Following the conquest of Damietta, an Arab book of prophecy was found, and it promised the Crusaders a happy way out of their difficulties. The 'Book of Clement' contained a prediction that when the seaside city of Egypt is conquered, at the same time with it will fall Alexandria and Damascus, and two kings, one from the west and one from the east, will meet in the same year in Jerusalem [Rishar, 2002, p. 214]. 'Rex David,' as he was named in the letter of the legate Pelagius to the Pope Honorius III, was already a ten days' journey from Baghdad. The expected tsar from the West was Frederick II, whose coronation was held in November 1220. In 1222 Easter fell on 3 April, and all the dates matched up, which meant that the power of Islam was going to fall within one year. At the same time, the Bishop of Acre, Jacques de Vitry, having received written messages from Count Raymond of Tripoli concerning intelligence in Eastern Turkestan, spread the report of Rex David [Relatio de Davide rege Tartarorum Christiano]. This step was a kind of addendum to the book of prophecies,

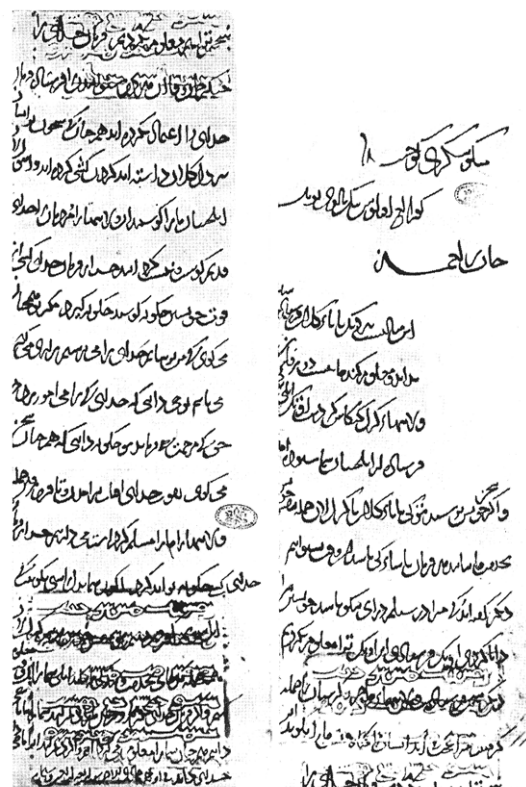

the translation of which was initiated by Pelagius. As a result of the work of both prelates, the western chronicles received the following message.

The Chronicle of Alberic de Trois-Fontaines, dated 1221, describes the campaign of the legendary king David, called Prester John, whose kingdom was located to the east of Persia: 'King David or, as some say, his son had passed through Cumania and defeated several thousand Russians, and it is said that then they destroyed the great city of Tornax—that is, Ornachia, which was frequently visited by merchants from remote countries' [MGH, 1874, p. 911]. The city of Ornachia or Ornas is the city of Urgench, the capital of Khwarezm Shah [The Vinland Map, 1965, pp. 102–104]. As for the aforementioned Cumania and Russians, this major event reflects the reconnaissance campaign of two Mongol tumens headed by Subedei-Bahadur and Jebe-Noyon, which passed from Iran to the Black Sea Steppes through Derbent and defeated Russian and Polovtsian detachments on the Kalka River. Soon Pope Honorius III received a letter from the Georgian Queen Rusudan [1224], which partially clarified the situation [MGH, 1883, p. 178 ff.]. The imaginary allies of the crusaders were the Mongols. According to Vincent de Beauvais [de Saint-Quentin, p. 178 ff.], the reconnaissance missions of the Curia were still collecting information about Transcaucasia, but the Mongols disappeared from the sight of Papal diplomacy up until the events of 1240–1242, when the troops of Batu invaded Poland, Hungary, and Dalmatia. Starting then the Curia began the rigorous collection of information on this formidable opponent because it was a real threat to the very existence of the Christian World. It will be recalled that the report of Dominican intelligence (the travels of Friar Julian to the Volga Region in 1237 by the initiative of the Hungarian king Bela) was immediately sent to the papal legate Salvio de' Salvi [Dörrie, 1956, pp. 129–135]. According to Matthew Paris's chronicle, in 1238 the Ismailit embassy arrived at the court of the French king Louis IX and informed him that 'from the northern mountains rushed some tribe of men, monstrous and inhuman, and cap-

tured vast fertile lands of the east, devastated Great Hungary, and sent frightening messages with formidable embassies' [Matuzova, 1979, p. 135]. The reference by the Ismailits to Great Hungary, the legendary ancestral home of the Ancient Hungarians, localised in the Volga Region, seems extremely surprising. Most probably, Matthew Paris got this message from the account of Julian, which in particular states the following: 'When, by the virtue of obedience to the mandate entrusted to me, I had to go to Great Hungary together with the brothers who were given to me to complete the journey as my companions, and we, desiring to complete the task entrusted to us, having reached the remote areas of Ruthenia, we succeeded in obtaining factual evidence that all the Bascarts, that is how the pagan Hungarians are called, as well as the Bulgars and many other kingdoms had been destroyed by Tatars.'

At the Council of Lyon in 1245, among the five disasters befallen the Christian World, Pope Innocent IV, first of all, mentioned the German Emperor Frederick II and the Mongol threat. Open to the outside world, Innocent IV was the initiator of broad diplomatic activity for the Curia. Last but not least, he was interested in precise information on the Mongols. It was in Lyon, at the court of Innocent IV, when the western world acquired for the first time accurate information about Mongols from a direct participant of those events, the Russian archbishop Petr, 'a honest, pious, and credible man' [Matuzova, 1979, p. 151]. If in the first bullae the Pope calls Mongols the 'Messengers of Satan and servants of the Tartars' [Regesta Pontificum Romanorum, 1874–1875, I, II, No. 11096], then the letter, which was taken to the east by the nuncius of the Holy See Giovanni da Pian del Carpine, contained significant diplomatic flexibility.

In the context of the entitled mission, Friar Giovanni was granted the broad authority of the Papal legate. Most likely, diplomatic travel to the Middle Asia was unplanned as the Pope did not send any gifts with the envoys. The messenger had to go to the nearest Mongol troop, and the route through Eastern Europe was chosen for this task. On the way, in Poland, the mission was joined by Friar Benedict Polo-

Letter of the Great Khan Güyük to Pope Innocent. Vatican

nus. In the preface of his book, Friar Giovanni made a note about the important role of this member of the mission: 'We had the decree of the Arch-priest to examine and consider everything carefully, which was fervently carried out both by us and Friar Benedict Polonius, [belonging] to the same order, who accompanied us in our need and served as translator' [Giovanni da Pian del Carpine. Book of the Tartars. Preface] [In Latin: (Carpine, 1989)]. The report of Friar Benedict was preserved in the short summary of Friar C. de Bridia [The Christian world, 2002]. The story of Friar Benedict is also known in the record of an anonymous writer, a Cologne scholar.

In this case we are interested just in one thing—the perception of the Jochid Ulus ruler among the members of the mission as a potential diplomatic partner of the Curia. Which terms were used by the Franciscans to describe the domains of Batu Khan? To answer this question, we will refer to the record of Friar Benedict's story, written by the Cologne schol-

ar. The anonymous writer states the following: 'By means of Conrad, the Polish Duke, envoys reached Kiev, the city of Rus', which now is under Tartar dominion. Rulers of this city provided them with guides for six days, up to the first Tartar watch, located near the appanage of Cumania' [Relatio fr. Benedicti Poloni. §1] [Sinica Franciscana, 1929, p. 134]. The dependence of Kiev on the Mongols is defined by the term *servitus* 'subordination, subjection, submission.' At the same time, according to Friar Giovanni, there were Italian merchants in Kiev in June 1247, and they arrived there from Constantinople. These people represented the interests of the leading trading houses of Venice, Genoa, Pisa, and Acre [Pelliot, 1973, pp. 73–74]. It is possible that the Italian merchants were buying not furs but slaves in Kiev. There is a famous papal bulla, dated 1 October 1246, sent to the patriarch of Jerusalem, legate of the Apostolic Curia and all archbishops assigned in the Jerusalem Kingdom, which sometimes condemns the trade of Russian slaves [Regesta Pontificum Romanorum, 1874, I, p. 1039, No. 12283]. The bulla states that some merchants from Pisa and Venice, sailing on ships from Constantinople, were taking to the Jerusalem Kingdom many Christians—Greeks, Bulgars, Russians, and Vlachs, both women and men, and were selling them to the Saracens. Many of the sold Christians were treated by their owners as slaves, and they used to flee to the church to prelates and insist that they were free and unjustly enslaved (for more on the slaves that were taken from Kaffa to the Mediterranean and sold, see: [Yemanov, 1995, p. 130]).

Let's return to the story of Friar Benedict. The steppe area between the Dnieper and Volga, controlled by the Mongols, 'was organised' in a specific way, as one can cross it only by moving from one watch [custodis] to another. The world that opened in front of the envoys was socially ordered. It should be noted that in exchange for gifts, the envoys were guaranteed safety and speedy movement. The skins of beavers and badgers were used as gifts. 'When the heads of the watch realised that they were envoys of the Pope, they requested and received gifts. Both of the Friars Giovanni and Benedict, as they were ordered, left the

third Friar there, who was ill, with the horses and servants, which they had taken with them on the horses of Tartars, and were taken safely across to the second watch along with their belongings. Horses were changed at the numerous watches' [Relatio fr. Benedicti Poloni. §2] [Sinica Franciscana, 1929, pp. 135–136]. On the third day envoys arrived to the commander of the troops who was managing eight thousand warriors. His name was Korentsa [*Cureniza*]. In Russian chronicles he is known as *Kuremsa* [Complete Collection of Russian Chronicles, 2, column No. 806]. The Ulus of Kuremsa was located in the western part of Batu's domains, sharing a border with the territory of the Russian principalities. Kuremsa asked the envoys what was the purpose of their travel and what was their occupation, and then he gave them three guides who looked after the horses and food until they arrived to the orda of Batu. The servants of Batu requested gifts and received 40 beaver skins and 80 badger skins.

It is interesting that the lands subject to the Mongols are called Cumania by the Franciscans, in relation to the names of the former owners of this territory—the Comans [that is how the Kipchaks were called in Western sources]. The Armenian historian of the 13th century Kirakos Gandzaketsi also called the domains of Batu Khan Cumania: 'The great commander Baty on the north settled his residence on the shore of the Caspian Sea and the great river Atl [Itil], which does not have any equal because it spreads like a sea because of the flat terrain. There, in the great and vast Kipchak Valley, he settled with his huge, immeasurable troops, and they lived in tents, and when they moved to a new place, they moved the tents in carts, harnessing many oxen and horses' [Gandzeketsi, 1976, chapter No. 55]. Envoys spent five weeks travelling from Kiev to the camp of Batu on the Itil River. 'Then Batu listened to the message, and weighing his every word, with his letter in five days, that is on the third day of Easter, sent them with the aforementioned Tatars, their guides, to the homeland of the Tartars to the son of the great emperor, and his son's name was Kuyuk-kan.' Friar Benedict says that in these two weeks they

had crossed Cumania. According to the scholar, on the border of Cumania they had crossed the river known as Yaik, behind which was the land of the Kangyts [Kangly]. They stayed on the road for twenty days and did not encounter anyone. The land of the Kangyts was covered with many salty bogs and streams, which were mistaken by the scholar with the Maeotian Swamp. The Mongol presence in the steppes between the Dnieper and Volga is obvious.

What indicates, in the opinion of external observers, the inclusion of these territories into the political space of the Mongol Empire? The western diplomats note two circumstances. First of all, the change of the nomadic elites: things that earlier belonged to the Kipchak khans were now at the disposal of the Mongol Khans and tsareviches. The nomadic orda of Batu Khan was seasonally moving along the eastern bank of the Volga River, while the orda of Sartaq, son of Batu, migrated along the western bank. Other members of Jochid clan with their hordes migrated along the Don and Yaik Rivers. As it was eloquently stated by William of Rubruck, 'they had divided between each other all of Scythia, stretching from the Danube River to sunrise; and every leader knows the sizes of his pastures, depending on how many people are under his rule, and also where he shall graze his herds in the winter, summer, spring, and autumn. In winter they go down to the south, closer to the warm countries, but in summer they go up to the north to the colder countries' [Itinerarium. II. 1] [Sinica Franciscana, 1929, p. 132]. Marco Polo, who was aware of Mongol affairs, accounted the domains of the descendants of Jochi as follows: 'The first tsar of the Western Tatars was Sain; he was a strong and powerful tsar. This tsar Sain conquered Rosia, Cumania, Alania, Lak, Mengiar, Zich, Guchia, and Khazaria; all of these regions were conquered by tsar Sain himself. Before he conquered them, they were possessed by the Comans, but they were not united and did not represent a single tsardom, and that is when the Comans lost their lands and were dispersed around the world. Those who stayed there were enslaved by this tsar Sain' [Book of Marco Polo, 1956, pp. 227–228]. According to J.A. Boyle, the term sayin that means 'good' is

a stable term to refer to the dead (Boyle, 2002, pp. 28–30.)]

The second circumstance, noted by the Franciscans, relates to the change of 'sanctuaries.' Numerous Polovtsian statues, depicting the portrait of dead leaders and permanently installed on high mounds, were replaced by a single golden idol statue of Chinggis Khan. All foreigners, coming to the Horde of Batu Khan, had to bow to the statue. According to the Franciscans, the idol statue of Chinggis Khan was installed on a special cart and thus served as a 'mobile sanctuary' [Yurchenko, 2002a, 245–260].

The information of western observers about Mongol diplomatic ceremony can be used in the description of the positional inclusion of 'new' subjects into the imperial hierarchy. At the khan's receptions, foreign rulers and envoys were seated away from the centre and, as it is mentioned, the Franciscans, at the back of their Mongol guides, because foreigners were not subjects of the great khan. The sitting order reflects the structure of Mongol society, and foreign rulers, whose political fate was not yet determined by the great khan, and envoys from remote countries were outside of this society. Describing the importance of this or that place during the Mongol ceremonies, the South Song diplomat Pen Da-ya [1233] notes another feature: 'As for the 'difference between' seats (according to the degree of honour), the most honourable seats are at the centre, then the right [side], and the left [side] is considered even lower' [Lin Kyun-i Munkuyev, 1960, p. 141]. According to Friar Giovanni, the foreign envoys, which have not yet been to the headquarters of the great khan, during the meeting with Batu Khan should have been on the left side of the yurt, while on the return trip, they were always seated on the right [Giovanni da Pian del Carpine. Book about Tartars. IX. 17]. This change was related not only to the increase in the status of the envoys but also to a kind of inclusion into imperial society. Following the ceremony of presentation to the Mongol emperor, the envoys became his 'subjects,' that is why they were under his protection. The right to have a seat on 'the right hand side' of the great khan meant the acquisition of a specif-

of Rubruck. 1735.

ports of medieval European diplomats.

The term Horde [*orda*] is extensively used in the reports of the Franciscan mission of 1245. In different contexts *orda* means 'camp, quarters, tent of a Mongol khan or his family members' [cf.: (Sevortyan,

1974, pp. 470–472)]. Thus, for example, it is said in Friar Benedict's report that *Staciones can et principum ordea Tartarice appellantur* 'khans and princes' camps are called in Tatar *ordas*' [C. de Bridia. *The History of Tatars* §38]. Friar Giovanni writes: *Vnde, cum essemus ante Ordam (sic enim stationes imperatoris apudeos et principum appellantur)* 'when we faced the Horde (this is what they call camps of the emperor and princes' (Giovanni da Pian del Carpine. *The Book about the Tatars*. I. 5)]. In D. Sinor's opinion, *orda* in this case means home—*domus* or a tent—*tentorium* [Sinor, 1970, p. 546]. Apparently, this is just one of the meanings of the word *orda* because the place where the khan stayed included homes for his wives, retinue, and guards who provided day and night security for the khan's tent. By *sira orda* Friar Giovanni implies the large Emperor's court. Similarly, 'the great orda' is defined by the Southern Song diplomat Peng Daya, when he talks about the tents of the empresses and the camps of other subjects. In some other place, Giovanni notes that *orda* is a court: *orda sive curia* [Giovanni da Pian del Carpine. *The Book about the Tatars*. IX. 25].

All the rituals described above occurred in the khans' Horde. The Horde was a political, administrative, and sacral centre, the keystone organising the living space of the nomadic world. It is no wonder that legates included this word in their common language (along with the other two terms: the title *khan*, interpreting it as 'emperor,' and the biggest troop unit defined as *shumen*, turkic *tümen* 'ten thousands'). *Khan*, *horde*, and *shumen* are the three terms that immediately became common in the re-

ports of medieval European diplomats.

The problem, however, is in the interpretation of the term *stacio*, which depending on the context, was used by the Franciscans to define a dwelling [yurt or tent], or a camp of nomads. The closest word for the Latin term *stacio* is 'encampment' [Pers. *ugruk*], used by

Rashid al-Din with regard to Chinggis-Khan's sons [Rashid al-Din, 1952, I, 2, p. 257]. The term *stacio* is used to describe a specifically arranged space inside which the horde was located. Additionally, Friar Giovanni calls the golden tent of Güyük where the coronation ceremony of the great khan took place, the *golden horde* [*orda aurea*]. Naming the golden tent 'golden horde' reflects the realia of the Mongol imperial way of life [Serruys, 1962, p. 356–378].

The Horde is always associated with the khan, which is actually reported by the Franciscans. For somebody to have an idea of what the horde, that is the quarters of the Mongol emperor or 'prince', looked like, the description of Batu's camp by William of Rubruck gets to the point. 'When I saw the court [*curia*] of Batu, I shuddered because his own houses looked like a big town stretched lengthwise and surrounded by people from all sides for a whole three or four levgas [approximately 11.5–15.5 km]. And just like the people of Israel knew on which side of the tent everyone should have put up their tents, they know in which direction of the court they should stand when setting up their dwellings. That's why they call the courthorde in their language which means the middle because [the master of the court] is always in the middle [surrounded] by his people, with the one exception being that nobody stands precisely to the south [of the tent] because the gates of the court open in that direction. But to the right and to the left they spread out to any extent they wish according to the site's requirements, only avoiding placing themselves right in front of the court or on the opposite side of the court' [Itinerarium. XIX. 4] [Sinica Franciscana, 1929, p. 212–213]. The Biblical text Friar William refers to is Num. 1, 50–54; 2, 1–31. Biblical language is used here for a reason—*tabernaculum* and *tentoria* [in the Russian synodical translation of the Bible: *tabernacle* and *camp*].

The first phrase of the passage cited is not instantaneously clear, as one would think that not only Batu's 'own houses' but the entire camp should have looked like a town. Another citation from Friar William's writing provides an explanation: 'Batu has twenty six wives, each

having a big house apart from other small ones [houses], which are set up behind the big ones. They look like rooms in which slaves live, and besides, each of these houses can also have two hundred double wagons adjoining them. And when they set up their houses, the first wife sets up her court the first in the Western direction followed by the others according to their statuses, so that the last wife will find herself in the Eastern end, and the distance between the court of one mistress and the court of another mistress will be equal to one stone throw. Therefore the court of one rich Moal will look like a big town, though there will be very few men in it' [Itinerarium. II. 4] [Sinica Franciscana, 1929, p. 173–174]. The word *curia* used by Friar William corresponds to the Mongol word *ordu*. As for the erroneous translation of the word *orda* as 'middle', proposed by Friar William, P. Pelliot assumes that the author confused the Mongol word *ordu* 'palais, campement central' with the Turkic word *urta* or *orta* 'middle', which, in his opinion, serves as additional proof of the Turkic language environment Friar William found himself in [Pelliot, 1973, p. 106]. A circle, as a nomadic settlement and troop formation, is observed among many nomads of the Eurasian steppes apart from the Mongols [Pletneva, 1964].

In the dictionary 'Codex Cumanicus' [1303] the translation of *ordu* from the Latin word *curia* means that the dictionary makers understood the term horde [*orda*] as 'the khan's court'. It is noteworthy that in the Persian column of the dictionary no equivalent was found to this word, the same *ordu* stands there as well [Pelliot, 1949, p. 49]. The Western Latin sources of the 13–14th centuries name the khan's quarters and military camp *orda*. On Italian maps near *Saray Grando* 'New Saray' *L'ordo de Saray*, that is 'Sarai Horde' is shown [Chekalin, 1890, II, 2]. The Venetian diplomat and traveler of the 15th century Giosafat Barbaro explains that the *orda* is a peoplehood controlled by the khan—«lordò zoè populo» [Barbaro and Contarini, 1971, p. 140, 168, note 40]. Barbaro finds an interesting image for *orda* as 'a town on wheels': 'Except that their camps are not surrounded by walls, – we view them as the largest and most beautiful towns'; 'as soon as the ruler stops,

they immediately spread out bazaars, leaving wide roads. Once the bazaars are set up, they immediately prepare their hearths, fry and boil meat and cook their meals using milk, butter and cheese. They always have game meat, especially deer. There are craftsmen in their troop—weavers, blacksmiths, gunsmiths and others, and, in general, all the necessary crafts can be found among them' [Ibid. p. 471–472].

The materials of European diplomats make it clear that the Golden Horde was perceived as an actual participant in international politics. The language describing the institutions of state power in the Golden Horde demonstrates

their inclusion into Western political practice. The Christian world had expanded its cultural horizon. If before the beginning of the 13th century in religious treatises depicting a fictitious dispute between the three adherers of world's religions involved three characters, a Christian, a Muslim and a Jew, then by the end of this century a fourth participant of the dialog appeared—'a Tatar'. Most likely this news was associated with tolerance brought to the level of law. The time of apocalyptic expectations and fictitious rumours gave way to the time of testing mutual interests, gathering information, reasonable prognoses and utopian projects.

§ 2. Military and Political Contacts with Byzantium and the Balkan Countries

István Vásáry

1.1. The First Conquest of the Balkans by the Tatars. The period of Tatar influence in the Balkans lasted for more than 100 years, beginning with the great Tatar campaign against Europe in 1242 until the reign of Janibek [1342–1357] in the Golden Horde. Then, because of the political confusion following the death of Berdibek Khan [1359], the Tatar state lost all its influence and interests in the Balkans. This one hundred year period can be approximately divided into three stages. The increasing power of Nogai, the ruler of most of the Western territories of Ulus of Jochi, is typical of the first stage. The end of this stage is marked by the death of three rulers of the region: the Bulgarian tsar Constantine Tikh died in 1277, the khan of the Golden Horde Mengu-Timur died in 1280, and the Byzantine Emperor, the founder of the Palaiologos dynasty, Michael VIII died in 1282. The change of power in these countries resulted in the slackening and collapse of Bulgaria and Byzantium, while the power of the Tatar leader grew higher than ever before. Within a very short period, his son even managed to secure his hold on the Bulgarian throne. The zenith of Tatar influence in the Balkans ended with the death of Nogai [1300] and his son Cheke [1301]. Finally, the last phase of fading Tatar influence in the Balkans falls

on the period between 1302 and middle of the 14th century.

On receiving the notification of the death of the great khan Ögedei on December 11, 1241, Batu-khan's warriors immediately left the devastated Hungarian kingdom and headed towards their Asian homeland, but one contingent of the Tatar army under the command of Kadan advanced to Dalmatia, chasing the king Bela IV. Having failed to catch him, they left Dalmatia for Bulgaria. At the same time the main forces of the Tatars, commanded by Batu-khan, trooped along the Danube against Bulgaria. [Hammer-Purgstall, 1840, S.124–126; Spuler, 1965, S.24]. The Tatar armies began to devastate Bulgaria but did not encounter any actual resistance from the Bulgarians. One would think that the weakened Bulgarian Regency accepted the Tatar suzerainty, thus avoiding the horrible devastation which occurred in Hungary as a result of the strong resistance of King Bela IV [for a good analysis of the Tatar invasion into Hungary in 1242 see: (Pavlov, Atanasov, 1994)]. The submission of Bulgaria to the Tatars by way of paying tribute to the Tatar state was the price they had to pay for peace. In 1253, eleven years after the submission of Bulgaria to the Tatars, William of Rubruck in his famous travelling notes clearly

stated that the Bulgarians paid a tribute to them [Wyngaert, 1929, p. 167–168, 331].

The submission to Tatar rule should have been of a formal and rather free character. Then the restoration of the Byzantine Empire in 1261 by the emperor Michael VIII Palaiologos created absolutely new power relations in the Middle East and the Balkans, which also changed the relative indifference of the Tatars to the Balkan states. The Emir of the Golden Horde, Nogai, was the person who pursued Tatar policy in the Balkans during the last four decades of the 13th century.

1.2. Emir Nogai. Nogai was a key person in Tatar history since he was a Chinggisid, one of the great grandsons of Jochi [see: [Veselovsky, 1922, p. 2–3; Pelliot, 1949, p. 10–28, 52–54]]. The young oghlan distinguished himself for the first time in the war against the Hulaguids at the battle on the River Terek in 1255/56 [653 A.H.], where he lost an eye from a spear strike [Collection of Works Related to the History of the Golden Horde, 1884, p. 96, 121, 131, 152]. Nogai, like his great uncle Berke, converted to Islam [Vásáry, 1990; CWRHGH, 1884, p. 77, 99], most probably, soon after the conversion of the khan in the 1250s. Beginning in the 1260s, emir Nogai became the absolute owner of the most western territories of the Golden Horde, stretching out from the River Don up to the Lower Danube. Although he was not a khan, he behaved in the above mentioned territories as a true sovereign, therefore Russian chronicles frequently called him a tsar [the Russian translation and equivalent to the word khan] and described him as a ruler equal to the khans of the Golden Horde [Complete Collection of Russian Chronicles, 8, p. 241]. The region of the Lower Danube and Northern Bulgaria fell directly under his sphere of influence.

1.3. The Tatars Release Izz al-Din in Thrace in 1264. After the emperor Michael VIII Palaiologos had restored the power of Byzantium in Constantinople in 1261, a new period of history began. Before 1261, the Egypt of Sultan Baybars and the Latin Empire had not had direct contacts, and the conversion of Berke-khan to Islam in 1250s gave an impetus to Egypt to develop a close relationship with Ulus of Jochi. In 1263, Baybars sent his

ambassadors to Berke, but they were arrested at the Byzantine court. [see: (Vernadsky, 1927, p. 77, etc.; Ostrogorsky, 1940, S.328–329; Pavlov, 1989)]. The arrest of the Egyptian ambassadors was exacerbated by the fact that Izz al-Din, the former sultan of Iconia, was held as a hostage, and the Egyptians also demanded his release. These events created the grounds for the military intervention against Byzantium carried out by Berke-khan in 1264 in order to release Izz al-Din from captivity.

'Izz al-Din Kaika'us became the Seljuk ruler in 1245. It was a troubled historical period, two years after the Mongols' victory at Köse Dag, when the Seljuks submitted to the Tatars. 'Izz al-Din and his younger stepbrother Rukn al-Din Kilic Arslan, and 'Ala al-Din Kaikobad were often just instruments in the political games of the Mongol rulers, Seljuk emirs and Byzantine emperors. After a long fight for power, 'Izz al-Din together with his wife, sons and escort had to flee [about 'Izz al-Din's life see: (EI, 1927, II, p. 682–683; Ā, 1992, VI, p. 642–645; EI2, 1971, III, p. 846–847)]. First he rushed to Antalya, from where he fled to the emperor Michael Palaiologos VIII some time before the latter reconquered Constantinople from the Latins on July 25, 1261 [Duda, 1943, p. 135].

'Izz al-Din was welcomed cordially by Michael Palaiologos but the warm relationship between them soon became strained, and the sultan was imprisoned in a fortress [Houtsma, 1902, p. 296–298; İşıltan, 1943, p. 55, 58–59; Flemming, 1964, S.29; CWRHGH, 1884, p. 200, 203]. Then he turned to the Tatars of the Golden Horde asking for help. Bulgaria had had hostile relations with Byzantium since 1262, when the Byzantines captured Fillipopol [Plovdiv], Stanimak, Mesembria [Nesebar] and Anchialos, so, they were also against Byzantium. The Tatar and Bulgarian warriors soon appeared in the Balkans where Tatar troops were a dominating element [Schopeni, 1829, I, p. 100; van Dieten, I, p. 114].

It was winter and the Tatar troops crossed the frozen Danube [Houtsma, 1902, p. 297]. According to Pachymeres, the Tatars who took part in the expedition were independent or 'autonomous', and they were not entirely submit-

ted to Nogai [Failler, Laurent, 1984, p. 303]. It is most likely that Nogai himself did not participate in that campaign, and the Tatars did not have a direct political goal, in contrast to the Bulgarians whose goal was to capture the Byzantine emperor. According to general opinion, this campaign clearly demonstrates the vassal dependence of Bulgaria on the Tatars of the Golden Horde, as Bulgaria was required to participate in the Tatar campaign with its auxiliary troops [see e. g.: (van Dieten, I, p. 247, n.176)]. Despite the generally accepted viewpoint of historians, this was not a Tatar 'state campaign' carried out by Nogai with the help of the Bulgarian auxiliary troops of tsar Constantine Tikh against Byzantium [Nikov, 1929, p. 109–110], but rather on the contrary, the Bulgarians wanted this campaign against Byzantium, and semi-independent Tartar groups of the Danube region willingly joined the expedition in the hope of a good haul. The release of sultan Izz al-Din was just a secondary goal of certain authoritative forces in the Golden Horde.

We can conclude with certainty that the release of 'Izz al-Din took place in 1263–1264, during the reign of Berke-khan. The later fate of 'Izz al-Din after his release was beyond the range of the Byzantine authors. But the Islamic sources hint at his life in Tatar exile. 'Izz al-Din was in the Crimea where Berke-khan presented him the provinces Solkhat and Sugdaia [Houtsma, 1902, p. 298]. Additionally, one of Berke's daughters, Urbay Khatun, was married off to him [SWRHGH, 1884, p. 81, 103, 482, 511]. He remained in the Golden Horde, in the capital city Saray, until his death in 1278/1279 [677 A.H.].

1.4. Nogai's Marriage to the Byzantine Princess in 1272. In 1271, new Tatar aggression against Byzantium occurred. This time the Tatars were invited by Sebastokrator Ioannes, the ruler of Thessalia, and Andronikos Tarkhanotis to attack Byzantium [Ostrogorsky, 1940, S.329]. These events convinced emperor Michael to settle his relations with the new power in Ulus of Jochi. First he married off one of his daughters, Maria, to Ilhan Abaka [Failler, Laurent, 1984, p. 234–235], then, in 1272 he made peace with emir Nogai, and as proof of union married off to him his other illegiti-

mate daughter Euphrosyne [Ibid., p. 242–243; Schopeni, 1829, I, p. 149] [Nicephoros Gregoras calls the emperor's daughter Irene]. Thus, the leaders of both Tatar states [Iran and the western part of the Golden Horde] became brothers-in-law and allies. The political aim and significance of these marriages were absolutely obvious for contemporaries. Thanks to the skillful maneuvering of emperor Michael, Byzantium could rely on a friendly circle of allies which surrounded a circle of hostile forces neighbouring Byzantium. Thus, Hulaguid Iran controlled the Ikonik Sultanate, Nogai and his Tatars held Bulgaria in their hands firmly and the Hungarian kingdom oversaw Serbia. Starting in 1273 and onward, Nogai who once had been an enemy, now became a close ally who helped Byzantium, even against the Bulgarians if needed. Soon an opportunity for an intervention occurred.

1.5. The Role of the Tatars in the Fight for the Bulgarian Throne in 1277–1280. In 1277 a new period of political instability came about in Bulgaria. In the spring of 1277, a large-scale peasants' revolt burst out, and this movement was accompanied by a fight for the Bulgarian throne which lasted until 1280 [these hard years in Bulgarian history were the subject of research in: (Zlatarski, 1940; Mutaftchiyev, 1943)]. The best source which describes the events credibly is again Pachymeres, while Nicephorus also adds some details [Failler, Laurent, 1984, p. 549–569, 589–591; Schopeni, 1829, I, p. 130–133; van Dieten, I, p. 129–131]. A strong pretender to the throne appeared in the rural area in the person of an illiterate swineherd named Ivaylo [see: (Zlatarski, 1940, p. 544 et seq.; Failler, Laurent, 1984, p. 549; Schopeni, 1829, I, p. 131; van Dieten, I, p. 130)]. The heart of the revolt must have been somewhere in the northeast of Bulgaria, close to the region which was later known under the name of Dobruja. Ivaylo's troops won victories one after another, and by the autumn of 1277 the formidable and invincible Tartars had to leave Bulgaria and retreat to the left bank of the Danube, to their homeland. Ivaylo approached the capital Tarnovo, then in a showdown fight, the tsar Constantine's army was destroyed and he himself was killed by Ivaylo [Failler, Lau-

rent, 1984, p. 551–553]. By the beginning of 1278, the rebels were already near Tarnovo, the capital without its ruler. At this moment, the emperor of Byzantium Michael decisively interfered in the Bulgarian affairs. First he married off one of his daughters to Ivan, son of Mitso, a refugee of distinguished birth, who was in the civil service in Byzantium. Ivan was the grandson of Asen II, so he had a legitimate right to the Bulgarian throne. Shortly after the wedding this Ivan, Mitso's son, was declared the Bulgarian tsar under the name of Ivan Asen III. He gave an oath of loyalty to emperor Michael VIII and set off for Tarnovo with Byzantine troops in order to assert imperial rights to Bulgaria.

In the spring of 1278, Tsarina Maria gave in and opened the gates of Tarnovo to the pretender to the throne Ivaylo, providing he would recognize her son Michael as the lawful heir to the throne. Ivaylo then immediately married her and was crowned tsar. At this moment the Byzantine emperor sought help from his brother-in-law – emir Nogai who sent his Tatar troops to Bulgaria. The emergence of Tatar troops in Dobruja changed the course of events. Beginning in the autumn of 1278, Ivaylo's rebels had to fight on two fronts, Ivaylo himself headed for the citadel Dristor [now Silistra] which had been under siege by the Tatars for 3 months. In the spring of 1279, the united Byzantine and Tatar forces were besieging Tarnovo, the Bulgarian boyars realized that their situation was hopeless. They devised a plot, captured Tsarina Maria and her son Michael and handed them over to the Byzantines who sent them to Constantinople. Ivan Asen III took hold of the throne, and Ivaylo failed to return to Tarnovo.

The Tatar troops helped to conquer Tarnovo. If the Tatar army had not distracted Ivaylo in the north, the Byzantine troops would have failed to advance from the northern fortresses of the Haimos mountain to the northern Black Sea Region, from where they managed to launch the final victorious attack against the rebels. The emperor Michael VIII fully recognized the Tatars and awarded the Tatar commander Chavush Bashi (Τζαβουσπάξης) with the honourable title of Protostrator [see:

(Moravcsik, 1958, II, p. 310; Zachariadou, 1978, p. 265–266)].

However, the Bulgarian boyars, just as they did not want Ivaylo on the Bulgarian throne, were suspicious of the new tsar, a Byzantine puppet—Ivan Asen III. Neither of them was the right person. On the contrary, George Terter was popular in Tarnovo, who was a boyar equal to them in status [who was elected the new tsar a year later, in 1280]. Terter's family was also of Kipchak [Cuman] origin, just like the family of the Asenids. Moreover, the Terterids had a mutual maternal ancestry [about George Terter see: (Zlatarski, 1940, p. 570–575)]. The Byzantine emperor knew that Ivan Asen III did not enjoy any support among the Bulgarian aristocracy, so he wanted to get this support by connecting Terter with the new tsar and Byzantium. As was agreed, Terter divorced his Bulgarian wife who together with their son Svetoslav [later the ruler Theodor Svetoslav: 1300–1321] were outlawed. He himself married the sister of Ivan Asen III and received the title of despot. The fact that the Bulgarians and Byzantines lost the support of Chavush Bashi, who had been removed from this high post by George Terter, was the price they paid for empowering Terter. The insulted Tatar commander went over to Ivaylo. But Terter had never given up the idea to become tsar, and he devised a plot with the help of the boyars. Ivan Asen III lost the support of the nobility and after several months of holding the Bulgarian throne left Tarnovo secretly and headed for Constantinople through Mesembria. All this had happened by the end of 1279. In the next year, 1280, George Terter was elected the Bulgarian tsar.

Then Ivaylo, together with his new ally, the Tatar commander Chavush Bashi, decided to seek refuge from the Tatar emir Nogai. Nogai welcomed them cordially and promised to help. But the news about Ivaylo's staying at Nogai's court caused anxiety in Byzantium, and emperor Michael sent his brother-in-law, ex-tsar Ivan Asen III, to Nogai, his other brother-in-law, in order to ensure his support in regaining the Bulgarian throne. A very difficult situation was created, as two Bulgarian pretenders to the throne simultaneously were fighting for the favour of the Tatar ruler who

Coins of Nogai. Isaccea. Late 13th century

deigned to accept the gifts and evidences of honour from them both. Pachymeres notes scathingly that 'in reality, for both of them, this was a mission aimed against Terter' [Failler, Laurent, 1984, p. 591]. This episode alone can illustrate the political and military significance of Nogai's Tatars of that period in the policy of the Balkans. Finally, Nogai made the decision [most likely instigated by emperor Michael VIII]. He invited all the 'actors' to a feast: Ivaylo, Chavush Bashi and Ivan Asen III. At some point during the feast he ordered Ivaylo and Chavush Bashi to be killed [Ibid.]. Nogai's servants fulfilled the order of their master without hesitation. The life of Ivan Asen III was saved, most importantly due to the interference of Nogai's Greek wife—Euphrosyne.

After George Terter had ascended to the throne and Ivaylo had died, the peasant's revolt and fight for the throne came to an end. Nogai and his Tatars were involved in all the major stages of the fight, and their efforts turned out to be critical just because they had been invited by the warring parties to solve controversial issues. Although the Tatars were not the main actors of the Bulgarian and Byzantine battles, in fact, without their active participation, the events could have developed in a new direction.

2.1. George Terter [1280–1292] and Nogai. Until the 1280s, the traditional Balkan lands, that is the territories to the South of the Danube, without a doubt, fell under the sphere of interests of Byzantium. Even the Tatars of the Golden Horde did not doubt the authority of Byzantium in Balkan affairs. The ruler of the western part of the Ak Horde, Nogai, was also connected with the New Rome by strong marriage bonds. But the death of the powerful

khan Mengu-Timur [1280] and his father-in-law emperor Michael VIII [1282] opened new horizons for Nogai's dormant hopes for bigger power. In Ulus of Jochi he became a very high-power leader who brought pretenders to the throne. All the three consecutive khans—Tuda-Mengu [1280–1287], Tula-Buga [1287–1291] and Tokhta [1291–1312]—ascended the throne thanks to Nogai's help and influence. He soon turned his attention to Bulgaria where he wanted to play the same role.

Since he ascended the throne Terter began to behave as if he really were an independent ruler, and forgot that there were political realities to reckon with. But his aspiration to be more independent was soon derailed by Nogai. In 1285, the Tatars set out against Hungary, and, allegedly, wanted to invade Thrace and Macedonia as well. However, luckily, the campaign against the Balkans planned by the Tatars in 1285 in fact was aborted, and instead the Tatars set out against Poland, and in 1286–1287 devastated Krakow and Lviv [Spuler, 1965, S.66–67]. In 1285 Terter was forced to send his son Svetoslav as a hostage to Nogai's court, and to marry off his daughter [her name is unknown, Svetoslav's sister or stepsister] to Cheke, Nogai's elder son. But even this act of obvious submission could not satisfy Nogai's hunger for power. Not only did the Tarnovo tsardom fall under strong Tatar control after 1285, but also two Bulgarian despotates—Vidin and Branichevo.

2.2. Nogai ulus becomes independent. In 1292, [George] Terter fled to Byzantium from the Nogai military menace and hid in the vicinity of Adrianople. The Byzantine Emperor, however, did not take the risk to grant him political asylum [Bekker, 1835, II, p. 264]. The

next ruler Smilets descended from one of the noblest boyar families of the Bulgarians and reigned for six years on the Bulgarian throne [1292–1298] as an obedient puppet of Nogai. A long period of chaos began in the history of Bulgaria after his death in 1298.

Thus the influence of Nogai and his elder son Cheke [Čeke] began to grow rapidly in the Lower Danube area in the 1280s. This fact received many confirmations in the last decades through valuable archaeological [mostly numismatic] finds in Dobruja. Coins with Greek legends were found in Isaccea [Tulcea county in Romania] and in the surrounding region. The coins have the Nogai clan tamga on one side, and various Greek symbols and legends on the other. Besides that, one of the coins displays both Nogai and Cheke's names in Greek letters. These numismatic finds apparently reflect the fact that a Greek Despotate existed in Dobruja with its center in Isaccea [in Tatar Sakçii], while from 1280 onwards this Despotate recognized the suzerainty of Nogai and his son Cheke [Oberländer-Târnoveanu, 1987, pp. 246–249]. As for the dating of the coins that we are interested in, Oberländer-Târnoveanu at first assumed the years 1285–1295, but later favored an earlier date—1271–1285 [Oberländer-Târnoveanu, 1993, p. 294, n. 18].

During the last twenty years new treasure troves containing various coins with legends in Arabic were discovered both in Isaccea proper and in its vicinity. All these finds testify to the existence of a large mint in the town of Sakçi [Ibid., pp. 296–298]. These silver and copper coins were minted with Arabic legends, containing the names of Nogai and Cheea and the Nogayid tamga, with Sakçi always being indicated as the coinage place. These treasures are of unique significance, for they shed new light on the historical role of Nogai and his sons. Tatar coinage commenced in Sakçi in 1286 and continued till 1351. Nogai and Cheke coins were minted in the period from 1296 to 1301. In light of these new finds, we should interpret anew the historical events of the last decade of the XIII century. Nogai indeed founded a new Khanate, which we can call his Nogayid Khanate. As a Chinggisid, he had rightful justification for this, being a Khan he could not be

A coin of Cheke. Isaccea

considered 'illegitimate', and at most he could be viewed as 'illegitimately born'. Further incessant rivalry between Nogai and Tokhta, the lawful Khan of the Golden Horde [1291–1312], can be explained by the separatist policy of Nogai, which in the 1290s resulted in the establishment of an independent ulus with Sakçi as its center. That is, the minting of coins with the ruler's name is a clear sign of independence in Islam. The official title of Nogai, as reflected on the coins, was Khan, while his son Cheke was called Sultan; however, when his father was still alive, he perhaps already in 698 AH [1298–1299 AD] took the title of Khan. Evaluating these facts, it becomes more and more clear why Tokhta so harshly reacted to Nogai's separatist movement, which ended with Nogai's death on the battle field at the Kugenlik [Kagamlyk] nearby the River Bug at the end of 1299 [see: (Collection of works related to the history of the Golden Horde, 1884, pp. 90–91, 113–114)]. The Byzantine Emperor wanted to maintain a friendly allied status with the Tatars in the post-Nogai period as well. Apparently, during Nogai's life or right after his death, Andronikos II proposed his daughter Maria, born out of wedlock, in marriage to Tokhta, who accepted it. Upon the end of the civil war, when all the Tatar clans submitted to the Khan, the Byzantine imperial bride was sent to Tokhta and the marriage was contracted [Bekker, 1835, II, p. 268]. Thus, the Byzantine-Tatar alliance was preserved even after Nogai disappeared from the historical scene.

2.3. The Beginning of Cheke's rule. After the death of the Tatar protégé Smilets in November 1298, medieval Bulgaria plunged into a new, prolonged period of overall political chaos. Eventually the internal chaos and Nogai's death at the beginning of 1300 forced

his son Cheke to become personally involved in Balkan politics. A fierce fight for the inheritance broke out after Nogai's death among his sons, the eventual result of which was their total defeat within a year and a half. After his father's death in the horrible battle at the Kagamlyk, Cheke entered into possession of all his territories and left his younger brother Teke without inheritance. Teke, therefore, was offended and tried to come over to Tokhta, however Cheke soon killed his brother. The fratricide however caused even his followers to forsake him [Collection of works related to the history of the Golden Horde, 1884, pp. 91–92, 115–116]. Soon there arose a rebellion against Cheke led by two emirs: one of them was Taz, son of Munjuk and husband of Nogai's daughter Tugulji, the other was Tonguz, son of Kachan, whom Cheke appointed regent in the course of his ascent to power [about Tonguz see (Rásonyi, 1969, p. 133)]. At first Cheke fled with a small detachment of 150 warriors to the country of the Yases [Ases according to Baibars]. These Yasa were the faithful allies of Nogai and they inhabited the Lower Danube area, the territory of later Moldavia [Brătianu, 1929, p. 43]. The Yases, representing a military force of 10,000 men, joined Cheke and returned to Transnistria, where they defeated the troops led by Taz and Tonguz. The latter had to go back to Tokhta-Khan, who sent his brother Burluk to them with additional troops. In these circumstances, Cheke decided to go to Bulgaria (in the Arabic text the word Ulaq here means Bulgaria: [Collection of works related to the history of the Golden Horde, 1884, pp. 93, 117, 139, 161, 370, 384]).

2.4. Cheke and Theodor Svetoslav in Bulgaria. Cheke apparently arrived in Bulgaria in the spring of 1300 [Oberländer-Târnoveanu, 1987, pp. 256–257]. Theodor Svetoslav, who was the son of George Terter I by his Bulgarian mother, steps once again onto the scene here [Bekker, 1835, II, p. 265]. At first he was a hostage of the Byzantines, then his father had to dispatch him to the court of Nogai also as a hostage. The position of Svetoslav became aggravated when his father Terter also fled to Byzantium and Smilets seized the Bulgarian throne in 1292. After Smilets' death in 1298,

however, his situation did not improve; only his sister's marriage with Cheke guaranteed him political survival. Now, in the spring of 1300, Cheke arrived in Tarnovo together with his wife and brother-in-law Theodor Svetoslav. Thus it was a joint risky venture, from which all parties benefited: Svetoslav, as the son of the former ruler George Terter I, made use of his authority among the Bulgarian boyars, while Cheke ensured him military support. Pachymeres, however, does not leave any doubt as to who among them was superior to whom [Ibid.]. Svetoslav was not yet the ruler of Bulgaria, but only a regent of his brother-in-law Cheke. As is known from the fact of recently discovered coins, Cheke took the title of Khan already in 1296–1297, during the life of his father, so at the time when he was moving towards Tarnovo he apparently regarded himself as the legitimate ruler of Bulgaria. That is, since late 1298 [Smilets' death], Bulgaria had no legitimate ruler. The conjugal union with the sister of George Terter could equally boost his support by the Bulgarian boyars and the legitimization of his power. Svetoslav, however, apparently did not forget that he was the son of the former Bulgarian tsar George Terter I. At the first opportunity, backed by Tokhta, the Khan of the Golden Horde, he captured Cheke and put him into prison in Tarnovo. Later, with Tokhta's consent, Cheke was strangled there [Ibid.].

Thus, by the spring-summer 1301 Theodor Svetoslav became the Bulgarian tsar. In his person the Cumano-Bulgarian oligarchy restored their power in Bulgaria, and relative peace and consolidation set in for twenty years in the troubled land of Bulgaria. The rise and rapid fall of Nogai and his son Cheke meant the end of the separatist Nogayid movement. Balkan lands, particularly Bulgaria, though bordering the Ulus Jochi territory in the Lower Danube, were freed from a direct Tatar threat. The focal point of the Tatar force fell to the lot of the Volga Region, while the territories stretching westwards of the Bug gradually came out of their immediate control.

2.5. The Final Fall of the Last Nogayids. After the murder of Cheke, the Nogayid Khanate disintegrated. In Bulgaria, Theodor Svetoslav completely restored the rule of the Ter-

terids, while the Cheke's ulus was placed under the regency of Tokhta's brother Sareibugha. The two sons of Tokhta Khan, Tyugel-Buga and Ilbasar, were also dispatched to the former Nogai country. Tyugel-Buga became the ruler of Sakçi and the region between the Danube and the Iron Gates, while Ilbasar was sent to the River Yaik [Ural] [Collection of works related to the history of the Golden Horde, 1884, pp. 117, 161].

Tokhta, however, could not be safe while Torai, the third son of Nogai, was still alive. Torai indeed wanted to avenge the death of his brother. He warmed himself into the confidence of the new regent Sarai-Buga and systematically incited him to seek the Khan's power against his brother Tokhta. The plot of Sarai-Buga and Torai, however, was soon uncovered by Byurlyuk [a brother of Sarai-Buga and Tokhta], and Tokhta then crushed the mutiny and killed both its leaders. The regency of Sarai-Buga was passed on to Tokhta's son Ilbasar [Ibid., pp. 118, 161].

The drama of Nogai and his sons, however, did not end there completely. Though all three sons of Nogai had died, Cheke's son [Nogai's grandson] Qara-Kesek [Kara Küçük] was still alive. Together with his two relatives, Çerik-Temir and Iol-Kutlu, he fled to the south. Tokhta dispatched his brother Burluk in pursuit in order to capture them. Qara-Kesek with his detachment rushed to the country of Shishman, to the place named Bdl near Krk together with 3,000 horsemen. Shishman gave them a refuge in his country, where they still continued to reside during the time of the historiographer Baibars [died around 1325] [Ibid., pp. 119, 162]. The country of Shishman apparently relates to Vidin and its surroundings, being a semi-independent Bulgarian Despotate in 1301–1302, when Qara-Kesek appeared in that country. Therefore the names Bdl and Krk can be corrected to Bdn and Krl to be read as Bdin [or Bodun] and Kerel. The first variation apparently reproduces the word Vidin, and the latter is an Arabic-Persian name for the Hungarian and Polish kings in the Mongol period and, consequently, their respective countries [Hungarian *király* and Polish *król*, that is in both cases 'king'] [cf.: [Pelliot, 1949, p. 116 et seq.; Ligeti, 1964]].

3.1. The Tatars in the battle at Branichevo in 1283/84. The Serbian [king] Dragutin was compelled to hand over his throne to his younger brother Milutin in 1282 [Hafner, 1976, S. 73, 75], but Dragutin did not withdraw from the political scene and applied special efforts to extend his power northwards to the buffer zone stretching along the south of the Hungarian kingdom, between the Hungarian and Byzantine spheres of interest. This vast territory, lying south of the Danube, comprised various territorial administrative provinces called banates [*bánság* in Hungarian, that is a territory of the *bán*], organized in the 13th century into the semi-independent provinces of the Hungarian kings. These provinces included Usora, lying between the Rivers Sava, Vrbas and Drina; Soli—an area around the present-day Tuzla, and Mačva—the territory between the Rivers Sava, Drina and Kolubara. After 1284 Usora, Soli and Mačva became the property of Dragutin, who by acquiring these three provinces became the owner of a vast territory. Now his cherished goal was the establishment of a 'northern' Serbian state by uniting the provinces south of the Danube, thereby counterbalancing his brother Milutin's 'southern' state. East of the River Morava there existed two territories named after their central towns—Branichevo and Kučevo.

From 1272 onwards Branichevo was a Hungarian banate, but soon its rulers, the brothers Dorman and Kudelin, became independent [Daničić, 1866, p. 115]. The separation of the two oligarchs in Branichevo must have irritated the Hungarian king Ladislav IV, while Dragutin had his eye on the disobedient vassalage of the Hungarian king. Thus, both the Hungarians and Serbs had a common interest in crushing the rebellious brothers of Branichevo. Those Dorman and Kudelin were either Cuman warriors in Bulgarian service or Bulgarian boyars of Cuman origin, who became partly or totally Bulgarized.

When Dragutin launched an attack against the brothers of Branichevo, Dorman and Kudelin turned to the Cumans and Tatars for help, hiring them as auxiliary troops. Finding himself in such a difficult predicament, Dragutin appealed to his brother King Milutin and

with his help managed to secure victory over Dorman and Kudelin [Ibid., pp. 115–116].

3.2. The Shishman Tatars against the Serbs in Vidin in 1290–1300. Like Branichevo, Vidin also became a target of Serbian expansionist policy in the east. At the end of the 13th century, Vidin was a semi-dependent Bolgar Principality under the political control of the Tatars. In 1280, when Bulgarian boyars enthroned Terter, another Cuman boyar Shishman became the sovereign of the western Bulgarian principality Vidin [Ibid., p. 117] [about the history of the Vidin principality see: [Nikov, 1922]]. Shishman together with his Tatar and other troops invaded Milutin's Serbia, but the latter, pursuing them back to Vidin, devastated the town and land, and Shishman fled to the woods on the opposite side of the Danube. Having punished and reproached Shishman, Milutin, however soon reinstated him on the throne on the condition that he become his true ally. The political alliance was bonded by Shishman's marriage to the daughter of the Serbian Grand Župan Dragoš. More over, later Milutin married off his daughter Ana-Neda to Shishman's son Michael, who afterwards, in 1323 became the tsar of Bulgaria [Daničić, 1866, pp. 118–119].

3.3. Stefan Uroš as a Tatar hostage. Since emir Nogai's territory bordered on the Danube and his sphere of interests extended to the right bank of the Danube, to the principalities of Tarnovo, Vidin and Branichevo, a collision with Serbian power that was seeking expansion to the east was only a matter of time. Some time between 1290 to 1300, Nogai launched a campaign against Milutin's Serbia, but this time the Serbian ruler succeeded in averting the imminent Tatar danger by sending his son Stefan [the future king Stefan Uroš III of Dečani] to Nogai as a hostage. Milutin's son, together with his Serbian entourage, indeed spent a long time at Nogai's court and returned only years later, apparently, already after the death of Nogai in 1299/1300 [Ibid., p. 122].

3.4. The Tatars and Yases in the battle of Velbazhd in 1330. Nogai's death eased Tatar pressure on Balkan lands, and Bulgaria with Serbia benefited from the fall of the Nogayid clan. Byzantium followed the strengthening

of the Bulgaro-Serbian alliance with growing concern and did its utmost to hinder it. After a long struggle for power between father and son, in May 1328 Andronikos III marched to Constantinople with his victorious army, led by Kantakouzenos, and confined his aged father Andronikos II to a monastery. A new era began in the history of the Byzantine decay. The Serbian king Uroš Dečanski supported the father in his fight against his son, which resulted in tense relations between the new Byzantine power and Serbia. At the same time, the Bulgarian-Serbian relationship began to chill, while the Byzantine-Bulgarian friendship was revived. A new collision in the Balkans seemed inevitable.

The Bulgarian army moved from Vidin towards Zemen on the Struma river on the Bulgarian-Serbian border, while Stefan Dečanski set his camp by the River Kamenitsa [Kamenča; now Sovolštica. For a description of the battle of Velbazhd see: (Ibid., pp. 178–196); on other sources (Nicephorus Gregoras, Kantakouzenos, etc.) and the battle analysis see: [Jireček, 1876, pp. 292–296; Škrivanić, 1970]. The two armies remained north of Velbazhd [now Kyustendil in Bulgaria]. Both sides hired mercenaries in large numbers: the Serbian king had Spanish and German armoured knights, while the Bulgarian tsar employed Tatar, Yas and Wallachian light cavalry. The Wallachian troops were led by Basarab, the first Wallachian voivode, who managed to free himself from vassal dependence on the Hungarian king Charles Robert Angevin. Thus he is rightly considered the real founder of the Wallachian principality, as in November 1330 Basarab gained victory over the Hungarian king in the Southern Carpathians [for reports of Latin and German chronicles see: [SRH, 1937, I, pp. 496–500; 1938, II, pp. 50, 220–222, 284]]. Since Basarab was married to the sister of the Bulgarian tsar Ivan Alexander, it was natural that he rushed to his brother-in-law's aid when the latter needed it at Velbazhd. In other words, Basarab was also a descendant of the Cuman clan, likewise his brother-in-law Ivan Alexander was an offspring of the Shishmanids, also a clan of Cuman origin in Vidin. The Bulgarian and Romanian [Wallachian and Moldavian] upper classes, a group of *boyars*

and *princes* [*knezes*], were densely permeated by Kipchak [Cuman] ethnic elements in the 13–14th centuries (for the Cuman origin of Basarab and his name see: [Rásonyi, 1935]).

Both the Bulgarian and the Serbian armies had approximately 15,000 warriors each, but the Bulgarian army, apart from the Bulgars, also included 3,000 Tatars, with the number of the Yas and Wallachian light cavalry remaining unknown. The battle was decided by the western mercenaries of the Serbian king [Fatouros, Krischer, II, S. 78; Schopeni, 1828–1832, I, pp. 429–430, 455–456; van Dieten, II, 2, S. 237], and the Bulgarian tsar Michael perished on the battle field. Bodies of the fallen Tatar warriors were left not unburied in the Bulgarian camp.

4.1. Tatar incursions of 1323 and a new half-Cuman Bulgarian tsar. At the end of 1322, after a short reign of less than a year, the Bulgarian ruler George Terter II died, without leaving a successor to the throne. The Bulgarian towns lying between Nesebar [Mesembria] and Sliven [Stilbnos] went over to the Byzantines, who commenced a siege of Plovdiv [Philippoupolis], but failed to take it. Meanwhile, Bulgarian boyars elected the ruler of Vidin as their tsar. The Despot of Vidin, Michael Shishman was by birth half-Cuman and half-Bulgarian [Fatouros, Krischer, I, S. 124; Schopeni, 1828–1832, I, p. 175]. (About the Cuman name Shishman see: [Rásonyi, 1969, p. 127]). The Bulgarian boyars clearly gained from this choice: Michael was unaffected by the inner feuds of the Bulgarian boyars, had no contacts with the pro-Byzantine circles, and possessed a rather large territory and, last but not least, like his father he maintained close links with the Tatars. The latter was of special importance, as it helped attract a Tatar military contingent to his side [Burmov, 1968, pp. 230–231].

The Bulgarian boyars handed Tarnovo over to Michael Shishman, the newly elected sovereign, who immediately marched on the capital of Bulgaria with his army and allied Wallachian and Tatar forces. In the autumn of 1323, a large-scale incursion was launched on Byzantine territory. Kantakouzenos is the sole authority to have reported these events in detail [Fatouros,

Krischer, I, S.133–136; Schopeni, 1828–1832, I, p. 189–193]. The Tatar army consisted of 120,000 warriors [probably an exaggerated figure] and had two commanders-in-chief, Taytaq and Toglu-Torgan (for these names and personalities see: [Schopeni, 1828–1832, I, p. 189; Moravcsik, 1958, II, pp. 296, 315]). This Tatar incursion was particularly long-lasting, as the Tatar troops remained in Thrace for forty days after its plundering. The young Emperor Andronikos attempted to resist the Tatars by assembling his scattered troops from the Thracian towns, but his effort was rather unsuccessful. Eventually, the Tatars withdrew and left the Byzantine Lands. A persistent rumour began to circulate, Kantakouzenos writes in his narration, that the Tatars were invited by the old Emperor to devastate Thrace, which was under the control of his grandson, the young Emperor. Though Kantakouzenos resolutely rejects this possibility, his conveyance of the rumour to his readers is indicative of his doubts and suspicions in respect to old Andronikos II [about the incursion of the Tatars in Thrace in 1323–1324 see also: (Bosch, 1965, p. 64 et seq.)].

4.2. The Tatars in the events of Bulgaria and Byzantium in 1328–1333. The Byzantine Emperor Andronikos II died in 1328 and the Bulgarian tsar Michael Shishman passed away two years later, in 1330. Both events caused tension and concerns in Byzantine-Bulgarian contacts. Tatar mercenary troops, as always before, interfered in the course of the events.

Not long after Andronikos III had captured Constantinople on May 24, 1328, Michael Shishman made an incursion into Byzantium, presumably in July of the same year. He brought his Tatar auxiliaries with him, and the allied Bulgarian and Tatar forces spent many days marauding the towns of northern Thrace. Heaving learned the bad news of this Bulgarian-Tatar incursion, Andronikos III marched to Bizye and prepared his troops for an encounter with the Bulgarians. But the army of Michael Shishman withdrew to Bulgaria. The Emperor pursued the Bulgarians and within a few days he entered the territory of their country. The Byzantine army took Diampol [Jambol], pillaged the town and returned home. In September 1328, sixty days after the Emperor's

incursion into Bulgaria, tsar Michael invaded Thrace for the second time and took the town of Bukelon, near Adrianople. This time there is no explicit mention of the Tatar auxiliaries, but their presence in Michael's military force is likely (about these incursions see: [Fatouros, Krischer, II, S. 167, n. 16–18]).

The Byzantine Emperor was supported and assisted by the Bulgarian inner opposition. In the spring of 1331 the Bulgarian rebels placed Alexander, son of Stracimir and cousin of the late tsar Michael, on the throne. Immediately after his enthronement, tsar Ivan Alexander launched an attack against the unfaithful towns, that had in the meantime gone over to the Byzantine side, and retook them, as he did with Mesembria on the Black Sea coast. As usually, Tatar auxiliaries took part in Alexander's army in great numbers. Upon hearing the threatening news, the Byzantine Emperor Andronikos III marched to Bulgaria and encountered his adversary at Anchialos, which was held by the Bulgars. The Emperor and the Bulgarian ruler soon agreed that the Bulgars would return Anchialos to the Byzantines, who would hand over Diampol. The agreement took place on 17 July 1331, and the ceremony of oath-taking and the deed of mutual concessions was planned for the next day [Ibid., S. 98–100; Schopeni, 1828–1832, I, pp. 460–464]. During the night preceding the oath [17–18th of July], the allied Tatar forces reached the Bulgarian tsar Alexander. He had summoned them to assist him in suppressing the revolt of his uncle Belaur. The Bulgarian ruler, however, misused the Tatar support and treacherously told them to attack the Byzantine Emperor, what the Tatars would have never done, as they had concluded a treaty with the Byzantines not long before that. The next day the Tatars launched their attack. The Emperor, who in the expectation of peace, had dismissed most of his troops, now felt bitterly let down and deceived. At first he thought that it was the Bulgars who were attacking him, but soon he recognized the Tatars by the typical sharp sound of their trumpets. He could not believe that the Tatars had come against him, since he had just made peace with them. He thought rather that the Wallachians, whose weapons looked similar to the Tartar archers, had arrived as allies of the

Bulgarians. After a long fight, in which the Emperor and his friend Kantakouzenos also participated, the Tatars won the battle and the Byzantine army withdrew to Rhosokastron. Tsar Alexander soon sent an envoy to them, who proposed the conclusion of the peace treaty formerly agreed, and also asked for the Emperor's daughter as the wife of his son. The latter proposal was rejected, but all the other conditions were accepted and the treaty was concluded [Fatouros, Krischer, II, S. 100–104; Schopeni, 1828–1832, I, pp. 464–470].

In the summer of 1332, the Emperor launched a new campaign against the Bulgars with the aim of repossessing the fortresses in the Haimos Mountains that had been occupied by Tsar Alexander. His grandfather, Andronikos II, appointed Michael Glabas as the governor of Thrace and ordered him to build or restore these fifteen fortresses to prevent the Tatars from crossing the borders and raiding the area. After the Emperor had succeeded in capturing some of the new fortresses, Alexander sent his envoys to negotiate, but they were turned away by the Emperor. Alexander gathered an army of 8,000 Bulgarian warriors and 2,000 Tatar mercenaries. Having left Tarnovo, they moved to Rhosokastron, where they set up their camp. The Emperor's army was much smaller than the Bulgarian-Tatar troops, numbering at most 3,000 men. The two armies clashed and fought valiantly. As a result, the Byzantines failed to attain their goal and returned home [van Dieten, II, 2, pp. 252–255; Schopeni, 1829, I, pp. 483–488].

4.3. The last appearances of the Tatars in Byzantium [1337, 1341]. Andronikos III [1328–1341] tried to maintain friendly relations with the Tatars. In the early years of his reign [prior to July 1331] he concluded a peace treaty with them [Fatouros, Krischer, II, S. 101; Schopeni, 1828–1832, I, p. 465]. State relations were further strengthened by the marriage of Andronikos II's daughter to Öz Beg Khan. [Bayalun was the third wife [khatun] of Uzbek Khan. Ibn Battuta met her personally and travelled with her to Constantinople. Bayalun went to the Byzantine capital to give birth to her child but never returned to the Golden Horde [Collection of Works Related to the History of

the Golden Horde, 1884, pp. 290, 294, 301–302].] Notwithstanding the relatively balanced official relations between Byzantium and the Golden Horde in these years, in 1337 a number of serious 'unofficial' Tatar incursions shook Europe, the last of their kind. Only Gregoras reports this event, while Kantakouzenos is silent. According to the former, the main cause of these incursions was that Byzantium had forgotten to send the regular gifts [that is tribute] to the Tatar ruler and nobility. In early spring an army of the Tatars crossed the Danube and plundered the whole of Thrace up to the Hellespontos. There they came across some Turks, who were accustomed to crossing the Hellespontos frequently to plunder the Thracian coast. These Turks were either taken captive or killed if they tried to resist. This incursion was quite different from earlier ones, when the Tatars used to appear suddenly, plunder and leave the next day. Now they remained and continue to plunder the area for fifty days. On leaving Thrace they are reported to have taken 300,000 [?!] captives [van Dieten, II, 2, p. 280; Schopeni, 1829, I, pp. 535–536]. The story of this incursion, though absent from Kantakouzenos' narrative, however, can be regarded as authentic. It was the last Tatar incursion into

Byzantium mentioned in the sources. A special piquant element of the story is the encounter between the Tatar and Turkish troops near the Hellespontos. One could regard this episode as symbolic: the northern nomadic warriors and experienced conquerors of the Balkans gave way to new, ambitious Turkic soldiers coming from the south. In a few decades the Turks were to set foot in the Balkans more firmly than the Tatars could ever have dreamt of for themselves.

Though the last Tatar incursion occurred in 1337, the danger was not over for years to come. In the spring of 1341, a Byzantine embassy headed by Demetrios Kydones set out to Öz Beg Khan in order to avert an alleged Tatar attack against Byzantium [Laurent, 1960, pp. 145–162; Fatouros, Krischer, II, S. 251, n. 359]. The Tatars had apparently given up their plan to invade the Balkans because of internal troubles. The greatest Khan of the Jochid Ulus, Öz Beg, died in 1341/42, and from that time onwards the Golden Horde was involved in other theatres of war and reduced its interests in the most western part of the Balkan Area. Tatar clans in Dobrudja and Bujaq acquired independence from the central power of the Tatars and lost their former political importance in Balkan politics [Spinei, 1986, p. 127].

§ 3. Wars in the West. Poland and Lithuania

Iskander Izmaylov

After the return from the European campaign the borders in the west were in a certain way stabilized. The Polish Kingdom became the northwestern neighbor of the Chinggisid empire, and relations with it, and later with the Grand Duchy of Lithuania, were becoming a top priority in Ulus of Jochi foreign policy. The special attention paid to this course by the Golden Horde Khans stems from the complex diplomatic game that they had entered into, which involved having conquered Russian principalities and imposed vassal relations on the Balkan states. The task to hold these territories in the orbit of its interests and to secure them from the expansion of an ever strengthening Poland and particularly the Lithuanian

Duchy, demanded energetic preventive offensive actions. A solid reason for vigorous actions against the Polish and western lied in the desire to isolate the Galicia–Volhynian princes, preventing them from becoming the center of a resistance to Ulus of Jochi power. The policy of division and isolation of potential adversaries and of the maintenance of a 'balance of fear' in the face of the threat from Ulus of Jochi served this goal. In this context, the policy of the Ulus of Jochi's Khans in respect to Poland and Lithuania did not envisage conquering their lands or even forcing vassalage upon the Kraków Piasts or Lithuanian Dukes Mindaugas and Gediminids, but instead focused on more complex geopolitical goals.

In general, the history of the relationship between these two states can be divided into several stages. **The first period (1241–1320s)** was a time of continuous strength for Ulus of Jochi, during which the Khans strived to weaken the power of the Galicia-Volhynian princes [1240–1270s] and to impose their influence upon Poland and Lithuania, and then later to keep the Prut-Dniester interfluvium and Southern Rus' [Ruthenia] in their sphere of influence.

Having returned from the campaign in the west, Batu Khan actively set about mastering the conquered territories and bringing all the rulers of the defeated lands to vassal dependence on the Great Khan. One of the main and most acute problems turned out to be the independent policy pursued by the mighty prince of the Great Galicia-Volhynian Principality in relation to the Ulus of Jochi's Khans and his neighbors. The strengthening and consolidating of power among the southwestern Rus' with its center in Galich in no way met the interests of the Mongol Khans. A military campaign was undertaken in 1243 against Rostislav Mikhailovich, son of Mikhail of Chernigov, the last Grand Prince of Kiev, who, using the support of the Hungarian king, Galician boyars and Bolkhov Land, attempted to seize power in the Galicia-Volhynian Principality. According to the chronicles: '... Rostislav was defeated by the Tatars in a pine forest and fled to Ugry' [Galician-Volhynian Chronicle, 2005, p. 113]. At the same time, Batu dispatched two of his military commanders ['Bogatyr's'] 'Manman and Balai' to find and capture Daniil Romanovich. The latter, however, 'shut Kholm' and avoided captivity. Tatar units '... fought through to Volodava and along the lakes causing much misfortune to the Christians' [Galician-Volhynian Chronicle, 2005, p. 113; Complete Collection of Russian Chronicles, 2, p. 794]. This campaign, as well as an unfavorably developing domestic situation, forced Daniel of Galicia to adhere the summon to come to Batu Khan and accept the latter's lordship over his principality. At this, both parties clearly pursued their own individual goals: Daniel, in his confrontation with Rostislav, the rebellious boyars, Poles and Hungarians, aimed to ensure the security of his domains in the east, while

Batu sought recognition for the Mongol Khans' power over the whole territory of the Rus' and, on that basis, the grounds to interfere in European politics. From that moment onwards the fate of the Galicia-Volhynia Rus' was tightly linked to the foreign policy of Ulus of Jochi in the west.

Over the span of ten years there existed this parity, when the Ulus of Jochi's rulers supposed that Daniel of Galicia executed their will, while he in his turn assumed that they would continue to be content with just formal vassalage and strengthened his power and authority, actively interfering in the affairs of the neighboring Hungarian and Polish Kingdoms. His victories over the Hungarians, alliance with Konrad, the Duke of Masovia, and the marriage of his son Leo with the Hungarian princess Constance contributed to the strengthening of his position as a kind of regional leader. Prince Daniel, however, always remembered that 'the Tatar host does not cease being dangerous as long as it is nearby' [Galician-Volhynian Chronicle, 2005, p. 127; Complete Collection of Russian Chronicles, 2, p. 826], as he said at the negotiations with the Papal Legate Opizo of Messina. This thought apparently formed the basis of his policy in relation to Ulus of Jochi and western neighbors. He sought to strengthen his power at the expense and with the help of the West in order to repel the advance of the Horde.

Such a policy clearly matched the interests of the Holy See as the ideological inspirer of European oriental policy. On the one hand, this allowed the West to deter the aggressiveness of the Mongols with minimum and demonstrative measures, while on the other hand, to increase its influence in the region. As early as 1245, the Holy See began negotiations with Daniel's representatives to make an alliance with him and persuade him, together with his boyars and clergy, to swear allegiance to the Pope. The negotiations ended in failure. In 1252, however, Daniel, drawn into the struggle for the Austrian succession and exposed to military pressure by the Tatars, and being in need of strong allies in the West, resumed talks. Meeting him half-way, the ecclesiastical council in Lion in 1253 called on Christians to crusade against Ulus of Jochi. In these circumstances Daniel had

to make certain concessions to the Holy See and in the winter of 1253 accepted the title of crowned king.

The Khans of Ulus of Jochi followed attentively Daniel's successes in the West, but for a long time their activity in this direction was delayed by the tasks of strengthening Khan power in North-Eastern Rus' and by inner Mongolian affairs. However, after the 1252 rebellion of Andrey Yaroslavich, the Grand Duke of Vladimir, who was an ally of Daniel of Galicia, the attitude towards him drastically changed. The ruler of the right wing of Ak Horde, ulusbek Kurmysh [*Kurmyshi*, *Khurrumshi*, *Kuremsa* in the Russian chronicles], a son of Orda, began to take steps in order to weaken the authority of Daniel of Galicia and really place him in a subordinate position. Therefore Kurmysh backed anti-Prince feelings among the nobility of the border areas [Bolkhov Land] and even dispatched his vicegerents—basqaqs [darughachi] to some towns, taking the latter under his patronage [for example the town of Bakota [Galician-Volhynian Chronicle, 2005, p. 128; Complete Collection of Russian Chronicles, 2, pp. 828–829].

In 1254 Kurmysh launched active military operations against the Galicia-Volhynian Principality, attempting to capture Kremenets by surprise [Galician-Volhynian Chronicle, 2005, p. 133], but failed to achieve such a goal. In return, Daniel, having repelled this incursion, moved onto the offensive and routed Kurmysh allies in Bolkhov Land and the Southern Bug river region. The following year Daniel resolved to resume the offensive and concluded an alliance with the Lithuanian Duke Mindaugas, deciding to take Vzvyagl and afterwards apparently Kiev Land. The campaign in general was successful, and the town, an ally of the Horde, was taken by storm, plundered and its residents barbarously slaughtered ['and a lake of bodies and shields and helmets lay on the ground' (Ibid.)]. A conflict between the Galicians and Lithuania, leading to the break-down of the alliance, flared during the argument over the war plunder. Daniel had been having rather strained relations with Lithuania already before that due to disputes over the section of Yatvingian lands.

In retaliation, in the winter of 1254 Kurmysh, using the opportunity of the Prince's absence, attacked Lutsk and other towns, but without success: 'not succeeding in anything, [he] withdrew to his country, that is to the fields' [Ibid., p. 134; Complete Collection of Russian Chronicles, 2, p. 842]. Overall, Daniel held out against Kurmysh troops rather effectively. A chronicler expressly wrote that the Prince of Galicia 'fought with Kuremsa without any fear of him, for Kuremsa could no longer do him harm' [Galician-Volhynian Chronicle, 2005, p. 136; Complete Collection of Russian Chronicles, 2, p. 846].

The situation changed in 1257, when this Ulus was transferred to Boroldai Bagatur. The domestic historiography usually associates this change of Ulus's rulers with the misfortunes of Kurmysh in his battle against Daniel (see: [Pashuto, 1950, s.274; Egorov, 1985, p. 188; Galician-Volhynian Chronicle, 2005, pp. 136, 312]), which is explained by the usual Russian wish to present Russia as the center around which the policy of Ulus of Jochi's khans revolved, and the relationships with which were allegedly determined all their internal policy. It seems that such an approach which replaces cause for effect, is not quite true. For the change of Kurmysh was brought about by the normal Jochid practice of redistributing uluses upon accession of a new khan to the throne, although his clan retained power and possessions in the Dnieper-Dniester interfluvium, and his sons Abaji, Karajin and Ianji played an important role at the court of Nogai, and it was noted that they belonged among 'senior military commanders and those commanding tens of thousand of soldiers in northern regions. They were equal to Nogai in terms of their power, value and the size of the forces'. It is their support that sharply increased Nogai's forces in his battle against Tokhta Khan, and their shift to the Khan's side brought him victory [Collection of Materials Relating to the History of the Golden Horde, 1884, pp. 112, 113, 117].

It is possible that there could be quite a banal reason for the transfer of power to a new ulusbek—Kurmysh's death. In this sense, it seems logical that the new Khan Berke assigned a famous commander, an old associate

Russian riders. Illuminated Chronicle.
End of the 16th century.

of Batu and Subutai as the head of one of the key uluses—the right wing of Ak Horde. At the same time it clearly demonstrates a change in his internal and foreign policies, his desire to save them from the dictates of the Great Khan and the all-Mongolian Kurultai, to give a new impetus to territorial expansion. Poland and Lithuania became one of the directions of this new aggressive policy. In light of this new course, the principality of Galicia-Volhynia became just a lever, a tool of military-political influence on the West.

Compared with his predecessor, Boroldai obviously possessed great military capabilities. This was apparently due to the fact that he relied on a powerful clan. Rather, he possessed large military forces, which, in terms of their number, were comparable with the army invading Poland in 1241. In any case, having just accepted power in the ulus ‘and having settled as a local ruler’ [Galician-Volhynian Chronicle, 2005, p. 136; Complete Collection of Russian Chronicles, 2, p. 846], Boroldai undertook a large campaign against Lithuania in 1258. This choice was not accidental. The newly formed Duchy of Lithuania was rapidly gaining pow-

er through the unification of western Russian and Polish lands and by taking advantage of conflicts between its neighbors. Boroldai’s campaign had to prevent the strengthening of Lithuania, break its alliance with Galich and suppress the fronde of Daniel of Galicia.

Having reached the borders of the principality of Galicia-Volhynia, Boroldai sent ambassadors with a laconic offer: ‘I’m going to Lithuania; if you are my friend, let’s go with me’ [Ibid]. Weakened by wars with his neighbors, Daniel did not dare to refuse the offer. The troops of Boroldai moved from the Dnieper River Region to the borders of the Galician-Volhynian principality, where regiments of Vasilko, Daniel’s brother, came from Berestye to unite with him. The Russian and the Golden-Horde detachments met probably somewhere on the right bank of the Neman river. The united forces advanced to the north, having ruined the center of the Duchy of Lithuania –Trokaysky and Nelshansky lands, which are located in the southeast [Galician-Volhynian Chronicle, 2005, p. 136; Complete Collection of Russian Chronicles, 2, p. 847]. Having finished devastating the right bank of the Neman river, the Russian-Golden-Horde troops crossed to the left bank of the river, to the land of the Yotvingians [Complete Collection of Russian Chronicles, 2, pp. 847–848].

Authors, who were independent from the southern Russian chronicles, eloquently pointed out that ‘the Tatars captured the entire country of Lithuania’ [Complete Collection of Russian Chronicles, 5, p. 189], confirming the opinion about the substantial devastation of the Duchy of Lithuania. The Tatar-Russian army turned from the land of the Yotvingians to the south and returned to Volhynia, having entered the city of Dorogochin on the Western Bug [Galician-Volhynian Chronicle, 2005, p. 136; Complete Collection of Russian Chronicles, 2, p. 848]. At the same time, Daniel’s troops invaded Black Rus’ and took Volkovysk seeking to capture Lithuanian princes Vaišelga and Tektivill [Ibid]. In addition to its immediate purpose - to attack a rising Lithuania, the campaign had another purpose - to deprive Daniel of a potential ally by turning Lithuanian princes into his worst enemies [Pashuto,

1950, pp. 283–284]. This part of the plan also was a success. In the same year, the Lithuanian prince Vaišelga attacked the Black Rus', seized it and even captured Roman, Daniel's son.

In the autumn of the next year, 1259, Boroldai moved his troops to Poland, wishing to attack the richest land of Sandomierz and Krakow [the details of this campaign see in: (Ibid, p. 284; Schaveleva, 1978, pp. 307–314)]. His way lay through Volhynia - the land of his ally, the prince of Galicia. To meet the ulusbek, prince Daniel sent his brother Vasilko and sons Roman and Leo, as well as the Kholm bishop Ivan. He himself, as in 1241, in fear of Tatar retaliation, fled at first to Poland and then to Hungary. The city of Shumsk was the first place in Volhynia, where Boroldai's army stopped, and where Boroldai issued an ultimatum ['if you are my friends'], explicitly threatening to devastate their lands in case of disobedience, and gave the order to remove the fortifications of the Galician-Volhynian fortresses of Lviv, Kremenets, Lutsk, Danilov and Stozhesk. Having achieved seen his order fulfilled, Boroldai moved to Vladimir of Volhynia, where fortifications were also burned and damaged. Only residents of the city of Kholm, locking the gates in front of the united army, refused to obey the order of Prince Vasilko to remove the city's fortifications [Galician-Volhynian Chronicle, 2005, pp. 137–138; Complete Collection of Russian Chronicles, 2, p. 851].

Boroldai was not going to undertake a long siege of a well-fortified city, so he immediately led his troops to Poland to Lublin, 'having started a war against Poland'. The united army further moved to Zawichost, near which they crossed the Vistula River and moved to its left bank, and from there—to Sandomierz [Galician-Volhynian Chronicle, 2005, p. 138; Complete Collection of Russian Chronicles, 2, p. 852]. Having approached Sandomierz, the united army besieged it. According to the chronicler, 'they surrounded it from all sides and installed poroks, and poroks were blowing day and night, and soldiers were shooting arrows, so that no one could come out of the city' [Ibid]. On the fourth day of the siege—on 30 November 1259—the city was taken by a direct assault, mercilessly looted and burned.

In general, this campaign had no long-term consequences. It was very interesting that Boroldai did not set any political requirements to Polish princes—he required neither subordination, nor any tribute, so the domestic historical science usually considered this campaign only in the context of the weakening the Galician-Volhynian principality and suppression of Prince Daniel's independence [Pashuto, 1950, p. 284; Schaveleva, 1978, p. 307]. It seems that this is a too easy target for such a campaign. The siege technique and assault of Sandomierz showed that Boroldai's army could easily wipe out Russian southern fortresses, if they really resisted. At the same time, the goal of the campaign was achieved even without a fight. However, it does not explain the objectives and the direction of the campaign. Apparently, the choice of the objective of the campaign can only be explained by the fact that it was a stage of the 'second onslaught of the West', which Berke Khan was going to undertake. However, the capture of Sandomierz turned to be the only and, perhaps, the most striking episode. The confrontation, and then the war with the Hulaguids forced Berke to curtail military activities in the West, concentrating all the power in Transcaucasia.

Thus, the situation on the western borders of Jochid Ulus almost stabilized. The principality of Galicia-Volhynia got under the full control of the Golden Horde khans, which is highlighted by a quote from the chronicles, 'and all princes found themselves under the control of the Tatars' [Galician-Volhynian Chronicle, 2005, p. 147; Complete Collection of Russian Chronicles, 2, p. 872]. It is ironic, but the greatest benefit from these circumstances was drawn by Daniel of Galicia. On the one hand, he stopped playing an independent role in Eastern European politics, but retained his lands, and got an opportunity to use the military power of Jochid Ulus or the threat of its use for his political purposes. Moreover, Prince Daniel and his heirs began to suffer from the increasing aggression on the part of Duchy of Lithuania seeking to expand its possessions by adding southern Russian lands. Permanent military conflicts exhausted the strength of the parties. The attack of the Lithuanians became

Tatars under the city walls. Western Europe, 13th century.

especially intense after Prince Daniel's death and the actual collapse of the united principality in 1264. Under these conditions, Prince Leo I of Galicia repeatedly sought military support from the khans of the Golden Horde. Actively participating in interstate relations, he relied on the support of the Tartars and wished to expand his possessions and political influence in Poland, Lithuania and Hungary.

It began in 1275, when Leo applied to Mengü-Timur Khan, asking for help in the struggle against the Lithuanians [Ibid]. As a result of the successful winter campaign of 1275, Novogradok was seized, and the surrounding territory was devastated. According to a late Resurrection Chronicles, 'Tatar and Russian princes made a raid against Lithuania, but having seized nothing, they returned back; however, the Tatars did much harm to the Christians' [Complete Collection of Russian Chronicles, 7, p. 172].

A new campaign against Lithuania took place in 1277, when ulusbek Nogai asked the princes of Galicia to undertake a campaign against Lithuanians: 'You always complain about Lithuania; so you have now an army and a voivode Mamshey, so go with them against your enemies' [Galician-Volhynian Chronicle, 2005, p. 149; Complete Collection of Russian Chronicles, 7, p. 877]. His troops, having passed the Lands of Galicia-Volhynia from

south to north, surrounded Novogradok and without waiting for the forces of the Russian princes, 'seized everything' [Ibid].

A new surge of Nogai's military activity was caused by the death of Grand Prince Bolesław V the Chaste in 1279 and the desire of the Prince Leo of Galicia to add the Lublin volost to his possessions, which belonged to his father, or even take the entire Lesser Poland (the political interrelation of princes see in: [Galician-Volhynian Chronicle,

2005, p. 339]), 'and Leo wanted this land for himself', as the chronicler wrote [Ibid, p. 151]. Whatever it was, but in 1279 he again applied to Nogai with a proposal to start a campaign against Lesser Poland. In winter of 1279/80, Tatar troops under the command of 'Konchak, Kuzey and Kubatan' together with Prince Leo, his son Yuri, and brothers Mstislav and Vladimir Daniloviches, who, according to the chronicler, 'went against their will' [Ibid; Complete Collection of Russian Chronicles, 2, p. 882]. Leo's army reached Sandomierz, near which they crossed to the left bank of the Vistula River. After standing for some time near Sandomierz and having left Vladimir to besiege it, the remaining troops moved to Krakow, probably by separate detachments, devastating all the surrounding territories. However, in February 1280, Leszek II the Black, Prince of Krakow managed to significantly defeat these scattered detachments, and perhaps even defeated Leo's druzhina ('the Lithuanians killed many boyars and servants from his army, as well as killed any Tatars'), making him retreat to Galician territories, with big losses and 'great dishonor' [Ibid].

In response, Leszek began military activities against Princes Daniiloviches attacking their lands and cities. At the same time, Volhynian princes intervened in the internecine war between Polish Princes Conrad II and

Boleslaw for Mazovia, having woven Russian-Polish relations into a tight knot. The western policy of Jochid Ulus served as a general political background for these interprince relations. A new surge in its activity was at the time of the highest power of ulug karachibek Nogai, who reigned in the western wing of the Ak Horde. With strength and power of almost the entire empire, he intervened in Balkan and Central European policy, seeking to expand his influence. One of the episodes of his activity was associated with an attempt to subjugate Hungary to his power.

The campaign of 1285 organised by Nogai involved Oglan (Sultan) Tula Buga, as well as Russian princes Leo and his son Yuri, who participated 'unwillingly', and Prince Vladimir sent his *druzhina*. Moreover, the troops were moving, like during the campaign of 1241, in two columns: the one headed by Nogai moved to Transylvania in the general direction to Braşov, and the other led by Tula Buga, had apparently to cross the Carpathian passes and enter Transylvania. Considerable military forces were gathered for this campaign; according to the chronicler, 'heavy forces were gathered, and there was a large number of soldiers' [Galician-Volhynian Chronicle, 2005, p. 154; Complete Collection of Russian Chronicles, 2, p. 888]. Nogai was successful in this campaign, and Tula Buga with his troops got lost in the mountains. The chronicler wrote with irony, that where the Carpathians could be crossed in three days, they 'were roaming in the mountains' for 30 days in a terrible need of food. The Khan's troops, which did not join the battle, suffered terrible damage: 'Eyewitnesses told as follows: 100 of them died', and the hapless commander returned 'by foot with his wife and one horse' [Galician-Volhynian Chronicle, 2005, p. 154; Complete Collection of Russian Chronicles, 2, pp. 890–891]. In Arabic sources, the data about this campaign coincided with the following campaign against Krakow, but its description coincides namely with the story about Carpathian disaster contained in the Galician-Volhynian Chronicle. Al-Nuwayrī wrote that Nogai and Tula Buga returned from the campaign in different ways. 'At that time, it got cold, and much snow fell', the Arab histo-

rian wrote,—Nogai with his [troops] separated from him [Tula Buga], went to his winter quarters and arrived there safely. Tula Buga went and lost his way. Many of those who were with him died. The situation made people eat their baggage animals, hunting dogs and the meat of those [people] who died from severe hunger. He [Tula Buga] suspected that Nogai had intentionally arranged [this] trap and planned something evil against him' [Collection of Materials Related to the History of the Golden Horde, 1941, p. 156]. The military collapse was exacerbated by the fact that the rebellious Boleslaw, Prince of Mazovia, taking advantage of the absence of Daniiloviches, attacked their lands, forced them to return from the campaign weakening the Tatar troops.

The next campaign aimed at Lesser Poland also took place in the winter of 1287 (the historical literature repeatedly confused the chronology of these campaigns [Veselovsky, 1922, pp. 30–37; Pashuto, 1950, pp. 297–298], which sometimes makes some historians believe that there were two successive campaigns with the same route and similar activities [Egorov, 1985, p. 191]). The very idea of it obviously arose under the influence and with the active participation of Prince Leo, who continued to fight against Krakow ruler Leszek the Black for the Lublin Volost. According to the authors, a campaign against Lesser Poland was to lead to the siege of Krakow, but in reality, it developed under a completely unpredictable scenario. Even when it was organised, it turned out that there were contradictions between Khan Tula Buga and Nogai. It is possible that Prince Leo, trying to play on the contradiction between them, enlisted the Khan's support, as Arabic sources directly indicate that the initiative of this campaign belonged to the Khan, who 'invited Nogai with him' [Collection of Materials Related to the History of the Golden Horde, 1941, p. 156]. Under these conditions, ulug karachibek, who did not want to strengthen the Khan's power, interfered with him in every possible way and sabotaged his orders. No wonder that the Volhynian chronicler wrote that the Khan and his military commander did not trust each other and were even afraid of each other: 'The former was afraid of the latter,

and the latter was afraid of the former'. Later, the lack of one-man management played a fatal role in the failure of the campaign.

Obviously, in late autumn of 1287 Khan Tula Buga 'having gathered great forces', moved through the south-eastern border of Volhynia near Kremenets to Peremyshl. Then he moved to Buzhsk, where he sharply turned to the north toward Vladimir. Most likely, Tatar troops acted in separate corps and often without any coordination of their actions (according to the chronicler, Nogai 'did not consult with Tula Buga'). Only this can explain that some part of the Tatar troops remained in the vicinity of Vladimir, ruining these territories and 'devastating Vladimir lands' [Galician-Volhynian Chronicle, 2005, p. 156; Complete Collection of Russian Chronicles, 2, p. 893]. Most of Tula Buga's troops together with the army of the Russian princes undertook a march to the city of Zawichost, where they did not manage to cross the Vistula River and were forced to go to Sandomierz. By this time, the rivers of San and Vistula got frozen, and the Tatar and Russian troops crossed them and set a camp. For 10 days, they ravaged the neighbourhood of Sandomierz and the surrounding land, and then went to Krakow. But on their way they suddenly received the news that Nogai's forces had already advanced there.

As noted by the Volhynian chronicler, Nogai 'did not go together with Tula Buga to the Lithuanians, because there was a great contradiction between them, he but went to Peremyshl along his own route. He approached Krakow, but did not manage to do anything there, as Tula Buga could not do anything in Sandomierz, but he devastated the Lithuanian lands' [Galician-Volhynian Chronicles, 2005, p. 157; Complete Collection of Russian Chronicles, 2, p. 895]. After receiving this news, Tula Buga, realising that he could not get any military loot near Krakow, 'did not reach it and returned to Torzhkou'. Annoyed with the unsuccessful campaign, Tula Buga returned and stopped near Lviv, and in two weeks he looted the surrounding territories and residents, who imprudently came from under the protection of the city walls. Nogai, having devastated Krakow's surrounding territories, turned to the south.

This military and political activity resulted in the strengthening of the power of Jochid Ulus in Lands of Galicia-Volhynia and influence of their vassals. The interprince struggle between Daniel's descendants can serve as an example, in which Khan's power acted as an arbitrator [Galician-Volhynian Chronicle, 2005, p. 174]. But, at the same time, the campaigns of the 80s of the 13th century showed that scattered regiments of several southern Russian princes could not resist the neighbours' onslaught independently, without the support of the Golden Horde khans. In fact, there was no centre of power in the region, the role of which had been played by Nogai up to a certain moment. However, when his power weakened, and after his defeat and death as a result of internecine warfare in Jochid Ulus, the region was left for itself, which led to the appearance of a new regional leader—Duchy of Lithuania. All further attempts of Khans of Jochid Ulus in the first half of the 14th century to regain their influence in Central Europe failed.

The second period (1320s–1420s) was a time of gradual strengthening and expansion of the Duchy of Lithuania and Poland, which, having subjected the southern Russian lands, began to intervene in internal Horde affairs influencing the Khan's policy.

The division of the Daniiloviches' principality into a number of separate possessions and its military weakening made its territory an object of constant expansion on the part of Lithuania, Poland and Hungary. While Jochid Ulus was at the peak of its power, it restrained aggressive aspirations of these states protecting the lands of its vassals. As a result of a number of successful attacks in the 20s of the 14th century, Lithuania lost some of its possessions in the Kiev Land. In the fight against the Horde, Poland and Lithuania tried to rely on the forces of the Catholic Europe. Fulfilling their request, in 1329 the Pope appealed to the Christian rulers with a special message and encouraged them to organise a crusade against the Tatars. However, nobody replied to this appeal.

Having found no understanding among the Europeans, the Poles decided to independently wage a war against the Golden Horde. This war proceeded with varying success. In 1337,

united Russian and Tatar troops tried to seize the Lublin Volost [Pashuto, 1959, p. 391], but failed. And in 1340, Polish spies managed to conspire and poison Prince Yuri of Volhynia. Taking advantage of this, Casimir, Prince of Poland, conquered the entire principality together with the Hungarians. In response, Öz Beg Khan directed a 40-thousand army against Lesser Poland in 1341, which although was defeated in the battle on the Vistula River [Ibid.], but managed to force Polish and Hungarian troops out of Volhynia [Safargaliev, 1960, p. 67]. All this stopped the Polish-Lithuanian attack of the western lands of Rus' for a while.

But already in 1344, Casimir started a new war for Volhynia, but only the competition with the Hungarians did not allow to add the principality to his possessions at that time. This happened in 1349, when his troops took control over the key Volhynian cities—Belz, Brestev, Vladimir, and later Galicia was also transferred under his control. It is known that Casimir, having entered the war against Jochid Ulus, again appealed to Pope Clement IV with a request to organise a crusade against the Tatars [Ibid., p. 105]. Simultaneously the pressure of Lithuanian princes on the lands of Smolensk, Polotsk and Pinsk princes increased.

A large-scale crisis and discord in Jochid Ulus in the middle of the 14th century became a turning point in the western policy, when the weakened empire was unable to provide effective support for western and southern Russian principalities, which passed under the control of Lithuanian grand princes one after another. There emerged a new military-political situation. Historian M. Grushevsky described it in the following way: 'The Tatar leadership was replaced by the Lithuanian "supreme power", but this "supreme power" came much more unnoticeably, perhaps gradually, without introducing drastic changes in the life of the region' [Grushevsky, 1891, p. 470]. Obviously, the author was quite right when he said that the power of the Lithuanian princes was established gradually, as if it was growing into the former system of Russian principalities. In fact, it was not quite a conquest, but rather adding on the basis of contracts and dynasty marriages, which guaranteed Russian princes and boyars

the preservation of their traditional rights and privileges.

By the middle of the 14th century, the power of Lithuanian princes had significantly strengthened; they managed to suppress the absolute power of the local nobility and direct its activity to foreign expansion, which was carried out mainly by several Lithuanian noblemen united around the political centre in Trokai and Prince Keistut. In the struggle for the lands of the Galician-Volhynian principality, Lithuania faced Polish princes, and after a series of Polish-Lithuanian wars in the 40–60s of the 14th century, they were divided between the winners (the extension of the Grand Duchy of Lithuania see in: [Ibid., pp. 470–490; Liubavsky, 2004, pp. 49–70; Pashuto, 1959; Florya, 1980, pp. 142–148]). The area of interest of these states was gradually defined: Lesser Poland princes and Hungarian kings claimed Volhynia and Galicia, and Lithuania wanted to obtain Smolensk, Polotsk, Kievschina and partially Volhynia.

By virtue of this 'creeping' expansion, the Grand Duchy of Lithuania did not engage in an open confrontation with Jochid Ulus for a long time, since it did not change the legal status of the Russian principalities. However, with the weakening of the Khan's power, during the 'Great Troubles', the process of absorbing Russian principalities became so extensive that it started to directly affect the interests of Ak Horde rulers. The attempts to stop the process failed. The decisive attack against the power of Tatar khans in Southern Rus' was undertaken by Algirdas, the Grand Duke of Lithuania (see: [Florya, 1980, pp. 149–150, Tsentralna Ukraina, 2003]). The first serious battle he won was on the Blue Waters River (the middle course of the Southern Bug) in 1363, which was held against the Tatar ulusbeys of the Crimea, namely Hajjibey, Kutlug Buga and Dmitry, 'and they were the three brothers, Tatar princes, fathers and grandfathers of the Podolsk land, and they assigned atamans, and the darughachis coming from these atamans charged tribute from the Podolsk land' [Complete Collection of Russian Chronicles, 8, pp. 31–32]. The military success opened the way for the Lithuanians to subject the Transdnistria and Dnieper River Region.

Expanding their sphere of influence, Lithuanian troops advanced south to the lower reaches of the Dnieper River, until they reached Beloberezhye [Complete Collection of Russian Chronicles, 15, p. 75; 35, p. 66]. Another clash between the Lithuanian army and the Golden Horde was recorded in 1374, when one of the beys was defeated, whose ulus remained on the western outskirts of the state. It is impossible to localise this possession correctly due to the lack of any geographic indications, but it is clear that it was the Dnieper-Dniester interfluvium [Florya, 1980, pp. 153–154, note 39]. Having suffered a number of serious defeats, the khans of Jochid Ulus not only lost the control over the southern Russian principalities, but were also pushed far into the Black Sea Steppes.

Speaking about the pushing of the Golden Horde out of the southern Russian principalities, we cannot but note an important question of the status of these territories with respect to the khans of Jochid Ulus. The historical science has usually characterised this process unambiguously, as liberation from the 'Golden Horde yoke'. For example, even A. Presnyakov wrote that the transition under the control of Lithuania 'promised liberation from the Tatar power and the hateful tribute' [Presnyakov, 1918, p. 142]. The works of modern Ukrainian historians lie within the framework of this hypothesis (see the articles: [Tsentralna Ukraina, 2003]). However, it seems that the situation in Russian lands was much more complex and far less optimistic regarding the 'liberation from the Tatar yoke'. As proven by Russian historians, such as I. Grekov and B. Florya [Grekov, 1975, pp. 26–33; Florya, 1980, pp. 145–148], the conquer of Russian principalities did not mean that their status was to be changed radically, and the khans of Jochid Ulus quite successfully achieved recognition of their traditional rights in all Russian principalities. The desire of the Grand Duchy of Lithuania and the Polish Kingdom, which obtained a significant part of western and southern Russian lands in the 14th century, to weaken the dependence of their possessions from the Horde was the major pivot of political interaction between these states and the Golden Horde and Tatar Khanates in the latter half of the 14–15th centuries.

Despite the general tendency towards a weaker power of the Jochids' empire, this fight took the form of a century-long conflict and was full of dramatic collisions. Moreover, the opponents of the Golden Horde were not always successful. Even Casimir, the King of Poland, who seized Galicia Land in the middle of the 14th century, although his possessions were far enough from the main possessions of the Tatars, failed to release the occupied land from the formal dependence at that time.

Even more specific data are at our disposal regarding the Russian possessions of Lithuanian Gediminovich princes. Thus, a letters patent of Alexander Koriatovich, a Podolia Prince, dated 1375 pointed out that the possessions of the recipient were not granted immunity from payment of a tribute to the Horde, 'while all the people should have paid the tribute to the Tatars, they also have to pay it to you' (cited from [Florya, 1980, p. 146]). Similar indications are contained in later letter patents of Lithuanian princes from Podolia.

This collision was most clearly described in a famous *yarliq* of Khan Toktamyskh dated 1397 to the Grand Duke of Lithuania Jagiello Olgerdovich, which reads as follows: 'This is the principle of ruling in your lands, as *volosts* paid tribute to the White Horde, pay us what is ours' [Ibid.]. The text of the *yarliq* is a list of lands and *volosts* granted by the Khan to Great Dukes of Lithuania. The issuance of this *yarliq* was due to the fact that, having lost power in Jochid Ulus and forced to flee to Lithuania, Toktamyskh, relying on the support of Vytautas, gave him a document, under which he refused the supreme Horde rights to the lands of the Grand Duchy and, consequently, rejected to obtain tribute from these lands; no wonder that the list of lands in the *yarliq* text pointed out that they were transferred 'together with the tribute and all other charges'. Consideration of the list of lands and *volosts* contained in the *yarliqs* shows that the 'grant' of Toktamyskh applied to the territory of the later Kiev, Volhynian and Seversk lands of the Grand Duchy, as well as to Podolia. Thereby, it becomes apparent that at the end of the 14th century, a considerable part of the Grand Duchy was in a certain dependence on the Horde. To represent

a complete image, it should be noted that even the agreement with Toktamys̄h did not lead to a complete cessation of tribute payment from the Lithuanian possessions. Even in the middle of the 15th century, Mongol-Tatar 'darugas' charged 'yasak' from a number of cities of the Kiev land [Syroechkovsky, 1940, p. 46, 70]. Judging by the yarliqs of the Crimean Khan Haci Giray (1461) and Menli Giray (1472 and 1507) to grand dukes of Lithuania, the tradition of paying tribute for Russian territories to the Crimean Jochids existed until the 16th century.

The territories of the Southern Rus' were not only to pay tribute to Jochid Ulus, but were, as the Khan's vassals, to participate in its military campaigns. It is unknown whether this law was effective, and whether it all came to money payments, but formally it seems to have existed since the 13th century. This is evidenced by a fragment of a peace treaty signed in 1352 between Casimir and Gediminovich princes, where it was explicitly stated: 'If the Tatars go against the Lithuanians, then the Russians (meaning Lithuanian Rus'—I.I.) must go with the Tatars against their will' (quoted from: [Florya, 1980, p. 147]). Thus, even in the middle of the 14th century, Russian lands of the Grand Principality had a formal obligation to send an army to support the khans of Jochid Ulus.

Political relations between Poland, Lithuania and Jochid Ulus in the latter half of the 14th to the beginning of the 15th century were rather complex and often came to armed conflicts. However, when Poland and Lithuania got united, there gradually emerged a relationship triangle, whose corners' interaction determined the policy of the western part of Eastern Europe in the 15–17th centuries—Polish-Lithuanian Commonwealth, Muscovy and Jochid Ulus, and later its successors—the Great Horde and the Crimean Khanate. Already since the 70s of the 14th century, these countries concluded various short-lived alliances among themselves, trying to establish their hegemony at the expense of their neighbours. Until 1380, a union between Mamai and its dependent khans and Algirdas, the Grand Duke of Lithuania was quite effective. During Toktamys̄h's

reign, these relations were fairly stable and mainly peaceful.

The relations between the Golden Horde and the Grand Duchy of Lithuania passed to a new level after 1397, when, defeated by Timur and then expelled from the country by the new Khan Timur Qutlugh and his ulug karachibek Edigü, Toktamys̄h fled to Duke Vytautas, bringing a significant group of Tatars with him, along with his court and his warriors' families. Some of them, having received lands to settle near Trokai—Tatar Sorok village, became a nucleus, where other Jochid Ulus' natives started to gather, and a centre for forming special military units of Lithuanian Tatars. In Lithuania, people from Jochid Ulus settled by clans, it became a basis for the military and administrative division into regiments—Khorugv. Names that matched the clan division in the Golden Horde are as follows: Ulan of the Grodno-Oshmyany Khorugv (obviously, from the descendants of Jochids—Oglans); Yushin of the Trakai Khorugv (from the clan of Uyshun/Uysun/Yushin); Naiman of the Vilna Khorugv (from the Naiman clan); Yalair of the Novogrudok Khorugv (from the clan of Jalair/Yalair), Kondrat of the Moreshlyan Khorugv (from the clan of Kongrat/Kundrat), Baryn of the Novogrudok Khorugv (from the Baryn clan) (see details in: [Mukhlinsky, 1857; Grishin, 1995, 2000]). Later, already in the 15–17th centuries, when this military and administrative system was established, Tatar khorugvs played an important role in the military history of the Polish-Lithuanian Commonwealth, being the most important basis for the royal power and its regular army.

In an effort to enthrone Toktamys̄h and receive a key ally to capture the hegemony in Russia, Vytautas '...gathered many people, Toktamys̄h and his court were with him, and Vytautas involved the Lithuanians, Germans, Poles, Samogitians, Tatars, Vlachs, Podolians, and there were 50 princes with him, and the army was strong enough. And with all the regiments and units, he went against Tsar Temür Qutlugh and against his entire Tatar army' [Priselkov, 1950, p. 450]. However, Vytautas' attempt to overthrow Edigü and Khan Temür Qutlugh failed. Edigü and Khan Temür Qutlugh approached him, and in a fierce battle on the

Vorskla River on 12 August 1399 Vytautas and his ally Toktamysch were defeated by Edigü's army (see more on the military and political circumstances of this battle in: [Lyaskoronsky, 1907, pp. 18–38; Jakubovsky, 194, pp. 30–45, Izmaylov, 1994, pp. 80–83]). Having defeated the united Russian-Lithuanian-Polish army and the Tatar troops, Edigü moved to Kiev, and some detachments even reached Lutsk: 'And Tatar troops even reached the great Lutsk, and devastated many towns, and subjected many states, and Temür Qutluğ did much harm to the Lithuanian land and returned back to his country' [Priselkov, 1950, p. 451]. Vytautas suffered a terrible loss and gave up the idea of establishing his power in Russia forever.

This defeat resulted in the strengthening of the central power in Jochid Ulus and in the deterioration of relations with Lithuania, although there were no serious military clashes. The former Khan Toktamysch was forced to flee and hide in Siberia, where he was killed in 1407. In 1409, Toktamysch's sons fled to Lithuania, along with their families and military detachments. The eldest of Toktamysch's sons, Sultan Jalal al-Din was accepted at the court of Grand Duke Vytautas and included in his entourage. Later, the young Sultan heading his *tysyacha* participated in the 'Great War' against the Teutonic Order and the Battle of Grunwald in 1410 [Dlugosz, 1962, p. 57, 198, note 23; Biskup, 1991, pp. 14–16]. According

to a legend, the Grand Master of the Teutonic Order, Ulrich von Jungingen, was killed in the battle by a Tatar commander Bagaradin. In this war and later, Tatar troops showed excellent military skills, were characterised by manoeuvrability, rapidity and fearlessness in the battle.

Later, after a revolt of the nobility and Edigü's overthrow, Vytautas actively supported his Jochid proteges—Toktamysch's sons, in their fight against Edigü. Finally, Edigü was killed in 1420, Jochid Ulus was disintegrated into separate khanates, and the Polish-Lithuanian Commonwealth was to seek for allies and fight against the enemy forming a new military and political configuration of states in the post-Horde space.

Thus, the relations between Jochid Ulus, Poland and Lithuania were not only an external, but also an important internal political factor influencing the subjected lands of the southern Rus', for nearly one hundred and fifty years. The relations of Poland and Lithuania with Jochid Ulus were full of military and political contacts and wars, but they were not limited by them, since diplomatic, trade and ethno-cultural communication also played an important role. Tens of thousands of Lithuanian Tatars—heirs of the Golden Horde—were a part of upper and lower classes of the Polish and Lithuanian society for many centuries, faithfully serving to their new homeland and leaving a deep trace in the history and culture of Poland and Lithuania.

§ 4. Relations between the Jochids and Chinggisids in Middle Asia

Alsu Arslanova

According to Rashid al-Din, Chinggis Khan allocated the most remote western lands as an ulus for his eldest son Jochi, many of which were even to be conquered—from Kayalyg and Khwarezm 'to those places that were reached by the hoofs of Tatar horses'. The northern part of Khwarezm was included as a share in the Middle Asia. With the departure of Chinggis Khan's troops, Jochi left Chintimur as a ruler in Khwarezm, who later was appointed by Ögedei as the governor of Khorasan and Mazandaran. The southern part of Khwarezm,

the entire interfluvium between the rivers of Amu Darya and Syr Darya belonged to Chagatai. N. Veselovsky noted that a confusion existed in the historiography about inclusion of Khwarezm in uluses of Chinggisids. He wrote as follows, 'Speaking about the division by Chinggis Khan of his empire, Islamic writers say nothing about the fact that Khwarezm was transferred not to Chagatai's descendants, but, as it can be concluded from the words of these writers, to Jochi's descendants. This circumstance made some European writers concerned

about this issue, make an error, as they thought that Khwarezm belonged to Chagatai' [Veselovsky, 1877, p. 75].

It is known that Jochi and Chagatai brothers were out with each other. V. Bartold drew attention to the fact that during the siege of Gurganj (Khwarezmian capital), Chagatai insisted on destroying the city, while Jochi, to the contrary, wished to preserve the centre of his future possessions. According to V. Bartold, only Chinggis Khan's interference softened the conflict between his sons, and Gurganj was later wiped off the map [Bartold, 1963, I, p. 502]. This case clearly demonstrates a characteristic feature of the severe struggle among the Mongol elite, which included supporters of diametrically opposite directions, who had different opinions regarding the essence of the Khan's power, the treatment of the conquered peoples, their economy and religion. I. Petrushevsky called these directions as political tendencies. 'One of them was relatively progressive,—he wrote,—and provided for creation of a strong centralised state with strong khan's power and, therefore, control over centrifugal desires of the Mongol-Turkic feudal military and nomadic aristocracy' [Petrushevsky, 1949, p. 111]. Ögedei and Möngke were proponents of tendency. However, until the end of the 13th century, the largest part of the Mongol military nomadic noblemen supported another tendency—a reactionary and hostile to the first one. Proponents of this movement, maintaining loyalty to Mongol nomadic traditions, were extremely hostile to a settled life and the local population, which they considered to be only an object of rapacious exploitation. 'They sought to destroy cities, seeing them as footholds for anti-Mongol revolts, and convert irrigated lands to pastures. Nomadic feudals were enemies of Islam and the local culture, which they contrasted to the Yasa of Chinggis Khan and the Uyghur nomadic culture. Chagatai was an ardent opponent of this policy, who was a recognised expert and guardian of the Yasa of Chinggis Khan, an implacable enemy of Muslims, the urban life and local culture. The struggle between these two directions passes through the history of the Golden Horde, the states of Hulagu's and Chagatai's descendants as a red thread' [Stroeva,

1958, p. 207]. We can say that its essence was not only in a contradiction as to the methods of exploiting the conquered peoples, but also in the issue of their merger with the feudal upper class and the adoption of a new religion.

Chagatai, the second son of Chinggis Khan, received from his father lands inhabited by Barlas and Khongirad tribes, as well as territories from the Southern Altai and the Ili River to the Amu Darya. Thus, his domain included the Eastern Turkestan, the greatest part of Zhetysu and Transoxania, that is a large part of the Middle Asia (including Bukhara and Samarkand) and the modern day Kazakhstan. 'The main area of his ulus was called Ile Alargu, with a centre in Almalyk' [Istoria Vostoka, 1995, II, p. 409]. According to eastern sources, Transoxania (the area between the rivers of Amu Darya and Syr Darya) was a part of Chagatai's ulus, but in fact it was owned by Ögedei Khan. It is known that in the 13th century Mongol khans did not manage the economic and cultural life of their uluses, limiting to receiving tributes from the population. 'In the western area,—Peter Golden said, 'Some borders between nomads and settled people were unclear, because they were included in a close political, social and economic contact. However, the settled society was often controlled by steppe horsemen, because aggressive and warlike nomadic traditions remained strong, which resisted the desire to create a city and considered them to be only an area for robbery. Personal qualities of Chagatai's descendants, which can be simply called pro-nomadic (according to Juwayni, he entrusted control over yasa (yasak, Mongolian "Yasa(g)"), laws, tribal customs and orders of Chinggis Khan, which are equivalent to the Turkic töre, that is an embodiment of the nomadic common law) and anti-urban, intensified the antagonism. The nomadic way of life was undoubtedly an element contributing to instability, which has always been an acute issue in the history of this region. However, the weakness of Chagatai's central power was also borrowed from the major examples of the Chinggisids' policy. Enthronement of Tolui's descendants, creation of the Ilkhanid dynasty in Iran... and the union between Toluids and Jochids, at least in respect to Chagataids, all this contributed

to their isolation and often interrupted their access to urban centres and trade, which was needed for nomadic economy. When necessary, Ögedeids and Chagataids were forced to model something resembling a state for the sake of self-preservation' [Golden, 1992a, p. 303].

At first, Chagatai's power covered only the nomadic steppe tribes, because according to the order of Chinggis Khan, Transoxania was in fact controlled by a rich Khwarezmian merchant and farmer Mahmud Yalavach, who made Khodjend city his residence. Subsequently Chagatai dethroned this governor without the consent of the Kaan. Ögedei, who gave Transoxania to Chagatai in *inja*, appointed Mahmud Yalavach's son to this position—Masud Bek, who began to manage the affairs and all the settled population of Middle Asia, Zhetysu, and Eastern Turkestan (from Beshbalik to Samarkand and Bukhara) until the beginning of the 14th century.

During the reign of the great khans Ögedei, Güyük and Möngke, the unity of the Mongol Empire was generally maintained. However, as the land assigned to the members of the Khan's dynasty became further from the centre, as noted by V. Bartold, 'princes having independent military force started to gradually obtain all the power, and the empire was doomed to disintegration into a number of independent kingdoms' [Bartold, 1963, II, 1, pp. 59–60].

In the 40–50s of the 13th century, there started a fierce struggle for power between the descendants of Chinggis Khan, which was due to the increasing striving for independence. This process of disintegration of the Mongol Empire was objectively linked to a lack of political, economic and cultural ties between its multi-tribe parts and their increasing military and economic power.

Shortly after Ögedei's death in 1241, Chagatai also died. Under the testament, Chagatai's ulus was now headed by his grandson Qara Hülegü, who appointed Masud Bek as the governor of 'Transoxania, Turkestan and other regions'. Güyük, Ögedei's son, dethroned Qara Hülegü saying that the grandson could not be on the throne while the son was alive. He appointed Yesü Möngke as the head of the ulus—the eldest living son of Chagatai.

As a result of serious confrontations involving the throne of the Great Khan between the descendants of Ögedei and Tolui, Möngke eventually ascended to power (1251–1259). He was the eldest son of Tolui, and many princes of Ögedei's and Chagatai's houses were accused of conspiring against him and executed. As is well known, Batu played an active role in this struggle and managed to take advantage of the moment. 'The Mongol Empire was actually divided between the heirs of Tolui and Jochi in the middle of the 13th century. The frontier borders of Batu's possessions, who was the son of Jochi, and the Great Khan Möngke were along the Chu and Talas rivers. Zhetysu fell under Möngke's control, and Transoxania came under the Jochids' control for a while' [Istoriya Vostoka, 1995, II, p. 410]. According to William of Rubruck, the border between the spheres of influence of Möngke and Batu lied to the east of Talas, which meant that a part of the lands of Jochid Ulus belonged to Möngke's sphere of influence. This situation was due to the fact that Qara Hülegü supported the candidacy of Möngke to the position of Kaan, and Yesü Möngke was among his opponents. Möngke restored the power of Qara Hülegü in Chagatai's ulus and gave him a *yarliq* that allowed him to kill Yesü Möngke. However, Qara Hülegü died travelling through the Altai. According to the Khan's *yarliq*, his wife Orghana killed Yesü Möngke and began to rule in Chagatai ulus in the name of her infant son Mubarak Shah. Möngke then sent troops to the west to finally defeat the enemies and descendants of Ögedei and Chagatai. As a result of the fighting, their uluses fell under his power.

Thus, according to V. Bartold, in the 1250s there was actually a division of the Mongol Empire between Batu and Möngke, and Batu was more respected in Möngke's territories than the men of the Great Khan in the possessions of his son Jochi [Bartold, 1968, V, p. 499]. We must also note that Batu's sphere of influence during Möngke's reign extended to those areas of Middle Asia, which were not officially included in Jochid Ulus. 'This conclusion of the scholar (V. Bartold—A.A.) was supported by subsequent researchers, and they agreed that both Batu and Möngke tried to not interfere in

the life of its 'cultural' (first of all, settled) areas, preferring to receive instead the rent tax collected by the Khan's vicegerent of these territories, Masud Bek, who was the son of Mahmud Yalavach, a famous scout for Chinggis Khan' [Arapov, 1999, p. 41]. The borders of Masud Bek's viceroyalty were thus significantly expanded: now he controlled Transoxania, Turkestan, Otrar, the Uighur region, Khotan, Kashgar, Jend, Khwarezm and Fergana.

When Möngke died in 1259, internecine strife within the 'golden dynasty' of Chinggis Khan started up again—this time namely between the brothers Kublai and Ariq Böke. This struggle led to bloody clashes, and in 1260 Kublai convened an illegal Kurultai in Beijing, where he was elected as supreme ruler of the Mongol Empire. The capital of the empire was then moved from Karakorum to Beijing, which further contributed to the disintegration of the empire into separate uluses.

Jochi's third son Berke, who became the Khan of Jochid Ulus after Sartaq (Batu's eldest son), was the only grandson of Chinggis Khan who refused to accept Kublai as the Great Khan and started to act independently. He actively defended the interests of Jochids in the struggle for power against the descendants of Chagatai and Ögedei, but in reality, only controlled the western part of his father's ulus. The rest of the Jochids obeyed him only nominally [Bartold, 1968, V, pp. 557–558]. 'Taking advantage of the weakness of other Mongol states, Berke's government began to interfere in the affairs of Chagatai's and Kublai's uluses. For example, there are indications in the sources about the robbery of the Christian population of Samarkand and Bukhara by Berke's troops, even though Jochi had nothing to do with these cities, which belonged to Chagatai's descendants' [Safargaliev, 1996, p. 318]. In the early years of his reign, Berke was actually a co-ruler of the Great Khan Möngke and was honoured in the empire as the second important Khan. It is known that the Khan accepted Islam and provided special protection to sacred Islamic areas and communities in Middle Asia. The policy of supporting the Islamisation of the country was naturally dictated by the urgent

need to strengthen the economic and cultural ties between various areas.

Alghu, Chagatai's grandson who was appointed to the position of head of the ulus by Ariq Böke and then openly revolted against him, successfully took advantage of the situation to expand his possessions at the expense of the Jochids. He drove Jochid viceroys and officials appointed by Berke from the western part of Chagatai's possessions, extending his power even to Khwarezm, which had always belonged to Jochid Ulus (in just a few years he conquered and ruined Berke's Otrar), and set the foundation for the establishment of an independent state. According to V. Bartold, 'the extermination in Bukhara of Berke's detachment numbering 5000 people reported by Wassaf... was likely performed not by Kublai's order, as Wassaf says, or Hulagu's order, as proposed by d'Ohsson (*Histoire des Mongols*, III, p. 381), but by the orders of Alghu' [Bartold, 1968, V, p. 504]. However, the northern part of Khwarezm was soon returned to the Golden Horde. This is indicated by Khwarezmian coins bearing the name of the Golden Horde Khan Mengu-Timur, which were minted in the early 1270s. As noted by G. Fedorov-Davydov, 'even the first Khwarezmian coins, where the mark of the Jochid house indicates that Khwarezm belonged to the Golden Horde, manifest an alarming symptom of the complex political situation caused by the struggle for Khwarezm between Chagatai's and Jochi's descendants: instead of Jochi's tamga, some coins of the second type contain a tamga that was used on Chagatai's coins' [Fedorov-Davydov, 1958b, p. 94].

A Chinese map of 1331 indicates the northern part of Khwarezm including Urgench as belonging to the Golden Horde. Transoxania remained in the possession of Chagatai's descendants, although by the decision of Kurultai dated 1269, Mengu-Timur and Qaidu possessed their shares there. At the same time, one street in Urgench, namely its citadel, was included in Chagatai's ulus along with Kyat and Khiva. 'Of course', G. Fedorov-Davydov said, 'it was a nominal possession. Nevertheless, this was certainly a reason for all kinds of feudal disputes and quarrels between the heirs

of Chinggis Khan's empire. The acuteness of these conflicts was increased by the economic importance of Khwarezm, the true pearl of Jochid Ulus' [Ibid.].

After the establishment of an independent Chagatai state in the 1260s, the struggle between the various parties mentioned above became even more acute. The first two Khans, Mubarek Hoja and Barak, who accepted Islam, tended to establish closer relations with Transoxania. However, this orientation was vehemently refused by the Mongol nomadic nobility, but Barak soon still managed to gain the favour of the Mongol party in Turkestan. In autumn of 1266, he defeated Mubarek Hoja near Khodjend and proclaimed himself Khan.

Ögedei's grandson Qaidu, who fought for power with Barak, supported the latter to preserve his own interests while Hulagu's descendants were fighting with the Jochids for Transcaucasia and the northwestern regions of Middle Asia. The western border of Qaidu's and his faithful vassal Duwa's possessions ran along the Amu Darya river, where there was a war being waged between them and Hulagu's descendants that proceeded with varying success. Mengu-Timur, the Khan of Jochid Ulus, entered into an alliance with Qaidu and sent a 50-thousand man detachment against Barak to help him. His interference in the affairs of Chagatai's ulus was obviously connected with his desire to ensure the safety of the Eastern caravan trade route from prince Barak, who had turned down a path 'of injustice and lawlessness' and devastated Middle Asia. The devastation of Samarkand by Barak certainly and directly affected the interests of the Golden Horde's trade. In 1268, Qaidu defeated Barak on the Syr Darya river with support from Mengu-Timur and forced him to divide Turkestan. The defeated Barak finally accepted Mengu-Timur's conditions.

In spring 1269, Khan Qaidu convened a Kurultai in the Talas valley. There peace was established between the uluses of Jochi, Chagatai and Ögedei, and borders were officially specified. Two-thirds of Transoxania were given to Barak, and one-third was divided between Qaidu and Mengu-Timur. According to Rashid al-Din, Qaidu had the right to collect

tribute in the possessions of all the participants of Kurultai, and could appoint his sons as the heads of regions bordering on the possessions of Jochi's, Hulagu's and Kublai's descendants. Moreover, the author reports that the Kurultai participants entered into an agreement stating that 'they will settle in the mountains and steppes, will not stick to the cities, and will not let cattle walk on sowed fields or charge unwarranted tributes from their subjects (raya)' [History of the Öz Beg Soviet Socialist Republic, 1967, I, p. 307]. In addition, at the suggestion of Mengu-Timur an alliance was entered into at the same Kurultai between the 'houses' of Jochi, Ögedei and Chagatai against the Iranian Ilkhanate, with which the Golden Horde had been at war since the reign of Khan Berke. 'The end of their council was as follows', Rashid al-Din says, 'in spring Barak must have crossed the Amu Darya river leading his army to the Iranian lands and took some possessions of Abaqa Khan so that his troops would have enough pastures, land and property. Barak said, "If your heart agrees with this proposal, then we will enter into alliance and conclude a treaty"...' [Collection of Materials Relating to the History of the Golden Horde, 1941, p. 78]. 'With this union, there no longer existed the threat of formation of a coalition of Mongolian rulers against the Golden Horde.... The uluses of Jochi, Chagatai and Ögedei... were thus recognised as independent states. Their independence was legally executed and ensured by a common agreement... which released the houses of Jochi, Chagatai and Ögedei from any claims of Tolui's descendants' [Safargaliev, 1996, p. 322]. The management of the settled areas was entrusted to the same Masud Bek.

Thus, Chagatai Khans did not try to establish their power in Transoxania for nearly a half a century, and their headquarters were located in Zhetysu, which had been repurposed into pastures due to the large influx of nomads. In its desire to destroy cities and plunder the settled population, the Mongol nomadic elite actively cooperated with the nomadic elite of the Hulaguid state. Ilkhan Abaqa sent two of his armies to Bukhara and Khwarezm, having ordered them to devastate those lands. So in 1273, they both participated in the devastation

of Bukhara, which started to become populated again only in 1280.

After Qaidu's death in 1302/03 and the short-term reign of Tuqa-Timur, power in Middle Asia was passed to Qaidu's ally—Duwa (1282–1306)—a descendant of Chagatai. Circumstances were such that he became the owner of the territory that had previously belonged to Chagatai's ulus, and the princes of Ögedei's house were forced to be subjected to him. V. Bartold referred to him as the real founder of Chagatai's state. After Duwa's death there began a period of internecine strife between the tsareviches accompanied by a constant state of unrest. The Persian historian Wassaf associates the complete decline of agriculture and trade in Transoxania and Turkestan with this unrest.

In 1312, power in the Golden Horde was passed to the famous Öz Beg Khan (1312–1342) with the help of Emir Qutlugh-Timur, who accepted (probably in 1321) and thoroughly established Islam in the country. The new leader was converted to this religion himself by Sayyid Ata, a Turkestan Sheikh. It must be stated that Middle Asian sheikhs, especially Khwarezmians, continued to influence the Golden Horde khans even after this event. Öz Beg's reign was accompanied by various diplomatic contacts and the flourishing of foreign trade with western and eastern countries. During this period, Khwarezm and its surrounding territories were flourishing, as it was an important cultural, economic and craft centre of the state. Qutlugh-Timur became the viceroy in Khwarezm, and according to Ibn Battuta, we know that the area was 'one of the largest, most significant and beautiful Turkish cities, rich in bazars, wide streets, numerous buildings and second-to-none sights. It's almost as if its trembling because of its numerous inhabitants, flowing like the waves of the sea' [Collection of Materials Relating to the History of the Golden Horde, 1884, p. 308]. At that time, Esen Buqa, Duwa's son, was the ruler in Chagatai's ulus and seeking an alliance with Öz Beg against Kaan. According to the anonymous author of 'The Continuation of the Collection Chronicles', he even sent him a letter where he wrote that Kaan had allegedly said, 'Öz Beg is not worthy of being a sovereign; I

will give Toqta's place to another prince'. Hearing this, Öz Beg wanted to rebel against Kaan, but Qutlugh-Timur, who was an Emir and his (Öz Beg's) adviser, said 'If you want to follow my advice, do not pay attention to the words of Esen Buqa, because he is a self-serving person and seeks only his own benefit in this case'. Öz Beg liked this opinion, and following his (Qutlugh-Timur's) words, he did not pay attention to that (statement of Esen Buqa), and sent messengers to Kaan with a proposal of friendship, unanimity, obedience and submission' [Collection of Materials Relating to the History of the Golden Horde, 1941, pp. 141–142].

When Duwa's son, Esen Buqa, died around 1318, the throne in Chagatai's ulus was taken by his brother Kebek (1318–1326), who abandoned the Mongol nomadic tradition and supported the transition process to a settled lifestyle and urban life, seeking to gain power over the rich and cultural areas of Transoxania (today's Uzbekistan and Tajikistan). Ultimately he transferred the headquarters of Chagatai's ulus to this region (to Nakhshab) and built a palace ('Karshi') near it. Kebek patronised Muslims, and his name is associated with monetary and administrative reforms that had centralised tendencies. Up until that time, there had been no single state coin in Chagatai ulus. Instead, they were minted in Bukhara, Samarkand, Termez and other cities. There were also coins minted in Khwarezm and the Golden Horde. In fact, he introduced the same monetary system as in the Chagataid state during the reign of Ghazan Khan. It should be noted that this system was widespread in the 14th century and was introduced in the Golden Horde, Chagataid Ulus and Ilkhanate at the same time. Of course, under better conditions this system could contribute to the development of trade and economic relations between them, if the relations between the Ilkhanate and the Golden Horde on the one hand, and Chagatai ulus and Ilkhanate on the other hand, were not so hostile. Kebek's successors continued this course and sought to consolidate Chagataid ulus. For example, his brother Tarmashirin (1326–1334), who lived in the centre of the Bukhara oasis, shifted away from the nomadic way of life, became an ardent Muslim and made Islam the official religion in the Chagatai state, which

according to al-Umari, contributed to the revival of trade between Transoxania and other Islamic regions. In the future, there was an anti-Muslim reaction, feudal unrest and a struggle for power among the nomadic feudal lords that lasted until 1346 or 1347.

Kazan, Yasavur's son, was the last independent Khan of Chagataid ulus who made attempts to restore the authority of the Khan's power, but was killed by a representative of the nomadic nobility, Emir Kazagan, in Karshi in 1346. The 'twelve-year reign of Kazagan (1346–1358) was a time where the aspirations and interests of the military-nomadic nobility, who were interested in maintaining campaigns and looting raids against neighbouring countries, were fulfilled' [Stroeve, 1952, p. 67].

In the 1340s Chagatai ulus was divided into Mogolistan, which was dominated by the nomadic way of life, and Transoxania, which instead featured a settled way of life, each with its own khan. In the late 50s, the Khan's power was reduced to zero, and the Chagatai state was split into 12–15 fiefs (nomadic or settled), which continually fought one another to increase their possessions. It is understood that

along with political fragmentation, this inevitably led to the considerable weakening of the economy, declines in trade, etc. Timur managed to skillfully take advantage of this troubled period to seize power in Chagataid ulus.

The strategic military and political plans of Toktamys, who had aspirations of at least a partial restoration of the Empire of the Chingisids in three uluses, were directed towards the territories that previously constituted the possessions of Chagatai's and Jochi's descendants. But as we know, Timur alone managed to gain the favour of the nomadic Chagataid feudal lords and the feudal circles of settled Transoxania. In reality, this was the reason for his success: 'He firmly established political stability in Transoxania, liquidated the threat of invasion of conquerors, and ensured the security of caravan routes. A huge flow of materials, an massive inflow of people, and the cessation of feudal wars—all this contributed to the development of the production capacities in the country... During Mongol domination, Transoxania turned into a united and relatively centralised state for the first time ever' [Ibid., p. 87].

§ 5. Wars between the Jochids and Hulaguids

Alsu Arslanova

In the 1230s, a large portion of Iranian and Transcaucasian countries were conquered by the Mongols. Some territories belonging to Ismailism followers in the mountains of Al-bursa and Quhistan, as well as the possessions of Baghdad caliphs in Arab Iraq and in Khuzestan, remained unconquered. The all-Mongolian Kurultai of 1251, where Möngke was elected as the Great Khan, made the decision to undertake a new campaign under the command of Hulagu Khan to complete these conquests. This new campaign, which was regarded as an all-Mongolian issue, involved an army gathered from all four uluses at the rate of two soldiers from each ten [Collection of Materials Relating to the History of the Golden Horde, 1941, p. 67; Petrushevsky, 1977, p. 231]. The Khan's army entered Iran

in 1256, and Hulagu began his campaign with the conquest of numerous Ismailian fortresses centered around Alamut. (There were more than fifty in Quhistan alone) [Grum-Grzymajlo, 1926, p. 474].

In addition to the troops headed by Hulagu, this campaign used detachments of Mongols that had remained in Iran since the war with Jalal al-Din, as well as supporting Muslim contingents [Ibid., p. 475].)

Then he launched a campaign against Baghdad, where Caliph al-Musta'sim was the ruler (1242–1258). Thanks to the capture of Baghdad, the Mongols had the opportunity to reach the Mediterranean Sea and take control of very important trade routes—from the Persian Gulf to Syrian ports—that promised rich materials and huge profits. Therefore, Hulagu

Khan attributed great importance to the conquest of the city. Baghdad was taken by the Mongols without any losses to themselves on 5 February 1258, and it subsequently lost its importance as one of the centres of world trade. The winners obtained the extensive treasures of the Caliphate, which Hulagu Khan then sent to Azerbaijan for storage in the treasury on the Shakhi mountain near Urmia lake. The captured caliph was executed on Hulagu's order, and with this death the Abbasid dynasty was finally interrupted after ruling in Baghdad for longer than 500 years (750–1258). The further western progress of the Mongols was stopped by the Egyptians, who stubbornly resisted and defeated them in Syria in 1260. Thus, Syria was lost for the Mongols, thus starting a war between the Jochids and Hulagu that did not present the latter an opportunity to fulfil its conceived punitive expedition to this country.

Despite the fact that the Mongols made repeated attempts over the decades but never managed to seize Syria, they were nevertheless able to assert themselves over the vast area of Western Asia over a short period of time. In conquered Iran, Hulagu established his own state, and made Maragha its capital, which was then replaced by Tabriz, meaning Azerbaijan was appointed as its central area. This state also included Armenia, Georgia, a large part of Western Asia, Mesopotamia and other countries. In 1261, Kublai Khan recognised him as ruler of these lands and gave him the title of 'Ilkhan' (that is, the lord of the people or tribe). From that moment, a feud flared up between the Jochids and Hulaguids. Moreover, Berke Khan actually separated from the head of the Mongol Empire after breaking his ties with Kublai and taking the side of his opponent—Ariq Böke—in the struggle for supreme power.

It is known from many sources that the troops put forth by Hulagu for the campaign included Golden Horde troops who took part in all of these conquests. As noted by A. Ali-Zadeh, 'the materials of these historians demonstrate that after the relations between the Golden Horde Khan Berke and Hulagu Khan worsened, these troops were to return to the Golden Horde by Berke's order. Some

of them left the territory of the Ilkhans and crossed the border to enter the lands of the Egyptian Mamluks, and some of them, after crossing the Derbent, returned to the Golden Horde' [Ali-Zadeh, 1956, p. 304]. Thus, Burke found it necessary to withdraw his troops, because he was confident in their safety. 'It is known', A. Ali-Zadeh wrote, 'that the Egyptian Sultan received the Golden Horde troops like a true friend: he ordered his vice-roys to provide them with all the necessities and sent them to Cairo, where he went himself to meet them. The Golden Horde soldiers were given lodging in houses built specially for them in al-Luka. In their honour, a feast was also arranged, and the Sultan awarded them with honorary clothes, horses and money, made their commanders emirs, and included all others in the group of the 'Bakhriyya' (or Bakhrits). The first Golden Horde troops that left Hulagu's camp arrived in Egypt in 660 under Hegira (1261/62). Golden Horde detachments then continued to arrive in Egypt, and they were all warmly received' [Ibid., p. 309].

A. Yakubovsky believed that Berke most likely, by providing military assistance to the Ilkhan in the conquest of Iran and the capture of Baghdad, expected that he would receive Azerbaijan as payment, where there were beautiful pastures and a rich 'craft industry, mainly textiles, which was widespread in the towns and villages of Azerbaijan' [Grekov, Yakubovsky, 1950, p. 76]. The intensive trade between the Golden Horde and Iranian Azerbaijan, along with the value attached to it by the Jochids and Hulaguids, are demonstrated by Wassaf, Kirakos Gandzaketsi and other authors. However, the negotiations on this matter never ended up leading to anything. According to N. Veselovsky, the Jochids, as well as the Chagataids, were obligated to support Hulagu's campaign. Success was typically rewarded by a land plot in the conquered territory, and this was obviously a reason why Berke made claims to Arran and Azerbaijan, as this corresponded to his economic and strategic interests. 'But both of these provinces remained Hulagu's, and therefore the Golden Horde Khan felt offended' [Veselovsky, 1922,

p. 4]. In any event, there are no documented data that there was ever any agreement on this issue between Hulagu and Berke [Ali-Zadeh, 1956, p. 305].

The deteriorating relations of the Ilkhans with Jochid Ulus made for more favourable conditions regarding the union of the latter with the Egyptian sultan. They often exchanged embassies and precious gifts, and under the pretext of protecting Islam incited each other to war against the Hulaguids. As it is known, Berke had been the first person in Jochid Ulus to convert to Islam and dutifully spread it throughout his domains. Islam, in this case, performed the role of a certain ideological tool that Berke used to win the sympathies of Muslims who had been within the territory subject to the Ilkhans, as well as to form an alliance with the Egyptian Sultan, i.e. to win over the Ilkhan's internal and external enemies.

'We can say that one of the reasons for the adoption of Islam by the Horde Khan Berke, the brother and successor of Batu Khan, was his feud with the Hulaguids and alliance with the enemies of the latter, i.e. the Egyptian sultans. On the contrary, as strange as it may seem at first glance, the Ilkhans did not adopt Islam for a long time, i.e. the religion that was professed by most of their subjects. Hulagu himself generally protected the Christians, and his eldest and most beloved wife (Kereit), as reported by Rashid al-Din, was a Christian. But the same had also been done by other Chinggisids until the decline of the Mongol Empire. During the persistent wars between the Jochids and Hulaguids (the 1260–80s), the Ilkhans remained heathens, and their main support had been formed by the nomadic tribal militia that had come to Iran with Hulagu' [History of the Orient, 1995, II, p. 414]. There is no doubt that the protection of Christianity by the Hulaguids was not a random fact. Throughout the history of conflicts between the Hulaguids and Jochids, this played a significant role as a tool in their flexible policy of affirming conquered countries and in the fight against the Jochids [Narozhny, 1989, p. 112].

Thus, the diplomatic relations of the Jochid Ulus with Egypt were a result of sig-

nificant political factors, and had formed after a long and close alliance between these countries, so different from a cultural perspective, throughout the middle of the 13th and the end of the 14th century. In this regard, it should be noted that the initiative to establish a mutually complementary relationship came mainly and directly from Egypt, as it had become increasingly 'deeply interested' [Grekov, Yakubovsky 1950, p. 78] in the power of a military alliance with Jochid Ulus against their sworn enemy, the Iranian Mongols. In Egypt, they were well aware of the benefits of pitting the Golden Horde against their immediate neighbor, Hulaguid Iran, in order to ultimately weaken both states potentially capable of becoming opponents of Egyptian rulers. Moreover, the efforts of the latter had been directed at maintaining a constant feud between them to divert Hulagu's attention from Syria's conquest. The Jochids, from their perspective, were also interested in this because they did not want to allow the Hulaguids to get to the Mediterranean Sea, seize the coastal Syrian cities and establish trade links with Europe.

In the writings of Arab authors there can be found valuable information on the correspondence between the khans of Jochid Ulus and the Egyptian sultans. Thus, the Secretary of the Egyptian Sultan al-Malik al-Zahir Rukn al-Din Baybars I, Ibn Abd az-Zahir, who left a chronicle of contemporary events, wrote based on his words a letter to Berke inciting him to speak out against Hulagu, explaining that for him this was an 'obligatory holy war against the Tatars (Hulaguids)... Islam does not consist in words only; Holy War is one of its (main pillars)'. This letter was sent by the Sultan to Berke with a special embassy. According to what was written later by the same author, 'with them, he sent two people of the mentioned Tartars who belonged to the supporters and servants of the king (Berke) and knew (those) lands. With the help of (these) ambassadors, he wrote a letter in which there was much about the approval and incitement to war, with descriptions of Muslim troops, their multitude and their mixed tribal nature; with the indication of their cavalry, Turkmens, Kurdish clans, and Arab tribes, which Mus-

lim and Frankish sovereigns made obey them, who opposed them, and who were in harmony with them, who sent them gifts, and who were with them in the truce, and how all of them were subject unto him (the Sultan) and obeyed his orders. In addition, (the letter contained) instigations against Hulavun—let Allah disgrace him—an explanation of the insignificance of his cause (i.e., the ease of dealing with Hulavun), incitements against him, censure of a careless attitude towards him, and the suggestion to do whatever will result in (Hulavun's) harm' [Collection of Works Related to the History of the Golden Horde, 1884, p. 47, 55].

As pointed out by Salikh Zakirov, this letter served as the beginning of a series of incitements against the Hulaguids that without fail permeated diplomatic relations between Egypt and Jochid Ulus. Thus, for example, the Arab historian al-Nuwayri wrote: 'In the month of Ramadan of the said year (9 July–7 August 1263), Sultan al-Malik az-Zahir released his (Berkay's) ambassadors back and wrote him (a letter) instigating him against Hulagu and inciting him to war against him' [Ibid., p. 131–132, 152].

As correctly noted by A. Yakubovsky, 'the calculations of the Mamluk Sultan Baybars were quite simple. Hulaguid Iran was a neighbour of Egypt, owned Syria, and its borders were in Mesopotamia. A strong Iran was a threat to the Mamluk sultans. What could be a more effective means than stoking antagonism between two Mongol states? That is why the main goal of the entire foreign policy of Mamluk Egypt was to maintain in every possible way and, if possible, strengthen the animosity in this struggle' [Grekov, Yakubovsky 1950, p. 78]. A. Ali-Zadeh, a scholar who considered this question in detail based on the Persian and Arabic sources, reached the conclusion that after Hulagu invaded Iraq and destroyed the Arab Abbasid Caliphate, the Mamluk sultans did their best to keep Hulagu from moving further into Syria and trying to regain the captured Syrian cities, and then to invade the Iraqi and Arab territories of Asia Minor, etc. The Ilkhans, in their turn, also sought to seize the whole of Syria and its complete sub-

ordination. In fact, the destruction of the Abbasid caliph and the destruction of the cities belonging to Muslims, were not so much the cause as the reason for the outbreak of hostilities (see.: [Ali-Zadeh, 1956, p. 311]).

In the early 13th century (for a length of 40 years), before the Hulaguids had adopted Islam, the 'trump card' in the hands of the Mamluk sultans had been the calls for holy war against the disbelievers. For example, Arab historian al-Zahabi reported that 'one of the main causes of the war that occurred between him (the Golden Horde's Khan Berke—A.A.) and Hulagu was the killing (by the latter) of the caliph'. Similar accounts were also mentioned by other Arab historians. However, the early Hulaguid Tokudar (1282–1284) and later Ghazan Khan (1295–1304) both adopted Islam. Meanwhile, the feud between the Ilkhans and their neighbours, the Muslims was far from never blazing up in combat again. Thus, it is obvious that it did not have a religious character, but in fact one of political contradictions [Ibid., p. 300]. V. Bartold astutely considered the following reports as more plausible: 'according to which the tsareviches from the house of Jochi felt that their rights had been violated with the creation of the new Mongolian state in Persia. The new state also included such areas as Arran and Azerbaijan, where even during the times of Chinggis Khan there passed "the hooves of Mongol horses", which meant, consequently, by the establishment of the conqueror, that they must belong to the domain of Jochi' [Bartold, 1968, V, p. 505].

The military confrontations between the Golden Horde khans and Iranian Ilkhans, which lasted for almost a hundred years (1262–1357) and were only occasionally interrupted by periods of a fragile peace, had already begun during the time of Hulagu and Berke, i.e. immediately after the formation of the Ilkhan state. Berke, as the son of Jochi, considered himself an elder in the clan, and accordingly demanded submission from Hulagu. During the lifetime of Batu, who until Hulagu's arrival to Persia commanded the Mongol forces in Transcaucasia, friendly relations had been maintained. The sons of Jo-

Hulagu Khan. Miniature. Iran. Early 14th century.

chi and Tolui even teamed up to participate in the enthronement of Möngke Khan in 1251, but soon after the conquest of Baghdad and the establishment of the Hulaguid state, the situation had changed dramatically, resulting in intensified antagonisms between members of the Khan's home. Friendship turned into open hostility, as Hulagu Khan became Khan of the countries that used to belong to Batu. Arab historian al-Umari noted that prior to the death of Batu, the Golden Horde had a political influence over the countries of Western Asia, Azerbaijan and Iran were in its possession, and the Jochids opposed Hulagu Khan's campaign in the West mainly thanks to their conquest of Baghdad [Collection of Works Related to the History of the Golden Horde, 1884, p. 246]. When power in the Jochid Ulus passed to Berke Khan, Hulagu began to act independently from him.

Rashid al-Din reported that Hulagu had been unhappy with 'Berke's despotism'. For his part, Berke condemned Hulagu for the fact that the latter 'destroyed all the cities of the Muslims, ruined the families of all the sovereigns of Islam making no difference between friends and foes, and killed the Caliph without consulting relatives' [Collection of Works Related to the History of the Golden Horde, 1941, p. 74], constantly cavilling and admonishing him. 'But', adds Rashid ad-Din, 'in view of the fact that Berke was a senior in the clan (aka), Hulagu Khan endured all of this...'. Soon, however, it started to annoy

him and, according to the same Rashid ad-Din, he said: 'Although he (Berke) is senior in the clan (aka), but because he is far from the path of humility and modesty, and treats me with threats and violence, I will not treat him with due respect... ' [Ibid., p. 73–74]. Perhaps by using his influence, Burke wanted to put Hulagu in a position of becoming dependent on him. Whereas Hulagu, in his strivings for independence, intentionally deprived him of some of the income that he received before the formation of the Ilkhan State.

Thus, the causes of this war, as pointed out by V. Bartold, were the following: the Jochids' claims on Arran and Azerbaijan, the arrogance of Berke as a senior in the clan in his relations with Hulagu, and the death of the Jochid tsareviches in Iran (Berke suspected that they had been poisoned). Berke, who by that time had become a Muslim, declared himself the protector of Islam from Hulagu's claims [Bartold, 1963, III, 1, p. 59–60].

Salikh Zakirov noted that the main reasons for this opposition were often 'hidden behind so many secondary causes that every historian and chronicler describing the course of events adhered to their own views and put forward some unique reason as the main factor, and in fact the most compelling in their own view' [Zakirov, 1966, p. 9].

Some extant documents contain information about the boundaries of Jochid Ulus and Ilkhanate, stating also the reasons for the deterioration of relations between them due to the territorial claims of the Golden Horde khans to the Ilkhans [Ichalov, 1975, p. 172].

The Persian historian of the 13–14th centuries Wassaf, as part of his determination of the boundaries of the Golden Horde and the Hulaguids, wrote that 'the extent of the land from the fringes of Kayalyk and Khwarezm and to the outer edges of Saqsin and Bulgar to the outskirts of Baku Derbend, he (Chinggis Khan—A.A.) allotted to his elder son Jochi. The area behind Derbend called Demir-kapuk (Iron Gates) had always been the winter lodg-

ings and rallying point for the scattered parts of the troops (Jochi's); at times, they made raids to Arran and said that Arran and Azerbaijan were also a part of their holdings and encampments (of the Jochids')... That is why on both sides of the Hulaguids and Jochids', the author continues, 'there began to appear reasons for discord and causes for bitterness one after another' [Collection of Works Related to the History of the Golden Horde, 1941, p. 80–81]. From this report, as well as from a number of other Arab and Persian sources, it is clear that the Golden Horde khans were not entirely lacking in legitimate claims to the Transcaucasian lands, as under the will of Chinggis Khan, they had been allocated to his eldest son Jochi, but were then captured by the Hulaguids. Most medieval historians place the borders of the Golden Horde state from Derbend and further to the North. Thus", noted A. Ali-Zadeh, '... we can say that Derbend (Bab al-abwab, Demir-Kapu) became part of the Golden Horde state, and the Ilkhans owned Shirvan, Arran and Azerbaijan in general. This is confirmed by the fact that taxes levied on these areas had been paid to the central treasury of the Ilkhans, and is further supported by the materials of Hamdallah al-Qazwini. As familiar to all, the latter mentions in his geographical work the total annual amount of tax revenue from these areas to the state treasury of the Ilkhans' [Ali-Zadeh, 1956, p. 310].

In fact, the main stumbling block for both states had been Azerbaijan with its centre in Tabriz, which owing to its natural resources and favourable geographical position, was one of the main hubs for trade caravan routes between the eastern and western countries [Ibid., p. 316] of both states. Hamdallah al-Qazwini's book 'Nuzhat al-Kulub' provides a detailed description of the network of caravan routes passing through the territory of Azerbaijan in various directions and linking the southern regions to the northern ones. Hulagu was therefore of particular value for the region, and made Tabriz the capital of its state, which received significant development throughout his rule. In fact, after the formation of the Ilkhan state, trade relations between the

Jochids and Hulaguids were disrupted. 'To assess the significance of these routes', noted A. Ali-Zadeh, 'it should be noted that during the time of Ilkhan the main road Soltaniyeh—Derbend, due to continued fighting between the Ilkhans and the Golden Horde Khans, was of great importance and had been often used for the movement of troops and the transportation of military materials. During periods of short-term truces, that road once again acquired commercial value as well. Thus, for example, according to Wassaf, during the reign of Gaykhatu (after the truce between the Ilkhans and the rulers of the Golden Horde), trade relations resumed, with slaves, horses and sheep serving as the main items of trade imported from the Golden Horde. These "goods", according to Wassaf, filled the markets of Arran' [Ali-Zadeh, 1952, p. 75–76].

In the narrative of his travels in Asia, Marco Polo offers his opinions on the causes of war 'between Alai king of Levant and Berke, tsar of the West'. In his view, the war broke out as a result of the disputed border area. 'Everyone wanted to take possession of it', Polo wrote, 'and neither would cede it to the other: they both considered themselves strong and powerful. They challenged each other and said, "I will go and take it, and let's see who can take it from me"...' [Minaev, 1902, p. 338]. This explanation is closer to reality than the explanation of al-Muffadal and Armenian historian Kirakos Gandzaketsi, who wrote that Berke supported Ariq-Böke against Kublai Khan, and Hulagu 'had been disappointed by this' and thus opposed Berke [Collection of Works Related to the History of the Golden Horde, 1884, p. 187–189].

Meanwhile, it is nonetheless obvious that this was not just confined to local border disputes, and those deeply rooted contradictions were based on larger interests, namely the fierce struggle for the regions most important in economic and strategic terms. The above-mentioned al-Muffadal referring to certain Ala al-Din ibn Abdallah al-Baghdadi said that the cause of the war had been the division of revenues from the conquered countries, which by order of Chinggis Khan was to be divided into five parts, where two were to

be given to the Great khan, two to the army, and one part had to go to the Khan from Batu khan's home. 'When Batu died, and Berke ascended to the throne, Hulavun kept his share' [Ibid.]. The causes of the war are explained by Ibn Wasil in the same way, who indicated that by order of Chinggis Khan, the third part from each conquered region was to become part of Berke's home, Chinggis Khan's home, and the troops'. Then Hulagu ceased to comply with this ruling. 'When Chinggis Khan died', writes Ibn Wasil, 'none of the Tatars had ceased to comply with his order and directions, but when power was transferred to Hulavun and he conquered the East, al-Ajam and al-Iraq seized the property, and he gave nothing to any of the Tatars, leaving all the property to himself, without sending anything to Berke's home or Chinggis Khan's home (now) called Batu's home, who was their great and powerful tsar. This was a frustrating thing for Berke's home' [Ibid., p. 73].

Persian historian Juzjani, a contemporary of these events, wrote that after the capture of Baghdad, Hulagu only 'sent Berke something as a gift along with his share' [Collection of Works Related to the History of the Golden Horde, 1941, p. 19, Note 3].

However, based on the writings of Arabic author al-Umari, one can reach a different conclusion on the financial accounts between the Jochids and Ilkhans. 'It turns out that the sustenance of the auxiliary corps sent to Persia to help Hulagu was carried out with the profits from the rich industrial cities of Tabriz and Maragha. Therefore, when Ilkhans was presented with the claims, it had not been a matter of a fifth or third part of the spoils or profits being compensation for their participation in the campaign, but coverage of the military costs' [Kozmin, 1935, II, p. 97]. In fact, one can agree with Azerbaijani author M. Seyfeddini, who wrote that even 'before the formation of the Ilkhan State, the Golden Horde freely distributed the trade routes and vast pastures of Azerbaijan, Georgia, as well as part of Asia Minor. In addition, the goods imported by it were exempt from taxes. The emergence of a new state that sought to seize the trade routes leading from the Black Sea

to the southern part of Azerbaijan, naturally infringed on their interests' [Seyfeddini, 1981, 2, p. 72–73]. Hence it is clear that military action between these states were actually inevitable. As I. Petrushevsky wrote, 'the struggle for the possession of Transcaucasia between Iran's Hulaguids and the Jochids of the Golden Horde was largely a struggle for the possession of the caravan trade routes to Europe running through Transcaucasia' [Petrushevsky, 1937, p. 912].

Golden Horde khans interested in the maintenance of direct and duty-free trade, political relations with Eastern and Western European countries, as well as receiving profits from this territory, sought to gain a foothold in Azerbaijan. 'Thus, the Ilkhans' dominance over certain critical trade and caravan routes of communication was one of the main reasons forcing the Golden Horde khans to make claims to Azerbaijan and carry out occasional raids into the territory' [Ali-Zadeh, 1956, p. 316]. In addition, there were exceptional pastures that were so favoured by the Mongols, as well as important natural resources.

The immediate cause of the war between the Jochids and Hulaguids was Jochid Ulus's withdrawal of its auxiliary corps from the army of Hulagu Khan in 1261–62, and the loss of three commanders (tsareviches and nephews of Batu Khan) [Rashid al-Din, 1960, II, p. 81–82; 1946, p. 54]. Since all the gains of the Mongols were earned by all the people, every purchase also became the property of the entire tsar's family, which imposed certain obligations on the ulus khans with respect to each other and to the Mongol emperor. As noted above, when Hulagu Khan went to conquer several regions of Asia Minor, he was provided with troops from each ulus, among whom there were also some of the Golden Horde under the command of some of the tsareviches and important feudal lords. According to Rashid ad-Din, all three commanders of these groups—the tsareviches Balakan, son of Shiban, Tutar, son of Buval, and Kuli, son of the Horde—that is, the grandchildren of Jochi and the nephews of Batu, who were directly involved in the expansion of the Mongol Empire, demanded their share, and under

various circumstances were killed in the ulus of Hulagu [Rashid al-Din, 1960, II, p. 81–82]. One of the tsareviches, Tutar, was accused of witchcraft and conspiracy against Hulagu, interrogated and ultimately found guilty. In deference to Berke, Hulagu sent him to the latter. Berke, on the other hand, making sure that the charges were just, according to the Yasa of Chinggis Khan, brought him back to Hulagu, who ordered his execution. Other Golden Horde lords, according to Rashid al-Din, died of natural causes, but Berke suspected Hulagu in their intentional poisoning. The families of these three tsareviches fled to Iran, reached Derbent and from there arrived to Jochid Ulus. Contemporary opinion on this incident can be judged by the words of Rashid al-Din: '... when his (Berke's—A.A.): relatives, Tutar, Balaga and Kuli suffered misfortune (death), there was a feud between them (Hulagu and Berke) and anger that intensified day by day' [Sbornik materialov, otnosyashhixsya k istorii Zolotoj Ordy', 1941, p. 74]. Golden Horde troops who took part in the conquest of Iran left the ranks of the Ilkhan army. A small part of them went to an that was Egypt hostile to Hulaguids, and the other went through Khorasan and Derbent to Jochid Ulus, and became actively involved in the fight against Hulagu. These events are narrated in their own way by medieval Armenian historians. For example, according to the monk Maghakia, the cause of contention between Hulagu and Berke was the following: emperor Möngke commanded the arguchis (judges) to enthrone Hulagu in the Khanate in the lands conquered by him, but some of the tsareviches rebelled against him. 'As soon as the Khan's sons learned that Gulavu intended to sit on the imperial throne, the four of them were furious and refused to obey Gulavu. Takudar and Bora Khan obeyed, while Balaha, Tutar, Katagan and Migan did not agree to recognise him as khan. When the arguchis of Mangu Khan were positive that these four were not only unwilling to obey, but also intended to resist Gulavu, they ordered to put them to yasad,—that is, strangling by bowstring, according to their traditions, as only in this way could the persons descended from Khans be put to death... Af-

ter that, the arguchis ordered the Armenian and Georgian troops to go against the armies of the rebels and kill them, which was then done. The number of people killed had been such that the stench from the corpses of killed Tatars spread throughout the mountains and fields. Only two of the leaders, Nuha-Kuun and Aratamur, having learned well in advance of the danger, took with them all the treasure, gold, and excellent horses they could, and fled with 12 horsemen. After crossing the great river of Kur, they returned to their land. But not content with having escaped, they instigated Berke, Sainkhan's brother, against Gulavu, and for 10 years maintained the course of terrible bloodshed' [History of the Mongols by monk Maghakia 1871, p. 31–32]. Kirakos Gandzaketsi in the chapter 'The bloody war between Gulavu and Berke', also describes these events: '... Great Gulavu, with which there were great and noble princes of descent equal to him, relatives of Batu and Berke, Kuli, Balaha, Tutar, Megan, Kuli's son Hatanagan, and many others, destroyed them all together with all their troops, sparing neither old men nor children, as they interfered with his orders. Only a few of them, and even then deprived of their wives, children and property, had been able to flee to escape to Berke and their other relatives. Learning of this, Berkay gathered a large army, and prepared to march against Gulavu to avenge the death of his relatives' [Istoriya mongolov po armyanskim istochnikam, 1873, p. 62–63].

Over the 100 years of wars between the Jochids and the Hulaguids, the political initiative shifted from one state to the other. Three separate periods can be singled out, respectively: from 1262 until the 1270s when the initiative belonged to the Ulus of Jochi, from the 1270s until 1318 when the Hulaguids took the initiative, and from 1318 until 1357 when the initiative returned to the Ulus of Jochi. According to A. Krishtopa, 'Regarding the Golden Horde Jochids, this initiative mainly manifested itself militarily (expansionist campaigns which were ultimately unsuccessful) due to their territorial claims; the Hulaguids' activity was predominantly political and economic' [Krishtopa, 1974, p. 98].

Thus, political and military confrontations between the Ulus of Jochi and the state of Hulaguids were connected with their struggle for the territories that were beneficial for both states economically and strategically. In many ways, this struggle defined the historical situation in this vast region, which included Dasht-I Kipchak, Transcaucasia, Iran, Khorasan, Asia, Egypt, and had an undeniably significant influence on world history in general.

Accounts of the military actions can be found in Arab, Persian and Armenian sources, though they are often quite tendentious and contain some inaccuracies. The Persian historians, whose accounts are more reliable, deserve more attention, as they were more knowledgeable about the events.

According to the Arab historian Ibn Wasil, a contemporary of the events, the military clashes started in 662 AH (1263 CE). He also said that Hulagu was the first to attack [Collected Materials on the History of the Golden Horde, 1884, pp. 70–71, 73]. Wassaf believed that the military actions started in the winter of 662 AH (1263–64 CE) [Collected Materials on the History of the Golden Horde, 1941, p. 50]. According to Rashid al-Din, the first war between Hulagu and Berke started when the Ulus of Jochi attacked the Hulaguids' lands in August 1262 [Ibid., p. 74]. Berke sent a thirty-thousand strong army under the command of general Nogai, son of the fallen Tutar, who skipped Derbend and stopped in the vicinity of Shirvan. For this campaign, Berke mobilised the entirety of his manpower. On Hulagu's side fought the vassalised rulers of Azerbaijan, Armenia and Georgia. As Rashid al-Din wrote, Hulagu advanced from Ala-tag, the place of the Ilkhans' summer camp, on 20 August 1262. The general engagement that then took place between the Chinggisids is described in the minutest of detail by many authors [Collected Materials on History of the Golden Horde, 1884, pp. 70–75, 273, 275; Collected Materials on History of the Golden Horde, 1941, pp. 81, 92, 99–100, 219, 228]. The decisive battle, which lasted the whole day, in which Hulagu suffered a serious defeat, took place on 13 January 1263. The

death toll on both sides was great. During the retreat of the army headed by Hulagu's son Abaqa-Khan across the Terek River, the ice suddenly cracked and a great number of the Ilkhanate soldiers drowned. According to Ibn Wasil, 'of the Tatars, not a single man survived who could spread the word (about what happened). All those who had run forward drowned, while those who fell behind were all killed. As for those drowned, their number is unknown. When Berke arrived and saw the place of the bloody battle, he ordered that all the dead were collected (in one place). They were brought together and their bodies made 3 mounds (or) large hills. The rains and winds had already polished them and the bones of the dead had turned white. Travellers could see them at a distance of 2 days (of travel). This battle is called the Temirkapuk battle. Hulavun escaped with a small group of soldiers'. The author of the chronicle continues: 'When Berke arrived at the scene of the battle and saw the terrible slaughter, he said: "May Allah disgrace this Hulavun who killed Mongols using Mongol swords. If we were united, then we would have conquered the whole world"' [Collected Materials on History of the Golden Horde, 1884, pp. 72, 75]. According to Ibn Kathir, Berke said through his tears: 'I feel sad that the Mongols kill one another, but what should be done to him who has broken Chinggis Khan's Yasa?' [Ibid., pp. 273, 275]. Rukn ad-Din Beibars writes about the arrival of Berke's envoys in 661 AH (1262–63 CE). In his letter, Berke emphasised his commitment to Islam: 'May it be known to the Sultan that I have fought Hulagu, who is of my flesh and blood, to praise above all Allah's word, and to be zealous in professing Islam, for he (Hulagu) is a mutineer, and a mutineer does not believe in Allah and his messenger' [Ibid., pp. 77, 99]. However, according to the sources, Berke's first letter to the sultan of Egypt was written in the 'Itil country' and dated the first of radjab 661 AH (11 May 1263) [Ibid., pp. 178, 189].

As a result, Berke seized Derbent and then returned to where he left. The battle on the Terek River brought about serious con-

sequences for the trade relations between both countries. On his return to Tabriz, Hulagu ordered that the Golden Horde merchants who were there be executed and their property confiscated; Berke did the same to the merchants from the Ilkhan State. According to Wassaf, Hulagu ordered that Berke-Ogul's merchants, who were engaged in trade and commercial transactions in Tabriz and who possessed vast, endless wealth, all be executed and all their property that is discovered be put in the treasury... Many of them had their money and valuables kept in the hands of the distinguished people of Tabriz. After their slaughter, the (said) wealth remained in the hands of the money holders. Seeking retribution, Berke-Ogul then had the merchants from his Khanate (Hulagu's Khanate) murdered, thus doing the same to them. Entering and exiting the territory, as well as travel in general for the merchants and craftsmen was hindered, (but) the shaitans of enmity had jumped out of the vessel of time' (quote from: [Grekov, Yakubovsky, 1950, p. 77]). Of course, Berke's victory brought Jochid Ulus and Egypt still closer together and allowed the latter to divert its armies from the Ilkhanate to fight the crusaders. As al-Maqrizi wrote, 'The Sultan (of Egypt) was glad...and the people were glad that Hulagu (because of the war in the Caucasus) was distracted from starting a campaign against the Syrian lands' [Collected Materials on the History of the Golden Horde, 1884, p. 429].

The existing situation had grave implications for the Hulaguids' foreign policy. Now they had to give up active, large-scale operations on the Syrian-Euphratian border until their northern border was protected from the Jochid invasion. They were concentrating entirely on the struggle against Jochid Ulus, as that is where the main danger came from. In addition, the eastern border also began to de-

Pursuing the enemy. Miniature. Iran. Early 14th century.

mand their attention, from where Barak, the Jochids' ally and great-grandson of Chagatai, began to threaten invasion.

In February 1265, Hulagu-Khan died. Although during his lifetime he undertook massive preparations to continue the war, he never actually took any military action. He was then succeeded by Abaqa (1265–1282) and the war resumed. As Rashid al-Din writes, after Abaqa ascended to the throne, he first (of all)...sent his brother Yushumut to Darbend, Shirwan and Mugan up to Altan so that those borders were defended from the enemy' [Rashid al-Din, 1946, III, p. 67]. At first, it seemed that a kind of peaceful treaty was starting to take shape, and the Jochids were even granted certain privileges, namely revenues from Tabriz and Maragha, but this probably was not enough to pacify Berke-Khan.

Al-Umari wrote: 'As for the Kipchak kings' claims to own Tabriz and Meragha being doubtful, my lord Nizameddin Abulfadail Yakhta Ettayari told me the following: "When the Great Khan sent Hulaku to fight the Ismailis and those who stirred up a mutiny in Eljebal, Hulaku then asked him to increase the army (sent) with him, and he (the Khan) sent with him (people) from every Chinggisid Khan's army. After conquering the countries they had seized, these armies stayed with him (Hulaku), and he gave each army one of the (conquered) areas as a possession. The

share that was allotted to the army that was sent with him by the ruler of the Kipchak and Khwarezmian lands was in Tabriz and Maragha. And they (the Kipchaks) began to receive from them what was needed to survive. Then, when Hulagu died and his son Abaga ascended to the throne, they *managed to deceive him*, saying that Sultan Berke wanted to build a *congregational mosque* in Tabriz. He (Abaga) gave them his permission to do this, and they built it and *wrote the name of Sultan Berke on it*. Then they asked (permission) to build a *factory to manufacture fabrics there for themselves*. He also permitted them to do this. And they began to manufacture fabrics there for Sultan Berke. Things went on like this until there was a discord between them and they clashed, and Berke defeated Abaga. Abaga then became angered and *destroyed the factories*. Later, when the former clash had been forgotten and the conflict between the two kings was settled, the factories resumed their work so that they (the Kipchaks) had the

right to bring material from their land to manufacture there what they wanted. And when some more time passed, then both the mosque and the factories built in the name of Sultan Berke became the centre of their harassment (about Tabriz and Maragha)' [Collected Materials on History of the Golden Horde, 1884, p. 239]. It is most likely that Berke wanted in this way to prepare the people of Tabriz to recognise him as their lawful ruler.

It was inevitable that the war continued on, and a major new battle was fought between Berke's and Abaga's armies. In the summer of 1265, Nogai advanced from Derbent to Shirvan with his great army. Hulaguid prince Yushmut (Hulagu's third son) set out against him. As A. Ali-Zadeh describes this event, 'he crossed the river, and near the Jegan-Muran River (Aksu River) a bitter battle was fought, during which, according to Rashid al-Din, there were heavy losses on both sides. Nogai was wounded with an arrow which struck his eye. His army took to flight. According to Rashid al-Din, after that Abaga Khan crossed the Kura River, where at that time the Golden Horde Khan Berkay was coming with his allegedly 300,000-strong mounted *opolchenie*. Abaga-Khan then turned his army back. After crossing the Kura river he landed on its southern bank and ordered that all the bridges be destroyed. But even after a 14-day stay here, Berkay was not able to cross the river. Then he decided to go to Tiflis and cross the Kura River there, but he still failed to achieve his objective: on his way he fell ill and died. His body was taken to Sarai Batu and buried there, and his army broke up and scattered. According to Hamdallah al-Qazwini, part of the soldiers were taken prisoner and given out as *gulams*' [Ali-Zade, 1956, p. 320].

The Armenian author Vardan the Great writes the following on Berke's hostile actions on the Caucasian border: 'With the advent of year 715 (1265/66), Berke, the ruler of the Northland, the successor of Batu, and Sartaq, who had adopted Islam, upon learning about Hulagu's death, came with a large army to the Kura River and stopped on its other bank, op-

posite Abaga's army and his brother Ismud's army, thus wishing to show that he is alive while their father had passed away' (quote from: [Mikaelyan, 1952, p. 338]. In this case, Abaqa adhered to defensive tactics.

In this way, Abaqa started to vigorously build up his defensive fortifications on the Kura River, the fact of which is recorded in Arab, Persian and Armenian sources, namely by Rashid al-Din, Wassaf, az-Zahabi, Kirakos and Vardan. The wall they built on the southern side of Darbend was called 'siba' or 'sibe' by them. According to Vardan, the army (of the Hulaguids) standing on this part, frightened by Berke's hordes, fortified their banks with a palisade called a shibar, and guarded them the whole winter [ibid]. According to Rashid al-Din, 'In 664 (1265–66) Abaqa Khan ordered that a rampart be built and deep ditches excavated on the other bank of the Kura River from Dalan-naura to the Kurdaman steppe adjacent to the Kura River. A detachment consisting of Mongols and Muslims was assigned to defend them, and caravans started to go there and back on both sides' [Rashid al-Din, 1946, III, p. 68].

Despite the armistice they reached, the clashes never ended during the reign of Abaqa Khan. As Wassaf wrote, '...When Abaqa Khan learned about the numerical strength of the (Jochid) army and its courage, he built on this (Ilkhan) side of Darbend a wall called Sibe to make the further invasion and encroachment of this army disturbing the whole world impossible. The animosity here was constant and unfading, and the two sides avoided one another until the reign of Gaykhatu Khan' [Collected Materials on History of the Golden Horde, 1941, p. 82].

The next invasion of the Hulaguids' territory by the Golden Horde army took place during the reign of Tula-Buga (1287–1290) during ramazan in 687 AH (1288) and was headed by Tama-Tokhta and Nogai [Ibid., p. 68; Rashid ad-Din, 1946, III, p. 118]. Arghun Khan (1284–1291) crossed the Kura River, reached Shamakhi and from there sent out a reconnaissance party of several emirs and princes to find out the enemy's positions and available strength. Several days later, they

came back to say that the enemy had retreated from their territory.

During Rabi' al-awwal of 689 AH (26 March 1290), the army of the Golden Horde Khan again entered the Ilkhan's appanages. The first battle took place on 29 April of the same year on the bank of the Kara-su River, on the other side of Darbend. The battle was violent with both sides suffering heavy losses, and the Golden Horde army lost several prominent commanders both killed and wounded. According to Rashid al-Din, the battle ended with the victory of the Ilkhan army while their enemy took to flight. The news of this victory was sent to all of Ilkhan's vassalised vilaiyets [Rashid ad-Din, 1946, III, p. p. 208, 118].

After Arghun Khan's death in a place called Bagche in Arran, the relations between the states improved temporally. According to Rashid al-Din, before the reign of Ghazan Khan in Iran (1284–1291) and Tokhta in Jochid Ulus (1290–1312), there were no military clashes. As Wassaf wrote, 'when Tokta became successor of the kingdom of Mengu-Timur, then (again) the route for merchants and holders of commercial deposits was opened thanks to the exchange of ambassadors and diplomatic correspondence. Measures for the safety and peace of travelers were also taken. The Arran people were excited to see the abundant bullock carts and yurts, horses and sheep. After a pause lasting for some time, the commodities and rarities of those countries were once again in wide use' (quote from: [Grekov, Yakubovsky, 1950, p. 89]. At that time Jochid Ulus was experiencing internecine wars that increased and lasted until Nogai's death in 1299–1300. The khans had to therefore give up their active foreign policies for some time. Besides, during this period Egypt was at peace with the Hulaguids. When in 1306 Khan Tokhta's embassy arrived to Egypt's ruler Malik an-Nasir Muhammad (1299–1309) with the proposal of fighting the Ilkhans together, the sultan refused politely. Besides their efforts to seize Syria, the Hulaguids also had to exercise control over their border with the Chagataids. However, according to Persian historians, the Hulaguids did not use the confusion among

the Jochids to their advantage. For example, Rashid al-Din quotes the words that were allegedly spoken by Ghazan Khan to the Golden Horde envoys sent by Tokhta: 'I do not interfere in your internal affairs, nor do I take advantage of (your) bad situation...' He instructed his trusted people in the following way: 'By no means are we to start a quarrel or be the first to act in matters that cause disturbance, so that we are not blamed for the damage caused to the ulus [Collected Materials on the History of the Golden Horde, 1941, p. 72–73].

The Golden Horde rulers renewed their claims to Azerbaijan at the time when Ghazan Khan was preparing to march against Egypt. In 1300–1301, he moved his army to Syria against the Sultan of Egypt. The same year (on 3 May), Ghazan Khan was visited by Tokhta's envoys. It is likely that the latter wanted to make the most of the situation and gain territorial concessions from the Ilkhan. But the negotiations never resulted in anything. Counting on the advantage of surprise, Tokhta moved his considerable army to the border with the purpose of seizing Azerbaijan. Ghazan Khan, who had returned from his campaign in Syria, went to Arran and nearly reached the limits of Darbend, which aroused alarm among the Golden Horde army. But the sources do not mention any specific military actions. Rashid al-Din only says that Tokhta Khan took to flight and his princes and emirs, thinking that Ghazan Khan was going to attack them, retreated to the other side of the river (Samura?). When the Golden Horde commanders saw that their guess was wrong, peaceful trade relations were once again resumed [Rashid al-Din, 1946, III, pp. 344–345, 188–189]. Historians assert that Ghazan Khan left his military forces in Arran to protect its borders.

Subsequent relations between the Ilkhan and the Khan of Jochid Ulus worsened still due to Tokhta's efforts, who hoped to use the alliance with the sultan of Egypt in his own interests. On 22 December 1302, the sultan of Egypt's envoys paid a visit to Ghazan Khan. At the same time, Tokhta's envoys also arrived there, and the number of their guards was con-

siderably larger than the diplomatic protocol of that time required. According to Rashid al-Din, there were 300 men [Ibid., pp. 352–353, 193], and according to Wassaf, the 3 ambassadorial uimaks arrived on 325 post horses [Collected Materials on History of the Golden Horde, 1941, p. 82]. In reality, Tokhta's embassy made the demand of Ghazan Khan that the Caucasian territories be conceded to them. According to Wassaf, Tokhta demanded that Azerbaijan be given to the Golden Horde. 'When Toqtai became a sovereign Khan and established himself as the peak of honour and good fortune, a feeling of vanity and arrogance awoke (in him) and he wished again to add (to his domain) Arran and Azerbaijan...' [Ibid.]. He said that his demand was motivated by the fact that according to the division of the Mongol Empire envisaged by Chinggis Khan's testament, Arran and Azerbaijan were to have belonged to Batu Khan, and that 'they (the Hulaguids) have wrongly been in possession of incomes and taxes for (many) years' [Ibid.]. Tokhta threatened Ghazan Khan and warned him that if his requirement was not met, he would achieve his aim using weapons. Ghazan decisively rejected Tokhta's demand. He said in response: As for the claim to these lands, ...the answer is this: although since the reign of Hulagu Khan these lands have passed to the extensive domains (of his), but (besides) the Mongols and Tajiks, nomads and city dwellers are aware that we conquered this area by using something precious, besides which there is no (other) mirror to see the face of victory, and no (other) preacher on the pulpits of subjection, and no (other) mediator in military clashes, and no (other) dragoman to talk of victory..., meaning the sword of an Indian origin; therefore, the conversation about its deprivation (of that area) must also be conducted in the language of the sword...' [Ibid., p. 83]. After the talks, Ghazan allowed the Golden Horde envoys to return. As the same Wassaf writes, '...(Ghazan Khan) honoured the Kipchak envoys with gifts and favours; he sent the 21 falcons that they had brought to his own hunting lodge and gave for each of them pearls from the treasury worth 1,000 dinars. He gave prince Toqtai his answer with differ-

ent exhortations and compliments, and suggested that he should continue to go along the road of consent and mutual agreement [Ibid., p. 84]. The envoys of the sultan of Egypt were sent to Tabriz (according to Wassaf, to Hamadan) and were kept there. No specific military actions between the two Khans are observed in the sources. Most likely, Tokhta's efforts were ultimately unsuccessful.

After Ghazan's death, there were no military actions between the Golden Horde khan and Sultan Muhammad Öljeitu (1304–1316), but the latter would never stop keeping military forces in Arran. After his death, the situation radically changed.

The next Khan of the Golden Horde, Öz Beg, who adopted Islam and successfully dealt with his internal enemies, decided again to raise his claims to the Hulaguids while maintaining lively, allied diplomatic ties with Egypt. In 1318–19, at the beginning of Ilkhan Abu-Sa'id's reign, the Khan of the Golden Horde and the sultan of Egypt set out against him. In the winter of that year, Öz Beg's considerable forces moved from Darbend to Arran. The emirs on the Ilkhans' side then began to retreat without fighting, so the Jochids managed to seize a large territory and reach the banks of the Kura River, on the opposite banks of which were positioned Abu-Sa'id's troops, which were numerically much fewer than in Öz Beg Khan's army. In addition, their fighting spirit left much to be desired, as they suffered from hunger due to lack of food, unfavourable weather conditions and the death of crops and cattle. During this time, the omnipotent emir Choban, who would have moved to Horsan to suppress the rebellions of the nomadic feudals, earned about Öz Beg's invasion and at once decided to come to help the Ilkhans' army, most likely trying to take the enemy from the rear. Öz Beg had to leave the captured lands and began to retreat towards Darbend [Ibid., pp. 87–88, 92], but Abu-Sa'id's troops pursued him all the way there.

It can be assumed that the relations between the two countries were generally peaceful over a period of several years. However, in all probability, Öz Beg Khan never abandoned his secret hope to unite Jochid Ulus

and Hulaguid Iran under his control. In fact, 'Sheikh—Uvays's History' states that a certain Bagdad-Khatun carried on a correspondence with Öz Beg Khan, inviting him to assume the Hulaguid throne, for which she was executed in 1335 [Ibid., p. 101]

Using the internecine strife among the Ilkhans to his advantage, Öz Beg Khan tried to seize Azerbaijan once again. Warned by informers and without waiting for the attack, Abu Sa'id went with a large army to Arran and reached Shirvan in 1334–1335 (according to Mirkhond, in the early 1335–1336). But an epidemic spread throughout his army and many soldiers died. The Ilkhan himself fell seriously ill himself, and on 30 November 1335 he died in Karabag. According to some historians, he was poisoned.

After Abu Sa'id's death, discord and internecine strife spread in the Ilkhan State, giving rise to people's revolts. Succession to the throne thus became an issue of great importance, and Arpa Khan was actually elected without all family members present due to the emergency caused by Öz Beg's invasion. Taking advantage of the situation, Öz Beg Khan invaded Arran with a large army. In the winter of 1335–36, Arpa Khan, who had succeeded to the throne after Abu Sa'id's death, also moved his army to Arran and reached the Kura River. A major battle took place between the two enemies which ultimately ended in the Golden Horde Khan's defeat. It should also be mentioned that the weather conditions had worsened by that time due to the bad drought. In addition, Öz Beg Khan had received a message from Qutlugh detailing Timur's death and, as Hamdallah al-Qazwini writes, 'they were not able to stay (at that place)' [Ibid., p. 93]. A. Ali-Zade, proceeding from the accounts of the Persian historian Muhammad Shebangarai, wrote: 'According to the historian, when Abu-Sa'id was alive, Öz Beg Khan planned to set out via Derbent. When he learned about Abu-Sa'id's demise, he moved his army through Derbent, approached the limits of Karabag, and stopped on the bank of the Kura River. Upon receiving the news of the Golden Horde's invasion, Arpa Khan, in command of a large army and together with

his vizier Giyath al-Din, son of Rashid al-Din and his emirs, immediately marched against the army of the Golden Horde Khan Öz Beg. For 45 days, both armies stood opposite one another, but military actions only took place for two or three days. According to the historian, during this time a grass grew in the steppe that the Golden Horde horses ate and died. In addition, when Öz Beg Khan saw that the army fighting against him was the same Abu-Sa'id's army that surpassed the Golden Horde troops in fighting skills, strength and equipment, he ordered to light a lot of fires, and at midnight, after he left the captured territory, he came back. On the following day, the Golden Horde troops vanished without a trace [Ali-Zadeh, 1956, p. 328].

Arpa Khan was killed during feudal strife, and the Hulaguid state broke up into a number of appanages that feuded internally. The Ulus of Jochi was also consumed with the same issues.

The Golden Horde Khan Janibek (1342–1357), following the traditions of the Golden Horde khans' attitude towards Azerbaijan, which was captured by the Chobanids after Abu-Sa'id's death, aspired to add it to his domains. According to the author of 'The History of Sheikh-Uvays', many hojis (merchants) of 'Tabriz, Serakhs, Ardebil, Bailekhan, Berda and Nakhichevan' were displeased with Malik Ashraf's policy and came to Janibek Khan to ask him to take power in Azerbai-

jan into his own hands [Collected Materials on the History of the Golden Horde, 1941, pp. 230, 101]. As A. Yakubovsky wrote, 'It seems that Janibek Khan had quite a few people in Azerbaijan who were loyal to him and who advocated for the Jochids' interests. His most active supporters were representatives of the ulama, namely sheikhs, qadis and others. True to form, while being oppressed by Valik Ashrefa, the famous qadi Mukhyi-ad-din Berdai moved to Sarai Berke and in one of his sermons began to appeal to Janibek Khan to launch a campaign against Tabriz [Grekov, Yakubovsky, 1950, p. 264].

In December 1357, Janibek defeated the army of Malik Ashraf and seized Tabriz, where he minted his own coins for some time, and executed him. Janibek then appointed his son Berdibek to take his place. Thus, for a certain period of time Azerbaijan was added to Jochid Ulus. On his way back to his ulus, Janibek Khan fell ill and died. According to other sources, he was killed by Berdibek's order. After hearing of this event, Berdibek hurried to the Golden Horde so as not to miss his chance to take the Khan's throne, and left the country he had just conquered. Subsequently, however, it was not in his destiny to add Azerbaijan to Jochid Ulus once and for all.

Tabriz was conquered once again during the lifetime of the Golden Horde Khan Tokhtamysh, but his constant struggle with Timur prevented him from retaining Azerbaijan.

§6. The Jochid Ulus and Mamluk Egypt: Political and Cultural Connections

Aleksandr Kadyrbayev

The emergence of Jochid Ulus and the Turkic Mamluk state on the world map coincided in time (the 1240–50s), which is not accidental, as one can see a distinct cause and effect relationship between these two events.

The 13th century witnessed a revival of the slave trade. After the terrible wars unleashed upon the world by the Mongol rulers, a great number of people were cut off from their homeland and made slaves who could

be bought and sold. The Mongol armies themselves were burdened with the masses of prisoners who were made slaves, and they attached little value to the slaves, as they were obtained cheaply during military campaigns and looting. When the wars began to subside, the prisoners turned into a source of profit, the objects of purchase contracts. A great number of slaves from the steppes of Dasht-I Kipchak were sold by Mongols, Muslim and

Italian merchants at the slave markets in Sarai, Kaffa (modern Feodosia), Soldaia (modern Sudak), Constantinople (modern Istanbul), Baghdad, Damascus, Alexandria, Samarkand and Bukhara to Europe, north-western Africa and India. But a considerable number of them were sold to Egypt and Syria. The Arab chronicler al-Ayni wrote: 'Those taken prisoner from these peoples (the Kipchaks) were brought to the Egyptian and Syrian lands ...' [Collected Materials on the History of the Golden Horde, 1883, p. 503].

Every Muslim ruler who respected himself had bodyguards. In India they were called *Gulyams*, in Egypt and Syria they were called *Mamluks*. These positions were filled by slaves bought when they were children or young men and then educated and brought up at the sovereign's palace. These soldiers were supposed to be loyal to their sovereign and independent of the state machine, government and its officials. The Mamluks obeyed only their master, the ruling monarch. Turkic slaves were considered the best *Gulyams* and Mamluks.

In the Egyptian–Syrian sultanate, where a lot of Turkic slaves were sold, as early as the middle of the 13th century the palace guard consisted mainly of Kipchaks. After the death of the last Sultan Malik as-Salih from the house of the Ayyubids, his wife Shadjarat ad-Durr, the daughter of a Turkic slave, occupied the throne in 1250 with the help of the Mamluks. After her short rule and death, the throne was then occupied by Kipchak Mamluks who created an army known for their excellent military skills, and who fought back not only the attacks of the West European crusaders, but also those of Mongol conquerors, which very few in reality managed to do. Among those rulers who defeated the Mongols were Mamluk Kipchak sultans Qutuz, Beibars, Qalawun and an-Nasir. While Qutuz was the first to have inflicted a crushing defeat to the Mongols, his successor Beibars, while fighting the Ilkhan Mongols, did not confine himself to mere military efforts. He also used the discord between the Hulaguids and the Jochids which, as stated above, caused the soldiers of Jochid Ulus who earlier fought under Hu-

lagu to join the Mamluks. In addition, in one of his letters sent in 1261 to Berke, the Khan of Jochid Ulus and a Muslim, he appealed to him as a brother in faith to set out against Christian Hulagu, which turned out to be an effective plea. Berke Khan's former troops quickly joined the Mamluks, and many of them became emirs and occupied high posts in the Mamluk hierarchy. In the midst of the wars waged from 1262 between Jochid Ulus and the Hulaguids, Beibars' first embassy sent to Berke Khan in 1263 initiated a number of analogous missions during the 13–14th centuries. They were composed of Sunni theologians who were supposed to facilitate the spread of Islam, officials, and Mamluk Kipchak emirs who communicated with the people of Jochid Ulus and with most courtiers without any translators. From that time on, Arab sources started to give relatively complete accounts of Jochid Ulus that remain valid today. The Byzantine Empire, which relied on the support of Jochid Ulus to counter the Ulus of the Hulaguids' aggressive efforts, acted as an intermediary between the two states. In the 1360s, a distinctive axis of Sarai–Constantinople–Cairo formed, which opposed the Hulaguids and their vassals in Cilician Armenia and Georgia, and in the distant Yuan Empire behind them, the Mongol state in China, as well as Latin West. Mediation among all these countries was conducted by Italians, namely by the Genoese for the first group, and by the Venetians for the other. The mediation Genoese rendered and the alliance with the Byzantine Empire helped the Mamluks to add more troops to their army by importing new slave-soldiers from Jochid Ulus and their khans' vassalage of Dasht-i Kipchak, preserving a relative homogeneity of the army's composition. The Kipchak Mamluks played a dominant role in the ruling elite of the Syrian–Egyptian sultanate from 1250 until 1382, though they were strangers in these lands. They were a separate caste in Egyptian–Syrian society, a type of privileged military, and though they were reinforced by slaves, actual slaves during the reign of the Kipchak Mamluks were the broad masses of the indigenous Arab population of these countries. Long-term

isolation from the local population would preserve the Turkic ethnic character of the Mamluk ruling elite, whose prestige was supplemented by a traditional image of Turks in the Islamic world as the supporting and striking force of Sunni Islam. Arab authors referred to the Mamluk state as Turkic, namely, *dawlat at-atrak* [Korayev, 2003, pp. 66–75]. The first famous Mamluk sultans who were mentioned above, except for an-Nasir, knew practically no Arabic, although they remain in Arab history as liberators from the threat of the crusaders and Mongols, as well as champions of jihad, meaning ‘holy war’. The language of communication among the Mamluks was Turkic. In the Syrian-Egyptian sultanate, Persian and Arab poetic works were translated into Kipchak. In this connection, the translation of Ferdowsi’s immortal work, ‘Shakh-name’, into Turkic by poet Sharif, who lived among the Kipchak Mamluks, is of particular interest. Egyptian and Syrian Kipchaks spoke their native tongue, which underwent considerable changes under the influence of other Turkic dialects, especially the Oghuz dialect. Quite a few literary works of diverse content had been written by the latter half of the 14th century in the Kipchak-Oghuz dialect, which had become the literary language in Egypt and Syria.

On its end, Jochid Ulus gave rise to written culture in the Turkic language, some works of which excited interest among the Turkic Mamluks; namely, the written sources of the 14th century called ‘Khosrov and Shirin’.

Dynastic marriages also contributed to the development of relations between the Golden Horde and the Mamluks. For example, a Khan of Jochid Ulus married his daughter to Beibars Sultan, of whom his first heir Said Khan Muhammad was born and named Nasr-ad-Din Berke Khan after his maternal grandfather. It is known that a Golden Horde princess named Tulunbi, who was from the Chinggisid family ruling in Jochid Ulus, was engaged to Sultan an-Nasir at the initiation of its rulers [Islamov, 2002, p. 10–11].

In Egypt and Syria, the Kipchak Mamluks introduced a lot of customs from public and private life that they brought with them from the steppes ruled by Jochid Ulus. The Mam-

luks had a dislike for Arab customs. They wanted to introduce their own rules, which were a peculiar combination of Kipchak rites and steppe law. Cairo’s people were surprised to see 300 horsemen together with musicians dressed in skullcaps and long caftans, in keeping with Kipchak fashion, who were sent by the Mamluk emir to precede him before his appearance from the palace. Traveling along the banks of the Nile, Mamluk emirs used the same bullock carts that the traveller Giovanni da Pian del Carpine had seen in the steppes of Jochid Ulus in the middle of the 13th century, and then described them. Here, in Arabic Egypt, when noble Mamluk emirs and sultans appeared in person, horses and sheep were slaughtered, and they would eat the meat of horses and sheep and drink koumiss (fermented mare’s milk) just as their Turkic ancestors used to feast in the steppe expanses of Dasht-I Kipchak. An-Nasir, seemingly one of the most Arabised Mamluk rulers, spent huge sums of money on horses, and he had 20 thousand sheep slaughtered for his son’s wedding party. Koumiss was served during audiences given by Beibars, which was ultimately the cause of his death. Beibars’ death was accidental and happened during a small drama which he himself had staged. He was planning to kill a Mamluk emir who was one of his rivals, and prepared a cup of poisoned koumiss for him. But just like in the Shakespearean drama, the latter managed to secretly change the cup and Beibars fell into his own trap—he drank the poison and died in terrible agony 13 days later. Among themselves, Kipchak Mamluks even ignored sharia and preferred to try people using common steppe law.

According to the Arab chroniclers Ibn Furat and al-Maqrizi, Sultan Qalawun, who had the honour of driving away the crusaders from the Middle East for good and winning great victories over the Hulaguids, and who spent his life mainly in military campaigns, is known for more than just his feats in this area. He allocated two thousand dinars to build a mosque on the land of Jochid Ulus in the Crimea (in Solkhat), and sent there his mason to carve his titles on its walls, which were seen by Ibn Battuta, a traveller from Morocco. Before that,

with the permission of Jochid Ulus' Khan, a mosque was built in Crimea upon the initiative of Beibars. Archaeological digs of Sarai prove the theory that during the Golden Horde period craftsmen from Egypt worked in that area. Bolgar structures of the Golden Horde period also show architecture similar to that of the Egyptian Mamluks

Although Egypt's Mamluk rulers were far from being orthodox Muslims, they still played a significant role in Sarai's official adoption of Islam, as at that time Cairo was considered a centre of Muslim civilisation with a history more than 300 years long. In 1261, a caliphate was established in the Egyptian-Syrian sultanate, that is it became the main state in the Muslim world. Therefore, the Mamluk sultans tried to stimulate the Jochid Ulus khans to adopt Islam. To a large extent the fruit of their efforts was the adoption by Berke Khan and his wife Jijek of Islam. It is known that the Khan of Jochid Ulus Tuda-Mengu (1280–1287) sent a letter to Egypt in 1283 with a Golden Horde embassy in which he asked to be given a Muslim name and sent the caliph's banners. In 1312, Öz Beg ascended the throne in the Golden Horde, and the following year he informed the Mamluk Sultan that he had exterminated the Golden Horde nobles who were against adopting Islam as the state religion in Jochid Ulus. In 1323, along with numerous presents from Sarai, the Mamluk embassy brought a letter to the sultan with the request to send books on Muslim law to the Jochid Ulus. Arab scholars' accounts state that among the expensive presents sent from Egypt to the Golden Horde khans there was also a Quran sent by Osman, one of the pious caliphs.

Nevertheless, as strange as it may seem at first glance, it was during the reign of Öz Beg Khan that the connections between Jochid Ulus and the Egyptian-Syrian sultanate became somewhat less intensive, which can be accounted for by the miserable marriage of Sultan an-Nasir to one of Öz Beg Khan's sisters, as well as by the Islamisation of Jochid Ulus, which banned the selling of Muslims, and as a result, the influx of slave-soldiers from Dasht-i-Kipchak to reinforce the Mamluk army in Egypt as well. The reasons

for the deterioration of ties between the Mamluks and the Golden Horde included the following: the weakening of the Byzantine Empire, their joint ally, caused by the pressure of the emirates of Seljuk Turks from Asia Minor, as the Hulaguids had lost control over them and it was passing to the hands of the Osman dynasty, who under the reign of Orkhan (1326–1362) assumed control of the Dardanelles, the fall of the state of the Hulaguids, their joint enemy, which ceased to exist in the 1340s, the protracted crises in both empires that ultimately resulted in the Turkic people's loss of power in Egypt and Syria, and the establishment in 1382 of Caucasian or 'Circassian' Mamluks, and in the Golden Horde it led to the 'great zamyatnya' in the 1350–1370s which caused the final disintegration of the Jochid Ulus [Landa, 1995, pp. 44–45].

But despite the paramount importance of relations between the Mamluks and the Golden Horde, they were not limited to the connections of Jochid Ulus with the Muslim world. For example, according to Chinggis Khan's will, the lands owned by Seljuk Turks in Asia Minor were to have passed to the Ulus of Jochi, and when the Hulaguids usurped this right, the war started between them and the Seljuk emirates fell under the authority of the Hulaguids. After the fall of the Hulaguids, the emirates of Anatolia, which were involved in establishing a new empire initiated by Osman, the ruler of the Konya Sultanate, under whose name it then existed for hundreds of years, resumed connections with Jochid Ulus. But very soon, at the turn of the 14–15th centuries, they became a unified political unit known as the Ottoman Empire. The diplomatic correspondence between the Golden Horde khans and the Ottoman padishahs is evidence of the connections between Jochi Ulus and the Ottoman Empire. This mainly concerns the letters sent by Khans Ulug-Muhammad and Mahmud to the Sultans Murad II and Mehmed Fatikh, respectively. As can be seen from this correspondence, before its disintegration the Khans of Jochid Ulus had recognised *de facto* that the Crimean Khanate, which used to be a constituent part of the Golden Horde, became a subject of the Ottoman Empire. It is inter-

esting to note that, albeit indirectly, the Ottomans considered themselves successors of Jochid Ulus and honoured the Jochids as the oldest line of Chinggis Khan's descendants, the dynasty which ruled the Golden Horde and its inherited Khanates, one of which (the Crimean yurt) became part of the Ottoman Empire. In the Ottoman Empire it was official law that the right to the Ottoman throne were reserved for the Chinggisids—the Girays, the rulers of Crimea, in case the Ottoman dynasty was cut off. By that time, the young Ottoman Empire, which was in the midst of a historic rise, and the Golden Horde, which had passed the peak of its power, and the Turkic empires of Eurasia had suffered a crushing defeat from the ruler of Samarkand, also a Turk, Timur or 'Tamerlane', the founder of the world empire extending from Asia Minor to China. But while the Ottoman Empire held out and outlived Timur's empire for many centuries, Jochid Ulus would never be restored and was from that point on relegated to history.

Jochid Ulus's connections with the Delhi Turkic sultanate in India can be proven by the fact that India's sultan Iltutmish, who rose to power in that country, was a native of the

Lower Volga Region and the Cis-Ural Region, who had once been sold into slavery by the Mongols and rose from a gulyam, a slave warrior, to a ruler. There were also Kipchaks from Jochid Ulus and the Crimean and Black Sea Steppes who served at the court of the Delhi sultans, for example, sheikh Rajab al-Burkui 'from the city of al-Qirim (Sary Krym), which is in the Kipchak steppe...' And for the cavalry, which was the striking force of the Delhi sultanate, they bought horses of 'Turkic breed' from 'Tataria', that is from Dasht-i Kipchak [Ibn-Battuta, 1929, p. p. 12–18].

Thus, Jochid Ulus had extensive links with the Muslim East, especially with Egypt and Syria, as well as with Anatolia represented by the Seljuk emirates, the Ottoman Empire and the Delhi Sultanate, borrowing not only religion but many other things as well, including crafts, architecture, baths, poems, ornamental décor, painted pottery, geometry and equipment, morals and tastes which were more sophisticated than those of the steppe soldiers of Jochid Ulus, and 'the Horde culture acquired a certain Muslim-Mediterranean shade', according to the famous orientalist C. Bosworth [Bosworth, 1971, p. 191].

Section V

The Civilisation of the Golden Horde

CHAPTER 1

The Cultural Legacy of the First Generations of the Jochids

Mark Kramarovsky

The line of events that led to the formation of the Ulus of Jochi, the main stages of its evolution, would appear to provide a framework for the clear chronological boundaries of our attention. But since the process in which the culture of the new state formation was established cannot be reduced to the stages of creating its military, administrative and political structures, the boundaries of the research are somewhat relative. Formally, these are defined by the period from 1207—when the Jochid Ulus was assigned through paternal inheritance—to 1242—the end of the European campaign by the Mongols.

Moreover, the lack of unity in the cultural genesis of the Mongol and Turkic-speaking tribes living to the north of the Great Wall of China at the initial stage of the formation of the single Mongolian state makes the chronology of the establishment of the Mongols' cultural relations with their neighbours relative too. This peculiarity is echoed in the Chinese written sources. The Chinese determined the level of culture of their northern neighbours by the degree of its proximity to the standards of their own civilisation. Hence, they perceived three groups of Mongols (Tartars): *white*, *black*, and *savage*.

This is reflected in all the information about them up to the end of the 12th century, which is mainly concerned with the cooperation between the Mongols and the Jurchen people of the Jin State. The Tatars, Jalairs, Keraites and Naimans are known by the Jurchens under the Khitan name, *Zubu*. The Mongol tribes are chiefly mentioned in the context of events in connection with important changes in bilateral relations. For example, around 1135 the Jin people, having invited the leader of the Mongols, Qabul Khan (an ancestor of Chinggis Khan), to the coronation of Xizong, tried to de-

stroy him on his way back. This episode led to the murder of the Jin ambassadors in 1137 and a failed Jurchen expedition against the Mongols. The son of Qabul Khan, Hotula Khan, defeated the Jins, and peace was only established in 1147, to the advantage of the Mongols. The other neighbours of the Jins, the Tatars (whose nomad camps were located along the western border of the Jin possessions in Manchuria) delivered Mongol Khan Ambaghai to the Jurchens for execution at the beginning of the XII century. In 1161, they helped the Jurchens to defeat the Mongols near Lake Buir. But in 1198, the Tatars were defeated by the Mongols, Keraites and Jurchens. In 1202, the entire tribal union of the Tatars was destroyed by Temujin. The Keraites were in direct contact with the Jurchens. In 1198 their leader, Tooril Khan, was given the royal title of *Ong* (hence—Ong-Khan) for assisting the Jurchens in the fight against the Tartars and the Onguds. Temujin participated in the fighting on the River Uldza as a junior partner of the Keraites. To show their gratitude, the Jurchens awarded him the title of *Dzhauthuri* (Great Emir). Between 1206 and 1209 Chinggis Khan continued to be an associate of Ong-Khan—the Jin's vassal. Two years later he started a war with the Jurchens that ended in the collapse of the Jin State in 1235.

These are just a few examples of the early history of the Mongol-Tatars in Central Asia. But they give us some idea of the quality of the new wave of invaders, who made their way beyond the Urals to the European zone of the forest steppes and Desht-i Kipchak as early as the first raid of Subutai (analysis of information by Yuan about him, see: [Kychanov, 1998, p. 43–46]). It is clear that by the time of the Kurultai in 1235, when the decision was made to conquer Bulgaria, the countries of the Ases and Rus', the Mongols of Batu cannot be re-

garded outside the context of the culture of the last third of the 12th century with respect to either their experience or their equipment. This refers to the efforts of several preceding generations of Chinggis Khan's noyons, for whom the period of twinship and struggle between Temujin and Jamukha coincided with their own maturity and the beginning of their professional career.

According to estimates by V. Rossabi, the number of the troops in the western military campaign, who consisted of Mongols, Turks, Khitans, Chinese, Jurchens, Tanguts, Persians and others, did not exceed 150 thousand men [Rossabi, 1988, p. 10]. Undoubtedly, the assault force was made up of eastern and southern Siberian unit of the Jochids.

1207 was a successful year for Jochi. Chinggis Khan's satisfaction with the brilliant victory of his eldest son in the campaign against the 'forest peoples' was marked by the granting of a ulus of 9 thousand yurts [Kozin, 1941, p. 175–176]. But the peoples conquered by the forces of the right wing (the western tumen, adjacent to the Altai, under the overall command of Bo'orchu) remained in allegiance with Jochi. After Jochi had been walking in Tuva and was nearing the Khakass-Minusinsk hollow, he was approached by the Kyrgyz rulers Edin-al, Aldiyer, Olebekdigin, who had an expression of humility on their faces [ibid, p. 174; Rashid al-Din, 1952, I, 1, p. 122–123, 150–151; I, 2, p. 151, 178, 253]. The entire territory of the Altai-Sayan Mountains, including Tuva, the Mountain Altai and the Khakass-Minusinsk depression, which before the arrival of the Mongols was ruled by the Yenisei Kyrgyz, had now become subordinate to Jochi [Kyzlasov, 1984, p. 87–88]. Thus, the new ulus was composed of the peoples of eastern and southern Siberia (Oirats, Buruts, Barhuns, Ursuts, Habkhanases, Khanhases, Tubases). After Chinggis Khan was introduced to the Kyrgyz generals of thousands and ten-thousands (tumens), and noyons of the forest peoples, the union of Chinggis Khan's home with the leading representatives of the local elite was secured by dynastic marriages [ibid., p. 175]; descendants of the Barga Mongols, Dzhedai-Noyon and Dzhurdzhagan, occupied a high position in the military sphere

Reconstruction of sabre and saydak belts
(according to M. Kramarovskiy and M. Gorelik)

[Zoriktuev, 1995, p. 90–95]. This localised example alone illustrates the conditions under which there was an opportunity to join the original narrow circle of the ruling nobility, which formed the elite of the Mongolian State. The rules were very simple: the personal accomplishments of the applicant were determined by their usefulness to the ruling house. Thus, the 'History of Yuan' lists among the notable members of the western campaign the names of the Tangut Sili Tsyambu, the Kankalis Aymyao, the Chinese Gao Min, the Uighur Hesy'mayli (Is-mail), and others [Kychanov, 2002a, p. 80–81].

The material aspects of the Jochids' military culture must now be judged mainly on the findings from the 14th century. In essence, there are still a lot of questions around the archaeology of the Golden Horde in the early part of the first half of the 13th century to the 1260s, owing to a lack of reliable attributions. But there are exceptions, of which two examples are given here. The Teleut Vvoz I burial site is a striking example of the monuments of the Forest-Steppe Altai [Tishkin, Gorbunov, Kazakov, 2002]. Our attention is drawn to the use of covered wooden

Belt set from the Olen'-Kolodez' burial site.
Second half of the 13th century
(according to K. Efimov)

sarcophagi (mounds 2, 8, 9) and those without a cover (mounds 1 and 6) in burial ceremonies at this burial mound. Researchers observe an analogy in the Altai Mountains; tomb 17 at the Kudy'rge monument, dating back to the time of the Mongols [*ibid.*, p. 137]. And, although the Altai colleagues do not consider burials in wooden sarcophagi (hollowed-out tree trunks) to be peculiar to the Mongols (in their opinion, Mongol burials involved boxes made from longitudinal or transverse boards), burials in sarcophagi in the western part of the steppes of Eurasia are often associated with those of the Early Mongol period and, to judge from the specific grave goods, in my view, can be identified with the elite of the Jochid, and probably the Mongolian, equites [Kramarovsky, 2001, p. 37–53]. In this regard, the Golden Horde burial in an oak sarcophagus from burial mound 7 of the Olen'-Kolodez' burial site on the left bank of the Don is worthy of mention [Efimov, 1999, p. 93–102]. Amongst the grave goods found here were a chain mail, a helmet with a barmica (camail), and a unique belt set of gilded silver

with a belt chalice, equipped with a handle in the form of a dragon's protoma. A dagger, a spear and a battle-axe were found amongst the objects of armaments. Of particular interest are a set of belts, clearly the craftwork of the Jurchens [Kramarovsky 2001, p. 39], and an iron axe with inlaid work of brass and silver. This type of axe is usually regarded as Northern European and dates back to the turn of the 12–13th centuries [Paulsen, 1956, p. 170–184, abb. 88–92]. There are fundamental analogies with occasional finds in Central Europe; Silesia and Moravia. The western unit of Batu, heading for Bohemia and Moravia, passed this way following victories in Silesia. It is perfectly conceivable that a nomadic burial near Voronezh was that of a veteran of the European campaign, which ended in 1242 with the Mongolian units returning to Desht-i Kipchak.

The expansion of the fund of archaeological sources associated with the first Mongolian wave challenges the popular perception of the time and circumstances of the emergence of a southern Siberian series of findings of objects in the cultures of the forest-steppe Volga Region, in certain ancient Russian towns, the Don River Region and in Hungary [Kyzlasov, 2000, p. 3–7]. Until recently, the paradox was that the so-called 'Askizsky' artefacts amongst the materials found in the strata and structures of the ancient Russian towns dated back earlier than the same artefacts, regarded in their home country as being from the Kamensky stage of the Askizsky archaeological culture (13–14th centuries). A revision of the chronology of the findings from the Old Russian monuments, which places these articles at a period more recent by several decades, has provided some degree of compromise. It cannot be overlooked that the new chronology of the mass finds of the Askizsky circle outside southern Siberia, including belt tips, stirrups with applique work in gold and silver, as well as some other categories of metal objects, including hooks for lacing plate shells such as 'Khatangu Degel', flints, various types of buckles, linings, etc., brings us closer to the initial stage of the Mongol expansion into Eastern Europe. The problem of the Early Jochid interpretation is elucidated with astounding clarity in an analysis of the

Belt linings from the Tash-Bashat burial site (Talas Valley). Second half of the 13th century (according to D. Vinnik)

Askizsky complex of artefacts from the territory of the Zolotarevsky settlement in the Upper Sura, the right tributary of the Volga [Belyrbkin, 2001, p. 160–172].

In our opinion, the problem is that, first of all, the impeccable cultural and chronological attribution of the item complexes has become blurred through inversion by authors, where the remains of the Askizsky equipment of the Jochid military unit, killed during an assault on a Bulgarian town in the first three decades or so of the 13th century, are attributed to hired (?) defenders [ibid., p. 172, 181–182]. Secondly, the dates of the items dating back to the 12th century and to the 1220–1230s are sometimes perceived too literally as indicators of 'pre-Mongolian contacts' [Rudenko, 2000, p. 48–127; 2001]. Moreover, the military equipment: the metal parts of harnesses, horse saddle, items of protective armour and weapons, often expensive and highly valued by several generations of one equestrian family, did not exactly wear out as quickly as shoe shine during a parade. This is confirmed, incidentally, by the actual early dates of the individual items.

The issue of the origin of the metal the Chinggisids used for artistic work is one of the most fundamental questions concerning the cultural heritage of the early Jochids. J. Watt recently touched upon this theme in a section of the catalogue of the exhibition 'The Legacy of Genghis Khan: Courtly Art and Culture in Western Asia, 1256–1353' dedicated to the exchange of artistic experience in the Mongol Empire [Watt, 2003, pp. 63–73]. Of interest here is his observation of the combination of Chinese and Islamic motifs in the form, decor and Arabic graphic inscriptions on the collar of a bronze vessel from Karakoram [Evtyukhova, 1965, pp. 280–281, Table 143]. According to

J. Watt, the vessel was made before 1270 in an area of weaving workshops in North China and was sent to the Mongolian capital as a tribute [Watt, 2003, p. 67]. L. Evtyukhova believed that 'the place of the vessel's manufacture could be Karakoram' [Evtyukhova, 1965, p. 281]. However, much of his short essay, mainly on the workmanship of the fabrics, is open to dispute. J. Watt evidently insists, by analogy with weaving manufacture, that the best works of to-reutics in the Mongol Empire before 1270 were produced by Chinese craftsmen. However, the author is not in the least perturbed by the fact that some monuments of interest to him are genetically linked to the crafts of the Jurchen Jin State (1115–1234). The find in the district of Gashun Ust in the North Caucasus is not as straightforward [Watt, 2003, p. 66–67, Fig. 62, cat.143]. J. Watt believes that the golden belt set from Gashun Ust is either an original record of the Chin dynasty period in North China and the Mongols' spoils of war (that is, before 1234), or was made by a Chinese craftsman prisoner from the Jin State for a family member of Batu (that is, in the period between 1234 and 1270; cf. [Kramarovsky, 2001, p. 51]). We can only agree on one thesis: the belt set belonged to an oglan—that is, a prince of the 'House of Batu'. This is evidenced by the pendant with a tamga [Watt, 2003, p. 66–67, fig. 62]. Judging from the type of tamga, the find may date back to the 1270s. [Kramarovsky, 2001, p. 49]. The belt type from Gashun Ust is not Chinese [ibid, p. 35–60]. A non-Chinese belt set was found in the burial site of Tash-Bashat in the Talas

Details of belt garniture with a depiction of deer and fallow deer from the Gashun-Ust burial complex (Ciscaucasia).
Second half of the 13th century belt reconstruction
by M. Kramarovsky

valley in Kyrgyzstan [*ibid.*, p. 45–47, Fig. 20]. The main theme in the decor of the belt plates from Tash-Bashat is a fallow deer against a background of blossoming nature. The image of fallow deer can be seen in the decoration of belt linings in the collection of Nasser D. Halili [Alexander, 1992, p. 30–31; Watt, 2003, p. 67, Fig. 65, cat. 151], which are also non-Chinese. At the same time, each of the findings bears features of the art of the Far East. We shall attempt to establish which traditions of the Far East are reflected in our records.

Bronze and iron buckles from belt sets with decorative motifs of interest to us have been found in the strata of the 12th century up to the beginning of the 13th century in the ancient Jurchen town of Lazovskoye in Primorye [Shavkunov, 1990, p. 140, tab. 41: 1–4]. Bronze belt clips with depictions of fallow deer have been found in the ancient town of Shaigin; two other objects with a similar design have been

found in Ananyevo Gorodishche (a lead belt lining and a stone stamp) [*ibid.*, tab. 43: 3, 4, 18]. Clearly, the Lazovskoye finds (the two buckles and belt clips) were made by Khitan craftsmen skilled in toreutics [Khodzevich, 1988, p. 90]. The fairly widespread depiction of fallow deer in nephrite of the Liao and Jin dynasties indicates a connection between the Khitan and the Jurchen traditions. Examples of this are the sabre clips from the Beijing Forbidden City [Zhungo neyzy zuantszy, p. 104, 275] and a Jurchen plaquette with an autumnal hunting scene from the collection of the National Palace Museum in Taipei [Watt, 1996, p. 60, pl. 23]. If it can be argued that the belt of Gashun Ust is somehow more closely associated with the tradition of the Jurchen crafts, then the events of 1233 should not be overlooked, when Subutai's Mongols seized the Jin capital Kaifeng, and the million or so inhabitants of the city, to which the population of all the surrounding provinces had fled, received mercy by virtue of their very concentration in Kaifeng.

Thus, my observations are very close to those of J. Watt. But there is a difference: the tradition of Jurchen craft, which in Russian research tends to be distinguished from Chinese, seems too obvious. The mechanism for passing on the traditions is difficult to explain without documentary evidence of the work of the Jurchen masters in the Golden Horde. Perhaps the answer is that the dimensional details of the belt set were completed by the use of templates. Bronze templates with the motif of a resting fallow deer are known to have been found in the ancient towns of the Golden Horde, for example, the finds from the area of the Volga Region or a matrix bought in Constantinople. A similar template has recently been found in the eastern Crimea near Golden Horde Solkhat. But let us return once again to the question of the date of the Gashun Ust find. The reverse of the clips are decorated with images of 'Arab' lotus flowers [Sokrovishha, 2000, p. 62, 67, two-page spread on p. 63–66; Kramarovsky, 2001, p. 48, Figure 21: 1, 3]. These stylised flowers are different from the lotuses of

the Tang belt or the linings resembling lotuses from the London collection of D. Khalili [Alexander, 1992, p. 48–51]. The closest comparison can be seen in the decoration of the glazed tiles of the Pir Husain mausoleum, dating back (according to their inscriptions) to around 1284 [Krachkovskaya, 1946, p. 101]. The fact that the date falls within the period 1270 to 1280 gives grounds to believe that the Gashun Ust discovery was one of Jochid *toreutics*, which preserved, as we have seen, the Jurchen tradition.

Clearly, the afore-mentioned belt set of gilded silver found in the Olen'-Kolodez' burial site is also associated with the crafts of the Jurchens.

Dare it be said that these monuments take us to the era of the formation of the culture of the Mongol Empire? It must be emphasised that the initial stage of the development of the Jochid Ulus, from 1207 until the end of the European campaign in 1242, coincides with the period of formation of the cultural identity of Chinggis Khan's empire as a whole, and the Great Khan command unit in particular. Of importance to us, therefore, are the discoveries of gold and silver associated with the first generation of the Chinggisids from both Central Asia and the regions of southern Siberia, or from the European zone of the steppes beyond the Urals. We are already familiar with one of these monuments (from the region of Voronezh). Remember that, along with the belt, a jug with a handle in the shape of a dragon's protoma was discovered in the Gashun-Ust district in the North Caucasus. Vessels of this type have been found in Siberia, on the Volga, near Voronezh, and the Dnieper [Sokrovishha, 2000, p. 56–58, 163, Figure 13, Cat. No.1214, 21]. A two-handled chalice for wine, similar to this group of vessels, was discovered during excavations in the ancient town of Tsarevo (town of Sarai-al-Maqrus) [ibid., p. 59, Cat. No.15]. The whole group of vessels dates back to the turn of the XIII-XIV centuries [Kramarovsky, 2001, pp. 61–72] and differs from the Yuan vessels of this type [Sokrovishha, 2000, p. 159, Figure 11].

We shall now consider a group of military belt sets with depictions of dragons. The emblems of the 'Emperor' and his 'Guard', with the image of a dragon, were formed in a narrow

space of time between 1204 and 1217. In 1221, they were viewed by Zhao Hun, who arrived in Yanjing, which had recently become the Jurchen capital. It is possible that this period of time was not quite as long. To date, the finds of military (Guard) belts with images of dragons are known only in the archaeological materials from the European steppe zone, where they were brought by the first generation of Jochid horsemen in the period of the 1220s to 1240s. The geographical area of the finds is delineated by the Dnieper and Don River Regions, the steppes of the Ciscaucasia, and the Middle and Lower Volga Regions.

There are three such finds in the Dnieper River Region: from the destroyed burial sites near the village of Kargi; a belt (probably silver) from the burial sites on the island of Berezan in the Dniepr lagoon; a belt from the burial mound in Novo-Podkryazh in the Middle Priorele area. Information about the burial ceremony has only been preserved in respect of the nomadic burials near Novo-Podkryazh [Kramarovsky, 2001, p. 35–45, Figure 14: 1–16].

A further three belt sets of interest to us originate from the Middle Don region and the steppes of the Ciscaucasia (from the inventory of the Vlasov burial site, from the burial mound near the village of Novoberezhanskaya in the Krasnodar kray (region) and from the burial site in the Stavropol Krai) [ibid., Figure 14: 17–19].

Amongst the finds in the Lower Volga Region is a belt set from the destroyed burial site in the ancient town of Krasny Yar [ibid., Figure 18]. A fragment of the belt has been preserved. Its mountings—silver gilt—consist of a buckle, a belt tip, gliding clasps, and two sabre clips with loops for hanging a sheath and 25 lunulas [Sokrovishha, 2000, p. 69, Cat. No. 19]. Although the belt, measuring 125–150 cm in length, has been preserved intact, there does not appear to be more than an estimated number of 65–70 items of belt mountings.

The decoration of the front plate consists of two dragons with fish tails facing each other. The back plate of the belt tip is covered from the reverse by a scaly pattern. The sabre clips are hollow and of rectangular shape with large loops. The face plate of the clips are produced by the technique of open-work casting. A de-

piction of a three-toed dragon covers most of the surface area. The bottom part contains the figure of a bird in flight; the large beak and powerful plumage suggest a falcon. The type of the sabre clip with the prominent loop and relief image of the three-toed dragon on the front side of the plate can be recognised from its Sung nephrite.

These belt sets belong to the same cultural tradition.

We have already noted that amongst the new Chinggisid elite the figure of the dragon gained importance as a heraldic symbol throughout the Empire. There is no five-toed dragon of imperial China in our materials. Only three-toed dragons, like the Khitan, are encountered. A dragon with three claws is depicted on eight gold plates from the burials of the Khitan princess Chengdzho, the niece of the Emperor Shenzong, who died in 1018. The plaque of nephrite with a magnificent dragon on the front side, which is very close to the interpretation of the dragons on the sabre clips of Krasny Yar, is exhibited in the Beijing National Palace Museum. Worthy of mention is the fact that, for the Chinese Ambassador to Mongolia (Zhao Hun), the material of which the object is made is more important than the details (the number of dragon claws) in his comparison of the symbols of the Great Khan and Wang.

The belts with dragon heraldry appeared in the Mongolian environment almost instantaneously. It was as if they were brought to life by the dramatic increase in nation-building after the reforms of 1206, when new unifying symbols were needed for the rapid growth of new branches of the nobility.

Thus, both groups of belts belong to the older generation of the Jochid command unit, who had made their way to the European steppe zone around the middle of the 13th century. The types and styles of these belts were developed in Central Asia before the Ulus of Jochi was formed. They clearly reveal the part of the 'Mongol legacy' that was brought to Desht-i Kipchak with the first generation of conquerors and here, on fresh territory, gave impetus to the growth of the cultural phenomenon which would later become known as the culture of the Golden Horde. This complex of artistic crafts

products of Central Asia makes it possible for the first time to consult records prior to the 1260s, which have not been disclosed in the mother country until the present time.

Based on the original archaeological finds from burial complexes belonging to the early Jochids, from the layers of certain villages and ancient settlements, we have been able to familiarise ourselves for the first time with a number of rare materials of the Great Mongolian State. Many of these monuments were moved from the areas of the River Irtysh and southern Siberia to Sura River Region and Volga-Kama basins and the Don River Region steppe zone by horsemen of Siberian units of Batu, who played an active role in the European campaign of 1237–1242.

The decline of the Turkic-Mongol equestrian cultural standards was already becoming apparent in the toreutic materials of the 14th century—during the period of the active Islamisation of the Golden Horde [Kramarovsky, 2001, p. 93–108]. In the treasure trove of Simferopol, one of the most representative complexes of the first half of the 14th century, owned by the Horde ruler of the Crimea [*ibid.*, p. 114–120], of the three sets of belts two belong to Italian masters [Sokrovishha, 2000, p. 106–107, Cat. No.517–526, 565–595], and only one to the Golden Horde. The features of the Early Jochid tradition, formed during the period of unity of the Mongol Empire, are completely absent in the parade shooting belt of the Simferopol treasure trove [*ibid.*, p. 83, Cat. No.527–564]. Still, it is a very curious fact that one of the most interesting records of the treasure trove is the decoration of women's caps [*ibid.*, p. 82, Cat. No.307–330]—these may be the remains of caps, but they still reveal the style and tradition of crafts that were more characteristic of Central Asia and China, and which date back to the Sui Dynasty (581–617) (cf. the decoration of the female headdress of gold and silver from the grave of Lee Dz-hingsun in the Shanxi province, China [Wei, Deydier, 2001, p. 112, # 274]). Women's dress here was plainly conservative. It should be noted that all items of this headdress were made in the Crimea, most probably in the jewellery workshops of Solkhat.

CHAPTER 2

The Culture of the Population of the Eastern Regions of the Jochid Ulus

Yuly Khudyakov

During the epoch of the developed Middle Ages the largest state formation in the western zone of the Eurasian steppe lands was the Jochid Ulus, whose territory stretched from the mouth of the Danube and the Carpathians to the upper reaches of the Irtysh and the Altai. The main focus of the study of the history and culture of the population of the Golden Horde was on an analysis of archaeological sites and historical sources relating to the state's political and cultural centre, located in the Volga Region, and records of the nomadic culture of the eastern Europe steppes and the southern Urals [Fedorov-Davydov, 1966, p. 229–241; 1981, p. 229–236; Mazhitov, 1977, p. 35–38, 112–118; 1981, p. 222–223; Ivanov, Krieger, 1988, p. 39–41, 66–68]. However, part of the Golden Horde included forest-steppe and steppe regions of western Siberia, the Altai and Kazakhstan, on the territory of which monuments of 'the Mongol age' of the 13–14th centuries have been discovered and studied [Gryaznov, 1956, p. 157; Mogilnikov, 1981, p. 194–200; Molodin, Sobolev, Solovyov, 1990, p. 186–189; Adamov, 2000, p. 83–84; Tishkin, Gorbunov, Kazakov, 2002, p. 141–143; Kadyrbaev, Burnasheva, 1970, p. 46–53; Arslanova, 1970, p. 58–59; Kadyrbaev, 1975, p. 132; Akishev, Baypakov, 1979, p. 100–102; Ismagilov, Khudyakov, 2001, p. 183–188]. These materials tend to relate to the culture of the Siberian Tatars and the Kipchaks, who made up the nomadic population of the eastern regions of the Golden Horde [Adamov, 2000, p. 84; Akishev, Baypakov, 1979, p. 102].

Desht-i Kipchak was not a single unified state. The different groups of the Kipchak tribes had independent unions led by khans [ibid., p. 203]. In the 12–early 13th centuries the possessions of the eastern Kipchaks were subordinated to the Muslim rulers of Khwarezm.

The troops of the Khwarezm-Shahs embarked on campaigns deep into the steppes. Under the blows of the Khwarezm troops, they were forced to migrate to the northern forest-steppe areas. The tribes of the eastern Kipchaks split into two unions. One of these kept their encampments on the Altai, Irtysh and Targabatai, the other in central Kazakhstan. The Kipchaks who lived in the steppes of central Kazakhstan were in vassalage to the Khwarezm-Shahs.

In addition to burial sites, memorial complexes have also been investigated on the territory inhabited by the Kipchaks. In central and eastern Kazakhstan there have been excavations of stone structures with statues in the centre, which served as sanctuaries for the nomadic Kipchaks [Ermolenko, Getsova, Kurmankulov, 1985, p. 149]. These monuments bear similarities with sanctuaries excavated in eastern Europe [Shvetsov, 1979, p. 207–209]. A series of Kipchak stone statues from central and eastern Kazakhstan and Zhetysay relate to the pre-Mongol period [Charikov, 1980, p. 223]. The area of distribution of the Kipchak sanctuaries and statues of the pre-Mongol period should correspond to the territory of settlement by the eastern Kipchaks.

Ancient towns and settlements have been studied in the lands of the Kipchak unification and vassal tribes in Kazakhstan and western Siberia, which bear witness to the process of the sedentarisation of the impoverished nomadic population, the transition to a sedentary lifestyle and the taking up of agriculture [Mogilnikov, 1981, p. 193; Adamov, 2000, p. 100–105].

By the beginning of the 13th century, when Mongolian troops led by Jochi entered the lands of the eastern Kipchaks, these were inhabited by numerous nomadic tribes who formed part of a tribal union, headed by the Kipchak khans. The vassalage of the Kipchak rulers was im-

posed on the settled population of the steppe and forest-steppe zones.

The foundation for the formation of the Jochid Ulus was laid by the all-Mongol Kurultai in 1206, at which Temujin was proclaimed Chinggis Khan, the ruler of all Mongols. In 1207 the eldest son of Chinggis Khan, Jochi, was instructed to conquer the 'forest peoples' of western Mongolia and the Altai-Sayan Region [Rashid al-Din, 1952, I, 2, p. 112].

The Mongol noyon Horchi was appointed the governor of the 'Irtysh forest peoples'. Under his authority were not only Mongolian, but also Turkic tribes living in the Altai, who had not yet been conquered. 'Let Horchi have not only three thousand Baarintsy, 'commanded Chinggis Khan, 'but also the tumens of the Dargwas, Chinostsy, Toles and Telenguts, together, however, with the (thousands of the) Tohay and the Ashikh. Let him roam around all the nomad camps as far as the Pre-Erdyshsky forest peoples, let him also command over the tumens of the forest peoples' [Kozin, 1941, p. 207].

The duty of carrying out these intentions was given to Jochi, who 'was sent to forest peoples with the army of his second-in-command. The guide was Buha... Having subjugated the Oirats, Buryats, Barhunys, Ursutys, Khabhanasys, Khanhasys and the Tubas, Jochi turned to the Tumen-Kyrgyz. He was then approached by the Kyrgyz noyons, Edi Inal, Aldiyer and Olebek-digin. They expressed obedience and humbly presented petitions while making gifts of white gyrfalcons, white geldings and white sables. Jochi took all the forest peoples under Mongolian authority, namely the Shibir, Kesadin, Bait, Tuhas, Tenlek, Toeles, Tas and Bachzhigi, from east to west' [ibid., p. 123].

In 1208, the Mongols defeated the Merkit tribe near the Irtysh, who showed particularly fierce opposition to Chinggis Khan. Defeated, the Merkits fled to the west, 'to the country of the Kanliytsy and the Kypchauts' [ibid., p. 151]. This gave the Mongols a pretext for attacking the Kipchaks. At the time, however, the Mongols were occupied with wars against other opponents, and so the campaign against the Kipchaks was postponed for several years.

In 1217, the Tumat tribe rebelled against oppression by the Mongol chieftains in Tuva.

The Mongols defeated the rebels, but their resistance was not completely crushed. The following year, in 1218, 'in the Year of the Snow Leopard. When one of the Tumat tribes revolted, (the Mongols) sitting in Bargudzhin-Tocuma and Bayluk, demanded the army (charik) of the Kyrgyz, since they were in the vicinity of the Kyrgyz, in order to suppress the uprising; this was not given and the Kyrgyz rebelled' [Rashid al-Din, 1952, I, 1, p. 151]. Jochi was obliged once more to subjugate the Kyrgyz and other tribes of the Altai-Sayan. The main army, commanded by Jochi, acted in the winter, when the Yenisey was ice-bound. They marched as far as the Minusinsk Hollow and the Mountain Altai and conquered not only the Kyrgyz but also the Urasut, Telengut and Kushtemi tribes, 'whose country was located on the other side of the Kirghiz, (at a distance of) about one month's travel'. Jochi 'captured these tribes too' [ibid., p. 123]. Obviously, Jochi's command during this period was in the North-Western Mongolia, from where he conducted a campaign along the Yenisey and returned to the Mongolian Altai. All the 'forest peoples' remained under the rule of Jochi Khan.

In 1219, troops led by Jochi occupied the lands of the eastern Kipchaks. Jochi's horde 'fell within the boundaries of the Irtysh' [Rashid al-Din, 1960, II, p. 78]. The sources do not provide any definitive information of how the conquest of the eastern Kipchaks came about and how they were united around Jochi. Apparently, a considerable number of the nomads who formed part of the union of the eastern Kipchaks succumbed without fierce resistance, as they were unable to withstand the onslaught of the victorious Mongol troops. Those who did not wish to surrender tried to leave, to migrate to the west, away from their dangerous neighbours, to the steppes of eastern Europe, occupied by the western Kipchaks, or the northern forest-steppe and taiga regions of western Siberia and the Urals. The Yenisei Kyrgyz people, after a devastating campaign by Jochi's troops, left the steppes of the Minusinsk Basin and headed north. Part of the Kyrgyz population settled in the forest-steppe and taiga areas in the valleys of the Rivers Chulym and Kiya

[Belikov, 1996, p. 139]. According to V. Mogilnikov, in the 13th century the Mongols penetrated into the Irtysh as far as Tara and Tobolsk [Mogilnikov, 1965, p. 281]. These campaigns of the Mongol troops pursued the goal of subjugating the Turkic-speaking nomadic tribes that made up the Kipchak confederation. The outflow of part of the nomadic population to the northern forest-steppe regions contributed to the Turkification of the Ugric and Samoyed peoples who lived on this territory.

After the conquest of the eastern Kipchaks, Jochi did not return to his previous location and moved his headquarters to central Kazakhstan. He was instructed by Chinggis Khan to conquer the 'northern countries', including the lands of the western Kipchaks. Jochi was, no doubt, intending to assemble more military forces for a new grandiose military campaign. However, in 1227 he suddenly died. According to various sources, Jochi's body was buried in the upper Irtysh area, or in a tomb which was erected in the valley of the River Sari-su in central Kazakhstan [Rashid al-Din, 1960, II, p. 185].

Following his death, Jochi's successor as the head of the ulus was not his eldest son Ordu, but his second son Batu, who was acknowledged by his commanders to be a most worthy heir. Chinggis Khan died six months after the death of Jochi. In accordance with his will, expressed at the all-Mongolian Kurultai, his third son, Ögedei, was elected the Great Khan. He seconded Chinggis Khan's order to Batu to lead an expedition to Europe and sent units, headed by Subutai-Baghatur and Kukdai, to join his army [Klyashtorny, Sultanov, 2000, p. 188]. After the death of Jochi the eastern lands, western Mongolia, and the Altai-Sayan Region were incorporated into the ulus of the Great Khan and placed under the control of Tolui, the younger brother of Ögedei. The ruler of the Jochid Ulus, Batu Khan, would have to compensate for these losses at the expense of his conquest of new lands in the west.

The decision on the large-scale conquest of the lands lying to the west of Batu's dominions was made at the all-Mongolian Kurultai in 1235. Researchers have different estimations of the numbers of troops that invaded eastern Europe under the command of Khan Khan.

When the ulus was assigned to Jochi, between 4 and 9 thousand soldiers were made available, according to various sources, [Rashid al-Din, 1952, I, 2, p. 198–201.; The Secret History of the Mongols, 1990, p. 120]. After the conquest of the eastern Kipchaks and other Turkic-speaking nomadic tribes of Kazakhstan and western Siberia, the number of Jochi's troops would have grown significantly. According to their ethnic composition, these were predominantly Kipchaks. In preparation for campaigns in the Volga area, Batu's army was reinforced by a detachment of three thousand of Subutai's and Kukdai's men [Klyashtorny, Sultanov, 2000, p. 189].

During the course of several long and successful campaigns in the countries of eastern and central Europe the troops of Batu Khan succeeded in attaching vast territories, with large nomadic as well as sedentary and agricultural populations, to the Jochid Ulus. The western Kipchaks made up the greater proportion of the nomads.

The eastern areas of the ulus, with their entire populations, were ceded by Batu Khan to the rule of his elder brother Ordu, who was given 10 thousand soldiers. His headquarters were situated on the upper Irtysh and in the area of Lake Ala-Kul. Ordu's dominions were the left wing of the Jochid Ulus and had the same name as during the reign of Jochi - the Kok-Horde [ibid., p. 196–199]. It also included the dominions of Shiban, one of the younger brothers of Batu, which were situated in the steppes of western and central Kazakhstan.

By this time the Mongol Empire had finally disintegrated into separate states, which waged wars amongst themselves over land and spheres of influence.

It is possible that, with the transfer of the headquarters of the Kok-Horde's rulers to the valley of the River Syr Darya, parts of its eastern lands were temporarily lost.

The population of the eastern regions of the Ulus of Jochi in the 13–14th centuries consisted of ethnic groups of various origins. They differed in their culture and economic activities. In the northern forest-steppe regions of western Siberia there were tribes of Ugric and Samoyed origin, who had adopted elements

of the cultures of the Turks, the Kirghiz and the Kipchaks. Apart from cattle breeding, they practised subsistence farming, hunting and fishing. In the 13th century, the influx of Turkic-speaking nomads, seeking to escape from Mongol troops, increased. In the Steppe Altai, in northern and eastern Kazakhstan, lived tribes of nomadic cattle farmers, who were part of the unification of the eastern Kipchaks. After the Mongol conquest, some of these, forming part of the troops of Batu, were moved to the western regions of Desht-i Kipchak, while others migrated to the northern forest-steppe lands. Military units, consisting of Kipchaks, were obliged to fight alongside Mongol troops on the territory of Mongolia and in the Sayano-Altai region.

The Mongol-speaking nomadic population was relocated during the Mongolian conquest of the lands of the Jochid Ulus. These were military units making up the armies of the first rulers of the ulus. After several generations they were assimilated amongst the Turkic-speaking tribes.

All the nomadic populations of the eastern regions of the Golden Horde were called 'Tatars' and spoke a Turkic language probably as early as the second half of the 13th century.

The archaeological materials studied in the territory of the forest-steppe zone of western Siberia have allowed researchers to identify the main economic activities of the population.

Typical of the burial complexes, which, according to V. Molodin, V. Sobolev and A. Solovyov, were characteristic of the ethnic ancestors of the Baraba Tatars, were burial sites under earthen burial mounds in rectangular grave pits. Burials were conducted according to the rite of solitary inhumation. The bodies of the dead were placed in ground pits, birch bark containers or on wooden blocks. They lay on their backs, in an extended position, with the head aligned towards the west, south-west or south. There were instances of burials at the ancient horizon level and of dismemberment of corpses. In one of the mounds a horse was buried in a separate pit. Amongst the accompanying grave goods were beads and ceramic vessels with burial food and items of weaponry. Traces of commemorative funeral feasts,

fire pits and fragments of pottery and bones of domestic animals have been found in the mounds [Molodin, Sobolev, Solovyov, 1990, p. 168–169]. The Baraba forest-steppes were also inhabited by the Ugric people, who intermingled with the Turkic-speaking population [ibid., p. 169–170].

Ancient towns with a complex fortification system, comprising several rows of earthen ramparts and ditches, have been studied in this area, as well as long-standing settlements with remnants of residential and farm buildings. The dwellings were sunk into the ground, had a rectangular or circular layout and a hearth in the centre [Trinity, Molodin, Sobolev, 1980, p. 167].

Round-bottomed or egg-shaped moulded pottery was typical for the complex of artefacts of the Turkic-speaking population of the Baraba forest-steppes. Most vessels were ornamented with round or triangular depressions and oblique notches. Imported glazed pottery, produced in the handicraft centres of the Golden Horde in the Volga Region and in Central Asia, has been discovered in the ancient towns [Molodin, Sobolev, Solovyov, 1990, p. 16–34].

Among the armaments found in the monuments of the Baraba forest-steppes in the 13–14th centuries were bone linings for bows, flat iron and bone arrowheads, spears and armour plates [ibid., p. 50–55, 73, 77].

The principal activity of the Turkic-speaking population of the Baraba forest-steppes was nomadic cattle breeding. Researchers believe it played an increasingly important role in the economy during the 13–14th centuries as a result of the migration of the 'the hordes of nomads' from the steppes of Kazakhstan [ibid., p. 197]. They bred horses, sheep and, to a lesser extent, cattle. Migrations with herds were seasonal and in a meridional direction.

At the same time, the proportion of the population that lived a settled life in fortified and open settlements practised subsidiary farming. Hunting for wild hoofed and fur-bearing animals was an important part of the economy. The taiga Ugric tribes traded in furs. Furs were the main objects of trade with merchants who came from the Volga Region and Middle Asia, and were supplied

as tributes to the nomadic nobility. The finds of imported crockery and items of weaponry, which were purchased by the Ugric people from visiting merchants for religious purposes, give an indication of the intensity of this trade [Borisenko, Khudyakov, 2001 p. 91–93]. In the 13–14th centuries the main trade route by which these products, produced in countries of the Middle East, Byzantium, western and eastern Europe, were imported into the taiga areas of western Siberia, passed from the Middle Volga Region through the Ural Mountains in the Irtysh area. A certain proportion of the goods were transported through the Baraba forest-steppes to the Altai steppes and the upper reaches of the Irtysh.

A large number of monuments of the 13–14th centuries have been studied in the Novosibirsk Ob' area. After analysing these materials, A. Adamov concluded that the funeral rites of the Turkic-speaking population of this region did not change significantly in comparison with the previous, pre-Mongol period [Adamov, 2000, p. 22].

The complex of artefacts of the Ob' nomads is quite diverse. The armaments found include bows with middle and end bone plates, arrows with flat and round iron arrowheads, and bone arrowheads of different shapes. Amongst the military equipment were birch bark quivers of a closed type. Horsemen's gear included belt sets with bronze belt buckles, plaques and arrowheads with iron rings with hooks, which were used for fastening the uppers of leather boots. The horses' harness included iron reins, stirrups, straps, buckles of saddle belts, and whips with bone handles. Earrings, pendants, beads, and mirrors were found in women's graves.

Amongst the items of ceramic tableware were round-bottomed pots and bowls, decorated with strips of stamped ornamentation on the rim and the upper part of the body [Troitskaya, Molodin, Sobolev, 1980, p. 32, 38–39, 41, 43, 46–47, 55, 57, 59–61].

The population living in the Novosibirsk Ob' region during the Mongol period practised different types of economic activity. An important part of the economy was the breeding of horses, sheep and cattle. For the inhabitants of long-term, permanent settlements cattle

rearing was transhumant, with seasonal change of pastures. The population also engaged in subsistence farming, the hunting of wild ungulates and fur-bearing animals and fishing.

Furs were objects of exchange and probably served as the payment of tributes to the rulers of the Kok-Horde. One of the trade routes to Middle Asia, by which fur was exported and jewellery and luxury goods were imported, ran along the Ob'.

With regard to the ethnic affiliation of the population of the Ob River Region during the Mongol period, there have been suggestions that these were Turkish-speaking, Kipchak tribes. On this basis, the ethnic group of the Tomsk Tatars was formed during the late Middle Ages [Adamov 2000, p. 84].

Various constructions of burial complexes have been examined in the forest-steppes of the Altai.

In the Upper Ob River Region a burial mound has been studied with a circular earthen mound in the centre of which was a burnt log construction at horizon level, which was used for burials according to the rite of inhumation. Around the construction were weapons and household tools. M. Gryaznov believed that the log construction in the centre of the mound was characteristic of the pastoral and hunting nomadic and semi-nomadic tribes of the forest-steppe zone of western Siberia. Buildings of a similar structure were characteristic of the Chatsk and Eushtinsk Tatars during the period of ethnographic modernity [Gryaznov, 1956, p. 157].

The burial mounds in the sites of the forest-steppes of the Altai contained rounded and oval earth mounds above one or more oval burial pits, sometimes with a wooden fence, covered with poles, logs or boards. The dead were buried in the graves in wooden sarcophagi or tombs made of boards, sometimes with an under-layer and overlays of bark. The dead were interred in accordance with the rite of solitary inhumation, in an extended position, on the back, the head aligned with the west, with a variety of implements [Tishkin, Gorbunov, Kazakov, 2002, p. 135–138].

Archaeological sites of the Mongolian period have been examined in the forest-steppes

of the Altai. The cultural layer contained bones of wild and domestic animals and fish, household items and decorations [Gryaznov, 1956, p. 153–154].

The complex of artefacts of the population of the Altai forest-steppes displays a variety of items of armament. Weapons of remote battle include bows with medial front plates, end plates and inserts, arrows with flat and three-edged iron heads, and trihedral, rhombic and hexagonal bone arrowheads. Arrows were kept in birch bark quivers decorated with ornamental ivory plates. A set of close-combat weapons included spears and swords [Khudiyakov 1997, p. 60–71]. Finds of iron plates of lamellar armour and a sphero-conical helmet relate to the Mongol period [Gorbunov, Isupov 2002, p. 136; Tishkin, 2002, p. 144]. Saddlery includes iron reins with ringed iron cheek-pieces, stirrups with a flattened loop and an opening in the bow for the stirrup strap, iron and bone clasps, buckles, straps and decorative headpieces for horses [Efremov, 1998, p. 158–169; Tishkin, Gorbunov, Kazakov 2002, p. 65–85].

Belt buckles and badges, earrings, necklaces and rings have been found amongst the monuments of the Altai nomads. Of particular interest are the cylindrical tops of hats made from birch bark, which researchers have associated with women's 'Bocca' hats worn by the Mongols [Tishkin, Gorbunov, Kazakov, 2002, p. 95]. The monuments of the Mongolian Steppe Altai period included a coin belonging to the Golden Horde and a bronze mirror with a side loop and ornament in the form of a rosette bordered by a strip of semi-circles, similar to the mirrors of the Kipchak burial sites in the Cis-Ural Region [Ivanov, 1999, p. 149–151]. Pottery was found in the settlements.

The nomads of the steppes and forest steppe zones of the Altai in the Mongol period were livestock breeders. They bred mainly horses, sheep and, to a lesser extent, cattle. Judging by the finds of bones of wild animals and fish, hunting and fishing played an important role in the economy [Gryaznov, 1956, p. 153].

Researchers have linked the monuments of the Mongol period in the forest-steppes and Altai steppes to the Kipchaks [Savinov,

1994, p. 70]. Some researchers also distinguish among them complexes of the local Turkified and Tatar population [Efremov, 2002, p. 104, 108]. The male graves of the Teleut Vzvoz-I burial site are believed to be those of the soldiers of the army of the Jochid Ulus, who ruled over the local nomadic Teleut tribes [Tishkin, Gorbunov, Kazakov, 2002, p. 142].

Burial sites of the Mongol period have been studied in the steppes of northern, eastern and central Kazakhstan, which made up the main lands of the Kok-Horde, the eastern wing of the Golden Horde.

The nomads buried their dead relatives according to the rite of solitary inhumation in rectangular grave pits covered with rounded sloping stone-earthen mounds or an oval covering. The deceased were placed in ground pits, in wooden tombs held together by iron clamps and covered with boards or bark. The bodies of dead relatives were placed in the tomb on their backs in an extended position, with the head facing the north or north-west, or very rarely the east. Men were buried with weapons and military and horse attire, and women with ornaments, toiletries and horse trappings.

Specific features of the position of the deceased and the composition of the items buried with them can be traced in some monuments. In the Tasmola monument in central Kazakhstan a body was found lying on the back, with the arms and legs placed to the sides and the head turned to the left. Apart from clothing accessories, weapons, harnesses and household items, the deceased had an earring in the left ear, and two silver coins in the mouth and left hand [Kadyrbaev, Burnasheva, 1970, p. 44–46]. These had been minted in the 14th century in the Golden Horde during the time of Toqta and Öz Beg [ibid., p. 49]. A silver cup and a bag with three silver coins were found in a male burial in the Zhartas burial site, in addition to arms and a harness, remnants of clothing and footwear [Akishev, Baypakov, 1979, p. 101].

In women's graves in the Zhdanov burial site and a destroyed burial site in the Pavlodar Irtysh River Region in northern Kazakhstan parts of headgear were found, such as Mongolian Bocchi, and also sewn silver jewellery

and a bronze mirror with silver rings and bone discs [Arslanova 1968, p. 54–57].

The funeral rites of the nomadic population of Kazakhstan were characterised by the complete eradication of the old traditions of the ancient Turkic and Kimak periods. The ritual of burial with a horse or with a horse's skin was only preserved by the western Kipchaks (Cumans) and on the northern periphery of the Kok-Horde, in the Upper Ob River Region and Novosibirsk, where it has been discovered in those monuments in which the burial rite of solitary inhumation prevails.

The influence of the culture of the local nomadic Mongolian cultural traditions and the adoption of Islam by part of the population, which strictly regulated the funeral rites of Muslim believers, is more clearly apparent in the Kazakh steppes than in western Siberia and the Altai.

Muslim burial rites included that of inhumation in ground graves with the deceased lying on their back in an extended position, in a north–west alignment, with their face turned towards the south–west, in the direction of Mecca. There were no accompanying items in these graves, examined in the Zhartas burial site in central Kazakhstan [Mogilnikov, 1981, p. 99].

With the spread of Islam, the dead were buried increasingly in graves with niches inside the grave structures, built of mud bricks, and in Gumbaz mausoleums [ibid., p. 200].

It is possible that, under the influence of the ministers of the Islamic religion, who actively fought against 'idolatry', the population of the eastern regions of the Kok-Horde ceased to build sanctuaries with stone statues in honour of their ancestors' veneration.

The complex of artefacts of the culture of the nomads in Kazakhstan in the 13–14th centuries is quite diverse.

Amongst items of weapons were bows with front or lateral medial plates, arrows with flat, lenticular, rectangular and tetrahedral iron and bone rhombic arrowheads [Khudyakov, 1997, p. 107–112]. Arrows were kept in quivers with a birch bark receptacle decorated with ivory plates with geometric and zoomorphic ornamentation [ibid., p. 112–113]. In close and hand-to-hand combat, horsemen attacked the

enemy with swords with slightly curved blades and navicular cross guards. Such a sword has been found in the Korolivka monument in Kazakhstan [Mogilnikov 1981, Fig. 72, 53]. For their protection, the soldiers used a cuirass of iron plates held together by a strap in a lamellate manner, and sphero-conical helmets with finials and plate-like barmicas (camails).

Harnesses are represented by two-pronged iron bridle bits with ringed cheek-pieces and stirrups with flat footrests, an arched aperture and flattened bow with a hole for the stirrup leather, iron buckles, plaques and saddle hasps with rings for securing straps [ibid., p. 196–197].

Waist belts were decorated with silver plates with hanging rings or jade plaques. A floral decoration and Kufic-style Arabic inscriptions were used for the ornamentation of the silver belt plates [Akishev, Baypakov, 1979, p. 97].

Metal earrings in the form of an open ring or with pins and pendants were used for female and, occasionally, male ornamentation. Silver plaques, pendants and beads served as jewellery.

Remains of trousers made of sheepskin and boots of rawhide were found in the Zhartas burial site. In the Korolivka monument, the tops of the boots were embroidered in a floral pattern of bronze thread.

Women's headdress consisted of a silver cylindrical tube with a conical piece decorated with embossed stripes in the form of a woven seam [Arslanova 1968, p. 54–57]. These 'Bocchi' hats were characteristic of Mongolian noble women.

A bronze disc-shaped mirror had a spherical hinge in the centre, which was threaded with a chain of two silver rings with bone discs. Animals are depicted in the ornamental field in two rows [ibid.]. These mirrors were cast in China. Copies of the Chinese mirrors were made in imitation of these in the nomadic cultures.

Various fragments and a stucco pot without ornaments were found in the monuments of the nomads of Kazakhstan of the 13–14th centuries [Mogilnikov, 1981, p. 197].

The production of ceramics by the eastern Kipchaks probably decreased as a result of the acquisition of pottery handicrafts produced in

the urban centres of Middle Asia and the widespread practice of not beating metal utensils.

The main focus of the economic activity of the nomads inhabiting the arid steppes of Kazakhstan was nomadic herding. They bred horses, sheep, camels and cattle. The Kipchaks were considered a people that had 'an abundance of horses'. Their nomadic life style was determined by the availability 'of grass and water' and the seasons. S. Akhinzhanov noted that they typically took migratory routes over long distances from the Irtysh to the Syr Darya [Akhinzhanov, 1989, p. 240–242].

Battue hunting of wild steppe herd ungulates was of great importance in their economy. The nomads were hot-tempered and hardy hunters; they could tirelessly chase gazelles and wild asses, and shoot straight from the bow at full gallop. Hunting also played a role in military training.

At the same time, part of the local nomadic population set down roots on the land, settled in cities, and took up agriculture and handicrafts [ibid., p. 250, 255–256].

The eastern areas of the Golden Horde carried out an important function in the transit caravan trade. One of the most important trade routes, which served as the meridional branch of the trans-continental trade route that ran from China through the Tien Shan Mountains in Middle Asia, passed through the Kazakh steppes from Semirechye to the Irtysh River Region, to the Altai and western Siberia. Records of the culture of the nomads during the 13–14th centuries in the steppes of Kazakhstan are traditionally described by all researchers as Kypchak [Kadyrbaev, Burnasheva, 1970, p. 53; Arslanova 1968, p. 58; Akishev, Baypakov, 1979, p. 102], although it would be more accurate to regard them as those of the Golden Horde.

An analysis of the archaeological materials of the monuments of the nomads inhabiting the eastern part of the Golden Horde, which covered vast steppe and forest-steppe areas of western Siberia, the Altai and Kazakhstan, has made it possible to trace certain changes in the culture of the various ethnic groups during the era of the Middle Ages.

Imperial, supra-ethnic cultural elements, common to all Mongol uluses, became wide-

spread amongst the nomads who joined the Kok-Horde, the eastern wing of the Golden Horde, during the 13–14th centuries. This is vividly displayed in one complex of artefacts. The soldiers were armed with Mongolian-type bows, arrows with faceted and flat iron arrowheads, quivers ornamented with plates, spears, sabres, swords, armour and helmets. Many similarities can be seen in the armaments of the soldiers and the horses' harnesses. The fashion for women's jewellery characteristic of the Mongol period became widespread. The unification of the main elements of the culture of the militia in the nomadic world is connected not only with the desire to emulate the dominant ethnic group of nomads, but also with the development of optimal forms of weaponry and horse harnesses for this period.

The direction of cultural relations at the time when western Siberia, the Altai and Kazakhstan were incorporated into the Golden Horde reflected the state ownership of these lands. The monuments of the nomads in these areas include coins belonging to the Golden Horde, jewellery and pottery imported from the urban centres of the Volga Region and Middle Asia.

There are significantly fewer items that can be considered to have been brought from China, which was part of the Mongolian Yuan Empire. Contrary to popular opinion, no decline in culture is observed in the monuments of the nomads of western Siberia, the Altai and Kazakhstan in the 13–14th centuries. The intensity of trading and cultural contacts between the nomads and the urban centres of handicrafts increased compared with the previous period.

The period of the joining of these territories to the Golden Horde coincided with considerable migrations of Turkic-speaking nomads. During the Mongol invasions a significant proportion of the Kipchaks migrated to Eastern Europe, to the steppe regions of the Altai and western Siberia, settled in the oases of Semirechye, the Syr Darya and the Aral Sea Region, which accelerated the processes of the acculturation and Turkification of the population of these lands.

The period of the Golden Horde was a time of the propagation of the Islamic religion, traditions, rituals and culture amongst the Turkic-speaking nomads of the Kok-Horde.

CHAPTER 3

The Phenomenon of the Ulus of Jochi Civilisation

§ 1. The City and Urban Life in the Golden Horde

Mark Kramarovsky

The myth of cultures of 'pure nomads', while not yet obsolete, has been losing its appeal more and more in recent decades [Kyzlasov, 1998, p. 47–64]. According to the calculations, in the Asian Hun Empire (209 BCE–48 AD) the settled population of about twenty fortified settlements of Mongolia and Transbaikalia (not counting villages without walls) were meant to provide agricultural and handicraft products for about 350, 000–800, 000 nomads [Kradin, 2002, p. 79]. The tradition of settling nomads, often forced, in the villages and in the cities, where a large place was occupied by a layer of non-free population, was developed among the medieval Uighurs, Khitans, Jurchens, and finally, Mongols and Tatars. According to observations in Europe, the city with its attributes was perceived by yesterday's nomads as a necessary evil, and city walls—unusual for Chinggisids—as a sign of weakness. The following dialogue between the two key merchants—a Venetian Giosafat Barbaro, who lived in the Golden Horde 16 years from 1436 to 1452, and a steppe Tatar—illustrates this. The conversation took place at the city gate of Tana, where the architecture of the gate tower attracted the attention of the interlocutors:

'This is a wonderful thing, isn't it?' Barbaro asked his casual acquaintance.

'Bah! He who is frightened builds a tower!' the Turk replied, grinning' [Barbaro and Contarini, 1971, p. 148].

The psychological rejection of a stationary life, rooted in the environment of Turkic-Mongol nomads up until the modern era, is expressively characterised by the saying: 'Let you as a Christian stay in one place and smell your own stink' [Miechowita, 1936, p. 213, fn. 46].

There is a need to identify a few preliminary issues of methodological significance for our topic. The Golden Horde, from the point of view of civilization, was an independent nomadic empire. The power of the state and the unity of the Jochid Empire was based, as in the case of a single state of Chinggis Khan, on the military power of the nomads. At the same time, the Golden Horde by the middle of the 14th century differed from the 'Great Ale' of ancient Turks or Mongols during the lifetime of the founder of the empire—that is, up to 1227, by massive construction of new towns in the steppe zone and growth of the old ones in the forest-steppe zone (after a short period of wartime ruin in the mid-1230s to early 1240s). The maxim on the impossibility of governing in the saddle, expressed by the Minister Khitan Yelü Chucai to the Great Khan, to some extent explains the need for the appearance of capitals—Karakorum or Sarai. But the same idea does little to elucidate the causes of mass construction of regional cities in the steppe Volga, Dnieper, Don River Regions, Ciscaucasia, etc. With cities and monetary circulation, new forms of division of labor come into the Dasht-i Kipchak and its farming periphery, based on the economic nature of the concentration, redistribution and sale of the surplus products coming from the steppe, the agricultural areas of the empire, as well as the result of trade relations, from abroad. During the stable existence of the Empire, cities become centres of international commerce centres in the craft of its own periphery and near trade centres of spiritual life, the various forms of intellectual activity and multi-ethnic culture. The specifics of this is the fact that the energy of these cities, the rhythm of their lives were subordinated to the steppe empire. The collapse

of the power of the steppe khans automatically leads to the collapse of steppe cities.

From seasonal rates to existing towns and cities: the tradition of Central and West Asia in the 13th century. The tradition of stationary settlements of the Chinggisid Mongols is usually associated with four major horde residences of the wives of Chinggis Khan. Hordes existed in parallel with his personal headquarters, referred to as 'the Great', but also 'Shira Ordo' [Minert, 1990, p. 90]. The exact location of the main hordes of Chinggis Khan's wives is unknown, although in this respect, there are many convincing hypotheses. It is assumed that the first residence of Temujin was located on the bank of the Tola, in the Dark Bor, indicated in 'The Secret History of the Mongols' as Hara-tun [Kozin, 1941, p. 189]. After the transfer of the main headquarters on the river Orkhon, L. Minert suggested considering it the Northern Horde. The main Southern Horde, apparently, was *Yu err Li*, which the mail road led to [Xi You Ji, 1866, p. 398]. The Eastern Horde apparently was in the lower reaches of Kerulen [Kafarov, 1866, p. 181]. Western Great Horde of Chinggis Khan, the researchers placed in the upper reaches of the Selenga. Subsequently, it may have been moved to the southern slopes of the Mongolian Altai in valley of the river Bulugun where there was a princely headquarters of the Naimans before their defeat.

One of the witnesses is a Taoist monk, Chu Cheng, who was invited to the court of Chinggis Khan and visited Yu err Li in 1227, and testified to the site of the headquarters as 'a village, whose inhabitants are mostly engaged in arable farming and fishing' [Xi You Ji, 186, p. 285]. Consequently, the headquarters of the Great Khan turned into a stationary settlement. Even in the pre-settlement period, there were apparently facilities, from which after dismantling, at best, remain the foundations of stone and brick, as one of the seasonal camps of Chinggis Khan, recently discovered in Mongolia [Shiraishi, 2001 p. 79–98]. We know, at least a few summer headquarters of the great Chinggisid Khans—Ögedei (1229–1241) and Guyuk (1246–1248).

The enthronement of Ögedei on Kurultai in 1228 occurred in the Kerulen Valley in the

'Chinggis yurt'—that is, in the former residence of Chinggis Khan on the site of its main Eastern Horde.

Juwayni reports important details that characterise the nature of the seasonal movements of the Great Khan's court, using stationary palaces and summer headquarters in the calendar regime [Juwayni, 2004, p. 163–165]. Before the enthronement Ögedei lived in a residence not far from Emile, after 1229 it was given to his son (Crown Prince Guyuk). After coming into power, twice a year, but mainly in the winter and early spring, Ögedei lived in a 'Chinese palace' in the park near Ordubalyq-Karakorum, where he was surrounded by the homes of brothers, sons and guards. The Great Khan spent some spring days in a small palace on a hill three miles from the city. The beginning of summer (the first forty days of summer) the Khan spent in the courtyard area of Karshi-Suri in the palace, which was built by Muslim craftsmen. The palace in Karshi-Suri boasted rich hunting grounds with lakes and waterfowl. The hot summer days were spent in the mountains in a 'Chinese' tent of white felt with the fabric top woven with gold. This place was called the Shire-Orda' [Ibid., p. 164]. There the Khan's court remained until the first snow. The pattern repeated. The Juwayni text follows that in the second third of the 13th century, building innovations, based on the architectural traditions of the Far and Middle East, adapted to the needs of early Chingissids were introduced into the routine practice of the ruling house, severely squeezing steppe line. It seems that the paradigm during Ögedei's time must be adequately taken into account in the analysis of the circumstances surrounding the appearance of the capital of the Golden Horde, Sarai, given that there are no traces in Selitrennoe ancient town of a city in the middle to second half of the 13th century.

However, the position of the nomadic yurt remained fairly robust. Based on the observations of Giovanni da Pian del Carpine, a witness of the enthronement of Guyuk, overriding structures of summer headquarters were huge woven tents for receptions. In the headquarters of Guyuk's mother Turakina, Ögedei's widow, who ruled an empire on the rights of a regent

for about five years, it was the tent of the 'white purple' with a capacity of more than 2,000 men [Puteshestviya, 1957, p. 74]. The tent was enclosed by a wooden fence with 'different images'. Turakina's headquarters was called 'Syr-Orda'; here the inaugural meeting of participants of Kurultai was held [Ibid., p. 75]. At the same time over the hip fence for four weeks there was far more than 4,000 distinguished persons from non-Mongols, ambassadors and vicegerents of the conquered lands, and, among them, the papal nuncio. Actually the enthronement took place in another tent, called 'Golden Horde', although, perhaps, more correctly it should be called 'the golden tent'. The tent was located in the valley between the mountains near the stream in the tract Angisume-Toli in three or four levkas (transitions) from Turakina's headquarters—that is, at a distance of 90–120 km from the Syr-Orda. 'The tent... was raised on poles, covered with gold leaf and nailed to a tree with golden nails, and the top and inside the walls, it was covered indoors with baldakin, and outside there was other material' [Ibid., p. 76]. The 'golden tent', where Giovanni da Pian del Carpine was allowed, among others, was held a ceremony of ambassadorial gifts. In the third pavilion of the 'flame-red purple' was used for a feast. At the same time the Great Khan was sitting on a throne placed on a high platform. Besides the three ceremonial tents—white for assembly (Kurultai), gold for the enthronement and red for the banquet, were in the rates of white felt yurts belonging to Khan's wives. Thus, the structure of the temporary architecture 'modules' in the seasonal camps—stakes side by side with permanent light installations. Later this combined system, but on the basis of tradition, rooted in the practice of the younger Chinggisid generation's khan quarters. These buildings are known as East and West Asia. Shangdu, the summer capital of the Yuan Dynasty in the western part of the city (West Outer Space) contained the palace for the pleasure called 'Bai-Orda' ('Luxury Horde'), at least five permanent buildings. There were debates with the participation of theologians, ambassadorial receptions, award ceremonies and receptions. The northern part of the capital (North Garden) contains a botanical garden, a zoo

and pleasure pavilion under a familiar name 'Syr-Orda'. It is possible that 'Bamboo Palace' Kublai Khan in Shangdu, described by Marco Polo as a collapsible was Syr-Orda—a temporary building secured with two hundred crepe silk ropes. The interiors of the palace could not but create a striking contrast with its tent 'walls', possibly made from palm fibre, and removable varnished pillars with ivory, decorated with dragons, on whose gilded heads rested the light bamboo roof of the pavilion [Kniga Marko Polo, 1956, p. 96, Note 3, Chapter 76, p. 279].

In 1255, on the orders of the Central Asian ruler Masood Beg in Samarkand, a tent of nasidzh fabric (a kind of brocade with gold thread) covered with white felt was built, where for forty days there were feasts in honor of Hulagu. Rashid al-Din mentions the royal pavilion built by the ruler of Khorasan in 1256, which called for a thousand golden nails. Ibn Battuta (1333) describes a convivial golden tent of Khan Öz Beg, not inferior to the luxury tents of Iran and Central Asia [Sbornik materialov, otnosyashixsya k istorii Zolotoj Ordy', 1884, p. 298, 301, 311]. Based on the striking riches of the finishes, these temporary buildings share one important trait—their function of khan winery—'house of wine' or (Persian) *sharab-khan*, going back to the 'Great Winery' of 'The Secret History of the Mongols' [Kozin, 1941, p. 173]. The Karakoram 'vineyard' with silver fountain for koumiss and wine, arranged in the form of a pear tree in 1254, was built as a stationary palace for congresses. The importance of the social institution of 'Great Winery' as part of the elite pleasures, which included hunting and, at the earliest Mongolian proverb suggests, based, apparently, on Iase, the division of spheres of activity of the four sons of Chinggis Khan. According to the will of the founder of the empire, the eldest son was entrusted to the care of the organisation of celebrations, meetings and duties, but also intelligence affairs (*oyun*), negotiation and entertainment [Togan, 2002, p. 175]. Consequently, the preparation of the feast after the campaign in 1224–1225 to Khwarezm, ending with a sporting competition, and installation of the famous stele of Khirkhira ancient town, known as the 'Chinggis Stone', was in charge of Jochi. Often it was seasonal

camps in summer and winter where the largest part of the lives of the members of the ruling house was spent, including princes, Khatun and senior officials, grew into the city, or at least urban-type settlement. At the early stage of existence 'of the Great Mongolian State' when nomadic traditions prevailed, the official life of the Chinggisid generation was focused mainly in the summer residences, which hosted kurultais, enthronements, feasts, hearings, receptions of embassies, appointments of military officials, and approval of the decision to hold seasonal hunts. However, after the death of the founder of the state in 1227, the great Khans in the east of the still united empire (formally until the end of the 1260s) ruled from the capital Karakorum and later cities such as Dadu, Kublai or Shangdu.

Batu Khan originally settled in Bolgar, where the stamping of the first Jochid coins began in the 1240s. For the second half of the 13th century, life in the city became so normalised that by the end of the century Bolgar grows be-

yond the old border of the pre-Mongol period. The centre of the city became a Friday mosque. In the 1330s, the city was decorated with a paved area in front of the Friday mosque and several large mausoleums. By the middle of the 14th century, the city had gained a whole group of monumental stone buildings, water supply pools and water pipes.

In the early 1250s, construction began in Dasht-i Kipchak of the capital Sarai, identified with the ruins at Selitrennoe and a 1282 coin is minted with the Arab name of the city, 'Sarai-al-Maqrus'—'Palace Protected by God'. Judging by the fact that 230 km from Sarai on the left bank of the Akhtuba in the last years of Öz Beg Khan (1312–1342) was the quarters of Khanbikov Tayduly, the future of the city on Tsarevo ancient town, you can think, the summer pasture preceded elder Khatuni titled 'Gulistan' (*Persian* for 'flower garden', 'garden of roses'). After the death of Öz Beg, in this place grew the city, which actively developed from the late 1350s. In a document dated to early March 1359, he is known as *Gulistan-Saray* [Grigoriev 2004, p. 225]. Previously, the city was identified as 'Sarai al-Jadid'—'New Palace' [Fedorov-Davydov 1964, pp. 270–271; Egorov, 1985, pp. 112–113]. The localisation of Gulistan was established by I. Evstratov [Evstratov 1997, pp. 88–118]. It is possible that the double title of Gulistan-Saray reflected the pre-city stage corresponding to the time spent in these seasonal quarters. Kiosks (*kushks*) were wooden tower gazebos far from the huge summer tent for the royal reception of emirs, mobile mosques and tents for the Qadi, khatibs, sheriffs and sheikhs feasting separately was noted in the area of Sarai by Ibn Battuta, who described the celebration and feast with the participation of Öz Beg on Friday 2 June 1334 [Sbornik materialov, otnosyashhixsya k istorii Zolotoj Ordj', 1884, p. 298, 301, 311]. Not present in the Golden Horde were stationary systems such as those seen in Rashidiya, which was built as a religious city. It seemingly remained the sacred city of the Horde. In this role, more than any other suitable settlement of Lapas on the left bank of the Akhtuba, 40 km below Sarai [Egorov, 1985, pp. 117–118]. There are ruins of four monumental mausoleums, which research-

ers presume are the tomb of the four Muslim Khans—Berke, Öz Beg, Jani Beg and Berdi Beg [Ibid.]. In the vicinity of the settlement there are more than a dozen mausoleums. Judging by the coin finds, the life of the settlement continued into the 1390s, but peaked in the first third of the 14th century. [Pigarev et al., 2005, p. 150, Table 3].

With an increasing trend towards integration of tent modules with complexes of stationary summer camps, which contained Chinggisid 'pleasure palaces', formed a new style of architecture of the empire. In the construction, the alignment of the building cultures of Central and Eastern Asia became ever more marked. In Iran, the son of Argun Uldzhaytu (1304–1316) built his new capital Soltanieh on the site of the summer pasture in Iranian Azerbaijan. According to Hafiz-Abru (d. 1430), the Uldzhaytu palace contained an indoor courtyard paved with marble. A huge vaulted ayvan opened to the yard, and could, like a ceremonial tent, contain up to 2, 000 people; around the yard there were 12 small rooms. The architectural structure, based on a combination of the closed space of the yard, surrounded by *ayvans* and small rooms, reflected the traditional plan of the Persian palace in the pre-Mongol period. In the first half of the 13th century all buildings known in Mongolian archaeology were built this way, including the palace of the Great Khan in Karakorum.

The planning structures of the new Central Asian cities of the Chinggisids fully reflected the traditions of the 'old' peoples of the young empire. Examining the roots of Mongol urbanism in the 13th century in Central Asian traditions and, in particular, in the urban planning culture of the Uighurs and the Khitan, the researchers concluded that Karakoram was an agglomeration across the valley of the river Orkhon [Minert, 1990, p. 94]. But it was a metropolitan area, based on the observation of certain principles. Across large parts of the territory, the residences (palaces) of the settled nobility sat side by side with buildings intended for craftsmen and traders. The settlements of the nobility and ordinary citizens were interspersed with military camps of nomadic yurts, land for grazing and fenced cropland that gave the area a sparse and spa-

cious character. Following this theory, the centre of the 'big' city was the receiving Palace of Ögedei, built in 1238 [Kiselev, 1965, pp. 138–166]. During the construction of the palace, the Mongolian version of spatial solutions were implemented on the basis of Chinese building techniques. In 1253, William of Rubruck noted in Karakorum two quarters—the Muslim merchant quarter and the Chinese craft quarter (this was also discovered by S. Kiselev's expedition). Palaces were outside these neighborhoods, and the city was surrounded by a *clay wall with four gates*, each of which became the focus of a specialized trade: grain—east, small cattle—west, bulls and cart—south, and horses—north. Outside urban areas were the 12 'idols' of various peoples, including two mosques and a Christian church on the edge of town. By the time of a visit by a Franciscan missionary to the city of Karakorum, founded by Chinggis Khan in 1220, the city has existed for at least thirty years. If a city had arisen, as is assumed, on the site the Great Khan's headquarters, it is unlikely that is boasted with ramparts and walls. It seems that the planning of Karakorum reflected the idea of empire model. Experience in planning and construction of the palace in the Karakorum influenced the construction of regional centres in the nascent empire. For example, a town on the river Hirhira in the Transbaikalia, where construction work began in the late 1230s. This town belonged to the brother of Chinggis Khan Jochi Hasar, and later his son Isunke, and was the centre of their holdings or yurt. The main settlement was located in the fortified palace of the ruler ('Citadel'). Around the Khan's residence—to the west, north and east—was a complex of separate developments. The space to the south of the palace remained open and free from any development, which indicates the Mongolian tradition to the planning structure [Minert, 1990]. In the territory there were more than 30 estates around the Khan's palace and more than 100 separate buildings [Artemyev, 2001, p. 254].

One of the characteristic details of the meagre urban landscape of the Chinggisid metropolis was specialised craft villages, towns such as Jin Cheng high on the river Aluhuan (possibly on the Orkhon, a tributary of the Selenga). Ac-

cording to the 'Yuanshi', this town was founded by Chinggis Khan as a settlement of weavers. More than 300 weaver families were relocated from Turkestan, seemingly after the capture of Bukhara and Samarkand in 1220, and the same number of wool weavers came from China, probably shortly after 1220, when the Muqali Mongols conquered Shaanxi province [Xi You Ji, 1866, p. 404]. Also in 1220, Chinggis Khan founded Karakoram, possibly on the site of one of the headquarters of the Great Khan [Minert, 1990, p. 94]. Earlier, after 1211, the Mongols in the Eastern Altai had established a colony of ten thousand prisoners of Chinese craftsmen and artists of both sexes. The prisoners built the city, which was named Chingali-Balgas, as one of the younger associates of Chinggis Khan, Ker Chingali, a future minister of Ögedei Khan, was put in charge of the colony [Maydar, 1981, p. 61]. It can be assumed that the number of Chinggisid special settlements directly depended on the total amount of military trophies, including in the form of captured craftsmen of various specialties. It is still necessary to distinguish between the construction of special settlements and the construction of cities. On the territory of Dasht-i Kipchak, special settlements of the Chingali-Balgas type have not been identified archaeologically, although in both cases mostly forced labor was used.

The trend toward building on uninhabited areas is a characteristic feature of the urban development of the Jochids [Fedorov-Davydov, 1978, p. 27; 1983, p. 216]. The massive Jochid urban construction manifested as a not yet fully recognised historical phenomenon of conscious retreat from the Chinggis Khan commandment that his descendants, along with the Mongolian nobility, should live in the conditions of a nomadic life forever, enjoying the benefits of free life of the steppes, but not cities [Vladimirtsov, 2002, p. 198]. It is obvious that in the formation of the new consciousness of the younger Chinggisid generation (the grandchildren's generation), a new pragmatism took hold, based on an understanding of the role of trade in the altered historical circumstances, which came toward the end of the 13th century, but especially later [Fedorov-Davydov, 1983, p. 215]. This is eloquently illustrated by the phenomenon of

urtachestvo—the equity of Jochid nobility in merchant transactions [Grekov, Yakubovsky, 1950, p. 154–155]. A not insignificant role was seemingly played by the awareness of accessibility to the inexhaustible resources of international trade routes of the steppe branch of the Silk Road, which had been active since the beginning of the 1260s to the time of the fall of the Latin Empire and the return of Constantinople by the Greeks. This coincidence with the period during the reign of Khans Batu and Berke (who belonged to the same generation) of minting coinage, the renewal of the transcontinental trade route and mass urban construction in the desert shows, in our opinion, evidence of the conscious choice by the ruling house of new paths to state formation.

On the Golden Horde town system. We have touched on the question of a paradigm leading the Jochids to embark on large-scale urban construction. Of course, it is based on a universal principle that is expressed in the fact that the city of the village features a developed market. However, the city of the Golden Horde was not just a large market place. It was also a place of concentration of power, money, craft building and, finally, the habitual residence of the spiritual elite. And the market in the city differed from the multi-purpose markets in a number of ways, such as in nomadic camps. The main feature of the city market is its specialisation; its function is to be a link with nearby artisan settlements, rural districts and the surrounding nomadic steppe. Among the most important social functions of the market is communication, which is particularly important in terms of establishing inter-ethnic and inter-religious links.

Cities in Dasht-i Kipchak sprang up everywhere as centres of new power [Fedorov-Davydov, 1983, p. 218; Egorov, 2000, p. 267]. It is clear that the presence of winter roads played an important role in the selection of sites. It is assumed Sarai grew along these lines, the first eyewitness account of which (by the brother of Rubruk) dates to 1254 [Puteshestviya, 1957, p. 185]. The question of whether the new cities of the Jochids appeared independently of the Khans' will and the support of labour and military aristocracy, is not even worth discussing:

Mosaics with geometric ornamental patterns (according to L. Noskova)

2: Tsarevskoe archaeological site,
3: Mechetnoye ancient town,
4: Uvek archaeological site

in the Golden Horde, especially in the 13th century, there was no other social force capable of changing the stereotype of nomadic farming in favour of sedentarisation.

To some extent the service weight of the 'old' and 'new' urban centres was reflected in the geographical description of the Golden Horde in the pages of the 14-century encyclopedia of al-Kalkashandi [Grigoriev, Frolova, 2002, p. 261–302]. The encyclopedia emphasises the two-part nature of the Ulus of Jochi, which was divided into two historic regions—Khwarezm and Kipchak. Urgench, where the headquarters of the left hand (wing) of the Golden Horde was located, was described by al-Kalkashandi as the second capital city of the region, after ancient Kyat [Ibid., p. 282–283]. Of the urban centres of Khwarezm, also named are Maly Urgench (Khiva), Zamakhshari, Khazarasp, Dargan and Farabr. The location of the headquarters of head of the right hand (wing) was the city of Solkhat (Sulgat). It was the capital of the district of Crimea (al-Kirim), including, according to the encyclopedia, 'about forty settlements'. If we understand the numeral 'forty' as 'many', one might think that we are talking about rural and artisan villages, the markets closed this small regional centre. Forty Solkhat settlements should not be confused with the 'As country' in Golden Horde Crimea that belonged to another administrative district of the capital Kirk-Er—Kirkir—the Turkic etymology which Kalkashandi interpreted as the 'forty men' [Ibid., p. 286, 290].

The description of the Crimean capital, situated at the junction zone of the steppes and foothills, in the encyclopedia takes into account the links of Solkhat with two port centres—Kaffa and Sudak—each defended by Solkhat at a dis-

tance of a day's travel [Ibid., p. 287]. Only from al-Kalkashandi do we learn that in the Khan's domain, there are cities, 'attributed' to Solkhat and among them, Ukek (Uvek), located about halfway between Sarai and Bulgaria [Ibid., p. 286]. This appears to be evidence of some kind of taxes in favour of Solkhat. At the same time, small Kerch (al-Karsh), located in Eastern Crimea, was 'isolated' on Azak, located fifteen days' march from Crimea [Ibid., p. 287–288]. From the text of the Egyptian author it follows that the organization of the structural subordination of the right wing of the cities was built upon a system, not based on the principles of regionalisation, but on administrative and economic feasibility.

The capital Sarai with its magnificent harbour is described in greatest detail in the encyclopedia. Al-Kalkashandi, based on the testimony of eyewitnesses and written tradition, characterises Sarai as a large city. Among the sights of the city he includes not only the Khan's residence, where the ruler and his emirs lived in the winter, but the city pond (water for industrial purposes). Sarai is described as a city where

there are markets, baths, charitable institutions, and warehouses. Modern researchers have determined the area of urban neighborhoods in Sarai to 10 sq. km [Egorov, 1985, p. 115]. However, not everything is clear in the identification of early Sarai. Until now, the Selitrennoe ancient settlement archaeologists have not found the remains of the 13-century city. Some historians attribute this to the regime of the Caspian Sea transgression at the turn of the 13–14th centuries, believing that the cultural layer of the settlement of the second half of the 13th century was washed away during strong spring floods [Lebedev 2005, p. 19]. Others believe that the core of the early Sarai (including, apparently, the palace of Batu) could be located 100 km to the south, at the place of confluence of the rivers Akhtuba and Buzan and in the settlement of Krasny Yar, where the coins of the second half of the 13–beginning of the 14th century have been found. [Goncharov, 2005, pp. 97–98].

On the rooting of urban life on Selitrennoe and several other settlements of the Middle and Lower Volga Regions, the Khan's domain was transformed into 'a nation of towns' in the Volga Region. In the 14th century alone, there were 47 towns and villages, representing 33.5% of the total number of recorded (140 known and identified based on mapping) of the municipal type. At the same time it should be noted that the territory of the former Volga Bulgaria, with its villages and towns in the 13–14th centuries was an area of continuous settlement [Fakhruddinov, 1975, p. 50–78]. From the perspective of modern archeology, the panorama of geographically and politically central districts of the Golden Horde in the 14th century were a landscape area, densely settled. During this period the 'Coast of Volga, ' said V. Egorov, 'was almost entirely built up with cities, towns and villages. Along the left bank of the river Akhtuba (from the source to its Sarai al-Jadid and more) there is a continuous settled strip consisting of small towns, villages and castles of the aristocracy, surrounded by cultivated fields. As similarly significant area occurs in the area where the Volga and the Don draws closest' [Egorov, 1985, p. 77].

A Golden Horde town is difficult to distinguish from a village, except by external met-

rics: its size, the number of inhabitants, the abundance of markets, public buildings, the splendor of noble houses and the concentration of countless crafts. Contrary to popular belief, the city is not always the issuer: often coinage is carried out in conditions of nomadic (military) headquarters. But copper coins are usually minted in urban mints. In contrast to European cities, those of the Golden Horde from the time of birth are not constrained by walls, and there was never anything like cathedrals or a fortified kremlin. There was no citadel, no *shakhristan* or *rabad*, like in the cities of Middle Asia and the Middle East. Difficulties in identifying the formal signs of the Golden Horde towns, I believe, lie in the features of the genesis of steppe urban planning. To elucidate the specifics of this, let us turn to historiography.

The extremity, according to which the origin of steppe cities due to a combination of two constants, military camp (fortress) and transit trade [Safargaliev, 1960, p. 77–79], did not pass the test of time. The archaeological study of the Golden Horde towns in the east and Shehr al-Jadid to the west provides a whole range of evidence of that in urban areas the indigenous Ulus Jochi method used was the forced concentration of artisans, but not in the form of fortified settlements. In the steppes, the Jochids had nothing and no one to fear. Most likely, the foundation was laid on the principle of combining commercial factors freely, with settlements without walls, which housed both owners and craftsmen gathered in the conquered territories. Tracing the evolution of the settlements into full cities, highlighting at the same stage of *pre-town*, happens very rarely. Unfortunately, the blurring of formal characteristics of the steppe town (in the absence of written evidence and statistical data) only complicates the issue.

The system of towns and settlements in Dasht-i Kipchak was created artificially by the Khan's house, without relying on tradition. In the prevailing conditions of the nomadic lifestyle of the bulk of the Turkic population, these new and updated 'old' cities, as we have noted, were designed to meet the needs of the ruling dynasty. But only to the extent to which the Khan's headquarters managed to suppress the resistance of the steppe aristocracy.

Now in Golden Horde urbanistics, the concept of two paths of urban development prevails. The first is the 'steppe' type common to the Lower Volga Region, the plains of the North Caucasus and the steppe zone of Prut-Dniester interfluvium (its main feature is the absence of pre-Mongol urban traditions). The second is 'autochthonous', which is characteristic of the marginal areas of the state where the Jochids used the 'old' city of the local population with their own urban planning and land use traditions [Byrnya, 1984, p. 32–35]. For the settlement regions this typological scheme does not take into account the growth of new cities, whose formation is not associated with the local urban planning traditions of the pre-Mongol period, but whose functions correspond to the idea of serving the interests of the Tatar nomadic elite and wealthy merchants of the Golden Horde. In the western regions—the right hand (wing) of the state—to those can be attributed Solkhat-Crimea and Kaffa in Tauris, Tang in the Azov Sea Region, Moncastro, Chilia and those living in the lower reaches of the Dniester and the Danube.

A number of authors seeking the genesis of some towns in the western parts of the Golden Horde turn, on the one hand, to the overcriticised factor of the Genoese trade colonization in East Crimea, and, on the other hand, to the criticised role that state power had in town building policy towards the Dniester River Region in the middle and the third quarter of the 14th century. Thus, some historians view the development of Kaffa as 'initiated' not by the Latin settlers' onward constructive activity, but by the Franciscan and Dominican missionaries building temples that supposedly were some kind of 'Cult forums' and 'places of regular barter' [Emanov, 1997, p. 17–24].

Historic Moldova, where the stage of pre-town was also missing, encounters even more controversial explanations of its urban origins. N. Russev, who literally equals the circulation of the Golden Horde's coinage to the movement of people (we should highlight that the replacement wasn't authorised by the Khan), talking about new towns emerging in the Prut-Dniester Region, suggested that two peaks of Jochid coinage seen by Old Orhei,

Costești and Bilhorod-Dnistrovskyi in the middle of the 14th century and the late 1360s may be explained by the mass uncontrolled migration of the capital citizens from Sarai al-Jadid [Russev, 1999, p. 35, 46–58]. According to the scholar, there were two reasons for this: attempts to avoid the plague pandemic, and the state oppression from which part of the trade and artisan population of the Volga Region fled. Both suggestions are wide open to criticism, for baths and mosques of Stary Orhei prove that people who came from the Volga Region continued to enjoy the goods of Islamic civilization.

In the 1230s, the army brought national Mongol novelties as well as foreign ones to Dasht-i Kipchak. It is sometimes difficult to separate them. The laws, military structure, tax and duty system, wrapping clothes from the right to the left, typical headwear, coiffures, dishes, common festivals, the cult of Tengri are all original Mongol marks which don't exclude borrowings as a result of cultural contact with neighbours. But we should enumerate some innovations adopted in the times of the united Mongol state: international trade; kans in house building; iron, bronze, ceramic and a number of other constantly updating productions. We should point out that, according to paleopedological data, the 13th and the 14th centuries were characterised by a climax of atmospheric overhumidity and 'considerable humidisation of the whole Eurasian steppe' [Demkin and others, 2005, p. 117–118].

Golden Horde culture was characterised by two coexisting lifestyles: nomadic (in the steppes) and settled (in rural and urban areas). After the first state capital, Sarai, emerged in the 1250s, the nomadic (that is military) elite settled down in towns. Moreover, 'old towns', ransacked in wars, began to be restored in that period. In a century, that tendency, together with the building of new towns, led to the establishment of a more or less balanced system controlled by nomadic leaders. We may call it an alliance between the steppe and towns, united in order to gain transit trade benefits and probably due to the growth of local production based in towns.

110 towns have been already marked on the modern archaeological map of the Golden

Horde; 30 towns known in the Middle Ages still have no location [Egorov, 1985, p. 139]. Archaeological observations are close to the data from 'Book of Travels' by Evlia Çelebi (17th century) who wrote about 170 towns in the 'Heihat steppe' [Çelebi, 1979, p. 143]. The importance of towns as economic centres from the very beginning determined their role as administrative centres that often had key positions in developing far trade and creating a chain of inns for caravans along trade roads. Large towns, such as Sarai, Khwarezm (Urgench), Gulistan, Bulgar, Bilär, Ordu-Bazar, Beq-Bazar, Ukek, Moksha, Saray-Jük, Hajji Tarkhan, Majar, Azak, Kaffa, Solkhat-Qirim, Shehr al-Jadid, basically redivided, to different extents, far imported goods (various fabrics including cloth, silks, brocade; expensive glass, jewellery, and so on) and local goods produced by blacksmiths, armourers, potters, saddlers, and glassblowers. There, goods were also made of raw materials supplied by the steppe (horses, cattle, skins, and wool) and of agricultural products from near and far areas, as well as local gardens, for many towns remained semi-rural centres. Meanwhile, the right-hand ('wing') economy was centred in Crimea (Solkhat) and Bulgar, the left-hand ('wing') economy—in Khwarezmian Urgench. Money was needed to establish fruitful exchange, the main urban economic function. So the right to issue coins (to have mints) was given in different periods at least to 17 towns that temporarily played the role of *administrative* centres. The phenomenon of issuing money in nomadic camps again highlights that *political authority* in the Golden Horde had *always* belonged to the nomadic elite, regardless of its loyalty to nomadism, including periods when it was associated with an urban lifestyle.

It was obviously early to talk of the urban system as a mark of state and administrative evolution in the Ulus of Jochi. At the same time, considering on coin-issuing towns and provinces, taking into account the activity of particular mints changed with time, we can see, from the second half of the 13th century [Goncharov, 2005, pp. 97–102], the following dynamic of leadership among the most important settlements and urban-centred provinces.

In the first period (from 1240–1250s to 1290s) coining was centred in Bulgar, Sarai, Crimea and Khwarezm. Bulgar and Sarai were parts of the Khan dominion, while Qirim and Khwarezm were polar areas on latitudinal ways of the steppe part of the international road to China that was only being established. We can't but mention that dirham coining in Qirim of that period had been disputable till recently [Baypakov, Nastich, 1981, p. 46, Fig. 12, No. 13]. Nowadays, a group of silver coins of two types is defined. The first type consisting of four coins, three of which read '*the Amir of Qirim*', dates back to the period between 1257 and 1280. The second type counts with five coins of the 1/4 of jarmak value. Two of them read as follows. Obverse: '*By order (?) of Temir Buqi (Tuqi?) the jarmak (of?) Qirim*'; reverse: '*Be happy. Twelve of these coins are one sultani*'. They were supposedly issued between 1257 and 1267 [Khromov, 2004, p. 15–17]. The inscriptions thus show that the latter were issued on behalf of Tuq Timur, the alleged owner of the Crimean Ulus up to 1270.

The second period (1290–1341) started with a 30-year break in the khan's coining in Bolghar. Mints in Sarai, the Crimea, and Khwarezm went on working. Since the late 1290s, Nogai's (1280–1299) coins had been issued in Isaccea. Meanwhile, Nogai, as well as Mengu-Timur, was a legitimate right-wing ruler of the Golden Horde (more data on Nogai's Empire: [Vernadsky, 1997, pp. 181–195]). His coin with the Greek inscription 'To the prosperous Nogai' issued somewhere on the Danube is known (for its drawing, see [Lebedev, 1999, p. 4]). Isaccea was a medieval town in Eski Kalle, on the right bank of the Danube ([Russev, 1999, pp. 29, 90–98, 110–115]; on disputable questions of Nogai's capital identification, see [Haywood, 2002, pp. 133–134]).

We may suggest that Nogai, who also issued coins with the inscription 'Just Nukhai Khan' in Crimea (one of them is known, without the year, but it supposedly dates back to 697 AH (1297/98 CE) or 698 AH (1298/99 CE), see [Severova, 2002, pp. 76–79]), was mainly focused on changing the right-wing Golden Horde into an independent state with the centre in Sakdzha-Isaccea. We should mention Toq-

ta's dirhams found in Isaccea and anonymous coins issued by the mint of Crimea [E. and I. Oberländer-Târnoveanu, 1981, pp. 89–109; E. Oberländer-Târnoveanu, 1987, pp. 245–258; Russev, 1999, pp. 130–131]. In such a situation, Crimea should have become an eastern province submissive to the Danube capital of the Nogais [Sbornik materialov, otnosyashixsya k istorii Zolotoj Ordy', 1884, pp. 117, 161].

Under Toqta Khan (1290–1312), the mint of Majar in the North Caucasus started to work, and coining in Sarai-al-Maqrus was resumed.

Under Öz Beg Khan silver coins were issued by the mints of Crimea, Sarai, Khwarezm, Mokhshi and Bulgar (?) from 711 AH (1311/12) to the 730 AH (1329/30); in the period up to the 730 AH, they were joined by the mints of Azak and Sygnak; from 730 to 741 AH (1340/41), the coining was carried on by Sarai, Bulgar, and Khwarezm. It's crucial that silver coinage, excluding Sarai and Azak, was issued by mints in provinces (uluses). I believe the ambiguous phenomenon (a town was called '*beled*' meaning 'district, province') of coining probably proves that towns, being the centres of the actual provincial economy, were submissive to the nomadic elite, which still was alien to urban lifestyle. At the same time, the mere town on that stage was viewed by the Golden Horde's nomadic elite as a vital instrument of social existence.

The third period stretched from Jani Beg to Tokhtamysh (1341/42–1380/81). The indisputable leaders were the Sarai al-Jadid and Khwarezm mints, the main coin issuers under Jani Beg since the 740s AH. From 752 AH (1351/52) to 768 AH (1366/67) dangs were actively coined in Gulistan and its province. According to researchers, coining in Beljamen and Ak-Sarai belongs to the new capital district [Goncharov, 2005, p. 98]. In the mentioned ten years, pulis were issued in Mokhsha and Hajji Tarkhan (since 767 AH = 1365/66); in 763 AH (1361/62) copper was coined in Saray-Jük, where Murid had processed Khizr's pulis.

In 762 AH (1360/61) Khwarezm became independent; in 768 AH (1366/67) Gulistan mint ceased working. Obviously, along with the establishment of Mamai's 'emirate' in the middle of 1360s, mints of Shehr al-Jadid in the Dnieper River Region, Orda (al-Mu'azzam) in

the Dnieper area, Azak in the Don River Region flourished. In the late 1360s, the leader was the mint in Orda where all the issuing of the 'emirate' silver coins was concentrated. This potential was kept by Orda up to September 1380, which proved fatal for Mamai.

In the east of the Golden Horde, in Khwarezm, copper inseparably prevailed over silver in 1360s and 1370s, but during all the period of Khwarezm's aloofness from the Volga area, gold dinars were issued there.

The fourth period began under Tokhtamysh (1380–1398) and finished under Jalal ad-Din (1411–1412). In that period all the regional centres became coining towns. And the mint of Orda nomadic camp, moved by Tokhtamysh from the Azov Sea Region to the Lower Volga Region, went on working.

The urban markets' potential was so high that the struggle between Tokhtamysh and Tamerlane had not influenced the geography of coining towns drastically up to 1395. On the eve of 1395, silver was coined in Khwarezm, Saray-Jük, Hajji Tarkhan, Orda al-Makhru-sa, Ordu al-Mu'azzam, Sarai (al-Jadid), Majar, Azak (al-Jadid), Orda (al-Jadid), Qrim (al-Jadid). Copper was coined in Bolghar and by a new mint in Edil (794 AH, 1391/92). After 1395, there was a steep, though brief, fall in coining, along with generally reduced quantity of mints. In the Volga Region, mints of Sarai al-Jadid, Hajji Tarkhan, and Ordu were fading; in the western territories the same was true for Qrim, Orda al-Jadid, Ulus al-Jadid. However, a few years later, under Shadi Beg (1399–1407), all the mints known under Tokhtamysh resumed their working. The list of coin issuers continues with Kaffa mint, the capacities of which were overwhelming as a result of the town's trade volume in the first quarter of the 15th century.

In the period when Tamerlane struggled with Edigu, the list of old mints grew shorter. The first town to come under the Timurids was Khwarezm.

Thus, the dynamic of mint establishment in provinces and coining towns between 1250s and 1430s [Goncharov, 2005] proves not only the complicated model of coining development but is also useful in defining the speed of the Golden Horde's urbanisation.

There, in the centres of a settled lifestyle in economically crucial provinces, but mainly in the leading coining towns that soon grew into regional capitals, the new culture of the Golden Horde was born. It cannot be defined as a 'state one' neither from our point of view nor from the medieval point of view. The Jochids had no 'state policy' towards culture (at least, the material culture). But, at the same time, the culture was not Mongol nor Bulgar any more, much neither Kipchak nor Sarai, Khwarezm, Qrim (nor mono-ethnic—Italian, Greek, Armenian in Crimea, and, more widely, in the Northern Black Sea Region). That empire culture was the culture of the *Golden Horde* (the given essay does not cover its regional aspects). Since the times of Berke Khan (1257–1267), it—the material culture of the Golden Horde—had been repeatedly influenced by Islam which was reflected in the urban look, types of public buildings, behavioural stereotypes, such as the burial ceremony for the citizens of the Golden Horde and a considerable part of the nomads. The Golden Horde towns inherited not only outer traits of the Middle East and Central Asia but also the principle of urban social 'splitness'. I suppose, Desht-i Kipchak can be well characterised by the urban not opposing the rural exactly. Based on our archaeological studies of the data coming from settlements in Solkhat steppe and mountain area, we share the opinion of I. Lapidus, who wrote about the homogeneity of the urban and the rural, which leveled the difference between the town and the country as it was customary in the Middle East [Lapidus, 1967, p. 95]. The outer similarity could not but level basic contrasts in the existence of rural provinces and the Golden Horde's towns. Still, the mechanism of the social organisation remained unchanged.

The interaction of three elements—the nomadic steppe, the town, and the rural settlements in the urban area, as it was, for instance, in Solkhat—was vital to Desht-i Kipchak. The town needed what the country produced, and the country needed the town even more, with its markets where artisan and agricultural produce of suburb settlements could be sold. An example of a settlement of the first type was

Bokatash 2, where 25 pottery kilns functioned. The produce of the furnaces was to be sold in the urban market [Kramarovsky, Gukin, 2004]. Krynychky in Solkhat area was a rural settlement of the second type. No artisan production was found there, but according to the coin material, household pits and urban ceramics, agricultural goods (unfortunately, we do not know which exactly) were changed in Solkhat for goods typical of urban way of life [Kramarovsky, Gukin, 2002]. Talking about the Crimea, the described situation characterised it mainly in the 14th century. That is why we can scarcely agree with V. Egorov, who has recently insisted that the country was completely missing in the Golden Horde [Egorov, 2000, p. 269], which, incidentally, contradicts his previous observations.

The dependence on the revenues from transit trade made interests of nomadic and urban elites closer. Growing standards of urban living could not but influence the demand for artisan produce. The development of the steppe towns' artisan potential, together with their distributive function, finally became one of the key factors in progressive evolution of Desht-i Kipchak towns by the end of the 13th century. However, the main part of the nomads and, to a lesser extent, the country still remained out of reach of the civilizational achievements of the town. The contrast between them grew dramatically, especially by the end of the 14th century.

Islamic cultural tradition in the new towns of Desht-i Kipchak and Crimea. The archaeological studies of recent decades have evidently proved the Islamic appearance of the Volga towns and regional capitals of the Golden Horde from Saray-Jük on the right bank of the Ural River, in West Kazakhstan region, to Solkhat-Qrim in East Crimea. That is why they differed drastically from the Mongol towns of Central and Eastern Asia. In eastern building, an original planning programme, which returned to the nomads in a modified, 'Chinese version', prevailed [Minert, 1990, pp. 90–91]. At the same time, building and ornamental techniques used in the Mongol towns of Central Asia went back to the tradition of the late Tang (618–907) and Liao (907–1125) dynasties [Steinhardt, 1983, pp. 137–158].

It would be logical to suggest that, from the planimetric point of view, new towns of the Golden Horde should have correlated to new Mongol towns in the east as well as in the west, including Ilkhanate Iran. But it was not so. Other traits have been found in Desht-i Kipchak urbanisation. The new Golden Horde towns, where Islamic outer forms and types of public buildings prevailed, had nothing in common with *planning structures* either of Central Asian towns or of the Middle Eastern ones. In the Ulus of Jochi, there were no towns with a separate *citadel*, the residence of the ruler; a *shahristan*, the town of the elite and the officials; and a *rabad*, the trade and artisan posad with markets—so that each part had its walls. Such planning was typical for the only old town of the Golden Horde, the pre-Mongol Derbent in the Caucasus.

Perhaps, as a tribute to the Islamic urban classification according to which provincial centres were equal to fortresses, the first stage of Solkhat-Qrim development is sometimes linked with a war camp. According to the bookish tradition, it was also promoted by the meaning of the Persian '*kerman*', 'the fortress'. In 'Codex Cumanicus', a Cuman dictionary created in the Crimea in the first half of the 14th century [Kuun, 1880], the word '*kerman*' was reasonably translated as 'Castum, Caste' meaning 'fortress, citadel, camp'. Deriving from these etymological arguments, it is a mistake to think that the majority of the Golden Horde towns built under the Mongols appeared at the places of former war camps [Safargaliev, 1960, p. 79]. Nevertheless, of five towns mentioned by him, Qirim (Sary Krym), Akkerman (Moncastro), Xankirmān (Kasimov), Kermenchuk (on the Vyatka River), Kremenchuk (on the Dnieper River), only the first two deal with the history of the Ulus of Jochi. More fruitful was the idea of the caravan trade role in the Golden Horde urban development: 'It is sufficient to have a look on the location of the Golden Horde towns such as Solkhat, Azak (Tana), Majar, Sarai, Saray-Jük on the caravan trade routes, or such towns on the Volga as Astrakhan, Ukek, Beljamen, Bezdež. All of them developed due to the caravan trade which, under

Mongols, became international for that time' [Ibid., pp. 79–80].

As studies have shown, the Golden Horde towns on the Volga developed on the basis of the Mongol elites' homestead building and without urban walls [Fedorov-Davydov, 1994, pp. 14–15]. However, we are talking about the homestead principle of the Golden Horde urban planning that went back to the Mongol towns of the 13th century but not about the Karakorum model of agglomeration. We have almost no data on the steppe towns planimetric features. The homestead planning differs the Golden Horde towns of the Volga Region from the towns of Central Asia and South Kazakhstan, for example Otrar and the western towns, including Bilhorod-Dnistrovskiy as well as the Crimean towns, where building progressed quarter by quarter. We must point it out once again: the Jochids, as well as all the early Chinggisids of the united empire's times, built their towns, on the first stage, as centres of regional power. But, unlike the metropolis, the Golden Horde supposedly had no artisan-specialised urban settlements.

We believe it is too early to talk about the typical traits of the planning structures applied to the Golden Horde steppe towns. Nevertheless, some important details have been clarified. No traits of the ancient 13th century town were found at Selitrennoe archaeological site [Ibid., p. 26]. This means that the town was built on virgin lands. Perhaps in the 14th century, taking into account the topographic traits of the cultural stratus outside the compactly built urban area, we may talk of agglomeration features and urban dwellings alternating with agricultural and cattle fields. In the area between Krasny Bugor and Kuchugury compact building was found, with irrigation channels (aryks) along the streets. In the western part of the town, there had been a district of aristocratic homesteads up to 1370. In 1380s–1390s, the district was partly inhabited by common citizens and filled with burial sites pressing the microdistrict from the west as well as from the east. To the north-west of the town's main core, we can now see the ruins of mausoleums. The scales of the town's square are estimated at 10 sq. km by V. Egorov [1985, p. 115] to 36 sq. km by F. Ballod [1923b, p. 31],

Architectural detail. Crimea. 13–14th century

which, together with the population quantity, in my opinion, suggests rather agglomerational building than a town without walls in the common understanding.

Ibn Battuta, enumerating peoples of Sarai, names, apart from the Mongols, the Ases (Alans), Kipchaks, Circassians, Russians, and Byzantines [Collection of Works Related to the History of the Golden Horde, 1884, p. 306]. His estimation of Sarai seems reliable: 'The town of Sarai is one of the most beautiful towns, hugely enormous, on the flat land full of people, with beautiful markets and wide streets... it is all a compact row of houses, without either empty places or gardens' [Ibid.].

Unlike other towns of the Volga Region and other regions of the Golden Horde, Sarai was not destroyed by Tamerlane's army in 1395. We do not know the date of its final abandoning, but it was still notable as a centre of international trade in the first half of the 15th century [Zakhoder, 1967, pp. 166–167]. The Golden Horde capital was a large artisan centre which, as we know, had quarters of blacksmiths and potters, where jewellers' and bone carvers' workshops have been excavated.

Tsarevskoe archaeological site has been defined as the second Golden Horde capital until recently. Now it is identified with Guliston [Evstratov, 1997, pp. 88–118]; only the most common topographic traits have been defined [Fedorov-Davydov, 1984, pp. 21–23]. It seems that, like building on the big radius of Selitrennoe archaeological site, Tsarevskoe can be viewed as agglomeration where urban buildings, large homesteads or their accumulation alternated with agricultural and cattle fields zone by zone. To the west of the town, there was a large

lake, the banks of which held dwellings in the middle of the 14th century, and, at the end of the mentioned century, there was a burial site there. In the centre of Guliston, a huge square was found. It was circled in the south and in the east by remarkably large buildings. Streets leading from the centre to outskirts had

aryks, along which we can sometimes trace pedestrian roads. In the eastern part of the town, basing on its microrelief, we can trace one more square, of an almost square form; in this sector of the archaeological site, probably four artificial pools were also located.

Tsarevskoe archaeological site lies on the bottomland of the Akhtuba River, and in old times, the town neared the mere bank of the river. Archaeological studies have proved the existence not only of the urban water supply but also of complicated hydroengineering systems regulating the level of water in the pools. The initial core of the town consisted of a few large aristocratic homesteads [Fedorov-Davydov, 1973, pp. 85–87; Egorov, 1985, p. 114]. Unlike Sarai, Gulistan-Saray was destroyed by Tamerlane in 1395.

Apart from Selitrennoe and Tsarevskoe archaeological sites in the Volga Region, in addition to the Bulgar area, over 30 ancient towns and settlements have been found. They are middle-sized and small towns, but the list counts with such famous ones as Mokhsa, Ukek, Beljamen, Hajji Tarkhan [Egorov, 1985, pp. 106–120]. The quantity of notable towns only is astonishing. In reality, such centres were brought to life by the need to organise the state structure and trade interchange. Even a brief list of ancient towns we are confining to gives us an insight into the steep urban growth in the 14th century. Here are some of the towns and large settlements in the right-wing borders only. In Ciscaucasia, Majar, Malye Majari, Upper Majary; in Dagestan, Derbent; in Northern Ossetia, Verkhny Julat; in Karachay-Cherkessia, Nijne-Arkhyzskoe archaeological site, settle-

(according to N. Malinovskaya)

ments between the Terek and Sulak Rivers; in Kabardino-Balkaria, Terskoe archaeological site and Nijny Julat; in the Azov Sea Region, Azov Gorodishche (the town of Azak) and a number of settlements; in the Taman, Matrega. Among new Golden Horde towns in the Crimea only Solkhat (Qrim) is known. At the same time, the Golden Horde capital of the Crimea had close military, political, and commercial links with other towns of the peninsula: Vosporo on the eastern coast, Soldaia and Kaffa on the sou-eastern one, Çembalo on the southern coast, Qirq-Yer in the mountains. The list should be continued by small towns and fortresses of Gotia: Mangup, Eski Kermen, Baklu Tepe-Kermen, Lustu Partenit. There were up to 32 small and middle-sized settlements, villages and castles in the Genoese narrow zone from Kaffa to Çembalo in the 14th century [Bertie-Delagard, 1915, pp. 229–256; Bocharov, 2004, pp. 186–204]. In the west of the region, we should note the fading, but still notable within the peninsula, Kherson [Aybabin, 2003, pp. 277–306].

Solkhat is not categorised as a steppe town, although it is situated on the border between the steppe zone and the Crimean Foothills, in the Second Ring area. The town of the 13–14th centuries emerged on the trade route from Soldaia to Kaffa. This is evidenced by the location of the town's mosques, five of which form a line along the road from the sou-west to the nor-east. The main town-defining road cuts through the compact building area of the 15–18th centuries for 2.2 km from the west to the east, dividing the medieval town into two unequal parts. It is doubtless that the 'entrance' and the 'exit' of the road was accompanied by urban gates. Perhaps we should look for other gates in the sou-eastern sector of the town, near the exit to former Bokataş village where, in the second half of the 13th century and in the 14th century, a Christian medieval settlement of the same name emerged, with a large pottery works [Kramarovskiy, Gukin, 2004]. According to the plan dating back to approximately 1783, the total area of the medieval town by the mid-15th century was about 2.2 sq. km. Solkhat was not

built very compactly. Perhaps, it dealt with the semi-agricultural features of a town full of gardens. A merchant from Sevilla, Pero Tafur, noted that there were yurts within the town walls, and that is the detail that also characterises the urban life of Gulistan-Saray and, perhaps, the capital Sarai [Fedorov-Davydov, 1994, p. 59]. Dwellings of the yurt type have been found in Azak and some towns of the North Caucasus. Images of yurts can be seen in the ink-on-stucco drawing at the Golden Horde's Beljamen archaeological site. The yurts are set up in the square in front of the facade of a madrasah with two minarets. Such yurts, evidently used as mosques in war campaigns (the wands mounting them have distinct pommels with the word 'allah'), were drawn in a miniature of Tabriz school from Berlin collection [Dschingis Khan, 2005, S. 266, No.294]. Taking into account the Middle East towns and the basic figure of 50 persons for 1 hectare, we shall estimate the population of Solkhat at 10, 000–11, 000 of people, which may be even too large a quantity if we also take into account the inconveniences that prevented a complete building of the town. The Arab sources vastly overestimate the population of Solkhat in the 14th century talking about 85, 000 plague victims in 1346–1347. That figure is hyperbolic even for the whole peninsula. Still, Solkhat was a large town for Taurica. To draw a comparison, I shall mention the approximate population of Kherson in the 13–14th century which was 3, 600–5, 000 people [Romanchuk, 1986, p. 185]. Archaeologists have found 109 quarters in Kherson of the 12–13th centuries, but after the massacre in the last third of the 13th century, the town was ruined, and its life mainly focused on the port area. In the 1360s, contesting the threat of Mamai's army, the town built walls. Their length, according to the 1783 plan, was up to 6.2 km; the walls were fortified with 28 towers. The trade road divided the town into two unequal parts. Christian sites were grouped in the nor–western sector of the town, while the Jewish *kenesa* was in the sou–eastern sector. Muslim quarters situated along the road filled all the central part of the town, pressing a little against the Christian and Jewish quarters. It is remarkable that two of six Christian churches supposedly belonging to the

Armenian community found themselves out of the town walls after 1360s. Many of the five hundred stone houses 'with lower and upper grounds' looked abandoned by 1660s (the time when Evlia Çelebi travelled). A two-ground building with a roof timber and tiled covering mentioned by the traveller with reference to Solkhat correlates with archaeological observations of the homestead building in other Crimean towns. In the middle of the 17th century Eski Qirim had five mosques (two of them were Friday ones; and three, Quarter ones), two madrasahs, a basic school, an old (obviously meaning 'antique') bath, a tavern and a market with 20 potter's shops, and the same quantity of other market shops.

Solkhat, like Sarai, survived the catastrophe of 1395, although it was heavily damaged. During the entire period of its existence, from the 1260s to the era of Catherine the Great, Solkhat lived and faded as a Muslim town. Thus, it makes sense to start the review of the architectural dominants with one of the most representative architectural complexes: Solkhat madrasah and mosque (first third of the 14th century–second half of the 15th century). Our studies have proved that the building of the complex started with the madrasah. The layout of the madrasah is based on a rectangle with a side of approximately 28 m [Kramarovskiy, 2005, p. 113]. A visitor, having ascended three stairs of the main portal to the entrance hole in the eastern wall of the madrasah, found himself in an inner yard paved with stucco blocks. The yard was circled by an arcade, only the stone basement of which has survived to our days. In the centre of the yard (with the area up to 240 sq. m), nearing the western rooms, we would see a small fountain streaming water into a well. Further, there were three closed compartments (Nos.14–16) aimed at the *Taliban* winter trainings. Their summer trainings took place under the vaults of two open *iwans*, the southern and the northern ones (both up to 7.35 metres high), decorated with a profile of Seljuk chain. In the evening and at night iwans were lit by glass lamps fixed with chains (the iron fixing rings have survived to the present). One such lamp decorated with coloured enamels, dominated by blue, was found during the mosque

interior excavation. There were 14 rooms for disciples in total. A narrow corridor led to the *hujras* of the sou-eastern wing. Light came there through a window in the southern wall. So, excluding the yard, the madrasah consisted of 26 living, studying, and additional rooms, including those which had niches for writing-materials and books, as well as a *mihrab* niche. Evlia Çelebi reported a building inscription that stated the madrasah had been built thanks to the funding from the wife of Solkhat ruler in 1332–1333 [Grigoriev, 1974, p. 27]. Strati-graphic data proves the lost building inscription. In 1925, a marble gravestone dating 776 AH (1371) was found there; it belonged to Injibeq Khatun, the founder of the madrasah [Borozdin, 1926, Fig. 13]. To bury her, a nor-western room of the madrasah was rebuilt into a *durbe*. The madrasah's plan almost completely copies the planning structure of Borisiya madrasah in the Anatolian Sivas (1271–1272). The building marks on the facade-covering blocks of the madrasah are also comparable to the Anatolian ones. In the beginning of the 15th century, or, perhaps, not later than its first quarter, the madrasah perished, which is proved by the treasure of 608 silver coins (1310–1378) found in one of the *hujras* that was a watching room by Injibeq Khatun's tomb [Severova, 2000, p. 77; Kramarovsky, 2003, p. 515]. The madrasah portal has not survived to our times (only its southern pylon with almost classic breaks has not been destroyed). The found architectural details with flat and deep three-dimension carving [Kramarovsky, 2005, pp. 114, 116, Cat. Nos. 206, 212–214] confirm our observations of the building artel work in Anatolia.

The mosque appeared at the second stage of the complex construction. This entailed the removal of the 'old' 1314 Öz Beg mosque to the new location by the northern wall of the madrasah at the turn of the 15th and the 16th centuries. The name of the Golden Horde Khan and the date of the initial mosque construction are derived from the portal inscription. The three-nave mosque belongs to the basilical type. Initially, the arcade of the central nave with three pairs of columns (the main pair with richly decorated basements was near the *mihrab* niche) was to support the wooden trussing

Glass lamp in blue, red, green,
and white: enamel painting
Middle East. After 1329

system of the high skylight in the roof with two sloping surfaces. After replacing, the mosque's construction became plainer as there was no longer a skylight. In the nor-eastern corner of the mosque, a fragment of the repeatedly restored minaret's body has been preserved. The size of the mosque is 13.5x17.5 m. Its portal is 'leaned' against the northern wall without bonds and has been restored on the resedimented layer; the western and the eastern walls have no bonds to the northern wall of the madrasah either. The portal and the *mihrab* are the true decoration of the mosque [Ibid., pp. 114–115]. The portal is a 4.01x6.03 m rectangle with a subtriangle niche filled with *ganch* stalactites (*muqarnas*). It is framed by a carved frieze and a pair of semi-columns with two-tier capitals [Ibid.] and lamp-shaped basements. The Arab inscription on the strip above the entrance semi-arch reads: 'Praise Allah for his gifts and may Allah bless Muhammad and his governors. (It was?) ordered to build this majestic mosque in the days of the Greatest Khan Mohammed Öz

Mirrors. Bronze. Ukek. 13–14th century
(according to L. Nedashkovsky)

Beg's ruling—may God extend his reign—to?) the powerless, needing and hoping for God's grace and forgiveness slave Abdul-Aziz, son of Ibrahim al-Irbili, in lunar year 714' [Aqçoqraqlı, 1927, p. 14]. The date, 714 AH (1314), shows that the town's Muslim community was soon to uphold the new policy of Sarai Khan who had come to power after the bloody coup in 1312. The name of Ibrahim al-Irbili, the probable builder (architect?) of the new Friday mosque, sends us to ancient Irbil (Arbel) lands. Still, as it is shown by measuring and graphical analysis of the portal and mihrab, both genuine elements of the initial 1314 mosque's construction belong to the Anatolian type. The analysis of their decoration leads us to the origins of the architectural tradition typical of the northern part of Central Anatolia in the period of the Seljuk Emirates. Almost the same can be said of the architecture of Solkhat madrasah.

The mosque's mihrab (2.60x4.83 m) copies the structure of the portal but is decorated even more richly [Kramarovskiy, 2005, p. 115].

The epigraphic frieze contains a Quranic verse: *'There is no god but God; Muhammad is the messenger of God. God bears witness that there is no god but He, as do the angels, and those endowed with knowledge—upholding justice. There is no god but He, the Mighty, the Wise. Religion with God is Islam.'* [Aqçoqraqlı, 1927, p. 14]. Twisted semi-columns with double capitals and lamp-shaped basements, double lancet niches with stalactites and rosettes with geometrised octagons are used in the carving decoration of the mihrab. The prevailing motif is reflected in 'Byzantine' styled grape leaves on spiral stalks organically twisted with the fluid italicised *Naskh* script that forms the Quranic inscription of the frame. The ornamental style is characterised by compositional and painting richness, which literally leaves not an empty inch. There is no doubt that the painter arranging the mihrab's drawing knew the main principle of Islamic ornamentation that corresponds the principle of *mil al-farag* ('filling of emptiness').

Unfortunately, the initial location of Öz Beg's mosque has not been found. Seemingly suitable for the role are the ruins of the nearby basilical mosque, the arcade of which had the same column spacing as in Öz Beg's mosque. Especially if we take into account that not a single carved stone from the portal was found during the excavation by the mosque's northern wall. But according to numismatic data, the mosque dates back to the beginning of Tokhtamysh's rule (1380–1398). It is difficult to say if the basilical type prevailed among Solkhat mosques (as it was among the majority of the Golden Horde urban mosques), but ruins of a domical mosque situated in the nor-eastern sector of the town have survived to our times. We are talking about Kurshun-Jami (meaning 'lead') mosque. The rectangle building (12.5x17.7 m) is made of ragged stone in lime solution. Wooden lags are inserted into walls probably to make them more earthquake-resistant. Pylons of the portal frame the entrance to the mosque in the north. The building is divided into two unequal parts. The rectangle northern hall (10.5x4.5 m) was covered by three duct vaults; the southern hall (10.5x10.6 m), with a mihrab in the southern wall, was covered by a sailed dome. In the nor-

western corner of the northern hall, the minaret basement has been preserved. The thrust of the heavy dome was balanced by two pairs of counterforts by the western and the eastern walls. Another counterfort by the mihrab niche in the southern wall was located along the long axle of the building. According to Evlia Çelebi, Kurshun-Jami was built in 1396 as a dervish abode (*tekke*) thanks to the charity of Bay Bugly Khatun, the granddaughter of Temür Qutlugh, the ruler of the town. Obviously, after the massacre by Tamerlane in 1395, this deed had a huge social impact on the life of Solkhat Muslim community. In 1398 the *tekke* building was turned into a quarter mosque [Grigoryev, 1974, p. 27], and its mihrab niche got new covering. In addition to mosques, mausoleums, baths, coaching inns, minarets, and other publicly significant edifices were built in Qirim, as in other Muslim communities of the Golden Horde.

The scale of religious construction in lower Volga cities can be estimated by the information given by Ibn Battuta, who registered 13 Friday mosques in Sarai only; according to him, he visited Friday mosques in Majar and Kaffa [Sbornik materialov, otnosyashixsya k istorii Zolotoj Ordy', 1884, pp. 280, 287, 306]. The mosques excavated at Vodyanskoe and Selitrennoe ancient cities date to the 14th century. Vodyanskoe mosque dates to the latter half of the 14th century [Zilivinskaya, 1998, pp. 20–22]. A similar mosque was discovered in Dnieper River Region, in a settlement of Kuchugur, near Zaporozhye [Dovzhenok, 1961]. The congregational mosque of Sarai—with nine naves, two iwans, a massive portal and nine wooden columns—was constructed with an open yard and a circular pond inside the mosque, by the entrance. The mosque was built of burnt bricks [Zilivinskaya, 1998, pp. 22–24]. A 14-century mosque, to which the Tatartup minaret belongs, was excavated at the Verknii (Upper) Julat ancient city in Northern Ossetia [Miloradovich, 1963].

A typical detail of the townscape were baths (from *Arabic* 'hammām'). Nowadays, more than 20 baths have been identified on Golden Horde territory. Public baths were widespread in all main Golden Horde cities, which can be confirmed, for instance, by a bathhouse which is

Architectural detail. Crimea.
First quarter of the 14th century

yet to be fully excavated in Majar, in the North Caucasus [Zilivinskaya, 2003, pp. 58–59].

Several dozen mausoleums have been preserved in ruins to our time and excavated in Desht-i Kipchak, as well as in Crimea, the North Caucasus, and the Southern Urals.

Thus, highly professional building crews, and probably architects and decorators, who attended to requests of Islamic communities or individual aristocratic customers, worked in particular areas of the Eastern and Western parts of the Golden Horde. It is highly probable that after 1395 a major part of the Golden Horde's rural potential was used by Tamerlane during construction in Transoxania.

In general, the history of city-planning in the Golden Horde passed through several stages. During all the latter half of the 13th century, old cities dominated, with their renovation dating to the 1240s. During the first half of the 1250s, new cities began to be built. In the 1250–1270s, the active building of new cities continued, but the coinage in Sarai and Ukek in the 1280–1290s remained weak [Fe-

dorov-Davydov, 1994, p. 16]. At the end of the 13th century, the mints of Bolghar and Crimea surpass the rebuilt Khwarezm in work intensity. But while the steppe cities of the Volga Region lagged behind the Bulgarian ones in the 13th century, in the 14th century, under Khan Toqta's rule, rapid growth of lower Volga cities began. In 1310 Sarai coinage began to force Bulgar coins out of all markets [Ibid.]. The rise of Golden Horde cities took place during the era of Khans Öz Beg and Jani Beg (1313–1357), during the rule of whom the best creations of Islamic architecture of the Golden Horde were created in Khwarezm, the Crimea, and the North Caucasus. In 1360 the first signs of decline to a lingering crisis appear, that ends in a military-political catastrophe of 1395, after which the outlined local architectural conquests disappear along with the customers.

The scale of the empire and the variety of landscapes, historical peculiarities, and civilizational peculiarities of the previous eras could not but influence the formation of differences in the external appearance of certain cities and the cultural provinces that appeared around them. In this sense, the absence of unity in the urban culture of the Golden Horde is an understandable and wholly expected trait. Among the local variants of urban cultures, the Volga Region and Bulgar stand out on one side, and the capitol Sarai, Gulistan-Saray, Ukek, and Beljamen on the other side. The Dniester River Region, the Crimea, the Azov Sea Region, and the North Caucasus, not mentioning the East of the empire from Saray-Jük to Khwarezm, represent regions whose urban cultures differed in a lot of aspects, or were not even fully comparable with the urban cultures developed in the khan domain.

Non-Muslim communities in a Golden Horde city: daily life and culture. The street in large and small Golden Horde cities was not exclusively Muslim. In the thick of the capital Sarai, Ibn Battuta, who preferred to spend his free time outside the Muslim community of Sarai, distinguished the non-Muslims, and amongst them were Kipchaks, Circassians, Russians, and Byzantines (presumably, Greeks) [Collection of Works Related to the History of the Golden Horde, 1884, p. 306]. The Jewish

and the Greek quarters were well-known to Azak—Tana (Hanafites were more tolerant to Jews and Christians than other Madhhabs) [Kovalevsky, 1905, 2, pp. 121–122]. Quarter-by-quarter building on ethno-confessional basis was not a specific trait of Golden Horde cities: it was a generally accepted practice in the time of the progressive Middle Ages. John Kitr, a Byzantine (12–13th century), while answering the question of whether Armenians could freely build their churches in settlement areas on the territory of Roman empire, said the following: 'In Christian regions and cities it is initially permitted for people of other religions and languages to live—Jews, Armenians, Ismailis (i.e. Muslims), Hagarians (i.e. Turks)—but only in separate quarters' [Dagron, 1999, p. 190].

Congregations consisting of quarters grouped around a mosque, a church or a kenesa not only eased living conditions for citizens in the age of ethnic diversity and religious pluralism of the Golden Horde. They provided a chance for survival by plying the trade one is used to, boosted the process of structuring intra-urban social life and overcoming ethnic insularity and linguistic muteness. The uniting role of religious congregations is underexplored. Especially in the context of their contribution to the development of urban subcultures and preservation (or loss) of ancestral authenticity of certain ethnoses living in a given quarter. Let us examine this using two examples from history of the Armenian-Gregorian and the Islamic communities of Solkhat (in addition to them, a Christian community of Greek doctrine, a Latin Catholic, and a Hebrew community functioned in the city; the latter united Talmudists and Karaites). The role of inter-ethnic communication is especially great inside related congregations. An example can be given when difference in beliefs did not hamper the forging of professional links. Thus, one of the early Solkhat-Armenian manuscripts—the Gospel, 1332—during the assembly of Armenian congregation of Mechitarists in Vienna was, first of all, decorated with Greek-inspired illustrations and, secondly, four Greek artists participated in decorating it. This is proven by inscriptions in Greek denoting the plot chosen for a given page of the

manuscript. Two Armenian miniaturists (one of them named Papapun) worked along with the Greeks [Buschhausen, 1976]. Any similar, or at least resembling, cases in the Muslim community are unknown to us. Still, it is worth mentioning the existence of an Armenian potter or a workshop keeper in Sarai al-Jadid, whose personal stamp had his Armenian name—Ananyd, son of Sarkis [Kramarovsky, 2005, p. 119, Cat. Nos. 164, 575–576]—written in Arabic. A Solkhat onomastician reports that the number of Turkic names increased only by the 15th century, and among them general Muslim names prevailed: *Urus*, *Beyram*, *Kutlu*, *Budzhuk*, *Lachin* [Kramarovsky, 1989, pp. 141–159]. Nisbas like *al-Sivasi*, *al-Kastamuni*, *al-Tokati*, *al-Kunevi* connect a certain part of male population of Islamic Solkhat to Asia Minor. In turn, nisbas like *al-Akhlati*, *al-Tebrizi*, *al-Luri*, *al-Dzhendi*, *al-Khalabi*, indicate presence of settlers from the Middle East and Iran. Nisbas of two builders (architects)—*al-Irbili*—bring us to the soil of Jazeera (ancient Arabella, a city in Mesopotamia). There is another phenomenon which is specific not only to the Crimea. Non-transparency of ecclesiastical names drastically decreases the chances of ethnic identification. A rare exception is names from synodical additions to the Greek Synaxarion of Sugdak—*Soldaia*—*Sudak* (1278). V. Smirnov [1887] studied Turkic names with epithets denoting a connection with ecclesiastical clergy—priestess *Suyunchuk*, wife of Antipa-iconom, the minister, monk *Alachi*, hieromonk *Sultan*. They were given names indicating that Turkic citizens of Sudak belong to a circle of local Byzantine bureaucrats: Baraks, daughters of *sebastos* Pul, Toktemir, son of *sebastos* Stephane, etc. Remarkable are Turkic names of people whose parents had ecclesiastical names: Sonkur, the son of Makary, Ikugach, the daughter of Dmitry Chogak, etc. Our example proves once more the idea that confessional belonging was often more important than ethno-ancestral authenticity. Undoubtedly, the situation in Christian quarters of Solkhat and part of its rural outskirts (in Bokataş settlement, for example) could not be crucially different. An important idea derives from this: the graveyard of an orthodox church is a place for eternal rest of a Greek, as well as

a Turk, or a Slav. Ethnic identity gives way to the confessional one. The same pattern, but from Muslim paradigm's point of view, repeats itself in Islamic community of Solkhat. Ibn Battuta, who generously enlisted the names of qadis, khatibs, legal scholars, names a sheikh of Greek descent Muzaffar ad-Din. There are no Mongolian names in any of the cases. Among the nisbas that preserved the name of their cities there is evidence of, at least, a second generation of citizens; 'al-Qirim' prevails. According to epigraphic data, 'as-Solkhati' alias does not exist, even though it is known to be according to a written source, and is part of the name of Sayf ad-Dina Solkhati, who completed the hajj in 1340. Sayf ad-Din belonged to one of the wealthiest families in the city, being a nephew of Muslim emir Temür Qutlugh, an ethnic Mongol. In Egypt Sayf ad-Din Solkhati was known as a musician and the leader of court orchestra in Cairo. One can assume that within confessional communities different ethnic communities prevailed, but generally ethnic diversity co-existed with preserving confessional freedom. A tombstone with Arabic epigram [Kramarovsky, 2005, p. 72, Cat. No. 210], where there is a lamp depicted on one side and a cross on the other, allows to assume that a Christian-Syrian stayed in the city. There are known immigrants from Syria in neighbouring Kaffa as well. Though Ibn Battuta writes about existence of a Christian monastery outside the city, we do not know which confession it belonged to. There is information, thought, about a Catholic monastery appearing in Solkhat at the cusp of the 13–14th century [Fedalto, 1973, p. 408]. There is an opinion that the majority of Solkhat residents were Armenians [Khachikyan, 1982, p. 340; Babayan, Korkhmazyán, 2000, p. 11]. Is that true? In memorable entries of the Lctionary, created by the famous Nater in Solkhat scriptorium between 1345 and 1349, 92 people are mentioned to have paid for the work of a codex scribe [Pamyatny'e zapisi, 1950, pp. 359–367]. If only the heads of presumed families are taken in consideration (the list contains elders and widows), then at five members of family per one member of the pious action we get no more than 350 people—a number that makes us think of a parish containing one or two quarters.

Ceramic flask. Ukek. 13–14th century
(according to L. Nedashkovsky)

But even if this number is increased by two or three times, it would not give enough basis to conclude that Armenian community was predominate in Solkhat. In the 14th century, an Armenian colony presumably occupied several quarters, one of which was called 'Verin (upper) okhetner' [Mikaelyan, 1974, p. 18]. The upper quarters belonged to that very nor-western part of the ancient town where in 1982 we discovered a tombstone of an Armenian boy, who died in 1362, with inscriptions on the sides of the stone [Kramarovsky, 2005, p. 120, Cat. No.218]. Another Armenian tombstone from 1349 was discovered at the site. The tombstone is in the shape of inverted V, decorated with an image of a male figure by a fire altar (?) on one of the sides; the other side has a date of Armenian chronology 'year 798'. With Nater's family moving, the city becomes one of noticeable centres of the Armenian manuscript in the Crimea. 12 manuscripts of the first half of the 14th century, which were made by Nater mainly in Solkhat, are preserved in Matenadaran. Four of his sons worked here as well—they were

scribes and talented miniaturists [Korkhmazyan, 1978, p. 27]. Amongst the Armenians of Solkhat there were famous blacksmiths, knife manufacturing specialists, tailors (?). Not far away from the city Armenians-Grigorians founded two Armenian monasteries [Babayan, Korkhmazyan, 2000]. Probably, the largest Armenian colony was based in Kaffa, where in the 14th century Armenian builders erected two churches of architectural importance—John the Baptist's and Saint Archangel's churches [Jakobson, 1956]. A group of 14–15-century khachkars bearing dates were discovered in Kaffa: 1356, 1362, 1386, 1403, 1424, 1425, 1427, 1429, 1439, 1451, 1453, 1456, 1471, and 1496 [Aybabina, 2001, pp. 62–72]. Armenian colonies in Golden Horde cities were known in Bulgar, Ak-Mechet, in Majar, and Azak [Smirnov, 1958, pp. 330–359; Volkov, 1995; Kramarovsky, 1978, p. 102; Fomichev, 1994, p. 13]. Armenian churches were built in Azak and Majar, just as in Bulgar, where the Armenian community had its own church, baths, and other buildings that had straight analogy with architecture of Armenia [Volkova, 1972, p. 58]. Armenian khachkars were found in Taman and Majar [Volkov, 1995].

Among other cultural fringes in Golden Horde cities, the least studied are the Jewish communities. Jewish quarters are known to be in Azak-Tana [Kovalevsky, 1905, pp. 121–122], in cities of Eastern Crimea—Kaffa and Solkhat, and, of course, Chufut-Kale. Ibn Battuta met a Jew from Andalucia in Majar [Complete Collection of Works Related to the History of the Golden Horde, 1884, p. 287], but it is unknown whether there was a Jewish community in the city. There is almost no information about the Jewish population of Solkhat. On a map from 1785, the south-eastern sector of Solkhat is marked as ruins of a 'Jewish school'. The argument between representatives of Karaim community and Talmudists about the origin of kenesa synagogue (archaeological studies were not conducted here) has still not been resolved. Amongst historical figures of the middle of the 15th century, we can distinguish Abraham the Crimean, born in Solkhat, famous in Jewish world as an exegete-rationalist. In Solkhat he wrote an extensive 'Commentary' to the Penta-

teuch (available in the collection of the National Library of Russia). The preface to the 'Commentary' says that Abraham's teacher was Shemarya b. Ilia Ikriti from Negropont [Tsinberg, 1924, pp. 93–100; Encyclopaedia Judaica, 1971–1972, 10, p. 1046]. As a Tatar prisoner, Moses b. Jacob Ga-Gole (exile) found himself in Eski Qirim in 1506. Moses b. Jacob studied in Constantinople, where he succeeded in astrology, maths, and philology; in 1514–1515 he finished the commentary to 'Orar nechaned' by Ibn Ezra. The monuments of Jewish epigraphy from medieval Solkhat contain names of Turkic-Mongol origin [Firkovich, 1872, p. 210]. However the data in 'Sapher abne-zikkaron' ('The Book of Stones'), collected by Abraham Firkovich, are questioned [Kunik, 1876]. But in 1979 a fragment of a stele with a Jewish inscription was found [Aqçoqraqlı, 1927, p. 7, No.296]. The inscription on the front part of the stele says: *'The burial monument of an elder, son of Joseph, bless his memory, Abraham son's, bless his memory. (Joseph's son) Died on the third day on the 23rd of Adar of the first year 5311 from the creation of the world. May his soul be braided in the wreath of*

life' (Russian translation by E. Mescherskaya). Thus, the date on the tombstone of Joseph's son, as the inscription says, is 1511 [Kramarovsky, 2005, p. 126]. A silver seal from the 15–16th century, that was found in the archaeological material in south-western area of the outskirts of modern Sary Krym [Ibid., Cat. No.172], has an Arab-Karaim inscription in two languages: *'Moshe ben kvodratı Malika / Moses, son of honorable teacher Malik, may God save him'* (the Karaim text remains unread).

According to a mid-18th century source, four Muslim quarters, one Jewish and five Christian ones, where the Greeks and the Armenians lived, remained in the city [Evliya çelebi, 1314/1896, 7, p. 662]. One can argue that Solkhat, after all, gives some idea of a more or less typical picture of inter-confessional co-existence of certain communities in the period of establishment and prosperity of urban life in the Ulus of Jochi. The materials available to us, including archaeological ones, indicate absence of racial or religious segregation in Golden Horde cities, which is, in a certain sense, typical of the empire's culture.

§2. High Islamic Culture of the Golden Horde

Uli Schamiloglu

Researchers of Islamic culture like noting that the modern word denoting the concept 'civilization' (*madaniya*) in the languages of many Islamic peoples is related to the Arabic word meaning 'city' (*madina*). Both these meanings were solidly interconnected in the Golden Horde, where a new great culture was created in the new cities in original river oases of the steppe area. Subsequently, at least before the collapse of the Golden Horde, they would coexist with traditional centres of the great culture in Khwarezm, the Crimea, and the Volga-Kama region. To create the high culture in new cities such as Saray and Sarai al-Jadid, it was necessary to fulfill a whole range of important conditions. First of all, significant investments from any sources were required to create infrastructure and offer patronage which were necessary for the support of development

of the high culture. Secondly, as the ruling Mongolian elite did not inherit its own significant high culture and was quickly assimilated by the majority of Turkic-speaking population, it had to develop it, while the Turkic high culture in Western Eurasia or the Middle East had not yet developed completely. Finally, taking into consideration the fact that knowledge in general was equated with the religious knowledge in this part of the medieval world, there was a need to create a new high culture on the basis of one of the great world religions with its own tradition. It could be carried out only by engaging scholars who were well versed in this tradition. Although Islam was not the only religion which was professed on the territory of the Golden Horde, in the early 14th century it got the status of state religion. The Islamic Turkic high culture, which was slowly develop-

ing in the 13th to 14th centuries, really started flourishing in the middle of the 14th century; it reflects successful combination of several different facts: wealth, urbanisation, turkification, and Islamisation (I explored these issues in detail in my work 'The Golden Horde: Economy, Society, and Civilization in Western Eurasia, Thirteenth–Fourteenth Centuries'.—Madison: Turkic-Tatar Press).

Any consideration of the religious history of the Golden Horde (which was highly complex) should begin with the traditional belief system of the local Turkic population (see [DeWeese, 1994, p. 27 et seq.; Golden, 1998, pp. 180–227]; criticism: [Schamiloglu, 2002, pp. 200–215, especially, p. 215]), the newly arrived Mongols, the further multiple world religions, which competed to get official support, and finally, the domination of Islam as the state religion of the Golden Horde. The traditional system of faith of the Tatars and the Mongols can be described as animistic, compatible with other traditional religions of Eurasia, where shamans served as intermediaries for raising spirits of natural phenomena. Some aspects of the Mongol religion, such as the purifying nature of fire, can be seen in descriptions of Latin travellers of the 13th century and in other written sources. There is no evidence of any significant influence of Nestorian Christian Mongols in the time that preceded the conquest, on the religious system of Mongols of the Golden Horde, even taking into account that the European powers were first mistakenly convinced that the great Christian tsar, 'presbyter Ioann', could be their ally in the East. Khans quickly adopted various world religions in the Golden Horde and other states—'fragments' of the Great Mongol Empire; this phenomenon is most evident in Iranian ilkhans (see a report by Benedict the Pole: [Mission to Asia, 1955/1980, p. 80; Heissig, 1980, pp. 6–23]).

The Golden Horde, like all the whole empire, regarded the diversity of organised confessions with tolerance. There was no policy directed against the Christians even when Islam became a state religion under Öz Beg Khan. Various sources of the 13–14th centuries, including translations of yarliqs of the rulers of the Golden Horde and Russian chronicles (it goes with-

out saying that they were composed by religious figures), say that the orthodox church was exempted from taxation [Priselkov, 1916; Grigor of Akanc', 1949, pp. 269–399, especially, p. 315; Gandzaketsi, 1976, p. 222; Meyendorff, 1989, p. 45; Allsen, 1987, pp. 121–122]. As it can be seen later, there are reasonable grounds to assume that the first members of the ruling elite of Golden Horde and their family were under the influence of Christianity. Below the ruling elite was a considerable Christian population in cities of the Golden Horde, including local and Christian clergy, as well as foreign merchants. Kipchaks in southern steppes were also partly Christian in this period [Ibn Baṭṭūṭa, 1958–1971, 2, p. 470]. Ibn Battuta claims that besides Muslims and As (Alans), the population of Sarai included the Christians: Kipchaks, Circassians, Russians, and Greeks (Rūm) [Ibid., pp. 515–517; Poluboyarinova, 1978]. On the other hand, there is only fragmented evidence concerning the Jews on territories of the Golden Horde [Ibn Baṭṭūṭa, 1958–1971, 2, p. 480]. As for Buddhism, the Mongols in the East became Buddhists too late to have a decisive influence on the West. For this reason, there are only traces of Buddhist relics on the territories inherited by Batu [Poppe, 1941].

The Orthodox, Catholic, Armenian, Nestorian, and other Christian traditions were present in this territory and competed for believers from the same cities and towns. Christian missionary activity originating from the Crimea can partly be seen thanks to the famous *Codex Cumanicus*, composed by Italian and German missionaries in the Crimea, which is a reference-book in Cuman Turkic (including translations of religious material) for use in the pursuit of converts [Codex Cumanicus, 1880/1981; Ligeti, 1981, pp. 1–54; Kuun, 1880; Golden, 1992, pp. 33–63]. The significance and success of Christianity on the territories of the Golden Horde are evident based on a number of official Christian institutions founded there. The orthodox eparchy of Sarai was created in the 1260s and continued to exist until the late 15th century, although seemingly the bishop did not always live in the Sarai residence throughout this period. This institution can be studied in details because Russian sources provide exten-

sive information about the bishops of Sarai (on the orthodox bishops in Sarai, see: [Spuler, 1965, S. 231; Meyendorff, 1989]). In the latter half of the 13th century, the Franciscans also received privileges and protection for their activity in the territory of the Golden Horde. By the end of the 14th century, Franciscan cloisters and residences emerged everywhere merchants travelled, including the cities of Soldaia, Kaffa, Solkhat (Krym) and Qırq Yer in the Crimea (later they appeared in Cembalo/Balaklava and Karasu), coastal cities on the Kuban river and in Abkhazia. The Franciscans had been in Sarai itself by 1286; in Ukek and Bulgar by 1320. Other places of Franciscan activity involved Astrakhan, Ak-Sarai, Urgench, and the posts in the east on the way to China. The Dominicans were active in Kaffa, Tana, and other places [Richard, 1977, pp. 86–97].

The Catholic administration organised numerous eparchies in Vosporo, Sarai, and Matrega with an archbishopric in Sarai. In many cases, the purpose of these eparchies was first and foremost to promote missionary work and meet the needs of travelling merchants rather than to serve the needs of large communities of the faithful [Ibid., pp. 230–255].

Apparently, the first high-ranking member of Chinggisid establishment of the Golden Horde interested in an organised world religion was Sartaq as he was considered to be a Christian. This fact was considered as an excuse to kill the first and probably the only Christian Khan of the Golden Horde as Islam would achieve the status of dominant religion in this state [Gandzaketsi, 1976, pp. 219, 226; Richard, 1977, p. 77 et seq.] Compare it with the report of William of Rubruck [Mission to Asia, 1955/1980, pp. 123, 149–150]. According to it, Sartaq was a Christian. Berke was the first future ruler of the Ulus of Jochi to convert to Islam. Many scholars have already described the role played by the sheikh of Central Asian Kubraviya Sufi order Saif ad-Din Bakharzi [Richard, 1967, pp. 173–184; Vásáry, 1990, pp. 230–252; Waley, 1992, pp. 289–310; DeWeese, 1994, p. 83]. No doubt, that was not an initial stage in Islam spreading over the ter-

Mosaics with floral ornamental patterns. Tsarevskoe archaeological site (according to L. Noskova)

ritory of the Golden Horde as Volga Bulgaria had already adopted it by the early 10th century, and it goes without saying that Khwarezm, which was an integral part of the territory of the state, was one more important bastion of Islam in the pre-Mongol period.

Meanwhile, the eminence of Islam as political power and a source of cultural inspiration in the Golden Horde treaded a very thorny path. A number of sources depict some khans of the Golden Horde after Berke as decidedly unsympathetic to Islam, while it is the opposite with Christian sources. Although there are contradictions in sources of the latter half of the 13th century, it is clear that Islam reached the status of a state religion only under Öz Beg Khan. Although Öz Beg conducted a campaign against animist or Buddhist priests, there is no evidence allowing us to assume that he practiced some oppression towards 'people of the book' as the Muslims regarded the Jews and Christians. Actually, the history of richness of religious life in the Golden Horde in the time of Öz Beg Khan is a history of integration of

the Ulus of Jochi with Islamic religious culture both in the sense of theological thought and at the level of popular Islam. We know a lot about it thanks to unique detailed information presented by the great traveler Ibn Battuta.

Approximately in January 1333, during his journeys through the territory of the Golden Horde, Ibn Battuta found mosques, religious judges, and Sufi hospice (*zawiye*) everywhere. He found a mosque in Kaffa; he stayed at a hospice in Qirim where there was the chief religious judge (*qadi*) of the Hanafi madhhab, as well as a religious judge of the Shafi'i madhhab. Ibn Battuta also met a lot of scholars, including a lawyer and a professor who was an As (Alan) and a preacher (*khatib*) simultaneously, who preached the sermon, and on Fridays he read the blessing for the caliph in a cathedral mosque. Ibn Battuta mentions a mosque built in the Crimea in 1288 with the help of Egyptian ruler Baibars, but we also know about two other mosques, including the cathedral mosque of Qirim built by Öz Beg in 1314 [Ibn Battūta, 1958–1971, 2, pp. 470–473; Jakobson, 1964, pp. 106–108 (on a mosque and madrasah in Solkhat (Qirim and later Eski Qirim), plan of its foundation and inscriptions of builders)]. In Azaq Ibn Battuta found a religious judge and students, witnessed recitations of the Quran with the subsequent sermon and blessings. There were also other kinds of religious singing in Arabic which were later translated into the Persian and Turkic languages. In Majar the traveller stayed at the hospice of a pious sheikh from Iraq. He also visited a mosque with a preacher from Bukhara [Ibn Battūta, 1958–1971, 2, pp. 475–481]. In Saraichuq he saw a hospice which belonged to a pious elderly Turk called Ata; he also met a religious judge there. Later he met one more religious judge in Kath, as well as the pious and devout sheikh Mahmud al-Khivaqi [Ibid., pp. 539, 549–550].

According to the traveller, Sarai was an exceptional town in terms of its religious life. There were 13 cathedral mosques for Friday prayers, including one for Shafi'i madhhab, and there were many other smaller mosques. Ibn Battuta met Shafi'ite scholar Sadr ad-din Suleiman al-Lakzi Maliki, scholar Shams ad-Din al-Misri, and Egyptian and judge of Sarai

Badr ad-Din al-A'raki, who was considered one of the best in his field, and other religious scholars. Every Friday, the Islamic day of rest, Öz Beg

Öz Beg Khan visited the guest house of scholar and preacher (*imam*) Nu'man ad-Din al-Khwarizmi, 'one of the most outstanding sheikhs, a great man with generous soul, extremely humble but severe towards the wealthy of this world.' Although this sheikh was meek before his poor brothers, the poor and pilgrims, his treatment of Öz Beg was the opposite. On the other hand, we can note that the same man gave Ibn Battuta a Turkic slave-boy [Ibid., pp. 515–517].

The great traveller discovered an outstanding centre of Islamic religion and knowledge in Khwarezm, with which neither Sarai nor Sarai al-Jadid founded later could compete. Here Ibn Battuta visited a cathedral mosque and a madrasah; this madrasah was kept by the great emir of Öz Beg called Temür Qutlugh, and the mosque was built by his wife, pious Turabek-hanim. Ibn Battuta and his travel partners stayed in another reconstructed madrasah. He describes his meeting with a number of scholars of the Sunni-leaning mutazilit school. As Öz Beg Khan and the great emir Temür Qutlugh were adherents of orthodox Sunni Islam, these scholars did not clearly show their commitment to the Mu'tazilite school. Ibn Battuta also describes a unique custom of warning the inhabitants about the approach of praying hour in Khwarezm. There was a whip in every mosque to flog anyone who did not visit collective prayers, and that person also owed 5 dinars, which were used to keep the mosque and feed the poor. It was considered to be an ancient custom with a continuous tradition. Ibn Battuta also described a hospice built above the grave of sheikh Najm ad-Dina Kubra, who was killed during the Mongol conquests and honoured by the Kubraviya Sufi order. All the travellers were supplied there with food, and sheikh Saif ad-Dean ibn Asab was a teacher in the madrasah and one of the main citizens of Khwarezm. There was one more place of receipt whose sheikh Jalal ad-Din al-Samarqandi spent one year or even more in holy lands of Mecca and

Medina. The grave of the learned imam Abu l-Qasim Mahmud Ibn Umar al-Zamakhshari was located four miles away from the city.

Ibn Battuta described various details of his meeting with religious judge Abu Hafs 'Umar al-Bakri, known by the title *sadr*, and his assistants. This judge was a personality who possessed fabulous wealth and landed property, and his sister-in-law was married to Temür Qutlugh. His house was decorated with expensive carpets, cloth hanging on walls, and vessels made of silver, gilt and Iraqi glass in numerous niches built in the walls. He also mentions that there were a lot of admonitory preachers in the city and the preacher (*khatib*) at Friday service of Mavlana Zain ad-Din al-Maqdisi was one of four greatest preachers he has ever heard of. Ibn Battuta narrates that a religious judge visits the emir's audience everyday, and this constitutes his regular practice. One of the great emirs, accompanied by eight great emirs and sheikhs of Turkic descent called *yarguchi* sits there. The religious judge settles conflicts between people within the jurisdiction of religious law, and the emirs settle other kinds of disputes ([Ibid., pp. 541–550]. Concerning the title of *sadr*, see [Bulliet, 1972, pp. 53–67]).

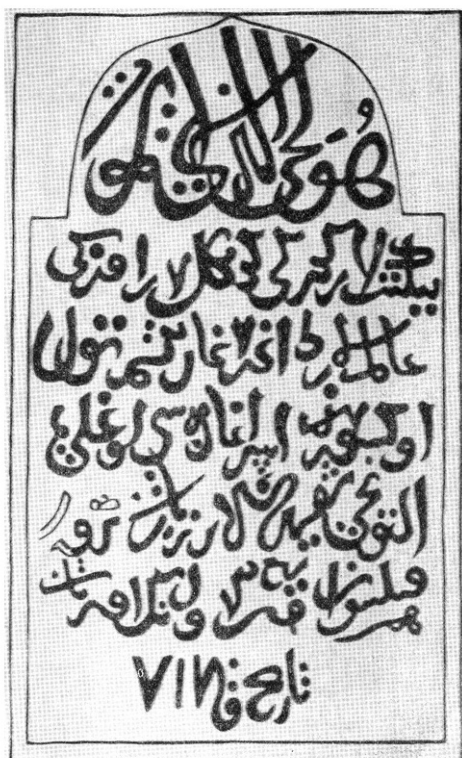

One can come to very important conclusions on the basis of information provided by Ibn Battuta. In Khwarezm and Bulgar (apparently the latter was not visited by Ibn Battuta), the devotion to Islam continued without a large break since pre-Mongol times. It is difficult to determine the age of Islamic infrastructure in the centres which the great traveller visited in the coastal area of the North Caucasus and the Crimea. However, the rapid growth of orthodox Islamic institutes in Sarai over decades was really spectacular. The full participation of high-ranking strata of the ruling elite in religious life, including the humiliating of Khan Öz Beg by the ascetic religious leader, by the time of the visit of Ibn Battuta was also very spectacular. At the same time we should not underestimate the role of Sufi orders in propaganda of Islam among masses in all religious Golden Horde borderlands. Just as Sufi sheikhs must have participated in missionary activity of the broader public at large when khans Berke and Öz Beg adopted Islam, they did so in oth-

er periods as well. Probably, one can speak of missionary Islam popularised by Sufi orders on the territory of the Golden Horde at the time of Berke Khan. By the time of Öz Beg, such missionary Islam had undoubtedly existed because hospices, described by Ibn Battuta, must have served as footholds in an Islamic religion and missionary network on all the territory of Batu's possessions.

Öz Beg Khan, Temür Qutlugh, and other leading officials and their families invested enormous sums of money in the foundation of mosques, madrasahs, and complexes related to them. Apparently, they or some other people made contribution to religious funds (Arabic *vaqf*, plural form *avqaf*). Their income, which was often controlled by the members of a donator's family for their own purposes, kept and supported these Islamic institutions on a regular basis as in any other place of Islamic world (on Central Asia in latter period [McChesney, 1991; Subtenley, 1991, pp. 38–61]. In Khwarezm the participation in religious life extended to conjugal units between the ruling Chinggisid establishment and the religious one, which could be considered as a new form of legitimacy completing the claim of the Chinggisids to supreme power.

It is also evident that there was a significant migration of religious figures to staff mosques and madrasahs of new towns. The great number of religious scholars mentioned by Ibn Battuta migrated to the Jochid Ulus from other centres of Islamic civilizations in the Middle East and other places as their names show (for example, *Misri* indicates an Egyptian origin). As a matter of fact, the Golden Horde was a home of Sunnis and Shiites, and all four Orthodox madhhabs, representing Islamic legal practice all over the world. That reflects close relations between the capitals of the Golden Horde and large centres of traditional Islamic doctrine in the Islamic world of that time, as well as the fact that representatives of all these different groups arrived in the Ulus of Jochi. This is more evidence of the fact that the wealth of the establishment of the Golden Horde could become incredible within a short period of time.

However, not all scholars were foreigners. Some of religious scholars were from local eth-

Headstone with an epitaph. Bulgar. 1317.

nic groups, such as As (Alans), or originated from traditional pre-Mongol Islamic centres of the Golden Horde, first of all, from Khwarezm. Although the capitals of the Ulus of Jochi—Sarai and Sarai al-Jadid—did not use to have institutions training Islamic priesthood by all appearance; by the time of Ibn Battuta's visit in 1333 some of religious scholars of the Golden Horde had been able to study in Sarai, no matter if the sources mention separate religious madrasahs or not. In the end, madrasahs as centres of religious life headed by scholars could also be useful for that. No doubt, they were also trained in some other southern centres of the Crimea or the seaside of the North Caucasus he had visited. Thus, rulers not only founded towns with their increasing wealth but also made contributions to erect buildings for religious practice and trainings and filled them with Islamic scholars. Even new town centres of the Golden Horde, including the capitals, could now claim to become the cosmopolitan centres of Islamic science able to preserve and teach Islamic knowledge to reproduce the class

of religious scholars, as well as to spread this knowledge among the newly converted, a process which could require several generations [Bulliet, 1979].

What did this massive investment in cities, Islamic religious infrastructure, and human capital give world civilization and what part of this contribution, if any, can be called typical of the Golden Horde? Actually, the destructions and a massacre that accompanied Mongol conquests caused serious disruption of intellectual life, in some sections probably forever. At the same time, very unfortunate ideas darkened the general notion of the high culture of the Golden Horde. The fact that the Golden Horde made a significant contribution to the continuation of the traditions of the civilization which had already existed on its territories, to the knowledge flow between its own centres and centres beyond its borders, to the development of new traditions of the civilization is the only satisfactory answer for the period until the late 14th century. But it all can be correctly understood if one goes deeper into sources on the civilisation of the Golden Horde and the place of this state within the corresponding context of cultural development both in time and space.

We have already noted that in this period knowledge in general was equated with religious knowledge, and we must turn to the religious centres that created all kinds of works that were related to high culture. It is likely that the majority if not all the centres of settled Muslim civilization in Crimea, the coastal area of the North Caucasus, the confluence of the Volga and Kama, and in Khwarezm, described above, continued playing the role which they had been fulfilling some time before the Mongol conquests. It is difficult to say how active the centres of the North Caucasus were in the period that preceded the Mongol conquests in comparison with the active religious and cultural life in the 14th century. According to reports from a number of sources, Volga Bulgaria lived an active intellectual life in the 10–12th centuries, but it probably suffered badly from cultural regression as a result of the Mongol conquests, whereas Khwarezm continued to be an important centre of Islamic learning, probably, with a short interruption.

Until the 13th century Arabic was the basic language of Islamic civilisation (see [Gibb, 1963]). The Persian high literature was developed properly only in the 11–12th centuries [Rypka, 1968], while Arabic was used as a literary language in the north, in Bulgar until the 13th century. (See, for example, [Tatar *ādābiyatı tarixi*, 1984, 1, 84–96 b.; Róna-Tas, Fodor, 1973, pp. 38–40], Persian was more important in southern areas of the territory of the future Golden Horde. As becomes evident from various sources, in the 13–14th centuries, they continued creating important theological and literary works in Arabic and Persian on the territory of the Ulus of Jochi. Unlike these languages, by the 14th century the Islamic Turkic literary tradition was only emerging. The first literary work was written in Turkic under the Karakhanids in the 1060s, continuing pre-Islamic traditions of Turkic-speaking Uighurs of the same region. There were only several works written in Turkic with the use of Arabic script in the 12th century in other places of Eurasia. The collection of wisdom of the Sufi Central Asian poet Ahmad Isavī known under the *Divan-i Hikmet* goes back ultimately to the 12th century, as perhaps do some other works.

The main group of Chinggisid ruling elite that arrived at the Volga spoke a language which we call Mongolian although that means the simplification of a difficult linguistic situation in Central Asia in the 12th century and interaction between those ones who spoke languages belonging to Mongolian, Turkic, and other families of languages. There are very few examples of the written Mongolian language among the descendants of Batu in the 13–14th centuries. There are references to documents written in Mongolian in Arabic sources, but there is also a discussion about whether it indicated the documents written in Mongolian or documents written in any other language with Mongolian script (such as Uighur, from which the Mongolian script was borrowed). All the edicts and diplomatic correspondence known under the collective title *yarliqs* have been preserved in the original Turkic version only from the late 14th century (1398) (see the translations into Russian [Priselkov, 1916; Pamyatniki russkogo prava, 1955, pp. 463–491]; see

the references to Turkic originals [Bennigsen, 1978, pp. 405–409; Usmanov, 1979, pp. 299–316; Vásáry, 1982, pp. 289–300; Muhamedyarov, Vásáry, 1987, pp. 181–216]). It is more noteworthy that, most likely, the translated documents of the 13–14th centuries were based on the Turkic original. Other references in sources suppose that the ruling elite of the Ulus of Jochi probably went through the process of turkification quickly enough because it was surrounded by the Turks.

However, the fact that other written works except for *yarliqs* were composed in the lands of the Golden Horde in the 13–14th centuries is less known. First, we would like to say a couple of words about the language of the Volga Bulgars, an unusual written language known only from epitaphs written with Arabic script and found near the juncture of the Volga and the Kama rivers (on these inscriptions, see [Róna-Tas, Fodor, 1973; Khakimzyanov, 1978; 1987]). Although Arabic was used on coins minted in Volga Bulgaria in the 10th century, the earliest epitaphs in the language of the Volga Bulgars are dated back only to the 13th century. The earliest gravestone in Bulgar dates to 1271, whereas the latest ones date to 1356 [Mukhametshin, Khakimzyanov, 1987, p. 120]. After this date there is no later epitaph nor any other dated written record in the language of the Volga Bulgars. Several Turkic headstone epitaphs found in the Middle Volga Region after 1357/58 were written in common Turkic [Khakimzyanov, 1987, Nos. 18, 19]. There were also headstone inscriptions in the common Turkic dialect, which can be considered an ancestor of the language of the modern Kazan Tatars in the same region except for the language of the Volga Bulgars [Róna-Tas, Fodor, 1973, pp. 38–40; Khakimzyanov, 1978, pp. 5–24; Róna-Tas, 1978, pp. 13–123] (see [Khakimzyanov, 1987, pp. 5–15]; see the map of distribution of both kinds of inscriptions [Ibid., p. 21]). F. Khakimzyanov supposes that the language of the Volga Bulgars, which ceased to be written after 1358, could have fulfilled the function of a sacred language which was probably no longer spoken by that time [Mukhametshin, Khakimzyanov, 1987, pp. 120–126; Khakimzyanov, 1987, pp. 5–15].

Having examined all possible arguments, we assumed that the language of the Volga Bulgars suddenly ceased to exist as a result of pandemics—the Black Death [Schamiloglu, 1991, pp. 157–163; 1993, pp. 447–457]. But the use of the unified Islamic Turkic language documented in Volga Bulgaria in 1271 and the introduction of the second language in the next century is an important point. These epitaphs reflect the great wealth from trade, probably great technical mastery, and cultural ties of Bulgaria with the rest of the Arabic-speaking Islamic world because the part of these inscriptions was written in Arabic. This is one more innovation which arose in the Ulus of Jochi in the sphere of Turkic written languages.

In terms of the development of high culture, the creation of a number of religious and art works in the Turkic written language (or languages, as some linguists insist) in the territory of the Golden Horde is more essential [Bombaci, 1968; Togan, 1963, pp. 229–249; Eckmann, 1964, pp. 275–296]. These works allow us to talk about the literature of the Golden Horde, produced in the local Turkic dialect(s), a language representing the development of earlier traditions. Turkologists described this language in different ways: as the 'language of the Golden Horde', 'Khwarezmian', or by other terms. Works from the early 14th century include the collection of stories by Rabguzi, 'Qisas al-Anbiya' ('Stories of the Prophets') [Rabguzi, 1995; Kışaşı'l-Enbiyā, 1997]. The later works of this age include romantic poems 'Khosrow-u-Shirin' (see the publication of the facsimile and the text in [Zajaczkowski, 1958; Eckmann, 1964, pp. 280–285]), Khwarezmi's 'Mukhabbat-name' (see a published text of this work in [Shcherbak, 1959; Gandjei, 1957, pp. 131–161; 1958, pp. 135–166; Nadjip, 1961; and Eckmann, 1964, pp. 285–287]) and the religious treatise 'Nahj ul-faradis' (see a published text of this work in [Nehcü'l-ferādīs, 1995; Eckmann, 1964, pp. 287–291]).

Some of these works, as well as others written in other languages, are evidence of the literary patronage of the Golden Horde's ruling elite, as we believe that dedication can be equated with patronage. Eventually, this process played a significant role in the writers' lit-

erary activities. 'Qisas ul-Anbiya' by Rabguzi is a collection of stories about prophets before Muhammad and other early Muslim figures. It was composed in about 1310 in Ribat-i Oguz, Turkestan, for the local bey, Nasir ad-Din Tokbugi. 'Muin al-murid' is a short religious work composed in Urgench in 1313.

The content of this work (due to its special emphasis on mystic Islam) shows that it was intended for the candidates for a Sufi order.

The earliest work related to the Golden Horde was 'Khosrow and Shirin' by Qutb, dedicated to Tini Beg Khan (1341–1342) and his wife Melika Khatun [Qutb/Hacıeminoğlu, 1968, pp. 191–195]. Apparently, this work was composed for the ruler of Sarai al-Jadid. 'Muhabbet-name' ('The Book of Love') by Khwarizmi was written on the banks of the Syr Darya (or Azov) in 1353 and dedicated to a Muhammad Khodjabek [Nadjip, 1961, text p. 35, translation p. 77, see also pp. 15–16]. The circumstances under which the religious treatise 'Nahj ul-faradis' was created, entitled as 'The Clear Way to Paradise' in Turkic, were more difficult. It was not dedicated to anyone, partly because it was a devout religious work.

The romantic poem 'Khosrow and Shirin' is a rework of the famous romantic poem 'Khosrow and Shirin' (1180) of one of the five great 'treasures' of the Persian poet Nizami (c. 1139 to c. 1174–1222). The reworking of earlier epic works was one of the common tests of an author's mastery. Nizami reworked earlier plots, and as Qutb's version was not meant to be a literal translation nor a literary experience, it should not be looked at negatively. Qutb himself noted that the goal of his work had been translating this work from the Persian language in the name of his khan [Qutb/Hacıeminoğlu, 1968, p. 195]. His version elevated Turkic to the literary standard following the spelling traditions established for the first time in the 11th century under the influence of the Uighur literary language (although with certain linguistic changes). It also relied on metric forms, which were used for the first time in the literature of the Karakhanids [Bombaci, 1968, pp. 96–97; Eckmann, 1964, pp. 280–285] and reflects the close acquaintance with, and even inclinations towards, the

Persian high culture at the court of Jochids. It could also be seen from the mysterious place-name Gulistan mentioned earlier, as it was the name of Sa'di's well-known Persian composition 'Gulistan' ('The Rose Garden'). The same work was reworked by Sayf-i Sarayi in the poem 'Gulistan bi-t-Turki' (see the publication of the text of this work [Säyf-i Sarayi, 1969]).

Even though the content of Qutb's work was ignored in all studies of this period, with the exception of those works which were dedicated solely to literature, besides the dedication to Tini Beg Khan and his wife, it contains many important assertions, which diverge from Nizami's original text and reflect the author's experience in the Golden Horde. The majority of such works begin with a declaration of the greatness and unity of God, supported by the positive characterisations of the Prophet Muhammad and praise of his four companions (also known as the Four Rashidun Caliphs: Abu Bakr, Umar, Uthman, and Ali.) Qutb's praise to the Prophet's companions describes them as leaders who could take care of Muhammad and fulfil all his wishes, and that together they could enter the 7 countries [Qutb/Hacıeminoğlu, 1968, pp. 190–191]. We can assert that this work offers a religious explanation for the relationship between the khan and the four tribal leaders; we have explained this political system in another place [Schamiloglu, 1984, pp. 283–297; Schamiloglu, 1986]. Probably, it can be regarded as a religious guideline for tribal leaders to continue to remain faithful to the khan.

We can note several other interesting changes which Qutb introduces over Nizami's version. One of them is the social structure of the society with the khan at the head. First of all are the begs, then the warriors (*bahadur*), then in the third place are the rich, in the fourth place are the poor, in fifth come the needy, followed in the end by innumerable slaves and others. A comparison with the original by Nizami reveals that Qutb knew who his patrons were [Nizāmī/Massé, 1970, pp. 143; Qutb/Hacıeminoğlu, 1968, pp. 350–351]. One can assume, following the logic, that the ulus begs, the wives of the ruling elite (*khatuns*) and the landocracy are represented as the ones spreading wealth. These components of the elite are

Headstone with an inscription in Arabic.
Alabaster. Vodyanovo archaeological site
(according to V. Egorov and G. Fedorov-Davydov)

not mentioned in the Nizami's original version, and their appearance in this version is a surprise [Qutb/Hacıeminoğlu, 1968, p. 421]. Lastly, while the Nizami's description of a feast includes dishes, which would be familiar to his audience, Qutb's version refers to the sacrifice of cows, sheep, horses, geese, chickens and ducks, as a type of feast [Nizāmī/Massé, 1970, p. 145; Qutb/Hacıeminoğlu, 1968, p. 352]. Thus, the inclusion of these and other details by Qutb gives us information about its context, at the same time representing further evidence that this work was supported by the patronage of the khan and was written with an awareness of how the court could react. In other words, the khan and his court understood the poetic language, which was not identical to the dialect of that time. They could assess genres of Iranian literature and follow the thread of a story written in ancient Iran. Undoubtedly, it was high culture.

Although 'Khosrow and Shirin' did have some moral and religious lessons for the court, it was not the goal of this work. A very different type of literature is represented by the compo-

sition 'Nahj al-Faradis' [Nehcü'l-ferādīs, 1995; Nuriyeva, 1999], which was a pious work. Already in the 19th century, Shihabetdin Marjani described the manuscript 'Nahj al-Faradis' (now lost), copied in Sarai in 749/1358. This manuscript attributed the work to a Mahmud, who was born in Bulgar and took refuge in Sarai, whose family name (*nisba*) Kerderi linked him to the city Kerder in Khwarezm. Another manuscript says the author died 3 days after 25 March 1360 and points to the various sources on which it is based and, in the end, refers to the author as Muhammad ibn Husraw al-Khwarizmi [Bombaci, 1968, p. 95; Nehcü'l-ferādīs, 1995, p. 309; Nuriyeva, 1999, p. 8].

This work is divided into 4 parts, each of which consists of 10 chapters. Part I 'Positive features of the Prophet Muhammad' is a detailed story about his life, the revelation of Islam, the flight from Mecca to Medina, miracles, which accompanied his life, his return to Mecca, the Prophet's ascension to Heaven in his sleep, the clarification on Heaven, the battle of Hunayn, and his death. Part II 'Positive features of the Rashidun Caliphs, the Prophet's family, and the Four Imams' includes stories about the first four caliphs (Abu Bakr, Umar, Uthman, and Ali), the Prophet's wife Fatima, Ali's two sons—Hasan and Hussein (whom the Shiites regard as martyrs), and the imams who founded the four primary madhhabs (the great imam Abu Hanafi, imam Shafi'i, imam Maliki, and imam Ahmad Hanbali). Part III 'Explanation of virtuous deeds that bring us closer to God' talks about the virtues of praying five times a day, charity, fasting in the month of Ramadan, the pilgrimage to Mecca, about a respectful attitude towards parents, a diet of religiously pure (*halal*) food, proper behaviour (including the ability to differentiate good from evil), religious ceremonies in the evening, patience, and satisfaction. Part IV 'Explanation of how evil deeds estrange a man from God' explains evil that originates from the unjust spilling of blood, adultery, alcoholic drinks, haughtiness, lying, love for this world, the hypocrisy of deception, malice, and envy, contempt, and hope for a long life.

How can we understand the nature of this work? We can suppose the content of this work

is orthodox Sunni in character, describing the basic knowledge and instructions necessary for a person to become a good Muslim. It includes balanced information about all Islamic schools of law, reflecting the number of Sunni scientists in the cities of the Jochid Ulus, as it was described by Ibn Battuta. If we can rely on the contemporary publication of manuals for Sufi orders of that period [Waley, 1992], this work was not specifically intended for a murid, a candidate of a Sufi order. The existence of both traditions answers the controversial question concerning whether any tensions between these two separate religious views could have existed. After all, orthodox Islam apparently dominated in the cities of the Golden Horde along the Volga, while in Khwarezm, and even elsewhere in the South, there was a strong Sufi tradition, which played its role in the conversion of Berke Khan to Islam. We cannot know whether the composition of 'Nahj al-Faradis' had an educational purpose or if it was only a devout act on the part of its author. There is one more observation we wish to make in this regard. This is that the name of this work provokes the desire to learn about how one can go to heaven. The fact of the increase in the number of those who had converted to Islam could have had an impact. As we have already noted, it was a period during which the Black Death had a devastating effect on the territories of the Golden Horde. As in Western Europe, it is most likely that the Black Death had a significant influence on society here, too. In Western Europe, the growth of religiosity, along with an interest in death and God's punishment were some of the responses to the onslaught of the epidemic. We believe that the Golden Horde's population undoubtedly had many causes for concern as to whether or not they would go to heaven, and this work was related to their fear.

Thus, the period of the Jochid Ulus was a golden age of the Turkic-Islamic high culture. All this serves as proof of the establishment of an Islamic and Turkic cultural synthesis on the territories of the Golden Horde in the 13th and 14th centuries (before the Black Death came), which was important from the standpoint of the development of both the Islamic and Turkic civilisations.

CHAPTER 4

Islam in the Ulus of Jochi

Iskander Izmaylov, Mikrasym Usmanov

The Jochid Ulus justifiably has a special place in the medieval history of Northern Eurasia. In this historical period, Islam crossed state and religious borders of separate countries in Eastern Europe and Central Asia for the first time, becoming the religion of the Eurasian Turkic Empire. There are many aspects to the problems concerning Islam's implementation and development, and its culture in the Jochid Ulus. They are therefore complex and require consideration within the context of the politics and the culture.

Literature survey. The topic of the distribution of Islam in the Jochid Ulus has been of great interest to researchers for more than two centuries and there is a large amount of literature devoted to it. Therefore, this is only an analysis of the most important and dominant works.

I. Hammer-Purgstall, the author of the first general history of the Golden Horde, was one of the first to examine this problem [Hammer-Purgstall, 1840]. Noting the distribution of Islam in the state of the Jochids, he failed to give a precise description of the appearance and development of Islam in it, instead focusing his attention on political history.

The well-known Kazan orientalist and historian, I. Berezin, made a more detailed attempt to introduce Islam into the context of the internal structure of Golden Horde society. However, owing to the ideas of the Jochids' state as being an amorphous, nomadic tribe only slightly touched by state structures and a settled civilisation, he also considered Islam as a phenomenon, which was rather foreign to the nomadic population [Berezin, 1864].

A brief work by G. Sablukov was also of interest to Kazan orientalists. Sablukov developed I. Berezin's ideas, presenting a more complete and integrated picture of the history

of the Jochid Ulus. He paid special attention to the spread of Islam and tried to highlight this problem for the first time, using a range of sources, written and archaeological. [Sablukov, 1884; 1895].

Each of these works followed a general trend, typical for academia of the time, where the recognition of the nomadic character of the Golden Horde state and the chronic weakness and amorphous character of its institutions—including religious ones—was expressed.

Tatar historical thought stands apart from these of development in Russian historiography. It is based on its own historical tradition, beginning with works by Sh. Marjani [1884, pp. 40–58; 1999; Marjani, 1989], where not only the Islamic character of the Golden Horde was noted, but also the continuity of the existence of Islamic civilisation in the Volga Region. According to Tatar historians, the Jochid Ulus period played a defining role in the establishment of Islam as a state religion and as the basis of medieval Tatar culture [Fäxretdin, 1996; Akhmarov, 1998; Iskhaki, 1991; Battal, 1996]. At the same time, all sources emphasise the tolerance and respect of the different religions in the Golden Horde. For example, G. Iskhaki claimed that 'It should be noted that all religions in the Golden Horde had equal freedom. According to the laws of Chinggis Khan, the penalty for offending any religion was death. The priesthood of each religion was free from paying taxes' [Iskhaki, 1991, p. 17].

Works of the outstanding Tatar historian G. Gubaydullin should be mentioned as part of this discipline. He successfully combined Russian and Tatar academic traditions [Gubaydullin, 1925, pp. 71–111]. G. Gubaydullin arrived at several important conclusions concerning the history of Islam in the Golden Horde, based

on a profound examination of its literature and other sources. He emphasised the freedom of worship in the Jochid Ulus as well [Gubaydulin, 1994, pp. 71–73].

F. Ballod's remarks on the culture of the Golden Horde are rather interesting. Based on the results of excavations in the whole range of the Lower Volga and towns including Sarai, Sarai al-Jadid and Ukek, he drew conclusions concerning the development of oriental urban life, which was drawn from the works of 'the most intellectual elements of the peoples of Asia and Europe' [Ballod, 1924, p. 349].

V. Barthold made a significant contribution to the formation of the academic interpretation of the Islamic history of the Golden Horde and even further, in Northern Eurasia. His works, which only partially concern the history of Islam in the Golden Horde, examine this topic within the context of Islam's distribution in other Mongol states [Barthold, 1965]. At the same time, he noted that, after a short-term recession caused by Mongol conquests, a period of cultural ascension began; one of its indicators was the development of Turkic literature [Barthold, 1966]. In general, his works seemingly marked the end of an extended period in the history of historical studies, where a panoply of written sources was gathered and the political history of the Golden Horde and its institutions was created.

A. Yakubovsky paid special attention to the reasons for Islam's distribution in the Jochid Ulus in a fundamental, general study [Grekov, Yakubovsky, 1950]. It should be noted that the first version of this work only slightly covered the history of Islam, though its tonality was more balanced [Grekov, Yakubovsky, 1937]. He analysed data from sources concerning the different confessions of the Mongols and the reasons for Islamisation in detail. He believed that the main reasons were the development of urban life, trade, and political ties with Muslim countries, particularly with Egypt [Grekov, Yakubovsky, 1950, pp. 166–168]. At the same time, the author emphasised that 'Islam had little success among working nomads' and its spread under the rule of Öz Beg Khan 'did not exceed the limits of urban life and the feudal elite of the steppe' [Ibid., pp. 165, 168]. This

conclusion was drawn from a historical thesis based on the theory of historical materialism and a limited range of sources, although it was accompanied by reservations about any significant development of the Muslim culture in the cities of the Jochid Ulus.

In another periodical publication on the history of the Golden Horde, M. Safargaliev focused his attention on the issues of Islam, mainly from the standpoint of the Jochid Ulus' political and diplomatic history [Safargaliev, 1960]. In his work, the issues of Islam's distribution and its influence on the Golden Horde culture were left uncovered, as in the work of A. Yakubovsky.

A significant step forward was made in the study of the culture and history of the Golden Horde in G. Fedorov-Davydov's works, where he relied on an enormous collection of archaeological material. His studies newly examined the culture of Desht-i Kipchak and showed its high level of development and the active extension of Islamic culture [Fedorov-Davydov 1973; 1976; 1994]. G. Fedorov-Davydov emphasised that, as cities sprung up in the Jochid Ulus (primarily in the Volga Region), a new urban eastern medieval culture of which Islam was the basis luxuriously blossomed. He clarified the question concerning Islam's diffusion among the nomadic population of the steppe, arguing that near the turn of the 14th and 15th centuries, the pagan rite of burial was replaced by its Islamic counterpart throughout the territory of the Jochid Ulus [Fedorov-Davydov, 1966, p. 248].

One of the authors of this chapter studied the issue of Islam's distribution throughout the Golden Horde, highlighting three stages—from an initial acquaintance of the highest ranks of the Mongols with Islam to the formal adoption of Islam in the time of Öz Beg Khan, and during the Islamisation of the population of the Jochid Ulus at the end of the 14th century [Usmanov, 1985, pp. 177–185]. He also studied the composition of the clergy and its hierarchy by the yaliqu of the Jochid Ulus [Usmanov, 1979, pp. 211–213].

Interest in the issue of Islamisation has noticeably increased recently. The problems of the formation of Islamic traditions in Tur-

kie-Tatar culture and the significance of the Golden Horde period in these processes have been studied [Däülätšin, 1999]. Literature experts and philologists are studying the separate problems of the interaction of cultures and the Islam's penetration into literature and 'high culture' (see, for example: [Minnegulov, 1993; Islamov, 1998; Nuriyeva, 1999]). These studies unambiguously show that the introduction of Islam into different segments of the population was complex and uneven.

At the same time, a tendency to return to the former position concerning the late and fairly superficial Islamisation of the population of the Jochid Ulus started to appear among orientalists. For example, considering that Islam permeated into the steppe Turkic population rather late, V. Yudin hastened to design a special Golden Horde 'faith'—'Chinggisism': 'a new genealogical complex, stated in terms of tribal interpretation of the appearance and formation of the structure of mankind, became the basis for the formation of views regarding the origin of the entire human race and the universe. It was supplemented with traditional elements of Turkic-Mongol Shamanism, which became the upper floor and annex to the new faith's construction. Thus, a cosmogonic myth was created, that is, an illusory world view and ideology were formed, and a new religion was born' [Yudin, 1992, pp. 16–21]. Nowadays, it is hardly possible to unambiguously consider Chinggisism a religion. The general idea of the society and the state of Jochids as a steppe empire or a nomadic union, which allegedly could not have had a developed historiography and ideology, became the cause of such an incorrect interpretation. However, it seems to us that the term 'Chinggisism' represents a special paradigm of the Mongolian and Tatar (Golden Horde) political ideology [Iskhakov, Izmaylov, 2000, pp. 99–100].

This concept was developed in a recently published work dedicated to the history of the states of the Eurasian steppes. T. Sultanov, the author of the section concerning the Golden Horde, claimed that 'there was no unified culture or religion in the state of Jochi's descendants' and Islam was finally consolidated in Desht-i Kipchak only after the Russian con-

quest [Klyashtorny, Sultanov, 2000, pp. 220–227]. It is strange that the author, ignoring numerous data from Eastern, Russian and Western European sources, as well as Golden Horde state acts and archaeological data, focuses on separate indications of traditional religions and remnants of the past, although their place and significance in the system of the Golden Horde's world view definitely played a more episodic role when compared with that of Islam.

Especially noteworthy is a particular work by historians and archaeologists from Saratov about the religions of the Golden Horde, where a special section by A. Rakushin is dedicated to Islam [Malov, Malyshev, Rakushin, 1998, pp. 94–125]. Generalising the large historical material, the author presented an entire study, focusing his attention on the key points. Basically, there are no objections to the description of the Islamic history and to the researcher's conclusions, except for two major aspects: the underestimation of Islam's role and its significance in settled areas and urban culture, which leads to the denial of the Golden Horde population's consolidation and the formation of the Tatar ethno-political community (such a tendency is vividly shown in essays written by N. Malov and A. Malyshev, where the authors use the non-scientific concept of 'nation', see: [Ibid., pp. 23–37]; see: these views were criticised by [Iskhakov, Izmaylov, 2000, pp. 5–11, 89–111]).

Another manifestation of this tendency (although in a different aspect) is the exaggerated attention paid to 'pagan' motifs in a number of historical works ('Chinggis-name') and epic poems about Edigu in a work by American orientalist, D. DeWeese, dedicated to the Islamisation of the Golden Horde [DeWeese, 1994]. It should be noted that the author does not deny the Islamic character of the Golden Horde and emphasises Islam's importance in integrating the Horde into a united ethno-religious community [Ibid., pp. 516–532]. However, the purpose of his work was to discover features and mythologems of the 'popular Islam'. The author collected and analysed a large amount of material, but the chosen direction of his work and the sources selected for analysis predetermined

his conclusions. The use of wider-ranged sources, for example, literary masterpieces of this epoch, yarliqs, and archaeological findings (such as graffiti, inscriptions on coins, etc.) prove that Islam in the Ulus of Jochi was more developed and complex (see an essay by Yu. Schamiloglu in Section 5).

In general, the history of studying Islam in the Jochid Ulus followed a significant path. A vast collection of material sources was amassed and researched, which has created a foundation for the further study of this complex topic, its expansion and development.

The religious situation during the period of the Jochid Ulus' creation: Christianity and Islam. At the time of Central Eurasia's conquest, there was a difficult and unstable religious situation here. From the 8th century forward, Islam completely dominated in Khwarezm and Central Asia, from where it penetrated into the Volga Region, where it became the state religion of Bulgaria in the 10th century. From the same northern distribution point, Islam quickly spread among the peoples of the Volga-Ural Region due to Bulgar's influence. Orthodox Christianity, which by the 13th century had repelled all other faiths to the periphery of the national culture, had already been introduced in Rus' at the end of the 10th century. Simultaneously, the output of the ideological doctrine of the Vladimir-Suzdal Rus went forth based on Christianity in its militant, 'crusader' function [Izmaylov, 1999, pp. 69–75]. The coast of Crimea was another focal point of Christianity, where, other than Greeks, the descendants of the Goths still lived. Few Judaist Khazarins—fragments of the once great people of Khazaria—dwelt there. In the foothills of the Caucasus there was another Christianity centre—the principalities of Alania. Between these islands of dominant religions there was a great sea of pagan cults and beliefs.

The same picture was observed in the Eurasian steppes as well. Its inhabitants were found to be under the influence of different civilisations and religions. Karakhanids were particularly active in the spread of Islam at the end of the 10th and beginning of the 11th centuries. Like all neophytes, they were fighting cruel religious wars, considering prosely-

tism with the help of weapons to be the basis of their foreign policy. Attacks in the name of jihad on the Kipchaks and Kimaks were successful enough, causing their flight to the west [Klyashtorny, 1993, pp. 124–127]. Cruel and fierce religious wars gave rise to unique literature and folklore, partially retained by the Karakhanid philologist, Mahmud Kashgari (in the 11th century). An example is his narrative of the battle against the Uighurs:

'We Bunchuks are more reliable,
and, like a flock of birds of prey,
we descended upon the Uighurs with the
Tatams
who were all thieves and were bestial to us.

...
We flew as a stream flows from its source.
At once we reached their cities,
and destroying Buddha's temples, we
became merry—
we mocked the idols'

[Poe'ziya drevnix tyurkov, 1993, p. 114].

These developments came alongside a cultural expansion provided by Islam's spread into the steppes of Central Asia. For example, highly competent historian Ibn Al-Asir (13th century) described the history of the Karakhanid power, writing that, 'in 1043, ten thousand carriages from faithless Turks adopted Islam, who used to make raids on Islamic cities in Balasaguna lands and Kashgar... they spent the summer in Bulgar's lands and wintered in the Balasaguna lands, but, when Islam was adopted, they were dispersed across the country...' [Ibn Al-Athir, 1973, p. 60].

It is hard to say whether it was a one-time phenomenon or it affected the broader masses of nomads, but it is impossible to deny Islam's gradual penetration into the culture of the Turks of Northern Eurasia. Islam was introduced even more actively among the Kipchaks from the latter half of the 12th century to the first third of the 13th century by Khwarazmian Anushtiginids. Descended from Turkic nobility, they actively strove to cast 'the light of true faith' on their northern neighbours [Buniyatov, 1986, p. 46; Akhinzhanov, 1989, pp. 208–225].

However, it can be generally assumed that the majority of Kipchaks from the Danube to

the Irtysh remained pagans, although their culture was constantly exposed to the influence of one or another monotheistic religion. The Kipchaks of the Black Sea Region apparently were under the ideological influence of Rus', as well as Byzantium and Bulgaria. A portion of them, especially the ruling elite, had already adopted Christianity, which can be seen from their names such as Yuri Konchakovich, etc. The Kipchaks and the Yemeks of the Trans-Volga region and the Aral Sea Region certainly trended towards Islam.

The picture was completely changed by the Mongolian invasion. In the destructive conditions of the old state and tribal structures and the creation of the Jochid Empire, a shift in the population's religious consciousness occurred. By the second quarter of the 13th century, after several bloody wars, victories and bitter defeats, Volga Bulgaria was defeated and conquered by Khan Batu's armies, fighting a path to the west, to the 'last sea'. Although the Mongols treated the religions of the conquered peoples loyally enough, Islam as the official or even dominating religion was broken, becoming one of many religions in the Ulus of Jochi. A period of relative religious tolerance—an original pagan renaissance—came to be. Symbiosis of various elements became the basis for the assembly of the imperial Golden Horde culture.

In the epoch of the formation of the state and ideology in Chinggis Khan's empire, Shamanism and Christianity of the Nestorian sect were traditionally spread among the Mongol Khans and their clans, for example, among the Kereits and Naimans [Kychanov, 1997, p. 192; Kadyrbayev, 1993]. The evolution of world perception within the population of the Golden Horde was also determined by life together with peoples of various confessions: Christians including Nestorians, Gregorian, Jews, etc. [Usmanov, 1985, p. 177; Poluboyarinova, 1978; Sochnev, 1993, pp. 107–117; Volkov, 1995, pp. 24–27; Malov, Malyshev, Rakushin, 1998, pp. 57–93].

Typical of the initial stages in the history of the Mongol Empire, a particular religious tolerance was elevated to law and imperial political tradition, allowing the descendants of Chinggis Khan to retain their power. The

Types of gravestones in burial mounds.
Southern Urals. 12–14th centuries (according to
V. Ivanov and V. Krieger).

Chinggisids were relatively indifferent to religious issues, creating the impression that any belief was lawful with regards to the power of the Mongol Khans, as long as it did not lead to a holy war against the conquerors. It was political loyalty rather than spiritual subordination to their faith that was important for the Mongol administration, which was built according to the Chinese tradition of public governance.

The Jochids also conducted a policy of tolerance towards the local religions (stated in 'Iasa' by Chinggis Khan) in the first period after the conquest of Eastern Europe, especially in settled countries. The Mongol conquerors did not try to impose their faith (Shamanism) upon conquered peoples. Despite their personal preferences and dislikes, Chinggis Khan and his closest descendants seemingly equated representatives of different churches, keeping them all at a distance. Certainly V. Bartold was right in defining this originality of 'religious tactics' of the early Chinggisids as a manifestation of

a purposeful policy, intended to look for allies among princes belonging to various churches and religions. This definition should be completed and clarified because the steadiness of early Chinggisids' conversion to the main or leading religion can be explained by a psychological factor and practical reasons simultaneously when it came to the populations of their улусes. If the psychological factor owes to their relative lack of consciousness, the practical reasons came down to the fact that by demonstrating their loyalty to Shamanism—the traditional faith of their ancestors—the early Chinggisids were trying to preserve the ideological unity of their clan and the empire inherited from Chinggis Khan [Usmanov, 1985, p. 177].

At the end of Batu and his closest descendants' rule, a furious struggle for the influence on the Khan's throne occurred between various groups of the nobility, which positioned their dogma as a standard. After a short struggle, the supporters of Khan Berke gained a victory. The furious character of the conflict can be explained by the fact that parts of the Jochids were Nestorian, particularly Batu's wife, Barakchin, and their son, Sartaq ([Sbornik materialov, otnosyashhixsya k istorii Zolotoj Ordy', 1941, p. 19]); for the political circumstances of the dethronement of Batu's descendants see: [Fedorov-Davydov, 1992, pp. 72–82]. Politically, they were oriented alongside the united Mongol Empire. Another part of the nobility headed by Berke aimed to break off and create an independent state and practice Islam.

Berke became the first khan of the Golden Horde who converted to Islam. Therefore, the attention paid to this fact in eastern historiography is understandable. Juzjani, a contemporary of Berke, believed that 'Berke Khan was converted to Islam by the hands of Seif ad-Din Bakharzi' [Sbornik materialov, otnosyashhixsya k istorii Zolotoj Ordy', 1941, p. 19]; Arab authors of the 14th century Ibn Khaldun and al-Ayni wrote that, 'Berke visited Islamic scholars in Bukhara, conversed with them, and then and there the conversion of Islam took place by Sufi Sheikh Shams Ad-Din Al-Bakharzi and his disciple Nadzhm Ad-Dean Kubra [Sbornik materialov, otnosyashhixsya k istorii Zolotoj Ordy', 1884, pp. 369, 478].

According to al-Omari, Berke adopted Islam during his return from the assembly in Mongolia where Möngke was declared the Great Khan (1251). William of Rubruck, who was at the court of Khan Batu in 1253, reported about Berke's adoption of Islam still before the coronation [Puteshestviya, 1957, p. 117].

Later, in around 1257, having already become the Khan, Berke visited Bukhara again to pay honour and respect to the outstanding Ulamas of the city [Sbornik materialov, otnosyashhixsya k istorii Zolotoj Ordy', 1884, pp. 245–246]. This pilgrimage of Khan Berke is noteworthy because his mentor, Saif ad-Dean Bakharzi (d. 1261), was one of the several remaining Murids of the respected Sheikh Khwarezm Ahmad Ibn Umar Abu-l-Jannab Najm ad-Din al-Kubra al-Khivai al-Khwarezmi, who was a theorist, practitioner of Sufism, and a founder of Sufi tariqa 'Kubravi' [Gordlevsky, 1941, p. 201; Bartold, 1963, p. 503; Snegarev, 1983, pp. 142–158]. The situation was made particularly interesting by the fact that respect for this saint is not only connected with his activity in the field of the cultivation of Sufism, but with his heroic death during the seizure of Urgench (Gurganj) at the hands of Chinggis Khan's troops [Ibragimov, 1988, pp. 73–74; Sbornik materialov, otnosyashhixsya k istorii Zolotoj Ordy', 1884, p. 309]. It is hard to say whether Berke was a follower of any Sufi tariqa, but the fact of the great influence of Sufi communities (*taifa*) on the politics of the Golden Horde is undeniable.

Apparently, at the same time as Berke, his wives, a unit of the emirs of his entourage, and his guard converted to Islam. Not without exaggeration, rumours spread throughout the Eastern countries that the army of the Khan of the Tatars was composed of 30 thousand Muslims who obligingly participated in the Friday Prayer and did not drink wine. To the Indian historian Juzjani, tales spread about Berke having a rich library and constant presence of theologians and lawyers in his palace, who participated in frequent debates over questions of the Sharia law. Al-Nuwayri (14th century) wrote about Berke that 'he is the first of the descendants of Chinggis Khan who has adopted the religion of Islam... who has given legal

Types of burials characteristic of earth mounds in the Southern Urals. 12–14th centuries (according to V. Ivanov and V. Krieger).

scholars honour, brought them to his place... and built mosques and schools on the borders of his land' [Sbornik materialov, otnosyashhixsya k istorii Zolotoj Ordy', 1884, p. 151]. Other Arab authors, describing diplomatic contacts with the Golden Horde, noted that during a reception of the ambassador by Khan Berke, his older wife and around 50 or 60 emirs were present, besides, 'each of the (present) emirs has with him a muezzin and an imam; each khatuni (also) has her own muezzin and imam'. It was also observed that the children of the nobility studied in the madrasah where they 'listen to readings of the venerable Quran' [ibid., pp. 64, 194]. The adoption of Islam by Khan Berke, his wives and closest emirs became a factor of great political significance. Simultaneously, a course of action was taken, which directly led to the separation of the Ulus of Jochi from the power of the Grand Qa'an: the minting of coins with the name Möngke ceased, and 'high tamga', house of Jochi (since 1257) and Berke's name (since 1259) appeared on them. However, after the beginning of an internecine war in the ulus of the Great Khan between Kublai and Arig-Buga, the payment of taxes into the Karakorum (approximately since 1260) ceased [Dalai, 1983, pp. 34–44]. The changes that began to occur in the Golden Horde during the rule of the new khan appeared to be by no means accidental, but corresponded with the tendencies of development in the society. The support of Berke's candidacy by Muslim merchants, dragged to Batu by the Golden Horde administration as tax-farmers and bureaucracy, facilitated his victory. A wide field for missionary activity opened up in front of the Muslim clergy. Af-

ter Berke came to power, the spread of Islam began in Jochid Ulus, especially among the Kipchaks, who had already begun the process of Islamisation. After the conquest, changes in their old tribal structure and their dispersion to the uluses of the new rulers, former tribal cults lost their sanctity and their mythology lost its bearing. In these conditions, the public conscience of the Kipchaks of Eastern Europe began to turn to a new religion—Islam.

It was also important that Batu and Berke, being co-rulers of a 'united' empire, played the part of the suzerain for Hulagu and other ulus khans [Fedorov-Davydov, 1978, p. 26 Trepavlov, 1993, pp. 82–83]. Berke's aspiration to put his plots of land against the possessions of the Great Khagan and other ulus khans also had its place with regards to ideology [Usmanov, 1985, p. 179]. However, there is also an allusion to the fact that having become the first Islamic ruler, Berke was trying to follow the norms of Islam and reduce Shamanism's influence. If these processes are regarded as the manifestation of remote tendencies in the politics of the khans of the Ulus of Jochi, it should be recognised that the measures taken by Berke were the beginning of the religious and ideological reorientation of the Jochids, that is, of quests with respect to the changes in the territory and the structure of the populations subordinate to them [Ibid., p. 178].

A war against the Hulaguids particularly accelerated the process of reorientation in regard to the khans of the Jochid Ulus. The main reasons for this were the strengthening of Hulagu's power and his refusal to recognise the seniority of the Jochid Ulus. This happened against the backdrop of the decline of the Baghdad Caliphate (1258) and the strengthening of Nestorian Hulagu's resistance against the Mamluk Egypt, where the descendant of the last Abbasid caliph, Musta'sim (who had been executed by the Mongols), was secretly transported. He was proclaimed the Caliph of Egypt, but being deprived of any real levers of power, he became a religious symbol for Islamic countries. As the struggle against Hulagu intensified, Berke began to use the religious factor as a means of recruiting allies. The ambassadors were received by the Sultan of Egypt with great honour and swore an oath to the caliph, recognising his authority and domination in affairs of faith [Sbornik materialov, otnosyashhixsya k istorii Zolotoj Ordy', 1884, pp. 429–431]. Berke's provocation of Hulagu was the most important aspect of diplomatic efforts, for the Sultan of Egypt and the caliph. It was justified as being the direct duty of Muslims to wage war against the faithless, even if they were relatives; a message stating this position was ended with an emphatic conclusion: 'Islam does not only consist of words: the holy war (jihad) is one of its (main) supports' [Ibid., p. 98, Rukn al-Din Baibars al-Mansuri]. The military and political aspects of this war are well known [Ali-Zade, 1946, pp. 16–38; Grekov, Yakubovsky, 1950, pp. 74–82; Zakirov, 1966, pp. 39–59], but its diplomatic and cultural elements are much more important. Having started the confrontation against Hulagu state, the Jochid Ulus automatically became an enemy of Orthodox Byzantium, the Catholic countries of the West, and their possessions in the Middle East from the Crusades, while becoming an ally of the Seljuk Turks and Egyptian Mamluks. In this manner, the political priorities and, most importantly, the direction of the civilisation's orientation were determined.

At the same time, we should not overestimate the scale of Islam's diffusion among the

population of the Ulus of Jochi. There was no mass Islamisation of the steppe population or the majority of the nobility. A certain balance was preserved under Mengü-Timur (1266–1288), who followed the foreign policy of his predecessors but was not an ardent follower of Islam. Previous traditions continued to function in public management and administrative practice. In other words, although Islam was rather popular among the highest ranks of the townsfolk, as well as in some regions of the Jochid Ulus (Khwarezm, Bulgaria and the Aral Sea Region), its influence was not yet a defining one.

Nevertheless, this process became irreversible. During the internecine wars of the end of the 13th century, concerning the choice of the Jochid Ulus' path for further development, the followers of Islam were victorious. In this regard, Nogai's activity is typical. The turning point of his political activity could be considered to be his letter to Egypt (1270–1271), in which he notified the Sultan of his own conversion to Islam, as well as that of a number of other emirs. It also mentioned that he was following in 'the footsteps of our father, Berke Khan, truth is being pursued and lies are being shied away from'. The closing sentence is, 'With you, we are like the fingertips of a hand: we work together with those who are with you and against those who are against you' [Sbornik materialov, otnosyashhixsya k istorii Zolotoj Ordy', 1884, pp. 101–102]. It is quite evident that he relied on Islamic Tatar clans and urban noblemen. A. Rakushin correctly notes that Nogai thus declared himself the direct successor 'of Berke's work', [Malov, Malyshev, Rakushin, 1998, p. 99]. After Mengü-Timur's death in 1281, Tuda Mengü Khan (1281–1287) was enthroned, upon which Nogai became the de facto ruler of the Golden Horde, showing further evidence of his true adherence to that path. Then, Tuda Mengü apparently converted to Islam and sent an ambassador to the Egyptian sultan with a request 'to ask for himself... a Muslim name, by which he could be called', as well as banners and drums 'so that he could move forth with them and set out against the enemies of the Faith'. Afterwards, the ambassador committed a hajj to Mecca [Sbornik

materialov, *otnosyashhixsya k istorii Zolotoj Ordy*', 1884, p. 69]. Tuda Mengu Khan took little interest in the actual conduct of state affairs and most probably occupied himself with questions of faith and spiritual education—he 'tied himself to the sheikhs and fakirs, visited theologians and holy men, settling for little after much' [ibid., pp. 105–106]. It led to a coup in the absence of Nogai: the participants accused the khan of insanity and 'contempt for the state affairs' and forced him to abdicate in favour of Talabuga (1287–1291).

While the khan ruled, 'The Islamic party' suffered a serious defeat, but in general it did not lose its positions. After a split in the traditionalists' camp, Nogai supported Toqta's group and defeated Talabuga and his supporters (Mengu-Timur and Tarbu's sons) during this internecine feud. Having become the khan, Toqta (1291–1312) rid himself of his noblest enemies, having massacred nearly all of the most authoritative leaders among the traditionalists. Later, Toqta became unhappy with Nogai's influence and began to deprive him of the true levers of power, thus provoking Nogai to another rebellion. Even though he was not officially a Muslim, Toqta's rule was a time for the Islamic Tatar aristocracy to consolidate their power. Temür Qutlugh, who had ties to the court of Khan Berke, was a notable aristocrat. Islam received a new impetus. Obviously, the religion was particularly widespread within the cities. The influence of the Muslim clans on domestic and foreign policy was highly significant. Striving to enlist their support, Toqta started producing coins since 1293, with the auspicious name 'Nasir li-d-Din Allah' ('Assistant of Faith and Allah') [Muhamadiev, 1983, pp. 46–49].

Thanks to the support of the Muslims, Toqta not only defeated his enemies, but also achieved an unprecedented strengthening of the Jochid Ulus. World trade was expanding, a growth of cities was noticed and a whole range of important victories were won in the international arena. Islam had been spreading more intensively in the steppes and towns of the Golden Horde since the late 13th century. The decrease in the number of pagan burial sites in the Volga and Cis-Ural Region, combined with

the emergence and widespread occurrence of Islamic necropolises, serves as evidence [Fedorov-Davydov, 1966, p. 248]. So, in the early 14th century, all the necessary preconditions were present to improve the status of Islam, both de facto and de jure, as the official religion of the Jochid Ulus.

The Adoption of Islam as State Religion.

Eventually, at the beginning of the 14th century, the Islamic community among the Tatar aristocracy was so strong that it not only enthroned its candidate (Öz Beg Khan), but also resolutely differentiated itself from the former religious and political traditions. A relatively large number of sources and significant historiography exist, concerning this key event in the history of the Jochid Ulus (see the analysis of sources: [DeWeese, 1994, pp. 101–158]; see the essential events: [Greeks, Yakubovsky, 1950, p. 90; DeWeese, 1994, pp. 90–100]). In his letter to the Egyptian sultan, while relating about an-Nuwayri, Öz Beg Khan described events that occurred, 'In his (Oz Beg Khan's) kingdom there still remained a group of bandits who did not profess Islam but, when they admitted this, he let them choose either to join the Islamic religion or to face war. They refused (to accept Islam) and entered battle, where, after attacking, they were forced to retreat and were destroyed... [Sbornik materialov, *otnosyashhixsya k istorii Zolotoj Ordy*', 1884, p. 163].

Al-Birzali (a contemporary from the first half of the 14th century) vividly portrays the atmosphere of that time. He writes that Toqta Khan was 'a non-believer', adhering to the religion of idolaters and that he loved 'lamas and enchanter and gave them great honour. He was just and spread his kindness to different denominations, but he respected Muslims more than others... He had a son... he was committed to Islam and loved to listen to readings from the great Quran, although he did not understand it. He proposed that, when he became the tsar of this country, no other faith would remain, save for the Muslim faith. He died during his father's life, leaving a son behind. When he died, his father (Toqta) appointed him, the son of his dead son, as successor. However, he did not rule, because after him (Toqta), the kingdom was taken by his brother's son, Öz Beg

Khan... He overcame several emirs and dignitaries, he subdued a large quantity... of lamas and magicians and proclaimed the creed of Islam' [Ibid., p. 174].

An author at the end of the 14th century, Ibn Dukmak, supports this information with a tale of Temür Qutluğ's conspiracy. Before placing Öz Beg Khan on the throne, he 'forced him to swear that when he ascended to the throne, he would become a Muslim and adhere to Islam'. After his ascent, in the words of Ibn Dukmak, Öz Beg Khan 'zealously joined the faith of Allah and built himself a cathedral mosque where (all) five prayers were held at the time set for each. A group of Tatar emirs resented this and intended to overthrow him, but the conspiracy was stifled and the ringleaders were executed' [Ibid. pp. 232–233]. The same information is repeated, with some additions, in the chronicles of al-Ayni (d. 1451) and Ibn Khaldun (written in 1406) [Ibid., pp. 384–386, 515–516].

Later versions of this event, (for example, the anonymous 'Shajarat al-Atrak/Genealogy of Turks' (15th century)) report that Öz Beg Khan adopted Islam much later: 'Having gained the throne, he (Öz Beg Khan) spent eight years in the northern Desht-i-Kipchak with his ulama and ulus... When eight years from the beginning of his sultanate had passed, he (Oz Beg Khan) had the honour to accept Islam under the direction of a holy sheikh of sheikhs and a Muslim, Saint Zenghi-Ata, the foremost Sayyid of highest titles, pointing the lost to the devotion of the Lord of all worlds, the leader of travellers and searchers, the holy Sayyid-Ata, the successor to Zenghi-Ata, in the months of 720 (12 November 1320—30 January 1321), corresponding to the year of the hen', [Sbornik materialov, otnosyashixsya k istorii Zolotoj Ordy', 1941, p. 207]. This message is differentiated from others because it shows the influence of Turkestan ulamas on the spread of Islam in the Golden Horde. This is obviously based on a desire to prove the ancient foundation of its claims to convert the Jochid khans.

It should be emphasised that, starting with Öz Beg Khan, who had his full Islamic name printed as 'Sultan Muhammad Öz Beg Khan' on all coins, all other Jochids also had an Islamic name along with their Turkic one—Jani

Beg (1342–1357) was called 'Sultan Jalal ad-Din Mahmud', Berdi Beg (1357–1359) and Urus—'Sultan Muhammad', Tokhtamysh (1379–1395)—'Sultan Nasir ad-Din', etc. [Klyashtorny, Sultanov, 2000, p. 223].

From then on, the Islamic civilisation became the defining force in the Jochid Ulus' political and cultural development. Thus, the medieval Tatar state became the centre of Islam in the north. Arabic diplomats respectfully called the khans of the Jochi clan, who ruled the Golden Horde, 'the sword of Islam in the northern lands'.

Religious Policy and Clergy. In the first half of the 14th century, there was a complex ideological situation in the Jochid Ulus: Islam—one of several competing religions—became the state religion. Islam began to spread throughout a significant part of the country's population. At first, however, the formal increase in the number of believers certainly did not lead to the deep penetration of Islam into public consciousness.

The irony of the situation is that, although previously small and compact Islamic communities with established traditions could demand a strict adherence to the rites and canons of faith, after the acquisition of an official status, the flow of neophytes could not help but make these norms more flexible and likely to change. On one hand, the appearance of a considerable quantity of publications by lawyers, theologians and writers, who were developing complex theological and dogmatic problems and stories, became a prominent feature of this development in the intellectual culture within the Jochid Ulus' population. On the other hand, the flow of converted pagans from different ethnic and social groups, who were far from these issues, became larger. Burial grounds located on the outskirts of the Lower Volga illustrate this complex period in the interaction between Islam and traditional faiths. Numerous burial sites with bones, horse skeletons and various items were examined there [Fedorov-Davydov, 1966, p. 150]. However, the underground tombs, where the dead bodies were placed according to qibla, and the pit graves that were faced with air-dried bricks (*sagans* like Central Asian semi-underground

burial-vaults), often without other possessions, are of the greatest interest [Ibid., p. 161].

During the formation of Islam as a state religion, the choice of concrete dogmatic practices and judicial canons as well as the development of links between local traditions and Islamic law occurred. Apparently, the Hanafi branch of Sunnism from Central Asia was adopted in the Jochid Ulus. At the same time, and contrary to popular opinion [Fakhrutdinov, 2001, p. 131], Islamic traditions from Bulgaria, which existed in more of an orthodox and millenarist form than in Khwarezm and Transoxania, did not have a decisive influence on the religious and ritual practices of the Golden Horde, and they later turned out to be mixed with, and substituted by, new traditions. Hanafi mazkhab, as well as Shafiit, which was apparently close to it, was widespread in Golden Horde cities, where they loyally followed some traditions and also allowed the preservation of some pre-Islamic customs. This tradition was better suited to a society, which was at the stage of introducing Islam.

At the same time, Öz Beg Khan and his closest descendants proved themselves to be strict followers of Islam. It was expressed by changes in diplomatic etiquette and practice, the appearance of Islamic fiscal terms and in Islamic trial, which was implemented by the authority of the Khan. There was also intolerance to representatives of other religions who, apparently, were not allowed to act in the public and administrative departments of the Jochid Ulus from 1313 onwards. Relations between the Golden Horde and Egypt under Öz Beg Khan and his descendants continued to be friendly and they remained allies. The parties repeatedly exchanged ambassadors, and particular diplomatic etiquette and forms of address in correspondence were created [Zakirov, 1966, pp. 98–143]. Islam became the state religion and the core of the empire's ideology—the Islamic priesthood was the most important guide for religious policy, receiving large gifts of land and *vaqfs* [DeWeese, 1994, pp. 90–142].

However, one cannot deny certain differences in the adherence to some canons of Islamic law that were demonstrated by various

to V. Egorov and G. Fedorov-Davydov).

levels of society. With false external piety, the nomadic nobility clearly allowed themselves some indulgences in ritual practice, for example, they drank wine and were buried in clothes and even with weapons. This is by no means accidental. The exact religious beliefs of the Tatar aristocratic clans ('throne support') were not that important to the khans, but their faithfulness to power, personal loyalty to the khan, and belief in the holiness of the 'Clan of Chinggis Khan' was. It was not accidental that the emirs sent the following in response to the Öz Beg Khan's demands that they adopt Islam, 'Expect our obedience and loyalty, but our faith, confession, and attitude towards the code (*Iasa*) of Chinggis Khan is not your business' [Sbornik materialov, otnosyashixsya k istorii Zolotoj Ordy', 1941, p. 141]. Therefore, although Islam played a significant role in the court of the khans and was an ideological sanction for power (unlike the Yuan Empire and Hulaguld Iran where '*Iasa*' by Chinggis Khan operated), for the nobility, Islam was often an

(according to V. Egorov and G. Fedorov-Davydov).

outer shell. This was especially the case for the nomadic nobility, which was oriented on the ritual aspect of life with knights' codes of honour and regional sects of saints, and superstitions [DeWeese, 1994, pp. 231–319]. They followed the ritualistic practices and canons of the religion more strictly in the cities and their outskirts, while a more domesticated Islam, with traditional faith and rituals, dominated the nomadic steppe.

After the brief rule of the oldest of Öz Beg Khan's sons, Tini Beg (1341–1342), his younger brother, Jani Beg (1342–1357), came to power. The new khan started to implement a stricter and more orthodox policy. As the Persian author Muin ad-Din Natanzi ('Iskander's Anonymous') wrote, 'He converted all of Öz Beg Khan's uluses to Islam, all altars of idols were destroyed, and many mosques and madrasahs were erected. He focused all of his attention on the well-being of the people of Islam. Many fine people and scientists from different countries and Islamic states made for his court. In his time, the sons of the emirs of Desht felt inclinations towards the acquisition of merits and the study of the sciences. Each of them became leading scholars, so the results of their thoughts and the fruit of their minds are still passed on at meetings and gatherings. He introduced all the customs of Islamic countries into the government' [Sbornik materialov, ot-

nosyashhixsya k istorii Zolotoj Ordy', 1941, p. 128] In his policies, Jani Beg completely followed his father's traditions, except for the fact that he did not interfere in Balkan affairs.

The active construction of religious buildings began in the towns of the Jochid Ulus at the end of the 13th and in the first half of the 14th centuries. Based on archaeological data, the construction started in the towns of Bulgaria, especially in Bulgar, where the famous Juma-Jami Mosque was erected in the centre of

the city [Smirnov, 1951, pp. 205–214; Aydarov, 1970, pp. 39–57]. Gradually, Islamic buildings, as well as madrasahs, hospitals and courts of justice, appeared in every region of the country. Dating from the first half of the 14th century, a whole range of samples of iconic architecture in different regions of the Jochid Ulus has been discovered. These include a 60 metre tall minaret of Temür Qutlugh, the mausoleum of Turabek-Khanum and Sheikh Najmuddin Kubra's zaviye in Urgench, another mosque (apparently, the Juma-Jami Mosque), and a madrasah, as well as possibly the premises of a Trial Chamber in Sarai (Selitrennoe archaeological site) and Beljamen (Vodyansk archaeological site), wonderfully preserved remains of the Large and of the Small Friday Mosques of Upper Julat—the largest mosque (nearly 3 thousand sq. m) in the Golden Horde in the town of Old Orhei (Transnistria), the mosque of the Kuchugur Ancient Town (Lower Dnieper) settlement, as well as the mosque and madrasah of Solkhat (Stary Krym) [Zilivinskaya, 1998, pp. 16–37]. All of these mosques and iconic buildings, as well as the monuments to pre-Mongol Bulgaria, followed the traditions of Central Asia, and especially the Seljuk architecture. When considering the eastern view of the capital of the Jochid Ulus and the presence of cathedral and large mosques, Ibn Battuta, who visited it in 1332, wrote, 'Sarai is (one) of the most beauti-

ful cities... There are 13 mosques for religious services, one of them is shafiit. In addition, there are many other mosques' [Sbornik materialov, otnosyashhixsya k istorii Zolotoj Ordy', 1884, p. 306].

The adoption of Islam led to a change in the status of the state's power. The khan's right to rule was not 'By the force of Eternal Heaven' but from Allah. Both state ideology and historiography changed respectively as well [Iskhakov, Izmaylov, 2000, pp. 98–106]. New Jochid bureaucracy, diplomacy and currency became the material expression of this change in civilisation [Usmanov, 1979; Zakirov, 1966; Muhamadiev, 1983]. Formal titles, such as 'follower of warriors and fighters of faith', 'the greatness of Islam and Muslims', 'the pillar of faith', 'the glory of Islam and Muslims', 'the sword of the ruler of the faithful ones', etc., appeared among the khans of the Jochid Ulus and high-ranking dignitaries. Traditional folklore and popular epic poems were filled with Islamic motifs.

In the first half of the 14th century, the hierarchical structure of the Islamic clergy gradually began to form in the Golden Horde. It was headed by the descendants of the prophet, the Sayyids (Syeds). The privileged position of the Sayyids was reflected in the sources; for example, the 'Genealogy of Turks', after the description of Öz Beg Khan adopting Islam, re-

lates that 'the sign of the il (tribe), which came from the north with Öz Beg Khan and Saint Sayyid-Ata with the Myurids of Sayyid-Ata, (and the ones who were not his murids either), [Sbornik materialov, otnosyashhixsya k istorii Zolotoj Ordy', 1941, p. 207]. Thus, the people (obviously, the priesthood) from the 'province of Öz Beg Khan' (i.e. the Jochid Ulus) were considered murids of a particular Sayyid who reckoned himself among the descendants of Saint Ahmad Yasavi.

Golden Horde Sayyids (Syeds) were one of the basic elements of the country's Islamic clergy, which had a complex internal structure. We can evaluate this based on a whole range of sources. For example, the yarliq of Öz Beg Khan to Metropolitan Peter contains an address to 'scribes, code keepers and public teachers' [Grigoryev, 1842] and Ibn Battuta wrote that Sultan Jani Beg 'gathered sheikhs, qadi, legal scholars, sheriffs and fakirs and held a great feast for them' [Sbornik materialov, otnosyashhixsya k istorii Zolotoj Ordy', 1884, p. 291]. 'Kazii-muftis' and 'sheikhs-masheikhs' (sheikhs above sheikhs), as well as 'Sufi sheikhs' are also mentioned in the yarliqs of Toktamys (1391 or 1392) and Temür Qutlugh (1397 or 1398) [Berezin, 1851, p. 10–15; Fedorov-Davydov, 1973, p. 126; Iskhakov, 1997c, p. 72–73]. Without a doubt, the above-mentioned clergymen were

Öz Beg Khan coins (Sarai, Azak, Khwarezm, Mokhshi) (according to G. Fedorov-Davydov)

hierarchically organised, relative to each other, although their hierarchy has not been completely defined.

Official judges ('qadis') played a special role in this hierarchy of the priesthood. They were elected by the community or appointed by the ruler and administered justice on the basis of the Sharia law. According to Islamic traditions, their main duties were not only legal investigation and dogmatic issues, but also the supervision of issues of morality and property of *vaqfs*, etc. Very often, the qadi carried out the administrative functions of community leaders and sometimes served as bureaucrats for special missions. Golden Horde qadis are often mentioned as participants in diplomatic contacts, for example, with Egypt - and not without reason. Apparently, the ulug karachibek (beklyaribek), Temür Qutlugh, fulfilled judicial functions himself in important cases. A description of a court session made by Ibn Battuta has been preserved: 'One of the habits

of this emir is that every day, the qadi comes to his reception and sits down in the seat allocated to him, and legal scholars and scribes come with him. One of the senior emirs sits down in front of him, accompanied by eight (other) senior Turkic emirs and sheikhs called *argudji*; people come to them for legal proceedings. As far as religious issues are concerned, they are solved by the qadi, all the rest is the emirs' business' [Sbornik materialov, *otnosyashixsya k istorii Zolotoj Ordy*', 1884, pp. 311–312] He also noted that, 'The qadi of this capital (Sarai), Bedreddin al-Araj, is one of the best qadis' and indicated that every *mazhab* had his own qadi in Sarai [Ibid., p. 306]. Obviously, this system was combined when religious and civil cases were investigated on the basis of different traditions. Gradually, Sarai became one of the active centres for the study of *fiqh* and for sharing information with countries of the Islamic East. For example, according to the data of some Arabic sources, Öz Beg Khan requested books on *fiqh* issues [al-Kholi, 1962, p. 28].

In the middle of the 14th century, distinguished scholars of theology and a *fiqh* lived and worked in the Jochid Ulus. Ibn Arabshakh understandably wrote that, 'Sarai became the centre of science and a source of grace; and in a short time an unprecedented number of scientists and well-known people, teachers of literature and masters, and all manner of distinguished people came there who could not be seen in other populous parts of Egypt or in its villages' [Sbornik materialov, *otnosyashixsya k istorii Zolotoj Ordy*', 1884, p. 463]. The formation of a universal system of Islamic education also occurred at that time. Madrasahs were usually organised on the basis of a well-known saint's burial vault (*zaviye*), which was either a pilgrimage destination or a mosque (see: [Ibid., p. 308]). Money to maintain mosques, madrasahs, and hospitals affiliated with them was often provided by *vaqfs* (these were usually caravans and/or baths).

It is believed that madrasahs were intended to train a class of professional scholars for to facilitate the spread of Islamic law and faith throughout society, that is, religious and legal information. In any case, the formation

of a system of Islamic education in the Jochid Ulus served the purpose of the further institutionalisation of Islam and the professionalism of ulamas, which contributed to the depth and breadth of Islam's distribution.

The wide-spread occurrence of Sufi cloisters (*khanqah*, *ribats*), not only in the districts where the traditions of Islam had spread, but also in the Lower Volga Region and Crimea, became another way in which the process of institutionalising Islam was expressed. The sense of Sufi theory as a mystical trend in Islam became a part of Sunni orthodoxy, thanks to works of al-Gazzali and his followers—and additionally, in the Turkic countries of Northern Eurasia, the sermons and works of Ahmad Yasavi. Khanqahs were especially wide-spread near mazars in the Golden Horde during the rule of Öz Beg Khan and his closest descendants, when their spiritual authority and social prestige rapidly increased. Judging by indications from sources, it can be seen that the khanqahs received rich waqfs, money allowances, and the patronage of the khans themselves. An example is the burial vault built at the grave of Najmuddin Kubra, which was rebuilt by the order of Öz Beg Khan. Sheikhs al-Bakharzi, Sayiid-Ata and others had a significant influence on the court of the khans in different years (for more on the spreading of Sufism in the Jochid Ulus see: [DeWeese, 1994, pp. 72–142; Malov, Malyshev, Rakushin, 1998, pp. 111–118]). In other words, Sufi khanqahs were usually located near places of worship, holy places and the graves of saints (mazars). They were centres for the spreading of Islam in different regions of the country (for more details see: [Ibragimov, 1988, p. 74]).

There appears to be an unjustified notion often found in scholarly articles that 'the Sufi sheikhs and dervishes, often inclined to mysticism, deliberately included the religious and domestic traditions of nomads in the expression of their religion... therefore, the Islam being preached by them was more viable in the nomadic steppe'. These researchers have a particular view concerning the Islamisation of the Jochid Ulus, in which 'Central Asian Sufism, giving Islamic form to many traditional Turkic Mongol religious faiths, brought new tribes

Islamic burials.
Vodyanovo archaeological site
(according to V. Egorov
and G. Fedorov-Davydov).

into the process of Islamisation...' [Malov, Malyshev, Rakushin, 1998, p. 118]. There are no grounds to believe that the traditions of national Islam were being established because Sufism gave an Islamic form to the Turk-Mongolian religious faiths. National Islam and its specific beliefs require a special study of the traditions and innovations, which appeared together with Islam, although they were neither welcomed nor condemned by it. It is thought that the causes of the relatively fast adoption of Islam among the Tatar population and its deep penetration into the consciousness of the aristocracy, as well as into that of ordinary folk, do not lie in the 'Islamic form' that was convenient for the faith of Turkic Mongolia, but in the significant administrative pressure and, clearly, the struggle for faith, which united the people.

Being one of the key and effective mechanisms of this conversion, Sufism was multi-faceted and encompassed different tendencies of public thought. However, orthodoxy and the practice of militant irreconcilability in the faith were a common feature of Sufi tarikahs in the

Islamic burials. Vodyanovo archaeological site (according to V. Egorov and G. Fedorov-Davydov).

early stage of their development. Regarding philosophical and literary works preserved since the epoch of the Golden Horde, they were saturated with Sufi motifs and expressed sufficiently high levels of ethical and social ideals, which required great self-denial and a resolution for internal change [Amirkhanov, 1993]. The Sufi brotherhoods and their ideology of the institutionalisation of Islam in the Jochid Ulus played a significant role in the reception of faith in the form of orthodox Sunnism. In addition, an influential wing, which was actively preaching an armed 'holy' war for the Faith, existed among Sufi tarikahs. At the same time, different traditional faiths, of course, continued to exist among the population of the Jochid Ulus, but they were located in the periphery of public consciousness and did not play a significant role in the mentality of the society and its ritual practices.

Nevertheless, there remain unanswered questions about the religious nature of the population of the Jochid Ulus and the internal organisation of life in the Islamic community. Some data relating to this can be drawn from the study of monuments with brief inscriptions of Islamic epitaphs from the territory of the Bulgarian emirates [Yusupov, 1960; Khakimzyanov, 1978; 1987; Mukhametshin, Khakimzyanov, 1987]. However, they do not give much comprehensive data about the life of the ummah—significantly less compared to the information they reveal about the conception of death and formal religious tradition.

Overall, despite the clear predominance of Islam in the Jochid Ulus during the first half of

the 14th century, religious tolerance remained. The non-Muslims (namely the Christians and the Jews, as the pagans were not considered to adhere to any religion), were obviously regarded as *Dhimmis*, that is, under the patronage of Muslims, but they retained self-governance (other papers clarify Golden Horde policy towards different non-Islamic faiths in great detail, allowing us to pass over this particular issue) See: [Grekov, Yakubovsky, 1950, p. 282; Poluboyarinova, 1978; Sochnev, 1993, pp. 107–118; Malov, Malyshev, Rakushin, 1998, pp. 57–93].

In the cities of the Volga Region, churches of all Christian denominations, as well as synagogues, were erected along with mosques and each faith group of the population had its own cemeteries. Mongol representatives of many peoples, Ases (Alans), Kipchaks, Circassians, Russians and Byzantines lived in Sarai. 'Each people lives in its own area separately', wrote the Arabian traveller, Ibn Battuta, adding that their churches were situated in the same place as their dwellings [Sbornik materialov, otnosyashixsya k istorii Zolotoj Ordy', 1884, p. 306]. This was not by chance. Having created an empire, the khans of the Jochid Ulus strove to join all their subjects into a single community even if they would not all adhere to a single faith. Hence, they aimed to have a clergy that served them, understanding the omnipotence of the throne of the Golden Horde and ensuring that the loyalty of citizens would originate directly from this policy. Very broad rights were granted to the Christians in Sarai. By 1261, in the time of Berke, the orthodox

diocese of Sarai was formed, and the first bishop, Mitrophan, was appointed. This diocese remained in Sarai up to the 14th century, after which it was transferred to Krutitsy, Moscow. It continued to exist there until 1764, when it was then divided between the neighbouring dioceses [Grekov, Yakubovsky, 1950, p. 282; Sochnev, 1993, p. 107; Malov, Malyshev, Rakushin, 1998, pp. 87–90].

In the regions where Christianity (Rus', Alania, Southern Crimea) traditionally dominated, the circumstances were different. Already during Batu's rule, the orthodox clergy received distinct privileges. During the reign of Mengu-Timur Khan, this policy underwent further development. The Metropolitan Kirill received a *yarliq* from his administration (around 1267) 'concerning their various tribute and tax exemption, respect for their service, and even deductions from Tatar bureaucrats for their offenses and harassment'. Its text asserted that 'this charter, seen and heard from priests and monks, certifies that neither tribute nor anything else that is desired by baskatsi, prince scribes, *kopluzhniki*, and *tamozhnitsi* will be taken, and if taken - they will have to apologise or die' [Pamyatniki russkogo prava, 1955, p. 467]. By this *yarliq* and the others similar to it, the death penalty was sentence for insulting churches and faith, as well as for the destruction of church property. The *yarliqs* even contained a direct address to the Russian princes, with an appeal to observe the privileges of the church. Also, after the formation of Islam as the Golden Horde state religion, the Orthodox Church gained enormous authority. So, in 1313 Metropolitan Peter made a special trip to the Horde and was greeted with an honourable reception, having gained the entrenchment of the clergy's privileges [Russkoe pravoslaviye, 1989, pp. 72–76]. Interestingly, it refutes Church legends regarding the Church itself as an organiser of struggle against 'Tatarschina'. On the contrary, the Horde's power was a guarantee for the Church's future prosperity. It is not without reason that Tver princes subordinate to the Khan, who met their deaths without even having begun an open opposition, were deemed holy by the Russian orthodoxy.

Mosaics with epigraphic ornamental patterns (according to L. Noskova).

The presence of various faiths and religious communities in the cities of the Jochid Ulus contributed to the early emergence of self-identification by both the nobility and the main population of the country. Religious affiliation was a defining factor here. Becoming a member of an Islamic *umma*, a person chose his Tatar ethno-political identification, whether consciously or unconsciously.

Islam and Culture of the Golden Horde.

The Golden Horde civilisation is a bright page in the history of world culture. A powerful imperial style was created, where the traditions of many peoples merged into one—not as a cluster of chaotic heterogeneous elements, but as a system of organically fused phenomena surpassed by powerful sounding styles and various trends in different periods of its existence. Aside from the syncretical background of pre-Mongol cultures, some of which had developed a figurative language based on Islamic (Khwarezm, Bulgar) or nomadic Eurasian (the Kipchaks and Kimaks) traditions, one cannot help but note Central Asian and

Far Eastern material elements and artistic culture in the Ulus of Jochi. The imperial culture of the Golden Horde emerged as a result of the creative activity of almost all the people who belonged to the Jochid Ulus, mastering a cultural repertoire that was then brought by conquerors to the west. Most vividly Chingisid traditions manifested themselves in the cultural field of socially exclusive accessories, which were the distinguishing feature of the military and service class nobility: a full costume system, consisting of a belt kit, objects of weaponry, and other accessories. Of course, this culture was not completely united because initially it was strictly socially oriented. However, in the beginning of the 14th century, during the growth of cities in the Jochid Ulus, primarily in the Volga Region, a new eastern medieval culture blossomed. This was a 'culture of flow bowls, mosaic panelled mosques, Arab stargazers, Persian poems and Islamic spiritual learning, hierophants of the Quran, mathematicians, and astronomers, exquisitely delicate ornaments, and calligraphy' [Fedorov-Davydov, 1976, p. 118]. Thus, the defining feature of the Golden Horde civilisation was that it was a syncretic, full-bodied, even, and supra-ethnic imperial culture, under the guidance of Islam.

The cities of the Volga Region were large cultural centres, where literature and art were developed and colloquial and literary languages were formulated. The archaeological remains of these cities (of which there are more than 100), were some of the largest medieval cities in Eurasia. Among these are Sarai (Selitrennoe archaeological site), Sarai al-Jadid (Tsarevskoe), Beljamen (Vodyanskoye), Ukek (Uvekskoe), Bulgar (Bulgaria), Ackerman (Belgorod Archaeological), Shehr al-Jadid (Starookheyskoe), etc., as well as numerous ancient settlements, waste heaps (barrows with elements of pagan ceremonies from until the end of the 14th century, and Islamic ground from the second half of the 13th century) and mausoleums (*keshene*) (from the 14th to 15th centuries). The presence of ovens, kans (horizontal chimneys), and sufs (brick ledges) in city complexes were typical features of the houses, as well as brick and white stone pub-

lic buildings (mosques, baths, etc.). The walls of many buildings, especially those of multi-room brick houses, were faced with painted plaster, carved ganch (terracotta), and kashin (or multi-coloured glazed) tiles and the floors were laid with featured stone tiles and bricks. Cities had complex street plans with large urban and suburban estates at their core. Estates have been discovered in the vicinity of big cities (which extended from 500 to 5000 sq. m and were surrounded by walls), within which the multi-room houses, separate residential complexes, household outbuildings and reservoirs (*hauses*) were situated. Complex hydraulic engineering constructions have been found, including artificial lakes, irrigation ditches, and an underground plumbing and sewer system (assembled from clay pipes). Circular red clay and kashin pottery dishes in diverse shapes (from pialas to jugs, bowls, soup plates and bottles), a variety of paintings (plants, geometrical, zoomorphic and arabesque ornaments), women's dress decorations and details of military everyday life (openwork and simple belt sets), the shape of weapons and trappings, etc. are characteristic elements of household culture from the Golden Horde period.

During the Golden Horde period, Turkic language and culture, along with Arabic and the Persian cultures, became the medium of international 'higher' culture. Various dialects of the Kipchak language were the basic means of communication in Golden Horde cities and in the steppe districts of the Jochid Ulus. On the basis of this, an urban language began to form in the cities of the Golden Horde and the Kipchak language acquired official status in the cities of the Golden Horde. A dictionary, Codex Cumanicus, which was put together in the 13th and 14th centuries in one of the cities of the Jochid Ulus, is evidence of this [Radloff, 1887; Abdullin, 1974, pp. 166–184]. The character of this language and its distribution among the layers of the city population and its prevalence among different strata of the urban population can be discerned by archaeological findings. A bull blade from Sarai al-Jadid deserves particular attention. The blade features two drawn faces and a Kipchak inscription: 'This caricature, I swear by Allah, (was done)

by the hand of Ali... son of Muhammad' [Usmanov, 1963, p. 246].

On the basis of the colloquial, urban language and the norms of literary Karakhanid language (and apparently Bulgarian as well), a literary language—Volga Turki—was formed in the Golden Horde [Usmanov, 1979, pp. 101–106; Nadzhip, 1979; 1989]. Surviving works of old Tatar literature were created, such as 'Gulistan of Bit-Turk' by Seif Sarai, 'Mukhabbat-name' by Al-Khwarezmi, 'Khosrov and Shirin' by Qutb, 'Nakhj al-Faradis' ('Open way to heaven') by Mahmud as-Sarai al-Bulgari, 'Qisas Al-Anbiya' by Rabguzi ('Stories of the Prophets'), as well as many other works that have disappeared with time [Nadzhip, 1989]. A special genre of literature was comprised of religious and philosophical works of a social and ethical nature (see more details: [Amirkhanov, 1993]).

It's certain that from the 13th century to the beginning of the 14th century, Mongol decrees and diplomatic documents were in part copied down or duplicated in Kipchak (for example, the famous complaint letter of Öz Beg Khan to the Venetian ambassador, A. Zeno, sent in 1332, was translated into Latin from 'Kuman' [Grigoriev, 1981, pp. 81–83]), but from the second half of the 14th century to the 15th century, Turkic was the only official state language (Kipchak or old Tatar) [Usmanov, 1979, p. 101].

The prosperity of the Jochid Empire, the development of cities, the formation of a powerful and syncretical culture, the formation of an urban language and a literary language ('Volga Turks'), as well as the active mixing of military-feudal nobility, led to the formation of the Tatar ethno-political community. Despite the fairly well-studied implications of these processes, the mechanism of such an ethno-political transformation itself still remains largely unstudied. However, based on modern ethnological studies and the analysis of the specificity of the medieval mentality, one can assume that ideological reasons played the key role in these processes, namely the insertion of a new Jochid ethno-political identification [Iskhakov, Izmaylov, 2000, pp. 89–111; Iskhakov, 2001, pp. 85–96].

The Fall of the Ulus of Jochi and the Rise of Islamisation. In the middle of the 14th century, the Jochid Empire seemed to be the 'world superpower' of which Mamluk Egypt Sultan Beibars spoke in 1263, referring to the 'acceptance of citizenship and subordination'. The Egyptian sultans termed Öz Beg Khan 'his great majesty, sultan brother, courteous, competent, just, the greatest, so to speak, unique khan, shahanshah, ruler, Öz Beg Khanilkhan, sultan of Islam and Muslims, the only one among the rulers and sultans, pillar of the kingdom, sultan of the Mongols, the Kipchaks, and Turks, the beauty of modern rulers, the pillar of the God-fearing house of Chinggis Khan, owner of the throne and crown, assistant to those who fear God, and the support of believers' [Polyak, 1964, p. 40]. However, the omnipotence of the khans of the Golden Horde had already been undermined by internal contradictions.

In 1359, the Horde entered a period of permanent, ever-deepening crisis. For twenty years, internecine wars, mutinies and palace revolutions tormented the Horde. Tokhtamysh Khan, who, thanks to the support of the eastern nobility, managed to unite the country and return it to its former strength in 1380, prevented the final break-up of the Jochid Ulus. However, a series of unsuccessful wars for hegemony in Central Asia between the Horde and Tamerlane's empire ended with a frightful defeat of Desht-i-Kipchak. The country lay in ruins. The majority of its cities were destroyed, craft production began to decrease, and trade and the economy were crippled. The long wars and the awful epidemics destroyed the population levels. Internecine feuds broke the country back into many parts. In a country which had been recently dictating its will to the neighbours, there was hardly any life at all. The neighbouring states—the former vassals of the Horde—were conducting a policy of expansion in their territories and active intervention in the affairs of the Jochid Ulus. The frequent internecine wars and struggles against neighbours caused the reinforcement of the religious factor in the state's life.

In the united Jochid Empire, the rulers were most likely to be more concerned about the loyalty of their subjects, as opposed to their

faith. Therefore, nominations of Nestorian and even of pagans for senior posts were frequent in the Horde. Religious tolerance was most likely universal and the basic political doctrine became 'Chinggisism'—a faith in the divine source of the power of the khans of Chinggis Khan's dynasty. It was only from the middle of the 14th century that the Muslims supplanted the other faiths, thanks to the increase of the city aristocracy and military nobility's influence. During the collapse of the Jochid Ulus, these tendencies surfaced even more frequently, revealing religious tensions between the different areas of the land.

In these conditions, a new stage of Islamisation in the Ulus of Jochi associated with the name of Ulug Karachibek (or Beklyaribek) Edigu began. He was a legendary figure. It is enough to say he was highly intelligent and had the rare abilities of a top statesman. Even though he was not noble or rich at birth, he managed to rise to the very top rungs of power in the Horde and to become one of the chief political figures of Eastern Europe and Central Asia at the turn of the 14th and 15th centuries. It was he who managed to neutralise the destructive processes in the Jochid Ulus. He used disagreement among clans of migratory and metropolitan nobility, and attempted to stabilise the domestic and external position of the country. He not only managed to consolidate the whole country for a little while and inflict a whole range of defeats upon his neighbours, but he also reactivated trade for a short time, brought order to laws and taxation, and increased military strength.

Edigu established 'subtle customs in the state and a great law (yasak), and the people entered into a constraint from frivolity' [Sbornik materialov, otnosyashhixsya k istorii Zolotoj Ordy', 1941, pp. 133–134]. This 'constraint' was also caused by the active intervention of Islam, about which the Castilian ambassador to the court of Timur, Ruy Gonzalez de Clavijo, wrote, citing someone else's words and clearly exaggerating the tension of the situation: '... this Edigeu drew and draws the Tatars to the Islamic faith, as they recently did not believe in anything, but they have not yet accepted the faith of Muhammad' [Clavijo, 1990, p. 159].

Another European who lived in the beginning of the 15th century in the Northern Black Sea Region—the Italian merchant and diplomat I. Barbaro—agrees with him. Describing the religious situation in Jochid Ulus, he noted, 'The Islamic faith became very popular among Tatars around one hundred and ten years ago. Admittedly, only few of them were Muslims before and every person could enjoy believing what he wanted. Therefore, there were even those who worshiped wood or cloth idols and paraded them on their carts. Coercion to accept Islamic faith comes from the time of Edigu, the military leader of the Tatar Khan...' [Barbaro and Contarini, 1971, pp. 140]. Archaeological data even more strongly suggests a widespread victory for Islam within the migrant population of the Jochid Ulus [Fedorov-Davydov, 1966, p. 9, and Garustovich, 1993, pp. 86–90; Garustovich, et al., 1998, pp. 257–259].

Of course, this referred to the steppe population as well as the city dwellers, not only in the traditionally Islamic regions of Bulgaria and Khwarezm, but in the Lower Volga Region, which was already quite Islamised from the beginning of the 14th century. However, even the active consolidation of the population with the help of religion did not save the Jochid Ulus. Edigu's struggle ended dramatically. The natural collapse of the Horde became a reality under him and the former power of the Horde continued living only in the minds of its descendants.

In conclusion, it must be said that the Golden Horde period in the history of Northern Eurasia was a time of complex ideological experimentation. Having a long history in Eastern Europe and Central Asia before the Mongol conquest and the formation of the Jochid Ulus, Islam became the foundation of the Golden Horde civilisation. Spread in the Middle Ages throughout a wide territory, each nation's form of Islam is known to have its own peculiarities. These local differences are for the most part related to the specificity of a nation's everyday life and to a significant extent, were caused by maintaining elements of pre-Islamic faiths and traditions [Mukhametshin, 1994, p. 31]. Being a Turkic state (if not by dynasty, then by ethno-political traditions) where nomads made

up a rather significant part of the population, the Golden Horde retained elements of earlier faiths in its culture for quite some time.

Islam was one of the most important consolidating and integrating factors in the Jochid Ulus. A new imperial supra-ethnic culture gradually started to form under the influence of Islam, with the dynamic formation of the Jochid state and development of cities and city culture. From the early 14th century, its culture became integrated with Islamic civilisation. The elements of traditional Turkic culture were either forced beyond the margin of public conscience or processed in an Islamic way.

As a result of the formation of a Tatar ethno-political community [Iskhakov, Izmaylov, 2000, pp. 89–111], the first plan of action included consolidating factors, which remained even after the collapse of the Jochid Ulus into separate khanates. The most important were the maintenance of the former socio-political

structures, the clan system that goes back to formation of the Jochid Ulus, which included the military-service Tatar nobility, as well as mythologems of ethno-political unity and a general religion— Islam. At the same time, the Muslims of the Golden Horde (especially the aristocracy, as it seems) were brought together not only by the acceptance of Islam itself, but by the special institution of the Sayyids (Syed). It's no accident that in a number of the later Golden Horde Tatar khanates, Sayyids (Syeds)—heads of local Islamic clergy—traced their genealogies to common ancestors who lived in the epoch of the Jochid Ulus [Iskhakov, 1997, p. 21]. This realisation of a connection with the Tatar khanate population via religion and its institutions was one of the factors that provided an inner unity between the historical past and culture of the Islamic peoples of Northern Eurasia, which held a significant meaning throughout subsequent history.

CHAPTER 5

Architecture, Arts and Crafts

Iskander Izmaylov, Liliya Sattarova

The art of the Jochid Ulus represents a very interesting and important stage in the history of world culture. As a result of the Mongol invasions, the ethno-political map of Eurasia was completely redrawn, which led to the formation of a new civilisation [Safargaliev, 1960; Zolotaya Orda, 2005; Kramarovsky, 2005; Kulpin, 2004]. At the same time, although the role of the regional heritage was quite large, Central Asian traditions came to define the period. The symbiosis of these various elements became the basis for the addition of an imperial, supraethnic, Golden Horde culture. Two integrating factors—Islam, which had already become the basis of the Golden Horde culture at the crossroads of the 13th and 14th centuries [Izmaylov, 2002b], along with the growth of cities, played the most important roles in these processes. The medieval Tatar state thus became the centre of Islamic urban civilisation in Northern Eurasia.

History of the Golden Horde's architecture and fine arts study had already begun by the end of the 17th century to the beginning of the 19th century, when the first descriptions of Volga Region cities appeared and the early archaeological researches were initiated (see: [Grigoriev, 1847; Tereshchenko, 1850; 1853]). These works bore the imprint of the initial stage of archaeological development in Russia and were unfortunately unsystematic and random, they were used rarely, only to illustrate historical papers. As a result, notions of the Golden Horde as a weakly developed, nomadic state, where art was entirely borrowed from subjugated nations, began to gradually form in the domestic academia.

F. Ballod made an attempt to reconsider the situation in the beginning of the 1920's, having undertaken the first significant research on the entire range of Lower Volga Golden Horde

cities, coming to a conclusion about the blossoming of the cities and urban culture in the Ulus of Jochi [Ballod, 1923a; 1923b; 1924]. Later, A. Smirnov picked up the mantle of studying the cities, embarking upon systematic and purposeful excavations in Bulgar in 1938, discovering the great monuments of the Golden Horde culture [Zbrueva, Smirnov, 1939; Smirnov, 1940; 1941].

The new stage in the study of the art of the Jochid Ulus commenced in 1959, when G. Fedorov-Davydov led an archaeological expedition to the Volga Region and began an intensive historical and archaeological project in all of the Lower Volga settlements and above all, in the capital cities of the Golden Horde. These studies not only increased the source base by a factor of hundreds and created the Golden Horde Archaeology, but also allowed for the reconstruction of the civilisation of this medieval state. The papers of G. Fedorov-Davydov [1976; 1981; 1994], his disciples and followers established a school for scientific study of the Golden Horde art, touching on diverse spheres of its culture, which allows for presenting it as an integral and independent phenomenon with its sources, traditions and tendencies of development. The studies of Russian scholars formed a solid basis for the integrated study of the art of the Jochid Ulus, its artistic and stylistic peculiarities and its specificity in refraction of different traditions. At the same time, it must be noted that these works were formulated based on archaeological materials and often did not contain artistic analysis by virtue of the specificity of the material. In that regard, it makes sense to pay attention to more general trends of development in the art of the Jochid Ulus, focusing on a number of issues that, from our point of view, are still insufficiently covered.

Urban Planning

Urbanisation in the territory of the Golden Horde developed unevenly. Regions such as Khwarezm, Bulgaria, Rus', Crimea, and Saqsin (Lower Volga Region) had traditions of urban planning and urban culture for long enough, at least since the 9th to 10th centuries (since antiquity in Khwarezm). Having conquered Eastern Europe and Central Asia, the Mongol khans used them for the creation of their urban infrastructure in the Lower Volga Region. Immediately after the stabilisation of the Golden Horde borders, the ruined cities in conquered countries began to be rebuilt and a new area of urbanisation emerged in the Lower Volga Region [Egorov, 1969, pp. 39–49; 1985, pp. 75–78]. The remains of more than one hundred archaeological sites, which were the biggest medieval cities of Northern Eurasia, have been discovered in the Jochid Ulus, including Selitrennoe (historical town *Sarai*) Tsarevskoe (*Sarai al-Jadid*), Vodyanskoye (*Beljamen*) Uvekskoe (*Ukek*), Bulgarian (*Bulgar*), Narovchatskoye (*Mukhsha*) Belgorod Archaeological (*Ak-Kerman*), Staroorkheyskoe (*Shehr al-Jadid*), Saraychyq (*Saray-Juk*), Majar (*Macar*), Azaksk (*Azak*), etc. The first Lower Volga cities played the role of administrative and trade and craft centres, later becoming real centres of the political, religious and economic life of the Jochid Ulus, around which agricultural villages gradually formed.

The original development of urbanisation in the Golden Horde provided an imprint for urban planning. In the regions of old city settlements, which experienced cultural impulses from the central regions of the country, their own cultural traditions developed. In the regions 'of new urbanisation', such as the Northern Caspian Sea Region, the Dnieper River Region, Transnistria and partially the North Caucasus, it was the Golden Horde traditions that were more expressive. Their common features included the active role of the ruling class in constructing cities, the short construction period of estate-castles as city-forming centres, a swarm of monumental complexes (public, religious and residential buildings), the syncretism of traditions and the absence of typical medi-

eval city planning, such as city fortifications [Fedorov-Davydov, 1994, pp. 12–16].

The Lower Volga Region was the heart of the Jochid Ulus. According to the Arab historian of the latter half of the 14th century, Ibn Khaldun, this region was particularly rich in cultivated places [Sbornik materialov, otnosyashixsya k istorii Zolotoj Ordy', 1884, p. 378].

Here were located the two true medieval metropolitan cities—*Sarai* and *Sarai al-Jadid* (i.e. New *Sarai*), as well as the other large towns, such as *Hajji Tarkhan* (near the modern-day Astrakhan), *Beljamen*, *Ukek*, *Gulistan* and *Saray-Juk*, which, together with dozens of other towns and settlements surrounding them, formed a densely populated agricultural oasis, which ran along both shores in the lower basins of the Volga-Ural Interfluvium. The political, economic, cultural and religious centre of the empire was located there and by the end of the 13th century, the region witnessed an unprecedented growth and blossoming of urban civilisation.

As major political, economic and cultural centres, the cities were distinguished by their high level of accomplishment - they featured centralised plumbing and sewerage systems and the majority of palaces and public complexes were built of raw brick. Excavations revealed a strew of rich complexes and entire estates. Obviously, the Khan's palace was enormous, about which Al-Omari wrote: 'The Tsar's place of residence is the large palace on the top of which there is a golden new moon... The walls, the towers and the houses where his emirs live surround the palace. Their winter residences are in this palace' [Ibid., p. 241]. Entire artisan blocks were found on the city line, the inhabitants of which specialised in metallurgy and metal working, pottery, glassmaking, jewel and bone carving, etc. They provided goods not only for domestic consumption, but for export. World transit trade was of major significance for the blossoming of *Sarai* and other Volga Region towns, as the routes to Europe for the silk and spice trade, as well as for other luxury items, ran directly through *Sarai* in the 14th century. *Sarai* was a true 'Golden Horde Babylon', where Mongols, Kipchaks, Alans,

Circassians, Russians, Bulgars, Byzantines and Italians lived. Every nation had its own city quarter with religious buildings, cemeteries and bazaars. In general, the main population of the cities, apparently, consisted of Muslim and Turkic-speaking people.

As far as other cities in the traditional agricultural region are concerned, Bulgar and Urgench should be pointed out as rather typical for the Golden Horde period.

The city of Bulgar played a significantly dominant role in the history of the Jochid Ulus due to 'its craft traditions, wealth of cultivated lands, and the commercial importance (of Bulgar) in Eastern Europe' [Fedorov-Davydov, 1987, p. 4]. Along with its suburbs, the medieval city occupied an area of up to 6 sq. km, based on archaeological data. A square located on the high stone headland formed by the Melenka River became its centre. White stone buildings from the latter half of the 13th to 14th centuries remained there, including the Jami-Juma Mosque, the Small Minaret, the 'Khan's Tomb', the White, Red and the Black Chambers, a whole row of mausoleums, several brick baths and other complexes. A central location among these complexes occupied Ulu Cami (Grand Mosque of Bursa)—a mosque situated on the edge of a terrace, from which a magnificent view of the Volga floodplain unfolded. Obviously, this complex was the first of its kind in the Jochid Ulus and can be traced back to the 1360's. The majestic monumental building was meant to demonstrate the grandeur of the rulers of the Golden Horde, their patronage of Islam and one of their most important provinces. On the terrace and the foothills of the medieval town, residential trade-craft quarters have been discovered. Bulgar's fortifications were erected in the middle of the 14th century and shared the common length of 8 km and surrounded an area of about 4 sq. km. A so-called 'Small Town' (possibly, caravansary) was built near the south-east city gate. A city trading wharf and a trade-craft suburb, Aga-Bazaar, were located on the headland at the mouth of the Volga. Several settlements, including an Armenian colony and a Russian - possibly Orthodox - colony existed outside the boundaries of the city.

The city of Urgench, also almost completely destroyed during the seizure by the Mongols, was restored at the end of the 13th century, becoming one of the most important centres of the Jochid Ulus. The city design preserved the traditional Central Asian city lines—the presence of fortifications, the block-street layout, etc. The survived iconic monuments of the centre of Urgench are of particular interest. Traveller Ibn Battuta, who visited the city in the 1430's, described it as the 'biggest, most significant, beautiful and majestic of the Turkic cities, with lovely markets, broad streets, numerous buildings and impressive views' [Ibragimov, 1988, page 73]. He mentioned several large structures, including the madrasah, cathedral mosque and the khanqah of Torebeg Hanym, the khanqah of the sheikh Najmuddin Kubra, a hospital and palace with 'a decorative wooden dome, walls decorated with colourful fabrics and a ceiling with gilded silk' [Ibid.], which are of great interest. Some of these outstanding Central Asian architectural models of the Golden Horde have survived, showing the high level of development of the Jochid Ulus' urban culture.

In general, we can say that urban planning was fairly diverse. In the centres of traditional settlements, such as the Crimea, Bulgaria, and Khwarezm, earlier urban planning traditions continued, although they received a new impetus, completely changing the appearance of these cities. In the Lower Volga Region, the practice of urban planning was elaborated as an alloy of the influence of traditional urban planning centres and Central Asian empirical traditions, where cities sprung up around rulers to serve the cultural and agricultural requirements of the aristocracy. Such were the urban planning tendencies in the towns of the Lower Volga, Dnieper River, and Trans-Volga Regions, and, apparently, in the steppes of the Crimea and the North Caucasus. In general, we can say that the layout of towns in the Jochid Ulus continued the earlier urban planning traditions (local and Central Asian ones), but, at the same time, adapted them to the local conditions (for example, estate and street development instead of the quarters traditional for Central Asia, with complex water supply and sewage systems,

which were absent in Bulgarian and Russian cities). It is vital to speak of the Golden Horde's gradual development of its own urban planning traditions, which were shown most vividly during the construction of the Lower Volga cities, but separate elements are noticeable in the construction of other regions.

Architecture and Architectural Decoration

Monumental Architecture. Architectural monuments from the epoch of the Jochid Ulus were known for quite some time, but the architectural subjects or the parts of an architectural ensemble of a city or region beyond a connection with an overall Golden Horde context were studied most often as separate and independent entities. Only the recent excavation of a whole range of Golden Horde cities has allowed for the division of monumental buildings into different categories, examination of their structural peculiarities and their comparison to similar complexes in other regions (see: [Zilivinskaya, 1990; 1991; 1998; Fedorov-Davydov, 1994, pp. 45–77; Gorod Bolgar, 2001]). Mosques, as places of prayer and appeals to Allah, appeared at the dawn of Islam's history. In Eastern Europe, the first mosques obviously appeared in the Crimea and the North Caucasus, but their first noted remains have been discovered in the Volga territory of Bulgaria (medieval Bilyar), where they date back to the first half of the 10th century (see: [Izmaylov, 2002a]).

The adoption of Islam by the khans of the Jochid Ulus in the 1260's, its diffusion among the urban population, and the adoption of it as a state religion (1313) led to the active construction of mosques, madrasahs, mausoleums and other iconic buildings. According to the testimony of Ibn Battuta, there were 13 cathedral mosques in Sarai alone and there was at least one mosque in each city of the country (for example, in Majar) [Sbornik materialov, otnosyashixsya k istorii Zolotoj Ordy', 1884, pp. 306, 326]. However, despite the presence of these early traditions, the Golden Horde architecture developed rather peculiarly, experiencing the influence of various schools and trends. In total, no less than 14 remains of mosques

and minarets have been discovered in the territory of the Jochid Ulus (in Bolgarian, Yelabuga, Selitrennoe, Vodyansky, Upper Julat (Tatartup) archaeological site (Tatartupsky), Kuchugursk, Staroorkheyskoe archaeological sites, in Solkhate (Crimea), Urgench, etc.) [Zilivinskaya, 1998; Fedorov-Davydov, 1994, pp. 67–69; Aydarov, 1970, pp. 39–57; 2000; 2001].

The earliest and most famous monument of Islamic religious architecture is Ulu Cami, a mosque in Bulgar (the so-called 'Quadrangle'). Obviously, it was erected in the 1360's (construction began at the end of the 1330's) and, having undergone repeated redesigns, it existed until the middle of the 16th century and its ruins remained up until the 20th century (see [Yegerev, 1958, pp. 376–382; Aydarov, 2001, pp. 9, 30; Polyakov, 2001, pp. 174]; see another opinion: [Zilivinskaya, 1998, p. 18]). The walls were the first to be built and bore the appearance of a quadrangle with a small broadening to the south (internal sizes: length 32.6 m, width 28.2–29.6 m). The 1.2–1.3 metres thick walls were made of pieces of untreated limestone and held together with lime mortar. On their perimeter, the walls were secured with rectangular buttresses: the east and western one with two and the southern one with three, from which the middle mihrab sprung. On the north wall there was an entrance opening that was 2.2 metres wide, decorated by a portal from outside, of which only two rectangular pylons have survived. There was a wall buttress to the east of the portal and to the west was a rectangular plinth of a minaret symmetric to it. The entire complex harmoniously oriented itself by a meridian axis. The interior space of the mosque was divided into five naves by four rows of columns. There were five rectangular pillars (85x92 cm) or (92x92 square cm) in the plan of a section in each row. The walls of the mosque were plastered inside and outside with white lime. The floors rested on a pebble-sand base with lime coating and were repeatedly repaired later by wood decking with durable lime putty. Along the western wall, a stage on columns was erected some time later for noble parishioners.

In the late 13th and early 14th centuries the mosque was completely rebuilt, apparent-

ly after a destructive fire. The masonry of the new walls was made from more durable mortar with pebbles and the floor was raised and laid again. It's possible that it was then that the corner support posts were replaced by eight-facet columns up to 8–10 metres in diameter. These constructions, not bearing any analogy in religious architecture, have caused disputes among researchers about their purpose. Thus, A. Bashkirov considered them corner minarets [Bashkirov, 1928, p. 54] and V. Egerev asserted that these were buttresses that made the corners of the building more solid after its erection [Egerev, 1958, p. 377]. The architectural-archaeological researches confirmed V. Egerev's correct assertion [Voskresenskaya, Smirnov, 1966; Polyakova, 2001; Aydarov, 2001]. Corner tower buttresses were erected, apparently, under the influence of Middle Asian architecture, which were used, although not often, for the design of mosque corners. In the 1440s, the mosque's interior furnishings were also changed. Door openings were carved in the eastern and western walls and window openings were carved on their sides. They added lightweight tambours to all three entrances from inside. Even the colonnade of the mosque was rebuilt: eight-facet stone columns on square wheelbases with cut corners were set in six rows with six columns in each row. The wheelbases and the caps of the columns were decorated with carvings in the form of stylised palmettos and the portals were decorated with carved friezes with verses from the Quran and arabesque ornamental patterns. A similar style of decoration was typical for religious architecture of the Seljuks of Asia Minor. In the researchers' opinion, the ceiling of Ulu Cami—a mosque in Bulgar—was flat and leaned against arcades set on the pillars of the hall. The roof was pitched perhaps with a light lantern in the centre.

Though smaller (21x21 m), but a mosque of a similar construction has been studied in the Elabuga Archaeological Site. It also has a cubic protruding shape, individual rising buttresses on the sides and hexahedrons (in one case, and supposedly in others) in the corners (around 9 metres in diameter). The triangular buttress from the south side of the plan shapes a mikhrah niche from the underside [Aydarov,

2000, pp. 78–79]. An opinion exists that this mosque traces back to the pre-Mongolian period due to a very superficial analogy with fortresses typical to Sousse (Tunisia) [Ibid.]. It is impossible to agree with this, as it merely ignores a direct analogy with the Jami-Juma Mosque in Bulgar.

The so-called Bigger Minaret adjoins with the Bulgarian Jami-Juma Mosque. Based on drawings from the 18th and 19th centuries and archaeological investigations, it had a view of a cubic plinth, which turned into an octahedron, on which the shaft of the cylinder slightly tapered up, crowned with a platform where the muezzin stood. Three windows were situated on two sides of the minaret and a phrase from the Quran was carved into its middle. The height of the minaret reached 24 m.

The Small Minaret that has survived has a similar structure and a cubic plinth that turns into an octagon, crowned with a cylindrical minaret shaft (19 metres long). It is crowned with a platform, where a cylindrical complex with a pitched roof stands. The door opening, which is situated 1 metre from the ground, is framed by a tourniquet and strip of a floral ornament. The quadrangle also includes a carved bear ornament in the form of three-petal rosettes.

Very close to the Bulgarian minaret is the minaret of the Jami-Juma Mosque, Urgench. Built by Torebeg Hanyim, according to the evidence of Ibn Battuta, in the beginning of the 14th century, it no longer survives. Only its 60-metre high minaret remains, and it is a unique example of this type of construction. It continues the Middle Asian tradition of erecting brick minarets with a shaft in a conical shape that is representational of 12th century minarets found in Vobkent and Bukhara. Apparently, it was also crowned with a lantern. The builder's inscription, cut out in carved brick in a kufi handwriting, mentions the names of Temür Qutlugh and the sultan of the Golden Horde, Öz Beg Khan (who ruled before 1342), which allows the approximate time of construction to be estimated—from the 1320s to the 1330s [Yakubovsky, 1930, p. 20]. The slender minaret is divided into seventeen wide decorative masonry belts of twin bricks [Pilyavsky, 1974, fig. on pp. 42–43] separated in staggered rows

with carved 'bows' that were laid upright and were covered in blue glaze in some of the top rows. The kufi inscriptions are located on four architectural sashes, of which the three upper ones have been poorly preserved.

Of the mosques opened in the capital cities of the Lower Volga Region, a mosque from the excavations of the Selitrennoe settlement (Sarai) deserves to be highlighted. Its walls were made from burnt clay-mortar-based bricks in four rows (almost 1 metre wide). The south wall was more massive and reached a width of 1.5 metres including a mihrab niche. The main entrance was made in the middle of the north wall. The doorway's outer opening (2.7 metres wide) was decorated with a massive portal, its pylons were 5 metres long, 3 metres wide to the east and 4.8 metres wide to the west. This can be explained by the fact that the western wall was built near the small hall of the mosque. Apparently, the walls of the mosque were covered with white plaster. The prayer hall of the mosque was a square; it was 35.5x36.5 metres and was divided into nine naves by eight rows of pillars. There were 8 columns in each row except for the two middle ones. The second and third pillars were absent in the middle rows on the north side and there was an inner courtyard (9.3x9 metres) with a parapet on its perimeter made from burnt bricks set on an edge, held together with lime mortar. The main area of the courtyard was paved with bricks laid flat on lime mortar. In its centre, there was, obviously, a small circular reservoir (3.7 metres in diameter, 3.3 metres deep) faced with burnt brick. The foundations of the pillars consisted of several rows of brickwork. The pillars themselves were made of wood and were square, based on prints smeared in the lime in one section (the diameter was around 38 centimetres). The central nave was slightly wider than the rest. It led to a mihrab decorated with ganch in the south wall of the mosque. Based on the material of their bases, these two pillars were made of stone. There was a narrow entrance with pylons in the middle of the eastern wall. Apparently, the same type of entrance adorned in the western wall, too. To the west of the main portal there were small premises with two pillars, a brick floor, and walls that

Mosque plan. Bolshie Kuchugury
(according to E. Armanchuk)

were richly decorated with gilded mosaic. This mosque was built in the 1340s and existed for at least 30 years. A specific feature of this mosque was the L-shaped premises with several isolated living rooms with kanas, ovens, and adjoining independent entrances. The outer corner had a decorative column. One room was empty with a small niche directed by kybla. Obviously, this is a small adjacent mosque. E. Zilivinskaya thought that these premises could have been a library or a court located near the mosque, but G. Fedorov-Davydov is most likely to have been correct in supposing that this was a khanqah (a cloister of Sufis) or a reception chamber [Zilivinskaya, 1998, pp. 22–26; Fedorov-Davydov, 1994, pp. 68–69].

There is another Lower Volga mosque, discovered in the Vodyansky settlement that is similar to that of Sarai. However, its better state of repair allowed the details of the design of a prayer hall and minaret to be deduced. For example, the mihrab niche was decorated with an alabaster plate with a carved inscription. There was a rectangular area in front of the mihrab, which was fenced off from the rest of the hall by wooden columns. There was a marble col-

Small Minaret. Bulgar. Photograph from the 1950s.
National Museum of the Republic of Tatarstan

umn in the centre of this platform opposite the mihrab. Below that was a part of a small marble cap from the early Asian epoch; apparently it had been brought from Crimea. The minaret's rectangular plinth (5x4.2 metres), made from large stone plates and blocks, was discovered near the northeastern corner of the mosque. A cylindrical minaret shaft assembled from burnt bricks was intended to rise over it. Tiles with turquoise glaze, alternating with ganch insets where 'Allah' and 'Muhammad', along with botanical and arabesque ornamental patterns were inscribed to decorate its surface [Zilivinskaya, 1998, pp. 20–22; Fedorov-Davydov, 1994, pp. 67–68]. This mosque was erected in the middle of the 14th century and existed until the defeat of the city by Tamerlane (1395) [Egorov, Fedorov-Davydov, 1976, pp. 108–132].

All of the other mosques are more or less similar to the ones described above and of the same type. As a rule, they are square or rectangular buildings and their interior space is separated by rows of columns supporting a flat ceiling in the form of beams or arcades. Rect-

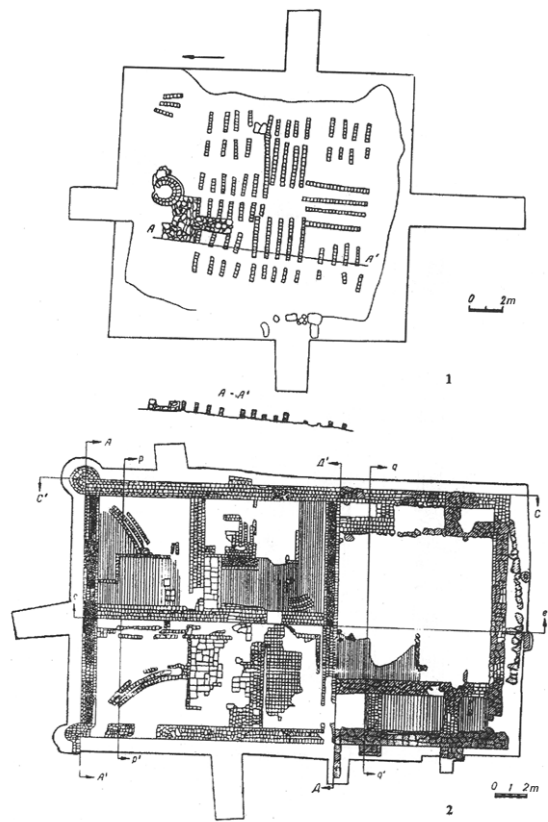

angular mosques are usually elongated in the Nor–South direction but they can be wider (for example, the Big Mosque of the Verkhnedzhulatsky settlement). The main entrance to the prayer hall was almost always located opposite the mihrab and framed with a portal. Sometimes, buildings had even small side entrances (Bulgar, Sarai, Kuchugur Ancient Town). The prayer premises measure from around 7x4 metres (Kurshun Jami, Crimea) to 35x36 metres (Sarai), 33x28 metres (Bulgar) and grandiose complexes measuring 58x52 metres (Shehr al-Jadid). Inside, the walls were usually covered with plaster and the mihrab was decorated with carved stones and tiles alternating with ganch. The floor was usually wooden, sometimes it was covered with lime mortar.

At the very least, it is worth searching for parts of similar mosques in Seljuk architecture, where the rectangular complexes were divided into naves by rows of columns or pillars inside, connected by beams or arcades. The presence of sky-lights in the roof, under which one can find a reduced inner courtyard with a reservoir or fountain, was a specific feature of Seljuk mosques. We can also find halls divided into naves in the mosques of the Ulus of Jochi. We can easily trace the construction of mosques in Bulgar, in the Kuchugur Ancient Town and in the mosques of Öz Beg Khan and Baybars in Crimea, as well. The distance between the rows of pillars and columns is identical in the mosques of Sarai and Beljamen, but the presence of a transept in the mosque in Sarai testifies to its familiarity with the layout of a basilica. The presence of the inner courtyard with the reservoir in the centre also indicates obvious Seljuk sources. For the mosques of Asia Minor, it was typical to emphasise the space in front of the mihrab by covering it with a dome. Most likely, the presence of a square platform in the mosque of Beljamen, surrounded by pillars in front of the mihrab, served the same purpose.

It is important to focus on the architectural details of the developed portal that led out of the structure in the mosques of the Golden Horde. Occasionally, it is considered that in the iconic complexes of the Jochid Ulus, an imposing peshtak with an entrance opening in the form of a lancet-arched portal niche was erected in

the religious buildings [Aydarov, 1970, p. 41; 2000, pp. 21–22]. However, the niche of the peshtak is hidden in the layers of the front wall in most of the constructions of portals in Islamic architecture and, if it projects beyond the main portion of the building, the thrust of the arch is reinforced with buttresses in the form of decorative minarets and side annexes. The presence of a peshtak with a pointed arch can only be assumed when it comes to the mosque of Sarai, where one can see Middle Asian influence on the building techniques. The pylons of its portal are remarkable for their special thickness. Also, the western pylon is strengthened by a wall of an adjoining building that was erected next to it (see more details: [Zilivinskaya, 1998, p. 33]). As far as the mosques of Bulgar, Bel-jamen and Shehr al-Jadid are concerned, one should note that the thickness of their pylons does not exceed the thickness of the walls of the building itself. Taking the connection with Seljuk architecture into consideration, one can assume that there was a portal with a stalactite niche and stone carving, similar to the famous mosque-madrasah in Crimea. The entrance of the mosque in the ancient Kuchugur Ancient Town was designed in a different way: it lead into the vast premises, which were in the form of an 'aivan' or an entrance vestibule.

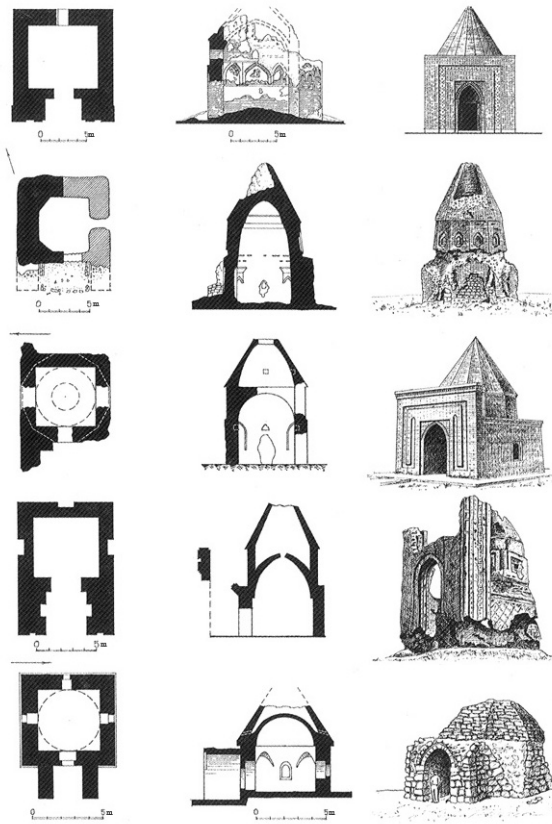

A presently-surviving mosque-madrasah of the medieval city of Solkhat (Stary Krym), is also of the great interest, reflected in the enormous amount of research dedicated to this complex [Bashkirov, 1927, pp. 122–145; 1926, pp. 108–126; Borozdin, 1926, pp. 271–302; Zasyupkin, 1927, pp. 113–169; Jakobson, 1964, pp. 104–108; Zilivinskaya, 1998, pp. 27–28]. The building is a basilica with three pairs of eight-faceted bases, interconnected by pointed arches. The complex measures 17.5x13.5 metres. The bases support a wooden rafter ceiling and a ridge tile roof. A cylindrical minaret shaft is built into the northeastern corner of the building. The entrance of the mosque is framed by a portal with a stalactite niche and carved stone friezes. The mihrab niche is decorated in the same way. An inscription dated back to the reign of Öz Beg Khan (1314) was preserved on a carved portal of the mosque. A madrasah in the form of a vast square complex

Plans of banya and madrasah. Bolshie Kuchugury (according to N. Armanchuk)

with an outdoor court in the middle adjoins the mosque in the south. This monument was considered to be a united and synchronous complex. However, the archaeological research of this monument conducted by M. Kramarovsky from 1978 to 1986 proved that the mosque had been built in the 16th century near the madrasah of the 1330s onwards, and the portal with the inscription was borrowed from another earlier mosque like all the décor of the mihrab [Kramarovsky, 1989]. At the same time, the researchers agreed that this complex was obviously built under Seljuk influence.

Mausoleums were another significant form of religious architecture. Their findings were rather large in number and expressive [Khlebnikova, 1970; Rtveladze, 1973; Alikhova, 1973; Palimpsestova, Runich, 1974; Egorov, 1980, pp. 74–88; Baranov, Kaveyev, 2001, pp. 176–199; Aksenova, 2001, pp. 200–216]. Several types of mausoleums in the Golden Horde are especially remarkable [Fedor-

Types of mausoleums - keshene. Aral Sea Region.
13–14th centuries.

ov-Davydov, 1994, pp. 70–72]. Square in layout, found in the Southern Urals, North Caucasus and in Lower Volga cities are the first group, and they were most likely crowned with tent ceilings. Square in layout with a portal in the form of a vestibule with two long pylons on the sides of the entrance cities are the second group; apparently, they are similar to the first group regarding their roofs. They were found in Bulgar and Mokhsa, in the Southern Urals, North Caucasus, and Transnistria; this is the most widespread type of mausoleum of the Golden Horde period. One-chamber mausoleums with a massive portal which are similar to peshtaks from Central Asia belong to a third group. Richly decorated mausoleums of this type have been discovered, for example, a mausoleum with a mosaic portal and pavement made of burnt brick above the graves was found in Sarai. Similar mausoleums with tent-domed roofs have been uncovered in the

Southern Urals [Smirnov, 1957, No. 58, fig. 8]. One more group is comprised of mausoleums with two chambers: a burial vault ('gur khana') and a place of mourning ('ziyarat-khana'). They could have a portal of the peshtak varietal. These mausoleums were found in the necropolises of the Lower Volga cities, Bulgar, and Mokhsa, as well as those of Southern Urals and the North Caucasus. Mosaics decorated the portal of a mausoleum from the ancient Vodyansky settlement and the 'Gur-khana' of another rich mausoleum was faced with wooden bars inside and it had ganch facing on the walls and dome. The underground mausoleum made of burned bricks in the ancient Selitrennoe settlement was square and had a ceiling built as a 'false arch'. Other vast underground mausoleums with four, pointed niches in its corners that shaped a cubic dome were discovered in the same settlement.

As a rule, mausoleums were the tombs of families and clans, therefore containing several burials. According to G. Fedorov-Davydov, the closest parallels to the mausoleums of the first type can be found in the architecture of Central Asia, especially that of Khwarezm. It is possible that mausoleums of the second group emerged in Bulgaria and spread throughout all of the Jochid Ulus from there. Features of Seljuk architecture can be found throughout the mausoleums of the Golden Horde [Fedorov-Davydov, 1994, p. 72].

In general, it should be emphasised that the religious architecture of the Jochid Ulus was formed under the influence of Seljuk traditions. At the same time, however, having taken the basilica layout with a flat ceiling as a basis, the architects of the Golden Horde reinterpreted it in a creative way, conforming to the local conditions and the tastes of their clients. As a result, original architectural solutions emerged, for example, the tower-like buttresses of the Ulu Cami Mosque in Bulgar, the annex of the khanaqah adjoining the mosque of Sarai, and the entrance vestibule of the Kuchugur mosque.

It is impossible to imagine a medieval Islamic city without a public bath—a *Hammam* (Turkish bath). For example, based on written sources, there were 5 thousand baths [Metz, 1973, p. 311] in Baghdad in the 9th century and

although these figures are evidently exaggerated, the presence of a great number of public and private baths in the cities of the Islamic world is beyond doubt. The studies of Golden Horde cities confirm this to a degree. For example, during the excavations of Bolgar Archaeological Site, six baths were studied. Three baths were found in the settlements of Selitrennoe and Staroorkheyskoe, and several more baths have been excavated in the Vodyansky settlement, Azak and another settlement near Zaporozhye at the Lower Dnieper [Alikhova, 1976; Byrnya, Zilivinskaya, 1988; Zilivinskaya, 1990; Fedorov-Davydov, 1994, pp. 69–70; Sharifullin, 2001].

Buildings with rectangular premises situated in one row, consisting of one (or more) washing areas with connected walls represent the simplified construction of the Hammam. The baths of the Narovchatsky settlement are notable because they featured a furnace chamber and an underground heating system. Seven small one-room brick buildings, measuring 8–20 square metres were studied there. Most likely, these were small baths with wooden anterooms, which were a part of a manor complex. This is a rather rare example of the occurrence of small, private baths. Another similar bath was discovered during excavations in Azov and Sarai [Zilivinskaya, 1990, pp. 133, 135]. Baths with three rooms are a more developed kind of this construction: a partially heated anteroom, a hot washing room and a furnace compartment. The bath from Sarai that belonged to a rich manor and adjoined its central building, is an example of this type of bath. It consisted of a large cold anteroom with a rectangular pool situated in its centre, a washing room with a warm floor, and a furnace chamber. Water was supplied with the help of a drainage system. A bath from Bulgar is also typical [Sharifullin, 2001, pp. 222–223]—its

Reconstruction of banya. Bulgar city. 14th century.
(reproduction of work by N. Freiman)

rooms were arranged as an enfilade suite where the temperatures rose. The room furthest from the oven measured 3x5.5 metres. Two parallel chimneys, which obviously were the remains of heated benches, can be seen along the walls. The main washing premises was almost square (6.2x6.6 metres). It was heated from an adjacent furnace room with the help of an underground system of flues.

The most impressive, typical kind of eastern bath—Hammam is exemplified by numerous baths from Bulgar (almost all of them, including Red, Eastern and White Chambers [Ibid., pp. 221–256]), Mokhshi, Sarai, Beljamen, and settlements at the Lower Dnieper. They featured the following architectural layout: they were rectangular (more often square) into which a cruciform hall was fitted, between the sides of which small, square, washing rooms were built into the foundation of the building, featuring an underground heating system. As a rule, service rooms were built next to it on two opposite sides. The first part was intended to supply heat and water to the central rooms. The second part, which was sometimes separated from the bathing rooms by an intermediate vestibule, was where visitors could dress, undress and relax. The whole system of ceramic

pipes for the supply and drainage of water was in the central hall of the bathing rooms and, as a rule, there was a stone basin reservoir with a fountain, in the centre of the hall. Apparently, the ceilings of the rooms were rather uniform and identical with domed vaults above the centre of the cruciform hall and bathing rooms; barrel vaults were above the sides of the main rooms, the vestibule and the cistern; the anteroom could have had a flat or a sloped roof [Ibid., p. 255]. One of the most typical baths (from Mokhshi) measured 14x10.5 metres. It was erected on a foundation made of stone rubble, topped with brick walls. The building consisted of two areas with different purposes: a cruciform hall with four corner bathing areas and a massive furnace area. The oven was located in the northern part of the bath and hot air from it passed through three horizontal chimneys, heating the main premises. Heat conductors were covered with large brick plates (6x18x6 cm). A reservoir in the form of a round basin (1.2 metres in diameter) with a flat bottom faced with bricks was situated in the centre of the hall, and a fountain was situated on a clay chimney with a bell mouth in its centre. At the entrance of a narrow chamber, there was apparently a small pool. A cold anteroom was located in front of the southern side of the bath [Alikhova, 1976]. One of the richest constructions is a bath in Sarai, the entrance to which was located in the square in front of the Jami-Juma Mosque [Fedorov-Davydov, 1994, p. 70]. It was an impressive 26 metres long and 13–16 metres wide. The building had 9 rooms. From the tambour through the passage, a visitor would find himself in a cold anteroom with sufas along walls, while heading from the vestibule through the hall. Its floor was laid with patterns made from pieces of burnt bricks. Obviously, there was a fountain in the centre of the anteroom fed by a qubur plumbing system. The anteroom had windows with ganch glazed lattices, called 'panchzhara'. Besides the anteroom, there were two more cloakrooms. One could get from the entrance vestibule to either of them or to the anteroom with a fountain. The hot rooms featured underground heating and a furnace which was common. The rooms intended for bathing were cruciform. The bath

was distinguished by careful decoration work and design with tile walls, a mosaic floor, and stained glass windows. It was intended for the prosperous level of the urban society.

The question about sources of similar architecture provokes a discussion. There is a point of view that the simple constructions of baths in the forms of a suite of rooms are 'the continuation of the ancient traditions' [Zilivinskaya, 1990, p. 137]. However, the presence of any constructional elements of a bath (absence of a vestibule, double volume) or the substitution of a separate element of the main frontage (a part of washing department) for a service room (a furnace chamber or a cistern) could be conditioned by pragmatic considerations: a customer's option to save materials and fuel combined with limited access of visitors, etc., but not ancient traditions. In addition, the design of almost all similar complexes in Eastern Europe from Bulgarian (the 10–13th centuries) to Golden Horde (the 13–14th centuries) was characterised by a system of underground channels with vertical flues for the forced circulation of smoke and heat, whereas the ancient tradition was characterised by fastening the floor to small pillars which provided free circulation of air and heat [Sharifullin, 2001, p. 257]. It was customary to believe that the construction of khammams with the central reservoir was brought to the Ulus of Jochi by Armenian masters [Khovanskaya, 1954, p. 422; Yegerev, 1958, p. 388]. However, as the similar construction is unknown in Armenia, but it is very typical for architecture of Asia Minor, one can assume this type of complex came from Seljuk sources [Zilivinskaya, 1990, p. 131]. At the same time, early Bulgarian, Central Asian and very strong Seljuk traditions were clearly intertwined here.

Architectural Decoration. The grandiose construction, which was conducted by the khans of the Ulus of Jochi in the new and old towns of the Empire was accompanied by a wealth of architectural decoration. Decoration of monumental iconic buildings—mosques and mausoleums, as well as palaces of rulers and nobility, which was unprecedentedly powerful and extensive, combined all of the materials and techniques which were previous-

ly known in Muslim design. The transparent glass mosaic and the tiles, carved terracotta, and gypsum, carved stone, and the painting on plaster are more or less known in decorative design of monumental buildings in all Golden Horde cities.

Mosaic of transparent glass is a technique of a decorative set of figures carved from ceramic tiles covered with pied glaze. It was widely used in public building interior and external design (see: [Meinecke, 1976]). It was preferred (in comparison to tiles) when it came to facing portals and pylons, the inner surfaces of domes, and the solid decoration of large surfaces of walls. The ability to repeat the outlines of many curved and profiled surfaces of arches, vaults, domes, under-dome drums, tromp, half-vaults of mikhrab niches, and stalactites—*mu-karnas* in Muslim architecture—was a big advantage of mosaic along with the creation of durable decorative covering with a bright pattern, which could be seen clearly, even at a distance.

Searching for direct analogues with the Golden Horde mosaics used in architectural decoration from Central Asia, Transcaucasia, and Iran was not successful [Noskova, 1976, p. 25]. They failed to find convincing proofs of the emergence of the technique of transparent glass mosaic in Khwarezm or Maverannakhr, where carved terracotta was the main facing material until the 14th century, and the appearance of mosaics is connected with complexes in Samarkand of the late 14th century. Many identical Volga motifs can be found in these famous but rather late monuments. L. Noskova, who researched the architectural design of the golden horde cities of the Lower and Middle Volga Regions, explained an earlier appearance of majolica mosaics in the Volga Region and Kwarezm than in Maverannakhr, by a tendency to completely decorate buildings requiring the invention of facings which would allow the efficient decoration of large surfaces which are significantly distant from an observer [Ibid., p. 28].

However, this tendency showed itself much earlier in Middle Eastern architectural decoration, namely in Asia Minor, where magnificent examples of irrigation decoration were left as

Majolicas with floral ornamental patterns
(according to L. Noskova)

undeniable evidence. In general, the Seljuk epoch became the time of prosperity for many artistic crafts. They gathered together older techniques and innovations. The gradual development of design in brick architecture of the Samanids, Ghaznavids, and Karakhanids continued in this period, a number of previously known techniques existing were perfected. The art of the Anatolian Seljuks in the 11–13th centuries absorbed many artistic traditions including the experience of Iranian, Syrian and Transcaucasian masters. Fleeing from Mongolian invasion, many of them found a refuge in Asia Minor and participated in the construction and decoration of the monumental buildings of the Konya Sultanate [Bayburtluoglu, 1993]. Undoubtedly, there were ceramists—masters of tile and mosaic decoration among them [Ibid., pp. 210–228]. In the 11th and 12th centuries transparent glass mosaic was already used in Asia Minor, in the outdoor design of buildings in combination with patterned masonry made

Majolicas with floral ornamental patterns
(according to L. Noskova)

from burned and glazed bricks; in the 12th century it became the most widespread kind of decoration of the interiors of iconic constructions. The inner premises of aristocratic buildings—palaces, baths—were covered only with a facing of figured tiles. One can state that in the 13th century the major superb development of architectural ceramics occurred in Anatolian-Turk art [Aslanapa, 1993, p. 318]. The use of mosaic design on the iconic buildings of Seljuk Anatolia seems to be extremely important within the context of the problem of the origin of Golden Horde mosaics. Surviving in the form of facings on the monuments of Khwarezm, and known due to excavations in the Volga Region, they contain many materials which allow the establishment of technological and stylistic continuity with their Anatolian predecessors.

The mosaic decoration of the mausoleum of Tyurabek Hanym in Urgench is one of such examples. This is a benchmark of pre-Timur architecture design. It should be noted that the transparent glass mosaic was serving as a decorative covering of its internal surfaces and of a

considerable part of the exterior surfaces. Natural yellow-pink bricks which were the basic dividers of decorative mosaic accents are skillfully used. Parts of the exterior design survive as insets, mainly turquoise, that mark out the places where it used to be concentrated. The mosaics served as a covering of the collapsed decorative stalactite filling of the half-vault in the portal, two curbs pressed into the surface of a rectangular frame clearly highlighted the panel above the entrance. The mosaic design amplified the picturesque form of divisions, repeating a portal scheme in eight facets of the main frontage of the building and the side portal walls. A blue conical roof, which crowned the building of the burial vault, was the most vibrant colour on the outside. The drum that supported the roof is broken into rectangular panels with carefully veneered thin brick frames. In its turn, the honeycomb pattern of the panel is also faced with thin bricks between which the seams of later mosaics survived. The cornice of two rows of stalactites, and the ribbon with an inscription under it, completed the design of the drum (it is lost) (see: [Pilyavsky, 1974, p. 52]).

Area of transition from the main walls to the drum and dome is wonderful in the design of interior. There are twelve blind arch niches of pointed outlines filled with mosaics in the drum, they are repeated in similar shapes of twelve window openings that alternate with them. The stalactite sails and the panel of the area between the hexagon and the drum are also covered with mosaic decoration. The elegance and completion of the compositions evokes the best known examples of oriental miniatures, and refer primarily to the design of the dome. Its ornamental pattern is based on interweaving nine- and five-pointed stars, combining in variations and diminishing logically in the direction of the centre of the dome. The unique composition scheme of dome mosaic furnishings has no predecessors in medieval art of Central Asia and Iran. For mastery of arrangement and performance they are comparable with only two surviving monuments among the few chronologically earlier tessellated dome mosaic interiors (the dome of Karataj Madrasah in Konya and Eshrefoglu-jami in Baishekhir).

Tin-glazed (maiolica) tiles with soft and brittle masses of crocks (20x20x2 cm, 15–20 mm thick, with a glaze layer of up to 0.75 mm) designed for cutting were found in the ceramic workshops of several Golden Horde cities [Noskova, 1976, p. 25]. The motifs of ornamental patterns and the fragments of background filling were cut into natural sizes with the help of curves prepared in advance. The reverse view of the set, applied in Golden Horde architecture [Ibid.] suggested laying out the parts of a pattern along the flat surface upside down, close to each other, with a subsequent pouring of a solution on the finished piece on the reverse side. The cut parts of ornamental patterns were a little conical in profile, which was especially convenient and important when laying out a pattern on a concave surface. It is identical to the technology of setting mosaic blocks in the design of Seljuk Anatolia (the ‘straight’ set along with it was mainly used in Anatolian mosaics in monumental epigraphy, and the design of stalactites in mikhrabs when parts of mosaics were placed on the prepared surface of the wall where the white background of plaster cement plays an equal role; see: [Yetkin, 1986, p. 162]).

Examples of architectural majolica with glaze painting which underlay decorative wall panels are also known, due to excavations in Bulgar. Majolica tiles are usually rectangular and richly ornamented. Small yellow-brown flowers on long curved stems with carved leaves are portrayed on Bulgarian tiles. The white Arabic inscription on them—apparently, in ‘naskh’ type—denotes a saying or a verse from the Quran. The finding of a majolica panel with aliid motifs matched with a design from Ukek is interesting. Carved terracotta with and without glaze were also typical. There are also many analogues in Islamic architecture to these elements of building decoration, especially in Asia Minor.

The area of plant ornamental patterns was remarkable for producing the greatest assortment of motifs and compositional freedom. In comparison with Central Asian patterns, with their tendency to repeat composition, the Volga monuments are distinguished ‘by free location, individuality, and non-repetition of sep-

arate ornamental schemes’ [Noskova, 1976, p. 25]. Branches and interlacing shoots with leaves, buds, and blossoms constituted the basis of the compositions of big panels; also, some plants, which were probably favourite ones at that time, can be recognized in the last images. Extraordinary methods of stylization of floral forms can be seen in mosaics, sometimes they are invented, but in most cases they are carnations, tulips, forget-me-nots, narcissi and lilies. The background of such compositions is usually ultramarine, turquoise shoots and branches stand out from it. The details of background and ornamental insets are located close to each other. Having a complex linear pattern, the blossom mosaic carpet is enriched by bright decorative colour combinations. Bright yellow, red, blue and white are in the mosaic palette. The resonance of the key elements of a panel, the repeating main motifs of curbs is reinforced by bright contrast insets—red on yellow, yellow on blue; these shallow, round, drop-like, heart-like and figured shape insets are carved very skilfully [Fedorov-Davydov, 1976, fig. 74–80].

The mosaics of Sarai al-Jadid are distinguished by a special elegance. Each motif is subjected to painstaking detailing for reasons of precision and recognition, which does not upset the general conventionalism of an image. The flowers, which became the main source of inspiration, are interpreted in a manner comparable to a jeweller’s view: the petals have fine contrast contours, all the surface of panels is covered by interlaced stems and curls of shoots, which is close to a pattern of openwork filigree; a method when blossoms, leaves and stems, seemingly moved by an accidental blast of a wind, cover each other, is wide-spread. One more original finding is a portrayal of a leaf’s transparency having a carved opening through which the thin stem passing under it can be seen [Noskova, 1976, table I, 5, II, 1, 3, 6]. The compositions which were decorating meshes of mukarnas—stalactites forming decorative wall cornices and half-vaults of niches—are especially noteworthy. These are compact small pentagonal panels [of tables III, 1–4] in the design of which the brief schemes made from several shoots and buds are repre-

sented [Ibid., tables III, 1–4; Fedorov-Davydov, 1976, fig. 76.]

The wide-spread occurrence of red marks out the mosaics of the Volga Region's Golden Horde cities [Kverfeldt, 1947, p. 88; Noskova, 1976, p. 26; Fedorov-Davydov, 1976, p. 122]. One can connect the brick-red insets which are typical of the architectural ceramics of Sarai al-Jadid, with the application of soil paint covered with soft transparent glaze. Another way of enriching the palette of mosaics is by gilding over the glaze of separate parts of a pattern, sometimes all of it, which has no analogues in medieval Islamic architecture in such a form [Noskova, 1976, p. 26].

Apparently, large epigraphic friezes and insets in the design of walls, probably mikhrabs, were faced with mosaic. The letters of inscriptions were always white. The fragments that reached us allow us to speak about the use of 'naskh' italic type for inscriptions on a monochromatic background [ibid., tab. V 1, 2] or epigraphic panels against the background of plant patterns [Ibid., tables V, 4, 5; Aydarov, Aksenova, 1983].

Numerous archaeological findings of fragments of tiles in the ruins of the Volga Region's medieval towns (Bulgarian, Vodyansky, Selitrennoe, Mechetnoye, Majar, Uvek ancient towns) support consideration of the original development of this art in the region in this period [Noskova, 1976; Fedorov-Davydov, 2001, pp. 147–159]. The formation of a unique decorative style of Golden Horde tiles was guaranteed by the active development of domestic ceramic production. Most probably masters from Iran, Asia Minor and Central Asia contributed to its formation. In these countries kashin architectural ceramics had been known since the early 12th century, because the secondary Persian inscriptions were preserved on Bulgarian majolikas which the masters used to help them to assign the order of laying out tiles [Noskova, 1976, p. 24].

Colour balance, pattern and the technique of painting Golden Horde tiles are distinguished by their great variety. Ultramarine was a favourite colour. Compositions that used plant, geometrical or epigraphic ornamental patterns were usually based on it.

Insufficient fragments of tile facings were preserved on larger fragments in the Volga cities of the Ulus of Jochi to give an idea of the nature of composition on large walls. However, even the smallest details that have reached us can be a basis for some reconstructions. The examples with painting and gilding above the glaze, within the form of an irregular rhombus [Ibid., table VIII, 5; Fedorov-Davydov, 1976, fig. 87] draw attention among majolics of Selitrennoe ancient town. The figured tiles, which are similar to that, were a part of mosaic facing constituting a massive facing of the lower tier of walls. We can find the analogues of shape and painting motifs in the design of a palace of Seljuk sultans in Konya. The lower tier of a wall in one of the palace buildings was faced with fine tiles forming hexagons [Sarre, 1937, p. 19–20, Taff. 6, 7; Oney, 1988, fig. 84].

The panels made from crossed tiles alternating with octagonal or square tiles are typical of the designs of medieval Iran, Azerbaijan and Anatolia. They played a particular role in Golden Horde interiors as well. Particularly, a fragment of octagonal (?) majolica tile with an image of a man from the excavations of Golden Horde Sarai can be evidence [Fedorov-Davydov, 1976, fig. 89]. The image of a warrior wearing a helmet which significantly differs from some images on architectural and household ceramics of Iranian area allowed it to be asserted that masters of the Ulus of Jochi had worked out their own artistic manner [Noskova, 1976, p. 26]. The polychrome decoration of outer and interior walls was enriched by panels from rectangular tiles with plant ornamental patterns, wickers and inscriptions. Mainly these majolicas were being manufactured of kashin dough with underglaze painting. Small tiles with more delicate glaze painting were used sparingly, being found in interior design details (curbs, cornices).

The degree of differentiation of tile design in connection with the function of a monument can be shown with the help of the following examples. For example, a brick gravestone with two-colour majolica facing found in the mausoleum in Vodyansky ancient town is extremely interesting. The majolica of the bottom platform of the gravestones has a motif, which

was applied for a frame of the main pattern [Ibid., p. 15]. One can find an interesting interpretation of this motif, which is extremely typical of Anatolian-Seljuk architectural design (Gyok Madrasah Mesjit in Sivas, a mosaic curb under the dome drum; a mosaic panel in the depth of the minaret of Chifte Minareli Madrasah in Erzurum; archivault of the arch of the entrance ivan, Abul-Mujahid Yusuf in Chaya; an engraved curb above the entrance arch and a portal in the Chifte Minareli Madrasah in Sivas; a portal of the Mama Khatun mausoleum in Terdzhan, etc.) in polychrome tiles with underglaze painting made from coatings of the so-called 'Khan's Burial Vault' in Bulgar [Chervonnaya, 1983, fig. 6].

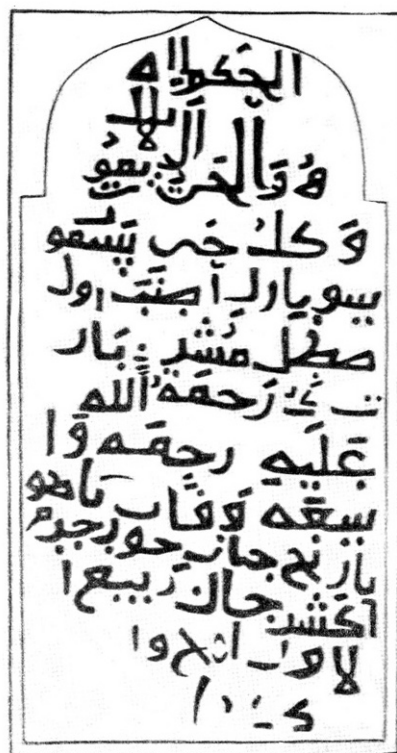

Carved and pressed gypsum panels and the curbs were a traditional way of decorating both religious and secular buildings. The combination of carved gypsum with transparent glass facings and painting on plaster is typical for the whole range of the monuments [Efimova, 1969, p. 67]. The mihrab of a cathedral mosque of medieval Beljamen (Vodyansky ancient town) was also decorated with gypsum carving: the traces of the profiled rectangular frame of a mihrab niche and an alabaster panel with a Quran inscription were preserved; burned and moulded turquoise brick, along with patterned and epigraphic insets made by pressing, combined with each other in the outdoor decorative masonry of a minaret shaft [Egorov, Fedorov-Davydov, 1976, p. 108, 123–125, figure 16–23].

The walls of the one of the palaces in the Sarai were decorated by stucco panels with images from stories. The surviving fragments of a curb made with help of moulding [Fedorov-Davydov, 1976, fig. 93–99] are a hunting image, popular in a spectrum of secular art of Western Asia and the Middle East. Admittedly, in the quality of an analogue and (possible source) for these curbs, from the point of view of the story, material of performance, and place in an ensemble of interior facings, one can give only the carved gypsum curbs of the seldzhuk palace in Konya, anywhere the gazelle, the leopards etc., are shown moving against the background of arabesque scrolls [Sarre, 1937, Taff. 9–11]. The reliefs of the Golden Horde seem to be a replica of konijsk reliefs, but in

them a planned background is absent and some modelling of bodies of animals is reflected fairly primitively. The tendency towards simplification, which led to division into simple rapports, also impacted in the design of many parts of the interior. For example, the carved column of Sarai looks this way [Fedorov-Davydov, 1976, fig. 92].

Stone Carving. The repertoire of the Golden Horde's architectural decoration is enriched in Bulgar monuments by stone carving. Erected out of limestone, most of these buildings were faced with dressed tuff blocks covered with decorative carving in certain areas. For example, carving decorated the capitals, the entrance arch, and the window openings of a Jami mosque (see the drawing: [Valeev, 1975, fig. 60, 1–4]). The surviving fragments allow one to pose the question about the sources of decorative techniques and motifs, in which there are direct borrowings and indirect influence from the art of Asia Minor of the 12–13th centuries. Similarities like those found in the architectural shapes of the Bulgarian complexes of the encirclement of window openings of mosques whose designs are comparable with the reviewed period. The carved parts of design have a typically 'Seljuk' appearance along with the technique of carving—comparable to many Asia Minor monuments [Mukhametshin, Khakimzyanov, 1987, p. 10]. The gradation of decorative curbs, the band of the geometrical grid used here, and the means of the edging are especially typical with carved triangles (for similar ones in the Asia Minor art, see, for example, the Al ad Dean mosque in Niida), thorough grinding and masonry of stone.

The tiles that are the remains of the portal's decoration give interesting samples of an epigrammatic ornament. Two of them are a part of the facing archivolt of the entrance arch, they contain fragments of two curbs. One with a plain twist of two 'running waves' and a 'sprout' with leaves, the second with cufesque (pseudo-kufic) motifs, derived from 'twisted' kufi. Another known fragment is the so called 'over portal plates' of the northern facade; it bears a sculptured inscription in thuluth placed against a background of two concentric plant shoots with small foliage ('of arabesques'). Based on

Headstone with an epitaph. Bulgar. 1322.

Types of carved rosettes on headstones.
Middle Volga Region, 13–14th centuries
(according to D. Mukhametshin, F. Khakimzyanov)

the style and nature of an inscription, plates were a part of an epigrammatic frieze on the design of a portal. The letters of an inscription and the parts of an arabesque ornament, intended to be a background for it, project from a plane to an identical height, coating them with a firm decorative grid. Meanwhile, in surviving monumental stone epigraphy, similar friezes did not have an arabesque background, this combination was more typical for carving to a curve (see: a panel with inscriptions in the mausoleum of Sultan of Sanjar in Merv (1157) and into an inner curb of mihrab of Arslan Khan Jami in Ankara (1289/90)), as well as for a transparent glass mosaic (in the monuments of Anatolia see: mosaics curbs in Siricali Mejit, Siricali Madrasah, and Karatay Madrasah in Konya, Gyok Madrasah in the Toccata, Burujiyya Madrasah in Sivas, Eshrefoglu Jami in Beysehir). Thus one can confidently speak of Asia Minor sources of this technique of carving on stone.

The stone design of another monument of Golden Horde Bulgar—the Small Minaret—is extremely typical. The inclines that form the

transition from the lower octagonal level to the round shaft are made in the form of a six-blade shell, common in design of stalactites and tromps in the interiors of stone buildings in Asia Minor. The design of the niche and entrance opening differs from the carved ornamentation of the mosque of Ulu Cami in the ornamentation style and the careful execution; apparently, it has been made by local masters at a later time when the school of carving had already been lost. The ogee arch of the decorative niche on the west facade is framed by a carved rectangular frame with large rosettes in corners. The composition is completed by the pointed arch of the blind niche in the tympanum of which since the 19th century there has been a tile with Arabic inscription. The carving of the entrance has not survived well, but we can mention the twisted column going on in the archivolt of the arch, as well as two rectangular borders with a twist and a fine pattern of palmette motifs.

In Islamic culture of the Golden Horde during Volga period, there developed another

field of application of architectural and decorative carving—the gravestones. By the end of the 13th century there was a specific type of gravestones with inscriptions and rich ornamentation. The epigraphy of these monuments was in Turkic, saturated, at the same time, with many Arabic loanwords and quotations from the Quran [Mukhametshin, Khakimzyanov, 1987]. The texts, as well as the calligraphic style of the inscriptions are extraordinarily peculiar. Epitaphs often contain inscriptions made in different styles of the Arabic script—thuluth, kufi, naskh. Some massive plates (up to 3, 5 m high) were completed in the form of a four-centre arch, in the tympanum of which was placed an inscription (Quran Formula) in elegant thuluth, in a similar style to the monumental architectural epigraphy of Bulgar monuments. Serving as separators between the tympanum and the rectangular base of the main inscription or the ornament of lateral tile faces, carved curbs most often represented twist or shoot variants with interesting shapes of three and four-partite leaves, buds and blossoms [Mukhametshin, 1977, fig. 2; Mukhametshin, Khakimzyanov, 1987, fig. at pp. 11, 21, 37, 51, 64]. In a number of monuments the manner of writing: use of defined Quran formulae, and the ornamentation techniques testify to presence of several local centres.

Arts and Crafts

The ornamentation, the wide colour palette, the presence of arabesque motifs, etc., are the characteristics of the Ulus of Jochi's applied arts. Studio pottery, the setting of jewels, and objects of everyday life, as well as the adornment of warriors' everyday life (armament and saddlery) are the most expressive examples of this art.

*Studio Pottery**. One of the most important features of the culture of the Golden Horde period was red clay and kashin potterywares of diverse shapes (pitchers, bowls, deep plates, bottles, etc.), with variegated painting (floral, geometric, zoomorphic and arabesque orna-

ments). In general, ceramics, especially glazed potteryware, expresses the vivid and typical image of Golden Horde civilisation. We can say that this colourful household potteryware most vividly reflected the syncretism of culture in the towns of the Ulus of Jochi and by virtue of their mass character and prevalence expressed the fashion and tastes of the medieval Tatars. The styles of dishes in terms of ceramics are divided into red clay and kashin, among which products with underglaze and overglaze painting stand out. It is difficult even to enumerate all the nomenclature of Golden Horde pottery for it is so diverse. Decorative motifs and styles of decorating glazed pottery are also diverse, for the most part these were geometrical and floral-vegetative motifs, as well as zoomorphic subjects. Golden Horde pottery has been studied for many years [Papa-Afanasopulo, 1925; 1930; Yakubovsky, 1931; Vakturskaya, 1959; Kverfeldt 1947; Bulatov, 1969; 1976], but the questions about the history of the technology of ceramic production in the Ulus of Jochi and artistic peculiarities of its ceramics continue to evoke discussions.

Unglazed red clay pottery is the most widespread and varied in forms, which, according to archaeologists, originated from an alloy of local traditions, such as Bulgarian, Crimean and Khwarezmian. As a result of mixing pottery techniques, as well as mutual enrichment using types of ornament, the formation of a special Golden Horde ceramic complex occurred. Ceramics were distinguished by a good firing. Its colour ranges from yellow to red and yellow to brown and russet, grey potteryware is also found. Their ornamentation is distinguished by the presence of strictly carved zonal lines in several rows, both as an independent element, and accompanied by wavy lines and arched zone lines.

Examining the sources of glazed kashin ceramics, the majority of researchers (N. Vakturskaya, E. Kverfeldt) followed A. Yakubovsky and considered that the influence of Khwarezm dominated the technical and technological developments. However, N. Bulatov's researches into the production of this type of potteryware, the colour of enamel and glaze, and painting (under- or overglazing)

* The paragraph is written in co-authorship with N. Lisova.

Kashin bowl. Sarai. 13–14th centuries.
(according to G. Fedorov-Davydov)

showed that the traditions of the Golden Horde kashin pottery were formed under the influence of Middle Asia, Iran and Asia Minor [Bulatov, 1969, p. 48]. As a result of such development, glazed kashin pottery turned out to be closer to Central Asian ceramic craft in terms of its technological aspects, and to ceramics of an Iranian and Asia Minor background in terms of its decorative motifs and themes. Special attention should be paid to the numerous findings of bowls with a covering of turquoise glaze with black underglaze painting that is very similar to the turquoise ceramics of Iran and Central Asia. Ceramics of such a kind in the 13th and 14th centuries became fashionable from Egypt to Central Asia. However, in the Ulus of Jochi their own style of studio pottery was developed, which resembled a form of Islamic art, but which can also be analysed as an independent style of pottery [Fedorov-Davydov, 1976, p. 128].

The entire complex of glazed Golden Horde pottery is divided into two types—kashin and red clay. Kashin products (that is ceramics made from a special mixture containing a large quantity of silica sand with an admixture of kaolin [clay with a high alumina content]), chamotte, clay, and tidings based on a special

adhesive [of animal origin]) constitute from 30% up to 70% of all findings of pottery. Before an ornament was applied, they usually coated products from loose kashin with engobe and then glazed. Potteryware was being ornamented by overglazing, as well as underglazing.

The decorations on glazed ceramics of Lower Volga Region demonstrates the high level of artistic achievement in applied arts. During almost two centuries, basic principles of composition and the placement of ornaments on vessels of different shapes were developed. In the ornamentation of Golden Horde pottery, there are several basic groups: floral, geometric, epigraphic, abstract, zoomorphic and anthropomorphic. As an exception, there is one example with a polymorphic ornament.

Floral ornament. Floral ornament mainly linked to an established canonical style of depiction. At the same time, the features of a regional Golden Horde style such as free distribution and the uniqueness of separate decorative schemes are consistently exhibited. The number of botanical motifs in kashin ceramics reached 26 elements, but the most widespread botanical images in kashin, as well as in red clay ceramics are lotus blossoms or bushes in the central circle or on the walls of a vessel, as well as botanical prints with thick leaves and buds in ceramics with a relief, and a variety of herbal patterns in ceramics without a relief. In red clay ceramics the botanical motifs are stylised and are not so diverse.

The geometrical ornament having its certain originality in Golden Horde ornamentation was applied in complex decorative compositions full of herbal and epigraphic patterns, and sometimes was concealed. All the elements of a geometrical ornament are properly adjusted, especially in overglazed kashin ceramics, and are depicted with evidence of accurate geometric knowledge. In glazed crockery of Lower Volga cities, a six pointed star was the favourite geometrical motif in the central ornamented circle. A motif of corners or wickers was located in the rim under the corolla of open vessels. The diagonal grid was an additional ornament.

Zoomorphic ornament. The zoomorphic ornament got widespread in the Middle Ages. The figures of animals lost their independent significance and were completely subordinated to the composition and shapes of leaves, branches, buds, geometrical lines and figures. The images of animals in the Golden Horde ceramics were subordinated to the peculiarities of a linear pattern, which is typical for a decorative style of the Islamic East. Ducks, peacocks, parrots, snow leopards, deer and hares were real and fantastic beings that decorated the Golden Horde's kashin ceramics. As a rule, they were shown moving: by riding, running or flying. Very often patterns of animals and birds, inscribed onto medallions, occupy all the space of a bowl and are framed by botanical motifs. The Golden Horde masters had an excellent mastery of the correlation between the shape of an object and its ornamentation. The botanical motifs and the movement of an animal or bird, in harmony with each other, enhance the expressiveness of the drawing.

Epigraphic Ornament. The style of a simple *Kufic* script, which is characterised by modest, slim writing of letters and presented by a repeated stylised Arabic word of *iqbal* ('success') is the main kind of writing on household pottery of the Golden Horde. In overall design composition epigraphic stripes or the panel usually play the role of structural elements, breaking the monotonous flow of patterns and enlivening the image texture. In kashin of ceramics the epigraphic ornament is the most typical and is combined with various ornaments, such as flourishes, geometric and zoomorphic patterns, and others. It is always located in a separate broad band around the main central ornament, more rarely they are its part. Besides the word of *iqbal*, on kashin ceramics sometimes there is also Persian poetry, written in a thin line in cursive handwritten *naskh*, as well as pseudo-epigraphical ornaments. The parts that were managed to read, these turned out to be usual good wishes, common on glazed ceramics of the Middle East.

The anthropomorphic ornament on the ceramics of the Golden Horde is rarity. It was commonly used on Iranian architecture and household ceramics; it is found in the territory

of Central Asia, Transcaucasia and the Crimea. Human images on the ceramics of the Golden Horde differ significantly from images known to us in their architectural treatment. If in the basis of Iranian images there underlay a Baghdad miniature style, which was reflected in the *minai* technique and in miniature paintings, in the Volga Region the ceramist masters managed to devise their own style and an artistic way of depiction.

Polymorphic Ornament. On one of the bowls from Selitrennoe ancient town a winged beast with a horse's body and a man's head is depicted in the central part of a vessel and a tiger's tail is crowned with a bird's head. The manner of depiction of feathers on its wings is typical of bird drawings. Most probably this is an image of the mythical beast of al-Burak, described in the Quran.

Abstract Ornament. In the Golden Horde ornamentation, along with others, additional types of ornament which are neither botanical nor geometric, were widely used. In kashin ceramics the similar motifs encompassed elements from the phylum 'peacock eye', 'fern leaves', 'peacock tail', as well as 'fir in a leaf' and different cloud like figures. For red clay pottery S-like and lance-shaped figures are typical.

The compositional distribution of ornaments on Golden Horde glazed pottery is based on the principles of composition and the placement of ornaments on vessels of different shapes. During the Golden Horde period, a diverse spectra of colours are being utilised in the ornamentation of glazed pottery and various motifs and elements of ornaments combine. Being combined and complementing each other, the motifs of ornaments created the most varied compositions. In glazed pottery of the Golden Horde, different kinds of compositions, such as centric, radial, concentric, radially-concentric, banded, swirl, medallion, solid, mosaic are identifiable, which had their own ornamentation motifs.

The compositions on kashin ceramics demonstrate a high and masterly command of the art volumetric and spatial composition and composition in general, as well as an acquaintance with Middle Eastern miniature painting

Kashin bowls with polychrome painting under transparent glaze. Ancient towns of the Lower Volga Region. 13–14th centuries (according to N. Lisova)

techniques. The works of Lower Volga ceramists were characterised by strict adherence to composition—whether it is concentric, medallion or radial arrangement of an ornament. A retreat from an imaginary canon such as introduction of random elements not typical for this type ornamentation or an output beyond the established boundaries is observed almost nowhere. For example, compositions of stylised botanical patterns, or a repeated word of *iqbal*, arranged in concentric belts, are typical for kashin products with multi-coloured painting and a relief. Stylised images of birds, animals, a six-pointed star, more rarely blossoms, and botanical patterns was being entered in the cen-

tral ornamented circle. A peacock eye and an epigrammatic inscription of the word 'success' were additional elements of an ornament. The defining style feature of this style of ceramics is the decoration and simplicity of composition by the use of minimal elements. The characteristic features of multi-coloured ceramics with a relief under transparent glaze include basic principles of composition, such as concentric, medallion, radial-concentric, solid and mosaic as an exception.

Ceramics without relief is stylistically close to the artistic style of the relief image, but the lack of relief gave more room for the imagination of ceramist masters, when designing vessels. During the creation of compositions, a large quantity of various elements and motifs in unique combinations was used. It is also typical for a combination of designs to be used on a single vessel. The concentric, solid, radial, radial-concentric, and medallion ceramics were also the basic compositional principles of division of ornaments for kashin ceramics with multi-coloured painting without a relief.

In blue-black ceramics, the decorative flourish became the main and the favourite pattern, demonstrating a complete command of manual painting. Smoothly bending on the stem that is

as thin as a hair, changing length and direction, the leaves stretched with three or five serrates, turning into a Garden of Eden for fairy birds and deer. Application of an openwork bound decorative flourishes, as well as original use of the abstract element 'cross stitch birds' for a similarity of the diagonal grid on the spherical walls of bowls are new to this part of kashin ceramics. In general, the composition of blue-black ceramic vessels are less diverse and consist mainly of the concentric, radial, mosaic and more rarely—vertical one.

In white-blue kashin ceramics, the Golden Horde masters employed decorative motifs also borrowed from Chinese porcelain. An original artistic style of Golden Horde ceramics craft was shown here particularly vividly. If, for Chinese white-blue porcelain, the symbolism where each element of an ornament is carrying a special sense of burden is typical, the Golden Horde masters decorated their vessels with botanical and zoomorphic motifs, using them to a significant extent as a decorative element, besides, the visual themes common to Chinese porcelain were absent in them. The Golden Horde cobalt ceramics also show the development of special techniques for a unique lightweight brushstroke in combination with the 'rice kernel' design. Masterly brush skills allowed the Golden Horde masters to create completely new compositions and led away ever further from Chinese prototypes. Variants of composition represented in white-blue ceramics are diverse: centric, concentric, concentrically radial, mosaic, banded, medallion and vertical. Centric composition of an ornament in the form of dots at the bottom of little bowls, in general, does not find analogies in design of other parts of Golden Horde kashin ceramics.

The red clay ceramics of the Golden Horde, when taken as a whole, demonstrates a special Golden Horde vessel design style in an ornament, although there are differences in the technique of applying the design. If for Caucasian and Crimean ceramics a basic tectonic pattern underlining the shape of a vessel was typical, in Lower Volga ceramics with a graphical ornament we can notice some withdrawal from this style. The impression is that there was not enough space for the ornament in the closed

concentric circle in the centre of a bowl, and it was trying to 'escape' beyond. We can observe the timid attempts to violate the strict tectonics even in the floral ornaments where the tips of radially located petals enter the decorative belt under the vessel corolla. The same can be observed also in the geometrical pattern as in the example of various wickers. An example of breaking the isolation of the pattern is the well-known figure of a leopard, where it occupies the entire surface of the bowl, and even seems to reach its edges in radial stripes.

For red clay ceramics the solid compositions where all of the surface of a bowl is coated with the ornament are, unlike the kashin one, the most typical. Most popular was the concentric, medallion and striped type of the radial composition. The most common versions of the interaction of ornamental elements in red clay ceramics are botanical, abstractly-geometrical and abstract.

The various art centres where the emergence and formation of Golden Horde ceramic craft of Lower Volga occurred influenced the formation of the artistic style of Golden Horde pottery. In the opinion of A. Jakobson, all the vast zone covering the Mediterranean, the Black Sea Region from Transcaucasia and Central Asia, the Middle East, and Near Middle East is one historical-artistic scene for glazed ceramics. And only relatively few motifs of ornamentation that usually signify a sign or a symbol, can be regarded as strictly limited in their distribution.

Borrowings of decorative motifs appear most vividly in multi-coloured ceramics without a relief. There are the analogies of decorative motifs of this part on ceramics of almost all cultural areas related to the Golden Horde. The elements of an ornament of this division are typical for the ceramics of the Far East, Transcaucasia and Central Asia. To identify one borrowing district is almost impossible. Analogies with ceramics of the Caucasus, Ani and Saray-Jük emerge. Kashin ceramics were widespread across a huge territory, with the same source of development—the ceramic craft of the Middle East.

In more complex forms of the decoration of cobalt ceramics of the Golden Horde, espe-

cially in timurid ceramics, the influence of Chinese ceramic art is being traced. However, the borrowing of Central Asia and Chinese decorative motifs in the ceramic centres of the Ulus of Jochi was accompanied by the development of their own Golden Horde style. This effect is especially noticeable on the example of a lotus blossom—a floral ornament in wide use in many regions. The impact of the ceramic craft of the medieval Western Caucasus and Crimea is the most noticeable.

A study of the style development of the Golden Horde ornament of household ceramics allows one to single out some peculiarities of its artistic design. First, all the colour spectrum of paintings on kashin ceramics is applied in cold tones; all shades of green from grey green, and bright green to almost black, cobalt blue and the running turquoise blue one. Kashin ceramics of the 'minai' type with many bright colours and the rarely found red clay ceramics with an engraved ornament under yellow glaze are exceptions to this rule. Secondly, in Golden Horde household ceramics the entire bowl mirror in open vessels and all the surface in closed molds are covered with ornaments. Thirdly, there is a diversity of decorative schemes on products typical for one part of ceramics. Fourthly, the use of decorative patterns dominated the ornaments of Golden Horde studio pottery and there is an almost complete absence of graphical scenes and landscapes as the botanical background in kashin ceramics and the minimum amount of zoomorphic images in red clay ceramics. Generalising everything mentioned above, one can deduce that the Golden Horde masters created an extraordinarily unique independent school of Golden Horde ceramics.

Comparative stylistic analysis showed that the decorative art of Golden Horde ceramics contained three powerful influences from the countries of the Muslim world (Iran and Central Asia), Byzantium and East Transcaucasia, as well as from the countries of the Far East. At the same time, the Golden Horde ornament bears significant differences in the design of artistic ceramics.

The formation of the Golden Horde decorative ceramic art was influenced by several fac-

tors: the influx to cities of Lower Volga Region of highly qualified specialists from conquered countries with developed ceramic crafts; the joint labour in one workshop of masters from different countries; the influence of tastes and consumer requests over the design of ceramic vessels whether from those at the aristocratic elite, the simple urban or the rural population; the expansion of mass production caused by increase and steady demand for household ceramics, in the country itself, as well as beyond its borders; the trade contacts of cities of the Lower Volga Region with many countries and cities in the Jochid Ulus, as well as with other neighbouring countries, which allowed the export of pottery on a mass scale.

Stylistic analysis of household glazed ceramic ornaments reflects the process of formation of a single festive imperial art culture of the Golden Horde's new medieval state. Obviously, ceramic art was in the forefront of this process by virtue of the understanding of art. Artistic ceramics penetrated all parts of the population and was considered to be a material for both monumental and applied arts, and where this process is exhibited most clearly. However, the bright ceramics of the Golden Horde were not a blind imitation of Eastern traditions of pottery. In the potters' workshops of the Ulus of Jochi they worked out their own style, having taken all the most advanced techniques and following fashion trends.

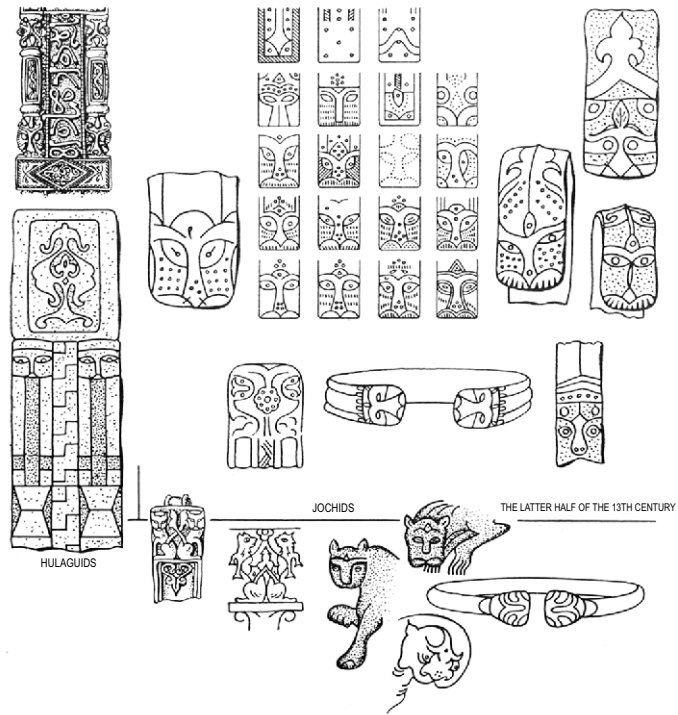

The pieces of jewellery and items of everyday life. Various pieces of jewellery were a typical part of the Golden Horde's culture. Many of them are widely represented in the museum collections of Moscow, Saint Petersburg, Kazan, Saratov, Astrakhan, and other towns of the Volga Region (for the sources of the initial stage of development of jewel art of the Golden Horde see an essay of M. Kramarovsky in Section V).

Lamellar bracelets which were the favourite type of jewellery for the medieval woman of the Volga Region had open ends decorated with sharp images of stylised lion masks. These bracelets, based on the findings of foundries of the Sarai al-Jadid, developed in Volga Region workshops in the second half of the 13th century under the influence of Asia-Minor and Ira-

Bracelets with lion heads:
schemes of origins and development
(according to M. Kramarovsky)

nian (seljuk) artistic style and were spread extremely widely in Eastern Europe until the 15th century [Kramarovsky, 1978, pp. 46–51].

Mirrors are one of the most widely seen household items and examples of artistic crafts. Thousands are known from collections and excavations of cities and burial sites from the territory of the Ulus of Jochi. For example, from Bulgar there are 879 items known, from Ukek—80, several dozens from burial sites of the nomadic population of the Golden Horde, etc. They are all extremely varied in their decoration. There are mirrors with a simple geometrical ornament in the form of concentric circles, radial-circular compositions, floral-vegetative ornamental motifs (with a border around the centre), etc. There are mirrors with zoomorphic compositions, in shape of two or four symmetrically situated sphinxes (al buraqs), fish, wolves, as well as mirrors with dragons that are curled up in a traditional Chinese art pose and hunting scenes. A certain part make up mirrors with epigraphic arabesque ornamentation reminiscent of early Asian and Asia Minor examples. To better understand the essence of the symbiosis of the Golden Horde cultures, one should observe the mirrors that combine the Chinese motif of fish with an Arabic inscription on the edge, along with botanical patterns. Having studied numerous mirrors from the Golden Horde times, G. Fedorov-Davydov came to the conclusion that 'the mirrors clearly show us eclecticism of tastes and inconsistency in the style that prevailed at the time of the Golden Horde... The art culture of the Golden Horde took, not only things of different ethnic traditions and origin, but even things of the same origin, but of different styles and epochs and turned them into its own integral elements'. [Fedorov-Davydov, 1976, p. 181].

Adornments of Military Life (Weapons and Harness). As in pre-Mongol period, a military costume was rather expressive. There was an especially large variety of different belt ornaments, such as straps, badges, and buckles. The most expressive of these products were the ones with scalloped edges with depictions of dragons dating back to Central Asian (Khitan&Jurchen) prototypes, as well as waistbands reflecting the stage of the formation of the Golden Horde's own jewellery manufacturing school [Kramarovsky, 1999; Kramarovsky, Poluboyarinova, 1982].

Few weapons (found in the excavations of settlements and burial places) have survived, but even fewer items can be studied as subjects of arts and crafts. A fragment of a sabre (the Öz Beg sabre) with a Kufic inscription, stored in the Hermitage and found in the ruins of the Sarai, is one of the notable findings.

Very typical quivers decorated with carved bone inlays should be distinguished from other decorated items of military life [Malinovskaya, 1974]. In total a set of 84 are from the territory of the Ulus of Jochi. Analysis of findings showed they had appeared in the Golden Horde in the second half of the 13th century

Quiver coverings. Jochid Ulus. 13–14th centuries (according to N. Malinovskaya)

and been used by the aristocratic heads of Tartar clans. They are known in a large territory from Transnistria to central Kazakhstan, but a district of Lower Volga Region [ibid. pp. 134–135, fig. 2] accounts for the largest concentration of findings. However, despite their being circulated in a large territory, there is an undoubted stylistic similarity in the discoveries. The ornamented inlays on each quiver demonstrate the great art of ancient masters, who skilfully combined various techniques of bone carving. Carving of triangles and rhombuses was most often employed. Botanical and spiral-like motifs, as well as various carved delimiter bands of separate decorative groups were usually made by engraving. At the same time the simple linear pattern was supplemented and made livelier by deep grooves that were filled with coloured paste. This manner of outlining a picture was typical of medieval Eurasian nomads' ornamentation. Very typical depiction of fallow deer with their head sometimes turned back or deer tossing powerful horns behind their back are often found in the design of belt sets in the Ulus of Jochi, Ilkhan

Iran and Asia Minor, especially in early times, in the period of Chinggis Khan's legacy [Kramarovsky, 1995, pp. 193–198; 1999]. Representations of a rider on horseback, as well as of fantastic dragons and beasts, different animals created as a result of combining body parts, and birds are also seen. Therefore, it can be said that all these inlays existed simultaneously and were made in one location. Undoubtedly, the Volga Region towns were their centre of manufacturing [Malinovskaya, 1974, p. 169; Fedorov-Davydov, 1966, p. 204]. The general botanical patterns and stylised animal shape give a teratological style to openwork covers. The covers of this quiver, in N. Malinovskaya's opinion are 'Perhaps, the ones most sophisticated in form, style and performance. The natural colour of bone plates combines with the bright colouring (black, red paste) of figures carved extraordinarily skilfully and gold foil serving as a background for all images. Figures of big cats and dogs, deer, hares, birds, and fantastic beasts' are going one after another [Malinovskaya, 1974, p. 140]. The plates of this quiver are distinguished from all others by a 'Romanised' depiction of animals, this style shows analogies with multi-coloured Iranian and Asia Minor ceramics and the Golden Horde metalwork. In other words, the diversity of animals on carved quiver plates and the unsteadiness of depiction of similar images indicate the medieval masters did not have a single role model and borrowed plots for themselves along with motifs of drawings. Obviously, these trends of bone carving art, having emerged from the rich traditions of medieval Eurasian art, brought everything traditional and new in the Ulus of Jochi into a new beautiful shape.

In general, this bright part of military life testifies to the interweaving and blending of various traditions (Central Asian, Kipchak) and the evolution of a general artistic style, serving the aristocrats of the Jochid Ulus, who lived in cities, as well as in the steppe. This general military fashion that defined the costume style of military nobles and subordinated to general trends of development, served as an important unifying factor of the Jochid Ulus military-service class.

* * *

The Golden Horde civilisation is a notable page of the history of world culture. It was a powerful imperial style that assimilated the traditions of many peoples, not in a chaotic heterogeneous elemental collection, but in a system of organically-fused phenomena surpassed by styles that sounded powerful and trends that varied in different periods of existence. Besides a syncretic background of the pre-Mongol cultures, some of which had developed figurative language based on Islamic (Khwarezm, Bulgar), or Eurasian migratory (Kipchak, Kimak) traditions, elements of material and artistic culture from Central Asia and Far East are evident in the culture of the Jochid Ulus. The imperial culture of the Golden Horde emerged as a result of the creative activity of almost all peoples that belonged to the Jochid Ulus, who mastered a cultured repertoire brought by their conquerors to the west. Most vividly Chinggisid traditions were shown in the cultural circle of socially prestigious products which were

the distinguishing feature of military and service class nobility. These included the uniform of the belt kit, weaponry and equipment, along with other accessories. Of course, this culture was not completely isolated because initially it was strictly socially oriented. However in the early 14th century the growth of cities in the Jochid Ulus, especially in the Volga Region, led to the flourishing of a new urban culture with its watering cups, mosaic panels on mosques, Arabic astronomers, Persian poetry and Muslim theology, interpreters of the Quran, mathematicians and astronomers, refined ornamental patterns and calligraphy [Fedorov-Davydov, 1976, p. 118]. Thus, the essence of the Golden Horde civilisation was that it was a syncretic imperial culture incorporating Islam which cloaked traditional Turkic culture. The Golden Horde was one of most powerful and highly developed medieval Islamic states of Northern Eurasia. For more than two centuries it developed its own traditions, which exerted a decisive influence on many Turk-Islamic peoples.

CHAPTER 6

Written Culture and Scientific Knowledge

§1. Scientific and applicative knowledge

Gamirzyan Davletshin

In the Golden Horde on the basis of the highly developed writing culture and thanks to the numerous enlightened people of the Islamic world concentrated in cities of Khwarezm, the Bulgar, the Caucasus and Crimea a variety of sciences developed, including mathematics, astronomy, geodesy, geography, medicine, history, logic, rhetoric, etc. These knowledges advanced considerably here.

At first, the development of exact sciences in the Jochid Ulus was closely linked to the economic life, but later they gradually began to play an important role in both administrative and state construction. The state and military construction of the Jochid Ulus was mathematically based to some extent. The military-political units were divided by 10000, 1000, 100, 10. The cities in particular, that were centres of trade, craft and architecture became a fertile ground for the development of mathematical knowledge. Without mathematical knowledge neither astronomical nor geographical ideas could develop.

There was a clearly regulated tax system in the Jochid Ulus. The taxation system required complex mathematical calculations both when being set and during collection. The amount and volume of taxable goods were determined. This involved calculations of values, interest, etc.

The majority of taxes were per capita. Therefore, one had to conduct population censuses in the country and conquered lands. They were conducted repeatedly. A population census is an important event for any state. It also requires the society to be prepared mathematically.

Active inland and foreign trade in the Ulus of Jochi could not exist without a highly-developed monetary system.

The coins are valuable historical sources, inter alia, even for discovering the mathematical knowledge of the society. In the weight-based monetary system of that time, one can find many ratios which need mathematical actions. The coins had clearly defined weights [Muhamadiev, 1983, p. 46]. Determination of value of a precious metal coin in a weight-based monetary system led to complex mathematical calculations, and raised the metals into higher level. Already in this time points denoting divisibility are found on the weights. However, it was not mere arithmetic. First one needed to define the weight system where the weight belonged, then make fairly complex mathematical calculations.

Such complex mathematical calculations could not always be memorised. Therefore, sometimes monetary units are temporarily marked on coins, scale dishes or on pottery-ware. A trader or buyer, looking quickly at an inscription, made his calculation. There is another interesting thing: the travellers of that time were very much interested in the prices of goods in markets. Therefore, there are many arithmetic calculations in the travel notes.

Strong mathematicisation of the society, that is the need of mathematical calculations in many areas of its activity, was reflected in works of fiction as well. For example, there are mentions of financial affairs and in this connection moral-ethical problems are being raised. Mentions of calculations, figures, mathematical symbols (*rakym*), facilities for drawing, etc., are found in the poem "Khosrow Shirin".

Jochi Ulus is a country of cities. In the vast steppes where city life was not known before, numerous cities appear relatively quickly. Majestic buildings are being erected in them. Hy-

draulic engineering and defensive constructions, the public buildings, none of these could be constructed without mathematical knowledge.

Since the middle of the 13th century Bulgar began to experience a period of great constructions. Knowledge of the peculiarities of various geometric figures and their skillful alternation allowed the architects to create majestic architectural ensembles. In the words of mathematician V. Berkutov "building constructions of similar types show that the Bulgars were well-informed about the science of stereometry and methods of stereographic projection" [Berkutov, 1994, 150 b].

Symphony of geometric figures is typical for many architectural monuments of Bolgar Archaeological Site. The so called 'Black Chamber' is most mysterious among the monuments. The architectural masses consisting of rigid geometric figures form clear correlations with each other. Thus the plan of this monument consists of unified squares of different sizes, an octahedron, and a circle.

Dyurbe are the mausoleums where the Bulgarian emirs and their relatives were buried. The cubes that form the base of the monuments thanks to the cuts go smoothly to the octagonal second tier, in a mausoleum of the North, possibly, into 16 facets. Inside a building they are crowned with the hemispherical dome and outside—with an octagonal tent.

Having explored baths on the Bolgar Archaeological Site, N. Kalinin and A. Smirnov came to the conclusion that 'the relation between the base and height of the vaults correspond to the simple proportions of an Egyptian triangle': for the east vault of 4:3, for south it is 3:2, for the west one, 5:4 [Kalinin, Smirnov, 1946].

Construction of architectural monuments on the principle of alternating geometric figures is also typical of other Golden Horde towns. Often the constructions of Sarai al-Jadid form rectangles in plan that remind of babylons. The babylon drafts are observed even on bricks in lower Volga cities [Fedorov-Davydov, 1961a, fig. 87]. Using relations of lines of babylons during construction in the plan of rectangular, square, 8 and 16-sided buildings was much more convenient. Such drafts were

also used in games (for example, Nine Men's Morris) [Polyakova, Fechner, 1973]. A similar draft was found in a children's room of a big house, explored in Sarai-Batu [Fedorov-Davydov, 1994, p. 58]. In addition, there were other mathematical games. here was a belief in the magical powers of numbers and an enthusiasm for magic squares was widespread in the Islamic world. Playing chips, the sides of which are marked by a different number of dots, along with hollows, are common finds during the excavations of Golden Horde archaeological sites [ibid, p. 178].

Because mathematical knowledge was closely linked to practical activity, few treatises relating to this field of science were written. Despite that, the separate encyclopaedist scientists were famous in this field as well. For example, there is a Taftazani Ate treatise on geometry [Marjani, 1885, 83 b.].

The Golden Horde stargazers used instruments that were a type of astrolabe prevalent at that time in the East. Some their parts were found in the Tsarevo archaeological site (Sarai al-Jadid) [Fedorov-Davydov, 1964b].

The astronomical instruments found by A. Tereshchenko in the middle of the 19th century in the Tsarevo archaeological site are two fragments of the so called planishperic or flat astrolabes with a degree grid and designations of degrees with Arabic letters. In contrast to the spherical ones, in these the sphere of the sky is represented on a flat surface. One can also estimate the popularity of astronomical instruments judging by literary works. For example, in the poem of 'Khosrow and Shirin' Qutb talks about an astrolabe [Qutb, 1992, No. 5, 35 b.].

In addition to that, astrolabe, the quadrant were used in construction works for measurement of horizontal angles. Not far from Sarai al-Jadid large hydraulic engineering construction that was very complex for its time, was erected. 'The perfection of all hydraulic engineering constructions merely amazed us... In this time the Golden Horde could really be proud of its capital and its engineers' wrote one of the early researchers of the ruins of the capital of the Jochid Ulus, Franz Ballod [Ballod, 1923a, pp. 21–22, 27–28]. This majestic hydraulic engineering construction

is a result of the scientific-technical achievements of the time.

In 1963, two fragments of a cast bronze quadrant were found in Tsarevo archaeological site. The quadrant is a goniometric astronomical instrument for the measurement of the height of heavenly bodies above the horizon and angular distances between luminaries. Unlike astrolabe, it is made of the fourth part of a circle. The plate of a quadrant was covered with the degree scale and lines, crossing each other, whereby one could easily calculate different arcs and angles with sufficient accuracy. On the found fragments, the points and the lines are labelled with Arabic letters, that is abjad. The words 'east' and 'degree' are also written in Arabic [Fedorov-Davydov, 1964b]. There is no doubt, in the Islamic world and Jochi Ulus, special treatises on these tools were distributed [Iskusstvo islama, 1990, fig. 49].

The shortness of nights in Bulgarian summers and consequently the difficulty of performing the daily five ritual prayers set by sharia continued to worry the Islamic world. In the Golden Horde period this was proved ever more by astronomical knowledge. With the help of tools, the time for the performance of prayers, and the removal of prohibitions during a fast is carefully calculated and measured. As mentioned by al-Omari, Masud [Collection of materials relating to the history of the Golden Horde, 1884, p.237] was not only a timekeeper but also an astronomer in Bulgar. The Bulgar was becoming one of the centres for the precise determination of time by observation of heavenly bodies. The Bulgarian stargazers kept following heavenly bodies far in the north 700 versts from Bulgar (the 20-day journey of al-Omari) [Kurat, 1920, p.789]. These are the lands of the Visu tribe. Because of the fact that the scientists from the centres of Islam did not have such a possibility, the Bulgarian scientists made a contribution to the Muslim astronomical science.

In the Jochid Ulus, they went beyond astronomical and geodesic knowledge to satisfy practical or religious needs. They also made certain theoretical generalisations in special treatises. According to the data given by Hajja Caliph, the author of one of them was Kamal

ad-Din al-Turkmani, who in 755, that is approximately 1354, in city of Guliston wrote commentaries on the work of the famous Kwarezmian scientist Mahmud ibn Muhammad ibn Umar Jaghmini on astronomy called 'Favourites from astronomy' [Sbornik materialov, otnosyashixsya k istorii Zolotoj Ordj', 1884, p. 463].

At that time fiction was a means of disseminating knowledge, including astronomical. Saif Sarai (1321–1396) in his work called Sukhail and Guldursun writes in a manner as if he was talking about a completely natural and normal phenomenon, that a girl, the heroine of the poem, goes around her beloved one as the Earth goes around the Sun [Miñnegulov, 1994, 25 b.; Poe'ziya Zolotoj Ordj', 2005, p. 155]. Another poet, Qutb, writes about distant worlds, what look like stars are in fact special worlds, and there are long distances between them, and there is a perpetual motion existing in the Universe. One chapter of his poem is called 'Motion in the Universe' [Qutb, 1992, No. 5, 35 b.].

Therefore, in terms of astronomical knowledge and scientific thought the Tatars were completing the transition from mythological views to being genuinely scientific. As one of the Islamic world's popular sciences, astronomy influenced even the Golden Horde society. Its development was directly linked to the requirements and rites of Islam. The names of heavenly bodies, and their symbols were present at rites. They were also reflected in the people superstitions, divinations, which included the knowledge gained with the help of astronomical instruments.

Astronomical knowledge of the Middle Age had a place in the life of the Tatars until the late 19th century. At that time tools such as quadrants and sextants were broadly used by astronomers.

In 1260 the completely established the Jochid Ulus unites a significant part of the territory of Asia and Europe. Naturally, the country's endless dimensions had a serious impact on the geographical views of its inhabitants. The travellers who visited the Jochid Ulus in their records described the size of this country based, of course, on information received from

the inhabitants of the country as well as by themselves. Al-Omari, during a description of the Jochid Ulus, presented a lot of information from a famous merchant, sheikh of this country an-Nugman al-Khwarizmi.

Bulgaria did not lose its role as an intermediary between the South and North in trade affairs in the period of the Jochid Ulus either. This role of mediator is clearly emphasised in written sources of that time. Information from specialists such as al-Garnati, al-Marvazi and Biruni about the northern territories, Bulgarian peoples, and their activities, which dated back to the pre - Mongol period, remained constant even in that time. However, there are other opinions among the authors about the territories of the North, where stories from the Quran and the tales the travellers heard [Sbornik materialov, otnosyashhixsya k istorii Zolotoj Ordy', 1884, pp. 240–241].

In that time the eastern intellectuals imagined the Volga River slightly differently. The Bolshaya Volga encompassed the Upper Kama (the White Volga), the Lower Kama (the Black Volga), and the remaining part of the Volga up to the Caspian Sea. Such a notion about the Volga River had already emerged in a Khazar-Bulgarian period and became traditional [Däülätsin, 1999, 374 b.].

The geographical views on the Eastern territories are interesting, especially those existing in the Jochid Ulus. It follows from the sources that there were two ways to the centre of the Mongolian empire. The first, the ancient road: through the Lower Volga, Central Asia and Kazakhstan. The other was from Bulgaria to Bashkortostan, through Siberia and Chulyman. There is no doubt, that the Bulgars preferred this way. Apparently, they had already mastered it in the pre-Mongol period.

Distances between the regions and towns of the Jochid Ulus were also determined fairly accurately. In the Mongol empire, as well as in the Jochid Ulus, high priority was given to road condition, maintenance, the organisation of a mail service, and the provision of roadside amenities [Sbornik materialov, otnosyashhixsya k istorii Zolotoj Ordy', 1884, p. 460].

All these conditions inside the country had a positive influence on the expansion of its in-

habitants' geographic knowledge. That is why many areas in Eurasia were familiar to them.

The Jochid Ulus kept close multilateral ties with many countries of the world. Ancient caravan routes brought them together. Particularly close ties existed with China, Mongolia, India, Iran, Iraq, Afghanistan, Central Asia, Byzantium, Egypt, Syria, Rus', Poland, Hungary and Italy. The Ulus of Jochi actively conducted political diplomacy with all neighbouring and distant countries, especially with Egypt. Between the years 1260 and 1430, 50 embassies were exchanged by these two countries [Zakirov, 1966].

Since the end of the 13th century the Northern Italian cities of Genoa and Venice, and their regions, were known as strong trade territories, and republics. The trading colonies of Genoa and Venice were situated in the Crimea, along the Black Sea shores. At first the Mongols even kept close contact with the Pope. For example, in 1248, Pope Innocent IV (1234–1254) received a Mongolian embassy [Fedorov-Davydov, 1968b, p.76].

Names of people of foreign descent who lived and died in Bulgaria (for example, Shirvani, Shamakhi, Samarkandi, Kardari, Dzhenidi, Kursani (Khorasani, Afrikandzhi), are seen on the Bulgarian monuments [Mukhametshin, Khakimzyanov, 1987, p. 119]. Even in that time the Islamic world was large. It encompassed many countries. All that was required to make journeys across these countries was to be a Muslim. In Islamic countries rooms were rented for travellers, merchants, dervish wanderers. In all the Jochid Ulus there were increases of Sufism, especially in certain periods, there were shelters(khanaka)for religious sheikh figures, pilgrims and dervishes. Travellers from many countries stayed in them. For example, Ibn Battuta stayed in the Majar (Madzhir) hermitage of a sheikh from Iraq for a year where there were 'near seventy Arab, Persian, Turkish and Russian fakirs'. Journeys were therefore regarded as a noble cause that contributed to the dissemination of religion and the discovery of new ways.

The travellers enriched each other with information about their countries. In the Jochid Ulus there were even some professional trav-

ellers, geographers. One of them, Ala ad-Din an-Noman (Nogman?) Ibn Davlatshakh ibn Ghali al-Khwarezmi, having set out from his house at the age of 21, in 1318 arrived in Damascus. After spending some time there, he headed to the sultan's palace in Cairo. Then he set out to Mecca and again returned to Cairo. He saw many countries and met many noble people; he was received as a valued guest in the palaces of khans Mengu-Timur, Toqta, and Öz Beg [ibid, p. 175].

Khans usually questioned the famous travellers with interest about what they saw on their way. Thus they received up to date information and increased their knowledge. Al-Mufaddal described how the Khan of Burke questioned the Egyptian ambassadors with interest about their country. He was interested in animals that were common in the Jochid Ulus, such as elephants and giraffes. Then he asked if what he had heard was true that the bridge over the Nile was made from human bones [ibid, p. 194]. In those days the fantastic tales about other countries which were delivered by word of mouth and in written form as well, were more or less true. Travellers often found themselves looking for ways to make their stories more exciting.

All this contributed to the increase of geographic knowledge of inhabitants of the Jochid Ulus. The economy and culture of the Jochid Ulus were also open to foreign influence, many imported innovations were implemented here willingly.

Sanitation and hygiene condition of Golden Horde cities noticeably differed from European ones. The sources note equipment, cleanliness, the perfection of public buildings and constructions, good-looking markets which became original centres of society, broad streets and a lot of mosques. Describing it, a researcher of the Bolgar Archaeological Site A. Smirnov concluded 'the infrastructure of the city, its cleanliness and the number of public complexes and constructions exceeded the majority of European cities of that epoch' [Smirnov, 1981, p. 209].

Sarai was one of the most beautiful medieval cities. The Arab traveller, Ibn Battuta from Maghreb, who visited the capital of the Golden Horde, wrote, 'Sarai is one of the most beauti-

ful cities having reached the extreme extent... it is too crowded with people, beautiful markets and broad streets' [Collection of materials relating to the history of the Golden Horde, 1884, p.306]. Thus, the Golden Horde's urban streets were wide, unlike European ones. It favourably affected the sanitary condition of a city. The location of the majority of streets in Sarai in the direction of the Earth's rotation perhaps created not only physical but also biopsychological comfort. Infrastructure and the sanitary state of homes had social aspect. The floors, in houses where the representatives of middle segments of population dwelt, were covered with paved burned bricks and sometimes had a basin—toshnau—in the centre. They consisted of two parts— a living room and a room for the storage and preparation of food [Egorov, 1970].

Water supply and waste water disposal were the most important problems of every medieval city and its successful sanitation/hygiene. On the Tsarevo archaeological site, the aryks and the moats were joined by a pipe network to large artificial lakes constructed on the northern outskirts of the town. The hills and spurs of the Volga-Akhtaba fluvial terrace were connected by dikes and water, which flowed in the snow melting season to the valley district where the city was situated, was stored in these artificial reservoirs. Thus the protection of an urban area from drought was achieved and, simultaneously, reserves of water were created. In addition, the aryks were being filled with water from wells that were included in their system [Fedorov-Davydov, 1994, p. 64]. The similar systems of underground drainages, watersheds and water-absorbent wells were explored in the Selitrennoe archaeological site, Bulgar.

The reputation of Bulgarian and Golden Horde baths spread far beyond the borders of the country. They were situated in the central squares and were equipped with an underground heating system, plumbing with hot and cold water, and sewerage with clay pipes, as well as with pools and fountains. There was a channel diverting water with a reservoir [Zilivinskaya, 1989; Kalinin, Smirnov, 1946; Shariullin, 1984, pp.23–25]. The cleansing effect of baths was well known to the population. There

is a Tatar legend about the therapeutic properties of a bath and a birch broom. The baths in the East and ancient Rome had not only sanitary and recreational purposes, they were also a resting place. Here they played draughts and chess, musical instruments and listened to music, and ate delicious food. During excavations, draughts, chess figures, remains of musical instruments, and fragments of the expensive tableware were found in the Bulgarian cities [Kalinin, Smirnov, 1946; Sharifullin, 1984, pp. 23–25].

There were public toilets in towns of the Golden Horde. For example, there was a two-section toilet made from bricks with a hole dug out under the floor in Sarai-Batu [Fedorov-Davydov, 1994, p. 67].

Medicine in the Golden Horde had a practical meaning. Medical knowledge had to meet everyday requirements.

Ibn Battuta wrote about the spreading of gout among Turks [Sbornik materialov, ot nosyashhixsya k istorii Zolotoj Ordy', 1884, p. 296], one of the causes of which was an abundant intake of fat meat. A feet disease was spread in some tribes of Turks. Perhaps this disease was a result of constant riding [ibid.] on horseback. The cause of the death of the famous Khan of the Jochid Ulus, Mengu-Timur (1266–1282) was 'an abscess, which collided in its throat. It pierced him and he died' [ibid, pp. 68, 103]. 'A colic', according to some sources, was the cause of the death of Khan Berke. From the standpoint of modern medicine, such pains could be associated with kidney, liver, intestine, and other diseases.

However, all the sources pay greater attention to the plague and cholera epidemic in the Jochid Ulus in 1346–1350 and in 1353 [ibid, pp. 529–530]. In the opinion of the population of the Jochid Ulus, the plague began in the 'Country of Gloom'. Actually, the plague epidemic in that time began in China, a part of lands of which belonged to the Mongol Empire. In the history of Islamic countries it was the sixth worst epidemic which, as the contemporaries wrote, 'devastated' the countries and dwellings, and affected people by numbness and hemoptysis' [ibid]. The great epidemic of plague (cholera) in the Jochid Ulus recurred in

1428–1430, when 'a lot of people died, few Tatars survived' [ibid, p. 439].

At that time, people tried to cure various diseases using natural remedies. They used a range of herbs, minerals and healing springs. A physician was traditionally called 'an otachi' in this time in the Turkic language, which literally means a herbalist. Thus, medicinal herbs were the most important means of treatment.

During excavations of Golden Horde cities they often found the so-called 'galls' or Latin galla [Grigoriev, 1847, p.570]. These are pathological parasites of plants. The oak, sumakh and pistachio galls are rich in tanning substances. Also, they were widely used by doctors.

Great importance in this period was attached to the power of healing springs and mineral waters. Al-Omari wrote about such a spring under a sacred mountain in Khwarezm: 'There is a spring known for the fact that people suffering from chronic illnesses arrive there. They remain there for 7 days and bath in the water every day in the morning and in the evening and after each bath, they drink the water till they get enough and thus, they are healed' [Collection of stories related to the history of Golden Horde, 1884, p. 242]. Ibn Battuta, who was in Caucasus in 1333, writes about the local healing springs as follows: 'Khan Sultan Muhammad Öz Beg's stake is four days of journey from Majar (a Golden Horde city in the Caucasus.—*G.D.*)—Bishdag (translated as Pyatigorye.—*G.D.*), where the hot spring where the Turks are bathing is located. They believe that whoever baths there will not be affected with the diseases' [Ibid., p. 289].

In 1264–1265 the sultan of Egypt organised a hajj in honour of Berke Khan. After it he sent an embassy to Sarai with numerous gifts, among which there were two vials of the so-called "zamzamii"—sacred water of the Zamzam spring and balsam oil [Ibid, pp.164, 358]. There is information on the healing powers of sacred waters in the Russian chronicles, too. For example, it is reported that none of the physicians of Khan Berke could cure his only son. The ruler of Rostov-on-Don, Kirill, came to help and he cured him with consecrated water.

And in that time people dreamed about immortality, everlasting life, rejuvenation. There is a mention of eternal water (*мәңгелек суы*) the poem by the Golden Horde poet Khwarizmi called 'Poem of love'. On a fragment of a large beautiful vase found in the homestead of a rich person in Sarai Batu the following is written in Persian: 'They say, there is water of life in the world' [Fedorov-Davydov, 1984, p.231]. The legends narrate about healing, rejuvenating water of life, water of eternity [Риваятьләр һәм legendalar, 1987, 214 b.].

The papers with Arabic texts, prayers, in the opinion of Muslims, also had a therapeutic property. In addition, the population used belemnites as a healing method. They were trying to strengthen therapeutic properties of belemnites by applying Arabic letters and words on them, which were considered sacred for Muslims. Thus, in this period the Arabic letters were sacred writings of Islam that served as drugs of their own kind and protected from diseases. On household items, in particular, on tableware, along with other wishes there are wishes of good health to the owner.

Jochi Ulus, which was quite developed for its time, could not do without a professional medical service. Sources report that in the Golden Horde there was such a well-established medical system that whoever fell ill could address a certain doctor. It is reflected as natural phenomenon even in literary works of that time. In this respect a relevant work is the collection of stories by Mahmud al-Bulgari, called 'Nakhj al-Faradis' written in 1358. For example, one of the stories tells about a woman who was cured for infertility with the help of psychological impact. Evaluation of a patient's pulse was one of the diagnostics means used by healers of Golden Horde [Mahmud al-Bulgari, 2002, pp. 195–196 b]. In the literary works of the Golden Horde period there are lines about separate medicines, as well.

In the Jochid Ulus a health care system is established. In the most developed regions of the country, for example, in Khwarezm, inpatient treatment centres (hospitals) open. This is reported by life facts of Al ad-Din an-Noman Davletshah Ibn Ali al-Khwarizmi, who was a famous religious figure, sheikh and a great ge-

ographer. One of his contemporaries—al-Birzali, says about him, 'He was a wonderful person; he left his motherland when he was 21, went to different countries, met famous people, studied logic, dialectics, and medicine, and returned to his land in 701. Here he made friends with King Timur-Malik, served as a doctor at his palace and was promoted to senior doctor in a hospital in Khwarezm (i.e. Urgench). Later, Timur-Malik sent him to Khan Toqta, Berkovich, who was the king of Desht-i Kipchak land, where he had major success' [Collection of stories related to the history of Golden Horde, 1884, p. 175].

One can conclude from reports of Ibn Battuta that the hospital in Khwarezm was also known abroad. Famous doctors from other countries worked there. One of them was a migrant from the Syrian town of Sakhun [Ibid. p. 309].

Another person who possessed encyclopaedic knowledge was tabib Ibn Nejam Abdarrahman Ibn Abd ar-Rahman Ibn Nasr al-Mausli (1254–1330). During the rule of Öz Beg Khan in Sarai he practiced different sciences, including medicine. In 1324 he arrived to Damascus. He taught in the madrasah of az-Zechariah al-Berali, al-Jarui, governed the Al-Qasr hermitage. Along with that he was a sheikh fakih [Ibid, p. 463].

Thus, medicine in the Jochid Ulus, based on national traditions and closely related to the achievements of the Muslim countries of that time, was turning into a professional activity. Inpatient medical facilities start to appear. These hospitals and the famous tabibs that worked there, lived under the patronage of khans and local authorities. Öz Beg and Toqta Khans paid special attention to medicine, they brought tabibs to their places, and patronised them [Ibid, pp. 175, 206, 277, 514].

The Jochid Ulus had its own state ideology and historical knowledge that served it. This ideology was very harmonious with the general Islamic one, disseminated in Islamic countries. Historical works of that period contain information about the dissemination of Islam, its acceptance by the Khans Berke, Öz Beg, as well as about the correlations of Sarai with the then centre of Islam—Cairo, the tense relations,

the military clashes of Golden Horde people with the then enemy of Islam Hulagu Khan.

In historical knowledge, pedigrees occupy ever more place, which is closely linked to the ancient Turkic traditions, as well as to Islam. In Islam, many official positions, ranks are related to proximity in kinship to the Prophet Muhammad and his family. After the election of a new caliph in Cairo, the history of his family is composed, the position of his kinship with prophets is certified by the seal and signature of the head of the qadis. It is announced throughout the Islamic world, first of all, to the rulers of the Jochid Ulus [Ibid, p. 430]. In the Islamic world, there were also other officials for whom it was obligatory to put up a family history. The composition of pedigrees was widely distributed in the Jochid Ulus. In such stories the authors strive, first of all, to emphasise the nobility of their family, its antiquity, and the number of tribes. The pedigrees approved by authoritative qadis turned into the most important argument for receiving high-ranking positions. The composition of pedigrees becomes fashionable also among the country's scholars. This document made an important difference for resolution of disputes. But a pedigree is not only the enumeration of tribes. A person's story is being set forth in it in relation to important, well-known historical events, a sort of benchmarks of the country's history. Pedigrees were preserved in a written form or passed by word of mouth, becoming a valuable aspect of the history of Turkic-Tatar culture. Each Tatar, at least, had to know his origin to the seventh tribe—this became an unwritten rule.

The Egyptian-Golden Horde Turks seem to have been familiar also with chronicles. The works of some Arab historians, who had good knowledge about the Turks of Desht-i Kipchak, were also called chronicles. They describe the events relating to the Jochid Ulus in the very smallest details. One such work is, for example, the historical work of Rukn al-Din Baibars al-Mansuri (he died in 1325 in Cairo) titled 'Baibars Chronicle', which has 11 volumes [Ibid, p. 73]. Another historian, Ibn Tagribirdi, who died in 1470, wrote about Egyptian Emir Artysh who carefully studied Iasu of Chinggis Khan, put up the genealogy of various Tatar

tribes and very often referred to the chronicles of his people [Ibid, p. 10]. By the concept of 'his people', first of all, the Volga Turks are meant here. Emir Artysh himself, having departed from the Volga Region to Egypt, received there a high position in the society.

Eastern literature, including the Golden Horde one, as well as fiction were also a beneficial means of spreading historical knowledge. In literary works they often turned to antiquity, the East, especially to the image of historical figures. Passing from one work to another, this information covered the activity of the same people and the historical events related to them. The typical characters of these stories are Iskander (Alexander the Great), Afletun (Plato)—a symbol of wisdom in the Golden Horde literature, Dionisius I of Syracuse—a symbol of evil, cruelty, Anushirvan—a symbol of justice, Harun ar-Rashid—in literature and folklore the attitude towards him is contradictory...

A philosophical idea about shortness of a person's stay on earth is being drawn in the poem of Khisam Qiatib 'Jumjuma Sultan'. Names of famous people of the past are specified as historical references [Boryngy terki, 1981, 157 b]. Here mythical history alternates with real one. Along with the Quranic ones, Arabic-Persian-Turkic literary characters of world-famous shahs, kings, and khans, such as Mahmud Gaznavi, Chinggis Khan are worthy to be historical reference points.

At that time, foreign Arabic and Persian authors wrote much about the Jochid Ulus and its history. The main plot of their works was the adoption of Islam by the khans Berke and Öz Beg, and their exaltation. In their works, they skilfully used also the traditions that existed among the local population. Among the historians who wrote the history as immediate witnesses, we can mention two, Ibn Arabshakh (1388–1450), and Ibn Bazzas (circa 1343–1423).

Historian Shihab ad-Din Ahmad Ibn Muhammad Ibn Abd Allah is known under the name of Ibn Arabshah. He visited the Jochid Ulus and wrote his work based on his own observations, as well as according to local informants. Originally from Damascus, he lived in

Sarai, Bulgar, and Astrakhan. He visited China, Iraq, Byzantium, Khorasan, Khwarezm, and the Crimea. Thus, he got acquainted with many regions of the Jochid Ulus. Quite a lot of information about this person, especially about his life related to the Ulus of Jochi, can be found in the works by Sh. Marjani. He writes of him as if referring to a Turkic-Tatar historian. In his words, Ibn Arabshah is a 'scientist, writer and poet, was aware of the people's everyday life, world history, events of the past times...' Based on what he had seen, he wrote many books. He lived in Bariiatel Barakat (Jochid Ulus. *G.D.*) for a long time [Marjani, 1885, 88 b.]. The best known of his works are *Garat'ib al-makdur fi navadir i-Timur*, *Fukakhat al-khulafa*, description of Turkic and Tatarstan dynasties, and so on. Ibn Arabshah considered famous scientists and historians of that time, such as Qutb ad-Din ar-Razi, Sa'ad ad-Din at-Taftazani, to be his teachers.

Among the known historians of the research period we should mention Ash-sheikh Hafiz ad-Din Muhammad Ibn Shihab Ibn Yusuf is al-Khwarizmi al-Kardari, known under the name of Ibn-al-Bazzas. He, according to the information of Sh. Marjani, received elementary education in Kardar, then visited Bulgar, Crimea, Ruma, and other cities and lands. He met there most educated people, which allowed him to replenish his knowledge. He was respected among khans. His book *Al-fatavi al-Bazzasia*, devoted to religion and history, had special popularity. When they asked the famous mufti of the time, Abu s-Saud, why he was not writing a book about the events of his time, he replied, 'I would be ashamed in front of Bazzasi, as he has already covered all the issues'. Even Golden Horde khans treated it with respect [Ibid, 87b].

In the Jochid Ulus legends about famous historical, as well as contemporary figures of that period were passed by word of mouth. Remarkable is the fact that already in the times of Ibn Arabshah, many narratives about the famous state figure of Jochid Ulus, talented military leader Edigu were being circulated. The historian writes about him the following, 'Surprising stories and great fairy tales are being told about him: arrows of disasters (shot) on his enemies (always) hit the target,

his thoughts were of intrigues, battles, traps...' [Collection of stories related to the history of Golden Horde, 1884, p. 473].

Based on the work of Mirkhonda 'Rauzat al-Safa', the Bulgar genealogical legends of the pre-Mongol period with certain changes continue to appear in the Golden Horde time as well. In this historical research special attention is paid to the city of Bulgar. To be more precise, the former data relating to Bulgar Bilyar better relates to the city of Bulgar on the Volga.

Such are the continuations of Bulgarian genealogical legends, stories about the construction of Bulgar by Dhul-Qarnayn ('There is evidence that Dhul-Qarnayn built it after leaving the Country of Gloom'). Historical legends tell about the construction of the city of Bulgar by him in the 3rd century BC.

In Golden Horde times ethnic history takes the backseat in official historical literature, religious, generically Islamic history is the first. There appear professional historians, historical works, genealogies are put up. They fully satisfy the interest in historical knowledge of the society.

Scientists, writers, poets, and religious figures in that time could live and work only under the patronage of rulers and wealthy people. Practicing science and literature was especially encouraged by Khans Berke, Öz Beg, and Jani Beg, to whom scientists and writers, in their turn, devoted their works (Qutb—to the wife of the Golden Horde Khan Tinibek Melik; Khwarizmi—to the relative of Jani Beg Khan, the Ruler Muhammad-Khoja; Seif Sarai—to Egyptian emir Taikhas Bey; Ibn Mahmoud az-Zahidi—to Berke; Taftazani—to Jani Beg).

Ibn Khaldun reports the following about Berke Khan, 'He spread it (Islam) among all his people, began to build mosques and colleges in all his possessions, brought scientists and lawyers closer to his place and made friends with them' [Ibid, p. 379]. Al-Omari writes about Öz Beg Khan the following, 'Öz Beg Khan built a madrasah for science in it (New Sarai), as he was very devoted to science and his people' [Ibid, p. 229]. The Turkic historian and khan of Khiva of the 17th century Abu-al-Ghazi Bahadur Khan praises the all-powerful Jani Beg Khan, 'This Jani Beg Khan is remarkably good

among Muslim rulers. He paid special attention to people involved in cognitive activities, especially to scientists and people devoted to religion' [Abu-al-Ghazi, 1906, p. 54].

Not only representatives of the upper class of the society, but also those who had power, but were at a lower position, gave scientists and writers patronage, which is also reflected in inscriptions on monuments. An epitaph of 1314 contains such lines, 'A performer who supported scientists and loved them, erected mosques... Son of Hudja, son of (Ottoman) tribute collector Ibrahim al-Suvari...' [Yusupov, 1960, tab. 12]. Thus, education in the Jochid Ulus was greatly honoured. Support of scien-

tists, writers, religious figures, their patronage was considered a religious business.

Professional scientific knowledge in the Golden Horde was advanced for its time. Its development was first of all linked to the influence of scientific and cultural centres of the Islamic world. Scientific knowledge was often far from everyday life, while the professional one, on the contrary, emerged from the needs of the society. Turk-Tatar scientists were writing mainly in Arabic. Therefore, their works possessed a general Islamic tone. Development of scientific knowledge itself in the Jochid Ulus was a kind of response of the Turk-Tatar world to the Eastern Renaissance.

§2. Historical Compositions and the Formation of a Historiographic Tradition

Iskander Izmaylov

One of the most widespread notions about the Jochid Ulus, which can be observed not only among non-specialists, but also among historians, is that the 'nomadic population' of this state neither needed, nor had its historiographical writing tradition. The historical notions, in this view, were preserved as an oral tradition and had folkloric character. Such an opinion has its origin from the time when the Golden Horde was considered to be 'a wild semi-nomadic and parasitic state'. And although some researchers are prone to deny the existence of Golden Horde historiography, it is believed that 'Chinggis-name' and other such works were not part of the historical tradition of the Jochid Ulus, but a certain 'oral steppe historiography' [Yudin, 1992, p. 25]. Such ideas come to an ever more apparent contradiction to the sources, the complex of which was revealed in the recent decades.

During a thorough study of archaeology and historical data it, becomes clear that the state, which was developed as per the medieval standards, and was within the Islamic civilisation, must have had a sufficiently developed system of historical compositions, which would legitimise the power of the Golden Horde khans and build their dynasty to their great ancestors. At

the same time, taking into consideration the dissemination of literacy and writing culture, it is clear that such works spread not only in oral, but also in a written form.

At the same time, one is to note that the difficulty of the revelation and study of the Golden Horde historical tradition is connected with the fact that no complete authentic work on a historical theme has survived, which could be interpreted as a historiosophical conception of the Jochid Ulus, not to mention, speak of its development over time. It is quite difficult to discover concrete authentic changes of plots and their enrichment by new elements during their development, because only some separate plots and passages, which were reworked at later time, have survived from the integral historiographical state tradition. However, we should admit that this tradition was not oral as it existed in the works of the court historians who, of course, used oral traditions, but not only. For example, in his work 'Chinggis-name' Ötemish Hajji, an author of the 16th century, writes about 'the chronicles that... he saw... [Ötemish Hajji, 1992, p. 90], thus noting the existence of a written historical tradition. It was not even a steppe one as it existed in cities, in the court of khans. The question about the relationship of

the oral tradition and the historical one is also quite complex. Based on the substantial uniformity of the surviving texts, one can assume that the traditions of the post-Golden Horde time were influenced by the historical tradition of the Jochid Ulus.

One cannot precisely determine when and who began the creation of the specific Golden Horde history. Its purpose, however, is undoubtedly clear—the strengthening of the own legitimization in struggle against the other kins of *Chinggisids* and creation of arguments in favour of their uniqueness and natural greatness. With the introduction and establishment of Islam, Chinggisism in its Golden Horde version acquires obvious connotations. In this process, new forms of ethno-political and social identification are clearly reflected, in particular, the Jochids' realisation of the importance of religion symbols for strengthening the Islamic reputation of the dynasty. In the 15–16th centuries, or rather even earlier, in the 14th century, Chinggisism in its existing form acquired apparent political and social significance, which V. Yudin hastened to call a special religion: 'The new genealogical complex that was set out in terms of tribal understanding of the origin and structure of mankind became the basis of formation of views on origin of all mankind and the universe. It was complemented by the traditional elements of Turkic-Mongol shamanism, which became something like an upper stage for the new faith. Thus, a cosmogonic myth was created, which means that an illusory vision and ideology were formed. So a new religion 'was born' [Yudin, 1992, pp. 16–21]. Today, one can hardly call '*Chinggisism*' a religion, at least because of the fact that the author himself writes that it was also 'a worldview, ideology, philosophy, sanction of a public system and social institutions, political and legal system, culturological doctrine, basis of education, means of regulation of behaviour in the family and society' and further he opens up a whole spectrum of quasi-religions—'*oguzism*', '*idegeism*' [Ibid, pp. 19, 55–56].

In other words, for the author any 'false ideological and world viewing system that determined the image and functionality of the world' is what religion is. Without going into

the understanding of the essence of religion, we would still like to note, that since its basis is considered the belief in the supernatural, then the author describes mythological thinking [Meletinsky, 1983, p. 377; Tokarev, Meletinsky, 1991, pp. 11–20]. In such setting of the problem it is revealed that the Mongols had their own mythological system, not reducible to '*Chinggisism*', [Neklyudov, 1991, pp. 170–174]. Chinggis Khan was by no means the 'Almighty God', as it seemed to V. Yudin, at least because of the fact that he himself ruled since the sanction of 'Eternal Heaven' [Trepavlov, 1993, pp. 59–67; Skrynnikova, 1997, pp. 56–73]. Besides methodological disadvantages, this theory has also 'political' roots. The basis of such a misrepresentation as to a large extent was the general view of the society and the state of the Jochids as a 'steppe empire' or 'nomadic coalescence', which allegedly couldn't have developed forms of historiography and ideology. It appears, however, that the term '*Chinggisism*' should imply a particular paradigm of Mongol and Tatar (Golden Horde) political ideology.

Meanwhile, the Chinggis Khan of the Golden Horde historical tradition is not 'a saint' and even not so much of a 'heavenly patron' of the dynasty and the state, but rather the founding father, the creator of the state and laws ('Iasa of Chinggis Khan'), an 'eternal ruler', who only temporarily transferred his rights to the next khan. Fundamental notions about the independent Jochid Ulus and the ethno-political unity of Tatars formed in the framework of this ideological paradigm, characteristics of dynastic legitimacy, continuity of power, the clan and social hierarchy were determined. And only after the break-up of the single state into separate khanates and possessions (the Kazan, Crimean, Öz Beg (Shibanid) khanates, Nogai Horde) there appear new symbols of power and legitimization mechanisms, related to the local peculiarities of power structures and the more active influence and introduction of Islam in these processes (exaltation of individual tribes of the descendants of Jochi - Tuk-Timurids, Shaybanids, and even the non-Jochids, the descendants of Edigu, the appearance of local saints - patrons of various dynasties, etc.).

The images of ruler saints are one of the typical and paradoxical phenomena of the medieval mind [Blok, 1998; Nelson, 1986]. But in spite of the proximity and similarity of images of saints in different civilisations and social contexts, they could have some deviations. The cult of Chinggis Khan that ruled since the sanction of 'Eternal Heaven' in this very regard responded to such demands, easily fitting to the system of Islamic values. The phenomenon of khans' aristocratic power, which arose in a pagan (or Nestorian) environment, obviously goes back to the system of mythological notions about the supernatural nature of power [Trepavlov, 1993, pp. 59–67; Skrynnikova, 1997, pp. 56–73]. However, in the archaic notions about the charisma of the Jochid Ulus ruler in the 14th century under the influence of Islam being introduced into mental structures of the society, an original transformation of traditional mythologema of power occurs in the new system of concepts, the Islamised religious and political symbols. Having adapted the cult of Chinggis Khan and his son Jochi to Islamic values, the Golden Horde ruling dynasty appeared to be included in a Muslim system of sanctification and legitimization of political power. Significance of this process which was reflected in the historical tradition, which, of course, bore an 'intuitive political influence', can be described by the formula of the 'Turkic-Mongol tradition in an Islamic paradigm'. It is also possible that the researchers who, referring to a broad anthropological context, believe that in the motif of the ruler's sanctity and the charisma of his power there reflected processes of mythologizing the leader, defined by the concept of the 'sacred ruler', are right [Skrynnikova, 1997, pp. 100–148].

Unfortunately, moving from the analysis of the ideological and social aspects of this cult to some specific issues, it should be stated that the problem of honoring the Central European and Muslim saints, the formation and development of their cults, their correlation with traditional Turkic beliefs were not a subject of deliberate and systematic study, if we do not count the wonderful work of D. DeWeese [DeWeese, 1994], where the historical tradition and folklore sources on the islamisation of the

Jochid Ulus are analysed in detail. It highlights the image of the saint Baba Tuklas, which, in the opinion of the author, is a key subject in the understanding of the Islamisation mechanisms of the Golden Horde, and demonstrates the implementation of Islamic motifs in the traditional archaic cults of the population of Central Asia [Ibid., pp. 321–516]. At the same time, the very image of Chinggis Khan and his descendants - the Juchids, as an essential component of the state ideology of the Jochid Ulus, are paid much less attention to, and the role of the associated range of images is less clearly highlighted.

The key elements of this tradition date back to the official Mongolian family history of Chinggis Khan - 'Altan Depter' ('The Golden Notebook') [Rashid al-Din, 1952, I, 1]. Typical narrative elements of it were the genealogy concentrated in chronicles (mythological - Chinggis Khan's ancestors from Alan-Goa and historical - Qabul Khan and his descendants), the brief biographical descriptions, related to genealogy, inclusion of 'small' stories (panegyric, didactic and other stories), a relatively weakly expressed (often in the form of event registration) chronological description, but the most important part of the historiography is dedicated to the life and activity of Chinggis Khan [Nekludov 1984, pp.223–241; Shastina, 1977, pp.462–483].

All Turkic pedigrees with a particular extent of completeness transfer this Mongolian tradition. The most complete version preserved in the Tatar historical collection at the end of the 17th century is 'Daftar-i Chinggis-name', where there are almost all the story elements that are present in the 'Collection of Chronicles' by Rashid al-Din, up to the mention of the progenitor Alan-Goa (in the form of *Alangu*). Direct borrowing of a part of this chronicle and its connection with some other Tatar sources are certain. However, it is unclear whether it is the result of a later compilation, or a part of early Golden Horde historiography that survived, but at the same time in the source there is no such element as a biography of Jochi Khan and his descendants (except Jani Beg, to whom a separate dastan is dedicated, which had been very significantly revised at a later time).

In other sources, where Golden Horde tradition has been preserved, apparently, more completely, there are no passages on the history 'of the golden race'. Most likely, in earlier versions of the Jochid historiography these motives have been presented to some extent, but, gradually losing their ethno-political relevance, they have been shortened or altered. Samples of a similar abbreviation of pedigrees are introduced in the versions of 'Chinggis-name' by Otemish Hajji and 'Genealogy of Turks' ('Shajarat al-Atrak')—[Otemish-Hajji, 1992, Collection of stories relating to the history of Golden Horde, 1941, pp. 202–209], where with some distinctions it is indicated that 'the greatest holder of the lucky star (sakhbkyran)', the great Chinggis Khan gave a part of his possessions—Desht-i-Kipchak and Khwarezm to his son Jochi. No other details about the majesty and the grandeur of conquest, undertaken by Chinggis Khan, can be found in the surviving Turkic tradition of a later period. They all seem to be left in the frames of the dynastic history of the Jochids, representing a striking contrast with the Mongolian tradition [Shastina, 1977; Neklyudov, 1984, pp. 223–241].

The version of processing is connected with the abundance of Islamic motives in the history. Its early stage is presented by Rashid al-Din who combines data about the ancestors of Chinggis Khan and the history of the Oghuzes - 'Oghuz-name' [Rashid al-Din, 1952, I, 1, pp. 80–91], where, at the same time, there is an Islamic genealogy of peoples, and the ancestors of Oguz Khan are associated with the prophet Japheth (Yefet).

In a somewhat revised form, this dastan got to the Golden Horde tradition, where it was supplemented by some new topical themes. All the pedigree of rulers is raised to Adam and his descendant Japheth. For example, according to Abu al-Ghazi 'The prophet Noah sent each of his three sons to different lands... Japheth was sent to the country of the North Land. Some people say that Japheth was a prophet, while others say he was not. Japheth left Juda mountain at the will of his father and set off to the banks of the Itil and Yaik rivers'. After Japheth, in the northern country ruled his son Turk

whom the father allegedly enthroned, telling the other sons, 'Treat Turk as your sovereign and obey him' [Kononov, 1958, p. 39]. After a series of other khans, including of Mughal and Tatar, who have no parallels in Rashids ad-Din's 'Oghuz-name', the ruler of turks become Kara Khan and after him—the son of Oghuz Khan. Thus, one of the peculiarities of the Jochids' historical tradition is cutting-off Chinggis Khan's 'Mongolian' ancestors, and the another—the inclusion of the eponyms 'Tatar' and 'Mughal' in the traditional Turkic and Islamic legends ('Oghuz-name'). And not only the eponyms, in the text there are indications that the power of Oguz Khan's military capability owned to 'the warriors of the Mughal and Tatar provinces' [Ibid, p. 45].

Another important aspect of these mythologems is the exaltation of the noble ancestral birthright to rule the Turks, starting from the legendary eponymic Turk to Oghuz Khan. In this sequence, Chinggis Khan seems to be one of the key characters. Public consciousness of Turkic-Tatar khanates assimilates him and adapts his character, making him a lawful successor and a heir of the great lords of the Turkic steppe. But his role is not so much related to the conquest of the world and the rule among Turks (for example, a number of stories emphasise that his main aggressive policy was aimed at other countries and regions), but to the transfer of authority over the Turks solely to his son Jochi [Ötemish Hajji, 1992, p. 91; Kononov, 1958, p. 44].

Within the territory of the Jochid Ulus, this tradition was further developed during the period of the formation of an independent state. The predestination of the appearance of 'the golden clan of Chinggis Khan' and the handover of power to his son Jochi in the part of the state (Jochid Ulus), which included 'Khwarezm and Desht-i Kipchak, from the borders of Kayalyk to the remote places of Saqsin, Khazar, Bulgar, Alans, Bashkirs, Uruses and the Circassians, all the way to the places reached by the hoof of a Tatar horse' became its key element [Sbornik materialov, otnosyashixsya k istorii Zolotoj Ordy', 1941, p. 204]. This is how Ötemish Hajji describes it: 'Jochi Khan was the eldest of his (Chinggis

Khan's—*I.I.*) sons. He gave him a large army and sent him to the vilayet of Desht-i Kipchak saying, 'Let it be a pasture for your horses'. He also gave him the vilayet of Khwarezm' [Ötemish Hajji 1992, p. 91]. According to the version of Abu-al-Ghazi, it is described in a similar way: '...Jochi and nukers belonging to him left Urgench for Desht-and Kipchak. The Kipchak people gathered and a battle occurred. Jochi Khan gained victory and defeated all the Kipchaks who caught his eye... The Kipchaks who dwelt between Itil and Tin were dispersed in four directions... Jochi Khan captured the Kipchak youth and settled in a Kipchak yurt. He moved his whole family here from the Mongolian country and everything he had received from his father. There were settlers in the Kipchak yurt from every Öz Beg urug'. Thus, Jochi performs two functions here - as the heir of the charisma of Chinggis Khan and the founder and creator of his own Jochid Ulus on conquered lands ['in these countries he established himself on the throne of the khanate and as ruler'] [Kononov, 1958, p. 44].

Apparently, this is a key mythologem of the developed Jochid political cult. Unfortunately, the subject of Jochi Khan is only slightly covered in the sources available to us, which seem to reflect a later stage in the development of the historiography. Some stories, possibly revealing the image of Jochi, can be found in a number of Persian sources created at the court of the Timurids, but they were significantly reworked and supplemented during the rule of the Shibanids. For example, the 'Genealogy of the Turks' ['Shadzharat al-atrak'] has three key motives: the legitimisation of Jochi as the eldest son of Chinggis Khan (this describes the well-known incident of the capture of Chinggis Khan's pregnant wife, Börte, by the Merkits, which cast a shadow on the legitimacy of the heir); the special love of Chinggis Khan for his eldest son (whom he loved more than all his male and female children), providing a widespread Turkic legend about a singer figuratively telling the Khan about his son's death as proof; and Jochi's younger brothers' (Chagatai and Ögedei) enmity and jealousy towards him [Sbornik materialov, otnosyashixsya k istorii Zolotoj Ordy', 1941, pp. 203–204]. Certainly,

there were no such incidents in the historiographical tradition of other Mongolian states, where other mythologems of power legitimisation come to the fore and other ties with the political cult of Chinggis Khan were emphasised (for example, in the states of the Chagataids and Hulaguids, in Moghulistan, the state of the Great Moguls, etc.).

The motif of noble origin is highlighted in the emphasis on Jochi Khan's receipt of ordination to receive power in the Ulus from Chinggis Khan. Attention is focused on the dynastic ties, as a reflection of the faith in the inheritance of charismatic qualities, and the consecration of the power of Jochi and his descendants with the cult of a person who will 'shock the universe'. In other words, the story line related to Jochi defines not only the inclusion of the political cult of Chinggis Khan into the Jochid political pantheon, but also marks the formation of a Golden Horde ethno-political mythologem. At a later time, the development of a Turkic historical tradition in the Jochid Ulus took place within the framework of this narrative paradigm. The genealogy of a certain descendant of Jochi with a short characterisation of the previous generations and a more detailed description of the biography of the khan (Jani Beg, Orda Khan, Urus, Abu'l-Khayr, etc.) or a noble karachibek (Mamai, Edigu) formed its basis.

The gradual enrichment of this tradition with Islamic elements (especially in the 15th and 16th centuries) by way of short insights (information on the adoption of Islam by Berke and Öz Beg, biographies of saints, etc.) and the restoration of the genealogy of khans and karachibeks [Edigu] up to the holy prophets is the main tendency of its development. This tradition was gradually built into the Islamic image of the world and historiography. Its closeness to folk and epic systems and the clear localisation of each clan (microcosm) within the empire of the Jochids (macrocosm) contributed to the circulation of this tradition and its introduction into the consciousness of the Turkic population [DeWeese, 1994, p. 321–408]. The 'Korenisation' of the history of the state, the emphasis of its local traditions and origins became another tendency. It was achieved by including

the history of tribes and clans, local saints, and popular heroes of legends and traditions into the state historiography.

Jochid Ulus united a considerable number of Turkic-Mongol clans between which a certain hierarchy took hold in the historical tradition and was established according to the genealogical proximity to the clan of Chinggis Khan. The creation of the hierarchy of clans headed by the Jochids in the Ulus of Jochi was interpreted not just as an institution of the state, but as an act of work arranging the macrocosm. The grounding of this historical tradition in a written form and later in an oral (folk) form made it authoritative and legitimate. This historical tradition worked out a basic set of mythologems and became the ideological justification of the formation of a new ethno-political 'Tatar' self-consciousness. It was mainly circulated among the ancestral and bureaucrat nobility (who were Islamised to a great extent) who were vassals of the Jochids involved in their clan and ulus system and who often led a nomadic life.

The creation of a Jochid (Tatar) historical tradition became the most important factor in the formation of the mental worldview and unification of various Turkic peoples, and the

cultivation of a Tatar ethno-political identification. Having achieved independence from the Mongol Empire, the Ulus of Jochi obtained the necessary mechanisms for the creation and design of its own power's historical tradition. After the official adoption of Islam as a state religion, it even found support in the plentiful opportunities of Islamic historiography and philosophic literature, having absorbed new motifs and symbols. Unlike a whole range of other Turkic states with a vague social structure and undeveloped state tradition, Golden Horde power ideology (a peculiar 'political theology') became a powerful burst of Turkic-Tatar self-consciousness. Its paradigm of ethno-political ideology turned out to be so authoritative that it consumed less adapted and weaker mythologems from previous epochs or absorbed them, partly developing them, and defining the further development of Turkic historical-political thought of late medieval Eurasian states and their peoples for many centuries. The Tatar historical tradition turned out to be so strong that after the collapse of the Jochid Ulus, it became an integral part of the local historical traditions of various Tatar states of the 15th to 18th centuries.

§ 3. Records management and paperwork culture

Mirkasym Usmanov

There was a highly developed normative management tool mainly represented by the **official record management**, which created various business documents, including acts in the Jochid Ulus which corresponded to the state's level of socio-political and economic development, its military-administrative system and efficient bureaucracy. Such documents, drawn up in the official offices of the Jochids by professional scribes, were intended to serve and satisfy the socio-economic, the administrative-managerial, and, therefore, the ideological and political interests and requirements of the upper echelons of power. At the same time, business documents—records management outcomes—are by their nature an integral part and important component of the multi-layered

written-communication culture. Therefore they had their prehistory, which was presented by different initial traditions.

Official records management developed from several sources, and over the course of separate periods, which corresponded to the complex and multicomponent origin of the state of Jochids. Each of them is noteworthy. In this connection it should be noted that despite the poor preservation of authentic autochthonous written sources on the history of the Jochid Ulus, part of the autochthonous documentary contains more or less significant material. It provides the opportunity to get an idea of both the sources and stages of development of the Jochid school of record management, which was originally one of the branches of

Mongol-Uighur paperwork culture. This refers to both the originals of the khans' yarliqs and messages of rulers of the Golden Horde themselves and Tatar Khanates, which separated from it, but continued developing its traditions [Berezin, 1851; Usmanov, 1979], as well as in the translations of similar acts into different languages [Pamyatniki russkogo prava, 1955; Zimin, 1962; Grigoriev, 2004; Lashkov, 1891; 1897; Vashari, 2002; Grigorievs, 2002, et al.]. The earliest texts of such documents preserved in translation were written in the **Uighur script**, in one of the dialects of medieval Turkic.

As it is known, the Mongols were an illiterate people before their state had been formed. However, the administrative-managerial needs of the developed state necessitated their adoption of a script. The script of the more civilised neighbouring Uighurs—the closest Turkic-language neighbours among the whole range of tribes and nations of ancient and medieval Central Asia—was chosen [Bartold, 1909, pp. 367–368; Meng Da Bei Lu, 1975, pp. 125–128; Kratkaya istoriya, 1991]. This is due to the fact that the language and script of the Uighurs, which had completely formed in the 8th to 10th centuries and continued the traditions of the ancient Turks, were a means of cultural communication among the peoples of Central Asia [Isiev, 1991, p. 225]. Therefore, the Uighur script adopted in the 10th century by Khitans, in the 11th century by Naimans and in the early 13th century by Mongols [Ibid., note 3] was easily circulated among these groups and withstood competition from other alphabetic systems [Kara, 1972, pp. 27–32]. Thus, it preserved the status of the **Khan's Tongue** for a long time. The fact that the Mongols adapted it to their language from the very beginning contributed to this [Meng Da Bei Lu, 1975, p. 128].

The active practice of Mongolian rulers, from Chinggis Khan himself to the rule of his great-grandchildren [Bartold, 1909, p. 367], of bringing literate Uighurs into service as teachers for their children, as civil servants of varying ranks, from common scribes to high officials, was also of great importance. According to the calculations of A. Kadyrbayev, the names of more than three hundred high-ranking Uighurs serving the Mongols are mentioned in sources.

The Uighur intellectuals of that epoch made a significant contribution to the circulation of different kinds of religious and literary knowledge among the Mongols and not only them [Kadyrbayev, 1991, pp. 235–243]. All this led to the fact that the Uighur script was holding its ground for a long time in Mongolia itself, in the Yuan Empire and in other uluses that were separated from the superpower—Jochi, Chagatai, and Hulagu [Ibid., p. 245].

Several factors contributed to the longevity of the Uighur script in the Jochid Ulus. For example, there was the factor of mastering the tradition of the Uighur script in the empire of the Mongols, which had grown by leaps and bounds by the 1230s and 1240s, when the territory of the possessions of the future state of the Jochids was being formed, where the economic, record keeping and management skills of the former united power of the Chinggisids continued to develop. So a significant part of the early paper notes, as well as the texts of yarliqs and messages of the early Jochids, were formulated with the help of the Uighur script.

The participation of Uighur princes and their armies in Jochi's western conquest (for example, the Turpan Idyk-kut of Barchuk), the presence of Uighur secretaries-bitikchis in the camps of Jochi and Batu [for example, Kurkuz—see materials by A. Kadyrbayev for more details] directly affected the formation of the early Jochid bureaucracy. The paperwork terminology of Uighur origin is evidence of this fact: a *bitik* (letter), *bitildi* (written), *bitikchi* (penman—that is, a secretary), a synonym of the latter one is *bakhshi*, etc. which was later replaced during Islamisation using local Turkic or Arabic equivalents [*yazyg*, *khafiz*, *katib*, etc.] [Usmanov, 1979, pp. 125–129, 267–270].

The following factor also was of great importance. The proportion of Turkic speakers in the army, and consequently the population of the future Jochid Ulus, increased during the advance of the Mongols to the West, beginning with the territories of Uighur-Karakhanid Eastern Turkestan, which means the turkification of the Mongols took place. So the early Jochids, or at least their clerks, were bilingual.

The **Uighur language** of the early 13th century underwent changes, passing through

ranges of the literary developed Karakhanid-Karluk world, and the layers of the Kipchak-Oghuz element, that is, it was enriched and became more complex. In the west of the empire, it was not identical to the Uighur language famous from Central Asian documents of the 9th to 10th centuries [see the samples: (Radloff, 1928)]. It was this written Uighur language that underwent changes and fell under the Karakhanid influence, and participated in the formation of the official Turkic language of the Golden Horde. This evolution and change of the Uighur language in the West under the influence of the Karakhanid language was what A. Kononov had in mind when he wrote that 'the literary language of the Karakhanid state' had been the basis for the literary language of the Jochid Ulus, which subsequently became the basis for the Chagatai language [Kononov, 1963, p. 65].

The following specific feature of the linguistic-graphical situation in the Jochid Ulus should be taken into consideration as well. Turkic regions, according to population and culture, such as Khwarezm, Bulgar, the Lower Volga Region, Crimea and a significant part of the North Caucasus were integrated into the future possessions of the Jochids. As a result, the proportion of forces in the future power irreversibly changed in favour of the Turkic language; it also appears that the above-mentioned role of Uighur officials in the bureaucracy of the empire's western ulus, which was united at that time, contributed to this situation as well. The fact that an overwhelming majority of early Jochid acts were written in Turkic [Pamyatniki russkogo prava, 1955; Borovkov, 1966; Usmanov, 1979, pp. 99–101], as well as peculiarities of the further development of the Turkic literary language in the Golden Horde support this conclusion. The strivings of some scholars [Grigoryev, 1977, p. 145] to qualify early acts of the Jochids as those written in Mongolian do not hold up to support, as has been proven in due course [Usmanov, 1979, pp. 94–97].

However, the script of the Uighurs turned out to be in a more difficult situation, unlike the position of their language. The Arabic script was mastered in Islamised regions—

Khwarezm, Bulgar, the Lower Volga Region, the Caucasus [Dagestan-Azerbaijan region]—long before the conquests and competed with Uighur rather successfully. Arabic script inscriptions on a proportion of early Jochid coins confirm this conclusion. In other words, the Uighur script failed to replace Arabic writing that was bound up with the local culture, despite its status as the khan's script. The position of the Uighur script was further undermined after the official adoption of Islam by the Golden Horde.

Apparently, the Mongolian language in the Jochid Ulus was in the same position. Certainly, the Uighur script and the Mongolian language were used a bit later, especially in correspondence with the rulers of Karakorum at first, then those of Khanbaliq (Beijing) and the Hulaguids who used the language and script of their ancestors longer than the Jochids. Coins with inscriptions in Mongolian can be found in Iran more often than in the Golden Horde [Tiesenhausen, 1889–1890, pp. 304–307]. Paizas, traditional 'guarding charters', were designed in a traditional way for which the exterior form was important. The Mongolian language and the Uighur script could be preserved longer in the everyday life of separate families for which bilingualism was typical (see more details: [Usmanov, 1979, pp. 100–101]). The texts of a birch bark manuscript from the Volga Region are evidence of bilingualism in the Golden Horde [Poppe, 1941].

It should be noted that the Uighur script was more widely circulated in the West of Eurasia than is stated in literature. It was also known in countries dependent on the Golden Horde and neighbouring states. For example, the original of Grand Prince Vasily Vasilievich's Letters Patent from 1435, discovered by M. Obolensky, contained an Uighur inscription in Mongolian letters. After being decoded by the specialist in the study of Mongolia, G. Gomboyev, and translated by the turkologist K. Faizkhanov, it turned out to be a resolution in Tatar reading: *bulai un gurduk*—'we have approved it in this form'—that is, 'we approve' which apparently belonged to a khan's bureaucrat. O. Kovalevsky confirmed the correctness of this reading and translation of the text on the authentic Russian charter, 'The same words have been used

by Kazan Tatars with the same meaning to this very day' [Obolensky, 1861, pp. 22–23].

M. Obolensky also uncovered the 1453 spiritual charter of Princess Sophia, the widow of Grand Duke Vasili, which also contained a Tatar resolution in the Uighur script: *alt-myshda yanbar aında* that is, 'in January 60' which corresponds to 6960 since the making of the world [Ibid., pp. 23–24] according to M. Obolensky. The publisher also regarded the inscription decoded by O. Kovalevsky and translated by A. Makhmudov as a resolution of Tatar (khan or horde-bureaucrat) origin [Ibid., p. 24]. On the contrary, A. Bobrovnikov claimed that these inscriptions belonged to the Russians themselves, who mastered the language and script of their feudal overlords [Bobrovnikov, 1861, pp. 24–25, 28]. Basically both parties are correct, as the facts of approval of Russian charters of the 14th century in Sarai are confirmed by recent studies on Russian diplomacy [Cherepnin, 1948, pp. 16–19, 29, etc.]. Such a phenomenon could also have taken place in the 15th century.

However, the authentic Russian dating of the second charter reinforces A. Bobrovnikov's opinion, because the facts concerning the real place of the Uighur script in Horde-Moscow correspondence of the 13th to 14th centuries, and therefore, the facts concerning the mastering of Uighur graphics in chancelleries of grand princes are confirmed by other data. For example, there was a whole box in the Royal archive of the 16th century containing 'old diaries of Batu from (Khan Batu.—M.U.) and other tsars; they have not been translated, as nobody can do it' [op. 1960, p. 32] [the italics is mine.—M.U.]. Apparently the former clerks of the grand dukes, who were able to read them, were not going to translate them. The fact that I. Berezin wrote that 'apparently both in Russia and Lithuania there were connoisseurs of Tatar and Uighur scripts' in 1850, while publishing an Uighur message of Toktamys, that is, before M. Obolensky's publications, is noteworthy [Obolensky, 1850, p. 44]. One can confirm that this script and language were known in other countries as well, for example, in Egypt and Turkey (for more detail, see: [Sbornik materialov, otnosyashhixsya k istorii Zolotoj

Ordy', , 1884, pp. 228, 251; Rahmeti, 1939, pp. 285–322; Usmanov, 1994, p. 125–130; 1979, pp. 112–114]).

Thus, the Uighur script was relatively widespread and it made enormous inroads into the official circles of the Golden Horde itself and regions in its dependence. It functioned in parallel with Arabic graphics, competing with it rather successfully until almost the third quarter of the 15th century. As can be seen from data of the inventory of the Royal archive, it went into disuse in the late 15th or the early 16th century, which was connected with the final confirmation of positions of Islam and Arabic graphics in post-Horde Tatar khanates [Usmanov, 1985], on the one hand, and strengthening the independence of Rus', on the other.

This was the fate of one of the main sources of Jochid bureaucracy, or to be more precise, the use of writing as its main instrument.

As for the paleographic peculiarities of the Uighur written acts of the Jochids, one can only judge them through indirect data because of the lack of originals [only their translations have been preserved].

For example, D. Banzarov who saw the original of Toktamys's yarliq message to Yagailo in 1393, wrote about the peculiarities of writing in that he used a clear Uighur type; in the paleographic respect it is distinguished by spelling precision and its type is close to the inscription of a stone plate found in Nerchinsk district and even closer to a paiza (of Abdulla)... in the calligraphic respect it yields to two letters of the Persian Chinggisids to the French King Philip I of Castile [Obolensky, 1850, p. 41].

V. Radlov, generally agreeing with the opinion of D. Banzarov, indicated that the penmanship of the letter to Yagailo belonged to a sure hand and it was tending not to the Mongol-Uighur variety of handwriting, but to Uighur-Islamic monuments [Radloff, 1889, pp. 4, 18].

As can be seen from the table 'Handwriting Samples of the Mongolian Script', there is an undeniable proximity between the style of a number of letters in the penmanship of the Golden Horde and Eastern Turkestan [Kara, 1972, p. 65]. This fact confirms my opinion concerning the direct influence of the writing and cultural tradition of Uighur proper (East-

ern Turkestan) on that of the Jochid Ulus [Usmanov, 1979, pp. 114–115].

A similar **tradition among Muslim countries and Islamic peoples of the Middle East**, mainly Iran, was another important source of the bureaucracy and clerical culture of the Jochids. The early Islamisation of a number of regions of the future state (Bulgar, Khwarezm), as well as the rapid growth of the political, commercial and cultural contacts of the Golden Horde with Islamic countries, especially Egypt, beginning in the time of Khan Berke, contributed to its penetration and the gradual removal of the Uighur element (for details see: [al-Kholi, 1962; Zakirov, 1966; Grekov, Yakubovsky, 1998] et. al.). For this reason more monuments of official bureaucracy in Arabic and Turkic have been preserved. The fact that the Golden Horde bureaucratic tradition and legal norms were developed in the post-Horde Tatar states, also contributed to their undamaged state. Therefore, there is an opportunity to study not only their contents but also their attributes. **Paper** was probably the one and only **writing material** in the Jochid Ulus (it is unknown if parchment was used or not). If the early Chinggisids were most likely to use Chinese paper, the Jochids mainly dealt with Central Asian paper from Eastern Turkestan. Because the manufacturing of paper, invented in Ancient China or Eastern Turkestan in the 8th century, was mastered in Samarkand [Malkin, 1940, pp. 19–22]; after Arabic conquests it was circulated throughout the Islamic world [Bartold, 1920, p. 353]. Therefore, the majority of early Jochid official acts are represented on polished Central Asian paper. Central Asian paper made from silky tows gained popularity. One can also find paper manufactured in the West, mainly in Italy, especially in later times [Usmanov, 1979, pp. 86–88]. We do not have any information on local paper manufacturing.

The Jochid clerks used *dyestuffs of varying colours* (the body texts of yarliqs known in originals are painted with black ink of different tints, from a blue-black to brownish one). Apparently, they used the various forms of production of black ink known in Islamic countries (they seem to have also used Chinese ink at an early stage).

Coloured dyestuffs were used along with black ink, including yellow, red and blue dyes. In addition, the yellow ones were derivatives of golden ink, or to be more precise, they replaced ink with a touch of gold. As a rule, invocations (theological messages), the word 'khan', and its pronouns with corresponding turns of speech were written with this kind of ink. Golden ink was produced from gold turned into powder and mixed with a sticky substance (egg-white) [Kaziev, 1966, p. 98]. Sometimes yellow paint had rather noticeable drops of the precious metal in its composition. The red paint was used for rubbing The **red tamga**, the blue [dark-blue] dye—for **Kok tamga** i.e. images of texts of official square royal seals. The so-called 'greasy paints' were used for this purpose [Usmanov, 1979, p. 89–91]. The last variety of dyestuff is connected with Chinese dye in its origin and consequently early Mongolian analogues [Kara, 1972, p. 117]. The writing materials of Jochid clerks are noteworthy as well. The inkwells were of various forms and made from different materials: from both metal and ceramics. For example, a bronze inkwell was found along with birch bark book dating back to the 14th century [Poppe, 1941, p. 81; Kara, 1972, p. 112]. Even faience inkwells have been found [Usmanov, 1979, pp. 91–92].

Various quills served as **writing tools**. Bird feathers [those of geese and swans] were good for small handwriting. Based on data from khans' yarliqs, cane **kalam**s were good for large handwriting. They received canes from southern countries, such as Central Asia, Iran and Egypt. Producing kalam was a kind of art which required great experience and knowledge [Kazi-Akhmed, 1947, pp. 116–119; Kaziev, 1966, pp. 35, 38–40]. A kalam which was ready to use was tested by writing a full stop [Kostygova, 1957, pp. 136–139]. First of all, a correctly and beautifully executed full stop was of great importance for Arabic-Persian scripts, in which more than 20 letters out of 32 have super- and interlinear dots; secondly, the width and height of separate letters were measured by the number of medium-size dots located close to each other.

Bone feathers were used in the Jochid Ulus along with bird feathers and cane kalam.s. The

discovery of such an instrument, a birch bark book, and bronze inkwell is evidence of that [Poppe, 1941, p. 81; Kara, 1972, pp. 110, 112]. However, the fact that a metal quill was invented in the Golden Horde is the most interesting for the history of paleography: one of these bronze quills with a cut at the painting end was found in Sarai-Berke, which was destroyed in the late 14th century. It is exhibited in the Hermitage with a faience inkwell [Kara, 1972, p. 112]. This is one of the earliest known uses of the metal quill not only in the Volga Region but in all of Europe, where the steel quill has only been used only since the 18th century [Lyublinskaya, 1969, p. 31].

'Soft' quills—brushes were used in the Jochids' chancelleries along with 'hard' feathers, mainly made from canes, bones, and even from metal. Apparently, they were used for writing large signs with theological messages, which were written with gold or a dyestuff that imitated it, as was noted above.

As can be seen from this brief overview, the Jochid clerks possessed a rich and diverse arsenal of stationery, writing instruments and materials, thanks to which they managed to produce highly artistic works of written-clerical culture.

In Turkic-Tatar chancelleries, officials paid special attention to the **external attributes** of documents, their form, material, and graphic look, as well as their legal design. Each traditional culture and the chancellery which followed its rules, created attributes which were typical only for that culture. It led to the fact that each state's chancellery was different from that of other countries, which in turn produced traditions which were typical only for them. A particular kind of bureaucracy was formed in the Jochid Ulus as a result of the organic integration of principles from several independent source. Authentic specialists from other countries understood this very well. For example, according to al-Omari and Al-Mukhibbi, al-Kalkashandi and al-Makrizi, who were well-informed on Horde-Egyptian contacts, a person who arrived from the Crimea and claimed to be an ambassador of Tokhtamysh was exposed as a liar by an Egyptian dignitary because the charter he brought did not correspond to the 'conditional rules of khan letters

in respect to the paper (apparently he meant its format.—*M.U.*) and the manner of narration' [Sbornik materialov, otnosyashixsya k istorii Zolotoj Ordy', 1884, pp. 248, 251, 341, 350, 407, 414–415, 431].

As can be seen from descriptions of their originals, khan *yarlyqs* and messages looked like **long, narrow scrolls** consisting of several sheets glued together [from 2 to 6 sheets]; being approximately 17–30 cm wide and 20–200 cm long. Those of the Golden Horde and the earliest *yarlyqs* of Tatar khanates were prepared in this way [Usmanov, 1979, No. 1–2, 5–7, 11, 13–15, 18, etc.]. Later, as a result of the former tradition's decline, the ratio of width to length of scrolls changed as well, but this was a gradual process [Ibid., No. 35–37, 45, 51, 53, etc.].

The **handwriting** made up an exterior feature of khan *yarliqs* and letters—they were paid special attention in Jochid chancelleries, as well as in other Islamic countries (for more details, see: [Kazi-Akhmed, 1947, Sadik-beg, 1963; Semenov, 1940]). According to one art historian, 'The script had an aesthetic significance like in no other part of the medieval world as it did in countries of the Middle and East' [Weinmarne, 1974, p. 144]. Dozens of calligraphic scripts were developed and perfected in Islamic countries (they numbered more than 70 variants in the 19th century [Muradov, 1967, pp. 7–8]). The towns of the Jochid Ulus were characterised by 'a brilliant urbanistic oriental medieval culture, a culture of flowing bowls and mosaic panels on mosques, Arabic astronomers, Persian poems..., exquisitely *delicate ornamental patterns, and calligraphy*' in their golden age [Fedorov-Davydov, 1976, p. 118] [the italics are mine.—*M.U.*].

As the script of the authentic granted charters demonstrates, the main writing styles in the Ulus of Jochi and earlier Tatar khanates were the *Thuluth* and *Divan* scripts. Out of 39 authentic documents known to me, 9 are written in *Thuluth*, 22—in *Divan* in different variants and only 1—in *Nasta'liq*. Out of them, *Thuluth* is typical of the earlier period (*Thuluth* was probably used in those early granted charters that came to us in ancient copies, see: [Usmanov, 1979, pp. 32–41, No.5–7, 11, 18–21, 23]). The *Divan* script was used in both

the Golden Horde and post-Horde khan yarliqs [ibid., pp. 29, 31, 37–38, 43, no.1, 13–15, 26]. Later, there was a simplification of the script, which occurred in parallel with alterations to the previous document forms (reduction in their length).

A visible external indicator of official acts, together with the form of the document and the script, are also **corroborative**, that is **certification marks**—seal impressions. These marks were mainly of two types. The first one was the **Golden, Red and Blue** tamgas. These large square seals (approximately from 6x6 to 13x13 cm) were the sovereign's **royal** certification marks [ibid., pp. 143–150].

The second type was a small ring-like seal shaped like an almond. This seal certified the **identity** of the ruling house representatives: the khan and his close relatives. It means that square seals could belong only to the ruling Jochids, the almond-shaped ones—to all the members of the clan and the dynasty. A ring-like seal of the ruling person was different from the seal of the other Jochids, the khan's relatives, in the so-called trident tamga in the text, that is the Giray dynasty mark [ibid., pp. 140–143, 164–167].

At the same time, the use of the almond-shaped seal was a prerogative of not only the Girays but also of the early Jochids and other Chinggisids of later periods. There is evidence that Tokhtamysh granted to one Beg from the Shirin family (clan) the right to possess the *bademi* as an exception, that is the almond-shaped seal, 'the seal that none of the Begs had' [ibid., p. 171].

The legends of the seals, depending on their function and formal designation also had differences. The texts of the almond-shaped seals consisted of the name and patronym of the holder, a short title and a trident (sometimes). In square tamgas, the texts were longer: they consisted of kalam in Arabic (sometimes with a motto), an epithet-title, the name and patronym of the khan, wishing welfare to himself. So they contained from five-six to seven-eight expressions [ibid., pp. 140–167, Tables 12–13].

'Bold' paints of golden, red and blue, perhaps, black colours were used for the impressions of square tamgas. The impressions of the

ring-like seal were black. They were made by smoking metal matrices—the front of the ring on the fire.

Ring-like seals by origin are related to the daily life and legal norms of the heads in the Islamic countries of the Middle and Near East, and through them with the cultural tradition of the Ancient World. As for the external form and use of square tamgas, it is a way of depicting symbols as impressions directly on the document, but not as hanging elements (as was habitual in the West and Rus'), as they had other roots. As V. Grigoriev wrote, the proto-image of the Jochid square tamgas was the Chinese seal with the writing 'Zhuan'. The Jochid record clerks, in order to achieve sufficient likeness with them, 'made (...) a new type of Kufic writing that is seen only on these Mongol-Tatar seals' [Grigoriev, 1844, p. 343]. So the creative combination of the fundamentals and qualities of two absolutely different writing systems—the Arabic alphabetic script and Chinese hieroglyphs—resulted in a new type of Kufic script, different from its other styles. That is why it should be called the **Golden Horde Turkic** or **Turkic-Tatar Kufic** script, which differs from the styles of the current scripts from Middle Asia, the Caucasus, Iran, Arabia, etc. [Usmanov, 1979, p. 151].

The certifying function of square seals was expressed with their impressions usually made at the beginning or end of the text in the document. At the beginning, after the invocation and the addresser, on the right, opposite several lines, some space was left. If a long document consisted of more than two glued pages, at each seam there were new impressions of the same tamga. That is why each neighbouring page contained half an impression. As a rule, each page of a multiple-paper document was certified with an official seal. So the analysed marks, on a par with their main function and designation (to certify legally the authenticity and formality of a document in general) performed exclusively paperwork tasks: they certified the authenticity of some physical parts of the acts—each page of the document. In other words, the impressions of square seals were at the same time some kind of *countersignature* [ibid., 176]. These procedures were also seen

in records management in the other Chinggisid states. That is why it was impossible to tear some pages (parts) of the document out of the acts or to replace them with counterfeited text [Kara, 1972, p. 117–118]. This specific and subtly invented way of certifying documents come out of more ancient well-proven bureaucratic traditions, for example, the traditions of the Far East states, and first of all, China.

Violations of these rules, strictly typical for forming more or less early Jochid acts, are seen later in the Tatar khanates, when they started to develop new rules and traditions.

So in the formation and development of Jochid sphragistic art, there are traces of cultures and civilisations which differ by origin and history. Certain rules, often very severe, were strictly followed not only in external drawings but also in the preparation of documents themselves, that is texts. This can be seen in the khan's granted charters—the *yarliqs*, which differ by type. Their texts consisted of the following components, which in turn had some expressions:

an initial record consisted of the *invocation* (kalam), the *intitulation* (of the addresser), the *inscription* (of the addressee); in the messages to heads of other countries, the addressee is followed by the *salutation*, that is the greeting;

the main part included the *introductory and narrative part*, the *disposition* (the essence of the edict, order), the *sanction* and the *corroboration* (the warning about the breach and the textual certification of the presence of the seal);

the final record (eschatocol) contained information about the *date* and *place* the document was issued, and also the names of the *intercessors* and the *executives* registering the act (for more details see: [Usmanov, 1979, p. 184 et seq.]).

The formation and development of the structure, that is the sections and textual formulas of the Chinggisid official acts, and, so the early Jochid acts, took into account the experience of the Far East administrative traditions, especially the detailed Chinese traditions. The adoption of the latter into Mongol-Turkic life was done by Uighur correspondence clerks, who were more aware of the conditions, de-

mands, legal norms, customs and capabilities of the steppe nomadic world. Some time later, as needed, with changes to the religious and cultural orientation, they borrowed the experience and aesthetic principles of the clerical culture of the Islamic states, predominantly that of Iran and Middle Asia. This is clear from the materials of the overview given here.

The kalam formulas made with large scripts and dyed by the non-Muslim Chinggisids and early Jochids, named by researchers as 'preambles' [Grigoriev, 1975, pp. 161–162], could be both Mongol-Shamanic and Buddhist. After adopting Islam, the Jochid invocations naturally became Islamic. They could be different religious formulas. By making the sovereign's edicts look formal, invocations mainly declared the religious affiliation of the mentioned monarch. It means they did not bear any specific social or economic burden. Perhaps, it explains their absence in some *yarliqs*.

An addresser is obligatory for all Jochid *yarliqs*. He is presented with the formula **Toktamış sözüm**—'**My Tokhtamysh's Word**' (also possible: 'My Tokhtamysh-Khan's Word', 'Our Tokhtamysh-Khan's Word', 'My Great Khan Tokhtamysh-Khan's Word', etc. Here, the name of the khan is conventional).

The formula regularly drew the attention of researchers (both Russian scientists and Hungarian turkicologists [Fekete, 1957; Ivanics, 1975, p. 215]). **söz**—'a word', has the main meaning in the formula, which, being next to the name of the monarch and with the attraction of the first person (**-m: sözüm**—'my word') acquired a special significance: **a will, an order, a decree, an edict, a solemn statement of the khan**, etc.

The results of a special analysis demonstrate that such an addresser has a *type-determining* meaning that allows us to carry out the primary, that is the main stage in classifying the khan's charters. The presence or absence of the 'my word' makes it possible to separate proper edicts from other types, for example, *bitiks*, that is from messages to the heads of other states [Usmanov, 1979a, pp. 223–240; 1979, pp. 198–200].

The early Jochid addressers were usually written in bigger letters than in the main text. In

later acts, they were made (under the influence of the Ottoman tradition) as a sophisticated *tughra* [Usmanov, 1990; Ivanics, 1992], which was not found in early Jochid acts.

Comprehensive information about the administrative staff, different governors, officials, their direct and indirect responsibilities is provided with a detailed inscription that contains also a thorough list of all the possible people who are obliged to implement the edict; the messages included names of precise addressees, heads of other states (for more details, see: [Usmanov, 1979, pp. 206–218. Tables 15–18]).

In the main part of the granted charters, in respect of information sources, the most valuable was the disposition that included a list of all the possible taxes and duties in the tarkhan acts and the description of the administration object in the suyurgal and official acts. Information on exactly this component, together with the information about the inscription, gives more or less trustworthy information about the administrative system of the state, social relations between 'the uppers' and 'the lowers' of society (for more details, see: [Usmanov, 1979, pp. 233–247]). As the results of the analysis of the tax and duty nomenclature of the dispositions in different yarliqs show (recording of pair terms, defining synonyms and their frequency), in literature there was an artificial increase in a number of taxes and duties [Mukhamedyarov, 1962, pp. 144–159], and it was not a trustworthy reflection of reality.

The dispositions of the granted charters determined the rights and privileges of the charter holders. The sanction pointed to the certain limits on the rights of the granted and to the possible executives of the yarliq orders. They also included the possible types of punishment for violating the sovereign's will.

One of the most important points to which the Jochid record clerks paid attention was corroboration—a certifying formula at the end of the main part about the type of the seal, the impressions of which were presented in the yarliq [Usmanov, 1979, p. 247–256].

The Jochid record clerks were punctual in drawing up the eschatocol, which is the final record of the acts. This quality is clearly re-

flected in the information about the date and the place of their issue. They are present in all the acts without exceptions. At the early stage, the Jochids used a 12-year cyclic calendar, that is the 'animal' calendar, phonetically coinciding with the terminology of the Uighur chronology. Since the middle of the 14th century, after the official adoption of Islam, the documents were dated according to the Hijrah. The complete ousting of the 'pagan' calendar from Jochid records management and replacement with the Hijrah took place at the very beginning of the 16th century [ibid., pp. 256–271].

The formula of the datum in the Jochid official records management was a strictly obligatory and quite developed element. This feature is related to the quality of the roots of the traditions, for example, to the development of the Uighur paperwork culture, on the one hand, and the detailed elaboration of the Islamic records management, on the other hand. Perhaps, it explains the difference between the final record in the Jochid documents and the eschatocol of, for example, the Russian charters, where it is the least developed part [Kashtanov, 1975, pp. 111–112, 116]. That is why the researchers of the Turkic-Tatar acts, if they are not defective, do not have the goal to determine their dates, unlike the specialists of Russian diplomacy, who have to pay significant attention to the determination of the dates of the early charters [see: Cherepnin, 1948, pp. 13–38, etc.].

As noted, the yarliqs together with the date obligatorily contained the place the granted charter is issued or message drawn up. This created a record about the location of the khan and his headquarters at a certain time. (So the official secretariat with his record clerks always followed the khan as he moved around).

The text of the granted act ended up with a special article that was a peculiar paperwork certificate, that is a formula, informing about the *intercessors* and the *scribes*, who directly took part in making up the document (details see: [Usmanov, 1979 pp. 125–131, 267–270]). Such an article proves that the Jochid secretariats followed strict rules in drawing up and issuing granted charters and the executors were responsible for the validity and authenticity of the charter.

A complete written document was presented for approval to be given a seal impression, red or blue tamga, kept by a high-rank official, for example, by a chief of the Divan, that is the state secretariat. Later, the yarliq became valid.

The approved yarliq was rolled up, beginning with the end. That is why the initial part of the document formed the upper layers of the document. In the Jochid secretariats, sometimes a piece of morocco leather was glued to the upper part of the acts. It served as a kind of case. There are incidences when special cases were made for important documents. Such cases were used to keep, for example, a message of Ulugh Muhammad and the Uighur-written yarliq of the Turkish Sultan Mehmed II, drawn up according to the rules of the Chinggisid acts [Kurat, 1940, p. 6; Rahmeti, 1939, p. 286].

In order to keep yarliqs conveniently in the Khan's Divan until they were given to their holders, on the reverse of the initial part at the end of each document the names of the executive secretary and the future owner of the granted act were given [Usmanov, 1979, pp. 35, 38–40, no.11, 15, 19].

All the above-mentioned proves that in the Golden Horde there was 'a high level of records management (...), better organised than in Rus' and the European states of that time' [Demin, 1974, p. 519]. It was quite logical as the Turkic-Tatar official records management in the 13–16th centuries was set up as an organic confluence and a creative development of legal norms, some original components, which were the results of managerial knowledge from the developed civilizations from the Far East to the Near East.

The official granting was supposed to have taken place in the presence of powerful officials, probably sometimes the khan. With the dry crisp of new paper, the upper layers of the document are slowly unrolled. After the Arabic-language invocation, solemn and mysterious for many people, there is a little pause—a blank space follows; then as a monarch's voice, a brief and powerful addresser is heard—the will of the sovereign: **My word, the word of Khan Tokhtamysh!** Again there is a warning pause followed by a uniform citation of all the governors of the tumens, the chiefs, the princes,

the spiritual leaders, all possible officials, order watchers; here is the name of the yarliq holder, his privileges and rights. Brightly made letters are still moving at a steady pace, sometimes going up, as if flying into 'the blessed future, slender, solemn and light lines are also moving. The Divan is keeping silent, listening, probably on his knees, with the happy holder of the granted charter, who is thinking about his future.

This is the way of forming and giving 'blessed' granted charters, which with the help of talented scribes who excelled at calligraphy nicely combined standard and unique features, conventionalism and artistry, and often turned into authentic masterpieces of the written arts.

This was how powerful and mighty legal acts were created; the khan's yarliqs, which were not only witnesses but also accessories of welfare and luxury for the minority and of poverty and sufferings for the majority.

This was how granted charters became certificates of law and order in the field of social, economic, political relations, legal norms of their epoch, which created at the same time a respectful attitude among people towards documents. In the end, it was the reason for preserving a significant number of the granted charters in the private 'archives' of the descendants 300–400 years later. Precisely, this respectful attitude towards the script in general and towards documents in particular, created over centuries, was the reason that in the 17–19th centuries the Tatar population of Russia without having any national official structures or administrative institutions regulated their internal ethnic, social, economic, ethic and legal relations with the help of private acts [Minnullin, 1988].

So only due to the mentioned respectful attitude towards the documents, on the backdrop of dozens of Golden Horde towns razed from the ground, nowadays we have the preserved patterns of the Turkic-Tatar official acts of the 13–16th centuries, special written sources proving evidence about the high level of social, political, and economic life and features of the administrative and state system as well as the roots, formation, development and specifics of records management and paperwork culture—a very specific part of the Turkic-Tatar writing culture during the Jochid period, in general.

§ 4. Literary Language of the Golden Horde

Famuzha Nuriyeva

The period of the greatest political and economic might of the Jochid Empire was during the reign of the Khans Öz Beg and Jani Beg, when at the height of prosperity of the economy and trading central power was quickly strengthened and a united governing system was set up. Being supported by the khan's administration, dozens of big cities grew fast, with their unique, magnificent, expressive and even eclectic style. The adoption of Islam as the state religion was also completed, and it contributed to the further integration of the peoples, the formation of a united ethnos and left a deep imprint on all the Turkic peoples of Eurasia [Iskhakov, Izmaylov, 2000, pp. 61—62; Fakhrutdinov, 1995, pp. 108—110; Usmanov, 1985, pp. 177—185].

There is no doubt that the religious factor played a significant role in politics, ideology, managing social institutions, economy, trading, spiritual culture and arts. The Islamic principle of the confluence of the secular and spiritual components came into effect. It implies that a supreme governor is obliged to control the right way of all aspects of life, their correspondence to the divine law. Under these conditions, it is not a coincidence that most of the preserved Turkic hand-written works of the 14th century and the copies of them were represented by the religious and religious-didactic literature: 'Kysas al-anbiya' by Rabguzi, 'Nakhj al-Faradis' by Mahmud Bulgari, the dastan 'Djumdjuma Sultan' by Khisam Qiatib, 'Kisekbash kitabi'. The predominance of religious literature was determined by the demand for it as well as by the tradition born and constantly strengthened by the power of the Islamic clergy, its huge influence on all the classes of society and all aspects of life.

The materials known today allow us to characterise the Golden Horde as a state with a predominantly sedentary way of life and a high level of architectural culture. Research into historical works together with other sources (yarliqs, various messages) leads us to conclude that the urban class (merchants, crafts-

men, officials, clergy) had great importance in the cultural life of the Golden Horde populace. It played a significant role in the emergence of the need among society as a whole for spiritual values.

Research into the social and cultural life of the cities and other cultural centres of the Golden Horde allows to make two important conclusions:

1) In these centres the conditions were ripe for the formation of the oral colloquial koine, a language based on Turks, the native speakers of the dialects of the Kipchak language group;

2) The cultural environment, administrative centres and local governors, the Islamic education presented by madrasahs, libraries, ulamas, literate mullah created a base for the written supra-dialectal form of the language and for the creation of written literary texts of different genres and styles based on this language.

The Golden Horde sources are prosaic and poetic fiction literature, religious and juridical texts, known to Turkology for decades. They drew the attention of generations of Turkologists, beginning with V. Radlov. In domestic Turkology, a significant role in the development of the problem of literary traditions in the written Turkic languages and the declaration of this problem was played by A. Samoylovich.

The state of the united literary language and its changeability under the influence of vernacular dialects were the basis for the periodisation of the writing culture of the Turkic peoples within the Islamic civilization, developed by A. Samoylovich. He paid significant attention to the second period, Kipchak-Oghuz, as exactly at that time (not during the Chagatai period), due to the formation of Genghis Khan's Empire, there was evidence of a situation that was favourable for the development of a united literary language for all the Muslim and Turkic tribes of the Mongol State. Besides, exactly this period is related to the birth of the main modern Muslim and Turkic literary languages. The researcher directly pointed to the succession of

the modern Tatar language in reference to the literary language of the Golden Horde: '...the Kazan Tatar literary language, going through several periods of its development, has got its ancient roots, the Kipchak roots, not from the 15th century, as it is generally claimed, but from the earlier literary works of the Golden Horde, where the Kipchak linguistic elements are dominant. This is also the initial fate of the Crimean Tatar literary language' [Samoylovich, 1928, p. 21].

The further development of the conception of A. Samoylovich about the succession of a uniform book tradition was reflected in the works of E. Tenishev [1988, pp. 67–85; 1997, pp. 35–38].

A great specialist in the history of the medieval literary languages E. Nadjip, unlike A. Samoylovich, proceeds from the recognition of numerous literary languages, languages of different genetic roots and primarily mixed languages [Nadjip, 1965, pp. 3–8; 1970, pp. 87–92; 1989, pp. 244–249]. The comparative studies of the written sources, which appeared in Egypt and were made on the territory of the Golden Horde, which were based, first of all, on distinguishing their lexical specific characteristics, singling out lexemes by their linguistic attributes and their further statistic processing, led E. Nadjip to the following conclusions: 1) By the 14th century, the Kipchak-Oghuz literary language of the y-group had been formed, which was common for the Golden Horde and Egypt; 2) Together with this new literary language, the more archaic written language of the z-group was also used. E. Nadjip called it the Oghuz-Kipchak literary language of the Lower Volga and Khwarezm. Later, this language did not spread farther than the Volga Region, and in Middle Asia it was replaced with the y-language. In the Volga Region, it continued to exist until the early 1900s as a language of narrative works with mysterious contents [Nadjip, 1989, pp. 81–82].

In the history of Tatar linguistics in the early 1920s–the 1940s, linguistic studies of the language of the Golden Horde cycle sources are represented by a small number of works. At the same time, their description from the point of view of literature studies and the definition

of their place in the history of Turkic literature is represented very widely. The first Tatar scientists G. Rakhim, G. Gubaydullin (Gaziz), N. Khakim, and G. Sagdi amply used the texts of Turkic-Tatar literature, and included them into educational books. They also paid attention to the linguistic specific characteristics; it is seen in the research of S. Vakhidi, where observations in different styles are given: 'In the latter half of the 14th century, in the Golden Horde, there was a well crafted local literary language, different from the Uighur language and the so-called Chagatai parlance' [Archives 53–1].

In the studies of the Tatar researchers, the Golden Horde language is called by different terms: the general name 'Terki Tel' is usually used, which is Turki (by specification: *Bulgar Terkise*, *Kazan Terkise*, *Idel-buye Terkise*); the term 'Volga Turki', used in the studies of E. Nadjip [Nadjip, 1957, 17 b.] was easily taken into use by the scientific world; in modern studies, historians and philologists use the term 'Turkic-Tatar', restored by M. Usmanov [Usmanov, 1979, p. 17], who notes that the term carries some new and more concrete contents: Turkic by genetics and Tatar by appearance.

The studies of the Golden Horde sources use the term 'mixed language'. Turkologists understand under the term 'mixed' the presence of phonetic, grammatical and lexical elements that belong to a language of another classification group, in their opinion. Meanwhile, these linguistic elements are assigned to a certain group of languages or dialects (Kipchak, Oghuz, Uighur, Karluk). Often, instead of a mentioned language attribution, these elements are defined with geographical or areal terms: the Khwarezm literary language', 'the literary language of Khwarezm and the Golden Horde' [Inan, 1953], 'Eastern Turkic language' [Brockelmann, 1954], 'the literary language of the Golden Horde and Egypt' [Nadjip, 1965], or chronological definitions are provided: 'Ancient Turkic', 'Middle Turkic', sometimes socio-political ones: 'Mamluk-Kipchak' [Eckmann, 1964], the 'Chagatai' language [Köprülü, 1926].

Taking into account the situation in Turkology with the term 'mixed language' of the written source, in the attribution of the studied

text we prefer to speak about the correlation of norms and variations in the language of the given source instead of speaking about its mixed character. When classifying the language of the written source we start stratifying the text and singling out the fundamental and peripheral elements in it.

The texts of religious-didactic contents.

The written source '**Kysas al-anbiya**' by **Rab-guzi** (hereinafter the KR), written in 1310 in the northern part of Khwarezm. His ancient manuscript, which is kept in the British Museum in London, is dated back to 1489. It should be highlighted that this written source was extremely in-demand in the Islamic world, that is why at the present there are a lot of copies, up to 35 in the manuscript archives, not including manuscripts in private collections. The copies of the written source were found in a large number of places: the Russian Federation (including Tatarstan), Uzbekistan, Azerbaijan, etc. It is clear that the scribes introduced a lot of linguistic innovations in these copies, and that is why our research is based on the oldest copy. An analysis of its language, in the end, allowed us to distinguish the following normative features in phonetics and graphics. Compare: the KR language includes a one-variation traditional writing of words with (alif) such as **اڭدڭ** *äḡḡü* 'righteous', the graphic variation carries a certain semantic differentiation: **اڭ** *är* 'man', **اير** *ir* 'warrior'. The labial harmony is also stably preserved, words with the **ḡ**-grapheme are the orthographic norm, the variation appeared in later copies. The **-q**-grapheme in the intervocalic position is stably preserved **ساقيندى** *saqyndy* 'thought', the combination **-ayū-**, **-uγū-**, **-yγy-**: **اڭيز** *ayyz* 'mouth', the auslaut **-y**: **ساريج** *saryy* 'yellow'.

The morphological features include a fundamental system of declinations related to the Uighur-Kipchak type.

Chronologically close to the KR is a manuscript of the other religious-didactic large-scale work '**Nakhj al-Faradis**' by **Makhmud al-Bulgari as-Sarai** (hereinafter the NF). Despite the small number of copies found (10), the mentioned source played an important role in the cultural life of the Volga peoples. It is particularly interesting in regards to studying

the history of public opinion in the medieval Volga Region, as its author relied on a great number of works (20 sources recorded) of famous Muslim theologians. The text is a combination of religious and ethic studies with the art form of its embodiment. Fascinating novellas and wise parables were aimed at developing loyalty to Islam and a high immunity to temptations lying in wait for a Muslim on the way to celestial bliss. Precisely this didactic tendency makes the text differ from the KR. All this together makes the NF language full of artistic techniques, synonyms, antonyms, phraseologisms, etc., and characterises it in general as close to the folk-colloquial form. The interaction of the literary norm and the folk-colloquial language is confirmed by the fact that the NF language, more often than in the language of the previous source, includes a variation in the phonetic-graphic forms of lexical units and in a set of grammatical indexes. However, here the adherence to a fundamental system, ascending to a stable writing tradition, can be seen. These fundamental features in grapho-phonetics include the succession and preservation of the labial harmony. In the NF, there are some cases in which these affixes are written with a deviance of the labial harmony (more often, the affixes of the past definite tense). In the stems with the hesitating vocalic anlaut, writing with the **ا** (alif) is more often replaced with the **اي** (alif yay). However, this variation is far from being consistent. The variation is also growing in the use of the **d~ḡ~j** with the predominant writing of the **ḡ**-grapheme: **قوزوغ** *quḡuy* 'well', **ايزى** *iḡi* 'owner', etc. The expansion of the function of the **-j**: **قايغى** *qajyu* 'grief', etc. proves the reflexion in graphics of the elements of colloquial speech. At the domination of the **-q-** in the intervocalic variation the variation *jaruyy* 'his light' appears. However, the combinations **-ayū-**, **-uγū-**, **-yγy-** are stably preserved, as well as auslaut **-γ**: **بوگون** *buγun* 'joint', **باغ** *bay* 'link', etc. A set of new phenomena includes a consistent reflexion of sonority and voicelessness in the affixes of the cases and in the affixes of the past definite tense. The declination system continues to reflect the Uighur-Kipchak declination type, and the low-frequency peripheral forms reflect the Oghuz declination type. It is

interesting to note that a lot of phraseological units, not only by content but also by form, are still found in the modern Volga languages, in particular, in Tatar. Compare: *irgä barmaq* 'to get married', *küz qamaşmaq* 'ripples in vision', *til tigürmək* 'to talk a lot', etc.

The analysis of the written source on the basis of the statistic processing of fundamental norms and peripheral elements demonstrates that the NF reflects the stable tradition of the Kara-Khanid-Uighur literary language. In comparison with the KR, its variation increases. In our opinion, this is related to its content aimed at a wide range of readers, on the one hand, and to a strengthening of the influence of the colloquial environment—the Kipchak koine, on the other hand.

The next chronological cut-off is dated back to 1369, and it is reflected in the language of the Volga Region '**Djumdjuma Sultan**' by **Khisam Qiatib** (hereinafter, the Dj), a work of religious-didactic content. It is evident that Kyatib was an outstanding poet of his time. It is seen even from the fact that he starts the given poem in an intriguing way by thinking over the frailty of all things existent on the earth, that all people turn into ashes in the end and live through the same torment for their actions, now matter who they were on earth. The poet, depicting the life and actions of his character Djumdjuma Sultan by artistic means, through his own perception, narrating on behalf of the character, managed to persuasively express the idea of humanism, the idea that the governor should take care of his people. The poem ends philosophically, with the statement that the Islamic religion is the most righteous religion.

The language of this written source maintains the Kara-Khanid-Uighur basis, which is expressed in its fundamental features: in the preservation of the labial harmony: كوزوم *küzüm* 'my eye', the voiceless -q- in the intervocalic position: جيقب *çyqyb* 'having coming out', the auslaut -γ: قوروق *quruy* 'dry', the traditional combinations -uγu-, -yyγ-, etc. It is notable that under the Kipchak fundamental declination type there is a formation of the ablative case with the affix -dyn. The past with the -dy is one of the most frequent tense forms that create the general background to a narrative.

As the text of the given work is known to us from the late copies, it is possible to presuppose that an obvious strengthening of the Kipchak features in its language is determined by the specific characteristics of the language of its latest scribes. However, on the general backdrop of the written sources studied by us, a picture is formed of the gradual progressive introduction of the Kipchak linguistic features, which are peripheral, into the traditional fundamental system of the Kara-Khanid-Uighur language.

The written source of religious and didactic content '**Kisekbash kitaby**' (hereinafter the KB) is dated to the period under consideration. The genre of the work is defined as the dastan, and this is how it is called by the author itself. While getting familiar with the content of the 'Kisekbash kitaby', it becomes immediately obvious that the plot coincides with the plot of the work 'Djumdjuma Sultan' by Kyatib, famous in the Volga Region, although the KB is simpler and not at such a high artistic and philosophical level as the Dj by H. Kyatib. The poetic dimensions of the studied dastan confirms once again the supposition about the time period of its writing: the Early Middle Ages, when the metre of arud was not approved yet in the Turkic poem [Akhmetgaleyeva 1979, pp. 56–57]. Although Ya. Akhmetgaleyeva considers the prosody in the 'Kisekbash kitaby' an incomplete arud, our studies show that there are no errors in the catalectic iambic hexameter. The abundance of copies demonstrates that the work was one of the popular texts in the Volga Region.

Like in the Dj language, in the language of the written source, the affixes of the genitive case and the past tense were not subordinate to the labial harmony, although in other cases they are kept relatively stable. In the alternation of the d~δ~j in the KB language, the use of words is one-variable: a) or only with the δ-attribute: اذاق *adaq* 'leg'; b) or only with the j-attribute: قویوق *qujuy* 'well'; the variable writing of words is not noted.

The fundamental declination system in the written source is comparable with the Kipchak declination. The described regular forms of the genitive, accusative, and dative cases be-

gin with a consonant in all the paradigms, but precisely in the nominal paradigm of the dative case there is a similar variation of the forms of the Kipchak **-ya** and the Oghuz **-a**. Used in the text, the ablative case with the **-din** is related to the Uighur declination type.

A typical feature of the written source is the traditional use of the past tense form with the **-dy**, in rare cases—with the **-mys** and the absence of the **-yan**.

Evaluating the language of the analysed works of the religious and didactic content, it should be noted that the set of isolated fundamental features characterises this language as a successor to the Kara-Khanid-Uighur writing tradition both in phonetics and morphology. Despite the obvious demonstration of the features of the Kipchak language system in all the analysed texts, it should be mentioned that they are peripheral in the language of the religious and didactic written sources. It is typical that first of all Kipchakisation was reflected in the declination system, which is proved by the data of the Dj and KB (for more details about the linguistic specific characteristics of these written sources see: [Nuriyev, 2004, pp. 48–193]).

Secular texts. Secular texts include the 'Khosrow-va-Shirin' by Qutb (1383), the 'Muhabbat-name' by Khwarezmi (1353), the 'Gulistan bi-turki' by Seif Sarai (1391). Secular texts were the subject of a number of studies by turkologists. Taking into account the achievements of our predecessors, we made an analysis of the mentioned texts by using the language stratification method on the fundamental and peripheral components.

The most demonstrative result of this approach is the classification of the fundamental language system of the '**Khosrow-va-Shirin**' by Qutb (hereinafter the KhSh), belonging to the Kara-Khanid-Uighur tradition, and two other texts by their fundamental forms belong to the Kipchak language system. The difference is explained, first of all, by the fact that Qutb, the author, being probably from the Volga Region, connected his literary activities with Sarai, and created this work at the end of his life by order of the governor Tini Beg. As literature specialists have discovered, the model for him was the work of Nizami, the

language of which was the classical literary Farsi. As the studies of Kh. Minnegulov have shown, many of the sides of the poem by Nizami were reflected in the work of Qutb. However, the KhSh is not a literal translation but a free retelling of the content of Nizami's poem [Minnegulov, 1993]. So we should pay attention to the obvious influence of the art form of Nizami's poem on Qutb's works. Besides, by giving his work to the Golden Horde ruler, traditional etiquette was evidently followed that presupposes a high poetic style vested in a poetic literary form of the language, which in the Turkic literature of that period came out of the Kara-Khanid-Uighur tradition. It seems that all these factors influenced the specific characteristics of the poem 'Khosrow-va-Shirin' by Qutb.

As for the '**Gulistan bi-turki**' by Seif Sarai (hereinafter the GB), this work is a translation of a famous work called the 'Gulistan' by Sa'adi. Sarai was well-known in the world of poets and scientists in the Golden Horde as a skilled master of poetics. That is why his friends recommended he would do the translation. It is known that Sarai was born in 1321 in the Volga Region and emigrated to Mamluk Egypt in the 1380s [Minnegulov, 1976; 1999a]. So his native language was a Kipchak language, but owing to his education he learnt the language of the Turkic classic literature of that period. That is why, in comparison with the KhSh, the conditions of the creation of the GB were different. In our opinion, it explains why the Kipchak language basis is traced in the fundamental system of the language of this source.

The history of the creation of the third secular source, the poem '**Muhabbat-name**' by Khwarezmi (hereinafter the MN) is the same. Khwarezmi was a famous poet of this time, who lived in the Golden Horde, in Sygnak, where he wrote the 'Muhabbat-name' by order of Muhammad Hodjabeg, who asked him to create the poem *bizniñ til birlä 'in our language'*, that is in the Turkic-Kipchak language. Khwarezmi took for as a model a plot popular in the East, which was a collection of love messages, vested in poetic form. Probably, being Kipchak by origin and carrying out the specific creative order of his patron, Khwarezmi (this is

a pseudonym, his real name is not known) created the work, the language of which is based on Kipchak. Like the works of other authors, the work of Khwarezmi is not a literal translation of the original but a free retelling of it.

On the backdrop of the latest two written sources, the KhSh language with its Kara-Khanid-Uighur basis contains a fairly large layer of Kipchak elements in its variable part on the level of peripheral features. As our analysis shows, in some cases the Kipchak elements start to become introduced into the fundamental paradigm and often acquire the status of a norm in the language of this source.

In the KhSh, the labial harmony does not form a united strict system anymore. A complex interrelation between a book tradition and a live colloquial language is observed which the variable writing of a huge number of words and word forms points to. Compare: بولوت *bulut* (17 times) ~ بولت *bulyt* (8 times) 'clouds'. Of the KhSh language, the elision -γ, -q is typical, and with the violation of the labial harmony: *jazuqluγ* ~ *jazuqly* 'sinful'. In many words the -δ-grapheme is typical, although there are double writings of the words: اذاق *adaq* (77 words) ~ اياق *ajaq* (20 words) 'leg'. Noting the relative stability in the auslaut -γ, there is variable writing with the omission of the final -γ. The declination is Uighur-Kipchak, and structurally ordered peripheral indexes are related to the Oghuz group.

The study of the language of the 'Muhabbat-name' by Khwarizmi is important as it is one of the links of a huge work studying the birth and formation of the Golden Horde literary language, its connections with the other literary languages of the Turkic peoples and the determination of the influence of its norms on the literary languages of later periods. As mentioned above, in this source there is a dominance of the Kipchak linguistic elements. The fundamental system of the declination is close to the Kipchak system, and the peripheral forms are close to the Oghuz forms. In the dative and locative cases, there are traces of the low-frequent Karluk group. The perfect is presented with two competitive forms -γan, -yp **tur**. Examples: çiçäk japraqлары jirgä tüşüptür 'the flower petals got scattered on the ground';

iki jaktu gävhar yälämga birgän 'he gave two light pearls to the world'.

The language of the poem is colourful, rich and figurative. The author skillfully uses various artistic means, in particular, epithets, comparisons and metaphors. Especially often, Khwarezmi takes advantage of comparisons while creating an image of an amazingly beautiful girl: *irür jüzi qujaş tek yäläm ara* 'her face beautifies her like the sun does the universe', etc. The poem is decorated with numerous artistic metaphors: *ysyryan danasi—zührä, jüzün—aj* 'the Venus is only a stone in your earring, and the Moon is your face', etc. (for details about the description of the linguistic specific characteristics of the mentioned literary written sources, see: [Nuriyeva, 2004, pp. 193–283]).

The above-analysed texts of the written literary language of the Golden Horde do not embrace the entire set of written sources of the Turkic-Tatar literary language of this period. Important sources are the Arabic-Kipchak glossaries, grammars, and also the translated literary works of the 13–15th centuries, created in the Mamluk Egypt for almost 250 years.

Among the sources of the region being studied, a special place belongs to the '**Codex Cumanicus**' (hereinafter the CC), which is the largest written source of the Kipchak colloquial language of the Golden Horde period as well as a wonderful written source for studying the history of the formation and development of practically all the modern languages of the Kipchak group. The advantage of this written source is that here the Turkic language is presented in Latin graphics, which allows the phonetic features to be reflected more precisely. The text of the written source is mainly aimed not only at colloquial speech but first of all at the availability of the language in the Turkic environment. That is why the written source is so valuable as a model for recording the colloquial style in the Kipchak dialects of the 13th century. It is evidenced, in particular, by the regular **j**-attribute: all the words are written in one way through **j**. There is a stable trace of voicing the intervocalic -q-, although there are cases in which it is preserved: *çygar* 'release', *saγγs* 'sorrow', *joqary baqyp* 'looking up', etc. The combination of -aγy, -uγy is regularly reflect-

ed as the diphthong **-uw**: *awuz* 'mouth', *buzau* 'calf'. There is a regular omission of the ending **-γ**: *bitti* 'letter', *jamau* 'swatch', *tau* 'mount'. In the declination, the genitive case is subordinate to the labial harmony, the accusative case has the formatives **-ny**, **-ni**, in the third person, **-yn** (17 times) and **-yny** (18 times) are almost equal, the dative case is presented with the affix **-qa-** and its respective harmonic variants, and the ablative case has the form **-dan**, **-tan**. The possessive-nominal declination system includes the widespread infix **-n-**. So the illustrative material of the dictionary demonstrates the clear Kipchak declination. The tense form on **-yp tur** is highly frequently, and the form on **-yan** and **-myş** is relatively rare. So the fully Kipchak language in the 'Codex Cumanicus' is proved.

In the 1990s, the research process embraced the written source of Islamic jurisprudence '**Irshad al-muluk va s-salatin**' (hereinafter the IM). On the last page of the manuscript, there is a record: *'Bu kitabyň vüciüdi zaýyfatlyf olan Allahyň rähmetinä mұxtaş qypçaq sojundan vä Xäñfi mäzhäbinä mänsul Bärkä ibni Bäräküz ibni Ögü tarafyndan jazylşynyn son ärmışi 789 sänäsi şäüval ajynyn jirminçi küniündä büjük Iskändärijä şährindä Illah onu här türlü afätdän korusunluqu bulmuştur'* 'This book is written by a weak and nice creator that needs God's blessing, native of the Kipchak surrounding, belonging to the Hanafi madhhab, Berke ibni Berakuz ibni Ogu in Great Iskanderia in year 789, the month of Shawwal, the 20th day (20 October 1387)'.

The source 'Khosrow-va-Shirin' was rewritten in Egypt by the famous calligrapher Berke Faqih. There were comments that some other manuscripts were also the work of Berke Faqih. Here, Berke emphasises that he is from Kipchaks and is known as a scientist, a poet and a translator in Mamluk Egypt. But the most significant part of his statement is his intention to write all his ideas in the poetic form by using the poetic metre 'Kutagdu bilik', but unfortunately he could not fulfill his intention. These words seem to us an indisputable proof of the fact that the Kara-Khanid-Uighur tradition for the Turkic speakers of the Islamic culture in the Golden Horde and in Egypt was not an 'abstract model', but was based on a real knowledge of

specific literary texts and, very notably, on the huge literary written source of the Kara-Khanid epoch 'Kutagdu bilik' by Yusuf Balasaghun, which was spoken about by Berke 200 years later. These arguments gave us grounds to use for our analysis the document of the Islamic jurisprudence 'Irshad al-muluk va s-salatin'.

This written source, consisting of the code of Sharia law, is a collection of fatwas, gathered from the works of famous and respected scientists, specialists in Sharia law, who were mostly adherent to the ideas of the Hanafi madhhab. The work includes the introduction, 29 books, 56 sections and 93 chapters. At the end, there is a chapter that contains 49 questions about Sharia law (fiqh), and a conclusion.

The analysis demonstrated that the fundamental language system of this work is organised on the Kipchak basis. It is obvious from the following features: the stable writing **ا** (alif yay), in the alternation of **d~δ~j** only the writing with the **j**- is kept, although there are cases of variations, keeping the voiceless intervocalic **-q-** is presented sporadically: **ا** *aqar* ~ **ا** *ayar* 'flow', and there is even the transition **-ayu>au**. Compare: **سوق** ~ **سوغوق** 'coldness', **توق** ~ **تاغوق** 'hen', etc. (for more details, see: [Nuriyeva, 2004, pp. 283–307]).

So the analysis of the two written sources shows their importance for the history of the Turkic-Tatar literary language of the earlier period, especially taking into account that in the 'Codex Cumanicus', the colloquial koine is a fundamental system.

Our research shows that the general line of development of the Turkic-Tatar language, beginning with the 13th century, is as follows. The writing literary language form of the Golden Horde period in its development in its literary centres at first is focused on the phonetic-graphic and grammatical norms of the literary languages of the Kara-Khanid-Uighur areal. It is quite explicable that the mentioned areals at this historical period remained the centres in which Islamic education spread, which included religious fundamentals as well as respective forms of the written literary language. The cultural life of the Golden Horde, beginning with the period of the formation of an independent state, was followed by the

strong influence of famous Muslim devoted theologians. That is why it is of no wonder that in the regional literature centres of the Golden Horde the important positions belonged to the literary written language, being based on the Kara-Khanid-Uighur variant of the Turkic written language, which fixed its positions also in the literature centres of the Golden Horde. At the same time, the main population of the Ulus of Jochu, both settled and nomadic, were speakers of Kipchak tribal languages, although among the residents of the Golden Horde there were Oghuz and Karluk speakers (for example, the Uighurs at the secretariats).

So the mentioned bearers of the Islamic civilization, due to the ethno-demographic conditions, found themselves in the dominant surrounding of the Kipchak speakers. The given ethnic situation was favourable for formation of the supradialectal koine in the cultural and trading centres, based on the Kipchak language elements. The influence and interaction of the old tradition with new linguistic processes are differently reflected in the languages of some written sources, depending on the genre of the written source (religious and didactic literature remained more stable, and secular literature accepted innovations faster), on the level of the education of the author and his affiliation with a certain literary artistic school, on the customer of the work, on specific conditions of the place of its creation, on the scribes, and their tribal affiliation and command of the native language. Our studies demonstrate based on the example of the isolated phonetic-graphic and morphological features and their statistic processing that every written source is a precise and live reflexion of the linguistic situation where it was created, and at the same time language is a source for characterising it. It can be stated that in the early written sources of the Golden Horde there is a stable Kara-Khanid-Uighur tradition, together with which the new variant of the regional literary language was being formed precisely in the Volga Region.

So the maximum number of the isolated phonetic features of the Kara-Khanid-Uighur tradition is given in the 'Kysas al-anbiya' by

Rabguzi, and the minimum in the 'Codex Cumanicus' and the 'Irshad al-muluk'.

The morphological characteristics of the languages in the written sources show that they are a reflexion of common patterns in the formation of the language in the Golden Horde period.

A review of the morphological categories leads to the following conclusions. The systematic study of declination in the language of the written sources and comparison of all data obtained from the analysis of each written source, with all the coincidences and differences recorded enable us to claim that precisely in the 14th century the initial transition from the Uighur-Kipchak declination into the Kipchak declination occurred. By classifying attributes, the Uighur-Kipchak and Kipchak declinations are presented with consonantal forms. The same forms are used in the possessive-nominal paradigm.

The Uighur-Kipchak declination is in the language of the 'Kysas al-anbiya' by Rabguzi, the 'Nakhj al-Faradis' by Mahmud Bulgari, the 'Khosrow-va-Shirin' by Qutb. The Kipchak declination is dominant in the language of the 'Gulistan bi-t-turki' by Sarai, the 'Muhabbat-name' by Khwarezmi, the 'Djumdjuma Sultan' by Kyatib, the 'Kisekbash kitabi', the 'Codex Cumanicus' and the 'Irshad al-muluk'.

Analysing the tense system in the language of the Golden Horde written sources shows that this system, together with stable fundamental components from the earlier stages of development of the Turkic languages and mostly reflecting the Kara-Khanid-Uighur tradition, in the Volga areal, like the system of declination, go through obvious changes by including in it new local regional Kipchak forms. Typically the language of different written sources depicts different stages of these dynamics (compare the NF and MN languages).

As for non-finite forms of the verb, of particular interest is the distribution of the participial forms in the attributive function in the language of different written sources. It should be noted that in the texts there are all the forms of the participles known in the history of the Turkic languages from the period studied: **-r**, **-yan**, **-an**, **-myş**, **-yu**, **-yuçy**, **-duq**, **daçy**, **-asy**.

As seen, among them there are some forms typical of the Oghuz and Uighur-Oghuz, Karluk linguistic groups and the language of the Kipchak group. The Oghuz and Uighur forms are the most peripheral among the non-finite attributive forms: **-an**, **-asy**, **-yu**, **duq**, **yuçy**, **-daçy**. The main rivalry in the attributive function is noticed between the highly frequent **-yan** and **-myş**. And in the language of some sources, their proportion by frequency usage is of interest. In general, the dominant form is **-yan**, although the form **-myş** is still perceived by the authors of the sources as its absolute semantic equivalent which could be used in literary texts.

In the field of impersonal substantive forms, the absolutely dominant form is **-maq**, the synonym of which is **-maya**. The form **-maq**, known in a set of Turkic languages, generally characterises the Turkic languages of the Eastern areal, and its fixation in literary written sources is related, probably, to the post-Kara-Khanid period. It became widespread, starting from the language of the Golden Horde and

Chagatai written sources. In the nine sources analysed by us only in the language of the KhSh, MN, Gb, CC, Sh is the new substantive form present **-rya**. It functions more often as the form of the supine, which means that it defines the goal of an action. Despite its low frequency, this form is regional, inherent to the language of the Volga Region, and some Turkic dialects of North Caucasus. So the analysed written sources show us the initial stage this form spreads in the languages of the Volga Region.

The linguistic analysis performed with socio-linguistic contents, on the one hand, allowed us to single out the sources of the Old Tatar literary language, being supported by an uninterrupted literary tradition of Turkic peoples, which came out of the epoch of the Turkic and Uighur khanates; on the other hand, it defined the role of the regional Kipchak koine, which being widespread within the borders of the Golden Horde enormously influenced the old literary written language. In the end, it led to the formation of the Turkic-Tatar literary language of the early period.

§ 5. Literature

Khatip Minnegulov

In the period of its existence (longer than two hundred years) the Golden Horde made significant progress not only in political, economic, social life but also in the spiritual field. The presence of centuries-long rich Turkic, including Bulgar-Khazar, traditions, the prosperity of cities, religious tolerance, good relations with a lot of states, especially with Mamluk Egypt, helped literature develop in the Golden Horde. However, unfortunately, a lot of the written monuments of that period for different reasons were destroyed or ruined. It is understandable as not only the books written on paper but also the magnificent Volga cities with stone and brick constructions were wiped off from the face of the earth by the conquerers.

The Golden Horde written sources known today are works of a varying nature and purpose. They include dictionaries, epitaph-

ic writings, official documents (the khans' yarliqs), scientific treatises, religious books, travelling books, fiction, etc. The overwhelming majority of the works are written in Turkic-Tatar, that is the language of international communication between the Golden Horde and a big part of Eurasia. There are works created in other languages. In particular, the dictionary 'Codex Cumanicus' (1303), compiled in Latin, and others in Persian. The poet Khwarizmi created his poems both in Turki and Farsi. It should be noted that famous thinkers, poets and travelers of the Islamic Orient, such as Qutb al-Din al-Razi, Sa'ad al-Din al-Taftazani, Kamal Khujandi, etc., lived and worked in Sarai for some years. In the travelling notes of ibn Battuta and ibn Arabshah, there are interesting facts about the spiritual life of the Golden Horde, about the high intellectual level of the Sarai scientists, and in

particular, about the mulammag poem writing contests in mixed languages (Turkic, Persian, Arabic).

The literature of the Jochid Ulus was created and developed not only on the territory of the Golden Horde, but in Mamluk Egypt too, as this area was ruled from the middle of the 13th century until the beginning of the 16th century by immigrants from Desht-i Kipchak—the Mamluks. Close political, scientific and cultural relationships existed between the Nile and the Volga. Many scientists, teachers and writers of the Golden Horde (Mahmud Sarai Gulistani, Seif Sarai, Berke Fakih, etc.) moved to Egypt for one reason or another, and continued their work there. Some time later, that is, at the beginning of the 16th century, the famous work 'The Turkic Shah-nameh' was created by Sharif or rather Tatar Ali Efendi in Mamluk Egypt [Islamov, 2002].

On the one hand, the literature of the Golden Horde continued the best traditions of the ancient Turkic and Bulgar written arts. The works of Iusuf Balasaguni, Ahmad Iasavi, Suyeyman Bakhyrgani, Kul Gali and other authors of earlier Turkic-language poetry were read and highly appreciated here. On the other hand, the Turkic-Tatar literature of the Golden Horde period developed in close conjunction with the written culture of the Muslim East. The works of Ferdowsi, Gazzali, Nizami, Attar, Rumi, especially Sa'adi, were read in the original and in various translations and with commentaries. The walls of certain Sarais were decorated with the poems of Sa'adi (cf: Tereshchenko, 2001, p. 11–12]).

As far as medieval literature was concerned, it must be borne in mind that there are no clear boundaries between the works of written lore and other kinds of written records; they often merge, the one leading into the other. Thus, for example, the piece of writing by Mahmud Bulgari 'Nakhj al-faradis' simultaneously deals

Muhammad Murad Samarkandi. Miniatures to the book by Ferdowsi 'Shah-nameh'. 1556–1566

with aesthetic, cognitive, religious and ethical themes.

There are numerous works in various languages on the literature of the Golden Horde. In particular, a significant part of the first volume of 'The History of Tatar Literature' (Kazan, 1984) is dedicated to this period (pp. 158–282). A great many facts and observations on the written tradition of the Jochid Ulus are contained in the book 'Medieval Tatar Literature of the 8–18 centuries' [1999, pp. 63–118], and in the monographs of H. Minnegulov, R. Islamov, and other authors.

The literary works of the Golden Horde are characterised by their variety of genres, their ideological and aesthetic richness and elegance of style and language. They are available in the original and in translation, in the form of prose and poetry, nazire (that is, responses in verse form), etc.

The writers of the Ulus of Jochi composed their works in the following genres: hikayat, kiyssa, dastan, poem, ghazal, qasida, rubai (quatrain), ode-madhia, elegy-madhia, fable, etc. There is also the poetic novel by Qutb entitled 'Khosrou-o Shirin'. The voluminous works of Rabguzi, Mahmud Bulgari and Seif Sarai are considered to exemplify the so-called 'box-composition' genre. In implementing their

artistic concept, authors freely handle materials of folklore and mythology, religious and historical books, the literature of earlier epochs and real life. For example, a poem by Berk Fatih depicts the fate of the author himself: his move from Desht-i Kipchak to Mamluk Egypt and his difficult life. Rabguzi uses a multitude of plots and characters from the Quran and the works of Arab authors.

The poets and prose writers of the Golden Horde deal with various questions concerning life and human existence. Of particular interest to them are moral and ethical issues, the meaning of life, the structure of society, the relationship between man and God, relationships of rulers and their subjects, love, etc. Secular motifs are frequently and naturally intertwined with ideas of religion and Sufism. Morality, intellect and knowledge are considered to be the main components of the aesthetic ideal. Living and working for the good of the people and creating a 'good name' for oneself—such is the meaning of life.

There now follows a brief description of the work of some of the most famous authors of the literature of the Golden Horde period.

Burhan ad-Din Rabguzi lived in the second half of the 13 to the first quarter of the 14 century in the eastern part of the Jochid Ulus, in Khwarezm. He is known for his book 'Kysas al-anbiya' ('The Tales of the Prophets', 1310), which was very popular among Turkic-Tatar readers. This voluminous work was first published in Kazan in 1859 and more than ten further editions followed. 'Kysas al-anbiya' contains various legends and tales about the prophets and their deeds, and affirms the norms and criteria of religious morality. Tadzheddin Yalchygul (1768–1838), Kayyum Nasiri (1825–1902), Gabdulla Tukay (1886–1913) used different motifs and forms of this writing in their works.

The life and work of **Qutb** (1297–mid-14 century) are associated with the Volga Region and in particular with Sarai. The only surviving copy of the poetic novel 'Khorosou-o Shirin' (1342) is preserved in the National Library of Paris. In the latter half of the 20 century it was published in Warsaw, Kazan, Tashkent and in other cities. 'Khorosou-o Shirin' by Qutb is

based on the work of the same name by Nizami [Minnegulov, 1993, pp. 158–162]. In it the poet praises the greatness of love, and affirms the ideals of beauty and humanity.

For Qutb as well as for Khwarezmi, love is the main element of the ideal of the perfect human being ('kamil insan') and the most important criterion for challenging his morality. The main idea of Khwarezmi's lyrical poem 'Muhabbat-name' ('Love Message', 1353) is that love gives purpose and meaning to a person's life. In his qasida the poet underlines the importance of a full-blooded life and the immortality of poetry.

Mahmud Bulgari (Mahmud ibn Ghali al-Bulgari as-Sarai al-Kardari) (1297–1360) was born in the neighbourhoods of Bolgar. He spent most of his life in the capital of the Golden Horde—Sarai. There he died. Mahmud Bulgari was a very respected man of his time: he was a theologian, a teacher and a writer. His work 'Nakhj al-faradis' ('A Way to Paradise', 1358) played a very important role in fulfilling the spiritual needs of Turkic-Tatar readers for over six centuries. There are numerous lists of this work. The oldest of these was created in 1360 in Sarai. Research on 'Nakhj al-faradis' has been carried out by Sh. Marjani, B. Yafarov, Sh. Abilov, E. Najip, Ya. Ekman, Kh. Minnegulov, F. Nuriyeva and other scholars. There are several publications on the study of this work (for example: [Mahmud al-Bolgari, 2002]).

'Nakhj al-faradis' consists of four chapters (babs), each of which contains ten parts (fasl). The first two chapters basically concern the life and work of Prophet Muhammad, his surroundings and first caliphs. The third chapter is dedicated to a portrayal of the qualities and deeds that bring us closer to God. And the final chapter is about the deeds that turn us away from the Divine Father. The book contains hadiths, commentaries on it and numerous hikayats-tales. 'Nakhj al-faradis' can be regarded as a manual of morality. The author affirms the concepts of kindness, fairness, generosity and modesty, and, by his use of antithesis, he strongly criticises their counterparts.

The dastan of Khisam Qiatib 'Djumdjuma Sultan' (1369) focuses closely on time [Minnegulov, 1993, pp. 158–162]. It starts with re-

flections on the 'evanescence of life', the transitory nature of human existence. The author enumerates the names of many legendary and historical personalities to prove his thesis of the caducity of mortal life. In the view of Khisam Qiatib, they all 'owned the world', but at the end of the day were compelled to leave all their 'riches, power and life' behind and pass into the other world. As an imaginative illustration of this idea, the author relates the tale of Djumdjuma. Typologically, his story is reminiscent of Dante's 'The Divine Comedy', and Ma'arri's, 'Message of Angels'. Khisam Qiatib believes that everyone is responsible for their deeds and actions, and the principle of 'you reap what you sow' is of universal relevance. Like Mahmud Bulgari, Khisam Qiatib is sympathetic to the ideas of Sufism. The most important things for the Sufis are not riches or power, but being grateful for small favours, a person's spiritual self-perfecting and godliness.

The works of **Seif Sarai** are considered to be the culmination of Turkic-Tatar literature of the Golden Horde period. Even during his lifetime he was an acknowledged and famous poet. Here is what a contemporary of his writes about him (word-for-word translation):

'Where in the world can you find a (man) as intelligent as Sarai Seif?!

Not knowing how to describe him, (the poet) pours out his heart.

If there is a man who does not like the style (virtue) of his poems, then

that man is foolish or has no soul in his body'.

According to modern science data it is believed that Seif Sarai was born in 1321 in Kamyshly in the Volga Region, studied and became engaged in literary work in the capital of the Golden Horde, and in 1380s emigrated to Mamluk Egypt. There he continued his work. He died in 1396.

The artistic legacy of Seif Sarai is familiar to us for two manuscripts: 'Kitab-i Gulistan bi-t-Turki' and 'Yadgyar-name'. The first of these was created in Mamluk Egypt at the end of the 15 century. It then made its way through the Crimea and Turkey, and then to Holland and today is kept in the library of the University of Leiden (No. 1553).

The 'Kitab-i Gulistan bi-t-Turki' consists of 373 pages. 'Gulistan bi-t-Turki' is on pages 3–356, the other pages contain poems by eight Turkic-Tatar poets (Maul Kazyi Muhsin, Maulyan Iskhak, Maulyan Khodja Maulyavi, Gabdelmazid, Ahmed Khodja Sarai, Tugly Khodja, Khwarezmi and Hasan ugly) followed by responses in verse (nazire) to each of these poems by Seif Sarai. In addition, at the beginning and end of the manuscript there are original poems, including ghazals by Sarai and other authors. A facsimile of the 'Kitab-i Gulistan bi-t-Turki' was first published in Ankara in 1954 by Turkish professor F. Uzlyuk. Other editions appeared later: based on the Latin script—in Budapest (in 1969, prepared by A. Bodrogligheti), on the Arabic script—in Kazan (in 1980, prepared by Kh. Usmanov, Z. Maksudova and R. Kadyrov), and others.

The other piece of work by Seif Sarai—'Yadgar-name' was also created in Egypt. The manuscript was brought to Middle Asia by one of the pilgrims in the 18 century. It has been known to the academic world since 1965 and is now kept at the Kh. Suleyman Manuscripts Institute at the Uzbekistan Academy of Science (No.311). The collection contains the poem 'Sukhail and Guldursun' and several poems by Seif Sarai, as well as the lyrical works of Ahmed Urgenji, Maulyan Iskhak and Tugly Khodja. All the works of Seif Sarai known to date, that is, all the texts (including poems by other authors that are contained in the manuscripts 'Kitab-i Gulistan bi-t-Turki' and 'Yadgar-name') are published in the collection of works, which appeared in Kazan in 1999 [Miñnegulov, 1999a].

The extant works of Seif Sarai are just a part of his artistic heritage, and the fate of the other part remains unknown.

In terms of its genre and structure, the main work of Seif Sarai, 'Gulistan bi-t-Turki' ('Turkic Gulistan', 1391), forms part of the group of so-called 'box-composition' works. There is no continuous plot and no single theme. It consists mostly of 'hikayats' (180 in total), 'nasihats' (instructions, 18), 'khikmets' (57) and other compositional units, which are written in a combination of poetry and rhymed prose. 'Gulistan bi-t-Turki' owes its 'box-composition' to the

didactic nature of the work. The aim of the author is to give instructions and advice on the most important questions of life and morality.

The main part of 'Gulistan bi-'t-Turki' is divided into thematic chapters: chapter 1 (bab) concerns the life of the rulers, chapter 2 is about the customs of the dervishes, chapter 3—the advantages of being content with little, chapter 4—the advantages of remaining silent, chapter 5—love and youth, chapter 6—old age and weakness, chapter 7—the role of education and chapter 8 concerns the rules of communication. Several pages of the book are given over to the traditional preamble and conclusion.

'Gulistan bi-'t-Turki' is based on the famous 'Gulistan' (1258) by Sa'adi. A comparative analysis of works by Persian and Tatar authors shows that Seif Sarai, as well as his predecessor Qutb, took a creative approach towards the original work, penetrating its emotional and vivid world. As a result, 'Gulistan bi-'t-Turki' became a monument of independent aesthetic importance, and enriched the Turkic-Tatar verbal art with humanistic ideas and new artistic forms and images.

The nazires of Seif Sarai are fine examples of the lyrics of the Golden Horde period. They were a source of inspiration for other authors as well. For example, the medieval Turkic-Ottoman poet Ahmad Dagi created a nazire based on one of the ghazals of Seif Sarai.

The poem 'Sukhail and Guldursun' (1394) affirms humanist ideals and exposes the injustice and despotism of society at the time of the author. The dastan begins with a depiction of the horrors of war. This is followed by a description of the harsh fate of Sukhail, who is taken prisoner. The daughter of the victorious 'shah', Guldursun, who falls in love with the captive, frees him from his dungeon and

together they flee her father's house. But on the way, suffering prolonged hardship and thirst, the girl dies. In despair, Sukhail stabs himself in the chest with a dagger.

The characters of the poem appeal to the reader by their beauty, faithfulness in love and courage in actions. Guldursun's deed is perceived as a great and noble act.

The literary heritage of the talented poet of medieval Turkic-Tatar literature Seif Sarai attracts the attention of literary critics, linguists, philologists and representatives of oriental studies around the world with its humanist content, aesthetic value and rich language. There are numerous articles and books in different languages devoted to this.

As in the dastan 'Sukhail and Guldursun', the aggressive politics of Tamerlane are exposed in the poems of the blind poet Ahmed Urgenji. The author considers him a 'villain', 'bloodsucker', and reminds him of his divine judgement.

Lyric verses of Ahmad Khodzha Sarai, Maulan Iskhak, Maul Kazyi Muhsin and other authors of Golden Horde are characterized by abundance of thoughts and feelings, perfect structure and elegant style. There are other works, related to the Ulus of Jochi period ('Kisekbash' is a very famous dastan; according to some researchers it can be referred to the Golden Horde times).

The literature of the Golden Horde is one of the cultural highlights of the many centuries of the Turkic-Tatar written culture. Its traditions were further developed successfully by such authors as Muhammad-Amin, Muhammedyar, Utyz Imyani, Gabdulzhabbar Kandaly, Derd-mend, Gabdulla Tukai and other poets (for the literary traditions of the Golden Horde refer to: [Minñegulov, 1999, pp. 64–88]).

Section VI

The Crisis and Collapse of the Ulus of Jochi

CHAPTER 1

Ecological, Socio-economic, and Political Crises

§ 1. Ecological Cataclysms

Iskander Izmaylov

Ulus Jochi was a medieval empire where a strict hierarchical structure of control over provinces and conquered peoples existed, a cruel mechanism which repressed any discontent. All this required keeping a large staff of officials, and the ongoing wars at the borders, internecine feuds and revolts of aristocracy required having a huge and efficient army consisting of nobility troops, which imposed a heavy burden on the population of the country.

But these considerations should not hide from us positive aspects of creating 'the world empire'. Ulus of Jochi was at its zenith once it emerged when long-term internecine wars and mutual raids, as well as the bloody conquest, were followed by the period of relatively steady peace, despite occasional clashes at the borders. Common laws, absence of numerous customs barriers and steady governance were perceived by the population as a big blessing. Travelers particularly note that 'merchants equipped with a tamga traveled everywhere, and nobody dared to bother them' [Fedorov-Davidov, 1998, pp. 38–39]. Free trade allowed for a faster exchange of scientific and technological innovations, their faster implementation in the production (for example, production of cast iron and firearms [Kirpichnikov, 1976, p. 77–78; Ryazanov, 1997]). Besides, the redistribution of the products within the empire led to their concentration in the hands of local nobility, for example, in Rus', in Bulgaria, etc. According to the archaeological materials the well-being of even common population was rather good, and concentration of the surpluses of goods and wealth in individual towns caused heavy growth of crafts, science and culture in them.

However in the latter half of the 14th century Ulus of Jochi faced challenges, and it had to undergo some changes in order to meet the requirements of that time period. During this period Ulus of Jochi was not only torn by the fight for the khan's throne, but also shaken by cataclysms, which led to violent Time of Troubles involving the entire society. It has been a long time since historians and philosophers came to the conclusion that any state, just like any social organism, went through certain development stages—emergence, zenith and collapse. Sometimes this cycle goes very slowly stretching out for centuries, sometimes it is extremely fast. The character and hidden mechanisms of this process are still unknown. Why were some states, which had emerged as a result of great conquests, destroyed only within one or two generations, and why did others, after shattering crises they had experienced, continue existing for many centuries? The answers to this question are of special interest when it comes to the states created by nomadic peoples. There are a lot of explanations for the reasons of collapse of nomadic empires, but all of them, to some extent, can be confined to the 'geographic' and 'social' theories. The first one gives priority to cyclic climate fluctuations, that is the periods of moisturizing and drying out (aridization) of steppes which, pulsating discontinuously, directly affect nomadic peoples, thus making them either thrive or decline. By synchronising the dates of historically known nomadic movements and the paleogeographical data, historians found striking coincidences which allowed them to conclude that there was a reason for these coincidences.

es. Among the researchers of this theory are such outstanding researchers as S. Huntington, J. Toynbee, L. Gumilev. However, the other theory, the social theory, has as many adherents. It is especially popular among local historians who established trends of development in nomadic societies depending on the changes in the social system. The dynamics of these processes are clearly demonstrated in the works of B. Vladimirtsev, I. Zlatkina, G. Fedorov-Davydov and many others.

No matter how attractive any theory is, one should not forget that history moves along a whole set of cause. These reasons, in every single case, give their specific constituent which affects the society. Apparently, in the situation when 'natural' is opposed to 'social', this problem cannot have a credible decision. For any people 'the forces' which threw it into the whirl of history were different, only the presence of these contradictory forces remains unchanged. With such understanding, natural and social factors do not seem to be antagonistic, but they complement each other, as though they 'were pushing' the society either to creation or destruction. No matter how fatal this view of the history of society appears, it allows us to depart from the historical concept strictly determined by social and economic reasons. Evidently, A. Toynbee was right in many respects. He pointed out that society constantly faces questions ('challenges') caused by ecological, demographic, social, economical and political factors, and depending on the answer society arrives at, it continues to develop or gets destroyed.

So, what were the main features of this challenge? The most common explanation of the collapse of Ulus of Jochi in Soviet historiography is the concept of the growth of separatism which was experienced by individual local feudal lords whose aspiration for power tore the country into conflicting areas. The mechanism of this process was clearly described by historians [Fedorov-Davydov, 1973, pp. 109–144]. In their opinion, the major conflict was between various quite independent uluses and groups of nobles owning them and promoting their pretenders to the khan's throne. Their intention was to take hold of the central

administrative structures in order to get access to the treasury of the empire and settle its domestic and international policy for personal gain. All this weakened the central authority, and, thus, led to a decrease of international activity, which, in its turn, deepened the separatism of nomadic aristocracy which viewed military campaigns as one of the major sources of gaining wealth. [Grekov, Yakubovsky, 1950; Fedorov-Davydov, 1973; Egorov, 1980; 1985].

The social factor would appear, however, to be a rather superficial and external phenomenon in the circumstances when the country was stricken by systemic crisis; it became a trigger of the political crisis rather than its cause. And exaggeration of social and political events may have historians making a surprising conclusion: the central power slackened because of feudal separatism, meanwhile their main aspiration was to take hold of the Sarai's throne and, consequently, to ensure consolidation of the central power! One can barely explain the dramatic slackening of the Jochid empire and strengthening of centrifugal tendencies in the 1360s to 1380s by separatism alone.

Unfortunately, it is impossible to give a detailed account of all aspects of this problem due to lack of factual data, therefore we should consider the key moments, outline the major features of this process. First and foremost, apparently, one should point out the natural factors the most important of which was drastic drying out of the steppe area in the 14–15th centuries as was demonstrated by works of a number of geologists, geographers and even historians [Gumilev, 1966; 1966a; 1967a; 1989a; Alek-sin, Gumilev, 1997, pp. 8–22; 'Sud'ba stepej' (The Fate of the Steppes), 1997; Kulpin, 1998, pp. 77–105; 2004, pp. 128–131]. It should be emphasised that all agrarian societies including the Golden Horde always depended on climate fluctuations, in general, and weather conditions every year, in particular.

Ulus of Jochi in this respect was a territory which depended on climate changes to far a greater extent than many other countries. It is explained by the location of that country in the heart of the Eurasian continent and its being a zone of severely continental climate for which significant climate fluctuations and

lack of moisture are typical. As a consequence, the territory of Ulus of Jochi was exposed to aridization. No wonder, a considerable part of this territory was covered by steppes and semi deserts.

The steppe climate is an extreme natural zone for human life, in general. Apart from the natural severe climatic conditions such as dry and cold North-Eastern and eastern winds, the severe continental climate (usually cold winter with little snow and a hot dry summer) and a minimal amount of precipitation, at certain periods all these factors could act at the same time and their absolute values could approach the extreme point. The most important indicator of interaction of all these factors is the presence and distribution of water. According to the vivid conclusion of the ecologist I. Ivanov, 'the wide range of species and intensity of steppe life in its entire history, from Pleistocene to Holocene, was determined not so much by cold snaps and warmings, and thickness of top soil, but rather by the humidity level' (cit. by: [Kulpin, 2004, p. 129–130]). The aridization of the climate in Desht-i Kipchak resulted in a decrease in the amount of rainfall in summer and settling of cold winters with little snow which led to gradual covering of the once rich steppes with sand (for more details see: [Aleksin, Gumilev, 1997, p. 8–22]). The cyclic changes of climate which occur gradually and constantly could not have stricken a violent blow at the economy on their own. Evidently, a notable combination of several factors played a crucial role in that the consequences turned out to be so tragic. The major natural abnormalities, apparently, were not just the deterioration of climate and its aridization, but several bad years in a row—cold winters with little snow and frosts in spring, dry winds and summer heat which exhausted 'the resilience' of agriculture.

For all we know about the household of the population of Ulus of Jochi, basically its herd consisted of sheep and horses. When conditions for economic activity were favourable it improved the well-being of stock farmers and facilitated the growth of their herds. But gradually negative things developed as well. The increased number of stock, especially sheep, on the one hand, inflicted great damage on the

landscape (grass, even the lowest, was being trampled down and eaten), on the other hand,—the huge concentration of the stock mass prevented the stock farmers from moving fast and choosing the steppe pieces which were left intact. Due to lack of water and severe winters huge herds of sheep were unable to survive which caused mass mortality.

There was a great number of examples of similar ecological disasters in the history of Inner Asia. Thus, for example, the study of mass loss of stock in the 19–20th centuries in the area between Volga-Ural Interfluve demonstrated that the crisis was caused by many years of favourable natural conditions and consequently by a sharp increase of the number of livestock (from 200,000 to 5 million head), in which sheep amounted to 77%.

Most likely it was a similar crisis of over-production that the population of Ulus of Jochi faced when it started increasing the number of sheep in favourable climatic conditions. But the drastically increased number of sheep started exploiting the soil, leading to its degradation. The situation turned out to be critical when the years unfavourable for agriculture did not alternate with good years but followed one another. Speaking of what caused the agricultural disaster, a witness described the causes very vividly and precisely: 'in a bad harvest year, there was the result that their livestock was lost or (great amount of) snow and thickening of ice' [*Sbornik materialov, otnosyashixsya k istorii Zolotoj Ordj*', 1884, p. 235].

These natural cataclysms inflicted severe damage on arable farming as well. The soil cultivation itself in this area of 'risky' farming was critical because even in relatively favourable conditions every third year in Inner Asia is considered to be an off year. But because the area of cultivated lands was constantly being reduced due to general aridization, the alternation of these adverse conditions was likely to lead to the disaster which inflicted a blow not only on the semi nomadic stock farming but also on arable farming. Contemporaries, particularly, give evidence of it. Thus, al-Ayni reported that in 1302–1303 '...Tokhta's lands experienced murrain, drought and soaring of prices, because they (the inhabitants) sowed

for 3 years in a row with no harvest, and that all their livestock died' [Ibid., p. 513].

Another evidence to it were notes of the secretary at the court of the Egyptian sultan al-Malik an-Nasir al-Umari (d. 1349) who gave a description of Ulus of Jochi based on the tellings of merchants and preachers who had been there. There is an interesting story of a witness in these notes: 'This country is one of the largest lands (abundant) in water and pastures, which gives high yields when (grain crops) are sowed in it, but they (its inhabitants) are a wandering and nomadic people which possesses livestock; they are free of (any) concerns regarding sowing and planting. Before it (this country) was conquered by Tatars it had been cultivated everywhere, now there are (only) remains of this cultivation... The fruits they have now are, actually, remains of what died out of the things planted by those who had been before them, such (people) who had passion for sowing and planting' [Ibid., p. 233]. This has been an evidence in favour of 'the destructive Mongol invasion which devastated Eastern Europe' for a long time in domestic historiography. But at present it is reasonable to look at this evidence from another perspective. Firstly, it contradicts with the available historical and archaeological data on the economy of the population of the East European Steppes from the 12th to the beginning of the 13th centuries which was mainly involved in stock farming, and only in some districts of the Don River Region preserved arable farming sites. Secondly, according to archaeological data we know about significant development of arable farming in the rural area of Ulus of Jochi which makes us doubt the evidence of 'having no concerns for sowing and planting'. Moreover, further, the same witness says that in the lands of Ulus of Jochi 'various trees, various fruits grow (namely): grapes, pomegranates, quinces, apples, pears, apricots, peaches and nuts' [Ibid.], which implies apart from simple cultivation possessing significant skills of arable farming, especially as regards to grapes growing. Further he notes that in the towns 'plenty of vegetables are planted, namely: rutabaga, turnip cabbage, and many others' [Ibid., p. 234]. In other words, it appears that the author describes a situation that was creat-

ed not a 100 years ago during the Mongol conquest, but in the 40s of the 14th century when, due to climatic abnormalities arable farming gradually degraded, but stock farming, under other conditions, was more viable and flexible.

At the same time the transgression (rising of the sea level) of the Caspian Sea began. As a result, its waves flooded a large part of the Volga delta and many settlements in it, having come close to the towns of the Lower Volga Region. According to the Italian geographer Marino Sanuto (1320), 'the sea rises every year by one hand and many good towns have been already destroyed' (cit. by: [Aleksin, Gumilev, 1997, p. 15]). The rising of the Caspian Sea level was recurrent in different decades and gradual during one century, but never catastrophic, marine deposits in a number of the archaeological sites of the Lower Volga Region being indicative of it. But one thing is doubtless that the high water of the Caspian Sea level was at the end of the 13th early half of the 14th centuries (for more details see [Ibid.]). In any case, the flooding of very fertile lands in the Lower Volga Region adversely impacted the arable farming area which facilitated erosion of the foundation of the economy of the Horde.

At the same time both Western and Eastern Europe experienced a horrible demographic shock. Good climatic conditions and improvement of the quality of life prompted the population growth. For example, the population in Western Europe in the 13th century almost doubled. Obviously, Eastern Europe experienced the same growth of population and, although the Mongol invasion inflicted great damage to the population, it continued to grow even faster. In the Golden Horde the population growth was induced by political stability, emergence of big cities and great number of settlements. It is difficult to say now how big the population of the Horde was, but there is no doubt that it reached the number of several million people. Worsening of natural conditions resulted in more frequent periodic food crises. Drought and famine followed each other. A number of Russian chronicles emphasise a relation between drought, famine and plague: 'In the summer of the same year there was a great drought throughout the land, and there was smoke in the

air and the earth was hot', and then there came 'high prices for bread and great famine' [Complete Collection of Russian Chronicles, 11, p. 162]. They were followed by 'plague which took away great and strong people, and it came from the Lower Volga Region, from Bezdezh, to Nizhny Novgorod. The pestilence was great and horrible and covered all the cities' [Complete Collection of Russian Chronicles, 30, p. 113]. The relation between these disasters is not accidental but naturally determined.

The famine drove people to cities and towns where they even had to sell their children which is reported by Arab geographers [Sbornik materialov, otnosyashixsya k istorii Zolotoj Ordy', 1884, p. 231, 235]. Concentration of people weakened by malnutrition in the towns of the Volga Region, the Crimea and Khwarezm turned out to be fertile ground for diseases. It is very likely that latent diseases in some regions which were inhabited by sick rodents spread out to the overcrowded towns where they gathered the mournful harvest growing up to pandemic of incredible proportions. The most horrible was the pandemic of plague which by the middle of the 14th century repeatedly came back to Dasht-i Kipchak mowing down the population, especially in overcrowded towns. A Russian chronicler wrote about this 'great murrain' under 1346: 'the plague was sent by God and attacked people in Astrakhan and Sarai and many other cities of the eastern

countries, it strikes representatives of different tribes (the Besermyans, the Tatars, the Obez, the Jids (Jews), the Fryaz (Italians), the Circasians) really fast, because there is nobody there to bury the dead' [Polnoe sobranie russkix letopisej, 4, p. 57; 5, p. 225; 15, p. 57, 76–77]. The pandemic of 1346–1350 inflicted a tremendous blow on the whole of Europe. As estimated by demographers, in Europe the Black Death left up to 25% people dead, and in a number of densely populated places up to 90% of the population [Samarkin, 1976, p. 84–90].

For Ulus of Jochi this blow appeared to be especially severe. According to Ibn al-Wardi, the Arabic historian, geographer and contemporary 'villages and cities became deserted' after the plague which had occurred in 'Öz Beg lands'. He also writes that up to one thousand people died in the Crimea every day, and over 85 thousand inhabitants died there in total [Sbornik materialov, otnosyashixsya k istorii Zolotoj Ordy', 1884, p. 498, 530]. According to these data the consequences of the Black Death's march along the Horde were catastrophic for the entire economic, demographic and social structure of the state. The damage inflicted on the cities and their neighbourhood in the Volga Region and the Northern Black Sea Region turned out to be especially irreparable. It can be said that this was when the decline of urban life started in the Lower Volga Region and the Lower Don river region.

§2. Black Death and its consequences

Uli Schamiloglu

It is known that epidemics and large-scale pandemics are an important factor in history. Particularly rich literature is dedicated to the social, political and economical consequences of the Black Death of the Mid-14th century in Western Europe [Gottfried, 1983, pp. 257–267; The Black Death, 1983; see the bibliography: Carmichael, 1986, pp. 166–175]. However, the role of this disease for the history of Central Asia has been rarely considered until now. Therefore any important data, observations and theories concerning the epidemic

in this region [McNeill, 1976; Dols, 1977] are worthy of appropriate consideration.

This is directly related to W. McNeill's hypothesis that the rise of the Mongol Empire gave rise to different circumstances which resulted in the transfer of the plague bacillus (*Yersinia pestis*) [Carmichael, 1986, pp. 6–7] to Europe in the 14th century. When the Mongol Empire was being founded one of the natural foci of the bacillus, probably, was located in the borderland between India, China and Burma, in the foothills of the Himalayas.

According to W. McNeill the Eurasian steppes between Manchuria and the Northern Black Sea Region were unlikely to be the place of its emergence, though he assumes that Mongol troops could have had contacts with this infected area even in 1252–1253. W. McNeill writes that spreading of the bacillus by people in the steppe regions was likely to have occurred shortly before 1331, that is the first year of a major plague outbreak in the Chinese province Hubei. This epidemic reoccurred in 1353–1354 sweeping widely throughout China [McNeill, 1976, pp. 142–145].

The spread of plague, however, was not limited to China. Both W. McNeill and M. Dols agree as regards the western direction of this outbreak through Central Asia [Ibid., pp. 144–146; Dols, 1977, pp. 35–50]. The gravestones of Nestorian burial sites near Lake Issyk Kul indicate that the plague outbreak occurred there in 1338–1339 [McNeill, 1976, pp. 145–146; Dols, 1977, pp. 48–50; for more details about these gravestones see: Thacker, 1967, pp. 94–107]. The information provided by Ibn al-Wardi (according to whom the plague appeared in 'the land of darkness'; this implied Inner Asia, see: [Dols, 1977, p. 40; McNeill, 1976, p. 144; see translation: Near Eastern Numismatics, 1974, pp. 443–455]) and Maqrizi (according to whom the epidemic first occurred in the lands of the great khan, then it reached Öz Beg's land, see: [Maqrizi, 1958, p. 773; Dols, 1977, pp. 40–41]), confirms that the disease occurred in Central Asia and raged there for 15 years. Then the plague struck the cities of the Golden Horde including Sarai and Hajji Tarkhan. From there it went through the Caucasus to Azerbaijan and Armenia. Major Italian commercial centres of the Crimea became the places which transferred the Black Death to the Middle East and Europe. Italian traders were drove out from Tana (Azak) in 1343, and twice, in 1343 and in 1345–1346 they were besieged in the fortified town of Kaffa. During the siege of 1345–1346 the plague appeared both among the Tatar troops and in the rest of the Golden Horde (Maqrizi indicates 742/1341–1342 as the date of the beginning of the epidemic in Öz Beg's lands [Maqrizi, 1958, p. 773]). Thanks to their strong resistance and, probably, the weak-

ened state of the besieging army, the Genoese managed to raise the siege. After that many Genoese fled to Constantinople spreading the infection. By 1347 the plague reached Italy and Egypt. Europe and the Middle East experienced its devastating effects [Dols, 1977, p. 40; McNeill, 1976, pp. 50–67; Gottfried, 1983, pp. 22–32].

Despite the absence of historical literature dedicated to the significance of the disease for the history of Central Asia, we can make some preliminary remarks regarding the effects of the Black Death on the Golden Horde based on studies of its impact in Western Europe, China and in the Middle East. Essentially, this avenue of research had already been proposed by W. McNeill who offered a number of hypotheses for the Golden Horde and other territories in Central Asia, although he did not develop them. The results of the effects of the Black Death on Ulus of Jochi can be combined into four classes described below.

A large-scale reduction of the population is one of the major results of the Black Death and other pandemics in history [Ziegler, 1969, pp. 224–280; Gottfried, 1983, pp. 134–136]. For example, it was estimated that in Byzantium the epidemic of the years 541–542 had reduced the population in the distribution areas by 20–25%, and during the period of 541–700 by 50–60% in total [Russell, 1968, pp. 174–184; Dols, 1977, p. 17].

The Black Death of the Mid-14th century had similar consequences. It is considered that in 1331, that is in the first year of the outbreak 9/10 of the population died in the province Hubei. During the second epidemic wave, in 1353–1354, according to the Chinese sources, 2/3 of the population died [McNeill, 1976, pp. 143–144]. The population of Egypt, probably, was reduced by 1/4 or 1/3 [Dols, 1977, pp. 212–223]. It was estimated that in Europe approximately 1/3 of the population died between 1346 and 1350 [McNeill, 1976, pp. 149–150].

There is no doubt that the impact of the Black Death on the population of the Golden Horde and the remaining part of Central Asia was equally severe. It has been already noted that the disease visited numerous population

centres in the Southern regions of the Golden Horde. Thus, Maqrizi mentions the reduction of population in the steppe area before the Black Death arrived in the Middle East. [Maqrizi, 1958, pp. 773–774; Dols, 1977, pp. 40–41]. According to Ibn al-Wardi, when the disease came to 'Öz Beg's land' (bilad Uzbek) in Rajab of 747 (A.H.)/October–November of 1346, the villages and towns were deserted. The qadi of the Crimea gives an estimate of 85 thousand deceased (see: [CWRHGH, 1884, p. 498, 530; Dols, 1977, pp. 51–52]).

Additional evidence is provided by the Rus' territory where in the cities, according to Russian chronicles, there were numerous occurrences of plague which resulted in high mortality (the significance of the Black Death for the history of Russia has become the subject of much scrutiny; see: [Alef, 1970, pp. 15–58; Langer, 1975, pp. 53–67; Alexander, 1980]). After its first occurrence in 1349 in Polotsk, in 1352 it came to Pskov, Novgorod, Smolensk, Kiev, Chernigov, Suzdal 'and to all the Russian land', having reached Moscow in 1353. In 1360 the plague visited Pskov again, and between 1364 and 1366 Nizhny Novgorod and all the large cities of North-Eastern Rus'. The sources report many recurrences of the disease which followed [Derbek, 1905, pp. 14–25; Alef, 1970, pp. 37–38; Langer, 1975, pp. 55–61; Alexander, 1980, pp. 12–15].

The emergence of the Black Death in the territories bordering with the Golden Horde implies that the pandemic left its mark there as well, because, rephrasing Gustav Alef's remark, the large-scale pandemic which devastated Rus' so badly could not be stopped by some Eastern iron curtain [Alef, 1970, p. 36]. Although many people think that the earliest wave of pandemic which burst out in 1349 came to Rus' from the West, it remains to be seen whether it could come from the South, that is from a plague stricken region of the Golden Horde such as the Crimea [Langer, 1975, pp. 56–57; Alexander, 1980, p. 13]. Besides, the Russian sources give valuable demonstration of several additional episodes of the spread of the Black Death in the Golden Horde in the 14th century. It is believed that the wave of 1364 occurred in Sarai [Langer, 1975, p. 57], and the outbreak

of 1374 struck not only 'the whole Russian land' but also the Golden Horde [Derbek, 1905, p. 23; Langer, 1975, p. 57]. It is assumed that the last wave of the 14th century struck the Golden Horde in 1396 [Derbek, 1905, p. 25; Alexander, 1980, p. 15]. Taking into consideration the evidence of the initial attack of the Black Death on the southern Golden Horde in 1346 (most likely it was the wave which spread out to the north in 1349), and evidence of the plague in other locations of the Golden Horde in 1364, 1374 and 1396, we consider it acceptable to assume that during that period the disease visited the majority, if not all the western territories of Ulus of Jochi (ulus Batu or Ak Horde is meant here).

Demographic Decline and Instability of the Political Structures. The initial wave of plague in Western Europe was accompanied by recurrent outbreaks of plague or other diseases which caused a long-term demographic decline. For England, it was recorded that the population had continued to decrease during the following 100–133 years, that is during 5–6 generations after the first wave. The British population reached the lowest point somewhere between 1440–1480, and only after this did it begin to recover slowly [McNeill, 1976, p. 150]. In the same way it is considered that the population of Rus' did not regain the level that preceded the Black Death until 1500 [Langer, 1975, p. 62]. The plague recurrences, by now it is a proved fact of life for Europe, Rus' and the Middle East [Ibid., pp. 55–61; Dols, 1977, pp. 223–231; McNeill, 1976, pp. 149–153], could also have caused the deterioration of the situation in the Golden Horde which was already bad. If such long demographic decline can also be applied to the Golden Horde, then in 1340s its population was likely to be only in the beginning of the long-term period of steady decrease in the sustainable population.

At the same time one should be careful when discussing the alleged initial reduction of the population of the Golden Horde or other regions of Central Asia by 20–45% (the figure for Great Britain) [McNeill, 1976, p. 149]. It was noted by the researchers that while some European communities experienced complete extinction, others, such as for example, resi-

dents of Milan, most likely, completely avoided this fate [Ibid., p. 147]. The reasons for these circumstances are complicated and could imply different directions of bacillus spreading (both by people and fleas). Historically, ports for merchant ships and nearby coastal areas were, evidently, most probable centres of the plague outbreak [Ibid., p. 149; Norris, 1977, p. 16]. All this gives a reason to believe that different areas of Central Asia were subjected to devastations to different extents, some of them even avoiding them. Such peculiarities of the plague's spread, including the fact that it affected the dense urban population, the less dense rural population and the least dense nomadic populations differently, were likely to result in demographic disproportions between different areas of Central Asia (we will come back to this later).

Another direct consequence of the plague's spread was the instability of the political structures which resulted from the demographic disaster [McNeill, 1976, p. 81; Gottfried, 1983, pp. 146–152]. One can also assume that available military personnel was reduced which affected the ability of the Mongol Empire to rule its territories [McNeill, 1976, pp. 168–170]. It is clear that demographic losses affected both the ruling classes and the lower social layers. This explanation was suggested due to premature deaths of members of the Mongol Yuan dynasty in China [Dols, 1977, p. 41]. In Moscow the Black Death is responsible for the death of the great prince Semyon and his two sons, his brother Andrey and Metropolitan Theognostus in 1353 [Alef 1970, p. 38].

Undoubtedly, for the Golden Horde, there is no reason to assume the complete collapse of centralised power in the period which followed the plague outbreak in 1345–1346 or earlier (see the most comprehensive overviews of the political history of the Golden Horde: [Spuler, 1965; Grekov, Yakubovsky, 1950, p. 261 et seq.; Safargaliev, 1960, p. 101 et seq.; Fedorov-Davydov, 1973, p. 145 et seq.; Kafali, 1976, p. 54 et seq.; Egorov, 1985, p. 207 et seq.; Halperin, 1985, p. 54 et seq.]). As is well-known, Öz Beg Khan (1313–1341) can be considered to have been one of the most successful khans in the history of the western part of the

Ulus of Jochi (Ak Horde). The reason for his fame was not only the length of his reign: Öz Beg managed the Tatar tribes with a firm hand, his efforts in the Islamisation of the state were successful, it was during his rule that a high Islamic culture began to develop, and he managed to preserve the integrity of the majority of his territories.

First, Öz Beg's son Tinibek (1341–1342) inherited the throne from his father, later his other son Janibek (1342–1357). Although, it was in the beginning of Janibek's reign that the plague first visited the western territories of the Golden Horde, it is clear that during most of the time that he held the throne there was stability in the country. For example, the model of tribal organisations, which I call the 'system of four beks' (see Section IV, Chapter 4 and [Schamiloglu, 1984, pp. 282–297; see the Russian translation: Schamiloglu, 1993, pp. 44–60]), functioned seamlessly. The two-year reign of his son and heir Berdibek (1357–1359), however, preceded the complete and absolute collapse of the centralised power in the Golden Horde. The time of 'Great Troubles' in the Horde as it is referred to by the Russian sources, has never been explained satisfactorily.

Usually the interpretation of the disorders in the Golden Horde which began in the late 1350s, only addresses political events: Berdibek's murdering his father in 1357, the murder of Berdibek by his own son Kulpa which followed in 1359, and then the murder of Kulpa, and so forth. Though this material could serve as plots for Greek tragedies, it does not seem to be convincing for understanding the main mechanism of the complete collapse of centralised authority in the Golden Horde. This was not something new that power went from hand to hand through acts of bloodshed: the long-term career of Nogai manipulating khans is an outstanding example of this.

As a rule, the political unity of the Golden Horde was maintained by the confederation of 4 major ruling tribes inside the state. Following Berdibek's death, the 4 main tribal leaders supported different candidates to the throne. For a long time this conflict could not be resolved internally, and as a result the political integrity of the Golden Horde was lost for good. It

appears that the death of a large part of the ruling elite influenced the Golden Horde even more than surrounding countries, such as Rus', because the central authorities in the Golden Horde relied on the agreement of different domestic ethnic social groups. The common fight for power could only be facilitated by a break in the continuity of the ruling hierarchies of Chinggisids and 'ruling clans'. The above mentioned argument about the reduction of military forces was likely to facilitate the destruction of centralised power as well. It is clear that the Black Death should become one of the factors which we consider when investigating the collapse of many traditional political structures of the Golden Horde in that period.

The third important consequence of the Black Death which should be considered is the cultural and technological regression [McNeill, 1976, p. 107; Gottfried, 1983, pp. 141–156]. In urban centres of Western Europe the waves of plague impacted harmfully large concentrations of craftsmen, traders and scientists. The cities of Golden Horde were similarly centres of attraction for highly educated people or people with highly developed labour or crafts skills (see Section IV, Chapter 1 of this edition). As has been already noted, when the Black Death attacked the urban regions of the Golden Horde, it must have had especially destructive outcomes for these population layers. W. McNeill assumed that the decrease in population, most probably, was a more important factor of the decline of urban centres in the western steppe areas than Tamerlane's (Timur's or Aqsaq Timur's) campaigns. He offers an interesting observation: while the urban centres in Anatolia and India recovered quickly from Tamerlane's campaigns and the migration of craftsmen, this was not the case with the cities of the Golden Horde [McNeill, 1976, p. 169].

There is also evidence which allows us to assume that, just as it was with the Latin literary language in Europe, the development of the Turkic literary language and even literacy in the Golden Horde was discontinued specifically by technological decline [Schamiloglu, 1992, pp. 157–163]. Most probably, the closest parallel to the decline of Latin as a literary language is considered to be a remarkable ex-

ample of the technological decline of the Turkic funerary inscriptions from Volga Bulgaria. In this region early Arabic script inscriptions in the Arabic and Turkic languages on coins, gravestones, etc. date back to the 10th century while the latest inscription is dated back to 1357 (see: [Róna-Tas, Fodor, 1973, pp. 38–49]). In the city of Bulgar the earliest gravestone is dated back to 1271, and the latest ones—to 1356 [Mukhametshin, Khakimzyanov, 1987, p. 120]. At that time there were two separate Turkic languages and dialects here which were used in such inscriptions: one of them was the Bulgarian language, whose closest contemporary relative is the Chuvash language, and the other was a language which can be considered as the ancestor of the contemporary language of Kazan Tatars (see: [Khakimzyanov, 1978; Khakimzyanov, Izmaylov, 2006, pp. 621–628]). By 1356–1357, only one decade after the first report of the Black Death in the Golden Horde, the practice of burial inscriptions in this northern area of the Golden Horde suddenly came to an end. At the same time the Volga Bulgarian language ceased to exist as a written language. This information should be considered to be an argument proving that the Black Death had a strong impact on the northern territories of the Golden Horde including Volga Bulgaria.

Migration of the Population Due to Demographic Reasons [McNeill, 1976, pp. 169–173]. As has been emphasised, different geographic areas could experience the plague outbreaks differently. Most likely, some areas avoided its consequences completely. Also, it is possible that the majority, if not all the western territories of the Golden Horde were devastated by it and, evidently, lost from between 20 and 45% of their population (judging by the experience of other regions of the world) or even more. Unfortunately, we know little about the consequences of the plague in the eastern half of the Golden Horde, known as Kōk Orda (the Blue Horde), or in other regions of Central Asia. It is quite acceptable that certain regions of Kōk Orda were not harmed by the pandemic as much as the territory of Ak Horde was. If this is the case, it can explain those migration tendencies which occurred in the latter half of the 14th century.

Berdibek's death was followed by two decades of anarchy and the disintegration of the Golden Horde's power. Although the clan leader and ulug karachibek Mamai gained supreme power among puppet khans, he himself remained no more than the leader of a single 'ruling tribe', as later would be Edigü, or Tamerlane, Mamai's contemporary in the Chagataid Khanate. Later none of the Chinggisids from the western half of the state seemed to come to power in the western territories of the Golden Horde.

The slackened Golden Horde began to experience the growing resistance on the part of the subject Russian princedoms and faced the Lithuanian expansion to the South (1362, 1399). Meanwhile, from the 1360s to the 1370s, Tatar tribes were attacking from the East. First Urus Khan, and then Tokhtamysh led campaigns against the central territories of the Golden Horde. The details are not so important to conjure up the circumstances of this process. It is enough to note that when in the 1380s, partially in the 1390s, Tokhtamysh became actually and legally the ruler of the western territories, he was supported by the confederation of the four 'ruling tribes' which consisted of the clans Shirin, Argyn, Baryn and Kipchak. It is proved that these four tribes migrated to these territories by the end of the 14th century together with Tokhtamysh [Kafali, 1976, pp. 31–47, 101–114]. The same four tribes will later form

the ethnic social basis of the Crimean, Kazan and, partially, Kasimov Khanates.

The importance of this fact becomes clear if we admit that initially the confederation of the 4 tribes in the Golden Horde was likely to be quite different. The four tribes of the nomadic Great Horde in the 15th century were Qiyat, Manghit, Saljigut and Qongirat. If they are to be considered the last remains and direct extension of the earlier population of the Golden Horde, they should also be considered to be the initial clans of the Golden Horde. The change of ruling clans can be seen as a remarkable example of migration of the population from the east to the areas devastated by the Black Death. Most probably, other migrations of the population in the steppe areas during the period of 1350–1500 can also be explained by the tendency to migrate to regions affected by the pandemic.

In conclusion it should be noted that the hypotheses of the consequences of the Black Death proposed by us go beyond the usual and traditional historiographical interpretations of the history of the Golden Horde. It becomes clear from our analysis that the pandemic of the Mid-14th century led to a period of intensive economic transformations in Central Asia which merit further investigation because the Black Death was not the only recorded outbreak among the diseases which had significant influence on Asian history.

§3. Economic and socio-political crises

Iskander Izmaylov

The economic decay in Ulus of Jochi was in many ways caused by the crisis of trans-Asian trading. Three circumstances were unrelying this unprecedented system of Eurasian trade, the important part of which lay in the territory of Ulus of Jochi.

Almost all the major trade routes involved not just a road, but strictly organized infrastructure. The first element was the creation of a system of continuous communications: yams (jams), postal way stations with horses and caravanserais. The messengers, clerks and other

authorized functionaries, proceeding with official business, could rest there, get fresh horses and supplies. Usually yams had a distance of 30–60km between each other, that is day-long trip on every important trade road, connecting different cities and ports of a country, covering the whole territory of Ulus of Jochi. During the foundation of the Mongol Empire the creation of yams was part of government measures on the cultivation of reconquered lands, it provided a fast trouble-free postal service to the farthest limits of the empire. Coachmen's du-

ties were considered to be some of the most important, release from which was specially determined in tarkhan yarliqs, for example, for members of the Russian clergy. Besides purely state interests, such as providing rapid expansion of important state information to the all ends of the country, the system of yams along with caravanserais, which appeared close to them, formed the most important trade roads of the country, where caravans with goods could safely and without any hindrance move from ports of Crimea to Karakorum and Khanbaliq. A vivid description of the road from Kaffa to Sarai, and from there to Urgench, and from there to India was made by a traveler and geographer Ibn Battuta in the beginning of the 14th century. Those roads were not only for material goods but also for information, cultural (religious in particular) and technological. Not for nothing did caravanserais often serve as a waqf of some sufi community, and and vice versa holy places began to appear around those caravanserais, mosques and meeting houses (khanaqah).

At the same time, yams served as nodes, connecting the vast empire into a single system. They not only served Khans but also ensured the safety and security of the main roads. The Florentine negotiator F. Pegolotti, describing the trade roads of Eurasia, said: 'The road from Tana to China is, according to merchants who travelled there, safe enough during the day and the night; but if a merchant had died on that way, all his property would be transferred to the king of the country he died in, taken by his officials, but if his brother or a close friend were with him and said, that they're brothers of the deceased, they would also share the property, and in such way it would be preserved' [Pegolotti, 1936, pp. 21–23]. Safety and almost complete security of merchants and their goods all the way from the Black Sea Region to China contributed to a sharp increase of trade in Eurasia. In many ways, already established trade conditions also played to its advantage it. The old traditional trade roads from the Levant to the Northern Mediterranean region ceased to function after several consistent defeats of Crusaders in Palestine and Syria at the end of the 12th century, and regained the importance

in the 13–14th centuries, due to the Mongol invasions and wars between the Hulaguids and the Egyptian Mamluks.

The main trade road, starting in China, going through the Horde, was a way for many products demanded by Western Europe: condiments and spices, dye, silk, cotton, precious stones, grain and slaves [Petrov, 1995, p. 60–91]. That flow of goods of extreme value for European markets, enriched intermediaries and served as the foundations of welfare of all the cities of Desht-i Kipchak. Not only were trade duty revenues to the treasury connected with trading, but also the well-being of numerous servants: caravanners, guides, guards, owners of caravanserais, craftsmen etc. Moreover, many workshops were producing items for sale and processing the semi-finished products. They all were very conscious of any changes in trading activity.

Another important condition was the creation in Ulus of Jochi of a somewhat stable monetary-fiscal system. Already in the mid 13th century, its own monetary-weight system was formed here, the basis of which constituted a silver dirham (yarmak) weighing 1.56g. Later, this system was organized by Tokhta Khan in 1310/1311 and, in a changed condition, existed till the country's collapse and, in some regions, even after it. At the same time, copper coins, proportional to the value of a silver coin, were minted. They circulated within the country and outside of it and in some states (for example, in the Grand Principality of Moscow) it became the basis of the emerged monetary-weight system. The stability and solvency of Ulus of Jochi's traders contributed not only to strengthening their connections with the Mediterranean, but also to the emergence of progressive forms of credit-fiscal systems such as banks and bills. In a similar way to China's yuan, paper money—government bills—probably circulated on the territory of Ulus of Jochi.

The universal weight system also contributed to it. There was a typical eastern system in Ulus of Jochi, its basis was mithqal, consisting of 100 ritles (455.7g). One tenth part of a ritl was 4.68g and matched the usual Sarai dirham. Its weight of 1.56g consisted of two daniks weighing 0.78 g. each, and their weight

Pottery spherical cones.
Ukek. 13–14th centuries.
(according to L. Nedashkovsky)

is 1/6 of a mithqal. That is, a usual mithqal was 144 dirham weight standards. Consistency and comparability of monetary-weight systems with weighing systems of the East made the market of the Golden Horde open to cooperation with other countries, attracting merchants from around the world.

The strengthening of monetary-weight system along with the stabilisation of trade made gains from trade an important part of the national budget. Some historians even think it was the main source of replenishments of the state treasury [Gubaydullin, 1994, p. 69]. Over the years, customs fees, the so-called tamga and duties, probably ranged on the prevailing market conditions, the method of sale and the variety of goods. In the 13th century tamga probably did not exceed 10% of the transaction value. But already in the end of the 13–the beginning of the 14th centuries, it was clearly reduced, and in the Black Sea Region it reached 3% [Grigorievs, 1990, p. 92]. Given the huge goods turnover from own products and, especially, transit trade, one can

only assume truly colossal profits for the state treasury and local authorities.

The largest shopping centers of transit trade were the ports of the Northern Black Sea Region, being a source of huge profits. For example, the decree of the Venetian Senate on December 30, 1343 emphasised their importance, pointing out that 'in those areas (our) merchants derive the biggest benefits and profits, as there was the whole source of goods' (quote from: [Karpov, 1990, p. 302]). This is not surprising, because the turnover of Italian merchants in the Black Sea Region alone has reached hundreds of thousands of ducats, and was about one third of the total turnover of, for example, Genoa. The profit of foreign trade and the amount of customs duties in the Ulus of Jochi was unlikely to have been calculated accurately, but it is clear that it was a very significant part of the Ulus of Jochi's budget.

Alongside this, the involvement into eurasian trade made the economy of the Golden Horde conditional on the world trade market fluctuations. But if the Italian trade republics could change their trading trends, for Ulus Jochi a slash in the goods turnover with the countries of the Mediterranean region was an irreplaceable loss.

The decline in world trade began in the 1340s and peaked in the latter half of the century. It was caused by a number of reasons, including the Rebellion against the Mongolian Yuan dynasty in China, the unstable situation in the Middle Asia and Moghulistan, plague, unrest in Anatolia after the decline in the Ilkhanid dynasty, and the outbreak of the war between the major Mediterranean trading powers Genoa and Venice. All this led to the restriction of trade turnover between the East and the West, drastically undermining the economic situation of the Lower Volga cities.

Another component of the crisis was the breakdown of the monetary-weight system of the country (see more: [Fedorov-Davydov, 2003, pp. 15–17; Muhamadiev, 1983, pp. 81–118]). In the 1370 the coining in the Lower Volga Region was growing scant and could not provide the country with silver coins. Judging from the monetary buried treasures, the number of local minted coins increased, whilst in the

first half of the 14th century coins from Sarai al-Jadid and Gulistan prevailed. Another consequence of the Black Death and environmental crisis was the increasing amount of buried treasures, which indicated the people's aspiration to save money and not place it in circulation. According to G. Fedorov-Davydov, most monetary treasures were buried in 1360s-70s, between the reforms of 1310/1311 and the 1380s [Fedorov-Davydov, 1960]. This resulted in removing silver coins from circulation and the increase of copper and cut coins, and also coins of smaller weight. All this was a sign of a deep crisis in trading-monetary relations in the state, having turned from the advanced trading country into the conglomerate of territories of subsistence agriculturists. And although some stabilisation happened from time to time, and even some revival of trade, this increase was not stable until the 1380s.

Only at the end of the 14th century did the crisis slowly began to cease, reviving world trade [Karpov, 1990, pp. 60–63, 300–331], but it only contributed to some stabilization of the situation in the Ulus of Jochi, because during the Time of Troubles the infrastructure of trans-Asian trade routes was totally destroyed.

The strengthening of the clannish aristocracy power and the growth of regional separatism. Socio-political processes, of course, cannot be overlooked too. Over the 100 years of its existence the Ulus of Jochi not only went through the formation, but also reached a high level of social development.

Complicated processes were taking place in the country, leading to the feudalisation of its territory, and already in 14th century there were several defining features of advanced feudalism, which is characterised by the decentralisation of power and possessions [Fedorov-Davydov, 1973, pp. 109–138]. For a long time this system was balanced by a strong centralised power and was stable enough, but under unfavorable conditions, it quickly began to transform and disintegrate.

According to written sources there clearly was an increase of power, as of ulusbeks, as of Tatar clannish nobility, who stood behind ulusbeks,—the owners of smaller fiefdoms—

iqta and suyurgals. Their economical power was based on advanced pastoralism and agriculture, and also on having a share of state taxes and other incomes, and their political power was based on the influence of their clans in the imperial system. A strong judicial and administrative authority within the subordinate uluses gave this important financial and political leverage. Moreover, many large feudal holdings became tarkhans in the latter half of the 14th century, that is the owners of unconditional holdings, free from almost all taxes and tribute to the Khan [Ibid., pp. 124–134]. The material resources of some of them were truly colossal. That is, according to Arabic sources, some Emirs of large fiefdoms, had an income of 100–200 thousand golden dinars from it and could maintain an army of 5 thousand well-armed horsemen [Collection of Works Related to the History of the Golden Horde, 1884, p. 244]. Besides the extensive holdings and the large number of troops, Tatar aristocracy, united in clans, had its own representatives at court and in the capital's officialdom, so that clans also had solid revenues from collecting taxes and duties. According to historical data, the number of high emirs, who gathered on kurultai, ranged from 50 to 70 [Ibid., p. 168]. Clearly, these Emirs were the top layer of Tatar clan aristocracy.

Alongside this, new trends in the social life of the country began to take shape in the 14th century. Ulusbeks oftentimes transformed their fiefdoms, including towns and nomads, into semi-independent holdings. On the one hand, small feudal holdings and towns, which were the base of the Khans' power, began to fall under the authority of more powerful emirs and ulusbeks, as they saw it the only chance to mitigate the effects of environmental and social actions. On the other hand the number of clans increased and their place in clan hierarchy remained secondary. They were power-hungry, but their ambitions were restrained by the existing system of 4 clans. The representatives of these clans, using the power of tradition, the resources of the treasury of the Horde and the armed forces of the empire, did not allow other clans, not among the ruling ones, to make claims to increase their status.

Basically this ethno-political system was stable enough and provided the continuity and stability of power in Ulus of Jochi. Its unity could not be shattered even by the attempt of Nogai to usurp the power in the latter half of the 13th century. However, as a result of the Black Death epidemic, it was, obviously the ruling clans who took large losses and began to lose their power. Their weakening made the other clans want to take their place. However, in Ulus of Jochi's existing political and ethno-social system, it was possible to attain to power only if the clan could produce a Khan, related to them one way or another. The system of 4 clans, which in usual conditions made the state stable, in contexts of plague and natural disasters became a reason for cruel power contests and a source of political deconsolidation. Obviously, a number of clans began to fight for power, using the nomination of its own Sultan from the Jochi clan as a pretext, in hope of using him to push the other clans aside and wrestle into a leading position at court. But, as there were a lot of claimants, and nobody had support from large noble clans, this ended in chaos and full destruction of the authority of Khan's power. Thus, describing the situation in the country after the death of Berdibek, the historian Ibn Khaldun wrote: 'There also were (except for Mamai—I.I.) several (other) Mongol emirs, who shared the management of domains near Sarai; they disagreed with each other and ruled on their own. Thus,

Hajji Circassian took the lands of Astrakhan, Urus Khan his appanages. Aybak Khan did the same. They all were called military emirs' [Ibid., p. 289].

And with it, contrary to the opinion of several historians [Egorov, 1985, pp. 56–58], the desire of Horde emirs for separatism in the mid 14th century should not be overstated. Nevertheless, the majority of them fought amongst themselves exactly for the throne of Sarai.

Another consequence of the weakening of the central government and a number of epidemics and environmental crises was the collapse of the internal connections in the country. In fact, in context of those catastrophes and political cataclysms, the number of prosperous regions (Crimea, Khwarezm, Mukhsha, Bulgaria) turned out to be in a political vacuum and forced autonomy. Having fewer environmental crises than the Lower Volga Region, they kept their economy stable or recovered from the plague rather quickly. Under the conditions of disintegrating internal communications and naturalisation of economy they at least needed a single state, tending to isolation. In some cases the separation of the central government was based on the old and half-forgotten tradition of the former regional unity. Not without reason did the country start to fall apart under conditions of internecine feud into old boundaries, which obviously, had some economic and cultural foundation, namely Crimea, Bulgaria, Muhsha and Khwarezm.

The aspiration to decentralisation had also found support in semi-independent vassal regions, which had always had a strong tendency to be separated from the Horde. This could be most clearly observed in Rus'. It was precisely then that there was not only the strengthening of power ready to resist the 'tsar of the Horde' but also the ideological justification of this struggle for liberation from the power of the 'infidels'.

In terms of economic and political crises in the country, in the regions some forces appeared and were established, forces seeking to fight in order to maintain their control; but they were able to gain an advantage only in the beginning of the 15th century. Until then, since there remained the united political power (the Khan and his administration) and economical connections (trading, the singly currency system), Ulus Jochi remained united.

CHAPTER 2

'Great Troubles'

Iskander Izmaylov

The fight for the Khan's throne, started by several Chinggisids, served as a political cause for a centrifugal explosion. Each of them had claims for the state of ancestors and numerous detachments of allies. The degradation of the natural environment, the decline of farming and pastoralism, the decay of trade and cottage industry, a reduction of tribute and spoils of war income in the Volga Region, the disorder of monetary circulation, weakening the power and influence of central government, which served as the backdrop for increasing the power of individual clans and their aspirations for political leverage—all this pointed to a growing crisis. These were the forces questioning the further existence of the Empire, and all the attempts to answer the call of age were unsuccessful.

The ensuing catastrophe, as it seemed, was not presaged. In fact, the years before the 'troubles' were characterized by the strengthening of the Horde and major foreign policy success.

After long years of bloody, but mostly fruitless rivalry, which started back in days of Khan Berke, Tatar armies under the command of Janibek reached the Kura River in 1358, crossed it and invaded Southern Azerbaijan. Iran was having troubled times and its central power was weakened after the overthrow of Hulaguids power. Local rulers could not organize an effective resistance. The Janibek's troops rushed to the south and captured Tabriz easily. For the first time in 100 years of the resistance Khans of the Horde were able to capture the whole Azerbaijan, which allowed them to append a rich region to their possessions and at the same time take a key part of the Great Silk Road. Possibly, it was the desire to establish control over all the branches of the trans-Asian trading road, that pushed them to start the war with Iran. Leaving his son Berdibek, and a

30 thousand-strong army, in charge of a conquered province, Janibek returned in the Horde. Here he fell to a deadly illness. Learning about it, Berdibek left his host and his subordinate province and hurried to the capital.

After his father's death, autumn 1357, Berdibek acceded to the throne. Some eastern authors, peddling rumors, possibly not unfounded, accused Berdibek of killing his father. His position was quite precarious, as some emirs were against him. Attempting to strengthen his power, he resorted to repression. Berdibek, according to contemporaries, summoned all tsareviches and killed them at once, having no mercy even on his 8 months old brother [Sbornik materialov, otnosyashixsya k istorii Zolotoj Ordy', 1941, p. 129, 234].

He ruled for almost 3 years and died, it seems, in the summer 1359. Russian chronicles (Simeon's, Rogozhskiy's) simply informs of his death: 'The same summer tsar Berdibek died, Kulpa acceded to the throne' [Complete Collection of Russian Chronicles, 13, p. 100]. However, the latest, Nikon Chronicle informs that Begdibek and his karachibek Toglu-bey (Toblu-bey), were killed as a result of a conspiracy in the 1359 [Complete Collection of Russian Chronicles, 10, p. 230–231]. It is possible, however, as V. Egorov argued, that Berdibek died naturally and the conspiracy was started by his karachibeg Toglu-bey to set a Khan on the throne, who would be in the hand of the beks [Egorov, 1980, p. 182]. However it may have been, Khan Kulpa was no marionette in the hands of karachibeks. He managed remorselessly to suppress the opposition of the nobility and establish himself on the throne of Sarai. His rule, judging from coins, minted in his name, spread over the whole Ulus of Jochi. Hard to say what his real politics were, but in any case there was a clear increase of discon-

Coins of Jani Beg (Sarai-al-Maqrus, Sarai al-Jadid) (by G. Fedorov-Davydov)

Coins of Kildi Beg, Myurid, Khair-Bulat, Aziz Sheikh, Bulat Hoja, Tulunbek Khanum, Circassian-bek (Sarai al-Jadid, Azak, Gulistan Hajji Tarkhan (by G. Fedorov-Davydov)

tent among the ruling clans. That court aristocracy started a new conspiracy. As a result, in the beginning of winter 1359, Khan Kulpa was deposed and killed, after only 5 months rule. According to Russian chronicles, Khan Kulpa 'killed by Nawruz, along with his sons Michail(?) and Ivan(?)' [Complete Collection of Russian Chronicles, 18, p. 100]. Nawruz became the new Khan.

Thus, in the 60s of the 14th century, the bloody wheel of internal war started to spin in the Golden Horde. The throne of the khans, having become a subject of contest between different clans from the White Horde and Blue Horde, began to pass from hand to hand very quickly. The important reason, starting this power merry-go-round, was the fact that there were no direct heirs left after the repressions of Berdibek, but there was a large group of Sultans, having different degrees of relation with the Jochid family. This provided a pretext for

some clans to set up their claimants. During the period from the 1359 to the 1380, Sarai had at least 17 khans (some took the throne several times), and about some of them historians know almost nothing but a name on the coins minted coins, and they still argue about their historicity and the order of rulings [Egorov, 1980, p. 190–192; Muhamadiev, 1983, p. 88–89; Grigoriev, 1983].

Nawruz, according to the coins minted in his name, put up a fight with Kulpa in the 1359, when he started to mint his own coins in Azov. Having the advanced uluses of the Black Sea Region as his base, he, apparently, easily captured Sarai-al-Jadid, where he held up until the spring 1360. The power of Nawruz, according to coins minted in his name, spread over the whole territory from Khwarezm to Crimea and Azov. He even managed to bring order in domestic affairs. In particular, he summoned Russian princes and gave them new yarliqs for

their sovereignty under his name: 'prince Nawruz was reigning and all the Russian princes came to him, and he gave them their principalities and they returned to their lands' [Complete Collection of Russian Chronicles, 18, p. 100].

Alongside this, the power of the new Khan was unstable, as he did not have enough legitimacy, and the clans in support of him did not have uncontested power. Apparently, there was no unity among the court nobility, which provided an enabling environment for intrigue and conspiracies. It should be mentioned, that eastern authors not for nothing blame emirs for supporting Kulpa, as they, for the sake of their ambitious plans, sought to set up the Sultan, who had little claims for Jochi's throne. Nawruz had equally small claims. It is possible, that he was just a nominal ruler, and the power belonged to the nobility of the capital, grouped around the widow of Öz Beg Khan, Taidula Khatun. The setting representative of the Jochi's sideline on the throne itself was one more sign of looming political crisis in the country, where no legitimate rulers were left, not the prestigious authority or the united system of ruling classes. There were decay, destruction and mistrust everywhere.

The critical point for the further history of Ulus of Jochi was that in the East of the country, in the Blue Horde, which was evidently less damaged by plague. There ruling classes not only preserved power but wanted to spread their power to the whole country and push away the traditional ruling classes of the White Horde. Numerous sultans from the Jochi's family, descended from his sons Shiban, Tuqa(y)-Timur and others, were an indication of this battle.

Obvious enough, those Sultans formally had better claims for the throne than the represents of sidelines descended from Batu. However, the traditional succession to the throne in Ulus of Jochi, did not assume the succeeding of 'left hand' sultans from the Blue Horde. Such change could happen only when the clans from the left hand would rotate ruling classes and push aside the traditional ones. This could have happened only through amilitary coup. Obviously, as a reason for this, they used the questionable legitimacy of Nawruz Khan and the

slogan of a contest against the usurper of the throne, which should belong to the oglans of 'Altyn Urug'. It is possible, that a split amongst ruling classes of the White Horde had contributed to it and some of them asked Chintay Khan of the Blue Horde for support, suggesting him for the throne. He, however, refused and sent his brother Orda Sheykh to the Horde and also several oglans with a host [Collection of Works Related to the History of the Golden Horde, 1941, p. 130]. The latter Nikon chronicle also informs of some rumors of this events reaching Rus'. They can hardly be trusted, but they give the information of some Horde princes starting 'secret meetings with Zayatsk tsar Khidyr', against the tsar Nawrus from the Volga and starting a conspiracy against him' [Complete Collection of Russian Chronicles, 10, p. 232].

However it might be, but Orda Sheykh not only entered the capital peacefully, but also, apparently, positioned himself as a power, able to bring peace to reconcile the warring fractions. However, in the spring 1360 he moved Nawrus out of power and set ogan Hyzr on the throne, the son of Sasy-Buka. Russian chronicles fairly accurately indicate, that 'the same spring (136–I.I.) some tsar from the East came to the throne of Volga, named Hidyr and became the prince of the Horde, and Nawrus tsar was killed by him' [Complete Collection of Russian Chronicles, 18, p. 100]. The new Khan resorted to repressions not only on the former ruler—his son Timur and even khanbike Taidula [Ibid.] were executed—but against the heads of clans who supported him, 'in love and harmony', and also against 'people of Mualbuzin [where] a lot of Tatars were killed' [Complete Collection of Russian Chronicles, 10, p. 232]. Those 'Mualbuzin's people' could be matched with the name of the influential karachibek of the 1350, Mogul Bey. In that connection it can be assumed that major repressions affected the clan nobility, evidently, grouped around Taidula and karachibek Mogul Beg (Movlu-Bey), and the former ruling clans, first of all Naiman and Kiyat clans. It is possible that they were forced to run away into their ancestral uluses, located in the Azov Sea Region and Crimea, where they found a leader in usulbeg Mamai,

Coins of Kulpa, Nawruz, Khizr, Timur-Hoja
(Khwarezm, Sarai al-Jadid, Gulistan)
(by G. Fedorov-Davydov)

who, according to Ibn Khaldun, overthrew the Crimean ruler Temür Qutluğ and seized this ulus.

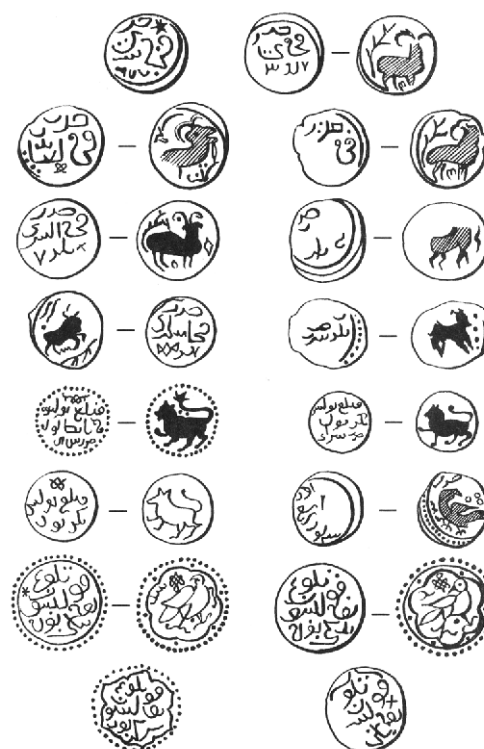

The appearance of the new Khan, lack of unity amongst the nobility of the White Horde and the existence of a large host from the Blue Horde somehow stabilized the situation in the country. In his days, the government strengthened and has been recognized by all the Volga Region uluses. Khidr (Khizr, Khidyr) Khan conducted an active policy, having made several Russian princes come to him for yarliqs on reigning and also deliver to his trial ushkuiniks, who wasted Juketau (Zhukotin) on the Kama River in the Bulgar ulus (wilayah) in 1360. He ruled in Sarai for about a year, but in the spring 1361 he was killed as a result of another rebellion. According to the chronicler 'there were great times of trouble in the Horde, tsar Khidyr was killed by his son Timur-Khwaja, who began to rule on the 4th day' [Complete Collection of Russian Chronicles, 18, p. 101].

However, Timur-Khwaja had, although he got to the throne stepping over his father's body, a mere semblance of power, and only in Sarai and its closest surroundings. Taking advantage of the situation, ulusbek Mamai moved his army against him. Russian chronicles say, that 'Mamai, the prince of the Horde, took the other side of the Volga River; he supported the tsar named Abdullah' [Ibid.]. Evidently, having captured Sarai, Mamai proclaimed Abdullah the Khan, probably some descendant from Öz Beg or Berdibek. The power of the Khan was nominal, as his karachibek Mamai had a firm grip on the reins of power. Ibn Khaldun writes about it eloquently: 'Mamai set up a son of Uzbek as the Khan, named Abullah' [Collection of Works Related to the History of the Golden Horde, 1884, p. 390]. However, Mamai and Abdullah, having no support from the nobility, retreated to Crimea to gather strength for new campaign against Sarai.

Mamai should be described with more detail as he was a key person in the fierce war of the uluses for almost 20 years. According to the sources we have, which are, by the way, very few compared to the role Mamai played in the life of the Horde, he was from the nobility of the right hand ('wing'), although he was not a Chinggisid. There is information about him belonging to the Kiyat clan. The throne of khans, having become a subject of the war between Mamai, the aristocracy from the capital and Tatar clans of the Blue Horde, was changing hands so fast that even contemporaries could not always follow the order of changing reigns. Historians know almost nothing about many khans of that time, only the names on coins minted by them. Mamai reached the height of power, most likely, in the days of Berdibek Khan, when he not only married his daughter, but also became one of the high emirs, 'regulating all the affairs' of Khanate [Ibid., p. 389]. It is unlikely that he bore an office of ulug karachibek, as V. Egorov supposed [1980, p. 185], because his name was not mentioned amongst karachibeks, who signed state Horde-Venetian agreements and yarliq for the Russian Metropolitans. Most likely, he was a vizier and, definitely, took this office in the end of the reign of this khan. He succeeded, it seems, later, during

the time of court intrigues, when the line of palace coups and purges removed the top layer of the aristocracy. In those conditions he managed not only to dispose of many competitors in the fight for the influence on the khans, but also became the ulusbek of Crimea. During the coup, which set Khyzr Khan on the throne, Mamai, it seems, escaped death and retreated to Crimea with his clan. Most likely, in the 1360s, the western part of the White Horde, centered in Crimea under the command of Mamai, became a stronghold for traditional ruling clans and last representatives of the Batu lineage. The very fact of being married to the Khan's daughter made Mamai a relative to the Khans with the honorable title of 'gurgan', authorizing him with significant rights, excepting the right to the throne. It is not surprising, that there were in his court 'The Horde and Tsarinas all with him', according to Russian chronicles [Complete Collection of Russian Chronicles, 15, p. 71]. In Soviet historiography he was disparagingly called 'temporary' and his role in history is usually assessed in the light of the outcome of the Battle of Kulikovo, that is purely negative. But if to approach his person with an open mind, it should be accepted that he was an outstanding statesman, a smart and crafty politician, who managed to preserve centralization in terms of the time of troubles and tried to resist centrifugal aspirations.

Within his domains in the western part of the White Horde he took steps aimed at the stabilization of the economy and the expansion of trade. As a result of his military campaigns in Azov in 1362–1363, a significant influx of slaves was noted, which caused a decrease in the prices of 'live goods', but lead to the stimulation of trade [Karpov, 1991, p. 193]. This was also matched by some trading privileges, given to Venetian emissaries in 1362 [Skrzhinskaya, 1973, p. 116]. It is characteristic that one of his domain centers was the city of Shehr al-Jadid (Yangi-Shehr), which is located in the Transnistria and corresponds to with the ancient town of Old Orhei. Its very name—'the New city' was meant to sound like the name of the capital 'Sarai al-Jadid', and show the political independence from the Blue Horde Khans' power.

Anonymous pulis of Sarai. Mid-14th century
(by G. Fedorov-Davydov)

His foreign policy was dictated by the desire to prevent or ease the pressure from the Grand Duchy of Lithuania and preserve the vassalage of Russian principalities. To some extent he succeeded. Losing a number of domains in the Western and Southern Rus', he managed to keep a part of his privileges in those principalities and formed a profitable alliance with Grand Dukes Algirdas and Kęstutis of Lithuania. But he could not hold on to Transnistria, which was slowly passing to Moldovan hospodars.

The main goal of his military and political efforts were Sarai and the Volga Region, which he tried to bring into his subjection. During the 20-year war against them all, however, this he was never able to achieve.

Moreover, having the forces of his supporting clans exhausted in a fruitless struggle, he began to steadily lose power in the regions. Gradually he was turning into an obstacle to practical tendencies for unity, which came from the Blue Horde which had been the main

driving force of the decay of the country. This resulted in defeat and the bitter fate of a hounded fugitive in his own ulus. Despite the tragic end, his fate had long been a guiding light for many people who wanted to reach the heights of power in the Ulus of Jochi. But all this was to happen after two decades.

Evidently, in the end of the summer 1361, Mamai, having expelled oglans of 'the left hand' from Sarai, reached the height of his power, placing a youth obedient to him on the throne as Khan. However, this did not secure him more authority amongst the aristocracy of the capital, who still did not want to accept his supremacy for some reason and subsequently schemed against him. Then he returned to the Crimea, from where he began his fight for the unification of the country. That was when the real 'times of trouble' in Ulus of Jochi began.

Mamai with his henchmen did not have enough power to overwhelm the Blue Horde armies and bring the nobility of Sarai into their power. But the Tatar clans of the Lower Volga Region could not unite the country either as they were also lacking in internal unity. At the same time both Mamai and his opponents fought and schemed against the Blue Horde oglans, seeking to preserve the traditional structure of the state. This multilateral conflict kept in suspense all the participators of this historical drama, causing new military campaigns, rebellions and conspiracies, which divided the state, tearing it apart with irreconcilable differences and leaving it twisting in a bloody internecine feud. Paradoxically, but the fact is that Mamai, trying to centralize power, objectively contributed more than other politicians of the time to the degradation of the Khan's power and acceleration of centrifugal tendencies.

After the step-back of Mamai, the period of interregnum begun, when, according to the eastern sources, in charge was probably some Qutlugh-Timur. But in the autumn 1361 the nobility of Sarai once again summoned the oqlan from the 'left hand', proclaiming Ordu-Melik (or Ordu-Sheikh) as Khan. Written sources have nothing on his origin, and historians argue if he was a brother to Chimtay Khan of the Blue Horde, who put Khyzr on the throne, or a son of Khyzr Khan. In any case, he obvi-

ously was under the protection of the Khan of the Blue Horde and the nobility of the capital. Evidently, he managed to push Mamai back to Crimea and occupy Azak, where coins were minted in his name. Ordu-Melik Khan united almost whole empire for a short period of time. At any rate, all regions but Crimea accepted him. Yet in a month the nobility of the capital once again began to intrigue against him. According to the Rogozhsky Chronicler, 'Ardemalik was put on the throne and reigned for a month and they killed him. And the Great Troubles began in the Horde, and killing of old princes of Sarai and Kogui and many others' [Complete Collection of Russian Chronicles, 15, p. 71]. The author of 'Anonymous of Iskender' has more information on this events, though his data is rather confusing: 'Emirs agreed for Orda-Sheikh to rule for one year. After that one of unknown and dull-witted men said: "How so the urug from the White Horde (should be Blue Horde—I.I.) will sit on the throne of rulers of the Blue Horde (accordingly this should be White Horde.—I. I.)". In the middle of the night he finished his business with a single strike of his knife. On the morrow, when emirs learned about it, they, on his false indication slaughtered and executed several innocents...' [Collection of Works Related to the History of the Golden Horde, 1941, p. 130].

After that Sarai emirs in the end of the autumn 1361 'for the sake of their kingdoms... having agreed (between themselves), put a stranger on the throne, saying that he was Kildibek, the son of Janibek Khan' [Ibid., p. 129]. It can be concluded from this mention made by Muin ad-Din Natanzi, the author of the 'Anonymous of Iskender', that a veteran court historian was surprised by the appearance of a man with very questionable claims on the throne. Apparently, Russian chroniclers shared that opinion, as they carefully noticed, that one of the Khans was 'named Kildibek, they say, the son of Janibek' [Complete Collection of Russian Chronicles, 18, p. 101]. This venturer typically used the name of Janibek. On the one hand, calling himself a direct descendant to this Khan, he clearly tried to indicate that he will use his principles in his politics and will contend for a strong government. On the other hand he

clearly opposed himself against the contenders from the Blue Horde, protecting the traditional clan system and the order of succession to the throne in the White Horde only by oglans from the 'right hand'. It can also be an indirect evidence of the end of the other branches of Batu dynasty descendants in the White Horde.

At first, Kildibek had indeed increased his power, extending it to the Volga Region, Azak and Muhsha, successfully fighting against Mamai. A difficult situation had developed, when there was a war between Mamai and Kildibek in the Ak Horde and both of them simultaneously acted against Murid, a new protégé of the Kok Horde emirs, who had come from the Trans-Volga region and took a part of the Lower Volga Region where he began to mint his own coins, pointing to Gulistan as the place of the minting.

In the difficult situation, Kildibek Khan had decided to strengthen his positions and to reduce dependence on the clan aristocracy. He, like his predecessors, had chosen repression against emirs who were disloyal to his authorities, as a universal tool for that, 'and a lot of them were beaten' [Ibid]. According to Natanzi, he 'found a pledge of his life to be the death of the emirs; secretly he called one of them and forced him to work that each attack the other' [Collection of Works Related to the History of the Golden Horde, 1941, p. 129–130]. All these actions, of course, did not contribute to the internal stabilization, but only exacerbated the struggle between different clans and factions of the aristocracy in the Golden Horde.

The Kok Horde emirs took advantage of this again. Their henchman Murid Khan, a relative of the Kok Horde governor, Chintay, and brother of Khyzra took Sarai al-Jadid in autumn 1362. Kildibek fled to the Volga-Don Steppes, and in the summer of the following year, gathered his supporters, marching onto the capital. The Rogozhskaya Chronicle reports about further developments, 'Murid stood on one side of the Volga, and Kildibek on the other, and there was slashing between them and Kildibek was killed' [Complete Collection of Russian Chronicles, 15, p. 73]. Therefore, because of the battle Kildibek 'was killed'

[Complete Collection of Russian Chronicles, 18, p. 101]. However, this victory did not bring the expected autocracy to Murid.

In the autumn of 1362, Mamai marched against him again; Mamai 'brought tsarevich Abdullah' with him. In the battle on the right bank of the Volga ('to be Mamai and Murid slashing over the Volga' [Ibid.]), Murid's troops were defeated, and he retreated to the beyond the Volga. Sarai al-Jadid was recaptured by Mamai, but this failed to bring him final victory. The only real result of this campaign was the recognition of his 'tsarevich' as a 'king'. There was outbreak of plague in the Volga Region, and he, categorically not using the support of the capital aristocracy, retreated to the West. Murid had managed to repulse Mamai's claims and established himself in the capital and in the region behind the Volga River. It is hard to say whom he relied in this struggle on, but beyond the eastern forces, some clans of the Ak Horde explicitly supported him. Actually, the country was divided into three large parts. One area was the European part of the Horde to the west of the Volga, where Mamai ruled on behalf of the Khans—in Russian chronicles it was called 'Mamai Horde' the second area was the Lower Volga Region with the center in Sarai al-Jadid, called 'Murotova Orda'; and the third area was lands of the Kok Horde. Of course, in reality there were many more parts. They periodically appeared, were conquered or fell apart, especially on the outskirts of the country.

Since that time, a long period of decline begins in Ulus Jochi, leading to collapse of the unified state. The outbreak of civil strife and loss of developed areas, such as Bulgaria, Khwarezm and Muhsha, also brought deterioration of financial situation and a deepening recession in trade and cottage industry with it. Because of the danger attack, regular activity of caravan routes ceased and, therefore, import of raw materials and craft products for export disrupted. There was a gradual decline of agriculture and desolation of sedentary settlements in the Volga Region. Capital cities were walled. In the wake of the central government weakening, the rulers of Rus', Bulgaria, Muhsha, Khwarezm and other uluses strengthened their independence. In conditions of interne-

cine feud, it was these rather steadily growing regions which had become objects of khans' struggle for the payment of tribute, manipulation of contenders for power and punitive raids. All these actions were destroying customary order and enjoining the defence of land against the encroachments of self-proclaimed rulers of the Horde.

In 1361 Khwarezm had completely fallen away from the Horde; the local Sufi dynasty began to rule there [Fedorov-Davydov, 1965, p. 183–184]. At the same time, due to the khans' repression against the clan aristocracy, it moved with its' clans from the center to the outskirts. Here they met the support of the local nobility and created their own separate ownership, sometimes even starting to mint their own coins. Among these emirs it is possible to distinguish Tagay, who ruled in Beljamen, and in the early 1360s went to the North, where, according to the Russian Chronicles, 'He took the Nuruchad (Ulus of Muhsha—I.I.) country to himself, all of those living and dwelling there' [Priselkov 1950, p. 378; Complete Collection of Russian Chronicles, 18, p. 101]. Here, while remaining safe from the turmoil in the centre of the Horde, he founded his principality and made frequent raids into the neighboring Russian principalities. Only in 1365, after an unsuccessful raid into Pereyasavl Ryzansky, information about him ceases. Perhaps taking advantage of the defeat, the local beks simply toppled him. Another emir ('Prince of Horde') Bulat-Timur, apparently the son of a famous ulusbek Toglu-bey, 'Took Bulgar and all cities along the Volga and uluses, and took away all the Volga way' [Ibid.]. In fact, becoming the ruler of semi-independent ownership in 1360–1366, Bulat-Timur held power in Bulgar until 1367, when he being defeated in the struggle with the princes of Nizhny Novgorod, 'from there fled to the Horde', where he was executed by order of Aziz Sheikh Khan. Constantly growing disintegration of Ulus of Jochi was not the only consequence of the 'zamyatnya' (turmoil). At the same time, its prestige plummeted as a global power. Taking advantage of the turmoil, neighbors began to break apart its territory. Thus, the Lithuanian Prince Algirdas, having the detachments of Mamai's ulusbeks

defeated in the Battle on Blue Waters in 1363, occupied the whole of South Rus', and later all the Prut-Dniester Interfluvium fell under the power of the Moldavian Principality.

In these circumstances, various adventurers and outlaws raised their heads. The North-Eastern Russian principalities, being under the rule of the Golden Horde, received one mark after another of Horde weakness. This was demonstrated by almost unpunished attacks of ushkuiniks (river pirates) in 1360, 1366, 1374, and 1375; in the latter case, they had been fighting for the entire Volga River region, and only the ruler of the Cherkes town managed to destroy them in Haji-Tarkhan. Another important indicator of the inability of the Horde to control Rus' was litigation on the great reign yarliq. In 1362, having examined the dispute between Dmitry Ivanovich of Moscow and Dmitry Konstantinovich of Suzdal; the Khan's ambassadors awarded the yarliq to the Prince of Moscow. On hearing this, Mamai hastily sent a messenger with the yarliq to the same Prince in the name of Abdullah. Then, in spite of his decision, Khan Murid pointedly conveys the yarliq to the Suzdal Prince. Dmitry Konstantinovich did not manage to keep this title, but the new Khan Aziz Sheikh who came to power in Sarai, seeking to adopt a power hierarchy acceptable to him in Russia, again, ignoring the Abdullah yarliq, provided the yarliq into Suzdal and proclaimed Boris Konstantinovich to reign in Nizhny Novgorod. These steps provoked a harsh response from the Moscow Prince Dmitry Ivanovich and Mamai. This confusion contributed to the growth of Russian vassal princes' discontent, whose ownership had not only become the plaything of khans changing with kaleidoscopic rapidity, but were subject to attacks of warring contenders for power in the Horde. These actions were destroying the strong procedure for approval of principalities, introducing an element of instability, and had provoked a desire to defend their own lands from all encroachments from the outside. The apotheosis of this was the war of the Moscow Prince Dmitry Ivanovich against Mamai (1378–1380) [Kuchkin, 1980; Muhamadiev, 1983, p. 88–99; Gorsky, 2000, p. 80–118].

The complexity of the situation was also that Russian principalities, less affected by

the Black Death pandemic and environmental disasters, began to grow, extending their ownerships due to the annexation of lands on the left bank of the Sura and Pyana rivers, in Meshchera and Mordovia. Weakened Muhsha rulers, not getting any support either from Sarai or from Mamai, could not resist this 'creeping' expansion. By 1380, a significant part of the Tatar lands in this region was captured by the Nizhny Novgorod and Ryazan principalities, and in 1382, 'Tatar places' as a part of the Ryazan land were specified in the charters of the treaty [Duxovny'e i dogovorny'e gramoty', 1950, p. 29].

At the same time, the traditional partners saw that Ulus of Jochi's credibility had decreased. The sultans of Egypt, who had recently declared their vassalage to its khans, at that time almost ceased correspondence. Mamai, who tried to have the correspondence, received letters, in which the Egyptian Sultan, humiliating him, wrote about himself as his 'parent' and not 'brother', as it was customized on the protocol [Collection of Works Related to the History of the Golden Horde, 1884, p. 350]. Undoubtedly, being well aware of the situation in Dasht-i Kipchak, the Egyptians did not want to be bound by an alliance with one of the contenders for power...

The internecine feud continued. Certain Khair-Bulat (Khair-Pulad, Pulad-Hoja, Pulad-Timur) acted against Murid in 1363. He squeezed Murid out of Sarai into Gulistan and was proclaimed Khan. At the end of 1363, information about him ceased, and the last coins, minted in his name, were dated September 1364. Muin ad-Din Natanzi, telling juicy details of the cause of his death, noted that the protagonist of the plot against the khan was ulug karachibek Ilyas Ibn Toglu-biy [Collection of Works Related to the History of the Golden Horde, 1941, p. 130]. If we put aside the salacious items, it cannot be excluded that the ruling clans had simply decided to shift the strengthened khan, in order to prevent the possibility of the clans from the East to push them out of power. At the same time, obviously, Khair-Bulat took the entire Volga Region, including Gulistan. However, his reign was short-lived. In 766 AH (1364/65), the protege

The Khan and his confidants observe the army crossing the river. Miniature from the book 'History of Abulkhair Khan' by Masud Kuhistani. Transoxania. Mid-16th century.

of Mamai, khan Addullah minted its own coins in Sarai al-Jadid. Nevertheless, he could not stay long at the helm. Apparently, the Sarai aristocracy once again teamed up and drove him to the Cis-Volga Steppes.

At the end of 1364, Aziz Sheikh, a protégé of Kok-orde, son of Timur-Hoja, once again became a Khan. He stayed in Sarai for a long time, almost until 1367, a fact which can only be explained only by the support of the Sarai aristocracy. Like many of his predecessors, he led a grueling struggle with Mamai, who had taken a massive attack onto the possessions of his enemies. Mamai's troops occupied the entire North Caucasus, where coins were minted on behalf of Abdullah, in Majar, 767 AH (1365/66). However, in the next 768 AH (1366/67) coins under Abdullah were minted in Sarai al-Jadid. Always ready to disclose the behind the scenes details of the private lives of Ulus of Jochi khans', the 'Anonymous of Iskender' author gives muffled hints at some

supposedly 'bad things' that khan Aziz Sheikh loved to do and which had led to mutiny against him [Ibid.]. Most likely, the Mamai offensive had caused a split among Sarai nobility that led to the overthrow and death of Aziz Sheikh.

The result was the weakening of the Lower Volga Region clans' power. Coinage in Sarai virtually ceased, and we have no other information sources. 'Anonymous of Iskender' reports about a short reign of Hajji Khan, the son of Erzen, the ruler of the Kok Horde, after the Aziz Sheikh death [Ibid.], but this is the only information about this Khan. It is not clear even where he ruled. It is possible that he was proclaimed Khan in Kok Horde, but had not the slightest influence on policy in Sarai.

Mamai was dramatically gaining strength. In 1370, his daruga Achi Hoja, together with the armed force of Dmitry Konstantinovich, the Prince of Nizhny Novgorod, besieged Bulgaria and, having displaced the local emir Hassan, appointed as Sultan 'Sultan Bakov's son', a vassal of Mamai, as governor ('set on the principality') [Complete Collection of Russian Chronicles, 18, p. 109]. Thus, Mamai's power was established all over the Volga Region, where he put all the previously semi-independent rulers under his control. Practically he became the ruler of the Ak Horde. However, during the apex of his power, there were some internal processes in his ownership that had weakened it. Details of this are unknown, but since the early 1370s he was starting to wane. In 1370, news that 'Mamai had put as tsar another Mamat Saltan in his Horde' reached Rus' [Complete Collection of Russian Chronicles, 15, p. 92; 18, p. 109]. The fate of Abdullah, the former khan, remained unknown, but in the realm of Mamai they started to mint coins in the name of the new Khan Muhammad-Bulak, 'Fair Sultan, Mohammad Khan' [Muhamadiev, 1983, p. 96].

After nearly five-year period they started to mint coins on behalf of Tulunbek Khanum, in Sarai, in 772 AH (1371/72) [Frähn, 1832, p. 22, No.179; Fedorov-Davydov, 2003, p. 191]. The scarcity of these coins and the lack of any information on this ruler in written sources led to the appearance of conflicting versions in recent studies; the versions concerned the origin

of Tulunbek Khanum and interpretation of her name (from reading it as a male name [Egorov, 1980, p. 201] to recognition of an error in the date and comparing her with the wife of Toktamysh [Grigoriev, 1983, p. 43, etc.]). Whatever it was, subsequent events showed that the 'Mamai Horde' power in the Lower Volga Region had been considerably weakened, and he had to win it again in 773 AH (1371/72).

Hajji Tarkhan became a new centre around which Mamai's opponents would circle, where emir Hajji Circassian had been ruling since 1374 [Sbornik materialov, otnosyashixsya k istorii Zolotoj Ordy', 1884, p. 389]. Russian chronicles contain information about this Lower Volga ruler, dated 1375; they called him 'a Hajji Tarkhan prince named Salchei', who destroyed the Novgorod ushkuyniki (river pirates) of Ataman Prokop, who were ravaging Kostroma and the Volga shore [Polnoe sobranie russkix letopisej, 18, p. 117; 25, p. 192]. The person of Salchei in Russian chronicles can be correlated with the Hajji Tarkhan emir, who had been producing copper coins on behalf of Circassian bek here, in 776 AH (1374/75) [Frähn, 1832, p. 22, 182; Fedorov-Davydov, 2003, p. 191]. According to the Ibn Khaldoun's reports, Hajji Circassian, having gathered significant forces, 'went onto Mamai, conquered him and robbed him of Sarai', forcing him to leave for the Crimea [Sbornik materialov, otnosyashixsya k istorii Zolotoj Ordy', 1884, p. 391]. Because of this victory, he united under his rule the entire Lower Volga Region. However, his power was more apparent since he constantly had to fend off the other contenders for power in the area. In the east, he fought against Aibek, and possessed the Saray-Jük alternately with him, in 1373–1374.

A new invasion by the powerful troops of the Kok Horde put an end to Circassian's power in Sarai al-Jadid. Relating the distant events of 776 AH, Ibn Khaldun says that Urus Khan of the Kok Horde, from the Tuqa-Timurid clan, turned against Hajji Circassian. The Khan managed to subordinate Sarai under his power after a series of setbacks [Ibid.]. Probably, the most famous coins of Urus Khan, which represent the Sarai mint [Savelyev, 1858, p. 437 et seq., No.433 et seq.; Muhamadiev, 1983,

p. 95–96], could have been minted in the first half of 1375. One of the descendants of Shibān, who had ruled in Saraychuk, known for coin legends under Alp-Hoja name, supported the troops of Urus Khan in the Trans-Volga region [Savelyev, 1858, p. 419 et seq., No.418]; and the writings of Eastern authors called him as Aibek (Ilbek, Ilban, Ilsan, Ilpac) [Sbornik materialov, otnosyashhixsya k istorii Zolotoj Ordy', 1884, p. 391; 1941, p. 54 et seq.; Sheibaniade, 1849, p. 69; Hafiz-i Tanysh Bukhari, 1983, p. 76, etc.].

The period of Khan Urus' stay in the Lower Volga Region did not last more than a few months, as his goal obviously was his henchmen's affirmation there. In the next year 777 AH (1375/76), they minted coins on behalf of the eldest son of Alp-Hoja, Kaganbek, in Sarai al-Jadid [Frähn, 1832, p. 22, No.183; Yanina, 1954, p. 447, No.108]. He ruled briefly, and after 2 years, Arabshah Khan replaced him. Russian chroniclers had recorded this event under 1377, when 'some Tsarevich, named Arapsha had crossed the Volga River from the Blue Horde' [Polnoe sobranie russkix letopisej, 18, p. 118; 25, p. 194]. Genealogical construction of medieval sources call Arabshah the son of Bulat (Pulad) [Sheibaniade, 1849, p. 69 et seq.; Sbornik materialov, otnosyashhixsya k istorii Zolotoj Ordy', 1941, p. 55; Materialy' po istorii Kazaxskix xanstv, 1969, p. 35; Hafiz-i Tanysh Bukhari, 1983, p. 76, etc.], who, in turn, was a brother of the aforementioned Alp-Hoja. Known coins of this issuer had been produced in Sarai al-Jadid from 779 to 782 AH (1377–1381) [Savelyev, 1858, p. 430 et seq., No.427 et seq.; Yanina, 1958, p. 447, No.109; Fedorov-Davydov, 1978, p. 46, No.156]; this allows us to confirm that Arabshah kept control over the Ulus of Jochi's capital until the Toktamys' accession to the throne of Sarai (at the end of 1380). The struggle between the different dynastic factions in the Lower Volga Region in the late 1370s is reflected in the passage of al-Jannabi, the Arab author, 'Then was the Time of Troubles (Smutnoye Vremya) and turmoil between the emirs began to intensify and voices were split in Dasht-Kipchak. Some were for Urus Khan, one of Chinggis Khan's Descendants, the others were for Toktamys',

and some for Abav-Arab-oglan (that is, 'tsarevich' (prince) Arabshah.—I.I.)' [Sbornik materialov, otnosyashhixsya k istorii Zolotoj Ordy', 1884, p. 537].

Weakening of the 'Mamai Horde' and the Kok Horde Khans' invasion into Rus' (for example, Arabshah in 1377, etc.) caused a surge of anti-Horde activity in the Russian principalities, which was observed in the Mid-1370s. The Muscovite princes had so increased in strength that, in 1377, they conquered Bulgar, which before was in the sphere of Mamai influence. Under conditions of political destabilization, Mamai's response was limited by organization of campaigns into Oka and Sura River Regions, designed, rather, only to back up diplomatic pressure. The Mamai's requirement for the 'Russian vyhod' tribute payment in the previous volumes served the formal reason for the further aggravation of relations with Moscow principality [Skazaniya i povesti, 1982, p. 18, 53]. Pereyaslavl program of Russian principalities unification under internecine feud in the Golden Horde developed in the late 1370's into the idea of the necessity of the 'Mamai Horde' forces' complete defeat. Anti-Horde policy orientation of some Church circles becomes more visible.

In a sharp weakening of his power, Mamai began to have internal political difficulties. It is not impossible that some of the Tatar clans supporting him were ready to compromise with the Kok Horde khans. However, Mamai forestalled them, having another change of khans conducted in 1379. The former khan together with his confidants were executed and a new ruler stepped in his place, who was known in the coin legends under the name 'Bulak' or 'Tulyak'—the second interpretation is more acceptable [Muhamadiev, 1983, p. 97]. A later version of Mamai's murder of his own tsar is described in the Patriarchal chronicle, 'Volga Horde's wicked and proud knjaz' (prince) Mamai held the whole Horde in his rule, and he smote many princes and kings, and put his own king under his own will. In addition, many people were confused and none trusted him, and he smote many more princes and alputs in his Horde. Also he killed his own king...' [Polnoe sobranie russkix letopisej, 11, p. 46]. The same name, that is submitted in the form of 'Tyulyak',

is mentioned in the text of the Khan's *yarliq* from 1379, granted to Metropolitan Mikhail (Mityai) [*Pamyatniki russkogo prava*, 1955, p. 465], and a similar name 'Telyak' or 'Tetyak' is contained in the 'Tales' of the Kulikovskiy cycle [*Skazaniya i povesti*, 1982, p. 20]. Contrary to V. Egorov's opinion, there is no reason to assume that this is a derogatory naming of Mamai, who allegedly proclaimed himself a Khan, as in all the Chronicles he is referred to as the 'Prince of the Horde'. In addition, the Chronicles contain a direct reference to the Khan from the clan of Chinggisids' presence in the 'Mamai Horde' on the eve of the Battle of Kulikovo [*Polnoe sobranie russkix letopisej*, 3, p. 376].

In preparation for a decisive battle, Mamai tried to consolidate his authority in the Lower Volga Region, which is evident from the coins of Tulyak Khan minted in Hajji Tarkhan in 782 (1380/81) [Savelyev, 1858, p. 418, No.416]. Although Mamai had managed to assemble significant forces, attract some mercenaries from Genoa, and had gained support from the Lithuanian Prince Jagiełło (see: [Begunov, 1966, p. 507]), he suffered a crushing defeat at the Battle of Kulikovo and escaped to his ulus (for more details on the battle, its political roots and consequences, and its military aspects, see [Grekov, Yakubovsky, 1950, p. 289–294; Safargaliev, 1960, p. 132–136; Grekov, 1975, p. 127–164; Kulikovskaya bitva, 1980; Kirpichnikov, 1980; Danilevsky, 2001, p. 270–312]).

Mamai tried to prepare for a new campaign in the Black Sea Region, but history did not provide him with an opportunity for revenge. His plans to prepare a new army failed due to an invasion from the East, 'from the Blue Horde'—Khan Tokhtamysh's troops—who by that time had seized a majority of the territory of the former Ulus of Jochi. The meeting of two rivals on the Kalka River ended with 'Mamai's princes' switching over to the side of the new Khan, 'dismounting their horses, they humbly beseeched Tokhtamysh, and swore feal-

ty to him according to their religion' [Complete Collection of Russian Chronicles, 4, p. 83; 15, p. 141; 18, p. 130; 25, p. 205]. Undoubtedly, the above-mentioned Qutlugh Buga and his son Ilyas were among the latter ones, who were later to be granted influential positions in the ulus administration of Crimea. The treason of his own troops forced Mamai to flee to Crimea, where he hoped to get help and protection from the Genoese, with whom he was bound by treaty. But the residents of Kaffa assessed the real state of affairs and decided to do away with Mamai rather than enter into conflict with the new Khan.

These events, full of conspiracies and battles, with many rulers coming and going, create the sense of a dizzying fall down a mountain. Indeed, this was a time when the state was rapidly descending into the abyss and hanging on at the very edge. The years of the Great Troubles, two decades when the whole Golden Horde spun around in a bloody whirl, passed a fateful turning point that would eventually divide its history. From then on, the actions of the politicians, no matter what goals they had in mind, were dictated by a combination of objective reasons and the interests of the people. But the actions gradually came down to fighting for unity or watching the country break apart. And, although the strict logic of necessity provided itself a path, there were still those who dared to challenge it.

Meanwhile, the striving for a united country, and the revival of its greatness, did not lose its historical inertia. Khan Tokhtamysh (1380–1396), who based his position on the military forces of Tatar clans, which were strongly consolidated in Kok Horde and Sarai, pressuring the former rulers, represented these interests. By ascending to the throne, he sent his ambassadors to all the Russian princes, telling them about his return and that he had reascended the throne, and how he defeated his opponent and their enemy Mamai, and went and took the kingdom of the Volga' [Complete Collection of Russian Chronicles, 15, p. 141].

CHAPTER 3

Attempts to Stabilise the Ulus of Jochi at the End of the 14—Beginning of the 15th Century

§ 1. The reign of Khan Toktamysh

Ilmur Mirgaleev

During the reign of Khan Toktamysh, the Tatar elite actively pursued the policy of turning the Golden Horde into a world power. Toktamysh was famous by the late 1370s (the history of his struggle for power is discussed in detail in the book: [Mirgaleev, 2003]). According to written sources and numismatic data, in 782 (1380/81) Toktamysh had all the territory of Ulus of Jochi completely under his authority. Al-Askalani informs us that 'in 782 he conquered the land of Desht, and Chingisid Toktamysh killed the khan who had ruled (there) for 20 years' [Sbornik materialov, otnosyashhixsya k istorii Zolotoj Ordy', 1884, p. 452]. During the whole year of 1381, Toktamysh was occupied with reinstating the institution of government on the territory of the Ulus of Jochi. Persian historian Abd al-Razzaq Samarqandi wrote that 'his power grew stronger and he raised the banner of elevation' [Sbornik materialov, otnosyashhixsya k istorii Zolotoj Ordy', 1941, p. 191]. Soon all felt the strong arm of the new khan. Lithuanian Prince Jagiełło began to pay tribute for the Russian and Tatar lands in the Golden Horde that he had conquered during the time of troubles [Grekov, Yakubovsky, 1950, p. 354; Bartold, 1968, p. 566; Safargaliev, 1996, p. 404]. The expansion of western neighboring states was halted.

In 1381 Toktamysh sent ambassadors to the Russian princes demanding they go to Sarai. But an ambassador 'went as far as Nizhny Novgorod and returned, and didn't go to Moscow' [Complete Collection of Russian Chronicles, 8, p. 42]. Toktamysh Khan probably wanted to discuss the situation in the Russian ulus

in general, to improve relations after the years of trouble and to increase the size of the tribute. The question about debt payments in recent years could have been raised too [Gorsky, 2000, p. 109]. The princes of Nizhny Novgorod and Ryazan accepted the khan's demands, but Dmitry of Moscow did not want to submit to any changes.

Toktamysh acted with resolve. The Russian merchants who had been trading in the Volga Region were apprehended so that the campaign would have the element of surprise, and after this he 'went secretly, unexpectedly and skillfully with all his forces'. The Tatar army advanced rapidly, 'because they moved very quickly' [Complete Collection of Russian Chronicles, 23, p. 127]. Vladimir, Suzdal, Pereyaslavl, Moscow and a number of other cities were taken [Solovyov, 1960, p. 289–290]. According to some Russian chronicles, the grandson of Aldirdas the Lithuanian, Prince Ostey, tried to organize the defence of the city. But when the Muscovites found out that 'the tsar came to execute his slave Dmitry, and escaped today', and that Toktamysh 'didn't come to destroy his ulus, but to save it' and wants to 'be gracious' [Complete Collection of Russian Chronicles, 15, p. 442], the defenders let the Tatars into Moscow. But despite the promises of the Khan, the city was robbed and set afire. Dmitry was forced to recognize the sovereignty of the khan of the Ulus of Jochi. He was allowed to return to Moscow only after fulfilling all of Toktamysh's demands [Complete Collection of Russian Chronicles, 4, p. 90; 16, p. 130; 18, p. 134].

After that 'peace', the sons of the Grand Princes were sent to Sarai as hostages [Ver-nadsky, 1997, p. 274; Gumilyov, 1997, p. 202], and the princes themselves took part in the khan's military campaigns [Polnoe sobranie russkix letopisej, 25, p. 218; 35, p. 30]. In Russian chronicles it is noted that in 1384 'there was a huge tribute, fifty per village. They gave gold to the Horde then and in Novgorod gave black beaver' [Polnoe sobranie russkix letopisej, 18, p. 135; 20, p. 205; 23, p. 130]. After 1382 the tribute 'was almost doubled' [Safargaliev, 1996, p. 393]. A specific number was even mentioned in the IV Novgorod Chronicle: 'the tsar took 8000 silver' [Polnoe sobranie russkix letopisej, 4, p. 90]. A. Gorsky suggested that this number was a tribute for two years (from the territory of the Grand Principality of Vladimir) [Gorsky, 2000, p. 108]. Undoubtedly, the Russian ulus began to regularly pay tribute to the treasury of the Horde at the rate stipulated by Toktamys. In 1382 the bishop of Sarai was relocated to Moscow [Belozerov, 2002, p. 24]. He had been given the right to represent Tatar authority in the ulus of Russia, and he was supposed to control the Russian princes.

From 1380 to 1385, Toktamys was mostly concerned with his internal state problems. He implemented a number of political and economic reforms, including the unification of the money and weights system. All his actions show that he offered the society of Ulus of Jochi an ideology of unity and greatness of the country, which he called 'Ulug Ulus', that is, 'Great State' [Berezin, 1850, p. 38]. Artisan production and domestic trade started up again thanks to the restoration of order in the country. As noted by archaeologists, during the rule of Toktamys, the economy (including trade) experienced a boom in the Golden Horde cities [Fedorov-Davydov, 1960, p. 113–114; Fedorov-Davydov, Vajner, Muhamadiev, 1970, p. 112; Rtveladze, 1972, p. 45].

The changes also affected the social system of the country. Tatar clans that helped raise the authority of Toktamys were granted more rights. Emirs and Begs who had been on his side confirmed their immunities with tarkhan yarliqs. Later, new feudal lords rose to prom-

Coins of Khan Toktamys (Azak,
Orda al-Muazzam, Orda al-Jadid, Crimea)
(by G. Fedorov-Davydov)

inence [Collection of Works Related to the History of the Golden Horde, 1941, p. 109]. Shibanids and Tuqa-Timurids from the Jochids actively supported the khan, and among the Tatar clans there were Manghits, Kungrats, Crimean feudal lords and emirs of the cities, especially Sarai. Later in the Tatar Khanates the karachibiys were represented mainly by such clans as Shirin, Baryn, Arghyn, Kypchak, Manghit, Jelair and others [Velyaminov-Zernov, 1863, p. 209; 1864, p. 411–420; Khudyakov, 1996, p. 674–675; Shamiloglu, 1993, p. 45], most of which had originated from the Kok Horde [Ötemish Hajji, 1992, p. 115]. Toktamys needed faithful servants and large financial resources. That's why, on the one hand, he confirmed the rights of the old feudal lords, and on the other hand, actively distributed the suyurgals to his new supporters, of course, in exchange for serving the central authority.

After instituting order internally, the government of Toktamys began to carry out an

Coins of Khan Toktamish
(Hajji Tarkhan, Khwarezm, Crimea, Sarai)
(by G. Fedorov-Davydov)

active foreign policy. Here they pursued two aims. First of all, they wanted to normalize relations with other states and to see that trade flowed smoothly. After reaching this economic goal, Toktamish tried to raise and strengthen the significance of the northern transcontinental trade route, which passed through the territory of Desht-i Kipchak. The second goal was to bring Ulus of Jochi onto the international stage. Friendly relations were restored with the Mamluks [al-Kholi, 1962, p. 15; Zakirov, 1966, p. 93] and the Ottoman Empire. In his letter to Gazi Murad, Ulug-Muhammad stated that 'Toktamish-khan had friendly relations with your great-grandfather Gazi Bayezid Bek, they sent ambassadors to each other' [Kuratt, 1992, p. 350–353]. By 1385 Toktamish had established friendly relations with all the neighboring states, including Moghulistan, Transcaucasian states and Tamerlane. But then the latter began laying claim to the heritage of the Hulaguid dynasty, and Toktamish's foreign policies radically changed.

As M. Safargaliev rightly suggested, Tamerlane's conquest of Iran and Azerbaijan dealt a blow to Golden Horde trade [Safargaliev, 1996, p. 405]. The political aspect of the changes to Toktamish's foreign policy was that if Tamerlane conquered Iran and the Transcaucasian states, then the border of Tamerlane's empire would have stretched along the entire southern and sou-eastern borders of the Golden Horde.

Toktamish used military force in his foreign policy for the first time in 1385. According to Ibn Khaldun, in 784 (1382/83), Tamerlane conquered Mazandaran [Collection of Works Related to the History of the Golden Horde, 1884, p. 392], taking advantage of the fact that the death of Sultan Uvays in 1374 prompted a struggle for supremacy between his sons. Aksak-Timur (Tamerlane) laid claim to the territory of Ilkhanate and, beginning in 1380, began to systematically conquer it. At that time Toktamish started paying particular attention to his foreign policy regarding Transcaucasia, trying to negotiate with Ahmad Jelairid, although he couldn't control all his possessions.

In 1385 a battle between Ahmad and Tamerlane took place near Sultaniya, and Tamerlane was victorious [Grekov, Yakubovsky, 1950, p. 331]. Ambassadors of Toktamish that had been sent to Ahmed ended up at Aksak Timur (Tamerlane). According to Thomas of Metsoph, Toktamish 'sent a messenger to khan of Tabriz Sultan Ahmed's son to conclude friendship and peace. And Tamerlane offended him with his evil and snide gesture'. Outraged, Toktamish sent his troops. However Tamerlane avoided meeting them and departed [Thomas of Metsoph, 1992, p. 360]. The reason he retreated was not just that 'more important business' had appeared, but also he was reluctant to fight against the Tatar army, having not completely defeated Ahmad.

The Tatars took control over the northern regions of the Jalayirid state. Judging by the coins, cities like Shamakhi, Shabaran', Makhmudabad, Gushtaspi and Baku were subjects of the Golden Horde [Savelyev, 1858, p. 319, 322–326; Markov, 1896, p. 484–487; Pakhomov, 1926, p. 59; 1938, p. 45, 74; Fedorov-Davydov, 1960, p. 157, 163–166, 173]. After capturing Tabriz, the Tatar army 'started to

march toward Maragha, turned back there and, passing through Tabriz again, devastated the lands of Marand and Nakhichevan' [Collection of Works Related to the History of the Golden Horde, 1941, p. 98]. The Spanish ambassador Clavijo states that Toktamyskh 'robbed many lands, destroyed cities and lands, but also partially restored them for himself... having finished all this robbery, especially in the lands belonging to Tamurbek, (Totamikh) and returned to Tartalia' [Clavijo, 1990, p. 143]. From this it would appear that the army of Toktamyskh took control of the territory of the Jalayirid state that had not yet been conquered by Tamerlane and devastated the lands that the Middle Asian emir had already managed to take [Collection of Works Related to the History of the Golden Horde, 1884, p. 392].

Toktamyskh immediately sent an army, which reached the Samur river, but was crushed. Emir Tamerlane didn't want to aggravate relations with the Golden Horde and released his prisoners [Collection of Works Related to the History of the Golden Horde, 1941, p. 110, 152] as, at that time, Ahmad had gathered his forces in Baghdad against him. The army of Kara-Muhammed, the ruler of the Anatolian Kara Koyunlu Turkomans, which were known as Tamerlane's greatest enemies, were in southern Azerbaijan, and the army of Mamluks, who had actively helped Ahmad Jalayirid, were in Syria. In response, Toktamyskh decided to open up another front, in Middle Asia itself. In alliance with Qamar al-Din, the emir of Moghulistan, they attacked simultaneously from the north and the east of Transoxania [Safargaliev, 1996, p. 406]. Zayn ad-Din reports that in 789 (1387/88) the army of Toktamyskh 'arrived in the Bukhara and Samarkand regions and devastated the capital' [Collection of Works Related to the History of the Golden Horde, 1941, p. 98]. Qamar al-Din and the military leader of the Tatars Ak-Hajj oghlan invaded Transoxania through Turkestan. Aksak Timur at that time was at war with the Jalayirids. The joint army scattered, Toktamyskh's troops conquered Tashkent, Karshi and a number of other cities, and started besieging Bukhara and Samarkand [Ibid., p. 154]. In February 1388, Tamerlane ar-

Tamerlane.

by M. Gerasimov

rived there himself with all his troops. The allies retreated, 'some of them went to Khwarezm, and some headed to Desht-i Kipchak' [Ibid.]. The Golden Horde, which had laid siege to Samarkand, was destroyed by Tamerlane's troops that had arrived and they were forced to retreat. Pursuing them, Tamerlane reached Khwarezm, destroyed the city, and enslaved all the residents [Ibid., p. 155].

In the late autumn of 1388, Toktamyskh organised a new campaign. According to the Russian Chronicles, the Tatars 'fought his far city, and could not defeat it and returned' [Polnoe sobranie russkikh letopisei, 11, p. 121; 18, p. 139; 34, p. 141]. Tamerlane couldn't continue the war, because an uprising had begun in Khorasan and Moghulistan [Safargaliev, 1996, p. 408–409]. According to Persian sources (Shami, Yezdi, 'Iskander's Anonymous' and Samarkandi), in 1388 Muluksarbadar and Hajjibek rose up in Khorasan and joined Toktamyskh [Materialy' po istorii kirgizov i Kirgizii, 1978, p. 106; Materialy' po istorii turkmen i Turkmenii, 1939, p. 523]. 'Hajji-bek Javuni-Kurbani, believing that Toktamyskh had defeated

'Tamerlane's stone'. 1391. Hermitage Museum

Tamerlane, formed an alliance with Mulyuk Serbedar and Isa Turkman, fortified the city of Tus and started to mint coins and read khutbah with Tokhtamysh's name' [Materialy' po istorii turkmen i Turkmenii, 1939, p. 523].

Aksak Timur was in a complicated situation. But at this time the Golden Horde was experiencing political complications, which prompted Tokhtamysh to return to Sarai. According to Tatar numismatic materials, Bek-Bulat established himself in Crimea. His known coins were minted in Crimea, Azak and Horde from 792 to 794 (1389–1392) [Fraehn, 1826, p. 357–358; Markov, 1896, p. 491; National Museum of the Republic of Tatarstan, No.2949; Ivanov, 1996, p. 12; Savelyev, 1858, p. 334–338; Fedorov-Davydov, 1960, p. 157–173]. In 1388 Bek-Bulat led the troops on the Caucasian front. While Tokhtamysh-khan fought against Bek-Bulat, in the summer of 1390 Tamerlane captured Shirvan. The latest coins of Tokhtamysh, minted in the cities of Shirvan, dated from 792 [Markov, 1896, p. 487]. Tokhtamysh couldn't retake Khwarezm, but actually lost Shirvan and his cities of the Kok Horde and encountered political instability in the Golden Horde. One of the key causes of the foreign policy failures at the end of the 1380s to the end of the century was the struggle of the anti-Tokhtamysh party of the Golden Horde feudal lords

By the end of 1390, Aksak Timur's troops had come right up to the borders of the Golden Horde in the Caucasus and had taken control of Derbent fortress. It's not known if there was a connection between Tamerlane and

Bek-Bulat in 1389, but considering that in his letter, Tokhtamysh wrote about a secret relation between the rebels and Tamerlane [Berezin, 1850, p. 37], perhaps such a connection existed also in 1389. After putting down the rebellion in Middle Asia and Iran, Tamerlane gave orders to prepare for a new campaign against the Golden Horde. The Russian Chronograph

notes that Tamerlane intended to wage war on deserted lands, allegedly 'sowing millet six months earlier to feed a multitude of troops' [Complete Collection of Russian Chronicles, 22, p. 421]. According to all Tamerlane historians, Aksak Timur (Tamerlane) prepared for this campaign very scrupulously [Collection of Works Related to the History of the Golden Horde, 1941, p. 158–159; Khaund-Emir, 1836, p. 477; Boudaq de Qazwin, 1836, p. 441].

In 1389–1390, Khan Tokhtamysh was in a difficult situation. Further events show that Tokhtamysh and Bek-Bulat reached a compromise before the Battle of the Kondurcha River. According to Tatar numismatic material, Bek-Bulat's ulus was eliminated only in 794 [Fraehn, 1826, p. 358; Markov, 1896, p. 491], therefore, most likely, in the spring of 1392. According to Tokhtamysh's letter [Berezin, 1850, p. 37], and the information of Ibn Khaldun [Collection of Works Related to the History of the Golden Horde, 1884, p. 392–393], Sharaf ad-Din Yazdi [Collection of Works Related to the History of the Golden Horde, 1941, p. 168], and Mirkhaund [Mirkhaund, 1836, p. 461], Bek-Bulat took part in the Battle of the Kondurcha River on Tokhtamysh's side. Having lost the Transcaucasian territories, the towns on the Syr Darya River and Khwarezm, Tokhtamysh decided to withdraw from the war. He had to deal with internal problems.

The battles of 1391 and 1395 had an enormous direct effect on the course of all Eurasian history. Practically all researchers point out that Tamerlane's attack was fateful for the Golden Horde (for the battles of 1391 and 1395, see

[Mirgaleev, 2003a]). At the beginning of 1391, Toktamyskh Khan's ambassador came to Aksak Timur to offer peace [Collection of Works Related to the History of the Golden Horde, 1941, p. 112, 159]. However, sources mention that it had already been decided to continue the campaign, and that's why an ambassador had been left in the camp as a guide, but in our opinion, however, Tamerlane's answer ('let him send Ali-Bek to us') [Ibid., p. 113] was sent to Toktamyskh to disseminate false information, so he didn't discover the invasion immediately. As can be seen from Toktamyskh's further actions, he did not expect Tamerlane to invade through the Kok Horde, believing that the Chagatai would not dare to cross the vast steppes. That's why all the preparations must have occurred on the Caucasian border.

According to Abd al-Razzaq Samarkandi, Tamerlane gave orders to gather an army 'of previous and new number' [Ibid., p. 191]. He increased the size of his army. Based on the Karasakpay inscription, we believe that it reached 300,000 warriors [Pope, 1940; Ponomarev, 1945]. Tamerlane's army moved rapidly. Nevertheless, his invasion was discovered quickly. Khan Toktamyskh 'reported immediately in all directions, gathered an army of the right and left wing' [Sbornik materialov, otnosyashhixsya k istorii Zolotoj Ordy', 1941, p. 164]. Trying to gain time, the scouts and guard detachments of Toktamyskh turned up daily, and didn't let their enemy relax [Charmoy, 1836, p. 116]. They lit numerous fires, demonstrating that there was a large army ahead [Sbornik materialov, otnosyashhixsya k istorii Zolotoj Ordy', 1941, p. 113] and they burnt the grass.

The main battle took place on 18 June 1391. At first Toktamyskh took the initiative. His army surrounded the enemies on either side of their flanks and entered from their rear, bringing Tamerlane's army into disarray. But the betrayal of some of the troops changed all Toktamyskh's plans. Tamerlane's army consisted of independent corps that operated autonomously. Flank vanguards and rearguards of his army organized a good defense, and all the centre, right and left wings attacked the centre of Toktamyskh's army and defeated him [Charmoy, 1836, p. 121].

Only Muhammed of Andrinople wrote specifically about the losses of the Golden Horde, giving a number of 'more than one hundred thousand people' [Mouhammed d'Andrinople, 1836, p. 505]. Tamerlane's losses had to be significant too. As for the reason the Tatars were defeated, the element of surprise played a significant role, by keeping Toktamyskh from using the full military potential of his state and allies. Still, the main reason behind Toktamyskh's defeat was that 'his great emirs were predisposed towards Tamerlane' [Collection of Works Related to the History of the Golden Horde, 1941, p. 209]. This reason was also given in the official version—Toktamyskh's letter to the Lithuanian Grand Prince [Berezin, 1850, p. 37].

After the Tatar army was defeated, Tamerlane turned back and his army scattered, robbing, burning and capturing people. It seems that Aksak Timur's main goal for himself in this campaign was to attack the human resources of Desht-i Kipchak. Toktamyskh absconded to the northern outskirts of the Bulgarian Ulus, and when 'his peace was restored, gathered his troops and called on the support of his people, who helped him' [Collection of Works Related to the History of the Golden Horde, 1884, p. 470]. Toktamyskh vigorously set about punishing traitors, who 'headed to the frontier lands and established themselves there' [Ibid., p. 393]. In early 795 (1392/93) 'they were executed, so they would not... do harm again' [Berezin, 1850, p. 21–22]. One of the main traitors, Bek-Bulat, who left the khan during the battle and attacked the capital, was executed [Collection of Works Related to the History of the Golden Horde, 1884, p. 393].

By the summer of 1392, Khan Toktamyskh had completely restored his authority over the Golden Horde. He spent the whole of 1393 addressing internal issues and restoring the international contacts of the Golden Horde. Previous agreements with Lithuania were confirmed in 1392 [Berezin, 1950, p. 37]. Agreements were also reached with the Ottoman Empire [Kurat, 1992, p. 350–353]. At the beginning of 1394, Toktamyskh's ambassadors also arrived in Egypt with an offer to be one 'hand against the rebellious criminal Timurlenk' [Collection

of Works Related to the History of the Golden Horde, 1884, p. 363]. The Golden Horde, Ottomans and Mamluks tried to coordinate their efforts against Aksak Timur. They held talks on creating an anti-Tamerlane alliance with the participation of these great states. In the chronicle of Ibn Tagribirdi it was stated that Toktamys, the Ottoman ruler Bayazid, the Mamluk sultan Barkuk, the emir of Sivas Ahmad Burkhan ad-Din, the ruler of Kara-Koyun Kara Yusuf, the Jalayirids, the ruler of Mardin and the Turkmen Emirate were members of the anti-Tamerlane alliance [Takkush, 1998, p. 382–390]. But right during the negotiations, Tamerlane attacked one of the main initiators, Toktamys, and forced the Tatars out of active international politics.

In 1394 the situation on the Caucasian border of the Golden Horde became very tense again. Aksak Timur's troops attacked Georgia in order to seize the Dariel Gates [Istoriya Gruzii, 1962, p. 258]. And the Golden Horde troops, going through Derbent, moved against the enemy's rear [Safargaliev, 1996, p. 419] and cut off Tamerlane's army from all the communication supplies, threatening to leave it surrounded. Aksak Timur had to retreat [Sbornik materialov, otnosyashixsya k istorii Zolotoj Ordy', 1941, p. 173]. He stopped in Northern Azerbaijan to spend the winter and ordered the recruitment of additional troops. Russian chronicles note that Tamerlane gathered 'from all... countries... numerous detachments' [Polnoe sobranie russkix letopisej, 8, p. 65; 24, p. 160–161; 25, p. 222].

Trying to gain time and escape Toktamys's vigilance and, according to Sharaf ad-Din Yazdi 'to create an excuse', Tamerlane sent ambassadors with an offer of peace [Collection of Works Related to the History of the Golden Horde, 1941, p. 174]. According to Nizam ad-Din Shami, Khan Toktamys 'was inclined towards peace and friendship' [Ibid., p. 119]. But his ambassador who was sent subsequently discovered the invasion of the enemies. Toktamys 'sent vanguard troops to protect the crossing of the Koy-su River' [Ibid., p. 119, 175] and began to gather other troops. The Tatars guarded every crossing and built fortifications. The whole army received an order to gather near the Kuray River. Khan

Toktamys came from Sarai with the existing army and established himself on the left bank of the Terek, preventing the enemy from crossing. But, Ruy González de Clavijo relates that Tamerlane was particularly clever and crossed the Terek River, crushing the Tatars' fortification structures [Ruy González de Clavijo, 1990, p. 144].

On 14 April 1395 the two armies faced each other. None of the sources give any details about the size of either army. Some historians suggest that Tamerlane had approximately 300,000 warriors [Khizriev, 1982, p. 49]. Turkish historian and traveler Evlia Çelebi, based on Tatar stories, stated that Tamerlane had 'three times one hundred thousand' troops [Çelebi, 1979, p. 142]. Given that Tamerlane had increased the number of rearguard corps and other military units and the fact that, after the battle, his army fought on the territory of Ulus of Jochi for another year, we can assume that it was greater than in 1391 and reached up to 350–400 thousand people. There were supposedly slightly less Golden Horde troops. According to Ruy González de Clavijo, 'it was a great and glorious victory, because Totamikh (Toktamys—I.M.) had an enormous army, and it was one of the greatest battles that Tamurbek had won, even, they say, more (important) than that with the Turk' [Clavijo, 1990, p. 144].

According to different sources, the battle lasted three days [Sbornik materialov, otnosyashixsya k istorii Zolotoj Ordy', 1884, p. 442, 448, 454, 466; 1941, p. 207; Polnoe sobranie russkix letopisej, 11, p. 159]. On the first two days Toktamys had the initiative, and the Tatars nearly captured Tamerlane himself [Khizriev, 1982, p. 51]. According to Ibn Arabshah, before the third day of the battle, a commander of the right wing left Toktamys [Sbornik materialov, otnosyashixsya k istorii Zolotoj Ordy', 1884, p. 465–466], likely bribed by Tamerlane. The left was also very weakened, which is why Toktamys sent some right wing tumens to the left wing. But it didn't help. The Tatars were destroyed at the end of the third day of the battle, and the army scattered. After the battle of 1395, Toktamys 'went towards Bulgar to a wooded area' [Sbornik materialov, otnosyashixsya k istorii Zolotoj Ordy', 1941, p. 178].

The victorious Tamerlane started to systematically devastate and destroy the Ulus of Jochi's military potential, first of all, by devastating Golden Horde cities. Russian chronicles note that Aksak Timur 'made a big fight and many rebels came to the Horde... many a quarrel happened, many were killing and achieving victories, conquering many enemy detachments and having unearthed many cities, killed many people... and went through all the Tatar land' [Complete Collection of Russian Chronicles, 5, p. 247–248]. Evlia Çelebi saw many cities destroyed by Tamerlane even in the 17th century. He noted that 'Khan Tamerlane reduced this region to ruins and debris, and its people were burnt at the stake'. And he talked about Sarai, the ruins of which in the 17th century could be 'seen from a distance of a two-day walk', with particular anguish. Tamerlane 'destroyed and devastated this stately city so much, that it was worthy of regret, and

he killed and hacked its residents to pieces', [Çelebi, 1979, p. 109, 135]. The testimony of Evlia Çelebi is confirmed by much archaeological data [Rtveladze, 1972, p. 42–47; Egorov, 1997, p. 72–76; Fedorov-Davydov, Vajner, Muhamadiev, 1970, p. 68–171; Fomichyov, 1981, p. 219–241]. Majar, Azak, Hajji Tarkhan, Sarai al-Jadid and many other cities were destroyed. Evlia Çelebi, most likely based on some Tatar sources, even mentions a specific number: 'there were 170 large cities at all ends of Desht-i Qipchaq. All the cities mentioned were destroyed by the powerful Khan Tamerlane' [Çelebi, 1970, p. 143].

Timur wanted to leave the country as devastated as possible. His army worked on destroying cities for over a year and killed the residents. When the spring of 1396 came, Tamerlane gave the order to retreat and went to Iran through the Caucasus, taking plundered goods and captives.

§ 2. Edigü and His Time

Iskander Izmaylov

Tamerlane's invasion had basically destroyed the Ulus of Jochi. Cities laid in ruins, day-to-day life for many people had been shattered. After the military campaigns and devastation, hunger and diseases set in. The plague returned again, which raged till 1405 in some parts of the country. Ibn Arabshah gave a very vivid description of these events: 'the residents of Desht who had prospered are now impoverished and devastated and deserted, destitute, and suffer from unbearable perversions. It has reached the point where if someone would travel through it (Desht) without a leader or head, than they, due to the devastation of the (region), would definitely perish while they were traveling. In summer the winds blow the sand and hide and sweep the way for a traveler, and winter snow, falling there, gathers on it and covers it so that all the land of it (Desht) is wasteland and its houses are deserted, its camps and watering places are abandoned, its routes, in all like-

lihood, are dangerous and inaccessible' [Collection of Works Related to the History of the Golden Horde, 1884, p. 470–471].

A single state ceased to exist, because Khan Toktamysch had escaped to the borders of the Grand Duchy of Lithuania, leaving it to fend for itself. As a result, the country ended up divided into several uluses. Khan Toktamysch established himself in the Black Sea Region, Tash Timur (Bash Timur)—in Crimea, Koyurchak (Kuyurchak)—in Sarai and the Lower Volga Region, and Timur Qutlugh ruled in the Trans-Volga Region (for another, obviously, distorted picture of historical events see: [Safargaliev, 1960, p. 174]). The positions of the rulers in these uluses were unstable, and their borders were amorphous and changeable. It seemed that under these conditions the break up of the Ulus of Jochi was unavoidable.

But some political figures didn't want this to happen. There was a small chance left to preserve the integrity of the state. From 1395

Timur's battle with the Turkish Sultan Bayezid. Miniature.
Iran. 15th century.

to 1397, it appears that the whole Kok Horde was united under the rule of Sultan Temür Qutlugh (Temür Qutlugh) and his ulug karachibek Edigü. It was here that human and economic resources were preserved that would become the core around which Ulus of Jochi would consolidate. In 1398, Edigü led troops in an invasion of the Lower Volga Region. After conquering the city of Sarai al-Jadid, Edigü declared Temür Qutlugh khan. In a short time, they defeated Koyurchak, then subdued the North Caucasus and Azak, forcing Toktamysch to escape to Kiev, to the court of the Grand Prince of Lithuania Vytautas. By the end of 1393 and beginning of 1399 their troops had seized Crimea, taking the main port city of Kaffa, which one of Toktamysch's sons had been defending. Several years later, Spanish Ambassador Ruy González de Clavijo, describing these events, wrote that 'Edigü attacked the city of Kaffa, because Totamikh's son (that is, Toktamysch's.—I.I.) had escaped to Tamurbek' [Clavijo, 1990, p. 144]. In spring 1399 the entire Jochid State was united under the rule of Temür Qutlugh.

Next came an epoch in which Edigü was to be the main character. The fate of this extraordinary and controversial Turkic-Tatar military leader and statesman is a vivid illustration of

the complex and controversial period of history of the Ulus of Jochi from the end of 14th to the beginning of the 15th centuries. His life and actions against the backdrop of the epoch often drew the attention of contemporaries and historians (for more details see: [Fakhretdin, 1996, p. 110–114; Bartold, 1963a, p. 797–804; Yakubovsky, 1947, p. 30–45; Safargaliev, 1960, p. 178–195, 227–229; Grekov, 1975, p. 223 et seq.; Izmailov, 1992a; 1994; Seleznyov, 2001]). And the epic poem created in his honour has been preserved by many Turkic peoples that were the successors of the people of the Ulus of Jochi. It has also become the subject of much scrutiny [Isanbet, 1940; Zhirmunsky, 1974, p. 351–386; Urmanche, 1999]. The role and the importance of Edigü has been an object of political manipulations and defamation repeatedly in the history of the Tatars (for more details see: [Le-

ushin, 1996, p. 85–95; Izmailov, Gibadullina, 1996, p. 96–114; Iskhakov, 1997, p. 194–205]).

By 1398 Edigü was a mature person who taken a thorny path. He was born, possibly, in the Aral Sea Region no later than the mid 1350s (for other points of view see: [Muhamedyarov, 1967, p. 474; Seleznyov, 2001, p. 55]). His family belonged to the Manghit (Ak-Manghit) clan, the upper aristocracy of the Kok Horde. His father, emir Baltychak (Balynmak) was one of the karachibeks of Urus Khan and his son Timur Malik [Sbornik materialov, otnosyashhixsya k istorii Zolotoj Ordy', 1884, p. 133]. For reasons that remain unclear, Edigü interrupted his career at the court of Timur Malik and escaped to Aksak Timur, where at this time sultan Toktamysch was also hiding. Trying to put a loyal person on the throne of the Kok Horde, emir Tamerlane provided him with military support. After a series of campaigns, battles and defeats in 1377/78, Toktamysch conquered Sygnak and was declared khan of the Kok Horde. Former khan Timur Malik was executed along with a few of his emir confidants, among whom was Edigü's father. But Toktamysch left his son Timur Qutlugh alive and even made Edigü his atalyk. Judging by eastern authors, at that time Edigü was one of Toktamysch's authorised

representatives. According to Ibn Arabshah, a historian who treated him favourably, 'emir Edigü was one of Toktamys's main emirs of the left side noblemen who were elected at the time of disasters to resolve them, and among those of sanity and intelligence; his tribe was called Kungrat' [Ibid., p. 457]. His military and diplomatic talents contributed to the growth of Toktamys's authority among the clan aristocracy and to his final victory. Most likely he also took part in the campaign against Mamai (1379–1380), and then in the conquest of Moscow as well (1382). However, at that moment his relations with the khan deteriorated. There is a hypothesis that Toktamys preferred the representatives of the traditional Ak Horde aristocracy to him. In any case, Edigü, believing that his efforts were not appreciated, organized a conspiracy in which he involved a few sultans, including his young pupil Timur Qutlugh. The conspirator's plans were uncovered and in the winter of 1388/89, Edigü and a few Jochids had to escape to Samarkand. They subsequently spent long years away from their homes. Forgotten and neglected, the exiles spent a few years at the court of Aksak Timur. But there Edigü encouraged the Asian ruler to start a war against Ulus of Jochi [Ibid., p. 459].

They had a chance to return in 1391, when the emir, in command of a huge army, headed through the deserts of the Aral Sea Region and steppes of the Trans-Volga Region against Toktamys. Edigü and other sultans of the Kok Horde took part in this campaign and, with the sultan's rebels 'of the left arm', was in the battle at the Kondurcha, contributing to the defeat of the Golden Horde khan. Tamerlane wanted to preserve his power over the lands of the Kok Horde, but Edigü didn't allow him to do that. He betrayed his patron once again. When Tamerlane went back to his own lands, he stayed there. Edigü headed armies of his supporters and occupied Saray-Jük. According to the author of 'The Anonymous of Iskandar', Temür Qutlugh and Edigü 'stayed behind Tamerlane and returned with the desire to (take away) the Öz Beg ulus... When they received news that Temür Qutlugh had arrived, all the tribes began to stay behind (him), Chintek and his en-

tourage escaped, and Temür Qutlugh took the kingdom, and Edigü the emirate' [Collection of Works Related to the History of the Golden Horde, 1941, p. 133]. Diplomatically balanced between Tamerlane, to whom ambassadors were sent with the assurance of allegiance, and Toktamys, who was gaining strength, and whose sovereignty was formally acknowledged by Temür Qutlugh, Edigü managed to protect his possessions from participating in the military escapades of this khan. Waiting for Tamerlane to leave the devastated Volga Region and for the country to plunge into turmoil, Edigü once again entered into a power struggle in the country in 1397. Several victorious campaigns allowed him to unite the country again in the beginning of 1399. Russian chronicles state that Toktamys, 'tsar of the Great Horde', had just sent his ambassadors to all countries, notifying them that he had 'defeated the evil' caused by the invasion of Aksak Timur, when 'some tsar named Temür Qutlugh came suddenly and drove him out... [taking] the throne of the Horde and Sarai' [Priselkov, 1950, p. 448].

By then, Edigü had become, in fact, a ruler with unlimited power, ulug karachibek under a young khan. All his previous life and actions were only steps to the summit of power, for the sake of which he fought, conspired, betrayed former allies, remained indifferent to his father's death, endured privations in campaigns and ate the bitter bread of expulsion. He reached his goal and could finally start to do what he wanted, to restore the supreme power of Ulus of Jochi. It is an irony of history that all his previous struggles with Toktamys served to destroy the centralized empire, and then, after taking power, Edigü began to fight to strengthen it, implementing policies to put down separatism.

Meanwhile, indomitable Toktamys retreated to the possessions of the Grand Duchy of Lithuania together with his Horde—relatives, warriors, their families and numerous wagons and herds. According to a chronicler, he 'fled from the Horde to Kiev with tsarinas and two sons' [Ibid., p. 449], and according to Polish historian Yan Dlugosz, he had a few thousand warriors [Dlugosz, 1868, p. 495]. He presented

himself there as the rightful leader of the Golden Horde and offered Grand Prince Vytautas an alliance against Edigü. In return for military assistance, Toktamys̄h was ready to make certain territorial concessions, and also to acknowledge Vytautas' right to Pskov, Novgorod and Muscovite Rus. According to the author of a record in the Novgorod IV Chronicle, 'Vytautas boasted to the Horde, saying, 'Let us go to capture the Tatar lands, defeat Tsar Temür Qutlugh, divide his tsardom and possessions; and make Tokhtamys̄h the tsar in the Horde, and I will reign in Moscow, in all Russian lands, and Veliky Novgorod and Pskov will be mine too'. This alliance assumed mutual military assistance. 'After conferring with Toktamys̄h, Vytautas said, "I will make you the tsar in the Horde, and you will make me the great prince in Moscow and all the Russian land" [Polnoe sobranie russkix letopisej, 4, p. 103; Priselkov, 1950, p. 450; Polnoe sobranie russkix letopisej, 11, p. 172; 15, p. 458]. Taking advantage of the favourable situation, Vytautas was able to secure support from the Teutonic Order, which sent its military detachment in exchange for a promise to yield Pskov to them.

A completely new balance of power was beginning to emerge in Eastern Europe. If Vytautas could have managed to beat Edigü and restore Toktamys̄h's authority, then they, together with the Order, would have been able to crush Moscow and make Lithuania the centre of the union of all the Russian principalities. Grand Prince Vasily Dmitriyevich of Moscow kept an eye on the preparations of his warlike neighbor and mortal enemy with utmost concern, but could do nothing to prevent it. He had no armed forces capable of resisting the forces of Lithuania, Toktamys̄h and the Order. Furthermore, we can say that a significant number of the Russian princes (Andrey and Dmitry Ol'gerdovich), which had at one time fought at Kulikovo Field under the banners of Moscow, now made up the backbone of Vytautas' army.

Expecting to succeed easily over the weakened Tatars, Vytautas, in response to the demand of the ambassadors of Temür Qutlugh to 'release our fugitive tsar Taktamys̄h' answered arrogantly, 'I will not release tsar Taktamys̄h, I want to see the tsar' [Novgorodskaya per-

vaya letopis', 1950, p. 394] and moved from Kiev to the south, to the steppe (the details see [Lyaskoronsky, 1907, p. 18–38]).

Vytautas gathered a large army under his command. Apart from Lithuanian and Samogitian regiments, he was supported by vassal Russian princes, Polish armies of Grand Prince Spytek of Podolia, which consisted of 400 'spears' (a spear is a small unit that included a knight, equestrian and foot military servants, not less than three), Order troops of 100 'spears', and also Toktamys̄h's cavalry. According to a Russian chronicler, a contemporary of these events, 'Prince Vytautas Kestutisovich of Lithuania had gathered many warriors, tsar Toktamys̄h with his court was with him, and Vytautas involved the Lithuanians, Germans, Poles, Samogitians, Tatars, Vlachs, Podolians, and there were 50 princes with him, and the strength of the army was great' [Priselkov, 1950, p. 450]. Military innovations included the use by Vytautas of 'wrought wagons' equipped with small guns, bombards, which later were successfully used by Czech Hussites. The troops marched slowly and reached the Vorskla river, where they found a camp of Temür Qutlugh. By surrounding himself with a wall of wrought wagons 'on iron chains, with many muskets and cannons and crossbows' [Complete Collection of Russian Chronicles, 11, p. 173], Vytautas issued an ultimatum to recognize himself (khan) as a vassal of Lithuania and to pay 'taxes and tributes'.

The sight of the great allied army made Temür Qutlugh waiver; he tried to gain time by entering into negotiations in order to wait for Edigü's tumens who had fallen behind. But Vytautas, seeing this as a weakness, made stricter requirements, demanding not only formal vassalage, but an actual one, so that 'the sign of Vytautas was on the money of the Horde' [Ibid.], that is, Vytautas' stamp on Golden Horde coins. In the meantime, Edigü's army arrived and, indignant at the course the negotiations were taking, responded to Vytautas' proposal using deliberately offensive language. 'Truly, you took our free tsar of the Great Horde as a son, but you are old and our tsar of the Great Horde Temir' Kutluj is young; but you should understand this: ... as I'm old before you, you are

young before me, and I should be your father, and you will be my son...' [Ibid.]. It was an invitation to fight.

In the morning of 12 August 1399, two enormous armies clashed in a bloody battle that decided the fate of all of Eastern Europe, since its military historical meaning far exceeded that of the Battle of Kulikovo, for example. The fight was long, cruel and bloody, according to the Chronicles, 'Such had never been seen in the Lithuanian land with the Tatars' [Novgorodskaya pervaya letopis', 1950, p. 394]. During the battle, Lithuanians used cannons and other firearms and crossbowmen. For a long time neither side could gain the upper hand. But at a key moment of the battle when Vytautas had exhausted his resources, Edigü managed to attack successfully, apparently using a tactical maneuverer (for further detail see [Izmailov, 1994]). Vytautas' troops faltered. The retreat quickly became a total rout. As a result, the allied troops suffered a crushing defeat: 'The Tatars beat many Lithuanian princes and voivodes and boyars and many Christians, Lithuanians, Germans, Poles and many other people were killed, and there were not many of them alive' [Priselkov, 1950, p. 450]. Suffice to say that on the battlefield or during the retreat Polotsk prince Andrey Olgerdovich, Bryansk prince Dmitry Olgerdovich, Kievian prince Ivan Borisovich, Smolensk prince Gleb Svyatoslavich, Volyn prince Dmitry of Volyn, Rylysk prince Fyodor Patrikeevich, Belsk prince Ivan Yuryevich and Podolia voivode Spytek were killed, and 'all the famous princes 74' [Polnoe sobranie russkix letopisej, 4, p. 104; 15, p. 165, 458; The Novgorodskaya pervaya letopis', 1950, p. 395; Polnoe sobranie russkix letopisej, 5, p. 251; 25, p. 229]. Chasing the fleeing warriors for '500 versts', Edigü's troops reached Kiev, where they took a large ransom and devastated Southern Rus' up to Lutsk [Ibid.]. Although Toktamys and the Great Prince Vytautas managed to avoid death, their plans were crushed. And it can certainly be said that the idea of Rus' unifying around Lithuania was crushed on the banks of Vorskla. The bravery and courage of the Tatars saved Moscow's future as the political centre of Rus'.

The time of Edigü had come. After defeating Toktamys and his ally Vytautas, he defended the unity of the Jochid Ulus and began to consolidate his power. According to his panegyrist Ibn Arabshah, 'the affairs were regulated by Edigü's decrees: he assigned sultans and removed rulers at his liking; if he ordered anything, no one would oppose it; if he drew a line, no one would cross it' [Collection of Works Related to the History of the Golden Horde, 1884, p. 472]. An Egyptian official and historian Badr al-Din al-Ayni wrote of him as 'the Emperor of Desht, Sarai and Nordic countries... the ruler of the Crimea, Sarai and other land of Desht', calling him 'the great Emir, rightly' [Ibid., p. 532]. This is also evidenced by a Russian historian of the later time, 'this prince Yedigei of the Horde is greater than all other princes of the Horde, he holds the entire kingdom in his hands and to his will' [CCRC, 11, p. 206]. The glory of Edigü's power reached Timur's court. The Spanish ambassador Ruy Gonzalez de Clavijo wrote about him as 'the Senor of Tataria', 'Emperor of Tataria' [Clavijo, 1990, p. 144, 151]. In other words, he had become not just Edigü ulug karachibek but the de facto ruler at the nominal rule of the Chinggisid khans. With his direct support the Kurultai elected khans, who had just representative functions. So, after the death of Timur Kutlug (1399/1400) Shadi Beg took the throne (1400–1407), then Bulat-Sultan (1407–1411), and later Timur (1411) was enthroned. Edigü's exalted place in the Horde's hierarchy is confirmed by an official document, which emerged from the Khan's chancellery: the Tarkhan yarliq for Timur Kutlug expressly states that Edigü 'led... oglans of the right and left wings, heads of thousands, hundreds and dozens of soldiers' [Berezin, 1851 p. 10; Samoylovich 2005, p. 198, 208; Usmanov, 1979, p. 206].

Edigü's reign was marked by a number of measures to streamline social relations, first of all, to confirm land and property rights of loyal emirs and resolve inter-clan issues. This included strengthening the positions of the clans that supported him in the first place, obviously, the Manghits and Kungrats. At the same time, Edigü's government tried to improve the au-

thority of the judiciary system. Eastern sources write about the 'order', established by him in the country, 'fine customs' ('tura') and the 'great law' ('Iasa'), which were not always met with approval by autocratic emirs.

In order to strengthen the financial system, Edigü sought to stimulate trade and stabilize the circulation of money by the monetary reform of 802 / 1399–1400, which actually led to the replacement of old coins with new issues on behalf of the khans Shadi Beg and Bulat. However, it did not result in any noticeable revival of trade [Fedorov-Davydov, 2003, p. 54–59]. The effectiveness of those efforts was negligible, since most of the Volga Region towns laid in ruins, the international and domestic trade stood disrupted. Evidence of this in the coinage at the beginning of the 15th century was concentrated in regions with relatively high levels of domestic and foreign trade such as in the Crimea, Azak, Bulgaria and others, while it had almost completely ceased in Sarai and the Lower Volga Region.

The Spanish ambassador de Clavijo noted an interesting thing that 'this Yedegui turned and is turning the Tatars to the Mohammedan faith, recently they have not believed in anything, yet now they have adopted the faith of Mohammed' [Clavijo, 1990, p. 144]. These words are accompanied by the opinion of another European, who lived in the Northern Black Sea Region in the early 15th century—the Italian merchant and diplomat I. Barbaro. Describing the religious situation in the Jochid Ulus, he says, 'the Mohammedan faith has become commonplace for about a hundred and ten years ago among the Tatars. However, earlier, only a few of them were the Mohammedans, and in general everyone could freely adhere to the faith which he preferred. There were those, who worshiped wooden or rag idols and carried them on their carts. Compelling them to accept the Mohammedan faith dates back to Edigü's time, who was the commander of the Tatar khan...' [Barbaro and Contarini, 1971, p. 140]. Even more compelling evidence of the widespread victory of Islam among the nomadic population of the Jochid Ulus is provided by archaeological data. The rite of pagan burial mounds was used occasionally in the second half of the 14th century.

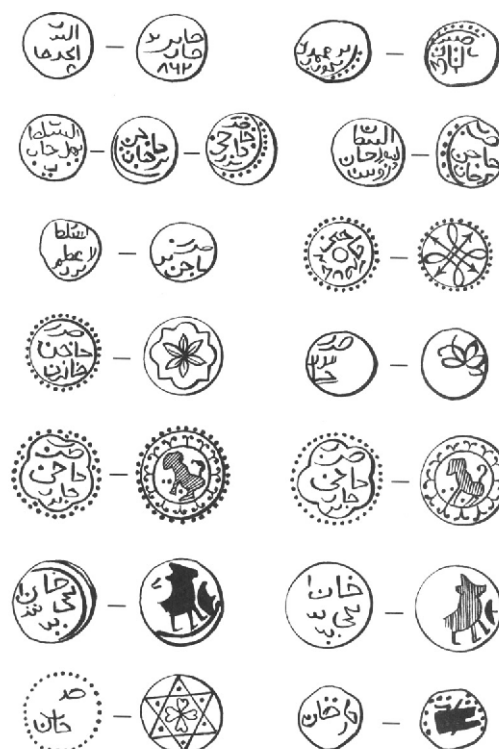

But at the beginning of the 15th century it was replaced by Muslim ground burials and burials in mausoleums (keshene) almost everywhere [Fedorov-Davydov 1966, p. 9 et al.; Garusovich et al., 1998, p. 257–259]. The dissemination of Islam in the Jochid Ulus in the second half of the 14th century can be attributed to several reasons, among which the increased religiosity of the population as a result of the Black Death, as well as a deliberate policy of the authorities with the aim of consolidating the country's population.

To overcome internal fragmentation in the country, Edigü had to suppress the separatist clan aristocracy, which used any excuse for rebellion. Thus, after the sudden death of Timur-Qutlugh Khan, according to Nizam al-Din Shami, a Timurid court historian, 'Timur-Qutlugh Khan died in the Öz Beg region, his ulus rebelled and they are at war with each other and fighting. For this reason, the region was turned upside down' [Collection of Works Related to the History of the Golden Horde, 1941, p. 125]. Edigü was able to suppress the rebellion and enthroned the new Khan, Shadi Beg, a son of Qutlugh-Bek and descendant of the third son of Tuqai-Timur, Urung-Timur. It is possible that in the words of the author 'Anonymous of Iskender' that during the interregnum Edigü 'had to put Shadi Beg Oghlan on the throne, who was the oldest and best known for his righteousness and abilities' [Ibid., p. 133], to make a compromise with the clan nobility, who were not fond of Edigü's autocracy and were counting on the loyal Khan.

However, neither he nor the new Khan considered themselves safe as long as Toktamysch was alive. He was their main rival in the struggle for power and the center of gravity of all the discontented. A former Khan, who was evidently forced to leave Lithuania under the terms of the Horde-Lithuanian Peace Treaty. He fled to Ulus Shibani, where he apparently had supporters. Here Toktamysch gathered an army and tried to regain power. Edigü was forced to fight against him. Ibn Arabshah, presenting some legendary version of the confrontation, says that Toktamysch and Edigü fought 15 times, with varying success, and Toktamysch was defeated only on the sixteenth time [Col-

lection of Works Related to the History of the Golden Horde, 1884, p. 470–471]. It is obvious that Toktamys'h's gradually supporters melted away, and according to the Persian historian Yazdi, he 'roamed the steppes confused and in a bad position' [Collection of Works Related to the History of the Golden Horde, 1941, p. 189].

In such a desperate situation Toktamys'h was forced to seek help from Aksak-Timur. The Spanish ambassador de Clavijo, who served at that time at the court of Timur, wrote that 'Totamikh (Toktamys'h— I.I.), the Emperor of Tartaglia and Tamurbek have reconciled and are trying to deceive Edigü together... This Totamikh and his sons are alive and (are) friends of Tamurbek' [Clavijo, 1990, p. 144]. Aksak Timur, faithful to his policy, started to intrigue with Edigü, pretending to offer him friendship and even promising to marry one of his grandsons to his daughter, but according to the Spanish envoy, Edigü answered 'that he knows him all too well and all his tricks and that such tricks will not fool him, that he realizes that all these arguments are only to deceive him, and if they do become friends, then only on the (battlefield) in arms' [Ibid.]. But Timur was in no hurry to meet Edigü on the battlefield. His plan was a huge campaign against China, for which he started collecting a huge army in Otrar. Timur said to Toktamys'h's ambassador that 'after this expedition with God's help, I will conquer Ulus of Jochi again and give it to you (that is, Toktamys'h)' [Collection of Works Related to the History of the Golden Horde, 1941, p. 189]. However, Edigü was ready to fight with Timur. He began to prepare for an open clash with the ruler of Maverannahr. However, as Eastern authors write, 'the mark of fate had a different pen'. Timur died in Otrar before the campaign on 18 February 1405, and a brutal war for power began between his descendants. The defeat of Toktamys'h, left without such a powerful ally, was a matter of time. He was gradually surrounded, defeated and killed in a battle, and his sons drifted off to (different) sides: Jelaled-din and Kerim Berdi to Russia, while Kubal and the rest of the brothers went to Saganak' [Collection of Works Related to the History

Anonymous pulis of Hajji Tarkhan. Early 15th century (according to G. Fedorov-Davydov)

of the Golden Horde, 1884, p. 471–472]. A Russian chronicler reporting on these events wrote: 'That same winter (6914), Shadi Beg Khan killed Tsar Tokhtamys'h in the Simbirk land' [Priselkov, 1950]. In the late (early 17th century) 'History' by Haider Razi, Toktamys'h's year of death is listed as 807 (10.07.1404–28.06.1405).

Freed from his archenemy, Edigü was able to attack the Timurids. Taking advantage of the turmoil after the death of Timur, he invaded Khwarezm and expelled the governor Timur. Then he made a raid on Mawarannahr. According to Ibn Arabshah, Edigü moved from Khwarezm 'with his cavalry to the Bukhara area and devastated it, but then he returned to Khwarezm... In Khwarezm and districts he assigned one of his men, named Anka' [Collection of Works Related to the History of the Golden Horde, 1884, p. 472]. According to Abd al-Razzaq Samarqandi, 'Emir Edigü took Khwarezm in Rajab 808 (23.12.1405–21.01.1406), and leaving Emir Anka as the ruler, rode to Desht'

[Collection of Works Related to the History of the Golden Horde, 1941, p. 193].

Edigü's decision to leave was dictated by a complicated situation in Ulus of Jochi, where in 1406 Khan Shadi Beg evidently had already begun to show independence and conspired against his ulug karachibek. Sources describe the conflict as the Khan's discontent with customs and laws established by Edigü, which 'put some people in difficult circumstances' [Ibid., p. 133]. Given these circumstances this should be clearly understood as the reluctance of the clan aristocracy to limit their power in favor of the central government. Moreover, their interests were expressed by the Khan, who was dissatisfied with the autocracy of his nobleman. As a result of a conspiracy disclosed to Edigü by someone who 'knew what he (Khan—I.I.) had in mind and wanted to do before the revolt' [Ibid.]. But he was too late. Shadi Beg learned of the failure of the conspiracy, 'ran to Derbent of Baku, and took refuge at the court of Emir Sheikh Ibrahim Derbend' [Ibid., p. 134]. Russian chronicles make it possible to specify the date of Shadi Beg's flight and Sultan Bulat's enthronement. The fact is that Grand Duke of Tver Ivan, who went to Sarai for his yarliq to rule on 20 July, found that there was 'great distress, Shadi Beg was ousted from the throne by Bulat Saltan' [Priselkov 1950, p. 465; *Polnoe sobranie russkix letopisej*, 25, p. 236–237]. It turns out that disclosure of the conspiracy, and the escape and enthronement of Bulat Sultan took place in May–July 1407.

While in exile, he continued to consider himself the ruler of Ulus of Jochi, and even minted coins in his own name (up to 1408). It was a dangerous situation. At that time, his son Bulat (Pulad) was proclaimed Khan in the capital; he minted coins in Sarai al-Jadid, while a new hotbed of destabilization arose at the border. In response to Edigü's diplomatic pressure, Timur's protégé Sheikh Ibrahim, Emir of Derbent, refused to give Shadi Beg shelter [Collection of Works Related to the History of the Golden Horde, 1941, p. 134]. However, in 811 / 1408–1409, the Khan suddenly died [Ibid., p. 134, 193, 212, 214], ending the political tension and strengthening Edigü's position.

One of Edigü's greatest military and diplomatic successes was his campaign against Moscow. Strengthening of the power of the Grand Duke of Moscow had long worried Edigü. During the confrontation between Timur and Ulus of Jochi, the princes of Moscow were able to expand their holdings and entangle other principalities in agreements limiting their sovereignty in favor of Moscow (such as Tver and Ryazan). Things reached the point that in 1399, in response to a campaign of Yentyak Sultan and Prince Semyon Dmitriyevich against Nizhny Novgorod to return the latter to power, apparently with Edigü's approval, the troops of the Grand Duke of Moscow Yuri Dmitriyevich struck a powerful blow to one of the most developed regions of the Horde—Bulgaria.

The official reason for the war was Edigü's demands specified in the yarliq to Vasily Dmitriyevich, written after the campaign in December 1408. The Grand Duke was obliged to pay tribute to 'as in the old days and truly' at a time when he had not gone to the Horde to receive yarliqs since the accession of Timur Qutlugh. It also listed 'grievances': supporting Toktamysh's children, mistreatment of ambassadors, increased trade tariffs for Tatar merchants, etc. (see: [Polnoe sobranie russkix letopisej, 4, 1, p. 406–407; 42 p. 172–173; *Sobranie gosudarstvennyx gramot i dogovorov*, 1819, p. 16–17; Gorsky, 2000, p. 196–197]). The fact that he was writing on his behalf, rather than in the Khan's name, suggests that the real power belonged to Edigü (there was recent a discussion among historians regarding the authenticity of "Edigü's yarliqs". A. Grigoriyev proposed to consider it a "letter", written by a Russian author in the middle of the 15th century [Grigoriyev 1988, p. 92–93], but A. Gorsky criticized his arguments and convincingly proved that it is an authentic document [Gorsky, 2000, p. 128–131]). In other words, there were a lot of reasons for organizing the campaign against Moscow, but Edigü's military and diplomatic options for that were limited for some time. First, he strengthened his power and fought against Toktamysh, then feared a new invasion by Timur. The time to bring Moscow to submission came only then.

The campaign was preceded by serious diplomatic preparations in order to weaken the power of Vasily I in Russia (Yuri Vsevolodovich's attempt to capture part of the estates in Tver, receipt of a *yarliq* by Prince Ivan and the capture of Pronsk with the help of a Tatar detachment) and aggravate his relations with the Grand Duchy of Lithuania. Edigü wrote a letter to Vytautas, notifying him of the alleged urgent requests of the Duke of Moscow to organize a joint campaign against Lithuania; conversely, Vasily was warned about the aggressive intentions of Vytautas ([Complete Collection of Russian Chronicles, 15, p. 178–179; 18, p. 155] (see [Grekov, 1975, p. 247–266; Seleznev, 1999, p. 34–37])). The reality of this was confirmed by Vasily's hostile actions in accepting the service of a number of Lithuanian princes—Svidrigaylo Olgerdovich, Patrickei and Alexander Zvenigorodsky from Putyvl, Prince Semyon of Peremyshl, and other princes and boyars. In September 1408, a Tatar squad participated in the campaign together with Moscow troops against the forces of Vytautas, which ended in a confrontation on the Ugra River [Complete Collection of Russian Chronicles, 23, p. 142]. In response to this confrontation, Edigü accelerated his preparations for the raid.

Wishing to deflect suspicion and dull Vasily's vigilance, a delegation came to Moscow in the autumn of 1408 with the words, 'please know, Vasily, the tsar comes to Vytautas to take his revenge for what he has done to your land. You should honor the tsar, and if not you, then your son should go to the tsar and some nobles in fear' [Complete Collection of Russian Chronicles, 15, p. 182].

Just before Edigü's invasion of Moscow in early November, a Tatar defector arrived and 'told the Grand Duke Vasily Dmitriyevich, that the great prince of the Horde Edigü wanted to capture his land' [Ibid., p. 205]. Upon learning of the approach of the Tatar army, the Grand Duke sent a delegation headed by a certain Yuri, which was detained.

Edigü's invasion was swift. Winter campaigns were rare in the Middle Ages, since they required serious training of troops, sup-

plies, skillful organization and leadership talent. Edigü mobilized large forces for this campaign. Thus, according to Russian chronicles, the campaign involved 4 sultans: Buchek, Tengri-Birdi, Altyn-Emir and Bulat, as well as karachibeks and noble emirs: Muhammad, son of Iusup Suleiman; Tegin, son of Shah; Sarai, son of Urus-Shah; Ibragim, son of Temiryaz; Yaksha-Biy, son of Edigü; and Sentyali-Biy, Burak, Yerikli-Berdi, etc. In total, the army included more than 30,000 soldiers [Priselkov 1950, p. 468.; Complete Collection of Russian Chronicles, 15, p. 179–184, 482–484; 18 p. 155–158]. It is unlikely that the Tatar army was larger (the indicated number is 70,000 soldiers [Seleznev, 2001, p. 61]), as it would have been impossible to feed people, and more importantly, horses, in winter conditions and with a raging plague in Russia.

On reaching the borders of Russia secretly, the army of ulug karachibek Edigü began their raid on Moscow on 23 November 1408 [First Novgorod Chronicle, 1950, p. 400]. Along the way, the army captured Pereyalsavl Ryazansky and Kolomna. Without having time to organize resistance, Grand Duke Vasily handed command over the defense of Moscow to Vladimir Serpuhovskiy and his own brother Andrei. The duke himself and his family rode hastily to Kostroma. On 1 December, Edigü approached Moscow, but the white stone walls armed with guns, were impenetrable to him. After making a camp in Kolomna, Edigü blockaded the city and sent large forces led by Sultan Tegri-Birdi in pursuit of the Grand Duke. Some groups began to ravage North-Eastern Rus', successively capturing and burning Rostov, Dmitrov, Serpukhov, Zvenigorod, Pereyalsavl Zalessky and other towns and villages up to Klin on the Tver border. At the same time, another part of the troops under the command of 'a prince' (perhaps Entyak) operated in the area of Nizhny Novgorod, 'A prince came to Nizhny Novgorod, with many of the Tatars with him, and the Bulgars, and the Mordva'. These troops took and burned Nizhny Novgorod, Gorodets and ravaged their surroundings up to 'Belogorodye' and almost reached Kostroma. Turning back, they 'fought and massacred the remnants of lo-

cal people', passed through Nizhny Novgorod, and came to the Sura River, where they took and burned the fortresses of Kurmysh and Sarah [Complete Collection of Russian Chronicles, 15, p. 484].

Without siege engines for a direct assault on the well-protected city, Edigü sent a delegation to the Grand Duke of Tver, saying 'I hereby order you to come to Moscow immediately with your troops and with cannons and with mattresses, crossbows and all the vessels to ruin the walls of Moscow'. But the Grand Duke of Tver was in no hurry to execute the order and went to Edigü without guns and 'with a small squad'. Meanwhile, Edigü began to prepare for a long siege of the city, especially since Russia suffered from a drought and pestilence in the same year. He stood near the walls of Moscow for 3 weeks, when suddenly he received the news that one of Toktamys's sons, apparently Jalal ad-Din, attacked the Khan's camp, 'with a minor fight and without capturing the khan, but inspiring rebellions in the Horde, and after that he left'. Under these conditions, Edigü had to begin negotiations with the defenders of Moscow and took a huge ransom of 3,000 roubles. After that he moved to the Lower Volga Region, ruining the surrounding areas and taking people prisoners [Priselkov 1950, p. 468; Polnoe sobranie russkix letopisej, 15, p. 179–184, 482–484; 18 p. 155–158].

Edigü's raid damaged the prestige of the Grand Duke of Moscow and the entire economy of North-Eastern Rus', weakening the anti-Horde coalition of Russian princes for some time. The campaign was successful in military terms, but its political results were very limited, inferior in its consequences to Toktamys's campaign in 1382, it demonstrated a general weakening of the Golden Horde in Russia. At the same time, it was a great success, a lesson to neighbors and vassals about how dangerous and even fatal it was to ignore the legitimate claims and rights of the Khans. Simultaneously it showed that forces ready to challenge Edigü were reaching the boiling point in Ulus of Jochi.

A special role in this was played by Toktamys's sons, among whom Jalal ad-Din (Zeleni-Sultan in Russian chronicles) stood out.

After being defeated by Edigü, he fled to Moscow to Vasily, where he became famous for fighting the Horde. It was not without reason that Edigü wrote directly to Vasily in his *yarliq*, 'You have Toktamys's children at your court, that is why I came with my army'. After the raid in 1408, Jalal al-Din retreated to Lithuania, where together with his cavalry he participated in the famous Battle of Grunwald against the Teutonic Order [Dlugosz, 1962, p. 57, 73, 198]. After this victory, Vytautas supported the Sultan to help him regain his father's throne, but first conquer the Crimea.

It is possible, as M. Safargaliev believed, that Bulat Khan was killed in the fight against Jalal al-Din for the Crimea [Safargaliev, 1960, p. 185]. The throne was taken by Timur Beg, son of Timur Qutlugh, 'because of the agreement that he had with his father, according to the author "Anonymous of Iskender", and the situation in the country stabilized again: the sick state has become well again' [Collection of Works Related to the History of the Golden Horde, 1941, p. 134]. The new Khan undertook a successful attempt to return the Azov Sea Region, and besieged and stormed Tana, which had apparently helped the rebellious sultan, who once again fled to the court of Vytautas.

At that time, events took place in Ulus of Jochi that were fatal to its subsequent fate. Timur Beg, was put on the throne by Edigü and gave his daughter to him as a wife, 'to narrow the access for instigators' talks, thanks to kinship' [Ibid.], became tired of guarding this power-hungry noble. According to Ibn Arabshah, a contemporary of these events, Timur Beg 'did not hand his reins to Idik, saying, "He has neither fame nor honor for him; I am a good ram that everyone obeys; I am a bull that everyone follows; how could I go after anyone?". There was a rift between the two of them, a hidden hypocrisy, which resulted in distress and misery, wars and hostilities' [Collection of Works Related to the History of the Golden Horde, 1884, p. 472–473]. According to 'Anonymous of Iskender', 'some time passed, and people really liked Timur Sultan, and they wanted to destroy Edigü. There was hostility and anger between them, they fought (with each other) once or twice. Since the Uzbeks have always

been striving for a power of Chinggis Khan's descendants, they, out of imitation or respect, went to serve at the court of Timur Sultan. And he became strong' [Collection of Works Related to the History of the Golden Horde, 1941, p. 134]. After a defeat from the troops of Timur Sultan, in 1410 Edigü fled to Khwarezm, which was apparently the center of his clan. While pursuing him, Timur Beg besieged Urgench, where fierce battles between the two of them took place again, but the Khan could not win [Ibid.].

The Khan's absence in the Volga Region benefited Sultan Jalal al-Din and his brothers. They took Sarai; a lot of emirs, 'who during the reign of their father saw a lot of prosperity, came to them, and others followed on their heels' [Ibid.]. Thus, Khan Timur Beg was left without the Khanate, and when he tried to move troops to Sarai, his army deserted him. He escaped and 'this disaster killed him'. According to another version, he was killed by rebellious emirs of his own troops, which besieged Urgench, and were sold out to the new khan [Ibid., p. 134, 193–194]. These events occurred in 814 (1411/12) [Collection of Works Related to the History of the Golden Horde, 1884, p. 473]. Now it was the forces of Jalal al-Din that besieged the city where Edigü had taken refuge, but were unable to capture it. At the suggestion of Jalal ad-Din, they offered to make peace with Edigü, in which he had to recognize the power of the new Khan, give his son Sultan Mahmud as a hostage, and give up his wife,

Toktamys'h's daughter. Edigü agreed, and the troops withdrew from the city. However, the wily Khan did not want to leave Edigü alone. He sent a new army, which outnumbered Edigü's militia troops. But thanks to a ruse, Edigü defeated the army of Jalal al-Din, and captured a lot of his soldiers [Collection of Works Related to the History of the Golden Horde, 1941, p. 194]. Then he migrated with his clan to the Aral Sea Region.

Timurid Shahrukh again tried to take advantage of civil strife in Ulus of Jochi and win Khwarezm, but suffered a humiliating defeat by troops of Edigü's emirs—his army fled as

soon as it heard a false rumor that the formidable Edigü was in a hurry to rescue the city [Ibid., p. 195].

Meanwhile, Jalal al-Din noticeably consolidated his power. It is significant that in 1411, the Grand Duke of Moscow Vasily Dmitriyevich and Ivan, Prince of Tver traveled to the court of Jalal al-Din to receive their yarliqs to rule [Polnoe sobranie russkix letopisej, 18, p. 161]. However, he was not destined to rule for long. A conflict broke out between the brothers. According to the author of 'Anonymous of Iskender', the rebellion was initiated by Tatar clans, who were unhappy that he had pushed them out of power. As a result, 'the emirs were distressed and tempted him (that is, Jalal al-Din—I.I.), the brother of Sultan Muhammad until he fantasized about ruling. Spurred on by the emirs, he stuck his head out of the collar of turmoil. After his brother had ruled for one year, he suddenly grabbed him on the throne at midnight and mercilessly killed him' [Sbornik materialov, otnosyashixsya k istorii Zolotoj Ordy', 1941, p. 134]. Be that as it may, Russian chronicles also report that 'our evil enemy, King Zeleni-Sultan Takhtamyshevich Umrah, was shot in the war by his brother, Kerim Birdi' [Polnoe sobranie russkix letopisej, 11, p. 219]. It is unknown whether the Horde suffered a series of palace coups, or different authors had different sources, but it is known that Kerim Birdi's coins were minted in the Crimea, Sarai and Hajji Tarkhan [Savelyev, 1858 p. 320–321; Muhamadiev, 1983, p. 121]. However, his reign did not last long. Unlike the brothers, he apparently took a pro-Moscow stance, and Vytautas organized his overthrow at the hands of other sons of Toktamys'h—Betsabul (Bakhtibek) and Kubek (Kopek) (see: [Safargaliev, 1960, p. 189–190]).

In 1413, Edigü's son was expelled from Khwarezm by Timurid Shahrukh [Collection of Works Related to the History of the Golden Horde, 1941, p. 195], but the Manghits led by Edigü settled between the Volga and Ural rivers, once again becoming the base for a power struggle in Ulus of Jochi. In 1414, Edigü banished the sons of Toktamys'h and enthroned Khan Chekre (Chakra). Coins with his name

were minted in Sarai, Bulgaria and Hajji Tarkhan and dated back to 817–818 (1414–1416) [Saveliev, 1858 p. 324–325]. It is clear that his government was involved in constant warfare with another protégé of Vytautas, a son of Toktamys, Jabbar Berdi. Chekre apparently died in a war. In response to the support of the sons of Toktamys by the Lithuanian prince, Edigü undertook a raid on the south of Russia in 1416. This time, the devastation was really horrifying. According to a South Russian chronicler, 'Yedike, Hetman Tamerlyanov of the Tatar king captured the Russian land, and Kiev, and burned the Pechora Monastery, destroying it, depriving Kiev of its beauty, that it still has not managed to restore after that; but Yedike was unable to capture the fortress' [Complete Collection of Russian Chronicles, 2, p. 353].

However, in the same year, judging by the information of Abd al-Razzak Samarkandi, Jabbar Berdi 'forced Chinggis-Oglan (that is, Chekre—I.I.) to flee and seized the Öz Beg ulus' [Sbornik materialov, otnosyashixsya k istorii Zolotoj Ordy', 1941, p. 195]. His position was clearly unstable. The following year, in 1417, he was overthrown by another protégé of Edigü—Darvish Khan—who united a considerable part of Ulus of Jochi under his rule, since his coins were minted in 820–821 (1417–1419) in Sarai, Saray-Jük, Hajji Tarkhan, Bulgaria and Derbent [Markov 1896, p. 503; Muhamadiev 1983, p. 122–123]. According to Arab sources, there was a man at Edigü's court 'who belonged to the family of Chinggis Khan, named Dervish, placed (above them) by Edigü as the khan, but (in fact) the authority to order and forbid was his (Edigü's). Dervish was khan in name only' [Sbornik materialov, otnosyashixsya k istorii Zolotoj Ordy', 1884, p. 532]. In 1417, Jabbar Berdi fled to the Crimea to the Italians, but Edigü's troops chased him, attacked Tana and destroyed it. Then Edigü stormed into the Crimea and besieged Kaffa. Following a long siege, the Genoese made peace with Edigü and expelled the son of Toktamys. He fled to Lithuania, where he died at the end of that year (see: [Safargaliev, 1960, p. 193]).

However, the fight for the khan's throne did not stop there. Vytautas provided considerable

support to another son of Toktamys—Kadyr Berdi—who was able to oust Edigü and Dervish from the Volga Region. According to al-Ayni, Toktamys's son Kadyr Berdi 'was constantly at war with Edigü because of the ruling. This year (that is, 822 AH / 1419–1420) Kadyr Berdi (again) went after Edigü; and Edigü (for his part) fought against him. They met, and there was a great fight and a fierce battle between them. A lot of people from both sides were killed; Kadyr Berdi (himself) was killed during the battle, and his companions fled. Edigü also suffered multiple wounds during the fight, and his troops also took flight'. 'Left alone, Edigü was the victim of a random group of Kadyr Berdi's soldiers, who found him wounded and "cut him to pieces' [Collection of Works Related to the History of the Golden Horde, 1884, p. 532]. There are other versions of his death; for example, Ibn Arabshah wrote that Edigü drowned [Ibid., p. 473]. All of this information is semi-legendary, suggesting that Edigü's death was the result of an accident.

This was how the life of this great warrior, commander and controversial statesman ended. Even hostile chroniclers called him 'Grand Prince in all the Horde, and of good courage, and strong, and exceedingly brave' [Complete Collection of Russian Chronicles, 11, p. 173]. After his death, the single great empire of Ulus of Jochi ceased to exist. According to al-Ayni, 'when all this happened, the Desht kingdom was governed by one of Chinggis Khan's family members, named Muhammad Khan, but constant turmoil and uprisings made things fall apart (finally)' [Collection of Works Related to the History of the Golden Horde, 1884, p. 533].

Thus, a new attempt to restore the stability of Ulus of Jochi by successful government, ideological and economic reforms (strengthening centralization, monetary reforms, the introduction of Islam, etc.), made by a talented military leader and diplomat ulug karachibek Edigü really strengthened the country and removed internal strain for a while.

However, they could not restore its former stability. The time of great power of the Golden Horde had passed, and its fall was inevitable. This tragic event is vividly and eloquently narrated in the Tatar epic poem 'Edigü':

... A dark day has come to the world. The throne created by Chinggis became the seat where blood flowed. The Khan's Palace is gone. The ravaged land became empty. Azhdarakan, Kazan and Crimea became independent, and the Golden Horde broke up.

Even after Ulus of Jochi had collapsed, its historical destiny was not over, because the Tatar people who had gone through this period of history managed to preserve their rich culture. Post-Golden Horde khanates emerged on the territory of Jochid Ulus. They continued its ethnopolitical and culture and civilization traditions.

Among the most important consolidating factors were the preservation of the former so-

cio-political structures, the clan system, which went back to the history of Ulus of Jochi and united the Serving Tatars, as well as myths and ethnopolitical unity and a common religion—Islam. It is clear that the Muslims of the Golden Horde, especially the nobility and the nomadic population, were united not only by the adoption of Islam, but also through a special institution of Seyids (Seyds). It is no accident that in some late Golden Horde Tatar khanates Seyids (Seyds) served as heads of the local Muslim clergy, since their genealogy was allegedly traced back to a common ancestor who lived in the era of Ulus of Jochi [Iskhakov, 1997v, p. 21]. These very real ties and mechanisms of social and religious unity, of course, were based on the Golden Horde ethno-political unity and symbols, which originated from the idea of the unity of the 'Tatars' as the clan aristocracy, the 'upper crust' of society, throughout Ulus of Jochi.

CHAPTER 4

The Collapse of the Ulus of Jochi and its Legacy

§ 1. Agony of the Empire

Iskander Izmaylov

In 1420, when Edigü was defeated and killed in a battle with the sons of Toktamysh, the final collapse of the Empire began. Several contenders for power appeared in the country, who in fact divided it into separate principalities. In the western part of Ulus of Jochi, supported by the Grand Duchy of Lithuania, power went to Ulug Mohammed, and the Kok Horde became a place of a fierce struggle between the Chinggisids.

At that time, the Kok Horde separated from Ulus of Jochi. The separation process was led by Ulus of Shiban. Hajji Muhammed became its ruler (1420–1430); he was the son of a descendant of Ali and Bahadur, the second son of Shiban and a grandson of Jochi. During the period of civil strife in 1416–1420, he supported Edigü in his struggle for power, fighting in his army against Kadyr Berdi. After Edigü's death, Hajji Muhammed did not recognize Khan Ulug Muhammed, and with the support of Edigü's son, the Nogai Murza Mansur, joined the right wing uluses of the Kok Horde. He founded the Siberian (Tyumen in the Russian tradition) Khanate with its center in Chinggi-Tur (now Tyumen), where he was proclaimed the Khan. In 1421, he became involved in a fight with another khan of the left wing of the Kok Horde, Barak, but was defeated and subordinated to him. Barak also began his career at the court of Edigü, but after his death he fled to Samarkand, to Timurid Ulugbek. Enlisting the support of his military forces, he returned to the Kok Horde and subjugated it. In 1421–1422, he invaded the Volga Region and defeated the forces of Ulug Muhammed, forcing him to retreat to Podolia. For a short time, he established his authority over most of Ulus of Jochi. In 1425, he even

minted his own coins in Bolgar. But in 1425–1426, he was defeated by Ulug Muhammed and withdrew to the Volga Region. He defeated Ulugbek there and ravaged Mawarannahr, forming his khanate with Sygnak as its capital.

Taking advantage of the weakening of Barak in 1427, Hajji Muhammed revolted against him, contributing to his defeat in the war with Moghulistan. After the death of Barak (1428), Hajji Muhammed united Siberian uluses from the Tura River and Tobol River with the Ishym under his rule. But when he started the war in the Aral Sea Region to annex the entire Kok Horde, it caused riots among the Siberian nobility. In 1428–1429, Hajji Muhammed won the battle near Jatar-Jalkin, defeating the rebel forces of Shibanid Jumadyk, proclaimed as the khan, and executed him. However, he was forced to pardon other rebels. Next year, they revolted again, supported by troops led by Nogai Murza's grandson Edigü Ukkas (Wakkas). The rebel shibanids proclaimed Abu-l-Khair, great-nephew of Hajji Muhammed, as their khan. In the battle on the Tobol River, Abu-l-Khair defeated Hajji Muhammed, took him prisoner and executed him (1430).

In 1431, Abul Khair invaded Khwarezm, where, with the support of a number of Tatar clans headed by the Kungrats and Manghits, he founded a new khanate, the so-called Öz Beg Khanate. In 1440–1443, he fought with Mustafa, the ruler of Hajji Tarkhan, and banished him. He fought with the Timurids. In 1446, he captured the Lower Syrdarya and Jend, Sawran and Sygnak. The latter became the capital of his Khanate. In the 1450s, Abu-l-Khair, seeking to consolidate his power, executed Ukkas, who caused discontent and

rebellion of the nomadic nobility and the Manghit clan. Taking advantage of his weakening in 1454, his lands were invaded by the Oirats (Kalmyks), headed by Uz-Timur-Tai-shi, who defeated his forces in the battle of Kuk-Kushany (near Sygnak) and forced him to sign a peace treaty. The weakening of his power led to the desertion from his troops by the Manghits and Kazakh horde led by Giray and Janibek, who formed their own Kazakh Khanate. In 1468, Abu-l-Khair undertook a campaign in Moghulistan, during which he died and was buried in Sygnak.

After the death of Edigü in 1419/20, Ulug Muhammed (Ulu Mahmed, Tsar Mahmed in Russian sources), supported by the Grand Prince of Lithuania Vytautas, took control of the western part of Ulus of Jochi. Ulug Muhammed was a son of Ichkele-Hassan, and a descendant of Tuqa-Timur, a son of Jochi (see: [Iskhakov, 2002]). Coins with his image started being minted in several uluses (Bulgar emirates, cities of the Lower Volga Region, etc.). In 1421/22, Ulug Muhammed was defeated in the war with Barak and retreated to the Lithuanian border. In 1423, Ulug Muhammed, with the support of Lithuanian Grand Prince Vytautas, defeated Barak and forced him out of the Crimea, and from the Volga Region in 1424/ 25. In 1426, Ulug Muhammed re-established his hold over the western part of the Golden Horde, strengthening his power, took part in campaigns against Rus' and the Livonian Order on the Lithuanian side (campaign to Pskov (1426) and Ryazan (1427). At the same time, Ulug Muhammad struggled with rebellious Chinggisids. In 1427–1429, he defeated Devlet Berdi, who was killed (1429), and took Crimea from him. The strengthening of Ulug Muhammed's power enhanced the international standing of the Golden Horde. In 1428, Ulugh Muhammad established diplomatic relations with Ottoman Sultan Murad II [Sultanov, 1978], and in 1431/32, taking advantage of the feud between Russian princes Vasily II and Yuri Dmitrievich, he strengthened the dependence of the Grand Principality of Moscow on the Golden Horde, issuing a yarliq for a grand principedom to Vasily II, on condition of reg-

ular tribute payments [Gorsky, 2000, p. 142–143]. Strengthening of the khan's power by Ulug Muhammed angered some of the nobility, especially Manghit (Nogai) biys. This was used by the Jochids opposed to Khan Ulug Muhammed, who started the offense against him. In the winter of 1436/37, he was attacked by Khan Kichi-Muhammed, and Nogai Emir Nawruz, son of Edigü, took his side. Their armies defeated Ulug Muhammed, forcing him to retreat to the north to the border between Rus' and Lithuania (winter 1437). Vasily II sent principal regiments, which multiply outnumbered the Tatars of Ulug Muhammed, who entrenched in the Lithuanian town of Belyov. However, the Moscow armies suffered a devastating defeat in the battle (5.12.1431).

After that, in spring 1438, Ulug Muhammed's clan apparently left for the Middle Volga Region. According to several historians (S. Solovyov, M. Khudyakov, R. Fakhrutdinov, and others), Ulug Muhammed subjugated Kazan in 1438. Entrenched in Kazan, Ulug Muhammed started an attack on the Grand Principality of Moscow. The excuse for military pressure on Moscow was that he considered himself the only legitimate ruler of Ulus of Jochi, to whom the Grand Prince of Moscow had the obligation to pay the 'Horde tribute'. In 1439, Ulug Muhammed suddenly approached Moscow and besieged it, after devastating its outskirts. The campaign apparently led to peace between Moscow and Kazan. However, in 1445, the Khan suddenly died. According to various reports, he was killed in a coup. His son Mahmud became the ruler of Kazan and actually the first Kazan Khan in fact and in law.

All in all, Ulug Muhammed Khan was an outstanding statesman and military leader of the Golden Horde. During his rule, the Golden Horde was united into a single state for the last time, with recorded contacts with many countries of medieval Eurasia, particularly with the Ottoman Turkey. Its defeat marked the beginning of a new era of the Tatar Khanates. He also played a great role in the formation of the Kazan Khanate, the national Tatar state, where a dynasty from his clan initially ruled. Thus, this historical figure united the

Findings from a burial. Middle Don region.
13–Mid-14th centuries
(according to V. Kravets, V. Verezutsky, A. Boiko)

Golden Horde and the new Kazan Khanate, establishing succession and consistent development of traditions.

After the expulsion of Ulug Muhammed, Kichi-Muhammed became the ruler of the western part of Ulus of Jochi. However, his rule was not strong and did not extend over the entire country. Hajji Giray, who took the Crimean throne from hands of Grand Prince of Lithuania Casimir in Vilnius, returned to Crimea, establishing his own Khanate. As early as 1443, he minted his own coins with the title of 'Supreme Sultan' in Qırq Yer. [Markov, 1896, p. 583]. The creation of a new Khanate was apparently supported by influential clans of Crimea—Yashlav (Suldzheut), as well as by Shirins, Baryns, and Arghyns.

Kichi-Muhammed (Kichi-Ahmad, Mahmet in Russian Chronicles) (1437–1450) was a son of Timur Khan and a grandson of Timur Qutlugh. He was apparently brought

up at the court of Edigü, and ruled autonomously in the Trans-Volga Region after Edigü's death. In 1436, taking advantage of the decline of Ulug Muhammed's power in Ulus of Jochi, Kichi-Muhammed invaded the Lower Volga Regions, where ulugh karachibek Nawruz, a son of Edigü went over to his side. In the late 1430s to early 1440s, after a number of internecine wars with Sayid Ahmad, who was entrenched in the west, Kichi-Muhammed took the Don and Volga River Regions. His power increased considerably in the 1440s, as evidenced by regular exchange of embassies with Moscow and the tribute paid by the latter. In 1442–1443, Kichi-Muhammed tried to launch an offensive against Rus', but was stopped at the Oka River. In the late 1440s and 1460s, Sayid Ahmad pushed him out of the Don River Region. In fighting with Sayid Ahmad, Kichi-Muhammed tried to find make the Grand Principality of Moscow an ally. Ulus of Kichi-Muhammed was the last fragment of the united empire of the Jochids—Ulus Ulug, which was

called the Great Horde in Russian, and this became the name of this state among contemporaries and in Russian historiography.

Kichi-Muhammed's opponent was Sayid Ahmad (Sedi Ahmad, Sidi Ahmad in Russian chronicles), who was a son of Kerim Birdi and a grandson of Toktamys. He lived at Ulug Muhammed's court, but after the decline of the latter's power in the Mid-1430s, he confronted him, traditionally relying on the support of Lithuania. After Ulug Muhammed was forced out of the steppe by Kichi-Muhammed (autumn 1437), Sayid Ahmad took Crimea, making it his ulus, and took the entire Black Sea Steppe in the early 1440s. From here, he undertook regular military campaigns against his neighbors, trying to subjugate them to his rule. In 1442, Sayid Ahmad invaded Podolia and came up to Lviv; in 1444 he invaded Lithuania; and in 1447, he again invaded Podolia. In 1449, he helped the rebellious prince

Mikhail, a grandson of Kęstutis, to take control of Kiev. The Khan's aggressive policy angered his own ulus. Supported by the Polish king Polish king Casimir IV and the Shirin clan, Sultan Hajji Giray separated in 1449 and declared himself a Khan, after retaking the Black Sea Region from Sayid Ahmad.

However, Sayid Ahmad himself managed to defeat Kichi-Muhammed and force him out of the Don River Region (about 1449). From here, the armies of Sayid Ahmad started invasions into Rus': Sultan Mazovsha besieged Moscow in 1441; armies invaded the Moscow region in 1449 and the Oka River Region in 1466. These raids resulted in tribute being regularly paid by the Grand Prince of Moscow Vasily II the Dark. However, during a campaign against Lithuania in 1456, Sayid Ahmad was defeated and captured by Prince Semen Olelkovich of Kiev. The defeat weakened his ulus, and it was taken by Khan Ahmad in the early 1460s.

Khan Ahmad (Ahmat, Ahmut in Russian sources), the Khan of the Great Horde (1459–1481), was a son of Kichi-Muhammed. Ulus of Ahmad or Ulug Ulus (the Great Horde in Russian sources) was situated in the Lower Volga and Don regions. The Grand Principality of Moscow refused to acknowledge his rule, which led to an invasion of Tatar forces into Rus'. In the summer of 1460, Ahmad campaigned against Pereyaslavl-Ryazansky, but after an unsuccessful siege he retreated to the steppe. The Moscow prince obviously came to certain terms with the khan, since major invasions temporarily ceased.

In 1469, Ahmad drastically strengthened his power after capturing the ulus of Sayid Ahmad and become the most powerful khan in the western part of Ulus of Jochi. This success allowed him to start active diplomatic efforts to enhance his international standing in the 1470s. In 1471–1474, he negotiated with Venice, promising his assistance in its struggle with the Ottoman Turkey; and in 1470–1471 he established a military alliance with the King of the Polish–Lithuanian Commonwealth Casimir IV. Ahmad's military and political efforts were aimed at restoration of the powerful Ulus of Jochi. However, Crimea and Moscow opposed the strengthening of his power. The war

15th century dirhams 1–Devlet Birdi,
2–5–Ghiyas al-Din, 6–15–Ulug Muhammed
(according to A. Muhamadiev)

between Khan Ahmad and Rus' started in response to an attack of the Russian fleet on Sarai and its devastation (1471). In the summer of 1472, Ahmad invaded Rus', and bypassing the fortifications at the Oka River, besieged and took Aleksin on 31 July 1472. Here Ahmad waited for help from Casimir's army, which never came, and he retreated to the Horde.

Trying to weaken Ahmad's power, the Moscow Prince Ivan III established close ties with the Crimean Khan Mengli Giray in 1474 and the Kazan Khan Ibrahim (visit of Sultan Murtaza in 1472).

In 1476, Khan Ahmad invaded Crimea twice, defeated Mengli Giray, who was supported by the Ottoman Empire, and replaced him with his appointee Janibek, insisting on his rights to the entire territory of Ulus of Jochi. After consolidating his power in Horde, Ahmad sent an embassy demanding that Ivan III come for a principality yarliq and pay tribute (1476) (about relationships between Moscow and Ulug Ulus see: [Gorsky, 2000, p. 163–177]). After Ivan III refused, Ahmad started to prepare to war, but in 1477–1479 his power abruptly

weakened. In the spring of 1479, Khan Mengli Giray, supported by the Ottoman Empire, took control over Crimea, but the Kazan and Astrakhan Khanates were opposed to strengthening of his power. After a long struggle, Ahmad defeated Öz Beg Khan Sheikh Haider and subjugated Astrakhan in 1479.

In 1479/80, Ahmad resumed the alliance with Casimir IV and started preparing for a major campaign against Moscow. In the summer of 1480, Ahmad invaded Rus', but was stopped at the Ugra River. The successful operations of Ivan III and the campaign of the Crimean khan against Lithuania prevented a successful outcome of the campaign and did not allow Casimir to provide him with military assistance. After standing at the Ugra until November 1480 and devastating the neighboring regions, Ahmad retreated. The actual defeat broke his power on the steppe. In the winter of 1480–1481, the Siberian Khan Ibak

(Aibak) and Nogai Murzas Musa and Yamghurchi opposed him. After attacking Khan Ahmad's quarters in the Don region, they destroyed it and killed the khan. After Khan Ahmad's death, the Great Horde actually collapsed. It finally ceased its existence, when the Crimean Khan Mengli Giray defeated Ahmad's sons in 1502 and started to call himself the khan of Ulug Ulus, claiming supremacy over the other khans of Ulus of Jochi. However, these claims were rather already more ideological claims that were supported by any real military and political power.

Thus, the collapse of Ulus of Jochi was inevitable after Edigü's death. For eighty years, the catastrophically collapsing empire went through violent agony, and new Khanates emerged within its territory—Siberian (1420), Crimean (1428), Kazan (1438) and the Great Horde (Ulug Ulus). A new ethnopolitical situation emerged.

§ 2. The Ulus of Jochi as the Precursor to the Russian State

Aleksandr Kadyrbayev

The sources of the phenomenon of the Russian imperial statehood, vividly embodied by the Muscovite state at its zenith and the Russian Empire, are based on the synthesis of three components: the old East Slavic state of Kievan Rus', the ideological and cultural tradition of the Byzantine Empire through the Orthodox Christian religion, and the imperial legacy of the Golden Horde.

The dispute over the Eurasian legacy of Ulus of Jochi is still relevant today. This is why the problem of the legacy of the Golden Horde is of considerable interest not only for Turkic nations of Eastern Europe and Central Asia, but also for Eastern Slavic and Finno-Ugric nations. The sources of this problem are rooted in the age of Mongol conquests of the 13th century.

With all its tragic elements, the Mongol age was not so clear and simple. This is also true for such complex conglomerates as the empires of Chinggis Khan and his first succes-

sors, including the Golden Horde. Therefore, a completely negative attitude to the entire Mongol conquest and everything related to it is obviously not entirely appropriate. In particular, this opinion was shared by a serious investigator of that epoch, V. Bartold [Bartold, 1963–1977, 1–9]. Created primarily as a result of bloody conquests, these empires subsequently played a civilizing role as well. After all, the creation of empires, despite all aversion to violence and blood, are human efforts at integration, although far from perfect. This is illustrated not only by the empires of the Achaemenids and Alexander the Great, Rome, Arab Caliphate, and the Ottoman, Russian, and British empires, but the actual results of the Mongol expansion. The states created after the campaigns of Chinggis Khan and his first successors, a vivid example of which was Ulus of Jochi, which also included Rus', were a motley picture in all respects. Moreover, much greater political stability was noted after the establish-

ment of these states across Eurasia from Eastern Europe to Central Asia and China.

In addition, the absence of spatial barriers within these widespread empires created the opportunity for convergence of Eurasian nations. For a long time, the cultures of Turkic, Mongol, Eastern Slavic, Finno-Ugric, Caucasian, and other nations of Eurasia were formed within in a single network. This brought them closer and largely determined the similarity of the lifestyle and outlook of these nations, and finally led to their association into multinational states, just like the empires of Chinggis Khan's descendants, such as Ulus of Jochi. Therefore, a strictly negative attitude toward them as 'wild' would be historically unfair.

After the collapse of Chinggis Khan's empire, the Old Eastern Slavic lands were included in Ulus of Jochi. The Mongols only brought their own social structure to the Dasht-i Kipchak steppes controlled by them; but with respect to Rus', the conquerers were satisfied with its total submission and establishing an institution of tax collectors (*baskaks*) within its lands, but without changing the social structure. Later, local Russian princes who accepted the rule of Ulus of Jochi, were charged with tax collection, as well.

The Russian Orthodox Church was exempted from taxation granted by special *yarliqs*, which protected church property from arbitrary decisions of secular authorities. This situation remained in Ulus of Jochi even after Khan Öz Beg declared Islam the official religion; this situation was unparalleled in other Islamic empires. In 1261, an Orthodox eparchy was established in Sarai, the Golden Horde capital. Thus, the Jochids, the descendants of Chinggis Khan, fulfilled his precept to be tolerant toward representatives of different religions. Therefore, the statement that the Russian Orthodox Church encouraged Russian society to struggle against the Golden Horde rule is debatable, as is the opinion that the defeat of Mamai's Horde forces at Kulikovo field undermined the power of Ulus of Jochi in Rus'. The victory of the coalition of Russian principalities led by Moscow over Mamai, who was not even a Khan of the Golden Horde and headed only part of

Golden Horde forces, was rather of moral and psychological importance, not for Ulus of Jochi, but for Rus' as its first major victory over Horde forces in over 150 years. soon after the battle of Kulikovo, Khan Toktamysch seized and destroyed Moscow, restoring the status quo. Ulus of Jochi was crushed by the Samarkand ruler Timur, the founder of a global empire from Asia Minor to the Chinese border, who undertook three campaigns into China. Towns of Ulus of Jochi were destroyed, and caravan routes moved south to Timur's lands. The Golden Horde was unable to recover from these shocks and collapsed into individual lands: the Great Horde, Crimean, Kazan, and then Astrakhan Khanates and Öz Beg Ulus, on ruins of which the Nogai Horde, and Kazakh and Öz Beg khanates were created, as well as the Grand Principality of Moscow, where the military organization, taxation system, embassy customs, and protocol tradition of state chancelleries operated according to Golden Horde examples, and the title of Khan and affiliation with the Chinggisid clan were very valuable. The Russian nobility would easily find correspondence for its titles in the Golden Horde system and consistently followed Horde practices [Trepavlov, 1998, p. 101–114]. Practices in Ulus of Jochi and in Rus' were so similar that as early as in the 15th century Russian tale 'Zadonshchina', Rus' was called 'Zalessky Horde'. In the turn, Chingissids were treated 'above boyars in honor' [Landa, 1995, p. 44–67]. The belief in having the right to rule over Moscow and its lands still lived in the conscience of the Turkic nobility of post-Horde Khanates and even among descendants of the Horde nobility within the Moscow aristocracy for a long time, right up to the Mid-16th century. Eventually, it became a reality in the enthronement of Boris Godunov, a descendant of Murza Chet of the Golden Horde. It was Godunov, who, with his edict, equalized the Chinggisid khans of the Moscow vassal Kasimov Khanate, who were, in fact, Muslims, with Georgian Orthodox *tsareviches* who lived in Moscow, and with the highest clergy of the Russian Orthodox church. Descendants of Horde nobility played an important

role at the tsar's court later as well, through intermarriage with the Romanov dynasty ruling Russia in the Mid-17th century.

Although the Chinggisids created their empire by military means, their state was not based only by military force, which accounts for their nearly 300-year rule over Rus'. The words of the ancient Chinese sage Lu Jia, often attributed to Confucius, proved to be prophetic: 'You can conquer an empire sitting on a horse, but you cannot rule it from a horse'. In Rus', descendants of Chinggis Khan were better able to adapt to the local environment and create a more efficient system for managing conquered territories than in China, as in the Yuan Empire, or in Iran, in Hulaguid Ulus of the Ilkhans, where they ruled for a much shorter period of about 100 years.

Rus', for its part, had spiritual and military support from its mother country, the Golden Horde, in numerous wars with Catholic Europe, which had declared a crusade against Rus' and the Horde. Thus, the choice of Prince Alexander Nevsky, the slayer of Swedes and Teutons, an 'adopted son' and favorite of Batu Khan, was made in favor of the alliance with the Golden Horde. This choice was authorized by the Russian Orthodox Church, which was clearly confirmed by the beatification of Alexander. In the Golden Horde age, this choice was also preferred by other eminent persons of Rus', such as the Grand Prince of Moscow Ivan Kalita. It was the Golden Horde system that later became the prototype of Russian imperial statehood. This manifested itself in establishment of authoritarian tradition of ruling, a rigidly centralized social system, and discipline in military science, and religious tolerance. Of course, there were substantial departures from these principles during certain periods of Russian history. In addition, Rus' and other lands controlled by Ulus of Jochi were involved in the more advanced fiscal system of the Golden Horde empire; the conquerors created an efficient yam system of communication, which outlasted ages, a network of postal organizations within a significant part of Eurasia, including the territory of future Russia. The Golden Horde legacy included the custom (however, not always

during Russian history) of avoiding assimilation of new lands, both conquered and annexed by the Russian State without bloodshed, and preserving the lifestyle, religion, and language of subject nations.

The Russian imperial idea is largely a synthesis of Golden Horde and Byzantine imperial traditions, which have both similarities and differences. Both Byzantium and the Golden Horde were large Eurasian Powers, and the Russian Empire inherited this feature from them. In terms of differences, the Byzantine legacy can be traced primarily in its spiritual life; and the Golden Horde legacy, in the practice of state structure and management, but not exclusively. The difference is also that the Russian Empire was the only inheritor of Ulus of Jochi, which was imperial, while the imperial successors of Byzantium, along with Russia, included the Ottoman Empire. However, the true superiority of Russia as a great state was not created by the East Slavs, Varangians, or Byzantines, but by Horde. Historically, Old Eastern Slavic statehood did not develop up to the imperial level, but fell into disunity and failed under attacks by Turkic-Mongol conquerors, who created a global Eurasian state, the Golden Horde, which became the precursor of the Muscovite state and the Russian Empire.

After being included in Ulus of Jochi, the nations subject to this empire did not stop in their development. However, the directions of this development changed radically, which eventually led Rus', for example, up hegemony among Eurasian Powers. By the late 15th century, Rus', in the form of the Muscovite state, became a decisive force in the great competition between tsardoms that were successors of the Golden Horde. This struggle for hegemony in the Eurasian legacy of the Golden Horde lingered up to the late 17th century, when the Muscovite state ceased to pay its, however irregular, "memorial" tribute to the Crimean Khanate, its major rival in the struggle for the legacy of Ulus of Jochi.

As part of the historical past, this rivalry also left its mark in the form of numerous Russian princely families of Turkic origin, which had their roots in both the times of the

Golden Horde and the latter epoch [Baskakov, 1979]. The final chapter in this age-old competition ended in favour of the Russian State in the latter half of the 19th century, when the last Turkic state, the Khiva Khanate, a successor of the Golden Horde, on the lands of ancient Khwarezm, became part of the Russian Empire. History made the next turn

of its spiral, and everything came full circle [Kadyrbaev, 2003, p. 66–75]... A Eurasian state was revived, but in another guise. Thus, the answer to the ways of reviving Russia as a large state appears to lie in the historical tradition of forming its imperial statehood, where the legacy of the Golden Horde is very noticeable.

CONCLUSION

Mirkasym Usmanov

A lot has been said about the Ulus of Jochi so far. However, an all-round, comprehensive scientific interpretation of the history of this huge state, extremely complex in its formation, ethnic composition, culture and history, in fact a global empire of the Middle Ages, has not yet been established. Like the past of a number of countries and states, the history of the state of the Jochids in widely available literature, first and foremost in textbooks (these most efficient means of influencing minds), is framed in all manner of myths and legends and labelled with negative epithets.

Of course, in spite of this overall picture and the prevailing historiographical tendency in respect of the Golden Horde in general, studies of quite satisfactory quality have been written on special or particular topics. This refers above all to a fairly consistent elucidation of the phases of the Mongol conquests in eastern Europe in the 1230–1240s. They also include, for example (regardless of the aims of the research and the proposed conclusions), themes on the history of the political interrelations between the rulers of the Ulus and the Russian princes during the epoch of dependence, although these treat the history of the state of the Jochids only as an external factor.

Particularly noteworthy are the fundamental works of domestic Orientalists, who have published written records, which still remain in scientific use as primary sources of information.

Interesting developments, although incomplete in their content, are presented on the topic of the history of the interrelations between the Jochids and individual countries of the East, such as Egypt of the Mamluks, Iran of the Hulguids.

Significant successes have been achieved in the archaeological studies of certain monuments of the Volga Region and the Crimea. An entire civilisation; the urban Islamic culture of medieval eastern Europe has been raised from oblivion by the works of F. Ballod, G. Fedorov-Davydov and his students and followers.

Achievements have been made in the study of the socio-economical features of the empire, including developments in financial and monetary matters. However, the possibilities of the numismatic legacy have not yet been exhausted...

At the same time, despite these individual achievements, the interpretation of the history of the Ulus of Jochi is, in many respects, presented fragmentarily, torn into individual stories studied with varying degrees of completeness.

This work, presented for the judgement of the readers, is the first to make an attempt at elucidating the history of the Ulus of Jochi in a multi-faceted and, as far as possible, systematic manner. It is treated not in a narrow sense, like the history of one or two later nations, even though they may be 'titular', but much more broadly, as the historical events were actually played out at that time. After all, the state of the Jochids left—whether we like it or not—an indelible mark on the history of a dozen or so nations and numerous tribes inhabiting the areas from the Altai-Sayan Region in the east to the Danube and the Balkans in the west. Hence, those peoples whose descendants continue to live in these territories to this day.

However, it must be admitted that this work fails to deal with all questions and interpret them in the proper manner, for two main reasons. Firstly, the history of several nations from the above-mentioned territories, lacking their own national identity both in the past and at present, was quite undeveloped at different periods in history.

Secondly, as a result of this, there is a lack of experienced experts on the medieval history of a number of regions of north-western Eurasia and the nations inhabiting them. To put it more simply, it was a problem to find appropriate writers on a specific topic. For this reason, some topics and themes have remained completely untouched.

There are other insufficiently developed, as yet incorrectly conceptualised problems of a

general nature that are essential for an understanding of certain peculiarities of the political history and social relations of both the Golden Horde itself and other states, including the Tatar state, which emerged at the time of its collapse.

Many basic institutions of the public and social, state and political, administrative and management structures of the Mongol super-state, and hence the Ulus of Jochi which had broken away from it, are rooted, as has been established, in the Central Asian sources of the pre-Mongol period, that is, in the peculiar nomadic civilisation, which over the millennia had adapted to the harsh geographic and climatic environment and had also been subjected to the influence of the Old Chinese culture. Thus, these 'children of nature' had their own simple and at the same time quite complicated rules of life, their own ethical paradigms and legal norms, existing in the form of customary law. Many components and elements of these principles and norms formed, as has been shown, the basis of Chinggis Khan's *Yasa*, the provisions of which were also applicable in the state of the Jochids. Thus, for a better understanding and, consequently, more correct interpretation of the features of the socio-political relations in the Golden Horde and other Tatar states, including their interrelations with the subjugated neighbouring countries and peoples, a knowledge of the basics of these moral principles and legal norms is essential. We will illustrate this with several examples.

The position and role of women in the upper strata of the nomadic society are of particular interest. The fact that women ruled the empire and state after the death of their husbands as female regents, which they did for years (for example, after the death of Chinggis Khan and Ögedei), and that the monarch's ladies actively intervened in state affairs, in throne-related intrigues (Ergene Khatun in the Chagatai ulus; Taidula in the Golden Horde; Nur-Sultan in the Crimea; Goharshad, Süyümbike in Kazan—the list goes on) demonstrates, apart from the personal traits of these women, certain underlying peculiarities of the customs and legal norms.

It would appear that the well-known religious tolerance of the Jochids, more precisely

of the early Chinggisids, expressly legalised in the *Yasa*, is also linked to the culture and mentality of the nations of pre-Mongol Central Asia, where different religions had coexisted for ages. It is characteristic that the same nation (for example, the Uighurs), who repeatedly changed their religion, did not attempt to completely destroy the monuments and traces of their former religions.

Hanafi Islam in the Ulus of Jochi also showed tolerance to other book religions. The tradition was also preserved later on. For example, in the Kazan Khanate there were no attempts to force Christians, even those captured, to convert to Islam.

The particulars of the interrelations between the uluses that had become independent are an extremely complicated question in the history of the post-Chinggis's Mongol Empire, including its final political collapse in the late 1260s. If we have a more or less detailed knowledge of the interrelations between the Jochids and the Hulaguids, this cannot be said of the relations with the Chagataid Khanate in the 13th to the early half of the 14th centuries. The question is made even more complicated by the consideration of the history of the connections between Sarai and Khanbaliq, that is, the capital of the Yuan Empire of the same period. The allocation of part of the taxes from the lands of the great Khan in favour of the Sarai rulers and the Jochids' provision in the 14th century of individual tumens of warriors from amongst the dependent Ases, Russians and Kipchaks for service in China, plus the existence of personal land plots of the Jochids in the Far East and of the great Khans in the Golden Horde, all require special investigation.

It would appear that certain little-known norms of legal and interstate relationships applied to some uluses of the formerly united Mongol Empire. If, prior to the collapse of the super-state, interrelations between the uluses had, tentatively speaking, a federation-like format, then after the collapse they assumed the resemblance of a kind of 'confederation'. Therefore, it is not simply a matter of asserting that the empire disintegrated into independent states at such and such a time, as this is contra-

dicted by the above facts. It is to be hoped that a special study and comprehension of these aspects of the inter-ulus relationships would promote a better understanding of the political history of the individual parts of the former super-empire and the Golden Horde itself, as well as the history of its 'fragments'—the Kazan, Crimean, Astrakhan and Siberian Khanates and the Great Horde, amongst which, as is well known, there were 'claims to the throne', which also facilitated their own downfall.

Just as essential as these general matters for a better understanding of the culture and everyday political life of the population and states of Central Asia as a whole and the state of the Jochids in particular are a number of specific, unresolved questions on the history of the Ulus of Jochi itself. For instance, the problems of the localisation of the Ak Horde and Kok Horde (White Horde and Blue Horde) have long been discussed. Contradictory, at times diametrically opposing, opinions have been expressed. The picture has now acquired a more definite form, although questions relating to the borders between them and their administrative, as well as political and legal interrelations, remain inadequately clarified.

There still remain the complex and obscure matters of interrelations between the individual tribes, families and clans of the nomadic part of the population of the Ulus of Jochi, who were known to have played a role in the 'great troubles' and 'thronal merry-go-round', leading to the beginning of the crisis and the collapse of the state.

An interpretation of the history of the crisis and collapse of the empire demands that due attention is paid to the importance of both the 'black death' (a pandemic of the plague) and the geographic, climatic and environmental cataclysms observed by experts in the social and natural sciences. It is naive to reduce the cause of the crisis and demise of the powerful state to external factors alone. It is hardly fair to equate the entire state with a separatist general. Therefore, the results of the research of the social and natural scientists, as well as the investigation of the well-known demographic crisis, should be accorded a proper place in an elucidation of the question.

There is no clarity or accuracy in the use and interpretation of the term 'Tatars', especially the composite term 'Tatar-Mongols' or 'Mongol-Tatars'. In many works, regardless of time and place, they bear the same meaning of conquerors led by Mongol rulers from Chinggis Khan himself to the khans of the 15–16th, and even the 17th centuries. In fact, the ethnic composition of the conquerors in the middle and the latter half of the 13th century differed from that of the first decade of the 13th century. Thanks primarily to Persian, but also Arab, authors, the former ethnonym 'Tatars', which used to be a collective exo-ethnonym, later became a politonym with an extremely extended meaning.

However, owing to the change in the ethnic composition of the conquerors during the course of their movement westward, as a result of the increasing Turkic component among them, and then the return of a considerable part of the Mongol warrior host to Central Asia with Güyük Khan, the population of the lands of Khan Batu took on a somewhat different ethnic appearance. Therefore, beginning from the time of the rule of Khan Berke (1256–1266), it is inappropriate to apply the ethnonym Mongols to the population of the country. Considering these peculiarities of the complex ethnic process, the use of the composite Turkic-Tatars would be more reasonable. Because the formation of this ethnic community, which started in the third and fourth decades of the 13th century, was almost completed by the middle of the 14th century.

This complex process requires further investigation, in which the ethno-national face of the main and overwhelming majority of the population would not be substituted with the ethnic origin of the ruling dynasty, which had also been subjected to Turkification. (This raises an apt question: is it appropriate, considering the Varangian origin of the early princes of Kiev, to refer to the entire Slavic population of the country as Normans and their urban culture as 'Norman'?).

The matters of the emergence and development of the system of towns of the Golden Horde epoch, which became centres of Turkic and Islamic culture and represented a new type

of urban civilisation, require a dedicated and integral study. They hosted many elements of 'high' culture: a written literature, spiritual and religious thought, an administrative and chancellery management system, a variety of handicrafts, the art of urban development (baths, sewerage, water supply, irrigation channels), etc. All this was a fundamental innovation; a new phenomenon, syncretic in its sources and original in its form, for the entire north-western Eurasia.

Naturally, a satisfactory study of such a complex culture (and not just this) requires, in addition to a consideration of the possibilities of the written sources, an extensive investigation of the archaeological sites, without restricting oneself to the territory of just a hand-full of central ancient towns. The question of restoring the traditions of the planned and systematic archaeological searches and investigations of the 60s–80s of the last century is still relevant. At the same time, efforts should be made to improve the protection of the archaeological sites from arbitrary decisions of economic executives and looting by 'black archaeologists'.

Such are the challenges facing the numismatists, who have an extremely rich legacy of coins, which is indicative of commercial, trade, economic and financial activities, that is, of a social life. Alongside the study of individual treasures, there is a need to create consolidated catalogues of the Jochid coins.

All this suggests that one of the priorities for the future will be the education of a new generation of highly qualified specialists, free of political blinkers and ethnic prejudices, both in general questions of the medieval history of the region and in specialised auxiliary subjects of historical knowledge.

These are, in summary, a few of the challenges facing medievalists studying the past of a number of nations of medieval north-western Eurasia, inextricably associated with the as yet insufficiently comprehended history of Central Asia, and hence with the Far East.

* * *

As far as the history of the Golden Horde itself is concerned, as a phenomenon of the past, as we have seen from the materials presented,

having entered a period of an expected long-term crisis in the latter half of the 14th century, and suffering a cruel defeat by Timur at the end of the same century, it continued along a downward spiral for almost one and a half centuries. In other words, twilight had descended upon the empire. Eventually, this resulted in its gradual collapse. Its total collapse occurred during the 15th century when, one by one but in different years, new independent Turkic-Tatar khanates, each in competition with the others, emerged within the various parts of the empire: the Astrakhan, Kazan, Kazakh, Kasimov, Crimean and Siberian Khanates, the Great Horde, and others. The latter, that is, the Great Horde, appears to have inherited the central part and the throne of the former Golden Horde.

In 1502 the Great Horde suffered a deadly blow by the ruler of one of the former ulus-es of the Jochid state—the Crimean Khanate, to which the Great Horde was annexed. Khan Mengli Giray, who won the battle against Sheikh Ahmed, the last khan of the Horde, added a new element to his title: 'The Great Khan of the Great Ulus' (Улуг Орданың улуг ханы).

The next volume of the 'History of the Tatars' deals with these events.

Thus, starting from the 16th century, the Turkic-Tatar and in particular the Tatar factor in north-western Eurasia entered a new period—a period of irreversible decline of political and state influence.

In this political environment a new factor, developing along an upward trend, entered the wider international scene: the Russian factor, consolidated in the depths of the Ulus of Jochi as a result of consistent and skillful fighting in three areas for independence (against internal separatism, Polish-Lithuanian rivalry, and pressure from Sarai).

Thus, the Mid-16th century witnessed the beginning of new external conquests and the elimination of other states, as has been the case with the history of mankind from ancient times.

Whereas the Turkic-Mongol conquests of the 13th century moved from east to west, the new process—a usual phenomenon in a great many similar 'pictures' of global history—progressed from the west to the east and the south. This resulted in the establishment of a major

new state in the nor-east of Eurasia—the Russian Empire, which played a dominant role in the history of other nations of the subcontinent.

However, the Turkic-Tatar factor was not reduced to nothing immediately after 1552–1556, that is, after the fall of Kazan, the subjugation of Astrakhan and even after the conquest of Siberia in the 1580–1590. The Russian Empire, alongside its nor-westward expansion, for a long time had to deal with one fragment of the Ulus of Jochi, which had existed longer than the others. The destiny of the Tatar factor in nor-western Europe was finally and fully decided to the benefit of the new empire only after the Crimean Khanate was joined to Russia in 1783.

* * *

Following the collapse of the Mongol super-state, the grandchildren of Chinggis Khan established dynasties in four states: the Yuan Empire, the Uluses of Jochi, Chagatai and Hu-

lagu. In China, Central Asia and Iran the Chinggisids were overthrown around 90–120 years later. The Chagataids (Tuglukids), who enjoyed only limited power, occupied the throne in Moghulistan almost up to the end of the 17th century. The representatives of the Jochids were the longest to remain on the Khan's throne. Whereas they occupied the throne for 275 years, from the powerful Khan Batu (tentatively from 1227) to the last ruler of the Great Horde, in Astrakhan, Kazan, Kasimov and the Crimea in the west and in Siberia, the vast Kazakh expanses and Central Asia in the east a number of Jochids, including the Shibanids, ruled individual ulus-khanates (for example, the Kazakh Hordes) for even longer, almost up to the Mid-19th century. The Girays, representatives of these Jochids, remained khans up to 1783 (1785). Hence, the Chinggisids-Jochids, gradually degrading both socially and politically, officially reigned in north-western Asia and eastern Europe from 550 to 650 years.

Appendices

I. Sources on the History of the Mongol Conquests and the Formation of the Ulus of Jochi

No. 1

From the Teachings of Chinggis Khan

W. Kotwicz (1872–1944), the prominent Polish orientalist and linguist, noted that there is a conversation between Chinggis Khan and his sons that is included in 'Chinggis Khan's Teachings to his Younger Brothers and Sons'. There are two slightly different variants of this work, one of only a few examples of the Mongolian epic composed in ancient times that is known to us: one of them was published in 1836 in Mongolian by A. Popov in his 'Mongolian Anthology'; the other was published by Ts. Zhamtsarano as a separate brochure in 1915 in Urga. Hereafter we will provide translation of those parts of the work as needed, giving preference to A. Popov's variant.

The source is W. Kotwicz's *The Teachings of Chinggis Khan* // Vostok.—Petrograd, 1923.—Book 3.—p. 94–96.

Chinggis Khan asked his sons:—'Which festival¹ is most meaningful? What is the greatest pleasure life offers?'

Chagatai said:—'A joyful festival and feast to celebrate the passing of the old year and arrival of the new—that is the most meaningful festival'.—But Chinggis Khan said, 'This festival is not a genuine festival. When a child has yet to be born and given a name, to leave the womb or see the world,—to whom will the name be given, whose life will be celebrated for the first time? If later you celebrate, remembering the day your father gave you life and your mother gave birth to you, that will be the real festival'.

Chagatai said, 'In my opinion, defeating one's enemy, crushing a horsemen, foiling a plot, forcing a female camel to roar at its colts, and bringing home booty—that is the greatest pleasure'.

Jochi said, 'In my view, the highest pleasure lies in raising numerous herds of horses, in letting my numerous two-year olds compete, pitching my tent and having fun during feasts'.

Ögedei said, 'I think the most enjoyment comes from assuring the prosperity of the great realm created by the labors of our Father-Khan, in putting one's feet on the ground and one's hands on the earth², in enabling one's own people to live in the tent, in keeping the affairs of state in order, making our elders and leaders happy, and calming the woes of our youth'.

Tului said, 'In my opinion, the greatest pleasure comes from training argamaks, from wandering around deep lakes as you let the old hawks fly, and from bird and duck hunting'.

Chinggis Khan said, 'Jochi and Tului, both of you speak like very petty people. Chagatai battled our enemies with me and therefore says such things. But our wives cried many times when we treated strangers unfairly. When we failed to treat the salmon with respect it sometimes wounded our hands painfully. Ögedei is quite correct'.

Thus concluded Chinggis Khan's conversation with his sons. As we know, he appointed as his successor Ögedei, who laid out a program for the peaceful establishment of the state. In this same 'Teachings of Chinggis Khan' the Mongol conqueror himself lays out some of his views. The following passage is ascribed to him:

Chinggis Khan said, 'If the affairs of state administration are in order; if the sovereign is wise and skillful; if his head commanders are accomplished; if his father and mother who gave him life are safe; if he has capable government officials; if he has an army able to defeat a worthy opponent; if his wives, children and descendants enjoy good health throughout the centuries; if the almighty eternal spirit protects him,—in all of this will he find incomparably great pleasure'.

Material prepared by Alsu Arslanova

¹ The Mongolian word '*hurim*' means 'celebration' and the feast associated with it.

² This is a figural expression, characterizing a restful life (apparently it is opposed to military life on horseback).

No. 2

'Heida shilue' ('Brief Accounts of the Black Tatars')

In 1233–1236, several South China diplomatic missions visited the capital of the Mongol empire. Unfortunately, there are no existing records of these visits. Some notes, however, that were made by two officials on these missions, Peng Daya (in 1233) and Xu Ting (in 1236), which were later incorporated into the 'Heida shilue' ('Brief Accounts of the Black Tatars') remain. But first we need to explain the term 'Black Tatars', since it was used by the Chinese to designate peoples now referred to as Mongolian. Apparently, in Medieval Chinese historical and geographical literature there appears a stricter classification of 'the northern barbarous nations', that is people living to the North of the Great Wall. By the 11–12th centuries, most of these groups became known under one rubric—'taga', or 'tatan' (the Chinese transcriptions of the ethnonym), that is, 'Tatars'. But in order to distinguish them from one another, they apparently began to use additional words to differentiate them such as Turkic, Mongolian and Tungusic, groups that had been referred to previously simply as 'Tatars'. Thus, we find the appearance of groups like the 'White Tatars', (the *Onguts*), the 'Black Tatars' (actually Mongolian nations), 'Wild Tatars' (the *hoi-in irken*, the 'Forest nations') and even the 'Water Tatars' in Chinese texts of the period.

The missions in which Peng Daya and Xu Ting participated took place during a period of close interaction between the southern Chinese Song Dynasty and the Mongol Empire: in 1233 the Song people and the Mongols, who were allies at that time, agreed upon the coordination of actions in the forthcoming campaign against the Jin. In February, 1234, the Song, together with the Mongols, captured the last stronghold of the Jurchen, their capital of Caizhou, and put an end to the Jin Empire. In 1236, Song authorities had to urgently solve the problem of dividing the Jin's inheritance with the Mongols. In both cases the Song needed concrete and precise information on the state of affairs in the Mongol empire. A large part of this information was included in the 'Heida shilue'*. This is an interesting work: on the one hand, it belongs to the genre of travel literature or notes, which are valuable because they provide eyewitness accounts. On the other hand, it is a type of memorandum for officials of the Southern Song government, an authentic record of the information contained in it. The composition of the publication is also unusual: it is a compilation of two different works, written and edited by the author of one of them, Xu Ting. In reality, Peng Daya wrote his work right after his trip to Karakorum, while Xu Ting composed his two years later. But they met in 1236: after exchanging their texts with one another for comparison, Xu Ting then used Peng Daya's as the framework for the work, supplying his own additions and comments to nearly every paragraph. He then published the resulting composition as one entire work. This resulted in a kind of layering of Peng Daya and Xu Ting's texts, one upon the other**.

The classification of information provided by Peng Daya and Xu Ting in the Han Shu is extremely wide and various. In the first half of the text they mainly describe the top leadership of the Mongol Empire, nomadic life, customs, beliefs, the writing system, and socio-political realities of both the Mongols and their subjects. In this section Peng Daya and Xu Ting's information is no more detailed than in the descriptions of other travelers to the Mongol Empire, although they add many interesting details. But in the other half of the Han Shu their information is extremely important and valuable, since they describe in detail Mongol military science, their methods of reconnaissance, horse breeding, the organization of military camps and garrisons, and the process of strategic decision making by those at the top. Except for Peng Daya and Xu Ting, none of their contemporaries left any information on these subjects in a comparable way—neither in volume nor detail.

In addition to the specified Han Shu also contains very interesting information about the neighbouring peoples of the Mongols, both of whom they conquered, and those with whom they were still fighting

* Peng Da-I, Xu Ting, 'Hey-da shilyue' // Wang Go-wei Hainin Wang Ching-an syanshen ishu (The posthumous essay collection of Mr. Wang Ching-an from Haining). Vol. 37. Changsha. 1940. 'Shāngwù Yīnshūguǎn'/Commercial Press Ltd' (hereinafter—YS). Underneath also cit.: 'Yuán Shǐ' (The History of Yuan). 'Zhonghua shutzui chuban'. Beijing, 1976 (hereinafter—YS).

** Here, as in the earlier Russian-language publications, the texts of Peng Da-I and Xu Ting are typed in different fonts.

(at the time of Peng Daya's and Xu Ting's stay at the Mongols). The lists of the so-called 'conquered peoples' and 'peoples who are still resisting the Mongols' given by Peng Daya and Xu Ting coincide surprisingly with the similar lists in 'The Secret History of the Mongols' and in reports of the Franciscan Missions (Giovanni da Pian del Carpine, Benedict of Poland, C. de Bridia). Their research and comparison provide a lot of additional information on the Turkic, Tungusic, and Tibetans peoples neighbouring the Mongols.

Especially valuable is the unique data on the resistance of the Kipchak tribes to the Mongols and the importance of its suppression for the latter (it should be noted that the campaign of the Mongols to Europe headed by Batu was called the 'Kipchak' in 'The Secret History of the Mongols'). And Xu Ting in the spring of 1236 witnessed the campaign against 'Muslim countries' of the large group of the Mongols and quite possible it was the very troops that in 2–3 years fought against the Bulgars, Russians, Polovtsians, Alans, and Circassians in Eastern Europe.

Unfortunately, to date only about half of the written source has published in Russian translation [Lin Kun-i, Munkuev, 1960]. The following are the most important passages of 'Hei-da Shilue' mainly related to the customs, beliefs, everyday life, military science, socio-political history and relations with neighbouring peoples of the Mongols ('Black Tatars') in the first third of the 13th century extracted from the new critical translation of the source full text.

In the original text by Peng Daya there are notes written in small double-column characters right after the commented passage. As found by Wang Guowei, a prominent Chinese textual critic and historian, these notes were made by Peng Daya to explain his Chinese readers the unknown realia or non-Chinese words. In the present translation these notes are given in parentheses in the text of the translation and are not further specified. A considerable number of remarks and footnotes is explained by specific character of Chinese realia and terms (idioms, Chinese analogies for non-Chinese realia, transcription of non-Chinese words and names into characters, titles, dates, etc.) mentioned and used by the authors of the written source.

Peng Daya, Xu Ting. 'Short notes about the Black Tatars'

'The state of the Black Tatars (that is, of the Northern Chanyu)' is called Great Mongolia^I. In Shamo^{II} there is a mountain called Mengushang, and silver in the Tatar language is called 'mengu'. The Jurchens called their state 'The Great Gold [dynasty]', so the Tatars call their state 'The Great Silver [dynasty]'^{IV}.

Their [the Black Tatars'] ruler^V, who was the first to usurp the title of the Emperor, was named Temo-chzhen' at birth^{VI} and the Emperor Chenczisy'—according to the usurped title^{VII}. Their current ruler was named Ukudai at birth^{VIII}. [A total of] eight people usurped the titles along with him^{IX}.

^I That means the lands to where Hsiung-nu's power was applied during the late Han period.

^{II} An inaccurate name of the Mongol state under Genghis Khan and his successors; officially it was called the Yeke Mongol Ulus (the Great State of the Mongols). The name of the Mongols, *mengu*, well-known as *men-u* and *men-wa* since the Tan period, can be found in 'Sing Tan Shu' and 'Tzu-Tan-shu' dynasty chronicles.

^{III} This was how the Chinese called territories north of the Great Wall; literally, 'desert.'

^{IV} The name of the *Mongol* state as well as the name of the Chinggisid dynasty had no relation whatsoever to 'silver.' To Pen Da-ya the words 'mongol' and 'mongon' (silver) were probably perceived the same way.

He linked the Mongol ethnonym and the name of silver by mistake, misguided by the consonance of these words.

^V The text contains term 主 '*chzhu*,' which means 'ruler, master.' The authors of the source regularly applied it to the Tatar ruler for the same reason that they accompanied titles and positions of the Mongol Empire with epithets like 主 '*tszyan*' ('usurped,' 'misappropriated') and 主 '*wey*' ('illegal,' 'false') as, from the Sun's point of view, all other countries on the territory of China were 'illegal,' were it Churchzhen or Mongol.

^{VI} In the text 忒沒真 '*Te-mo-chang*.' This was the transcription of Temuchzhin, Genghis Khan's real name.

^{VII} In the text 成吉思皇帝 '*Cheng-tsi-si-Khuandi*,'—that is, 'Chinggis the Emperor.' However, Genghis Khan is a title rather than a name.

^{VIII} In the text 窩闊台 '*U-ku-dai*'—that is, Ughedei. Yuanshi records his name as 兀剌合臺 '*Wo-ko-tai*'—that is, Okotai.

^{IX} As for those eight persons, the following are being referred to: Yeku, the son of Dzhochi-Khasar, the younger brother of Genghis Khan; Alchidai, the son of Khachiun; Temuge-otchghin and Belghutei, younger brothers of Genghis Khan; Ugedei; Batu, the son of Jochi; Chaghatai, the second son of Genghis Khan; Menghu, the son of Tolui, the fourth son of Genghis Khan. At the time of of Pen Da-ya's mission only those eight persons were khans

The names of his [the ruler's] sons are: Koduan', Kochu, Xesidai (proclaimed as the illegal heir to the throne, studies Chinese writing and culture, his teacher is secretary Ma) and Xelachzhi^x.

He has four Ministers, their names are: An'chzhidai ([he is] a Black Tatar, clever and decisive), Ila Chucai^{xi} (nicknamed Jin Qing, [he is] the Khitan and is called *Zhongshu Shilan*^{xii}), Nianhe Chungshan ([he is] the Jurchen and is called *jiangjun*^{xiii})—[they] administer affairs [related to] the Chinese; and Zhenhai^{xiv} ([he is] the Uighur^{xv}) who is particularly responsible for the affairs of the Islamic countries. <...>

Ila Chucai and Zhenhai call themselves *zhongshu xianggong*^{xvi} and have control over the affairs of state. Zhenhai [who] is also responsible for the affairs of the Muslims. The Tatars do not call them Ministers^{xvii}, they call them *bicheche*. *Bicheche* means *lingshi*^{xviii} in Chinese. They are only responsible for correspondence and official documents.

Their [the Black Tatars'] lands behind Juyong (more than 100 li (chinese miles) Nor–West from Yang^{xix}) rise and expand gradually, and behind Shajing (80 li from Tianshanxian county) there is a flat open land, a wasteland that is overrun with weeds. The mountains seen in the distance appear high and lofty at first sight, but when approached they [become] flat hills. And here only sands with gravel are around.

The sands with gravel that [I, Xu] Ting saw are not very large, just sand with crushed stone, that's all.

Their [the Black Tatars'] climate is cold and piercing. There are no four [year] seasons or eight terms (for example, there are no thunderstorms during the 'Awakening of insects' term)^{xx}. It often snows on the fourth and the eighth moon. The weather does not change much [during the season]. For the last time north of Juyongguan, for example in Guanshang, Jinlianchuan, it snows even in the sixth moon.

[I, Xu] Ting on the way back from the steppe spent the night at the bottom of the Yehuling pass just at the beginning of the seventh moon. On the morning of the 5th day [of this moon] he woke up absolutely frozen, hands and legs were all cold.

Steppe grass growing on the land of the Black Tatars begins to turn green on the fourth moon, then blooms on the sixth moon and dies by the eighth moon. There is nothing else in those places but grass.

(7 of them had their own appanages/uluses, plus the supreme khaan); therefore, the words about 'illegal titles' must be linked to them.

^x Yuanshi, in its genealogy tables of the imperial family (tz.107) mentions 7 sons of Genghis Khan. The eldest one was Guyk; the second, tsarevich Kodan; the third, tsarevich Koçu; the fourth, van Xalaçar; and the fifth, davan Xaşı. Koçu from Pen Da-ya's text was the Koçu from Yuanshi. Xesidai is Xaşı from Yuanshi, and Xalaçji is van Xalaçar. Pen Da-ya ignored Guyk as Pen Da-ya was sent to the Mongols at the same time Guyk had set out to Lyadung. That explains why he wrote 'Xesidai was elected illegal heir to the throne,' he erroneously recorded what he had heard.

^{xi} Another version of Elui Çuçay's surname is.

^{xii} 中書省 'chzhun-shu shi-lang.' In this instance Pen Da-ya gives the old title of Elui Çuçay, which can be traced back to the period when the Mongol Empire had not yet adopted the Chinese-patterned system of high offices, and all high officers of Genghis Khan were named identically, 'bitekchi' (clerks in Turkic languages) or 'bicheche' in the Chinese version. Further on in the text the records explain the situation as well as the practice of the officers in Mongolian service to call themselves by the Chinese words they were accustomed to. It seems that before the formation of the Main Imperial Secretariate in 1231 to manage the empire (中書侍郎 'chzhun-shu-sheng') and Elui Çuçay being appointed as its head (Yuanshi, tz.2) he called himself 'assistant of the head' (*shilan*) of the *chzhungshushen* that was yet to appear. In any case, this name for Elui Çuçay's position is found on the title page of the *Si yu lu* (Notes on Travel to the West), a book he wrote and published in Yanzhing in 1228.

^{xiii} 將軍 'tsyang-tsyung'—that is, 'warlord' or 'commander,' was a common element for many titles of the highest military positions.

^{xiv} In the text 鎮海 'Chzheng-khai.' In the 13th century this was the transcription of the Cinqai name, a minister of Genghis Khan and Ugedei, whose pronunciation is known from other sources as well.

^{xv} In the text 回回 *khuikhui*—that is, generally a 'Muslim'; however, in the 13th century these symbols were used as a synonym for the Uyghurs proper, 回鶻 *khuikhu* and 回紇 *khuikhe*. This is why only context can explain whether they are Muslims in general or Uyghurs in particular. Pen Da-ya calls Chzhengkhai a Uyghur. Yet, according to his life description in Yuanshi (tz.120): 'Chzhengkhai was from the Kereit clan.'

^{xvi} 中書相公 'chzhung-shu syang-gung'—that is, literally 'ministers of *chzhungshu* [*sheng*].'

^{xvii} In the text it was simply 相 'syang', the abbreviation of the usual 相公 'syangung,' a minister.

^{xviii} In the text 令史 *ling-shi*—that is, a 'clerk.'

^{xix} Yan was an ancient name for the region around Peking.

^{xx} This refers to the 8 of the 24 seasons of the Chinese agricultural calendar. One of them was one called 驚蟄 'tchzing-chzhi'—that is, the, 'awakening of insects,' began around 5–th6 March.

They [the Black Tatars] breed cows, horses, dogs, sheep and camels. Sheep of the Northern tribes have fluffy hair and fan-shaped fat tails. Chinese sheep are called 'gulyuj' [by the Black Tatars]. [Their] camels can be two-humped and one-humped or without humps [at all].

[I, Xu] Ting saw cows in the steppe which were all yellow. They were the size of the South China buffaloes and extremely durable. As [the Tatars] do not plow the [bulls] only pull carts. Most of [the bulls] do not have [a ring] through the nose.

They [the Black Tatars] live in dome-shaped dwellings (that is, in felt tents), [they] do not have towns with walls and [stone] buildings. [The Black Tatars] move depending on the availability of water and grass, [their routes] are not regular. The ruler of the Tatars transports [his] tents behind them, arranging battue hunting. All illegal officials and subordinates follow him—[such] action is called 'to raise a camp'.

Their carts are dragged by bulls, horses and camels. On top of the carts [there are] rooms where one can sit or lie. They are called 'tent-carts'. The carts represent a rectangular frame with vertically standing pillars and overlapped boards.

[Black Tatars] use memorial columns to worship the Heavens, this process is called [a prayer] for food and sustenance.

[Black Tatars] make each team that consists of five carts which are located both to the left and right, and on all sides and tend to their [destination] like columns of ants or like twisting ropes stretching to 15 li in length. As soon as the half of them reaches the water, they stop, and this is called 'to set up camp'.

The entrance of the ruler's tent is located to the south ahead of the remaining tents. A row of tents for wives and concubines is located behind them. A guard with illegal officials and subordinates is in the next row. The place where the hunting tent of the head of the Tatars is located is usually called 'the Horde'.

Only the camp where a golden tent (it is so called because its props are covered with gold) of their [ruler] and all the other [tents] of the illegal empresses and subordinates are raised together is called the 'Great Horde'.

Their encampments are selected by terrain that is surrounded by heights and behind the slopes of hills in order to mitigate the force of the wind. Their migrations look like the campaigns of Chinese imperial trips: the same stops, not determined in advance and moving that is made either in one moon [of stay] or in one quarter.

When [I, Xu] Ting arrived in the steppe [the Tatars] set up the golden tent. I think they made so to show a splendid sight to the ambassador sent personally by the Emperor of our dynasty. When the previous mission of Zou who was appointed envoy had arrived [to the Tatars] they had not set [the golden tent], but when the mission of Cheng the great ambassador and the mission of Zhou who was appointed envoy arrived [after us] [the golden tent] was set for both of them. It [the golden tent] is made of felt which is rolled in quantities in the steppe. As the outer coating of [the golden] tent they use felt from top to bottom. In the middle of the dome between the tied [willows of the frame] there is a window-hole for light transmission. More than a thousand of ropes are used to pull [the felt on the frame]. The only door, the threshold and pillars [inside the tent] are all covered with gold, that is why the tent is called golden. It can hold several hundred people inside. The *Hus*^{xxi} bed, where the ruler of the Tatars sits in the tent, looks like an ambo inside a Buddhist temple which is also decorated with gold. Wives and concubines are located according to rank and it looks like they are surrounded by a fence.

The yurts [of the Tatars] are of two kinds. Those that are made in Yanjin have willow wood as a frame which is exactly like a sieve from the South [of China]. [They] can be fold and unfold, the door opens forward^{xxii}. Top [of the yurts] resembles umbrella frame and the very top of it there is a hole called 'sky window'. All [of them] are covered with felt and can be placed on horses. Those that are made in the steppes have thick round [frame] woven of willows and simply covered with felt. [They] are fixed and can not be fold or unfold. [They] are placed on the carts as they are. When water and grass run out [the Tatars] move on. The days [of migrations] are not defined in advance.

Their [Black Tatars'] food is meat, not grain. [They] hunt hares, deer, wild boars, tarbagans, moufflons (their spine bones are used to make spoons), Mongolian gazelles (they have a yellow tail which looks like a big fan), wild horses (resembling donkeys), fish from rivers and waterholes ([it] can be caught when it's cold). Sheep are [their] main livestock which [they] breed and cook. In second place after them [sheep]

^{xxi} In the text 胡 'hsui'—that is, of the 'Khus.' *Khu* was a traditional Chinese name for the 'barbarians from the North'—that is, Hsiung-nu. 'Hsiung bed' was the Chinese name for light folding chairs.

^{xxii} That means to the South, according to Chinese custom.

there are horses which are not slaughtered [by the Black Tatars] unless there is a big feast or meeting. [Black Tatars use] broiling in nine cases out of ten, and cooking in tripod kettles—in 2–3 cases out of ten. They slice meat and first eat it themselves and then feed others.

[I, Xu] Ting, having spent over a month in the steppe, have never seen the Tatars killing cattle for food.

They [Black Tatars] drink mare's milk and koumiss made from cow's and sheep's [milk]. Every time a person pouring a [drink] shall drink it himself first and then [give] it to the second person. However, the second person who has received the drink first offers [the cup] to the first person. The third and the fourth persons are smacking [at this time]—this is called 'tasting'. The first person does not drink but gives [the cup] to the third one. The third person drinks it up, scoops and gives it to the second one. The second person again does not drink but [gives] it to the fourth one. The fourth person makes the same ritual as the third one. Only then the second person drinks it up, scoops and gives it to the first one. The first person pours a drink in the same order to give a drink to the third and the fourth persons. Such ritual is called 'cup exchange'. Originally it was made to protect oneself from the poison, but then the Tatars got used to it and it became a commonplace.

Their [dishes] are only flavoured with salt. <...>

They [the Black Tatars] cook food on grass coal (cow and horse dung).

They [the Black Tatars] burn grass coal in lamps as a filler, and mutton fat—as oil.

Their customs are archery and hunting. Whenever their ruler organises a raid he gathers crowds of people. [They] choose places to make pits, stick wooden [stakes] as marking poles, connect [them] with hair ropes and hang felt fringe [made of scraps] [on them], in the way the Chinese catch hares with nets. [The fences] stretch and cover the space of 100–200 li and when the wind blows the fringe flutters so all the animals jump aside out of fear and do not dare to run away. Then the battue [hunters] push them [to the pits], keep them [there and then] slaughter them.

[I, Xu] Ting saw that Tatar families procure hair ropes and felt during their migrations and consider it to be quite a hard [work]. The horses which [I, Xu] Ting used at the station-pits were mostly shorn and did not have manes. [When I] was trying to find [a reason] for that [I was] told that it [horse hair] was used to make ropes, and the last ones were passed to the camp-Horde for the arranged hunts. The period of battue hunting [begins] with the ninth moon and ends during the second one. Every time when the hunts are arranged [the Tatars] use hunted animals as their daily food while only few sheep are slaughtered.

Their [the Black Tatars] hats and hairstyles: they unbind [their hair] and tie it into knots; in winter they wear caps and in summer—cone-shaped bamboo hats; women [wear] a *gu-gu*^{xxiii} on the top of the head.

[I, Xu] Ting, saw it. To make a *gu-gu* they use painted wood^{xxiv} as a frame which they wrap in fine red silk and golden silk fabric. At the top of it [*gu-gu*] they use willows or iron rods 4–5 chi long, wrapped in blue felt and decorated differently: for people of the high ranks they are decorated with plumes of kingfisher feathers [exported from] our country or multicolour silk [scraps] fluttering from their movements; while for people of lower classes they are decorated with pheasant feathers. Naturally beautiful [Tatar] women use wolf feces to smear on the face^{xxv}.

Their [Black Tatars'] clothes are wrapped to the right side by square flap. In the old days [it was made] of felt, wool and leather, and now—of cloth and silk [stitched with] gold thread. [Clothing colours] are red, purple, violet and green. [The clothes have] patterns in the form of the sun, moon, dragons and phoenixes. There are no differences between [the clothing] of the nobility and common people.

[I, Xu] Ting studied this. It [the clothing of the Tatars] is sewed in the image and likeness of *shen-i* dress^{xxvi}. But the flap of these [Tatar clothes] looks exactly like the clothing of Taoists of our state. The flap that they call square resembles a quadrangle. Collars are the same as those of the Chinese. The ruler

^{xxiii} Boghtagh is the national female headdress of the Mongols.

^{xxiv} The preparation of *ghu-ghu*, described here, is an ancient custom of the Mongols. Wang Go-wey, in his commentary to Men-da bey-lu ('Comprehensive Description of the Mongol Tatars') by Zhao Hun, supposed this to be a slip of the pen: instead of "桦木 *khuamu*," a birch, was 畫木 '*khuamu*,' 'painted wood.

^{xxv} In his commentary Wang Go-wey writes: 'I suspect the phrase 'wolf stool for smearing on the face' to be a mistake in the character. In the Men-da bey-lu it was said: 'Women often smeared their foreheads with yellow ceruse. [This] was borrowed from old Chinese make-up.' Evidently, this was said [by Zhao Hun] similar to the [custom] of Tang women who put yellow patches on the forehead.'

^{xxvi} A ceremonial outfit in ancient China. Was represented by a broad robe with wide pleated strips.

of the Tatars, along with members of *zhongshu* [*shen*] and other people of high ranks [of society] do not wear [such clothing] anymore. On the waist [of the Tatar dress] there are so many pin tucks that it is impossible to count their number—while there are only 12 [of them] on *shen-i*, the Tatar dress has [much more] tucks. [The Tatars] also use red and purple silk twisted into the girdle, which is across the waist, and which is called the belt. [The Tatars] probably want the girdle to be tight while riding a horse, as well as colourful, bright, and beautiful.

They [Black Tatars] use a spoken language and have no written one. Many [words] come from borrowings and sound respectively. They [need] to be interpreted and explained, [there are] interpreters for this purpose.

Their names are names at birth and they do not have surnames and second^{xxvii} names. If [Black Tatars] have some bad feeling [about the name] they change it.

[I, Xu] Ting observed [that the Tatars] from highest to the lowest classes [have] only birth names and no surnames at all. In addition, they do not have job titles. For example, if [a person] is responsible for official documents he is called '*bicheche*', if he leads people he is called '*dalukhuachi*', and [one who] is responsible for perimeter protection is called '*kholuchi*'^{xxviii}. Similarly, the Ministers such as [Yelü] Chucai and others called themselves *zhongshu xianggong*. As to Wang Ji, he gave himself [the honorary title] *yingqing-guanglu*, imperial chief censor, *xuanfushi* (Pacifying Commissioner) and *zhugoshi*^{xxix}. Initially [all these titles and positions] were not given by Tatar rulers.

Their rules of courtesy: they hug each other in greeting and go down on the left knee as a bow.

[I, Xu] Ting saw how they [the Tatars] hug each other [in greeting], that is, they enfold each other.

They [the Black Tatars] place the most honoured [people] in the middle, next [in the order of honour]—on the right side, and left [side] is for people of lower ranks.

Their system of chronology earlier used symbols denoting [years] of the twelve-year animal cycle...

All of it they learnt from the Chinese, Khitans and Jurchens. Speaking of native Tatar customs, originally [the Black Tatars] did not understand [the calendar]. [They] only noted: if the grass turned green it means that one year [has passed], and if the new moon comes out for the first time it means that one moon [has passed]. When you ask them [Black Tatars] how many [years have passed] from their birth to their [current] age they count on their fingers how many times the grass has turned green. <...>

If they [the Black Tatars] choose a good day for their work on the calendar, they pay attention whether the moon is full or waning in order to start or end [the work respectively] (they avoid [working] in both cases—before the moon reaches waning [of the 1st quarter] and after the half moon reaches [the last quarter]); and [when they see] the new moon they always bow.

They write official papers using wooden sticks. [The characters] resemble the trail of snake and earthworms and are similar to *fuzhuan* style of the 'Book of Heaven' and musical [notes] 五 (u), 凡 (fan'), 工 (gun) and 尺 (chi). Islamic letters^{xxx} are probably akin to them.

[I, Xu] Ting, studied this. The Tatars originally did not have a written script, however [the script] they use now are of 3 kinds. The documents used in the Tatar state are just small tablets with a length of 3–4 *cun*. They are notched at four corners. For example, when they send someone for ten horses, they make ten notches. In general, they only notch the number of [items].

They [the Tatars] are honest and their thoughts are focused on one thing [they are doing at the moment], that is why they never tell a lie. According to their law one who tells a lie must be killed, that is why they do not dare lie and cheat. [The Tatars] though having no script managed to establish the state on their own. The small tablets mentioned above are exactly the ancient [Chinese] credential tallies.

^{xxvii} Here the author underlines the difference from the Chinese system of personal names—in childhood a Chinese would receive a child's name while he also had an ancestral name—a family name in the European understanding, and later, when coming of age, he would take a second name or surname.

^{xxviii} Ghak Sui Tin conveyed the titles of Mongol public officials: *bitekchi*, 'clerk' in the Turkic languages, *darughachi* (*baskak* being its Turkic synonym), *khorchis* ('archer'). *Khorchis* were part of the personal guard of the Mongol khan (*keshig*).

^{xxix} *Ingtzhing guanglu*, an honorary title, literally a 'high official bestowed with silver threads and a seal.' Silver thread with a seal were attributes of high officials in old China. *Syungfushi* means 'authorised for reconciliation,' a title of a plenipotential representative of a central power in a province. *Zhugoshi*, an honorary title, literally 'an ambassador who arrived in the country.'

^{xxx} Or of the Uyghurs, 回回字—though literally 'Islam signs' in the text.

The [documents] that are used in Islamic [parts of the Mongolian state] are written in Islamic [or Uighur] letters and are in responsibility of Zhenhai. There are only 21 letters in the Uighur [or Islamic] script. The additional [symbols] in this [script] are only added on the sides and in such a way connected [into words].

The [documents] that are used in all the defeated states of the Chinese, Khitans and Jurchens are written only in Chinese characters and are in responsibility of [Yelü] Chucai.

In addition, on the backside of the [document] sheets under the date, Zhenhai personally writes in Islamic [or Uighur] letters: 'Give to somebody or other'. This is probably a special precaution in relation to [Yelü] Chucai as these words [written] in Islamic [or Uighur] letters are a kind of control. If they don't have these words, the official document is invalid. Zhenhai's authentication is probably necessary to perform mutual checking.

In the urban schools of Yanjin a lot of them learn Islamic [or Uighur] script and translation from the Tatar language. As soon as they are able to translate, they immediately become translators. Then together with the Tatars they go [everywhere] and at their own discretion demand *sahua*^{xxxI} under the threat, extort and get clothes and food. <...>

All decisions [without division] into big and small are made by the illegal leader of the [Black Tatars]. [Yelü] Chucai, [Nianhe] Chungshan and Zhenhai together at the helm of the Tatar state.

Affairs of the countries of the four corners of the earth or those for which there are no decrees of the Tatar ruler as well as the power of life and death are all in the hands of a person who has a stamp at his disposal.

[I, Xu] Ting, studied this. The only [dignitaries] who monitor the official documents are [Yelü] Chucai and Zhenhai who received the [capability] to handle matters in their personal favour because the ruler of the Tatars is unable to read and write. Speaking of military affairs, troops and similar important affairs they are solved by the Tatar ruler personally. However, he also considers them together with his close relatives. The Chinese and other people are not involved [in this].

The Tatars are usually call themselves according to their clans and families^{xxxII}.

Even if one who litigates has good connections, *sahua* is used in judicial cases: even if one explains [his case] to the ruler of the Tatars, will not get the decision [without *sahua*] and go [with nothing].

Their [the Black Tatars'] divination is the study of the burnt bones of mutton shoulder. The signs on them are defined by their directions (forward or backward) as denoting happiness or unhappiness and then the final decision is clear—whether the Sky has refused or has granted. [The Black Tatars] genuinely believe it. It [divination] is called 'pi-pa burning'^{xxxIII}. There is nothing, big or small, that [is done] without divination. Divination [on different occasions] is [made] many times and constantly. <...>

They [the Black Tatars] always say in ordinary conversations: 'I rely on the strength and power of the immortal Sky and on the protection of the happiness of the Emperor!'. If there is something they want to [do] they always say: 'Let the Sky do so!'. If they have already done something they say: 'The Sky knows!'. There is nothing that is not related to the [influence] of the Sky. [All of them], from the ruler of the Tatars to his subjects, do so and in no other way.

Their taxes and tributes are called *chai-fa*. A prescribed [number] of horses and milk, the required [number] of sheep and food are divided among the houses of common people [according to] the number of their livestock and collected from these people. It is like the *shang-gung*^{xxxIV} of the Chinese.

As for the organisation of post stations, the leaders and the heads are allowed to determine the service duration at all stations.

In recent years, the Chinese population except for craftsmen is [laid under] annual tribute without distinction to men and women: silk yarn valued at 25 liang [of silver] is [collected] from every citizen; silk yarn valued at 50 liang of silver is collected for [each] bull or sheep (that is the amount of silver that has already been borrowed from the Muslims and which was spent for food given to ambassadors and offi-

^{xxxI} This was how they transcribed the Mongol word *sauqa*—that is, 'present,' a name they used for the mandatory tributes to be given to officers and chiefs.

^{xxxII} *Yasun*—that is, 'a bone' was the term the Mongols used for their ethnosocial structure and denoted the relationship on the direct male line from one common ancestor.

^{xxxIII} *Pee-pa* is a Chinese musical instrument, a mandolin-like with a flat back. The name the Mongols used for fortune-telling was given by the Chinese.

^{xxxIV} The tax under the *Gai* and *Sun*, literally meant 'procurement for the Emperor.' This represented part of taxpayers income contributed directly for the needs of the royal court.

cials who passed through the [town]); silk yarn valued at 100 liang of silver and grain tribute valued at 4 dans of rough rice are [collected] [from each] rural farmer annually regardless of the size of [his] cropland.

Parcels of silver transported [as a tax] from all provinces [are] 20,000 dings annually. As for the implementation of taxes by the [Tatars], it is impossible to describe all the sophisticated [ways to do this].

In their lands, across which [I, Xu] Ting, travelled to Shamo, everyone including the Tatar ruler, illegal tsarinas, tsareviches, princesses, [members] of the ruler's clan and lower families have certain [land] boundaries. All the common people give as *chai-fa* livestock, horses, weapons, workers, mutton and mare milk because the Tatars have distributed land management in the steppe and each [such appanage] gives a *chai-fa*. There is no one among both the nobility and villains who would receive exemption [from tributes]. In addition, there is another form of [tribute]: from all *chai-fa* given by each land [appanage], the necessary [funds] are taken for the post stations located in this [appanage]. Upper and lower classes are [laid under tributes] on equal grounds—this is the *chai-fa* in the steppe!

If we are to talk about *chai-fa* in Chinese lands, then except for [collecting] silk yarn and wool valued as silver from each draft of each yard, everyone also gives fodder, food, utensils and munitions for travelling ambassadors and dignitaries as well as for repositioning troops and cavalry. All of these used for state purpose is calculated after some time and the total sum is [divided] among the population as a tribute. In all the defeated states people find it quite oppressive, [their] indignation and outrage are extremely strong but they can do nothing about that! The Tatar ruler can at any time send officials from the steppe to the Chinese lands to set *chai-fa*. <...>

They [the Black Tatars] barter sheep and horses [for] gold, silver, linen and silk.

Speaking of trade and sales, all of them, from the Tatar ruler to illegal tsareviches, dukes, princesses and others give silver to Muslims [for turnover]. The Muslims in their turn lend it to people and [receive] a huge interest: 1024 dings are paid for one invested ding in 10 years. They also can buy different goods and sell them in [distant lands] or demand from people compensation for damages referring to the [alleged] nighttime thievery.

[I, Xu] Ting, saw that the Tatars did nothing but [received] *sahua*. There is no one [among them] who knows trading and profiteering. [All of them] from the Tatar ruler to the [lowest] classes give silver to Muslims and order them to trade and profiteer to get profit [from this silver]. The Muslims put [this silver] into circulation themselves (giving it at interest) or travel personally to all countries to trade and profiteer. Sometimes they lie that they were robbed and get compensation from population of districts and counties.

The Tatars mostly wish to [buy] linen, silk, iron, tripod kettles [for cooking] and colourful wood which are necessary for clothing and food. Chinese, Islamic and other traders come to the steppe and the Tatars happily barter their sheep and horses for it [that is, for the above-mentioned goods].

The Tatars are highly-moral and never steal^{xxxv}. However robberies happen inevitably and are [committed] by people from the defeated states. In addition, the Muslims put [some] things in a deserted place and watch from a distance on a rise. As soon as there is someone to touch them, they come immediately and accuse him falsely of theft. People are afraid of the wicked Muslims. [They] are also very nimble and speak the languages of all countries well. It is truly amazing!

Officials illegally call them [Black Tatars] the [following titles]: *Govan*, or 'a Placeholder of the Emperor'; or *Junwang*^{xxxvi}; or *Xuanchar*^{xxxvii}.

[Officials from among] the prisoners of all the fallen states are referred to as either *zhongshu chengxiang*^{xxxviii}; or *jiangjun*; or *shilan*^{xxxix}; or *xuangfu-junshi*^{xl}.

Due to the fact that [the Black Tatars] were thieves and gave these titles at their own will, imperial edicts were not issued to appoint officials to these positions.

[I, Xu] Ting, studied that. It was not customary among the Tatars to assign to a position and ask for a salary, and the Tatar ruler did not understand the [value of this]. Officials^{xli} explained to him the signif-

^{xxxv} In the text 道不拾遺 'dao bu shi-i.' An idiom denoting the high morality of the people.

^{xxxvi} Bestowed upon the prince of the 4th rank.

^{xxxvii} That means 'the messenger of the Emperor.'

^{xxxviii} Ministers of *chzhungshu sheng*—that is, the central government-secretariate.

^{xxxix} Usually this corresponds to a deputy minister.

^{xl} A senior authorised officer in a border region or a top military commander there.

^{xli} That means tzhing or Chinese officers are being referred to.

icance and importance of this. The Tatars [now] only have golden paizas with the tiger's head, ordinary golden and ordinary silver paizas [according to the rank of officials]. [Officials] with merit give gold and silver, and the Tatar ruler gives them permission to mint paizas with engraved Uighur [or Islamic] letters on top of it which say: 'By the power of the eternal Sky...' and so on; the whole [text] is engraved on the outer side of the [paiza].<...>

Their [the Black Tatars'] organisation of common people^{XLII}: the head of ten people is called 'desyat-nik'; from ten to hundred, from hundred to thousand, from thousand to ten thousand of people—each group has its own head.

Prohibitions in their [the Black Tatars'] state.

Those who dig during the grass braird and those who leave fire and burn grass are executed together with their families.

As for those who pick the dropped thing, who [touch] a threshold with their shoes, who beat horses all the time, who commit adultery and run away with the neighbour's [wife], they are executed alone.

As for those who hiccup while eating and those who have their mouth and nose bleeding, they are found guilty of [bad] intentions.

As for those who ignore [prohibition] to not wash felt curtains, then they are found guilty of bad [intentions] and are brought to the Tatar ruler [for judgment] with a rope around the neck.

If a horseman meets another one coming from the opposite direction and passes by on the left side, it is considered to be a mutually favourable [sign].

When one person gives another one some meat and the latter takes it with his left hand, it is considered a mutually unfavourable [sign].

As for those who drop a jar while pouring milk and kumis, they are considered to be [doomed] to lose their offspring.

If there's thunder with fire [from the lightning], then [the Black Tatars] leave all the property and livestock and flee. [They] wait one year and then return to [this previous place].

[I, Xu] Ting, saw the Tatars stopping their ears and bending down to the ground every time they heard a peal of thunder, [during this] they kind of hung down their [head] and hid their face.

As for their [the Black Tatars'] system of rewards and punishments, it is considered to be a common practice to perform one's duties and [no one] dares to consider it as a merit.

When they [the Black Tatars] admonish each other, they always say: 'If the ruler sends me through fire and water, I will go there!' And so they do^{XLIII}. The word [of the Black Tatars] that means hunger, cold and suffering from misfortunes is [the only] word *dai* (the [word] *dai* means 'bad'^{XLIV}). For these reasons their state does not reward them [at all] in peaceful times. Only when troops are used in the battle and they win, then [they] are rewarded with horses or golden and silver paizas or scraps of linen and silk. Those who conquered a town, [can] rob it, take children, women, jewels and silk. The first and the last to rob and steal are ranked according to their merits. One who came first, darts an arrow to the door of the house and others do not come in. Those who violate [this custom] are punished by death. This is called 'an'dasi'^{XLV}.

Those who were not [sentenced to] death are sent to hard works in the battle of baturs (same as the Chinese word for 'fearless warriors') and are forgiven only after three-four [merits]. For those whose guilt is considered to be light, half of their property is confiscated.

[I, Xu] Ting, considers that the best of their laws is to kill those who lie.

They [the Black Tatars] punish by death those who break the law and rob. Their wives, children and livestock are confiscated and go into the disposal of the families who suffered from [these] robbers. [When] slaves belonging to some A steal property of some B or the property of slaves belonging to B,

^{XLII} In the text 民戶 'ming-khu', literally 'yards of people' (for sedentary nations) or tents/families (for nomadic peoples).

^{XLIII} The translation may be different according to the understanding of the symbol 相 'syang': 1) if you accept its main meaning as, 'in relation to one another,' then the above version of the translation fits; 2) if the abbreviation of 相公 'syangung' or 'minister' is meant here, which Pen Da-ya uses widely in his text, then another translation is possible: 'When their ministers are instructed by the [khan], every time [they] say this: 'If my lord sends me into the fire or into the water, I will go there!' And, upon saying [these words], they act as they said.'

^{XLIV} The text contains the symbol 𪛗 'dhai'—that is, 'bad.' Obviously, Pen Da-ya misunderstood his Mongolian informant; he most probably meant the Mongolian word 'daiin', 'war.'

^{XLV} In the text 安打奚 'an-da-si'—that is, the Mongolian word 'aldagi (andagi), 'to make a mistake.' This Mongolism is widely used in various Yuan documents.

then all the [property, wives, children and livestock] of A and his slaves are confiscated, and the slaves together with A are executed. This is called 'to pass a sentence upon the chief'^{XLVI}.

[I, Peng] observed that when they wanted to [receive something] they called it *sahua*. If they received it, then they said: 'Nashaing'^{XLVII}. In the Tatar language [this means] 'good!'. If they did not get what they wanted, then they said: "Maou"^{XLVIII}. In the Tatar language [this means] 'bad!'. As for *sahua*, [this means] 'to extort' in Chinese.

As regards their [the Black Tatars'] archery from a horse, [they are] tied tightly to the horse's back from their childhood. And so they ride with their mother everywhere. At the age of 3, [they] are tied with a rope to a saddle [pommel], so that they have something to hold onto and the whole crowd rush at full speed. At the age of 4–5, [they] are allowed to keep a small bow and short arrows, together with it they grow.

All year round, [the Black Tatars] hunt in the field. They rush rapidly on horses standing on tiptoe [in the stirrups] and do not sit, so the main strength they have is in their calves, not in the thighs. [They] are extremely fast and incredibly strong. [In the saddle they] can turn left and right at rapid-fire pace, so turning left they can shoot right and even aim back. As regards their archery on foot they stand astride, take big steps and bend down with legs halfway bent. That is why they can pierce armour [with their arrows].

[I, Xu] Ting, saw a Tatar woman gave birth to a child in the steppe. Immediately after birth she used sheep hair to wipe the [child], wrapped him into the sheep skin and tied inside a small box 4–5 chi long and 1 chi wide. Right after that, the woman took it under her arm, sat on a horse and rode off.

Their [the Black Tatars'] horses graze in the field and do not need hay and grain. On the sixth moon [they] eat a lot of young grass and become fattened and strong. When the [stallions] turn four, they make them into geldings^{XLIX}. That is why [they] are very strong, calm, willing and can tolerate wind and frost for a long time. If not gelded [they] become intractable, they nicker and become frightened so it is impossible to use them in ambushes.

As the hooves of [the Tatar horses] are easily cut and can be injured by stones, [they are strengthened] with iron or wooden plates. They are called 'foot pads'.

In all instances of fast galloping, [the Tatars] do not feed [the horses] to satiety. They free them from saddles [after each gallop] and tie them so that the horse's face is turned up, then they wait until their *chi*^L comes into balance, their breathing is smooth and their legs cool down.

When it becomes cold, the Tatars let their horses [follow] water and grass. Those who graze them are called *ulachi*^{LI}. Three [out of 10] *ulachi* are Muslims and seven of them are Northerners^{LI}.

[I, Xu] Ting, investigated the horse breeding system of the Tatars. [They] stop fighting at the very beginning of spring. After [spring they] always go to war with good horses.

Moreover, [the Tatars] let their horses follow water and grass, and horsemen do not control [their] movements. But when the west wind comes, [the Tatars] catch, harness [their] horses and hobble them near the tents. [The horses] do not eat much grass or drink a lot of water, and during the month when [they] grow thin and become strong, horsemen travel with them for several hundred li. In such a way [they are] in their natural position and do not sweat, therefore, they are able to endure long-distance [trips] and military campaigns. Usually, on their way through the main road, [the Tatars] do not let them [go] to the side [roads] for eating and drinking. They do so, probably, [because if] a horse eats and drinks during hard work, it will not lose fat and fall ill. This is a good way to breed horses. Southerners do the opposite, that is why [their] horses often get sick.

The strongest and the best of the remaining stallions they [the Tatars] call *ila*, that is, stud horses. The most of the rest [stallions], except for [*ila*], are geldings. Thus, [the Tatars] always have strong and sturdy [horses]. As for leaders, [they] are state-owned horses. The gelding never leads the herd of mares

^{XLVI} In the text 斷案主 '*duang-ang-chzhu*,' literally 'to pass sentence on the main instigator.' The meaning of this expression was explained by Wan Go-wei in his comments to the Book of Han: 'Regarding the expression 'to pass sentence upon the main,' it should be understood as the main form of punishment [for crimes] brought about by heads of clans/families [to which the criminals belonged]. It was also the custom in Northern China.'

^{XLVII} The distorted Mongolian word 'mash sain'—that is, 'very good.'

^{XLVIII} The distorted Mongolian word 'muu'—that is, 'bad.'

^{XLIX} That means 'castrate.'

^L 氣 '*tsi*,' Chinese notion for a spirit, the vital forces of the body.

^{LI} That means *ulagchi*, 'coachman' in Mongolian.

^{LII} In the text 漢人 '*khangzheng*,' literally 'Hans,' the Southern Suns used this name not only for the Han Chinese but also for the Chzhutchzhens and the Kidai, long-time rulers and settlers of Northern China.

that do not mix with the herd of geldings. The herds of geldings and mares, each, individually, make up their own herds. All horses are [divided] into herds with 400–500 animals which are led only by a couple of *ulachi*. [They] control the [herd] using round iron pointed [rods]. They use them as whips. When horses see them, they become frightened.

Every morning and evening every *ulachi* leads the horses around the tent of the [horse] owner and leaves them on the sides of the tent. Some time [after that] each [*ulachi*] leads [his horses] in different directions.

Every time they need to water the horses, they [the Tatars] dig a well from which only 4–5 horses can drink. Each [horse] knows the order of precedence: [horses] come one after another and the [first] horse drinks and leave, then comes the next horse. When some horse breaks [this] order, then *ulachi* just waves with the iron whip from a distance and [the horse] obediently bows and does not move. And no one dares rebel, so the perfect order is set. Each herd of mares is led by *ila* [assuming] one horse [*ila*] per 50–60 mares. When a mare leaves the herd, then *ila* bites and kicks it forcing it to return. Or when a horse *ila* of another herd crosses [its path], then the horse *ila* [of the first] herd bites, kicks it and makes it go away. In fact, there are many other amazing things [the Tatar have] to see.

Their [the Black Tatars'] saddle and harness are light, simple and comfortable for fast galloping. Their weight does not exceed 7–8 jins. At the front of their symmetric saddle, there is a vertical [pommel] and the back of it the pommel is flat. It lets the horseman turn in different directions, and the [horse] shoulders will not get hurt. As the stirrups are round, the legs [in stirrups] are in central position and there is not any bias. As the [bottom] of the stirrup is wide, the boots [of the Black Tatars] can easily slip into the stirrup and fit tightly. The stirrups are made of handmade untanned leather with saltpeter and [only] greased with mutton fat, so [it] is resistant to rain and does not rot. The [harness] is made of [leather] straps with a width of more than one cun and a length not exceeding four [cuns], therefore it is very comfortable for a [horseman] to turn with his whole body when he stands [in the stirrups].

Their [the Black Tatars'] army consists of common people at the age of 15 and older. There are only cavalry and no foot soldiers. There are two-three or six-seven horses per a person. 50 horsemen are called *dyu* (fan'ce^{LIII} [of characters] 'du' and 'yu' [is read as] *dyu* which means 'one unit').

The bellicose leaders and [their] strong servants unite together and units are subordinated to senior commanders. They are called the troops of the Batur^{LIV}. Earlier, when they attacked the Tanguts and the Jurchens, they drove people in all [these] states ahead [as slaves] and attacked their towns.

[I, Xu] Ting, [during] my trips to the steppe and back have never seen anyone travelling on foot. When their [Tatar] troop marches [on campaign], the leaders are riding on one horse and have 3–4 or 5–6 more horses. For a common [soldier] going on a [campaign], one or two horses would be enough.

They [the Black Tatars] are armed with the armour of 'willow leaf'^{LV} and the wicker armour [similar to] a sieve (the leather is [woven] in 6 layers).

[The Black Tatars] also have bows made of argali horn (plates made of the horn are attached to the bow tops, bows are 3 chi in length) and singing arrows (that is 'signal arrows'). There are also arrows made of camel bones and arrows with long and flat needle-like heads. Thinly planed wood is used as arrow shafts and the tied eagle [feathers] serve as fletching.

[The Black Tatars] also have bent swords made on the pattern of Islamic ones^{LVI}. [They] are light, robust and very sharp with small and narrow handles, that is why [Black Tatars' swords] are so convenient to move and swing. [The Black Tatars] also have short and long spades with blades^{LVII} [which they use] with stretching like a cutter, therefore nothing can slip out. [They] can pierce strong plates of [armour].

^{LIII} The well-known Chinese method of phonetic transcription of characters through the contraction of reading two other characters: the initial is taken from the first, and the final, from the second. Therefore, the phangtze symbols of *du* and *yu* given by Pen Da-ya are read as 'du'.

^{LIV} In the text 八都魯 'ba-du-lu,' a transcription of Mongolian word 'baatur,' 'brave warrior, hero'; with time 'batur' morphed into the title or rank to be bestowed for courage in battles. The Yuanshi mentions batur supervised tents of the common people: '[Guuyk] ordered every hundred Mongol tent to be supervised by one batur' (Yuanshi, tz.2, p. 39).

^{LV} That means referring to armour braided from leather strips.

^{LVI} Version: 'of the Uyghurs as the text contains 回回 'kuikhui,' literally 'Islamic'; however, it may stand for 'Uyghur.' See above.

^{LVII} In the text 槍刃 'tsyang-zheng,' literally 'pike-blade,' yet, as 刃 'zheng' was also a generic morpheme for all types of cold-bladed weapons, and Pen Da-ya described its action, it could be identified to a palm, a bladed weapon on a staff 0.5–1.5 m long. According to archaeological data, palms were a rather popular weapon among the Mongols.

[The Black Tatars] have rectangular shields, weaved from leather, and instead of bamboo [in their frame] they use willow. The width of the [shield] is 30 cuns, the length is one and a half times the width. There have also round wicker shields made specially [for the soldiers] of the forefront of the battle wearing them on elbows. They are used when [the Black Tatars] dismount and only shoot [a bow] to crush the enemy. [The Black Tatars] also have round iron shields which are used as helmets. They use them to move and turn fast inside the [enemy] column during the [battle]. There are also wooden shields on poles which are used to shelter from stone fougasses of the [enemy] when attacking towns.

Each chief and military leader [of the Black Tatars] has one military banner. And he is the only one who [has a right to do so] (It is forbidden to set out [banners] for people of low rank). [Banners] are usually folded and put away. Every time they meet the [enemy], they either fold or unfold the banners to control the battle.

Regarding attacks on towns, [the Black Tatars] use stone fougasses. The stone fougasses are also set on towers. The towers have a set of ropes and are used to protect those who pull the ropes [moving the tower up to the walls].

When [the Black Tatars] attacked Fengxiang by means of the stone fougasses, they deliberately shot one [chosen] corner of the wall. 400 stone fougasses were mounted [for that]^{LVIII}.

The rest of their [military] weapons and equipment are similar to those [mentioned above]. Speaking of the most important of their [weapons], bow and arrows come first, and after that a sabre.

[I, Xu] Ting, studied this. The Tatars initially [were] primitive and did not ply any trade. And is there anything they can do but raise livestock? Their [Tatar] people are too simple minded and calm [to be craftsmen]. The only thing [the Tatars] can do [themselves] is to carve wood for the pommel of a saddle and cover it with sheepskin. They also carve stirrups out of wood. As for arrowheads, [the Tatars made] them of bones [as they] did not have iron. Later, when the Muslims [or the Uighurs] were defeated, the Tatars acquired handicraft production for the first time—they received masters and therefore received weapons and tools for the first time. As the Muslims were very skilled craftsmen, they improved [Tatar] weapons for an assault of fortifications. After Jin's death, the captured [craftsmen] taught [the Tatars] even more. After this, [the Tatars] gained a lot of good craftsmen and improved the technique.

Their [the Black Tatars'] army foodstuffs are mutton and mare's [milk] ([the Black Tatars] express their [mares] milk by hand, this is called 'to milk'). As for the first daily mare's milk, [the Black Tatars] let the foals drink it. As for the evening, they gather [mares] for milking. They store [milk] in leather vessels for several days. [It] tastes a bit sour when you drink it for the first time. It is [also] called kumis.

When [the Black Tatars] violate borders of other people, they certainly commit plunder and confiscation following the orders of Sun Tzu: 'to use provisions [taken] from the enemy'.

[I, Xu] Ting, often watched them [the Tatars] milking their mares in the daytime. I also often asked [the Tatars] about that. [The answer was]: first, there was no division between daytime and evening milking. According to their [Tatars'] rules, they first give the foals to suck milk a little, then they chase them away and milk the mares with their hands into a leather bucket, then they pour milk into a leather bag and pound it. Common people drink it [from that bag] during a few days.

When I first came to the golden tent of the Tatar ruler, [I] drank pure sweet kumis. It is absolutely different from the white [kumis] which is cloudy, sour and smelly. It is called 'black kumis' probably because it is pure and so it seems black [as vessel bottom and walls]. [I] asked about it and [I] was told: this [leather bag] was filled with [milk] and pounded for 7–8 days. The harder they pound, the purer [the kumis is], and when [the kumis is] pure it stops smelling.

It was the only time when [I] drank the [black kumis]. [I] never was honoured with such delicacies in other places. Moreover, [when I stayed] in the golden tent for the second time they sent [me] grape wine... [I] remember that [wine] is brought as tribute from the Uighur state.

Their [the Black Tatars'] moving army always trembles in fear of a sudden attack from an ambush. [According to the proverb] 'sit high, look afar', the best horsemen (even from the flanks) ride in different directions to investigate the [enemy territory] for 100–200 li. [They] attack suddenly and seize citizens or passers-by to find out the actual circumstances: better roads to use; towns to attack; lands to conquer;

^{LVIII} Most probably, here Pen Da-ya is recalling the 1230 siege of Phengsyang. Concentrated fire on a selected point of the fortress wall, made by numerous catapults, was recorded in the 1232–1233 campaign during the siege of other Tzi cities like Khaiung or Loayng.

places to set up camp; location of enemy troops; areas with food and grass. This is the responsibility of the cavalry patrols that return [to the main forces] with reports.

If the main troops [of the Black Tatars] unite [their] forces and carry out the formation 'turn of a hedgehog'^{LIX}, [the Black Tatars] first burn pi-pa and [then] choose one person to command all units.

[I, Xu] Ting, never saw large troops of the Tatars in those towns of Henan which I visited on my way northward. There also was not a single [Tatar] soldier in towns—[the centres] of districts and counties. Only outside the towns, in villages, there were cavalry patrols located in all directions and ruling [there]. In case of alarm caused by suddenly appeared dust clouds [made by the approaching troops] [the patrols] reconnoiter in all directions. If this [information] is [confirmed], they immediately report to [their] direct commanders who, in turn, report it to the main chiefs of the [Tatar] cavalry.

[When] they [the Black Tatars] set up camp, they without fail do so on a high hill. The tent of the commander-in-chief must be placed south eastwards. Before the tent, there are cavalry patrols (called *tolochi*^{LX} in Tatar) which protect the area in turns (troops are not deployed only right in front of the [tent]). On the sides of the tent of the commander-in-chief and behind the tents of dignitaries [there are] all the troop units, each of which is subordinated to their military leader (touxiang), who places them in order. In addition, noble [Black Tatars] distribute services and order to take up empty positions for easy foraging and cantonment. In case of unexpected [events], [the leaders] leave every second horse in the camp saddled for the night.

The name of the camp commander is the night password. If there is an alarm in one camp, the neighbouring one has horses awaiting the [signal for] pursuit or a surprise attack. Speaking of other camps, [they] do not move at all. The situation is different only with camps of cavalry patrols.

After the [camp] commander takes his place in the centre, the troops take their place around him. [Camp commander] passes plates with notches^{LXI} to the back ends of the camp for turn night patrols (this is the same as the system of shooting [warning] arrows in the Chinese army). Horses are fed inside the camps to prevent their escape. Before the sun goes down, they [patrols] build fires in their camps. They are called 'relay fires'^{LXII}. And while the night lasts, the [patrols] move where no one can see them to warn about a night attack. Meanwhile the fires of relay follow each other from the camp located at the very beginning to camps which do not move until morning.

[I, Xu] Ting, many times saw how they [the Tatars] use dogs for the relay^{LXIII}.

They set up camp in the morning, while it is light they need to explore conditions of the terrain [variant—military position] around.

Their [the Black Tatars'] battle formation is advantageous for field battle. When they do not feel superiority, they do not advance forward. While moving and stopping they find out strengths and weaknesses of the enemy. A hundred of horsemen can encircle the ten-thousand troop, and a thousand of horsemen can disband and occupy the territory of hundred *li*. When crashing the strong formation [of enemy troops] and carrying a position they use soldiers in armour of bonded leather at the prong of attack. There are, as a rule, three such soldiers out of ten [attacking] ones. When faced with enemy, [the Black Tatars] usually have the following battle formation: extended order with 4–5 [people in a group], so that [they] do not crowd together and can not be captured by the enemy. In general, [the Black Tatars] use dismounted order in regular [formation] and use cavalry in an extended formation. When the enemy troops disband or join together, [the Black tatars] do the same, as their cavalry reacts fast. It does not matter whether the

^{LIX} That means a manoeuvre made by manoeuvrable horse detachments thrown out of the battle orders.

^{LX} 托落赤 'to-lo-chi,' a transcription of the Mongolian 'torchī'—that is, 'the one who catches with a net,' from 'tor' meaning 'net, snare.'

^{LXI} Above Sui Gyn had already told about them.

^{LXII} In the text 火鋪 'kho-pu,' literally 'fire-station/mail post.' In antiquity that was how towers to watch the enemy and, through chain of signal lights, to remotely transmit information of the actions of the enemy were called. Cf. in 'Tszhichzhi Tuntzyang' ('Comprehensive Mirror to Aid in Administration', 1084)? tz.288: 'The initial year of motto Tsyang-you [reign] of Ghao-tzu (year 948—*R. Kh.*)...then... they removed their flags and quietened their drums (i.e., stopped military actions—*R. Kh.*) and only put watch towers (in the text 火鋪 'khopu'—*R. Kh.*) along the Hwang Go River, which stood in tens of *li*, and warriors were standing [at the towers] in order to guard them.'

^{LXIII} In the text 狗鋪 'ghou-pu,' literally 'dog-station.' Although the German researchers R. Olbricht and E. Pinks suggest we consider this a mistake or distortion of the original text, there is a clear parallel here with the previous description about the Mongol's method of transmitting information through torch relays. Besides, in the 13th century the symbol 鋪 was not only used as an independent notion for an intermediate station for any kind of mail/relay but also as a generic morpheme for any relay. For example, this was how it was used in the decree of 1260 by Khubilay on the system of government couriers relay (急遞鋪) (Yuanshi, tz.101, p. 2596).

[enemy troops] are far away or not, large or small, extended or joined together, [the Black Tatars] move like a falling sky and go through like lightning. This is called 'troops [like] a flock of crows scattering in all directions'. They [the Black Tatars] join together and disband according to the direction [their leader shows] with his whip. They disband and [then] join together hearing the sounds of the [drum] 'gugui' as a signal. [The Black Tatars] can cover the distance of 1000 *li* very fast. Before the overnight stop they observe the signal lights so they know [where to go]. They [prefer] fighting in a very cold area. If there is no snow, [the Black Tatars] grind stones and pray to the Sky.

[I, Xu] Ting, observed the Tatar military art. [It] is only of one kind as [the Tatars] are ignorant and consider it to be right to attack savagely. In addition, they are not afraid of death at all. Since they [the Tatars] invaded the south, they have less and less failures and for that reason [their] courage is growing. [The Tatars] are brave but they let [themselves] be uneducated [in the Chinese military art].

Their foodstuffs are poor and consist of sheep and horses which follow [them] in campaigns. [The Tatars] do not practice the conveyance of food rations. However, although [their] army mainly consists of the Tatars, the rest of them are people of the fallen states. The sheep and horses are not even enough for the Tatars themselves, while people of the defeated states furthermore need a grain allowance. <...>

Regarding how they [the Black Tatars] defeat the enemy, they act [according to the proverb] 'sit high, look afar' and first study the terrain, find out the state of things of the enemy, wait for the moment when the enemy is confused and then attack. Every time [the Black Tatars] use a detachment of horsemen to first attack directly the main point of the enemy formation. As soon as the [enemy] weakens, [the Black Tatars] attack the enemy on a broad front and chase him. And even if there are 100,000 [enemy] soldiers [they] can not resist. If the [enemy] does not give in, the first detachment moves sideways and the next one attacks again. If they fail again to penetrate into [enemy's formation], the next detachments act the same way as the [previous ones]. So while they break through the enemy's [position], they gain time to concentrate the troops left, right and behind the [enemy]. And as soon as they close the enemy in, the last one to perform the [maneuver] gives the [signal] sound of the 'gugui' [drum]. Then [the Black Tatars] simultaneously join their forces from four sides and eight directions^{LXIV} and attack the enemy together.

In addition to this method [the Black Tatars also use]:

- one more thing—when [the Black Tatars] get down from a horse with round wicker shield in hand and shoot arrows with every step right to the target, then from both flanks [they] definitely break the enemy's formation, then mix [it], chase the enemy and break through the enemy's [ranks];
- or—when [the Black Tatars] see the opportunity to surround the [enemy's] foot troops, they position the [cavalry] detachment behind the [enemy's] foot troops and when [the Black Tatars] turn the enemy back, this cavalry detachment attacks the enemy;
- or—when they can not break the [enemy's] positions with all their tactical methods, they run cattle towards the enemy;
- or—[the Black Tatars] run wild horses with whips toward the [enemy], not to let the enemy take up an unconquerable position;
- or—if the [enemy] arranged the fence of halberds and the cavalry stopped its attack in the face of resistance, [the Black Tatars] surround the [enemy] with horsemen that patrol from a distance and shoot arrows from time to time forcing the enemy to expend energy in moving. After some time of such a tense standoff, the enemy inevitably runs out of food;
- or—if the lack of grass and water make the [enemy] leave, [the Black Tatars] attack and force [him to surrender];
- or—[when] the enemy's formation moves [the Black Tatars] do not hurry to attack, waiting for the [enemy] to be tired and exhausted, and only then break through [his ranks];
- or—if their army is not sufficient, [the Black Tatars] leave the area dragging the trees and raising the dust to the sky, [so] the enemy suspects that [the Black Tatar] army is large and becomes confused. Meanwhile, [the Black Tatars] attack and defeat him;
- or—[The Black Tatars] make their prisoners obey their orders and fight, [so the Black Tatars] win as the enemy is exhausted by the attacks [of these prisoners on his] picked and trained troops;
- or—as soon as [the Black Tatars] cross swords [with the enemy], they pretend to be defeated and run away throwing their treasure, so the enemy is [distracted] by picking up gold and silver;
- or—[when the Black Tatars] pretend to be defeated, but the enemy chases them and attacks, then their [Black Tatar] ambush cavalry appears and destroys [the enemy].

^{LXIV} Idiom meaning 'from all sides.'

And even when [the Black Tatars] suffer defeat, they still can win due to luck and skillful tactics.

This is due to the fact that [the Black Tatars] have always cared most about [fighting] with each other and [they] possess such [tactical methods] which are not mentioned in ancient teachings of [military art]. When they win, they chase the enemy, attack him rapidly and kill him not allowing [anyone] to be saved. When they suffer defeat, they scatter in all directions so their pursuers can not overtake them.

The commanders of their [Black Tatars'] cavalry used to be seventeen military leaders^{LXV}: Temochzhen' (that is, Chengjisi; after his death the cavalry [belongs] to the mother of Ukudai, now she heads it herself)¹, the illegal elder tsarevich Chzhochzhi ([he] is already dead)², illegal second tsarevich Chahedai (was sent to the north-west to the Muslim states)³, illegal third tsarevich Ukudai (he is the Tatar ruler now), illegal fourth tsarevich Toluang (having returned from Henan, he became ill and died, four people mentioned above are all sons of Temochzhen')⁴, Temoge-Wochzhin (shortly referred to as Wochen, entitled 'Nias-Shen-Dawan', the younger brother of Temochzhen')⁵, An'chzhidai (the nephew of Temochzhen', the younger brother^{LXVI} of Ukudai)⁶, Bodu-[fu]ma (the son-in-law of Temochzhen')⁷, Baisyma (the first name is Baisybu, the illegal tsarevich of the White Tatars and the son-in-law of Temochzhen', former husband of illegal princess Alahan')⁸, Muhuali-Govan (a Black Tatar, [he] is the father of Bovo and the godfather of Chalaven')⁹, Gete-Junwan (a Black Tatar)¹⁰, Xiao-Fuzhen¹¹ (a Khitan, responsible for the yards assigned for the needs of artillery¹²), Ahai (a Khitan, originally dwelt in Dexingfu)¹³, Tuhua (is the younger brother of Ahai, originally dwelt in Xuandefu)¹⁴, Minan¹⁵ ([he] is a Khitan; his son is Han'tabu¹⁶, *dage*^{LXVII} of Yanjing, currently ruling it) and Liu Bo-lin (Chinese, the commander of the *tumen* of 'younger brothers')¹⁷.

Speaking of field strength, I did not find out the exact number of soldiers. All I know is that there are several wives per one man and several children per one wife. And if earlier there were a few [Black Tatars] and now there is a lot of them, it means that their [field strength] and the [number] of current leaders is increasing. In addition, I do not know how many old leaders and skilled commanders died. However, a large part of [these commanders] who participated earlier in the conquest of Jin and fought in the lands between [Tong]guan and [Huang]he, such as Subutai¹⁸, Temodai¹⁹, Tachar (now called Benjan)²⁰ and An'char²¹ are still alive. And though [the Black Tatars] fight constantly, it seems that there is still no lack of soldiers able to [fight].

[I, Xu] Ting, observed their [Tatar] customs: one husband has several dozen wives or more than a hundred wives. They are very rich in terms of number of livestock per one wife. Chenjisi established it as a law that [the Tatars] must increase their offspring. [The Tatars] tolerate no jealous men [among them]²².

The current ruler of the Tatars is Ukudai, he was born in the year of bin-u^{LXVIII}.

[The barbarian tribes] *hu*²³ including the Black Tatars, [have] little facial hair, so the [barbarian] *hu* with a lot of [facial hair] certainly becomes noble.

[When I, Xu] Ting, stood in front of the golden tent I suddenly saw the Tatar ruler who came out of the tent with one or two companions to shoot a bow. The Tatar ruler shot 4–5 arrows, the [shooting] range was 200 steps. After some time [they] stopped shooting and immediately entered the golden tent.

As for the way they the [Black Tatars'] military leaders arranged border protection, the army of Wozhen is located in Liaodong, the army of Chahedai is in the Islamic [countries] and the army of Bodu-fuma is in Hexi. All of them have to protect [each other's] rear units.

The Black Tatars have 8 *tumen* heads. Some *tumens* have reduced strength, however this is an army of clans [of the Black Tatars' ruler]: uncles, nephews, children of younger and elder brothers²⁴ which are not included in the number of the [above-mentioned] *tumen* heads²⁵. There are 4 *tumen* heads of [troops from] Han lands²⁶.

^{LXV} In the text 頭項 'tou-syang,' a term first found at the Kidans, is a transmission of a *tarqan* term well known since the Turkic Khaganate (see below). It can also be found in Yuanshi and generally refers to the heads of the thousands (they commanded a thousand warriors), formed by warriors from their own clans/oboks. Often in these instances a *tousian*, the nominal head of a thousand, who in reality commanded several thousand warriors; with each regiment having its own actual commander, its own thousander in the original meaning of the word. This practice, too, matches the Mongolian status of *tarkhan*, the ruler of a nomadic appanage and commanders of their own military forces.

^{LXVI} Here, Pen Da-ya is absolutely exact in rendering familial terms of the Mongols as they did not have the notion of 'cousin' in that period and called any cousins just brothers (junior or senior).

^{LXVII} As N. Munkuyev explained, *daghe* was the transcription of Mongolian word *dargha*, a phonetic version of *daruga* (*darughachi*) word [Men-da bey lu, 1975, pp. 161–162].

^{LXVIII} 23 January 1186–9 February 1187.

All the other [military leaders] are inferior to these four tumen heads. The number of troops is large and their forces are numerous. Like the armies in Liaodong, Hexi and all Islamic states, [the Black Tatars] also have [troops] in addition to the Han tumens.

When [I, Xu] Ting, stayed in the steppe, I saw that their [Tatar] carts of chiefs and commoners were loaded with heavy treasure along with old men, children and property and they all went several days without a break. And the majority of [these Tatars] were 13–14 years old. When I asked about the [reason], I was told: 'All these Tatars are moved to fight in Islamic countries and it takes 3 years to get there. Those who are 13–14 years old now, will be 17–18 years old when they reach those places, and all of them will be excellent soldiers by that time'²⁷.

Muslims of all kinds have already resigned and joined [the Tatar] army. And this is the only kind of Muslims which dwell on the other side of Sichuan^{LXIX} and resist the [Tatars]. The capital of their country is 300 li [in size]. [This] area is fertile and a lot of things are produced [there]. [It] is warm enough to cultivate 'five grains' and fruit trees^{LXX} and melons [grown there] are huge in girth.

As for the countries that still do not agree to become vassals, Chahedai has been fighting with them for several years, that is why [the Tatars] increase the [number] of troops there.

They [the Black Tatars] treat all countries cruelly. Those [of them] that have already been defeated and do not resist have the following names:

- in the sou-east—the White Tatars²⁸ and Jin foreigners (nuzhens)²⁹;
- in the nor-west—the Naimans (or [they] are also called Naiman')³⁰, the Uighurs³¹, the Sary-Uighurs³², the Sarts³³ and the Kangly³⁴ ([these are all] the names of the Islamic states)³⁵;
- right to the north—the Tatars (that is, the Ursut clan)³⁶ and the Merkits³⁷;
- right to the south—the Xi Xia³⁸.

Those [states] which still resist and have not yet been conquered have [the following] names:

- in the East, these are Korea and the [state of Puxian] Wannu (that is the Jurchen state Dazhen)³⁹ <...>;
- in the nor-east, these are Nishu⁴⁰ and Nahai-irgen⁴¹ ('The Dog's State'. Men there have square face and fists, and have hair on the nipples. They walk so fast that they can overtake a running horse. Their girls are beautiful and graceful. The Tatars attack them, but are unable to win)⁴²;
- in the sou-west, these are Usu-irgen (the Water Tatars)⁴³ and Mubo⁴⁴ (a tribe on the western outskirts of [China], that is controlled by tribal leader and has no rulers on the throne⁴⁵);
- in the nor-west, this is Kybchak⁴⁶ (the Islamic state, [they] are a type of Uighurs)⁴⁷, first [they] surrendered, but then rebelled and escaped into the gorges and beyond the rivers to resist there⁴⁸.

When Temochzhen was alive, he said⁴⁹: 'You may try for ten years but you have to finish the conquest: if you hesitate to finish the conquest then the rest of the Jin dynasty can propagate again. You better leave Chahedai to protect [unconquered Muslims] and take the rest of the Jins and put an end to [them]'. This was what they did after that [that is, after Chinggis Khan's death].

In the year of gui-si^{LXXI} Chahedai, who became the main tsarevich by that time, attacked the following areas: Sindhu (the Black Muslims, there is no rain there and they sell water, considered to be a state)⁵⁰; directly to the north from here—Khara-Khidat (the Black Khitans or just Khitans, some people call [them] 'the Great Khitans', this is the state of Dashi Linh[a]⁵¹). [Chahedai] either takes away their lands or capture their population just as in Korea, in the [state of Puxian] Wannu, in the Dog's state, [in the states] of the Water Tatars and Mubo.

[The Tatars] can easily conquer all [these states]. Only the Kybchaks are too bellicose. If [the Black Tatars] do not put down [their rebellion], they can have a lot of troubles. They [the Kybchaks] are those with whom the Tatars will certainly fight. <...>

Due to the fact that the Tatars especially care about the horse hooves and roads rich in [food], [they] send [people in advance] to observe the grass growth in the steppe. <...>

^{LXIX} Translated as 'Western rivers/valleys.' This refers to the Wayghan River in the province of Xinjiang, known since the times of Tan as Sichuan, on the territory of the Uighur state of Kucha (Eastern Turkestan), together with its twin river Dunchuan ('the Eastern River'). At the same time, according to the 'Chzhungo gu-tzing dimin da tsy-dyang' (Comprehensive Dictionary of Ancient and Modern Geographic Names of China, 1935, p. 743), there is one more territory named Sichuan, namely lands west of the Sichuan province; most probably, they are meant in the place of the Book of Han that retells the story of Ughedei's strategic plan.

^{LXX} In China for a long-time the name for the main cereal and agricultural crops were: rice, millet, barley, wheat, and beans.

^{LXXI} 11 February 1233–30 January 1234.

When they [the Black Tatars] die while in the army, their bodies are sent back home. If it is not possible, they put a body in a bag, bury it, and take the property of the dead man.

[I, Xu] Ting, saw [the Tatars] who died while in the army. If servants travelled back home with the remains of their owner, they got the whole livestock [of a dead man]. But when other people [brought the body home], they got everything—his [dead man's] wives, slaves and livestock.

Their [Black Tatars'] graves do not have burial mounds. [The Black Tatars] use their horses to trample the [grave] and make it absolutely flat. As for the grave of Temochzhen', it is [surrounded] by arrows as a fence (more than 30 li in a width) and protected by horsemen.

[I, Xu] Ting, saw the grave of Temochzhen' located on the bank of the river Jlyroy. Mountains and a river surround it. I was told that Temochzhen' was born in this place that is why he was buried there. I do not know whether it is true or not. <...>

Written on the first day of the first summer moon in the year of din-yu of Jia-Xi [era name]^{LXXII} by Xu Ting from Yongjia, also known as Changru'.

List of Chinese measures and weights

li—about 576 m; 1 chi = 10 cun—32 cm

jin—about 600 g; liang—about 37 g; 1 ding = 50 liang

Comments

¹ The discussion is about the chief wife of Chinggis Khan—Börte, mother of Jochi, Chagatai, Ögedei and Tolui. Women in Mongolian society were quite equal to men and had both their own property, and the rights for property of their husband after his death. In the ruling dynasty, it also applied to the management functions, therefore, women often acted as regents.

² That is Jochi, the eldest son of Chinggis Khan. Died at the end of February—beginning of March, 1227.

³ Chagatai, the second son of Chinggis Khan, was allocated lands of Eastern Turkestan and Transoxiana (except Bukhara) within the lifetime of Chinggis Khan.

⁴ Tolui is the forth and the last son of Chinggis Khan and his chief wife Börte Üjin. After Chinggis Khan death he, being the youngest son, got the majority of the Mongolian tilt carts which the Mongolian Qa'an had had, including great military forces—considering the nature of the Mongolian army as a warrior nation (according to Rashid al-Din, the number of Tolui people made 101 thousand, see [Rashid al-Din, 1952, I, 2, p. 266]). According to Yuanshi, Tolui died in September–October, 1232 (Yuanshi, juan 2, p. 32). His sons were 2 Qa'ans—Mengü Qa'an and Kublai, and also Hulagu—the founder of the Mongol Ilkhanate within the territory of Iran, Afghanistan and Western Asia.

⁵ Temuge-Otchigin, the younger brother of Chinggis Khan, 4th son of their father Esugei Baatar. Peng Daya gives his name very close to the Yuanshi variant—*Temuge-Vochitszin* (*Temoge-O[t]čigin*).

⁶ Here An'chzhidai means Alchidai/Aldzhidai—the son of Hachiun, the younger brother of Chinggis Khan, and cousin of Ögedei. In generation tables of Yuanshi he is named *Anchzhitsziday* (*Aldzhigidei*), and according to Rashid al-Din—*Eljiday*.

⁷ In Yuanshi (juan 118), there is a biography of Botu. According to it, Botu was of the Ikires tribes and first married the younger sister of Chinggis Khan, and after her death—his daughter Khochen Bekhi. It was he whom Peng Daya calls *Bodu-fuma* (*fuma* is the name of the son-in-law of the emperor accepted in China). Rashid al-Din also mentions Butu-gurgen (in Mongolian 'son-in-law' is 'gurgen')—Khochen Bekhi's husband, the eldest daughter of Chinggis Khan. According to Yuanshi, Botu died in the campaign against Xi Xia, that is in 1226–1227. So here, as well as in several cases of mention of supreme commanders of the Mongol troops who had died by 1233 (for example, Mukhali), Peng Daya speaks not about Botu, but about the troops which were under his command and came under command of his successor. In this case, it was Botu's son—Sorkhak who also married the princess of imperial blood—Altun Gunchzhu (the daughter of

the younger brother of Chinggis Khan—Otechigin Noyon, *Gunchzhu* is the name of princesses of imperial dynasty in China) (Yuanshi, p. 2922).

⁸ Here the discussion is about Buyan Sibān, the eldest son of the head of *Onghuts* Alakhush the Digit-khuri (Yuanshi, juan 118, p. 2924). In 'Mengda Beilu' (further—ML) he is also named Baysybu, but written in signs 白四部 unlike 白厮卜 in Han Shu. 'Basyma' is a transformation of Baysybu-fuma, since, according to ML, he was married to the daughter of Chinggis Khan Alakhai Bekhi. Buyan-Sibān was a Nestorian Christian, his name 'Sibān' is a Turkic form of a Christian name Stefan/Stepan. In the text, he is called 'tsarevitch' (*taizi*) as the successor of Alakhush the Digit-khuri, however, as well as in other cases, here it is told about the died leader of the Mongol troops—Buyan-Sibān was killed between 1211–1213 and in 1220 Zhao Hun writes about Alakhai Bekhi as about his widow (see [Mengda Beilu, 1975, p. 57]).

⁹ Mukhali (1170–1223) had died by the time Peng Daya appeared. His status and titles were inherited by his only son Bo'ol. Peng Daya provides his name very close to the actual pronunciation—'Boo[l]' whereas in Mukhali's biography in Yuanshi this name is mentioned as *Bolu*. 'Chalaven' is mentioned in the text of Han Shu (察刺溫—the Mongolian name 'Chalaun' is so told in Han Shu) is actually Tas, the senior grandson of Mukhali, the first son of Bo'ol as it is reported in the list of sons of Bo'ol: '7 sons: the senior is Tas following him Sugulchak... Tas, [his] first name—Chalaun' (Yuanshi, p. 2937). Peng Daya mentioned him not coincidentally—Bo'ol died 5 years before the arrival of Peng Daya, that is in 1228. Therefore in 1233 titles of Mukhali and his son Bo'ol were inherited just by Tas, same as 'Chalaven' (查刺溫). The mention of certain 'protection' of Mukhali to Chalaun/Tas is very precise information—in Tas's biography in Yuanshi it is said that he was distinguished by great abilities since childhood, and his grandfather Mukhali saw him as his worthy successor. Probably, it was connected with the poor health of Mukhali's only son—Bo'ol who died at the age of 31 and Tasu had to become his successor at the age of 17 (Yuanshi, pp. 2937–2938).

¹⁰ Katai, along with his father Jurchedai, were members of those first 95 colonels whose positions were founded by Chinggis Khan in 1206. Both of them were leaders of Uruuds, therefore, Chinggis Khan gave people of this tribe under their command [The Secret History of the Mongols, 1941, pp. 158, 162]. Thus, Katai came out to the top of the nomadic nobility at the time of formation of the state of Chinggis Khan. He kept this status at the time of Ögedei. Besides, Ketay was married to Ibakha Bekhi, the daughter of Zhakha Gambu, the brother of Keraits head Van Khan, she was first a wife of Chinggis Khan [Rashid al-Din, 1952, I, 2, p. 72]. The latter gave her in marriage to Katai together with all her bonded vassals and possessions. This act of Chinggis Khan was a demonstration of his goodwill and appreciation of Katai merits. Thus, Peng Daya rightfully included Katai in the list of chief noblemen—tarkhans (*touxian*).

¹¹ One has to agree with the explanation of Wang Guowei concerning a distortion in the title. Namely, in the present text, it is necessary to read 'dafu' instead 夫人 of 'fuzheng' 大夫 as reduction of the position 御史大夫 'Yushi Dafu'. Besides, the collation of stories about the capture of the Northern Capital Jin in the biographies of Mukhali and Shi-mo Yesen shows that the one who in the first biography is called 'Xiao Yesen', in the second one is actually Shi-mo Yesen (see (Yuanshi, p. 2931, juan 150, p. 3542)). Thus, it confirms the fact of the biography of Shi-mo Yesen that his patrimonial surname was Xiao. However, Peng Daya speaks, most likely, not about Shi-mo (Xiao) Yesen, but about his eldest son Zhala (Zhala[r]). The matter is that Shi-mo Yesen died in 1219, at the same time Zhalar inherited his rank of a *yuishi dafu* (Yuanshi, pp. 3542–3543). Most likely, he is mentioned in Mukhali's biography under the name of 'Xiao Temur'. The usage of the Mongolian name 'Temur' should not confuse—the Mongols awarded their non-Mongolian brothers-in-arms the honourable right to bear the Mongolian names or nicknames—or as an addition to their initial names or as their complete replacement by the Mongolian name in recognition of their services. According to the writings of the yuan author Van Yun (died in 1304) 'Shi chjun-u gun jia juan', it is known that Xiao Zhalar was a general, and together with two others—Shi Tianze and Liu Hay-ma, he was ordered to make the right wing of troops [Mengda Beilu, 1975, p. 64].

¹² Shi-mo Yesen was a founder of the so-called 'Black army' which consisted of the Chinese, Khitan and Jurchen people, who defected to the Mongols. And it was supplied at the expense of the yards of the Chinese people which were dedicated for these purposes. Shi-mo (Xiao) Zhalar after the death of his father headed the army and participated in sieges of many cities where stone-hurling machines were widely used. His merits during the capture of strong protected Zhenhemen gate at the siege of Kaifeng in 1232–1233 are especially notable in Chzhapar's biography (Yuanshi, p. 3543), just at the time Peng Daya stayed with the Mongols. And according to the data from 'Jin Shi', it is known that each wall and each gate of Kaifeng were under sustained and massed attack of a large number of stone fougasses during this siege. Therefore, there were also sizable

forces of the Chinese stone fougasse throwers that Chzhapar was also responsible for and this fact is, probably, mentioned by Peng Daya in the present text.

¹³ Yelu Ahai was a descendant of the Khitan imperial dynasty. In the beginning, he served the Jins, but in 1203 he defected to Chinggis Khan. It happened when he was sent to the Kerait Van Khan in the capacity of an ambassador—at that time Chinggis Khan was not so much an ally of Van Khan as a vassal and often stayed at the Keraites. During this mission Yelu Ahai came into contact with Chinggis Khan who offered him to come to serve him. But he did not defect to the Mongols at once. Instead of this, he agreed that his younger brother served the Mongols—as a hostage, a kind of insurance, while he remained an ambassador of Van Khan. But soon Yelu Ahai defected to the Mongols—in 1203 Yelu Ahai was noticed in the suite of Chinggis Khan. During the first campaign against the Jin in 1211, Yelu Ahai was the deputy of Jebe and was in charge of vanguard of his corps. Peng Daya truly tells the fact that during the first Mongol conquests in Northern China Yelu Ahai captured Desinfa, and his troops remained in all metropolitan area of Yan—the same information is given in the biography of Yelu Ahai (see (Yuanshi, juan 150, p. 3549)). However, by the time Peng Daya came to the Mongols, Yelu Ahai had died—he participated in the campaign against Khwarezm Shah, the troops under his command conquered a number of large cities of Middle Asia—for example, Bukhara and Samarkand. Right after the capture of Samarkand (1220), Yelu Ahai remained there as a governor, and later the main daruga of all conquered cities of Middle Asia. But soon after that, he caught his death [Ibid.]. Therefore, as well as in other cases, Peng Daya reports about Yelu Ahai's descendants who up to Mengü Qa'an's reign were in the capital area or commanders-in-chief of troops (Manghudai, the eldest son of Yelu Ahai commanded Khitan and Mongolian corps), or main darugha (at first Mal-Sergeg, the middle son of Yelu Ahai, and later his son Mayge inherited this position) (Yuanshi, p. 3550).

¹⁴ Yelu Tuhua was first a hostage of Chinggis Khan as a guarantee of behaviour of his elder brother Yelu Ahai whom Chinggis Khan entrusted a unit under command. However, the status of such hostages was high—they were a part of *kheshig*, the personal guard of Chinggis Khan: so, even Subutai began his service as a hostage. After the break in relations with Van Khan and the defeat at Mao-Undur, Chinggis Khan hid near Baljun lakes and swamps with the rest of his most devoted adherents—among them were also Yelu Ahai with Yelu Tuhua. This fact was considered as an honourable distinction, all who 'drank Baljun water', according to Rashid al-Din, were considered attendants of Chinggis Khan who took them as reliable and trusted people. So, in a number of biographies in Yuanshi the fact that the character or his ancestors were among those who were at Baljun with Chinggis Khan is emphasised as an important characteristic of position of the character, of his biography in hierarchy of the Mongol Empire. Yelu Tuhua was involved in war with Jin from the very beginning—in 1211 he together with his detachment acted as guide, with the corps of Mukhali (Yuanshi, p. 3532). In 1217 Chinggis Khan, leaving conquest of Northern China to Mukhali, gave him a number of troops with Yelu Tuhua as a member of command—he commanded a separate corps of the Chinese troops already [Palladius, 1877, p. 191]. By the time of Ögedei's reign, Yelu Tuhua had become one of the leading Mongolian commanders in Northern China—he received the title 'Chief Executive Great Noion', and in the campaign against Jin generals Chzhalar, Liu Hei-ma, Shi Tian-tsa and others, 7 generals in all, came under his command (Yuanshi, p. 3543). During this campaign he died (there is no date of death in his biography, according to Tu, it happened in 1231, but it cannot be considered as precisely known). His son Zhuge inherited his father's assignments, including the command over 7 generals [Ibid.]. However, in this case Peng Daya reports about Yelu Tuhua, but not about Yelu Zhuge since, most likely, Peng Daya could not know about Yelu Tuhua's death in 1233.

¹⁵ Shimo Mingan (1164–1216) was a confidant of the Jin commander-in-chief Wanyan Jiu Jin. While his defection to the Mongols is usually dated right after the battle at Xuandefu (September, 1211), but, according to other sources, he defected to the Mongols in 1213. Together with the Mongolian detachment, the Chinese troops of Shimo Mingan took an active part in the siege and capture of Yanjin in 1214–1215. After the capture of Yanjin, Shimo Mingan was appointed a commander-in-chief of all troops (Mongolian and Chinese) in this capital area and soon he became ill and died in 1216.

¹⁶ Peng Daya gives a clearer form of record of Shimo Mingan's son's name since in the biography of Shimo Mingan in Yuanshi his name is spelled as 中書相公 'Xiandebu' which also carries over the close sounding—'Hantebu'. According to ML, he was Yanjin's 'elder brother' ('*dage*'), and according to his biography—Yanjin's *xingsheng*, that is Yanjin's 'manager' (Yuanshi, juan 150, p. 3557). Thus, it is again confirmed that the word '*dage*' is the version of the word '*darugha*'. In 1220, Chao Hong finds Hantabu in this position

in Yanjin therefore the information given by Peng Daya is quite outdated here, since by 1233, Hantabu had succeeded to his father for already 17 years.

¹⁷ Liu Bo-ling (1149–1221) defected to the Mongols in 1211 when the Mongols besieged Weining where he was a colonel commanding defence.

¹⁸ Subutai was the greatest Mongol commander of Chinggis Khan and Ögedei (the translation of his biography in Yuanshi see [Khrapachevsky, 2004, p. 497]). From the middle of 1232, after Tului's disease and death, he led a war against Jin. And from March of 1232, to February, 1233, Subedei was outside of the southern capital of Jin—Kaifeng which the Mongol army besieged for almost a year. Therefore Peng Daya could have only the indirect information about him in 1233.

¹⁹ Temodai (忒沒得) from Han Shu and Temuday Horchī (忒木歹火兒赤) from 'Sheng-u chin-zheng lu' ('Notes about personal campaigns of sacred and aggressive [Chinggis Khan]') (see [Palladius, 1877]), about whom Wang Guowei wrote in his comments, are, probably, one person who must be identified with Jalair Temurtai (in the text of Yuanshi, this name is spelled as 忒木台 'Temutai') from the biography of his son Aurugchi in juan 131 Yuanshi. According to this biography, Temurtai was a great military leader and commanded large contingents of Mongol troops—backbone of the army of the Mongol Empire which already had a large number of non-Mongol detachments in the days of Ögedei. Besides, 'Jin Shi' mentions 'commander-in-chief Temodai' as the commander of the Mongol troops, the first troops that approached Kaifeng in 1232. And according to Yuanshi, Temurtai commanded a separate corps made up of 5 Mongolian families 'Urud, Manghud, Ikires, Kungrat and Jalair' under the special order of Ögedei and was the head of the so-called 'marching office' (行中書省 'sin-junshushen' was a special body of military administrative management in the province) in Hannan (Yuanshi, p. 3190). If one compares these data with news of 'The main records' of Ögedei's government and Subutai's biographies in Yuanshi, it is possible to conclude that in 1232–1233 Temurtai, though he was a commander, at the same time was under operational control of Subutai as the head of the entire campaign against Jin.

²⁰ There is a biography of Tachar in juan 119 Yuanshi. According to it, he had the nickname 'Benjan' (that is Baljal). Tachar was a grandnephew of Borokhul—one of the so-called 'four kuluks' of Chinggis Khan. However, a number of Chinese authors consider this information in Yuanshi to be wrong, and Tachar was Borokhul's son. Tachar was considered to be one of the most successful Mongol commanders during Ögedei's reign. According to 'Jin Shi', in 1233, Tachar along with the Mongolian troops was sent to besiege Caizhou. After its fall the next year, Tachar remained vice-regent in Central China and was engaged in military training for raids on Song, until he died in 1237/38 (see (Yuanshi, p. 2953)).

²¹ Aljar—according to his biography in Yuanshi (juan 122), he came from the ancient Xianbei family of Toba and early on joined Chinggis Khan. After the declaration of Chinggis Khan as Qa'an (in 1206), he became the closest deputy of Mukhali and later participated in his campaign of capturing Northern China, in the course of it he commanded large detachments and controlled serious military operations. At the time of mission remaining with the Mongols which included Peng Daya, Aljar participated in a siege of Kaifeng at the command of Subutai in 1232–1233 (Yuanshi, p. 3007).

²² In comparison with the decree established by Ögedei on quriltai in 1234: 'All those women who wear ceremonial and house clothes which do not correspond the laws are found guilty; and also those, who are jealous' (Yuanshi, juan 2, p. 33).

²³ The common name of 'northern foreigners'—Hsiung-nu and other Turkic and Mongolian nations in China.

²⁴ Chinggis Khan, and later his successors, assigned tilt carts of common people kharachu to his blood relatives and so-called 'tarkhans' (which means that he assigned these kharachu to them). From this moment they served their governors as soldiers as well. Nominally, they were a part of all-Mongolian army—as relatives of the Qa'an and tarkhans to whom they were subject were obliged to obey his orders. However, in fact they were assigned to their masters and served as their personal troops. They made up the so-called 'tammachi army' as a part of the Mongolian army which are known by various sources. In the treatises part of Yuanshi, it is said that from the very beginning the Mongol army consisted as of the professional forces subjected to the Qa'an and appointed generals/colonels, and of 'tammachi army' (Yuanshi, juan 98, p. 2508).

²⁵ It is clear that commanders of such 'personal troops', or 'tammachi army', had a rank of a colonel or a tarkhan (*tousyan*), but not a general. Apparently, it was important for Peng Daya to emphasise this distinction in status of the various commanders of the highest ranks in the Mongol army.

²⁶ Northern China and its nations, not only the Han, namely the Chinese, but also the Khitan, Jurchen and others are meant here.

²⁷ So Xu Ting describes the complicated system of draft ages of the Mongols. Though Peng Daya defines it extremely simply: 'those who are 15 and older', according to other documents of the Yuan period there are details that Xu Ting describes here. The matter is that younger draft ages had a special name and were classified in a separate category—'gradually growing'. So, in Yuanshi in the section of treatises 'Armies' (juan 98) there are several examples similar to the situation described by Xu Ting: 'Men in a family, who are over 15 and under 70 [years], all are registered in the draft register as soldiers... Guys, who are not adults yet, are fit into this [draft] register and are called 'growing corps'; in February, 1278, the marching office of Yunnan reported: 'The Mongol troops which were earlier garrisoned in Yunnan are very small. Therefore, it is necessary to train the troops from among the rising corp for action' (see (Yuanshi, pp. 2508 and 2517)).

²⁸ Here the Onguts are meant as those who wandered close to the Great Wall of China, which means to the south-east of the native Mongolian lands. In 1203, the head of the Onguts, Alakhush the Digit-khuri recognised their dependence on the state of Chinggis Khan. Further in the text of Peng Daya, there is a 'list of the conquered nations', which resembles the similar list of countries and nations conquered by the Mongols, brought in notes of Franciscan missions to the Mongols. This similarity is, most likely, caused by the common primary source the traces of which are visible in several similar lists in 'The Secret History of the Mongols' where they enumerated nations and countries which were conquered and still showing resistance to the Mongols.

²⁹ Thus, in the text 女真 'Nuzheng', Han Peng Daya separates the Han population of the Jin Empire from the Jurchen nationality dominant there.

³⁰ The Naimans were called a tribal alliance of various clans/tribes of Mongolian and Turkic origin (*Naiman* in Mongolian means 'eight'). Records on their conquest are included in this 'list of the conquered nations' on account of a great significance of the event—annihilation of the Naiman protostate in 1204 was an important stage on the way of creation of the empire of Chinggis Khan. Besides, in 1216–1218, the remnants of Naimans who had run to Eastern Turkestan were finally incorporated by the Mongols into their state. In Giovanni da Pian del Carpine's list the Naimans are also called the second, but after Kitay which is explainable—the Mongols called the Jin—Kitad (see [Sokrovennoe skazanie, 1941, p. 298]).

³¹ Peng Daya provides the names that he had heard from the Mongols in his list of the conquered nations. Therefore, the Uighurs are called close to their pronunciation, but not accepted by the Chinese writing—'hui-hu' or 'veiu'. This name is provided exactly in Mongolian by Giovanni da Pian del Carpine—Huyur [Puteshestviya, 1957, p. 57].

³² With the word 'sapi', Peng Daya gives the old Mongolian word 'sary', which means 'yellow' (in Khalkha-Mongolian—'sphere'). Wang Guowei was right to identify this ethnonym with Shara Uighurs, or 'yellow-headed Uighurs', the nationality which exists now in Mongolia, China, and Tibet. They are present at Giovanni da Pian del Carpine's list as Sari-Huyur [Ibid.].

³³ The Chinese transcription of the word 'sapit' reproduces the word 'sartaul' the name of the Muslim population of Turkestan (compare with sarta'ul in 'The Secret History of the Mongols' [Sokrovennoe skazanie, 1941, p. 301]). This ethnonym also appears Giovanni da Pian del Carpine in the notorious list of the conquered in the form of Sarti [Puteshestviya, 1957, p. 57].

³⁴ 'Kanli' very precisely reproduces the ethnonym 'kangli', and is closest to the Mongolian name 'kanlin' which is available in 'The Secret History of the Mongols'. In this case by the Kangli the Turkic people are meant, who lived in the east part of Dasht-i Kipchak kindred to the Kipchaks—once, as well as the Kypchaks, the Kangli were a part of the Kimak Khaganate. William of Rubruck called them Cangle [Ibid., p. 118], and Giovanni da Pian del Carpine—Kangit [Ibid., p. 57].

³⁵ The reference to 'the Muslim states' can mean both Islam confession, and affinity of these three nations to Turkic Uighurs. So, clearly, it is necessary to consider this note of Peng Daya as his additional reference to the ethnic affiliation of the Shara Uighurs, Sarts and Kangli to the Turkic world.

³⁶ The group of 'Khulun Jurchens' which differed from the group of tribes which was the main body of the tribal alliance of Nurkhatsi in the 16th century which was called 'Manchou' is distinguished among the Tungusic nations of the south of Manchuria in the 14–15th centuries. Nurkhatsi emphasised it, telling the ambassador of the Khuluns: 'We are Manchurians, you are Khulun'. This Khulun group of the Tungusic tribes consisted of four main clans, one of which was Ula. The areas of settlement of Tungusic and Mongolian clans and tribes on the border between Inner Mongolia and Manchuria were also called *Ula* and *Urut*, according to the Manchurian list of families census of the Jin Empire 'Jakun gusai Manjusai mukun hala be uheri ejehe bithe' ('Complete genealogies of the Manchu clans and families of the eight banners', 17th century). So, the

Mongolian clan *Urut* and Manchurian *Ula* are noted there, besides, in this census, a number of coincidences of names of clans and tribes which was available both in Manchurian and in Mongolian parts of this list. In the Chinese sources, not only the Mongolian tribes were written earlier in 'Tata'. Therefore, Peng Daya considered the Ursut to be Tata.

³⁷ The Merkits are one of the major tribal confederations of the Mongols who were enemies of Chinggis Khan. The localisation of them in the north is appropriate, as the Merkits wandered in the basin of the Selenga River, that is to the north of the Tola, Kerulen and Onon Rivers—the homeland of the Mongols, the tribe of Chinggis Khan. The Merkits were also listed in the lists of 'the conquered nations' in the news of Franciscan missions and Minorite William of Rubruck.

³⁸ Xi Xia is the official name of the Tangut state. It was destroyed by the Mongols by the end of 1227. William of Rubruck talks about the resistance of the Tanguts against the Mongols in this war of annihilation, and he tells of a legend about the capture of Chinggis Khan by the Tanguts [Puteshestviya, 1957, p. 130], which is related to the similar legend about the death of Chinggis Khan in war with the Tanguts in the Hypatian Chronicle. Apparently, this legend is based on the fact of disease of Chinggis Khan during the campaign of 1227 in Xi Xia and his death in September of the same year.

³⁹ In November, 1215, Puxian Wannu, the commander of the Jin border troops, announced the independence of Liaodong from Jin and founded Dazhen, he adopted the title of Tianwang (Yuanshi, p. 19). Puxian Wannu was a member of the clan of Puxian, one of major jurchen clans which founded the Jin Empire.

⁴⁰ Most likely, they were certain tribes of the northeast of Manchuria and Amur River region. In the 13th century 'nishu' reproduced sounding of 'nizhu'—perhaps, it was the name of some unit of the Tungusic tribes which originally lived in the territory of modern Manchuria and Heilongjiang (the Chinese call the Amur River this way). Compared to the self-title of nationality on Amur—Nivkhs, or, rather, 'Nivukh' that means 'people'.

⁴¹ 'Nakhai-irgen' means 'the clan/tribe of a dog' in Mongolian. It is possible that the name was given after a totem of a dog. But the insistent mention of certain 'pesi nations' ('canine nations'), 'pesegolovtsy' by Giovanni da Pian del Carpine, Benedict of Poland and C. de Bridia counts in favour of another version—the distorted transfer of information about peoples of Northeast Asia who used dogsleds. Besides, the localisation of these nations in the nor-east also indicates some nomadic hunters who used dogsleds as a means of transport.

⁴² Details of this story about the country of 'pesegolovtsy', is, most likely, a reproduction of mythic ideas of the Jurchen and the Mongols about the population of Northeast Asia which also have parallels in the Chinese geographical tradition. However, Peng Daya, perhaps, reflects here some historical events too—the Mongols conducted military expeditions (both the Mongols, and the Jurchen who had defected to them) against the so-called 'forest people' of Manchuria and Amur River region. In the epics of some Tungusic nations of Amur River region, there are legends about attacks of the Mongols against them, that's why they had to leave their homes and move from the south, that is Manchuria, to the north.

⁴³ The Mongolian word 'Usu-Irgen', which means 'the water people'. In the explanation of Peng Daya they are also called 水韃靼 '*Shui-Dada*' which means 'water Tatars'. Data of Franciscan missions and William of Rubruck contain news of 'Su-Mongols', or 'water Mongols' (see Giovanni da Pian del Carpine—'Su-moal, id est Moal aquatici Mongoli'), and Giovanni da Pian del Carpine also included them in 'the list of the conquered nations' (as 'Su-Mongal' [Puteshestviya, 1957, p. 57]). Considering that the Chinese did not set aside the Mongols among various 'Tata' ('Tatars'), it is possible to identify 'water Mongols' of the European travelers of the 1240–1250s with 'water Tatars'—'the water people' of Peng Daya. 'Water Tatars' are often mentioned in the yuan texts, and usually together with the Jurchen and in Manchuria. See, for example, in Yuanshi, about the solution of Kublai 'to call in garrison troops [people] from the lands of the **Jurchen, Shui-dada** (水達達) and **Harbin**' (Yuanshi, juan 98, p. 2512). According to some researchers, 'water Mongols' were meant by the Tatars—initially Turkic nationality, but over the course of time mongolised, which was conquered by Chinggis Khan. 'Su' in the prefix to their name comes from suu 'most august', the word which accompanied the name of the khan, and, thus, the conquered Tatars are 'the Tatars belonging to the most august'. It is also offered to mean 'su-Mongols' by those Mongols who belonged to Chinggis Khan (see all argument in [Puteshestviya, 1957, p. 201]). However, such an explanation cannot eliminate the independent understanding by Europeans, and Peng Daya of 'su' and 'usu' as 'water' (in Turkic and in Mongolian, respectively) in the prefix to the name of the people. At the same time, the fact that Peng Daya localises 'usu-irgen' to the south-west from the native Mongolian lands near the Tibetan tribes Mubo, perhaps, indicates some other tribes, maybe, kindred to Shpwei or Xianbei (in the Chinese tradi-

tion—ancestors of the Mongols, therefore Peng Daya could consider them to be 'Tatars'), and living near the Tanguts and Tibetans.

⁴⁴ 'Bod' is the self-title of the Tibetans, and 'Mu', according to the Tibetan chronicles, is one of 'four major families': Se, Mu, Don and Ton, 'primal forefathers' of all Tibetans according to the names of whom the historic areas of their settlement were called.

⁴⁵ In other words, the level of these tribes, in Peng Daya's perception, was very low—they had only leaders who obtained different titles of honour in the form of 'favours' from the Chinese emperors.

⁴⁶ The Chinese transcription 'kebishao' reproduces the Mongolian name of the Kipchaks—'Kibchaut', stated as 'Kibčaud' in the pronunciation of the 13th century in 'The Secret History of the Mogols'. Thus, the sign which is nowadays read as 'shao', in the times of Peng Daya was the transcription of the Mongolian termination—čaud (with a marker of the plural '- ud') in ethnonyms, since in the Middle Chinese language the sign 'shao' (modern reading) corresponded to the phoneme * djew[t] (see [Starostin, 1989, p. 682]).

⁴⁷ Most likely, this indicated that the Kipchaks belonged to the Turkic world. It is unlikely that Peng Daya provided information about the common origin of the Uighurs and the Kipchaks here—the time of such community is too far from the time of Peng Daya, besides he gives information of the most common character in his short notes.

⁴⁸ Other sources also give the reasons of fierce war of the Mongols with the Kipchaks: the Kipchaks were constantly attacked by the Mongols since 1216, when they hosted the Merkits and Naimans who had run from their enemy Chinggis Khan (at that time they were taken by the punitive detachments of Subutai and Jebe, see [Rashid al-Din, 1952, I, 2, pp. 177, 183]); later they were at war with the Mongols as the vassals of the Khwarezm Shah during a war with the state of the latter in 1219–1222; and, at last, a part of their clans (in Eastern Turkestan) was assigned to the army of Subutai against their will by order of Chinggis Khan in 1225 ((Yuanshi, juan 121, p. 2976)). Most likely, the events of the last fight are described by Peng Daya as 'conquered... then later rebelled'.

⁴⁹ In the text 常曰 'ch'ang-yue' synonym 常言 'ch'ang-yan', which means 'aphorism, saying'. On the other hand, the sign 常 has another meaning also 'law, establishment'. Apparently, here Peng Daya repeats what he had heard from someone of the Mongols 'bilik' ('saying' in Turkic) of Chinggis Khan.

⁵⁰ India. In Muslim and Turkic sources it was called *Sind*. The agents of Peng Daya call its inhabitants 'Black Muslims' for two reasons: because of the dark skin of the Indians and religion of the dominant class at that time (at the given time a considerable part of India was under Muslim rule). The description of sale of water is quite reliable: in the countries of the Middle East and in India, there is still a profession of a seller of water who sells it in retail.

⁵¹ In Chinese sources, Western Liao, the state of the Kara Khitan, was also called Dashi Linya state, by the name of its founder of Yelu Dasha (*linya* is a Khitan title of the prelature in Liao). The state of the Kara Khitan existed in Mawarannahr and Eastern Turkestan. It was founded by Yelu Dashi (耶律大石), a member of imperial Liao family, after the destruction of the state by the Jurchens.

No. 3

Information of 'History of the Yuan dynasty' ('Yuanshi') about the Tatars

Most information about the Tatars is in the official history of the Chinese dynasty 'Yuanshi', in the section 'Liezhuan' ('Biographies') which contains biographies of the prelatore, military leaders, cultural figures who were in the service of the Mongol khans in the 13–14th centuries, and also short descriptions of those countries where these characters descended from. Among these biographies there are also biographies of Tatars, descendants of the tribes - the inhabitants of Mongolia and regions of Central Asia adjoining it before and in the times of Chinggis Khan, and also their offspring. They are biographies of the Tatars - Vanutai, Timurbuki, Dachzhir, Dakhaytimur, Toinna. In Yuanshi, there is information about a son of Chinggis Khan by name 'U-lu-chi-taichi', 'tsarevitch Uruchi', whose mother, according to Ke Shaomin, the author of history of the Chinese dynasty 'Xin Yuan Shi' ('The New History of Yuan'), was a Tatar.

In Yuanshi, the Tatars are called differently, and their names are written with various Chinese characters—'dadar' / 'tatar', 'dadai' / 'tatai', 'dadalитай' / 'tatalитай'. The biographies of the characters stated above are rather wide, but they contain particularly no data on the events concerning the history of the Tatars of Central Asia in Mongolia before the unification of nomadic people of Central Asia in the state of Chinggis Khan, that is before 1206, and all of them are devoted to biographies of Tatars in the service of the Chinggisids, generally during the reign of Chinggis Khan and his son Ögedei Khan, and also during the times of Yuan—the period of Mongol rule in China (1271–1368).

'Vanutai. From the Mongolian tribe dadar. His grandfather's name was Dasikhorch. Under Taichung's command, (Ögedei Khan) established (Mongolian) order on the Plain of China. He distinguished himself (in actions) and became a darugha (the Mongol governor) in Dunpinlu (province of China). Seriously rose. Vanutai served Shitszu (Kublai Khan, the grandson of Chinggis Khan and the founder of the Yuan Empire—the Mongolian state in the territory of China and actually Mongolia after the fragmentation of the Mongol Empire in 1260) in the Bachjou district (in Northern China) as a 'zong-lu-zonguaguan' (high-ranking official). On the seventh year Zhi-Yuan (1270) became a general of the troops which were at the forefront. (For his merits) he was awarded a golden and a tigerish paiza. On the eighth year (1271) he was transferred (to the position) of the Mongol general... He founded naval units on the southern coast of Wan Shan (in China). On the ninth moon (in September of the same year) he attacked Xianyang and Gucheng (the Chinese cities and fortresses) with the (Mongol) troops... He destroyed the troops (of the Chinese Empire) Sung in Anyang. He fought and disengaged 80 li (from the battle-orders of his troops in the heat of the fight)... On 10 moon (in October) the big army attacked (the Mongols)... (Vanutai) divided the (subordinated) troops and became a patrol on five roads... At that time Vanutai headed the fifth wing of the army... As a reward (for the feat of arms) he got 100 liang (1 liang ≈ 37 g) of gold... Xianyang fell... He burst upon the emperor's eye, was awarded 50 liang of silver, and also... armor and other gifts. On the eleventh year (1274), under command of a Chengxiang (minister) Bayan and a Pingzhang (specially authorised official) Ashu he conquered the South (of China). Received the order to be under command of general Shigeshuai. Repeatedly at the ridge Jiang-shan faced with troops of Song and breached their battle-orders... His troops fought their way and destroyed them (the Chinese army of Song Empire)... (Vanutai) was the first to climb the walls (of the Chinese fortresses during the assaults)...' [Yuanshi, 1958, juan 131, pp. (1514)27466–(1516)27468].

'Timurbuka. From the dadalитай... On the seventh year Zhi-Yuan (1270) received tiger paiza (a special badge of merit signifying the official powers of an official)... Participated in hijacking of the battle ships of the enemy (that is the Chinese ships of the Song Empire) and pursued them to Yunnan (the south-west province of China)... Inflicted a powerful defeat upon the (the Song Empire)... For his merits he was promoted in Xinsheng (marching imperial office—the department responsible for preparation and carrying out military campaigns). He was awarded 50 liang of white gold and one change of clothes, a saddle and a rein. In addition to that, on the ninth year (1272) he became a general. On the eleventh year (1274)... under command of a chengxiang Bayan, took part in the punitive campaign against Song and broke their great commander Fu Gui... The great army of the Mongols crossed the Yangtze. (Here) his merits were great. (For that), he was granted 500 liang of white gold. (Then) again, going with his

troops, forced to abandon (the Chinese fortress and city) Echzhou (key defensive point of the Song Empire), punished Guangxi (province of the southern China)...' [Ibid., juan 132, p. (1530)27482].

'Dachzhir. From the Mongolian Dadar tribe... Battled against the army of Song and broke it... More than once defeated the troops of Song, beheaded more than 500 enemies (in battle)... Captured the battle ships (of the Song Empire)... Again battled against the troops of Song, personally killed more than 10 enemies (in battle)... He was awarded a silver paiza and got an appointment in government army (the Yuan Empire). Then conquered Voduang (Hotana?)... Fought with rebellious Vans (Chinggisids hostile to the Yuan Empire)... Won them... Approached Ganzhou (in the nor-west of China). He was awarded golden paiza and promoted to zonguan... Under control of a Zhuwan (prince) Kheban and Yuanshua (commander-in-chief) Vangudai with their troops approached lands of the Voduang (Hotana in the territory of East Turkestan).. Zhuwan Baba rebelled. (Dachzhir) at the head of soldiers approached and attacked (the rebel) Zhidar. Partially defeated them (the rebels) and executed over 500 people... Advanced (up the service ladder) to the position of the deputy of the general... Took more than 30 people prisoner... was awarded a golden paiza, became the title holder 'the Gallant Commander who Pacified Yang' (that is Xianyang, one of the Song fortresses) and other liu (provinces), he was appointed a daruga in the administration of generals. Died. His son Jiangdu Bukhua (Tyanbuka) was his heir [Ibid., juan 133, p. (1535)27487].

'Dakhaitimur. From the Dadalитай... Served govan (the sovereign of the state) Mukhuli... The Mongol army conquered Zhungyan (Northern China)... (Dakhaitimur) occupied eight western districts (in Northern China), broke the (enemy) military leaders, vans (sovereigns) and the huns (princes) and their army. Beheaded the huns. Then... conquered Hesi (the Tanguts), destroyed Jin (the empire of the Jurchen in Northern China and Manchuria). He was distinguished everywhere (on the battlefield) and was awarded land properties. He conquered Shue (Sichuan—the province of China). Died in Xinyuan. His grandfather Jalatai... His father Badar distinguished himself by his valour... (Dakhaitimur) destroyed the Song army in Baishuijiang. Captured one enemy warship, and 30 enemies. Got promotion and the title of 'the Valorous Commander of Government Troops'. He was at war under command of the military leader Esudar... Under his command he participated in conquest of the countries Xiyu, (to the west from China)...' [Ibid., juan 135, p. (1556)27508].

'Toinna. From the Dadai tribe. In times to Shizu (Kublai Khan) he participated in the pacification of Nayan (the commander of Kublai Khan who betrayed him during the endemic warfares with other Chinggisids, litigating the throne of the Great Khan), distinguished himself and was highly appreciated (by the yuan government). On the seventh year, Ta Te (1303) became the colonel in the personal imperial security guard (of the Mongol governors of China) formed of Jincha (the Kipchaks), and daruga. (Toinna) was awarded the title of a 'Virtuous Commander' and a golden paiza... On the tenth year (1306), he was promoted to the position of a daruga in the administration of generals... and in accordance (with the position) he was awarded a golden paiza. He was promoted and became the title holder of 'the Commander of Faraway Conquests'. His position was changed and he got a title of a 'Nobleman who Faithfully Carried out the Decrees of the Sovereign'... As before he combined the previous positions. On the second year, Zhi-da (1309) became a Canzhi-Zhengshi ('one who participated in the administration of political affairs'), that is the councillor in Xinshen—the imperial marching office in Gansu. Rose (from the ranks) to 'the Nobleman Appointed by the Imperial Edict'. On the fourth year (1311), he became Qing (official) in the Taiyu department. He was promoted to 'the Nobleman who Faithfully Carried out the Decrees of the Sovereign'. On the first year, Huang-Qing (1312) became a daruga in the management of the generals aerlu (Argyn (?)—Turkic tribes) and the Han (Chinese) troops (on the Mongolian service) in the city of Xianyan. As before, he headed the Taiyu department. On the third year, Yan-Yu (1316) was awarded the title of 'the Virtuous Nobleman' and a Yucheng (the deputy of the head of the department) of the imperial marching office in Gansu (in the nor-west of China). On the second year, ZhiZhi (1322) rose (from the ranks) to a Zhengshi (councillor). Several times he was made a Fuyuanishi (the deputy of the head of the department). (Then) again he was given the position of Zheng (councillor)..., divided the departments in Shangdu (Kaiping—summer capital of the empire of Mongols in China). On the eighth moon, in spring (1328), Daolashao (Davlat-shah, a Muslim and the head of the government of Mongols in China) was killed. Wenzong (the Mongol emperor Tuktimur)

accessed to the throne (of the Mongol Empire in China). He awarded Toinna with the titles of the 'Nobleman Fired by Glory', 'Servant Representing Virtue and Devotion', 'Pillar of the State'. (Toinna) served Pingzhang-Zhengshi (an authorised person for management) to Zhongshu (the State Council or government). After that he was awarded the title of 'I-Go-Gun' (the prince, a support of the state). The afterlife name of Toinna is Zhong Ying. He had sons Dingtong and Zhierlakhon. Dingtong inherited his father's post, became a darugha in the administration of generals of the Chinese troops (who subordinated the Mongols) from Xianyang and administration of generals of aerlu troops. Got a golden paiza and a title of 'the Commander Fired by Glory'. Zhierlakhon long before it became a daruga and a general of Imperial Kipchak Guard, had a golden paiza, became the owner of titles 'the Commander Covered by Valour', 'the Nobleman of the Imperial Court'... He was raised to 'the Nobleman Carrying out the Imperial Edicts' [Ibid., juan 135, p. (1561)27513–(1562)27514].

'Ala-ad-Din 'Ata-Malik Juvaini. 'The History of the World-Conqueror'

The source is quoted according to the edition: Genghis Khan. The History of the World Conqueror by 'Ala-ad-Din 'Ata-Malik Juvaini / translated from the text of Mirza Muhammad Qazvini's by John Andrew Boyle.

PART ONE*<...>

[2]

**Of the laws which Chinggis Khan framed and the yosas which
he promulgated after his rise to power**

... then did God, in accordance with the above mentioned promise, endow Chingiz-Khan with the strength of might and the victory of dominion—*'Verily, the might of the Lord is great indeed'*; and when through pride of wealth, and power, and station the greater part of the cities and countries of the world encountered him with rebellion and hatred and refused to yield allegiance (and especially the countries of Islam from the frontiers of Turkestan to uttermost Syria), then wherever there was a king, or a ruler, or the governor of a city that offered him resistance, he annihilated together with his family and followers, kinsmen and strangers; so that where there had been a hundred souls alive; as a proof of which statement may be cited the fate of the various cities, whereof mention has been made in the proper place.

In accordance and agreement with his own mind, he established a rule for every occasion and a regulation for every circumstance; while for every crime he fixed a penalty. And since the Tartar peoples had no script of their own, he gave orders that Mongol children should learn writing from the Uighur; and that these yosas and ordinances should be written down on rolls. These rolls are called the Great Book of Yosas and are kept in the treasury of the chief tsareviches. Wherever a khan ascends the throne, or a great army is mobilized, or the tsareviches assemble and begin [to consult together] concerning affairs of state and the administration thereof, they produce these rolls and model their actions thereon; and proceed with the disposition of armies or the destruction of provinces and cities in the manner therein prescribed.

At the time of the first beginnings of his dominion, when the Mongol tribes were united to him, he abolished reprehensible customs which had been practised by those peoples and had enjoyed recognition amongst them; and established such usages as were praiseworthy from the point of view of reason. There are many of these ordinances that are in conformity with the Shari'at.

In the messages which he sent in all directions calling on the peoples to yield him allegiance, he never had recourse to intimidation or violent threats, as was the custom with the tyrant kings of old, who used to menace their enemies with the size of their territory and the magnitude of their equipment and supplies; the Mongols, on the contrary, as their uttermost warning, would write thus: 'If ye submit not, nor surrender, what know we thereof? The Ancient God, He knoweth'. If one reflects upon their signification, [one sees that] these are the words of them that put their trust in God—God Almighty hath said: *'And for him that putteth his trust in Him God will be all-sufficient'*,—so that of necessity such a one obtains whatever he has borne in his heart and yearned after, and attains his every wish.

Being the adherent of no religion and the follower of no creed, he eschewed bigotry, and the preference of one faith to another, and the placing of some above others; rather he honoured and respected the learned and pious of every sect, recognizing such conduct as the way to the Court of God. And as he viewed the Moslems with the eye of respect, so also did he hold the Christians and idolaters in high esteem. As for his children and grandchildren, several of them have chosen a religion according to their inclination, some adopting Islam, others embracing Christianity, others selecting idolatry and others again cleaving to the ancient canon of their fathers and forefathers and inclining in no direction; but these are now a minority. But though they have adopted some religion they still for the most part avoid

* Notes are omitted.—*Editor's note*

all show of fanaticism and do not swerve from the yasa of Chingiz-Khan, namely, to consider all sects as one and not to distinguish them from one another.

It is one of their laudable customs that they have closed the doors of ceremony, and preoccupation with titles, and excessive aloofness and the mighty. When one of them ascends the throne of the Khanate, he receives one additional name, that of Khan or Qa'an, than which nothing more is written [in official documents] ; while the other sons and his brothers are addressed by the name they were given at birth, both in their presence and in their absence; and this applies both to commoners and to the nobility. And likewise in directing their correspondence they write only the simple name, making no difference between Sultan and commoner; and write only the gist of the matter in hand, avoiding all superfluous titles and formulas.

He paid great attention to the chase and used to say that the hunting of wild beasts was a proper occupation for the commanders of armies; and that instruction and training therein was incumbent on warriors and met-at-arms, [who should learn] how the huntsmen come up with the quarry, how they hunt it, in what manner they array themselves and after what fashion they surround it according as the party is great or small. For when the Mongols wish to go a-hunting, they first send out scouts to ascertain what kinds of game are available and whether it is scarce or abundant. And when they are not engaged in warfare, they are eager for the chase and encourage their armies thus to occupy themselves; not for the sake of the game alone, but also in order that they may become accustomed and inured to hunting and familiarized with the handling of the bow and the endurance of hardships. <...>

With regard to organization of their army, from the time of Adam down to the present day, when the greater part of the climes are at the disposition and command of the seed of Chingiz-Khan, it can be read in no history and is recorded in no book that any of the kings that were lords of the nations ever attained an army like the army of the Tartars, so patient of hardship, so grateful for comforts, so obedient to its commanders both in prosperity and adversity; and this not in hope of wages and fiefs nor in expectation of income or promotion. This is, indeed, the best way to organize an army; for lions, so long as they are not hungry, will not hunt or attack any animal. There is a Persian proverb: '*An overfed dog catches no game*', and it has also been said: '*Starve thy dog that it may follow thee*'.

What army in the whole world can equal the Mongol army? In time of action, when attacking and assaulting, they are like trained wild beasts out after game, and in the days of peace and security they are like sheep, yielding milk, and wool, and many other useful things. In misfortune and adversity they are free from dissension and opposition. It is an army after the fashion of peasantry, being liable to all manner of contribution (*mu'an*) and rendering without complaint whatever is enjoyed upon it, whether qupchur, occasional taxes (*avārizāt*), the maintenance (*ikhrājāt*) of travellers or the upkeep of post stations (*yam*) with the provision of mounts (*ulagh*) and food (*'ulūfāt*) therefor. It is also a peasantry in the guise of an army, all of them, great and small, noble and base, in time of battle becoming swordsmen, archers and lancers and advancing in whatever manner the occasion requires. Whenever the slaying of foes and the attacking of rebels is purposed, they specify all that will be of service for that business, from the various arms and implements down to banners, needles, ropes, mounts and pack animals such as donkeys and camels; and every man must provide his share according to his ten or hundred. On the day of review, also, they display their equipment, and if only a little be missing, those responsible are severely punished. Even when they are actually engaged in fighting, there is exacted from them as much of the various taxes as is expedient, while any service which they used to perform when present devolves upon their wives and those of them that remain behind. Thus if work be afoot in which a man has his share of forced labour (*bīgār*), and if the man himself be absent, his wife goes forth in person and performs that duty in his stead.

The reviewing and mustering of the army has been so arranged that they have abolished the registry of inspection (*daftar-i'arz*) and dismissed the officials and clerks. For they have divided all the people into companies of ten, appointing one of the ten to be the commander of the nine others; while from among each ten commanders one has been given the title of 'commander of the hundred', all the hundred having been placed under his command. And so it is with each thousand men and so also with each ten thousand, over whom they have appointed a commander whom they

call 'a commander of the *tümen*'. In accordance with this arrangement, if in an emergency any man or thing be required, they apply to the commanders of *tümen*; who in turn apply to the commanders of thousands, and so on down to the commanders of tens. There is a true equality in this; each man toils as much as the next, and no difference is made between them, no attention being paid to wealth or power. If there is a sudden call for soldiers an order is issued that so many thousand men must present themselves in such and such a place at such and such an hour of that day or night. *'They shall not retard it (their appointed time) an hour; and they shall not advance it'*. And they arrive not a twinkling of an eye before or after the appointed hour. Their obedience and submissiveness is such that if there be a commander of a hundred thousand between whom the Khan there is a distance of sunrise and sunset, and if he but commit some fault, the Khan dispatches a single horseman to punish him after the manner prescribed: if his head has been demanded, he cuts it off, and if gold be required, he takes it from him. <...>

Another *yasa* is that no man may depart to another unit than the hundred, thousand or ten to which he has been assigned, nor may he seek refuge elsewhere. And if this order be transgressed the man who transferred is executed in the presence of the troops, while he that received him is severely punished. For this reason, no man can give refuge to another; if (for example) the commander be a prince, he does not permit the meanest person to take refuge in his company and so avoids a breach of the *yasa*. Therefore no man can take liberties with his commander or leader, nor can another commander entice him away.

Furthermore, when moonlike damsels are found in the army they are gathered together and dispatched from the tens to the hundreds, and each man makes a different choice up to the commander of the *tümen*, who makes his choice also and takes the maidens so chosen to the Khan or the princes. These too make their selection, and upon those that are deemed worthy and are fair to look upon they recite the words *'Keep them honourably'*, and upon the other, *'Put them away with kindness'*. And they cause them to attend on the Royal Ladies until such time as it pleases them to bestow them on others or to lie with them themselves.

Again, when the extent of their territories became broad and vast and important events fell out, it became essential to ascertain the activities of their enemies, and it was also necessary to transport goods from the West to the East and from the Far East to the West. Therefore throughout the length and breadth of the land they established *yams*, and made arrangements for the upkeep and expenses of each *yam*, assigning thereto a fixed number of men and beasts as well as food, drink and other necessities. All this they shared out amongst the *tümen*, each two *tümen* having to supply one *yam*. Thus, in accordance with the census, they so distribute and exact the charge, that messengers need make no long detour in order to obtain fresh mounts while at the same time the peasantry and the army are not placed in constant inconvenience. Moreover strict orders were issued to the messengers with regard to the sparing of the mounts, etc., to recount all of which would delay us too long. Every year the *yams* are inspected, and whatever is missing or lost has to be replaced by the peasantry.

Since all countries and peoples have come under their domination, they have established a census after their accustomed fashion and classified everyone into tens, hundreds and thousands; and required military service and the equipment of *yams* together with the expenses entailed and the provision of fodder—this in addition to ordinary taxes; and over and above all this they have fixed the *qupchur* charges also.

They have a custom that if an official or a peasant die, they do not interfere with the estate he leaves, be it much or little, nor may anyone else tamper with it. And if he have no heir, it is given to his apprentice or his slave. On no account is the property of a dead man admitted to the treasury, for they regard such a procedure as inauspicious.

When Hülegü appointed me to [the governorship of] Baghdad, the inheritance taxes were in force in all that region; I swept away that system and abolished the imposts that had been levied in the countries of Tustar and Bayat.

There are many other yasas, to record each of which would delay us too long; we have therefore limited ourselves to the mention of the above. <...>

[4]

Of the sons of Chingiz-Khan

Chingiz-Khan had much issue, both male and female, by his wives and concubines. His eldest wife was Yesünjin Beki. Now according to the custom of the Mongols the rank of the children of one father is in proportion to that of their mothers, so that the child of an elder wife is accorded greater preference and precedence. By this wife Chingiz-Khan had four sons who had risked their lives in the execution of great affairs and glorious actions and were to the throne of the kingdom as its four pedestals and to the palace of the khanate as its four pillars. For each of these Chingiz-Khan had selected a special office. To Tushi, the eldest, he assigned hunting and the chase, which is a great sport with the Mongols and held in high esteem by them; while to Chaghatai, who came next to him, fell the administration of the *yasa* and the law, both the enforcement thereof and the reprimanding and chastisement of those that contravened it. Ögedei he selected for [all that called for] understanding and counsel and for the administration of troops and the equipment of armies. When the matter of Ong-Khan had been disposed of and the tribes of the Mongols had, some by choice and some by compulsion, been reduced to his command and rendered submissive and obedient to his orders he divided the tribes and peoples of the Mongols and the Naiman, as well as the armies, between the aforesaid sons; and to each of his other younger sons and to his brothers and kinsmen he allotted their share of the armies. And thereafter he was wont to urge the strengthening of the edifice of concord and the consolidation of the foundations of affection between sons and brothers; and used continually to sow the seed of harmony and concord in the breasts of his sons and brothers and kinsfolk and to paint in their hearts the picture of mutual aid and assistance. And by means of parables he would fortify that edifice and reinforce those foundations. One day he called his sons together and taking an arrow from his quiver he broke it in half. Then he took two arrows and broke them also. And he continued to add to the bundle until there were so many arrows that even athletes were unable to break them. Then turning to his sons he said: 'So it is with you also. A frail arrow, when it is multiplied and supported by its fellows, not even mighty warriors are able to break it but in impotence withdraw their hands therefrom. As long, therefore, as you brothers support one another and render stout assistance one to another, though your enemies be men of great strength and might, yet shall they not gain the victory over you. But if there be no leader among you, to whose counsel the other brothers, and sons, and help-meets, and companions submit themselves and to whose command they yield obedience, then you case will be like unto that of the snake of many heads. One night, when it was bitterly cold, the heads desired to creep into a hole in order to ward off the chill. But as each head entered the hole another head would oppose it; and in this way they all perished. But another snake, which had but one head and a long tail, entered the hole and found room for his tail and all his limbs and members, which were preserved from the fury of the cold'. And there were many such parables which he adduced in order confirm in their minds his words of counsel. They afterwards always abided by this principle; and although authority and empire are apparently vested in one man, namely him who is nominated Khan, yet in reality all the children, grandchildren and uncles have their share of power and property; a second *quriltai* apportioned and divided all his kingdoms among his kinsfolk, sons and daughters, and brothers and sisters.

When during the reign of Chingiz-Khan the kingdom became of vast extent he assigned to everyone his place of abode which they call *yurt*. Thus to Otegin Noyan, his brother, and to some of his grandchildren he apportioned territory in the regions of Khitai. To his eldest son, Tushi, he gave the territory stretching from the regions of Qayaligh and Khorazm to the remotest parts of Saqsin and Bulghar and as far in that direction as the hoof of Tartar horse had penetrated. Chaghatai received the territory extending from the land of the Uighur to Samarqand and Bokhara, and his place of residence was in Quyas in the neighbourhood of Almaligh. The capital of Ögedei, the heir-apparent, during his father's reign was his *yurt* in the region of the Emil and the Qobaq; but when he ascended the throne of the Khanate he removed it to their original homeland, between Khitai and the land of the Uighur, and gave that other fief to his own son Güyük: an account of his various dwelling places has been recorded separately. Toli's territory, likewise, lay adjacent thereto, and indeed this spot is the middle of their empire like the centre of a circle.

What we have related is but an insignificant part of the story. The children and grandchildren of Chingiz-Khan are more than ten thousand, each of whom has his own position (*maqām*), yurt, army and equipment. To record them all is impossible: our purpose in relating this much was to show the harmony which prevails among them as compared with what is related concerning other kings, how brother falls upon brother and son mediates the ruin of father till of necessity they are vanquished and conquered and their authority is downfallen and overthrown. 'God Almighty hath said: '*And dispute not lest ye become faint-hearted and your success go from you*'. Whereas by mutual aid and assistance those khans of the children of Chingiz-Khan that succeeded him on the throne have conquered the whole world and utterly annihilated their enemies. Now the purpose of these tales and histories is that the intelligent man may learn without the pain of experience and be edified by the study of these discourses. <..>

[38]

Of Tushi and the accession of Batu in his stead

When Tushi, who was the eldest son, had gone to Qulan-Bashi to join Chingiz-Khan and had returned from thence, the predestined hour arrived. And of his sons, Boghal, Hordu, Batu, Sibaqa, Tangut, Berke and Berkecher, these seven had come of age; and Batu succeeded his father and became ruler of the kingdom and his brothers. And when Qa'an came to the throne of the Empire Batu reduced and subjugated all the territory adjoining his own, including all that remained of the Qifcgaq, the Alan, the As and the Rus, and other lands also such as Bulghar, Magas, etc.

And Batu abode in his own encampment, which he had set up in the region of the Etıl; and he built a town there which is called Sarai; and his word was law in every land. He was a king that inclined towards no faith or religion: he recognized only the belief in God and was blindly attached to no sect or creed. His bounty was beyond calculation and his liberality immeasurable. The kings of every land and the monarchs of the horizons and everyone else came to visit him; and before their offerings, which were the accumulation of ages, could be taken away to the treasury, he had bestowed them all upon Mongol and Moslem and all that were present, and heeded not whether it was much or little. And merchants from every side brought him all manners of wares, and he took everything and doubled the price of it several times over. And he wrote drafts on the Sultans of Rum and Syria and granted them yarlıghs; and no one that came to visit him departed without achieving his purpose.

When Güyük Khan succeeded to the Khanate, Batu, at his request and entreaty, set out to meet him. When he had reached Ala-Qamaq the death of Güyük Khan occurred. he halted in that place, and the princes came to visit him from every side; and they settled the Khanate upon Mengü Qa'an, the account whereof will be given in the chapter on Mengü Qa'an. And from thence he went back, and came to his own *ordu*, and busied himself with pleasures and amusements. And whenever a campaign was being organized he would, in accordance with the exigencies of the occasion, dispatch armies led by his relations, kinfolk and commanders. When in the year 653/1255–6, Mengü Qa'an held another *quriltai*, he sent Sartaq, who was an adherent of the Christian faith. Sartaq had not yet arrived when the commandment of God was fulfilled and the inevitable state came to pass in the year... And when Sartaq arrived, Mengü Qa'an received him with honour and respect and distinguished him with all manner of kindnesses above all his equals; and he dismissed him with such wealth and riches as befitted so great a king. He had not yet reached his *ordu* but had only come to... when he too departed to join his father. Mengü Qa'an sent his emirs to console his wives and brothers; and he commanded that Boraqchin Khatun, who was Batu's chief wife, should issue orders and educate Ulaghchi, the son of Sartaq, until he grew up and succeeded his father. But Fate had not willed it thus, and Ulaghchi passed away that same year.

[39]

Of the conquest of Bulghar and the territory of the As and the Rus

When Qa'an held the great *quriltai* for the second time, they deliberated together concerning the extirpation and subjugation of all remaining rebels; and it was decided to seize the lands of the Bulghar, the As and the Rus, which bordered on the camping grounds of Batu; for they had not completely submitted being deluded by the size of their territory. He therefore deputed certain princes to aid and assist Batu, viz. Mengü Qa'an and his brother Böchek; his own sons Güyük Khan and Qadaghan; of the other

princes, Kölgen, Büri and Baidar; Batu's brothers, Hordu and Tangut; and several other princes as well as Sübetei Bahadur from amongst the chief commanders. The princes departed each to his own place of residence in order to organize their forces and armies; and in the spring they each of them set forth from his own territory and hastened to carry out this undertaking. They came together in the territory of the Bulghar. The earth echoed and reverberated from the multitude of their armies, and at the size and tumult of their forces the very beasts stood amazed. First they took by storm the city of Bulghar, famous throughout the world for the strength of its position and ample resources; and as a warning to others they slew the people or led them captive. And from thence they proceeded to the land of the Rus and conquered that country as far as the city of Magas, the inhabitants of which were as numerous as ants or locusts, while its environs were entangled with woods and forests such that even a serpent could not penetrate them. The princes all halted on the outskirts of the town, and on every side they built roads wide enough for three or four waggons to pass abreast. And they set up mangonels opposite the walls, and after a space of several days left nothing of the city but its namesakes, and took great booty. And they gave orders to cut off the right ears of the people, and two hundred and seventy thousand ears were counted. And from thence the princes turned homewards.

[40]

Of the horsemen of the Keler and Bashgird

When the Rus, the Qifchaq and the Alan had been annihilated, Batu resolved to proceed to the destruction of the Keler and Bashgird, who are large nations professing the Christian faith and are said to border on the land of the Franks. With this object in mind he arrayed his armies and set out in the new year. And that people was rendered arrogant by the magnitude of their numbers, the greatness of their power and the strength of their arms; and when they heard the report of Batu's approach they too set out to meet him with four hundred thousand horsemen, each of whom was famous in war and considered flight disgrace. Batu sent his brother Sibaqaq on in advance with ten thousand men to spy out their numbers and send word of the extent of their strength and might. Sibaqaq set forth in obedience to his command and at the end of a week came back and reported that they were double the size of the Mongol army, all men of war and battle. When the two armies drew close to each other Batu went up on to a hilltop; and for one day and night he spoke to no one but prayed and lamented; and he bade the Moslems also assemble together and offer up prayers. The next day they made ready for battle. A large river lay between the armies: Batu sent over a detachment by night and then his [main] army crossed. Batu's brother entered the battle in person and made attack after attack; but the enemy's army was strong and did not budge. Then the [main] army arrived from behind; and Sibaqaq attacked at the same time with all his forces; and they bore down on their royal pavilions and cut the ropes with their swords. And when the Mongols had overturned their pavilions the army of the Keler lost heart and fled. And no more of that army escaped, and those lands also were subjugated. This was one of their greatest deeds and their fiercest battles. <...>

PART THREE <...>

[2]

Of Bachman and his destruction

When Qa'an dispatched Mengü Qa'an, Batu and the other princes to conquer the countries of the Bulghar, As and Rus and the Qifchaq, Alan and other tribes, all those regions were cleared of mischief-makers and such as had escaped the sword bowed their heads in submission. However, one of the discomfited Qifchaq chieftains, a man called Bachman, had evaded pursuit together with a band of Qifchaq warriors, and he had been joined by other fugitives. Having no lair or hiding-place to serve as base he betook himself every day and every night to a different spot. And because of his dog-like nature he would strike wolf-like on every side and make off with something. Gradually his evil grew worse and he wrought greater mischief; and wherever the army sought him they could not find him since he had departed elsewhere and hidden his tracks.

Most of his refuges and hiding-places were on the banks of the Etil. here he would lie concealed in the forests, from which he would spring out like a jackal, seize hold of something and hide himself once

again. Prince Mengü Qa'an ordered 200 boats to be constructed and 100 fully armed Mongols to be set in each. Then he and his brother Böček formed a *nerge* on either side of the river. Coming to one of the forests along the Etil they found the traces of an encampment that had been vacated that very morning: broken waggons and the dung of men and beasts lying around. Amidst all this rubbish they caught sight of a sick old woman. They asked her what had happened, who the horsemen were, and where, and of what manner. They discovered that Bachman had decamped that very moment and taken refuge on an island in the middle of the river and that all the animals and wares he had stolen in the course of his depredations were likewise on that island. They had no boats with them, and the river was billowing like a sea so that it was impossible to swim in it, let alone ride a horse. Suddenly a wind sprang up and blew away the water from the approach to the island so that the bottom appeared. Mengü Qa'an ordered the troops to ride in without delay. Bachman was seized before he was aware, and his army was destroyed within an hour, some being flung into the river and others killed outright. The Mongols bore off their wives and children as prisoners, and they likewise carried off much valuable booty. Then they returned. The water began to move and when the troops had crossed it was back again without one soldier's having suffered harm.

When Bachman was brought before Mengü Qa'an he begged to be put to death by the latter's own hand. Instead he ordered his younger brother Böček to cut him in half.

These indications provide a reason for the transfer of power and the key of empire to the World-Emperor Mengü Qa'an such as requires no further demonstration.

[3]

Of the accession of the lord of the seven climes, the just emperor, Mengü Qa'an, to the throne of the Khanate, and of his spreading the carpet of Nushirvanian justice, and reviving the practices of sovereignty, and laying down the principles of monarchy

<...> That is to say, the keys of the kingdom of '*For the earth is God's: to such of His servants as He pleaseth doth He give it as a heritage*' were laid in the powerful hand of the Supreme Monarch, the Lord of all mankind, the Khan of all Khans, Arab and non-Arab, Mengü Qa'an (*may he live till the end of the world!*); and the surface of the face of the earth was again decked out and adorned because of his all-embracing justice, and the affairs of mankind in general and the concerns of the Moslems in particular took on a new freshness and brilliance. Of this the circumstances are made plain in the events which shall be described and the truth hereof expounded in the chapters that shall be written. '*And our trust is in the grace of our Lord. Verily, it is He to Whom we turn for aid!*'

Batu had set out from his ordu in the Bulghar and Saqsin country to proceed to the Court of Güyük Khan and had arrived in Ala-Qamaq, which is a week's distance from the town of Qayaligh, when he heard the report of Güyük Khan's death. He halted where he was and sent messenger after messenger to his kinsman on every side to announce his arrival: he bade them present themselves [before him there]. Mengü Qa'an set out from the region of Qara-Qorum. As for Siremün and the other grandsons and wives of Qa'an who were in that region, they sent Qonqurtaqai Noyan, the emir of Qara-Qorum, as their agent and gave a written undertaking to the following effect: 'Batu is *aqqa* to all the princes. Whatever he commands his word is law. We consent thereto nor shall we refuse whatever he prescribes and sees fit'. As for the other princes, [viz.] the sons of Güyük Khan, being already in that neighbourhood, they came to Batu in advance [of the rest]. They remained a day or two and then, without seeking permission, turned back towards their own ordu on the pretext that the practitioners of the science of the *qam* had not sanctioned a longer stay. They left Temür Noyan as their agent with Batu with instructions that when the necklaces of the assembly was reached between *aqqa* and *ini* he too should give his consent.

The princes now presented themselves from every side. Of the sons of Qa'an there came Qadaghan Oghul and of the sons and grandsons of Chaghatai, Qara-Hülegü and Mochi. [There came also] Mengü Qa'an with his brother Möge and Arigh Böke and the emirs Uhatai and Yesü-Buqa; and from other directions came the emirs and noyans and the other princes and nephews of Batu. They held a great assembly and after feasting for some days deliberated together about the entrusting of the Khanate to a person who was fitted thereto and had experienced the good and ill, the weal and woe of action, and tasted the sweet and bitter of life, and led armies for and near, and won renown in banquets and victory

in battles. For days and nights they weighed and pondered this matter, that is which prince there was of the sons and grandsons of the race and lineage (*urugh*) of Chingiz-Khan who by his sound judgment and penetrating counsel might control the lands and guard the roads; for if the affairs of the Empire were to remain neglected as they were the very basis of the commonweal would be overturned and the knots of administration loosened, so that the ordering thereof by the hand of wisdom and policy would be impossible and mending thereof by deliberation inconceivable.

*And no lord shall be lost to us ever but we shall rear
amongst us a lad to be our lord.*

Finally after much thought and reflection all present in that assembly, whether princes or emirs and *noyans*, arrived at the decision that since Batu was the eldest of the princes and the leader amongst them he was best conversant with the good and ill in the affairs of the realm and dynasty (*daulat*). It was for him to decide whether he should become Khan himself or suggest another as Khan. All being agreed on this decision they gave written undertakings that they would in no way go back on their word or contravene Batu's command. And having thus concluded and wound up their discussion that day they began to drink and make merry.

*The next day when the banner of the light of day was unfurled and the veil of darkness removed—
A day such that [even] the world-illuminating lantern became bright of eye from [contemplating] it;
Its dawn having risen out of Paradise, its wind experienced the breadth of the Messiah—*

the necklace of the princes' assembly was as on the previous day strung in the manner of the Pleiades. Batu took up the speeches of that day and none having anything to add thereto he continued as follows: 'The administration of so great a realm and the advancement of so delicate a matter can be effected by such a person, and only such a person can extricate himself from the straits of entrance and egress, as has known and experienced the *yasa* of Chingiz-Khan and the customs of Qa'an, and in the race-course of wisdom and the hippodrome of manliness has borne off the reed of excellence from all his peers and equals, and has in person supervised important affairs and been in charge of weighty matters, and in the overcoming of difficulties and the crushing of rebels has provided unanswerable proofs. Now of the lineage (*urugh*) of Chingiz-Khan is Mengü Qa'an, who is famous for his shrewdness and bravery and celebrated for his sagacity and valour. The affairs of the Khanate should be ordered and regulated by the excellence of his world-adorning counsel and the welfare of land and people assured by the good fortune of his knot-loosening resolution and forethought.

*In this world there always appears the affair for every man
and the man for every affair.*

'There are men for every action and everything is possible to such as are created for it'. I shall place the reins of this affair in the hands of his proficiency and put the signet of the Empire upon the finger of his resolve and experience, for that unbroken horse, the world, will be tamed beneath the things of his severity and valour and the sword that protects the commonweal and guards the frontiers will be unsheathed from the scabbard of his resolve and intrepidity'.

Hearing these words with the ear of intelligence and understanding all present knew of a certainty that the profits and advantages hereof would accurate to all mankind and to themselves in particular and that whatever was beyond this would be redundant—'when thou dost pass beyond the straight it is crooked'. They exclaimed as one man: 'Though hath given the bow to him that shaped it and hath settled in the house him that built it'. Beyond this stage there is no thoroughfare. 'There is no village beyond Abbadan'. And each said truthfully in allegory:

*'If I tear my heart away from thee
and take my love from thee, upon whom shall I cast that love,
whither shall I take that heart?'*

An every jewel comes to rest when it finds its proper settling.

However Mengü Qa'an would not consent and for days he continued to refuse and would not undertake this immense charge nor accept this mighty obligation. When this persistence had exceeded all bounds his brother Möge Oghul, who was adorned with the jewel of wisdom and authority, rose to his feet and said: 'In this assembly we have all given written undertakings and in this meeting we have all promised to abide by Batu Qa'an commands, and suffer no change or alteration thereof, and desire no

addition to his words. But since now Mengü Qa'an seeks to deviate from the advice of the *aqqa* and his own statement, if hereafter *aqqa* and *ini* should disagree on some matter, let it not give rise to censure or be the subject of reproach'.

He spoke in this fashion and with the diamond of his tongue pierced the pearl of this affair. It was a clear proof and a decisive demonstration, and Batu praised these words and applauded Möge. And Mengü Qa'an was convinced.

And since the rare and wonderful works of God had made the sapling of kingship firm of root and lofty of branch beside the stream of '*And We made you kings*', Batu as is the custom of the Mongols, rose up and all the princes and noyans knelt down with him. He then seized a goblet and set the Khanate in its proper place. All the preachers and novices approved his action.

*The leadership has come to thee submissively,
trailing its skirts towards thee.*

It was fit only for him and he was fit only for it.

*Had another than he desired it, the
earth would have quaked with quakes.*

Everyone who was present in that assembly acclaimed [Mengü Qa'an] as sovereign, and they arranged to hold the great quriltai in Onan-Kelüren in the new year. And with this intention each returned to his own encampment.

Tidings hereof spread throughout the world and penetrated to the farthest corners of the earth. And Sorqotani Beki began to cultivate strangers with all kinds of attentions and favour and to win over kinsmen and relations with all means of courtesy and diplomacy.

As for those who spoke evasively and postponed [a decision] on this matter, fabricating tales and inventing stories, on the pretext that the Khanate ought to remain in the family (*urugh*) of Qa'an or Güyük Khan, they forgot the subtlety of '*Thou givest power to whom thou wilt*' and therefor dispatched messenger after messenger in all directions and also sent messages to Batu to say that they dissented from that agreement and did not acquiesce in that covenant.

Batu would reply: 'With the agreement of the *aqqa* and *ini* we have settled this matter and the discussion is over—'*the matter is decreed concerning which ye inquire*'. It is impossible to abrogate it, and if we did not proceed in the matter in this fashion and if another than Mengü Qa'an were to be nominated, the order of affairs would be upset and the laws of the realm and the concerns of the people thrown into confusion to such an extent that it would be impossible to set matters to rights. And if you ponder this business well with the eye of reflection and farsightedness, it will be clear to you that the interests of Qa'an's sons and grandsons have been respected, for the administration of so great an empire, which stretches from the farthest East to the uttermost West, is beyond the strength and knowledge of mere children'.

Amidst such exchanges the appointed year came to an end and the next year was half over, and still there was no sign of the conclusion of that matter. Meanwhile with each year that passed the affairs of the world became more desperate, and with every month the garment of the people's livelihood more ragged.

Batu sent his brothers Berke and Toqa-Temür as his representatives. Qadaghan set out too, as did also Qara-Hülegü. And the other princes who were of one mind began to journey [thither]. From Ulugh-Ef, which is the ordu of Chingiz-Khan, came other princes.

Meanwhile Mengü Qa'an and Sorqotani Beki sent to those who were not constant and sincere of heart and trod the pathway of consideration, friendliness and helpful advice—'*you must pet the camel before you can milk it*'. Since their exhortations and admonishments produced no effect upon them and there was no sign of any change in their attitude, they dispatched messenger after messenger to them, now cajoling them, now making use of threats and menaces; and so they reinforced their argument hoping that they might be restrained by kindness and conciliation and arosed from the slumber of pride and negligence. But far sighted Wisdom would say:

*O thou who rebukest lovers,
let be a band that God has led astray
as He will lead them aright.*

*Reproach produces no effect upon endeavours whereof the nearest to thee are
the farthest from thee.*

*The unlucky man never does anything at the bidding of the wise man;
never by any device can the unlucky man become lucky.*

When that year drew to an end and there reached men's hearts the gladness of the following spring, the Lord of the Planets began to proceed gradually from the places of his fall and detriment to his apogee in mansions of honour and glory and to direct his course towards the house of his exaltation. Like the victorious Khusrau Parviz he set his world-illuminating face towards the residence of power. And when he placed the burden of royalty upon the litter of Aries, the fertile winds began to blow and move in a gentle manner like the Northern zephyr, which blowing from the bedchamber of the rose stirs the base of the sweet herbs. And the straitened ponds that had been shackled by the cold of Dai and like Bahman imprisoned in the bonds of snow and ice (*bahman*), by the efforts of the gentle breeze now became open-hearted and loose of rein.

*Though the effort of the breeze there appeared on the surface of the water a thousand ripples
(chīn),*

and upon every ripple a thousand Chinese (Chīn) musk-bags.

And the soil of the earth waxed joyous and merry from the heat of the fiery exhalations. The natural powers [of living organisms] came into action with their growth and development, and birds burst into song in the meadows.

*Now we must drink sweet-tasting wine
, for the scent of musk arises from the stream
. Every garden is covered with the petals of flowers
; every mountain is full of tulips and hyacinths.*

<...> Like the days of union with the damsel with the mole, the state of the weather was as temperature as could be wished and the sickness of the year was changed to health. The world was a rose-garden and the season resplendent.

*This spring and these lights of it
—excellent are its nights and excellent its days.*

Most of the princes now assembled on the Kelüren. They sent Shilemün Bitikchi to Oghul-Ghaimish and her sons Khoja and Naqu and 'Alam-Dar Bitikchi and Yesü-Mengü with the following message: 'Most of the family of Chingiz-Khan have gathered together and the business of the *quriltai* has been delayed until now because of you. There is no more time for excuses and procrastination. If you have a mind to concord and unity you should present yourselves as soon as possible as the *quriltai* in order that the affairs of the realm may be dealt with in unanimity and the foul veil of estrangement (*vahshat*) and duplicity removed from the countenance of harmony'.

Previously Siremün also had sent messengers to Khoja and Naqu, for a feeling of friendship and amity had sprung up between them since

in times of stress ill feelings disappear.

When they realized that no good would come of deferment Naqu Oghul set out. Qadaq Noyan and some of the emirs of the Court of Güyük Khan likewise set out. And Yesün-Toqa Oghul, the brother of Qara-Hülegü, [setting out] from his place of abode came with them to join Siremün, so that all these were assembled in one spot; and it was rumoured that they were hatching some plot against the Moslems.

Thereafter Khoja also gradually began to move, saying now 'to-day', now 'to-morrow' and causing time to pass with 'perhaps' and 'peradventure'. And they all still imagined that the business of the *quriltai* could not progress or be successful without their presence and that the question [of the accession] could not be settled. Siremün and Naqu being the nearest, the princes, emirs and noyans in attendance on Mengü Qa'an sent a joint message to them to this effect: 'If you intend to be listless and laggardly in proceeding to the assembly, we [by ourselves] shall raise Mengü Qa'an to the Khanate'. Realizing that delay and deferment would not conduce to the attainment of their aims and desires they gave their promise to reach the assembly at such-and-such a time. And they set out with the speed of the fixed stars, travelling slowly with horses, horsemen and troops, with heavily loaded camels and countless wagons.

*How slow is the camels' gait whether they carry stone
or iron, or men sitting crouched!*

When the appointed time had passed and they still showed no haste to appear and their delay and deferment had exceeded all bounds a group of wise men and astrologers who were present at that assembly selected the 9th of Rabi' II of the year 649 [1 July 1251] because of a horoscope such that the fortunate planets might glean after its fortune, and Jupiter seek to purchase its effects, and Venus light herself with its light. And one of the indications of daily-increasing fortune was that in those few days the clouds had piled up, and the rains poured down, and the face of the sun was enclosed behind a veil of vapour and a screen of mist; and at the selected hour the astrologers were writing but the dark clouds kept off the radiation and they were unable to take the altitude. Suddenly the fair countenance of the sun, like a bride displayed to the bridegroom after being guarded, and kept from him, and denied to him, cast aside its veil at the chosen hour, and the sky was uncovered enough to reveal the globe of the sun and was cleared of the turbidity of the fog; and the astrologers began to take the altitude. The world was adorned with light and brightness, and the face of the earth emptied of shadow and darkness. The rising of the house of the Greater Benefic was ascertained from the movement of the heavens and the strength of the angle of the Ascendant determined: the maleficent planets and the Dark Degrees were cadent from the fortunate Ascendant, the Greater Luminary was erect in its apogee in the Tenth House and the Anaretae (*qavāṭi* ') resident in the Twelfth.

All those present—the princes such as Berke Oghul and his brother Toqa-Temür, their uncle Elchitei the elder, the sons of Otegin, Köten and Kölgen, and the emirs, noyans and great officials of the ordu of Chingiz-Khan as well as such other leaders as were in that neighbourhood, together with troops beyond number or computation—[of all these] the princes took off their hats inside the ordu, slung their belts over their shoulders and raising up Mengü set him upon the throne of sovereignty and kingship. They named him Mengü Qa'an, and from the ringing of the heavens there came this cry as augury to the ear of the innermost soul:

*'O king, remain a thousand years in thy kingdom,
and then for a thousand years take pride in thy glory,
Every year a thousand months, every month a hundred days,
every day a thousand hours and every hour a thousand years'.*

As for the emirs and troops they drew up outside the ordu—more than a thousand men of action, famous warriors, who in truth were lions of battle at the moment of revenge or when in desperate straits—

*A band of men like gloomy Night and broadswords
which shone like the dawn of a dark night—*

and, at the same time as the princes inside the ordu, knelt three times. <...> First he appointed armies for the East and the West, for the lands of the Arabs and the non-Arabs. The Eastern countries and the provinces of Khitai, Manzi, Solangai and Tangut he entrusted to Qubilai Oghul, who is distinguished by his wisdom and sagacity, his intelligence and shrewdness. He nominated noyans of high standing to accompany him and placed under his command all the emirs of the right and the left who were resident in those regions. The Western countries he allotted to his other brother Hülegü Oghul, who is renowned for his firmness and dignity, his vigilance and caution, his powerful protection and his jealous sense of honour; and he appointed double the number of troops to accompany him. And Ked-Buqa Bavurchi set out in advance in the middle of Jumada I, 650 [July, 1252], in order to begin dealing with the Heretics.

*By thy command which has gone forth
let them travel night and day, now from Chin towards Rum, and now from Rum towards Chin.*

And in order to assess the taxes and register the names of the people he appointed governors, and *shahnas*, and scribes. The Eastern countries from the beginning of the Fifth Clime on the banks of the Oxus to the farthest limits of Khitai, which are the First Clime, he settled as previously upon the Great Minister (*ṣāḥib-i-mu'azzam*) Mahmud Yalavach and his worthy heir Mas'ud Beg, giving to Mahmud Yalavach, whose former services had been rewarded with marks of favour and who had arrived before his auspicious accession, the region of Khitai, whilst to Mas'ud Beg, who had come in fear and trembling and had experienced terror and danger because of his devotion and adherence to the Emperor, until in the end after escaping that peril he became all-powerful and enjoyed great honour, there fell the

whole of Transoxiana, Turkestan, Otrar, the land of the Uighur, Khotan, Kashgar, Jand, Khorazm and Farghana. And since their arrival at Court had preceded the *quriltai*, he dismissed them the sooner and all who had accompanied them were distinguished with all manner of favours.

After their departure the Great Emir Arghun, who had travelled an immense distance [along a route] fraught with terrors and menaces arrived in Court on the 20th of Safar, 650 [2 May 1252], after the *quriltai* had dispersed and each of the princes had departed to his home. And since perpetual favour and eternal ability had ever been in attendance on him and he had previously distinguished himself in devoted fidelity to the dynasty and sincere devotion to the royal house by the adoption of firm measures and the employment of perspicacious methods (*and 'in the morning men praise the evening'*), he was singled out by the granting of his wishes and the attainment of his aims; and there was laid in his hands authority over the countries of Khorasan, Mazandaran, India, Iraq, Fars, Kerman, Lur, Arran, Azerbaijan, Georgia, Mosul and Aleppo. And all the *maliks*, emirs and *bitikchis* who accompanied him were at his suggestion and by his favour distinguished and honoured; and on the 20th of Ramazan of the same year they set out [on the return journey]. Some of their number still had all kinds of business to attend to; these remained behind for a few days and then departed joyfully after him.

The Emperor appointed *nökers* to accompany these governors just mentioned and he commanded them to hold a census of the provinces and assess the taxes; and when they had finished, to turn back and proceed in haste to Court. And each of them had instructions to the effect that the conditions previously prevailing should be properly investigated and examined and that none of them should shirk the difficulties of the task. However '*God hath forgiven what is past*' and the Emperor was concerned with alleviating the lot of the people, not increasing the wealth in the treasury. And he issued a *yarligh* reducing the contributions (*mu'an*) on the people, the text of which is preserved in the archives and from which it is clear how great are his concern and solicitude for the affairs of mankind and the maintenance of their interests.

After the death of Güyük Khan the princes had issued an excessive number of *yarlighs*; they had engaged in commercial ventures and dispatched *elchis* to all parts of the world. Moreover persons noble and base had sought the protection afforded by being and *ortaq* and the subjects had fled from the greatness of the burden. The Emperor now gave orders that any *yarlighs* or *paizas* from the time of Chingiz-Khan, Qa'an, Güyük Khan and the other princes that were held by any one of them in the province belonging to him should be returned and that henceforth the princes should not give or write instructions regarding any matter relating to the financial administration (*maṣāliḥ*) of the provinces without first consulting the agents of the Court. As for the more important *elchis* they should not make use of more than fourteen *ulaghs*; they should proceed from yam to yam and should enter no village or town in which they had no specific business; and they should take no more provisions (*'ulūfa*) than the amount allotted for each man. Furthermore the practice of tyranny and oppression having exceeded all bounds and the peasants in particular being crushed and ground underfoot by the collection of casual levies (*'avāriz*) to such an extent that the produce of their crops did not amount to the half of the contributions (*mu'unāt*) from them, he gave orders that all *ortaqs* and financial and administrative agents (*aṣḥāb-i-'amal va shughl*) should behave with self-control in their dealings with the people. Each should pay in proportion to his circumstances and ability the amount due from him according to the assessment (*bar vajh-i-mu'āmalat*) except such as were exempt from the inconvenience of contributions (*mu'an*) by the ordinance of Chingiz-Khan and Qa'an, that is, of the Moslems the great *sayyids* and the excellent imams, of the Christians, whom they call *erke'ün*, the monks and scholars (*aḥbār*) and of the idolaters the priests whom they call *toyin*, the famous *toyins*; and of all these classes of people, those who are advanced in years and no longer capable of earning a living. The Jews heard of this ordinance and not being included in that category they became exceedingly vexed and annoyed; they were perplexed and bewildered and thrust and hand of discomfiture into their beards. As Zahir says in his description of a preacher:

A red-bearded fellow was present. He put his hand to his beard when he heard that.

He said: 'We are not of that number.'

We amount to nothing in either world'.

And in order that every agent (*ṣāhib-shughl*) might not distribute (*qismat*) [the revenue at his own discretion] he instituted an annual scheme (*muwāza'a*) whereby in the countries of Khitai a man of great wealth was taxed eleven dinars and so in proportion down to the poor man who paid but one; and so it was in Transoxiana also; in Khorasan a rich man paid ten dinars and a poor man one. He further ordered that the governors and scribes should not show favour or partiality; that they should not accept bribes; and that they should not falsify the truth or display the false for the true. As for the levy on animals (*marā'i-yi-chahār-pāi*), which they call *qupchur*, if a person had a hundred head of a particular kind of beast he was to give one, and if he had less, none. And wherever there were arrears (*baqāyā*) of taxes and whoever of the peasants owed them, they were not to pay [such arrears] nor were they to be exacted from them. As for the merchants and ortaqs who had made extensive deals with Güyük Khan, his wife and their children he ordered them to be paid from fresh revenue (*az māl-i-nau*).

And of all the peoples and religious communities he showed most honour and respect to the Moslems. It was upon them that he bestowed the largest amounts of gifts and alms and it was they who enjoyed the greatest rights. A proof of this is the following. On the occasion of the 'id-i-fitr in the year 650 [5 December 1252] the Moslems assembled before the Emperor at the gate of the ordu together with the chief cadi Jamal-al-Milla vad-Din, the exemplar of the ulema, Mahmud of Khojend (*may God perpetuate his excellence!*). The chief cadi led the prayers and delivered the sermon, decorating and adorning the *khutba* with the mention of the Orthodox Caliphs and the Commander of the Faithful. And when they had finished the prayer of the festival, which according to a tradition of the Prophet is more excellent than 2000 prostrations performed in the Ka'ba, the chief cadi entered the ordu and acting as *imam* prayed [for the Emperor] to the following effect:

*'May the rising of the star of the Festival be lucky for thee,
for thy horoscope is lucky for
all mankind.
Thy enemy is waning like the full moon from an eclipse;
but thy fortune, like the crescent moon,
waxes day by day'.*

He was viewed with the glance of favour and indulgence and several times commanded to repeat the prayer. And as a gift for the festival the Emperor presented waggon-loads of gold and silver *balish* and all kinds of costly clothing, and the greater part of mankind had their share thereof; although at other times than festivals also his generosity towards the Moslems is great and boundless.

*Because of thy gifts every day is a
festival to us:
how then shall the festival be distinguished
on the day it returns?*

And throughout his realm, wherever there was a criminal or a prisoner in the abasement of captivity, he ordered his release and liberation and so gave him quarter from the trials and indignities of this world. And here I have inserted the following verses, which, although this is not the appropriate place for them, will yet have some appeal to men of taste and discernment:

*Who am I to God that when I sin He should not forgive
my sin?
Forgiveness is expected of the sons of Adam: how then shall it not be expected
of God?*

In how many hearts did hope revive when necks were left upon bodies and dirhems and dinars in purses and wallets! And on this errand alchis and messengers sped to every corner of his realm.

*Let the kings who bestow gold and silver
learn custom of bestowing life from our Sultan Bahram-Shah.
Like the sun in mid-heaven
whose light covereth the lands in the East and West.*

Now were one to begin describing the deeds which spring daily from his being and to commence recounting the charitable acts which thus manifest themselves, whole volumes would be filled to over-

flowing. A little out of much, a drop from the ocean, an atom from the sun has been and will be conveyed with the tongue of the pen to the ear of those interested. *'A little of it is a guide to the greater part'*.

And since the fame of his justice and equity has spread throughout the world, all people, far and near, with a sincere desire seek refuge in allegiance to him and so obtain quarter from his might. Others who are exceedingly far distant cherish the same wish, and ambassadors and *elchis* come from the land of the Franks, and farthest Syria, and the Abode of Peace; and sultans bring and send to his Court numberless gifts and presents of heavily laden horses.

*From these cities they send tribute for they have not the strength
and might to make war on him.*

And they return having satisfied their wants and attained their desires. They will each be mentioned in a separate chapter.

*O Khusrau, may thy kingdom and thy life be increased,
may the face of thy fortune be rosy!*

Thy fortune is the centre of the sun: may it be outside the orbit of decline! <...>.

No. 5**Literary Monuments of Ancient Rus'.
Russian chronicles about the Tatars and Jochid Ulus**

Russian sources have an important meaning in the study of the history of the Mongolian conquests and the Jochid Ulus. Evidence about the conquest of Russian principalities, the cooperation between the khans and Russian princes and other aspects of domestic policy of this state, such as inter-confessional cooperation, etc. is particularly important and unique.

The data has been grouped together into sections that contain the most important information from the Russian chronicles. The chronicle texts are represented by letters substituted from the ancient Russian alphabet, which is no longer in use, with letters and alphanumeric symbols from the modern Cyrillic alphabet and Arabic numbers.

The text of the chronicle is followed by sources in the form of alphanumeric symbols (Hypatian Chronicle, Laurentian Chronicle, Novgorod First Chronicle, Novgorod Fourth Chronicle). As a rule repeated texts are provided only in the case of significant discrepancies pointing to different sources (columns) or the author's edition of the chronicle.

The Mongolian conquest of Rus'(Ruthenia)**1. Battle of Kalka River**

'In the same year (6731/1223) the pagans came and nobody knew who they were, where they came from, or what their language and faith was. Some people call them Tatars, others call them Taumens, and the rest call them the Pechenegs. Methodius, the Bishop of Patara, says that they came from the Yetrievsky desert which is located between the East and the North. According to him, they are descendants of Ismael and their arrival is a sign of the approaching apocalypses because they are going to capture all the earth from the East to the Euphrates and from the Tigris to Pontus except for Ethiopia. Only God knows who they are and where they came from. Wise men who have the corresponding literature know who they are. As for us, we have no any idea about them except for that they have already captured many countries; they killed many Yasa, Obezias, Kasogas and Cumans. Some of them were captured and died shortly after. The damned Cumans badly damaged the Russian lands. Our merciful God wanted to kill and punish Ishmael's sons the Cumans and avenge the Christian blood on them. They passed through all Taurmenia, the Cuman land, and approached Rus' not far from the Cuman wall. The Russian princes Mstislav of Kiev and Mstislav of Chernigov heard them heading their way and decided to counterattack. So Vladimir sent his messengers to Grand Prince Yuri, Vsevolod's son, to ask him for help. He sent prince Vasilek Konstantinovich and the inhabitants of Rostov. But he failed to get to Rus'. The Russian princes came and fought them and they were defeated. Few of them managed to survive. The ones who did, fled. All the rest were killed: old good prince Mstislav and other Mstislavs, 7 princes in total, and many Boyars and other classes. They say that 10 thousand villagers were killed there. All the inhabitants of Rus' suffered this sorrow. That happened on 30 May, on martyr Yerema's day. When Vasilko heard what had happened in Rus', he returned from Chernigov being saved by God and the saint cross and prayers of his father Konstantin and George and arrived in Rostov praising God and the Virgin'.

Laurentian Chronicle. Columns 445–447

'In the year 6732 (1223) enormous armies of godless Tatars came to the Cuman lands. The Cuman Khan Yuri Konchakovich was the most destructive warrior. The Cumans who had nothing to oppose them had to flee. Many of them were killed up to the Dnieper river. The Tatars had to go back to their lands. The Cumans who reached the Russian lands told the Russian princes, 'If you do not help us, we will be killed and the next morning you will be killed'. The Grand Prince reigning in Kiev said, 'It is better to meet the enemy in another land than in your own'. At that time Mstislav Romanovich was in Kiev, Mstislav was in Kozelsk and Chernigov and Mstislav Mstislavovich was in Galich. They were the elders of the Russian land. Yuri, the Prince of Suzdal, was not there. However, there were the young princes Danil Romanovich, Mikhail Vsevolodovich, Vsevolod Mstislavovich of Kiev and many others. At that time the Cuman prince was christened as Batu. Vasilko was not there; he was in Vladimir.

In April he left for the Dnieper river, the island of Varangians. All the Cuman land came there as well as the inhabitants of Chernigov, Kiev, Smolensk and other towns; they came to the dry Dnieper although it seemed to be covered with water because of the great number of people. The inhabitants of Galicia and Volhynia came with their princes, and the inhabitants of Kursk, Trubich and Putivl came with their princes on horses. The citizens of Galich reached the Dnieper and entered the sea, there were thousands of people, so they entered the Dnieper, constructed barriers and stayed at the passable Khortitsa River. Domamerich Yury and Derzhikrai Volodislavich were with them.

It became known that Russian boats had been seen nearby. When prince Danil Romanovich found out, he sent his armies in that direction. Many princes following him could only see these enormous armies. Looking at them, Yury said, 'They are archers'. Other people said, 'They are common people. Cumans'. Yury Domamirich said, 'They are warriors and volunteers'.

When Yury and his companions got there, they said to Mstislav and the other young princes, 'Mstislav and the other Mstislavs, we should oppose them'. So all the princes, Mstislav and the other Mstislavs of Chernigov, crossed the Dnieper, the other princes came and headed for the Cuman field. They crossed the Dnieper on Tuesday. There the Tatars met the Russian regiments. The Russian archers were victorious and drove the enemy away in the direction of the field. They took their livestock and left.

It took them 8 days to reach the Kalka River where they met the Tatar guards. They had a fight and Ivan Dmitrievich and two warriors of his were killed. The Tatars went away safe and sound.

The Tatar Cumans met Russian regiments at the Kalka River. Mstislav Mstislavovich ordered Danil and his regiments to cross the Kalka and he was riding himself surrounded by his guards. Seeing a Tatar regiment, he said, 'Get ready'. Out of envy he didn't report it to Mstislav and the other Mstislav who had stayed at the headquarters. The conflicts between them were rather significant.

The regiment which took part in the battle got back. Danil left in advance and Semen Olegovich and Vasilko Gavrilovich hurled themselves at the Tatar regiments. Vasilko's people were defeated and Danil himself who was too young and arrogant and could not take a reasonable view of the situation at the age of 18 was rather strong. Danil's people, who were brave warriors, fought against the Tatars successfully. Seeing the power and might of Danil, Mstislav the Mute made a decision to pass the reins of government to Roman from the tribe of Vladimir Monomakh. Being indifferent to his father, he entrusted his volost to him after his death giving it to Prince Danil.

The Tatars galloped, the regiment of Danil defeated them and Oleg of Kursk fought against another regiment opposing them. The Russians were defeated because of our sins. Seeing the failures of his warriors, Danil put his horses to flight. He was hurrying until he reached water to quench his thirst. He did not feel any wounds on his body in view of his young age, insolence and bravery. From top to toe, he had no sins.

All the Russian princes were defeated; it was an unprecedented situation. The Tatars defeating Russian princes for the sins of Christians, reaching Novgorod of Svyatopolk and barely knowing that their flattery is opposed to them with crosses. They killed all of them.

God was waiting for the peasants to repent their sins and directed his attention towards the oriental land. He sent wars to the lands of Tanougousts and other countries. At that time their Khan, Chinggis was killed. The armies of other countries, charmed with their flattery, defeated them. This flattery turned out to be the most destructive'.

Hypatian Chronicle. Columns 740–745

'In the same year (6731/1223) the pagans came and nobody knew who they were, where they came from, what their language or faith was. Some people call them Tatars, others call them Taumens, and the rest call them Pechenegs. Methodius, the Bishop of Patara, says that they came from the Yetrievsky desert which is located between the East and the North. According to him, their arrival is a sign of the approaching apocalypse because returned those who were defeated by Gideon and they are going to capture all the Earth from the East to the Euphrates and from the Tigris to Pontus except for Ethiopia. Only God knows who they are and where they came from. Wise men who have the corresponding literature know who they are. As for us, we have no idea about them except for that they have already conquered many countries; they killed many Yasa, Obezias, Kasogas and Cumans. Some of them were captured and died shortly after. The damned Cumans badly damaged the Russian lands. Our merciful God wanted to kill and punish

Ishmael's sons the Cumans and avenge the Christian blood on them. These Taurmens passed through the Cuman land and approached Rus' not far from the Cuman wall. The damned Cumans killed many of their people, including Kotyan and other princes, Danil Kobaykovits and Gurgi were killed as well as many Cumans; Kotyan was Mstislav Galitsky's father-in-law. He came with the Cuman prince to his father-in-law Mstislav Galitsky and other Russian princes, brought them many presents: horses, camels, bulls, and beautiful girls and gave them to the Russian princes saying, 'Our land has been captured today and yours will be captured tomorrow', and Kotyan asked his father-in-law for help. Then Mstislav told the Russian princes that they had to unite their efforts and to repulse the enemy together, otherwise they will become even stronger. The princes listened to them and decided to fulfill his requirements, so all the Russian princes set off to attack the Tatars and soon they reached the Dnieper. When the Tatars saw the Russians moving against them, they sent their ambassadors to the Russian princes and said, 'We know that you have listened to the Cumans and decided to attack us, but we do not invade your lands, do not burn down your towns and villages, you should make peace with us and rise against the Cumans, seize their possessions, since they had already caused much evil to you'. The Russian princes did not listen to them, beat up their ambassadors and rose against them instead. They did not reach Oleshie and stayed at the Dnieper. Then the Tatars sent their second messengers to them and said, 'If you listen to the Cumans and beat up our ambassadors, we do not want to know who you are, may the Lord be with you' and their ambassadors were set free. Then Mstislav crossed the Dnieper with one thousand warriors of his and defeated them and then they found themselves at the Cuman mound with voivode Gemyabeg and he buried him there. The Cumans asked Mstislav for permission and then killed their enemies. The Russian princes found out about it, crossed the Dnieper, moved for 9 days and afterwards they headed to the Kalka River and sent Yarun and the Cumans to spy out the land and set up camp at the river themselves. At the same time Yarun wanted to fight against the Cumans but they did not make it up, they escaped and devastated the camps of the Russian princes on their way, as the latter were not prepared to resist them, and there was a furious battle. When Mstislav, the Prince of Kiev, found out about that, he decided to stay there and not to move. They fought at a fortified hill on the Kalka River for three days. Some Tatars fought against Russian princes up the Dnieper; there were two voivodes left at the hill, Tsygyrkan and Teshukan, for Mstislav, his son-in-law Andrey and Alexander Dubrovitsky. And voivode Ploskyn went to kiss the cross [take an oath] to Mstislav and both princes promising that they would not be beaten, but betrayed him and gave to the Tatars. At the end of the day, the fortress was captured and its inhabitants were killed, the princes were also killed unmercifully: they were squashed by wooden planks while Tatars were having dinner over them. Some princes were killed at the Dnieper River: Svyatoslav Yanyvsky, Izyaslav Ingovorovits, Svyatoslav Shumsky, Mstislav of Chernigov and his son, Gurgi Nevezhsky. At the same time Mstislav M'stislalic managed to cross the Dnieper and could hardly flee, other warriors turned bridles, some of them were killed by the Cumans. That is how God punished us for our sins, many people were killed, many towns and villages were in dismay and sorrow. That happened on 31 May, on St. Eremy's day. The Tatars returned from the Dnieper and we do not know where they came from, only the Lord does'.

Novgorod First Chronicle. Column 61

2. Battle of Batu

'In the year 6744 (1234) on 3 August there was a solar eclipse; the sun looked like the moon for four days. That autumn godless Tatars came from the oriental countries to the Bulgarian land and captured the great city of Bulgar and killed everyone from elderly people to babies and got a lot of trophies and burnt down their town and captured their land.

In the year 6745 (1237), during winter the godless Tatars came to the Ryazan land from the eastern countries through forests and started waging wars against the Ryazan land and captured it up to Pronsk. They captured it and burnt down the town and killed its prince. Some of them were dismembered, others were executed by shooting and all the rest were bound hand and foot. Many holy churches, monasteries and villages were burnt down. Many estates were misappropriated. Then they headed to Kolomna.

In the same winter Vsevolod, Yury's son, opposed the Tatars. They went into action near Kolomna. They started a great fight. Vsevolod's voivode Yeremey Glebovich and many other soldiers of his were killed. Vsevolod fled to Vladimir with the rest of his retinue. The Tatars headed to Moscow.

In the same winter the Tatars captured Moscow and killed voivode Philip Nyank for his Orthodox faith. Prince Vladimir was captured with the help of Yury's son. All the inhabitants were killed, from elderly people to babies. The town, holy churches, monasteries and villages were burnt down and many estates were misappropriated.

In the same winter Yury left Vladimir with a small part of his retinue and ordered his sons Vsevolod and Mstislav to go to a special place. He headed to the Volga River with his sons Vasilek, Vsevolod and Vladimir. They stayed there waiting for his brother Yaroslav with his regiment and retinue. So prince Yury started machinating against the Tatars. He ordered Zhiroslav Mikhailovich to become the voivode of his retinue.

In the same winter, on 3 February, a week before meat fast Saturday, on St. Semeon's day, the Tatars came to Vladimir. The inhabitants of Vladimir locked themselves in the town. Vsevolod and Mstislav were there and Petr Oslyadyukovich was a voivode. The inhabitants of Vladimir did not open the gate, the Tatars and Vladimir Yrievich, Vsevolod and Mstislav's brother, came to the Golden Gate. The Tatars asked Grand Prince Yury to let them in. The inhabitants of Vladimir shot some arrows at the Tatars. The Tatars also shot their arrows at the Golden Gate. Then the Tatars told the inhabitants of Vladimir, 'Stop shooting!' They did not reply. Then the Tatars came up to the gate and asked, 'Do you know the Prince of Vladimir?' He looked upset and depressed. Vsevolod and Mstislav were standing at the gate and recognised their brother at once. They were agape with amazement and their eyes were full of tears. Vsevolod, Mstislav, their retinue and all the residents were looking at Vladimir and crying. The Tatars left the Golden Gate, passed around the town and then their large army came back and stood in front of the gate. Vsevolod and Mstislav felt sorry for their brother and told their retinue and voivode Petr, 'Brothers! We'd rather die at the Golden Gate for Our Lady and the Christian faith!' But Peter Oslyadyukovich was against their wish. Then both princes said, 'It is all God's punishment for our sins!' And the prophet said, 'It is all in God's hands! May he be blessed forever'.

The Suzdal land suffered great damage as never before, but let us omit it.

The Tatars put up their camps near Vladimir and after that they captured Suzdal and plundered the church of the Virgin and burnt down the court of the prince and the Monastery of St. Dmitry and plundered all the rest. All the monks and priests and the blind and the lame and the deaf and sick people were killed. As far as the monks, nuns, wives and children of all these priests and dyaks are concerned, all of them were taken to foreign countries.

On Meat Fast Saturday the Tatars started preparing the forests and setting traps until the evening and they surrounded Vladimir with a fence for the night. On Meat Fast Sunday after Morning Prayers they attacked the town on 7 February, the day of the great martyr Fyodor Stratilat. And the town was full of tears because of our sins and unfairness, not joy. God led the damned conquerors into our land for our increasing anarchy without patronising them but punishing us to prevent us from immorality. The penalty of God for us is the invasion of the damned Tatars. This is his lash urging us to not to move along the path of miscalculation. So he does on holidays, that is why the prophet says, 'I will turn your celebrations into mourning and songs into weeping'. So the town was captured in the morning and beginning with the Golden Gate, they crossed the town wall at the Church of Saviour, then they came up to Irina's Gate and Copper Gate from the north at the Lybed River and the Volga Gate from the Klyazma. Soon they captured the New Town this way. Vsevolod, Mstislav and all the people rushed to the town at the Pechora. Bishop Mitrophan and the Yury's princess with her daughters, daughters-in-law, grandchildren and other princess of Vladimir with children and many Boyars and many other people locked themselves in the church of the Virgin. And they were burnt down... and died this way.

The Tatars opened the doors of the church by force, saw priests and congregation die in fire, killed the ones who was still alive, plundered the church, tore a fascinating icon decorated with gold, silver and precious stones. They tore away and destroyed almost all the icons in the monastery, some of them were misappropriated. It also comes to holy crosses, sacred vessels and books. They also captivated the vestment of the first canonised princes hanging in the church. The prophet said, 'Lord! Pagans burst into your possessions. They desecrated your holy church, used Jerusalem as a vegetable store, gave the dead bodies of your servants to birds and their flesh to wild animals pouring their blood like water. Pakhomi, the Archimandrite of monastery of the Nativity of Mary, and abbot of Assumption Theodosy of Spassk

and other abbots, monks, priests and dyaks from elderly people to babies were killed. The ones who survived were captivated and taken to the camps naked and barefoot.

The Tatars captured Vladimir and came and attacked Grand Prince Georgy. Those damned blood-suckers headed to Rostov, not Yaroslavl and some of them to the Volga River, to Gorodets. And they captured everything located along the Volga up to Galich of Meschera. Some of them headed to Pereyasavl and captured it. Afterwards they reached and captured all the country and many towns, even Torzhok. There were hardly any places or villages in the Suzdal land where they did not wage war. So they captured 14 towns except for slobodas and villages in February of year 6745.

But we can look ahead. Once the message reached Prince Yury, 'Vladimir was captured and churches, bishop, princess and her children and daughters-in-law and grandchildren were burnt down. The elder son with his brother was killed outside of the city as well as his people'. Hearing that, he started weeping for the Orthodox Christian religion, especially for the church and bishop, and people deprived of wives and children. He took a long breath and said, 'Lord! Please, be merciful to all the people who survived, give us patience and faith!'. Then he started to pray, saying, 'Woe is me! It would be better to die than keep on living in this world. Why have I stayed alone here?' He was saying prayers and crying and suddenly the Tatars approached. He stopped grieving for what had happened and said, 'Lord, hear the prayer of your servant, please. Save my body and my soul'. Afterwards he said his second prayer, 'Lord, I rely on you. Please save me from all the insidious enemies'.

So the godless Tatars came to the Sit' river to fight against Grand Prince Georgy. They heard that Prince Yury, his brother Svyatoslav, nephews Vasilko, Vsevolod, Vladimir and other warriors opposed the damned enemies. Both armies met each other and there was a furious battle and our warriors took to flight. Prince Yury was killed and Vasilko was captured and taken to the camps of the enemy. That happened on 4 March, on the day of the saint martyrs Paul and Ulyana. So the Grand Prince Yury was killed at the Sit' River and many soldiers from his družina died there. Vasilko Konstantinovich was taken to Shernsky forest by force and when they put up a camp there, the damned godless Tatars started to make him adopt their disgusting habits, be with them and fight on their side. But he did not obey and said again and again: 'Oh wretched foul kingdom! You will never make me disown my faith although I've got into trouble. What will you tell God killing so many souls for which God will execute you all the time? He will judge the souls of those you killed'. The Tatars started gnashing their teeth willing to be sated with his blood.

This blessed Prince Vasilko met the same death as Andrey: he washed his sins away with martyred blood as well as his brother and father, the Grand Prince Georgy. It was miracle that even after death God united their bodies; Vasilko's body was brought and put in the Church of St. Virgin in Rostov where his mother had been buried. At the same time the head of the Grand Prince Georgy was placed in the tomb where his body had already been lying'.

Laurentian Chronicle. Columns 460–470.

'In 6745, the godless Ishmaelites came who previously fought against the Russian princes at the Kalka River. They invaded the Ryazan land for the first time and took it by assault, lured prince Yury out of the town by deception and took him to Pronsk, his princess was in Pronsk at that time. His princess was also lured out of the town and both of them were killed. All the land was devastated. They did not spare anyone's life; even children and babies were killed. Kyur Mikhailovich and his people went to Suzdal and told the Grand Prince about the arrival of the godless Agaryans. When the great prince heard about that, he sent his son Vsevolod and all his people and Kyur Mikhailovich there. The warriors of Batu headed to the Suzdal land. They met each other at the village of Kolodna. They fought against each other and both sides suffered sufficient human losses in the fights. Vsevolod was defeated and hurried to report this piece of news to his father so that he could take the corresponding measures. Prince Yury left the town, leaving his son Vladimir and princess there. Having no guards on his side, he was captured by the illegal Bourondaem; he devastated all the town and killed the prince. The warriors of Batu standing near the town walls started enticing the citizens from there saying that the Ryazan princes had disappeared, their town had been devastated and Prince Yury had been killed. Hearing that, the Reverend Bishop Mitrophan appealed to the citizens with his eyes full of tears not to let themselves be led by the Tatars and to care about their life after-death, not the current one. Do not think of them burning down our town and killing you but think of Jesus Christ giving you his wreath'. Hearing his words, everyone

started to fight furiously. The Tatars got angry and shot their arrows at the citizens. Prince Vsevolod sat and decided to surrender at discretion, he left the town with a part of his retinue, bringing numerous presents and hoping to beg successfully for pardon but he failed and he was put to the knives at once. So all the town was devastated. The Reverend bishop, princess and children dashed to the church. The damned Tatars ordered to commit it to the flames. So they yielded to the spirit, Vladimir was devastated, the Suzdal towns were captured, the Tatars came up to Kozelsk where prince Vasily ruled. Soon they found out that the citizens of Kozelsk did not fall for flattery. So the citizens of Kozelsk told Batu, 'Although our prince is quite young, we will still eagerly render life for him and we will become glorious and receive heaven wreaths from Jesus Christ'. The Tatars wanted to capture the town and destroy the town wall, so they climbed a hill. The inhabitants of Kozelsk started their counterattack and they managed to kill more than 4 thousand soldiers from the tatar troops. The inhabitants of Kozelsk themselves also suffered significant human losses. However Batu captured the town and killed everyone including youths and babies. There is no information about prince Vasily. Some people say that he drowned in blood being too young. The Tatars called Kozelsk an evil town because they were fighting for seven weeks and many Tatars were killed. The Tatars could hardly find their friends and relatives in the piles of dead bodies. Having captured Kozelsk, Batu headed to the land of the Cumans. He started sending his regiments to the Russian land from there. He took Pereyasavl by storm, killed everyone there and destroyed the church of archangel Mikhail and stole numerous golden church cups and precious stones. They killed the Reverend bishop Semeon. At the same time his troops headed to Chernigov and they surrounded its walls. When Mstislav Glebovich heard of this attack, he went there to defend it immediately. They fought, Mstislav was defeated and many of his warriors were killed. The town was captured and burnt down. The bishop remained alive and was taken to Gloukhov. The next point was Kiev. His troops stayed on the other side of the Dniester, not far from the town of Pesochny. Looking at the town, enjoying its beauty and grandeur, he sent his ambassador to Mikhail and his citizens, but they turned out to be indifferent to flattery and did not listen to him.

In 6746 (1239), Mikhail and his son were fighting against the Tatars and Rostislav Mstislavich of Smolensk was in Kiev. Danil was going to join Rostislava and left Dmitri in Kiev to get the upper hand over the godless Tatars.

<...> In 6748 (1240), Batu came up to the town with his large army and the Tatar array surrounded the town. The town was besieged. Batu was near the town. His warriors shot at the town. Nothing could be heard because of the creak of his wagons and noise made by his camels and horses. The Russian land was full of warriors. There was a Tatar called Tovroul among them who demonstrated his strength and deftness to them at once. His strong brothers were the voivodes Ourdyu, Baidar, Biryui, Kaidan, Bechak and Mengou. When Kyuuk found out that the khan had died, he became a khan. Due to his voivodes Sebedyai and the Bouroundai Bulgarian and Suzdal lands were captured. They were literally countless. Batu khan ordered to put gunpowder near the Lyadsky Gates. Firing all day and all night, they broke through the walls. They fulfilled his command and entered the town. There were so many arrows that they eclipsed the daylight. Dmitri was wounded. The surviving citizens created a small asylum at the church of St. Virgin. In the morning they came and started a great battle. Frightened people scattered in all directions. The church walls fell down because of their weight. The town was captured by warriors. Dmitri was tortured and finally killed.

At the same time Danil was on his way to the Hungarians' King, he did not know that the foul Tatars had arrived in Kiev. Batu captured Kiev, heard about Danil who that time was the guest of the King of Hungarians, and headed to Vladimir. When he reached the town of Kolodyazhny, he put 12 siege-guns there but could not break walls. People started talking about that. Listening to his advice, they came out and were killed. Izyaslav's Kamenets was captured. Then he saw that Kremyanets and Danil's town are hard to conquer and retreated. Then he came to Vladimir and captured it, killing the local population without sparing anyone. That also happened to Galich, and countless other towns. Danil's tysyatsky in Kiev told Batu, 'The time had come to attack the Hungarians. Otherwise they will attack you themselves'. He saw the Russian lands dying from the foul enemies. Batu listened to Dmitri's advice and set off against the Hungarians.

'In 6746 (1237)... foreigners called Tatars came to the Ryazan land in large numbers; first of all they reached Nuzla, captured it and stayed there. He sent his ambassadors from there, wife-enchanted and two people from there to the Ryazan princes asking them for a tithe—a tenth part of everything: of people, of princes, of horses, etc. Ryazan princes Yury, Igor's brother, Oleg, Roman Igorevich, those of Murom and Pronsk did not let them in and headed in the direction of Voronezh to oppose them. The princes told them, 'When we die, that will be yours'. Then they let them go to Yury to Vladimir, the Tatars left it for Voronezh. The Ryazan prince sent his messenger to Yury of Vladimir, asking him for help or joining them in a battle. Yury did not agree, as he wanted to go and fight the Tatars separately from brothers. It was late to resist God's anger as God told Joshua: I shall send thunderstorm and fear and tremor on the heads of our enemies. God deprived us of strength and sent bewilderment, fear and trembling to us as a punishment. At the same time the foul Tatars surrounded Ryazan and laid siege; Yury, the prince of Ryazan, and his people locked themselves in the town; Prince Roman Igorevich started fighting against them with his people. Prince Yury of Vladimir sent Yeremey as a voivode and left with Roman; the Tatars surrounded them near Kolomna, they were fighting furiously and drove them away and killed prince Roman and Yeremey and there were many human losses. The inhabitants of Moscow saw nothing. The Tatars captured the town on 21 December and they started storming it on 16 December. They killed the prince and his princess, men, women and children, monks and nuns, priests, some of them were burnt and the others were knived. They violated nuns, priests' wives and other women and girls in front of their mothers and sisters; while God saved the bishop—he had left the city before it was besieged. When we saw that, we got frightened and scared and we were crying day and night; now we are sighing day and night caring of lands and hatred of brothers. But let us get back to the topic. At the same time the foul Tatars who captured Ryazan headed to Vladimir and started mass bloodshed there. Prince Yury left Vladimir and headed to Yaroslavl, his son Vladimir, his mother and all the people locked themselves in Vladimir. Illegal Israelites approached the town and stormed it. The next morning when princes Vsevolod and the Vladyka Metrofan found out what was going to happen, they headed to the church of St. Virgin and took monastic vows together with the prince, princess and many other people there. Then the illegal Israelites came, put up their attacking constructions, captured the town and burnt it down. That occurred before the Great Lent. The prince and princess saw the town burning and people dying from swords and arrows and rushed to the church of St. Virgin to hide there. The foul Tatars hammered in the doors, burnt down the church and killed them unmercifully; that is how they died. Prince Yury headed to Yaroslavl. Prince Yury sent Dorozh as a spy among three thousand. Dorozh, who arrived and said, 'Prince, we are almost surrounded'. The prince started mobilising his army immediately when the Tatars came. The prince did not have time and fled; that happened at the Sit' River; he was caught and killed there. Only God knows how he died; there are many legends about that. Rostov and Suzdal became separated. Then the foul Tatars came to Moscow, Pereyasavl, Yuriev, Dmitrov, Volog, Tver; Yaroslav's son was killed there. Then they surrounded Torzhok during the Holy week and completely devastated it; they fought there for two weeks, people got tired, and they did not receive assistance from Novgorod, so the foul Tatars captured the town and killed everyone from children to elderly people, especially the priests and their relatives. That happened on 5 March, on St. Martyr Nikon's day. Ivanko, posadnik, Yakim Vlounkovich, Gleb Borisovich, Mikhailo Moiseevich were also killed there. At the same time the foul Tatars went to Ignach cross, 100 versts away from Novgorod, killing everyone on their way. Novgorod was protected by God, St. Sofia, St. Cyril, the prayers of priesthood and the great princes. As you know, God let the foul Tatars in because of our sins. This terrific army was led by Devil: God does not want our souls to be destroyed. The devil is happy with the murders and bloodshed. In such cases God either punishes people with starvation, floods, wind or rain or asks to turn to him by saying prayers from the very depth of one's heart. But we are still suffering from God's punishment because of our sins like pigs.'

Novgorod First Chronicle. Columns 74–76

No. 6

Sempad the Constable. 'Chronicle'.

The outstanding military leader and historian of Cilician Armenia of the 13th century Sempad the Constable (1208–1876) composed valuable works. One of them is called the 'Chronicle'. It contains evidence on the Mongols and other peoples. The history is given here in chronological order.

As A. Galstyan noted, Sempad the Constable provided valuable data on the events of his epoch which had not been covered by any medieval historian... The texts of Sempad the Constable published before had almost no evidence on Mongolian conquests except for several pages about Mongolian troops crossing the Syr Darya and Amu Darya ('History of Mongols', ed. 1, pp. 66–67) and a few words on the journey of Sempad to Mongolia to Guyuk-khan...

The ancient Armenian texts of the 'Chronicle' by Sempad the Constable published in Moscow in 1856 and in Paris in 1859 also contain scant information on the Mongols and their conquests. It refers to three Matenadaran manuscripts: No. 4584, 1900 and 4337. A recently found manuscript of the 'Chronicle' by Sempad the Constable dated back to 1315 was published in Venice in 1315. It contains rather interesting materials on the Mongols and their conquests. We only translated the part of the mentioned work which refers to Armenian-Mongolian relations and the invasion of the Mongols in the Middle East, Central Asia, and Transcaucasia.

Sempad the Constable talks about the Armenian-Byzantine, Armenian-Georgian, Armenian-Persian, Armenian-Arabic and Armenian-Turkish relations. Sempad explains in rather great detail the history of Armenian emigration from Great Armenia to different countries of the West, and particularly to the Byzantine Empire.

Sempad thoroughly explores the Mongolian conquests in his 'Chronicle'. He provides interesting information about Khwarezm. Sempad reports that the Mongols defeated Khwarezm shah Darbain and put him to flight. Then he reports about the capture of a town of Middle Asia by the Mongols. Describing the capture of Marakanda (Samarkand) in detail, he writes that the shah of Khwarezm fled to the other side of the river and thought that the Mongols would not be able to cross it. Sempad continues, 'Chinggis Khan, the head of the Tatars, made a bridge from tied boats, crossed the Gokhon and captured the great town Samarkand within four days, but he failed to destroy it within four years because Samarkand means 'a rich town' in Turkish. Afterwards Sempad writes about the conquest of the Rum sultanate by the Mongols. After Getum had returned from Mongolia, he gathered a powerful army and invaded Rum in order to avenge the destruction of the Armenian regions by the Rum sultan during his absence. Gaining victory over the Rum troops, Getum returned to his country with valuable trophies.

Sempad talks in detail the capture of Baghdad by the Mongols. He provides some data on social contradictions in feudal Armenia, on internecine feuds, etc.

The historical work by Sempad the Constable contains reliable data on the history and geography of the countries of Central Asia and the Middle East' [Armyanskie istochniki o mongolax, 1962].

The source and notes are quoted on the basis of: Armyanskie istochniki o mongolax. Izvlecheniya iz rukopisej XIII-XIV vv. (Armenian sources on the Mongols. Abstracts from manuscripts of the 13–14th centuries) / Translation, appendices and notes by A. Galstyan. Moscow, 1962. Pp. 47–64.

'During these days the Tatars arrived in Rum. The sultan's mother took her daughter and they fled to Cilicia. The Tatars sent an ambassador to Tsar Getum (Getum I.—A.G.) who demanded the fugitives be brought back. They said that otherwise the alliance they had concluded would be invalid. He (Getum I.—A.G.) gave up the fugitives, fearing a Tatar invasion of his country¹.

A terrible anger gripped Sultan Kai-Khosrov-shah and all the Muslims then. He gathered the cavalry and instructed paron Konstantin, the owner of Lambron, to head it. He penetrated into the Paparon Mountains burning down everything on his way. Then paron Konstantin Tagavoraayr² and Sempad the Constable³ entered Tarsus and the tsar and his cavalry headed to Adana. The Turks besieged Tarsus then they moved along a riverbank, captured local places and spent six days there. After that they returned to

Kapan through the Kuklka. The tsar and his cavalry chased them. At that time Tagavoraayr and Sempad the Constable arrived at the place called Maitsar.

He (sultan.—*A.G.*) and his numerous troops turned around. Then we attacked him and with God's help prevented their advancement, and having defeated them, we chased him to Putande⁴.

In one year, in 695 (1246), the Turks gathered a large army numbering 260 thousand people and entered Kapan, crossed the Kuklka and besieged Tarsus. Tagavoraayr and I, Sempad the Constable, entered Tars. If we wanted to describe everything we had gone through because of all these catapults and battles, it would be a very long story. The town wall was badly damaged along the entire course of the river at the distance of the flight of an arrow. Both sides suffered significant human losses but the besieging Turks lost many more warriors because we had good Franconian archers.

A Tatar messenger arrived, he suggested raising the siege but the Seljuks refused thinking the town had already been captured by them. However, God who had spared the Christians many times took mercy on them again because on those days sultan Gıyas ad-Din suddenly exclaimed while drinking something in his castle Kalonoros, 'Come to me! Come to me!' and died. Then the emirs who heard about that started negotiations with the tsar and demanded only Prakan to conclude peace and go back. The tsar gave Prakan to them, so they raised the siege and left.

We did not know then that the sultan had died, otherwise we would have been able to punish him properly. In two years we got Prakan back and no single enemy managed to escape according to the lord's will. It never rained during the armistice but as soon as they concluded peace, it started raining and it did not stop for twenty days and nights. All the country was flooded and when the Turks were retreating, more than one hundred thousand infantrymen drowned. We would have annihilated them unless we had taken an oath.

In 697 (19 January 1248) I, Sempad the Constable, went to Mongolia, and in 699 (18 January 1250) returned to my brother, Tsar Getum (Getum I.—*A.G.*)⁵. <...>

In 702 (1253) the Armenian tsar Getum dressed himself up as a driver, left Cilicia with a small number of people and headed to the East to the peoples who were good at archery, to Mangu Khan. He cautiously crossed the lands of Ismaelites who lived in the country called Cappadocia. A coenobite called Barseg⁶ who drove on this road several times was his guide. They reached a place called Vardeni located not far from Thuedosia⁷ and stayed at prince Kurd's house. They stayed there until gifts for the khan were brought from Cilicia. Konstantin Tagavoraayr and people loyal to him sent Getum the gifts prepared in advance. After Getum had received these fine gifts, he came to Mangu Khan and gave them to him. The Khan received the Armenian Tsar with great pleasure and granted all his requests.

He (Möngke Khan.—*A.G.*) ordered his servants, one-eyed Marketey and Bach, to accompany Tsar Getum to his country, Cilicia. In the same year Tsar Getum gave his daughter in marriage to Bohe-
mond—Prince of Antioch and Count of Tripoli. <...>

In September 705 (1256) the Armenian Tsar, Getum returned from the aforementioned Mangu Khan; this time he followed the way he used to in secret like a lion, he reached Bardzraber castle successfully where his father Konstantin, sons and daughters were. All of them were glad to see him. Then in October of the same year Tsar Getum gathered all his army with his close relatives and azats, they say their number reached one hundred thousand people. He and his troops invaded the region of Rum at the bottom of Taurusvuoret near Arakli to avenge the destroyed churches and Murand fortress. They took a lot of large and small cattle, horses, mules, slaves, gold and came home with great trophies and had a feast for several days. <...>

In 707 (1258) the archers moved from the east and reached Babylon. All the tysyachniks [head of a thousand] and centurions headed by their Hülegü Khan oppressed them badly (inhabitants.—*A.G.*). There were many locals; in addition many Muslims gathered there. There were several reasons [to gather] : firstly, they found out about the attack of Hülegü Khan one year ago, so they were preparing for the war properly; secondly, the caliph who was in Cairo died under King Baldwin who reigned in Jerusalem and oppressed Egypt.

The Sultan of Halab arrived and killed the caliph, afterwards their impious patriarch throne was passed to Baghdad. That is why so many [Israelites] headed by their leaders gathered in the town. Then the inhabitants of the town rose against them [the Tatars.—*A.G.*] and destroyed many archers and put

them to flight. Driving them away a little they left them and returned to the town. Then they started the second offensive to continue the war. The caliph sent his people to Hülegü Khan and said, 'Leave our town with your army immediately, otherwise if we declare war, all of you will die⁸ but if there are people of our confession among you, I will spare them'.

When the Khan [and his people] heard his words, they started laughing at him and seemed to be spitting in the caliph's face chewing [betel]. Khupagu pronounced loudly, 'With the help of God and by the order of Chinggis Khan I will put you to the sword for boasting of his message. The nation of archers is oppressing them everywhere raising cries. They attacked them bravely and broke their resistance and put them to flight. Afterwards they entered the town and killed all the men and women so that the broad Euphrates river flowing through the town was full of blood for many days. They exterminate the residents of the town until they got tired, after that they appointed their vicegerents and tax collectors and returned with great trophies. <...>

In 709 (1260) Hulagu Khan and his large army moved [west] like a spring flood. Wherever he went, he subordinated people via persuasion or hostilities. He reached Halab and besieged it, then he sent his people to tsar Getum so that he came to him. His troops and he [Getum] came to the khan without hesitation. The khan received him with joy. The victorious khan besieged Halab with the help of numerous machines. He destroyed the wide town wall within seven days and made a deep ditch around the town easily passable for attacking troops.

A roar of cries ascended and the earth rang with their (the khan's troops.—*A.G.*) voices. They broke into the fortress and started killing the Ismaelites with swords unmercifully. As for the Christians, they did not kill them; they only robbed them. Nobody can describe the number of victims. They headed to Damascus with trophies and captives. All the towns, villages and fortresses up to Jerusalem were conquered. They appointed their vicereagents everywhere and a Kitbuga was appointed as a byurapet⁹. The powerful khan mobilised his troops and headed east with his son Abaga, but byurapet Kitbuga did not stay at his place as he had been ordered but gathered his own army and demanded 500 people from the Cilician Tsar and rose against Egypt. When the Egyptian scouts learned about this, they reported it to their countrymen, they armed themselves, got ready and headed for them (Kitbuga's troops.—*A.G.*). They travelled for four days and reached a place called Prr. They set up their camp and were half a day away from Kitbuga. A terrible battle broke out at sunrise but the nation of archers was defeated because of the terrific heat and weakness of horses¹⁰, so they took to flight and the Egyptians chased them. Few of them managed to survive. The military leader Kitbiuga was killed in this fight and his wife and children were captured and taken to Egypt. All the rest returned to Khupagu-khan and told him what had happened. He started roaring like a lion and threatened to go there and take revenge on his army. In the same year the Armenian tsar Getum gathered an army and crossed Cappadocia and Iconia to join the troops of the nation of archers in Galatia, Gangra, at the frontier of Smyrna and Laskar. He received an invitation to go there in advance but when he was getting ready to go to their side, they had already got to the other side. They were so afraid of the Mongols that he did not turn back but, exposing himself to danger, kept on going as it was mentioned above and went to them. But it was in vain because the ones they attacked had learnt that in advance and settled in caves and on the tops of the rocks. That is why they had to return with nothing. One of the princes from the army of Tsar Getum who was of Greek origin, Vasil Keronents, died on his way back but he was taken to Cilicia and buried next to his ancestors. <...>

On 6 January 720 (1271) Tsar Getum's son Levon was crowned as the Tsar of Armenia in Tarsus of the cathedral of St. Sophie. All the Christians gathered to enjoy this worthy spectacle. On this day people were rewarded, an amnesty was announced and many people were set free. Several days after the assembly had been dissolved, the newly-crowned tsar headed to Isauria to look at this region; after that he came back home joyful. In the same year the Egyptian sultan Beybars Punduktar opposed Cilicia but tsar Levon sent ambassadors to him who persuaded the sultan to return to Egypt.

After that Tsar Levon headed east to Abaga-khan. The khan placed him at the disposal of 20 thousand warriors who had to go to Cilicia with the tsar to defend his country. The khan promised to go to Armenian Cilicia some months later. Tsar Levon returned to his country taking several warriors. <...>

Notes

1. Kirakos of Gandzak describes this story in a different way. He says that when tsar Getum I saw the Mongols ruin a powerful state such as the Sultanate of Rum, he hurried to conclude an alliance with them and sent his representatives to do that. Bayju Noyon accepted the offer of the Armenian Tsar with joy, demanding him to give up the mother, wife and daughter of the sultan who took shelter in Cilicia first of all. According to Kirakos, Getum was very upset. 'It would be easier if they wanted my son Levon, but not them', said Getum, but the fear of a severe penalty forced him to satisfy the requirements of the Mongols and give up his guests (Kirakos, p. 270). See also: Malachia, *History of the nation of archers*, p. 16; Malachia, p. 76, note 29; G. Altunyan, *Mongols and their invasions in the 13th century*, p. 39.

2. Tagavoraayr—the great paron Konstantin, as Tsar Getum's father was called in Armenian historical literature. After Levon II had died, Konstantin Tagavoraayr was a regent under Tsarina Zabella. Later he engineered a coup, seized power and announced his son Getum as king. But as his son was underage, he was ruling the state himself for a long time.

3. Constable—this term was borrowed from the Old French (*connétable*). It was explained in folk etymology (this word was used in Old Armenian to denote military leaders commanding the armed forces of the country. This position was introduced in Cilician Armenia under Levon II.

4. All the cities mentioned above are in the territory of former Cilicia.

5. It seems to us that the trip of Sempad the Constable to Karakorum is dated here improperly. Writing about his trip in a letter from Samarkand, Sempad himself indicates 1246. In our opinion we are dealing with the interpolation of the scribe as there is no such phrase in the Yerevan manuscript. Other historians who were contemporaries of Sempad the Constable also talk about his trip to Mongolia (Kirakos, p. 301–302, 350; Mekhitar of Ayrivank, p. 82, Malachia, p. 17, 'Brief chronicles', vol. 1, p. 81, 215; Johannes Dardell, *Chronicle History*, Saint Petersburg, 1882, p. 17, in Armenian). <...>

6. Barseg was an active diplomat. He held heated negotiations with the Mongolian khans in their residences. At first he visited Batu and then headed to Möngke Khan. He was one of the people who accompanied Tsar Getum I during his journey to the residence of Möngke (Kirakos, p. 352; Alishan, *Aiapatum*, p. 462; 'The History of the Mongols', ed. 2, p. 82, Acharyan, *Dictionary of personal nouns*, vol. 1, Yerevan, 1942, p. 397.

7. Theodosia is the city of Theodosiopol on the Euphrates.

8. The text says: **զի մի յորժամ հանիցեմ զպատմունքանն, պատգամաբերին մեր ի տեսս մարդիան առ հասարակ կորիցէր**. It can be literally translated as: 'If I pull off the raincoat of the messenger in full view, all of you will die'. In our opinion, this symbolical expression is equal to 'throwing down the gauntlet'.

9. Byurapet—a temnik [general], commander of ten thousand warriors.

10. According to Kirakos of Gandzak, Kitbuga was defeated because he had not ensured the protection of his troops (Kirakos, p. 152) and Malachia says that when Hülegü Khan made him his viceregent, 'Tatar headman Kitbuga did not take precautions, entered the hostile lands ten days away from Jerusalem. Having found out about that, the foul and impious Egyptians attacked the Tatars with a large army, they partly annihilated it and partly put it to flight' ('The History of the Mongols', ed. 1, p. 38). As far as information goes, Kitbuga was of Naiman origin and he practised Christianity ('The History of the Mongols', ed. 1, p. 97, note 71; Rashid al-Din, p. 23, 'Brief chronicles', vol. 2, p. 82)'.

Material prepared by Alsu Arslanova

No. 7

Anonymous Georgian 'Chronograph' of the 14th century.

The main source for the history of Georgia in the late 13–early 14th centuries is a chronicle narration of the 14th century 'Zhamta-agmtsereli' which is usually called 'Chronograph' in Russian. No doubt the unknown author of this fundamental work is a unique and talented writer.

As the publisher of the source writes, 'The postscript composed by the 'Commission of wise men' headed by Tsar Vakhtang VI in the first third of the 18th century says that this work completes the cycle of Georgian chronicles 'Kartlis Tskhovreba' ('The History of Georgia').

The name of the author was lost. This circumstance is connected with the fact that the compilers of the mentioned cycle (since the 12th century) initially aimed to create a continuous narration in the history of Georgia and put together separate written monuments. As a result their initial and final lines were destroyed unintentionally. So the real names of their authors were committed to oblivion. Moreover, based on some idioms, 'Chronograph' went through the whole range of interpolations carried out by either scribes or even the authors of entire plots...

Researchers always recognised the importance of the source of the given written monument and a strict researcher such as the famous expert in Mongolian studies B. Vladimirtsov referred it to narrative sources in history and ethnography of Mongols which describe the appearance of the Mongolian nomadic empire, and relate to us the great conqueror called Chinggis Khan...

... As a matter of fact the author (or authors) of this fundamental work is the forefather of Georgian historiography of the ensuing centuries (Parsadan Gargijanisdze, Beri Egnatashvili, Vakhushti Bagrationi, 'Commission of Wise Men' under Tsar Vakhtang IV, etc.). The enumerated authors and other compilers of the later Middle Ages belonging to the realistic movement of medieval Georgian literature decisively denied the romantic estimation of facts which was typical for writers and historians of the golden age of the Georgian feudal kingdom.

In view of the reality of the artistic manner of the anonymous author portraying a true image of the internal situation of his country in a difficult historical period, his information on the ethnopolitical history of Georgia and neighbouring peoples have taken on special value...

The translation is provided according to the publication 'Centenary history'. Preface and notes by R. Kiknadze. Tbilisi, 1983.

The source is quoted on the basis of: Anonymous Georgian 'Chronograph' of the 14th century / Edited by L. Basheleishvili. Translation from the Old Georgian and introduction by G. Tsulay. Moscow, 2005. Ed. 1. Text. p. 22–152.

'Now let us say a couple of words about the children of Chinggis *Khan*

This Chinggis *Khan* had many wives as well as children. The senior wife Sevinji bore him a son who was called Tushi and the Georgians called him Jochi. The second one was Chagate, the third one was Okota and the fourth one was Tuli. These four sons who were Khataeti were appointed as *khans* by him. The elder one—Tushi—got half of his army and was sent to the Great Kivchakia, Ossetia, Khazareti and Rus' (Ruthenia) up to the lands of Darkness. He passed it all on to this son. As far as all the rest are concerned, we will mention them a bit later.

So upon learning that the Tatars were approaching, the greatest Tsar Khwārezm-Shāh who was a rather elderly ruler at that time and who passed the reins of government to his son Jalāl al-Dīn possessing the country of Genoa, Khorasan and Iran, he mobilised Jalāl al-Dīn and all his army numbering six hundred thousand people and set off for Chinggis *Khan*.

He opposed the Shah of Khwarezm. A fierce struggle began between them, both sides suffered enormous human losses but the Khwarezmians were defeated.

But the elderly Khwarezm Shah and his small detachment were among the fighters and they were surrounded by the Tatars. Seeing that his son sultan Jalaldin, a heroic and brave, courageous and fearless man seeming to be incorporeal, an extremely strong man with no match in fights, came to the rescue of his father with his small detachment, saved them immediately and both of them fled to Khorasan.

After that Jalaldin fought against the Tatars several times more, to be more precise, he fought them in Jeon three times and in Khorasan four times, on the other side of Jeon. So God gave our country to the Tatars because of our sins, our people were completely defeated and driven away. Having learnt about the escape and his hiding in fortresses, Chinggis *Khan* sent the two pursuers mentioned above—Iama and Salpian—to get him. The Georgians call them Seba and Jebo. He ordered them to cross the lands of Khorasan and Iraq and do everything to scout out those countries. They headed there with twelve thousand horsemen without armour and provisions, but only with bows and without swords.

They crossed Turan, Jeon, Khorasan, Iraq, Adarbadagan and reached Gandza. Nobody resisted them. Whoever appeared, they beat them. Soon they reached the frontiers of Georgia and started devastating the lands of Gaga. Varam of Gaga and *atabag* Ivane found out about this and reported to tsar Lasha about the invasion of foreign tribes, foreign languages, the devastation of Armenia. The tsar gathered his army, *imers* and *amers*, and ninety thousand horsemen. They set off to attack the Tatars located not far from Gaga. Then *atabag* Ivane and his nephew Chanshe, his brother *amirspasalar* Zakare's son, *msakhurt-ukhutses* Varam of Gaga joined them with a large army and attacked them.

The (Tatars) set up camp there on a bank of the Berjuji River which is now called the Sagim. They saddled the horses immediately and went into action. A furious battle broke out. Half of the Tatars fled, the other half hid and was ambushed. At that very moment we were punished by the Lord for our lack of faith and sins, the Georgians and their warriors fled as well as their tsar Lasha and an incredible number of Christians died. The great *atabag* Ivane, Samtskhiy *spasalar* barely managed to survive in this fight and *mechutlet-ukhutses* Kvarkvare's son, the great warrior Beka was killed. At that very moment we felt the anger of the Lord, the Georgian tribe was doomed because of our lack of faith, the luck of war turned its back on Gavid's victorious, great and renowned clan because God used to grant his clan with victories all the time and the victorious clan of David and Gorgasal had never been defeated. Since then he did not gain any victories in view of the ups and downs of the fate of Georgian people. Those who used to be glorious and mighty became fugitive runaways. Finally they reached the town. Their power and glory were substituted for sorrowful sighs because our wicked deeds disturbed God and he filled up our hearts with grief and disgraced us before our enemies.

The Tatars reached Samshvilde and turned round there and committed a rather impulsive act: they went down the Darband road, then they went through the Darband Gate as neither the shirvan-shah nor inhabitants of Darband could resist them, they entered Kivchakia and imposed a battle on the local population, so they were fighting against the Kivchaks in many places but the Tatars gained a victory everywhere and they gradually moved away from there. As I have already said, having unshod horses and no armour, they did this journey, went through Kivchakia and went round the Darband Sea, reached Karakurum and came to see their tsar Chinggis Khan. It was very spontaneous of them to do such a journey leaving Karakurum on unshod horses and returned there again without having a break.

Having found out about the victories of the Tatars occurring everywhere, Chinggis Khan sent his sons to search for Khorasan sultan Jalaldin. When Sultan Jalaldin found out about that, he gathered an army and engaged in battle several times as I have already said. But when he felt his own weakness, he and his relatives pulled up roots and fled from the Tatars and headed to our country which will be described in the chapters below.

Tsar Lasha died as the anger of the Lord vexed by us was not pacified.

Feeling the attack of cavalry, Tsar Lasha called for renown magnates of his tsardom and entrusted his sister Rusudan to them saying with his eyes full of tears, 'I know that the royal clan is absolutely loyal to you, Georgian grandees, so I entrust my sister Rusudan to you relying on God, so that you can make her a tsarina, which has been a custom for generations of our ancestors. Serve her loyally and may your courage protect the tsar's throne from the evil of hostiles. Although she is a woman, not a man, she is still very wise and good with public affairs. You, noble magnates of this tsardom, remember the mercy, generosity and honours of my brilliant mother who was distinguished from other tsars. If the Lord does not mind, my sister will also be honoured with your respect. Now I am begging you before God to make her a tsarina, my successor. I entrust my sister Rusudan before God to bring up my son David and when he gets strong enough to rule and become a warrior, she will make him a tsar and the heir of my tsardom.

Although he is a youth now, if God lets him grow up, I think he will deserve to be a tsar because he is well-built and has inherited good looks'.

He finished his command and passed away. They grieved over him unspeakably. His sister Rusudan was in mourning for him for many days, he was taken to the Gelati Tsar burial-vault. <...>

Now let us get back to Chinggis *Khan* mentioned above. As soon as the Tatars reached our country, the persecuted sultan Jalaldin fled and left his tsardom. The (Tatars) easily secured a grip on Turan, Turkey and all Khorasan. So Chinggis Khan divided his army into four parts and appointed his four sons as khans:

the first son was given half of his army and went to the Great Kivchakia to the country of Mrak, Ossetia, Khazaria, Rus' to the Bulgarians and Serbians, to all the inhabitants of the Northern Caucasus as I have already said;

the second son Chagata was sent warriors and the country of Uighurs to Samarkand and Bukhara to the country of Alma-Ata; it seems to be Turan;

the third son Okota was given his throne as well as Karakurum, Chin-Machin, the countries of Eme-ly, Kutak and Khataeti;

the fourth son was called Tuli; he was given troops and lands located to the east of the dominions of Okota. These four young men were assigned to be khans and reported; once a year the elder brothers must come and see Okota to convene Kurultay as the throne was given to him. <...>

Then a messenger was introduced to the great *khan* who reigned in Karakurum on the throne of Chingis *Khan* because Chinggis *Khan* was dead and his son called Okota secured a grip on his *khanate*. He was a good, rather generous and fair man but he also died. Then Okota's son called Kuka became a *khan* but he also died and then Kuka's son Mangu secured a grip on the *khanate*. A messenger was sent to him to notify him about the capture of Persia, Georgia, and Greece; they sent him hats, armour and clothing from everywhere and notified him about the following order: 'Many Georgians appeared, their Tsar and *mtavars* who are extremely religious and avoid falsity, one can hardly find a poisoner among them'. As far as Persians are concerned, they said 'Persian are liars, betrayers and perjurers, many of them are poisoners and sodomites'.

First of all the messenger came to Batu who was the son of Tushi, Chinggis *Khan's* first son, as Batu had a whole range of advantages; he captured Ossetia, the Great Kivchakia, Khazaretia and Rus' up to the lands of Mrak and the Darban Sea. He sent him to Mangu *Khan*. When he saw the messenger, he rejoiced, and when he saw his helmet, he was surprised. Mangu *Khan* told the *noins* the following thing, 'As you made sure that the Georgians are good at fighting and falsity is not typical for them unlike loyalty, be friendly with them for battles against your enemies. As far as Persians are concerned, annihilate them and send their leaders to the *khan*'. When this messenger returned, Avague, who used to be an *amirspasalar*, and became an *atabag* due to tsarina Rusadan was sent by *noin* Chagata to *khan* Batu with the *khlat* sultan. They kept to unknown roads that had never been used by Georgians. When they reached Batu, who was the leading *khan* at that time, his mighty handsomeness surpassed anyone else's, Ivane Akhaltsilhsy's son called David, *ejib* of Avague, told *atabag* Avague, 'As we came to an unknown tribe and we do not know what may happen to us, I strongly recommend you to pretend to be my servant and I am your *patron* and master. If he wants to kill you, let it be me, not you. I do not think they will kill both a master and his servant'. Yielding to persuasion, Avague agreed to act this way. When they got to Batu, Avague let David walk first as if he was a leader. So David was ready to immolate himself for the good of his *patron*. Batu saw them, rejoiced and paid compliments for many days. As soon as they got used to largesse of Batu and there was no mortal danger any more, one day Batu called for David and Avague decided to walk first. The shocked *khan* told Avague, 'Are you completely impolite?' But David replied with a smile, 'Oh, great victorious tsar! He is my patron and I am his servant'. The shocked *Khan* asked what had made them pretend. He answered, 'Oh, great *khan*, we acted this way because we were not aware of your nobility and we did not know what you were going to do with us. If you decided to execute us, you would first have me executed, not my master'. He was really surprised, praised David and said, 'If Georgians are such people, I order them to be considered the best and the noblest nation among all the nations subordinated to the Mongols and be reckoned to the Mongolian army, their patrimonies and possessions must be only t'. He ordered that this edict be published and it was sent

to Mangu *Khan*, to Khataeti and Karakurum. That is how it was; now we will get back to our narration. Tsarina Rusudan left Likhi for Tbilisi and the entire nobility of the kingdom met her. She sent her son David to the *khans* who received him with respect and gave him his tsardom in full, all the nobility and *mtavars* of Georgia. So the kingdom was again under the authority of Tsarina Rusudan. <...>

The following thing happened at that time: as *Khan* Batu who was the greatest *khan* decided to count all the lands and make a list of them, he found a man from the Oird clan called Argun who was extremely wise and good at law and logic. He sent him to every corner of the empire which was subordinate to him—Rus', Khazaretia, Ossetia, Kivchakia, up the Mrak, to the east to Chin and Khataeti to count and figure out the number of horsemen and warriors who are able to take part in military campaigns of varying scales with the *noins* depending on their *ulupa*, that is offerings for wayfarers, the price of horses and packs.

As soon as he put the empire of Batu in order, he sent him to Karakorum to *khan* Kubil to put his territories in order with the help of Argun. When he reached *khan* Kubil, he did the same and sent him to put his state in order, which he did. Then he went to the *khan* of Chagat and Urkan. He put Turan in order and completely arranged the local affairs. He crossed Jeon and arrived in Khuarasan, Eraq and all of Romgur and put them in order as well.

Then he went to *Khan* Ulo, he received him with great honour and sent him to Georgia, to Tsar David and to Greece and all the lands which were subordinate to him to take a census and administer them. When he got to Georgia, all the inhabitants of David's tsardom were in distress. They started making a list of everything from people to livestock, from cornfields to vineyards, from gardens to vegetable gardens. One wealthy peasant out of nine was recruited for military campaigns. Nine *dumans* of horsemen were formed in David's kingdom who were supposed to accompany the Tatars which makes up nine *bevrs*. The size of the offerings was established—one village had to give the leader of one thousand horsemen a lamb and a *drakhkan*, as for the leader of *bevr*—a ram and two *drakhkans*, a horse cost three *tetris* a day. So he put everything in order and left for Greece and Baghdad and so on and so forth.

When this Argun had put four *khanates* in order, he was satisfied as he was an active man. But he did not introduce any taxes, duties or *qalan* in clerical institutions, monasteries or churches and he set the sheikhs and dervishes and people practicing different religions and all the priests free. <...>

Everyone was waiting for evil to happen to the Tsar and Sargis to be executed. Then the Lord sent down his mercy to those who relied on him and protected them. When the tsar exchanged a few words with the *khan*, a man from Darband appeared, one of the *khan's* bodyguards who were called sentries, and while the negotiations were in progress, this man of the *khan* entered the Horde and reported to the *khan*, 'There is no time left for conversations, because the *ulus* of the greatest *khan* Batu has set off and his son the great *khan* Berke is on the Darband way with his enormous army'.

When the *khan* heard that, he gathered his army in a hurry and it got battle-ready rather quickly. They set off to engage in battle at once and when both armies approached, the tsar asked the *khan* to allow him and his warriors to assign him a vanguard as was customary for a Georgian. Ulo listened to him and assigned him an advanced warrior standing near him. Sargis Jakeli was placed personally in front of him, on the right and on the left. The organisers of the detachments set off.

But then the following thing happened. A deer suddenly appeared in the detachment. Sargis Jakeli wearing armour killed it by shooting. A bit later his arrow struck a fox. Then he killed a hare as it passed by. *Khan* Ulo was a witness of all three cases and praised Sargis and said many good words to him.

Then the two armies approached and a noble man sent by the great *khan* Berke appeared among them as the *khan* himself did not step forth. He approached Tsar David which put the tsar warriors on alert as he was a strong warrior and a brilliant archer. But the Tsar drew an arrow from his quiver, struck the breast of his horse, and pierced the heart of the warrior. The Georgians rejoiced, recovered their spirits and rushed forward.

A brutal battle took place in the field of Shabaransky. The tsar and his warriors were fighting selflessly, Sargis performed such a glorious feat that the *khan* was shocked. The battle lingered, both sides had numerous human losses. The army of Berke fled, they started chasing them rashly, then the following thing happened; while they were being chased, the *khan* and his four warriors stood on a hill. When the runaways saw him, seven of them who were brilliant warriors hurled themselves at the *khan*. Seeing

that, Sargis passing by with three people attacked those seven warriors and fought with three soldiers, Sargis and his *aznaurs* defeated four of them and all the rest managed to flee. Then Ulo saw Sargis and his servants with his own eyes and rejoiced. They continued chasing the warriors of Berke up to Darband Gate, crossed Darband and chased them for three more days. <...>

When the time came to gather the harvest, the *khan* headed to the country of Shirvan, to the Georgian borders, to a place called Chagan-usun, that is White River. They fenced a bank in and called it Siba because he was thinking of the invasion of Berke-*khan*. Thenceforth the Tatars stayed in Siba from the harvest time to spring. In spring they went to their summer camps.

But *Khan* Ulo captured the *khan's* children mentioned above—Tutarm Kuli and Abaga and had them executed. He conquered the country and all its treasures. The inhabitants of this land who were in Greece at that time found out that its ruler had been murdered. The noble man Ala-Temur was their headman. He left Greece with his relatives and all his possessions and headed to Samtskhe.

When the Tatars of Ulo *Khan* found out that Ala-Temur had fled, they chased him and caught up with him. They turned round and fought with them and defeated many of Ulo-*khan's* people. To make a long story short we will say that they were caught up twelve times before getting to the Kolai Mountains and Ala-Temur defeated and drove them away twelve times as well. So they reached Lower Artan, a village which is called Glinavi. Murvan Gurkliysky met them there. Mukhajag's son met the hunter, the Tatars captured him and nearly killed him. He begged for mercy and promised to take them to Likhtimeri and introduce them to *khan* Berke. They believed him. He led them to Samtskhe, then to Gurklischalu and betrayed all of them there. A man was sent to ask Sargis Tmogveli and Shalva, Botso's son, and all the *meskhs* and warriors of Sargis Jakeli to gather and capture Ala-Temur and give him to Ulo-*khan*. They set off but Ala-Temur found out about it, left his home with his family and possessions, crossed the Kura and headed in the direction of Javakheti. He crossed a place called Elasi near Oshori and arrived at an area called Lerdzavi where he saw Tmogveli and avoided meeting him. Sargis, Botso's son and their army chased them together and Murvan Gurkleli followed in their tracks. Gurkleli and his small number of troops caught them up because neither the warriors of Botso's son and Sargis nor Tmogveli came to help Gurkleli.

They entered into a bloody battle, the Tatars gained victory and many court *aznaurs* were defeated and Gurkleli fled.

The Tatars crossed Javakheti and Trialeti and crossed the Kura near Rustavi. The armies of Tatars and Armenians clashed everywhere, we have no time to narrate it. Ala-Temur remained a victor everywhere. They stormed their way forward in Kambechani, Kakheti, Ereti and retreated following the Balkan way, invaded Khundzeti, because the Khund tsar opposed them but the Tatars won again and returned to Berke-*khan* as victors. The feats they performed were so great that the people who stayed there were called *agnars* which means headmen. Infuriated, Berke started to prepare for an attack. These Tatars constructed a fence near the river and spent the winter there as I have already said. <...>

At that time the great *khan* Berke set off along Darband road with his army to avenge the Tutar, Balaga and Kuli affairs. Having been informed about this, *Khan* Abaga called up his and Tsar David's warriors and went to meet them. When he found out how powerful and large in number Berke's army was, he changed his mind and did not cross the Kura, but rather went along its bank and occupied all the high spots and left his warriors at the junction of the Kura and Rakhsi—from here and up to Mtskheta.

Berke devastated the lands of Shirvan, Ereti, Kakheti and the entire shore of the Lori river, his army reached Tbilisi and they annihilated many Christian souls. *Khan* Berke stayed at the Gareja Mountains. Then the Lord looked at the country and *khan* Abaga mercifully, Berke suddenly felt bad and he died. When the warriors found out that their *khan* had died, they took his body and went through Darband Gate. And in this way a calm overcame the country <...>

Material prepared by Alsu Arslanova

No. 8**'The Great chronicle' about Poland, Rus' (Ruthenia) and their neighbours in the 11–13th centuries.**

A historical composition known as the 'Wielkopolska Chronicle' is a fundamental compilatory chronicle which contains significant new materials as compared to works by previous authors. The chronicler of Great Poland continued his narration to 1273. Highlighting the events of the 13th century, he mainly used the data of Polish records. According to the author of the source, the Wielkopolska Chronicle is considered to be an exceptional work by right which was created gradually and reflected the two stages of development of historical thought of the 13th century and the latter half of the 14th century, and for this reason this is a source of both the period of feudal fragmentation and the next stage connected with the unity of the country under Casimir the Great. But first of all it is noteworthy because the history of the 13th century written by direct eye-witnesses fills in the gap which emerged between the chronicle by Vincent Kadlubek and compositions written in the ensuing centuries. The chronicle by right can be considered the most fundamental work of medieval Polish historiography'.

The source and notes are quoted according to the publication: "Velikaya xronika" o Pol'she, Rusi i ix sosedyax XI-XIII vv. ('The Great Chronicle' about Poland, Rus' (Ruthenia) and their neighbours in the 11–13th centuries.) / Edited by the associate member of the Academy of Sciences of the USSR V. Yanin—Moscow, 1987. Pp. 154–155, 235–236.

'Chapter 71. On the first Tatars who penetrated into Poland and Hungary

In 1241 Tatar Khan Batu and his army consisting of numerous and cruel people crossed Rus' and decided to invade Hungary¹. Before he reached the borders of Hungary, he sent part of his army to fight against Poland. They devastated the town on the day of Ash² and the Sandomierz land without sparing people of any sex and gender. Then they arrived in Krakow through the village of Wiślica, devastating everything that they saw³. Princes Władysław of Opole and Boleslav of Sandomierz met them not far from Opole and started fighting against them but they fled without having a chance to resist both their number and God's will. So the mentioned part of the Tatar army reached Silesia, devastating Sieradz, Łęczyca and Kujawy. Henry, the son of Bearded Henry, the prince of Silesia, Poland and Krakow, with many thousands of armed warriors met them in the field near the Liegnitz fortress and confidently fought against them relying on God's mercy. The famous prince Henry mentioned above and thousands of his warriors were defeated in the battle field by the favour of God who sometimes allows the death of his servants for their offenses⁴. Prince Boleslav, who was called Schepelka was defeated there as well. When the Tatar khan Batu invaded Hungary, the Hungarian kings, Béla's brothers and Koloman blocked his way⁵. The last people, having lost the main part of their army in the fight fled in disorder. Devastating Hungary and killing people from babies to elderly people without sparing representatives of any sex and age, khan Batu crossed the Danube. He spent a year and more in this kingdom inflicting butchery among people and the unholy devastation of towns⁶. <...>

Notes

¹ Before invading Hungary Khan Batu wrote to the Hungarian King and demanded subordination. King Béla IV sent numerous Dominican and Franciscan missions on reconnaissance (Fontes autentici itinera (1235–1238) fratres Juliani illustrantes / Ed. L. Bendefy // Archivum Europae Centro-Orientalis. Budapest, 1937. Vol. 3. Pp. 1–47; Istoriya Vengrii (History of Hungary). Vol. 1. P. 147; V. Matuzova. The Mongolian invasion from the standpoint of the political views of Matthew of Paris // Metodika izucheniya drevnejshix istochnikov po istorii narodov SSSR. Moscow, 1978. Pp. 189–190).

² Wednesday before the first Sunday of Lent

³ Krakow was devastated on 22 March 1241

⁴ On 9 April 1241 one of the most powerful Polish princes, the prince of Silesia Henry the Pious died in the battle of Legnica. But the Tatars failed to capture Legnica (see: Pashuto V. Foreign policy of Ancient Rus'

(Ruthenia). Moscow, 1968. p. 286; Groblewski W. Skutki pierwszego najazdu tatarów na Polskę // Szkice legnickie. Wrocław, 1971. Vol. VI. P. 81–99).

⁵ The chronicler permits an inaccuracy, when talking about Koloman (Kalman) as a 'city of the Hungarians'. Kalman (1208–1241) was the King of Galich and from 1226 he was the Duke of 'all Slavonia'. <...>

⁶ Batu defeated a Hungarian-Croatian army numbering 60 thousand people in the battle of Mohi (April 1241). The Tatars captured Pest, devastated the left-bank of Hungary as well as Slovakia which was subordinate to Hungary. They only left the country in March 1242 (Rogerii Carmen miserabile // SRH / Ed. E. Szentpetery. Budapest, 1937. Vol. II. P.569–571, 576–580; Berteni I. Mezhdunarodnoe polozhenie Vengrii posle tatarskogo nashestviya (The international position of Hungary after the Tatar invasion) // Vostochnaya Evropa v drevnosti i srednevekov'e. Moscow, 1978. Pp. 315–319). <...>.

**Matthew of Paris.
'The Great Chronicle' ('Chronica majora')**

Matthew of Paris (around 1200–1259), the author of 'Chronica Majora' ('Historia major') was one of the most outstanding and interesting chroniclers of the English Middle Ages. His own compositions are the main source of evidence on him as for most medieval authors. Much remains unclear in his biography. His nickname 'Paris' is explained either by his origin or the fact that he studied at Paris university.

The documentary material of chronicles picked up by Matthew from the royal archive he gained access to as a confidant of King Henry III (1234–1272) is also unique. Many messages of the Pope and the emperor (for example, a message from the German Emperor Frederick II—passage 6) can only be found in 'Chronica Majora'. This composition by Matthew of Paris is valuable because it reflected many events witnessed by the chronicler; among them being the Council of Lyon of 1245.

Matthew was well read in the sphere of medieval historiography. He was familiar with the works of Bede, the chronicles by William of Malmesbury, Henry of Huntington, John of Worcester, Gervase of Canterbury, Geoffrey of Monmouth, etc. He used the records of some English and French monasteries. Matthew also mentions compositions by Gregory of Tours, Peter Lombard and Petrus Comestor. He was also familiar with works by ancient (Roman) authors: he numerous times cites Virgil, Horace, Ovid, Juvenal, Lucan, Terence, Seneca, etc.

Besides the 'Great Chronicle', Matthew of Paris also wrote the 'History of the Angles, or Brief Chronicle' ('Historia anglorum, or Hisroria minor'), 'Deeds of abbotts of St. Albans Monastery' ('Gesta Abbatum Sancti Albani') and some hagiographic compositions.

The source and comments are quoted according to the publication: Matuzova V. Anglijskie sred-nevekovy'e istochniki IX–XIII vv. (English Medieval sources of the 9–13th centuries). Moscow, 1979. Pp. 107–171.

[1237]

*[Epistle to the cardinals of Germanus II, the Patriarch of Constantinople]*¹

<...> The only thing I wil add is that evidently there are great peoples who believe as we, the Greeks do, who are similar in all manner. First of all, they live in the nearest part of the East: Ethiopians, Syrians and others who are more significant and powerful, to be more precise: Iberians², the Laz people³, Alans⁴, Goths⁵, Khazars⁵, the incalculable people of Rus' (Ruthenia) and the victorious kingdom of Ulgars⁶. All of them seem to be obedient to our church and are loyal to Orthodox faith. <...>

[1238]

About the Tartars leaving their lands and devastating the northern lands

During these days official ambassadors were sent to the King of the Franks⁷ by the Saracens⁸. They reported mainly on behalf of Mountain Old Man⁹ that a monstrous and inhuman tribe was moving from the Northern Mountains, occupied vast and fertile lands of the East, devastated Great Hungary¹⁰ and sent frightening messages through their ambassadors. Their headman claims that he is a messenger of the Lord to pacify and subdue¹¹ the peoples who rose against them. Their heads are too big and their are not proportionate to their bodies at all. They eat raw meat and human flesh as well. They are great archers. They cross rivers at any place on portable boats made of leather. They are strong, thickset, godless and pitiless. Their language is unknown to any people. They have large numbers of large and small cattle and herds of horses. They have extremely fast horses which can cover a distance of three days within one day. Their armour protects them well at the front, but not from behind to prevent them from taking to flight. They have a very cruel headman called a Khan¹². It is believed they are called Tartars (it comes from the name of the river Tar¹³), they are large in number and reside in the northern lands. They befall humanity like a plague either from the Caspian or neighbouring mountains, although they have already appeared several times, this year they have behaved especially outrageously. That is why

the inhabitants of Gothia¹⁴ and the Frisian Kingdom¹⁵ who were afraid of their invasion did not come to England, to Gernema¹⁶ as it was usual while fishing herrings they usually ship. That is why that year herrings went for a song in England because of its abundance—forty-fifty fish went for one silver coin even in remote places although they were choice ones. This Saracen messenger, having the powers of a noble clan, came to the king of Gaul who was ordered to notify about that on behalf of the whole East, and who asked western countries for help to deal with the Tartar threat in a more efficient way, sent the Saracen messenger to the king of England¹⁷ who came to the king to notify him about that and he said that if the Saracens were not able to suppress their onslaught, only one thing would be left: the Tatars and western countries would devastate them. As a poet said, 'It is your business as well when your neighbour's wall is burning'¹⁸. This messenger asked for help at the moment when they were threatened with danger so that the Saracens could counter the attack with the help of the Christians. The Bishop of Winchester¹⁹ who happened to hear the conversation replied him wittily making the sign of the cross, 'Let the dogs²⁰ bite each other until they eat each other up. When we attack the enemies of Christians who survived, we will wipe them off the face of the earth. The whole world will be subordinate to the united Catholic church and there will be one shepherd and one flock'²¹. <...>

5

[1241]

On the terrible destruction caused by an inhuman tribe called the Tartars

In the ensuing days this inhuman and ferocious barbarian and indomitable tribe having no laws which is called Tartars made violent incursions into the northern lands of the Christians and devastating them, caused immense fear and trepidation among the Christians. Frisia²², Gothia²³, Poland, Bohemia and both Hungaries²⁴ were mainly turned into a desert by their unprecedented cruelty after the rulers, prelates, citizens and peasants had fled and had been killed. The following illustration was preserved among the written testimonies on this event:

Letters concerning the aforementioned, sent to the Duke of Brabant:

'To our kind and highly esteemed father-in-law, Henry, Duke of Brabant, by the mercy of God Count of Thuringia, Palatine of Saxony, expresses his sincere desire and readiness to serve him. The misfortunes predicted in the Holy Writings and sent to us because of our sins today are not decreasing, but expanding. A certain countless and cruel, furious and illegal tribe invaded neighbouring lands and occupied them and reached the Polish land, passing through many lands and annihilating many peoples. We received a report on them from ambassadors and the king of Bohemia²⁵ and we heard his appeal to deliver him assistance to protect the faithful. We know for sure that this Tartar tribe is going to approach us in a week after Eastern approximately and invade the lands of Bohemia. If we do not get assistance on time against them, the Tartars will cause unprecedented damage to us. As all the neighbouring lands are either being devastated at the moment or getting ready to resist²⁶, we kindly ask you to deliver assistance to us and give some advice for the sake of the Church. As delay is similar to death in this situation, we ask you to hear us, get armed and hurry up to help us for the sake of our and your salvation. We are going to send our ambassadors to you again so that you mobilized an enormous army calling for powerful and brave representatives of nobility and people subordinate to them. We announce a crusade through our prelates, preachers²⁷, and minorities²⁸ as it comes to the crucified tsar, establish public prayers and fasts everywhere, we appeal to wage a war for Jesus Christ and all our lands. We should also add that the main part of this foul people and those who joined them are devastating Hungary unmercifully, they say the king²⁹ hardly managed to reserve a part of his possessions. To cut it short let me say that the church and the people of northern countries are humiliated so badly that there are no analogs to that. Given in 1241, on the day when they sing, 'Rejoice, Jerusalem!' The same message was sent by the Duke of Brabant, to the Bishop of Paris³⁰. The archbishop of Cologne³¹ sent the same message to the English King³².

This awful discord between the Pope and the Emperor³³ which turned out to be disastrous for the church caused many fasts and public prayers to be called in many lands with generous alms-giving so that God would take compassion on the people, precipitated the arrogance of the Tartars because he equally celebrates victory over his enemies of all sizes, be they small or great peoples.

When the mother of the King of the Franks³⁴, an honourable woman beloved by God, Queen Blanche of Castile³⁵ found out that the Scourge of God had threatened the people, she said, 'Where are you, my son Louis?' He came up to her and said, 'What is wrong with you, my mother?' She took a deep breath and started sobbing, but being a woman she still realised this danger and said, 'What should we do, my beloved son, under such terrible conditions? An awful rumour has gone abroad. The uncontrollable invasion of the Tartars threatens to destroy all of us and our church'. When the king heard that, he replied with tears in his eyes, 'Mother, may God's consolation strengthen us. Because if the people we call the Tartars attack us, we will either overthrow the Tartars³⁶ in the place they come from or they will send us to God'. It was a kind of saying, 'We will either counter the attack or will depart to God as true Christians or martyrs if we are defeated'. This speech which deserves mentioning and praise encouraged and inspired not only the nobility of France but also inhabitants of the neighbouring lands.

6

[1241]

Upon learning of this, His Majesty the Emperor³⁷ sent to the Christian rulers, primarily to the English King³⁸ the following message entitled '

*A message from the Emperor on the invasion of the Tartars*³⁹

'Emperor Frederick and his entourage greet the King of England. We cannot help mentioning the affair concerning both the Roman Empire whose duty was to preach the Gospel and all the kingdoms of the world practicing the Christian religion because the entire Christian world is in danger of destruction, and although we have heard the truth quite recently, we will still offer it to your attention. People of barbarian descent and lifestyle who were hiding in a sun-burnt area for a long time in a red-hot desert came from a southern region. Afterwards they stayed in northern regions having capturing these areas suddenly and propagated their kind like locusts and we do not know if they are called Tartars in view of their origin or natural habitat. They have survived to our times not without reason; it is an act of God who sent them to correct our Christian world, not to annihilate it! Their invasion caused a disaster, the devastation of all the kingdoms and death of fertile lands conquered by ungodly people who spared no one, with no regard to their age, sex or social position and who regarded themselves the only nation deserving to rule in all lands due to their supernatural power and population. So killing and devastating everything that they lay their eyes on and causing devastation, the mentioned Tartars (moreover—emigrants from Tartarus) came to the overpopulated area of the Cumans⁴⁰. As they do not spare their lives and bows are the commonest kind of weapons for them as long as arrows and other missile weapons they use all the time (that is why their arms are stronger than those of other people), they crushed the Cumans. The ones who failed to escape were killed by their bloody swords. But this dangerous neighbourhood did not make Ruthenians⁴¹ living by their side be cautious at least to think how to protect themselves from irregular raids of this unknown people they are afraid of. Because they attack all of a sudden to plunder and annihilate. One of the largest towns of this kingdom—Kleva⁴²—fell down under pressure of raids of this Barbarian people. After its inhabitants were killed, all the kingdom had been destroyed. It should be a sign for neighbouring Hungarian Kingdom to get armed and erect fortifications but they omitted it carelessly. Their lazy and irresponsible king⁴³ who was asked to give up and pass his kingdom without fighting through messengers and ambassadors so that he hurried up to enjoy their favour for his citizens and himself, being scared and afraid did not show them a proper example to get ready for defense and protection from raids. As long as they were sleeping in peace next to their enemies being arrogant and unaware relying on natural fortifications⁴⁴ they invaded like a storm and surrounded them. Surrounded and defeated Hungarians being absolutely unprepared for this attack tried their best to resist. When the Tartar army was 5 milliaris⁴⁵ away from the Hungarian one⁴⁶, Tatar advanced detachment moved forward at the dawn and surrounded Hungarian fortifications, at first they killed all the nobility and prelates who had opposed them, killed the hostile people demonstrating an unprecedented outrage—one can hardly remember any other battle since ancient times which was similar to that⁴⁷. The King chose the fastest horse and fled away, he hardly managed to survive. Being accompanied by several horsemen, he headed to the Illyrian kingdom⁴⁸ to take asylum there at least. The rejoiced winners took left fortifications and trophies of losers. Now they are unmercifully devastating the largest and the most fertile part of Hungary across the Danube river with fire and sword which we knew from the Bish-

op of the Vatican⁴⁹, ambassador of the aforementioned King of Hungary directed to our throne at first and then to that of Rome. Going through our possessions he approved what he had seen and his evidence is absolutely true⁵⁰. We can also learn about that in detail from messages of our beloved Konrad's son⁵¹ who was elected as a Roman king, the heir of the emperor and Jerusalem kingdom, and from the king of Bohemia⁵² and from dukes of Austria⁵³ and Bavaria⁵⁴ as well as from messengers who knew that the enemies were quite close based on their own experience. We listened to these reports full of heat passion. Indeed, as it turned out and according to rumours, their countless army is moving forward divided into three parts causing damage and grief as God gratifies their designs. One part was sent against the Pructens⁵⁵ and entered Poland; the leader of that land was defeated in a battle initiated by them⁵⁶ and afterwards all that kingdom was devastated by them. The second part invaded Bohemia but it was stopped due to the brave resistance demonstrated by the King of Bohemia and his warriors. The third part was riding through the territory of Hungary approaching the borders of Austria. Fear and thrill caused by insane outrages of the invading enemy encourage some rulers to act, the need itself which is reinforced by direct danger requires to oppose them and urges all the rulers, mainly those of the Christian world, to unite their efforts in struggle against them. Because this people is wild and they do not know what humanity and laws are. However they have a leader⁵⁷ they follow, eagerly obey and respect and consider God on Earth. As for height, they are a short people, strong and athletic. They are sinewy, strong and brave, they are ready to perform risky deeds as soon as they are ordered to. They have broad faces, a sidelong glance; they make terrific noises which are consonant with their hearts. They wear unmanufactured bull, donkey and horses' skins. Their armour is made of iron plates attached to leather; they have used them until now. But we have to say with a certain degree of regret that now they are armed with weapons stolen from Christians which are better and nicer because according to God's design, we were doomed to be killed with our own weapons. In addition, now they have the best horses, eat the most delicious dishes, get dressed in the most beautiful costumes. These Tartars are excellent archers, they take special bubbles made of leather with the help of which they cross lakes and fast rivers. People say that is there is shortage of food, the horses they ride get satisfied with bark, grass and leaves; however they are extremely fast and hardy when necessary. We foresaw that and often warned his royal majesty and other Christian rulers in messages and through our ambassadors, recommended and required to put an end to their quarrels and conflicts which often cause damage to the state of Christ and rise against the common danger which has arisen recently, as an expected arrow is not so dangerous so that the common enemies were not too happy getting ready for a long military campaign because quarrels like this are wide-spread among Christian rulers. Oh my God! We groveled in the dirt so many times so that the Pope⁵⁸ stopped biasing everyone against of us because of his dislike and cope with unreasonable anger so that he could calm down our indignant citizens in the battle with whom we spent enormous sums of money and wasted human resources, our might would increase and it would be easier to oppose the common enemy. But as his own will was a law for him and he did not stop a rampant flood of words and found it needless to stop countless attempts of quarrels, to the joy of rioters minding our honour and glory, he ordered to organize a crusade against of me, the main helper of the defender of church, through his servants which should be organized against tyrannic Tartars and Saracens who invaded the Holy land and conquered it. As our main task is to get rid of internal enemies, how should we resist the Barbarians? As they are good at military art, due to their scouts whom they send everywhere they learn about social fragmentation and weakness of lands; they get even more encourages and inspired when they learn about those problems and fragmentation among kingdoms. Oh, this joyful encouragement helps them so much! Thus meaning both things, we should do our best to resist the danger facing the church both from the Barbarians and internal enemies with the help of God. We decisively ordered our beloved son Conrad and other noble people of other empire to oppose the powerful invasion of the Barbarians. We also kindly ask your Royal Majesty to get ready with efficient assistance against invaders as soon as possible for the good of the commonwealth and Christian religion, thinking of him and his kingdom blessed by God. We required that for the sake of Christ's blood and a union connecting us⁵⁹. Let them join us to fight for the liberation of the Christian world bravely and fearlessly in the battle against the enemies who are about to invade Germany like the gate of the Christian world, gain a common victory for the God's army. Please notice that and not delay it. If they enter Germany and face no

barriers and boundaries, all the rest will invade all of a sudden like thunder and lightning which appeared by the order of God as the world is blackened by awful deeds and love faded in many people⁶⁰ who are supposed to confess faith, because of the world is full of vanity and anarchy. May your royal majesty do your best to resist the enemies as soon as possible carrying out outrages in neighbouring; because they left their lands to conquer all the West and destroy the belief in Christ. They got so mad feeling the support of God that they think that all the kingdoms of the world belong to them and that they humiliate their kings and leaders subordinate to their power. We only rely on Jesus Christ whom we owe our triumph being free from our enemies so that they lost their pride and got back to their Tartar. They should not be proud of passing so many provinces, conquered so many peoples, caused so much damage when the devil himself will make them die in front of triumphant flags of the powerful European empire as soon as Germany facing the war bravely, France being the mother of knighthood, military and courageous Spain, England famous for its men and fleet, Alemagne⁶¹ abundant with energetic warriors, maritime Denmark, irrepressible Italy, Burgundy recognizing no peace, calmless Apulia with pirate victorious islands in the Greek⁶², Adriatic, Tyrrhenian seas, Crete, Cyprus, Sicily with islands and lands, adjoining to the ocean, bloody Hybernia⁶³ with cheerful Wales, Scotland full of lakes, icy Norway and other famous and glorious kingdoms located in the west will create their own army headed by a flag with a life-giving cross on it which frightens not only many peoples but also revolting demons. Given on the way back after Favencia⁶⁴ had been captured and devastated, on 3 July <...>

8

[1243]

*A rather terrible address sent to the Archbishop of Bordeaux*⁶⁵

In those same days, the following message, given to the Bishop of Bordeaux⁶⁶ and sent out to many Christian rulers, which was mainly consonant with the message of the emperor on the terrible devastation caused by the inhuman people called the Tartars⁶⁷ (although they are called the Tatars or Tatars in it [in the message.—V.M.]) sent a great many people into fear, including imperturbable people.

'By the mercy of the Archbishop of Bordeaux, Giralda welcomes John of Narbonne who used to be one of the most unworthy religious figures... [At the beginning of the message John repents of his sins interpreting the Tatar invasion as a God's punishment.] I told about that because a certain countless tribe, unmerciful people, whole law is anarchy, anger—fury, the Scourge of God, were invading boundless lands and devastating them violently destroying all the barriers with with fire and sword. This summer the mentioned people called Tatars entered Pannonia which was captured without resistance, that town⁶⁸ was besieged by a countless army⁶⁸ where I happened to be. There were only fifty warriors there who were left there with twenty arbalesters⁶⁹ to guard the town by the Duke⁷⁰. All of them got frightened because of rare cruelty of followers of Antichrist, when they saw the army from a high fortification, One could hear Christians crying addressed to God. They equally died, no one was spared by conquerors whatever their age, gender, or social status was. They were caught unawares and were killed in an adjoining territory. The chiefs and their lotus-eaters ate their dead bodies like bread and they left only bones for black kites. What is surprising is that the hungry and insatiable black kites were squeamish about eating up leftover pieces of flesh. They put old and ugly women at the mercy of the so-called cannibals like a field ration; they did not eat up beautiful ones but they violated to death the ones who screamed and shouted. They also beat girls to death, cut off their bosoms and left them for military leaders as a delicacy and ate their bodies themselves with great pleasure. When the scouts saw the duke of Austria and King of Bohemia⁷¹, the Patriarch of Aquileia⁷², duke of Karintia⁷³ and supposedly Margrave of Baden⁷⁴ with enormous armies of neighbouring states from the spur which had already been formed up, all these impious troops disappeared at once and all these horsemen returned to poor Hungary. They retreated as sweepingly as they attacked; that is why they put in fear everyone who saw that. The ruler of Dalmatia⁷⁵ captured eight runaways, the duke of Austria knew that one of them was an Englishman who was convicted to permanent exile because of a crime. He visited the king of Hungary⁷⁶ twice on behalf of the Tatar king as an ambassador and translator and threatened by mortal danger giving enough examples unless he gives his kingdom to the Tatars and becomes their captive. When our rulers forced him to tell the truth about the Tatars, he seemed to keep in himself nothing but he gave some details which made it possible to believe in the devil himself. [Then comes follows a story of an Englishman

on his misadventures after exile from England.] After he had been caught by scouts, he was taken by the Tatars; afterwards they received a reply that would dominate over the whole world⁷⁷, persuaded him to be loyal to them and serve them with the help of numerous gifts as they needed interpreters. As for their morals, manners, and beliefs, their physique and height, homeland and the way they fight, he gave his solemn word that they had no match in greed, anger, cunning and heartlessness; but due to the severity of the punishment and cruelty of penalties imposed by their rulers, they avoid quarrels, mutual atrocities, and lies. The founders of their tribes are called gods; at a fixed time arrange commemorative celebrations in their honor; many [of the festivals] are local and only four of them are overall. They are convinced that everything was created only for them. They do not consider a sin the manifestation of cruelty towards providing resistants. They have strong and mighty breasts, thin and pale faces, hard and straight shoulders, squashed and short noses, sharp and prominent chins, the upper jaw is tiny and deep set, teeth are long and rare, the slit of eyes comes from the temples to the nose, pupils of the shifty and black, eyes are shifty and black, glance is sidelong and sullen, oblique view and sullen, limbs are bony and sinewy, shanks are thick, but although their cannon-bones is usually made up at the expense of upper parts of body. are shorter than ours, they are still as tall as us, as what lacks in cannon-bones leg bones are shorter [what we do], yet they are the same with us growth, because what is lacking in the leg bones, filled in the upper parts of the body. Their homeland which used to be desert and extremely vast is situated beyond from where they drove away lions, bears and other predators using bows and other weapons. They produce light but still impenetrable armour from their skin. They got used to not very tall but very hardy horses being content with a small number of food, they sit on them being tightly attached to them; they were fighting tirelessly and bravely using spears, pole-axes, clubs, and swords, but prefer archery and they have no match in it. As their backs are poorly protected not to take to flight, they retreat being attacked only when they see the banner of their leader disappear. If they lose, they do not pray for mercy and never spare losers themselves. All of them are equally striving to subdue the whole world to their domination. But there are only a thousand of thousands of them. When their followers numbering six hundred thousand people are sent to prepare a place to stop for a rent, cover the distance of three-day marches within one night riding on their horses. They suddenly scattered across all lands, capturing all the people, unarmed, defenceless and fragmented, they cause so much destruction that the King or chief of the captured and can hardly find someone to oppose them. They treacherously attack peoples and chiefs of these countries for the reason which is not a reason at all. They believe they leave their homeland to get there three Bethlehem Tsars and sorcerers⁷⁸ whose relics make Cologne famous; to put an end to greed and pride of the Romans who oppressed in antiquity; to conquer only the barbaric and hyperborean peoples; being scared of Teutons⁷⁹ to humble them; to learn military science from the Gauls; to seize the fertile lands that can feed many of them; because of the pilgrimage to Saint James with the final destination in Spain. Because of these inventions some unsuspecting Kings allowed them to pass freely through their land because and of these inventions concluded a union with them but they still died because they did not follow these unions.

9

[1244]

*It was said by Peter, the Archbishop of Rus'**(Ruthenia) who managed to escape from the Tartars when he asked about their life*⁸⁰

As long as this fateful draw advanced on the world, an Archbishop from Russia called Peter, a noble, honest, devout, trustworthy man by all appearance exiled by the Tartars, left his Kingdom and escaped, crossing the Alps to get advice and assistance for his archbishop and consolation from his brothers if the Roman Church and merciful favour of the [local] rulers would help him by order of God. When he was asked if he was aware of the actions of these Tartars, he replied,

'I think they were the last Midianites who fled from Gideon to the remotest areas of the East and North and settled in the terrible place and uninhabited desert called Etrev. They had twelve leaders, the major one was called Tartarkan. That is why they are called Tartars although some of them say they were named after Tarakhont. Chiartkhan having three sons also descended from him. The first one's was called Tesirkan, the second one was called Churikam and the third one—Batatarkan. Although they were raised in the highest and almost unavailable, rude, recognizing no laws, wild and brought up in

caves and dens of lions and dragons which they drove away, they yielded to temptations. were exposed to temptations. So the father, his sons and humerous troops armed in their peculiar way set off, besieged a great town called Ernak and captured it and its ruler who was killed at once and purchased Kurtseva, his runaway nephew, in many provinces devastating the ones which granted shelter to him. Russia which has been mainly devastated for 26 years was among them. As soon as their father died, the three sons were separated. Having become shepherds of herds, they were capturing all neighbouring shepherds for a long time, they killed them or turned into their slaves. So they attacked the remotest areas and conquered towns winning their inhabitants becoming the largest in number and the most powerful, electing leaders from among them. Tesirkan attacked Babylonians, Churikan—the Turks, Batatarkan stayed in Ornaka and sent his chiefs against Russia, Poland, and Hungary and many other kingdoms. And the three brothers and their large armies are going to attack neighboring parts of Syria. They say 34 years have passed since they left Etrev desert for the first time.'

When he was asked about [their] confession, he said that they only believe in the Lord of the world and when they sent ambassadors to the Ruthenians, they were ordered to say, 'God and his son are in heaven, Chiarkhan is on land'.

As far as their lifestyle is concerned, he said, 'They eat horse and dog meat and that of other animals which are usually despised but they do not eat raw meat; they cook it. They drink blood, water and milk. They strictly punish crime, fornication, stealing, lies and for murder they apply capital punishment. They do not condemn polygamy and each of them has one or more wives. They do not allow foreigners to live with them, trade or take part in councils. They set up camps separately and if someone decides to penetrate there, he will at once be killed'.

As for their rites and beliefs, he said, 'In the morning they they hold up their hands to heaven everywhere worshipping the creator. While having a meal, they throw the first piece of food up in the air; when they start drinking something, at first they pout a part [of liquid] onto the ground, worshipping the creator. And they say that their leader is St. John the Baptist. They have noisy celebrations in the dark of the moon. They are stronger and more flexible than us. It is easier to them to deal with various problems; it also refers to their horses and livestock. Their women are great warriors, especially archers. Their armours are made of leather, they are almost impenetrable; offensive weapons [was] are made of iron and impregnated with poison. They have numerous devices which destroy accurately and powerfully. They sleep under the open sky paying no attention to severe climate. They have already incorporated many people from different nations and tribes. And they intend to conquer the entire world and they got a divine revelation according to which they destroy the whole world in thirty-nine years. They argue that they are similar to the divine punishment which purified the world with the help of flood in the past. They believe and say that they will have a severe struggle with the Romans because they call all the Latins Romans and they are afraid of miracles as they believe that the verdict on the future retribution may change. If they win, then claim that will rule the whole wide world indeed. They observe treaties with [those] who give up immediately as prisoners rather properly; they select warriors from among them who always fight in the front line. They also spare various artisans unlike the one who oppose them and disregard their yoke. They graciously receive ambassadors, interview them and set them free'.

In the end, when he was asked about how they crossed rivers and seas, he said they crossed them on horses or with the help of bubbles specially prepared for this. In three places they have prepared vessels for the sea. He also said that a Tatar called Kalaladin, Chirkan's son-in-law, fled to Russia because he was exposed as a liar. Only thanks to his wife he was spared by Tatar elders and was not killed. <...>

16

No. 61. [*Report on the Tatars communicated in Lyon*⁸¹ by the Dominican Andre⁸². 1245]

[...] In addition, lay brother Andreas and another preacher have arrived in Lyon recently; one of them was sent two years ago by the Pope to the Tatars tsar. That lay brother found a Tatar troops being forty-five-day marches away from Akon numbering about three hundred thousand horsemen from among Tartar themselves without mentioning prisoners paying tribute from many peoples. And this army [was in the forefront of?] troops of the great tsar who was five-mon-march away from it. An ardent Catholic judging by his actions, appearance and faith, one of those who are normally called monks was alleged to appear in the army and he received such a power from the tsar that conquering any kingdom, he asks

to [protect] what is peaceful and protects churches and erects and restores the destroyed ones; he extended his patronage to all believers and all Christians who give themselves to the authority of this tsar. Because the Tatar tsar only desires to dominate over all, and also to the monarchy all over the world and does not thirst after anyone's blood but allows everyone to practice his religion and forces no one to convert into another faith.

On their religion

The brother who was asked about their religion also replied that they believe there is only one God and have their rites which should be followed by everyone on pain of punishment. They govern their state in the fairest way possible. If they catch someone ignoring his wife and servants with someone else's wife, servant or daughter or exposed as a liar, he will be unmercifully put to death.

On their power

They are so powerful that they have already conquered almost all Eastern Asia being only two daytime marches away from Antioch⁸³ and would have invaded it unless the aforementioned monk had not held them back. But he cannot do it any more. Twenty years have passed since they drove away the inhabitants of Khwarezm⁸⁴ from their lands and they (the inhabitants of Khwarezm.—*V.M.*) gained a victory over Christians in the Holy land⁸⁵, so they (the Tatars.—*V.M.*) were laughing at them (Christians.—*V.M.*) as they dared to oppose the most powerful Tartar Tsar. The Sultan of Konya⁸⁶ was among kingdoms he had conquered, his land was much larger than all the kingdoms on the other side of the mountains; every day he sent him one thousand golden perpers⁸⁷ and a quirite to serve him. Their armament is light and made of leather. They do not use mangonels but they are excellent archers. Their food is quite modest as they turn cured and dried meat of horses and other similar animals into powder and dissolve it in water or in mare's milk and drink it and become sated in this way.

On the origins of the Tatar tsar

That brother also said that their Tsar was a son of a Christian woman because when his father conquered India and killed the one who was called Prester John⁸⁸ (the name which is given to all Indian Tsars), he married his daughter who bore him the son who is ruling the Tartars now. The mentioned monk was taken to the Tartar Tsar at the urgent request of that woman as he used to be with Prester John mentioned above. And when the Tartar Tsar realised that he was a holy man giving good advice, he had left him and passed him the indicated power. This monk sent to the Pope⁸⁹ through the mentioned lay brother staff a crozier made of ivory as a gift and wrote to him and Frederick that he loved them [but] condemned for the fact that being headmen of the Church, they are hostiles without paying attention to the fact that the most powerful Tartar Tsar is about to attack them, and the whole Christian world was unable to resist their power.

On the brother mentioned as well

The aforementioned brother told many things which could exceed the limits of reality unless his authority was proof of the truth of what he had said. He also knows the Arabic and Chaldean languages and nothing they were talking about could be hidden from him. He was with the mentioned above for twenty days, and the monk granted honours to him and sent his Messenger with him to the Pope.

The uncle of this Tartar Tsar leads the troops which attacked the Hungarian kingdom⁹⁰. I also heard from someone that the Pope had written to the bishop of Osan (?) that a new tsar would be elected soon and he would be better than the previous one. <...>

Comments

¹ The Patriarch of Constantinople, Germanus II (1222–1240) turned to Pope Gregory IX several times suggesting him to create a union of the Greek and Latin churches claiming that the Latins and Greeks having the common faith should join their efforts to fight against the enemies of the church. In 1232 he wrote a message by the order of John III Doukas Vatatzes (1222–1254). The Greek text of the message was not published. See its rendering in: *Laurant V. Les Regestes des actes du Patriarcat de Constantinople*, t.1 (4). Paris, 1971, No. 1257, pp.65–68. Germanus II enumerates peoples subordinate to the Greek church in the final part of his message. Countless people of Rus' 9Ruthenia) are among them. 'Avsgi', that is Abkhazians were not mentioned in the Latin translation provided by Matthew of Paris in 1237.

² The Iberians—one of the Caucasian tribes.

³ Laz people—one of the Caucasian tribes, indigenous population of sou-eastern coast of the Black Sea.

⁴ Alans. On the Christianity of the Alans (Asy), ancestors of the modern Ossetians *Kulakovsky Yu.* Christianity of the Alans. Byzantine Chronicle, Saint Petersburg, 1898, No. 1. Pp. 1–18.

⁵ Goths, Khazars—apparently this is about the Goths and Khazars living in Kassaria (Crimea). On their confession see: *Yu. Kulakovsky.* The Past of Tavrida. Kiev, 1906.

⁶ Kingdom of Ulgars—Bulgaria. Probably this is a hint about the victory in the battle of Klokotnica in spring 1230 by Tsar Ivan Asen II (1218–1241) over Emperor Theodore Komnenos Doukas (1224–1230). They believe that the message of Germanus II was written shortly after this event.

⁷ King of the Franks—Louis IX, or Saint Louis (1226–1270), a French king belonging to the Capetian dynasty.

⁸ All Muslim peoples were called Saracens during the Medieval epoch.

⁹ Old Man of the Mountain. 'The travels of Marco Polo' contains a description of Mulekt country (Mulecte, Mulecete, Mulette, Melete, Mulete, Milicie, Mulehet), in which an old man of the mountain called Ala ad-Din lived. We can read in a comment composed by V.V. Bartold that Ala Ad-Din (murdered in 1255) was the headman of Ismailite sect, or Assassins; he was replaced by his son, Rukn ad-Din, who gave up to the Mongols in 1256. The main castles of Assassins were in Quhistan and especially in the mountains in the south of Mazandaran province (*Minaev I.* The travels of Marco Polo. Marco Polo Travel. Edited by V. Bartold. Saint Petersburg, 1902. P. 57). D. Saunders believes that the messengers of the Old Man of the Mountain could be from Northern Persia or from Syria (*Saunders J.J.* Matthew of Paris and the Mongols. Essays in Medieval History presented to B. Wilkinson. Toronto, 1969. P. 120); then 'northern mountains' should be interpreted as the Caucasus (*ibid.* P. 121). The image of the old man of the mountain probably borrowed from the composition by Marco Polo was preserved in one of the variants of old-French poem 'Seven Roman wise men' (around 1300) (*Runte H.R.* A Forgotten Old French Version of the Old Man of the Mountain. -Speculum, Cambridge, Mass., 1974, v. XLIX. P. 544).

¹⁰ In the 13th century Bashkortostan was identified with Great Hungary. For further detail see comment 114 in 'Opus Major' by Roger Bacon

¹¹ ad e[do] mandas—literally: in order to tame.

¹² In this case the title 'khan' was taken by the author of the chronicle as a proper name, G. Luarde assumes that Batu was meant here (Matthei Parisiensis Chronica Majora, vol. III. London, 1876, p. 488).

¹³ This is one of the attempts to give an etymological interpretation of the ethnonym 'Tatars'. Matthew of Paris assumes it originates from the legendary Tar (or Tartarus) river although later another etymological version was accepted which was based on the pun by French King Louis IX calling the Tatars 'emigrants from Tartarus' (hell) (*Voegelin E.* The Mongol Orders of Submission to the European Powers, 1245–1255.—Byzantion, Boston, 1941, vol. 15, p. 406; *Saunders J.J.* Op. cit., p. 124). In fact by all appearance it is based on the Chinese concept 'tata' referring to the tribes dwelling north of China (*Saunders J.J.* Op. cit., p. 124). The endonym of the nomads 'Mongols' was first mentioned by Giovanni da Pian del Carpine, since then the ethnonyms 'Tatars' and 'Mongols' were interchangeable in Latin medieval literature.

¹⁴ Gothia—Gotland island.

¹⁵ The Frisian Kingdom—in the Middle Ages this name referred to the Netherlands (*Saunders J.J.* Op. cit., p. 118).

¹⁶ Gernemu—Yarmut.

¹⁷ King of England—Henry III (1234–1272).

¹⁸ Quintus Horatius Flaccus (65–8 BC). Message 18, 84 (translated by N. Ginzburg). Cited in *Quintus Horatius Flaccus: Complete works.* Translated by F. Petrovsky, 1936. P. 318).

¹⁹ The Archbishop of Winchester—Pierre de Roche. (Petrus de Rupibus) (1205–1238) (Handbook of British Chronology, ed. F.M. Powicke. London, 1961. p. 258).

²⁰ S. Tomashevsky interpreted this as a pun, or play on words: canes—dogs, can—khan (*S. Tomashevsky* isidor's forerunner Petro Akerovich, unknown Russian metropolitan (1241–1245).—*Analecta ordinis s. Basili Magni.* Notes by St. Vasily the Great, Zhovkva, 1927, vol. II, ed. 3–4. p. 244).

²¹ The Gospel of John, X, 16.

²² See comment 15.

²³ Gutiya—Gotiya. See comment 14.

²⁴ The medieval authors distinguish between Great Hungary (in the Volga region) and Minor Hungary (in Pannonia).

- ²⁵ Wenceslaus I, King of Bohemia (1240–1253).
- ²⁶ See comment 18.
- ²⁷ Preachers—Dominican monks.
- ²⁸ Minorites—Franciscan monks.
- ²⁹ Béla IV, King of Hungary (1235–1270).
- ³⁰ William III of Auvergne, Bishop of Paris.
- ³¹ Henry II, King of England.
- ³² Archbishop of Cologne, Conrad von Hochstaden.
- ³³ The religious-political conflict between Pope Gregory IX (1227–1241) and the German Emperor Frederick II of Hohenstaufen (1212–1250) is being referred to.
- ³⁴ King of the Franks—Louis IX the Saint.
- ³⁵ Queen Blanche—Blanche of Castile (1188–1252), wife of Louis VIII the Lion, King of France.
- ³⁶ It is believed that these words gave rise to the interpretation of the ethnonym 'Tatars' as 'people from Tartarus'.
- ³⁷ Frederick II of Hohenstaufen, German Emperor.
- ³⁸ Henry III, King of England.
- ³⁹ The message of Frederick II to Henry III was only preserved in the 'Chronica Majora' by Matthew of Paris.
- ⁴⁰ Cumans—Polovtsians. See comment 59 to 'Opus Major' by Roger Bacon.
- ⁴¹ Ruthenians—Russians.
- ⁴² Kleva—Kiev; Kiev was captured on 6 December 1240 <...> Giovanni da Pian del Carpine writes that the Tatars 'besieged Kiev which was the capital of Rus' (Ruthenia), they captured it after a long siege and killed the inhabitants of the town' (*Carpine—Rubruck*, p. 45) (see [Puteshestviya, 1957].—*Editor's note*).
- ⁴³ Béla IV, King of Hungary.
- ⁴⁴ Apparently they mean the Carpathian Mountains (*Heinisch K.R.* (ed.). Emperor Frederick II Letters and Reports from his time. Darmstadt, 1968, P. 514).
- ⁴⁵ Milliarium—a mile in English sources.
- ⁴⁶ The battle took place at Mohi (Muhi) near the Sajó River (Istoriya Vengrii (The History of Hungary)), Vol. 1 / Edited by V. Shusharin. Moscow, 1969. P. 148).
- ⁴⁷ The battle occurred on 11 April 1241.
- ⁴⁸ The Kingdom of Illyria. Béla IV went to Croatia and then found refuge on the coastal islands of Dalmatia (*E. Lederer* Tatarskoe nashestvie na Vengriyu v svyazi s mezhdunarodny'mi soby'tiyami e'poxi (The Tatar invasion of Hungary in connection with the international events of the era).—Acta historica Academiae scientiarum Hungaricae. Budapest, 1953, t. 2, fasc. 1–2, p. 14, 17; Istoriya yuzhny'x i zapadny'x slavyan (History of southern and western Slavs), Vol. 1, p. 148). From the 13th century power in Croatia and Dalmatia was passed from time to time to the son or brother of the Hungarian King (Istoriya yuzhny'x i zapadny'x slavyan (History of southern and western Slavs)) / Edited by I. Voronkov. Moscow, 1969, p. 49). From 1227 to 1241, Béla IV's brother, Kalman was the Duke of Croatia and Dalmatia.
- ⁴⁹ Bishop of the Waitzen—Stephen II, Bishop of the Vác. Roger of Torre Maggiore says in his 'Sorrowful Lament' that Béla IV 'sent Stephen, Bishop of the Waitzen, to ask imperial and Roman (papal.—*V.M.*) curiae for assistance (*Rogierius*, p. 575) (see *Carmen Miserabile super Destructione Regni Hungariae per Tartaros*. Ed. L. Juhasz//SRH. Vol. II. Budapest, 1937–1938. PP. 543–588.—*Editor's note*).

⁸³ Antioch—the centre of the Antioch principality which arose in 1098 as a result of the conquest of Northern Syria and nearby areas by the crusaders.

⁸⁴ The inhabitants of Khwarezm were driven away by the Tatars and fled to the west.

⁸⁵ Victory over the Christians in the Holy Land (meaning the reconquering of Jerusalem in 1244).

⁸⁶ Konya, or the Sultanate of Rum—a state in Asia Minor.

⁸⁷ Perper—a golden coin.

⁸⁸ See comment 120 to 'Opus Major' by Roger Bacon about Prester John.

⁸⁹ Pope Innocent IV (Sinibaldo Fieschi) (1243–1254).

⁹⁰ The Mongol-Tatars invaded the Hungarian Kingdom in three columns. At the head of the army stood the outstanding military leader Kadan, khan Baidar and chief khan Batu. 'The tsar of tsars and the Tatar lord who invaded Hungary was called Batu' (*Rogierius, p. 563*).

Material prepared by Alsu Arslanova

No. 10**Letter from the King of Hungary Béla IV to the King of Germany Conrad IV**

The original version of the message has been lost. A copy was presented in the so-called Baumgartenberger Formelbuch (Wiener Hofbibliothek Nr. 409 Handschrift 52/a). The text has been published several times: J v. Hormayr-Hortenburg: *Die Goldene Chronik von Hohenschwangau*. Muenchen 1842. II S.65; Wenzel AUO II S.127–128; H.Baerwald: *das Baumgartenberger Formelbuch* (Fontes rerum Austriacarum II. XXV). Wien 1866, S. 347.

The message lacks a date but it can be determined by context, it contains a reference to Bishop Stephen's Embassy in the spring of 1241. The letter could also be mentioned in connection with another message sent in advance to King Frederick II. In it Béla IV asked the Emperor for assistance, promising to acknowledge himself as his liege in the future (Riccardo de sancto Germano: *Chronica. Rerum Italicarum Scriptores* (VII)/2 [1936–38] s. 290 ff.; *Annales sancti Pantaleonis Colonensis* MGH SS XXII, s. 535). In his return letter, which has been preserved by Matthew of Paris (CM IV, s. 114) Frederick promised to help; however he asks Béla IV to address his son, King Conrad. Indeed Conrad gathers an army in Bavaria, apparently, in order to defend the borders of the Empire, rather than to help the Hungarians. Because in July when he was told that the Mongols had stopped their advance at the Danube, he dissolved his troops (see: B. Homan: *History II*, p. 149).

The source and notes are translated according to the edition by: Göckenjan H., Sweeney J.R. *The Mongol Storm // Hungary's Historian*, Vol. IV. Vienna, 1985. pp. 283–288 (translation: Thietmar, 2001; online resource).

'To the glorious ruler Conrad¹, by the grace of God, the magnificent King of Germany, Béla, by the grace of God, the King of Hungary conveys his greetings, his message and willingness to proffer his services.

We are forced to make known the bitter lamentations coming from the depth of our hearts and turn our joy into profound sadness. We are afraid of the death of Christianity in view of the unfortunate outcome of our fate. Our Saviour, tired of the increasing evil of our times, presented before us such a storm that the ship of faith is not only rocking from right to left on the waves, but is faced with the threat of completely sinking unless God hears the cries of the wailers and finally helps the oppressed people².

Because He, on whose orders the world is controlled, as we firmly believe, allowed the savage peoples who call themselves the Tatars to come from the East like locusts from the desert³ and devastate Great Hungary, Bulgaria, Cumania, and Russia as well as Poland and Moravia due to the sins of man. Only a few castles being defended up to this day have remained unharmed⁴. Many people were annihilated. Having passed the [conquered] lands to new dwellers,⁵ they occupied (oh, the unhappiness!) all our kingdom along the opposite side of the Danube⁶. It was with great pain we reported that respected archbishops, bishops, abbots, monks, Franciscans and Dominicans as well as nuns, women and girls, who had been dishonoured in advance were unmercifully put to death. And so we resisted, not without great loss of life and property, yet fate was again ill-disposed to us. To those whom we have thrown the anchor of our hope, forced us, because of our sins to suffer defeat.

However, as I learned from a reliable source, that upon the arrival of winter they plan to catch Germany unawares and as soon as any resistance is put down there to occupy the rest of the states and countries⁷. Based on prior experience, we currently are risking not only our destiny but that of all Christianity and our defensive bulwark is already partially broken, we beseech and insistently call You and address our prayers to the Lord, so that You, for the sake of the exaltation of God's name and all Christianity and without hesitation arouse your subjects to perform this noble act. If you are going to hear our requests that we address to you on behalf of Christianity and turn away the danger threatening the whole world from other worshipers, we will be grateful and eternally indebted to you. But those turn out to be worthy of God's appointment and will lead to us your assistance may notify us about their arrival so that we may receive them at the border of our state with honour. If a person passing this letter onto you reports as our messenger, then please grant him Your gracious trust.

Notes

¹ King Conrad IV (1250–1254), the second son of Frederick II from his marriage to Isabella II (Yolanda) of Brienne, heiress to the kingdom of Jerusalem. Conrad became king in 1236 while his father was still living and represented the interests of the Emperor of Germany.

² The taming of the storm by Jesus in the Sea of Gennesaret is being alluded to here. (Mark. 4. 35–41)

³ John the Apostle 9.1–12, see the depiction of the invasion of locusts in the Old Testament. Abel 1, 1–12. There is also a comparison of Mongolian troops and crowds of locusts in the works by Arabic authors, for example, al-Omari (The Mongolian World Empire p. 95)

⁴ These castles were named in the letter of a Hungarian prelate to the Pope.

⁵ A country to the north and east of the Danube.

⁶ Indication on the colonisation of the conquered lands.

⁷ Julius and his companions-in-arms had already reported on the Mongol's intention to move against Rome and the western rulers. Here, Béla, evidently is relying upon this information.

'Historia Mongalorum quos nos Tartaros appellamus'
(**'History of the Mongols, which we call Tartars'**)

The source and comments are quoted in accordance with 'Puteshestviya v vostochny'e strany' Plano Karpini i Rubruka (Travels to the Eastern Lands of Pian del Carpine and Rubruck).—Moscow, 1957.—p. 270.)

CHAPTER 5

The Beginning of the Empire of the Tartars and Their Chief Men, and the Dominion Exercised by the Emperor and the Princes

Having spoken of their customs we must add something about their empire. First we will tell of its beginning, secondly of its chief men, thirdly of the dominion exercised by the Emperor and the princes. <...>

Section 2. Tatar princes

1. Chingis had four sons.¹ One was called Occodai, the second Tossuc Chan, the third Chiaaday² and the name of the fourth I do not know³. All the Mongol chiefs are descended from these four. The first, namely Occodai Chan, had the following sons⁴: the eldest is Cuyuc, who is the present Emperor, and Cocten and Chirenum, and I do not know if he had any more sons. The sons of Tossuc Chan are⁵: Bati, who is the richest and most powerful after the Emperor, Ordu, who is the eldest of all the chiefs, Sibani, Bora, Berca, Thaube. I do not know the names of Tossuc Chan's other sons. The sons of Chiaaday are Burim and Cadan⁶. I do not know the names of the rest of his children. The sons of Chingis Chan's other son, whose name I do not know⁷, are as follows: one is called Mengü⁸; his mother is Sorocan⁹, and among the Tartars this lady is the most renowned, with the exception of the Emperor's mother, and Mengü was more powerful than anyone else except Bati; another son is called Bichac¹⁰; he had a number of other sons, but I do not know their names.

2. The names of the chiefs are as follows: Ordu¹¹—he was in Poland and Hungary; Bati, {Syban}¹², {Birin}¹³ and Dinget, all of whom were in Hungary; Cirpodan¹⁴ who is still beyond the sea fighting against certain Sultans of the land of the Saracens, and others who are beyond the sea. The following have stayed in their own country: Mengü, Sirenen¹⁵, Hubilai¹⁶, Sirenum, Sinocur, Chuacener, Caragai, Sibedei, an old man who is known among them as 'the knight'¹⁷, Bora, Berca¹⁸, Mauci¹⁹, Corenza²⁰; this last named, however, is the least of them all. There are many other chiefs, but I do not know their names.

Section 3. The power of the Emperor and his princes

1. The Emperor of the Tartars has a remarkable power over everyone. No one dare stay anywhere except in the place he has assigned to them. It is he who appoints where the chiefs are to be, but the

chiefs fix the positions of the captains of a thousand, the captains of a thousand those of the captains of a hundred, and the captains of a hundred those of the captains of ten. Moreover, whatever command he gives them, whatever the time, whatever the place, be it to battle, to life or to death, they obey without a word of objection. Even if he asks for an unmarried daughter or sister, they give her to him without a murmur. Indeed, each year or every few years he collects young girls from all parts of the lands of the Tartars, and if he wants to keep any for himself he keeps them; the others he gives to his men just as it seems good to him to arrange. Whatever envoys he despatches, to whatever place and wherever it may be, they are bound to give them without delay pack-horses and provisions²¹. Also from whatever quarter envoys come to him bearing tribute, they have likewise to be provided with horses, carts and supplies. Envoys who come for any other reason, however, are in a most unhappy position as regards both food and clothing, for poor and inadequate provision is made for them: and particularly when they come to the princes and have to prolong their stay there, for then such a small quantity is given to ten men that two could scarcely live on it. Even in the princes' ordas and on the journey they are given nothing to eat except once a day, and that little enough. Moreover, if they suffer any injury they cannot easily make any complaint and so are obliged to bear it patiently.

3. The chiefs have like dominion over their men in all matters, for all the Tartars are divided into groups under chiefs. Both the Emperor's men and all others are bound, without raising any objection, to provide envoys of the chiefs—whatever the destination to which they are being despatched—with pack-horses and provisions and men to look after the horses and to serve the envoys. The chiefs as well as the others are obliged to give mares to the Emperor as rent, so that he can have the milk for a year, or for two or three years as it pleases him; and the men under the chiefs are bound to do the same for their lords, for not a man among them is free. In short, whatever the Emperor and the chiefs desire, and however much they desire, that they receive from their subjects' property; and their persons they dispose of in all respects according to their own good pleasure.

4. After the death of the Emperor, as has been said above, the chiefs assembled and elected in his stead Occodai, a son of the said Chingis Chan. Occodai held a council of his princes and then divided up his armies. Bati, who ranked second to him, he sent against the country of the Great Sultan and the land of the Bisermins. These latter were Saracens but spoke the Coman language. Entering their territory, Bati fought with them and overcame them in battle. A certain city called Barchin²² held out a long time against him, for they dug a great number of pits around the town and covered them over, and when the Tartars were nearing the city they fell into the pits, and so were unable to take it until they had filled them in. The inhabitants of another city called Sakint²³, hearing of this, came out to meet the Tartars and of their own accord surrendered to them. In consequence their city was not destroyed, but many men were killed and others transported. The Tartars plundered the city and filled it with fresh inhabitants: they then proceeded to attack the city of Ornas²⁴. This city was densely populated, for there were many Christians there, namely Gazarians²⁵, Ruthenians, Alans²⁶ and others, and there were also Saracens there. The government of the city²⁷ was in the hands of the Saracens. This city was moreover filled with great wealth for it is situated on a river which flows through Iankint and the land of the Bisermins and runs into the sea, which makes it as it were a port, and other Saracens used to carry on extensive trading with that place. The Tartars, unable to conquer the city by any other means, threw a dam across the river, which ran through the town, and submerged it with its inhabitants and property.

5. Having accomplished this, the Tartars then entered the land of the Turks²⁸, who are pagans. Subduing this country, they attacked Russia, where they made great havoc, destroying cities and fortresses and slaughtering men; and they laid siege to Kiev, the capital of Russia; after they had besieged the city for a long time, they took it and put the inhabitants to death. When we were journeying through that land we came across countless skulls and bones of dead men lying about on the ground. Kiev had been a very large and thickly populated town, but now it has been reduced almost to nothing, for there are at the present time scarce two hundred houses there and the inhabitants are kept in complete slavery. Going on from there, fighting as they went, the Tartars destroyed the whole of Russia. Proceeding from Russia and Comania, the afore-mentioned chiefs made war on the Hungarians and Poles²⁹. A great number of the Tartars were killed in Poland and Hungary, and if the Hungarians had not taken flight and had resisted manfully, the Tartars would have left their country, for they were filled with such fear that they all tried

to run away. Bati, however, drawing his sword, withstood them to the face saying: 'Do not flee, for if you do, not one will escape, and if we are to die, let us all die, for that is about to happen which Chingis Chan foretold when he said we should be put to death: if the time has now come let us endure it'. And so fresh heart was put into them and they stayed and destroyed Hungary.

6. Then on their way back they came to the land of the Mordvinians³⁰, who are pagans, and they conquered them in battle. They next proceeded against the Billeri, that is to say Great Bulgaria³¹, and destroyed it completely. Going further north they attacked Baschart, that is Great Hungary³², and also defeated them. Leaving that country they went still further north and came to the Parossites³³. These people have small stomachs and tiny mouths, so we were told, and they cook meat but do not eat it; when it is cooked they lean over the pot and inhale the steam and this is their only refreshment. If indeed they do eat anything, it is extremely little. The Tartars continuing in their way came to the Samoyedes³⁴. Now these men, so it is said, live entirely off their hunting; even the tents and clothes they have are made of nothing but animal skins. Pressing on, the Tartars reached a land bordering on the ocean, where they came across monsters, who, we were told for a fact, had a human shape in every respect except that the extremities of their feet were like the hooves of oxen and, although they had human heads, they had the faces of dogs. They would speak two words like human beings and the third they would bark like a dog, and they broke into barking in this way at intervals; however, they always came back to the matter in hand, so it was possible to understand what they were talking about. From there the Tartars returned to Comania and some of them have stayed there even until now.

7. At the same time Occodai Chan sent Cirpodan with an army to the south against the Kergis³⁵ and he defeated them in battle. These men are pagans and have no beards; they have a custom that when a man loses his father by death, out of grief he removes from his face a strip of skin from one ear to the other as a sign of mourning. Having conquered the Kergis, he proceeded south against the Armenians. When the Tartars were crossing a desert, they came upon certain monsters, so we were told as a certain truth, who had a human shape, but only one arm with a hand, in the middle of the breast, and one foot, and two of them shot with one bow; and they ran at such a rate that horses could not keep on their track, for they ran by hopping on their one foot and, when they grew tired with this method of progress, then they got along on the hand and foot turning cart-wheels. (Isidore³⁶ called them Cyclopedes.) When this had exhausted them, they ran again in their former fashion. The Tartars managed to kill some of them, and we were told by the Russian clerics who live in the orda with the Emperor that in the legation at the Emperor's court several of the envoys of whom we made mention above came from them to make peace with him. Moving on from there, the Tartars reached Armenia, which they conquered in battle; they also defeated part of Georgia³⁷, and the rest of the country came to do their bidding, and they gave them forty thousand yperpera³⁸ each year as tribute and still do the same. Continuing their march, the Tartars came to the land of the Sultan of Rum³⁹, a man of considerable might and power; and they fought against him and defeated him. They pushed on further, subduing and conquering, as far as the country of the Sultan of Aleppo⁴⁰, of which they are at the present moment taking possession, and it is their intention to attack other countries beyond this. Never up to the present day have they returned to their own country. The same army attacked the territory of the Caliph of Baghdad⁴¹, which it also subdued. Every day they pay them as tribute four hundred besants⁴², in addition to brocades and other gifts. Every year the Tartars send envoys telling the Caliph to come to them, and every year he sends magnificent presents with the tribute, begging them to release him from this obligation. The Emperor accepts the presents, nevertheless he sends for him to come. <...>

CHAPTER 7

How They Make Peace, the Names of the Countries They have Conquered, the Tyranny They Exercise over the Inhabitants, and the Countries Which Have Manfully Resisted Them

Having described how the Tartars fight, I have now to tell of the countries they have brought under their sway and I will write of this in the following manner: first I will tell how they make peace, secondly I will give the names of the countries they have subjected, thirdly I will tell of the tyranny they exercise over them and fourthly of the countries which have manfully resisted them. <...>

Section 2. The names of the countries they have subjected

The names of the countries [and races] they have conquered are as follows: Kitay¹, the Naimans, the Solangi, the Karakitayans or black Kitay, Comania, Cumae², Voyrat, Karanites, Uigurs, Su-Mongols, Merkits, Mecrits, Sari-Uigurs, Bascart that is Great Hungary, Kergis³, Cosmir⁴, the Saracens⁵, the Bisermins⁶, the Turcomans⁷, Byleri that is Great Bulgaria, Catora, Tomiti⁸, Buri-thabet, Parossites, Cassi⁹, {Jacobites}¹⁰, the Alans or Assi, Obesi or Georgians, Nestorians¹¹, Armenians¹², Kangit¹³, Comans, Brutachi who are Jews¹⁴, the Mordvinians, the Turks, the Gazars, the Samoyedes, the Persians, the Tarci¹⁵, Lesser India or Ethiopia, the Circassians¹⁶, Ruthenians¹⁷, Baghdad, and the Sarti¹⁸. There are many other countries, but I do not know their names. We saw men and women from almost all the countries just mentioned. <...>

Section 4. The tyranny they exercise over their subjects

In the land of the Saracens and other nations the Tartars, who live among them as their lords and masters, take all the best craftsmen and employ them in their own service, while the rest of the artificers pay tribute out of their work. They store all their crops in the barns of their masters, who however allow them seed and as much as will furnish them with a reasonable living. In the case of others they give to each a very small quantity of bread every day and nothing else, except the small amount of meat with which they provide them three times a week, and this they do only for those artificers who live in the towns. Moreover, when it pleases the masters they take all the young men with their wives and children and compel them to follow them with all their household; from henceforth they are counted as Tartars, or rather as captives, for although they are numbered among the Tartars, they are never shown the respect that these enjoy but are treated as slaves and are sent into every kind of danger like other prisoners; they are first in battle and if a swamp or dangerous river has to be crossed, they have to try the passage first. They are also obliged to do all the work that has to be done and if they offend in any matter or do not obey a command they are flogged like donkeys. In short, it is little that they eat and little that they drink, and they are wretchedly clad, unless it happen that they can earn something as do the goldsmiths and other skilled craftsmen. Some however have such wicked masters that they allow them nothing and, on account of the great number of tasks which have to be carried out for their masters, they have no time to work for themselves unless they steal it from the hours when they ought to be resting or sleeping—they can do this if they have wives and their own dwelling. But the others who are kept in their master's house as slaves are in a most unhappy condition. I saw them very often wearing leather trousers with the rest of the body naked in the extreme heat of the sun, and in winter they suffer from the intense cold. I saw some of the men who had lost toes and fingers owing to the great cold and I heard that some had died or had lost the use of all their members from the same cause.

CHAPTER 8

How to Wage War Against the Tartars; the Intentions of the Tartars; Arms and Army Organisations, How to Meet their Cunning in Battle, the Fortification of Camps and Cities, and What Should be Done with Tartar Prisoners

Having spoken of the countries subject to the Tartars, I must now add a description of how to wage war against them, and it seems to me it should be dealt with in the following manner: first as to their plans, secondly, as to arms and army organisation, thirdly how to meet their cunning in engagements, fourthly of the fortification of camps and cities, fifthly of what ought to be done with prisoners.

Section 1. The intentions of the Tartars

1. It is the intention of the Tartars to bring the whole world into subjection if they can and, as has been mentioned above, on this point they have received a command from Chingis Chan. It is for this reason that their Emperor writes in his letters: 'The strength of God, the Emperor of all men' and this is the inscription on his seal: 'God in heaven and Cuyuc Chan on earth, the strength of God, the seal of the Emperor of all men'. This also accounts for their refusing to make peace with any nation unless, as has been told, they surrender into their hands. Since there is no country on earth which they fear

with the exception of Christendom, they are preparing to make war on us. Wherefore be it known unto everyone that, while we were in the land of the Tartars, we attended a solemn court, which had been announced several years back and at which, in our presence, they chose Cuyuc as Emperor, or Chan as it is in their language. The said Cuyuc Chan, together with all the princes, raised the standard to proceed against the Church of God and the Roman Empire, and against all Christian kingdoms and nations of the West, unless they carry out the instructions he is sending to the Lord Pope, the rulers and the Christian peoples of the West. In my opinion, these instructions ought on no account to be observed, first because of the extreme, nay intolerable, hitherto unheard-of servitude to which they reduce all nations they conquer and which we have seen with our own eyes; then because they are not trustworthy and no nation can rely on their word—they break any promises they make as soon as they see that the tide is turned in their favour, and they are full of deceit in all their deeds and assurances; it is their object to wipe off the face of the earth all princes, nobles, knights and men of gentle birth, as has already been told, and they do this to those in their power in a sly and crafty manner: then because it is unfitting that Christians should be subject to them in view of the abominations they practise and seeing that the worship of God is brought to nought, souls are perishing and bodies are afflicted beyond belief in many ways; it is true at first they speak fair words, but afterwards they sting and hurt like a scorpion; and lastly because they are fewer in number and weaker in body than the Christian peoples.

2. At the aforementioned court the fighting-men and chiefs of the army were given their appointments. Out of ten men they are sending three with their servants from every country under their sway. One army is to penetrate by way of Hungary, and a second by way of Poland, so we were told. They will come prepared to fight without a break for eighteen years, and they have been assigned their time for setting out. Last March we came upon an army which had been called up from among all the Tartars through whose territory we travelled after leaving Russia. In three or four years' time they will reach Comania. From there they will make an attack on the countries mentioned above; I do not know however whether they will come immediately after the third winter is over, or wait some time longer so that they have a better chance of coming unexpectedly. All these things are sure and certain, unless God, in His mercy, places some hindrance in their way as He did when they went into Hungary and Poland. It was their plan to continue fighting for thirty years, but their Emperor was killed by poison² and consequently they have rested from battle until the present time. But now, since an Emperor has been newly appointed, they are beginning to prepare for the fight once again. It should be known that the Emperor said with his own lips that he wanted to send an army into Livonia and Prussia.

3. Since it is their object to overthrow the whole world and reduce it to slavery—a slavery, as has already been said, unbearable for men of our race—they must therefore be met in battle. If one province is not prepared to help another, then the country the Tartars are attacking will be vanquished and they will fight against another country with the prisoners they take and these will be placed in the front line. If they fight badly the Tartars kill them, but if they fight well, then they keep them by means of promises and flattery, and to prevent them from running away they go so far as to promise to make them mighty lords. But after this, when they can feel sure that they will not leave them, they turn them into most wretched slaves and they do the same with the women they wish to keep as servants and concubines. And so, with the inhabitants of the district they have conquered, they destroy another country and, in my opinion, there is no province able to resist them by itself unless God fight on its side for, as has already been said, men are collected together from every country to fight under their dominion. Therefore if Christians wish to save themselves, their country and Christendom, then ought kings, princes, barons and rulers of countries to assemble together and by common consent send men to fight against the Tartars before they begin to spread over the land, for once they begin to be scattered throughout a country it is impossible for anyone to give any effective help to another, for troops of Tartars search out the inhabitants everywhere and slaughter them. If the latter shut themselves up in fortresses, the Tartars station three or four thousand or more men round the fort or city to besiege it, at the same time continuing to spread all over the country killing men. <...>

LAST CHAPTER

*The Countries Through which we Passed, Their Position, the Witnesses we Came Across,
and the Court of the Emperor of the Tartars and his Princes*

Having described how to make war against the Tartars, to finish we will speak of the journey we made, of the countries through which we passed, the arrangement of the court of the Emperor and his princes and the witnesses who came our way in the land of the Tartars.

Section 1. The countries through which we passed,
and their positions

<...> After this we were given horses and three Tartars; two of these were captains of ten while the third belonged to Bati, to whom they were to take us with great speed. This Bati is the most powerful of all the princes of the Tartars, with the exception of the Emperor whom he is bound to obey.

9. We set out on the journey to him on the Monday after the first Sunday in Lent [February 26th].¹ We rode as fast as the horses could trot, for we had fresh horses three or four times almost every day and we rode from morn till night, even very often during the night, yet we were not able to reach him before the Wednesday of Holy Week [April 4th]². We travelled right across the land of the Comans, which is flat and contains four large rivers. The first is called the Dnieper; along the Russian side of this Corenza roams and on the other side, over the plains, Mauci, who is mightier than Corenza; the second is the Don, along which roams a prince, Carbon³ by name, who has as wife a sister of Bati; the third is the Volga, a very large river, along which Bati goes; the fourth is called the Yaik and along this go two captains of a thousand, the one on one side of the river, the other on the other. All these men go south in the winter towards the sea, and in the summer they go up north along the banks of the same rivers to the mountains. The sea is the Great Sea⁴, from which juts out the arm of St. George⁵ which goes to Constantinople. For many days we went along the Dnieper on the ice. These rivers are large, and very full of fish, especially the Volga. They flow into the sea of Greece, which is called the Great Sea, on the shores of which we were in considerable danger for many days on account of the ice in a number of places, for it freezes round the shores for a good three leagues⁶ out. Before we reached Bati two of our Tartars went on ahead to inform him of everything we had said to Corenza.

10. When we got to Bati, on the borders of the land of the Comans, we were stationed a league away from his tents. When the time came for us to be taken to his court, we were told that we would have to pass between two fires, a thing we were on no account willing to do. But they said to us: 'Go without any fear, for we are making you pass between two fires for no other reason than this that, if you are planning to do any evil to our lord or if you happen to be carrying poison, the fire may remove all that is harmful'. To this we replied: 'That being the reason, we will go through so as not to be suspected of such things'. When we arrived at the orda, his steward, who is called Eldegai⁷, asked us with what we wished to bow, that is to say what gifts we were ready to give. I gave the same answer as I had given to Corenza, namely that the Lord Pope had not sent any presents, but we wished to honour him as well as we could from among those things which, by the grace of God and the Lord Pope, we had with us for our needs. The gifts offered and accepted, the steward Eldegai enquired of us the purpose of our coming and we gave him the same reasons we had given earlier to Corenza.

11. Having heard this they led us into the dwelling after we had first made a bow and received the warning about not treading on the threshold, as has been described. Entering we said what we had to say on our knees; that done we delivered the letter and asked to be given interpreters capable of translating it. We were given them on Good Friday⁸, and carefully translated the letter with them into Ruthenian, Saracenic and Tartar characters⁹. This translation was presented to Bati, who read it and noted it carefully. At last we were led back to our tent, but they gave us no food, except once when they gave us a little millet in a bowl the first night we arrived.

12. Bati lives with considerable magnificence, having door-keepers and all officials just like their Emperor. He even sits raised up as if on a throne with one of his wives; the others, however, both his brothers and sons and others less noble, sit lower down on a bench in the middle; as for the rest they sit beyond them on the ground, the men on the right and the women on the left. He has large and very beautiful tents of linen which used to belong to the King of Hungary¹⁰. No outsider, except a member

of his household, however mighty and powerful he may be, dare approach his tent if he has not been summoned, unless he happens to know that that is Bati's desire. We, having declared our purpose, sat down on the left, for this is what all envoys do on their way to the Emperor, but on the way back we were always placed on the right. In the middle near the door of the tent is set a table on which drinks are placed in gold and silver vessels. Neither Bati nor any other Tartar prince ever drinks, especially in public, without there being singing¹¹ and guitar-playing for them. When he goes out riding a sunshade or little tent is carried over his head on a stick, and the same is done in the case of all the chief princes of the Tartars and also their wives. Bati is kindly towards his own men, nevertheless he is greatly feared by them; in battle he is the most cruel of men, very shrewd and also extremely cunning in war, for he has now been fighting for many years.

13. On Holy Saturday¹² we were summoned to the orda, and Bati's steward, whom we have mentioned before, coming out to us told us on his master's behalf that we were to go to the Emperor Cuyuc in their own country, and that they were detaining certain of our party under the pretence that they wished to send them back to the Lord Pope. We gave them a letter to take to him giving an account of all that we had done, but when they reached Mauci on the return journey they were kept there until we arrived. On Easter Sunday we said office and made some kind of a meal and then, together with the two Tartars who had been assigned to us by Corenza, we left with many tears, for we knew not whether we were going to death or to life. We were so weak we could hardly ride. During the whole of that Lent our food had been nothing but millet with water and salt, and it was the same on other fast days, and we had nothing to drink except snow melted in a kettle.

14. North of Comania, immediately after Russia, are the Mordvinians, the Bylers, that is Great Bulgaria, the Bastarcs, that is Great Hungary; beyond the Bastarcs are the Parosites and the Samoyedes; after the Samoyedes are those men who are said to have faces like dogs and live in the wilderness along the shores of the ocean. To the south of Comania are the Alans, the Circassians¹³, the Gazars, Greece, Constantinople and the land of the Iberians, the Caths¹⁴, the Bruthachi¹⁵ who are said to be Jews and shave their heads, the land of the Sicci¹⁶, of the Georgians and Armenians and the country of the Turks. To the west it has Hungary and Russia. This land of the Comans is very large and long. It took us from the beginning of Lent until eight days after Easter to cross Comania, riding hard, for we had fresh horses five or seven times a day, not indeed when we were going through the desert, as has already been told, but then we were given better and stronger horses able to maintain a prolonged effort. The Tartars killed these Comans; some did in fact flee from before them and others were reduced to slavery. Most of those who fled however have come back to them.

15. We next entered the country of the Kangits, in many parts of which there is great scarcity of water and but few people dwell there. This was why many of the men of Jerozlaus, Duke of Russia, who were going to the land of the Tartars to join him, died of thirst in the desert. In this country as well as in Comania we came across many skulls and bones of dead men lying on the ground like dung. We were travelling through this country from eight days after Easter until about the Ascension¹⁷ of Our Lord. The inhabitants were pagans and neither the Comans nor the Kangits cultivated the land, but lived off their animals, nor did they build houses but dwelt in tents. The Tartars also wiped out the Kangits and now inhabit their country; such Kangits as were left have been reduced to slavery.

16. On leaving the land of the Kangits we entered the country of the Bisermins¹⁸. These people used to speak the Coman language and still speak it, but they hold the faith of the Saracens. In this country we came across innumerable ruined cities and demolished forts and many deserted towns. There is there a large river¹⁹—I do not know its name—on which lies a city called Iankinc, and another called Barchin and a third called Orpar and many others the names of which I do not know. This country used to have a ruler called the Great Sultan²⁰ and he was destroyed, together with all his children, by the Tartars, but I do not know his name. There are very high mountains in this land. To the south of it lies Jerusalem, Baghdad²¹ and the whole country of the Saracens²²; near its borders are stationed the chiefs Burin and Cadan²³ who are blood-brothers. On the north it has part of the country of the Black Kitayans and the ocean; here Sibani, Bati's brother, is stationed. We travelled through this country from about the feast of the Ascension until eight days before the feast of St. John the Baptist²⁴ [17th May–16th June]. <...>

Notes¹

To Chapter 5

¹ Chinggis Khan had four sons with his senior wife, Borte Ujin Khatun: Jochi (1185(4?)–1224), Ogodei (1186–1241), Chagatai (1190(?)–1242(?)) and Tolui (1192–1232). In addition, he had a son named Kulkan with his second wife, Khulan Khatun. Kulkan was killed in the siege of a town during the campaign against the Russian principalities. <...>

² Russian corruption of the name Chagatai. According to Persian historians, his dominion spread from the Uighurs' land to Amu Darya. (Note by A. Malein).

³ The fourth son of Chinggis Khan was Tolui. According to ancient Mongol custom, being the youngest son, he was the guardian of the home and held the honourable name 'otchigin', or 'prince of the fire'. He also held the titles 'yeke noyon' (great lord) and 'edzen' (master). According to custom, the youngest son was constantly with his father and inherited the father's main property ('yurt'). That's why Tolui, aside from an appanage received during Chinggis Khan's lifetime, should also have received the main appanage, his father's ulus and the army that had been part of his estate.

⁴ Ögedei had seven sons: Guyuk Khan (1205–1248), Khuden (called Cocten by Giovanni), Khochu, Khorachar, Khashi, Kadan, and Melig.

⁵ Jochi had seven sons: Orda Ichen; Batu (died 1256), the founder of the Golden Horde khanate; Berke (Berkay in Russian chronicles) who succeeded to the throne of the Golden Horde after Batu (1256–1266); Berkhechir; Shiban; Tangad; and Buval, the father of Nogai, known from Russian chronicles.

⁶ Chagatai's sons were Mutukan (or Moatugan), who perished during the siege of Bashyan; Baidar; and Yesu Möngke. Burin was a grandson of Chagatai, and Kadan (or Godan) was his nephew.

⁷ We mean Tolui who had nine sons, including Möngke and Kublai who became Great Khans; Hülegü who founded the dynasty of the Ilkhans in Persia; and Ariq Böke who rivaled Kublai.

⁸ So Möngke Khan (1209–1259), the eldest son of Tolui, became the fourth Great Khan (1251–1259), who acceded to the throne during the feudal struggle, with the help of his cousin, the powerful Batu. Giovanni da Pian del Carpine uses the Turkic version of Möngke's name, Mengu.

⁹ The name of Tolui's widow was written by the authors of that time in different ways. She was called Sorqaqtanibeki in 'The Secret History of the Mongols', Sorghok Teni in the 'History of Yuan', Surakhtkhambeq by the Georgian historian Stefan Orbeliani, Sorghiiatai Beki or Beki Sorkhikhitai by Juvayni, Sorkhokhtani Begi by Rashid-al-Din, and so on. The correct name, Sorghaghtani Beki, was restored by P. Pelliot [Pelliot, 1932, vol. 29].

¹⁰ Oriental historians call him Bujek, Buygek or Buchek; the Chinese historians call him Pocho. (Note by A. Malein). Bujek was a son of Tolui.

¹¹ Orda Ichen, the eldest son of Jochi, who took part in campaigns against Russian princedoms, Poland and Hungary.

¹² The fifth son of Jochi, took part in the campaigns of 1235–1236 against Russian princedoms, Poland and Hungary. Having analysed all the versions of Shiban's name by different oriental authors, P. Pelliot suggested that the name had Christian origins and was a modification of the name 'Stepan'.

¹³ Probably Buri, a grandson of Chagatai, took part in the campaigns against Russian princedoms and Sou–West Europe.

¹⁴ Charmagun, who waged war in Sou–West Asia in 1229–1231, died in 1241. (Note by A. Malein) Charmagun, a major Mongol commander, took active part in Chinggis Khan's campaigns against Middle Asia, the conqueror of Georgia, Armenia in 1232–1233, where he was afterwards the vicegerent. He is repeatedly mentioned in 'The Secret History of the Mongols'.

¹⁵ Shiremun, a son of Güyük Khan from his oldest wife, Oghul-Ghaimish. Regarding the name of Shiremun, Pelliot suggested that it was a Turkic or Mongol modification of the Christian name Shlemun, or Solomon, and it was widespread among the Nestorian Mongols.

¹⁶ Kublai Khan (1216–1294), a grandson of Chinggis Khan, the famous fifth and the last Great Khan under which the Mongol Empire actually disintegrated.

¹ Text of notes is significantly reduced.—*Editor's note*

¹⁷ Sobodai, Subutai or Subudai, one of the greatest Mongolian leaders — a warrior, as Carpini translates the word Bahadur. (Note by A. Malein). Subutai Bahadur was one of the most talented commanders of Chinggis Khan. He headed the campaign against the Kipchaks, defeated the Russian and Cuman troops on the Kalka River. He descended from the Uriankhai clan, was a close associate of Chinggis as one of nine Orluks. Subutai had the title of 'bahatur' or 'bagatur' which means 'hero' ('bogaty' in Russian).

¹⁸ In Russian chronicles, Berkay and Birka. Berke Khan converted to Islam, supposedly for political reasons. The name of Berke means 'difficult, complicated' in Turkic, and, according to V. Minorsky, 'hostage' in Turkic.

¹⁹ Versions: Montij, Mopsu. It is Maychi, the second son of Khiiadai. (Note by A. Malein). Chagatai had a son named Mutukan.

²⁰ Giovanni da Pian del Carpine also calls this prince Curomza. He was probably the third son of Orda, a grandson of Jochi, named Khurumshi. There were several Khurumshis among the Chinggisids. However, the one mentioned by Giovanni da Pian del Carpine was probably a son of Orda and a nephew of Batu. Russian chronicles contain references to Khurumshi as Kurems.

²¹ A postal service was arranged for the entire administrative system of the Mongol Empire in 1235. The service had to transport ambassadors, messengers and officials. Post stations, in the form of pits, were established. Each of them had to hold 20 ulachins and a herd of spare horses, as well as a flock of sheep to provide visitors with food. The funding of pits and coaches, 'ula', was a heavy burden on the population.

²² Probably on the Syr Darya River. (Note by A. Malein) In the valley of the Syr Darya River, there was the town of Barchkend, or Barchynlyghkend.

²³ The town of Janchikent situated on the Lower Syr Darya River. Nowadays its ruins are known as Janykent.

²⁴ According to the description of the town by Giovanni da Pian del Carpine, the name should be taken as Urgench, the capital of Khwarezm, which was conquered by diverting the riverbed.

²⁵ People of Turkic origin who inhabited the Lower Volga and the Volga and Don steppes. In the 7th century the Khazars established the Khazar Khaganate.

²⁶ The Alans were nomadic tribes of Sarmatian origin who lived in the southern Russian steppes. Some of the Alan tribes as a result of the great migration left for Europe; others did not move and integrated into the Khazar Khaganate. The Alans left burial sites that are interesting and rich in archaeological data in Kerch, Ossetia, on the Donets River and in other areas. The Alans are thought to be the ancestors of the Ossetians.

²⁷ Here 'the Saracens' means 'the Khwarezmians'.

²⁸ That is, the Torks. They were one of the Turkic nomad tribes in the southern Russia steppes. (Note by A. Malein).

²⁹ Mongol detachments invaded Poland several times in 1240 and 1241. They ravaged Lublin, Sandomierz, Krakow, marched into Silesia where they defeated the army of Henry, the Duke of Silesia, who was killed in the battle of Liegnica. Moravia was also completely ravaged.

³⁰ That is, the Mordvins, a tribe of Finnish origin that inhabited the Middle Volga basin (along the Moksha and Sura Rivers). Some of the Mordvin land was conquered by the Mongols in 1229. The Mongols valued the furs, honey, wax and bread that the Mordvin had (see A. Korotkov, *On the Northern Uluses of the Golden Horde Khanate*, p. 77). The semi-ravaged Mordvin lands were finally conquered in 1239.

³¹ We are talking about Volga Bulgaria that emerged as a result of the disintegration of 'Greater Bulgaria'.

³² In this case, by Baschart we mean Bashkir. It should be mentioned that the name Bashkird (Baskart by Giovanni da Pian del Carpine) was applied by Arab and Persian authors to Hungary, that was why the term was used by Giovanni da Pian del Carpine.

³³ Parossites was the name given by Arab and medieval authors to the Permians, Wotyaks and other tribes of Finnish origin that inhabited the Vyatka River basin and other areas to the north of the Volga Bulgaria. Giovanni da Pian del Carpine's remark about smoke should not be taken as literally as A. Malein did. Giovanni da Pian del Carpine probably in this case repeats one of the sou-eastern peoples' legends that were widespread among authors of antiquity. Stories about peoples who eat air or scents were told by Pliny, Strabo and other authors of antiquity.

³⁴ That is, to the Samoyeds. Giovanni da Pian del Carpine was one of the first to report about these peoples in West European geographical literature.

³⁵ That is, the Cherkess. Here, by Kerghis, Giovanni da Pian del Carpine meant the Cherkess. Further on he used the same term to refer to the Kirghiz. (See: Note 131).

³⁶ That is, Isidore of Seville (570–636), a Spanish bishop, prominent scientist, writer of the early Middle Ages. The author of numerous works which demonstrate extensive erudition and the skill of promoting the knowledge of his times in an easy-to-understand and brief manner.

³⁷ The Latin name of Georgia.

³⁸ Apparently one of the names of bezant that was used in the Byzantine Empire.

³⁹ That is, the Sultan of Rûm. In antiquity, the eastern peoples of Rome were called Rûm. After the disintegration of the Roman Empire in the 4th century, the name Rûm was applied only to Byzantium. And since the end of the 11th century it had been used only for Asia Minor where, after Asia was conquered by the Oghuz Turkmen, a state ruled by the Asia Minor branch of the Seljuk dynasty was established. When the Mongols were conquering Asia Minor, Ala ad-Din Kayqubad I (1219–1236) was the Sultan of Rûm.

⁴⁰ That is, the Sultan of Halab. The province of Halab was in North Syria, its capital was Ma'arra, the second biggest town was considered Halab, which was named after the province (modern Aleppo).

⁴¹ That is, the Caliph of Baghdad. Baldah is the medieval name of Baghdad, the capital of the Abbasid Caliphs who ruled Iran from 762 to 1258.

⁴² We mean the so-called Byzantiums which initially were the Byzantine soliduses, and then any other oriental gold coins (the French besant derives from here). Their price was highly volatile and depended on the place of coining (thus, on the weight of the metal). Byzantiums were probably equal to hyperpyrons. (Note by A. Malein).

To Chapter 7

¹ North China, or the Jin Empire is meant.

² Hori Tumat, an alliance of several Mongol tribes that existed even before Chinggis Khan.

³ That is, the Kirghiz and Kam Kamjiuts, tribes of Turkic origin that lived in north-west Mongolia, in the Upper Yenisei and Ob region. The Kirghiz were conquered by Chingis Khan in 1206.

⁴ That is, Kashmir.

⁵ That is, subjects of the Sultan of Aleppo. (Note by A. Malein).

⁶ The Khwarezmians.

⁷ The Turkmen. (Note by A. Malein).

⁸ These names are hypothetically restored. The chronicles mention Catorocomuty, Korola Tomici, Colona Thorati.

⁹ A version of Jassi. The people are not known definitely.

¹⁰ Giovanni da Pian del Carpine, along with the peoples' names, lists some Christian sects widespread in the East, including Jacobites who belonged to heretical monophysitism.

¹¹ A Christian sect founded in the 5th century, in Syria, by Archbishop Nestorius after whom it was named. Nestorius was deposed by the Council of Ephesus in 431, and his teaching of the Christ's human nature was called heretical.

¹² That is, the Armenians.

¹³ William of Rubruck calls them the Kankalis. The Kankalis were a nomadic tribe that formed part of Dasht-i Kipchak. In the 13th century, the Kankalis lived to the east of the Yaik (Ural) River.

¹⁴ By Brutachi, we probably mean the Burtas who were conquered by the Mongols during their campaign against Volga Bulgaria. The Burtas inhabited the right-hand bank of the Middle Volga and were linked with the Bulgars.

¹⁵ An unknown people. The chronicles call them the Tarci, Tarti, Tati, Thaos, Thoas. (Note by A. Malein).

¹⁶ That is, the Cherkess. (Note by A. Malein).

¹⁷ That is, the Russians. (Note by A. Malein).

¹⁸ The Mongols gave the Middle Asian people the name Sartaghuls, including the Khwarezmians. So, Giovanni da Pian del Carpine repeated the Mongol name. Sarta goes back to the Sanscrit word sārtha which means a trader. <...>

To Chapter 8

¹ The text of the inscription cited by Giovanni da Pian del Carpine had considerable differences from the inscription of Güyük Khan's letter seal which was kept by Giovanni da Pian del Carpine and was preserved in the Vatican archives (concerning the letter see Note 217). The letter and the seal were studied and published by P. Pelliot. The text of the seal consists of six lines carved in Mongolian writing.

Mongka t(ä)ngri-yin kücün-dür yeke mongyol ulus-un dalai-in ḡan j(a)rl(i)ḡ il bolḡa irgün—dür kürbäsü büširätügüi ayutuyai (The text is cited as transcribed by P. Pelliot.) which means 'By the power of the Eternal Sky, Dalai Khan of the Great Mongols orders. If he comes to a conquered people, let them respect him and let them fear him'. <...>

We can say that the tendency of the Mongol Khans to fight and conquer were fully reflected in the Khan's seal inscription. They are also partly reflected in the version given by Giovanni da Pian del Carpine who wrote down the inscription as heard from Chinkai, Bal and Khadak, the Khan's secretaries, and translated it into Latin with inaccuracies. This seal is of special interest because the inscription was carved, and the whole seal was made by a Russian craftsman, the jeweler Kozma. That is the very Kozma (Kosma) who helped Giovanni da Pian del Carpine in hard situations and who was so warmly described by our traveler. Kozma was evidently one of those Russian craftsmen who was taken into captivity and taken to far Mongolia during the campaigns against the Russian princedoms.

² Giovanni da Pian del Carpine reports hearing of the circumstances of Ögedei's death who, according to the History of Yuan, died as a result of excessive wine drinking (The History of the First Four Genghisid Khans, p. 284, 285). Giovanni da Pian del Carpine's story is worth noting if we correlate it with the information from 'The Secret History of the Mongols' concerning Ögedei's illness and the remedy made for him but drunk by Tolui (see: 'The Secret History of the Mongols', Section 272), and so of the attempt to poison Ögedei.

To the last Chapter

¹ 26 February 1246.

² That is, 4 April 1246. So having left Kiev on 4 February, Giovanni da Pian del Carpine reached the Volga in two months where the Batu's main camp was located.

³ Versions: Carton, Carbon, Tirbon. (Note by A. Malein).

⁴ A few lines later Giovanni da Pian del Carpine wrote: 'a Greek sea which is called "Mare Magnum"', which is the Black Sea that was called in ancient times 'Pontos Euxeinos'. Giovanni da Pian del Carpine's geographic views were rather unclear, he mistakes the Caspian and Aral Seas for the Black Sea. The Volga, according to him, flows into the Black Sea.

⁵ The Bosphorus.

⁶ League is an ancient Gallic unit of length equal to a French lieu $\frac{1}{25}^0$ of the meridian = 4,445 m. (Note by A. Malein).

⁷ Russian chronicles mention this person concerning the murder of Saint Michael of Chernigov and call him Yeldega and Batu's stolnik. (Note by A. Malein).

⁸ 6 April. (Note by A. Malein).

⁹ After 1206, the Mongols began to use the Uighur alphabet, having adopted it to the Mongol language. The earliest of the currently known examples of that writing is the inscription on the so-called 'Chinggis stone' that dates back to 1219.

¹⁰ That is, Béla IV (1235–1270), who was defeated in the battle for Pest in 1241 by the Mongol army led by Batu. Béla fled from the Mongols to Austria, then to Dalmatia, and finally to the islands of the Adriatic Sea where he waited for the Mongol troops to leave.

¹¹ Gomboyev characterised that singing as showing respect to the known person. (Note by A. Malein).

¹² 7 April. (Note by A. Malein).

¹³ That is, the Cherkess. (Note by A. Malein).

¹⁴ The Iberians, who were the people living between the Moschian Mountains, the Caucasus and Armenia. The Iberians were a people with a highly developed culture who lived in numerous towns. The Caths are the Kakhetians.

¹⁵ See: Note 143.

¹⁶ Alternate spellings: Sittorum, Zythorum, Zichorum. The first editor of Giovanni da Pian del Carpine's journey in Russian language D. Yazikov supposed that the land of the Sicci was 'Zichia, on the eastern shore of the Black Sea'. (D. Yazikov. Collection of Journeys to the Tatars, p. 270).

¹⁷ 17 May 1246.

¹⁸ In this case by the Bisermins the Khwarezmians are meant.

¹⁹ The Syr Darya River, in the valley of which a large number of towns were located: Otrar, Yasa, Shabaran, Sygnak, Bargkent, Jankent, Jand, Ashnas and others. Some of them are mentioned by Giovanni da Pian del Carpine.

²⁰ That is, Ala ad-Din Muhammad Khwarezm Shah (1200–1220), killed fighting the Mongols.

²¹ A medieval name for Baghdad.

²² In this case, Saracens, the name Giovanni da Pian del Carpine used for Muslims in general, refers to Persian lands.

²³ Those tsareviches were not brothers. Burin, or Buri, was Chagatai's grandson, and Cadan was Ögedei's son.

²⁴ 24 June.

CHAPTER 16

Concerning the land of Sartach and its peoples

The country beyond the Tanais is very beautiful, with rivers and forests. To the north are great forests, inhabited by two races of men: the Moxel¹, who are without any religion, a race of pure pagans. They have no towns, but only little hamlets in the forest. Their chief and the greater part of them were killed in Germany; for the Tartars took them with them to the borders of Germany, and so they have formed a high opinion of the Germans, and they hope that through them they may finally be freed of the Tartar yoke. If a trader comes among this people, he with whom he first puts up must provide for him as long as he sees fit to stay among them. If one sleeps with another's wife the husband cares not, unless he sees it with his own eyes; so they are not jealous. They have swine, honey and wax, precious furs and hawks. Beyond them are the others called Merdas², whom the Latins call Merdinis, and they are Saracens. Beyond them is the Etilia, the largest river I have ever seen, and it comes from the north, from Greater Bulgaria and flows south, and it flows into a certain lake³ which has a circumference equal to a four month journey, and of that I shall tell you later. So these two rivers, the Tanais and the Etilia, in the north where we crossed them, are 10 days journey from each other; but to the south they are very remote from one another. For the Tanais flows down into the Sea of Pontus, while the Etilia forms with many other rivers which flow into it from Persia, the above sea or lake. To the south there were very high mountains, inhabited, on the side facing this desert, by the Kerkis and the Alans or Aas, who are Christians and still fight the Tartars. Beyond them, along the sea or lake of Etilia, live certain Saracens called Lesgi⁴, who likewise owe them no allegiance. Beyond them are the Iron Gates, which Alexander made to keep the barbarous nations out of Persia; of these I shall tell you later, for I passed through this place on my way back, and Comans Capchac used to live between these two rivers in this country through which we were travelling before the Tartars occupied it. <...>

CHAPTER 20

Concerning the Russians, Hungarians, Alans and the Caspian Sea

Of Sartach I know not whether he believes in Christ or not. This I do know, that he will not be called a Christian, and it even seemed to me that he mocked the Christians. For he is on the road of

the Christians, that is, of the Ruthenians, Blacs, Bulgarians of Minor Bulgaria, Soldaians, Kerkis and Alans, all of whom pass by him when going to his father's ordu, taking presents to him, so he shows himself to be most attentive to them. Should, however, Saracens come along carrying more presents than they, they are sent along more expeditiously. He has Nestorian priests around him who strike the board⁵ and sing their service. And there is another one called Berka⁶, a brother of Batu, who has his pasture lands toward the Iron Gate, which the road crosses taken by all the Saracens coming from Persia and Turkia, and going to Batu, and who when passing through bring him presents; and he has made himself a Saracen, and he does not allow pork to be eaten in his ordu. When we came back Batu had ordered him to move from that place to beyond the Etilia to the east, not wanting Saracens to cross his land; it appeared to him to be harmful. During the four days we were at Sartach's ordu we were not once furnished with food, and only once with a little cosmos. On the road between him and his father we were in great fear, for the Ruthenians, Hungarians and Alans, their slaves, of whom there are very great numbers among them, are in the habit of banding together 20 or 30 in number, and run off at night (armed) with arrows and bows, and whomsoever they find at night they kill. During the day they hide, and when their horses are tired, they come by night to the herds of horses in the pastures and swap their horses, and take one or two with them to eat when necessary. Our guide greatly feared some adventure with them. On this part of the road we would have died of hunger, had we not carried with us a small supply of crackers. So we arrived at the Etilia, the greatest of rivers, for it is four times bigger than the Seine, very deep, coming from Greater Bulgaria, which is in the north, flowing southward, and emptying into a certain lake, or sea, which is now called the Sea of Sirsan⁷, from a certain city, on its coast in Persia. Isidorus, however, calls it the Caspian sea, for it has the Caspian mountains and Persia to the south, the Mulihec mountains⁸, that is, the mountains of the Axasins⁹ to the east, which touch the Caspian mountains; to the north is this wilderness in which are now the Tartars, though at first there were the Comans called Cangle. And on that side (that is, the north) it receives the Etilia, which rises in summer as does the Nile of Egypt. To the west of it are the mountains of the Alans, the Lesgians, the Iron Gate and the mountains of the Georgians. So this sea has mountains on three sides, but on the north it has this plain. Friar Andrew went himself along two sides of it, the southern and the eastern, and I along the other two; the northern when going from Batu to Mangu chan, and again in coming back; and along the western side when coming back from Batu to Syria. One can go around it in four months, and it is not true, as stated by Isidorus, that it is a gulf of the ocean. It nowhere reaches the ocean, but is surrounded by land on all sides.

CHAPTER 21

Concerning the ordu of Batu and how he received us

All this country on the west side of this sea, where the Iron Gates of Alexander and the mountains of the Alans are situated, to the northern Maeotis marshes where the Tanais begins, used to be called Albania¹⁰. Isidorus says of it that it has dogs in it so big and fierce that 'they seize bulls and kill lions': the truth is, as I have heard tell, that towards the Northern ocean they make dogs drag carts like oxen, so great is their size and strength. At this place where we reached the Etilia, the Tartars have made a new village¹¹ with a mixed population of Ruthenians and Saracens, and they transport the envoys going to and coming from the order of Batu; for Batu is on the farther bank to the east, neither does he go beyond this point we had reached when he comes north in summer, and he had begun moving southward (when we arrived). From January to August he goes up to the cool country, as do all of them, and in August they begin moving back. So we went down the river in a boat from this village to his (Batu's) ordu and from that place to the cities of Greater Bulgaria to the north it takes five days. I wonder what devil carried this religion of Machomet thither. From the Iron Gate, which is the door out of Persia, it takes more than thirty days to cross the desert, going up along the Etilia, to this Bulgaria, along which route there is no city only some villages near where the Etilia flows into the sea; and these Bulgarians are the worst kind of Saracens, keeping to the law of Machomet as no others. When I saw the ordu of Batu, I was astonished, for it seemed like a great city stretched out about his dwelling, with people scattered all about for three or four leagues. And as among the people of Israel, where each one knew in which quarter from the tabernacle he had to pitch his tents, so these know on which side of the ordu they must go when they

set down their dwellings. A court (*curia*) is *orda* in their language, and it means 'middle', for it is always in the middle of the people, with the exception, however, that nobody places himself right to the south, for in that direction the doors of the court open. But to the right and left they may spread out as they wish, according to the lay of the land, so long as they do not bring the line of tents down right before or behind the court. We were first taken to a Saracen, who gave us no food. The next day we were taken to the court, and they had a great awning spread, for the dwelling could not hold all the men and women who had come thither. Our guide cautioned us to say nothing until Batu should bid us to speak, and then to speak briefly. He asked also whether you had already sent ambassadors to the Tartars. I said that you had sent to *Keu chan*, but that you would not even have sent envoys to him and charters to *Sartach* if you had not believed that they were Christians. Then they led us before the tent, and we were warned not to touch the ropes of the tent, for they are held to represent the threshold of the door. So we stood there in our robes and barefooted, with uncovered heads, and we were a great spectacle unto ourselves.

Friar John of Policarp¹² was there; but he had changed his gown, fearing lest he should be slighted, being the envoy of the lord Pope. Then we were led into the middle of the tent, and they did not require us to make any reverence by kneeling down, as envoys usually do. We stood before long enough to say: '*Miserere mei, Deus*', and everyone kept a profound silence. He was seated on a long throne as broad as a couch, all gilded, and with three steps leading up to it, and a lady¹³ was beside him. Men were seated here and there to his right, and ladies to his left: and where the room on the women's side was not taken up by them, for only the wives of Batu were present, men occupied it. A bench with *cosmos* and big cups of gold and silver, ornamented with precious stones, was located at the entry to the tent. He looked at us intently, and we at him, and he seemed to me to be about the height of my lord John de Beaumont,¹⁴ may his soul rest in peace. And his face was all covered at that time with reddish blemishes. Finally he bid me speak, and our guide told us to kneel down and speak. I bent down on one knee as to a man, but he gestured to me to kneel down on both, which I did, not wishing to argue over it. Then he bid me speak, and I, thinking I was praying to God, having knelt down on both knees, began my speech by saying: 'Oh lord, we pray to God from whom proceedeth all good things, and who gave you these worldly goods, to give you hereafter celestial ones, for the former without the latter are worthless'. And as he listened attentively, I added: 'You must know for certain that you shall not have the celestial goods unless you have been a Christian; for God saith: 'He who shall have believed and have been baptised, shall be saved, but he who shall not have believed shall be condemned'. At this he quietly smiled, and the other Moal began clapping their hands, laughing at us, and my interpreter stood dumbfounded, and I had to reassure him that he be not afraid. Then silence was re-established, and I said: 'I came to your son, because we had heard that he was a Christian, and I brought him letters from the lord King of the French. It is he (that is, *Sartach*) who has sent me here to you. You must know the reason why'. Then he ordered me to rise up, and he asked your name and mine, and that of my companion and of the interpreter, and he had it all written down, and he also asked against whom you were waging war, for he had heard that you had left your country with an army. I replied: 'Against the Saracens who are profaning Jerusalem, the house of God'. He also asked whether you ever had sent envoys to him. 'To you', I said, 'never'. Then he made us sit down, and had us drink milk, and they hold it to be a great honour when anyone drinks *cosmos* with him in his dwelling. While sitting there I was looking down, but he bid me look up, either wishing to see me better, or on account of their sorcery, for they hold it to be a bad omen or sign, or as portending evil, if one sits before them looking down as if in sorrow, and especially so if he rests his chin or his cheek in his hand. Then we went out, and after a little while our guide came to us, and while taking us to our lodging said to me: 'The lord King requests that you remain in this country, but Batu may not do this without the permission of *Mangu chan*. So you and your interpreter must go to *Mangu chan*. As to your companion and the other man, they will go back to *Sartach*, where they will await your return'. Then the interpreter *Homo Dei* began to lament, deeming himself lost, and my companion to declare that they might sooner cut off his head than separate him from me; and I said that without a companion I could not go, and moreover that we really required two servants, for should one happen to fall ill, I could not be left alone. So he went back to the court and told Batu what I had said. Then he commanded; 'Let the two priests and the interpreter go, and the clerk return to *Sartach*'. He came back and told us the decision; but when I wanted to speak about the clerk, that he might come with us, he said: 'Say no more about it,

for Batu has settled it, and I dare not go again to the court'. The clerk Gosset had 26 yperpera of your alms and no more; of these he kept 10 for himself and the boy, and he gave the 16 others to Homo Dei for us; and so we parted from each other with tears, he going back to Sartach, and we remaining there.

CHAPTER 22

Concerning the brothers' journey to the ordu of Mangu Khan

On the eve of the Assumption¹⁵ (14th August), he (Gosset) reached the ordu of Sartach, and the next day the Nestorian priests were dressed in our vestments in the presence of Sartach. As for us, we were taken to another host who was to provide us with lodgings, food and horses, but as we had nothing to give him he was mean with his offerings. We travelled down the Volga with Batu for 5 weeks¹⁶. Sometimes my companion was so hungry that he would say to me, almost with tears in his eyes; 'It seems to me that I shall never get anything to eat'. The market always follows the ordu of Batu, but it was so far away from us that we could not get there, for from lack of horses we had to travel afoot. <...>

I saw Batu riding with all his horde (turba); and all the heads of families were riding with him, but according to my estimate there were not over five hundred men. At last, around the feast of the Elevation of the Holy Cross (14th September), a rich Moal came to us, whose father was a chief of a thousand, which is a high rank among them, and he said: 'I am to take you to Mangu chan. The journey takes four months, and it is so cold that stones and trees are split by it. Think over whether you can bear it'. I answered him: 'I trust that, by the grace of God, we shall bear what other men can bear'. Then he said: 'If you cannot bear it, I shall abandon you on the road'. I replied: 'That is not right; we are not going of ourselves, but are sent by your lord, so, being entrusted to your care, you should not abandon us'. Then he said: 'All will be well'. After that he made us show him all our clothing, and what seemed to him of little use he made us leave with our host. The next day they brought each of us a sheepskin gown, breeches of the same material, boots according to their fashion, felt stockings, and hoods such as they use. The day after the Elevation of the Holy Cross (15th September) we set off on our ride¹⁷, with two pack horses for the three of us, and we rode constantly eastward until the feast of All Saints. And through all that country and beyond lived the Cangle, and they were a branch (parentela) of the Comans. To the north of us was Greater Bulgaria, and to the south the Caspian Sea.

CHAPTER 23

Concerning the Jagac River and different lands and peoples in that country

After travelling 12 days from the Etilia, we found a great river which they call the Jagac¹⁸, and it comes from the country of Pascatir in the north, and flows into this previously-mentioned sea (that is, the Caspian). The language of Pascatir¹⁹ is the same as that of the Hungarians, and they are shepherds without any towns whatever, and from the West this country adjoined Greater Bulgaria. From this country eastward, and on that side to the north, there are no more towns; so Greater Bulgaria is the last country with towns. 'Twas from this country of Pascatir that went forth the Huns, who were afterward the Hungarians; hence it is the same as Greater Bulgaria. Isidonis says that with their fast horses they crossed the barriers which Alexander had built among the rocks of the Caucasus to hold back the savage tribes, and that as far as Egypt all the country paid them tribute. They ravaged all the world as far as France, so that they were a greater power than are now the Tartars. With them also came the Blacs, the Bulgars and the Vandals. For from that Greater Bulgaria come the Bulgars, who live beyond the Danube near Constantinople. And besides Pascatir live the Illac, which is the same word as Blac, but the Tartars do not know how to pronounce (the letter) B, and from them come those who are in the land of Assan²⁰. They call both of them Illac, the former and the latter. The language of the Ruthenians, Poles, Bohemians and Slavons is the same as that of the Vandals, and the hand of all of them was with the Huns, as now a large part of them with the Tartars, whom God has raised up out of the remote parts of the earth, a mighty people but a stupid race, according to what the Lord saith²¹: 'I will move them to jealousy (that is, those who do not keep his law) with those who are not a people; I will provoke them to anger with a foolish nation'. This is fulfilled to the letter as to all the nations who do not keep to the law of the Christ. That which I have told of the land of Pascatir I know from the preaching friars²² who went there before the arrival of the Tartars, but since then it has been subjugated by the neighbouring Saracen Bulgars,

and some of the people have become Saracens. The rest may be learned from the chronicles, for it is a well established fact that those provinces from Constantinople (westward) and which were called Bulgaria, Blackia and Sclavonia were provinces of the Greeks, and that Hungary was Pannonia. So we rode through the country of the Cangle from the feast of the Holy Cross (15th September) to the feast of All Saints (1st November), and nearly every day we traveled, as well as I could estimate, about the distance from Paris to Orleans²³, and sometimes more, according to the quantity of horses. For sometimes we changed horses two or three times in a day, while others times we went for two or three days without finding anyone, so we had to go slower. Out of 20 or 30 horses we, as foreigners, always got the worst, for they invariably took their pick of horses before us. They always gave me a strong horse, on account of my great weight; but I dared not inquire whether he rode easily or not, nor did I venture to complain if he was slow, but I had to bear it all with equal good grace. Consequently, we had to endure extreme hardship, as at times the horses tired out before we had reached the people, and we had to beat and whip them, put our clothing on other pack horses, change our saddle horses for pack horses, and sometimes even the two of us rode one horse. <...>

CHAPTER 49

The journey from Karakorum to Batu, and from Batu to the city of Sarai

So, for two months and ten days we travelled to Batu, and during all this time we did not see any town or a sign of any buildings but tombs, except for one small village²⁴, where we did not break the bread. And for those two months and ten days we rested only for one day, as we could not obtain fresh horses. Our way back was mostly in the lands of the same people, but in quite different terrains. We went in winter, and returned in summer and in much higher northern countries, with the exception that fifteen days in a row you need to travel there and back near some river between the mountains, where was no grass but by the river. We went for two, and sometimes for three days having no food but kumis. Sometimes we were in great danger, not being able to find people, and we had little food stocks and our horses were tired. After 20 days, I heard the news about the tsar of Armenia, and that at the end of an August he rode to meet Sartach, who went to Mangu Khan with a herd of great and small cattle, with wives and babies, but his big houses remained between Etilia and Tanais. I went to bow to Sartach and told him I would like to stay in his lands, but Mangu Khan is desirous that I return and deliver the charter. He said that the will of Mangu Khan must be granted. Then I asked Coyac about our people. He said they were currently at the Batu's ordu under supervisory care. I demanded also our vestment and books, and he said 'didn't you take them to Sartach?' I said: 'I took them to Sartach but didn't give them to him, as you know'. Upon that I repeated to him that I replied when he asked if I wanted to give them to Sartach himself. Then he said: 'You speak the truth, and nobody can resist the truth. I left your belongings with my father, who dwells near Sarai, in the new city built by Batu in Etilia; but our priests have some of the vestments here with them'. I told him: 'You can keep all the vestments you want, if only my books were returned to me'. Then he said that he will deliver my words to Sartach. 'I should', I said, 'have the charter for your father so he would return everything mine to me'. But as they were ready to leave, he only said: 'The court is following us closely, you can leave there and I will send a reply of Sartach with this man'. I was worried he would deceive me but could not argue with him. In the evening the man he pointed at came to me and brought two shirts which I took as whole, not cut up silk fabric. This man told me: 'Here are two shirts for you: one Sartach sends to you; and the other, if you think it's appropriate, deliver to the king in his name'. I told him 'I do not wear such garments; I will deliver both to the king as a mark of my esteem for your master'.—'No', he answered, 'deal with them as you wish'. And my wish was to sent both to you and so I did with the bearer of this letter. He gave me also the charter to the father of Coyac so he would return me my belongings, as he did not need any of my none of them. I arrived at Batu's ordu on the same day I left it a year ago, that is two days²⁵ after the Exaltation of the Holy Cross, and gladly found our men healthy but dejected with the poverty Gosset told me about. And they would have died, as they thought me dead, if not for the tsar of Armenia, who gave them great comfort and committed them to the care of Sartach himself; Tatars have began to ask them if they know how to keep bulls or milk mares. And if I did not return they would be turned into slaves. After that Batu commanded me to seem him face-to-face and ordered that

a charter be brought to me, which Mangu Khan sent to you. As Mangu wrote him that if he wanted to add, or remove, or change anything, he was free to do so. Then Batu told me: 'You will deliver that charter and have it translated'. He asked also which passageway I wanted to choose; by sea or by land. I told him that by sea was not a choice as winter was coming, so I should go by land. I thought later, that you were still in Syria, so I went to Persia. For if I knew you had gone to France, I would have gone to Hungary and reached France faster and along a route which is more pleasant than through Syria. Then we travelled with Batu for a month before we could get a guide. Finally, we were assigned a person named Yugur, who, thinking that he would get nothing from me and despite the fact that I said I wanted to go directly to Armenia, ordered that he get a charter that he would escort me to the Turkey Sultan, in the hope of getting gifts from him and obtaining more spoils on that road. Then I set foot on the path to Sarai, exactly in two weeks²⁶ before All Saints' Day, heading directly to the South and down to the river-bank of the Etilia, which divides into three large forks down there; each fork is almost twice as big as the (Nile) and Damietta Rivers. Moreover, Etilia also forms four smaller forms, so we crossed that river on boat in 7 places. In the middle fork there is the city named Summerkent²⁷, which had no walls; but when the river overflows the city is surrounded by water. Before they took it, the Tatars stood before it for 8 years. Alans and Saracen lived there. There we found one German man with his wife, a good man in whose house Gosset stayed. It was Sartach who sent him there to lighten his court that way. Close to these lands near the time of Christmas Day Batu comes on one side of the river and Sartach on the other side, and no further. Sometimes the river freezes completely and so they cross it. Plenty of grass grows here and the Tatars hide there in the reeds until the ice melts. The father of Coyac, having received the charter of Sartach, had returned my vestments, except for three surplices, the omophorion, embroidered with silk, the epitrachelion, belts and also clothes for an altar, embroidered with gold and one deacon's vestment (Superpellicium); he also returned the silver vessels, except for the censer and the small box with chrism; those vessels remained with priests who were with Sartach. He returned all my books, except for the Book of Psalms of the Queen, which he took with my agreement as I could not forbid him. It is he who said that Sartach liked the Psalms a lot. He asked me also that if I happened to return to those countries, would I bring them a man able to make parchment. On the request of Sartach he was building a bit church on the western bank of the river and a new settlement and he wanted, as he said, to make books for Sartach. However I knew that Sartach did not care about it. Sarai and Batu's palace were located on the eastern bank of the river; the valley where the mentioned river forks flow is more than 7 lieu in width and there is a lot of fish in those rivers. I also could not get the versified Bible, the book in Arabic, which cost thirty byzantiums, and a lot of other things.

CHAPTER 50

The continuation of the travel from Sarai through the Albanian and Lesgian mountains, through the Iron Gates and other places

Having left Sarai that way on All Saints' Day²⁸ and heading to the South, we arrived on St. Martin's Day²⁹ at the Alans mountains. Between Batu and Sarai we did not meet any people in 15 days, except for one of Batu's sons, who was moving onwards with falcons and his hawkers in great numbers, and one small settlement. For two weeks starting from the All Saints' Day celebration we did not meet any people; once we almost died of thirst during one day and one night as we did not find water almost until 3 o'clock of the next day.

The Alans who live in those mountains are still subjugated, so two out of each ten people of Sartach were to watch the mountain canyons so the Alans would not go out of the mountains to steal their herds in the valley, which stretches between the domains of Sartach, Alans and the Iron Gates, which are a two day journey away, where the Arkakk valley begins. Between the sea and the mountains some Saracen live, named Lesgians; highlanders who are also still not subjugated, so Tatars, who live at the bottom of the Alans mountains were to give us 20 men to escort us beyond the Iron Gates. I was very glad about it as I hoped to see them armed, because I have never seen their weapons, although I had a great interest in it. And when we reached the dangerous passing, two out of twenty had armour. I asked where they had got it. They said they bought it from the mentioned Alans, who knew well how to make it and were

great smiths. From it I concluded that the Tatars themselves have few weapons, that is only quivers, bows and furry shells (pelliceas). I saw them being delivered with iron armour (platas) and iron helmets from Persia, and I also saw two men, who presented themselves to Mangu wearing convex shirts made of hard leather, very poorly fitting and uncomfortable. Before we reached the Iron Gates, we found one castle of the Alans, belonging to Mengu Khan as he conquered that land. There for the first time we found vines and drank wine. On the next day we reached the Iron Gates built by Alexander the Great. This is the city whose eastern end is on the sea shore and between the sea and the mountains there is a small valley, where the city stretches until the top of the mountain on its west end; so there is no road above because of the mountains, and no road below because of the sea, and the only road is through the city, where the Iron Gates stand, the name of which the city bears. The city is more than one mile long and has a strong castle on the top of the mountain; in terms of width the city stretches the distance of a big stone's flight. It is surrounded by the strongest walls without moats, with towers built from big hewn stones. But the Tatars destroyed the tops of those towers and embrasures, having leveled the towers with the walls. In the lower parts of that city the land was previously considered an earthly paradise. In a two day journey from there we found another city named Samaron³⁰, where a lot of Jews lived; when we passed through it, we saw walls coming down to the sea from the mountains. And, leaving the road through the mountains along these walls, as it turned to the East there, we climbed the mountains headed southwards. <...>

Notes²

To Chapter 16

¹Probably, the Mokshas-Erzya people of Finno-Mordvins origin, who lived near the Moksha River (left tributary of the Oka River).

² That is, Mordvin (Mordvinian), see: Note 101 to the journey of Giovanni da Pian del Carpine.

³ That is, the Caspian Sea.

⁴Apparently, Lezgins. According to information from the 10th century author ibn al-Athir, Lezgins (or, as he calls them, 'Lezgs') practiced both Islam and Christianity.

To Chapter 20

⁵Greek Semanteriorum.

⁶ That is, Berke, see: Note 86 to the journey of Giovanni da Pian del Carpine.

⁷ Mare Sirsan, also Sirtan or Sircan in other manuscripts of William of Rubruck, which is, apparently, a mistake of the scribe, instead of mare Servanicum or the Shirvan Sea.

⁸The Arabian word, *mulhid* = a heretic' is meant.

⁹'The name of the sect was Hashashin from the stupefying drink hashish. Killings of Ismaili gained such fame that the French word assassin originated from the name of their sect'. (Note by A. Malein).

To Chapter 21

¹⁰William of Rubruck took this definition of Albania from the Isidore of Seville, who wrote in his famous 'Etymologiae' (vol. 14, p. 501): 'Albania takes its name from the colour of its people, who have fair (alba) hair; it starts on the East near the Caspian Sea and stretches through the steppes and woods alongshore the Northern Ocean to the Maeotian Marches. There are huge dogs in this country, so ferocious, they catch bulls and bring down lions'. Many medieval authors spoke of the fierce dogs of Albania.

¹¹Probably, William of Rubruck speaks of Uvek. Marco Polo calls it Ukaka.

¹²Of course Giovanni da Pian del Carpine. The interpreter of Giovanni da Pian del Carpine speaks of the mentioned later dress changing. (Note by A. Malein).

¹³Probably, the first wife of Batu, named Borakchin.

¹⁴ A participant of the seventh Crusade, an Admiral of the French Fleet, an attendant of Louis IX during the landing in Egypt in 1249. His nephew William de Beaumont also participated in that Crusade as a marshal.

² Text of notes is significantly reduced.—*Editor's note*

To Chapter 22

¹⁵ That is, the 14th of August.

¹⁶ It is of no surprise that Batu with his retinue travelled slowly, probably no more than 10–15 km per day, because William of Rubruck pointed out that they had to go on foot as they lacked horses.

¹⁷ William of Rubruck set out for the ordu of Möngke Khan on 15 September 1253. He left the course of the Volga River at a latitude between 48 and 50 degrees north, far more north than the place he first came down the Volga River from the West. H. Yule came to this conclusion by studying the route of William of Rubruck. His view is held up to this day.

To Chapter 23

¹⁸ That is, the Jayıq River, renamed the Ural River in the latter half of the 18th century.

¹⁹ Baskart by Giovanni da Pian del Carpine, see: Note 103 to the journey of Giovanni da Pian del Carpine.

²⁰ The movement of some of the Bulgars from the Volga river and their occupation of Wallachia occurred in 485 AD, but only in the beginning of the 6th century some of them under the command of Aspacures crossed the Danube River and took the lands of modern Bulgaria, 'the lands of Assan', according to William of Rubruck.

²¹ The Book of Deuteronomy, 32, 21 (confer with the Epistle to the Romans, 10, 19). From our Bible: 'They have roused me to jealousy with a non-god, they have exasperated me with their idols. In turn I shall rouse them to jealousy with a non-people, I shall exasperate them with a stupid nation'. (Note by A. Malein).

²² Those first preachers of the Dominican Order are only mentioned once in the 'Chronica' of Albert Trum Fontium in 1237: 'There are rumours that the Tatars are planning to conquer Comania and Hungary, so four preachers travelled for 100 days and reached Old Hungary, and, having returned, asserted that the Tatars had already invaded Old Hungary and brought it into their subjection'. According to William of Rubruck, Dominicans made other attempts to find their way into the East of Europe.

²³ One hundred kilometers. According to the calculations of F. Schmidt, William of Rubruck did 80 km daily. <...>

To Chapter 49

²⁴ In the original 'una villula', which is more correctly translated as 'one town', although Rockhill translates it as 'one little village'. Schmidt (p. 231) assumes that it was Omyl, which, according to him (p. 113), was visited by William of Rubruck on his way back. (Note by A. Malein).

²⁵ 16 September 1254

²⁶ 16 October. On his way back William of Rubruck spent a month in the Batu's main camp.

²⁷ The Muslim geographer Abd ar-Rashid (15th century) mentioned the city Saqassin, which was flooded by the Volga River. The exact location of it is unknown. It is possible that Summerkent mentioned by William of Rubruck is a misrepresentation of the name Saqassin.

To Chapter 50

²⁸ That is, the 1st of November.

²⁹ That is, the 15th of December.

³⁰ The exact location of this city is unknown; it is located in the middle between Derbent and Shamakhi, a two-day journey from both cities. (Note by A. Malein).

No. 13

Report by Benedict of Poland

In 1247 members of a diplomatic mission, Franciscans Giovanni da Pian del Carpine and Benedict of Poland returned to Europe with a reply letter from the Mongol Güyük Khan and detailed reports. It can be assumed that the translator of the mission, brother Benedict had complete information due to his responsibilities. In one Eastern European cities, where members of the embassy found lodgment in the tenement of the Franciscan brothers, at the urgent request of father Bogusław, the steward of the Order in Bohemia and Poland, an anonymous person made a short copy of brother Benedict's report. The fate of the report itself is unknown to this day. As for the copy made by the anonymous person (who is commonly named C. de Bridia, as he signed with only the initial C), it is preserved to our days in a Latin manuscript of the 15th century. The existence of this text allows us to affirm definitely that the author of most of the mission's information, which brother Johann was unreservedly accredited with before, was brother Benedict, as in his report the information was enviably complete, Mongolian terminology and its adequate translation.

In the 1965, the American historian G. Painter published the text of 'The History of the Tatars' by brother C. de Bridia¹. In 1967, German philologist O. Onnerfors prepared the second, corrected edition of this text². In 2002, in Saint Petersburg, the publishing house 'Eurasia' gave to the world the new critical edition (where all corrections by C. Kneepkens were considered³) and the Russian translation of the report with detailed annotations⁴. The translation below is based on the last publication.

The most impressive part of the report, which was entitled 'The novel about Chinggis Khan', which describes the legendary campaigns of three Mongol hosts to the end of the world, is covered in a special study⁵ and for that reason is not commented on here.

'The History of the Tatars' by brother C. de Bridia

The History of the Tatars begins.

<...> [2] So, it should be known that, according to the Tatars and some other [people] of the inhabited world⁶, its construction has two main [parts], which is the East and West, widely expanded from the [point] of the rising of the sun to the [point] of its setting during winter and summer. The West is different from the land of Livonia and stretches from Prussia right to Greece and beyond, and it includes the Catholic church.⁷ That is why Tatars call the Pope [of Rome] 'the great Pope' of all the West⁸. And the other part is called the East, where the land of the Tatars is located; where the East connects to the North, being close to the northern sea and being called Moal. <...>

[23] After those [events, *that is the death of Chinggis Khan*] Occodai⁹, his son, inherited the empire as he was elected out of others. In fact, Chinggis Khan had four sons: Occodai, who was his heir, Tossuc, Chagatai¹⁰, the name of the fourth I could not learn from the brothers or from the others.¹¹ Occodai had three sons, namely Kuyuk¹², who recently became khan, that is the emperor, Kokten¹³ and Kirenen¹⁴. The second son, Tossuc Khan, had two sons: Bati¹⁵ (he was the most powerful after the khan) and Ordu¹⁶. He is the eldest amongst the leaders and the most respected. He had two more sons from his other wife, namely Siban¹⁷ and Khaut [Tangut]¹⁸. The third [son of Chinggis Khan], Chagatai, had two sons: Ka[da] n¹⁹ and Buri²⁰. The fourth [son of Chinggis Khan], whose name I do not know, had two sons: Mengü²¹ (he was the oldest, his mother was Serekta²², who was the [most] well-known among the Tatars after the mother of the Emperor; [Mengü] is the most powerful after Bati), and Bekhac²³. I did not find out the names of the other sons. And the names of the Leaders were Ordu (he went through Poland and Hungary), Bati, Burin, Kadan, Siban, Bugiec (they were in Hungary), Kirbodan²⁴ (he was still fighting against the Sultan of Damascus); Mengü, Kokten, Sirenen and many others, who did not need to be named, stayed in the lands of the Tatars.

[24] And Occodai, being very strong in number [of men], like his father did earlier, organised three [armies]. He put Bati, his nephew, in charge of the first army, and sent him to the West against the Church and all the Western lands. He [Bati], having arrived, conquered the land of Altisoldan²⁵ and the land of bisermen. They were Saracens who spoke Koman. There he also captured, after a long war, the strongly fortified city named Barchin. And the other city, named Iakint, yielded itself and he did not

waste it, but got the spoils and killed the most noble persons according to his tradition, and made the citizens move to settle other people in that city. After that he moved to Ornas²⁶, the large city full of Christians, that is Gazars and Alans, and also of different Saracens from different parts [of the world]. It was located on the river (taking a large part of the seashore), which streamed through the city. Tatars blocked the river in the upper part and flooded the city with all that was inside of it.

[25] Besides, at the same time Bati conquered the land of Terkomen [Turkmen] and the land of Kagnit, and also the Great Comania and Rusia, and captured Kiev, the capital of Rusia, the largest and most famous city. [He reached that] by destroying a large number of people and numerous battles [the description] of which I will omit now, as it requires a special teller.

[26] Kuyuk, the son of Occodai, the cousin of Bati, who was the khan from recent times, who was going back [from the Western campaign], learned about his father's death and on his way back he captured the land of Gazars and the land of Alans, then the land Tkh'et, and finally the land of Tartar. Those were the lands of Christians, with different languages and they were located in the South, close to the sea. Having done that, he returned to his lands.

[27] Bati, being in Rus', fought against the Bilers, that is, Great Bulgaria²⁷ and the Mordvins, and having captured their [nobles], added them to his army. Then he moved from there against Poland and Hungary, and, having divided his army on the border [of those] lands, against Poland he sent ten thousand warriors with his brother Ordu, many of whom were confused and died in the battle in the very beginning of this land, killed by the Polish from Krakow and Sandomierz duchies. But as envy (which is true) feeds a great number of sins, the Polish did not seek the common good, but were destroyed by the Tatars as they were miserably arrogant and envious of each other.

[28] Tatars, having moved forward to Silesia, entered into battle with the duke Henry who was the most [heavenly minded] Christian of that time, and at the moment, when, as the [Tatars] told brother Benedict himself, they were almost ready to retreat, suddenly the v-shaped closed ranks of the Christians ran. Then the Tatars captured the duke Henry, undressed him completely and made him kneel before the dad [tatar] prince, who was killed in Sandomierz, then his head, like it was from a sheep, was sent through Moravia to the Bati in Hungary and there tossed among the other heads of killed men.

[29] When Bati himself entered Hungary and [his army] crossed more than a half of that land, near some river they [met] a great [army] of two [Hungarian] kings, brothers, that is, Bela, who rules now and Coloman of blessed memory who himself in the very first battle threw the chief Tatar leader off the bridge above that river along with the horse and weapons. He also withstood their second and third [onslaught] and [fought] until the Tatars ran. Bati in the meantime sent his troops across the river in its upper stream on a one or two day journey, so they could attack the bridge from the rear. And so they did. As a consequence that whole affair turned unexpectedly. And after the Hungarians neglected the king Coloman's warning, the Tatars crossed the bridge. And, from their own words, after they ran from the Hungarians, Bati unsheathed his sword and forced them [to return] to the battle, as the Hungarians, thinking they were safe, took a rest and did not care for Tatars. The Hungarians were moved by a premature pride, as the Polish were moved by envy. And the Tatars, attacking [them] maimed many and hunted Bela, the king of Hungary, until the very sea.

[30] When Bati, being in Hungary, learned about Occodai Khan's death, who was poisoned by his sister and was buried 'with rich in Hell', he immediately returned in Comania. The brothers [Franciscans] had also seen him on their way back from the Tatars to the Pope. Moreover, the brothers said that he was heading from his domains to Kuyuk Khan. Besides, there was a big discord between them and if it had a continuance, [then] the Christians could get a rest from the Tatars for many years.

[31] The second army under the command of Girpodan went to the South and conquered the land named Kirghiz. The people of this land are pagans, they don't have hair on their chins and [when] someone's father dies, this man as a sign of deep sorrow and pain makes a cut on the chin from one ear to the other. He [Girpodan] had also conquered Armenia and Georgia, Nubia, Turkey, also Baldak [Baghdad] and the [lands] of many others Saracen sultans. They say he is still fighting with the Sultan of Damascus.

[32] And the third army is fighting with some eastern people, who still have not completely subjugated to the Tatars.

[33] So after Occodai Khan's death the Tartars lived without the khan for seven years, and therefore they did not wage war westwards. His son Cuyuc was elected unanimously when our brothers were present [at this event in the Horde]. He, however, raised the triumphant banner against God's church and the domination of Christians, and he used all the states of the West and the third of all his might for war purposes. And here they came to fight discontinuously for eighteen years, and they would not stop until no noble man, no emperor, no king stayed [alive]. And though they knew that sooner or later they were to be killed by the Christians, they were not aware of the day or the land which God destined for this to happen, when suddenly the vindictive God would have revenge upon the blood of the unavenged.

[34] The names of the lands conquered by the Tartars are as follows: China, Solangi, Ethiopia, Voyrat, Keraniti, Burithebēt, Uighur, Kirghiz, Saruyhur, Merkit, Mekrit, Naiman, Kara Kithay (Qara Khitai), Turquia, Nubia, Baldak [Baghdad], Urumsoldan, Bisermins, Kangits, Armenia, Georgiania, Alans (Alani) who call themselves Asses, Circassians, Gazars, Komans who call themselves Kusskara [Kipchaks], Mordva, Bascart that is Great Hungary, Bilers, Korola, Kassidy, Parossits, Pesi [nations, canine nations], Samojeds, Nestorians, Nusia [Rusia], the [lands] of the Persian sultans who name themselves Sarracenas.

[35] So, we described the Tartars' wars and origin, [just for the record], wherever their land was, now it is known that this land is mountainous in some parts and in other parts it was completely flat. It is not fertile because it is sandy. [Its] climate is extremely fluctuating, and this is likely due to the alternation of mountains and plains. [This land] is abundant in strong winds. There is also sometimes lightning, thunder and storms, and [besides] they occur out of season, for they told their brothers that their climate had surprisingly begun to change several years before. Therefore it often looks like clouds are fighting with each other close to the earth, and they further said that shortly before [our] brothers arrived, fire had come down from heaven and destroyed many thousands of horses and livestock with all the slaves who pastured [it], with little exception. And when the brothers were present at the ceremony of the election of the khan, that is, the emperor, it began hailing so heavily that after it suddenly melted over sixty people drowned, and [the flow] carried belongings along with dwellings far away. But the brothers' dwelling which was nearby was not damaged at all. Moreover, when the brothers were looking at the [disaster] and sharing the pain of others, a very strong wind blew and lifted up the dust such that nobody could sit on a horse or even stay on their feet.

[36] These Tartars are mostly of medium height and rather slender thanks to [firstly, the consumption] of mare's milk which makes a man slim, and, [secondly, to every day] work. They have wide faces and prominent cheek-bones. Besides, they shave a circle on their heads, just like our clerics who have [tonsure], and a [stripe] in the direction of each ear which is three fingers in size. Their foreheads are covered with a fringe which hangs down to their very eyebrows in the shape of a crescent. They wear the rest of the hair loose or braid it as the Sarracenas do.

[37] What should be known about their clothes is that men and women wear similar clothes, therefore they are hard to distinguish from one another. However, this is more interesting than useful. For this reason, I did not care to further describe their other outfits and clothes.

[38] Their dwellings are called yurts. They are round and made of branches and stakes. They have a round window above to [let out] smoke and light. The roof and entrance are made of felt. However, they can differ in size and be moved [from place to place] ; according to the size requirements of the [yurt] to move it, one, or three, or four, or even more bulls suffice). The khan's and princes' camps are called in Tatar hordes (*ordas*). They do not have towns but they set up camps in different places [like towns]. They have a town which is called Karakaron, near which our brothers spent half a day traveling when they were in the Golden Horde, that is, in the best court of the emperor. Being short of firewood, both noble and common [people] have nothing else to do but use horse and bull dung for fuel.

[39] Some legends say that Chinggis Khan was the creator of their [religious law], but in most cases our brothers hardly learned anything about the performers of [these traditions], though they spent much time among them. However, they [found out that] Tartars believe in the One God, the Maker of things, visible and invisible, and the Giver of all good things [measured] for this life, as well as evil. However, they do not worship Him properly, because they have various idols. They have some figures of people made of felt which they place at both sides of the yurt entrance under an udder made of felt in a similar

way, and they say that they are the keepers of the livestock and sacrifice meat and milk for it. But they worship silk idols to a greater extent. They put them on a covered wagon [inside it], [or] at the yurt entrance. If somebody steals one of these, he is immediately killed. And commanders of thousands and hundreds have in the centre of the yurt a goatskin stuffed with hay or straw, and they sacrifice for it milk of all kinds. And when they begin to eat or drink, the idol in the wagon is offered on a plate the heart of the animal which they remove and eat in the morning. Besides, they once made an idol of Chinggis Khan which they placed in front of the yurt of any [ruling] khan and brought him gifts. The horses presented to him, however, are subsequently never used for riding. Also, they first offer to him, that is [idol] the animals which they kill for food, [and] they do not break the bones of this animal. They bow to this idol southwardly, as if it were God, and they force many people to do this, especially the subjugated nobility.

[40] Therefore the following happened recently: the ruler Mikhail, who is from the great princes of Rus, when he surrendered to their power and refused to worship their named idol, saying that it was not allowed for Christians to do that, and stood firm in his faith in Christ, was ordered to be beaten with heels in the chest to death. And when his warrior encouraged him to be firm in his martyrdom, he had his throat cut by a knife, and the encouraging warrior was beheaded. They also made sacrifices to the sun, the moon, water, earth, and they were accustomed to doing it especially in the mornings.

[41] Besides, they have some traditions [created] by Chinggis Khan which they follow. He established that the guts of an animal should not be cleaned, as mentioned above, by cutting the intestines open, but the [feces] should be squeezed out by hands, and the belly cleaned this way should be cooked. And also if someone driven by arrogance wants to become a khan on his own volition, then he must be killed immediately. For this reason, before Cuyuc Khan was elected, Chinggis Khan's nephew was murdered, because he wanted to [take] the power. He [Chinggis Khan] also established that [the Tartars] should conquer all the lands of the world, and make no peace with anyone, except with those who themselves surrendered openly and unconditionally, and in this case he ordered to have mercy on the common people, and to kill anybody more noble. He also predicted to them [that is the Tartars] that, eventually, they all will be murdered in the Christian land, however, very few of them who would be left [alive] would abide by the law of [that] land where their fathers died different deaths. He also ordered that the troops consisted of the following commanders: ten commanders, hundred commanders, thousand commanders and ten thousand commanders, that is ten thousand [warriors] under one [commander], which the Russians have a name for: '*legion*'.

[42] Fear of God [was the reason] that they believed in the existence of some great sins. One [of these sins] was to pierce the fire, or to touch [the fire] in any way with a knife, or take the meat out of the boiler with a knife. It is also prohibited to chop wood near the fire because, as they say, the head of the fire is being cut off this way. It is also [prohibited] to sit down on a horse whip (for they do not use spurs), or to touch arrows with the whip, or to take small birds from a nest. It is also [prohibited] to beat a horse with a bridle, or urinate in a yurt. Those who do it deliberately are killed after that, if this was done unintentionally the guilty person must pay the magician to be cleansed [leading] him between two fires in such a way that he himself along with the yurt and all that is inside it would go through the [fires]. And until this is done nobody is allowed to touch anything [in] the yurt. Also, if someone puts a piece of food in his/her [mouth], (or *bolus*, which means the same), and is unable to swallow it, then a hole is dug out under the yurt and this person is pulled through it and killed immediately. Besides, if someone steps on the threshold of the yurt of the leader, his/her life is taken away ruthlessly; therefore our brothers learned not to step on the threshold. Also, they believe that spilling mare's milk on the ground deliberately is a sin. When, however, our brothers told them that it was a sin to shed human blood, drink until drunk, lay hands on someone's property and many other things of this kind, they laughed, not caring for this at all. They do not believe in the eternal life of the saints either, nor in the eternal curse, they only [believe] that after they die they will live again, increase their herds and eat [food]. They also resort to the preparation of potions and spells, and believe that the demon's answers are answers from God, whom they call Iuga, and Komans [call] him Kodar. They do not force anybody to give up their faith, they only want everybody to comply with their orders. Otherwise, they use force to [submit] or kill. So they forced the younger brother of the Prince Andrey in Rusia (who was murdered by them on a false charge) to marry the brother's widow by laying them on one bed in the presence of other people.

[43] They also tend to start anything new in the beginning of the moon or in the full moon. They also say that the moon is a great emperor and bow to it, kneeling down. They say that the sun is the moon's mother because the [moon] receives light from it and because the sun has a fiery nature which they worship above of all for they believe that everything gets pure through fire. That is why any ambassadors, no matter what, with the gifts which they bring to their lords, are to go between two fires for any poison they may have brought, or bad intention, gets purified. For the same reason, even our brothers went between the fires [before they were admitted to the court].

[44] When someone among them gets seriously ill, near his/her yurt a pole is erected which is nine elbows [long] and wrapped in black felt, and from then no stranger dares to get in the camps [designated in this way]. When a dying person is in agony, it is a rare thing that someone stays beside him/her, because none [of] those who witnessed a death would have been able to join the orda of any leader or [what is more] emperor before the new moon began.

[45] If a rich man dies he is buried secretly in the field along with his yurt with him sitting in it, and with a [wooden] trough full of meat and a cup of mare's milk. A mare with a foal, a horse with a bridle, a saddle, a bow with a quiver and arrows are also buried with him. One horse is eaten by his friends and its skin stuffed with hay is raised on wooden supports. They believe that in the future [life] the deceased man will need all these; namely, a mare to get milk, a horse to ride, and the other things which are [buried with him]. Similarly, they put silver and gold there.

[46] Some more important men are buried this way: a pit is dug out secretly in the field, its edges are square and small, and inside the [pit] is widened, and near the camp they dig out another [pit] openly and publicly in which they imitate the funeral of the dead man. The slave who was valued by the [deceased] above all the rest is put under the dead body while the grave is left open. If the [slave] gets to his feet in torture on the third day, he becomes free and powerful and respected by the whole family [that is the family of the deceased]. After that they dig the [true] grave and all night long they chase mares and sheep over this place in order to level it, so that foreigners could not find the treasures placed with the [deceased]. Sometimes they cover this place with the grass which they removed earlier.

[47] Besides, they have in their land two cemeteries: one for common [people], the other one for emperors, leaders and nobility. And they make every effort to bury in this cemetery all the noble men who died in a foreign land, as it was in Hungary. If anybody, except for the superintendents, approaches this cemetery, he/she is treated ruthlessly, and for this reason, our brothers who, not knowing [about this prohibition], entered the [territory of the cemetery] and would have been insulted cruelly if they had not been ambassadors of the Great Pope whom Tartars call *yul-boba*, that is, the 'Great Pope'.

[48] And after someone dies it is necessary to clean everything related to his/her camp. For this reason, two fires are started and nearby two poles are erected vertically which are tied together at the top with a belt with several pieces of bukeran attached to it. The people and animals are to pass under this belt between the poles and fires, and to pull the yurt along with them. At both sides of the [poles] two women-magicians are standing, splashing water and pronouncing spells. And if the wagon breaks while passing [between the fires], or if any belongings fall down [from it], the magicians take them immediately to their right. In a similar way, if someone dies being struck by thunder, then everything he owned is rejected by everyone [as something dirty] until it is purified in the way mentioned above.

[49] They have as many wives as they are able to support. In general, they buy all of them, therefore they [wives] are like their property, except for noble ones. They make no difference as to who they marry, excluding their mother, daughter, or sister from the same mother. After the father's death they marry the step-mother and the younger brother or [another] relative [marries] the brother's widow. The wives do all the household chores, namely, they make short boots, [small] leather items and other similar [things]. Men only [make] arrows and practice archery. They also make three and four year old boys practice it. Besides, some women, especially, girls use arrows and ride horses just like men do. If anyone is caught committing adultery or debauchery, both the man and woman are killed.

[50] Besides, they also obey their lords more than other peoples do, or even more than clergymen obey their prelates. They have no mercy for deserters, therefore their emperor has absolute power over them. Because they have no choice between death and life, if the emperor says so. The emperor can

marry daughters or sisters of anyone, whenever he wants to. And after he enjoys them and decides not to let them stay, he gives them away to anyone he likes.

[51] He the [emperor] grants free allowances and gives post horses to the ambassadors he sends or to the ones who are sent to himself. However, he grants a tiny allowance to foreign ambassadors, because that [minimum] which would have been eaten by two or three people was given for ten people. I begin to shiver when describing all the misfortunes our brothers went through because of this, because even they themselves who lived through [all] this, still wonder how Jesus Christ's mercy protected them despite human nature. Oh, how often they rode on the change horses of the Tartars for one day for more than thirty Bohemian miles without having any bread or water, and only in the afternoon or at night, and not always, they had some poor soup cooked in a hurry from boiled millet. No wonder they covered such a big distance on horses, because they could stop any time and exchange the exhausted horses for strong and fresh ones, which were brought to them by the Tartars.

[52] All camps are set up and moved by the khan's order; because he himself appoints the places for the leaders who [in their turn, appoint the places] for the commanders of thousands, and those for the commanders of hundreds, those for the commanders of tens. Besides, all of them, both noble and poor, are extremely greedy and always try to extort gifts. If they do not receive gifts immediately they torture the ambassadors with hunger or they haggle until they reach the point when the person who refused to give [gifts] voluntarily later has to offer them against his will. Therefore it happened that our brothers basically gave as a gift alms of good people which they had accepted in order to carry out the special mission entrusted to them by the Apostolic altar. Otherwise, they would have found themselves in a fix, and also in contempt while [serving] the Universal Church.

[53] Also they resent other peoples to the highest degree because even Tartar interpreters, though being of humble origin, outperform the ambassadors entrusted to them in marching and sitting [during receptions], even if these are ambassadors or legates of the Apostolic altar or the kings. Also, they do not stick to the truth as regards strangers at all. Because, first they promise many good things, and, eventually, they ruthlessly commit ongoing atrocities. For their promise is like a scorpion which looks silky but suddenly attacks with its poisonous tail sting.

[54] They also get drunk more than any other peoples of the world for each time when they throw up because of excessive drinking, they continue drinking immediately at the same place where they are accustomed to doing it many times during one and the same day. Besides, they have the habit of drinking milk of all kinds. Also, they eat a great deal unclean food: wolves, foxes, dogs, carrion, afterbirth, mice, and, if needed, human flesh. Similarly, they do not reject anything that flies, but they eat clean food together with unclean food. They do not use any cloths or table cloths when eating, and therefore they are messy eaters. They rarely wash plates and not too well if they do; the same with spoons.

[55] However, they get along well with each other; debauchery and adultery are rare things among them. Their married women are superior to women of other peoples in term of their chastity. Except that they use bad words as a joke. Theft is an extraordinary thing among them, that is why their yurts with all their belongings are not locked. If someone finds any horses or bulls, or something of this kind, they will be let to continue [their way] or will be brought to their actual owners. They have a greater abundance of horses, bulls, cows and sheep than any other people on the earth. They are friendly enough with each other and they willingly share their things due to their mutual complaisance. Besides, they are very enduring because they often sing and joke as if they had eaten very well, although they had not eaten anything for a day or two. They willingly raise one another in honours. And disorder happens rarely among them, and no wonder that they follow this [rule], because, as I mentioned above, those who violate the rules are punished ruthlessly.

[56] Now we should give a brief summary of their [ways of conducting] battles and how one can stand up against them. Every time the Tartars are going to occupy foreign lands, the army which is sent to conquer [those lands] moves forward very carefully along with all the household members, that is with their wives, children, slaves, [as well as] with the tents and all utensils, with herds of work stock and sheep, in wagons and on horseback. They also carry with them a great deal of arms, bows, quivers and arrows. When the Tartars start approaching the [enemy], they send forward very fast spies who terrify people with their suddenness and kill [them] to prevent other people from gathering an army against

them. And if they do not encounter an obstacle, they always keep moving forward quite openly, and [all the] crowd follows them with all their [belongings].

[57] If they [that is the detachments of spies] see a crowd of [enemies] which is too big, they immediately gallop back to their people and arrange the army as follows. The core of the army is located around a triumphant banner in the centre with a large number of [warriors], and at their flanks two smaller [battalions] are placed, one on each side at a small distance [from the centre] and protruding forward greatly. A few people are left to protect the women, weak and sick people, children and those [belongings] which they brought with them.

[58] When they should confront their enemies, many of them arm themselves with a large number of quivers and arrows, and, before the enemy's arrows reach them, they fire their arrows, even if this is untimely, and their firing is not well-aimed. But when they can reach their [enemy] easily, it looks rather like rain than like flying arrows, or so they say. The reason for this is the extreme thickness of the [flying] arrows. If they find their enemies unready for the [fight], they suddenly besiege them as if by a wreath [that is from all directions] and chase them along one road [left specially for this purpose] to make them run, and attack, them firing arrows unstintingly. So if anybody in the middle [discontinues] fighting, he dies in an attempt to flee. Therefore, I assume that it is better to die fighting with dignity than to look for ways to flee disgracefully.

[59] It is notable that when they move forward successfully, they themselves, while advancing, leave behind camps for the commanders of thousands and hundreds, and depending on their needs they [leave behind] people and pack animals. In this situation the largest and most fortified camps are situated very close to the major forces of the enemy.

[60] And if in the occupied lands there are towns or fortified castles (which can stand up against them successfully), where people can be attacked by arrows or thrown stones at by machines, and where they are running out of supplies, products and water or firewood, this situation can be improved by the courage and braveness of the [besieged] people. A similar situation occurred in the land of ancient Saxons who went out of the town in small groups and killed many Tartars and, while the women were putting out the fire set by the Tatars, the men defended the ring-wall; and when the Tartars got into the centre of the town through an underpass, the [besieged] people killed [many] of them and put the rest to flight. It is absolutely impossible for people to hide in the forests where they can be found in summer and winter. They [the Tartars] trail people like wild animals. However, it is safe in the sea and in the above mentioned places.

[61] To what extent one can stand up to the Tartars one can be seen from various stories of the Macabaeans which describe archers followed by troops and ambushes arranged in different ways. Besides, I believe that it is highly important to make peace [between our] rulers, so they could unite the forces and set three or more armies against the enemies, depending on how well the warriors have been trained. Besides, it is advisable to make ambushes on the flanks on selected horses. And the ballistrarias who are set up in front of the troop at least in three [rows] should fire arrows before the battle order of the Tartars is achieved, [that is] in the best and timely way, so their own fighting ranks would either run or get confused. In case the enemy is put to flight, the ballistrarias with archers, as well as those in the ambush, would chase them while the army would slowly follow them. If there are no other ballistrarias [for chasing] the enemy, then [horsemen] on armour-clad horses move forward. Protecting themselves with heavy shields closed in front of the horses, they suddenly confuse the Tartar archers. I will leave other additions on the [conduct] of wars to those who are trained to do it rather by experience than by writing.

[62] So, I beseech Your Reverence, for if I made my notes less orderly than required, then this is attributed rather not to my will but to my ignorance. Put in writing on Kalendae III of August [30th of July] 1247 AD. This brings to an end 'The Life and History of the Tartars'.

⁵ A. Yurchenko. *Empire and Cosmos*. The actual and imaginary history of Chinggis Khan's campaigns based on the materials of the Franciscan mission of 1245. Saint Petersburg, 2002.

⁶ Most likely it was a reflection of the words from Innocent IV's letter to Güyük Khan dated 13 March 1245: *mundialia elementa machinae*, see: *Painter*, p. 55, n. 2.1.

⁷ This division between the West and the East is rather of political and religious nature than it is geographical, because instead of the traditional meridian of Jerusalem or the dividing line along Tanais the eastern border of the Roman Church is taken for the dividing line.

⁸ The 'Chronicle' of Brother Salimbene da Parma contains a story of Brother Johannes according to which the great Güyük Khan asked the Pope's ambassador the following question: who was more powerful in the West—the Pope or the emperor, and Brother Johannes, feeling dutiful, answered: the Pope.

⁹ *Okkodai*; lat. Occodai, mong. Ögödei, Ugedey (1186–11 December 1241), the third son of Chinggis Khan (the Chinese temple name Tai Zong). After Chinggis Khan's death he inherited the throne and received the title Khagan. He ruled from 1229 to 1241.

¹⁰ *Cha'adai*; lat. Chiaadai, mong. Ca'adai, Chagatay (?–1242), the second son of Chinggis Khan.

¹¹ *Toluy*, mong. Tolui, (1193–1232), the fourth son of Chinggis Khan. His name remained unknown to the Franciscans because of the Mongol prohibition to name and use the names of dead people.

¹² *Cuyuc*; lat. Cuyuc, mong. Güyüg, Güyük (1205–1248), the elder son of Ugedey (the Chinese temple name Ding-Zong). He ruled the Mongol Empire in 1246–1248.

¹³ *Cocten*; lat. Cocten, mong. Köden, Godan (1206–1251), Ugedey's second son.

¹⁴ *Cyrenen*; lat. Cyrenen, Sirenen, mong. Siremün (?–October 1252), not a son but a grandson of Udegey from his third son Kücü.

¹⁵ *Bati*; lat. Bati, mong. Batu (1208–1256), the second son of Jochi, the founder and first khan of Jochid Ulus (1242–1256).

¹⁶ *Ordu*; lat. Ordu, mong. Ordu, the elder son of Jochi. After his father's death acquired ownership of part of Jochid Ulus—an area in Siberia.

¹⁷ *Siban*; lat. Siban, mong. Šiban, Sheiban, the fifth son of Jochi. Later he became the owner of the steppes of Northern Kazakhstan and Siberia stretching to the Ob river.

¹⁸ *Tanuht*; lat. Chauth, Tanuht, mong. Tangyut, Tangut, the sixth son of Jochi.

¹⁹ *Kadan*; lat. Cadan, mong. Qadan. Contrary to information provided by the Franciscans, Cadan is Ugedey's son, not Chagatay's, the sixth son by seniority.

²⁰ *Buri*; lat. Burin, mong. Büri (?–1251), not a son, but a grandson of Chagatay from his eldest son Mutugen who died very young.

²¹ *Mengü*; lat. Mengü, mong. Möngke, Munke (10 January 1209–11 August 1259), the eldest son of Tolui (the Chinese temple name San-Zong), Mongolian Khaghan (July 1251–11 August 1259).

²² *Seroktan*; lat. Seroctan, mong. *Sorqaqtani, Sorkuktani (?–1252), the wife of the younger son of Chinggis Khan Tolui, the mother of the two great khans: Munke and Hubilai, her other sons are Arig-buka and Hülegü, the founder of the Mongol dynasty in Iran.

²³ *Bechak*; lat. *Bechac*, mong. Büjek, Buchek, the seventh (according to Rashid al-Din) or the eighth son (according to 'Yuanshi') of Tolui.

²⁴ *Chirpodan*; lat. Chirpodan, mong. Čormaqan, Chormagan (?–1242), a Mongol commander from the sunni ethnic group. Chormagan-noion participated in Chinggis Khan's campaigns to Middle Asia, the conquerer of Georgia and Armenia in 1232–1233 where he later was the namestnik.

²⁵ *Altisoldan* (Altisoldan)—sultan Jalal ad-Din, Khwarezm Shah's son.

²⁶ *Ornas* (Ornas)—Urgench, the capital of Khwarezm.

²⁷ There is no doubt that in the Franciscan reports Magna Bulgaria means Volga Bulgaria.

The material was translated and prepared by Alexander Yurchenko

II. Sources on the History of the Jochid Ulus During its Zenith

No. 1

Literary Monuments of Ancient Rus'.

Rus' and the Jochid Ulus in the second half of the 13–mid-14th century: the confrontation between Tver and Moscow

The text of the chronicle is followed by its sources in the form of accepted in scientific literature (Hypatian Chronicle, Laurentian Chronicle, Novgorod First Chronicle, Novgorod Fourth Chronicle, Tver Collection, Simeon Chronicle, Rog.—Rogozhsky Chronicler, Vladimir Chronicler).

In the summer of 6751 (1243) the great prince Yaroslav went to the town of Tatars to visit Batu, and he sent his ambassador Konstantin to Kanovich (Ka. Batu received Yaroslav and his people with honour and when letting him go he said to him: 'Yaroslav, be the senior of all the Russian princes'. Yaroslav returned to his land with great honour'.

Laurentian Chronicle. Column 470.

'In 6750 (1243)... of the same year the great prince Yaroslav Vsevolodovich went to the Horde to visit Batu Khan, and he sent his son Konstantin to Kanovich (Karakorum). Batu received the great prince Yaroslav with honours and before the latter left he granted him the principality among all the Russian people; and Yaroslav came back to his land with great honour'.

Tver Collection. Column 385

In 6758 (events of 1245) the Moguchiy Khan (Powerful Khan) sent an ambassador to the princes Daniil and Vasilko, who were in Dorogov, with a demand to give them Galich. 'The great khan will be very sad unless he secures towns in his land': Daniil consulted his brother and replied to Batu's demand: 'We will not give away half of our motherland but I will go to Batu myself'... And he came to Pereyasavl and met the Tatars. Then he went to Kuremsy Khan and saw what evil things they did. And he was appalled and hurt to see them in the grip of the Devil: so disgraceful were their lies and so bad were Chinggis Khan's dreams, so horrible were their slaughters, and their involvement in magic; and the tsars and princes, and noblemen who arrived should have bowed to a bush as if they were honouring the sun and the moon, and the earth, and the Devil, and the dead fathers, mothers and grandmothers. Oh, how disgraceful is their beauty! Those who hear this get very upset. He came from there to the Volga to bow to Batu Khan. One of Yaroslav's men, Songurovi by name, came up to him and said: 'Your brother Yaroslav bowed to a bush; and you should bow too', and Daniil answered: 'The Devil speaks for you; God shut your mouth and your word will not be heard'. At this moment Batu came in and God released him from their evil madness and magic; and he bowed according to their tradition and entered his tent: 'Danilo! Why did it take you so long to come here? But it is good that you came. Do you drink the black milk, our drink, Koumiss?' The latter replied; 'I have not drunk it before but I will drink if you insist'. Batu said: 'You are one of us, a Tatar: drink our drink'. Daniil drank it and bowed according to their tradition, and said: 'I am going to bow to the great princess Barakchinovi'. 'Go' he said. He bowed to her as their tradition required: and she brought wine and said: 'You are not used to drinking milk; drink wine'. Oh, the Tatar honour is worse than evil!

<...> The prince spent 20 and 5 days there, was let go and given back all his lands, and he came back home. <...>.

Hypatian Chronicle. Columns 805–808.

'In 6754 (1246)...of the same year the prince Mikhail of Chernigov together with his grandson Boris went to the town of Tatars, and when they were in his camp Batu ordered Mikhail to bow to the fire and idols. Mikhail refused to submit to their order and to bow to their 'deaf' idols, as he put it. Then he was stabbed to death without mercy. He died on 20th September, on St. Eustace's Day. Batu, however, let Boris go to his son Sartaq. Sartaq honoured prince Boris and let him go.

In autumn of the same year the prince Yaroslav Vsevolodovich died in a foreign land when he was coming back from Kanovich (Karakorum) on 30 September on St. Gregory's Day'.

Laurentian chronicle. Column 471.

'In 6754 (1246)... prince Svyatoslav Vsevolodovich called Gavriil and his brother prince Ivan Starodubsky Vsevolodovich and his sons returned to their fatherland from the land of the Tatars; Batu sent great prince Yaroslav to Kanovichi.

In the same year prince Mikhailo Vsevolodovich, Chermny's son, of Chernigov and his boyar Fyodor were killed because they refused to worship the sun, bushes and different idols.

<...> When they knew that, the rest of princes and common people who had run off to different lands started gradually gathering and coming back to their lands. The Tatars started calling them to come and see khan Batu saying, 'You shouldn't live on the land of khan Batu without bowing down to the ground before him'. Many people listened to them and came there to bow before khan Batu. Khan Batu had the following habit: if someone wanted to bow before him, he should have gone through fire at first and bow before bushes and idols. As for presents brought, sorcerers took a part of them threw at fire. After that they were let to see the tsar and pass him their presents. Many princes and their boyars were going through fire and bowing before the sun, bushes and idols for glory and each of them asked for power. The Tatars did not mind and fulfilled their requests.'

Tver Collection. Columns 286–288.

'In 6757 (1249) prince Gleb Vsevolodovich went to the Horde to see Tsar Sartaq Batuevich, Sartaq decided to set him free. In the same winter great prince Alexander Yaroslavovich came from the Horde and became the prince of Kiev and whole Rus'; his brother Andrey reigned in Vladimir'.

Tver Collection. Columns 395–396.

In 6760 (1251) Alexander Yaroslavovich, prince of Novgorod went to the land of the Tatars and they set him free with honour and granted him with leadership in his brotherhood.

<...> In that year prince Andrey Yaroslavovich and his boyars decided they would rather flee away than serve the tsars and headed to an unknown land with his princess and boyars.

The Tatars chased after prince Andrey Yaroslavich and reached him near Pereyasavl. God saved his life due to prayers of his father. The Tatars started searching for them and soon they found princess Yaroslavlya, took away her children, killed voivode Zhidoslav and the princess, Yaroslavlya's children were captured as well as an enormous number of people and livestock, so they did a lot of evil as usual and went away.

In the same year the Tatars allowed prince Oleg of Ryazan come to their land.

In the same year the grand prince Alexander returned from the Tatars to Vladimir and he was met at the Golden Gate by the metropolitan and all the abbots and citizens and he set his father Yaroslav on the throne. <...>'

Laurentian chronicle. Column 473.

'In 6760 (1251) Grand Prince Alexander Yaroslavovich went to the Horde to see Tsar Sartaq. In the same year Nevruy, Kotyak and Olabuga the brave set off to attack great prince Andrey Yaroslavovich and Suzdal land; they were going in the direction of Pereyasavl when great prince Andrey and his troops met them and the Tatars defeated them. Prince Andrey fled to Veliky Novgorod and then to Pskov then he was waiting for his princess and headed to Kolyvan'; then he set off to the land of Swedes where he was received with honour by local authorities, he sent his princess to Kolyvan and prince Andrey was killed there, over the sea, in the land of the Swedes. The Tatars, led by Nevruy captured Pereyasavl, found the princess of Yaroslav with her children, they killed the princess and captured her children, voivode Zhidislav was killed as well.'

Tver Collection. Columns 396–397.

'In 6764 (1256/57) all the princes of Suzdal went to the land of the Tatars, they respected Ulanchi and his voivodes and returned without any problems.

In the same winter Gleb returned from Kanovich and was married in the Tatar land. In the same winter the tsar's Census takers came to the Russian land and kept a tab of everything in the Russian land appointing desyatniks [decursions], sotniks [centurions], and tysyachniks [heads of a thousand] but they did not respect such religious figures as abbots, priests and census takers so on and so forth serving the

church. All of them came to Rus' because of our sins. God, please, spare us and draw their anger aside, we only rely on your mercy and humanity!"

Tver Collection. Columns 400–401.

'In 6765 (1257) bad news came from Rus' that the Tatars were going to collect tamgas and desyatinas in Novgorod land and all the people were anxious the whole summer.

In the same winter Tatar ambassadors and Alexander arrived and Vasily fled to Pleskov and the ambassadors started asking for desyatinas and tamgas but the inhabitants of Novgorod did not agree, gave them tsar's presents and let them go in peace. Prince Alexander drove his son away from Pleskov, Alexander and his retinue were executed, some of them were deprived of noses, the others lost their eyes, so all of them died violently.'

Novgorod First Chronicle. Column 82.

'In 6767 (1259)... Mikhailo Pineschinich came from Ponizovie with deceitful ambassadors and said, 'Hostile enemies have already entered Ponizovie', so the inhabitants of Novgorod got mobilized as soon as possible. In the same winter foul Tatars Berkai and Kasachik came with their wives and many other people. The great rebellion outburst in Novgorod and the Tatars collecting taxes inflicted much damage to the whole volost. After that the foul Tatars started being afraid of death and told Alexander, 'Please, provide us with guards, otherwise we will be killed'. So the prince ordered boyars' children to guard them at night. The Tatars decided, 'Give us a number of taxes or we will run away', common people did not want to fulfill their requirement, so they said, 'We will die for saint Sofia and churches of angels'. Then people divided into two camps, the ones who were on the side of good defended saint Sofia and corresponding confession. And although the foul Tatars who intended to attack the town from both sides fled away driven away by the Holy Spirit, they still did not seem to be forgotten by Christ. Having no fear in front of their fate, they said, 'We will die for Saint Sofia'. The next morning the prince left the ancient town with the foul Tatars who were rather large in number. The foul Tatars started going down the streets plundering and devastating houses and households. Apparently God decided to punish us for our sins this way. After that prince Alexander went away leaving his son Dmitri in the throne. In the same year on the eve of Boris's day there was a hard frost in the volost but God decided to spare us that time asking us to repent of our sins, all of us are sinful and we are afraid of the execution imposed by the Lord.'

Novgorod First Chronicle. Columns 82–83.

'In the year 6770 (1262) God saved the inhabitants of Rostov land from the fierce Besermyan mass, he put much anger in the hearts of peasants who could not bear the violence of the foreigners. They drove them away from Rostov, Vladimir, Suzdal and Yaroslavl. They turned collecting tribute into a real outrage, thus, sowed much evil and many peasants were killed. The humane God saw that and saved his servants from this sorrow. In the same year Izosima the criminal was killed. He was a drunkard, idle talker, blasphemous man who did not believe in Christ certainly he was a Besermyan who came over to Muhammad's side. At that time Besermyan called Kutluby came from the Tatar tsar and started committing outrages causing troubles to Christians, doing violence to the saint cross and churches. That became the last drop which overflowed the cup. People attacked their enemies, drove them away and killed some of them, foul Zosima was killed at that time in Yaroslavl, his body was left to the mercy of dogs and ravens.'

Laurentian Chronicle. Column 476.

In the year 6777 (1269) an army of Germans who were large in number arrived at Pleskov during the week of All Saints, they did not manage to devastate it but caused a lot of damage, spending there 10 days. The inhabitants of Novgorod left the town and the army of Germans saw them, they fled behind the river. The inhabitants of Novgorod arrived at Pleskov and concluded peace there of their own accord. In the same year prince Yaroslav came to Novgorod and said, 'My warriors and brothers have been defeated and you are fighting against the foreigners'... The inhabitants of Novgorod supported them and the prince was going to leave the town but the inhabitants of the town made a vow, 'Prince, you may be angry with us but do not leave us, please'. The prince did not listen to them and went away. So he sent the lord and magnates to ask for mercy and they were received in Bronnitsy. At the same time

Ratibor Kluksovich got one thousand warriors. In winter of the same year prince Yaroslav was planning to gather all the princes and a great number of troops and come to Novgorod, there was also a darugha from Vladimir called Amragan who was going to visit Kolyvan'. When the foreigners saw that, they sent their ambassadors expressing their obedience and resignation as well as desire to stop bloodshed and conclude peace.'

Novgorod First Chronicle. Columns 87–88.

'In the year 6789 (1281) the Tatar army led by Kovady and Alchedan set off to attack Dmitri, they arrived at Pereyasavl but did not find him there, they burnt down the town and churches and sacked the villages of Pereyasavl and Rostov.

In the year 6790 (1282) prince Andrey Alexandrovich and tsarevich Semen Tolignevich complained about their brother Dmitri and the Tatar army rose against him and Pereyasavl was conquered; prince Dmitri and his relatives, and servants left it and passed by Novgorod toward the direction of Koporie.

Another army set off to catch Dmitri, Touratemer and Alyn were led by Dmitri's brother prince Andrey, Semen Tolievich was with them. So prince Dmitri was taken to the Horde to the tsar Nogai.

In the same year prince Dmitri returned from the Horde from tsar Nogai and became reconciled with his brother Andrey but he killed Semen.'

Novgorod Fourth Chronicle. Columns 244–245.

'In 6791 (1283)... of the same year great prince Dmitri Alexandrovich returned from the Horde and met his brother prince Andrey.

In the same year a lot of evil was sown in Rus' (Ruthenia). The Besermyan Akhmat initiated violence in the Kursk principality and bought up all the tributes from the Tatars which caused trouble for the princes and common people, he also established two slobodas in possessions of Oleg, prince of Rylsk, and used much violence near Vorgol and Rylsk. Prince Oleg and Svyatoslav, prince of Lithuania, turned to tsar Telebuga on this account. Tsar Telebuga provided Oleg with reinforcement and ordered him to devastate both slobodas. At that time Akhmat was at Nogai's, when he knew that his slobodas had been devastated, he slandered them and said, 'Oleg and Svyatoslav are not princes, they are robbers who are going to harm you. If you don't trust me, send your messengers to them and ask them to come and see you. If they refuse, I am right'. Prince Oleg did not dare to come to Nogai, tsar Nogai got angry, directed his army against Oleg, ordered to punish him and misappropriated his principedom. The Tatars approached Vorgol on 13 January. Prince Oleg fled to tsar Telebuga and Svyatoslav fled to the forest with 13 large troops and filled it in with people. The boyars were given to Akhmet, he beat them and left his two brothers in those slobodas. <...>

In the year 6792 (1284) two Besermyans were going from one sloboda to another with more than 30 Russians; prince Svyatoslav defeated them and killed more than 25 Russians and those two brothers managed to flee as well as others from both slobodas.

In the same year Oleg returned from the Tatars and sent his ambassador to Svyatoslav saying, 'you did not go to the tsar with me although you had promised. That means we have become irreconcilable enemies. Only God can settle the dispute between us'. In the same year Oleg and the Tatars came and killed Svyatoslav while Alexander, Yaroslav's brother, killed Oleg and two his sons.'

Vladimir Chronicle. Column 97.

'In 6798 (1290) there was a lunar eclipse: it became blood-red and then turned into darkness. At the same time the Tatars were mobilized, Tokhta, Telebuga and Aguy headed to Tokta. <...>

In 6799 (1291)... tsar Nogai killed Telebugou and Algoy.

In 6801 (1293)... On Tudan's military campaign. Princes Andrey Alexandrovich, Fyodor, Dmitri and Konstantin came from the Horde. The Tatar army led by Tsar Tudan came with them to attack prince Dmitri Alexandrovich but the prince went to Pleskov. The Tatar captured Vladimir, Pereyasavl, Moscow, Volog, 14 town in total, and sowed much evil in the Russian land, they killed many peasants, many of them were captured. The inhabitants of Novgorod sent Semen Klimovich with presents to tsar Tudan; prince Andrey heard his brother leave Pleskov for Novgorod and the Tatars army came back to their land.'

Novgorod Fourth Chronicle. Column 248.

'In the same year (6822/1314)... Fyodor Rzhevsky came to Novgorod from prince Yury of Moscow and called for governor-generals of Mikhailo and kept them at the court while the inhabitants of Novgorod headed to the Volga River; prince Dmitri Mikhailovich left Tver and he was standing on one of the banks of the Volga before strong frosts; prince Mikhail was in the Horde then. He concluded peace with Dmitri and then sent prince Yury to Moscow and returned to Novgorod himself. In the same winter prince Yury and his brother Afanasy arrived in Novgorod before the great Shrovetide and the inhabitants of Novgorod were pleased to see them. <...>

In the year 6823 (1315) On 15 March 6823 (1315), on Lazar's Saturday, Grand Prince Yury of Novgorod was invited by the tsar to go to the Horde and see him, so he left his brother Afanasy in Novgorod. In the same year prince Mikhailo came to Rus' from the Horde with the Tatars, foul Taitemet was among them. The inhabitants of Novgorod and prince Afanasy knew about that, set off to Torzhok and came there within 6 weeks. At the same time prince Mikhailo, the inhabitants of Ponizovie, and the Tatars headed to Torzhok; so they met in the battlefield. That was the Lord's will. There was a furious fight between them and there many human losses, many boyars and good people from Novgorod were killed... some of them fled to the town and locked there with prince Afanasy. Prince Mikhailo sent his messengers to Torzhok and asked 'to give up prince Afanasy and Fyodor Zhrevsky, then he would conclude peace with them'. The inhabitants of Novgorod said, 'We will not give you up Afanasy, all of us will die fairly for Saint Sofia'. Then prince Mikhailo sent his messengers against and asked 'to give up Fyodor Zhrevsky', at first they did not want to but then agreed and recieved 50,000 grivnas of silver and concluded peace and kissed the cross. Prince Mikhailo called for prince Afanasy and boyars of Novgorod and arrested them and sent them to Tver as prisoners and the rest of people in the town were sold and their possessions were misappropriated. The battle occurred on 10 February, martyr St. Charalambos' day. Prince Mikhailo sent his governor to Novgorod and Semen Klimovich got the posads.'

Novgorod First Chronicle. Columns 94–95.

'In 6825 (1317) prince Yury came from the Horde with a sophisticated ambassador called Kavgadiy; Grand Prince Mikhailo let them near Kastroma and all the princes of Suzdal were with him and they were standing at the Volga River for a long time; having negotiated with Kavgadiy, prince Mikhailo passed his throne to Yury and went to Tver and laid the foundation of the local Kremlin. <...>

In the same winter prince Yury with Kavgady and all the princes of Suzdal left Kostroma for Rostov, Rostov for Pereyasavl and intended much harm to Christians; then they left Pereyasavl for Dmitrov and Dmitrov for Klin. <...>

Prince Yury, the Tatars and all the warriors of Suzdal started fighting against Tver volost, burnt down their villages and dwellings, captured many people and then they were standing 15 versts away from the town and spent 5 weeks at that place and three months in Tver region in general, the ambassadors of Kavagady came to visit great prince Mikhail palavering him into concluding peace but those were futile efforts. Grand Prince Mikhailo mobilized his soldiers and inhabitants of Tver and Kashin rose against Yury while Yury was leading his troops against Mikhailo; they meat each other and there was the great battle and God helped great prince Mikhail Yaroslavich as many his opponents were killed; princes got many trophies and brought them to Tver, princess of Yury Konchak was also taken there, prince Yury himself and the rest of his retinue fled to Veliky Novgorod and Kavgady ordered his retinue to roll down the flags and headed to the camp himself. That happened on 22 December. The next morning the grand prince Kavgady, they concluded peace and the prince and his retinue were allowed to go to Tver with respect.

In the same winter prince Yury and the inhabitants of Novgorod came to Brod and Grand Prince Mikhailo met them halfway and they proclaimed peace. In the same winter Grand Prince Mikhailo sent his son Konstantin to the Horde.

In 6826 (1318) great prince Mikhailo sent Olekso Merkovich to Moscow with peace and prince Yury killed him.

In the same year prince Yury Danilovich went to the Horde with Kavgadey... Prince Yury reached the Horde with the illegal and damned Kavdadey who was guided by the Devil started setting illegal tsar Ozbyak against Grand Prince Mikhail saying, 'Prince Mikhailo collected a lot of tribute in different

towns and now he is heading to the foreigners, not to you'. The Tsar became angry, he ordered to starve his son, prince Konstantin, and locked him in a monastery. But the Tsar ordered to set him free, otherwise he would never see his tribute. He had to listen to them and ordered him to be released.'

Tver Collection. Columns 410–411.

'In the year 6826 (1317)... that same year Grand Prince Yury left the Horde of the Tatars and inhabitants of Ponizovie. They headed to Tver to attack prince Mikhail. Sending Telebuga they also asked the inhabitants of Novgorod; and they came to Torzhok to oppose prince Mikhail, they joined the troops of prince Yury 40 versts away from Tver, at that moment, prince Mikhail left Tver and they started a furious combat, prince Yury had especially many human losses, his brother Boris and Yury's princess Yasha were taken to Tver and intended to be killed there; prince Yury himself fled to Novgorod and called for the inhabitants of Novgorod, they came to Novgorod and Pleskov, soon lord Davyd joined them, they came to the Volga River and had one more battle against prince Mikhail on his way to the Horde, so Yury's brother and princess were set free. So the inhabitants of Novgorod came home in spring and prince Yury set off to Moscow and then to the Horde.

In 6827 (1318) Prince Mikhail of Tver was killed by the tsar in the Horde and Yury became Grand Prince. <...>'

Novgorod First Chronicle. Columns 95–96.

'In 6827 (1318) Grand Prince Mikhail Yaroslavich of Tver was killed in the Horde by the order of Tsar Azbek. This Tsar reigned in the Horde who adopted the faith of Bulgarians was not going to spare Christians. <...>

This punishment can be explained by our sins. But let us recall the past. At that time many princes became enemies and our hostile, foul Devil, collecting an enormous army with the help of tsars of the Horde. Grand Prince Yury Danilovich stayed in the Horde and Grand Prince Mikhail was allowed to return to Rus'. In ensuing years the Ismaelites made their living by outrages and bribes, misappropriated a lot of silver coins, Yury Danilovich became the great prince, illegal and foul Kavgady was released and headed to Rus' with him. Blessed Grand Prince Mikhailo met him with his troops and told great prince Yury Danilovich that he knew that he had become the Grand Prince but he still should not enter his lands and possessions'. Devil did not want to stop the bloodshed because of our sins, so the army of prince Yury Danilovich came to Tver as long as pitiless Kavgady, many Tatars and Mordvins, they started burning down the town and many villages. Everything was in distress and sorrow, men were tortured and killed and their women were violated, all the authorities of Tver were burnt down up to the Volga river. Afterwards they crossed it and continued to sow their outrage on the opposite bank. <...>

Blessed Grand Prince Mikhailo made a sign of the cross and rose against the army, he saw a great deal of warriors. The Cumans gathered and furious combat started which resulted in the victory of Grand Prince Mikhail. A great number of horsemen fell heavily to the ground like sheaves.

Grand Prince Yury Danilovich saw many people dying in the battlefield and left for Tozhesk with a small army and then he headed to Veliky Novgorod. Grand Prince Mikhail did not order to beat the foul Kavgady and his companions-in-arms'. <...>

Yury Danilovich united the forces of inhabitants of Novgorod and Pskov and went to Tver. He was met by Grand Prince Mikhail, they did not want to see bloodshed again and became reconciled. So Grand Prince Mikhailo said, 'Brother, let's go to the Horde together and complain to the tsar, probably he will be ready to help us.'

Grand Prince Yuri Danilovich united his efforts with Kavgady and they set off to the Horde enlisting the support of all princes of Ponizovie and boyars from small towns and Novgorod by the order of Kavgady and composed false witness against Grand Prince Mikhail.

Grand Prince Mikhail sent his son Konstantin to the Horde and he went there himself a bit later after he received the ministrations of Bishop Varsonofius and the abbots and priests and his spiritual father Abbott Ivan at the Nerl River purifying his soul and said, 'God, I was thinking for a long time how to help these Christians, they should not take punishment for my sins. God, bless me, if I happen to shed blood, let it be enough to make satisfaction for the sins of these Christians'. That is what his prayer. <...>

He went to Vladimir with his son prince Dmitri and prince Alexander and when he arrived there, the tsar's ambassador called Akhmyl came from the Horde saying, 'The tsar is calling for you, you have one month time to come and see him, otherwise he will aim a stroke at you and your towns'. Kavgady insulted you saying, 'He will never be in the Horde!' The boyars thought and said, 'Your son is already in the Horde. Send someone else'. His sons told them, 'Father, please, do not come to see the tsar, beware of his anger, send one of us there'. The prince full of resignation said, 'If the tsar calls for me, he seems to need my head. If I reject his requirement, all our motherland will be in danger and many Christians will be killed. It will be better for me to run this risk myself than expose them to danger' <...>

He arrived at the Horde during the month of September, on the 6th day... prince Konstantin met him there, the tsar gave him a bodyguard so that no one may offend him. He gave presents to all the princes and tsarinas of the Horde, then the tsar himself, and spent one month and a half in the Horde. The tsar said to his princes, 'One should judge prince Mikhailo and Grand Prince of Moscow Yury Danilovich. The one who wins will be in my good graces and the one who loses will be executed'. So he made a wreath for one of them. One day all the princes came to the tsar's court and presented many petitions against Grand Prince Mikhailo saying that 'he had collected many tributes without sharing with the tsar. A true sufferer for Christ, Mikhail loved the truth and repudiated any lies in their testimony, and in such courts said: 'Put those who mock them in court, judge their disgrace', but his reputation was blackened as a result of successful initiative of the dishonest Kavgady. He judged the prince unfairly without listening to his true words of Grand Prince Mikhail, the thoughts of Christ's warrior were not justified in their country.

In a week after that trial blessed prince Mikhailo was brought before the court again, being tied up he listened to the following verdict, 'You did not give all the tributes to the tsar, opposed the ambassador and tortured the princess of Grand Prince Yury'. Blessed prince Mikhailo and his witnesses replied, 'If I misappropriated tsar and princes' treasures, I would be extremely rich, your representatives are lying'. As far as the princess is concerned, he said, 'I've never done it to her, that is malicious calumny'. But the judges refused to believe him saying there was no single true word in his speech. As a result they made the following decision, 'He will be put into irons and condemned to death unless he listens to us and obeys'. The next night gusards appointed by seven princes came and put him into irons. He spent all the night being tied up. At the same time all his boyars, servants and spiritual father Alexander were driven away and he stayed alone and said to himself, 'All my retinue was driven away, I have nobody to rely on now'.

The next morning the godless Tatars ordered to put the log of a heavy tree on the saint which caused him excruciating torment... The godless Tatars ordered to leave the tsar behind as a captive. <...>

The next day foul Kavgady exuding poison striving for ruining the soul of patient Grand Prince Mikhailo ordered to take him into the hall, called for loads of people and asked to put the saint on his knees. So he committed another outrage against the prince and finally he said, 'Let Mikhailo know what the tsar's tradition is like. That is how he reacts when he is in anger even when it comes to a person from his tribe. Tomorrow he will recover from that and he will again be as he was.' <...>

The blessed and Grand Prince was in distress and sorrow for 26 days behind the Terek River at the Sentsa River not far from the town of Tetyakov having passed by Yassk and Cherkassk Mountatins at the Iron Gate. On Wednesday early in the morning he stood up and said in an upset voice, 'Dear prince, Kavgady, great prince Yury and many other people are going from the Horde'. He got up and exclaimed, 'I know that they are going to kill me'. <...>

Kavgady and Grand Prince Yury sent murderers to prince Mikhailo of Tver and headed to the local market themselves. The murderers acted like wild beasts and merciless blood suckers, they drove away the blessed people and captured him by and a tree and struck him forcefully and broke a wal. They jumped upon the tent and completely destroyed it after a furious fight. They brought him low and started beating him unmercifully. One of them called Romanets took out his knife and struck a blow to his right side and cut out his honest heart. So the soul of the blessed prince went to heavens on Wednesday 22 November at 7 o'clock in the morning. <...>

The Russians and Tatars plundered the tent of the blessed prince and nobody touched his naked dead body. One of them came to the market and said, 'They have already fulfilled your order'. Kavgady and

great prince Yuri came to see his dead body. When Kavgady saw his dead body, he said furiously, 'Ar-en't you his brother? Why is his body lying here this way?'. Then the great prince ordered to cover his body with his shirt, then it was put on the board and raised on the cart and afterwards it was taken over the river which is called Adzh, or called grief. <...>

His boyars and servants sprinted to cover trying to take refuge with the tsarina of the Horde, some of them were captured, beat unmercifully like evildoers, taken to their camps and put into irons. Princes and boyars themselves were drinking wine in the same discussing what they had charged the blessed prince with. <...>

...The body of the blessed ambassador was taken to Majar with his Boyars...

Then it was taken to Bezdezh. Soon they approached the town...

Then it was taken to Rus' (Ruthenia), to different Russian towns and reached Moscow and it was taken to the church of the great Saviour and monasteries.'

Simeon I Chronicle. Columns 375–396.

'In 6826 (1320) Tatar Gayapchar and a Jewish debtor to Kashin and caused many problems.'

Rogozhsky Chronicler. Column 41.

'In 6833 (1324) great prince Dmitri Mikhailovich set off to the Horde. In the same winter on 21 November, on Philip's day, or on the day of memory of the Presentation of the Blessed Virgin Mary, prince Dmitri Mikhailovich of Tver killed Grand Prince Yuri Danilovich in the Horde, took his body to Moscow and placed it in the church of St. Michael.'

Simeon Chronicle. Column 89.

'On 15 September 6834 (1325) the two princes Dmitri Mikhailovich of Tver and Alexander Novoselsky were killed in the Horde, on the same day and at the same place, on the Kondrakly river.'

Rogozhsky Chronicler. Column 41.

'In the year 6835 (1327)... On the day of Dormition of the Holy Mother of God prince Alexander Mikhailovich killed many Tatars in Tver and other towns and killed many Khopyl merchants; then a powerful Tatar ambassador called Shevkal came from the Horde. Prince Alexander sent his ambassadors to Novgorod, he wanted to flee there but he was not received there properly. In that same year prince Ivan Danilovich sent his governor to Novgorod and headed to the Horde himself. That same winter a Tatar army which was large in number came and captured Tver, Kashin, Novy Torzhok volost, and devastated all the Russian land, only Novgorod was saved by God and St. Sofia. Prince Alexander arrived at Pleskov, Konstantin, his brother, and Vasily headed to Ladoga; the Tatars sent their ambassadors to Novgorod and the local population gave them 2000 silver coins and sent their own ambassadors to voivodes with loads of gifts. Then the Tatars killed Ivan, prince of Ryazan. <...>.'

Novgorod First Chronicle. Column 98.

'In the year 6835 (1327)... That same year a powerful ambassador called Shchelkan came from the Horde to Tver with many Tatars and started committing great unprecedented violence, they wanted to kill prince Alexander and his brother, Shchelkan wanted to become the prince of Tver and appoint other princes in different Russian towns, he also wanted Christians to adopt the Besermyan faith. So the prince mobilised the inhabitants of Tver and they set off to attack Shchelkan saying, 'he wanted bloodshed to occur, so we have to protect them'. When they knew that Alexander and his army had set off to attack them, they came to the fore and started a battle at sunrise and they were fighting all day long and by the evening Alexander had gained a victory and Shchelkan had been defeated. Alexander burnt down the court of his father, so hand his retinue were burnt alive. They won on the day of Dormition of the Mother of God and killed all their Khopyl guests. Ivan Danilovich headed to the Horde and in winter an army, 5 temniks, and prince Ivan Danilovich came to Rus' and captivated Tver and caused much damage to its population; prince Alexander fled to Pskov.'

Novgorod Fourth Chronicle. Column 261.

'In the year 6835 (1327)... That same autumn prince Ivan Danilovich of Moscow came to the Horde. In the same winter an enormous Tatar army, Fedorchuk, Turalyk, Syuga, 5 temniks and voivodes, and prince Ivan Danilovich came to Rus' from the Horde by the order of the tsar and captured Tver and

Kashin, and other towns and volosts, villages and all Tver principedom and devastated them, and it was in profound distress and sorrow because of our numerous sins, Christian blood was shed by the pagan Tatars, many Russian were captured, another part of them were killed with swords and all the rest were shot and killed with different kinds of weapons and delivered onto death in different ways. Prince Alexander fled Tver for Pskov.

<...> In that same year prince Ivan Yaroslavich of Ryazan was killed. Our prince Ivan Danilovich and his Moscow and all the region were saved from the foul Tatars by the mercy of God.

In the year 6836 Grand Prince Ivan Danilovich was Grand Prince of all Rus' and since then there were no wars for forty years and the foreign Tatars stopped waging wars in the Russian lands and treating Christians violently, so they could take a break and rest from the Tatar burden and violence, since then there was calm in the Russian lands'.

Simeon Chronicle. Column 90.

'In the year 6836 (1328) Grand Prince Ivan Danilovich and Konstantin Mikhailovich were on the road and inhabitants of Novgorod sent Fyodor Kolesnitsy to the Horde to the tsar; they were released and Tsar Ozbyak ordered to search for prince Alexander. Prince Ivan sent his ambassadors and the inhabitants of Novgorod sent master Moses and tysyatsky Avraam to Pskov to Prince Alexander ordering him to go to the Horde but he disobeyed. Ivan Danilovich was the Grand Prince and nothing disturbed the Russian land.'

Novgorod Fourth Chronicle. Columns 261–262.

'In the year 6838 (1330)... The foul devil forced the Russian princes to search for prince Alexander and they set out in search of him by the order of foul tsar Ozbyak. Prince Ivan Danilovich came to Novgorod with Tver princes: Konstantin, Vasily, Alexander of Suzdal and mobilized the inhabitants of Novgorod, and they sent their boyar Luka Protasiev and the inhabitants of Novgorod sent master Moses and tysyatsky Abraham to Pskov and said to Alexander, 'Go to the Horde and protect Christians from the foul Tatars'. Alexander replied, 'It is too late, They have already captured Tver, captivated many people, some of them were killed with swords, the others with knives', then he felt sorry for them, headed to the Horde, and added, 'I will die alone for all the Christians'. The inhabitants of Pskov said to him, 'Please, lord, do not go to the Horde. We will die at once if something happens to you'. Prince Ivan and all the princes and inhabitants of Novgorod opposed the Pskov army and stayed at Opok, when metropolitan Theognostus knew that, he cursed them and unchurched them. Then he said to the inhabitants of Pskov, 'My brothers and friends, you won't be cursed and unchurched because of me, I'm leaving your town, my oa-taking by kissing a cross does not concern you' and went to Lithuania. The inhabitants of Pleskov sent ambassadors with petitions to prince Ivan, inhabitants of Novgorod, and to Opoka and became reconciled with that.'

Novgorod Fourth Chronicle. Columns 262–263.

'In the summer of 6848 (1340) <...>

On 29 December of the same year prince Alexander Mikhailovich and his son Fedor were killed in the Horde, tsar Ozbyak invited them there with the help of his flattery, they listened to his flattering speeches and came, so they met their demise there.

In the same winter Tovluby left the Horde, he was set free by the tsar and his army to reach Smolensk, he was accompanied by prince Ivan Korotopoly and came to Pereslavl-Ryazansky. Prince of Pronsk Alexander Mikhailovich headed to the Horde to see the tsar and pass him tributes and he was met by Korotopol, robbed him and took to Pereslavl-Ryazansky where he was killed by his brother Ivan and the arme left Pereslavl for Smolensk. Prince Ivan Danilovich sent the army with Tovluby by the order of the tsar; prince Konstantin Vasilievich of Suzdal, Konstantin of Rostov, Ioann Yaroslavich of Yury, Ioann Drytsky, Fyodor Fominsky, and voivode Alexander Ivanovich, Fedor Onkifovich. The army spent many days at Smolensk, then they retreated but did not capture the town; by the mercy of God and Holy Virgin all the Russian army was safe and sound, nothing had harmed it.'

Novgorod Fourth Chronicle. Column 270.

'In the year 6854 (1346)... An execution was held near an oriental country, in Vornats, Sarai, Astrakhan and other towns: people including Besermyans were dying from starvation, it was hardly possible to bury all of them; God executed them like Egyptians.'

Novgorod Fourth Chronicle. Column 276.

'In the year 6857 (1349) the King of Krakow came and captured Volhynia and much evil was sowed by the peasants converted Christian churches to Latin worship. The inhabitants of Novgorod and the Dvina region opposed the Murmans. Prince Semen sent prince Fyodor Glebovich to the Horde as well as Fedor Shubayevich and called for the Lithuanian princes, Mikhailo and Koriyad, and Simeon Svi-lovsky, Aiksh; they were taken to Moscow by the tsar's ambassador Totouy.'

Novgorod Fourth Chronicle. Columns 279.

No. 2**Letter of Pope Benedict XII to Khan Öz Beg, his wife Taidolu and son Jani Beg in 1340**

In the spiritual realm, Pope Benedict XII (1334–1342) (the Frenchman from Foy Jacques Fournier) was more adept than on the political field. He was poorly versed in the intricacies of diplomacy, tried to get out from under the control of King Philip VI of France (1328–1350) and attempted to come to terms with Ludwig of Bavaria, but the French King via his subjects convinced the Pope that this could lead to heresy and rebellion. Benedict XII tried to organise another crusade against Muslims, but met opposition from Philip VI, who was engaged in a war with England.

Source cited in the publication: The Tale of the Roman Catholic missionary Dominican Julian on the trip to the country of Volga Hungarians made before the year of 1235 and the letters of Pope Benedict XII to Khan Uzbek, his wife Taydolu and son Jani Beg in 1340 ¹// Zapiski Odesskogo obshhestva istorii i drevnostej (Notes of the Odessa Society of History and Antiquities. Odessa), 1863. Pp. 998–1006.

'2. Letter of Pope Benedict XII to Khan Uzbek

Bishop Benedict and his retinue. To His Majesty khan Uzbek, the Emperor of the Tatars, may the current mercy lead you to glory in the future. We received the sons of noble Petrano del Ortho (de Lorto), the former ruler of Kaffa and Albert, his friend practicing Catholicism, messengers of your Majesty, and the gracious son of Helium (Helya) from Hungary, Franciscan, messenger of noble Prince Jani Beg (Gynybeck), your first-born son assigned to us, with joy and respect and we listened to what they tried to suggest on your behalf patiently and discussed it later. The mentioned messengers, describing your greatness, power, as well as the sense of love and respect, you feel about St. Apostle capital, explained to us everything by attaching a nice story that you received our messengers we had sent before to the Chinese Empire (Cathayense) with respect and honour expressing your respect to God, us and the Apostle capital mentioned above, and commanded to give them money and all necessary things humanly and provide them with everything they heed, not poor but even luxurious stuff. Then they added that you favourably fulfilled our requests and exhortations with which we had entrusted your grace with Christians Catholics referring to the Church of Rome, living in your Empire, you exaggerated their generosity and mercy giving them liberty to continue building churches and other religious constructions, and preach the word of God for bishops and religious figures, and administer sacraments according to the custom and rituals of St. Roman Church, mother and teacher of all the faithful. In addition to that when several foul people dared to make an attempt upon your life and besieged you at night in your Palace burning it and after that they tried to charge the Christians mentioned above with this malicious deed, You successfully managed to cop with this danger with the help of God, keeping in mind our requests and inspired by God's wisdom, found this charge slander and calumny and set them at liberty except for three those who are alleged to join evildoers and are said to be punished with them. All that is highly pleasing to God and to us and our capital, loving justice and mercy and approving what is worthy approval enlarges the glory of your name and makes you worthy of obtaining the Divine grace. Indeed, we hope and believe that Divine Providence which does not make mistakes in their prescriptions will inspired you with these and other pious deeds in which you succeed as is well known and send encouragement to your heart so that you could finally know the truth, that is Christ, and being enlightened with the light of Catholicism, you will enter that very flock headed by one and only Shepherd and will not be deprived of eternal pastures of saturation until the end of your life. For this reason we ask your Majesty as representatives of God to think of how short and sometimes unfair human life is and succeed in everything you do to join heavenly hosts for your salvation. This and all other matters relating to your salvation are what we are asking God for. We are rendering thanks to your Majesty for helping Christians Catholics

¹ From the collection of records relating to the history of Hungary stored in the Vatican Archive, published in 1858 in Rome by Augustino Theiner, under the title: *Vetera monumenta historica, Hungariam sacram illustratia, maximam partem nondum edita, ex tabulariis vaticanis deprompta et collecta ac serie chronologica disposita ab Augustino Theiner. Tomus primus ab Honorio pp. III. usque ad. Clementem pp. VI. 1216–1352. Romae, 1859.*

as it was mentioned above and for gifts from you, from your first-born son and the great Empress, your spouse, given us by your messengers and received with gratitude. We are attaching to the requests and exhortations above our desire to see your mercy to the Christian Catholics subordinate to the mentioned Roman Church always grow. In addition, since we learned that there are quarrels and conflicts between you and the officials and citizens of Hungarian and Polish kingdoms at the boundaries of your state which cause murders, devastation, and even more serious risks, we want to ask you to cease these attacks. If you are attacked by some of your opponents, we will do our best with the help of God so that you could be satisfied with the outcome. Avignon, 17 August, the sixth year of high priesthood (1340).

3. Letter of the same Pope to Jani Beg

Bishop Benedict and his retinue. To nobleman, Prince Jani Beg, first-born son of His Majesty Uzbek, Emperor of the Tatars, may the current mercy lead you to glory in the future. We favourably received Helius's son from Hungary, a Franciscan, representative of your Majesty who has been introduced to us recently taking into consideration our respect to you and his honesty and what he was going to say. We listened to that graciously and comprehended it diligently. Although we have already heard of your love given you by the Lord and that you are kindly disposed towards the St. Apostolic capital and the Roman Church, the mother of all faithful Christians and teachers, as well as your mercy to Christian Catholics who are subordinate to the Roman Church living in the Empire of your father for love of God and respect to us and to the Apostolic capital in numerous reports, however the mentioned messenger praising for you these and many other noble deeds told us many pleasant things about you and your virtues God had granted you with. Rejoicing at your virtuous deeds and wishing your salvation and success in everything which can bring you grace in this life and glory of eternal bliss in the future, we respectfully ask for your nobility to get the instructions of Ilya mentioned above, your loving messenger which is beyond doubt taking care of everything you need for your salvation. Please, do not let the the feeling of awe cultivated by the Lord go out, extend your patronage to those Christians and show them your good will so that God himself who is the source of mercy enlightened you with his grace and true faith and directed your actions to make sure that they please him and that they are useful for your salvation. We are rendering thanks again for your gift presented by your messenger mentioned above and for mercy rendered to the mentioned Christians. Given in Avignon, 17 August, in the sixth year.

4. Letter of the same Pope to Uzbek's wife Taidolyu

Bishop Benedict and his retinue. To the worthiest Tsarina Taidolu (Taydolu), Empress of Northern Tartaria, may your current mercy lead to glory in the future. A day or two Ilya from Hungary, Franciscan and noble Petrano del Orto, former ruler of Kaffa, and Albert, his companion, messengers of his Royal tsar of Tatars Emperor Uzbek, your spouse, tried to show us the way you treat Christian Catholics subordinate to the Roman church and living in the country and your readiness to extend patronage and assistance having a profound respect to us and St. Roman church. We listened to the report of the mentioned messengers glorifying your name both because of that and for many other reasons with great pleasure, we are rejoicing and thank God who gave you these feelings, hoping that he does it so that you could finally comprehend and adopt Christ without being deprived of joy of eternal life at the end of this unhappy and unstable life. For this reason we are asking your Majesty to extend your patronage to those Christian Catholics continuing your great deeds and adopting true Catholic faith without which no one can be saved. We promise to say prayers for the mental and bodily salvation of yours, your spouse, your children and children. We are rendering thanks for your mercy provided to the Christians mentioned above and the gift sent on your behalf which we received gratefully showing our respect to you. Given in Avignon, 17 August, in its sixth year.

Yarliqs of the Tatar Khans to Moscow metropolitans

Introduction, source and review cited in the publication: *Yarly'ki tatarskix xanov moskovskim mitropolitam: Kratkoe sobranie* (Yarliqs of the Tatar Khans to Moscow metropolitans: Short collection) // *Pamyatniki russkogo prava*. Ed. 3. / Edited by L. Cherepnin. Moscow, 1955. Pp. 463–491.

'A Short collection of Khan yarliqs is one of the few remaining file sources that depict the system of the Tatar-Mongol Dominion in the Nor–Eastern Rus'... The Golden Horde khans in an effort to ensure the support of the Russian church, gave the Russian clergy benefits that were strictly defined in their feed-in immunity charters—yarliqs. They released clergy from fees in favor of khans and their henchmen.

Although the yarliqs that have reached us originated from the Tatar khans, they also reflected the norms of Russian law in relation to the clergy. The study of yarliqs gives an indication of the diversity of legal norms which had application in Rus'. The yarliqs also show that senior representatives of the Russian Church hierarchy sought to use the patronage of the Tatar Khans in order to preserve their land, wealth and power over the dependent peasants.

The yarliqs provide the characterisation of various forms of fixed property of spiritual feudal lords.

The information about the numerous taxes across Nor–Eastern Rus' (Ruthenia) are of great value for studying the structure of financial relations in the Russian state and are reflected in the yarliqs.

A part of the khans' yarliqs, that are stored in the archives of the Russian metropolitans was translated from the Uighur language into Russian and with an epilogue. That is how the short collection of yarliqs appeared. The high quality translation of documents testifies to the development of practical diplomacy in Rus' in the 14–15th centuries. The thirteen lists of yarliq collections that reached us are in the form several types of two recensions. The first recension is a complete one consisting of three types: the Trinity I preserved in a single list of the middle of the 15th century (on it we print the yarliqs); Trinity II preserved in two lists (one list of Trinity II refers to the 1470–s, the other list—Ovchinnikovsky—to the 1670s.); the Lvov one (four lists).

The text of the complete recension on the Lvov list was included in the Lvov Chronicle, where it was put no later than the middle of the 16th century. The second recension, the incomplete one (the last yarliq and conclusion are absent from it) only in some cases provides a better manuscript of the collection to be able to read it, which is the result of the work of the later copyists. It consists of two types: the Voskresensky (put in the appendix to the chronicle collection in the Voskresensky and Archive I lists) and the Dated (in it the dates of the yarliqs are marked). The Dated type is comprised of the lists from the Archive II and Dubrovsky chronicle collection of the 16th century as well as the Synodal and Uvarov lists from the metropolitan collection of the 16th century.

In the 1540s a lengthy collection of yarliqs began to be compiled. These represented the later processing of texts from the short anthology which included the false yarliq of Khan Uzbek to Metropolitan Peter, based upon the model of Khan Mengu-Timir's yarliq.

The drafters of the lengthy meeting belonged to the Russian church authorities, pursued the problem of falsifying historical documents to prove the inviolability of the rights of the clergy to its fixed property and on the lack of jurisdiction over the clergy by secular authorities. This collection has been preserved in two forms: incomplete (without the 'yarliq' of Khan Uzbek) and complete (with 'yarliq. of Khan Uzbek). The extensive collection has not been printed in this collection.

YARLIQS² WERE GIVEN BY HORDE KHANS TO THE METROPOLITANS OF KIEV
AND ALL RUS' TO RULE CHURCHES

1. [1379]

TYULYAK'S YARLIQ WAS GIVEN TO METROPOLITAN MIKHAIL
THE FIRST YARLIQ WAS GIVEN BY TSAR TYULYAK TO METROPOLITAN MIKHAIL

² For a historical and legal review of the 'Yarliqs', see below. Textological comment of 'Yarliqs' is omitted.—
Editor's note

By the mercy of God Tulyak's order according to the testaments of grandfathers and great grandfathers led by Mamai and addressed to ulus princes and commanders, volost officials, and princes, and scribes, and tamozhniks, and poberezhniks, and visiting ambassadors, and sokolniks, and pardusnik, and buralozhnik, and zastavshhik, and lodeishhik, and many other categories of people.

At first priests said prayers for Chinggis Khan and then for tsars Aziz and Berdebek and received khan yarliqs for that because it was necessary, no matter what taxes and tributes were. Right now according to the yarliqs of predecessors we decided to grant metropolitan Mikhail the corresponding yarliq. Since he was appointed in Vladimir, he has said prayers for us, all our clan and tribe. Thus, we decided that he shouldn't pay tribute in any form; no money, podvoda, foodstuff, drinks, no gifts or present should be asked from him. They are not obliged to deliver a saddled horse to a rider either. No one is allowed to enter churches, clerical waters, lands, vegetable gardens, vineyards, mills and plunder them. If someone dares to take something there, he will have to get it back immediately. No one is allowed to destroy churches. If someone dares to destroy them, he will face consequences and die.

And you, Metropolitan Mikhail, pray that if you are granted those Church houses or lands or waters and in the gardens and vineyards or over the religious people, –you are free to set duties on what is at your disposal. Or it will be made through theft or lie or some evil deed and you will not be able to see it, but you will do as God orders. And will pray to God for us, and you will be as before, but we will not say about this.

Having made this decision, we gave these yarliqs with a scarlet tamga in acknowledgement in the sheep year of daryka on the 10th day of sylgat month when the Horde was roaming not far from Velkoluz. It was written on

2. [26 September 1347]

YARLIQ OF TAIDULA TO THE RUSSIAN PRINCES

2 TSARINA TAIDULA GAVE A YARLIQ TO METROPOLITAN IOAN

Taidul's word to taida. Metropolitan Ioan has been praying for us since the very first kind days. He should not pay taxes or tribute as he prays for us. Everyone must be aware of that. If it comes to any taxes or problems in other towns, listen to them carefully and then judge them. Or if there are complaints about priests, satisfy them yourself so that they prayed for us.

You, Russian princes, led by Semyon have changed nothing, you are doing the same things as your predecessors.

So we gave him the charter with a nishan of 5 August in the year of the pig. The Horde was at Zheltaya Trost'. It was written on

3. [1 August 1267]

YARLIQ OF MENGU-TIMUR

3 YARLIQ WAS GIVEN BY TSAR MENGU-TIMUR

With the power of highest God, by the will of the Highest Trinity Mengu-Timur's order is addressed to ulus baskaks, and princes, and danshiik, and scribes, and visiting ambassadors, and falconer, and pardusnik. Chinggis Khan is merciful to them because they are saying prayers for us and our health from the depth of their hearts, so they should not be touched. Saying that, the last tsar gave yarliqs to priests and monks. They should be given everything they ask for: popluzhnoe, warriors, but do into give a tamga. We started giving them charters for saying prayers. One has no right to enter their secular lands, waters, gardens, vineyards, mills, zimovishhe, letovishhe. If an offender is caught, he must give back that which he has stolen. Nobody has right to touch holy books and other relics. And those who will abuse their religion will have to apologise and keep silence. All family members of all clerics must have the same rights. If tribute is taken from them, it must be returned to them. According to this charter, we granted the priest for saying prayers for us diligently.

And you do not have the heart to pray for us-God will put that sin on you. Saying this. It is also possible to accept the laity under patronage in case they pray to God. Saying that we gave the charter to the

Metropolitan. This charter seen and heard by priests and monks confirms that baskaks, princely scribes, popluzhniks, tamozhniks are not allowed to take taxes from them, in case they disobey, they will have to present their apologies and die by the order of yasa.

The yarliq was given in the year of hare on 4 September when our camps were in Tala. Written on

4. [4 February 1351]

YARLIQ OF TAIDULA TO METROPOLITAN THEOGNOST

4 CHENIBEK'S YARLIQ WAS GIVEN TO METROPOLITAN THEOGNOST BY TAIDULA

According to Chenibek's yarliq, Taidula's order is addressed to ulus princes and volost and town and village officials and collectots of tamga, and tax collectors from ships coming to the shore and visiting ambassadors and many other categories of people. From the old good times popes and all the priesthood have been praying for us, so they do not know any taxes and duties—they pray for our clan and the whole tribe in front of the Lord. Saying that the tsar received metropolitan Theognostuts and gave him a yarliq with a red tamga. We gave him this charter on the basis of yarliqs with a nishan. Since he was appointed in Vladimir, he has said prayers for Zdenibek, us and our children. He does not have to pay tribute in any form: food supply, presents, his people, podvoda, zapros cannot be accepted from him. Nobody is allowed to touch his lands, waters, vegetable gardens, vineyards, mills. If someone harm them, he will be punished and killed. And you, Metropolitan Theognistus, let people know that you were granted. If someone enter your gardens, vineyards, waters, lands, you know what to do. Do not forget to say prayers for us. Saing that that we passed this nishan charter to be acknowledged. On the 8th day of aram month the Horde was roaming in Sarai. Written on

The complaint was lodged by Taobogga, Akkhoch's mukhtar and Uchugui's karapchii. Written on

5. [November 1357]

BERDIBEK'S YARLIQ GIVEN TO METROPOLITAN ALEKSEY

5 THE YARLIQ WAS GIVEN TO METROPOLITAN ALEKSEY BY TSAR BERDIBEK

By the mercy of God's order of Berdibek's grandfather and great-grandfather and Tatar ulus prince Mualbuga's message is addressed to volost officials, and princes, and copyists, and custom officers, and border guards, and foreign ambassadors, and porters, and supervisors, and many other categories of people.

Priests and different religious figures said prayers for Chinggis Khan and next khans, our fathers, and received khan yarliqs for that because it was necessary, no matter what taxes and tributes were. They were granted with yarliqs saying these words. Now we decided to grant metropolitan Alexey⁴³ with the corresponding yarliq as well. Since he was appointed in Vladimir, he has said prayers for us, all our clan and tribe. Thus, we decided that he shouldn't pay tribute in any form; no money, taxes, foodstuff, drinks, presents should be accepted from him. No one is allowed to enter churches, clerical waters, lands, vegetable gardens, vineyards, mills and plunder them. If someone dares to take something there, he will have to get it back immediately. No one is allowed to destroy churches. If someone dares to destroy them, he will die as a sinner. And you, Metropolitan Aleksey, pray that if you are granted with those Church houses or lands or waters and the vegetable gardens and vineyards or over the religious people, that through taxes it will be made-and on you. Or it will be made through theft or lie or some evil deed and you will not be able to see it, but you will do as God orders. And God will pray for us, and you will be as before, but we will not say anything about this.

When they decided to act this way, they gave a paiza and a red tamga to be confirmed on the 10th day of the growing moon of tigiguys year when the Horde was not far from Kaonga. The petition was written by Temir, emir of copyists, and it was represented by head princes.

6. [11 February 1354]

THE YARLIQ GIVEN TO METROPOLITAN ALEKSEY BY TAIDULA

THE SIXTH YARLIQ WAS GIVEN BY TSARINA TAIDULA
TO METROPOLITAN ALEKSEY TO GUARANTEE HIS INVIOABILITY IF HE DECIDED TO
GO TO CONSTANTINOPLE AND SEE THE TSAR DCHENEBEK

According to Dchenibek's yarliq, Taidul's speech was addressed to temniks, tysyatskies, princes, sotniks, dessiatniks, and volostels, and road inspectors, and princes, and ambassadors, and many other people.

When this metropolitan Aleksey goes to Constantinople, we prescribe not to arrest him and not to cause any constraint wherever he was. Wherever he stays, no one has to arrest either himself or his servants and horses as he prays for Jani Beg, his children and us. That is our will. The powers that be who employ violence towards him will be charged on the basis of the great law.

The charter was given with a nishan. It was written in the year of horse in the month of aram on the second day of the moon in decrement when the camp was in Gülüstan. The petition of Metropolitan Aleksey was presented by Timur-hoja.

7. CONCLUSION OF THE COMPILER OF THE COLLECTION

THESE AND MANY OTHER YARLIQS WERE PASSED TO THE HOLY CHURCH
BY GODLESS TSARS AND REPRESENT A STORY OF THE METROPOLITAN
AND HIS POWER

All the heads of Russian Orthodox church got corresponding yarliqs from all the Tatar khans except for Batu. One should not stoop to be in the good graces of the Tatars. You, Orthodox princes and boyars, ought to protect the possessions and privileges of the church from those barbarians not to be disgraced. As the Gospel says, one day or another they will be brought before the court and will be responsible for their crimes and recant publicly.

There are also yarliqs of previous tsars in the metropolitan office but it is impossible to translate them as the language they are written is in unfamiliar to us. We have suffered a great deal from these godless people who are blinded by the lack of knowledge of Christian laws and encroach on church property.

Lenin State Library, Troitsk, No. 765, sheets 174–180.

Historical legislative review

The first yarliq

Applied to various Tatar officials, the yarliq exempts the servants of the Russian Church from all kinds of tribute and obligations in favour of the khan's authority. This exemption is conditioned by the fact, that the 'priestly rank' held a church service for Tatar khans. In addition, the yarliq consolidates inviolability and immunity rights of landownership of Russian spiritual fiefs. The yarliq of Tulyak (Tulunbek) is based on the no longer extant Toqta Khan yarliq, issued to the Metropolitan Peter. It was dated back to 'seven hundred and eighth year of Dhu al-Qi'dah on the tenth day of waxing crescent', that is 12 April 1308. It was the time when Peter was consecrated as Metropolitan (according to the 'Life of Metropolitan Peter', he died in December of 1326, having sat in the Metropolitan's chair for 18 years and 6 months). M. Priselkov believes that the Toqta yarliq was confirmed by his successor Uzbek in 1313 (upon his accession to the throne), when Metropolitan Peter visited the Horde (Complete Collection of Russian Chronicles, vol. 25, p. 160), and again around 1333, when Metropolitan Theognostus visited the Horde as well. Later, the Toqta yarliq was confirmed by Berdi Beg and Aziz Khan ('Tsar Aziz and Berdi Beg afterwards'). The Berdi Beg yarliq of 1357 has survived (see the fifth yarliq), whereas the Aziz yarliq (ca. 1365) is no longer extant. Afterwards, finally, Metropolitan Mikhail was issued the commented yarliq. This yarliq is the latest out of all the extant khan's yarliqs, granted to Russian Metropolitans. The date is unclear: the 'sheep year'. In this case, converted from

the Mongol chronology, it means 1379. In 1379, Mikhail received the Metropolitan's chair in Rus' (Ruthenia).

Several comments should be made concerning the dates of yarliqs noted in titles (in so-called Dated form). The Dated form of incomplete recension was obtained as a result of the collation of yarliq texts with the information from the chronicles. The chronicle edition of this type of yarliq is proven by dates, denoted in their titles (copies C, A II). The author of the Dated form supposed that he is dealing with a collection of chronologically set yarliqs (according to chronicle style of material narration) and tried to determine the date of their issuance, relying on the data of the chronicles. He was guided by the names of Metropolitans mentioned in the yarliq texts. The chronicles of 6862 note: 'Prince Ivan Ivanovich left the Horde and took the throne in Vladimir. The same year Alexius was consecrated as Metropolitan, and in the autumn he came out to Rus' (Ruthenia) (Complete Collection of Russian Chronicles, vol. 26, p. 121; vol. 26, p. 179). According to the context, the author of the chronological order of Short collection of yarliqs assumed that Alexius left the Horde as well, which led to the date 6864, as a date of the last in his collection, the fifth yarliq to Metropolitan Alexius. The chronicles of 6850 (perhaps, in some of the copies of 6851 as well) say: 'The same winter Metropolitan Theognostus left the Horde'³; hence, the date 6851, the date of issuance of the forth yarliq to Theognostus.

The preceding third yarliq in the texts of the Dated form is connected to Metropolitan Peter. The author of the collection dated it to 6816, that is the first year of Peter in the Russian metropolitanate. The second yarliq refers to Metropolitan John. In the chronicles a Metropolitan with this name is mentioned in 6673. This same date could be set before the yarliq as well⁴.

The first yarliq of the collection refers to Metropolitan Mikhail. According to the reasoning of the dating author, he was supposed to be Metropolitan before Ioann, and, indeed, the chronicles of 6642 (1134) mention such a Metropolitan. Hence, the last date of the collection is also incorrect, as well as the rest of them.

By the mercy of God's order (translation)—By the power of the Eternal Sky; by the will of the Eternal Sky.

Of grandfathers and great grandfathers—according to testaments of grandfathers and great grandfathers.

With thought (translation)—lead by.

ulus (translation)—Great Ulus.

'Ratnym knyazem'—Begs, Commanders (cf. 'polchnye knyaz'ya' - regimental princes from the third yarliq).

Volost officials—volost official (daruga)—the supreme chief of all income to the khan's treasury. He also managed the census, tribute collection, and delivery. Volost darugas are his assistants and assigned to volosts. The Mengli Giray yarliq (1453) mentions darugabegs, the Temür Qutlugh yarliq mentions 'darugas of internal settlements'; the forth yarliq—'city', 'volost' and 'settlement' darugas; the sixth yarliq—'volostel' and enclosed land darugas'. In the 13–14th centuries, the Horde had a special 'Moscow daruga', 'Tver daruga', with whom the princes of separate principalities met to discuss the payment of tribute.

Princes—Begs (Noyans, Emirs), representatives of the Tatar-Mongol feudal elite.

Scribes, copyists—bitikchi (scribes), Divan (chancellery) secretaries. Their head were bitikchi of the Great Divan (cf. Divan bitikchi of Great Tamga in the Mengli Giray yarliq of 1453, cf. 'Palace copyists'; in the Temür Qutlugh yarliq; cf. 'Prince copyists' in the third yarliq).

Custom officers—apparently, collectors of tamga, trade taxes, cf. 'tamozhennyj' (customs) of the Temür Qutlugh yarliq and 'tamgovshhiki' (tamga officers) of the Mengli Giray yarliq.

Poberezhnik—tax collectors from ships coming to the shore. 'Poberezhnoye' (of shore)—(see in Letters patent of the latter half of the 14–first half of the 15th centuries; Acts of the Archaeographic

³ Complete Collection of Russian Chronicles, v. XXIV, p. 128; cf. v. XXV, p. 175.

⁴ Nevertheless, the date of 6670 (1162) was specified in the surviving lists although the last letter-number "r"[g] obviously could have been simply omitted.

Expedition, vol. 1, No. 17, 21, 42; SHA: Supplements to the Historical Acts Collected and Issued by the Archaeographical Committee, vol. 1, No. 8,9).

Visiting ambassador—cf. in the third yarliq 'arriving ambassador', in the Temür Qutlugh yarliq 'visiting and arriving ambassadors'.

Sokolnik—falconer, the servant in charge of falcons; cf. also in the Temür Qutlugh yarliq and 'sokol-nich`i' in the Mengli Giray yarliq.

Pardusnik—'barsnik', hunting servants in charge of snow leopards.

Buralozhnik—according to Berezin, hunting servants, 'volchars', from Tatar—buruluk, wolf-carer. Perhaps, it is better to see the term as misspelled 'berlozhnik'. It is a poor translation of one of the Mongol official titles, tutkaul (by the way, it means 'lair of the beast'); cf. the closeness of bukauls to tutkauls, reflected in other yarliqs.

Zastavshchik—khan's officials, collecting travel taxes at the pikes; cf. 'border guards' (tutkaulov) in the Mengli Giray yarliq.

Lodeishhik—rowers in rowboats; cf. 'lodochniki' in the Temür Qutlugh yarliq.

For Chinggis Khan (translation)—before Chinggis Khan.

Right now (translation)—right now.

According to the yarliqs of predecessors (translation)—according to previous yarliqs.

Tribute—tribute (dan`) paid to the Tatar treasury (otherwise known as the Horde silver, proportionate to the property of a tax payer.) Sometimes, this tribute was called desyatina (the First Novgorod chronicles of 1257): it was determined on the basis of property (firstly, the land) census of the tax payers.

Podvoda—a duty to deliver (lead) the saddled horse to the rider. Cf. the Temür Qutlugh yarliq: 'podvod is not taken from their livestock'; in the Tokhtamysh yarliq of 1382—'podvod is not to be forced or to be rushed'. 'Podvoda' as service duty is mentioned in the letters patent of 1362–1374; SHA: Supplements to the Historical Acts Collected and Issued by the Archaeographical Committee, vol. 1, No. 8.

'Korm' (foodstuff)—food supply.

Zapros—extraordinary tribute. Cf. in the Trinity Chronicle of 1357: 'That same year the ambassador from the Horde arrived...after the zapros to all Russian princes'. Cf. the First Novgorod Chronicle of 1339: 'the tsar zapros, that the Tsar requested from me'.

Dar—in this case a gift—a semi-voluntary offering to khan officials.

Pochest'ya—see the charter of Rostislav Smolensky of 1150.

Vineyards—in Rus' vineyard could mean a garden in general (the Temür Qutlugh yarliq mentions 'duty from vineyards').

'V gresex budut' (face consequence) (translation)—those that will face consequences.

In acknowledgement (translation)—in acknowledgement.

With a scarlet tamga—with a red stamp.

Daryka—tarikha, chronology; cf. the Tokhtamysh yarliq of 1393. For conversion of yarliq dates to modern chronology see L. Cherepnin, 'Russian Chronology', Moscow, 1944, pp. 82–88.

The second yarliq

Along with the exemption of Russian clergy from exactions in favour of Tatar khans, the Taidula yarliq contains a message for Russian princess with a demand to not infringe upon the 'tribute' in their relations with the Metropolitan.

The beginning of the yarliq is ruined: there was no Metropolitan Ioann in Rus' (Ruthenia) in 1347 (the yarliq was issued on 26 September, 1347—in the eighth month of the pig year on the fifth day of waning gibbous). In 1347, the Moscow Prince, Semeon Ivanovich, visited Jani Beg in the Horde and returned in 1348 'with a granting' (Complete Collection of Russian Chronicles, vol. 25, p. 177). Apparently, the yarliq must refer to this trip. In general, the yarliq confirms the immunity of clergy from jurisdiction of the Princely court; cf. statutory charter of the treaty of Metropolitan Cyprian of 1404.

Since the very first kind days (translation)—'perhaps, from the time of the former Sain long ago' (Butu Khan's nickname 'Sain' meant 'kind').

Или накы—если же [if however].

Russian princes, led by Semyon—the yarliq applies to all the Russian princes, the head of whom is considered to be the Moscow Prince, Semyon Ivanovich.

Vsemi mitropolity—with all the Metropolitans.

With a nishan—with a stamp.

At Zheltaya Trost'—in Sary Kamysh (near modern day Kamyshevo).

The yarliq is given on behalf of the Khan's wife, Taidula. The 14th century historian, Al-Omari, wrote about Mongols, that 'their wives take part in government affairs along with them (husbands); the orders come from (both of) them' (V. Tizenhauzen, Collection of materials, vol. 1, Saint Petersburg, 1884, p. 229).

The third yarliq

The yarliq of Mengu-Timur is the earliest of the yarliqs presented in the short collection. It was apparently issued on 1 August 1267: 'the first autumn month of the hare year, on the forth day of Waning gibbous'. Mengu-Timur took the Khan throne in 1266. The chronicles of 6774 (1266) say: 'the Tatar Tsar Berkai died, and Besermen were fast weakened from violence by Christians' (Complete Collection of Russian Chronicles, vol. 25, p. 146).

With the power of Highest God, by the will of the Highest Trinity (translation)—by the power of the Eternal Sky, by the will of the Eternal Sky.

Ulus (Rus. 'lyud'sky'm')—from 'ulus'—people. The original text of the yarliq stated: 'Velikogo ulusa' (of the Great ulus).

Baskaks—Tatar-Mongol officials, responsible for the service of internal 'security' in the subject countries. (A. Nasonov). They supported Mongol tribute collectors, scribes, 'chislennik' with their armed detachments. The people's movements of the 20s of the 14th century in Nor-Eastern Rus' (Ruthenia) forced the Tatar-Mongols to abolish the baskak (darughatchi) system. Therefore, baskaks (darughatchi) are not mentioned in other yarliqs (the 14th century).

Danshhik—in this case, collectors of the Horde tribute. Due to the abolishment of the baskak system in Rus' (Ruthenia), the tribute collection was assigned to Russian princes, therefore, danshhiks are not mentioned in the yarliqs of the 14th century.

He заммають—не трогают [(they) do not touch].

Popluzhnoe (from 'plug'—'plough')—a tribute, charged from a plough, 'ral'. 'Poralskoe srebro' is mentioned in the will and testament of Clemens of 1270; 'poralnoe' is mentioned in a Letters patent of 1477; cf. 'pososhnoe' (from 'posokh'—'stave') in the 15th century.

Warrior—the delivery of recruits during military operations.

Mills—the first mention of mills in Rus' (Ruthenia).

Zimovishhe, letovishhe (from 'zima'—'winter', 'leto'—'summer')—winter and summer encampments (mechanically transmitted in the yarliq, intended for the Russian clergy). Cf. Laurentian Chronicle of 6707.

Мастери—ремесленники [craftsmen].

Извиниться—повиниться, будет обвинен [to confess, to accept charges]; cf. Art. 4 of the agreement of 1229.

Treated in the same way—the same benefit.

Princely scribes—see scribes in the commentary to the first yarliq.

Popluzhnik—a tribute collector (see above).

Yaza—meaning 'yasa' of Chinggis Khan.

Tala—steppe, plain.

L. Cherepnin compares the yarliq to Article 12 of the statutory charter of Metropolitan Cyprian of 1404: 'Although popovich (pope) will be assigned to my service (of the Grand Prince), if he wants to become a pope or a dyakon, he is free to do that. Whereas popovich, who lives with his father, who eats the food of his fathers, is mitropolich. The popovich, living separately and away from my father and eating the food of his own, those are mine, of Prince Grand' (see above).

The forth yarliq

On the 8th day of aram month—in this case, 4 February 1351.

According to M. Priselkov, the charter is based on the Jani Beg yarliq ('on the Chenibek yarliq'). According to the chronicles, Jani Beg became Khan in 1342 (Complete Collection of Russian Chronicles, vol. 25, p. 73), when, as noted by M. Priselkov, he could have issued his yarliq. M. Priselkov assumes, based upon the Taidula charter, that the Jani Beg yarliq was not as beneficial, as the Toqta yarliq or of other khans. In the chronicles Jani Beg is characterised differently: 'the kind Tsar Chzhanibek has died' (Complete Collection of Russian Chronicles, vol. 1, p. 180). But at the same time, the 6850 (1342) chronicles narrate the trip of Theognostus to the Horde, where the Metropolitan 'suffered a great deal in the Horde, as the Tsar took him and tortured, and demanded: "where is the yearly tribute?" But he did not give up and bribed him with 600 rubles' (Ibid., p. 174). Therefore, the Jani Beg yarliq does not contain exemption of church people from tribute and, at the same time, references to orders of Chinggis Khan and his heirs, there is no more a ban of billeting in church houses, a right of no appeal for the Metropolitan decisions before the khan authority (cf. different in the first and fifth yarliqs).

If someone harm them (translation)—if one runs riot.

He will be punished and killed (translation)—and he will be scared, or be dead.

Nishan charter (translation)—yarliq.

The complaint was lodged (translation)—but reported (reported a petition).

Mukhtar (translation)—foreman.

Karapchii (translation)—karachi—supervisor, confidant of the Khan.

The fifth yarliq

The Berdi Beg yarliq, like the Tyulyak yarliq of 1379, dates back the Toqta Khan yarliq to Metropolitan Peter of 12 April 1308: 'seven hundred and eighth year of Dhu al-Qi'dah on the ninth day of the Waxing crescent'. The phrase 'as sat in Volodimer' referred to Peter, not to Alexius (the latter had been sat on the Metropolitan's chair for three years by the time of the yarliq issuance, whereas Peter had just received the appointment).

Tigiguys on the 10th day of the growing moon—the tenth month of the chicken year (from 'tekhiya'—chicken), that is in November, 1357. According to M. Priselkov, at this time Berdi Beg confirmed the old, beneficial version of the khan's yarliqs, having renounced the version of his father and his predecessor on the khan's throne, Jani Beg. This turn in khan's politics was encouraged, according to M. Priselkov, by Tsarina Taidula's 'healing' by Metropolitan Alexius in the Horde that same year (cf. Complete Collection of Russian Chronicles, vol. 25, p. 180).

The fifth yarliq is quite similar to the first one. Only the names of khans are new (Berbi Beg instead of Tulyak; uncle Mualbugin instead of Mamaev; 'our fathers' instead of Aziz and Berdi Beg'; Alexius instead of Michael; addition of Mualboga and further to the end), date and place of yarliq drafting ('in Kaong' instead of Vekoluz on the river; 'tigiguya leta desyatogo mesyaca' (on the tenth month of the chicken year) instead of 'ovech'a leta daryka' (the sheep year). Other differences in reading are clearly due to the specifics of interpretation. The following is absent: 'Pred' ('Chinggis Tsar'); 'v rod i rod' ('to family and family), 'ni darov' (no gifts), 'domekh'. The following is added: 'ne yemlyut u nikh' (they are not charged), 'i ves' vash' popov'skyi chin' (and your entire pope rite); 'baisu'. The following is recited differently: 'i posledniy' (and the last one) instead of 'a posle togo' (and after that); 'tako ml'vya' (that was said) is given in the yarliqs instead of 'tako yesmy vzmolvili' (they pronounced); 'da ne li inoye chto uvedav' (have seen the other thing) instead of 'otvedav' (having tried); 'pr''vykh tsarei yarlyki' (yarliqs of the first tsars) instead of 'paki pr''vykh yarlykov'; 'tvorit' (makes a prayer) instead of 'vz''daet' (honours), etc.

Next khans—tsars, khans, succeeding Chinggis Khan.

Силы над ними не творят—не творят над ними насилия [(they) impose no coercion on them].

Baisa—paidze, tablet (cast iron, silver, gold) with an inscription, replacing travelling charter for officials. Baisa provided its owner with the right to a means of transportation, billet and food while travelling.

Not far from Kaonga—near Kang (in the former Astrakhan guberniya).

Kutlugbulai—in 1387 Kutlubuga renewed a trade agreement with the Genoese. In 1382 a jarlig of Tokhtamysh Bey-Khodzha was assigned for his name as the Crimean ruler. Around 1381 he was sent by Tokhtamysh to the Duke of Lithuania Jogaila (see Tokhtamysh jarlig of 1393). However, it is also known about Katlug-Buga, the son of the Akh Horde leader Urus Khan, who was killed around 1374-1375.

Myur' bakshii (*emir of copyists*)—the chief of scribes.

The sixth yarliq

After May of 1353, Alexius made his way to Tsargrad (Constantinople) for consecration as Metropolitan. Supposedly, he received the yarliq on 11 February 1354 from Taidula. This yarliq ensured him the unhindered passage to Tsargrad ('if he goes to Tsargrad'). In the same year of 1354, in Tsargrad, Alexius was consecrated as Metropolitan and set off to Rus' (Ruthenia) in autumn (Complete Collection of Russian Chronicles, vol. 15, p. 179). So, in the Taidula travelling voucher Alexius is named Metropolitan ('Metropolitan Alexii').

To temniks, tysyatskies, princes, sotniks, dessiatniks—to Tatar-Mongol military commanders: beg-temniks—chiefs of tumens (detachments of 10,000 people), beg-thousandmen (tysyatskies)—of 1000 person detachments, hundredmen (sotniks)—leaders of the 100 person detachments, tenmen (dessiatniks)—leaders of the 10 person detachments.

Pak silu uchinit'—*if once employ violence, using force.*

Year of horse in the month of aram on the second day of the moon—11 February 1354. Aram is the first month of the year for the Uighur (Uyghurs) (see the tables of Ulugh Beg).

In Gülistan—according to V. Trutovsky, Gülistan was the small capital of the Golden Horde khans, the remains of which are in the Selitryannoye archaeological site of the former Astrakhan guberniya, 220 versts from the Sarai ruins. According to N. Veselovsky, it is a palace near Sarai.

Conclusion

Since Sain—Since the time of Batu Khan.

You, Orthodox princes and boyars—the compilation of a short yarliq collection is aimed at the princes and boyars urging them to protect the wealth and privileges of the Church. This appeal does not mention the Grand Princes, which means the collection most probably dates back to the late 14th century.

In the archive of the metropolitanate—it is unclear whether this refers to the Moscow or Vladimir archive. The latter is more likely, since later (since the end of the 15th century) the Moscow metropolitan archive did not contain any yarliqs: copy books and log books of the Moscow Metropolitans do not mention them: same is for other official documents of that time (yarliqs are mentioned in the 'reply' of Metropolitan Simon of 1503 about the monastery agriculture—the latest addition).

He възмогохом привести—не смог привести [(he) failed to bring].

The Yarliq from Mengu Timur to Prince Yaroslav Yaroslavich

The yarliq of Mengu-Timur, Khan of the Ulus of Jochi, to the Grand Prince of Vladimir, Yaroslav Yaroslavich, containing assurance of safe passage for German guests through his land. The suggested source has quite a significant meaning for study of the Golden Horde. The small number of Jochi act materials in general, especially at the early stages of its consolidation and development, in particular, makes this document even more valuable. The source was found in the Riga hall of records and published for the first time in 1868 by K. Napiersky. The document is not dated, the time of its issuance might be during the period between 1266 and the winter of 1271/1272, that is from the moment Khan Mengu-Timur came to power in Ulus Jochi up until the death of the Grand Prince of Vladimir, Yaroslav Yaroslavich. The yarliq was most likely issued in 1270, as indicated by the following text of the charter of the treaty between Novgorod and Prince Yaroslav Yaroslavich: 'Our guest can stay in Suzdal lands without restrictions, according to the Tsar's charter' [Gramoty, 1949, pp. 11–13]. The overleaf of the charter of treaty says: 'Ambassadors, Chevgu and Baishi, were sent by Tsar Mengu-Timur to give Yaroslav the charter' [Ibid].

This yarliq of Mengu-Timur (as well as his yarliq for the Kiev Metropolitan, Kirill) has been preserved only in Russian translation. The document is very informative, its content is incommensurable to its wordage. The value of the suggested source also lies in the fact that the scribe had essentially combined two acts in one document. Thus, the source can be divided into two parts: the first one being the Mengu-Timur yarliq itself and the second one the safe-conduct charter of Prince Yaroslav. The brevity of the first part allows us to assume, that such a cut was made by the scribe himself. The compiler had left the yarliq of the Golden Horde rules just as a brief order to his vassal, who, in his turn, informed his direct subjects. It is interesting that the scribe focused more on the decree of Prince Yaroslav, by which he emphasised the rights and powers of the local ruler, but marked his dependence on the Khan of Ulus Jochi. The protection yarliq of Mengu-Timur Khan is quite short and laconic. It was most likely the work of the compiler, who tried to just give the subject matter of the document, while keeping within its general structure. At least here we can separate the initial record, typical of act materials of the Golden Horde and Chinggis Khan in general. In our case, one of the main aspects, proving the Golden Horde origin of the analysed document, is intitutionation. A stand-out feature is the addresser, 'The word of Mengu-Timur', typical for all the Golden Horde yarliqs. The inscription or addressee does not match the known paper form of the Golden Horde yarliqs, which is most likely the result of the scribe's cut. The main part of the yarliq is represented only with an order ('open the path for the German guest to your volost'). As one can see, the main part was given by the scribe only in a general sense. Other components of the abstract paper form were dropped completely. Thus, based on the brief structural analysis of the first part of the considered document, one can come to some conclusions concerning the authenticity of the Mengu-Timur yarliq to Prince Yaroslav Yaroslavich.

The source cited by the publication: Des Fürsten Jaroslaw Jaroslawitsch mit Bewilligung Mengu Temir's, des Chans der (1266–72) goldenen Horde, ertheiltes Sichergeleit für die rigischen und andre (fremde) Gäste durch sein Gebiet. (Prince Yaroslav Yaroslavich with the authorisation of Mengu Temir, the Khan of the Golden Horde (1266–72), command of safe passage for Rigans and other (foreign) guests through his territory.) The source and notes are quoted from the following publication: Kniga Marko Polo (The Book of Marco Polo) / Translated from the Old French text by I. Minaev. Edited and opening article by I. Magidovich.—Moscow, 1956.—Pp. 227–343.

CHAPTER CCXX

Of the Lords of the Tatars of the West

The first tsar of the Tatars of the West was Sain, who was a very great and powerful king. He conquered Russia, and Comania, and Alania, and Lac, and Mengiar, and Zic, and Gucia and Gazaria¹. All these provinces were conquered by king Sain. Before this conquest, they were all Comanians [Kipchaks], but they were not under one government; and through their want of union they lost their lands, and were dispersed into different parts of the world; and those who remained were all in a state of serfdom of King Sain. After King Sain reigned King Patu [Batu], and after him King Berca [Berke], next king Mungletemur [Mengu-Timur], then King Totamongur [Tuda Mengu], and lastly Toctai [Toqta], who now reigns².

Having thus given you a list of the kings of the Tatars of the West, we will tell you of a great battle that fell out between Alau [Hulagu], the Tsar of the East, and Berca [Berke], the Tsar of the West, as well as the cause of the battle, and its result.

CHAPTER CCXXI

*Of the War between Alau and Berca [Hulagu and Berke]
and the Battle They Thought*

In the year 1261 [of Christ's incarnation] there arose a great quarrel between king Alau, Tsar of the Tatars of the East, and Berca, Tsar of the Tatars of the West, on account of a province which bordered on each of their territories, which both claimed, and each was too proud to yield it to the other¹. They mutually defied each other, each declaring that he would go and take it, and he would see who dared hinder him.

Six months after the call each gathered up to three hundred thousand horsemen, all well armed according to their custom with everything needed for war. When everything was prepared, Alau, the Tsar of the East, went on campaign with all of his men. They rode many days without meeting any adventures and arrived in the large plain situated between the Iron Gates and the Sea of Sarain², in which they encamped in good order. I tell you truthfully there was many a rich pavilion and tent³. And there Alau said he would wait to see what course Berka would follow, as this spot was on the border of the two kingdoms.

[Let us leave Alau and his people and return to Berca and his army.]

CHAPTER CCXXII

How Berca [Berke] and His Host Went to Meet Alau [Hulagu]

Now when Tsar Berca had made all his preparations, and knew that Alau was on his march, he also set out on his way, and in due time reached the same plain where his enemies awaited him, and encamped at about ten miles' distance from him. Berca's camp was quite as richly decked out¹ as that of Alau, and his army was more numerous, for it numbered full three hundred and fifty thousand horsemen. The two armies rested two days, during which Berca called his people together, and addressed them as follows:—'Fair sirs', said he, 'you know certainly that since I came into possession of the land I have loved you like brothers and sons, and many of you have been in many great battles with me, and you have assisted me to conquer a great part of the lands we hold. You know that I share everything I have with you, and you ought in return to do your best to support my honour, which hitherto you have done. You know what a great and powerful man Alau is, and how in this quarrel he is in the wrong, and we are in the right, and each of you ought to feel assured that we shall conquer him in battle, especially as our number exceeds his; for we know for certain that he has only three hundred thousand horsemen, while

we have three hundred and fifty thousand as good men as his and better. For all these reasons, then, you must see clearly that we shall gain the day, but since we have come so great a distance only to fight this battle, it is my will that we give battle three days hence, and we will proceed so prudently and in such good order that we cannot fail of success, and I pray you all to show yourselves on this occasion men of courage, so that all the world shall talk of your deeds. I say no more than that I expect every one of you to be well prepared for the day appointed.'

[Berca here stopped and said nothing more. Let us leave him. We have told some things about him. Now we speak of Alau and his army, and what he was doing when Berca and his army came close to him.<...>]

CHAPTER CCXXIV

Of the Great Battle between Alau and Berca [Hulagu and Berke]

When the day fixed for the battle arrived, Alau rose early in the morning, and called his men to arms, and marshalled his army with the utmost skill. He divided it into thirty squadrons, each squadron consisting of ten thousand horsemen; and to each he gave a good leader and a good captain. And when all this way duly arranged, he ordered his troops to advance, which they did at a slow pace, until they came half way between the two camps, where they halted and waited for the enemy.

On the other side, king Berca had drawn up his army, which was arranged in thirty-five squadrons, exactly in the same manner as that of Alau's, and he also ordered his men to advance, which they did within half-a-mile of the others. There they made a short halt, and then they moved forward again till they came to the distance of about two arbalest shots of each other.

It was a fair plain, and wonderfully extensive, as ought to be, when so many thousands of men were marshalled in hostile array, under the two most powerful warriors in the world, who moreover were near kinsmen, for they were both of the imperial lineage of Jengiz-khan [Chinggis Khan].

CHAPTER CCXXV

More about the Battle between Alau and Berca [Hulagu and Berke]

Both kings stood not far from each other, waiting for the start of the battle and the sound of nacar¹. After a short while the nacars at length sounded, upon which both armies ran at each other; took the bows and shot arrows at the enemy. The arrows were flying from one side and another that you could hardly see the sky. You could see so many were slain, man and horse; you have to believe me: it could not be otherwise, as so many arrows were shot. They did not stop while there were arrows in the sheaths, and the ground was covered with the dead and mortally wounded. When all their arrows were exhausted, they grabbed for swords and maces, ran at each other and traded heavy blows. A fierce and cruel battle had begun. It was hard to look. You could see hands and heads flying off; there were dead men and horses lying on the ground; many had died; the battle had started at a wrong time; what a shame! No other battle had killed as many people as this one. The noise was louder than the thunder of heaven. To tell the truth, they were forced to walk on corpses; the ground was covered with them and reddened with blood. The truth is, I will tell you, it had been a long time since there was such a battle with as many people getting killed as this one. People were crying and those who fell deadly injured were screaming not being able to stand up. It was so hard to look at! It was a bad time for both sides. Many wives became widows and many children orphans. They had shown that they were deadly enemies.

King Alau [the brave]² showed his strength in the battle, proved himself capable of possessing the land and to wear the crown. He distinguished himself by his valour, supported his warriors; they saw how brave and strong their King was and followed his example. It was indeed an incredible act of valour; everyone was in awe, friend and enemy alike; it seemed as if Alau was not a human, but lightning or a storm. That was how Alau acted in the battle.

CHAPTER CCXXVI

How Berca [Berke] Acted Bravely

[I will tell you how Berca differed as well. He acted well and was brave; indeed, the entire world praised him; but on that day his bravery was of no use; all of his warriors were killed, some injured

and dropped to the ground, and he became restless. Thus, as the battle went on till dusk, Berca and his warrior could not stand anymore and were forced to leave the battlefield.

[What can I say? When they could not take it anymore, they fled as fast as they could;] and Alau and his men saw it and pursued them furiously, cutting down and slaying without mercy. After they had pursued a short distance, Alau recalled his men, and they returned to their tents, laid aside their arms, and dressed their wounds; and they were so weary with fighting, that they gladly sought repose. Next morning Alau ordered the bodies of the dead to be buried, enemies as well as friend, and the loss was so great on both sides that it would be impossible to describe it.

After this was done, Alau returned to his country with all his men who had survived the battle. [Know that, although he won, many of his men died; but indeed, more men died on his enemy's side. So many men died in this battle, that you would not believe.]

Now you have heard how the battle was fought, and Alau was victorious¹.

Now let us leave Alau and these affairs and we'll tell you clearly about the battle of the Western Tatars.

CHAPTER CCXXVII

How Totamangu [Tuda Mengu] was Lord of the Tartars of the West

You must know that in the West there was a king of the Tatars named Mongutemur [Mengu-Timur], and the sovereignty descended to Tolobuga [Talabuga], who was a young bachelor, and a very powerful man, named Totamangu, slew Tolobuga, with the assistance of another king of the Tatars, named Nogai¹. Thus Totamangu obtained the sovereignty by the aid of Nogai, and, after a short reign, he died, and Toctai [Toqta], a very able and prudent man, was chosen king. Meanwhile the two sons of Totamangu had grown to be now capable of bearing arms, and they were wise and prudent. The two brothers assembled a very fair company, and went to the court of Toctai, and presented themselves with so much courtesy and humility on their knees that Toctai welcomed them, and told them to stand up. Then the eldest said to the king, 'Fair sir Toctai, I will tell you in the best way I can why we are come to court. You know that we are the sons of Totamunga, who was slain by Tolobuga and Nogai. Of Tolobuga, I have nothing to say, since he is dead; but we claim justice on Nogai for the slaughter of our father, and we pray you as a righteous lord to grant it us. This is the object of our visit to your court.'

The young man stopped and said nothing more.

CHAPTER CCXXVIII

[How Toctai [Toqta] demanded of Nogai a report on the death of Totamagu [Tuda Mengu]

When Toctai [Toqta] had heard the youth, he knew that what he said was true, and he replied. 'Fair friend, I will willingly yield to your demand of justice upon Nogai, and for that purpose we will summon him to court, and do everything which justice shall require.'

Then Toctai sends two messengers to Nogai, and ordered him to come to court to answer to the sons of Totamagu [Tuda Mengu] for the death of their father; but Nogai laughed at the message, and told the messengers he would not go. When Toctai heard Nogai's message, he was greatly enraged, and said in the hearing of all who were about him, 'With the aid of God, either Nogai shall come before me to do justice to the sons of Totamagu, or I will go against him with all my men and destroy him'.

He then quickly sent two other messengers with the words you are about to hear.

CHAPTER CCXXIX

How Toctai [Toqta] sends messengers to the Nogai

The two messengers rode in all haste to the court of Nogai, and on their arrival they presented themselves before him and saluted him very courteously, and Nogai told them they were welcomed. Then one of the messengers said: 'Fair sir, Toctai [Toqta] sends you word that if you do not come to his court to render justice to the sons of Totamagu [Tuda Mengu], he will come against you with all his host, and do you all the hurt he can both to your property and person; therefore resolve what course you will pursue, and return him an answer by us'.

When Nogai heard Toctai's message, he was very angry, and replied to the messenger as follows: 'Sir messenger,' said he, 'now return to your lord and tell him from me, that I have small fear of his hostility;

and tell him further, that if he should come against me, I will wait for him at the entrance of my territory, for I will meet him half way. This is the message you shall carry back to your lord'.

[He stopped and said nothing more.]

The messengers hastened back, and when Toctai received this answer, he immediately sent his messengers to all parts which were under his rule, and summoned his people to be ready to go with him against King Nogai, and he had soon collected a great army. When Nogai knew certainly that Toctai was preparing to come against him with so large a host, he also made great preparation, but not so great as Toctai, because, though a great and powerful king, he was not so great or powerful as the other.

CHAPTER CCXXX

How Toctai [Toqta] proceeded against Nogai

When Toctai's [Toqta's] army was ready, he commended his march at the head of two hundred thousand horsemen, and in due time reached the fine and extensive plain of Nerghi¹, where he encamped to wait for his opponent. With him were the two sons of Totamagu [Tuda Mengu], who had come with a fair company of horsemen to avenge the death of their father.

[But enough of Toctai and his warriors and more about Nogai and his men. As soon as Nogai heard that Toctai was marching toward him, he waited no longer,] Nogai also was on his march, with a hundred and fifty thousand horsemen, all young and brave men, and much better warriors than those of Toctai.

What can I say to you? Not even two days had passed when Toctai arrived at this plain, while Nogai with all his men were already there and has established a camp some ten miles from the enemy. When the camp had been set up, many beautiful installations of golden fabric, many glorious tents were visible, that this was the camp of a wealthy king. Toctai's camp was no worse or poorer, but even better and richer, there were incredibly rich installations and rich tents here. The two kings stayed in the Nerghi plain and rested there, in order to be fresh and full of energy on the day of the battle.

CHAPTER CCXXXI

Toctai's [Toqta's] Address to His Troops

Then king Toctai [Toqta] assembled his chiefs, and said to them: 'Sirs, we are come here to fight king Nogai and his men, and we have great reason to do so, for you know that all this hatred and rancour has arisen from Nogai's refusal to do justice to the sons of Totamagu [Tuda Mengu] ; and since our cause is just, we have every reason to hope for victory. Be therefore of good hope; but at all events I know that you are all brave men, and that you will do your best to destroy our enemies'.

[He stopped and said nothing more.]

Nogai also addressed his men in the following terms: 'Fair brothers and friends', said he, 'you know that we have gained many great and hard fought battles, and that we have overcome better men than these. Therefore be of good cheer. We have right on our side; for you know well that Toctai was not my superior to summon me to his court to do justice to others. I will only further urge you to demean yourselves so in this battle that we shall be talked of everywhere, and that ourselves and our heirs will be the more respected for it'.

Nogai stopped and said nothing more.

After this, as the two kings had said their addresses, the next day they prepared and armed for battle. Toctai drew up his army in twenty squadrons, each with a good leader and captain; and Nogai's army was formed in fifteen squadrons, with ten thousand horsemen in each and a good leader and captain.

What can I tell you? When both kings had armed and prepared their armies well, they started their way and rode towards each other. As they had reached the arrow flight distance from each other, they stopped and started waiting. After a short while the nacars at length sounded, upon which both armies ran at each other, shooting arrows. You could see arrows flying from one side and another in incredible amounts. Horses and men fell to the ground, dead or mortally wounded. There was much shouting and crying. When all their arrows were exhausted, they grabbed for swords and maces, flinging themselves at one another, trading blows. A fierce and cruel battle had begun; palms and hands were chopped off, bodies and heads cut off. It was clear how horsemen fell to the ground dead or mortally wounded. The noise was louder than the thunder of heaven. There were so many corpses as there had never been in

any battle; but there were more casualties on Toctai's side rather than on Nogai's. Nogai' warriors were better than those of Toctai. I will tell you the truth, both sons of Totamagu distinguished themselves by their valour; both did the best they could to avenge the death of their father, but they failed, it was not easy to kill Nogai.

What can I tell you? It was a fierce and deadly battle; it was not a good time; there were many healthy and strong men at dawn, who were then slain in this battle; many wives became widows; no wonder, as it was a fierce battle. Toctai did his best to support his men and save his honour, and distinguished himself by his valour; the entire world praised him. He threw himself at the enemies with no fear of death; he was dealing blows left and right. And his actions did harm both to his men and the enemy: he harmed the enemy by slaying them with his own hands; but he harmed his men: as they saw how brave their King was, ran to the enemy courageously and died from the hands of the enemy.

CHAPTER CCXXXII

How the King Nogai Distinguished Himself

I will tell you the following about king Nogai: he distinguished himself as no one did on both sides of the battle. He was attacking the enemy as bravely as a lion attacking wild animals. He was making his way destroying and killing the enemies. He did a lot of harm. He threw himself into the toughest combats and destroyed men as if they were small cattle. His men took example and did their best to harm their enemy.

Without many words, I want you to know that Toctai's [Toqta's] men did their best to save their honour, but they failed, as they had to face glorious and strong warriors. They had withstood so much and seen that if it remained so they would all die, that they could no longer last, so they fled as fast as they could. Nogai and his men pursued them furiously, cutting down and slaying without mercy.

It was as you heard, Nogai won¹. I tell you, full sixty thousand men were slain in this battle, but king Toctai, as well as the sons of Totamagu [Tuda Mengu], escaped. <...>

Notes

To Chapter CCXX

¹ <...> Mengiar probably refers to the country of Magyars, or Hungarians, Zic to the country of Circassians, Gucia to the country of the Crimean Goths. (*Comania* is the land of Cumans; *Alania* is the land of Alans (ancestors of Ossetians). *Crimean Goths* are ancestors of a relatively small group of the Goths, a German tribe, that had moved to the South Crimea in the 3rd century A.D. and later assimilated with the local native population.—*Note by the editor*).

² Marco Polo erroneously distinguishes Sain from Batyi [Batu], whom the Mongols nicknamed Sain Khan ('kind khan'). Other khans: Berkai [Berke] (further in the original Berca, 1257–1266), Mengu-Timur (1266–1280) and Tuda Mengu (1280–1287). (After Tuda Mengu and before Toctai (Toqta) the Khan of the Golden Horde was Talabuga (1287–1290), who was omitted from the list in the text.—*Note by the editor*).

To Chapter CCXXI

¹ The dispute was over the province Arran (in Transcaucasia) and Azerbaijan; cf.: Ohsson, III, 379.

² That is between the Derbent Pass [Caspian Gates] and the Northern part of the Caspian Sea. The battles were fought in 1262 in a place to the north of Derbent and on the Terek River. (Marco Polo uses Sea of Sarain to refer to the northern part of the Caspian Sea by the name of the Golden Horde capital, Sarai, situated at the lower reaches of the Volga River (Sarai Batu).—*Note by the editor*).

³ Pavelonz in the original text.

To Chapter CCXXII

¹ Pavilons in the original text.

To Chapter CCXXV

¹ Nakar—a battle drum.

² Prodonmes (the brave) in the original text.

To Chapter CCXXVI

¹ The results of the war were not as favourable for Hulagu; he managed to destroy Nogai's detachment (squadron) to the north of Derbent and rob Berca's [Berke's] camp beyond the Terek, during which his army was unexpectedly attacked by Berca and suffered defeat. The remains of his army fled through the Terek, where the ice under them broke and many men drowned.

To Chapter CCXXVII

¹ The original text, as seen further, has mixed the names Toloboga or Tolobuga [Talabuga] and Totamagu or Totamigu [Tuda Mengu]. Talabuga overthrew (according to the [Persian] historian, Wassaf, also killed) Khan Tuda Mengu, but failed to keep power in his hands; he was murdered by Toqta with the help of Nogai. Historians have provided no evidence of the sons of Tuda Mengu or Talabuga taking part in the battle between Toqta and Nogai. Nogai was the great grandson of Juchi, the oldest son of Chinggis Khan. (For Nogai see Grekov B., Yakubovsky A. 'The Golden Horde and its fall'. Moscow, Leningrad, 1950, pp. 84–88.—*Note by the editor*).

To Chapter CCXXX

¹ Nerghi. The battle between the Toqta and Nogai, that ended with the victory of the Nogai, occurred near the Don River. (The name Nerghi has not been explained.—*Note by the editor*).

² Pavillonz, hereafter paveilonz.

To Chapter CCXXXII

¹ Consequently, Nogai was defeated and killed by Toqta near the Dnieper River. These events happened in the last years of the 8th century, after 1295; more certain chronological dates are still impossible to determine. (Nogai was defeated by Toqta and killed in 1300; see 'The Golden Horde and its fall', p. 87.—*Note by the editor*).

George Pachymeres. 'De Michaelae Et Andronico Palaeologis Libri Tredecim'

George Pachymeres (1242–ca. 1310), a contemporary of the Mongol invasion of Asia Minor, held a host of senior positions in the state throughout his life, both in church and civil government. He had an insight into state affairs and was familiar with aspects usually hidden to other people, which is why his account is of particularly high value.

Prominent among his contemporaries with his education and literary work, Pachymeres left several extant writings. The most important one is 'The History of the reigns of Micheal and Andronicus Palaiologos', covering the period from 1255 to 1308. There Pachymeres gives the evidence of relationships between Byzantium and the Mongols during the reign of the first Palaeologus. The first mention of the Mongols in the 'History' of Pachymeres refers to the time when Michael Palaeologus, already announced as the co-regent of the child John, the son of the Emperor of Nicaea, Theodore II Laskaris, and crowned for kingdom, began to show his aspiration for monocracy. The information chronologically dates back to 1261. At the time, the Mongols, whom Pachymeres referred to as Tocharians, were a powerful force.

The source is quoted from the following publication: Vizantijskie istoriki, perevedyonny'e c grecheskogo pri Sankt-Peterburgskoj Duxovnoj Akademii. Georgiya Paximera Istoriya o Mixaile i Andronike Paleologax. Trinadcat' knig. Tom I. Carstvovanie Mixaila Paleologa 1255–1282. (Byzantine historians, translated from Greek by the Saint Petersburg Theological Academy. Georgii Pachymeris de Michaelae Et Andronico Palaeologis Libri Tredecim. Thirteen books. Volume I. The reign of Micheal Palaiologos 1255–1282.) Translation under editorship of Prof. Karpov.—Saint Petersburg, 1862.—pp. 159–325.

'3. Having arranged things well and at his own wish, the Tsar started sending embassies to the ruler of the Tocharians, Hulagu, and to the Ethiopian Sultan. Whereas the Persian Sultan Azatin was beside him and lived in the city, immoral, spending time in debauchery and drinking at crossroads; as the city was still empty and the crossroads were similar to deserts, he sat there with no shame with a large crowd of followers, indulging in Dionysian orgies and drinking. Thus, he sent embassies to those kings and welcomed ambassadors from them. He gave his illegitimate daughter Mary, borne by Diplovatacina, to marry Hulagu and assigned the monk and priest Prinkips as a middleman. Prinkips, who was at the time the archimandrite in the residence of the Almighty, accompanied said maiden grandly, luxuriously and carried with him various fortunes, including a travelling temple made of thick covers, and images of saints, lined with gold and fixed with crosses and strings, and holy precious jars for consumption at holy sacrifice. But in the meantime, while the marriage was under preparation, Hulagu passed away before Prinkips' arrival, and the maiden, come too late for the father, married his son Abaqa, who was left as his heir. The Ethiopian Sultan had another reason for entering into negotiations with the Tsar. The Sultan originated from Cumans and, having been one of those given to slavery, had a commendable reason to seek an alliance with his kinsmen. It is well-known that the northern and southern climates on Earth, being opposed to each other, have influence on inborn abilities of the residents, both on body and soul, as well as on temper, the difference in which can be seen not only in inarticulate animals, in comparison to animals alike, but in people compared to people. In the north animals are white, and black in the south. People in the north are unreasonable and barely rational beings: they have no rules of language, no science, no knowledge, no sense, no economy in life, no arts, and nothing else, that sets people apart from inarticulate animals; the only thing they have is inclination to hostility, and, being vigorous, they are always ready to join battle, they throw themselves right away, if someone agitates them. The attitude towards each other is kind of reckless and bacchic, and they serve Ares. Things are quite the opposite in the south: these are noble, completely reasonable and great in social life, known for the arts, verbal sciences and conscientiousness, but they are slow in their strivings, weak for battles and prone to live with less in idleness rather than have a lot through hard work. The natural reason for such phenomena can be considered the sun, that rarely shows itself in the north and insufficiently warms the brain, as its warmth brings out positive natural qualities, whereas skin-straining cold brings harshness to the limbs. In the southern part the sun, on the contrary, is up longer and promotes the development of positive natural qualities, which, however, makes all the limbs of the body weaker for heroic acts; according to physics, souls match the bodies. Hence, Ethiopians highly regarded Scythians in

the past as well, when they used to obtain them for slave service, or when they used them as warriors: but now the power was in the hands of a Scythian; so Scythians were welcome there and comprised a subsidiary army. But being hired, they could get there only through the Euxine Sea Channel; but it was hard to do without the Tsar's permission. Which is why there were often ambassadors with gifts, sent to the Tsar, so he would allow those in the ships to enter the Euxine Sea and, having hired Scythian boys for big money, to go back home. As we know, it happened quite often: the Tsar received gifts from there, and the voyagers had clear way to the Sultan from here.

Meanwhile, we still withheld the impudence of Tocharians—not with the courageous army, but with friendly, or rather slavish offerings. We engaged in family ties with them and sent them gifts, sometimes exceptional and the greatest. That was the second in time alliance with western Tocharians, who came out of nowhere and occupied northern countries with their immense forces headed by their leader Nogai. The Tsar betrothed his second illegitimate daughter, Euphrosyne, to him; which is how they achieved on friendly terms that which they would have scarcely got by the harshest war.

Now it is necessary to recall Azatin Sultan, who was a terrible plague for the Macedonians and Thracians and who clearly accomplished what was foreboded by the comet. After living in Constantinople for a long time and constantly expecting to return with a large force, Azatin eventually lost any hope for success; for he saw that the Tsar was busy with other things and knew about his secret deals with Abaqa, according to which his return to his homeland had to be postponed. Hence, he seized the occasion when the Tsar was away and contacted one of his relatives, a pleasant man in the northern shorelands of Pontos Euxinos (Black Sea) and secretly asked him for help against the Tsar, who was holding him unarmed and pretending to be his friend though he was no different from an enemy. If you help me, Azatin added, then you can contact Constantine and persuade him to attack the Romans; meanwhile, I will be by Michael's side and throw him right to your hands, especially, if you will be not only with Constantine of Bulgaria, but with the Tocharians as well. As soon as the Tsar is captured, it will be easy for you to attack; if not, you will at least gain a fortune and take over the royal treasures; you will have the best of that fortune; just remember the kinship and past glory. But in case these two reasons are not enough to hurry—if kinship and hope to dare to do a great deed are not enough, then just the desire to help a relative and have mercy on him is enough to make it happen. Thus, being in secret correspondence with his uncle and having received written promises from him, Azatin pretended to strongly seek a meeting with the Tsar and said that he even wrote to him and asked for permission to visit him, as it was hard for him to not see His Majesty for so long. Whether or not I have his permission, Azatin added, I will still visit him; because a strong desire aches and tortures me. Having found out about this, the Tsar (could he suspect such treachery?) wrote to the Sultan himself and allowed him to pay a visit, moreover, he would have a chance to see western countries, which he, living in the east, had never seen. Having received permission, the Sultan was quick to depart and, leaving all of his fortune, even his wives, children, sister and mother, partly, to avoid any suspicion, partly, to have no obstacles on his way, left the city with one servant and headed directly to the Tsar. In the meantime, the aforementioned uncle visited the Tsar of Bulgaria, Constantine, and opened up to him, or rather his wife, about the Sultan's plans against the Tsar and managed to persuade them into doing what they had been ready to do for a long time since. Afterwards, he sent ambassadors to many Tocharians, promising them a fortune, if they united with him and the Bulgars. At the time this people was ruled autocratically; as the Nogai, who were the first to start overthrowing despots, had not yet fully subjugated it. While living in peace with Tocharians and being on friendly terms with them, he was conquering lands with them not in favour of the Khan, who, as they thought, sent him, but left them for them and himself. Having heard of such invitation, the Tocharians, like hungry dogs, rushed to empty the best regions. This was before the blood tie, which the Tsar and Nogai engaged in; as his illegitimate daughter Euphrosyne was betrothed to a Nogai later on. At the same exact time, when the Tsar was returning home from the west, they met up with Constantine and, while getting through the Haemus gorges, camped there. However, these masses did not come in one formation and did not stay in one place, but scattered to many hills, where they jumped out in ambush with others and, thus, wrecked havoc—robbed, killed, captured, did all kinds of evil. Naturally, the Tsar soon heard of this; as they did not attack secretly and cautiously, but quickly surrounded the entire country, like raging fire. At the first message of this Michael's heart trembled, and he found himself in a difficult situation. He was not ready

for a battle at all (the troops were sent home), as he was coming home with few of his court servants; meanwhile, the Tocharians were known to the Romans as an invincible nation. There was no way to flee either, because the enemies, having occupied and surrounded the passages, were fearlessly running around in crowds and killing some and taking others to the barbarians as slaves; so, no matter where, no one could secure his freedom. Thus, having surrounded the entire place, they almost captured the sovereign; since, according to how messengers managed to report on the barbarisms of the enemies, the distance between them and the Tsar was barely half a day's ride; so in the evening they camped in the place that the Tsar has left in the morning, or, stayed where he was the day before. However, they were in such a mess, that were not divided into phalanxes, but scattered all over the place in hope of spoils, and that hope was bigger than their fear. Constantine was travelling in a chariot, as having once broken his leg, he was unable to use it properly either walking or riding a horse. Surrounded by Bulgars, he was thoroughly informed where the Tsar was and hoped to capture him, when he will be left alone; since all of those, surrounding the Tsar, servants and inmates, worried about the safety of their own, fled without looking back and left the Tsar to worry about his own rescue. From that point on, every man only had his own safety in mind and did not think of those close to him: some were guided by reasonable fear, others by excessive cowardice; some others were moved by necessity, for if they did not take care of themselves, they would be captured; some who did not understand the trouble followed the example of others and, coming to the same conclusion, left for places in which they hoped to find safety. They were unable to unite and face the enemies in battle; since their leader was scared of this situation himself and was looking for a place to hide. Indeed, having a few especially close and loyal people by his side, the Tsar took particularly desolate routes and, while leaving some horrors behind, encountered the others; so, after having escaped danger there, he faced it here, and, as he saved himself from one evil, another even greater one awaited him. Petrified, he often thought some hill tops to be armed warriors. Any news was terrifying to him; as everyone he met or who approached him told him horrible stories. Hence, when someone told them he was near the enemies to know how many of them there were and where they were going, the ones with the Tsar, having only rescue in mind, did not trust such bravery. Finally, thanks to the night's darkness and various detours, the Tsar somehow reached the Ghana mountains and left the others to save themselves. The ones left behind he thought to be in captivity and abandoned all hope for them. Meanwhile, they had the royal treasury in their hands, and Sultan Azatin was beside them. Having climbed the mountain, the Tsar sent riders, some to observe the enemies, carefully and hiding their escape route, others to drive a light triera to the mountain as soon as possible; while he moved from one place to another, elaborately hiding from the enemy whenever they drew near. When he learned that the triera was ready, he climbed down the mountain with others, boarded it and arrived in Constantinople. The both sides were fighting to death, but the fortress defenders finally felt their powerlessness and saw death ahead of them; which is why they sent ambassadors to announce that they would agree to give them the Sultan, only if they swore in front of God and the holy shrine to leave them alone (this embassy was sent to Constantine). Having sent the embassy and received agreement from their enemies, they reached out to their local bishop. The bishop, wearing holy clothing and holding sacred icons, came out with the entire clergy and made his way to Constantine. When Constantine uttered his vow in front of God and the hierarchy, the bishop returned to the fortress, and the besieged immediately surrendered the Sultan with his entire entourage and property. Having captured him, the enemies left right away and did not demand anything else; as they swore to have only the Sultan and to do nothing else. But fate appeared to be strong; no matter how hard you fight it, you cannot escape your destiny. A day or two later, royal trieras appeared in the sea. They had hardly reached the pier when the residents of the fortress rued their deed. However, there was nothing to do, the penitence was too late and was useless. Hence, as they could not bring back what had been already done, they started to think about a way to save at least the money and avoid any mistakes here; because the country was still full of enemies scattered all around. Having set trieras in front of the city and lined troops on both sides of the route to the sea, they carried out the royal treasures, brought them aboard, boarded the ships themselves and sailed. As they arrived in Constantinople and informed the Tsar of everything that had happened, the Tsar, annoyed by such news, was enraged and lost his temper. The bishop was forced to face the trial of Church, he was convicted and almost sentenced to a special penalty for taking part in those affairs; servants were beaten and banished,

wearing women's dresses, as a sign of dishonour; the Sultan's wife, daughter, mother and sister, along with the children and all of his servants, were imprisoned; and all of his treasure, silver and gold, luxurious covers, clothes and belts, pearls and gemstones—all items of so-called Persian luxury were passed to the common treasury chamber.

4. Nogai of the Tocharians was a powerful person, an experienced ruler and skillful warrior. Sent from the Caspian Sea shores by the leaders of his nation, bearing the name of khans, with numerous troops of native Tocharians, who were called Mongols (*Μδγούλιοι*), he attacked the tribes living in the north from Pontos Euxeinos (Black Sea), conquered by the Romans a long time ago, but set apart from their rulers and governed autocratically, since the city was taken by the Latins and due to failures of Romans. Nogai took over those tribes and enslaved them at his first attempt. Seeing how good the conquered lands were and how easy the people were to manage, he stepped back from the khans' orders and subdued the peoples to himself. As the time went on, the neighbouring tribes, which were Alans, Zyggii, Gothi, Rus' and many others, learned their language and, naturally, adopted their customs and clothing, became their allies in war. Hence, the Tocharian tribe soon became extremely widespread, powerful and unbeatable; so, when it, as a rebellious tribe, was attacked by the supreme rulers, not only it did not give in, it also defeated many of them. In general, the Tocharians are easy-going and sociable, fast and strong at war, vain in life, unpretentious and careless when it comes to maintenance. Their legislator was neither Solon, Lycurgus, nor Dragon (as they were legislators of Athenians, Lacedaemonians and other similar nations—the wise men of the wisest and the smartest, the best in science), but an unknown and wild, who was first a blacksmith, then rose to the title of Khan (that is how they call their ruler); nevertheless, he brought up courage in his tribe to leave the Caspian Gate and promised them victory, if they obeyed his laws well. The laws were as follows: do not cede to comfort, be content with what will happen, help each other, avoid autonomy, love the community, do not think about the means of life, consume any food as there is no bad food, have many wives and provide them with all that is necessary. Hence, the fast reproduction of this tribe and abundance of all the needed. They were also accustomed to not have things in possession forever and not live in houses, like their own estate, but move from place to place when needed. When there was not enough food, they were to hunt with a weapon in their hands, or stab a horse and drink its blood; if solid food was needed, they said to take the internals of a sheep, pour blood on them and put them under the saddle, where they would cook a little with warmth from the horse, and that would be their dinner. If someone would find a piece of old fabric, one had to sew it to one's dress right away, whether one needs it or not—it does not matter (so that the Tocharians were not ashamed to sew old patches to their old clothes, when it would be needed). Using these regulations, the legislator taught his subjects to live in complete mindlessness. Having received a spear, saddle, clothes and life itself from a woman, a Tocharian was ready for a battle with an enemy right away, with no problems. Secured with such regulations from their Chinggis Khan (now I remember his name: Chinggis is his name, Khan means Tsar), they are certain in their words and true in action; being free souled and straightforward at heart, they wish to hear truth and see authenticity of actions in others.

Thus, having engaged in blood tie with their tribe leader, Nogai, the Tsar sent him many materials for clothing and for different food, and, moreover, barrels full of fragrant wine. After tasting the food and wine, Nogai accepted all of it with pleasure along with gold and silver cups. But as for various caps and clothes (since such things were sent to him from the Tsar as a gift as well), he moved them aside and asked the carrier: does this head cap cure headache, or do these pearls and other stones protect the head from lightning and thunder, so that the one wearing the cap becomes invincible? Can these precious dresses save me from exhaustion and tiredness? If no one stopped him, he would tear the sent clothes apart; if he tried one or another on, it was only for the sake of friendship with the Tsar, but he wore it only for a minute, afterwards, he would come out in his dog fur or wool clothing and be proud of it more than of those of high value. He did the same with the caps, choosing the useful ones over precious. Having found anything useful, he would tell the carrier: this treasure is for this and for that, and put it on right away, drawing his attention not the stones and pearls, but to the thing's application. <...>'.

No. 7**Rashid al-Din. 'The Compendium of Chronicles'**

Sources and notes are quotes as per the following edition: Rashid-ad-Din. *Sbornik letopisej*. Tom II. (Rashid al-Din. *The Compendium of Chronicles*. Volume II) / Transl. from Persian by Yu. Verkhovsky, notes by Yu. Verkhovsky and B. Pankratov, edited by prof. I. Petrushevsky.—Moscow-Leningrad, 1960.—pp. 78–87.

'PART TWO**NARRATIVE OF JOCHI KHAN;**

**DATE [OF ACCESSION TO THE THRONE] AND STORIES ABOUT THE PERIOD OF
HIS REIGN; DESCRIPTION OF THE THRONE, WIVES, TSAREVICHES
AND EMIRS DURING HIS ACCESSION TO THE THRONE;**

**NOTE ABOUT HIS SUMMER AND WINTER NOMAD CAMPS AND SOME WARS,
WHICH HE WAGED, ABOUT THE VICTORIES, WHICH HE GAINED;
DURATION OF HIS REIGN**

All the regions and ulus located between the Irtysh River and the Altai mountains, summer and winter nomad camps of those surroundings were granted by Chinggis Khan to Jochi Khan. Chinggis Khan also issued a strict decree, according to which [Jochi Khan] had to conquer and annex Desht-i Qipchaq and states, located in these lands. His yurt was within the Irtysh bank, and there was the capital of his country. That's all!

Short story about Jochi Khan's affairs

Due to the fact that Jochi Khan died earlier than his father, it's impossible to narrate a story only about him, that is why we [hereby] provide a short description of his deeds, which [have already been] mentioned in details in the narrative of Chinggis (Genghis) Khan, as well as circumstances of his illness and death. That's how it was:

According to Chinggis Khan's order, Jochi Khan was constantly in campaigns and he conquered and subdued many regions and cities, so when Chinggis Khan, heading to the Tajiks, reached Otrar, he left him [Jochi Khan] there, telling him to conquer Otrar. Jochi Khan, as it has [already] been told in the narration of Chinggis Khan, captured Otrar and, having destroyed it, went back. He conquered the regions, which were on his way back, until he came to his father in Samarkand. Chinggis Khan once again sent him together with his brothers Chagatai and Ögedei [in a campaign] to conquer Khwarezm. When they besieged this place¹, they could not capture it due to his [Jochi Khan's] disagreement with Chagatai. Chinggis Khan assigned Ögedei commander in that war. Thanks to his abilities, he established agreement among the brothers, and they captured Khwarezm in unity. Chagatai and Ögedei set off to their father and reached [him] in Talikan Fortress. As for Jochi Khan, he headed to the Irtysh through Khwarezm, where his slings of carts were waiting, and joined his hordes. [Previously] Chinggis Khan ordered Jochi to start a campaign and conquer the northern countries, such as: Kalar, Bashgird, Urus, Cherkes, Desht-i Qipchaq and other regions lying in these lands. When he evaded the task and went to his dwellings, Chinggis Khan was enraged and said: 'I will execute him, he will see no mercy.' But suddenly Jochi became ill, and that is why when his father came back from the country of the Tajiks to his headquarters, he could not ride to him, but sent several *khavārs*² of hunted swans³ and profuse apologies. Subsequently, Chinggis Khan repeatedly ordered him to come, but due to his illness [he] kept on not coming and apologising. Then [one day] a man from the Mangut tribe rode through Jochi's yurts; and Jochi, changing one yurt to another and remaining ill, reached one mountain where he generally hunted. As he was weak, he sent hunting emirs to hunt. When this man saw this hunting group, he decided that it was Jochi [himself who was hunting]. When he came to Chinggis Khan, he was asked about Jochi's illness, and so he replied: 'I have no data on Jochi's illness, but I saw him hunting on a mountain...' Chinggis Khan inflamed with anger and decided that [Jochi], apparently, rebelled and paid no attention to his father's words, and said: 'Jochi must be mad to do this.' And he ordered his army, headed by Chagatai and Ögedei,

to set off to Jochi's dwellings, planning to follow them afterwards. Meanwhile, the sad news⁴ about Jochi were delivered in...⁵. This news deeply distressed and saddened Chinggis Khan, he carried out an investigation and proved that this Mangut was lying, and Jochi was really ill and could not hunt. [Chinggis Khan] demanded this man be executed, but nobody could find him. Respected emirs and messengers, coming from Jochi's ulus at various times, told that his death had happened when he was from thirty to forty years [old], and these words are comparatively close [to the truth]. Others said that he declined when he was twenty years old, but it is clearly a delusion. After his and Chinggis Khan's death, when Ögedei Qa'an enthroned, he rigorously fulfilled the decree about Jochi Khan's conquest of the northern regions, previously issued by Chinggis Khan, and ordered the members of his house to continue his ancestor's assignment, and they engaged in this [conquest] with the help of other tsareviches.

**Story about Batu's enthronement as his father's successor
and notes about circumstances of his [life] during [his] reign**

When Jochi Khan died, Batu, his second son, ascended to the Khan's throne in his ulus. His brothers submitted and obeyed. In Ögedei Khan's epoch, as it was told in details in the narrative of Ögedei Khan, his brothers and other tsareviches were assigned as per the previous decree issued by Chinggis Khan to conquer the northern lands. All the assigned gathered at Batu's ulus and jointly set off and, as it has [already] been narrated, conquered the majority of these countries. After tsareviches Mengü Qa'an and Güyük Khan return [from the campaign], his brothers and he [Batu], as it has [already] been mentioned in addition to his genealogy, started conquering the remaining part of these regions. In the beginning of 639 [July 1241 AD], when Ögedei Qa'an died, Batu, due to his declining years, felt a decline of strength. He was requested to attend the quriltai, but on [the ground] of the illness he evaded his participation [in it]. As he was the oldest of all [the relatives], due to his absence, the affair with [the title] of Khan was not cleared out for three years. Töregene Khatun, the oldest of Ögedei Qa'an's wives, was ruling. Meanwhile, distemper went into the suburbs and central parts of the state. The Khan made his grandson Shiremun the heir to the throne, but Töregene Khatun and some emirs could not agree and said: 'Güyük Khan is older'—and they asked Batu to enthrone him. Even though he felt aggrieved and was afraid of sad events due to previous relations, still he set off and rode very slowly. [Even] before his arrival and relatives' appearance, they confirmed Güyük Khan's title by means of their own power. Due to the fact that Güyük Qa'an was suffering from an incurable illness, he headed to Emil-Kudjina⁶ together with all his army on the grounds that 'the water and air of the ancient yurt, granted by my father, are more wholesome for me'. When Batu approached this place, he started to have some fears. By virtue of the mutual friendship, established and set among Jochi and Tolui Khan and their houses from the times of Chinggis Khan, Sorkhokhtani⁷—Bekhi, the oldest wife of Tolui Khan, secretly sent a message, that Güyük Khan came to these lands not without cunning intentions. In this regard, Batu's distrust increased, and he was waiting for Güyük Khan's arrival with precaution and prudence. As for [Güyük Khan], he died in 640 [1 July 1242–20 July 1243 AD] from the illness he had been suffering from, when he reached Samarkand located one week away from Beshbalyk. And once again the throne remained Khanless for a long period of time, and Töregene Khatun continued her reign.

Sorkhokhtani-Bekhi sent her son Mengü Qa'an to Batu, as soon as the news about his illness blew about, on the grounds of visiting the ill. Batu was glad to receive him, and as he noticed with his own eyes the signs of glory and intelligence in this man, [moreover] being offended by Ögedei Qa'an's children, he said: 'Mengü Qa'an is the eldest son of Tolui Khan, who was the eldest son of Chinggis Khan; the root yurt and dwelling [of Chinggis Khan] belong to him. This tsarevich⁸ is very intelligent and gifted and prepared for reign. Who else can be the Khan, if he is present? Moreover, Ögedei Qa'an's children acted in contradiction to their father's words and did not give the authority to Shiremun, and contravened the ancient law and custom, without relatives' advice and any reason killing the youngest daughter of Chinggis Khan, whom he loved more than [his] any other child and called Chaur-sechen. That is why they don't deserve the khanate'. He installed⁹ Mengü Qa'an on the throne and made all his brothers, relatives and emirs obey and subdue. He sent his brother Berke Khan and

son Sartaq, who was an heir to the throne, with Mengü Qa'an, accompanied with three tumens, so that they were able to put Mengü Qa'an on the imperial throne of qa'anate in the region of Onon and Keluren, the root yurt of Chinggis Khan, and cope with the intrigues of Ögedei Qa'an's children, who had been planning treachery.

All in all, the house of Tolui Khan commenced ruling the qa'anate and established [its] rights to it thanks to Sorkhokhtani-Bekhi's abilities and insight as well as to Batu's help and assistance, thanks to his friendship. After this event till the end of his life, and even after his death in the times of Sartaq and Ulaghchi, and most of the time of Berke, the houses of Tolui Khan and Batu shared feelings of unity and friendship.

Within the lifetime of Batu Mengü Qa'an sent his third brother, Hulagu Khan, with a large army to Iran lands and ordered to [select] two men out of each ten warriors of every tsarevich's army in order to send these men together with Hulagu Khan as helpmates. Orda sent his elder son Kuli with one tumen through Khwarezm and Dekhistan, whereas Batu sent¹⁰ Balakan, Shayban's son, and Tutar, Mingkadar's son, grandson of Buval, who was the seventh son of Jochi Khan, through Kipchak Derbent, so that they became a reinforcement to Hulagu Khan's army and served him. Batu deceased in 650 [14 March 1252–2 March 1253 AD] in the lands of...¹¹, on the bank of the Itil river. He was forty-eight when he died. Möngke Khan received his son Sartaq with honour, assured his throne and state and gave [him] a permission to leave. He [Sartaq] also died on his way back. Mengü Qa'an sent his messengers, inducing and gaining friendship of his wives, sons and brothers, as well as wishing Ulaghchi [Batu's son] the throne and tsardom of his father and marking everybody with various favourable and affectionate words. Soon Ulaghchi also died and left his throne and tsardom to others. That's all!

Story about Berke's enthronement to the throne of Jochi Khan's ulus and about circumstances of [his] life

When Batu died and his sons Sartaq and Ulaghchi, who were chosen his successors, died one after the other, and [when] his younger brother Berke took his place in 652 [21 February 1254–9 February 1255 AD], his orders were strictly fulfilled in his ulus. He traditionally kept amiable sincere terms with the house of Tolui Khan, going along the road of faithfulness, benevolence and unity. In 654 [30 January–20 December 1265 AD] Balakan, who was in this state¹², laid a scheme of treachery and betrayal against Hulagu Khan and resorted to sorcery. Accidentally [it] came into light¹³. An inquiry was held, he confessed. In order to prevent the insult, Hulagu Khan sent [Balakan] and emir Sundjaq to Berke. When they arrived, the doubtless guilt of Balakan was proved, and Berke sent Balakan [back] to Hulagu Khan: 'He is guilty, and you should deal with it.' Hulagu Khan executed him. Soon after that Tutar and Kuly died. It was surmised that they were deliberately given a deadly potion. That is why they became discontented [with each other], and Berke started to have a feud with Hulagu Khan, and as it will be told in the narrative of Hulagu Khan, they had a battle in Shawwal, 660 [August 1262 AD]. Most of the army which had arrived with Kuly and Tutar scattered away. Some of them left through Khorasan and dwelled from the mountains of Ghazni and Bini-Gau to Multan and Lahore, which were the borders of Hindustan. The older of emirs, who were the commanders of the army, was Nikuder, and Unkudjene, one of Hulagu Khan's emirs, was close on their heels. Others reached their dwellings through Derbent. This feud between Berke and Hulagu Khan continued during [all their] lives. Nokai, a son of Jaruq¹⁴, who was a son of Tumakan, who was a son of Kuly, was Berke's commander. He was a brave and varmint tsarevich. In 663 [24 October 1264–12 October 1265 AD] Hulagu Khan died in his winter nomad camp in Chagatu, and his son Abaqa Khan took his place on the throne, he preserved his hostile relations with Berke. In 663 [24 October 1265–12 October 1266 AD] Berke returned to Shirvan and, having passed through Derbent, died near the Terek River in 664 [13 October 1265–1 October 1266 AD]. That's all!

**Story about the enthronement of Mengu-Timur, a son of Toqoqan Khan,
who was the second son of Batu, to [the throne] to rule his ulus**

When Berke died, he was replaced by the aforementioned Mengu-Timur. For a long time he also resisted Abaqa Khan, and they had several battles, and Abaqa Khan was winning. Finally, in...¹⁵ due to urgent necessity they concluded peace, as it has been described in detail in the narration of Anaqa Khan. Since then they had forgotten their disputes until the times of Arghun Khan, when in Ramazan, 687 [29 September–28 October 1288 AD] a huge army reached them. Tama-Toqta and Buka were their commanders. Arghun Khan had [already] been heading from his winter nomad camp in Arran and Mugan to his summer one. When he heard about this arrival, he returned and sent an army headed by older emirs Togachar and Kunji-Bal. And there was a battle, and they killed Burultai, [one] of the commanders of their army and many warriors. The splintered enemies turned back. Since then, a blessed epoch of Islamic sovereign Ghazan Khan, let Allah immortalise his authority, they abandoned their conflict and due to [their] weakness preferred an agreement to a feud, looking for friendship and unity and sending the Islamic sovereign messengers with the news about their [affairs] with gifts and offerings. That's all!

**Story about the enthronement of Tuda Mengu, about his overthrow carried out
by Mengu-Timur's and Tarbu's sons, about their conjoint ruling, about Toqta's escape,
about their canning capture executed thanks to Nokai's help and about [their] execution**

After 16 years of reign, Mengu-Timur died in 681 [11 April 1282–31 March 1283 AD], and on this very day Tuda Mengu, the third son of Toqoqan, ascended [to the throne] and was a sovereign for some time. Afterwards, Mengu-Timur's sons, Algu and Togryl, and Tula-Buka and Kunchek, sons of Tarbu, the oldest son of Toqoqan, dethroned Tuda Mengu on the grounds that he was insane. They ruled conjointly for five years. They started to plot against Toqta, Mengu-Timur's son, whose mother was Oljai-Khatun, Kelmish-Aka Khatun's granddaughter. They started to conspire when they noticed that he showed the signs of courage and manhood. He found out about this circumstance and ran away from them, searching for protection from Ilylkchi, Berkechar's son. He sent the following message to Nokai, who was a commander of Batu and Berke: 'The cousins attempt my life¹⁶, you are older, I resort to the protection of the one who is older, so that he will support me and stop this attempted assassination. Until I'm alive, I will obey to the older one and will follow his orders.' When Nokai found out [about it] he felt grudge and indignation. He pretended being ill and set off from Urus and Kehreb, which he had conquered and made them [his own] yurt and residence, then he crossed the Uzi river and won over each thousand and each emir, whom he visited. He told [them] : 'The declining years are coming, I abandoned arguments, disputes and distempers, have no arguments with anybody and don't want to make war. However, I've got a decree from Sain Khan¹⁷, according to which if somebody executes a wrongdoing in his ulus and disturb the ulus, I will investigate this [case] and make peace between the arguing.' Thousands and warriors, hearing these guidance and seeing his concern, subdued and obeyed him. When he approached the horde of the aforementioned tsareviches¹⁸, he pretended being ill—drank fresh blood and vomited it back. He went along the road of friendship and amity, but secretly sent Toqta a message: 'You need to be ready and, as soon as you receive my notice, you should come [to me] with an army, which [you] 'll be able to get.' When Tula-Buka's mother heard about moderation and sincerity of Nokai and about the fact that he vomited blood, she told her sons: 'Have a conversation with this feeble old man as soon as possible, as he is leaving [this] world and firmly wants to get to another world. If you were careless and negligent [in this affair], than your mothers' milk would have been useless for you!' As per [their] mothers' advice, tsareviches came to Nokai carelessly and imprudently to pay him a visit. He said them as a guidance the following: 'Dear children, I served your fathers, and used to restore justice in past and recent times, that is why you need to hear my harsh words, so that I [will be able] to transform your arguments into true agreement. Your good is in peace, arrange the qu-riltai, and I will give you peace.' And he was continuously vomiting caked blood. Having informed Toqta [about their arrival], he used this sweet talk to lull the tsareviches' vigilance, until Toqta and several thousands appeared unexpectedly and captured the tsareviches, killing them immediately. Nokai went back straight away and crossed the Itil river, heading to his permanent yurt. That's all!

Story about Toqta's enthronement to the throne¹⁹ of his ulus, about his disagreement with Nokai, about the war between them, about Nokai's defeat and execution

Toqta killed the aforementioned tsareviches thanks to Nokai's help, and afterwards became a sovereign on Jochi's throne and repeatedly sent messengers to Nokai, inviting him and promising him great fortunes. [However] Nokai did not agree to come. Saljidai Gurkhan from the Khongirad tribe, Toqta's father-in-law and Kelmish-Aka Khatun's husband, proposed his son Yajlag, born by the abovementioned Khatun, as a husband for Nokai's daughter, a certain Kabaq, and Nokai agreed. Soon after the wedding Kabaq-Khatun converted to Islam. Yajlag did not get along [with her], as he was a member of a religious community of the Uyghurs. They used to quarrel and argue on the topic of religion and beliefs. His community despised Kabaq. She told her father, mother and brothers [about it]. Nokai was in a rage and sent a messenger to Toqta saying: 'People know how much I struggled and how many troubles I overcame, I got involved in treachery and trickery in order to free the throne of Sain Khan²⁰ for you, and now karachu Saljidai is sitting on this throne. I [my] son Toqta wants to strengthen our father-and-son relationship he should send Saljidai to his yurt, situated near Khwarezm.' Toqta disagreed. And once again Nokai sent his messengers [to him] with his request regarding Saljidai. Toqta said: 'He is like a father and a tutor to me, and [he] is an old emir, how can I deliver him into the enemy's hands?' And he didn't give [him] out. Nokai had a wife, whose name was Chapai and who was most intelligent and gifted. She was the one who had repeatedly ridden to Toqta with ambassadors. She had three sons: the eldest was Juke, the middle one was Eke and the youngest one was Turi. They gained over several thousands which belonged to Toqta, and, having submitted them, put them across the Itil [river], making a bold and violent gesture in Toqta's lands by ruling [there] by themselves. Tokhta got angry and requested them to return [these] thousands. But Nokai also refused, saying: 'I shall send them back when he brings Saljidai to me, as well as his son Yajlag and Tama-Toqta.' This situation flared a fire of disturbance and enmity. Toqta mobilised an army and in 698 [9 October 1298–30 August 1299 AD] carried out a parade of approximately thirty tumens on the bank of the Uzi [river]. Due to the fact that the Uzi did not get frozen completely that winter, he was unable to cross it. As for Nokai, he remained where he was. In spring Toqta turned back and spent the summer on the bank of the Tan [river]. Next year Nokai crossed the Tan together with his sons and wives and once again proceeded with tricks, saying: 'I've got an intention to [organise] the quriltai in order to make peace with you.' He knew that Toqta's army had dispersed and there [was] only a small part of it with him, so he hurried to move forward in order to attack him unexpectedly. Toqta found out about his arrival and gathered the army. They had a battle in Bakhtiari lands on the bank of the Tan. Toqta was defeated and fled to Sarai. Emirs Madji, Sutan and Sanguy turned their backs on Nokai and headed to Toqta. Toqta summoned Toma-Toqta, a son²¹ of Eluga, who had been protecting and defending Derbent for a long time, and once again gathered a big army and unleashed war with Nokai. Nokai had no power to resist, so he evaded [the battle] and crossed the Uzi river. His enemies plundered the city of Crimea and captured many captives. The local citizens went to Nokai's headquarters and implored for release of the captives. Nokai ordered to bring the captives back. Warriors immediately became angry with Nokai and send the following notification to Toqta: 'We are the slaves and lieges of the ilkhan²²; if the sovereign forgives us, we will capture Nokai and bring him to you.' Nokai's sons found out about this message and decided to stand against the thousands. Emirs—the thousands heads—sent a man to Teke, the second son of Nokai, [with the following message] : 'We all conspired against you, but if you hurry to us, we will give the ruling to you.' Teke rushed to them. He was instantly captured. Juke, who was the eldest brother, mobilised an army and fought with the greater thousands. The thousands were defeated, and one head of thousands got into his hands. He sent his head to the remaining thousands, which had captured Teke. Three hundred men were guarding him. They took his side and one night ran away and went to Nokai and [his] sons. When Toqta learned about their discordance, he crossed the Uzi river with sixty tumens and settled on the bank of the Tarku River, where Nokai's yurt was located. At the same time, Nokai, sitting in an araba cart, approached with thirty tumens from the other bank [of the river] and settled there. Pretending to be ill, he lay in his araba cart and sent his messengers to Toqta, saying: 'Your slave did not know that the sovereign was coming personally. [My] tsardom and army belong to the slaves of the

ilkhan²³, and [your] slave is an old man, he is feeble, he spent all [his] life serving to your fathers. If there was a misdeed, [it] happened because of the sons. I hope that the sovereign will be merciful and will forgive them" However, he secretly sent Jule with a big army and ordered him to cross the Tarku higher up the river and stroke Taqta and his army. Toqta's soldiers on guard duty captured a spy and this spy described the state of affairs. When Toqta found out about this treachery, he ordered his army to get ready and set off. The armies started to fight. Nokai and his sons were defeated, and many people were killed in this battle. Nokai ran away with seventeen horsemen. A Russian horseman from Toqta's army wounded him. Nokai said: 'I am Nokai, lead me to Toqta, who is the Khan'. Urus took his [horse's] headrope and led him to Toqta. But he gave up his [spirit] on his way there. As for Toqta, he gloriously returned to Sarai Batu, which was their capital. Nokai's sons hesitated over the choice without any use [for them] ; and as they saw no good in their fate Eke, Chubi's son, and Yajlak, Turi's mother, addressed to Juke: 'The best we can do is to leave the argument and cussedness behind and to go to Toqta.' Juke was intimidated by this proposal, so he killed his brother and step-mother, and kept on [purposelessly] wandering with some adherents²⁴. He hid in a fortress, the way to which was as narrow as As-Sirat [Bridge]²⁵ and as tight as the heart of a tightwad; what will be his end? Even before that Nokai laid foundation for a sincere friendship and unity with Anaqa Khan and Arghun Khan, in...²⁶ he sent his wife, son Turi and an emir to Anaqa Khan sought marriage for Anaqa Khan's daughters. He [Anaqa Khan] married his daughter with Turi. They stayed there for some time and left, having enjoyed much kindness. When Nokai and Toqta quarreled, he repeatedly sent distinguished ambassadors to the Islamic sovereign [Ghazan Khan], let Allah immortalise his authority, appealed [to him] asking for help and wanted to become dependent²⁷ from his highest person. Indeed, the situation was very convenient, but the Islamic sovereign Ghazan Khan, let Allah immortalise his ruling, disagreed to help due to highness of [his] thoughts and paid no attention to unfavourable circumstances of [Toqta] saying only the following: 'Currently treason and breach of promise are far from being noble; treachery and lies are frowned upon and forbidden by sense, God law and Yasa; and even though Nokai and I are good friends, I won't deal with his arguments and quarrels, as using a convenient situation for evil is not a praiseworthy quality, and this is especially true for supreme sovereigns'. Toqta was afraid and on the alert [himself], so in order to get rid of this circumstance he [also] sent ambassadors offering friendship. The Islamic sovereign Ghazan Khan, let [Allah] immortalise his authority, summoned the ambassadors from both sides and told them during the reception the following: 'I won't take part in your internal strife and won't make use of your inconvenient circumstances. If you make peace, it will be good and meritoriously'. In order to [get rid of] their doubts and suspicions, he personally decided not to spend the winter in Arran, but spent it in Baghdad and Diyarbakır, so that their spirits were calm and confident. In his heart he still keeps friendly feelings and sincerity for both Toqta and Nokai's sons. He repeatedly ordered and [always] continue to order relatives to stop their quarrels with them and not to seek motives for enmity. 'We will never start an argument [he said] and won't be [the first] to start something that will cause distemper, because then we won't be guilty of devastation in the ulus'. It seems that the Supreme Creator created his sinless and radiant soul from pure kindness and limitless mercy. This sovereign, gifted with magnanimity of character, famous in all the ends of the world for [his] just and virtue. [This is] the Tsar of Tsars, concerned about religion, he is an impartial justice, arranger of the army, kind to his subjects, [born] under a lucky star, chosen by the crowd. Let our God, one-above-all and all-mighty, grant him being [ahead] of the world's peoples for many years and endless ages, let our God grant him a life full of pleasures, statehood, tsardom and authority. I swear on the honour of the best of prophets [Muhammad] and his house of righteous men! Let Allah be merciful to [his] slave, who said 'Amen'. <...>

Ötemish Hajji. 'Chinggis-name'

The author of the 'Chinggis-name'—Ötemish Hajji, a son of Mawlānā Muhammad Dosti; a descendant of a powerful family, serving Ilbars Khan (918/1512–931/1525). His ancestors served to Yadgar Khan, a Shaybanid, whose ulus in 80s of 15th century was located in the lower reach of the Syr Darya river. Initially, Ötemish Hajji served the abovementioned Ilbars, apparently, as a court scrivener.

V. Yudin, an orientalist from Kazakhstan, made a significant contribution to studying of the 'Chinggis-name', prepared this work for publishing in Russian, amplifying it with textological notes and transcription of the original text. The 'Chinggis-name' occupied a special place in historiographic analysis of V. Yudin as a source, credibly and vividly depicting historic and socio-economic history of Desht-i Qipchaq in the 14th century, showing the military science, lifestyle, culture, ideology and language of the nomadic population.

Ötemish Hajji's manuscript covers the ruling period of Chinggis Khan and the Chinggisids—13–14th centuries. It contains data on the Khans of the Golden Horde, starting from Batu Khan to Tokhtamysh Khan.

The 'Chinggis-name' was written on the basis of legends and oral information.

The source and comments are quoted as per the following edition: Ötemish Hajji. Chinggis-name/ Facsimile, translation, transcription, textological notes, research by V. Yudin. Commentaries and indications by M. Abuseitova, Alma-Ata: Gylym, 1991, p. 91–104, 108–118.

[Chapter One]

BEGINNING OF THE NARRATIVE OF CHINGGIS KHAN

When Chinggis Khan conquered vilayets¹, [which] were bordered by Baghdad from one side, by Hindustan from another, by Desht-i Qipchaq [and] the Idil river² from the other side, he granted these vilayets to his four-five sons. Hulagu Khan³ got the vilayet of Iraq. Ögedei Khan was ruling in his vilayet. Tuli Khan was by Chinggis Khan's side. Chagatai Khan got the vilayets of Bukhara, Samarkand⁴, Khorasan⁵ and Hisar⁶.

Jochi Khan was the eldest of his sons. He [Chinggis Khan] gave [him] a big army and sent him to rule in Desht-i Qipchaq, saying: 'Let it be a pasture for your horses'. He [also gave him] the vilayet of Khwarezm. When Jochi Khan rode to the vilayet of Desht-i Qipchaq, he reached Ulug-Tag⁷, which is well-known. One day, when he was hunting in the mountains, he saw a herd of maral-kiyiks (deers and roe deers). He was following the herd, shooting arrows, fell off his horse, broke his neck and died.

[Chapter Two]

IJAN KHAN [AND] SAIN KHAN

Ijan Khan and Sain Khan are famous. They were born by Turali Khan's daughter, his [Jochi Khan's] wife. [He also had] seventeen sons, who were born by other wives. These Ijan and Sain // succeeded each other on the throne. Sain Khan was younger. He told his elder brother Ijan the following: 'You are my elder brother, [who] was like a father to me. It means that you are my father. We are leaving for an alien yurt⁸. You should be the Khan.' Ijan replied: 'It is the truth that I am older than you. But our father loved you a lot and you grew up spoiled. Up to this moment I coddled you and subdued. [But] one day it [may happen] that, if I become the Khan, I won't be able to subdue [any more], and there will be a war [and] much hatred between us. [So] you should be the Khan. I will be able to accept your leadership, while you won't be able to accept mine.' [Sain] offered his elder brother the throne many times, saying: 'How can you say that?! How I can possibly be the Khan, when I've got the elder brother as per yasak⁹?!' When he refused, and when [Sain] said the following: 'Then, let's do something. Let's go to our mighty grandfather Chinggis (Genghis) Khan. I will tell him what I think, so will you. Whatever our grandfather decides, we'll comply',—[he] approved these words and accepted [them]. Two sons, born by one mother, and seventeen sons, born by other mothers, altogether went to the korunush¹⁰ of the great Khan. When they came to serve their [grandfather], the Khan erected three yurts for them: a white yurt with

a golden doorstep for Sain-Khan; // blue horde¹¹ with a silver doorstep for Ijan and a gray horde with a steel doorstep for Shayban¹².

In brief, Shayban Khan's oghlans are proud and cocky to oghlans of Tokhtamysh Khan¹³, Timur-Kutlu¹⁴ and Urus Khan¹⁵ due to three reasons. They say: 'We are exceeding you'. First of all, because of the yurt. [They] say: 'Our father Jochi Khan had died, and after that our fathers went to our mighty grandfather Chinggis Khan, who, having erected yurts for Ijan and Sain, [also] erected a yurt for our father Shayban Khan. But [he] didn't prepare [even] a [roofed] cart for your father. Secondly,—[they] say,—when Öz Beg Khan, being in anger, showed kindness to Kiyat Isatay and gave [him] for koshun¹⁶ all his oghlans together with their houses and tribes, he showed us respect and honour and gave us a two-part el¹⁷, saying: '[They] are the oghlans of bogatyr Shayban, who used to saber [and] conquer yurts'. One of them was the Karluk tribe, the other was the Buyrak. [We] took these two els, we were left to ourselves in our yurt, given [to us] by Sain Khan. When [other oghlans] put stones [and] bricks in the mausoleum of Jir Kutla¹⁸, when [they] were standing around the doors [of the yurt] of his son Tengiz Buga¹⁹ [and] kneeling while singing the hymn in his honour, we didn't participate in this'. Moreover, when Berdi Beg Khan²⁰ was ruling, and Sain Khan's oghlans perished, Tay Duali Begim, Jani Beg Khan's mother, having decided that the yurt and Khanate would belong to Shayban Khan's oghlans, summoned Khizr Khan, Mangkutai's²¹ son, [and] made [him] the Khan in the vilayet of Sarai²². 'We took the throne of that Khan after Sain Khan's oghlans',—[they] say. This story is provided hereby as a retelling.

And here we are once again at the beginning of the previous legend.

In short, when they returned from the korunush in Chinggis Khan's headquarters to the allocated vilayets, Sain Khan, having arrived on the banks of the Idil River, mobilised an army and organised a campaign against Maskav²³, the city located in the vilayet of Urus.

They say the following things happened. During that campaign [Sain Khan] gave Shayban Khan thirty thousand people and sent him to the vanguard detachment, [whereas] he was following him. [Shayban Khan] was three days ahead. Moscow sovereign received the news [about the enemy approaching. He] rode towards the enemy with one hundred and fifty thousand people. They received the news about Moscow sovereign riding towards them. Shayban Khan decided to approach him in a forced march. No matter how much [Beks] tried to talk [him] out of it, [he] was uncompromising. So by means of the forced march three days away from the [major army] [he] burst into the camp of [the sovereign], who was unaware of the peril. The Russian sovereign could not defeat [Shayban Khan, so the latter] captured its [Russian vilayet's] sovereign. Those, who were to be killed from his army, were killed, [while] the others were captured. [They] took a countless amount of property and equipment, chain armors [and] cuirasses. However, Shayban Khan ordered not to appropriate any things or [pieces] of equipment, grabbed by any man, [and] to bring them all. They say, [that] there were several piles of things, each type [of things] in a separate pile. And [these] piles were uncountable.

[Sain] Khan arrived two days later and saw this victory. The plunderage was taken to the Khan [and] was given to [Sain Khan]. [He] was greatly pleased [and] praised Shayban Khan. Afterwards, when [Sain Khan] arrived and organised the korunushes, he favoured Shayban Khan and was benevolent to him // and gifted him. He gave all the plunderage to Shayban Khan, [and he] gave it to his army. Next morning [they] set off [and then] arrived at the vilayet of Maskav. They stayed there for several months, arranged the affairs in the vilayet, collected mal [and] kharaj²⁴, established darugas²⁵ [and] assigned hakims²⁶. Victorious, they returned to their vilayet.

Meanwhile, before they came back, Ijan Khan's nökers²⁷ rebelled against their master and killed Ijan Khan together with all his oghlans. When Sain Khan learned about it, he was mourning deeply. As soon as he arrived home and organised a funeral banquet, he mobilised his army and organised a campaign against this enemy. And they were unable to oppose, and their leaders ran. Sain Khan resettled all other houses and tribes, annexed them to his el, and gave each aimag²⁸ to a Beg for koshun. This is the reason why it is traditional up to the present time to put mutineers and enemies to the sword.

So when Sain Khan took [all] these vilayets and els, he distributed tribes and kins among all his relatives, and allocated [them] lands and yurts. But when he consulted his Beks while allocating vilayets, kins and tribes to Shayban Khan, his Beks said: 'This man did a great deed. And now he is putting on airs.

It's no good giving him kins, tribes and vilayets, keeping [him] close. You should add an army to those thirty thousand people which [you've recently given to him] and send this man in unconquered vilayets. Let him take any vilayet he'll conquer.' [Sain] Khan liked these words, he added another ten thousand Kyat [and] Yuraldai to thirty thousand people, whom he had previously given to [Shayban Khan], and sent [him] as an appointee to the vilayets of Crimea²⁹ [and] Kaffa³⁰.

[Chapter Three]

BEGINNING OF THE NARRATIVE OF SHAYBAN //KHAN

Shayban Khan did many exciting and amazing deeds. We will recount one of these deeds in this short story. So his deed was the following.

There is a strong granite fortress in the vilayet of Crimea called Qırq Yer³¹. Its might and inaccessibility are well-known [all] over the world. [Shayban Khan] was laying siege to [it and] trying to storm it, but he couldn't take it. Finally he ordered: 'Hit any object with another object making clink-clank from dusk till dawn!' [His people] took [such objects] in both hands and started hitting one object with another, they started hitting in copper boilers, trays and bowls. So loud and rumbling it was in his army, that the ground [and] sky shivered, and the ears grew deaf. The besieged were running back and forth in great panic, wondering what had happened. That night this rumpus and clatter didn't stop till the morning, and the besieged didn't sleep. When the sun rose, [the besiegers] stopped [making any noise]. Next evening they started rumbling and clattering again. They repeated their actions for a week [or] for approximately ten days. The besieged were so exhausted due to restless nights [that] they started saying: 'If they had wanted to do something, they would have [already] done it. It is possible, that this time of the year they have such a custom or [such] a tradition',—and they calmed down. When Shayban Khan found out that they had calmed down, he gathered his army. They say that this fortress was located on a bare cliff. That very night [the besiegers] were making more noise [than before]. They started digging underground passages to the fortress from four different sides. By dawn they managed to dig [such a big] passage that a man could pass through it. Due to the rumpus and clatter the besieged could not hear the noise of pick axes [and] could not know that there was [the digging]. When the passages were ready, [the besiegers] started storming the gates. The besieged ran to the gates. One detachment of the Bahadurs were assigned to this digging mission. [The Bahadurs] ran out of these passages, // rushed to the fortress and took it. We were able to talk to some travellers, who had seen this fortress; and they said that the signs of this digging were [still] visible.

After that Shayban Khan went on a campaign to the vilayet of Ulag³² and captured it. Then he went on a campaign against the vilayet of Koral. Koral is a large vilayet. Many battles were held for Koral. Finally, he conquered Koral and made it the capital. He died there. [Even] now there are descendants of the ruler of Koral [vilayet]. Shaykh Ahmad Khan was a captive in this vilayet for several years, then he successfully escaped and came to his vilayet of Hajji-Tarkhan³³. He used to say: 'Whatever aimags our Uzbek peoples belong to, [all these aimags] are present there: they went together with Shayban Khan and stayed there'.

And so now, when we've finished our story about Shayban Khan, we once again come back to the story about Sain Khan. Sain Khan became a great sovereign in the vilayet of Desht[-i Qipchaq]. He ruled in happiness and prosperity for several years. When his fatal hour came and he left this world, he had two sons. One was called Sary-Taq (Sartaq)³⁴, the other was called Tugan (Toqoqan)³⁵. Sary-Taq died before him at the age of eight. Tugan [also] became [fatherless] in his young age. Begs cooperatively sent a scabbard without a saber and a shirt without a collar, meaning that the el was left without a sovereign, and the women were left without their husbands.

When Hulagu Khan found out about this news, he went to the vilayet of Shirvan³⁶ and, having equipped a big army, he sent [it] with [a messenger]. While this army is approaching, we've come to [the story about] Berke Khan³⁷—let [Allah] send his mercy and benevolence to him!

[Chapter Four]

BEGINNING OF THE NARRATIVE OF BERKE KHAN

The aforementioned [Berke Khan] —let him enjoy [Allah's] mercy—is known [due to the fact that] he was a Muslim from the moment he was born by his mother. When he was born he didn't drink milk [neither] of his mother, // [nor] of other non-Muslim women. In this regard, [Jochi] showed [him] to his magicians and sorcerers. When they said: 'He is a Muslim. Muslims don't drink milk of non-Muslim women',—a Muslim woman was sought and brought. He started drinking her milk.

Several years after that his father Jochi Khan died, and he went to Sygnak³⁸, being unable to stay among disbelievers. When he came to this vilayet he heard about distinguished features of Shaykh al-Alam Shaykh al-Din Baharzi³⁹, who was [one] of caliph Khazrat Shaykh Najm al-Din Kubra⁴⁰. So he came to serve him with great eagerness and love. For several years he aimed at obtaining the greatest degree of [spiritual] perfection of saints. He was still serving the Shaykh when Sain Khan died [and] his Begs cooperatively sent a messenger to Hulagu Khan.

One day the Khazrat Sheikh told Berke Khan the following: 'Oh, [my] son! Here is the will of our Supreme God: 'Go and rule in the yurt of [your] fathers!' [He replied] : 'I am serving you. If I go, I will be doomed to rule this [perishable] world and cope with its problems'. So the Sheikh replied: 'You won't be able to evade the Judgment of our Supreme God, even if you get into trouble or accept the torments of this life'. As a result, the abovementioned Khan occurred in a hopeless situation and agreed. It took several days to prepare for the travel, [and then] he left. The Khazrat Sheikh ushered [him] from Bukhara to Karaköl⁴¹. The Khan was walking on foot holding the headrope of the Sheikh's [horse]. In Karaköl the Sheikh blessed [Berke Khan] and returned home, [whereas] the Khan // headed to the vilayet of Desht.

When the vilayet of Desht subdued Berke Khan, he converted the majority of disbelievers into Islam. Some people say, that he ruled for thirteen years, others say that he ruled for sixteen years. Then he united with the merciful God. The Khazrat Khan left no children. Earlier we've mentioned [that] Sain Khan had two sons: one was Sary-Taq, the other was Tugan. Sary-Taq // died before his father at the age of eight. Tugan left two sons: one was called Tuda Mengu⁴², the other was Mengu-Timur⁴³. [When Berke Khan died] this Mengu-Timur was little. And even though Tuda Mengu was of age, he was a feeble-minded, mentally deficient man. Unable to find another descendant of Sain Khan, Begs had to make the aforementioned [Tuda Mengu] their Khan. There are many strange and astonishing legends, unbelievable stories about this man. But [only] one [or] two of them are mentioned in the present manuscript.

They say the following things happened. One day ambassadors of the supreme (?) Khan arrived. Cooperatively, the Begs of the Khan [Tuda Mengu] told him the following: 'This ambassador from a far-away land has come. Don't say anything stupid in front of him. Ask him if the Khan is healthy; also ask him if his el is prosperous. Don't ask anything else'. Moreover, they added: 'You can't do whatever you wish. We will tie a rope to your legs, and one of us will get under the throne and will sit [there] holding the rope. [And] every time you forget about our directions and start saying stupid things, he will pull this rope. [And] then you'll stop talking'. They said [this], and he agreed with their words. They say, [that] despite his madness, he agreed with everything that his Begs told him cooperatively, and he never disobeyed. That is why he was ruling in Desht vilayet for eighteen years.

Edigu-bey—let Allah be merciful to him—used to say: 'If you want to bring disaster upon your enemy, say the following prayer: "Oh, one God! Deprive my enemy of his mind. Moreover, prevent him from paying attention to the words of those who are intelligent!" [Say] this prayer'. // He [also] used to say: 'If someone is not intelligent, [but] listens to the words of the intelligent, he is intelligent. There is no difference!'

In short, the ambassador was received next morning. [Tuda Mengu Khan] asked if the Khan was healthy. He asked, if the people were prosperous. Then he asked, 'Are there many mice in your el?' [The ambassador] replied, 'Yes, there are'. Then he asked, 'Is it raining heavily in your el?' [The ambassador] replied, 'Yes, it is'.

The man, holding the rope saw that the [Khan] was carried away in the conversation. He pulled the rope. [Then] the Khan said to the ambassador: 'I would ask you something else, but somebody is pulling

my legs.' The Begs immediately took away the ambassador, left [the reception] and ushered him away, giving him a horse [and] a fur coat as presents.

When the ambassador returned to his sovereign, the Khan asked him the following: 'What were the circumstances in which you were received by our brother the Khan and how do you find him?' and the ambassador replied, 'I was received only once. I couldn't sort the reception out. During the reception he asked me about your state of health and about prosperity of our people. He also asked the following: "Are there many mice in your el?" I replied, "Yes, there are". And then he asked, "Is it raining heavily in your el?" And I answered, "Yes, it is". Afterwards he said: "I would ask you something else, but somebody is pulling my legs". Immediately after that the Begs stood up and left the reception. So did I. That's how I talked to the Khan'. This Khan and his Begs brooded over this story and said: 'It's good that he asked about our weather, as rains bring good to any people. It's also not bad that he asked about mice: mice always bring evil to everybody'. But no matter how long they reflected, they [still] couldn't understand his words: 'Pulling the rope'. [That's] how the story goes. <...>

Some people say, [that] he was the Khan for eighteen years, [while] others insist [that] he ruled for eight years. Then, as soon as his younger brother Mengu-Timur gained strength, he did the decent thing and said: 'You've been recognising me as the Khan due to the absence of a [dignified] candidate for so long. You were in torment, so was I. And [now] my younger brother, praise Allah, has grown up. I'm pleased with you. Make my brother the Khan', and he abdicated. And the Begs were glad to hear these words [and] made his younger brother Mengu-Timur the Khan.

[Chapter Five]

BEGINNING OF THE NARRATIVE OF MENGU-TIMUR KHAN

[Mengu-Timur Khan] was a just, mighty and wise sovereign. During his reign his people were prosperous. [He] was called Koluq Khan because of his great kindness. And he is famous [under the name of] Mengu-Timur Koluq Khan. They say [that] he reigned for thirty years, [and] then died. He left two sons. The name of one [was] Tokhtogha⁴⁴, the name of the other was Toghrilcha⁴⁵. Tokhtogha succeeded his father to the throne after his father's death.

[Chapter Six]

BEGINNING OF THE NARRATIVE OF TOKHTOGHA KHAN

This Tokhtogha Khan was a great sovereign. Among Sain Khan's oghlans there were few sovereigns, who could be compared with him. They say, [that] he had such a festive table [that] every day his cooks prepared ninety hogs apart from horses, cows, sheep and other animals. He had a son, whose name was El-Basar. He [Tokhtogha Khan] exterminated all his relatives and descendants, because of fear that they would compete with him [El-Basar] for the authority after the Khan's death. He even killed his younger brother Toghrilcha. However, some people say [that] Toghrilcha died from an illness. Toghrilcha had a wife, whose name was Kelin-Bayalin⁴⁶. She was beautiful. When Toghrilcha died, she had a son. She noticed, that Tokhtogha Khan was killing his relatives for his son's benefit. She sent her [child] on the run to the Circassian mountains with several companions. The famous Öz Beg Khan—let [Allah] be merciful to him—[is] this oghlan. Later on [Tokhtogha] Khan married Kelin-Bayalin. He loved her very much. Several years had passed. They say [that] the Khan was ninety years old: he became the Khan when he was ten, he reigned for eighty years. Some people believe, [that] he became the Khan when he was twenty years old and reigned for seventy years. When his life was over, it turned out that his son, whom he had been protecting and whose future ruling he had been securing, died before him. He was deeply sorry that it happened like this, that he had a son, and trembling for his son's succession to the throne he exterminated his own urug⁴⁷, [moreover] he was sorry [that when] he was at death's door, his son had died even before him, [and] that is why his torment was so devastating. Eventually, he became ill because of this sorrow, and his illness lingered.

One day he was lying in his bed, tossing, turning and moaning. Kelin-Bayalin understood why he was moaning [and] said: 'You were constantly ill. [But] why are you moaning [only] now?' He replied: 'How can I not moan?! I completely exterminated my urug for fear that my relatives will start a competition with my only son El-Basar for the Khan title. My son followed them, and now I'm dying as well.

[Now] my yurt will belong to an alien. That's why I'm suffering.' Kelin-Bayalin replied, 'I did something against your will. If you forgive my misdeed, I will tell you.' The Khan immediately rose, sat in his bed and asked, 'What did you do?' Filled with happiness, Tokhtogha Khan felt as healthy [as never before], [when Kelin-Bayalin] replied as follows: 'When your younger brother died, I had a son from him. I was afraid that you would kill him, so I sent [him] on the run to the vilayet of Circassia. Now every year I receive the news from him that he is well. This year he [turned] fourteen. He would possibly come, if you sent your people [for him]'. [Tokhtogha Khan] praised Kelin-Bayalin with a *tumen*⁴⁸ of two thousand [people] for such a happy news. Next morning he summoned his Begs, gave forty thousand people to Kiyat Isatay and Sijut Alatai and sent [them] for Öz Beg Khan—let [Allah] be merciful to him.

[However] Tokhtogha Khan had died before they came back. There was [a certain] Bajir Tok-Buga⁴⁹ from the Uighur *omak*⁵⁰. [The Uighurs] was an *el* with numerous [and] strong houses [and] tribes, it was also the Khan's *atalyk*. It was *shaitan*'s work—as he was a black man—he declared himself Khan. He also married Kelin-Bayalin and other wives of the Khan. Some people say [the following]. Bajir was an Uighur, whereas Tok-Buga was a Nutin. It looks [like] this statement is erroneous, as it is difficult to imagine that two [men] from two [different] houses were Khans at the same time. It's more possible that his name was Bajir, and his nickname was Tok-Buga.

In sum, this Bajir Tok-Buga declared himself Khan, married Tokhtogha Khan's wives and subdued his people.

Meanwhile, those Begs, who had left for Khazrat Öz Beg Khan came to the bank [of the Idil River?]. They received the news that [Tokhtogha] Khan died and Bajir Tok-Buga proclaimed himself Khan and subdued the people. They were bewildered and got worried because of this news. They held counsel on the topic of what they could do. When Kiyat Isatay⁵¹ said: 'Even before these events he was a man with numerous [and] strong houses [and] tribes, but now everyone recognised him. We won't succeed if we'll show our aggression at once. Let's try some trick to get to him, and then we'll decide [what] to do'. Everyone agreed with these words and sent a messenger [to Bajir Tok-Buga]. [That's what they] said: 'The Khan, our lord, sent [us] to fulfill his task. [Now] we are bringing this man there. This man is also a descendant of many generations of our lords. You shouldn't have done that. Right now you've declared yourself Khan in accordance with your qualities. The people have subdued and now obey. And we also have subdued [just as well] [and] will obey. We haven't [even] thought about waywardness. And even if we have, do we have enough power?! This [man] is a boy. We'll bring [him] and will give him to you. You'll do whatever you decide'. They sent a messenger and ordered him [to tell Bajir Tok-Buga the following] : 'We don't want to be separated with our home and *el*'.

When their messenger arrived, [Bajir Tok-Buga] was happy, received [him] and treated him kindly. He immediately sent him [back] together with [his] people. He sent [him], saying the following: 'I did so because I was afraid that someone else could lift his head and would want the khanate.

Is it possible that I would like to be the Khan, when my lord's son is alive? Let the sovereign come. Both the Khanate and people are his!' When they heard these words, they started off immediately. [But] Bajir Tok-Buga and his Begs had deliberated and agreed as follows: 'When they enter the dwelling of the widow, they'll express their woes [in screams]. We'll attack them afterwards, so that they'll be able [to scream] "*chäv-chäv*" only twice'.

In a word, the Kalmaks have such a tradition. When their sovereign, or [a] respected [person] dies, they arrive, crowd after crowd, each house separately, and express their sorrow crying '*chäv-chäv*' three times. This tradition is still preserved among them in Ulug-Tag.

One day Öz Beg Khan and his Begs were riding at night. They met a man, [who] rode past them [with] a frightening scream: 'Say "*chäv*" and say "*chä*".' He said it once and rode away. [They] did not pay attention to his words. When he repeatedly said them, Kiyat Isatay inquired: 'What are the words you keep saying?' This man replied: 'My name is Sangsun. You'll understand the rest'.

Kiyat Isatay thought to himself: '[This man] has something to say,' and so he followed him and asked, 'Tell me. What's that secret?' He answered, 'Bajir Tok-Buga and his Begs were in cahoots and decided to attack and kill you soon after your arrival, when you enter the dwelling and, expressing your sorrow, cry out "*chäv-chäv*" twice. If you didn't attack them, crying "*chäv*" [only] once, then you'd be dead, and

it would be your end. Here is the gist of my secret, [just as] I've told you.' When Isatay told this news to his Begs, they decided that they should act, crying 'chäv' [only once].

Next morning they started off and arrived to the place, where the headquarters was. Bajir Tok-Buga was sitting on the throne in the dwelling, [whereas] his Begs and Nökers were on guard in front of the door. They rode closer, dismounted, and having cried 'chäv-chäv' only once, cried out 'chä' and attacked Bajir Tok-Buga. He was unable to stand up [from the throne], as Isatay came up to him and cut his neck, [he cut it so hard that] his head flew away at a step distance. Alatay put [it] on his dagger, lifted it up [above his head] and cried: 'Here [it is], the head of your lord! Don't move!' Everyone was stunned [and] froze [where he stayed]. Afterwards this head was taken from one kuren to another, and it was declared as follows: 'Let the ruling of black people stop from this moment!'

When Bajir Tok-Buga was killed, Khazrat Öz Beg Khan was elected Khan, and so he started his ruling. <...>

[Chapter Nine]

BEGINNING OF THE NARRATIVE OF BERDI BEG KHAN

Berdi Beg became Khan at his father's [Jani Beg Khan's] throne. This Berdi Beg was a very stupid and reckless man. He killed his relatives and oghlans for fear that they would question his reigning.

They say that there was a man with numerous and strong relatives, whose name was Kangli Tulubay⁵². He was an atalyk of the Khan. [The Khan] did not defy him, no matter what he said. He had a son, whose name was Sumay. He was a bogatyr and a great archer. This Sumay was robbing during Jani Beg's reign. The Khan killed him for that—let [Allah] be merciful to him. It made Tulubay angry, and in revenge for his son he advised [Berdi Beg Khan] as follows: 'You are a young man now. Your sons, who are born in this period, will be growing [with you] at the same time. You'll be getting older, day after day, [whereas] they will be getting strength. They'll question your authority and will take your Khanate from you tomorrow, when you are old. [So] kill them now. When you'll be getting old, then you'll [leave them alone].' And this ill-fated man followed this advice and killed [his sons]. That's why he is called Kerkin-Kötän Khan.

His time was marked by turmoil. Kiyat Mamai took the right wing and went to Crime with the tribes, [as for] the left wing, Tengiz Buga, Kiyat Jir-Kutla's son, took it to the bank of the Syr River. [Berdi Beg] Khan and his insiders were in Sarai. He was the sovereign of Sarai for three years, and then died.

Tai Tugly Begim, a famous wife of Öz Beg Khan and Jani Beg Khan's mother, was alive in the period, [when] there was no Sain Khan's descendant left. [Then] the aforementioned Begim said: 'Now the Khanate and yurt will belong to Shayban Khan's descendants.'

In that period there was a son of Mangutai from Shayban Khan's house, [whose] name was Khyzr oghlan. Mangutai's yurt, allocated [to him] by Sain Khan, was located in [a place] called Ak-Kul⁵³. We've mentioned before why [Mangutai] separated from other [Jochi's] oghlans and stayed in his yurt. In short, the abovementioned Begim summoned Khyzr oghlan and put [him] on Sain Khan's throne in Sarai vilayet. [But] let's interrupt this story [for now]. <...>

Now the story about Khyzr Khan begins. When Tai Dugly Begim summoned Khyzr Khan and made [him] Khan on the throne of Sarai, she erected a golden yurt, left after Öz Beg and Jani Beg Khans, as a wedding yurt. They say the following things happened. Begim dyed her hair black [and] wished to marry [Khyzr] Khan. The Khan also wanted to marry [her]. However, he had a Beg called Qutlugh Buga from the Naimans, who was against it. He said: 'She is a woman, who a subservient of Öz Beg and Jani Beg. [Whereas] you are a man, who has grown as an opponent [to their house]. Give her a lesson. Don't marry!' He followed the advice and didn't marry.

When Begim realised that he wouldn't marry her, she started showing [him] less respect and honour than before. When the Khan, being angry with her, decided to destroy the golden yurt and share [the gold] among his Cossacks⁵⁴, Begim sent a man to the Khan, saying: 'Don't let them do this. When there is no gold [and] silver, [the golden yurt] is a treasure for the Khan. But [still] they shouldn't destroy a building built by good old [men] !' Alas, Khyzr Khan refused to follow her advice, destroyed the yurt and shared the gold. In return Begim became mad at [Khyzr] Khan, gathered her trusted Begs and kicked him away. Khan left and once again came back to Ak-Kul. [Then] this Begim helped a certain

Keldi Beg to become the Khan. Other Begs called him False Keldi Beg. Everyone said: 'Berdi Beg killed Keldi Beg. How could he resurrect?!'

When the el refused to obey [False Keldi Beg], [a man] called Bazarchi⁵⁵ was elected Khan. He was a descendant of Boavul. In this period of time there was a supreme Beg called Sijud 'Ali Beg. [Begim] thought that we wouldn't subdue to this Bazarchi, so she summoned him, [so he] was brought and killed. 'Ali Beg had a son, whose name was Hasan. He ran away and came to Ak-Husein, Kongrat Nagadai's son, who was the hakim of Khwarezm vilayet. This Hasan was his nephew. [Ak-Husein] was terrified because of such indecent actions of Begim, and renounced her.

Ak-Husein sent an ambassador to Khizr Khan, saying: 'This woman is on Devil's path, [as] she's doing such deeds. But we renounced her. We'll start a campaign against her, if you are noble-minded and lead it!' He was also a revengeful man—praise [to him]! Ak-Husein mobilised the army of Khwarezm, came to Ak-Kul, made the abovementioned [Khizr] Khan and started off to Sarai vilayet. There was a battle near Sarai. Bazarchi [and] Begim were captured. Begim was put in roofed sledges, was tied up tightly. A mad stallion was harnessed to the sledges and was set free. This mad stallion ran away with the sledges, he was running in ravines and gullies, hitting the sledges till Begim died. The Uzbeks⁵⁶ say: 'Tai Dugly Begim was killed by Khizr Khan.' And we've described the circumstances of this.

Having killed [Begim], Khizr Khan became Khan for the second time and was reigning for a year and a half. He had a wicked son, whose name was Burut⁵⁷. He couldn't stand that his father became Khan, so he suddenly attacked [him] and succeeded his father to the throne. This provoked the time of turmoils. Each and everyone wanted to rule. Sarai was destroyed. The majority of the el fled to the vilayet of Crimea to Kiyat Mamai. Here we end this narration.

Once again we begin our story about Kara Nogai. For three years Kara Nogai ruled Turkestan vilayets⁵⁸ on the banks of the Syr. Then he died. His younger brother Tugly Timur⁵⁹ succeeded him to the throne. The *däftär*, which was kept by Khazrat Dost Sultan, the pride of sultans, says [that] this Tugly Timur became a great sovereign and ruled Samarkand and Bukhara. However, it's not known how long and when he ruled.

Urus, Badyk oghlan's son, became Khan after him. Urus Khan became a great sovereign, ruled in the vilayets of the whole Turkestan. Tokhtamysh Khan and Timur Kutlu Khan were not ruling in that period. They were serving this sworn Khan. By the grace of God Tokhtamysh oghlan showed royal traits of character, so [Urus] Khan's nökers and other people unwillingly leaned to this aforementioned oghlan. That is why the Khan hated Tokhtamysh oghlan to death and wanted to kill [him].

[Tokhtamysh oghlan] spent that winter serving [Timur] Beg. Spring came, and [Timur] Beg gave him several people. When [Urus Khan] was going to his summer headquarters, [Tokhtamysh oghlan] came up to his el and led away his herd of horses. They were chased, and Tokhtamysh was defeated. He returned to Timur Beg to serve him. In short, Tokhtamysh oghlan was wandering the Cossack way, stealing [Urus Khan's] herds and raiding the el.

Since ancient times the Shirin, Barin⁶⁰, Arghyn⁶¹ [and] Kipchak tribes had been the els of Tokhtamysh oghlan. [And when] this oghlan, leading the Cossack way of life, started behaving like that, daredevils, courageous lads from these els wanted to become his nökers and began supporting [him]. Urus Khan started ravaging in these els. In their turn, they sent a man to Tokhtamysh oghlan with the following message: '[Urus] Khan is angry with us because of you, he is taking out cattle. A disaster is threatening us. If you are unable to take care of us, [than] we will catch you by the collar, and the day of Judgment will come for you!' Tokhtamysh oghlan became really upset when he heard these words, and he told the messenger: 'When you head for the summer headquarters, keep in the back of the [whole] el. Encamp at the bank of a certain river and be prepared. Hopefully, I'll be alive and will certainly come to you!'

Spring came, and [Urus] Khan started off to the summer headquarters. This el followed [the other] els and also moved. When they reached the summer pastures, each el went to a bank of [a] river. These els encamped on the bank of the bespoken river. People were drinking kumis, enjoying themselves and having fun. [And] this was the time [when] Tokhtamysh oghlan [secretly] wriggled his way into this el. Due to the fact that they had already bespoken the conditions and were ready, each head of every family harnessed horses, put his children in carts and ran towards the 'Idil river.

[Only] two days later [Urus] Khan found out that Tokhtamysh oghlan took the Shirin, Barin, Arghyn and Kipchak tribes, as well as his other els to the 'Idil river. Khan immediately set off with his people, sent his messengers around and began chasing these runaways. Meanwhile [Urus] Khan's els drifted away in the summer pastures. The horses eventually became fat. [Urus] Khan was advancing like the wind. The army of far-away els hadn't made it to the Khan in time, whereas horses of near els also became fat.

When [Urus] Khan almost reached them [the runaway els], there were few people near him. There were two hundred people with him, three hundred at the uttermost. At sunset the guardsmen of this [runaway] el rode to the el, having seen [a cloud of] dust raised by [Urus Khan's detachment]. The escapees put heads together and unanimously decided the following: 'They are approaching riding weary horses. After a while they'll come up to us and will attack us [immediately]. We are condemned men. Let's die in front of our families. Additionally, let's save our semen! Let's be separated from Jalal ad-Din Sultan⁶² and Iahshy Hoja with some boys used to the life in the saddle and a guide. Let this guide [lead them] near our detachment at a voice distance. If we defeat the enemy, they will know about [it] thanks to our hooray and will join us. If the enemy defeat us, it will be clear because of his hooray. [Then] they should try to run away in order to save themselves!' They separated from Iahshy Hoja, who was the eldest son of Uriq Timur, and some boys used to the life in the saddle headed by Jalal ad-Din Sultan. Jalal ad-Din Sultan was twelve years old. Iahshy Hoja was approximately the same age.

That night they were riding alongside of the major detachment approximately at a voice distance. When one night watch had passed, [Urus] Khan caught up with them. They sent their carts in front of them, but adopted a formation and followed. [Urus Khan] said: 'These people outnumber us. If the day breaks and they notice that we are outnumbered, it won't be good. Let's attack [them] at night with violent cries. They won't understand how many we are, and they will run.' So they attacked with a battle-cry. When [Urus Khan's people] rode away after the attack, Uriq Timur's horse fell. So he cried: 'Hey, mean Tokhtamysh, have we agreed to this?! I'm left [horseless] when they have turned back!' At that very moment the boys were standing, drawing the reins, listening. Iahshy Hoja recognised his father's voice and told Jalal ad-Din Sultan: 'Have you heard? It is my father! He's been captured. Soon your father will be captured too. What our life of fatherless of wet noses will look like?! Isn't it better to die together with them?!' And so Jalal ad-Din Sultan and these boys, with the assistance of the Supreme Allah, rode to the major detachment. Each of them cried a battle-cry as a courageous voivode, and [all of them] careered (towards the enemy). [Urus Khan's people] were so afraid that they pulled the reins [of their horses]. Tokhtamysh oghlan rode back in a gallop, darted [towards the enemy], lifted [Uriq Timur] on his horse and rode away. The horses of [Urus] Khan's people were exhausted, [that is why] many of those people were captured. [Tokhtamysh oghlan's people] believed that the major detachment [of Urus Khan] was behind him, they didn't chase [his people] much. The captured were killed [right there] with arrows, their horses and equipment was taken. Tokhtamysh Khan's people followed his [major] detachments.

Those [Urus] Khan's people, who managed to escape, ran far away, [but eventually] they gathered together and noticed [that] the Khan was nowhere to be seen. One of them said: 'I was near the Khan. I saw that two people attacked and captured him. But I don't know what happened next.' [All of them] turned back, came to the battlefield [and] found the Khan's dead body. They took his body right away and rode to their homes. Meanwhile these [runaways] were running in the opposite direction, for fear that [Urus] Khan would catch them.

These are the circumstances of Urus Khan's death. The Uzbeks say: 'When Jalal ad-Din Khan was a boy, and Urus Khan was fighting with his father, he attacked him from the side leading a group of boys, he defeated and killed Urus Khan.' That's how it was.

Afterwards, [Tokhtamysh oghlan] set off and came to the 'Idil river. There was no Khan, no Sultan in Sarai. He came, he took Sarai and, seizing the opportunity, came to a mosque on Friday, read a khutbah⁶³ [in his name and] became Khan.

[After that] he marched out and started a campaign against Kiyat Mamai. Mamai also came with a big army. A violent battle took place. Mamai's army was defeated, he was captured. [He] was killed.

His el was taken to the bank of the 'Idil river. This time Tokhtamysh Khan became a mighty sovereign sitting on the throne of Sain Khan in Sarai.

Most of the els, left after Jani Beg Khan, belonged to Mamai. [Tokhtamysh Khan] killed Mamai, took his els and nökers. When he came to Sarai vilayet, those people, who high-handedly lifted their heads here and there in Desht[-i Qipchaq] vilayet, came, whether they liked it or not, to Tokhtamysh and humbly became his nökers. The aforementioned Kan Bay came too. [Tokhtamysh Khan] allocated him some land on the estuary of the Tan, because this was the place which had been allocated [to him before]. But he was constantly seeing 'Arab oghlan. He allocated him some nomad territory at the right wing, asked him to sit near him and arranged equestrian competitions. Dzhatba songs were sung at this festival⁶⁴:

'You became Khan at Koxdey.

Don't boast, [that] you led the way.

You swelled your bosom [like a turkey-cock],

We hit your forehead for a long time, standing upside down,

Why did you follow our asses, Kan Bay!?'

In short, Tokhtamysh Khan hosted many favours and gave many presents to 'Araboglan and ordered: 'Let all the people, who used to belong to Shayban Khan, come to you, wherever a slave, who has run away from his master, or an el, who has eluded his yasak, were...' <...>

Commentary on the translation¹

¹ Vilayet (Wilayah) is an administrative division, a district in countries of the East, in Arabic literally meaning a country, a district or a province (Materials on the History of Kazakh Khanates, 1969, p. 525).

² The Idil (Itil, Volga) river flows into the Qalzam (Caspian) Sea. Historical chronicles have it as *Atal*, in Moghulian it is called *Idil* (The Tarih-i-Rashidi, Materials on the History of Kazakh Khanates, p. 220). 'Having left the wagon-train there and singled out the picked troops, he launched a raid and set in pursuit of Tokhtamysh, crossed the Idil passage, which the Turks call Turatur...' (Collection of Works Related to the History of the Golden Horde, 1884, p. 12).

³ Hulagu Khan, son of Tolui, grandson of Chinggis Khan, founder of the Hulaguid dynasty in Iran; reign years 1256–1265.

⁴ The Samarkand vilayet, comprised the regions of Bukhara, Kesh, Karshi, Guzar, Kermine and Karakul and Sughd and Shaurad tumans (Materials on the History of Kazakh Khanates, p. 537).

⁵ Khorasan is a region in the northeast of Iran. At that time Khorasan included the nor–eastern part of Iran, south of the present-day Turkmenia and the nor–western part of the present-day Afghanistan.

⁶ Hisor (Hisar) is a district and city in the valley to the sou–east of the Hissar range. During the Timurids and the Uzbeks the city was the headquarters of practically independent rulers. The Uzbeks acquired a stronger hold of the region since the time of Abdullah Khan II (*Bartold V. Hisor (Hissar) // Sochineniya v 9 tomax*, Moscow, 1965. Vol. 3, pp. 401–402). At present the Hisor area forms a part of the Surxondaryo Region of Uzbekistan, and partly, including the town of Hisor, belongs to Tajikistan.

⁷ Ulug-Tag (Ulu-Tag, Ulu-Dag) is a part of the Alay Mountains, a massif of high mountains west of the Isfairam mountain crossing and the Kara-Kadyk pass. The Ala-Tag extends for 50 km. The mountains are west of the Karaganda region and northwards of the Sary su river.

⁸ Yurt is a term used in the sources to denote the 'territory', within which a given administrative-tribal unit conducted its nomadic life; it can also mean a 'country' (Materials on the History of Kazakh Khanates, p. 496).

⁹ Yassa means here the so called 'decrees by Chinggis Khan' (Yasa/Yasaq—Editor's note), that is the common customs and conventions, that he put in the form of laws, which observation was obligatory for all, without exception, residents of the empire.

¹⁰ Korunush is an introduction ceremony.

¹¹ Orda (Horde), in its original sense of the word meaning a yurt, khan's yurt, palace yurt or front ceremonial yurt, acquired the new meaning of the 'headquarters, residence of a Khan or ruler' (*Yudin V., Hordes:*

¹ Text of comments is significantly reduced.—Editor's note

White, Blue, Gray, Golden... // Kazakhstan, Srednyaya i Central'naya Aziya v XVI-XVIII vv., Almaty-Ata, 1983, pp. 116–117).

¹² Shayban (Shiban) is a son of Jochi Khan and a brother of Batu.

¹³ Tokhtamysh Khan (Tokhtamysh) was a descendant of Tuqa-Timur, managed to briefly unite under his power the left and right wings of the Ulus of Jochi, reigned in 1380–1395.

¹⁴ Timur Kutlu (Timur Qutlugh, Temür Qutlugh) is a descendant of Tuqa-Timur, the 13th son of Jochi. He founded the dynasty of Astrakhan khans (*Yudin V.*, *Hordes...* p. 123).

¹⁵ Urus Khan (1369–1379) is one of the rulers of the left wing of the Jochid Ulus.

¹⁶ Koshun is unit, a 'hundred', in the military organisation.

¹⁷ El is the term that the sources and researchers use in various meanings: a tribe, tribal union, people, state, power, country, orda, assembly of nobility of different tribes. Here it is a clan, tribe.

¹⁸ Jir-Kutlu is a historical personality. According to Chinggis-name, he was also a son of Kiyat Isatai, while his son Tengiz Buga built a mausoleum above his father's grave on the Syr Darya banks and a detachment of Jochids—prisoners took part in the construction. The construction was carried out in the year Berdi Beg Khan died (1359).

¹⁹ Tengiz-Buga is a son of Kiyat Jir-Qutlugh, the sole master of the Golden Horde's left hand (wing), who, according to some sources, was killed by Urus Khan. During the reign of Berdi Beg Khan (1357–1359), Kiyat Mamai drove a part of the Golden Horde people to Crimea, while Kiyat Tengiz-Buga took his part to the Lower Syr Darya. That was how the famous Mamai Horde emerged, as well as the yet unknown to historians the Horde of Tengiz-Buga came to life on the territory of Kazakhstan (*Yudin V.*, *Hordes...* p. 154).

²⁰ Berdi Beg Khan (1357–1359) was a son Jani Beg Khan (1341–1357), had the nickname Kerkin-Kotan Khan.

²¹ Mangutai (Mangkutai, Mongatai): Kadak-oghlán was the third of Shayban Khan twelve sons. He had a son named Tala-Buka. And he, Tala-Buka, had two sons. Their names were Mangutai and Tuman-Timur (Collection of Works Related to the History of the Golden Horde, 1941, p. 55).

²² Sarai was the first capital of the Golden Horde, founded by Batu Khan at the beginning of the 1250s.

²³ Maskav is the city of Moscow.

²⁴ Kharaj is a term related to the tax system; products rent has been mostly known as 'kharaj'; a synonym of this term is *mal* (sometimes *mal-i kharaj* or *kharaj-i mal*, *mal-i gallya*) (*Abduraimov M.* Studies of the agricultural relations in Bukhara Khanate in the 16–first half of the 19th centuries), Tashkent, 1970. Vol. 2. p. 148).

²⁵ Daruga is a Mongol ruler, Khan's vicegerent in a town; the daruga responsibilities included general governance, supervision over the collection of tribute, taxes and execution of duties. In the 15–16th centuries the term 'daruga' had a broader meaning of a ruler, manager, general administrator, in charge of collecting duties for the treasury, a governor (*Grebkov B.*, *Yakubovsky A.*, *The Golden Horde and its fall.* Moscow; Leningrad, 1950. p. 471).

²⁶ Hakim is the ruler of a town or a province, appointed by the Khan, performing administrative and judicial functions.

²⁷ Nöker in Mongolian literally means a comrade, warrior, servant. The term was denoting a free warrior, who pledged to serve his leader. Turkic people by the term 'nöker' defined members of retinue, military servants (Materials on the History of Kazakh Khanates, p. 500).

²⁸ Aimag, equally 'omak' or 'obak', means a 'tribe', 'clan'; the same also in Islamic works of the 15–18th centuries (Materials on the History of Kazakh Khanates, p. 494).

²⁹ Qirim—its ruins are located on the territory of the present-day town of Sary Krym.

³⁰ Kaffa (Caffa) is a medieval town on the southern coast of the Crimean peninsula, in ancient times and now again called Feodosia (Theodosia). In the latter half of the 14th century the southern Crimean coast was occupied by Genoese settlements-colonies, for which Kaffa (Feodosia) served as an administrative center. Until the 1260s, it was a minor village.

³¹ Qırq Yer (Kyrk-Or, Chufut-Kale)—its ruins are known at present under the name of Chufut-Kale and are situated not far from Bakhchysaray. Throughout the 13th century the town was an autonomous domain, semi-dependent on the Golden Horde. In 1299 it was destroyed by Nogai troops, with its autonomy being abolished after that, and it became one of the Golden Horde towns in the peninsula. After the emergence of

Bakhchysaray (16th century) Qırq Yer finally lost its significance (*Smirnov V.*, The Crimean Khanate under the rule of the Ottoman Porte before the beginning of the 18th century., St. Petersburg, 1887, p. 120).

³² Ulak—upon assumption of V. Yudin, the word is spelled in such a way that it should be read Ulaq. However, the *ḥarakah*, when being written, gets a thickening at the beginning, so that the *fathah* starts resembling a *ḍammah*. Though perhaps it is indeed a *fathah* here, and the word should be read as *Avlak*, that is *Vlach*. See: Textological notes, Leningrad, 41a, line 178.

³³ Hajji Tarkhan (Xacitarxan, Aztarakan), its ruins are found at the Shareny Bugor archaeological site, situated on the right bank of the Volga, a little upwards of Astrakhan.

³⁴ Sary-Taq (Sartaq) (1256–1257) is Sartaq, a son of Batu Khan, reigned apparently for less than a year.

³⁵ Tugan (Tukan, Togan) is a son of Sain Khan (Collection of Works Related to the History of the Golden Horde, Vol. 2, p. 288).

³⁶ Shirvan was situated between Derbent and the Kura, with Shamakhi being its capital.

³⁷ Berke Khan (Birkai, Barka, Baraka) is a son of Batu (Sain) Khan. According to Bosworth, Berke Khan ruled from 655/1257 (*Bosworth*, The Islamic Dynasties, p. 203).

³⁸ Sygnak, the region of the northern and lower reaches of the Syr Darya with the towns of Otrar, Sairam, Sygnak and Jand, constituted the main part of the domains of the Kok Horde Khans. Sygnak ruins are situated on the right bank of the Syr Darya near the town of Zhanakorgan (Yani Kurgan) in Kyzylorda Region of the Republic of Kazakhstan.

³⁹ Sheikh al-Alam Sheikh Saif ed-Din al-Boharsi (1190–1261) is a famous Sheikh, a student-follower of Nadjm ed-Din Kubra, the founder of the Sufi order Kubrawiyya. He set up a khaniqah in Suktari near Bukhara (*Kubrawiyya* community actively functioned there till the end of the 18th century, while its members spread the ideas of al-Kubra up to the western borders of China) (*Islam. Encyclopedic dictionary*, p. 140).

⁴⁰ Nadjm ed-Din al-Kubra, Shaykh Abu 'l-Djannab Ahmad ibn Umar (1145–1221) is the founder of the Sufi order *Kubrawiyya*, a famous Persian theoretician and practitioner of Sufism, a poet. He died in 618/1221 during the Mongol assault on Gorganj, which he was defending with arms together with his students. His grave is situated in the municipality of Kunya-Urgench. Al-Kubra founded his school of a mystical way of learning. He worked out ten principles, the basics of the *Kubrawiyya* order and rules of behaviour for a murid. He set out his views in a number of treatises in Arabic (*Bertels E.*, Sufizm i sufijskaya literatura (Sufism and Sufi literature). Selected works, Moscow, 1965, Vol. 3; *Islam. Encyclopedic dictionary*, p. 139).

⁴¹ Karakul (Qorako'l) is a district west of Bukhara. It is a city-fortress situated between Bukhara and Chardzhou on the Amu-Darya. At present it is a district capital in Bukhara Region of the Republic of Uzbekistan.

⁴² Tuda Mengu is a son of Tugan, a son of Batu. He ascended the Sarai throne in 681 (11 April 1282–31 March 1283) after the death of his brother Mengu-Timur. In 686 (16 February 1287–5 February 1288) Tuda Mengu, the Tatar Tsar of the northern regions, abdicated the tsardom (Collection of Works Related to the History of the Golden Horde, Vol. 1, p. 122).

⁴³ Mengu-Timur (1266–1281) is a son of Tugan, a son of Batu.

⁴⁴ Tokhtogha, Toqta is a Khan of the Golden Horde (1290–1312). His name is also being presented as Tokhtai, Tokhtaigha, Toqta, Tochtugu, a son of Mengu-Timur, who was a son of Toqoqan, the second son of Batu.

⁴⁵ Toghrul (Toghrilcha, Toghluk, Tulicha) is a son of Mengu-Timur Khan, a kin brother of Tokhtogha (Toqta).

⁴⁶ Kelin-Bayalin (Bayalun) is a Byzantine princess, a wife of Toghrilcha, then of Toqta, then of Bajir Tok-Buga and, at last, of Öz Beg Khan. According to Chinggis-name, she was Öz Beg's mother. It is worth noting that, by reports of Arab sources, to marry Bayalun, Öz Beg was to receive a special permission of Islamic law experts, and such was allegedly given only because his father was a disbeliever and the marriage of the Öz Beg's father with Bayalun was recognised as illegal. Meanwhile, other Golden Horde Khans used to marry stepmothers under the rule of levirate, without any interference of Islamic lawyers. The fact, naturally, is worrisome. According to other sources, Bayalun was not Öz Beg's mother.

⁴⁷ Urug or Uruk means 'a family, a descendant, a clan'. In the written sources of the 15–17th centuries this term was used in a narrower meaning than 'aimag' or 'omak' and denoted an association of blood kinsmen

headed by the patriarch or the person, who for some reason played a leading role in the association (Materials on the History of Kazakh Khanates, p. 497).

⁴⁸ Tumen (Tuman) is an administrative unit (feudal estate) contributing a tumen of warriors. Some researchers tend to consider this term in this case as a tribal name. It is not so apparently. Its use in Eastern works identifies it more as a social term, and that its usual meaning is ten thousand, a military formation of 10,000 men, a district, which could dispatch or maintain 10,000 warriors (Materials on the History of Kazakh Khanates, p. 494).

⁴⁹ Tok-Buga (Tula-Buka) (1287–1291) is a Jochid, a son of Batu Khan's son Toqoqan.

⁵⁰ The Uighur is one of the largest tribes of Desht-i Kipchak; the Uighurs went with Muhammad Shaybani Khan to Transoxiana, later settling down in Khwarezm.

⁵¹ Kiyat Isatai-beg is a powerful favourite of the Golden Horde from the Kiyat tribe, who, according to Kadyr-Ali-Bey ibn Hushum-bey Jalair, enthroned Öz Beg Khan and led in his time, as reported by Ötemish Hajji, a special detachment of Jochids. His descendants had an important political influence in the Eastern Desht-i Qipchaq and at times concentrated all the power in their hands (Materials on the History of Kazakh Khanates, p. 493). Kiyat Isa-Gurken, or Isa-Kurhekan, that is the Isakhan son-in-law, and Isa-Korkoz, that is Isa-One eyed, was married to Itkujuk-Zhuk, a daughter of Öz Beg Khan. One of the main grandees and favourites of Öz Beg founded a line of Kiyat tribe Beys in the left wing of the Golden Horde, who after the death of Berdi Beg Khan even (1359) usurped the power in the Syr Darya region. His descendants were broadly known in the Eastern Desht-i Kipchak long after Öz Beg Khan death (died in 1341). For example, Buzanjar-Bey Kiyat demonstrated activity in the late 15–early 16th centuries. He was also the father-in-law of Öz Beg as his daughter Urduja was the Khan's spouse (Collection of Works Related to the History of the Golden Horde, 1884, p. 295) and his other daughter Isataya was married to Sijut Alatai (Collection of Works Related to the History of the Golden Horde, 1884, Ibid.).

⁵² Tulubai (Tugly-bey, Tavlubey, Tuvlubey) is one of the most influential emirs in the reign of Jani Beg Khan.

⁵³ Ak-Kul is a small lake in the north-west of the present-day Daşoguz (Tashauz) (Turkmenia), the lake to which the Zhelanshik (Jilanchi) river flows into (Materials on the History of Kazakh Khanates, p. 543, 546). <...>

⁵⁴ Cossacks—in the opinion of V. Yudin, the word '*cossack*' appeared in the sources only in the post-Mongolian period in the 13th century. It was applied to a person, who had separated from his state, tribe or clan and had to conduct an adventurer's life. In Turkic languages the word had several derivatives: *cossack*—'kazak', *kazaklyk kylmak*—'to imitate a cossack, to conduct a cossack way of life', *kazaklamak*—also 'to imitate a cossack, to conduct a cossack way of life'. One of the most vivid evidences of the original meaning of the word is the famous report by Mirza Muhammad Haidar Dughlat about the confer on the part of the Uzbeks, who roamed away with Giray and Jani Beg from Desht-i Qipchaq to Semirechye, the appellation of *Kazak*, which later became their national name (Yudin V. On the etymology of the ethnonym *Kazakh* (*Kazak*) (Manuscript)).

⁵⁵ Bazarchi is a new Khan of the Golden Horde, enthroned by Taydula. House (descendant—Editor's note) of Tangkut, a son of Yoji Khan. Tangkut had two sons. They were called Tokuz and Sudai. Tokuz had three sons. The latter's names were Kalmutay, Arslan and Boakly. And from their descent were Tubay, Bazarchi Khan... and Bazarchi Khan's son Timur-Malik (Materials on the History of Kazakh Khanates, p. 38).

⁵⁶ The Uzbeks—in the 14th and 15th centuries the name Uzbeks was used not as ethnonym, but as a collective, political name to denote local Turkic and Turkised Mongol tribes of the Eastern Desht-i Qipchaq (The history of Kazakh SSR from ancient times to the present day: in 5 Volumes, Alma-Ata, Vol. 2, 1979, p. 177; Ahmedov B., The state of nomadic Uzbeks, Moscow, 1965, p. 11–16; Gafurov B., Tajiks: The early, ancient and medieval history, Moscow, 1972, pp. 547–548).

⁵⁷ Burut (Murat, Amurat)—he minted coins in New Sarai and Belad Gulistan from 762 to 764 AH, died on 10 October 1362/1363.

⁵⁸ Turkistan (Yasi) is a city and a vilayet. At the end of the 14th century the city became an arena of fight between Tokhtamysh and Tamerlane. In the 16th century the city got the name of Turkestan and played an important role in the history of Kazakh Khanates.

⁵⁹ Tugly (Tughlugh) Timur—we know about Tughlugh Timur that he was a Khan, though available sources identify him with Moghulistan Khan Chagataid Tughluk Timur.

⁶⁰ The Barin—other variants of the ethnonym include 'bayri, barym, bahrim, bagrin, baarin'. A known Turkic-Mongolian tribe, which divisions happened to be scattered around the Chagatai Ulus. Il Barin are noted among the Moghuls of Moghulistan in the time of Ulugh-Beg (Tarih-i Rashidi, Manuscript, Institute of Oriental Studies Of The Academy of Sciences of the Republic of Uzbekistan, B 648, p. 395). They are mentioned as an independent aimag even in the middle of the 17th century on the territory of Kashgaria (*Shah Mahmud Choros*, Ta'rikh, p. 74a, 84a; *Yudin V.*, Clan and tribal composition of Moghuls of Moghulistan and Moghulia and their ethnic connections with Kazakh and other neighboring peoples // *Izvestiya Akademii Nauk Kazaxskoj Sovetskoj Socialisticheskoy Respubliki, Organizaciya Ob`edinenny'x nacij*, 1965, Issue 3, p. 55).

⁶¹ The Argyn (Argun) is a tribe, which in the period of the reign of Abu Said roamed from the Syr Darya basin to Transoxiana. A contingent of Desht Argyn volunteers took part in the capture of Herat by Abu Said in 862 AH (1457–1458). Argyn tribe representatives are also mentioned among high officials of Timurid Ahmad Mirza (Tavārīkh-i guzīdah nuşrat'nāmah. Manuscript. Institute of Oriental Studies of the Russian Academy of Sciences, p. 745; *Sultanov T.* Nomadic tribes of the Aral Sea Region., p. 11).

⁶² Jalal ad-Din, Sultan (the Green Sultan), is a son of Tokhtamysh Khan.

⁶³ The Khutbah represents a kind of an exhortation, which begins with the praise of Allah oneness and invocation of blessings on the Prophet and his family; then follows a prayer for the reigning sovereigns of the faithful and finally admonitions to piety with recitation of the Quran and sayings of Muhammad (*Muhammad Yusuf Munshi*. Tarih-i Mukim khani (Mukim-Khan History), p. 239. Note 34).

⁶⁴ Dzhatba is a specific song genre'.

No. 9

The Tale of Peter, Tsarevich of the Horde

The 'Tale of Peter, Tsarevich of the Horde' is dedicated to the founder of the Petrov Monastery in Rostov. A nephew of Berke Khan, Peter adopted Christianity and went to serve the Prince of Rostov. It should be noted however that Peter's name and the names of his descendants are not mentioned in historical documents. The 'Tale' was written in the 15th century with the purpose of validating the land rights of Peter's descendants and of the monastery itself. With this in mind, the author of the 'Tale' wrote rather freely about the story of the Rostov Princes.

The source and notes are quoted from the publications: *Povest' o Petre, tsareviche Ordynskom* (The Tale of Peter, Tsarevich of the Horde) // *Drevnerusskie Predaniya* (Old-Russian Tales) (11–16th centuries), Moscow, 1982, pp. 151–160 (published per the copy of the early 16th century (Sofia compilation No. 1364. of the State Public Library named after M. Saltykov-Shchedrin)) // *Russkie Povesti XV–XVI* (Russian Tales of the 15–16th centuries) / Compiled by M. Skripil', Moscow-Leningrad, 1958.—*Editor's note*.

'The life of the blessed Peter, the nephew of Berke Khan¹, and how he came to experience the fear of God, and how he was moved in his soul, and how he arrived from the Horde to Rostov in the year 6761 (1253) and was baptised, and how he saw the apparitions of the Holy Apostles Peter and Paul on the field, where now stands the Church of the Holy Apostles Peter and Paul and where now a monastery is set up. Bless me, Father.

The blessed Bishop of Rostov, Kirill, went to the Horde to the Tsar Berke to request honourably for donations for a church to the Blessed Virgin Mary. The Tsar learned from him about the saint Leontius, who was descended from the Greek lands; how he baptised the city of Rostov, how he strengthened the people who lived there in their faith, how he came there, blessed by the Patriarch and already accepting this honour from the Russian princes and the Greek Tsar, the Patriarch, and the whole Ecumenical Council, and how since the death of Leontius, miracles to this day have been occurring from his relics at his tomb. And along with that, Kirill preached many sermons on the Evangelic holy teachings. And the Tsar Berke listened to the bishop and felt delight. He honoured him, gave him what he asked for, and let him go. I dare say, the Tsar Berke then enjoined the Yaroslavl princes to pay annual tribute for decorating his tomb following the bishop's death. That same year, the only son of Berke fell ill. The Tsar received no help from doctors and chose to send him to Rostov, to the holy Vladyka, promising him rich gifts so that he would cure his son. The Vladyka called for public prayers in all the churches of Rostov, blessed the water, and upon arriving at the Horde, healed the Tsar's son.² The Tsar rejoiced together with his whole house and his whole Horde and ruled to give annual tribute to the Vladyka to build a church to the Blessed Virgin Mary. A certain boy, a son of the Tsar's brother, though being young and never failing to serve the Tsar, having heard the exhortations of the Vladyka, felt touched in his soul and shed tears. Secluding himself, he went to the field, and reflected: 'How do our Tsars believe in this sun and crescent moon and stars and fire, and who is the true God?' He contemplated just as Abraham had once done, but the latter had been a branch of a good root, while this youth was a good branch of an evil root. So he decided to leave together with the holy Vladyka, to see the churches of the Russian land and the wonders worked by holy men. The youth said: 'No miracles occur from the sun, crescent moon, stars and fire in our countries'. At that time, his father, the Tsar's brother, was already dead. His mother was in charge of considerable wealth all belonging to him. Disregarding this wealth, however, he with all his heart strove for faith. His mother then, lamenting over her son's intentions, showed him all the riches of his father. But he instead distributed all these riches among the Tatar poor and gave many treasures to the bishop.

And so he secluded himself from the world, thus receiving great grace even before he was baptised. In this way too, the ancient Melchizedek, a Tsar's son, became a priest after running away, having experienced the divine grace of God before baptism. Of such people the Gospel says: 'Many that are first shall be last, and the last first'. And so the youth came with the Vladyka to Rostov and saw there a church, the church of the Blessed Virgin Mary, beautified with gold and pearls and precious stones as on a bride³.

Inside, the singing was mellifluous, like that of the angels: the left choir was singing in Greek, while the right choir was singing in Russian.

The youth, who had no faith, heard all this and a fire burned in his heart, the crescent moon waxed in his thoughts, and the sun began to shine in his soul. He threw himself to the Vladyka's feet and said: 'O Holy Consecrator, my Lord, I was pondering over the gods of our Tsar and my parents: the sun, crescent moon, and fire, and understood that they are God's creatures, while your faith is right and righteous and your God is true. I beg you to give me the sacred baptism.' The Vladyka gave him honour, but told him to wait, for he was still reflecting on the youth's journey.

The Tsar Berke died not long afterwards. Unrest broke out in the Horde⁴ but no one looked for the boy there. The holy Vladyka then baptised him, christening him Peter. So Peter began studying the Christian faith, spending each day in the Vladyka's sanctuary. Then, the holy Vladyka Kirill passed away and was buried with honours and prayers. May the memories of him live forever. The Vladyka Ignatius then took the diocesan throne⁵. He began to cover the roof of the Blessed Virgin Mary church with tin and covered the floor with marble. He went to the Horde to pay tribute to the Tsar. And Peter, following the instructions of the Vladyka, prayed day and night to God and fasted for Him.

Peter, however, did not abandon his royal entertainments: he still went out to the Rostov lake for falconry. Once, he was hunting by the lake and fell asleep after his usual prayer since it was already late at night. And here two men, radiant like the sun, came to him, woke him up and said: 'Our friend Peter, God has heard your prayer and your alms'. Is it not a wonder, brothers! Is it not surprising that the alms given at a time of doubt were heard in faith! The same way as in the old times, when the pagan, Eustachius Placidus⁶, handing out alms, was rewarded during his life with faith and with the heavenly kingdom after his death, just like Peter. God himself has said the following about alms: 'Are not five sparrows sold for a copper coin? And not one of them is forgotten before God'. The same way the alms of the blessed Peter, given in doubt, with prayer were heard in faith. Having woken up, Peter saw in front of him two giants and was in awe; they seemed to rise all the way to the clouds, illuminating the whole world with their light. Peter stood up, but then fell down in horror. He stood up again, but once more fell down. And still a third time he stood up, but just as before he fell down. And those two radiant men took him by the hand and told him: 'Our friend Peter, do not be afraid. We are sent to you by God. You have come to believe in him and have been baptised. He will strengthen your family, your tribe, and your grand children till the end of the world; he will reward you for your alms. For your labours, you will receive eternal blessings'. And they gave him two scrips and said: 'Take these pouches, one with gold, and the other with silver. In the morning go to the city and barter for three icons⁷: an icon of the Blessed Virgin Mary with a child and icons of St. Dmitry and of St. Nikola. Give for them whatever is requested'. Peter looked at them and now saw them as ordinary men. He took the scrips, supposing that they were strengthening his Tatar tribe, not truly perceiving the meaning of what was being said to him. Then, gathering his thoughts, he told them: 'My Lords, what if the icon traders ask me about the origin of the scrips, what am I to do? And who are you?' And the two radiant men answered to him: 'Keep these hidden in your bosom so that no one knows about them. If the icon traders ask for nine coins of silver and the tenth one of gold, count them out one by one. Upon receiving the icons, go to the Vladyka and tell him: 'Peter and Paul, Christ's disciples, have sent me to you so that you build a church by the lake at the place where I fell asleep. And here is the omen from them, the icons that I have procured and the scrips that I was given. What do you order me to do with them?' And do what he will tell you, and remember us, Peter and Paul, the disciples of Christ'. And they disappeared. Look, brothers, it was not untrue when God said: 'For I shall honour those that honour me'. And so God blessed this Peter for his alms.

The same night the Holy Apostles appeared before the Vladyka and made him tremble. They told him: 'Build a church with the resources of the diocese for our servant Peter, for he has given a lot of gold to the Vladyka's diocese, and consecrate this church in our name. If you do not do this, we shall bring death upon you'. Having said this, they disappeared. And the saintly Ignatius, having awakened, started to ponder over this apparition. There was plenty of gold and silver in his diocese.

He then called on the Prince of Rostov and said to him⁸: 'I do not know what to do. Peter and Paul, exactly the same as on the icons, appeared before me and frightened me. They told me to build a church

in their name, but where, that I do not know'. The Prince replied to him: 'I see you, Vladyka, overcome with awe'.

So they were conversing in the bishop's chamber when the Prince saw Peter coming from the church of the Blessed Virgin Mary; and the light from his icons was shining brighter than fire and reaching higher than the church. And the Prince was stricken with horror and exclaimed: 'Oh Vladyka, what is this fire?' And it seemed to them that he was a man in flames. Yet, no one else saw this fire. As for Peter, he had already come to the city in the morning and taken the icons. He now went and placed them in front of the Prince and the Vladyka. He then bowed to the ground before them and said: 'Holy Vladyka, Peter and Paul, the Apostles of Christ, have sent me to you so that you build a church by the lake, at the place where I fell asleep. They gave me these icons, their signs, and these scrips. What do you order me to do with them?'

It was the hour before services. The Prince and the Vladyka stood up and bowed to the sacred icons, uncertain of where they were from, for there were no icon-painters in their city while Peter was too young and as they knew, descended from the Tatars. So they asked him: 'With whom have you traded for these icons?' Peter answered to this: 'My Lords, I traded for them at the market'. And they reflected on the apparition that had taken place. The light from the icons in the chamber started to shine like the sun, and all those present felt terrified. After the morning service, the Vladyka Ignatius sang prayers to the Blessed Virgin Mary, to Saint Dmitry, and to Saint Nikola. Sainly Ignatius also honoured Peter, telling him to get on a chariot with the icons and ride to the place where he had fallen asleep. At this, the Vladyka, the Prince, and the whole city, singing, drove the icons to Peter's sleeping place and at this place gave a prayer to the Holy Apostles. At the service, the Prince and Vladyka, with tears and joy, called the names of the Holy Apostles Peter and Paul and donated farmsteads and villages to them. Having given the prayer, the people, by orders of the Prince, set up the chapel with the materials brought from the city and surrounded it with a fence. They then returned back to the city. Peter, for his part, then mounted the icons there in the chapel.

Having mounted his horse, the Prince in jest remarked to Peter: 'The Vladyka will build you the church, but I shall not grant the plot. What will you do?' Peter replied to him: 'Prince, by the will of the Holy Apostles, I shall buy from you as much land as your grace will allot'. The Prince, who had already seen Peter's pouches at the bishop's chamber, thought in silence: 'It is necessary to take them from you, while the Vladyka still remains in awe of the apparition of the Holy Apostles'. And then he muttered to himself: 'It well may be like in the time of Elijah the prophet, the jar of flour will not be used up, the tub of water will not be emptied, and the jug of oil will not run dry'. And he said to Peter, as if in jest: 'Peter, I shall ask you: whatever you have given for the icons, so give the same for my land. Put out nine grivnas of silver and the tenth of gold. Will you do this?' Peter replied: 'The Holy Apostles told me: do as the Vladyka commands you. So I shall go to ask him, my Lord'. And Peter asked the Vladyka. The Vladyka in his turn took a cross, blessed Peter, and said: 'Give to everyone asking from you, and you, child, do not regret the wealth of the parents, as it is written: "the jug of oil will not run dry, the jar of flour will not be used up". Your family, son, will be blessed by the prayer of the Holy Apostles. Respect the Prince's will and do give for the land as much as he asks for'. Peter bowed down to the ground to the Vladyka and trusting his words, went to the Prince and said: 'So be it, Prince! Upon the will of the Holy Apostles, all shall be as you wish!'

And so the Prince ordered to throw a measuring rope from the water to the gates, and from the gates to the corner, and from the corner to the lake. And the plot was spacious. Peter then said: 'Prince, order for a ditch to be dug around this place as they do in the Horde, so that no-one shall trim this plot later'. And so the Prince did. And the city-dwellers, those who had come with the icons, immediately dug the ditch, which has remained to this day. For his part, Peter began to lay out coins along the rope, picking them one by one from his pouch—nine grivnas of silver and the tenth one of gold. Carters filled up their barrows, the very barrows they had brought for the chapel, with Peter's coins so much so that the horses could hardly move them. The Prince and the Vladyka saw plenty of gold and silver, and pouches all full, worth ten vykhods (tributes)⁹, and said to themselves: 'God, what is all this? Not for our sins is this being done. Clearly, this man received great grace before God and we now marvel at your kindness and the strength of the Holy Apostles'. And so they placed on guard at Peter's yard the promised men who

attended the prayer and they told Peter to mount a horse. And there was a great celebration in the city. Peter was accorded great honours and many gifts. Public prayers, praising God and the Holy Apostles' miracles worked in our time, were given for many days, much alms were given, and beggars fed.

Peter had no idea how this miracle had happened and stayed in silence, secluding himself. And so the Vladyka and the Prince noticed that Peter kept silent, and started to talk to each other, saying: 'If this man of the Khan's tribe goes away from us to the Horde, then there will be great harm to our town'. Peter was tall in stature and handsome in face. And so they asked him: 'Peter, would you like us to find you a bride?' Peter, moved to tears, replied to the Prince and the Vladyka: 'My Lords, having come to you, I have come to love your faith and abandon my parent's beliefs. So let the will of God and yours be done'. The Prince then found for him a fiancée of a great prince. And this prince, a prince of the Horde, was living at that time in Rostov. And so the Vladyka married Peter and built him the church and consecrated it as ordered by the Holy Apostles.

The Prince took Peter with him for royal entertainment, to the falconry by the lake, in order to keep him in our faith. And the Prince told him: 'Great grace you have found before God and thanks to you, so has our city as well. For it is said: "I shall recompense God of all the good that he bestows upon us". Peter, accept some land from our patrimony, which lies opposite the church of the Holy Apostles near the lake of Rostov. And I shall write you a charter of gift'. Peter replied to this: 'Prince, neither I, nor my father nor mother, have ever owned land. What is this charter for?' And so the Prince said: 'Peter, I shall arrange everything for you. The charters are needed to ensure that, after us, my children and grandchildren could not take away these lands from your children and grandchildren'. Peter replied to that: 'So let the will of God be done, Prince'. And the Prince ordered, with the bishop to bear witness, that they write the charters to Peter for the possession of many lands along the lake, together with waters and woods. These charters to this day still exist. And houses for Peter were built on these lands. As for the Horde, it remained in peace for many years.

Such were Peter's sweet answers and good nature in everything. And the Prince liked Peter so much that he would not sit at a table without him, and so the Vladyka had to make him and the Prince sworn brothers in church. And so Peter started to be called the Prince's brother. And of Peter were born children, his rightful successors.

A few years later, the Vladyka Ignatius passed away and entered the Kingdom of Heaven. May the memories of him live forever. The old Prince then also died a few days after the Vladyka. And the children of the Prince were calling Peter uncle till his old age. And having lived peacefully many years, Peter then passed away in extreme old age, 'passing to God' as believers say. And he was laid to rest by the place where he once had fallen asleep, near where he had once seen the Holy Peter and Paul. And after that day, this monastery was established¹⁰.

However, the grandchildren of the past Prince¹¹ forgot Peter and his virtues and started to take away meadows and peripheral lands from Peter's children. Then, Peter's son went to the Horde and told them there that he was a grandson of the Tsar's brother. His uncles rejoiced, honoured him with many gifts, and asked the Tsar to send an envoy with him. The Tsar's envoy then arrived in Rostov. After studying the charters of Peter and the old Prince, the envoy passed judgment for Peter's son and the past Prince's grandchildren. He determined Peter's son to be right and established the boundaries to the lands, giving him a charter with a golden seal of the Khan, delineating the relations and rights between the young princes. And the envoy left. And the young princes were saying among themselves and their boyars: 'We heard that our parents called his father, Peter, an uncle, that our grandfather accepted plenty of silver from him and became a sworn brother to him in church. But they are of Tatar descent—not our blood! What kind of relatives are they to us! We have inherited neither silver from Peter, nor from our parents'. And so they continued to converse, having forgotten about the miracle of the Holy Apostles and the love of their forefathers. And they lived for many years, envying Peter's children, who were received in the Horde with more honours than they! And Peter's son also had sons and daughters born, and he passed away to meet God in extreme old age.

Peter's grandson Yury worshiped the Holy Mother of God in Rostov as strong as his parents had. He laid hryvnas upon the icon, organised annual feasts for the Master and the clergy of the Cathedral Church on the memory day of the Holy apostles Peter and Paul and memorial days of his parents and

grandparents. His fishermen gained great catches, unlike the city's fishers. In the manner of a game, Peter's fishermen threw the net and pulled out many fish, while the city's fishermen had a poor catch no matter how strong their efforts were. And fishermen complained to the princes: 'Our lord princes, if Peter's fishermen do not cease their fishing, our lake will become empty. They will catch all the fish.' The great-grandsons of the old prince appealed to Yury: 'We have long heard that your grandfather took charters of possession from our ancestors for the place under your monastery, thus defining its borders. But the lake of Rostov is ours and you have no charter for it, and your fishermen must not catch fish in it.' And the prophesy of the old prince, Peter's brother, came true who forecast that grandsons would take offenses and therefore granted his charter.

Yury, Peter's grandson, listened to them and departed to the Horde where he said that he is a great-grandson of the Khan's brother. His uncles received him with honour and presented many gifts to him and, having asked the Tsar's permission, they sent an ambassador to accompany him. The ambassador arrived in Rostov and accommodated himself in the monastery of St. Peter and Paul, and the princes were afraid of the khan's ambassador. And he was a judge between them and Peter's grandsons. Yury displayed all charters in front of the ambassador and the latter, having examined them, said: 'Aren't these charters for land-purchase false? Is it your water in the lake? Is there earth under the water? Can you remove it from this earth?' And the princes responded: 'Hey, lord, these charters are not false. And there indeed is earth under the water, and the water is our ancestral land, but we cannot remove it, dear lord!' And the judge, the khan's ambassador said: 'Since you cannot take the water away from the earth, why do you call it yours? Because it has been created by the Holy Lord so that it served all people.' And the khan's ambassador adjudged the borderline lands and water to Peter's grandson Yury: 'As the land was bought, the water was also bought in a similar way.' And he gave Yury a charter with a golden seal reflecting the khan's word and then he departed. The Rostov princes could not do any evil to Yury. And the life of Peter's grandchildren flowed peacefully for many years, and they praised God and, as their parents had taught them, they created a memory for the Holy apostles with tears and joy remembering their miracles and also annually commemorated their parents by giving a lot of alms.

And Peter's great grandson, Yury's son Ignat, grew up. And here is what happened during his life. Ahmyl¹² came to the Russian land and burnt Yaroslavl, and headed towards Rostov with all his forces. And the whole land feared his raid: the Rostov princes and archbishop Prokhor¹³ fled. Ignat, however, drew his sword, caught the archbishop and said: 'If you do not stand against Ahmyl together with me, I will cut you down. Our tribe and our fellows are there.' And the archbishop listened to him and together with all the clergy, dressed in robes, bearing a cross and a gonfalon, he headed towards Ahmyl. And Ignat marched in front of the sacred procession with citizens bearing the Tsar's merry-making items: merlins, fur coats and honey. He knelt on the lake bank before Ahmyl and told him that he came from the ancient tribe of the Tsar's brother. 'And here is the village of the khan and yours, my lord. It was bought by our great grandfather, because miracles had been seen here.' Everyone contemplated Ahmyl's weaponed army with terror. And Ahmyl said: 'You present me the Tsar's merry-making things, and who are these ones standing in white robes with a gonfalon; do not they want to fight us?' And Ignat replied: 'These are the Tsar's and your prayers and they are here to bless you, while they bear icons as our rule dictates.'

At that time, Ahmyl's son was in Yaroslavl deaffly ill, and he was transported in a cart. Ahmyl gave the order to bring his son so that he could be blessed. Archbishop Prokhor, after consecrating water, gave it to him to drink and blessed him with a cross. And Ahmyl's son recovered. Once Ahmyl saw his son cured, he dismounted his horse in front of the sacred procession and, holding up his hands to heaven, exclaimed: 'Be blessed the Holy Lord, who imposed the thought to arrive here into my head. You are righteous, Archbishop Prokhor, for your prayer revived my son. And you, Ignat, be blessed, because you saved your people and kept this city. You are of the Tsar's bone and of the Tsar's tribe. If anyone causes offense to you, do not be idle and come to us.' Ahmyl took 40 measures of silver and gave them to the archbishop, while he granted 30 measures to his clergy. He accepted Ignat's merry-making items, kissed Ignat, bowed to the archbishop, mounted his horse and returned home. Meanwhile, having escorted Ahmyl, Ignat returned to the city together with the citizens and the archbishop. Delighted, they organised a public prayer and praised God.

God, give consolation to those reading and writing about their ancestors' deeds! Grant them peace today and in the future century! Keep Peter's kin safe and multiply it! May joy without sadness be always abundant in his kin and may the memory of it be eternal till the end of days. Be our Lord Jesus Christ always glorious and powerful, honoured and worshiped, now, and ever, and unto the ages of ages. Amen.

Notes

¹ *...the nephew of Berke Khan...*—Khan Berke, Batu's brother, seized power in the Golden Horde killing his nephew Sartaq in 1257. He ruled the Horde till 1266, adopted Islam, carried out a census in Ruthenia in order that its citizens paid tribute, while exempting the clergy from the tribute. The legend that Berke's nephew had left the Horde possibly appeared in the 15th century. Many boyar families in Ruthenia traced their kins to Golden Horde migrants, the Godunovs, Saburovs, Sheins, Velyaminovs. Legends about the Horde migrants who were founders of churches and monasteries were popular.

² The Vladyka... healed the Tsar's son. Kirill II, the archbishop of Rostov [1231–1261], died in 1262. Chronicles say nothing about his visits to the Horde.

³ *...and saw there a church beautified with...*—the Cathedral of the Assumption in Rostov [see note 7 to 'The Tale of Leonty of Rostov'], its new stone building was erected in 1231. At the moment, a building dating from the 16th century stands in its place.

⁴ *Berke Tsar died afterwards, and unrest broke out in the Horde...*—Berke died in 1266 and his brother Mengu-Timur [1266–1280] ascended to the throne. Bishop Kirill died in 1262 and could not baptise the Horde man.

⁵ Vladyka Ignatius was the archbishop of Rostov [1262–1288]. He covered the whole top of the Cathedral of the Assumption with stannum and paved the floor with red marble in 1280. He visited the Horde multiple times.

⁶ Eustachius Placidus was a Roman commander who adopted Christianity. He was executed by Emperor Adrian around 118 and canonised.

⁷ *... exchanged for three icons...*—According to the 'rules', an icon can neither be bought, nor sold; it can only be exchanged for something.

⁸ *He called upon the prince of Rostov and said to him...*—Under Bishop Ignatius, the Rostov princes were Boris Vasilievich [died in 1277] and then his son Konstantin [died in 1309].

⁹ *...worth ten vykhods...*—A vykhod is a tribute the Russians paid as a favour to the Horde.

¹⁰ *And this monastery was founded since that day.*—According to a chronicle account, Peter's monastery in Rostov had existed back in the 12th century.

¹¹ *The grandchildren of the old prince...*—were possibly the grandchildren of Konstantin Borisovich, the sons of Vasily Konstantinovich, Konstantin and Fedor Vasilievich who divided the Rostov Principality between themselves.

¹² Ahmyl was a Golden Horde ambassador who came to Ruthenia together with Moscow Prince Ivan Kalita in 1322 and pillage Yaroslavl.

¹³ Archbishop Prokhor was the archbishop of Rostov 1311–1328] and the author of 'The Life of Metropolitan Peter'.

III. Sources on the History of the Ulus of Jochi in the Second Half of the 14–First Third of the 15th Century

No. 1

Classics of Old Rus' literature. The 'Great Troubles' and the Crisis of Khan Power in Ruthenia

After rendering the text of the chronicle, its sources are indicated using the alphanumeric which have been adopted in this field [N4C—Novgorod Fourth Chronicle, Tv.Col.—Tver Collection, Sim.—Simeon Chronicle, S1C—Sofia First Chronicle, Tr.—Trinity Chronicle, ACV—Abbreviated Chronicle Vault of 1493, Typ. —Typographic Chronicle, Vl.—Vladimir Chronicler, RC—Rogozhsky Chronicler, MC—Moscow Chronicle of the end of the 15th century].

1. The 'Great Troubles' of the 1360s–1370s

'In the summer of 6865 [1357] Jani Beg Khan took the tsardom of Tevriz. That autumn, the Horde's ambassador with the mighty name of Komak came to Ruthenia, and it was a great pain for the Russian princes. In that winter, the good Tsar Jani Beg died and his son Berdi Beg inherited the throne after killing 12 his brothers by the hand of the evil betrayer Tovlubiy. And once Metropolitan Aleksy arrived in the Horde, he received much languor from the Tatars, with the help of God and prayer of His Holy Mother, he remained safe and sound and not touched by the violence of the unholy, and thus returned to Ruthenia'.

S1C, p. 432–433

'In the year 6868 [1360]... In that year the Novgorod people took Zhukotin and slaughtered many Besermyans, both men and women.'

S1C, p. 432.

'In the year of 6868 [1360]... In that winter, an ambassador came from the Horde to discuss the case of the robbers with the Zhukotin people. All the princes gathered for a meeting in Kostroma, Grand Prince Dmitry Konstantinovich and his elder brother Andrey of Nizhny Novgorod, Prince Konstantin of Rostov. They extradited the criminals and sent the ambassador back to the Horde.'

Tr, p. 377.

In the year 6868 [1360]... That year, Anfal took Zhukotin and slaughtered many Besermyans. In the same winter, Zhukotin's princes received three ambassadors from the Tsar: the oldest was Ourus, another was Kairbek and the third was Altyn bey, and the Russian princes were beaten and had much pain.'

ACV of 1493, p. 242.

'In the year 6868 [1360]... In that summer, unrest occurred in the Horde. Many Tsars, tsarinas, tsareviches and commoners were heavily beaten and slaughtered each other.

<...>In the year 6869 [1361] Russian princes came to the Horde to greet the new Tsar Khodyr [Khizr] : Grand Prince Dmitry Ivanovich and Prince Ondrey Kostyantynovich and his brother Prince Dmitry Kostyantynovich, Prince Kostyantyn of Rostov, Prince Mikhailo of Yaroslavl, and they were present when Tsar Khodyr was killed by his son Temir Khoja. On the 4th day he took the tsardom and on the 7th day his general Mamai organised unrest in the Horde, and a great rebellion happened there. Meanwhile, Prince Andrey Kostyantynovich departed from the Horde to return to Ruthenia and on his way Prince Ryatikoz attacked him. But God helped Prince Andrey Kostyantynovich, so he arrived back in Ruthenia safe and sound. Temir-Khoja escaped beyond the Volga and was killed there. Prince Mamai passed across the River Volga, beyond the Mountain Land with the whole Horde, and with his tsarinas. One Tsar named Kildi Beg revolted and beat many of them, but then he was killed himself. Other princes of Sarai locked themselves in Sarai, recognising Amurat as their Tsar, while Bulat-Temir, a Horde prince, occupied cities along the Volga and various uluses. And then the princes of Rostov were robbed in the Horde.

In the year of 6870 [1362] both Grand Prince Dmitry Ivanovich and Prince Dmitry Kostyantynovich debated between themselves on the matter of the grand principality and sent kilicheis [ambassadors] to the Horde, and Tsar Murat ordered Dmitry Ivanovich to keep occupying the position of grand prince.'

S1C, p. 432–433.

'In the year 6874 [1366]... That year, one hundred fifty Ushkuiniks came from Veliky Novgorod by way of the Volga. These Ushkuiniks, Novgorod pirates, beat many Tatars, Besermyans, Armenians in Nizhny Novgorod, kidnapped many people, including men, women and children, took their goods and robbed their properties, including barges, boats, trade boats, sailing ships. They pillaged the city and departed by the Kama towards Bulgar, robbing in the same manner and fighting in the same way.'

Tr, p. 382

In the year 6874 [1366]... In the same year a prince of the Horde named Boulaktemer came with the Tatar army and robbed all the uyezds along the River Volga, even reaching Soundoviti, including the villages belonging to Prince Boris. Meanwhile, Prince Dmitry Kostyantynovich together with his brother Boris and his children gathered troops and marched against him. He, a cursed man, did not take the fight and escaped beyond the River Piana. Chasing after him, many Tatars were beaten and some of them drowned in the River Piana. Meanwhile, Boulaktemir retreated to the Horde and was killed there by Tsar Aziz.'

Typ, p. 124

'In the summer of 6877 [1369]... In that autumn, 10 ushkuis [boats of the Ushkuiniks] sailed on the Volga. Some went on the Kama and were defeated near Bulgar.

In the year 6878 [1370]... Novgorod people arrived on the Volga twice and did much evil.'

N4C, p. 295

In the year 6878 [1370] Mamai in his Horde enthroned another Tsar—Mamant Saltan....That same summer Prince Dmitry Kostyantynovich of Suzdal gathered many warriors, sent his brother Prince Boris and son Prince Vasily with many forces and the Tsar's ambassador named Achikhozha together with them, against Bulgar's prince Osann. The latter went to meet them with obeisance, bringing many gifts. The former accepted the gifts, but enthroned Saltan, son of Bak, and returned back to Ruthenia.

Tr, pp. 389–390.

'In the year 6884 [1377]...In that winter, Grand Prince Dmitry Ivanovich sent Prince Dmitry Mikhailovich Volynsky with his army to fight the godless Bulgarians, while Prince Dmitry Kostyantynovich of Suzdal sent his son Prince Vasily and his other son Prince Ivan and many boyars and voivodes with him. They arrived in Bulgar in the Great Lent, on the 16th day of March, on Monday of the Holy Week. Paganish Besermyans came out of the city, stood opposite them and started shooting arrows, some of them made thunder [used cannons] from the city frightening our army. Others shot automatic arrows and the rest rode camels, confusing our horses. However, our people, were not a bit afraid of their terror, and they were strong in opposing them in the battle. They unanimously rushed to the city and attacked the Besermyans. The latter, a cursed people, retreated back to their city, while ours chased after them and killed 70 Besermyans. Then the Prince of Bulgar Osann and Maahmat Saltan came out of the city, made obeisance to the Russian grand prince, presented 2,000 rubles to another prince and 3,000 rubles to the army. Our people returned after imposing their will and placing a custom officer there. They also burnt boats, villages and winter residences, beat people and thus returned home with a victory.'

Tr, pp. 401–402.

'In the year 6883 [1375]...It was the time when Prince Dmitry was near Tver, when the Novgorod people from Veliky Novgorod and robbers-Ushkuiniks on 70 ushkuis [boats] with their alderman Prokop and another one Smolnan arrived and took the city of Kostroma....After conquering it, they pillaged it thoroughly and stayed in the city for a week and expropriated every single treasure and caught and took every single good they found. But they did not take everything with themselves: they carried only the most expensive and light things; and the rest, the heavy and excessive items, were dropped into the Volga to sink, while the other goods were burned. They captured many peasant people, including men, women and girls, took them and thus departed from Kostroma. Going down the Volga, they robbed

Nizhny Novgorod, took many captives and burnt the city. Then they headed even lower and turned to the Kama and slowed down there for a while. And then through the Kama they again reached the Volga; going down it they reached Bulgar. Over there they sold to the Besermyans their captive peasants, the people from Kostroma and Nizhny Novgorod, including wives and maidens. After that they themselves went on boats down the Volga, heading towards Sarai and robbing peasants and beating Besermyans on their way. And like this they reached the Volga estuary, a spot near the sea and near some city named Khaztorokan [Astrakhan], but the prince of Astrakhan whose name was Salchii outwitted them with flatter and thus the Ushkuiniks were defeated, and none of them were left alive, while Astrakhanians seized all Ushkuiniks' property. And thus was the death of Prokop and his troop. '

N4C, pp. 303–304

In the year 6885...In autumn, the Mordvins came God knows from where and attacked the uyezd of Nizhny Novgorod, captured many people and did much evil. Prince Boris Kostyantynovich followed them and reached the host near the River Piana, the impious started retreating beyond the River Piana, some were beaten and others sank in the river.'

VI, p. 123

'That year, some princes defected from the Blue Horde beyond the River Volga. A prince named Arapsha desired to march towards Nizhny Novgorod. Prince Dmitry Kostyantynovich sent a message to his brother-in-law Grand Prince Dmitry Ivanovich. The latter gathered many troops and came with his army to Nizhny Novgorod with strong forces. But there was not a trace of Prince Arapsha, and thus he returned to Moscow sending his voivodes against him together with troops from Volodimer, Pereyaslavl, Yuriev, Murom, and Yaroslavl; while Prince Dmitry of Suzdal sent his son Prince Ivan together with Prince Semen Mikhailovich and many voivodes and warriors with them, and so it was a great massive army. And they went beyond the River Piana, and a message reached them that Prince Arapsha had been noticed at the Volchya Voda [Wolf's Water]. They took alarm, but with negligence gathered their armour and threw it into carts, and some items were dropped into bags. Some warriors were not ready, neither were their shields, nor spears prepared. Their sulitsas [throwing weapons] were not spindled. Their tapings were taken off their arms and shirts were unbuttoned, as they perspired: they felt hot, they felt sultry. And once they stopped for a halt, they started drinking honey and beer immeasurably and rode horses all drunk. Indeed they were drunk at the River Drunk ['Piana' is translated from Russian as 'drunk']. At the same time, their aldermen, noblemen and voivodes went to chase game, entertaining themselves, as if they were at home. However, at that time, the pagan Mordvinian princes brought their Tatar army from the Mamai Horde to fight our princes, while ours were not aware of this. No message was received of the Mordvins. When our people reached the Para, the pagans quickly divided themselves into 5 regiments and suddenly attacked the rear, God knows from where, beating, cutting and stabbing everyone. Our people failed to do anything and ran towards the River Piana, while the Tatars followed them, beating them and like this they killed Prince Semen Mikhailovich and many boyars; Prince Ivan Dmitrievich ran in anxiety to the River Piana driven there needlessly. He bumped into the river on horse and drowned in it, and many boyars, servants and other people drowned together with him. This evil matter occurred on the 2nd day of August. <...>

In that summer, above mentioned Prince Arapsha came again and pillaged the area behind the River Sura and burnt it.'

Tr, pp. 402–403

2. The Battle of Kulikovo

In the year 6886...that summer the Tatars approached Nizhny Novgorod when the prince was absent, and the people abandoned it. Citizens escaped beyond the Volga from the destroyed city. That time, Prince Dmitry returned from Gorodets and saw the area in ruins. He offered a ransom for the city, but they rejected it, burned the city on the very day of St Boris. The next day they departed from the city and pillaged the Berezovo Pole and all uyezds along their way. Then they burned all the icons in the

Cathedral of the Savior and burned the marvelous doors which were beautifully adorned with gilded copper. <...>

In the same summer, Mamai, the Horde's prince of pagans, upon gathering troops, sent Begich with the army to fight Grand Prince Dmitry Ivanovich and take all the Russian land. However, Grand Prince Dmitry Ivanovich became aware of this and also gathered many warriors and marched against them with multiple forces. After cutting across the River Oka he entered into the land of Ryazan and faced the Tatars near the River Vozha. So they stood with the river flowing between them. After many days of waiting, the Tatars cut across the river, rushed forward on their horses and attacked the Russians. And Timofey okolnichy [a member of one of the highest ranks of boyars] attacked their one flank, Daniley Pronsky attacked another flank and the grand princes marched straight against them. That hour, the Tatars dropped their spears and ran beyond the River Vozha, while our people chased after them, cutting, beating, stabbing and killing many of them. Others drowned in the river. Here is the list of killed princes: Khazibii, Koverga, Karabaluk, Kostrov, Begichka. Soon it was evening, the sun was down, it was growing dark and finally the night fell on the field. It was impossible to chase after them beyond the river. The next day it was still misty, the Tatars kept running through the evening and through the whole night. In the morning, before midday, the grand prince departed to hunt after them, though they had run far. He found their multiple courts—tents and pavilions, yurts and hovels and carts; and discovered multiple goods in them: everything was arranged, though not a Horde man was there, as everyone escaped to the Horde....Then Dmitry Monastyrev and Nazar Kusakov, Danil's son, were killed. This battle occurred on the 11th day of August, on the day of Saint martyr Deacon Yeoupl, on Wednesday during vespers. May God help great Dmitry Ivanovich and his warriors to defeat foes and press the paganish Tatars away—similar to the cursed paganish Cumans who had been defeated in shame, and to the Ismail people who had returned home unsuccessfully....They returned back to the Horde, to Mamai, who had sent them - he was like the Tsar that time in the Horde. Nothing could be done in front of Mamai, as he held the eldership and possessed everything in the Horde.

When Mamai saw how exhausted his army was, when he saw that many princes were beaten, aldermen—defeated, noblemen—killed, and few people managed to escape, he erupted with anger and fury. That autumn he gathered the remaining troops and suddenly attacked Ryazan. Prince Oleg was taken by surprise and did not manage to prepare his forces to repel the attack. He did not stand against them, but left his lands and escaped beyond the River Oka. Meanwhile the Tatars reached the Ryazan city of Pereyaslavl, burned it with fire, volosts and villages, slaughtered many people and captured others. Thus they returned home having done much evil.'

RC, pp. 134–135.

In the year 6888 [1380]...In that summer the godless wicked khan of the Horde, the cursed Mamai, gathered many warriors, all the Cuman land and all the Tatar army, Franks, Circassians and Jász people, and with all his forces marched against Grand Prince Dmitry Ivanovich and against all the Russian lands. It happened in August. A message from the Horde reached grand prince Dmitry Ivanovich, that the Tatar army was on the way to fight the Christians. The wicked kin of Ismail and godless Mamai were extremely furious at Prince Dmitry because of lost friends and lovers and princes, for they had been killed on the River Vozha. So he marched against him, intending to capture the Russian lands.

Upon hearing that, Grand Prince Dmitry Ivanovich gathered many warriors and prepared to stand against them, striving to protect his Motherland and the Holy Church and the Orthodox Christian religion and all Russian lands. After moving beyond the River Oka, fresh news reached him: Mamai stood beyond the River Don in the field, awaiting help from Yagail and Lithuanian troops.

So the grand prince headed beyond the Don where the field was pure and vast, while the intelligence reported where the pagan Cumans and Tatars were concentrated. The Russian army thus reached the estuary of the River Nepryadva. Here, on this spot, both adversaries clashed: they rushed towards each other and it was a fierce battle lasting many hours. Through the day, they clashed and cut each other, and multiple warriors fell dead from both sides. God helped Grand Prince Dmitry Ivanovich, while Mamai's pagan warriors fled. Our people chased after them cutting and killing without any mercy. With an invisible force, God frightened Hagar's sons and the latter ran away with their shoulders in wounds, and many of them were killed by weapons, while others drowned in the river. And they were chased till the River

Mecha, and many of them were defeated while others got stuck in the water and drowned. Thus the foreigners led by Mamai, afraid and gingered by the fear of God, returned to their Tatar land. This battle happened on the 8th day of September, on the day of the Nativity of the Virgin, on Saturday, before midday. Among the killed there were: Prince Fyodor Romanovich Belozersky, his son Prince Ivan Fyodorovich, Semen Mikhailovich, Mikula Vasilievich, Mikhailo Ivanovich Okinovich, Andrey Serkizov, Timofey Volui, Mikhailo Brenkov, Lev Morozov, Semen Melik, Aleksandr Peresvet and many others.

Meanwhile, grand prince Dmitry Ivanovich with other Russian princes and voivodes and boyars and aldermen and the remaining Russian regiments stood on bones and thanked God and praised his army and the courage of the men who had fiercely struggled for their Motherland and ventured to fight for their God and Christian faith and managed to return to Moscow, their Motherland, with a great victory, and that the army managed to defeat their adversary. Many of his warriors felt a great joy, as they obtained a huge treasure: herds of horses and camels and oxes the amount of which could not be counted, and armour and boats and goods.

Then the grand prince was told that Prince Oleg of Ryazan sent his forces to help Mamai and broke the bridges across rivers. Upon hearing that the grand prince decided to send his troop against Oleg. At the same time, Ryazan boyars arrived and told him that Oleg had left his land and escaped together with his wife and children and boyars and Duma people. And the Ryazan boyars begged and asked Dmitry not to send his army against their city and made obeisance to him and wanted to be enrolled as Dmitry's servicemen. Having listened to them, the grand prince accepted their obeisance and didn't send the army against them. He returned to his land and placed their governors to rule in the Ryazan principality.

At that time, Mamai with a few regiments left the Don battlefield shamed and dishonoured, angry and furious because of his defeat. He gathered his remaining exhausted forces and in the morning again decided to attack Grand Prince Dmitry Ivanovich and all Russian lands. Once he was prepared, he received a piece of news that some khan named Tokhtamysh from the East, the Blue Horde, intended to attack Mamai. So the latter marched against him, with his army ready for another campaign. They clashed on the River Kalka. Here, Mamai's princes dismounted and made obeisance to khan Tokhtamysh and made an oath to him according to their faith and brought their troops to him and left Mamai dishonoured. Upon seeing this, Mamai retreated with his counselors and fellowmen. Khan Tokhtamysh sent a troop after them and killed Mamai when he was caught. Meanwhile, Tokhtamysh took Mamai's horde and his wives and treasury and all the ulus and shared Mamai's wealth between his warriors.

From there, Tokhtamysh sent ambassadors to the Russian land to Grand Prince Dmitry Ivanovich and all the Russian princes, so that they were told how Tokhtamysh had arrived and occupied the throne and how his adversary Mamai had been defeated and how he had taken his main camp himself. The Russian princes let the ambassadors go with honour and many gifts and in that winter and spring each of them sent their kilicheis [ambassadors] so that they brought many presents to khan Tokhtamysh.'

RC, pp. 139–141.

In the year of 6888 [1380] <...>

Then Mamai ran away with his few forces and returned to his land, offended and beaten and dishonoured and extremely angry because of his defeat. He then gathered his remaining warriors and decided to march against Ruthenia the next morning. And once he was prepared, a tidings reached him that someone called Tokhtamysh, a Tsar from the East, was going from the Blue Horde against Mamai. So the latter decided to go against him with his prepared forces, and they clashed on the River Kalka, and in that battle Tokhtamysh was the victor. Mamai's princes got off their horses and made obeisance to Tokhtamysh and swore an oath to him as their faith dictated, and so Mamai was left dishonoured. Having seen it, Mamai retreated with his associates, while Tsar Tokhtamysh sent warriors to chase them. Escaping from Tokhtamysh, Mamai reached the city of Kaffa and asked its citizens to provide shelter for him. And they decided to accept him. So Mamai brought multiple gifts, silver and gold, while the Kafinians consulted, betrayed Mamai, deceived and killed him. And this was the end of the godless Mamai.

Meanwhile, Tsar Tokhtamysh took the Mamai Horde, his wives, treasures and uluses. He also divided Mamai's wealth between his troops.'

MC, p. 205

In the year 6889 [1381]...That same year, kilicheis [ambassadors] of the Grand Prince Tolbuga and Moksha departed from the Horde to arrive there by the Dormition of the Mother of God. In the same year, Tokhtamysh ordered his ambassador, Prince Ak Khozya, to Grand Prince Dmitry Ivanovich and all the Russian princes. Ka Khozya was accompanied by an army of 700 warriors. So he reached Nizhny Novgorod and returned back. He did not dare to go against Moscow, but sent there several of his fellows with small troops.'

RC, p. 142

'In the year 6890...In that year Tsar Tokhtamysh directed an ambassador to Bulgar and ordered them to rob Russian and Christian merchants, take away their vessels with goods and load them on their own carts, while he himself gathered many troops and went along the Volga with all his forces and all the godless Tatar regiments. After cutting across the Volga he marched against Grand Prince Dmitry Ivanovich and against all Russian lands. Prince Dmitry Kostyantynovich heard it and sent his two sons—Prince Vasily and Prince Semen to chase after Tokhtamysh. They caught his trail at Sernach, followed him and finally reached him in Ryazan. But Grand Prince Oleg of Ryazan accompanied Tokhtamysh showing his land, and this message soon reached Moscow.

Meanwhile, when Grand Prince Dmitry Ivanovich heard the news, he neither decided to attack the Tsar, nor marched against Khan Tokhtamysh, but returned to his city Kostroma.

The Tsar cut across the River Oka, conquered the city of Serpukhov and burned it, and from there he headed towards Moscow. But it was a pointless move. He burned settlements and villages along his way and cut and killed Christians, capturing some of them. And on the 23 day of August he approached Moscow where Ostei, Algirdas's grandson, locked himself with many people: migrants from destroyed volosts and other remaining citizens: priors, and presbyters, and monks, and poor people of all ages and genders: men, women, children and infants.

The Tsar stood at the city for 3 days and on the fourth day he deceived Ostei with false speeches promising peace thus managing to lure him out of the city. Ostei was killed in front of the gates. Tokhtamysh then ordered his troops to go and pillage the surrounding lands and mount stairways to the city wall. On the 26th day of August he took the city on the commemorating day of Saint Andrian and Natalia, at 7 o'clock. The Cristian people who remained in the city, locked themselves in fenced stone churches. But the Tatars broke the churches' walls cutting them with their swords, killing people with other weapons, and robbing cathedral churches. They stole miraculous icons adorned with gold and silver and pearls and beads and jewels, as well as shrouds and sacred church vessels, and churchmen's robes. Multiple books were taken away from the whole city and surroundings and from cathedral churches which had been stored there, and they were forever gone. In churches and at sanctuaries, the cursed Tatars did much evil: killed people and profaned the holy place;...spilling blood like water near Moscow without burying the dead bodies: priests and other churchmen, Semen, Archimandrite of Spass, another Archimandrite—Iakov and abbot Akinf Kirilov and many other abbots and presbyters and monks and friars and popes and deacons and ordinary people from the oldest to the youngest, male and female—everyone was killed; others were captured without a chance of being rescued. At that time the city saw crying and weeping and sobbing and screaming and moaning and bitter sadness and grief and troubles and terror and fear and trembling and need and dishonour and outrage and shame and disgrace and reproach from our enemies for our sins. The Tatars took the city of Moscow, robbed all the estates, burned all the houses and ignited the whole city, slaughtering people with swords. And thus was the city's destiny.

And the Tsar released the rest of his forces to pillage other lands: some went to Zvenigorod and others to Volok and Mozhaishk, and others to Dimitrov. Some troops were sent to Pereyasavl. There, troops conquered Pereyasavl and burned it, while its citizens abandoned the city, sailed on boats along the lake and were beaten over there. The Tatars destroyed volosts and captured cities and burned villages, and robbed monasteries and slaughtered Christians, capturing many of them thus doing much evil.

Prince Volodimer Andreevich gathered many warriors and marched towards Volok. That night, several Tatars came there, but the prince drove them out. They returned to Tokhtamysh all beaten and

injured. When Tokhtamysh realised that the grand prince stands near Kostroma and prince Volodimer near Volok, he decided not to spend many days near Moscow and soon returned to the Horde. On his way, he let his warriors go to Kolomna. After conquering Kolomna, he retreated. Tokhtamysh then cut across the River Oka and pillaged the Ryazan lands, burned it with fire, slaughtered people and captured others to bring them to the Horde. When Prince Oleg of Ryazan saw it, he left his city.

On his way from Ryazan, the prince sent his ambassador Shikhmat with an embassy to Prince Dmitry Kostyantynovich, his brother-in-law, accompanied by his son, Prince Semen, while he brought his other son, Prince Vasily, to the Horde.

The Tatars disappeared and after some time Grand Prince Dmitry Ivanovich and his brother Prince Volodimer Andreevich with his boyars entered into their native city, Moscow, and saw it conquered, burned with fire with destroyed churches and an avalanche of dead bodies. They felt much grief and cried and ordered those killed to be buried, giving 50 kopecks for every 40 buried corpses and 1 ruble for burying over 80 people. In total, they gave out 150 rubles.

In that autumn, Prince Dmitry Ivanovich sent his army against Prince Oleg of Ryazan. But the latter slipped away with his few forces taking everything from the land and burning it and making it totally empty, as if the Tatars had pillaged it.

In that autumn, Tokhtamysh's ambassador named Karach arrived to Grand Prince Dmitry Ivanovich.'
Sim, pp. 131–133

In the year of 6891 [1383]...In that spring Grand Prince Dmitry Ivanovich sent his eldest son Vasily from Volodimer to Khan Tokhtamysh and senior boyars to accompany him, and his son stayed there for three years; then he sailed down the River Volga.'

Typ, p. 426

In the year of 6897 [1389]...In that year Prince Boris Kostyantynovich went to the Horde, while Tokhtamysh marched with his army against Temir Aksak. Prince Boris reached Tokhtamysh and followed him for thirty days, while the khan released him from the place called Urukhan and ordered him to arrive in Sarai before him, while he himself went to fight Temir Aksak. He ransacked his city but did not manage to find him and returned back to his ulus. <...>

In the same summer, on the 15th day of August Prince Vasily Dmitrievich occupied the throne of his father and grandfather and great grand father, enthroned by the khan's ambassador, Shikhmat.'

Tr, pp. 434–435

'In the year of 6899 [1391]...In that summer, Novgorod people from Veliky Novgorod and those from Ustug went on boats and ushkuis [pirate boats of the Ushkuiniks] down the River Vyatka and conquered Zhukotin and ransacked it, and took Kazan and thus reached the Volga and robbed all the guests and returned back home.'

Tr, p. 438

'In the year of 6899 [1391]...In that summer, Khan Tokhtamysh sent Prince Bektut to ransack the land along the River Vyatka, and he beat some people and captured others.'

MC, p. 219

In the year of 6903 there was a war between Tokhtamysh and Temir Kutluy, and the latter drove Tokhtamysh to Lithuania and occupied the throne himself.'

SIC, p. 511

'In the year of 6906 [1398]...In that summer Tokhtamysh, the khan of the Great Horde, seized control of his country and sent his ambassadors in all directions to all countries glorifying his name and receiving much gold and silver and many gifts and calling upon the Tatars so that they arrived in the Horde to him. However, someone named Temir Aksak defeated Tokhtamysh, while Temir Kutluy pressed the latter away and occupied the Horde's main camp in Sarai. Tokhtamysh then colluded with Vytautas and escaped from the Horde to Kiev with his women and two sons. <...>

In the year of 6907 [1399]...Prince Vitaūt Kiejstutavič or Vytautas of Lithuania gathered many warriors. Tokhtamysh accompanied him with his court, while among Vytautas's warriors were Lithuanians,

Germans, Poles, Samogitians, Tatars, Vlachs, Podolyans with around 50 princes among them—a great force it was. And upon gathering all his multiple regiments, he marched against Khan Temir Kutluy in order to dethrone him and give the khanship to Tokhtamysh. Vytautas himself intended to occupy the Muscovite throne and rule throughout all the Russian lands. Beforehand, Vytautas held counsel with Tokhtamysh telling the latter: I shall enthrone you in the Horde while you shall help me obtain the Muscovite throne and govern the Russian lands. And thus they decided to attack Temir Kutluy. However, the latter managed to arrive on time with his multiple regiments and his Horde princes and all the Tatar forces and joined the battle with Vytautas on the River Vorskla, and it was a fierce struggle, and it happened on the 12th day of August and lasted for a long time. God helped the Tatars and Khan Temir Kutluy celebrated the victory over Vytautas and his whole Lithuanian army. And Vytautas escaped with a small regiment, while the Tatars followed them and cut them down, and Tsar Tokhtamysh escaped from that battle and also did much evil to the Lithuanian lands as a consequence. The Tatars defeated many Lithuanian princes at that battlefield: voivodes and boyars and Christians and Lithuanians and Germans and Poles and many other people, and only a few remained alive. And Khan Temir Kutluy headed to Kiev and took 3000 rubles in Lithuanian silver as a ransom and dismissed his army to pillage the Lithuanian land. And on their way, Tatar regiments even reached great Lutsk and captured many cities, pillaged many lands. Thus Temir Kutluy did much evil to the Lithuanian lands and returned back home.

Here is the list of Lithuanian princes who were killed that time at the battlefield: Prince Andrey Olgerdovich of Polotsk and his brother Dmitry Dobransky, Prince Ivan Dmitreevich Kidyr, Prince Andrey, a stepson of Dmitry, Prince Ivan Yevlashkovich, Prince Ivan Borisovich of Kiev, Prince Gleb Svyatoslavich of Smolensk, Prince Lev Koryadovich, Prince Mikhailo Vasilievich and his brother Prince Semen, Prince Mikhailo Podbereskii and his brother Prince Aleksandr, Prince Mikhailo Danilovich and his brother Prince Dmitry, Prince Fyodor Patrikeevich of Volyn, Prince Yamant Tuluikovich, Prince Ivan Yurievich Belskii, Prince Luspytko of Krakow.'

Tr, pp. 450–451

In the year of 6907 [1399]...Vytautas and Tokhtamysh with all the Lithuanian forces, Germans and Poles, Samogitians, Tatars, Vlachs, Podolyans and Tokhtamysh's court, who make up a great force, marched against Temir Kutluk. [Vytautas] boasted that he would enthrone Tokhtamysh in the Horde and he himself would be the ruler of the Russian lands in Moscow and in order to achieve this division he inflicted this disorder; Tokhtamysh had promised to grant him Moscow and all the Russian lands. And like this the paganish thought in vain, while the Prophet said the following about them: 'Lord brings the counsel of nations to nothing: He frustrates peoples' plans.'

That time, Temir Kutluy arrived with many regiments and stood opposite Vytautas in the field on the Vorskla River. It was a scary scene that time to see these two great powers. Then Edigu arrived and attacked Vytautas with a rain of arrows, while the Polish responded with automatic arrow-shooting. But Edigu started to press those helping Lithuania; and then the Tsar came with a great force and encircled Vytautas and shot the horses they rode, and a fierce battle took place. Temir Kutluy won, while Tokhtamysh was the first to escape. Vytautas retreated with a small army and the Tatars chased after him, defeating many of the Lithuanians on their way. This battle occurred on the 12th day of August, on the day of Saints Photios and Anikita. The following Lithuanian princes were defeated: Andrius Algirdaitis of Polotsk and Dmitrijus Algirdaitis of Bryansk; Prince Mikhailo Yevnutyevech, Prince Ivan Dmitrievich Kydyr, Prince Andrey, Dmitry's stepson, Prince Ivan Yevlashkovich, Prince Ivan Borisovich of Kiev, Prince Gleb Svyatoslavich of Smolensk, Prince Lev Koryadovich, Prince Mikhailo Vasilievich, his brother Prince Semen Vasilievich, Prince Mikhailo Podberezsky, Prince Dmitry of Volyn, Prince Amont, governor of Smolensk; many other princes, boyars and knights were killed, many Polish people from many lands were slaughtered.

Tsar Temir Kutluy arrived in Kiev sending his forces to fight in the Lithuanian lands and reached Lutsk, subduing many cities along his way and making the land desolate. From Kiev, Temir Kutluy took 3000 silver and returned to his land.'

Tv.Col, columns 458–459

In the year of 6907 [1399]...In that autumn Prince Semen of Suzdal came with an army to Nizhny Novgorod while Prince Yentyak with a thousand of Tatars accompanied him. People locked themselves in the city, and Volodimer Danilovich, Grigory Volodimerovich, Ivan Likhov were among their voivodes. And the battle lasted for three days and many people died, shot by arrows and like that peace was achieved. Christians kissed the cross, while Tatars swore according to their faith that no evil would be done to Christians but [then] the latter deceived and violated their oath and robbed all Christians releasing them cleaned out. Semen then said: it was not me who did it, but the Tatars. I do not control them and thus cannot punish them. And like this the Tatars seized Novgorod on the 25th day of October and, after spending two weeks there, they heard that the grand prince went against them [with an army] and retreated [to the Horde].

But the grand prince found out and gathered many troops, and he sent his brother Yury Dmitrievich and voivodes and senior boyars and many forces with him to war. He then went and took the cities of Bulgar, Zhukotin, Kazan, Kremenchuk and pillaged all their lands, beat many Besermians and Tatars and captured the Tatar lands. And the war lasted for three months and he returned home with a great victory and much treasure to the Russian lands.'

Tr, p. 453

'In the year of 6913 [1405] an ambassador from khan Shadi Beg arrived to the grand prince. He was the khan's treasurer.'

Tr, p. 459

'In the year of 6914 [1406]...In the same month, September, on the 7th day, grand Prince Vasily Dmitrievich mobilised many warriors, marched against Vytautas and stood on the Plava River. Khan Shadi Beg sent Tatar troops from the Horde to help Prince Vasily. When Vytautas arrived with his army, they stopped at the Peshkova causeway. After waiting for a while they retreated and in the same year Vytautas asked for peace. <...>

In the same winter khan Shadi Beg killed Tokhtamysh in the Siberian lands.'

Tr, pp. 461–462, 465.

'In the year of 6915 [1407]...In that summer on the 20th day of July Prince Ivan of Tver went by boat to the Horde, to Shadi Beg khan, and it was the time of 'Great Troubles' there, when Khan Shadi Beg was ousted by Bulat Saltan.'

MC, p. 236

'In the year of 6916 [1408]...In that winter some Horde prince named Edigu, upon the order of Khan Bulat, made a campaign against the Russian land; there were four princes and other Tatar princes with him: Buchak, Tegriberdii, Altymyr', Bulat, Grand Prince Edigu, Mahmet, Isup, son of Syulimen, Prince Tegin, son of Shikh, Prince Sarai, son of Urus, Prince Obryagim, son of Temir, Prince Yakshibi, son of Edigu, Prince Seityalibi, Prince Burnak and Prince Yerikliberdi. Upon hearing that, grand Prince Vasily Dmitrievich did not stand against the Tatars, but rushed to Kostroma. And it happened during St. Philip's [Christmas] fast, on the 1st day of December, before the midday, when Prince Edigu approached Moscow with his massive army and all the Tatar forces and let them pillage all the surrounding lands, and so they dispersed and spread out like wolves, throughout all lands and cities and volosts. No place was left which would not be visited by the Tatars. They took the city of Pereyaslavl and burned it, the same fate awaited Rostov and Serpukhov and Nizhny Novgorod and Gorodets.

And Prince Tegriberdii and Prince Yakshibii, Edigu's son, and Prince Seityalibii with 30 thousand warriors were sent to chase the grand prince. And they followed him and did not manage to chase him, but finally found him and thus returned back to Edigu.

Meanwhile, Edigu stopped near Moscow, in the village of Kolomenskoe, and sent his ambassadors Prince Bulat and Prince Yerikliberdi to Tver, to Grand Prince Ivan Mikhailovich of Tver ordering him to immediately arrive in Moscow with his whole army, main guns, cushions, automatic arrow-shooters and all hail-damage equipment, desiring to break and conquer Moscow. But Prince Ivan did not want to do that and betray the cross-kissing oath and long-lasting peace and love for the grand prince, but instead he planned the following: he would march from Tver without a large army, but with a few troops

and reach Klin, and from there—turn back to Tver. And with this canning move he would neither make Edigu angry, nor would he betray the grand prince and would not face any of them. The action was smart. Meanwhile, Moscow sank in sadness—the people locked inside of the city, and burned the city's posad and surroundings themselves.

Among those who locked themselves in the city were Prince Volodimer Andreevich, Prince Andrey Dmitrievich and his brother Prince Peter and Prince Ivan Yurievich and many boyars and bishops with them, and the whole clergy and citizens who gathered behind the city's solid walls. All of them were blanketed with sorrow, as they awaited help from nowhere but God. So they prayed to the Holy Lord and His Holy Mother, begging for help to all Christian kin....The Omnibenevolent and all-merciful God heard these people's prayers and grief and did not neglect their lamentations, but had mercy upon them with all His benevolence and thus saved them from the godless people of Ismail.

That time, Edigu came to Moscow wanting to spend winter here and desiring to conquer the city.

At the same time, some prince in the Horde gained support from some allies when all the Horde was exhausted, since the army had marched against Ruthenia and only a few regiments were left by the khan's side...and this prince attacked the khan, but the move was groundless, as his guide obstructed him and did not bring him to the khan, instead, he offered a bargain, besides, it was already misty outside. Thus, the prince did not obtain the desired outcome, but spurred unrest in the Horde and returned. Meanwhile, Khan Bulat was terrified, and soon he sent messengers to Ruthenia ordering Edigu to return to the Horde as soon as possible, as the khan feared an rebellion.

When Edigu heard of this, he started to think on how to retreat from Moscow as a winner and began demanding a ransom. The city's citizens, princes and boyars, however, did not know that Edigu had been called upon to return, and obeyed and paid him 3,000 rubles. Having taken the ransom, Edigu left Moscow to get back to the Horde, after waiting near the city for 3 weeks. He had neither stormed, nor even approached the city, but stood in the village of Kolomenskoe the whole time... When he was ready to depart, he released his army to go before him with all the captives, while he himself departed on the 20th day. The departed Tatars bore so many goods and led so many captured people that their number exceeded a thousand. It was a sorrowful scene, as one Tatar led up to 40 Christians with multiple goods. A great number of people were cut, some died of frost, others died because of thirst and hunger. Fathers and mothers wept seeing their children beaten and killed, while children suffered because of separation from their families. No merciful men were found. Neither helping, nor compassionate people were found among them. And a great weeping erupted throughout the whole Russian land: Christians cried and screamed without any consolation, and the whole land was captured starting from Ryazan and finishing with Galich and Beloozero.'

Tr, pp. 468–470

'In the year of 6917 [1409]...In that summer Anfal marched towards Bulgar by the Kama and Volga rivers with 100 nasads [flat-bottomed boats] sailing down the Kama and 100 and 50 nasads down the Volga. But the Tatars defeated them on the Kama, while Anfal was captured and brought to the Horde, as the Volga nasads did not manage to arrive on time.'

MC, p. 239

'In the year of 6920 [1412] Grand Prince Vasily Dmitrievich went to the Horde to Khan Zelin-Saltan, son of Tokhtamysh.'

S1C, p. 534

'In the year of 6930 [1422]...In that summer...August...In that same month, on the 31st day, Khan Barak defeated Khudaidat Khan and in autumn came with his army to the city of Odoev, but retreated from the city without conquering it, although he did evil, and disappeared with captives in the field. However, Prince Yury Romanovich Odoevsky and Grigory of Mtsensk caught him, beat him and released the captured people.'

MC, p. 245

'In the year of 6939 [1431]...Grand Prince Vasily sent Fyodor Davydovich Pestry with an army against Bulgar. He conquered it and captured all its territory.'

<...> In the same year grand Prince Vasily and Prince Yury Dmitrievich. His uncle wanted to become the grand prince and intended to depart to the Horde, to Khan Mahmet, on the holyday of the Assumption of the Mother of God. Once the liturgy was over, the grand prince departed to the Horde on the same day <...>

In the year 6940 [1432] on the 8 of September Prince Yury Dmitrievich went to celebrate the holiday of the Nativity of the Virgin... and headed towards the Horde to receive the title of grand prince.

Once he arrived to the Horde, the Muscovite daruga Minbulat took him to his ulus. The grand prince received much honour from him, while Prince Yury received only shame and much pain.

But the Grand Prince of the Horde Shirin Tegin was kind towards Yury, and he took him away from Minbulat and promised Yury to give him the grand principality. And Shirin Tegin together with Yury went to spend the winter in the Crimea, while the Grand Prince stayed at Minbulat's. At that time, the boyar Ivan Dmitrievich who accompanied Grand Prince Vasily Vasilievich, decided to make obeisance to the Horde's princes—Aldar and Minbulat. He said the following: 'Is this, dear sirs, your appeal to the Tsar and your loyal word about our ruler, the Grand Prince, that the Tsar must not turn back on Tegin's word in the face of all of you, but wants according to his word to give the grand principality to Prince Yury. What will happen then? Prince Yury will be the Grand Prince of Moscow, while his blood brother Švitrigaila will rule in Lithuania and Tegin will be the master of the Golden Horde without asking you'. These words hurt their hearts like an arrow. And so they went to the khan with bows, making obeisance to support Grand Prince Vasily and managed to incline the khan to their side. And the khan said the following: 'If Tegin mentions that he wants to enthrone Yury, I will give the order to kill him.'

When spring came, Tegin returned from the Crimea back to the Horde wanting to give Yury the grand principality. A Tatarian named Usein, who was the khan's chamberlain, and Tegin's nephew told him the khan's order and the princes' plans—that if he expressed the desire to make Yury the grand prince, he would be killed. After hearing that, Tegin did not dare to say a word about Yury.

Meanwhile, the khan ordered his princes to judge the Russian ones and there were many debates between them: they intended to defend his right for the grand principality on the rights of his father and grandfather, while Prince Yury Dmitrievich attracted chroniclers, their copies and the last will of his father, grand prince Dmitry, to prove his rights. And then the Boyar Ivan Dmitrievich said the following to the khan and his princes: 'Dear sovereign, our Tsar, let me, a slave of the grand prince, say a word. Our ruler, Grand Prince Vasily, desires to prove his right for the grand principality in your ulus, given to him by your charter, and here is this charter, lying in front of you. While our lord, Prince Yury Dmitrievich, wants to become the grand prince by the will charter of his father—not by your permission and charter, while you are free to enthrone anyone in your ulus, according to your own will. And our ruler Grand Prince Vasily Dmitrievich had given the right for the grand principality to his son, Vasily Vasilievich by your will—the chainless khan. And he has been ruling as the grand prince already for many years, as you yourself know very well.' The Khan gave the grand principality to Prince Vasily Vasilievich and ordered Prince Yury, his uncle, to lead the horse Vasily rode. But the grand prince did not want to dishonour his uncle this way, while Shirin Tegin stood in front of the khan wanting to refuse him, because there was a message that Tsar Kich-Akhmet marched against Makhmet. The khan became scared of it and provided Yury with a patrimony in Dmitrov, giving him all necessary powers.

And the khan let them go to their patrimonies, and the grand prince arrived in Moscow on the day of St. Peter, and Prince Yury headed to Zvenigorod and from there—to Dmitrov.'

From the work of Ahmad ibn Arabshah

Abu Muhammad Shihab al-Din Ahmad ibn Muhammad ibn Abd Allah ibn Ibrahim, better known as ibn Arabshah, was born in Damask in 791/1388. He was captured and brought to Samarkand when he was a teenager where he studied the Persian and Mongolian languages. He visited the lands of Khitai, Khwarezm, Sarai, Astrakhan, Crimea and Adrianople. Having returned back home, he soon moved to Cairo where he died in Rajab 854 AH / August 1450. He compiled 'Ajaib al-makdur fi akhbar Timur' [The Wonders of Predestination in Timur's destinies] —a work written in rhymed prose.

The source and notes are quoted from the edition: Tizengauzen V.G. Sbornik materialov, otnosyashixsya k istorii Zolotoj Ordy'. (V. Tiesenhausen. Collection of Materials Relating to the Golden Horde History.) Volume I—St. Petersburg, 1884.—Pp. 455–474; The History of Kazakhstan in Arabic Sources. Volume I. Collection of Materials Relating to the Golden Horde History. Extracts from works collected by V. Tiesenhausen. Revised and expanded edition.—Almaty, 2005. Pp. 329–349.

'About his [Timur's] return from Diyarbakır and Iraq and about his campaign to the Kipchak steppes; the description of tsars and their possessions and explanation of settlements and their ways'... He [Timur] headed to Dasht-i Kipchak, striving to be fast and instant. It [Dasht-i Kipchak] is a vast kingdom embracing terrific steppes; its sultan is Tokhtamysh—the one who in the war with Timur was like a banner for rebellious sultans: for he was the first who stood against him with hostility and, confronting him in Turkestan's steppes, he fought him, but was defeated, as it has been said earlier, by Sayyid of Barak. The Dasht land is called Dasht-Kipchak and Dasht-Berke. In the Persian language '*dash*' means 'steppe', while '*Berke*' is a suffix name in the genitive case. He [Berke] was the first sultan who adopted Islam and unfolded the banner of the Islamic religion in the country, while [before him] they [the Kipchaks] were only polytheists and idolaters who knew neither Islam, nor al-huda. Some of them still worship idols. And here he [Timur] departed along the Derbent road controlled by Sheikh Ibrahim, the sultan of Shirvan's possessions... Another reason for his [Timur's] campaign against these possessions, although it was not necessary, lied in the following: emir Idiku was one of Tokhtamysh's main emirs on the left side, [one] of the aldermen who were elected during the times of troubles for their exclusion from people of good sense and advice. His tribe was named Kungrat. There were [different] tribes and tongues among the Turks, just as among the Arabs. When he noticed a change in the ruler's attitude towards him, Idiku started fearing for himself, because Tokhtamysh was of a fierce temper. Thus he [Idiku], being afraid that a misfortune could suddenly seize him, was constantly wary of him and always ready to escape if he considered it necessary. He started to observe and watch him, to take care of him and flatter him, but during one night of revelry, when stars of cups span in spheres of pleasure and the sultan of wine already controlled the captive of the mind, Tokhtamysh said the following to Idiku while the fire of his common sense was sometimes ignited and sometimes extinguished: 'A day will [come] for me and for you [when] trouble will throw you into poverty, and you will have to fasten after feasts of life, and the eye of your existence will be filled with a dream caused by death.' Idiku attempted to evade the talk and started to joke saying: 'I hope to God that our lord chagan will not be in rage with his innocent slave and allow the tree which he seeded himself to vanish, or will break the foundation [of the building] he erected himself.' Then he [Idiku] expressed outward humility, obedience, poverty and belittling, but, convinced of the reality of what he had suspected, he began to refine his mind on account of salvation and to use his intuition and sharpness, realising that if he ignored this case or delayed it to wait a little, the sultan will deal with [him]. He quickly slipped between the retinue and servants and left the place in a great anxiety, as if he was to accomplish an ordered matter. He headed to Tokhtamysh's stables in a strong unremitting excitement and rushed to tack up a harnessed horse, bred and swift-footed, which stood already ready in case of anything. And he said to one of his servants whom he trusted and believed he would not break his secret: 'If anyone wants to contact me, he will find me at Timur's; do not divulge this secret until you make sure I have passed through the deserts.' Then he left him and went away; his departure was disclosed only when he was already [far] and being a horse, gradually managed to overcome the longest distances, thanks to the mercies of the road. But neither his traces nor the dust [he had raised] were noticed. He arrived to Timur, kissed his hands, accounted the whole story explaining what had happened and said: 'You rush to far lands and to wild and desolate areas, because of which you expose yourself to dangers. You cross ridges of deserts and sort Books of Travels, while your treasure is cold and lies in front of your eyes; you will gain it easily and

comfortably, in a manner pleasant and convenient for you. Why should you hesitate and rest? Why would you procrastinate and delay it? Rise up with a strong determination, and I am a bail for you that [there is] no fortress which would detain you and there is no obstacle which would stop you; and there is no warrior [with a sword] who would drive you out; there is no guard who would bar your way; there is no enemy who would stand against you and there is no commander who would fight you. Only rabble and rascals are there. Their wealth will be theft and their treasures will come on their own feet!' He [Idiku] did not cease to incite him [Timur] to it, spur and entangle him by all means... When Timur with a great rapidity prepared to conquer Dasht-Berke. This area was exclusively Tatar, abundant in different animals and Turkic tribes, surrounded along [all] sides and cultivated in [all] directions, vast in size, with healthy water and air. Its people are men [in the complete sense of this word] and its warriors are [excellent] archers. Judging by their language, they are the most eloquent Turks, by their lifestyle—the most righteous, by their faces—the most beautiful, by their beauty—the most perfect. Their women are suns, their men are full moons, their tsars are [great] minds, their boyars are [heroic] bosoms. There are neither lies, nor deceit among them, neither do they have cunning nor slyness between them. Their custom is to ride on carts with determination, without a trace of fear. They have few cities, and the transition [from one encampment to another] takes a long time. The border of the Dasht land in the South is the Qulzum [Caspian] Sea—angry and capricious, as well as the Egyptian Sea which turned to them from the Sultanate of Rûm. These two seas almost collide, if not for the Circassian mountains which form an 'impenetrable boundary' between them². In the East there are confines of possessions of Khwarezm, Otrar, Sygnak and other lands and countries in the direction of Turkestan and the Dzhēt lands, up to the Chinese borders belonging to the possessions of the Mongol and Khitai people. In the North, there are Ibir and Sibir, deserts and steppes and sands [heaped] as mountains. And how huge the steppe is, where birds and animals wander! It is similar to the mercy of aldermen of [our] time: the edge which cannot be reached and the limit cannot be achieved. In the West—there are the peripheries of the Russian and Bulgarian lands, as well as possessions of Christians-evildoers; these outskirts are adjoined by the Rûm possessions [lying] close to the lands controlled by Ibn Osman. When caravans come from Khwarezm they go with their carts in calmness, without any fear or threat, to the [very] Crimea, while this passage [requires] nearly three months. The width of this passage is a sea of sand, seven seas long in which even a leader would not be able to find the right way and along which even the bravest and wittiest man would not dare to go. Caravans neither brought goods with themselves, nor did they have food for horses. There was no guide leading them. It was because of the multiplicity of [local] peoples and abundance of safety, food and drinks among the people [inhabiting these areas]. They traveled precisely from one tribe to another and halted only at the place of those who [themselves] offered shelter. It is them who are described in the verse³: 'All of them inhabit both sides of the Okaz, while their children use the hollo 'ar'ar' when they call upon each other to play games. Today, none of these tribes or peoples live in those areas from Khwarezm to the Crimea. There is not any other society besides ghazals and camels. The capital of Dasht is Sarai. This city is of an Islamic style, and is a miraculous fortress. Its description will be provided [below]. Sultan Berke—may Allah have mercy upon him!—after adopting Islam built it [Sarai], chose it as the capital of [his] kingdom and loved it. He prompted the peoples of Dasht to join the commandment and pasture of Islam and therefore it [Dasht] became a place [for the gathering] of different goods and benefits, so the former name of 'Kipchak' was supplied by [another] name, 'Berke'⁴. Our maula and sayyid Khoja Isam ad-Din, son of our deceased mullah and sayyid Khoja Abd al-Maliq, one of the sons of the famous sheikh Burhān al-Dīn al-Marghīnānī⁵—may Allah have mercy upon him—who returned from glorious Hejaz in 814 [25 April 1411–12 April 1412], and in our time, i.e. in 840 [16 July 1436–4 July 1437] became a ruler in Samarkand, recited to me this [following] verse in Astrakhan, one of Dasht's cities, having suffered various troubles along his way: 'I used to hear that a blessing lives in the steppe named after its sultan Berke [i.e. the steppe of blessing or benefit]. I allowed my female camel to stop at one of its outskirts [of the steppe], but did not find any blessing there...'.

When Berke Khan was granted the honourary clothes of Islam and hoisted banners in the lands of Dasht in honour of the Hanafi confession, he invited scholars from all lands and sheikhs from all around so that they taught people the statutes of their religion and showed them the path of their monotheism and orthodoxy. He presented them [in exchange for their help] rich gifts, and those [scholars] who came [to his call] were granted a [whole] sea of gifts. He provided patronage to science and scholars, respected the laws of Holy Allah and the statutes of the prophets. At that time, our mullah

Qutb al-Din, scholar al-Razi⁶, sheikh Sa'ad al-Din at-Taftazani⁷, sayyid Jalal ad-Din, the interpreter of 'Khadjibey'⁸ and other Hanafi and Shafi'i celebrities;⁹ and then, after them, our mullah Hafiz ad-Din al-Bazzazi¹⁰ and our mullah Ahmad al-Hujandi¹¹—may Allah have mercy upon them!—visited him and later they visited Öz Beg and Jani Beg Khan. With the assistance of these sayyids, Sarai turned into a concentration of the sciences and a mine of blessings and shortly accumulated [such a] kind and sound population of scientists and celebrities, philologists and craftsmen as well as other prominent people, that could not be found either in the crowded areas of Egypt, nor in its villages. 63 years [passed] between the construction of Sarai and the destruction of those areas. It was one of the greatest cities as concern [its] position and the most inhabited according to the number of people living there. They say that a slave escaped from one alderman and, after getting settled in a place located far from the [big] road, the slave set up a shop there and traded to earn salt. This scoundrel lived like this for nearly a decade and his master [never] met him there, never came across him or saw him, due to the size of it [the city] and a large number of its citizens. It [lies] on the bank of the river detached from the River Itil in respect to which chroniclers and travelers (?) agree that there is not [a single] fresh, flowing or growing river which is bigger than it. It flows from Russian land and does not produce any other benefit besides the fact that it pleases souls. It empties into the Qulzum [Caspian] Sea, as the Jaikhun and other Ajam rivers, although the Qulzum Sea is closed and surrounded by several Persian possessions: Gilan, Mazandaran, Astrabad and Shirvan. The name of Sarai's river is the Singila, and it can be crossed only by [large] boats; neither a pedestrian, nor a knight may enter the river [i.e. it cannot be crossed by wading]. What a great number of arms ramify from this long and wide river, and each is bigger than the Euphrates and the Nile!

How this flood [Timur's raid] occurred and wiped out the Dasht peoples after Tokhtamysh was defeated¹². Timur arrived in this area [Dasht-Kipchak] with innumerable troops, no, with stormy seas, with bearers of flying arrows and cutting swords and biting spears, with strangling lions and attacking tigers, with all kinds of chasers imposing their revenge on their adversary, guarding their goods and neighbours, their home and shelter, their booty and kin, rushing into the depths of the sea of war and standing against its waves and streams [of the sea]. Then Tokhtamysh sent for his aldermen and heads of his peoples, for the citizens of his sandy steppes and the inhabitants of his suburbs, for the heads of his family and leaders [original: molar teeth] of the right and left flanks, calling upon them and inviting them to stand against the foe and fight. They arrived dragging the cloth of obedience behind them and rushing [to him] from all heights, and they gathered according to tribes and kins, a horse and on foot, armed with swords and arrows, impending and upcoming, repelling and striking with sharp sword and spear. These people are excellent marksmen; their flingers and archers do not commit mistakes and shoot better than the Soali¹³. When they pull the string, they fall into the core and when they find the one they need, they reach their target, be it sitting still or flying. Then he [Tokhtamysh] marched out and braced for the battle and contest with troops that looked like sand because of their multiplicity and like mountains, because of their enormity.

Of the discord which erupted in the army of Tokhtamysh in the course of the battle¹⁴. When both armies stood against one another and entered the battle, Tokhtamysh's right wing commander stepped forth and demanded that he [Tokhtamysh] deliver one emir against whom the commander harboured a grudge and asked [Tokhtamysh's] permission to kill him [this emir]. He [Tokhtamysh] told him: 'Yes, your desire will be respected and your request will be fulfilled. But you see what has happened and occurred to people, so leave us in peace until we achieve what we want; [then] I will deliver your debtor and give you your rival and you will unleash the fury of your wrath upon him and satisfy your demands.' But he replied: 'No, [I need him] now. And if I do not have him, I will give you neither my obedience, nor my subordination!' He [Tokhtamysh] objected: 'We [are] in a deep grief which concerns [us] more than your desire and are in a dark situation which saddens [us] more than your trouble, so be patient and do not be in a hurry, calm down and do not be afraid, as no one can miss what [he] is to gain and nothing will be left which one has a right to. Therefore, do not make a blind man seek shelter at a sheer cliff and do not be one of those who worship Allah for lucre; [now] you are in the night of unhappiness which is already gone and in the day of prosperity which is already breaking. So stay where you are and attack your foes, press them and do not surrender, and accomplish what you are ordered to.' But this emir [did not listen and] marched with a huge crowd; all the traitors and apostates followed him, as well as the whole tribe whose name is Aktau. He departed, heading towards the Rûm possessions, arrived in Adrianople's lands with his people and settled here. Because of this, Tokhtamysh's army disintegrated and the arrows of his desire did not strike the target they had been shot at. Not seeing the possibility to elude the battle and evade the clash, he encouraged his spirit and his army, threw his arrogance and

carelessness away, put stalwarts in front of their troops, arranged the cavalry and infantry, strengthened the center and the flanks and placed arrows and swords in the proper positions. As for Timur's army, he skipped such preparations, because he felt the environment and his position were clear, and the words of victory and power were drawn on the forehead of his banners. Then both armies clashed, attacked each other, mixed and became ignited with the fire of war. Enemy faced enemy, their necks stretched to strike with swords and their chests straightened up to throw spears; their faces darkened and were covered with dust; fighting wolves bared their teeth and howled; angry tigers hardened and straightened up [to pounce] ; hordes of lions grappled and their hair stood on end; their skins got covered with the feathers of arrows and trembled; commanders had their heads low in the mihrab of the battle [as if they were bowing] to pray and spread out [on earth] ; dust whirled and ashes rose up; everyone sank in the sea of blood—both noble and birthless people; in the darkness of dust, the fly of arrows became a brilliant shining of missiles shot at devilish commanders, and in the clouds of ashes the sparkle of swords turned into a bright radiance over kings and sultans. The horses of death did not cease to rush and spin, while the lions of the detachments did not stop to rush and attack [their enemies] ; dust from the hooves sailed up into the air and blood from the swords flowed along the steppe, so that there became six lands and eight heavens, just as the seas. This battle and destruction lasted for nearly three days; then the retreat of Tokhtamysh's army, which showed the rear, raised dust; his troops dispersed and retreated, while Timur's hordes spread throughout Dasht's possessions and became accommodated [in them]. He conquered its tribes and the first and the last ones obeyed [him]. He seized all movable properties and shared them and he seized all immovables and took them with himself, gathering [everything] conquered and gave out treasures, allowed his people to rob and capture, produced deaths and violence, eliminated their tribes, changed their rules and brought [with himself] seized money, captives and property. His forward troops reached Azov, he destroyed Sarai, Saray-Jük, Hajji Tarkhan [Astrakhan] and [all] these areas. During the reign of this king, Idiku's positions consolidated. Then he moved to Samarkand,¹⁵ accompanied by Idiku wanting the latter to follow him.

What Idiku arranged and how he deceived Timur and outsmarted him¹⁶. Idiku sent a messenger to his kinsmen and neighbours and to tribes of the left flank, as all of them belonged to the circle of his allies and friends, behind Timur's back [to tell them] to leave their places and nomadised away from their native lands, heading to the very centre and where the lands [provide] difficult communication and multiple threats; so that they, if possible, did not halt at one and the same encampment for two days and so that they [most assuredly] did it this way, otherwise Timur, upon chasing them, would disperse and destroy them. They listened to Idiku and did as he had advised and went without stopping. After finding out that his troop left and his people slipped from Timur, Idiku told him: 'Our lord emir, I have a great number of kinsmen and family members; they [constitute] my muscles and my hands, and my well-being is tied to the intactness of the means of their subsistence. But they are not safe after this case occurred to me, and they are offended and oppressed by Tokhtamysh; I do not doubt that he will perish and eliminate all of them. While I am protected against him by the mercy of your grace, he will unleash the fury of his character on the members of my family and kin; because I drew up the thread of these clashes and threw him into the narrows of trouble and rags of defeat. Anyways, my soul is not calm since they live all together in one place with him and can my life be pleasant when my friends are his neighbours? If [your] bright mind allows to send a messenger to those places, to [these] multiple tribes, so that by your monarchical edict and the supreme order their thoughts inclined and the hearts of their tribes and kins sweetened, so that you order them to nomadise away and improve their position, we will all [live] under the fame-worthy shade in the gardens of prosperity, fruitful and covered with leaves¹⁷. We will release ourselves from the smooth steppe of this Dasht,¹⁸ ending the present troubles and will spend the rest [of time] in the gardens at the foot of which the rivers flow. But the highest thing is the supreme mind and the first prerogative for slaves is to follow what he orders.' Then Timur told him: 'You are his [people's] palm and their frayed column¹⁹ and, despite your rank, you [yourself] have walked all over these roads.' He [Idiku] objected: 'All people are your slaves who follow your desire, and they are your servants; if you consider anyone to be worthy of a matter you order him to do, this labour would be easy for him.' He [Timur] told: 'No. You were the first to initiate this matter, so be its bail; because the one ruling the city does not require [an alien] decision.' He [Idiku] replied: 'Provide me with one of the emirs; let he be my guardian against them²⁰, with the monarch's edicts regarding what the supreme mind decides.' He [Timur] agreed with him and fulfilled his desire and gave him the one he wanted. After finishing their necessary matters, they both departed to the places they were look-

ing for. Upon Idiku's departure from Timur, the latter wanted to fix his omission, because he realised that Idiku had flattered him and deceived his mind. He sent a messenger to him [demanding] that he return to solve a problem which had just come up and participate in a meeting which was expected to take place, but once the messenger reached him [Idiku] and told him why he had been sent, he [Idiku] told him and the emir accompanying him, prohibiting them from following him: 'Fix your problems and come back to your lord, kiss his hands and tell him that here our communication is terminated and [further on] I have nothing to do with him, because I fear Allah.' They could not treat him rudely, as in such a critical situation they could only be kind. Therefore they said farewell to him, turned back and left without stopping. When Timur heard about this, he became sad and confused, concerned and anxious, erupted with great anger at him and repented when the time of repentance had [already] passed. Out of spite at him, he almost killed [himself] and drank of the cup [told of in the Quran] : 'A day [will come] [when] the unjust one shall bite his hands'²¹. But he was not overcome by a desire to end him and did not feel a the desire to march against him, although he returned to his possessions, and then to Samarkand, leaving him [in peace]. This is how his dealings with Dasht-Berke finished. People then said: no one has ever cheated or outsmarted Timur and no one has ever led him astray or made him error in word or deed, except for the above-mentioned Idiku and [from my point of view] I will provide my own story which will not include the qadi, Wali al-Din 'Abd al-Rahman ibn Khaldun al-Maliki, who will be described below²².

Of the battles and fights in the northern countries between Tokhtamysh and Idiku before their dealings and the positions of each of them had changed²³. When Timur departed with what he had gained and, upon arrival in his territories, consolidated himself there, and while Idiku joined his supporters and was happy to meet his fellows and favourites, the latter began to reconnoiter Tokhtamysh's affairs, and was wary and careful of him, but armed himself and braced for repelling him, unable to see what he had ripped and fix what he had broken. Moreover, he could not adopt the rank of sultan, because Timur would [immediately] name himself likewise after conquering [all] the kingdoms. Then he [Idiku] appointed a sultan on his behalf and enthroned [a special] khan in the capital, and invited commanders of the left wing and the leaders of its tribes to greet him. They obeyed his call and came to him, because they were stronger than the others and safe from the evil deeds of the Chagataians and their injustice. Thanks to this move, his sultan became stronger and his khan got enriched with [whole] caravans of hordes; his rights in the capital consolidated and the pillars [of his power] rose up. As for Tokhtamysh, when his fear faded away and his brain [again] adopted the common sense, and when his adversary was gone and his calmness prevailed, he gathered his troops and called upon his people to aid him and this they did. The blows did not stop in anticipation of the battle between him [Tokhtamysh] and Idiku and, the eyes of peace, as eyelids of the destiny who pretended to be blind, did not cease to close in order to establish peace between them. It came to the point that they fought for 15 times between themselves, [moreover], one could be the first to win the battle and the next time—the other one celebrated victory. The affairs of Dasht's tribes worsened and deteriorated and, due to the small number of shelters and fortresses, were subject to division and discord. All the more so, two lions attacked them and two troubles pressured them. A bulk of them went with Timur whom they now obeyed and whose captives they became. A part separated from them, which can neither be counted nor calculated, and which can be defined neither as a divan [a chamber], nor a defter [a list]. They headed towards the Rûm and Russian people and, due to their unfortunate fate and vicissitudes of life, found themselves between Christians, polytheists and captured Muslims, in the same way as it had happened with Ghassanid Jabala²⁴. The name of this troop is Kara Bogdan. For these reasons, Dasht's citizens who used to live in abundance, came to impoverishment and ruin, dissociation and depopulation, poverty and complete perversion. It reached the point that if someone passed through it [Dasht] without a guide or a leader, he, due to the region's desolation, would surely die whilst travelling. In the summer, winds blow the sands away and hide and sweep the traveler's road, while in the winter, snow accumulates upon it and covers it in such a way that its land (Dasht's land) is desolate and its dwellings are non-inhabited, its halts and waterings are abandoned and its paths are possibly harmful and inaccessible. The fifteenth battle ended not in Idiku's favour: he was defeated and dispersed, put to rout and expelled. And he, together with 500 of his close people, were absorbed by a sand sea which no one knows. Tokhtamysh became the single ruler of the empire and Dasht-Berke became purified for him. But at the same time, he awaited news about Idiku and how life was treating him, and he desired to gather information that he died in his sands. Thus, nearly a half a year passed like this. His traces flicked out of sight and no gossip was pronounced by people's tongues, however, Idiku was well familiar with these sandy hills and paps and was [one] of those who used to cross the surface of these

unfertile and wild steppes on his own feet. He went, awaiting and watching, thinking and reflecting on the sense of the verse I had mentioned: 'Monitor the environment and look for a convenient occasion; use the time when it comes and link your patience to the common sense; this way, a leaf of a mulberry tree turns into silk.'

After making sure that Tokhtamysh gave up looking for him and was confident that he was torn by 'the lion of deaths', he [Idiku] began nosing about him, monitoring and looking for his traces, as well as watching until the [gathered] information convinced him that he [Tokhtamysh] stayed alone without the army in the countryside. Then he, mounting the horse's wings, bundled up in the dark of the approaching night, got off on a night's ride and changed a dream into a wake, climbing up the heights as water bubbles do and going down the paps as dew does, until he [finally] reached him, unaware of anything, and attacked him as unavoidable fate. He [Tokhtamysh] awoke only when troubles encircled him and the lions of deaths seized him and the snakes of spears and echidnas bit him. For [some] time, he avoided them and swirled around them; then he fell dead. It was the sixteenth time he participated in battles and this clash marked the separation [from life]. The reign of Dasht was conferred upon Idiku, and the nearest and remotest, and the biggest and smallest were all subject to his orders. Tokhtamysh's sons drifted away in [different] directions. Jalal ad-Din and Karim Birdi [went off] to Russia, while Kubal²⁵ and the rest of the brothers, to Sygnak²⁶...

Then Idiku with [multiple] troops rose, like sands, from the Northern edge and, confident and cautious, marched towards Khwarezm's possessions which were ruled by the vicegerent [of Timur] named Musika²⁷. When the latter heard the Tatars were approaching, he was scared for his life and escaped, taking his people and allies with him. It happened after the raid of the Rûm Tatars²⁸, who left for Argun Shah [Timur's commander] and passed across the Jaikhun River, which was frozen at that time. Argun Shah returned to his residence, and Idiku arrived in Khwarezm and conquered it²⁹. [From there], he headed with his cavalry to Bukhara, pillaged its surroundings but then again returned to Khwarezm, because Chagatai was already burning with the fire [of discord] and committed evil. In Khwarezm and its suburbs, he appointed a man named Anka on his behalf³⁰...

Human affairs were arranged in accordance with Idiku's edicts. He appointed anyone he wanted as sultans and dethroned them once he desired it; if he ordered, no one could object him. If he drew a line, [no one] could cross it. Among those appointed by him were Qutlugh Timur Khan and his brother Shadi Beg Khan, then Fulad Khan, Qutlugh Timur's son, then his brother, Timur Khan. In his [Timur Khan's] time, things deteriorated; he did not hand his helm of state to [the emir] Idiku saying: 'He has neither glory, nor honour; I am the forefront stag, [i.e. the head] whom everyone obeys, how can I be subject [to another] ; I am a bull [a leader] whom people follow, so how can I follow anyone?' A discord erupted between them, a hidden hypocrisy appeared from the side of ill-wishes, and troubles and misfortunes, wars and acts of hostility followed. At the same time, when the mists of internecine feuds were crescent and the stars of troubles mixed, suddenly one of the brilliant descendants of Tokhtamysh rose in his full grandeur [original: 'in his full moon'] of Jalal's power, marching out of Russian lands³¹. This event occurred during the year of 814 [25 April 1411–12 April 1412]. Cases aggravated, disasters became complicated and Idiku's significance weakened. Timur [khan] was killed³² and feuds and discords continued between the kings of Kipchak's territories until [at last] a wounded Idiku drowned. He was taken out of the Saykhun River, near Saray-Jük, and abandoned to the whims of fate, may Holy Allah have mercy upon him! Amazing tales and stories are recounted about him, along with marvelous wonders [fables] : arrows of misfortunes [shot] at his enemies would [always] hit the spot, his thoughts [were] schemes, [his] battles—traps. At the basis of his [state] ruling, good and poor coins [were circulated], the analysis of which will outline [the real] target [of his aspirations], out of what [he] already achieved³³. He was swarthy, of an average height, strongly-built, courageous, ugly in appearance, of high intelligence, generous, with a pleasant smile, of a nimble acumen and wit, loved dignified people and people of science. He contacted and became friends with pious people and fakirs, had conversations [played jokes] with them using the most tender expressions and facetious hints, fasted and rose up at nights [to pray], adhered to the grounds of the Sharia making the Quran and sunnahs, along with wisemen's aphorisms, the intermediaries between him and Holy Allah. He had nearly 20 sons, each of whom was a sovereign king having [his own] special appanage, troops and allies. He ruled all Dasht affairs for about 20 years. The days of his [reign] were a light spot on the brow of centuries and the nights of his rule were a bright stripe on the face of the times³⁴. <...>

Notes

¹ Ed. Manger, I, pp. 348–382. Kalkut. edition pp. 107–118.

² See the Quran LV, 20.

³ The ancient poet An-Nabigha az-Zubyani [See: Journ. Asiat. 1868, Sept. p. 275, and Fleischer, Sitz.-Berichte d. k. sächs. Gesellsch. d. Wiss. 1865, p. 283].

⁴ In the original, this phrase represents an untranslatable wordplay, because in Arabic the Turkic name 'Berke' or 'Baraka' means 'blessing' or 'benefit'.

⁵ Died in 593 AH [24 November 1196–12 November 1197]. See: Hadji Khalifa VII, p. 1059, No. 2257.

⁶ Better known under the name of al-Tarkhani, who died in 776 AH [1374–1376]. See: Hadji Khalifa, VII, p. 1134, No. 5043. In the work by al-Jannabi [see chapter XXVI below] which almost completely provides the fragment from Ibn Arabshah's work. Here 'al-Razi' is also added أيمل قوحين i.e. 'scholarly Muhtar, son of Mahmud, az-Zahidi'. The following is said about him: 'In 668 AH [18 December 1259–5 December 1260], Muhtar, son of Mahmud, son of Muhammad, az-Zahidi, al-Karmini [in Hadji Khalifa, VII, p. 1187, No. 6988: al-Gazmini], Najm ad Din Abu-r-Rija who wrote a wonderful interpretation of 'Muhtasar' written by al-Kuduri [Hadji Khalifa V, 452]. He is [also] the author of a book on laws, the book 'Imams' Viaticum' [Hadji Khalifa III, 526], books 'Selection of Basic Rules' [Hadji Khalifa V, 382] and a 'Collection of regulations and basic edicts' [Hadji Khalifa II, 580]. He [also] created a missive which he called 'Nasyrian' and devoted to Berke Khan [Hadji Khalifa III, 448 and VI, 290]. He read the Quran at Yusuf Sakaki's, a Khwarezm scholar who was interested in Arabic science, the author of 'The Key' [Hadji Khalifa VI, 15], who was born in the early hours of Wednesday, 3 Jumada al-awwal 555 AH [i.e. on 11 May 1160] and died in 626 [30 November 1228–19 November 1229]. For other works which Hadji Khalifa attributes to the same Muhtar see: Lexic. bibliogr. III, 11, 400, 445, 452. IV, 106, 399, 453, 572. V, 130.

⁷ Died in 791 [1389] See: Hadji Khalifa, VII, p. 1202, No. 7560.

⁸ No works in Hadji Khalifa's bibliography are mentioned under this name. In the opinion of the deceased S. de Sacy, it should be a famous grammatical treatise *الكافية في النحو* [Hadji Khalifa V, 6] which Khadjibey named 'after its author', Ibn Khajib. In this case, the interpreter of 'Khajibey' should be Jalal ad-Din Ahmad al-Gojdivani [Khajji Khalifa V, 8], as academician Fren has already suggested, who in his exemplar of Ibn Arabshah's Manjer edition [I, p. 381] he made the following postscript: *جلال الدين احمد بن علي بن محمود العجدواني* 'fuit discipulus tou Husam Signaky, qui ipse adhuc a. 676 studiis vacabat [v. me ad Cast. voc. جلال].

⁹ Among the scholars who lived in Sarai at that time, there was also sheikh Ibn Najam about whom al-Aini [see chapter XXV] says the following [manuscript from the Asian Museum No. 524, d, IV, fol. 450, r.] : '...Sheikh imam Abd ar-Rahim, son of Abd ar-Rahman, son of Nasr, al-Mausili, known under the name of Ibn Najam, died in Jaruhia on the 2nd of Rabi' al-thani 730 AH [23 January 1330] and was buried on the 'Graves of Sufies' in Damascus. He was born in 652 AH [21 February 1254–9 February 1255] in Mosul, left his Motherland during childhood, traveled around [different] lands and lived [at first] in Baghdad, where he was involved in science for some time, then settled in the city of Sarai, in the kingdom of Öz Beg Khan. He arrived in Damascus in 724 [1324] and [there] began to teach at [the school] az-Zahiriye-al-Baraniye, after which he also joined the faculty of [the school] al-Jaruhie and management of priory al-Kasr. He was a sheikh-faqih and a doctor. May Allah have mercy upon him!' In another fragment [IV, fol. 547, v] the same al-Aini speaks about the deceased Ala ad-Din Ahmad who died in 790 [1388], and was the son of Muhammad Sairami, who was a teacher at the Cairo school az-Zahirie-al-Barkukie, i.e. تبريز و قرم و صرخى و خوارزم و بلاد وافتى فى بلاد خوارزم و صرخى و قرم و تبريز. The same time marks the life of Kamal ad-Din at-Turkmani or at-Terkali who in 755 AH in the city of Gölüstan wrote a commentary on the astronomical work by al-Chagmini [Hadji Khalifa II, 601, VI, 113, VII, 952].

¹⁰ Died in 827 [5 Dec. 1423–22 Nov. 1424] See: Hadji Khalifa VII, p. 1078, No. 2947.

¹¹ Possibly Ahmad, son of qadi Burhan ad-Din Mahmud, son of Asad, al-Khojandi, the author of the work *ملخص فى الفتاوى* [Hadji Khalifa VI, 112].

¹² Ed. Manger, I, pp. 384–387; Kalkut. edition p. ١١٨-١١٩.

¹³ The Soali or Benu-Soal constituted a part of the large Southern Arabic tribe of Tayyits, notable for their horsemanship and marksmanship.

¹⁴ Manjer edition I, pp. 388–397; Kalkut. edition pp. 119–122.

¹⁵ Another fragment [Manjer edition I, p. 424; Kalkut. edition p. ١٣٠] states that Timur 'could not stay in Persia because of [a great number] of Dasht people accompanying him, and he therefore headed to Samarkand where he shook out his wineskins and emptied his sacks of Dasht goods with which he had filled them.'

¹⁶ Manjer edition I, pp. 398–407; Kalkut. edition p. ١٢٢–١٢٥.

¹⁷ In his exemplar of the Manjer edition, Fren added the following remark made by S. de Sasy: وریف duplici sensu accipi potest, 1° ut sit فَعِيل a rad. ورف [multo virore splenduit planta] et tunc erit وريق على معطوفى aut 2° ut sit ريف [solum culturae idoneum], tunc erit روض على معطوف منه.

¹⁸ 'Et evademus ab hoc Deschto cujus planities est laevis, i.e. omnibus vegetabilibus caret. S.de Sacy [ibid].

¹⁹ A saying describing the position of a significant and powerful person.

²⁰ It is vivid in the addition to Fren's exemplar that de Sasy instead of وزراء read وزارا 'adjumentum vel munimen.'

²¹ The Quran, surah XXV, 27.

²² See: Manjer edition II, p. 186; Kalkut. edition, p. 669. Compare also: Journ. Asiat. 1844, I, pp. 350–352.

²³ Manjer edition, I, pp. 408–422; Kalkut. edition, pp. 125–130.

²⁴ I.e. with Ghassanid king Jabalah, son of al-Aiham. For more details about him see: D'Herbelot, Bibl. Orient. Vol. II, p. 116.

²⁵ Read: Kubyak.—Fraehn [l.l.] : lege كوياك Küjak.

²⁶ In order to adhere to the chronological order, I considered it useful to insert firstly Ibn Arabshah's story about Idiku's campaign against Khwarezm [Manjer edition II, pp. 608–611; Kalk. edition pp. 375–379] and then insert the ending of this chapter.

²⁷ Or Musaka, who by Timur's order restored the city of Khwarezm. See: Hist. de Timour-Bec II, 4.

²⁸ These Rûm Tatars or Kara Tatars whom Timur resettled to Mawarannahr in 806 AH, are described here: Quatremère, Not. et Extr. XIII, 77–79.

²⁹ In Rajab 808 (23 December 1405–21 January 1406). See: Not. et Extr. XIII, 226.

³⁰ Here ends the insert mentioned in Notes 2.

³¹ I.e. Jalal ad-Din is known in Russian chronicles under the name of Zeleni-Saltan.

³² Fren added the following: 'Censeo legendum و قتل' et occisus est Timur [scil. a Dschelal-ud-dino; cf. Schildberger]. The correctness of this amendment is obvious, because Idiku was not killed, but drowned, as Ibn Arabshah himself has told below.

³³ S. de Sasy translated the last phrase in the following way: 'nuinmi parati boni et nummi monetae pravae, de quibus si inquirere voluerimus, id alienum fuerit a scopo quem nobis proposuimus.' Fren suggested this translation: 'pecuniae probae aequae ac adulterinae, quarum disquisitio superabat omnem quem inde petere licet fructum', but added a question-mark to it.

³⁴ Ibn Arabshah's account of Idiku are almost completely reproduced in Al-Maqrizi's biographical dictionary الفريدة العنقود, a part of which is contained in the manuscript stored at the Ducal library in Gotha [see: Pertsch, Die arab. Hdschr. III, 353, No. 1771, fol. 149, r.—150, v.]. For himself, Al-Maqrizi added the following remark: وهو الذى منع الططر من بيع اولادهم فلذلك قل جلبهم الى الشام و مصر 'he [Idiku] was the one who prohibited the Tatars from selling their children, which was the reason why their import into Syria and Egypt was decreased.'

The same remark finishes the article about Idiku placed in the biographical dictionary of Essa Khavi [manuscript of the Leiden Library No. 871 = 369, b., s. v. ايدكو], which represents a short extraction from Ibn Arabshah's work. However, Idiku's death is wrongly dated to 814 AH which Ibn Arabshah marks as the year of birth of Tokhtamysh's son, Jalal ad-Din. But after coming across an account of Idiku's death in 822 in other sources, Essa Khavi supposed that it must have been another person, to whom he dedicated a special title اذكى, the following note:

اذكى بكسر الدال المهملة وفتحها صاحب مملكة الدشت مات قتيلًا في سنة ٢٢ (٨) و استقر بعده محمد خان ذرية جنكز خان, i.e. 'Idiki or Ideki, the king of the Dasht state, met a violent death in (8)22. After him, Muhammad Khan from the kin of Chinggis Khan was enthroned.'

No. 3

Letters and yarliqs of the Golden Horde's khans

A. The Letter from Khan Toktamys̄h to the Polish King Jagailo

Information about the source and notes are cited using the following edition: Sultanov T.I. Pis'ma zolotoordy'nskix xanov. (T. Sultanov. Letters of the Golden Horde's khans.) // Tyurkologicheskij sbornik. 1975.—Moscow, 1978.— Pp. 234–251.

The original is written using the Uighur script in the so-called Chagatai language on two sheets of coated paper, one of which was 39.6 cm long and the other—41.8 cm long. The width of both of them was 19.8 cm. Both sheets have a sign of a bull's head. The letter's text was written with ink on the obverse side of each sheet. In total, the document contained 25 lines, 13 of them on the first sheet and 12 on the second. The first line [*Toqtamiš sözüm*] and the first word of the sixth line of the first sheet [*bizgä*], just as the beginning of the first [=the 14th] [*Tänri bizni jarliyp*] and the sixth [=the 18th] line [*bizgä*] of the second sheet are written with gold. The next three lines (3–5), after mentioning of the addressee's name, are shifted 'down' [to the left]. At the beginning of the letter, on the right side, near the third, fourth and fifth lines we can see a golden impress of a rectangular seal of 6x6 cm consisting of two squares, one inside of the other, with a text written in the Arabic language in the Kufic script. The text in the inner square reads: 'Just Sultan Tokhtamys̄h'; and in the external: 'In the name of Allah, the Most Beneficent, the Most Merciful! There is no god but Allah, Muhammad is His messenger. May Allah bless him and greet him!'. Written in the year of the Rooster, 8 Rajab 795/20 May 1393.

The letter was discovered in 1834 by K. Obolensky in the main archive of the Ministry of Foreign Affairs among papers which 'not so long ago were stored in the Crown Archives of Krakow and kept by the Polish historian Narushevich². The analysis and interpretation of this document were carried out at different levels of participation by influential Russian and foreign Eastern studies specialists [Kh. Fren, V. Grigoriev, O. Kovalevsky, A. Kazem-Bek, I. Berezin, D. Banzarov, J. Hammer-Purgstall, etc.]. There are several versions of a translation of the letter into the Russian language which were fulfilled by different scholars [O. Kovalevsky—1835, A. Kazem-Bek—1837, I. Berezin—1850, V. Radlov—1888], the most accurate and frequently quoted of which are the translations by V. Radlov³ and by I. Berezin⁴ with historical-philological commentaries. In 1927, A. Samoilovich published an article in which he 'without an aim to produce a complete revision of the edition and translation' of the letter made several particular amendments to the translation fulfilled by I. Berezin and V. Radlov⁵.

In the original, the place of creation of the letter is denoted by the expression: ordu dan-da ärür-da which O. Kovalevsky, A. Kazem-Bek and I. Berezin translated as 'when the Horde was on the Don'⁶. In the Russian translation of the 14th century and the letter's translation into Polish [the 17th century] the location is named as 'the Don estuary'⁷. V. Tiesenhausen and V. Radlov preferred to translate *dan-da* as 'on the Tana',⁸ meaning under the Tana, a city near the Don's estuary [Azov]⁹. A. Kurat puts a question-mark near the word 'Tana'¹⁰. However, the interpretation offered by V. Tiesenhausen and adopted by V. Radlov and V. Bartold¹¹ seems to be convincing. In the known cases when the document was indeed compiled on the river bank the text contained the words *qīnarīnda* [Timur-Qutlugh's yarliq] or *jaqasīnda* [the letter of Ulugh Muhammad and Mahmud Khan] which are absent in the letter of Tokhtamys̄h Khan.

The original of Tokhtamys̄h Khan's letter was stored for a long time in the archive of the Ministry of Foreign Affairs, Moscow. In 1921 it was transferred to Poland and is currently stored in the Central Archive of Warsaw. Besides the reproduction of the facsimile¹² there is also a published edition of the text¹³ in the scientific literature, as well as several publications of the letter's text in Arabic siglas¹⁴, Mongolian siglas¹⁵ and the Latin alphabet¹⁶.

The letter was used in works on the Golden Horde's history¹⁷, in anthologies¹⁸ and grammars of the Turkic languages¹⁹, as well as in research devoted to documents of the epistolary character²⁰ and in some works on literature²¹.

The foreword and the source are cited in the following publication: V. Radlov. Yarly'ki Tokhtamy'sha i Temir-Kutluga (Yarliqs of Tokhtamysh and Temir Qutlugh) // Zapiski Vostochnogo otdeleniya Russkogo arxeologicheskogo obshchestva. 1888. Vol. 3.—St. Petersburg., 1889.— Pp. 1–17.

'Tokhtamysh's yarliq to Yagailo was published and translated by I. Berezin, while Temir-Qutlugh's yarliq was translated by Hammer, Berezin and Vambéry. Their translations are so faithful that a new translation cannot provide any previously unknown important historical facts. Despite this, I consider it useful to provide these yarliqs with a transcription and a corrected translation. <...>

The yarliq of Khan Tokhtamysh

TRANSLATION

I am Tokhtamysh, I said to
Jagiello.

In order to publicise about how *We* had enthroned on the great place, We first of all sent envoys, headed by Qutlugh Buga and Hasan, and at the same time you sent to *Us* your petitioners. Three years ago some oglans, headed by Beg Pulad and Khojamuddin, and Beys, headed by Begish, Turduchak-Berdi and Dawood, sent a man called Edigü to Temür in order to give him an invitation in secret. He accepted this invitation and in line with their malicious intent, sent them a message. *We* realised this (only) when he reached the borders of (our) people, got together, and when *We* were about to start the battle, those evil people wavered at the very beginning, thus leading to confusion among the people. It all happened in this way. But God was merciful and punished the oglans and Beys, headed by Beg Pulad, Khojamuddin, Begish, Turduchak-Berdi and Dawood, who were hostile to us.

In order to publicise these matters we are now sending out envoys headed by *Hasan* and *Tuula Hodzha*. Now there is another matter. You shall collect tributes from the peoples subject to *Us* and hand them over to those envoys who will come to you, let your merchant groups travel as before; it will be better for the condition of our great people.

We have issued this yarliq with a golden stamp on it. In the year of the chicken, according to the calendar in 795, on the 8th day of the Month of Rajab, when the Orda was in Tana, we wrote (this)'.

B. Tarkhan yarliqs of Tokhtamysh and Temür Qutlugh

The forewords and translations of the yarliqs are quoted from the publication: Tarxanny'e yarly'ki Toxtamy'sha, Timur-Kutluka i Saadet-Gireya s vvedeniem, perepis'yu i primechaniyami, izdanny'e I. Bereziny'm, professorom Kazanskogo universiteta. (Tarkhan yarliqs of Tokhtamysh, Temür Qutlugh and Saadet Girei with an introduction, revision and commentary, published by I. Berezin, professor in the University of Kazan.)—Kazan, 1851.—Pp. 1–15.

I. YARLIQ OF TEMÜR QUTLUGH

The original of this yarliq was taken from Constantinople by an official of the Austrian embassy A. von Raab to the famous orientalist Hammer, who printed it with a transcription in Arabic letters and a translation in the VI volume of *Fundgruben des Orients* (pp. 359–362). The original yarliq, of which a lithographed picture on four pages is included in Mr Hammer's article, was written in the Old Turkic language (Uighur dialect) with Uighur letters: the handwriting of this yarliq is quite beautiful and differs from the yarliq of Tokhtamysh, addressed to Jagiello, by the greater studied elegance and calligraphic patterns: one can say that the handwriting of the yarliq of Temür Qutlugh relates to the handwriting of the latter as decorated shorthand relates to longhand. For the same reason the handwriting of the yarliq of Temür Qutlugh does not match with yarliqs of Argun and Öljeitü. When Mr Hammer was printing these yarliqs, he said nothing about the appearance or shape of the original: we can assume that it was written on an elongated sheet, just like other yarliqs, that is it has the seals of Temür Qutlugh and finally, that the heading and all the expressions: *We*, *Us* etc. are written in gold letters, as was common for the khan's yarliqs. Apart from that, the first line should stand higher than the others.

It is well known that Temür Qutlugh was the Khan of the Golden Horde, acceding to the throne in 800–1397. The *yarliq* that he offered relates to the Tarkhan *yarliqs*, that is the holder of the *yarliq*, Muhammed, whose ancestors were Tarkhans, approved to hold this title with their children, for which the present charter is given to him, (see detailed explanation of the *Tarkhan* in 'The internal structure of the Golden Horde,' which I published. The tarkhan *yarliqs* usually list the duties from which those persons appointed as tarkhans are exempt: the listing is not the same in all *yarliqs*, but because history does not show us that there were tarkhans of different degrees, we can assume that they were all of equal merit, and were equally exempt from all the duties of a citizen.

TRANSLATION

The word of Temür Qutlugh.

For the right flank and the left flank's Oglans, tumens' Beys, headed by Edigü, to the thousandth, hundred, tenth, internal settlements, ecclesiastical judges, ecclesiastical jurists, elders, ascetics, secretaries of the chambers, customs officials, weigh-men, architects, dorozhniks, bukauls, watchmen, post-men, kormovshhiks, falconers, leopard-hunter, boatmen, bridge-men, who are at the market.

In accordance with the custom of true tarkhanship, since the time of the long-deceased Sain Khan the *yarliq* was handed over from one to another until it passed on to the current holder Muhammad; it was granted to his father Haji Bayram Hoja by our elder brother, Khan; and since he asked to be told whether he had been approved as Tarkhan, and his request being well-founded, we solemnly pronounced that Muhammad have the rank of Tarkhan conferred upon him by us. From that time in the Crimean-Qırq Yer Region, in the vicinity of the settlement called Sudagk, after the manner of a lawful obligation since ancient times from the well-known privilege with the privilege of Undinch for approved Tarkhans, to his lands and waters,—the sons of Muhammad, Ilk Haji Muhammad and

Mahmud shall be free tarkhans—of these lands and waters, vineyards and gardens, baths and mills, possessed places, earlier being freed and remaining so, farmers and sharers, or whomsoever shall not be subject to coercion or abuse; their belongings shall not be touched or taken without reason; cereal tamga from agricultural crops, granary and barnyard ground bread, tributes imposed on subjects, tributes called poll tax, arrears, departure levies shall not be collected; during travel, arrival, entry and departure in Crimea and Kaffa while buying and selling whatsoever tamga and weight levies shall not be collected; guards shall not be recruited for the Tarkhans mountain road; their cattle shall not be taken to the carts; soldiers shall not be put into a station; food and lodging shall not be demanded; they shall be protected and preserved from any worry, anxiety and trouble: being in silence in the morning and evening at the sacred times they shall pray and call for blessings on us and our posterity. Saying that, we gave the golden, red-sealed *yarliq*. Written in the year 800, in the year of Bars, on the sixth day of the month of Shaban, while being in Mujuran on the Dnieper River bank.

II. YARLIQ OF TOKHTAMYSH

This *yarliq* initially belonged to some Crimean owner; from Crimea it was presented as a document stating the right of ownership it was presented to Prince Mikhail Semyonovich Vorontsov, who at that time was the Novorossiysk and Bessarabian Governor-General. Later it was published by the Odessa Society for History and Antiquities from the copy made by A. Borzenkov, in a lithograph of the original size by Tromonin, rendered with Arabic characters and translated by the first Tatar translator of Ministry of Foreign Affairs, Yartsov, with a short introduction and some comments by G. Grigoryev.

This is a tarkhan *yarliq* of Tokhtamysh: it was offered by Tokhtamysh to a certain Haji Bey in confirmation of the privileges granted by Pulad Timur to the Sutkul tribe. The form of this *yarliq* is similar to the previous one, but it mentions some ranks which were omitted in the first one, and there are some differences in the listing of privileges, which can easily be seen by comparing both *yarliqs*.

The original is written in Arabic characters with a beautiful and figured script, either *jali* or *divani*: the first two lines, the name of Pulad Timur and a phrase, are written with golden letters; the red seal of Tokhtamysh, twice as big as the seal on the charter for Jagiello, is impressed twice.—The language of this *yarliq* is Old Turkic (Uighur dialect).

TRANSLATION

I commit myself to God and trust in His grace and mercy!

The word of Tokhtamysh.

To the leaders of the Crimean Region, headed by Qutlugh Buga, to the Beys, ecclesiastical judges, ecclesiastical jurists, arch-priests, elders, secretaries of the chambers, customs officials, weigh-men, bukauls, zastavshchiks [watchmen], craftsmen of whatever kind, and to all.

Since Timur Pulad ordered thus: 'we granted the owner of this yarliq Hajji Bey and all his people (on a yearly basis, they have all been paying whatever expenses were demanded, with extra charges to the state treasury). Henceforth do not impose a poll tax on the Sutkul, do not demand yam and feed; do not demand grain grubs for the barns; regional authorities do not interfere with any subject of Sutkul in the Crimea, outside, at stopping sites; you shall all absolutely support Hajji Bey in order to exempt them from the required expenses, provide protection and assistance, help in preparing the tarkhan yarliq with a paiza, then those who collect the poll tax shall avoid causing trouble or offence Hajji Bey. However, if you, Hajji Bey, saying: "I am thus granted", start harassing the miserable poor, no good shall come to you either. Saying that, they gave him the red sealed yarliq for holding. The Orda was located on the Don River, on the Ur-tube, in the steppes. Written in the year of the monkey, year 94, the month of Zul-Kaada, 24'.

**Johann Schiltberger. 'Travels in Europe, Asia
and Africa, 1394–1427.'**

Johann Schiltberger was born in Munich (1380—not before 1438). He was involved in the crusade of the Hungarian King Sigismund against the Turks in 1396, and was captured for the first time in the battle of Nicopolis. He spent long years serving at the court of Sultan Bayezid I. In 1402 Schiltberger was captured by troops of Tamerlane in the battle of Angora and remained a prisoner until 1427. 'During the 30 years of his captivity, Johann Schiltberger, together with his owners, visited many countries of Europe, Asia and Africa: Hungary, Bulgaria, Wallachia, Moldavia, Ukraine, Turkey, Byzantium, Egypt, Palestine, Jordan, Iran, Khorasan, Central Asia, Azerbaijan, Georgia, Dagestan, Circassia and many other regions of the Northern Caucasus, Crimea, Astrakhan district and Siberia' [Schiltberger, 1984, p. 4].

Returning home after long years of wandering, the illiterate Bavarian soldier Johann Schiltberger wrote narratives of his travels, which, in the words of Z. Bunyatov, 'sometimes seem fantastic and exaggerated and require a critical approach' [Ibid].

The source and comments are quoted from the publication: Iogann Shil'tberger. Puteshestvie po Evrope, Azii i Afrike s 1394 po 1427 god. (Johann Schiltberger. Travels in Europe, Asia and Africa, 1394–1427.) / translated from the Old German by F. Brun; edited and with comments by Z. Bunyatov, an academician of the Academy of Sciences of the Azerbaijan Soviet Socialist Republic.—Baku: 'Elm', 1984.—Pp. 33–82.

'25. About the king's son

Abu Bakr held the son of the king of Great Tatary¹. The prince was offered the chance to return home to take up the throne. With the consent of Abu Bakr he headed there accompanied by 600 riders, including me and my four comrades. <...>

From here the king's son went to Great Tatary, to a nobleman called Edigü², who had sent him the offer to return and take up the throne. At that time Edigü was preparing for a campaign to the country called Siberia.

I must say that there is a dignitary in Great Tatary who appoints and overthrows kings who are entirely dependent on him. At that time this high position was held by Edigü.

The Tatar rulers also have a habit of migrating in winter and summer with their wives, children and herds. At the place where the king stops 100 000 yurts must be pitched.

The aforementioned king's son, Chakra, accompanied Edigü to Siberia. They travelled for two months before arriving in that country where the mountains extend for a 32-day walk. According to the stories of local people, this mountain range is adjacent to a desert which reaches to the edge of the world, and where people cannot live because of the wild animals and snakes which dwell in it. The mountains are inhabited by separate families of savages who have no permanent dwellings. Their bodies, apart from their faces and hands, are covered with hair and they, like other animals, wander the mountains, feeding on herbs and anything else they can lay their hands on.

The Vicegerent of this district sent to Edigü a man and a woman from these savages, who had been caught in the mountains, which are also inhabited by horses, no bigger than donkeys in size. The country abounds with different kinds of animals which are not seen in Germany and which I can't even name. There are also donkey-size dogs, which are harnessed to carts and sleds and also used for transportation of luggage. I also want to note that the local people worship Christ, like the three kings who came to Bethlehem³, where they saw him in a cradle, offering him gifts. That is why in their temples one may come across pictures of Christ, depicted how the three kings had seen him, and they pray in front of these images.

The followers of this doctrine are called ugin⁴; there are many of them in Tatary.

There is also a custom in this country, in accordance with which if an unmarried man dies, he is dressed in his best clothes and placed into a coffin covered with a canopy. After that young people come,

dressed in festive costumes, and carry the deceased to the grave accompanied by musicians, who play and sing carols. They are followed by parents and relatives of the deceased, who, on the contrary, weep and lament.

After the burial, food and beverages are put around the grave and eaten by young people and musicians, who have fun and enjoy themselves. However, the parents and their friends sit apart and continue their lamentations.

Finally, they are all taken home and that is the end of the ceremony, which is to represent the celebration of the wedding of the deceased, if he had not died.

Only millet is sown in this country, and they do not eat bread at all. I saw all this with my own eyes, when I was with the king's son, Chakra, mentioned above.

26. How the rulers were changed

Following the conquest of Siberia, Edigü and Chakra invaded Bulgaria⁵, which they also conquered. They then returned home.

Around the same time a man called Shadi Beg Khan was the king of Tataria (the word 'khan' in Tatar means 'king'). When he got to know that Edigü was approaching, he fled and perished⁶ in a clash with people who were sent by Edigü to pursue him. Edigü then enthroned a king called Pulad, who reigned for a year and a half and was later⁷ expelled by another [pretender] called Jalal ad-Din, who was overthrown by Pulad's brother, Timur⁸. However, the latter reigned for no more than 14 months and died in a battle with the returned Jalal ad-Din. The latter, having reigned for 14 months, was killed in a war with his brother Kepek, who, however, should have given up the throne to another brother, Kerim-Berdi. Following a reign of five months, the latter had to hand over the throne to his brother Jabar. He was also expelled by Edigü⁹ and my lord Chakra, who was enthroned as it had been promised by Edigü.

However, after nine months they had to fight with a new pretender to the throne called Muhammad. Chakra had to flee to the country called Desht-i Kipchak, and Muhammad ascended the throne¹⁰.

Muhammad, who had been ousted by Barak, regathered his forces and expelled him in turn. However, he himself was later expelled by Devlet-Berdi, who after a reign of three days was forced to hand over the throne to Barak. The latter then died in a battle with my lord Muhammad, who had once again taken the throne. My lord Chakra, who wanted to oust Muhammad, died in a fight with him. <...>

35. About Red (Golden) Tataria

I have also been to Golden Tataria¹¹, where of grain crops the people only sow millet. In fact, they do not eat bread and do not drink wine, which they replace by milk from horses and camels. They eat the meat of these animals.

It should be noted that in this country the king and noblemen migrate in summer and winter together with their wives, children and herds, carrying with them all other goods and wandering along this completely flat country from one pasture to another. It should also be noted that when the king is elected they put him on a white felt and lift him up three times. Then they carry him around the tent, sit him on the throne and give him a golden sword, after which he has to swear an oath in accordance with their rules.

It is worth mentioning that they, like all pagans, sit on the ground when they want to eat or drink. No other people among pagans are as brave as the inhabitants of Golden Tataria, who could withstand so much hardship in campaigns and travels as they do. I have seen them suffering from shortage of food, and they let the blood [of horses], collected it, cooked it and ate it. In the same way, when they need to take to the road in a hurry, they take a piece of meat and cut it into thin strips, which they put under the saddle. They firstly salt the meat and eat it when are hungry, imagining that they had cooked a good meal, because the meat dries out from the horse's warmth and being under the saddle, it becomes soft because of the ride, during which its juices flow. They use this method when they have no time to cook food any other way. They also have a custom of offering horse milk to the king in a golden dish when he wakes up in the morning, and he drinks this milk on an empty stomach.

36. Countries subject to Tataria, which I have visited

Khwarezm is the first of this group of countries, with its capital city of Urgench, located [on an island] on the great river Itil¹². Then the country Beshtamak, very mountainous, with its capital Julad¹³. In the same place there is the great city of Astrakhan in a good country, and the city of Sarai¹⁴—the residence of the Tatar king. There is also the city of Bolgar¹⁵, rich with animals of different kinds, and the cities of Sibir¹⁶ and Azak, called by Christians Tana¹⁷. It lies on the banks of the Don river, teeming with fish, which is exported on big ships and galleys to Venice, Genoa and the islands of the Archipelago.

The next is the country called Kipchak, with its capital Solkat¹⁸. Different kinds of grain are harvested here. [In this country] there is the city of Caffa, located on the shore of the Black Sea¹⁹ and surrounded by two walls. The inner city has six thousand houses, inhabited by Italians, Greeks and Armenians. It is one of the main Black Sea cities with up to 11,000 houses on the external line and inhabited by Christians: Latin, Greek, Armenian and Syriac. In the city, there are the residences of three bishops: Roman, Greek and Armenian. The city is also inhabited by many pagans, who have their own temple.

Four cities depend on Kaffa, and they are located on the coastline. There are two types of Jews who have two synagogues in the city and four thousand houses in the suburbs.

The next is the city of Kirker²⁰, located in a nice region called Gotfiya²¹, but pagans call it Tat. It is inhabited by Greek Christians and it produces good wine. It was in this country, located on the Black Sea coast, near the city of Sarukerman²² that St. Clement drowned. There is also the country (land) of the Circassians²³, also on the Black Sea coast, inhabited by Christians, professing the Greek faith. However, they are evil people and sell to pagans their own children, and children whom they steal from others. They are also engaged in robbery and speak a special language. They have a custom to put those who are killed by lightning into a coffin which is then suspended from a high tree. Then neighbours come, bringing food and beverages and start dancing and having fun, slaughter sheep and oxen and distribute the main part of the meat to the poor. They do this for three days and repeat it every year until the bodies decay entirely, imagining that the person who was struck by lightning must be a saint²⁴.

The next is the kingdom of Russia, which pays tribute to the Tatar king. It should be noted that there are three generations between the Golden Tatars: Kaitaks²⁵, Jamboluks²⁶ and Mongols²⁷. Their country extends for a three-month long walk, representing a valley which has neither forest, nor stones, and is covered only with grass and reeds.

All of these lands constitute part of Golden Tataria and I have been to all of them. <...>

Notes

¹ This refers to the Golden Horde prince Chakra, (1414–?) from the clan of Urus, son of Orda. Great Tataria meant the White Horde, or the Eastern Kipchak.

² This is the famous Edigü murza, who for many years concentrated in his hands the actual power in the White Horde. He was killed in 1416.

³ Bethlehem is a Palestinian city, to the west of the Dead Sea. Jesus Christ was born in Bethlehem in the reign of King Herod the Great (37 BC).

⁴ According to F. Brun, Ugins were 'followers of Lamaism, that is, a type of Buddhism which was introduced from Tibet to Mongolia by Chinggis Khan'.

⁵ Bulgaria (Bolgaria) is a region in the Middle Volga River basin.

⁶ Shadi Beg Khan, son of Qutlugh bug, grandson of Urus Khan, in 1407 tried to free himself of the influence of Edigü, but was defeated and fled to Astrakhan, and then further to Shamakhi. Edigü demanded that Shirvanshah Sheikh Ibrahim release Shadi Beg, but Shirvanshah refused him. Shadi Beg died in Shamakhi in 1408.

⁷ Pulad Khan (Khan Bulat Sultan in Russian chronicles) was a son of Shadi Beg. He died in 1410.

⁸ Following the death of Pulad Khan, Timur Khan, the son of Timur Qutlugh, the grandson of Timur Malik and the great-grandson of Urus Khan, became the ruler. In order to secure control over Timur Khan, Edigü married him to one of his daughters. However, after several months Timur Khan confronted his father-in-law, and in 1411 the defeated Edigü fled to Khwarezm. However, Timur Khan did not reign for long and was overthrown by the son of Tokhtamysh, Jalal ad-Din.

⁹ All of these palace coups took place before 1419, when Edigü was killed by the son of Tokhtamysh, Kadir Berdi.

¹⁰ Coins with the name of Chakra were minted up until 1414 and from 1419 in the regions of Afyonkarahisar or Antilya (the Mediterranean coast).

¹¹ The lands of 'Golden Tataria' (the Eastern Horde) stretched from the Urals to Syr Darya and the Black Sea.

¹² Khwarezm (Khwarezm) is a region between the Amu Darya and the Syr Darya. Urgandz (Urgench) was the capital of Khwarezm. In this case, the Itil means the Amu Darya.

¹³ About Julad, see: fn. 109. It was not possible to locate 'the country of Beshtamak (Bestan)'. There is a possibility of identification with the mountain Beshtau (Bestak, Bestau, Beshdag, Beshtag).

¹⁴ According to Evlia Çelebi (Book of Travels, second edition, p. 136), the city of Sarai 'was a big settlement on the banks of the Great Volga River, at a distance of two days' walk to the north from the Caspian Sea coast. This city of Sarai is built so that it has a jetty on the Volga River bank. It goes around the city from the north and west, and then flows downwards to the south'.

¹⁵ About the city of Bulgar (Bolgar) and Bulgaria, see: fn. 113.

¹⁶ In this context, Sibir is inappropriate. Schiltberger could have confused Sibir with the Sabirs, who inhabited the Caspian-Azov intermarium (see M. Artamonov. History of the Khazars, p. 69–78 and the map on p. 72).

¹⁷ Tana came down to us through Arab and Persian sources under the name of Azak. The city was a trading centre of the Venetian and Genoese Republics on the left bank of the Don River, at its mouth. It handled a huge trade turnover. It was destroyed by Tamerlane in 1395, but was soon restored by the Venetians.

¹⁸ Solkat (Solkhat) is the present-day Old Crimea. Up to the mid-15th century it was the administrative and commercial centre of the Crimean steppes. [See also: Evlia Çelebi. Ibid., p. 100, 162, 231].

¹⁹ Kaffa (Kafa) is the present-day Feodosia.

²⁰ F. Brun Kirker (Kirkier) identifies it with Chufut-Kale (Crimea).

²¹ Gotfiya is Tavrida. At one time Goths inhabited the area between Kaffa and Balaklava (Chembulak).

²² Sarukerman is Kherson. [Compare: William of Rubruck. Travels, p. 88, 89: 'Kherson, where Saint Clement was martyred' and 'Kherson, the city of Clement'].

²³ At one time the Circassians inhabited the nor-west spurs of the Caucasus, on both sides of the Kuban River, along the Black Sea coast.

²⁴ Compare: Apollonios Rhodios (3rd century BC). Argonautica, XII, p. 200–209: 'When they left the ship, they saw many trees with thin leaves and dead bodies, tied with ropes to the tops. The Colchians still consider cremation of dead bodies as a grave sin. They neither burn the dead, nor erect memorials on the graves. They wrap bodies in raw hide and suspend them from the trees away from the city' (Apollonios Rhodios. Argonautica. Translated by A. Urushadze, Tbilisi, 1975, p. 122).

²⁵ Kaitaks (kaitags) are a small ethnic group of Dargins who live in Dagestan and speak the Kaitak dialect of the Dargin language. Kaitaks live in sou-eastern Dagestan.

²⁶ Jambuluk is the Jambuluk or Evboluk Orda of Nogays, who wandered in the Elbe River basin up until 17th century. Then the Nogays moved to the western coast of the Sea of Azov.

²⁷ In this case, by Mongols Schiltberger meant Kalmyks, whose language belongs to the Mongolic languages.

No. 5

Giosafat Barbaro about the Tatars

Giosafat Barbaro was born into a noble Venetian family. In 1436 as the ambassador of the Republic of Venice and a merchant he arrived in Tana (present-day Azov), which at that time belonged to the Genoans and was a storage area for Chinese and Indian goods. Barbaro had lived in Crimea for 16 years, travelled around it by land and by sea, and so he had had a good opportunity to collect very detailed and important information about the Tatars. In the last two chapters of his work, he describes Russia and the lands of the Tatars to the east and south of Russia. In 1471 under an order from the Republic he travelled to Persia to Uzun Hasan, in order to help him with the military reserves and give advice in the

war against the Turks. As he states himself, when he returned home in 1479, after eight years, that is in 1487, he described both of his travels, so he was able to mention in them the conquest of Kazan and Novgorod by the Russians. Barbaro died in 1494 in Venice.

The source and comments are quoted from the publication: *Barbaro i Kontarini o Rossii. K istorii italo-russkix svyazej v XV v.* (Barbaro and Contarini about Russia. To the history of Italian-Russian connections in 15th century.) / Introductory articles, text preparation, translation and comments by E. Skrizhinskaya.—Leningrad, 1971.—Pp. 136–187.

'GIOSAFAT BARBARO

Journey to Tana

<...> So, I am going to divide my narration into two parts. In the first one I will describe the journey to Tana, while the second one will be devoted to the journey to Persia. However, in neither of them will I say anything, with very rare exceptions, about the difficulties, the dangers or inconveniences which I was compelled to deal with.

Section 4. In 1436 I started my journey to Tana, where year after year I had stayed for sixteen years. I travelled around those regions, both by sea and by land, assiduously and with curiosity.

Section 5. The Tartary plain¹ has the following borders if one stands in the middle thereof: the River Ledil² to the East; Poland to the West and Nor-west; Russia to the North; with its territory stretching all the way up to the Maggiore Sea³, the regions of Alania, Cumania, Gazaria⁴ in the South, and all the latter countries bordering the Tabacche sea⁵. So, the plain lies within those said boundaries.

Section 6. For you to better understand me, I will start the story moving along the Maggiore Sea, partly along the coast, partly along the lands deep inland, up to the river Eliche⁶ which is located behind Caffa⁷, around forty miles away. Crossing the river, you are heading to Monkastro⁸. There is the most famous River Danube. I won't tell anything about the lands further the way, because they are already well known. <...>

Section 13. The Islamic faith became commonplace among the Tatars 150 years ago. However, earlier only a few of them were Muslims, while in fact everyone could freely adhere to the faith they liked. For this reason, there were people who worshipped wooden or rag idols and carried them on their carts. Coercive adoption of the Islamic faith relates to the period of Edigü⁹, the commander of the Tatar khan, who was called Sidahamet Khan¹⁰. Edigü was the father of Navruz; we will talk about him now.

Section 14. In 1438 the steppes of Tatar were ruled by the Ulu-Mohameth Khan¹¹, which means emperor the great Mohammed. He ruled for many years. When he and his Orda, that is his people¹², were in the steppes which lie in the direction of Russia, and his military commander was Navruz¹³, the son of Edigü, with whom Tatar adopted the Islamic faith, a disagreement arose between Navruz and his emperor. For this reason, Navruz separated from the emperor and left with those troops who wanted to go with him [Navruz]. He headed to the Ledil river, where a certain Kezimahmet was¹⁴, which means the small Mohammed, originating from a clan of the Tatar emperors. They combined both their intentions and military forces and decided to mount a joint attack against the Ulu-Mohameth.

Section 15. Passing by Astrakhan they reached the Taman steppes¹⁵; then, rounding Circassia they headed towards the Don River¹⁶ and the gulf of the Tabacche sea¹⁷; both the sea and the river were covered with ice. Because there were many people and a considerable number of animals, they had to move on a broad front, so that those moving in front would not destroy all the straw and other food, required for those coming behind. For this reason, one of the main detachments of this tribe with herds reached the place called Palastra¹⁸, while the other one approached the Don River at the place called Bozagaz; this word means "a gray tree". The distance between these places is 120 miles; that was the distance over which these moving people extended, though not all of these places were convenient for passing through.

Section 16. We received news of their [the Tatars] coming to Tana four months in advance. But a month before the appearance of the Tsarevich [Chezimameth], certain sentry patrols began coming towards Tana¹⁹: three or four young men on horseback, each of them with a spare horse in hand.

Those who visited Tana were invited to the consul; they received a warm welcome and were offered gifts. To the question where they were going, and what they intended to do, they replied that they were all young, and they were travelling just for pleasure. It proved impossible to force them to say anything else. They stayed no longer than one to two hours and then departed. The same thing was repeated everyday, with the only exception that each time their numbers increased. When the Tsarevich was approaching Tana at a distance of five to six days' journey, they began appearing in groups of twenty five to fifty men, fully armed; when he approached the city even closer, there were already hundreds of them.

Section 17. Finally, the Tsarevich²⁰ arrived and encamped at the distance of a bow-shot to Tana, in the old mosque. The consul immediately decided to send him gifts and sent a novenna for him, one for his mother, and a third one for Navruz, his military commander. A novenna is a gift that consists of nine different items, for example, silk fabric, scarlet cloth and other things, totalling nine: that is a custom in these parts when making gifts to rulers.

It happened that it was I who was supposed to go with the gifts: we brought him bread, mead, buza, or beer, and other things to a total of nine. When we entered the mosque, we found the Tsarevich reclining on a carpet and leaning against Navruz, his military commander. The Tsarevich was twenty two years old, while Navruz was twenty five.

After offering him all the gifts, I entrusted the city and the population [to his protection], saying that it is under his rule. He responded to me very politely, but then, looking at us, began to laugh and clap his hands, saying: 'Look, what is that city like where only three eyes account for three people!' That was true: Buran Taia-petra²¹, our interpreter, had only one eye; the consular verger Dzuan, a Greek, also had just one eye; and the person who was carrying the mead was also one-eyed.

After receiving permission from the Tsarevich to withdraw, we returned to the city.

Section 18. If somebody came to this place, he might consider it not very reasonable that the aforementioned sentry brigades travel in groups of four, ten, twenty and thirty people across these plains, staying at a distance of ten, sixteen, or even twenty-day journey from their people; and he might ask what they eat. I will respond that each of these [riders], when he leaves his people, takes with him a small bag made of goat skin full of millet flour, kneaded into dough with a small amount of honey. They always carry with them several wooden bowls. If they do not have enough game, which is in abundance in these steppes, and they are very good at hunting, mainly using the bow, then they use this flour to make a kind of drink²² with a small amount of water; and they get manage with that.

When I asked one of them, what they eat in the steppes, he immediately asked me a question: 'Is there anyone who died because he did not eat?', in the meaning: 'I just need to have an amount sufficient to maintain life, I don't worry about anything else'. They are content with herbs, roots and everything else available, as long as they have salt. If they do not have salt, their mouths become covered with sores and they fester; some of them even die because of this illness, and they also have diarrhoea.

Section 19. But let us return to where we left off. Following the departure of the Tsarevich, people with herds began to arrive. Horse herds, consisting of sixty, one hundred, two hundred horses were the first; then appeared camels and oxen, followed by herds of small ruminants²³. This continued for six days, when throughout the entire day, to the extent the eye could see, the steppe from all sides was full of people and animals: some passed by, others arrived. However, these were only the main detachments; thus, you can easily imagine the number of [people and animals] in the middle of the [troops].

All that time we were standing on the walls²⁴ (we kept the doors closed) and closer to the evening we became tired of watching. The cross section of the plain, occupied by masses of these people, was equal to 120 miles; it all seemed like a kind of Paganian.

This is a Greek word, which I learned first in Morea²⁵, while hunting with a prince. He brought one hundred villeins; each of them was holding a club. They were distributed at a distance of ten steps from each other and moved forwards, hitting the ground with their clubs and shouting out some words to make the animals come out from the forest. Hunters, some on horseback, some on foot, with birds and dogs, were standing where they wanted. At a convenient moment they threw the birds [into the air] and turned the dogs loose. <...>

§ 22. These people use countless numbers of two-wheeled carts, higher than ours. On top, they are reed matted, some of them covered with felt, others covered with woollen cloth, if they belong to

noblemen. On some of them houses are placed, which they build as follows: they take a wooden hoop, one-and-a-half paces in diameter, install on it several semi-hoops, crossing at the centre; the gaps are reed matted, covered with either felt, or woollen cloth, depending on their wealth. When they want to stop to make camp, they take these houses from the carts and live in them²⁶. <...>

Section 25. Justice is carried out throughout their camp, at any place at all, and without any preparation. This is how they do it.

When someone starts a quarrel with another, and both of them use abusive words (however, it is not quite the way it is with us, without being particularly offensive), then both, or if there were more people, then all of them, get up and go to the road, which they like more, and say to the first comer, if he is a man of dignity: 'Lord, judge us, because we have fallen out'. The man stops immediately and listens to what they say, and then takes a decision, as he thinks it right, without making any records, and nobody judges his decision later. In such cases, a crowd of people comes, and he, speaking out his decision, says: 'You will be the witnesses!' Such courts are continuously held across the camp, if a quarrel happens during a campaign, they follow the same procedure, asking the first-comer to be the judge and forcing him to judge.

Section 26. Once in the Orda²⁷, I saw an overturned wooden bowl on the ground. I came closer, picked the bowl up and found cooked millet under it. I asked one of the Tatars what was it. He said that it was placed by 'hibuth peres', that is by pagans. I asked: 'Are there pagans among these people?' He replied: 'Ho, ho! There are many of them, but they hide'²⁸.

Section 27. I will start with the number of these people and tell you [about it] tentatively, for it is impossible to count them, giving the [figure] neither bigger, nor smaller, than I think. I am sure and firmly stick to the number of three hundred thousand people in the entire Orda, when it is gathered together. I made this note, because one part of the Orda²⁹ belonged to the Ulu-Mohameth, as I mentioned before.

Section 28. Military people are extremely brave and courageous, to the point that some of them, especially possessing outstanding qualities, are called 'talubagater', meaning the mad brave³⁰. This nickname was born among the people, just as we have 'wise' or 'beautiful', whence it is said—a certain Peter, nicknamed 'Sage', or Pavel, nicknamed 'Handsome'. These bogatyrs have one advantage: everything they do, even if to a certain extent it goes beyond the bounds of common sense, is considered right, because as far as it is done out of courage, everybody thinks that bogatyrs are just doing their job. Among them there are many of those who do not care about their life, are not afraid of danger, but rush forward and without thought beat their enemies, so that even those who are timid are inspired by that and turn into men of courage. I find their nickname very appropriate, because I can't imagine a brave man who was not mad. For, in your opinion, isn't it madness when one man dares to fight against four?

Is it not madness when someone with one knife is ready to fight against many, the more so when they are armed with swords?

Section 29. In this regard, I will relate something which happened when I was in Tana. Once while I was standing on the square, the Tatars came to the city and said that a mile away from there, around one hundred Circassian horsemen were hiding in a grove and planning to carry out a raid on the city, as was their custom. I was sitting in a fletcher's shop; there was also a Tatar merchant who had come there with wormseed³¹. When he got to know about the Circassians, he stood up and said: 'What if we go and capture them? How many riders are there?' I told him: 'One hundred'.—'That's good', he said, 'there are five of us, how many horsemen can you find?' 'Forty', I replied. Then he said: 'The Circassians are not men, but women. Let's go and capture them!' Hearing all this, I went to look for the messer Francesco and explained to him everything I had been told, and he, laughing, asked me if I was brave enough to go there. I said that I was.

So we mounted our horses, ordered our people to get there by water and by noon we descended on the Circassians. They were standing in the shadows, some of them were sleeping, but, unfortunately, it happened that a little bit before we reached them, our trumpeter made his call. Because of that many of them managed to flee; still, we got 40 people dead and captured. But the beauty of this case refers to what was said about the 'mad braves'. The Tatar man who suggested that we go and capture

the Circassians was not content with the spoils, but started out alone to pursue the escapees, even though we were shouting: 'You won't come back, you will never come back!' He returned almost an hour later, joined us and complained saying: 'O woe unto me, I could not catch any of them!'—and he was grievously distressed. You decide how mad he was,—because if only four Circassians had turned against him, they would have chopped him into pieces. More than that, when we reproached him, he just made a joke out of it.

Section 30. The sentry brigades (whom I described above) who had approached Tana earlier than the rest of the troops, always moved before it in eight different directions to discover any possible dangers from all sides, staying many days away from it and acting in accordance with its needs.

As soon as the ruler stopped, they immediately set up bazaars³², leaving broad roads. If it happens in winter, then the greatest mud is formed from the numerous animal feet; if it happens in summer, then the greatest dust is produced. As soon as they set up the bazaars, they arrange their fireplaces, fry and boil meat and prepare their food from milk, butter, and cheese. They always have game, especially deer.

In this army, there are many artisans, such as clothiers, blacksmiths, armourers, and others, and there are all the necessary crafts.

If you asked me: 'That means they wander just like gypsies then?'³³—I would give a negative answer, because apart from the fact that their camps are not surrounded by walls, we see them as the largest and most beautiful cities³⁴. In this connection [I will tell you the following] : once when I was in Tana, where there was a beautiful tower above the gates, a Tatar merchant was standing next to me and looking at the tower; I asked him: 'Don't you think this is a remarkable thing?' But he looked at me, chuckled and said: 'Bah! Towers are built by those who are afraid!' I think that he was right.

Section 31. In speaking of merchant men, so now I return to my subject, namely the Tatar army. I will say that there are always merchants with it³⁵; some carry their wares in via diverse ways, though others solely pass through the Orda with the intention of travelling to other countries.

Section 32. Tatars are excellent hunters with falcons, and they have many gyrfalcons; they catch birds on burdock³⁶ (we don't use it), they hunt deer and other big game. They carry gyrfalcons on one fist, and they hold a stick in the other hand; because these birds are twice as big as eagles, when they get tired, they put the stick under their arms. Sometimes a flock of geese sweeps over their army; then people from the camp shoot twisted arrows thick as a finger, with no feathers. The arrows fly straight, then turn and fly across the path of the birds, catching the bird and crushing its neck, or legs, or wings. Sometimes it seems as if the air is full of geese; from the people's shouts they are stunned, frightened and fall to the ground. <...>

§ 34. What can I tell about the great, even countless, variety of animals in the Orda³⁷? Will anyone believe me? It is up to you, but I will dare to say how many of them are there.

Let me start with the horses. There are horse-traders among these people; they take horses from the Orda to various places. There were four thousand head³⁸ of horses in one caravan, which arrived in Persia before I left it. Don't be surprised: indeed, if you wanted to buy two thousand horses in one day in the Orda, you would find them there, because, like cattle, there are herds of horses. Usually, a man goes to the herd and says to the seller that he would like to get one hundred such horses. He has a club with a lasso attached to the upper end of it, and he is so good at his job that as soon as the customer tells him, 'catch me this horse or catch that one', he puts a noose onto the horse's head, drags it from the herd and puts aside. In this way he catches the amount and type of horses required by the customer. While travelling, I have seen merchants chasing so many horses that they occupied the area of the entire steppes.

But this is what is surprising: the country does not produce thoroughbred horses; they are shortish, with a large belly and they don't eat oats. When they are taken to Persia, the biggest advantage which can be recognized is that they eat oats, because if they did not eat it, they would not be able to stand fatigue in case of need.

The second type of animal which these people have is the large, wonderful oxen, there are so many of them that there would be enough of them even for the Italian slaughterhouses. They are taken to Poland, part of them is sent through Wallachia to Transylvania; moreover to Germany, and from there they are taken to Italy. In those regions [the steppes] oxen are used to carry luggage and packs when required.

The third type of animal that these people breed is the tall shaggy Bactrian camel. They are taken to Persia and sold for 25 ducats each. The eastern camels are dromedary and small in size; they are sold for ten ducats each.

The fourth type of animal that these people breed is the huge sheep on long legs, with long wool and with such tails that some weigh up to twelve pounds. I had seen similar sheep which were dragging a wheel behind them. Fat from their tails is used by [Tatars] in food; they use it instead of oil, and it does not thicken in the mouth.

Section 35. I don't know who, apart from an eyewitness, could have explained about what I am going to tell you now³⁹. Because you could ask: 'So many people, what do they eat, when they are journeying for days on end? How do they get the bread they eat? Where do they get it from?' I, as someone who had seen it all, will answer you.

Around the new moon in February a call is issued across the entire horde that anyone who wants to sow should prepare everything necessary, because the sowing will take place at the new moon in March in such-and-such a place, and everyone will set out on such-and-such a day. Afterwards, those who plan to sow themselves or who want to charge somebody with this duty, load their carts with seeds, take the animals they need and, together with their wives and children or with a part of the family, set out for the appointed place, which is as a rule a two-day journey from where the horde was camped at the moment the call to sow was made. They plough and sow and live there until they finish everything that they wanted to do. Then they return to the horde.

The khan treats his horde as a mother treats her children on a walk: keeping an eye on them. That's why he rides around these sowing places now here, now there, never going [away from his people] farther than a four-day journey. This continues until the corn ripens. When it ripens, he does not go there with his horde, but sends there only those who had sowed and those who are willing to buy the wheat. They go with their carts, oxen and camels and the other things they need, as they do in their village.

The earth there is fertile and brings a fiftyfold yield of wheat, which is as high as Paduan wheat, and a hundredfold yield of millet. Sometimes the harvest is so abundant that they leave it in the steppe.

Section 36. Let me tell now about the following. One of the sons of Ulu-Mohameth was here; he reigned for several years and was always afraid that one of his cousins from the other side of the river Ledil would come and take a part of his people⁴⁰, which was usually leaving for sowing and therefore was in particular danger. For eleven consecutive years he prohibited sowing, and during that time they only ate meat, milk and similar things; there still was a little bit of flour and millet at the market, but at an expensive price. When I asked them how they were getting along, they just chuckled in response, saying that they have meat. However, the aforementioned [tsarevich] was still expelled by his cousin.

Finally, Ulu-Mohameth (of whom we have spoken above)—after Khezi Mohameth arrived in his lands—seeing that he would be unable to resist him, left the horde and fled with his children and others. Khezi Mohameth declared himself the khan of that entire people⁴¹.

Section 37. He arrived at the Don River in June, and it took him two days to cross the river with his entire people, carts, cattle and all his property. It is amazing to believe it, but it is even more amazing to watch it! They crossed the river without any noise, and with such confidence as if they were walking on the ground. They cross the river in the following way: leaders send their people in front and order them to build rafts out of dry forest, which is in abundance along the rivers. Then they order them to make bunches out of reeds, which are put under rafts and carts. That's how they cross the river, horses swim, dragging these rafts and carts, and naked people help the horses⁴².

A month later [after I saw the crossing] I headed down the river to the fishing place and saw so many abandoned rafts and fascines floating downstream, that we hardly managed to get through them. Apart from that, I was amazed by the countless number of rafts and fascines left on the banks in these places. When we arrived at the fishing place, we found that it was damaged even more than I had described before. <...>

Section 46. The steppe on 'Kaffa island' is subject to the Tatars⁴³. Their ruler is Ulubi⁴⁴, the son of Aziharey. There are many Tatars, and in case of need, they could supply from three to four thousand horsemen. They have two settlements, surrounded by walls, but they are not fortresses. One of them is

Solkhat⁴⁵, which they call Inkremin, which means 'fortress', and the other one—Kerkiarde⁴⁶, which in their dialect means 'forty settlements'.

Section 47. However, I would just like to tell you about the loss of Kaffa, precisely what I learned of it from one Antony da Guasco, a Genoese, who was present there and fled by sea to Georgia, and from there into Persia, at the same time that I happened to be there⁴⁷. Now listen to how it was that this city fell into Turkish hands.

At that time, the ruler there, namely in the steppes, was a Tatar man called Eminakbi⁴⁸. On a yearly basis he collected a certain tribute from the people of Kaffa, which was common in those regions. Once some disagreement arose between him and the Kaffa people, and the consul of Kaffa, a Genoese, decided to address them to the khan⁴⁹ in order to invite to the throne one of the relatives of Eminakbi. With his assistance and support of his followers the consul intended to expel Eminakbi. For this reason he sent a ship from Kaffa to Tana⁵⁰. An envoy of the consul was on that ship, who headed to the Orda, where the khan was based. As soon as they found there a relative of Eminakbi, called Mengli Giray, the envoy received permission and took him to Kaffa via Tana. When Eminakbi learned that, he tried to make peace with the Kaffa people by a treaty, under which they were supposed to return Mengli Giray. But the Kaffa people did not agree to this treaty; then Eminakbi, fearing for his business, sent an envoy to Ottomanno, promising him (if he sent his fleet to lay siege to Kaffa from the sea) that he would lay siege to the city from the land so as to hand over Kaffa to him, which he wanted to conquer.

Ottomanno, who was also desirous of this, sent his fleet and in a short time took the town; Mengli Giray was captured and sent to Ottomanno, who kept him in prison for many years.

Section 48. But Eminakbi began to regret handing over the town to Ottomanno, since the Turks did not treat him well, and stopped allowing the import of goods into the town. Thus, they began to experience a great shortage of bread and meat, as if the city were under the siege. Then they reminded Ottomanno that if he would send Mengli Giray to Kaffa and keep him there under house arrest, then there would be plenty of food in the city, because the local population loved Mengli Giray very much. Ottomanno realized that this was a good suggestion, and sent Mengli Giray [to Kaffa]. As soon as it became known that he had returned, the city became prosperous again, because the urban population also liked Mengli Giray. He wasn't kept under tight guard and could go anywhere within the city limits. That was when they would organize archery competitions.

Here competitions were held in the following way. A silver bowl was tied with a thin rope that was attached to a horizontal wooden beam mounted on two wooden pillars, (similar to a gallows). Archers competing for the prize had arrows⁵¹, the iron tip of which was crescent shaped with very sharp edges. Riders with bows would gallop past this gallows and, having barely passed it, would turn back and shoot at the rope, even though their horse might be still charging in the other direction: the one who pierced the rope and dropped the bowl would win the prize.

So once during these games, Mengli Giray, taking advantage of the situation, made a deal with one hundred Tatar riders to hide in a valley close to the city. Pretending that he too wanted to compete in the archery competition, he galloped off and hid among his compatriots. Gradually, as the population of the 'island' realized what had happened, many of them followed after Mengli Giray. Together with them he headed to Solkhat, six miles away from Kaffa, and conquered it⁵². Mengli Giray killed Eminakbi and became their ruler.

Section 49. The next year he decided to go to Astrakhan, which was a sixteen-day journey from Kaffa. At that time it was ruled by Mordassa khan⁵³, who, together with his troops, was on the Ledil River. Mengli Giray attacked him, captured him and his people, the majority of which were sent to 'Kaffa island'. But Mengli Giray decided to spend the winter on the banks of the aforementioned river. A few-days journey from there was another Tatar ruler who, when he learned that Mengli Giray had decided to winter in the area, and that the river was already frozen, fell upon him and his troops. He defeated Mengli Giray and released Mordassa khan, whom Mengli Giray had been holding prisoner. Having been dealt a crushing blow, Mengli Giray and his frustrated army returned to Kaffa.

The following spring, Mordassa khan with his army went directly to Kaffa, where they attacked him, raiding and damaging inner sections of the 'island'. But, because he lacked the troops to take the city, he

was forced to turn back. Still, as I was told⁵⁴, he is putting an army together once again and intends to return to the 'island' and expel Mengli Giray.

Section 50. While all of this may be true, it nevertheless served as a basis for rumors spread by those who either don't understand why these two leaders were fighting amongst each other, or can't comprehend the difference between the great Khan and Mordassa khan. Upon hearing that Mordassa khan was gathering together a new army to return to the 'island', they start gossiping and spreading the news that the Great Khan is marching on Kapha instead of Ottomanno, and is preparing to go all the way to Moncastro, Valachia and Hungary, to any place where Ottomanno would be likely to go⁵⁵. This is all lies, even though it is based on information contained in letters from Constantinople. <...>

Section 53. The Edil is a affluent and extremely wide river; it flows into the Baku [Caspian] Sea⁵⁶, which is approximately twenty five miles from Astrakhan. The river, like the sea, contains an enormous amount of fish; a lot of salt is mined from this sea.

Moving upstream, one can sail almost all the way to Moscow on this river: from there it is only a three-day journey⁵⁷. Every year people from Moscow sail to Astrakhan for salt⁵⁸.

There are many islands and forests along the river [Edil] ; some islands are up to thirty miles in circumference. One can even find lindens in these forests are so huge that you can make a hollowed-out boat from just one of them that can carry eight to ten horses⁵⁹ and the same number of people. <...>

Section 59. I have no more to say of the Tatars, except that those who have remained pagans still worship idols that they carry with them on their carts. And there are those among them who worship daily the first animal they meet when they leave their houses for the day. <...>

Comment¹ on the text and translation by Barbaro

¹ La pianura is a plain, or, more fittingly, a steppe. Barbaro uses this word often when referring to the South Russian steppe territories; sometimes it is used with a meaning similar to the word 'campagna'. Thus, both 'pianura' and 'campagna' in texts relating to the Northern Black Sea region should be understood to mean 'flat terrain' or 'steppe'.

² Ledil, Edil-Itil or Edil is a well-known medieval name for the Volga River that is derived from its Turkic name. The nomadic Khazar, Pecheneg, Cuman and Tatar tribes used this name in reference to the Volga River. Western European and Eastern writers—geographers and travelers—were responsible for the promulgation of this name given to the largest river in Europe.

³ Mare Maggiore, mar Mazor or mare Maius was the name given to the Black Sea by the Italians. This name was used on Italian maps and in all written sources from the 13–15th centuries. The name mar Mazor can be found among the pages of the works of Barbaro and Contarini.

⁴ Alania, Cumania, Gazaria are three regions that apparently lacked clearly defined boundaries and were located around the Azov ('Zabak') Sea: Alania was adjacent to its eastern coast, stretching further along the Northern Caucasus; Cumania was adjacent to the northern coast (marked as Chumania on the map of Benincasa, dated 1474); Gazaria, according to the name that was established later (by the 13–14th century), was located in Tavrika, mainly in its eastern, non-Gothic part. Referring to these three regions with their original ethnic names, Barbaro concludes his narration about the rough borders of Tataria; moreover, speaking of the North (Russia) and the West (Poland), he does indeed mention regions that were beyond the reaches of Tatar settlements and nomadic camps; but speaking about the East and the South, he names places that indeed could have been within the settlement area of the Tatars.

⁵ Mar delle Zabache is the Zabak Sea, the present-day Azov Sea. It is possible that the word Zabache conceals within it the name of a fish called 'chabak', a word still used in the Lower Don Region to refer to a bream. It is widely known that the Azov Sea and mouths of the rivers flowing into it are rich in various types of fish (valuable species of fish such as the sturgeon, starry sturgeon, white sturgeon, perch, bream, common carp and sabrefish). According to Barbaro's notes, he and other Venetian merchants had fisheries on the Don River—le peschiere. Notably, the eastern authors called the Tana (in the 14–15th centuries) by the name of 'Azak'. This is where the Azov Sea (or 'Ozach' in 'The Journey' by Ignaty Smolnyanin) gets its name: 'we passed through the mouth [that is, the Cimmerian Bosphorus, the Kerch Strait] of the Ozach Sea and went out onto the Maggiore [that is, the Black] Sea' (Ignaty Smolnyanin, p. 5). Sometimes the Azov Sea was referred

¹ Text of notes is significantly reduced.—*Editor's note*.

to as the Frankish Sea. This term was used by the Persian writer Abd al-Razzaq Samarqandi (1413–1482): 'They (the tsareviches and emirs of Timur) devastated and plundered this region (the Circassian ulus) up to the shores of the Frankish Sea, the so-called Azak' (Tiesenhausen, II. p. 181, note 1).

⁶ 'Elice' refers to the Dnieper River. This is clearly explained in the work of Contarini: 'There is a river in Kiev (Chio), which is called Danambre (Danapr, Dnieper) in the local language and Leresse in our language; it flows near the city and empties into the Maggiore Sea' (Contarini, p. 68 v).

⁷ Capha or Kaffa was the largest Italian colony in the Northern Black Sea region. The city of Kaffa, the predecessor of the present-day Theodosia, belonged to the Genoese from the 1260s until 1475, when it was conquered by the Turks. In Genoese Kaffa's final years of existence, there was a Venetian consul there, in addition to the Genoese one. The Genoese paid tribute to the Tatars, who had granted them Caffa.

⁸ Moncastro was the Italian name of a fortress located at the mouth of the Dniester River. Constantine Porphyrogenetos had called this fortress 'Ἀσπροπον', which was the translation of the local Pecheneg name (see: Const. Porph. De adm. imp., cap. 37), but the name Asprokastron ('White Fortress') can also be found in the the copies of the bishops, hence the present-day name of Bilhorod-Dnistrovskiy. In the 15th century Moncastro was the starting point for travelers arriving to the Black Sea from the Caucasian coast (on the way from Georgia, Persia) and heading to Poland, Germany, Italy. The Via de Moncastro, was preferred over the road through Kaffa (Via de Caffa), particularly on the way from the East, because by passing through Moncastro up the Dniester, it was possible to bypass the difficult passage through the Tatar steppes in order to reach the Dnieper and Kiev (see: Cornet, Le guerre, doc. 18, a. 1471, Oct. 25, p. 31).

⁹ Edigu was the sovereign ruler of the Golden Horde from 1397–1419.

¹⁰ 'Sidehameth can' was Barbaro's mis-transcription of the name of the Tatar Shadi Beg Khan. This transcription was closer to the name of Sayyid-Ahmed (1433–1465), but the period of reign extended beyond the lifetime of Edigu, who died in 1419. Shadi Beg was one of the 'dummy' khans during the reign of Edigu from 1400–1407.

¹¹ Ulugh Muhammad (Tsar Mahmut in Russian chronicles) was the first khan of the Golden Horde following the death of Edigu.

¹² Barbaro correctly notes that 'Orda' meant 'people' or 'population' (lordo zoe populo). What Russians called the Golden Horde was being called the Blue Horde or the Ulus of Jochi by eastern writers. 'Ulus' referred to the population that was subject to the khan or the representative of Chinggis Khan's clan (see: Yakubovsky. The Golden Horde, p. 35). The word 'ulus', equivalent to the word 'Orda', was sometimes used in the chronicles (The Moscow code, p. 249).

¹³ Nauruz, the son of Edigu, was a noyan (or emir) of Ulugh Muhammad Khan, the commander-in-chief (capitano); Barbaro correctly noted that he held the same high position as his father—'capitano della gente'. However, the power of Nauruz was much weaker than the almost unlimited power of his father during the reign of the impotent Chinggisids. Yet the son too aspired to power, much like his undoubtedly more talented father, and for this reason he left Ulugh Muhammad in 1438 (Barbaro correctly dates this event to 1438, the last year of Ulugh Muhammad khan in the Golden Horde) and with a part of the troops that followed his lead, moved over to one (uno) Chinggisid Kichik Mehmed (Chezimehameth), who was little known at that time.

¹⁴ Kichik Mehmed (1435–1465) was a khan of the Golden Horde and the rival of his predecessor, Ulugh Muhammad Khan.

¹⁵ Barbaro tells of a road from the Lower Volga region to the Lower Don region that he knew well. In this case, the army of Kichik Mehmed passed by Astrakhan and headed further to the west along the Taman steppes (de campagne de Tumen), rounding Circassia. It should be noted that here the Tumen can mean only Taman, and clearly has no connection to Tyumen in the Irtysh River basin.

¹⁶ Barbaro gives a descriptive account of the Don River: 'the river of Tana' (fiume della Tana). Eastern writers often referred to the ancient Tanais as 'Tan' (which later became 'Don').

¹⁷ The gulf (colpho, golfo) of the Zabak Sea is the present-day Gulf of Taganrog.

¹⁸ Palastra is a settlement on the northern bank of Azov Sea that was marked on the portolans (for instance, on Benincasa's portolan, dated 1474) near the Gulf of Berdyansk.

¹⁹ The sentries who were sent ahead by the Tatar military commanders to scout the paths before the main army accessed them were called 'karauls' or 'khabargiri'.

²⁰ Barbaro was delegated by the Venetian consul to offer gifts to Kichik Mehmed, who had come with his Orda, to his mother and his noyan Shuruz, and saw that the young khan already occupied a dominant position in the Lower Volga region. However, in his records, Barbaro does not refer to him as 'emperor', as Western Europeans called the Golden Horde khans, but applies to him the generic term 'seigneur'. It is possible that

Kichik Mehmed and Ulugh Muhammad were still competing with each other, or that at that period of time another contender for the khanate in the Golden Horde, Sayyid Ahmed—according to some information, the son of Tokhtamysh—had temporarily gained the lead.

²¹ It is not clear in what sense the word 'taiapietra' is used here; either it refers to a sculptor (or simply a stonemason) or a well-known surname in 14th and 15-century Venice. Considering the position of the translator (turzimano) and the people named alongside him—the verger of the consul (bastoniero) and his porter—Buran was a stonemason (taiapietra).

²² Barbaro described the way in which Tatars prepared flour soup during campaigns, especially the scouting horse detachments, which separated from the main army that moved across the steppes with large strings of carts. This description is supported by an account of the Persian author Abd al-Razzaq al-Samarqandi (1413–1482) [Collection of Works Related to the History of the Golden Horde, 1941, p. 192].

²³ Compare: Tana, Section 34, about the trade of horses, cattle, camels and fat-rumped sheep.

²⁴ The walls of Tana, on which the observers of the Tatar Orda's arrival to the city stood (and which were the fortifications of the last period of existence the independent city) were constructed after 1395, when Tamerlane destroyed Tana (Azak). <...>

²⁵ Barbaro came to know Morea when he was a provveditore in Albania and was organising resistance to the Turks in 1465. Barbaro recalled one of his memories of this country in writing about how moving masses of Tatars and their herds would drive huge numbers of partridges and bustards towards the city. This resembled a hunt with an organised raid that he had seen on the land of one of the Morean princes.

²⁶ A similar description of Tatar 'houses', tents covered with felt or cloth, is also given by Barbaro in the second part of his work 'Journey to Persia' (Persia, p. 56 g; Rimusio, II, p. 109 g), alongside a reference to his own description in the first part of the 'Journey to Tana'. The nomads' covered wagons or tents, their 'houses' on carts, were described even in ancient times.

²⁷ Above, Barbaro used the term 'Orda' (lordo) in its main meaning of ulus, population or people, but here it is used to mean of land, nomad territory or ulus territory, which usually was expressed with the Turkic term 'yurt'. See note No. 40.

²⁸ The story of the adoption of Islam in the Golden Horde can be divided into three stages: the reign of Berke Khan, the reign of Öz Beg Khan and the reign of Edigu. However, the Tatar/nomad masses did not give up paganism (shamanism), which is reflected in the answer that Barbaro received to his question about the presence of pagans (idolatri) among the Tatars.

²⁹ Barbaro, who knew the details of the complicated political relations in the Golden Horde, which was plagued by constant internecine feuds and rivalry between representatives of Chinggis Khan's clan, was correct in stating that Ulugh Muhammad (Ulu-Makhumet) Khan (1419–1424; 1427–1438), ruled over only part of the entire Golden Horde.

³⁰ Bagater or bahadur is a Mongol title from the 13–15th centuries, granted to those who exhibited military merit and fearless valour. Bahadur means knight, brave one, slasher, brave slayer or brave-heart.

³¹ Semencina is a name for wormseed, an antihelminthic widely used in the Middle Ages, which was brought as a commodity to all major cities of Levant and Western Europe from the steppes of the Black Sea and Azov Sea region. Semencina was extracted not from seeds, but from inflorescences of wormseed that contained santonin. Pegolotti often related this commodity ('santonico' or 'seme de vermini') to other spices—not to those which were called 'spezierie minute' (smaller and more valuable), but to the 'spezierie grosse'—coarse, large spices, such as soap, alum, wax, sugar, animal and vegetable oil, etc. (Pegolotti, p. 293–297). <...>

³² When the Tatar army (the Orda along with the headquarters of the khan, or the tsarevich, or the noyan) stopped to make camp, it always erected markets, 'bazaars' where they sold both necessary items (food, household items, weaponry, etc.) the spoils of war. Barbaro, who had been many times to the Tatar camps, accurately and vividly describes the mobile bazars, making reference to several artisans (artesiani) that were selling their goods: clothing and cloth, items made out of metal, military equipment, etc. Apart from the temporary bazars of the nomadic army, Barbaro also mentioned artisan shops in Tana; for instance, he recalls that he was once sitting in a shop, where the owner (maestro) was making and selling arrows that were very valuable for use on the steppe (freze—Section 29).

³³ The question quoted by the author demonstrates that (in Tana?) 'cingan' (Ramusio, II, p. 95: zingani) was a widely understood and accepted term for vagrants, people who had no home or property. It is also clear that this word was not used (in the city of Tana) for the surrounding steppe-dwelling nomads. A reference to

the Romani in a written source from the 15th century is considered to be one of the earliest mentions of this tribe (compare to Thomas, p. 18).

³⁴ Barbaro describes his impressions of the Tatar army camp: it occupied so much territory that it resembled a huge city. Ibn Battuta, who had visited Desht-i Kipchak a hundred years before Barbaro did, had the same impressions. Ibn Battuta writes about the Orda approaching a camping place: 'We saw a large city moving together with its residents; and there were mosques in it, and bazaars, and kitchen smoke whirling up through the air' (Tiesenhausen, I, p. 289). Particularly noteworthy is Barbaro's exceptionally detailed and exhaustive description based on his observations during a campaign led by Uzun Hasan. Uzun Hasan marched from his camp on the steppe towards the city of Shiraz, which his son had captured after hearing rumours of his father's death. Uzun Hasan's army, his headquarters, his entourage, members of his family, servants and maids all moved on the city; behind them was a great number of people accompanying the army—men, women, children and babies (et in cuna)—on horsebacks or in wagons; the army was also followed by numerous craftspeople and merchants. Finally, a throng of animals also flocked behind them; some of them were beasts of burden, others were ceremonial animals adorned in expensive harnesses (son menati per pompa). Herds of big- and small-horned animals were driven. Hunting animals and birds were also transported (leopards, dogs, falcons, kites and others). Barbaro rode all over the camp with his servant and counted (using beans!) both people and animals in groups of fifty. In his story he reported all the numbers from this enumeration (Persia, p. 40 v–43 r).

³⁵ A valuable remark by Barbaro. At Tatar camping grounds (and, of course, cities), one could always find merchants, who travelled to different regions of Desht-i Kipchak along different paths (per diverse vie), bringing with them their goods (robbe) that they had acquired from everywhere. It has been established that trade along various centuries-old routes was safer under the Tatars than under the Polovtisans, and caravans of merchants moves along them freely, despite always being armed.

³⁶ Camaleone is a type of weed with thorny, clingy fruit, similar to burdock. The expression 'uccellare a camaleoni' seems to refer to the practice of catching small birds using these clingy fruits, whose thorns stick to feathers and prevent birds from flying away. Barbaro points out that this method of catching birds was unknown in Italy.

³⁷ Barbaro uses the question about the innumerability (innumerabil multitudine) of the animals (horses, big- and small-horned livestock) on the steppe that belonged to the Tatars of the Great Horde to impress on the Italian reader for the idea of huge herds and flocks from the vast ranges of Desht-i Kipchak that were unthinkable in Italy.

³⁸ The mass sale of horses by Tartaria to Persia was described in Barbaro's 'Journey to Persia' (Persia, p. 42 v), where he repeats that the herds (le mandre) that were driven from the Black Sea and Volga steppes amounted to 4,000–5,000 horses. These horses were not the most beautiful specimens; they were undersized, cost 4–5 ducat each, and were used as beasts of burden. The movement of horses being sold is mentioned in a chronicle as well: the Tatars drove their massive herds not only to the south, but also to the Russian north.

³⁹ Barbaro records a rather aspect feature of economic life in the Golden Horde: Tatar agriculture. This report is considered to be unique; all other existing information on agriculture in the Horde has to do with the land's native farming population, similar to that of Bulgar or Crimea. Before launching into his story, the author rightly begins with a kind of introduction, which assumes readers will be surprised: on the one hand, where do the nomads get their bread from? On the other hand, how in the world could nomads cultivate land? Regarding the former, the answer is simple: often, or rather, almost always, many roaming Tatar groups went without bread. Contarini, who observed everyday life of the Golden Horde almost at the same time as Barbaro, writes unambiguously, albeit in less detail, that the fare of the Tatars consisted exclusively of meat and milk, never other food (ne niun altro alimento hanno); 'they don't know what bread is, except for the few merchants who have visited Russia' (Contarini, p. 93 r). In contrast to this, Barbaro tells of a systematic sowing that took place in March after riding to a place selected by the khan; they headed to these fields with their wives and children, gathered the animals needed for work and brought seed. After ploughing and sowing, everybody returned to the Orda. When the corn was ripe, the khan sent his landowners to the fields again; corn buyers also gathered there (quelli che han seminato e quelli che voleno comprar li formenti, con carri, boi e camelli). The harvest was sometimes so abundant that part of it was left on the steppe.

⁴⁰ Quarrels among minor khans occurred constantly. This phrase indicates that the leaders aimed not so much at defending their yurt, the territory they roamed, as their ulus, the people they led, their part of the Orda (parte del popolo). <...>

⁴¹ Küçük Mehmed came to power in 1435.

⁴² The Dnieper was crossed in the same way by Contarini alongside his travel companions and the Lithuanian ambassador, who was travelling to the Orda with them. Having left Kiev, they reached Cherkassy (Cercas) and on May 15th 1474 sailed over the Dnieper (Danambre) on rafts (Contarini, p. 69 r–69 v); compare to Contarini's crossing of the Volga (p. 95 v, 96 v-r.) <...>

⁴³ This paragraph shows the exact way in which the lands of Taurica were distributed when Barbaro was writing about it, that is, around the middle of the 15th century (it had been the same in the 14th century). In the mountainous western part of the peninsula there was a state called Theodoro, which Barbaro said nothing about, though he did write about Goths and their language. The steppe part belonged to the Tatars and was at first governed by the vassals of the Golden Horde (in Italian documents—'domini', 'signori'), and in the middle of the 15th century by Crimean Khans from the House of Giray. The rulers used the town of Solkhat as a centre, while Giray chose the town of Qırq Yer (compare to notes 112 and 113 below). Coastal towns held by the Genoese, with Kaffa as a centre, were independent, but the government (consul and his administration) paid tribute (tributum) to the steppe Tatars (see note 21).

⁴⁴ This name for the Crimean Khan cannot not be clarified using the sources. He might have been one of the ten sons of Hajji Giray (d. 1466).

⁴⁵ Solkhat or Solkhat, present-day Stary Krym (Eski Qırım), was located 25 kilometers to the west of Feodosia and at roughly the same distance due north from Sudak. Solkhat was (in the 14th to the first half of the 15th century) the centre of the Crimean steppe lands.

⁴⁶ Cherchiarde, or, more correctly, Qırq Yer (Qyrk-jer in Spuler's transcription), 'Kyrkor' in Russian manuscripts, is identified with Chufut-Kale in western Crimea, not far from Bakhchysaray. Crimean Tatar rulers possessed two towns in their steppe lands—Solkhat and Qırq Yer. When the Crimean Khanate had emerged, it was Qırq Yer that received the role of the capital city.

⁴⁷ Barbaro's description of the loss or the perdition of Kaffa (la perdita de Capha) conquered by the Turks in June 1475 (Tana, Sections 47–48) can be considered reliable, as the story of Kaffa's fall was told to him by a recent eyewitness who had fled for his life from Kaffa, where the Turks had slaughtered all the Christians. The person from Kaffa or its vicinity, who belonged to the house of Guasco, well-esteemed among the Crimean Genoese, reached Persia by sea and through Georgia. In Persia he was hosted in Barbaro's house in Tabriz, which was mentioned in Barbaro's 'Journey to Persia' (Persia, p. 63 r).

⁴⁸ Eminachbi (Eminek-Bey or Beg), the ruler of the Crimean steppe, was descended from Tatar nobility and was a relative of a Chinggissid, Hajji Giray's son and Mengli Giray. He may have been his brother, as the first to seize the power after Haci Giray's death (1466) is considered to be his son, Nur Devlet, who as early as 1468 was banished by his brother, Mengli Giray.

^{49a} At that time (not long before the fall of Kaffa in the summer of 1475) the khan of the Great Horde was Ahmed (1465/1481).

⁵⁰ In terms of its geographic location, Tana was the closest city to the Great Horde's territory (in the steppes near Azov and the Lower Volga Region), which is why the Genoese that dealt with the Tatars sent their ships to Tana in order to reach from there the khan's headquarters (in el lordy) afterwards.

⁵¹ Barbaro's work tells us about three types of arrows: 1) arrows used with bows, the most widespread weapon among the Tatars (Tana, Section 29); 2) arrows used for killing geese in flight (Section 32); these arrows were short and crooked, with no fletching; after being launched they changed their direction (se voltano); 3) arrows for archery competitions; they had a metal crescent at the end used to cut the rope to which a silver cup was attached (Section 48). Giovanni da Pian del Carpine too observed that the Tatars had various kinds of arrows. He writes that, in addition to battle arrows, there existed arrows 'for birds, for beasts, and for unarmed people' (Ioh. de Plano Carpini, p. 689).

⁵² Here Ramusio made a lengthy digression, which suggests that there was a special manuscript from which he obtained this information. After the word 'prese', he typed (Ramusio, II, p. 97 r), 'There was an increase in the number of people ready to submit to him, and then he went to Qırq Yer (Cherchiarde) and captured it' (Crescendo poi il pololo a sua ubidienza ando a Cherchiarde e quella similmente prese). It is clear that Mengli Giray's influence had increased, and he captured both of Tatar Crimea's most significant cities—Solkhat and Qırq Yer (Chufut-Kale near Bakhchysaray). Compare to note 113. Contarini calls the town 'Chercher' (see note 19 for Contarini).

⁵³ Mordassa or Murteza, Murtaza, Khan Ahmed's son; Murtaza was a khan of the Golden Horde, co-ruling alongside his two brothers Sheikh Ahmed and Seyyid Ahmed. These co-ruler brothers were at enmity with

each other and the Crimean Khan Mengli Giray (see for example: Mosk. svod, p. 332). Barbaro notes that during one of their feuds, Mengli Giray was fighting Murtaza on the banks of the Volga near Astrakhan and took him as a prisoner; there soon appeared 'another khan' (un altro signor, pur tartaro)—apparently, one of the co-ruling brothers (this is how Spuler calls Sheikh Ahmed; see Spuler, S. 188–189)—and freed Murtaza. This event was recorded in Barbaro's work by chance, but there were many similar occurrences during the period of the Great Horde's dissolution, which came after the death of its last more or less powerful ruler, Khan Ahmed.

⁵⁴ Even after having returned to Venice, Barbaro still took an interest in the state of affairs in the Great Horde (during the 1480s) and noted that the information he recorded had been conveyed to him by someone—'fi me ditto...'; Ramusio corrects, 'mi fu ditto...' (Ramusio, II, p. 97 r).

⁵⁵ Barbaro's words imply that one of the three brothers—Khan Ahmed's sons—was the 'Great Khan' ('gran can'; formerly called 'Emperor')—in other words, that had more power than his co-rulers. Sheikh Ahmed (1481–1502) was the 'Great Khan' (see: Spuler, S. 454), while Sayid Ahmed and Murtaza were co-rulers.

⁵⁶ The Sea of Baku (mar de Bachu) is another name for the Caspian Sea. This is one of numerous examples of a sea being named after a large city located on its coast—for example, the Sea of Kaffa, the Sea of Surozh, the Sea of Istanbul (the Black Sea), etc. Pegolotti refers the Caspian Sea not as the Sea of Baku, but the Sea of Sarai (mare del Sara; Pegolotti, p. 380). Contarini, who had to sail across the Caspian Sea from Derbent to Astrakhan, calls it the Sea of Baku (Contarini, p. 89), adding that it is also called the Caspian Sea (il mare di Bachan cioe mare Caspio).

⁵⁷ Three days to reach Moscow (from Astrakhan?) must be a mistake. This period of time—three days—is echoed in the 1543 Aldo edition (p. 20 v) and by Ramusio in the 1559 edition (Ramusio, II, p. 97 v).

⁵⁸ Here Ramusio adds (Ramusio, II, p. 97 v), 'This is an easy route (la via facile) because the Moscow River flows into another river called Oka (Occa), which descends into the Erdil River'. This addition is absent in the 1543 edition.

⁵⁹ The author means 8–10 horses instead of 18.

IV. Sources on the Culture of the Ulus of Jochi

No. 1

Birch bark manuscript of the Golden Horde time

Introduction and source are quoted from the following publication: N. Poppe, Golden Horde manuscript on birch bark // *Sovetskoe Vostokovedenie*. 1941.— No. 2.— p. 81–134.

In 1930, kolkhozniks busy digging a pit for silage found a birch bark box in the soil on the left bank of the Volga, almost directly opposite Uvek, near the village of Ternovki (Podgornoe) on the territory of the Volga German Autonomous Soviet Socialist Republic. It contained a small manuscript written on birch bark. The kolkhozniks handed the manuscript over to the republican museum in the city of Engels; it was then sent to an exhibition at the State Hermitage Museum in Leningrad. A bone quill and a bronze pot with ink residue were found along with the manuscript.

An archaeological investigation of the site of this discovery conducted afterwards unearthed the remnants of a Golden Horde settlement located a few kilometres away from another such settlement. It was also established that the manuscript, the pot (which was quite clearly an inkpot) and the quill were extracted from a burial site that dates to the 14th century, but could, according to archaeological evidence, be dated to the 15th century. This burial site is that of a commoner, not a wealthy person or a member of the nobility.

Based on the fact that the manuscript was written in the Uighur script, State Hermitage workers recognised a priori that it had belonged to the Uighurs; however, Turkologists who examined the manuscript found Uighur words only in some passages; the bulk of the intact part of the manuscript was found to be not Uighur. N. Poppe established that a large part of it contained Mongolian text, the other passages were acknowledged to be Uighur based on the few remaining legible words. <...>

The manuscript consists of 25 passages, 19 of which have text on both the front and on the back, and the remaining 6 are covered in writing only on one side. The Mongolian text contains only 6 passages; the remaining fragments form the Uighur part of the manuscript... The Mongolian portion of the manuscript is the best-preserved and includes several perfectly intact pages. The size of the pages varies from 85 x 95 mm to 85 x 100 mm, which indicates that the initial format of the manuscript was 85 x 95 (100) mm. <...>

The manuscript is of great interest from several perspectives, including the palaeographic, linguistic, historico-literary and culturo-literary points of view, as it is one of the many examples of Mongol writing in its ancient period of development that is available to us today.

First of all, let us dwell upon the issue of the dating of the manuscript. The manuscript does not contain any dates; however, it can be dated quite precisely, as mentioned above. The 11th passage of the manuscript, one of the passages in Uighur, contains several clearly preserved signs of the Mongol square script. <...>

These signs are of even greater importance to us in that they make it possible to date the manuscript quite precisely. <...>

Therefore, the manuscript dates to the period between 1269 and 1368. It can also be stated with some certainty that the manuscript belongs not to the beginning of this period, but to the first quarter of the 14th century. We know that the spread of square writing was a very slow process, and despite repeated imperial edicts, it took on weakly and for a long time remained the domain of a handful of several institutions. Thus, the manuscript should be dated to the beginning of the 14th century. <...>

First of all, this is so far the only available Mongol-Uighur manuscript that includes annotations in square script. The size of the passages, the size of the letters and similarities in handwriting make it possible to conclude that this is a Mongol-Uighur manuscript, and not the passages of two separate manuscripts, one Mongol and one Uighur. All in all, it is not particularly important whether these passages belong to the same manuscript or not. Much more important is the fact that its various sheets were all

written by the same person and that all of the fragments were found at the same burial site along with the inkpot and the quill. This record of Mongolian writing is one of the westernmost such findings. <...>

Manuscripts such as this one that contained only poems could be distributed only among people who knew Mongolian. Therefore, this finding is proof that there were people who knew the Mongolian script and used Mongolian written language not only for clerical interactions, but also in daily life on the territory of the Golden Horde at the beginning of the 14th century. This is proven by the very fact this handwritten poetry book was found: even if it was not written at the site, somebody must have been reading it. It is still possible that the manuscript was written at the site, as it was discovered along with the inkpot and the quill. And the fact that it was written on birch bark can be seen as evidence that this manuscript was in the possession of a modest man, possibly a scribe, not a wealthy person such as a commander or a clerk. This could explain why the manuscript is written in two languages; it is difficult to imagine that a common soldier would have known two languages—Mongol and Uighur—and three writing systems—Mongol square script and the Uighur script—but it is reasonable to except that a scribe could have possessed such knowledge. One can assume that the manuscript was placed at the burial site as an example of the deceased man's writing along with his equipment. Kipchaks called such scribes *baqši*, and the word *baqši*, which can be found written in square script in the manuscript, could be attributed to this scribe as well. Thus, this manuscript is valuable evidence of the fact that Mongolian elements of the Golden Horde continued to use Mongolian writing up to the beginning of the 14th century. Therefore, one can conclude that the Mongols, who generally had trouble transitioning to a settled lifestyle in the Golden Horde, continued to preserve their language, despite al-Omari's assertion to the contrary, at least during the first quarter of the 14th century. The manuscript is also one of the few pieces of evidence that the Mongols used birch bark as a writing material. <...>

One can presume that the manuscript was written at the same site where the manuscript was found by a scribe who came from one of the easternmost regions or a local man who learned square writing in the East. <...>

The manuscript is of great significance in the historico-literary sense as well. It should be mentioned, first of all, that the manuscript contains the first work of fiction written in Uighur alphabet symbols. It is known that the first records of Mongolian writing—the Chinggis Stone, the Ilkhan charters, etc., which belong partially to the 13th and partially to the beginning of the 14th century—are not literary works in the full meaning of the term, as they are texts written on stone, diplomatic messages, documents, etc. We only have information about one literary work during the first half of the 14th century that was written in the Uighur alphabet: a poem by Mohammed ibn Omar ibn Hasan ibn Mahmud Abdulgaffar al-Samarqandi written in 724 AH in the four languages that were widespread in Iran at the time, including Mongolian. 724 AH is equivalent to AD 1324.

Thus, the poem by al-Samarqandi dates approximately to the same time as the present manuscript, but it remained unpublished, and as a result, our manuscript is the first published literary work in Mongolian that was written in the first quarter or third of the 14th century and is either contemporary to the poem by al-Samarqandi or even older. <...>

Its content consists primarily of a dialogue between a mother and her son. <...>

The contents of this poetic text and its general tone are not typical of 13–14-century Mongolian aristocratic poetry. Based on this fact, we can conclude that we are dealing not with a piece of literature written by a member of the ruling class of the Mongolian military-feudal empire, but by a commoner—an example of ancient Mongolian folk lyric poetry, the earliest example we have so far discovered. <...>

Translation

The beginning is missing.

'When you reach the [[kind-hearted]] ruler with resolve,
fall before the spar!

Why should you be bitter
about falling before the spar?
[to the kind-hearted] glorious ruler
.....you will be taken, my child!"

.....
.....
.....
[['A man]] [will take] you, my [child] !

When you reach the caring ruler with resolve,
fall before the [gates] !

Why look around and stare because you fell
Before [the gates] ?'

'By the ruler who watched over
you, you will be taken and accepted, my child!
When you reach [[with resolve]] the godlike
ruler,

fall [before the] doorstep!

[[Why.....and.....
for that reason]] [did you fall before the doorstep] ?

[[To the godlike ruler
you will be.....taken and accepted, my child!"]]

Why stay and.....?
Coming and.....to the remorseful ruler you will be
taken, my child!

Oh, the worthy and glorious falcon!"

At least one page is missing.

'When you arrive, full of hope, to.....
why grow upset before the door?
To the cursed man you [will go], [my child] !'

[When you reach.....]
[.....] and the glorious [ruler],
[why] grow upset [before.....] ?
To the slaves you will go in dismay, my child!
Oh,.....and the beautiful hawk!

When you draw closer,
fall before the blade!
Why be cunning
about falling before the blade?"

'A fugitive, you will be taken into the service, my child,
by the glorious ruler delivered by fate!'
The golden nightingale, her child,
Started singing a song in response
To his mother, his sweet mother,
Mother, My sweet mother!

.....wife.....
.....your.....
.....

.....
Said: 'I will see you again!' and departed.

It is likely that one page is missing.

'I am departing!
Oh my mother, sweet mother!
The grass on the field grew greener,
Close friends began to take their leave.
I shall go back to my welcoming motherland!

.....
My mother, sweet mother!
.....became.....
reached.....
I will retire to the country in which I will live!

Mother, my sweet mother
[Started] singing a song in response:
'The hairs on your.....
I will make [.....golden] and she said
'Do not be attacked by the evil spirit and.....!
Walk [ascend], my child!
The hairs on your breast
I will make golden!', she said.

'Do not be afflicted by grief and misery!
Take off, fly away, my child!
The hairs on your breast
I will cover with gold!', she said.
'Do not expose yourself to [miseries] and evil spirits, my child!
The hair on your [head I will turn into] grains of gold!', she said.

.....
.....
'When you [[in fear]] reach the
[[kind-hearted]] and [glorious] ruler,
why grow upset before a wooden cart?
To the one who wants not.....you will reach out your hands in dismay,
my child!
Your palms.....

One page is missing.

'I will feed you from ails (?)!
I will make.....and golden as a basket (?)'.
During his ascension
he sang

to his Mother, his sweet mother:
'The grass on the mountain becomes like a field,
the brothers start to take off.
I will travel back to my motherland, where I live,
so that I can be there!'

No. 2

Khorezmi. 'Muhabbat-Name'

Introduction and source quoted from the following edition: Khwarezmi. *Mukhabbat-Name* / Publication, transcription, translation and research by E. Nadzhip. — Moscow, 1961.—p. 7–105.

'*Mukhabbat-Name* is one of the works that prove the existence of 13–15th century Turkic fiction and a literary language in the Golden Horde, and in Ak Horde territory in particular.

The author's name is unknown to us: Khwarezmi is his pen name. This pen name is mentioned in the *Latafat-Name* by Khojandi, a 15-century imitation of the *Mukhabbat-Name*, which was written in Middle Asia. At the end of Sa'di's *Gulistan*, which was translated in the 15th century by Saif Sarai at a Kipchak trading post in Egypt, there is a ghazal written by Khwarezmi. Perhaps, our poet and this Khwarezmi are the same person. A copy of the *Nakhdzhu-l-faradis*, which was written during the same period by an inhabitant of the Golden Horde, was re-written by a certain Khwarezmi sometime before the author's death. We know that poets were often paid to rewrite the works of others. Thus, it is possible that this Khwarezmi is the author of the *Mukhabbat-Name*. <...>

We have no other information about Mohammed-Hoja-bek. It is known that Janibek, son of Öz Beg Khan, whose name Khwarezmi connects to that of Mohammed-Hoja-bek, ruled the Golden Horde from 1342 to 1357. The poet says that he created his work on the banks of the Syr Darya. We know that the lower Syr Darya and the cultural center of Sygnak were the most inhabited parts of the Ak Horde (the White Horde), an autonomous region within the territory of the Golden Horde during this period. Thus, the *Mukhabbat-Name*—this remarkable 14-century literary work—was written in one of the cultural centers of the time, where 200 years previously the mystic poet Ahmad Yassawi wrote his *hikmats* in a language close to that used in the *Mukhabbat-Name*.

Two copies of The *Mukhabbat-Name* by Khwarezmi exist at the present time. One of them was written in Arabic and dates to the 16th century. The other copy written in Uighur is older, more damaged and incomplete. Both manuscripts are kept in London. The variant in Arabic, which can be found in the British museum under Add. 7914¹, dates to 914 Hijrah, that is, to AD 1508/1509. The manuscript is in good condition. It was first studied by A. Samoylovich². Certain letters and ghazals from this copy were published as transcriptions in anthologies, in textbooks on Uzbek literature, and in the 'Anthology of Uzbek Poetry'³. The variant in Uighur is part of a large manuscript preserved in the British museum under Or. 8193. This collection of works was mentioned by academician V. Bartold in 1924⁴. It contains various religious and poetic works and was compiled in March–April of 1432 by bakshi Bakyr Mansur for Mir Jelaladdin, who was supreme commander under Shahrukh in Herat in 1407–1444. The Uighur variant of the *Mukhabbat-Name* covers pages 158b–177a in this collection. V. Bartold mentions that the *Mukhabbat-Name* is a fairly early poetic piece written in the Golden Horde.

The Uighur variant of this work was studied by A. Scherbak⁵. In 1957 in Naples the first part of the study by T. Gandzheya was published in the university 'Annali'⁶. It includes a transcription of the Uighur variant with a critical apparatus and a facsimile.

The variant in Arabic writing consists of 47 pages, or 948 poetic lines, or 474 beits. One beit (364) is repeated twice.

The piece consists of eleven letters from a man in love to his beloved. <...>

⁵ A. Scherbak, *Oguz nāme. Muhabbat-nāme. The records of old Uzbek and Uighur writing systems*. Moscow, 1959.

⁶ Tourkhan Gandjei, *Il «Muhabbat-nāma» di Hōrazmī («Annali»*, Napoli, 1957, vol. VII), pp. 135–106.

With the name of the great God on my lips
 I created *Muhabbat-name*.
 Two bright pearls he gave to the world,
 Provided man with the riches of love.
 As the book of fates [decrees] he coloured the night,
 He made the word the basis of the world.
 Seven spheres of the majestic gold portico
 Created the Almighty in six days.
 He made the swan in the air to be the kite's nourishment.
 He made a drop of water look like a full moon.
 He gifted hair stretching to the ground to the one
 Ruby-coloured cheek, to whom he bestowed a birthmark.
 He created a hyacinth growing in the black earth
 And set a rose among the thorns.
 He turns a hard stone into a precious diamond,
 And a reed into a sugar cane.
 His might created the rivers on the earth,
 And put a sparkling pearl into a shell.
 He created the pure rose for the nourishment of the bee,
 He called the morning Zephyr to be the servant of the lawn.
 The wind and clouds rumble and sweep
 And rain down where he commands.
 He gives the tiny gnat a large knife,
 By which he takes out Nimrod's brain.
 He turned the wind into Solomon's fast horse,
 The wind, the ruler of the world.
 He gave a staff to Moses to tend sheep,
 He appointed Josef sultan in Egypt.
 He made Jacob a friend of suffering
 And saved the son of Aazar in a fire.
 He turned the sun into a crown on the head of Jesus,
 And took to heaven Muhammad Mustafa.
 Muhammad became the shah of prophets,
 His love deserved him the love of Allah.
 Muhammad begot love,
 And this love made me insane.
 Oh, Allah, cast a look at the poet Khwārizmī,
 Do not make the love in his heart smaller!

HE TELLS OF HIS FIRST MEETING

That evening, when the festive moon arose,
 Muhammad-Hoja-bek, the ruler of the state,
 Commanded, and a tent was put up on a hill,

Glasses were brought and the feast began.
 After tuning the saz to the melody of *khusayni*
 The singer started this ghazal.

GHAZAL

How beautiful you are, oh, proud cypress,
 The rose is amazed by (the beauty of) your face.
 Whenever I see a young tree whose head is carried high,
 Thinking of your slender waist, I'm kissing its trunk.
 Your face is like the sun, the pearls in your ears
 are like those of Venus;
 It seems that Venus has become the love of the Sun.
 The tender bloom on your face that a musky curl hides,
 Is like a parrot's nestling held in the falcon's claws.
 Every ruby and sapphire look so much like your lips,
 But not every finger ring has [this] miracle.
 As long as you can, keep flirting with us,
 For it is so nice to see your charming friend coquette.
 A Hindu throwing a lasso is not as black or crafty as your curls,
 Your eye is like a fast Turkish archer.
 You are a sultan on the throne of the kingdom of beauty,
 Sometimes sacrificing your time for us, miserable people.
 When does a flower garden happen to be without a nightingale,
 And the beautiful faces of beauties without curious glances?
 How pleasant [will be] the day when Khwārizmī again
 Makes his eyes dust [under] your feet.

HE SAYS WHAT HAPPENED

He smiled and said:
 'Bring us a gift worthy of us.
 There are many pearls in the sea of your heart,
 There are many of your books in Farsi in the world.
 You surpassed many in the lyrical verse,
 You won the world by your sugar-like tongue.
 I want you to write in our tongue
 A book this winter at my place.
 The short-lived days will sweep by like a wind,
 Let us leave a gift from us in this world'.

I agreed, kissed the ground and said: 'O, shah,
It is happiness for me to be at your door.
I shall labour with all my might,
And glorify your good name the world over.
Drink your wine before dawn today
And listen to this Ghazal that I have just composed'.

GHAZAL

I saw in your face, my dear, a festive moon,
Let me be your victim in reward for this.
Even if the sun does not arise,
Your shining face will light the dwelling of a slave.
If Plato falls in love with you,
He will also forget about all his thoughts and intentions.
How many magical birds of the heart
Your sweet words have caught!
Happiness and prosperity made
Clothes of grace for your figure.
If you permit, I like a dawn [that spreads all over the world]
Shall glorify your beauty the world over.
Khawārizmī came to visit you, so take him under your wing,
Like all the shahs protect all those deprived.

MASNAVI

The shah listened to the Ghazal to the end
And granted me a robe and a pair of horses.
Some time passed, and the feast renewed again,
The cups went round, and the wine went to their heads.
And again I found a convenient time
And read aloud this Ghazal in his presence.

GHAZAL

He who created the soul in a human body,
Made you a queen to rule the beautiful.
He created your face to shine like the sun,
And made me astonished like the sky.
The day the Lord created you,
Your beauty became the Qibla for the people.
Over a cypress he hung the full moon,
And on the moon he created a flower bud that blooms.
He made your beauty shine all over the world,
And made me struck by this image.
Have you ever heard of Josef's beauty?
He made you ten times more beautiful!
The generous Lord, striving for perfection,

Created you, oh Moon, impeccable.
How nice it is that the Almighty made a drop of water
A mine containing pearls of love.
Creating the world, he made Khawārizmī destitute,
And he made a sultan out of those on whom he focused his eyes.

* * *

I began the book and want to finish it,
May *Muhabbat-name* reach Syria and Egypt.
At this table I announce to all,
That I shall create *Muhabbat-name* from of ten letters.
And I shall write two chapters in Farsi.
For an atlas robe is becoming for him who knows much.
First I shall glorify the Bek,
And after that I shall start my writings.

PRAISES OF MUHAMMAD-HOJA-BEK

Be praised, you brave lion from the Qongirat tribe,
The greatest of the great from early childhood!
Muhammad-Hoja-bek, the joy of the world,
A spring of happiness, a treasury of bliss.
Before you came the country was a soulless body,
O, you, who is related to Shahanshah Janibek.
Your armies strengthen the faith,
And give a wretched man the treasure of Fari-dan.
You, Shah, reign like King Solomon,
With the Messiah's [resurrecting] breath and Josef's face.
When your horse trots, it outruns the wind,
Your name embraced the world as if it was the sun.
Should Hatem-i Tay who died a thousand years ago come back to life,
He will kiss the earth when he hears your name.
You are a good omen for the country,
Jupiter is a slave to your beauty.
You govern the world with the force of your mind.
In battle blood streams down you whip
Courage and generosity are always with you,
For you are courageous and generous.
Hatim himself would be ashamed of his banquet,

And Rustem would lose in battle to you.
 When your armies encounter enemies,
 Know that your soldiers fly like arrows.
 Your soldier goes into battle as if it was a feast,
 He flings into battle like a hungry wolf goes
 for a sheep.

You are worthy to be called Rustem,
 For your sword cuts the [enemy] army into two
 halves.

If the writer of the sky [Mercury] starts writing
 praises to you,

He will not finish writing one thousandth of his
 praises in a thousand years' time.

No matter how long Mercury, the Scribe,
 and Venus, the musician, will shine in the sky,

May your power shine like the sun,

May the seven heavens bend down like slaves
 at your threshold.

May your humble servant Khwārizmī pray for
 you,

Reward him with your generosity.

I shall weave a satin of praises—

During winter I shall recite spring poems.

Peace, where you feast, is a paradise,

It is always summer [here] with fragrances of
 paradise!

GHAZAL

The cups went around in the garden,
 Drink and enjoy the fragrant wine in the fra-
 grant garden!

The servant of the lawn, the morning Zephyr,
 Poured out the fragrances of roses in the garden.
 They blossomed, but the summer is over, and
 those who were

Josephs of the flower garden, are now in prison.
 The flower petals lie scattered on the ground,
 Like a carnelian lies in a mine.

O, rose of paradise! Come to the clearing,
 Don't hide in the palace today!

Let us drink to the health of our bey,
 Although we are not held in high esteem.
 Muhammad-Hoja-bek, who is like Ali,
 Distinguished in the battlefield.

If suddenly his
 arrow hits an anvil,

Its tip will disappear in it.

O, victorious, when his sword strikes

It makes the enemies bleed!

May the Creator prolong your life for many
 years, my bek!

May it be prosperous.

There is no one like you either in Iraq, or in
 Rum, or in Canaan!

Khwārizmī lost his head, His body froze, his
 soul stood still.

POET'S ADMONITIONS

O, horseman, drink your wine and eat your
 sweets,

After today, live for another one hundred and
 fifty years!

Sip slowly happiness and pleasure,

May the wine obscure your mind.

For this world is so unstable,

And is not eternal for man.

Please be merciful and take care of the people,

Always be cheerful and happy!

Your good name conquered the whole world,

May the Lord protect you from the evil eye!

Your slave, full of affection, prayed for you,

May his prayers be accepted!

I have ended the praise of Muhammad-Ho-
 ja-bek

And began *Muhabbat-name*.

THE END OF THE BOOK

Here I concluded the words of *Muhabbat-name*,
 I wrote all this on the bank of the Syra River.

Although you are Jamshid and Asaf,

Favour *Muhabbat-name* with a glance.

Read this, for it is fatihah. When he looks at
 you,

Let the slave Khwārizmī Ravani rejoice.

This work which came about as [sweet as]
 Egyptian sugar,

Was completed in the year 754.

By the end, the Lord showed His mercy:

Now listen to another interesting story.

A STORY

The year when I went to Damascus,

I travelled far by foot,

With a staff in my hand and shoes in my pock-
 et. No matter where I

found myself, I felt good everywhere.

Some people gave me bread, others gave me
 water,

Like beauties' curls my canoe drifted [in the
 wind].

Placing my trust in God, I crossed the sea, and
 from end to end, I crossed

The whole Rumian kingdom.
Like a dervish, [taking my time], I visited every cave,

Where, as I heard, there lived someone from the Abdal group.

Then I was shown the way to Damascus,

I headed for Damascus through the Byzantine Empire.

I had a fellow traveler who came from a noble family,

Young and virtuous, he was born a sayyid.

Two braids lying on his shoulders Conquered the heavens.

[Sometimes] he wore the coarse clothes of a Dervish,

A Bay

azid cap on his head.

As a dervish, he suffered much because of his voluntary poverty,

Like the sun hidden behind a cloud.

In his presence, bitter water tasted sweet.

King Solomon became the table companion of an ant,

The Phoenix that flew down from the palace of kings,

Became the friend of a sparrow.

We went among flowers, we went among thorns,

Through the groves, in the mountains.

We kept walking this way

, when someone from the caravan

Insulted him on purpose:

‘God have mercy! You are not a sayyid, you are a beggar,

Who claims that he is a descendant of Muhammad’.

There was with us an old man who was a Christian,

Who was going to Jerusalem and to the monastery in Mina.

He ran up, took

that man by the hand and said:

‘In Tartabidan we have a church,

Where there are now three hundred hoofs which belonged to [Christ’s] donkey,

Decorated with rubies and pearls.

People take this in different ways,

For one donkey [can have] only four hoofs but not three hundred.

But they revere them all for the sake of Christ’s donkey.

They worship every one of the [three hundred] hoofs,

Although only one of them [can be] really [the hoof of Christ’s donkey]’

He said [so] and left.

He brought back the lost sheep to the fold.

When the Christian laughed at the Muslims,

That man came to believe in him at once.

He bowed to him and while we were on the journey,

He did him many favours again and again.

You also light a candle in the dark,

And learn Islam from Christians.

Do not embitter the hearts of the sayyids a bit,

Like Khwārizmī, make friends with noble families.

If in poverty you are pleased with very little,

Then you are your own shah and emir.

It is good that your life is cheerful and carefree

And you enjoy your rightful place.

[But] do not build castles in the air, it is in vain,

A gulp of water and a piece of bread is enough for you.

REQUEST

He who will read

this book with love,

Will be the one to get to know the true world.

I want people to pray for

Him who narrated and wrote this book.

FARD

And I beg you, oh, my idol,

Don’t forget the slave, for God’s sake!

Completed [by copying] *Muhabbat-name* by Khwārizmī in year 914’

Material prepared by Alsu Arslanova

No. 3

‘Shaybani-name’

The preface and source are quoted from the edition: 'The History of the Mongol-Turks' written in the Chagatai dialect with a translation, annotations and supplements published by I. Berezin, Professor at Kazan University, Master of Oriental Literature, Member of the Russian Geographical Society and the Society of Lovers of the Russian Language and Literature, Member of the Asiatic Societies in Paris and Leipzig, Corresponding Member of the Archaeological and Numismatic Society, et cetera.—Kazan, published in the University print shop, 1849.—P. V–XII, XXXIV–XLVIII.

'Studying the Mongol period in Russian history, which is rather instructive for an observant historian, is of great significance for a Russian researcher, all the more so as recent doubts and new data cast a shadow of another kind on this period of our history. To this day, however, no Russian orientalist has devoted his talent to studying Russian–Mongol relations, and as for foreigners, the work '*Geschichte des Goldenen Horde*', presented by Mr. Hammer, has not been found satisfactory for a variety of reasons. Not wishing to be a person who is absolutely alien to Russian History, but at the same time being aware of my weak potentialities and limited means, I am determined to start collecting and publishing stories by Oriental writers about Mongols in the original and in translation, as well as about Turkic and other tribes which inhabited primitive Russia, enriching this knowledge with extracts belonging to Muslim geographers.

To begin with, I offer a short history of the Mongol–Turks. I've published this work based on the only existing manuscript, which belongs to the Asiatic Museum of St. Petersburg Academy of Sciences and is numbered 591.* The manuscript was obtained from Mirza A. Kazembek, an honourable teacher of mine, consists of fifty folios of 8° size, and is written in simple but clear half-Shikasta script, probably, by a literate scribe or rather scribes, because starting from folio XXXIX to folio XLII the hand is a little different, and on folio XXXVIII two handwritings are included. This story is prefaced by a didactic work written by the famous Chagatai writer Mir Ali Shira 'Mahbub ul-Qulub' written in 1253 AH in another hand on another type of paper. This history of Mongol–Turks raises a rather difficult question: by whom and when was it written? The content of this history must somehow determine the time when it was written, so here is its content.

The author divides his book into two parts. The first part deals with the brief history of Mongol and Turkic tribes according to the Muslim tradition from the time of Noah until Chinggis Khan's ascension to the imperial throne. <...>

The second part contains incomplete historical evidence about the Khongirad tribe, which was matrilineally related to many Mongol khans. Paying his attention largely to this kinship, the author speaks rather little about other tribes, Chinggis Khan, or of his sons, but more about the Khongirad Beks, and presents the family tree of Abul Khair Khan and his successors, finishing this part by describing seven pious sultans. This part is described more inconsistently than the previous one, but it makes it possible to supplement and correct the genealogy of the Bukharan Khans set forth by Abul Ghazi and Muhammad Yusuf El-Munshi. The genealogy of Abul Khair Khan's successors is traced by the author to the fifth generation, that is until the middle of the 16th century. While describing the kinship of the Khongirad Beks, the author again followed the description of Rashid al-Din, who, according to Mr. Hammer (Wien. Jahrbücher, 1837, B. LXXVII, 21), gives a detailed account of this tribe.

Actually, it is this part that should complete the account, but the author tells the story again, giving a rather detailed account of the internecine strife after Abul Khair Khan's death and the campaigns conducted by Muhammad Shaybani, Abul Khair Khan's grandson; he concludes the story by describing Shaybani Khan's death during the battle with the Shah of Persia Ismail, which happened in 1510 C.E.

* The Library of the University of Kazan holds the list of the manuscript, numbered 101: it is not credible because the anonymous calligrapher who wrote it used the Tatar spelling for Chagatai words and carelessly shortened and omitted some periods.

Here the author gives the title of his book: 'Shaybani-name', the Shaybaniade, but says nothing about himself or the time when this work was created. After this conclusion, we again find the genealogy of Abdul Khair Khan's successors, which is somewhat different from the former in details, but is just as thorough as before.

Thus, finding no reference to the author of Shaybani-name, we can only infer that he lived not later than the first half of the 16th century, and the genealogies he gives make one think that his work was written not earlier than 1510–1530. The manuscript was copied in 1235 AH as the inappropriate indication of the year at the end of the second part makes one think. One shouldn't be surprised that two manuscripts which belong to different times and were written by different scribes are combined. Besides, it was done in such a way that the later manuscript was inserted before the younger one's time of writing shows. This practice is quite common with Muslim scribes. <...>

I publish the text of the only manuscript that I have without any change, but in the footnotes I correct obvious slips of the pen or gaps made by the copyist, and give the uniform Chagatai spelling to the frequently used words, except for proper names, which I did not consider it appropriate to correct in this edition and left as they were both in the original and the translation. However, I thought it to be my right to make corrections both in Shaybaniade and the works of Mongol-Turkic history. I put the missing places in the text or those which I thought unnecessary in square brackets: it is easy to distinguish one from the other when you compare the translation with the original. I did my best to preserve the spelling of the proper names as they were pronounced by the people the names belonged to. Thus, I coordinated, as far as possible, the spelling of the names of the Mongol people and tribes used in our manuscript with the spelling used by the Mongol historian Sagang Sechen, by the way, without making corrections or impossible changes in the former, and in spelling the Turkic names I followed the Chagatai Turkic pronunciation.

I wanted the translation to be not only literal but as unsophisticated as the Turkic original; those who know the Chagatai dialect will see that often there are words which are not found in any lexicon, and so in spite of the story being simple, the translation presented considerable difficulties.

I did my best, as far as possible, to confine myself in the notes to philological, and very seldom, to historical or geographical remarks. In the volumes of the Oriental Library which are to follow, there will be plenty of cases to explain the gray areas in the history of the Mongol-Turkic tribes.

In the supplements, I give a translated description of Transoxiana taken from the Universal Geography written by Hajji Khalifa and from the memoirs about Mongol History, brought to me by our scholar Banzarov, a Mongol and a Candidate of Science at Kazan University. In the conclusion, there is a list of all the Turkic and Russian names mentioned in this edition. <...>

I. Berezin

<...> AN ACCOUNT OF BARTAN BAGHATUR AND HIS CIRCUMSTANCES AND A STORY OF KUTILA KAAH*

Bartan Baghaturs is Chinggis Khan's grandfather and Kutila Kaan is the younger brother of the second after him. In the Mogul tongue, a grandfather is called Ebuge. He took a wife from the Burkut tribe whose name was Siyungil Ko'agjin; he had four sons from this wife. The eldest son's name is Mongedung Kiyat, the second son's name is Negun Taishi, the third son's name is Yesugei Baghaturs, the fourth son's name is Darinai Utchugen. The Kiyat tribes originated from Mongedung Kiyat's clan, he was a very brave man. He was given this name because in the Mogul tongue it means 'a huge stream flowing from a mountain'. Yesugei Baghaturs is Chinggis Khan's father and they come from the Borjigin Kiyat, the meaning of which is 'brown-eyed and and yellow-faced'. The children born of Yesugei Baghaturs are mainly sheep-eyed and yellow-faced; besides, Alan Gua used to say: 'Be aware that by all indications my children will produce famous sovereigns'.

* Notes are omitted.— *Editor's note*

A STORY OF YESUGEI BAGHATUR AND BARTAN BAGHATUR

Yesugei Baghatur is the father of Chinggis Khan. The Moguls call a father Ichege. On his father's death, his uncles and relatives by blood and marriage made him king and ruler. His boldness became known to the uluses. He took as his wife a girl from the Olkhunut tribe who was called Hoelun Ko'agjin, and is also called Hoelun Idjegez. From this wife he had four sons born to him, the eldest son's name was Temüjin; he was called Chinggis Khan when he became a Sovereign.

The second son was Jo'chi Qasar, or Viltuni in the Mogul tongue, which the Sarts (Persians) call a hyena. He was a very fearful and strong man. The historical books write that his shoulders and chest were so broad and his waist was so thin that when he stretched his body ready to sleep, a dog could go under his side; and he was so strong that when he was angry with a man, he would seize him, raise him to the air and crush him, and, as if breaking a young tree, he would break his back and throw him down. He would always be with his elder brother. The third son's name was Hachiun. The name of the fourth was Temüge Utdjigin.

Temüge is the name, and Utdjigin means 'master of the yurt and food'; he is also called Otchi Noyan, though this name made him famous. He took to wife a relative of Chinggis Khan's mother whose name was Sanduk Jin (Sened Ko'agjin) from the Anghunut tribe; because of this he was highly honoured and respected, and Chinggis Khan loved him more than any relations. He was keen on building: wherever he went, he would build suburban gardens, almshouses and palaces. The fifth is Belgutei Noyan, but he was born from another mother, so he wasn't respected very much.

CHINGGIS KHAN'S NARRATION

In the year 549, Yesugei Baghatur, because of the war with a Tatar tribe, took to the field; his wife Hoelun Ike was pregnant with Chinggis Khan. The name of the Tatar tribe's ruler was Temüjin Uge. Having conquered him, Yesugei Baghatur killed him and seized all his property. After that, in the month of Zulgka'ade in the year of the pig, which corresponds to year 549 AH, Chinggis Khan was born of his mother. In his right fist he grasped a blood clot the size of a cup (scoop): taking this as a good omen, they gave him the name Temüjin. He had hardly turned thirteen in the year of the pig when his father died. The Tayichi'ud tribe, who was related to Chinggis Khan's uncle, abandoned them, which led to misfortune. His younger brothers were still small and Hoelun Ikke, Chinggis Khan's mother, was very sad.

A STORY OF CHINGGIS KHAN

Chinggis Khan was left fatherless at 13. The Tayichi'ud tribe made an enemy of him and strife and trouble began. When he was left fatherless at thirteen, from that time on, he saw different troubles for twenty-eight years. The Almighty saved him from all those troubles and misfortunes and gave him an Empire and a Khanate when he was over fifty, which was in the year of the pig. He reigned for 21 years, conquered a large part of the world and, as it was ordained by the Almighty, passed away at the age of 72.<...>

A STORY

Once, in his early youth, overtaken over by passion, he went to abduct a girl from the Tayichi'ud tribe. While he was walking along the road, a big stone was rolling in front of him in the field. Chinggis Khan was amazed: 'nobody is rolling this stone, the wind isn't moving it, besides, the wind isn't strong enough to roll it and bring it to me.' He said this and was surprised and thought that 'this means: do not go this way, but go back!' But Satan seduced him again and did not let him go back: walking (turning his face forward), Chinggis Khan continued on his way. By chance, Torgutai Qarluq, the ruler of the Tayichi'ud tribe, was hunting. Suddenly, Chinggis Khan met him. Having captured Chinggis Khan, he tied him up, put a cangue on him, and sent him to his horde where he was to be watched. An old woman from the Tayichi'ud tribe by the name of Ichege looked after Chinggis Khan, whose neck was injured by the cangue: she put felt to his neck, combed his plaits and shared his grief. It went on like this for nearly three years. Once the Tayichi'uds went hunting. Chinggis Khan took the opportunity and ran away with a cangue on his neck. In that place there was a large lake: when he entered the lake, he sat down to hide. The Tayichi'uds came back from hunting and, having not found him, began looking

for him. Surgan Shire, who belonged to the Sulduz tribe and whose dwelling was near the Tayichi'uds, happened to see Chinggis Khan's cangue and made him a sign: 'put your head in the water'. Chinggis Khan dived and hid his head in the water. The Sulduz Surgan Shire says to the Tayichi'uds: 'you go another way and start searching, and I will start to search and inquire in these parts and places'. The Tayichi'uds said: 'Inquiring, we shall find Chinggis Khan', and split up, going in opposite directions. As soon as dusk fell, Sulduz took Chinggis Khan from the water and brought him to his home, took the cangue off his neck and hid him among the carts. The Tayichi'uds did not find his traces in the places they went to; they came back and, coming upon his tracks, came to Sulduz's dwelling. They stuck their darts into the felt which covered the carts, looking for him. Being predestined, as he was predestined by the Almighty to have great success for himself, the Almighty saved his life and kept him under His protection. The Tayichi'uds didn't find his tracks and he was saved from this trouble. After this, Surgan Shire gave him a dark bay mare, some raw meat, some arrows and a bow, a lasso instead of a horse bridle, a flint, and a water bag.

After he was captured, Chinggis Khan's mother Hoelun Ikke and his wives were in despair and thought that he had been slaughtered. But his fourth son Tului Khan, a four or five year-old boy, playing and jumping said: 'My father is riding a dark bay mare and there is some meat for me tied to the horse's side'. His mother Börte Üjin pulled his ears and beat him with a stick saying: 'Why are you talking nonsense which grieves us? Why are you telling us about your father, which makes us sad? Your father was slaughtered'. But he wouldn't stop speaking and always said the same thing, that Chinggis Khan would come the next day riding a dark bay mare. Chinggis Khan's mother Hoelun Ichige and his wife Börte Üjin, daughter of Dei Noyan of the Khongirad tribe, amazed at the words of so small boy, wondered and took these words as a (good) omen. 'Our omen is good!' Saying so, they did favours and made feasts. God knows the truth!

PART 2

ON THE HIGH BLOOD OF THE KHONGIRAD TRIBE, ON THEIR GIVING STRENGTH TO CHINGGIS KHAN, AND ON THEIR BEING RELATED TO EMPERORS BY MARRIAGE

The Khongirad tribe is descended from the roots of those two men who entered Urgene Oun mountain and had been mentioned before. The chronicles say that the clan of Kiyat and Nokhus multiplied very much and tribes appeared out of the clan. And when the sub-tribes multiplied very much, they decided to leave Urgene Oun mountain as they didn't have enough place to live in. The Khongirad tribe, without calling for a popular counsel, left it quickly before the others, so much that the fire hearths of the other uluses were crushed under their feet; the Moguls believe that because of this the Khongirads often suffer from foot diseases which are called *Nafridz*. Many more tribes branched from the Khongirad tribes, all of them having their own name and nickname. God willing, we shall describe all of them in this treatise. –The 'Historical Accounts' writes that Khongirad is a man who was born on a bed of gold. The Uyghurian lamas wrote a lot and described the greatness and nobility of this Khongirad tribe in the Khatai history, and when they said and wrote 'born on the bed of gold' they expressed everything that is necessary to say about their (the Khongirads') greatness and nobility. Khongirad had these sons: the eldest son's name is Jurluq Mergen, whose tribe is now known under the name of Khongirad. The second son is Quba Shira, who had sons called Ikeres and Olkhunut. The third son is Tusbu Da'u, who also had two sons, Karanut and Tungliyut. From the Yurluk branch, they opposed him, but Chinggis Khan did not seize their appanages and did not enslave them, but made them members of the council and gave them a free hand. They were related to Chinggis Khan.

A STORY OF THE TUSBU DA'U TRIBE

Tusbu Da'u had two sons: one son's name is Qunut and the others is Qongliyut. Qongliyut took his father's wife and had a son from her who was given the name of Meiser Ulyuk. This man also took his father's wife and had a son from her, who was given the name of Gorlos, and the Gorlos tribe is descended from his clan. He took a woman from the Khatai tribe to be his wife, who gave birth to a son who was called Eloign; the Eljigin tribe is descended from his clan.

A STORY OF THE KARANUT TRIBE

The Karanut tribe is descended from Tusbu Da'u's eldest son and this tribe is called by his name.

A STORY OF THE QONGLIYUT TRIBE

Qongliyut had a son whose name was Meiser Ulyuk; in the Mogul tongue they use this word to call a man who is afraid of nothing, though now it is used to call a dead thing in general—'ulyuk'. This Meiser Ulyuk had a habit of being asleep for three days and three nights without waking when he was sleeping. It is said that he was so strong that a tent supporting pole could become a lash in his hand. It is also said that he went to the sea shore to catch seashells, boil them on the fire and eat them. Having caught a lot of seashells, he put them into a sack and went carrying them. On his way, he was overcome by sleep and fell asleep putting the sack under his head as a pillow, and he slept three days and three nights without waking. A bird called Abru laid eggs on his back building herself a nest there. Meiser Ulyuk also took his father's wife and had a son from her who was given the name of Qurlas. All Khongirads and the Ikeres branched from one family line. Ikeres and Qurlas, being related, always fought each other and there was feud and discord between them. Chinggis Khan put Budukh Khan from the Ikeras tribe to flight, and when Chinggis Khan was going to Balja, 3,000 Khongirads and the Qurlas, who were related, went and joined him in Bal Ji-Yun; after that Chinggis Khan went to Bal Ji-Yun and won victories. Otchi Noyan and Dar Kurkan were from this tribe.

A NARRATIVE WITH A STORY AND AN ACCOUNT OF CHINGGIS KHAN'S WIVES,
SONS AND DAUGHTERS

Chinggis Khan had 500 wives and a legion of concubines, of which five wives were taken by Mogul marriage and law. The main one was Dai Noyan's daughter from the Khongirad tribe called Börte Üjin. This Dai Noyan was the elder and Sovereign of the Khongirad tribe. Chinggis Khan had four sons and five daughters from Börte Üjin. The eldest son was Jochi Khan; the Sovereigns and Khans who were in Desht-i Kipchak, Kashgar, Urush, Chaqmaq and on the limits of the Khatai country were descended from his clan. The chronicles mention this and develop that while Chinggis Khan was fighting the Merkit ulus, he was defeated; Börte Üjin got into their hands pregnant with Jochi Khan. The Merkit ulus was ruled by Ong Khan. Börte Üjin was sent to Ong Khan. Ong Khan met her with respect and esteem, doing honours to her, because he used to be friends with Chinggis Khan's father and he called Chinggis Khan his son. Ong Khan's Beki asked him: why don't you take her? His answer was: 'she is my daughter-in-law, and I can't look at her with a treacherous eye and (it is) far from being humane'. After these words, Chinggis Khan found (her); he sent Sartaq Noyan's father who was a Saba from the Jalair tribe to Ong Khan and asked for Börte Üjin. Ong Khan gave him a meal and gave Börte Üjin to him and let them go. On their way, Jochi Khan was born. It was snowing and the road was full of fear, so there was no chance of making a cradle. From flour they made soft dough and kept him (Jochi) in the dough and wrapping him in the edge of a skirt went to Chinggis Khan. As his birth was sudden, he was named Jochi Khan. The second son was Chagatai Khan, who was given an appanage stretching from Kashgar to Turkestan and from Turkestan to the Amu River. The third son is Ögedei Khan, who became Great Khan after his father's death, and all the relatives, great and small, according to Chinggis Khan's will, proclaimed him Sovereign and began to obey him and submit to him. The fourth son was Tolui Khan, whose other names are Ikke (Ege) Noyan and Ulugh Noyan, and Chinggis Khan called him Nuker; he spent most of his time together with his father and in the battlefields he was near his father. In the Mogul tongue Tolui means 'mirror'. Möngke Khan, Kublai Khan, Hulagu Khan and Ariq Böke were his children, and his children were also Temür Khan, Ghazan Khan and Sultan Abu Said Khan, and there were many more Sovereigns from his line and clan. For their courage, perfection and excellence, these four sons of Chinggis Khan were called the four Kolukhs.

A STORY OF TO WHOM CHINGGIS KHAN'S FIVE DAUGHTERS WERE MARRIED

And of the five daughters who were born of this Börte Üjin of the Khongirads and to whom Chinggis Khan married each of them, these are the details. The eldest daughter's name was Üjin Bikke. At first, they thought to marry this daughter to Sengun's son, grandson of Ong Khan, but as it never happened,

she was then married to Begun Butu Qurqan who was from the Ikras tribe. The second daughter was Chichkhan, and she was married to Turalji Qurqan, who was the son of Qutugh Bikke, and Qutugh Bikke was Sovereign of the Oirat tribe. The third daughter, whose name was Tumalun, was married to the son of the Khongirad's Sovereign, Qurqan by name. The name of the fifth daughter was Altalun, who was also called Altalun Khan. She was married to the son of Taiju Qurqan from the Olkhunut tribe, Chadyr Sachan by name. Taiju Qurqan was the youngest brother of Chinggis Khan's mother. Much is said and written about these sons-in-law. In this (short) treatise one can't tell about them, because you can go too far, that is why it is not written.

A STORY OF CHINGGIS KHAN'S SON CALLED HULAGU KHAN

Tavahaz, the chief of the Merkit tribe, had a daughter called Qulan Khanum; this woman gave a birth to a son who was called Hulagu. This Hulagu had four sons: the eldest son's name was Khoja. Hulagu died a young man; on his death he (Chinggis Khan?) gave to his son Khoja 6000 men and his father's position. Khoja had a son called Ordui who also took his father's position and was attached to Kublai Khan. He had a son, Ebugan by name. He united with Qaidu Khan and many royal princes and banded together with the Tagajar Noyan tribe. They wanted to fall away from Kublai Khan, but Kublai Khan learned about this, seized them all and executed them.

AN ACCOUNT OF THE STORY OF HOW A GIRL FROM THE KHONGIRAD TRIBE CALLED SARTAQE ÜJIN, WHO WAS TAKEN BY JOCHI KHAN, GAVE BIRTH TO A SON

Jochi Khan had four main wives and several concubines. His senior wife was a Khongirad girl, Sartaq by name. A son was born by her called Orda. This wife was taken during the reign of Chinggis Khan. This Orda had seven sons: the eldest son was Konchi Bayan. He also took a daughter of Moga Noyan from the Khongirad tribe called Ilgan. Orda also had a wife from the Khongirad tribe called Tobakhana Khanum. Batu was Jochi Khan's second son and he was also called Sain Khan; his mother was from the Khongirad tribe. Batu was Jochi Khan's second son and was known under the name of Sain Khan. His mother Oki Üjin was Alchi Noyan's daughter from the Khongirad tribe. Batu lived a long life after Jochi Khan's death, he was over a hundred years old. He was still alive when Jagatai Khan, Ugedei Khan, and Tului Khan died. All the khan's children and grandchildren gathered at his place and convened a Kurultai, and on his orders began to conquer countries. He had four sons: Sartaq, Toqan, Abugan, and Olaqchi. The second son Toqan took Oljai from the Khongirad tribe to be his wife, and Tudu Mengu Khan's senior wife Arigkaj also came from the Khongirad tribe.

THE CIRCUMSTANCES OF JOCHI KHAN'S DEMISE

Jochi Khan had died before his father Chinggis Khan's death, which happened like this: when Chinggis Khan went to the Sart areas and reached the Atrar area, he left him (Jochi) to seize them and the Atrar area and ordered: 'we are going to Bukhara, and you come to us and conquer all the cities and fortresses on your way after us'. Jochi, following the order, conquered the cities and fortresses, and joined Chinggis Khan in Samarkand. From Samarkand, Chinggis Khan sent him, giving him his two youngest brothers, with a strong army to conquer the Khwarezmian lands. On their getting to the place, the conquest failed due to his discord with Chagatai Khan: Chinggis Khan ordered that 'he should be the head in this matter and that his brothers shouldn't get out of their elder brother's hand'. When the order was followed, the Khwarezmian country was conquered before ten days were over. After that, Chagatai Khan with Ögedei Khan followed Chinggis Khan and joined him near Termez. Jochi Khan came to the Northern countries and went to Bashggir, to Urush, Cherkes and Desht-i-Qipchaq land. Because he went without the Khan's permission, the Khan was rather upset and said: 'I will have him executed'. Jochi Khan became ill. Chinggis Khan, coming back from the Sart country, went to his own country; Jochi Khan sent birds that had been caught on several camels, saying: 'I am ill, so pardon me that I am not going'. A man from the Manghit tribe walked near Jochi Khan's yurt and, going from one yurt to another, he came to a hill where his (Jochi Khan's) hunting place was. As he (Jochi) was ill, he said to his beks: 'you hunt on this hill'. On seeing this gathering, the Manghit thought that Jochi Khan was hunting himself. When he came to Chinggis Khan, the latter asked him: 'what news of Jochi and his

illness have you got?' (The Manghit) answered: 'I myself know not of his illness, but he was hunting on so-and-so hill'. As soon as Chinggis Khan heard these words, he got angry with him (Jochi), flew into a rage and decided that 'Jochi Khan had revolted and wouldn't obey me, or he has gone mad if he does such things'. (Chinggis Khan) gave an order that first Ögedei Khan and Chagatai Khan go against him: 'I myself will take the field after them'. The army was ready to set out when suddenly there came the news of Jochi Khan's death. The Khan grew rather sad and upset. They were looking for the Manghit who had brought the false news to execute him, but he had escaped and was never found. Some chronicles say that Jochi Khan lived until he was 20 years old and died, but some say that he found death when he was 30–40 years old. God knows!

A story. On his demise, when he had made his will to his children, Chinggis Khan said to his beks: 'he who wants to know the law, the code and science, let him go to Chagatai; he who wants property, war booty and bravery, let him go to Ögedei; he who needs good conduct, prudence, firmness and peace, let him join Tolui'. He didn't say any other words except these and divided his beks among his sons. <...>.

No. 4

'Codex Cumanicus'

The manuscript of 'Codex Cumanicus' was found in the library of St. Mark in Venice, in the section of rare books. Poet and bibliophile F. Petrarch received it once from a certain Antonius Finale and together with his other books gave it to the Republic of Venice as a gift in 1362.

'Codex Cumanicus' consists of two notebooks numbering 168 pages, which differ very much. The first part, which writing (or copying) dates back to 13 July 1303, is a trilingual Latin-Cumano-Persian dictionary consisting of two parts. The first part contains approximately 1,600 words. They are verbs, nouns, adjectives, pronouns and examples of their conjugation and declension, as well as adverbs. The second part has over 1,100 words which are grouped thematically. The second notebook consists of a Kipchak-German dictionary, which besides separate words, contains separate sentences and reference material in Kipchak grammar. The dictionary is followed by separate texts, which mainly consist of Christian prayers in Latin and their translations into Kipchak. Besides, there are 46 riddles of Kipchak folklore which are listed on both sides of a page. Such renowned scholars, specialists in Turkic philology, as G. Kuun, V. Bang, V. Radlov, Yu. Nemet, S. Malov, A. Chechenob, and Kh. Makhmutov have greatly contributed to the study of these texts. It was due to their work that the texts and riddles were integrated into scientific research.

As for the place, time and purpose of creating this work, and its author, there is a difference of opinion. It is believed to have been created between 1303 (the date is written on the manuscript itself) and 1362 (the period during which F. Petrarch gave it to the library of the Republic of Venice) [Kuryshzhinov, Repin, 1966, pp. 38–39; Chechenov, 1978]. By the hypothesis put forward by the German scholar V. Bang, this dictionary was compiled in the 14th century by the priests of the Franciscan Monastery of St. John in the city of Sarai [Bang, 1913, pp. 244–245]. According to D. Rasovsky, [Rasovsky, 1929, p. 211], it was created in the city of Solhat in the Crimea, where there was an Italian colony.

At that time, the city of Solhat (Eski Qirim) was one of the flourishing cities of the Black Sea and the Caspian Sea area, and during the Golden Horde period, it was also the residence of the Golden Horde khan's vicegerent.

M. Safargaliev [Safargaliev, 1960, p. 36] thinks that 'Codex Cumanicus' was compiled in Italy with a strictly practical aim as a manual for Venetian merchants who traded in the Golden Horde and therefore needed knowledge of the languages spoken in that locality.

'Codex' was first published in Paris in 1828 as an incomplete version. Its complete variant was published in 1880 in Budapest by Géza Kuun [Kuun, 1880].

In 1887 V. Radlov published the 'Codex' in German under the title 'The Turkic linguistic materials of the Cuman Codex', in which the materials were transcribed into Cyrillic [Radloff, 1887].

Having carefully studied the specific phonetic features of the Cuman (Cuman, Kipchak) language, V. Radlov conclusively demonstrated its affiliation with western Turkic dialects and connected it with the Mishar dialect of the Tatar language [Radlov, 1884, pp. 52–53].

Many works by turkologists from various countries have been devoted to the comprehensive study of this written source. It is often cited in research written on the history of the Tatar language and literature. The content of the 'Codex Cumanicus' is worthy of special attention from the perspective of the Old Tatar language features it contains. The language of the 'Codex' is described as Tatar in the book itself. For instance, in the part of the written source that sets out the basics of Catholicism, the language of the written source is named as Tatar: 'tatar telgä köneldi' translated into Tatar, 'bitik tilinçä-tatarça' in the literary language—in Tatar [Radloff, 1887, pp. 48, 83].

V. Radlov's point of view is supported by renowned turkologists A. Samoylovich and S. Malov, while Tatar philologists have reinforced this idea, their work providing convincing arguments in favour of this view.

According to H. Muhammetov, an expert on ancient Tatar literature, 'The language of the written source is very close to present-day Tatar. 70% of the 'Cumanicus' consists of words used in ancient Tatar literature. The majority are present in the Tatar language or its dialects today. The same can also be said of the grammatical forms' [Möxämmätov, 1963, 182 b.]. In a comparative study of the vocabulary of the 'Codex Cumanicus' and that of present-day Tatar linguist L. Makhmutova proved, providing specific examples, that 80% of the vocabulary of the 'Codex' has been preserved in present-day Tatar. Not only were there close or full matches regarding individual words, but the similarities of grammatical forms, word order, and sentence construction between this written source and modern Tatar are quite obvious [Makhmutova, 1982, pp. 68–153].

As long ago as 1919, Professor N. Nikolsky proposed a theory regarding the proximity of the Cuman (Cuman, Kipchak) and Kazan-Tatar languages [Nikolsky, 1919].

As is clear from translations, Christian beliefs, and also rhymed psalm verses, the authors of the 'Codex Cumanicus' had a strong command of the Tatar (Kipchak) language¹.

Different graphemes were used to express one and the same sound: [y]—y, ŷ, y, v; [r]—к, г; [ə]—e, i, ä, äi; [x]—к, h, x, [ч]—č, ц, etc. The different ways of writing clearly indicate that at the time a special graphical system for expressing Turkic sounds had not yet been developed. Transcribing the text on the basis of the Cyrillic script, V. Radlov incorrectly transcribed the Latin grapheme ч, č as [ц], not [ч].

5) Синең языгың алдында мин торырман.

6) Белеме китек кешеләр, минем сүземне ишетегез. Ике юлны аерыгыз. Ярлы, мескен кешеләр яхшы (дини) белем белмәсләр, әйткән сүземне ишетегез, янарлар, кисәүле тәмугка төшәrlәр. Анда ашау юк, ничә (күпме) чакырса(ң) ишетмәк юк, ничкайчан тагын котылу юк.

Translation

1. I will recompense anyone who recompenses me but will not recompense someone who does not recompense me.

2. I will give you food.

3. A dog barks, a cow lows, a horse neighs, a chicken clucks, a wolf howls, a person grieves.

4. By working hard, exhausting yourself, you can obtain food. When you sow your field with wheat, then weeds, saltbush, burdock, and thorns will disappear.

5. I am standing over your sin.

6. Hear me, the uninitiated. Learn to distinguish the true way from the false. Hear me, the poor, the unhappy, strangers to the truth, you will burn in hell. There is no food there. No matter how hard you call, nobody will hear you, and there is no way to escape.

De Sancto Stephano.

Біз окурбыз ары Стефан[тогрусын]дан, кім көп төзді тәңрі үңүн, дағы көп таңлар әтті тәңрінің болушмакы билә. Каңан көптән төзді соңрасында таш билән ташлап өрдүрлүләр. Каңан аны таш билән ташлар әди, ол айтыр әди: жокары бакып көрүнүз! мән көрәрмән, кім көк барца ацылыптыр. Дағы Christos туруп, ата, сенің сак колыңда! Каңан аны айтты, анда катты ура башладылар. Тизін цөкүп жүгүндү. Дағын айтты: Бим тәңрим бошаткіл (каңүргии) аларға, билмәсләр нә діләр, дағы айтты: бим тәңрі мәним тынымны алғыл! Ол сөзүнү айтты да, цанын әліна бәрді.

Бу күн сәкізинчи күн, ағырлалык! нәчик бијиміз тәңрі ары кыз Мариамдан тоқты, бүгүн айтылды. Аның алғышлы аты барцадан үстүн[дә], барцадан күңлү, барцадан татлы. Jesus Christos битик тилиңә, татарца куткардачы.

Изге Стефан

Без укырбыз изге Стефан хақында, кем күп түзде тәңре өчен, тагы күп могжизалар эшләде тәңренәң булышыгы белән. Бик озак түзде, ахырда таш белән бәрәп үтерделәр. Кайчан аңа таш белән ташлар иделәр, ул әйтер иде: югары карап күрегез, мин күрәмен, күк йөзе барча ачылган. Тагы Христос торыр, ата, синен сагында. Кайчан аны әйтте, катырак ора башдылар. Тезен чүгеп тезләнде. Тагы әйтте: Биём Тәңре, бушат, кичер аларны, ни дигәннәрен белмәсләр, тагы әйтте: Биём Тәңре, минем тынымны (жанымны) ал! Ул сүзен әйтте дә жанын тәңре кулына бирде.

Бу көн сизгенче көн, олылык. Ничек биебез тәңре изге кыз Мәрәмнән туды, бүген әйтелде. Аның мактаулы исеме барцадан өстен, барцадан көчле, барцадан татлы. Иисус Христос битик теленчә, татарча куткаручы, ул барча галәмне куткаручы.

St Stephen

We read about Saint Stephen, who long suffered for God and also performed many miracles thanks to God. He suffered for a very long time; eventually he was stoned to death. When he was being stoned, he said: 'Look up, I see the sky is open. There is our father, Christ, protecting you.' After he said these words, they began to beat him even harder. He got down on his knees. Again, he said: 'My Lord, forgive them for they do not know what they are saying.' And he added: 'My Lord, take my soul.' As soon as he said these words, he relinquished his spirit to God.

It is the eighth day, we bless you. It was said today how our Saviour was born from Saint Mary of the Immaculate Conception. His blessed name is superior to all; it is the most powerful, the most sweet. In Tartar literary language Jesus Christ is called the Saviour, Saviour of the universe.

1 Ave уңмакның қабағы!
тірілікнің ағацы!
жәмішін бізгә тірдің,
Jesus-ны қақан турдун.
2 Ave Maria, кім бізгә
турдун бу цыһанда

Атабыз, күктә син! Мактаулы булсын синең исемен ханлығың. Синең теләгәнең ничек күктә булса, шулай ук жирдә булсын. Көндәге икмәгебезне безгә бүген бир, тағы гөнаһларыбызны бездән бушат (гөнаһларыбызны ал), ничек без бушатырбыз (кичерербез) безгә яман әйткәннәрне. Тағы безне начарлық сынавына калдырма, тағы барча яманлықлардан коткар. Амин!

Сөек, Мария, шатлык белән тулы син. Бөек алла синең белән. Барча хатыннар арасында хәерфатихалы (сайланган) син. Тағы хәер-фатихалы жимешен, синең уругың, корсагыңдагы Иисус Христос. Амин.

Яшәсен, ождахның ишеге,
Тереклекнең агачы.
Жимешенне безгә үстердең
Ииусны кайчан тудырдың
Ave Мария, кем безгә
Тудырдың бу жиһанны.

Our Father in heaven, hallowed be your name. Your kingdom come, your will be done, on earth as it is in heaven. Give us this day our daily bread, and forgive us our debts, as we also have forgiven our debtors. And lead us not into temptation, but deliver us from evil. Amen!

Ave Maria, the Lord is with you, blessed be. Of all the women on earth, you are the most blessed. Blessed be your clan and the baby that you carry, Jesus Christ. Amen.

Ave, the gates of Paradise,
the Tree of life.
She raised her baby for us
She gave birth to Jesus
Ave, Maria, who gave birth to our Saviour.

Mahmud al-Bulgari. 'Nahj al-Faradis.'

The introduction and the source are cited from the following publication: F. Nuriyeva 'Nahj al-Faradis' by Mahmud al-Bulgari, Kazan, 1999, 208 p.

'Nahj al-Faradis' ('The Open Way To Paradise') by Mahmud bin al-Ghali al-Bulgari al-Sarai is an epic 444-page work that is theological and didactic in nature. 11 copies of this valuable 650-year-old written source have been preserved. The original is missing. The Istanbul copy has been chosen as the basis of the study. The language of the copy under consideration is valuable because it was made in the 14th century. The copy is one of the complete ones (containing 4 chapters and 40 sections). It is well known and widely used in Turkology research. There is a postscript at the end of the manuscript: *'This book was completed in the year seven hundred and sixty-one, on the sixth day, in the God-blessed month of Jumada al-Awwal. It was finished in the early morning. What is more, the compiler of the book passed from the earthly world into the world of eternity on the said Sunday'* (pp. 443–444). This postscript contains the date when Muhammad ibn Khosrow al-Khwarizmi completed the copy. This postscript is particularly valuable because it records the exact date when the author of the work died.

It is indisputable that the author was born in Bulgar and lived and worked in Sarai. The third takhallus—'Kerder'—is controversial. Ya. Kemal admits that Kerder was one of the famous cities in Khwarezm [Kemal, 1930, p. 11]. E. Nadzhip links the author's origins with a Kazakh Kurder dynasty [Nadzhip, 1971, p. 63]. B. Yafarov suggests that it could be a suburb of Bulgar—Kardar, based on the fact that the word 'Kard' is used in many texts alongside the word Bulgar [Yafarov, 1949, 70 b.]. The phrase 'Kard Bulgar' is used in Sh. Marjani's book 'Mustafad al-Akhbar.' The Saint Petersburg Institute of Oriental Manuscripts of the Russian Academy of Sciences holds a poem (call mark 344), which praises Kard Bulgar in Persian.

The problem concerning the language of the written source has attracted the attention of turkologists domestically and abroad—Sh. Märçani [Märçani, 1885], A. Samoylovich [1927], S. Vahidi [Archive 53-1, 26-43], Ya. Kemal [1930], B. Yafarov [1949], Ya. Ekman, [Ekman, 1956], Kivametdin [Kivametdin, 1934], E. Nadzhip [1971; 1989] Sh. Abilov [1977], E. Fazylov, [1966; 1971], F. Nuriyeva [1998; 1999; 2002], and others. The first information about the language of 'Nahj al-Faradis' was provided by historian Shigabutdin Marjani, who included 'Nahj al-Faradis' in a list of ancient Tatar literary written sources.

Thanks to a tireless search by talented scholar and historian S. Vahidi, three copies of the manuscript 'Nahj al-Faradis' have been found. Valuable thoughts on the significance of the written source and its language have been preserved in unpublished notes [Archive 53-1, 28]. Through his study of copies of the work S. Vahidi came to the following conclusion: in the 14th century there was a language in the Volga Region that differed from Uighur and Chagatai, which was spoken by the Tatars of the Urals and Volga Region up until the 1905 revolution [Archive 53-1, 27]. The same view has been expressed by literary scholars such as G. Răxim and G. Gaziz [Răxim, Gaziz, 1924, 5 b.].

In Turkology the dedicated study of the written source's language started with the well-known work by A. Samoylovich. He made a direct link between the language of the written source and the history of Kazan Tatar literary language in the Golden Horde, where Kipchak language elements dominated [Samoylovich, 1927, p. 20], thus supporting Sh. Märçani's theory that the language of 'Nahj al-Faradis' is closer to Tatar than other Turkic languages.

A Crimean Tatar scholar Yakub Kemal made a great contribution to the study of this written source. He studied the language in a copy of 'Nahj al-Faradis' that is not known to academia. This scholar's legacy is even more valuable taking into account that this copy was later lost.

E. Nadzhip, a well-known researcher and scholar of the Turkic language traditions of in the Middle Ages, believes that many literary works of varied content and written in mixed Turkic languages were created over a vast territory of the Turkic world from the lower reaches of the Syr Darya River and the Northern Khwarezm to Azerbaijan, Crimea, and Mamluk Egypt... 'Alongside the Kipchak-Oghuz language, another literary language took shape in the same territories. It can be traced back to the

Karluk-Uighur literary language of the Kara-Khanid period... This language, known provisionally as Oghuz-Kipchak, belongs to d-δ-j—that is, a group of Turkic languages. This literary language was used to write 'Khosrow and Shirin' by Qutb, the Central Asian 'Tafsir,' 'Kysas Rabguzi' and 'Nahj al-Faradis' [Nadzhip, 1971, p. 56].

These statements regarding the attribution of the written source's language are supported by more modern studies in Turkology. In his articles on the history of Tatar literary language, E. Tenishev [1987, pp. 133–137] links, for example, the emergence of written sources such as 'Kisekbash Kitaby,' 'Bedavam,' and 'Nahj al-Faradis,' directly with the Volga Region. The work of Uzbek scholars devotes much attention to the study of the written source's language. Linguistic aspects of the work along with other written sources in Central Asian literary language were quite thoroughly covered in summary works concerning vocabulary and grammatical structure by scholars such as E. Fazylov [1966, 1971], Sh. Shukurov [1974], and others. As to the issue of attribution, these scholars tend to consider the written source against a broader background of Central Asian and Khwarezmian written sources. This view is shared by Tatar scientist and academic M. Zakiev. According to him, 'Until the 15th century Old Turkic language was common to all Turks living in the Kara-Khanid Khanate, Volga Bulgaria and Seljuk Union, the Golden Horde, Cumania; therefore, written sources from the 10–15th centuries called Old Turkic should be recognised as common heritage and be studied when researching the history of the language and literature of all Turkic-speaking peoples (except for the Chuvash and Yakut)' [Zakiev, 1986, pp. 140–141].

Foreign Turkologists, such as Ya. Ekman, Zeki Velidi, E. Bloshe, V. Kivametdin, Mehmet Fuat Köprülü, and others, have contributed greatly to the linguistic study of the records. Ya. Ekman published the text of the record based on the Istanbul copy. Ahmed Zeki Velidi [Velidi, 1926, II], based on the Istanbul copy of the written source, expressed some interesting thoughts regarding the lexical composition of the work. With no recourse to special linguistic analysis and taking into account only the kharake placed in the text, he suggested that this manuscript was written from beginning to end by a resident of Khwarezm. To support his argument, Z. Velidi points out that the author of the work refers exclusively to theologians of Middle Asian origin. This is not surprising because Middle Asia was the commonly-accepted centre of theology at that time. And we must take into account the fact that copies of this manuscript were found neither in Khwarezm nor in Middle Asia.

Professor M. Fuat Köprülü-Zadeh, supporting Z. Velidi's view, associates the written source with Khwarezm [Köprülü, 1926, pp. 344–345].

While we believe that there is no direct contradiction, as Khwarezm was part of the Golden Horde, a detailed study of the written source's language gives us reason to associate it with the Volga Region, and our position regarding the study of the written source's language is close to that of the researchers in the first group (Sh. Märçani, S. Vahidi, B. Yafarov, E. Nadzhip, and others), who considered that the Volga Region was the most likely region for the written source to have appeared and defined the language of the written source as a Kipchak version of the Golden Horde-Khwarezmian language—that is, a close precursor of Old Tatar language.

Almost all copies of the manuscript 'Nahj al-Faradis' known to researchers are partially described in works by S. Vahidi's (unpublished works), B. Yafarov, Ya. Kemal, Z. Togan, Ya. Ekman, Ya. Bloshe, E. Nadzhip. Newly-discovered copies are described by Sh. Abilov (for more details about copies of the manuscript 'Nahj al-Faradis' see: [Nuriyeva, 1999, pp. 20–28]).

As mentioned in the introduction (mukaddime), Mahmud al-Bulgari used reliable sources (mögtämäd kitaplar) while writing the book: 'Masabih al-Sunnah' ('Sunnah Lamps') by Hussyn al-Baghawi, 'Al-ta'aruf li-madhhab ahl al-tasawwuf' ('Study of the Sufi way') by Muhammad al-Kalabadhi, 'Masharik Anwar al-nabaviya min sihah al-Akhbar al-mustafaviya' ('Rise of Lights') by al-Saghani, 'Nisab al-Akhbar' by Abu 'Ala al-Ushi, 'Kenz al-Akhbar' by Muhammad ibn Bashraviya, 'Shihab al-Akhbar' by Abdullah al-Kuda'i, 'Al-Mabsut' by al-Sarakhsi, 'Ihya Ulum al-Ain' ('Revival of the Sciences about Religion') by Abu Hamid al-Ghazali, 'Tanbiyat al-Ghafilin' ('Awakening of the Careless') by Abu Leysy al-Samarkandi, 'Al-Jami al-Sahih' ('Authentic Collection') by al-Bukhari, 'Sahih' ('Authentic Collection') by Muslim al-Nishaburi, 'Jami al-Sahih' by Abu 'Isa al-Tirmidhi, 'Musnad al-Nas' by Shabgan ibn Mahdi.

In the conclusion (hatim) the scribe mentions other sources used by Mahmud al-Bulgari when writing his book: 'The author of the book (Mahmud al-Bulgari) said that the commentary on Tafsir (interpretation) is based on the books 'Kashshaf' by Imam al-Jarullah al-Alam and 'Tafsir' by Imam Abu-Ma'ali ibn Ahmad ibn Muhammad al-Isfahani. At the beginning of each chapter there are Hadiths of the Prophet Muhammad and the titles of the books from which they are cited, passed down by scientists and sheikhs who used the books 'Kut-al-Kulub' by Imam Abu Talib Makki, 'Mujtala' by Zainula Imamati Ferdowsi and a commentary on the texts of 'Muzhtala' by Imam Vakyydi, 'Maghazi,' and Imam Muhammad Katib's 'Maghazi.' The final part also indicates a tafsir by al-Zamakhshari 'Al-Kashshaaf 'an Haqa'iq at-Tanzil,' which is the only and the most complete Mu'tazila commentary that has been preserved. The list of the authors of these works alone demonstrates the author's familiarity with theological literature. At the same time, an analysis of the sources used by Mahmud al-Bulgari helps to reveal how the works of eastern philosophers and scholars in the Volga Region spread and developed, as well as the role they played in forming public opinion in the 14th century.

The main idea of the work is to establish the rules of conduct for a true Muslim, providing him heavenly bliss in the other world. This idea is revealed in the main part of the work, which consists of four chapters (bab). Each chapter is divided into ten sections (fasl). The first chapter is devoted to the life of the Prophet Muhammad. The fasls describe the following: the prophet's virtues; the prophet receiving the revelation; the prophet's first companions and their exploits; an explanation why the prophet left Mecca for Medina; the prophet's miracles; the prophet's conquest of Mecca; the rapture of the prophet; the prophet's journey to heaven and hell in the night of rapture; the angels' assistance to the prophet during battles; the death of the prophet. The second chapter provides biographical data about the four caliphs: Abu Bakr, Umar, Uthman, and Ali, let peace be upon them, about the family of the Prophet Muhammad—his daughter Fatima, grandsons Hassan and Hussein, and four Imams: Imam Abu Hanifa Kufi, Imam Shafiga, Imam Malik, and Imam Ahmad ibn Hanbal. The third chapter is devoted to charitable activities relating to God: prayer, zakat, fasts (uraza), pilgrimage to Mecca (hajj), obedience to father and mother, eating only permitted food (helal yemek), good deeds, appropriate ways to spend time, patience in adversity. The fourth chapter is devoted to actions that alienate a person from God: the shedding of innocent blood, adultery, the harms of alcohol, arrogance, lies, attachment to earthly life, wealth, vindictiveness, pride, and faint hopes.

With regard to its genre and compositional structure, 'Nahj al-Faradis' is of a so-called 'compartmentalised composition' work [Minnegulov, 1993, p. 243]. They consist of various relatively independent composition units called hikayats. The hikayats are placed according to various ideological and thematic sections to support the hadith along with quotations from the works of outstanding Sufi scholars. These stories used real life examples to demonstrate the idea of the hadith, its wisdom, and its truth.

Bab III

Excerpts from the seventh fasl

'On the necessity of moderating one's appetite'

Zuhri was asked: 'O Zuhri, you are a great scientist, why do you serve the sons of Marwan?' 'Here is my honest answer,' he said, 'I could not stand up in the face of my own gluttony, but even so, I could not acquire everything that my body desired. So I began to serve Emir and Sultan. Now I understand that I made the wrong choice and was tempted by the flesh. If I could have subdued the flesh and been content with what I had, it would have been better' (300–301).

Once a scientist visited the home of his student. The student laid out a meal for his teacher, but there was nothing on the table, except for a crust of bread. The student was very ashamed of his poverty. The teacher sensed this. 'Stand up, let us go to the gates of the prison,' he told the student. The student was surprised and did not understand why they must go to the gates of the prison. When they approached the prison, they saw how beyond the gate some were being brutally beaten; others were having their hands cut off or being subjected to some other form of torture. The teacher said: 'Do you understand, my dear student, for what purpose I have brought you here?' 'Oh, teacher, no, I do not understand your intent,' the student admitted. Then the teacher said: 'Know and remember this: these poor people chose not to content themselves with a piece of bread, they wanted something more, and for that reason they turned

to thievery and committed other violations of Islamic commandments, and so they are condemned to such a torment.' One of the prisoners, with shackles on his feet and a chain around his neck, turned to them, imploring: 'O, my dears, I am very hungry, I have not eaten for several days, please, give me at least a piece of bread, for God's sake.' In response, the teacher said, 'O shackled one, if you could have contented yourself with the piece of bread you had, you would not find yourself in such a situation.'

'O my dear, you speak the truth; really, this is how it was,' said the man in shackles. The teacher said: 'O my student, we have come here to learn how to moderate our vile passions' (301).

Once upon a time, Sheikh Fathi Muassali saw two small children. Each of them had a piece of bread in his hand. One of them had bread topped with halva. The one without any halva, said: 'Give me some halva.' 'Fine,' said the one with halva, 'I will give you a piece of halva if you agree to be my dog.'

He agreed. Then the child with the piece of halva tied it up with a string, put it in the mouth of the child who had asked for it, and began to pull him around like a dog.

Having seen all this, the sheikh said: 'If the child had agreed to be content with a piece of bread without halva, he would not have turned into a dog.' The conclusion was as follows: he who cannot be content with what he has, is envious of other people's possessions, thirsts for them, and becomes a slave of his passions truly turns into a dog.

Bab III

Excerpt from the eighth fasl

'On the necessity of doing good and fearing unrighteous deeds'

<...> Sa'id Khudri recalls what he heard from the Prophet: 'If any among you see that something bad is being done, you have the duty to make it right. If you cannot make it right by physical means, then you must at least say: 'What are you doing is very bad, do not do it.' If for some reason you are afraid to say something, as it is perhaps dangerous for you, then at least judge the action within your heart. But passive condemnation alone is a the least effective way of defending iman.' <...>

Bab IV

An excerpt from the seventh fasl about the harm of intoxicating drinks

Ibne Homer and Ibnelgabbas say that the Prophet, let peace be upon him, said that drinking alcohol is the greatest of all sinful deeds. Once a Muslim takes a cup of an intoxicating drink into his hands, this servant of God will be immediately deprived of the grace of Allah, never to receive it again. Once he takes a sip from this cup, he will immediately be plunged into God's curse; when the alcohol reaches his stomach, he will be subjected to God's punishment; and those who do not drink alcohol but sit at the same table as those who drink it will be deprived of the necklace of Islam (363).

<...> A muezzin by the name of Salih lived in Baghdad. He had served as muezzin for forty years. Near the mosque lived a Christian with a very beautiful daughter. When Salih climbed to the top of the mosque's minaret to pronounce the Adhan for prayers, he always looked down at her and admired her. Finally, he fell in love with her. Once, having climbed the minaret for a prayer, he saw that the girl was alone at home. He stared at her for a long time, and, having fallen still more deeply in love with her, he could not hold himself back; he descended from the minaret, entered her home, and tried to hug her. But the girl called her father. The muezzin was caught and reprimanded: 'You are a Muslim muezzin, and yet you thought to commit such a wicked act. We will take you to a Muslim judge and cast shame upon you.' The muezzin told the Christian: 'I am madly in love with your daughter, let her marry me.' 'Well,' the Christian said, 'I will let my daughter marry you if you fulfill my conditions: accept my faith, eat pork, and drink vodka.' 'No, I cannot betray my faith by accepting yours,' said the muezzin, 'and I may not eat pork as this is a very large sin, but I may drink a little bit of vodka.' Vodka was brought in, and the girl herself served vodka to the muezzin. He drank it, became intoxicated, and began to nibble on some lard. Then the girl's father said: 'Become a Christian, or I will not give up my daughter to you.' The muezzin did not dare refuse and accepted Christianity. The girl's father gave up his daughter to him and left them alone. Having decided to take a walk in the fresh air in order to become sober, the muezzin climbed to the top of the minaret but could not maintain his grasp on it because he was drunk. He fell

to the ground and died, without having acquired what he desired most. Thus, vodka did not bring the muezzin happiness, but deprived him of iman and doomed him to eternal hellfire.

Bab IV

An excerpt from the sixth fasl about the danger of excessive love of worldly goods

<...> Abū Hurayrah said: 'Once the Prophet, let peace be upon him, said to me: 'Well, Hurayrah, would you like me to show you a picture of the world?' He took me by the hand and led me to a pond. The pond was full of filth; there were human heads and bones, animal bones, old rags, and human waste all floating around. 'Well, Abu Hurayrah, this is the picture of the world,' the Prophet said, 'Here you can see the heads of those who were greedy for worldly goods, who pursued earthly riches. Just like you, they hoped to want for nothing. Now, Abu Hurayrah, do you see that only their bones are left, no skin and no flesh? After a few days the bones will turn into dust as well. You see all of this waste. Before it was the food that they took with them. Now it is just disgusting filth. O Hurayrah,' he continued, 'you see these old rags; all these shreds were once these people's clothes. They adorned themselves in them. Now they are too disgusting even to pick up. Do you see these skeletons? These were animals. Some of them were ridden by people who travelled the world on their backs; some of them were forced to work by people. Now they are a pile of bones. Only the wind blows over them.' 'Is this really our world, our lives?' I thought and began to weep. 'If one wants to mourn for this world, let him cry,' the Prophet said, let peace be upon him. Prophet Isa (Jesus), let peace be upon him, once came to one city with his apostles. All of the residents of the city were dead; there was no single living creature, only white bones and the smell of decay. Prophet Isa told his students: 'It seems that the residents of this town died by the God's will. If they had died in their beds, they would have buried each other. Here, no one is buried. I will not be surprised if it comes to be known that God destroyed the city in one hour.' The apostles said: 'O Jesus, we beg you, may the Lord allow one of them to speak to us, to tell us about what happened.' Prophet Isa, let peace be upon him, went to the Lord with this request, and the Lord commanded: 'O Isa, come to this pile of bones at midnight with your students and ask all of the questions that may interest you. You will get an answer.' Prophet Isa came to this place at midnight with his students and cried out: 'O city dwellers, how do you feel? Tell us what happened to you.' A voice emerged heard from the pile of bones: 'O Son of God, know and tell our story to everyone. We were living in peace and in good health, and then God's punishment befell us; we all died and descended straight to hell.' 'Why were you punished by the Almighty?' 'We loved all that which displeased the Lord, we were attached to this world as a baby is attached to its mother! When something was not as we wanted, we wept and grew angry with our lives as a child grows angry when punished by his mother and cries when his mother's attention is distracted from him. When we got what we wanted from our lives and satisfied all our earthly passions, we were all killed.' 'O you who is speaking to us, why were you allowed to speak, and not someone else?' Isa asked. 'I was also among them, but I was not so tied to the earth as they were, and yet I was also killed right along with them, but while they descended straight into the depths of hell, I found myself on the edge of hell, where there is still hope for survival.' After hearing these words Isa said to his students: 'O my students, is it not this better to live on this earth modestly, eat barley bread, wear simple clothes, sleep on the bare ground, and lead a righteous life than to burn in hell in the kingdom of God?' The students then said: 'O Son of God, you are right. Let it be so.'

Tatar Legends

The source and the notes are cited from: Vagapov G.A. *Tatarskie skazaniya*. (G. Vagapov, *Tatar Legends*.) // Proceedings of the Eastern branch of the Imperial Archaeological Society, Part I, Issue 1, Saint Petersburg, 1858, pp. 1–9 (reprinted from *Kazanskiye Gubernskiye Vedomosti*, 1852, No. 43 and No. 45—*Editor's note*).

*'Timur's Seizure of Bulgar'*¹

And our Bulgars were known for their debauchery. They were allowed to take out loans because of legal loopholes, but they committed just as many sins of adultery and slaughter; they left behind Jumu'ah² because of their hard drinking, they abandoned the rituals practised after the fivefold prayers; they considered it permissible to drink buza and beer, saying that they were not in Misr³; they abandoned collective prayers; they deplored Imam Shafi, saying that his words were idle talk; and they also abandoned Eids (religious festivals)—they became sinners before God Almighty. And for that very reason the God Almighty committed them to Lord Aksak Timur.

Bikchura was a khan in Bulgar at that time. Lord Mir-Timur⁴ sent messengers to Bikchura Khan to ask: why do not you say Jumu'ah or celebrate Eids? The khan said to his scholars: how will you answer Mir-Timur? The scholars said: answer him according to our books. And the Bulgarian scientists answered that Bulgar was not Misr, and they offered supporting texts from Hidae, Vikae, and others⁵. Mir-Timur wrote in his response: Why are not you guided by Daljiy, Timurtash, Kiney, and other books, which certainly prescribe that Jumu'ah should be said in the villages as well? Moreover, the books of the six legends⁶ do not contain anything indicating that Misr is required for this, and a book called Durrul-Asar contains the legend that no Jumu'ah means no appeal to the East, except in the Misr Collection, there are no legends but only words of one of Muhammad's associates⁷, and moreover, this associate is of a questionable character—we do not know which of the associates he was, and the books of six legends do not contain such a legend. The interpretation of Durrul-Asar states that Imam al-Humam, Mister Nu'man, the son of Sabit, made a mistake in this place, and that the mistake of the Mujtahid⁸ can be forgiven. Even in Jusa, a village near Medina, there were forty mature men: Muhammad himself along with three other people read the Jumu'ah prayer. Along with these answers he wrote other ones and sent them with an ambassador to the Bulgars. The Bulgarian scholars answered: the fact that you consider the Grand Imam erroneous, that you do not recognise the legend of 'no Jumu'ah, no appeal to the East' as a legend, that we should not adhere to the words of the book called Durrul-Asar certainly shows that you are a dissident: we thought that you were worthy of our respect, but indeed, you are a dissident.

You must know that the book called Durrul-Asar is not a schismatic text; by 'books of six legends' we mean the following books: the first called Sahih Muslim; the second, Sahih Najadi; the third, Musabih; the fourth, Myushkat; the fifth, Mubarak; and the sixth, Musharak.

In those days our Bulgarian and Khwarezmian scholars were engaged in the study of Rhetoric, Logic, and Philosophy, and they were teachers of these disciplines, as our mentor and scholar Dr. Taftazani wrote an interpretation of Akaid; and his students, the honourable Mullah Hayali and Mullah Ahmed, delivered lectures. He himself wrote a Tahdhib on Logic, and the most learned of his students wrote interpretations, on which others wrote notes, so that the science of legends, destroyed one after another, became Sophistry in these three countries, and they involved themselves in studying and teaching the science of Ayna and Hidae using contemplation and debate, so that the study of the Sunnah remained only in Dagestan and Egypt. Scholars of this country (Bulgar) were ignorant of the Sunnah.

And thus Aksak Timur, having heard the mentioned words of the Bulgars, commanded his troops to attack with unpi (battering rams) and cannons.

And he said: I swear by the Almighty God, I will destroy the city of Bulgar and any memory of it! And he swore.

In three days the city of Bulgar had been reduced to ruins as if it had never existed. Only God Almighty knows how many soldiers he had. Having ordered his troops to destroy the stone fortifications with unpi (battering rams), he cast them to the bottom of the Volga River; he ordered that the heads of Bikchura Khan and his twelve viziers be cut off; girls and women like pearls were made into slaves and distributed among the commanders; he hung thirty-six scholars on the gallows, and in the course of one week he ordered for the survivors of the siege to be carried off in various directions and ordered not to live there. An old man named Janbakti founded a village along with his generation and called it

Janbakti. An old man named Musellyam with his generation went to Tashbilgi and settled in Tashbilgi village. An old man named Tetyush and his generation found themselves in the Bulga Ravine, and this became the village of Tetyush. An old man named Laish and his generation found himself on the bank of the Belaya (Kama) River, and Laish village was founded there. An old man named Mamadysh stopped on the Nukrat (Vyatka) River, and Mamadysh village was established there. Some of them moved to New Kazan, which is located in the mouth of the Kazanka River; some of them moved to the eastern side of the Urals in Saray-Jük; some of them moved to be among the Kirghizes; they were scattered all over the world.

According to Islamic chronology, on the 86th⁹ year, on the 1st day of the month of Muharram, on Friday, after a prayer, and on the 26th day of the Gemini constellation (May) according to Christian chronology, the city of Bulgar was relegated to ruin and oblivion: only its name remained in the world. At that time there were ten thousand and twenty-four households in Bulgar.

During the same era he (Aksak Timur) razed the city of Bilär. Having ruined the city, he scattered its residents all over the face of the earth.—On the banks of the Kama River (Belaya River) there was a city called Kashan: having devastated it as well, he exiled its entire population.

Having razed Bulgar, Bilär, and Kashan, Lord Mir-Timur planned to conquer Moscow. At that time the Russian Tsar Ivan IV Vasilyevich¹⁰ reigned in Moscow. With plans to convert him to Islam, [Mir-Timur] left Bulgaria with his troops, and after some time they approached a Russian city called Vladimir. They spent the night there. During the night Lord Mir-Timur had a dream and saw Khidr¹¹, let peace be upon him, who told him: 'You have no permission from God to convert Muscovy to Islam: the time has not come yet, it must be done upon the appearance of Mahdi¹². Return to Samarkand. The lawyer Abulleys-i Samarkandi waits for you with love in the bosom of his grave; there is the place of your burial.' Having said this, he disappeared. After he rose in the morning and read a morning prayer, Lord Mir-Timur told the most learned Taftazani about his dream; he replied: 'O Sultan! If we have not been granted permission, we shall not go because the cursed Satan cannot transform into Khidr.'

As it was Sunday and the first day of October, which the Russians call Intercession of the Theotokos, they were in church for a prayer.—In the neighbourhood there was a two-year-old black mare that belonged to one Russian man. When the Russians were coming out of the church, Lord Mir Aksak Timur, grasping the hind legs of the black mare, threw her out of the Russian man's shed¹³. Where the mare fell, there appeared a lake for Aksak Timur's troops to perform ablution; for there was no river near the city of Vladimir; the Russians used well water. And this lake exists even today: Russians say that this water is impure and do not drink it.

Lord Mir-Timur began to make his way back to Samarkand. The road led to New Kazan. At that time Ilham Khan reigned in New Kazan. When he heard that Mir-Timur was coming, he went out to meet him. Mir-Timur entered New Kazan and stationed his troops in the suburbs. Over two months he and his viziers went to worship the graves of the followers¹⁴. (In the original there is a list of the followers, whose names I have not stated here.)

After that Mir-Timur arrived in Sodom—that is, the city of Elabuga. At that time Ilbakti Khan, son of Urazbakti Khan, reigned in Sodom. This khan did not recognise any faith or religion; Mir-Timur wanted to convert him to Islam, but they could not come to an agreement. The Sodom in question was a small town. He razed it too and, after ordering the destruction of the city gates, had them thrown into the Kama River; he captured the residents and scattered the rest of them about all the world's countries. He visited the graves of the followers located in the mouth of the Toyma River. (There follows the list of the followers.) From there, crossing the river (Kama) and stopping in the village of Myalkas, he worshiped (the followers); the troops were quartered at the inhabitants' homes on the Kama River. Autumn arrived, and it came time for the snow to fall.

The mouth of the Irnya River flows into the Sviyaga River. A khan called Bayrash, the son of Qoli Khan, reigned there. Aksak Timur wrote a letter to him saying that he would come to him to spend the winter. Bayrash Khan wrote him in response: 'O Sultan Mir-Timur! I am always at your disposal. Let our father and mother be your sacrifice. I agree. God is our benefactor.'

On the Bagrash River—this river flows into the Irnya; beside the river is a tall mountain—and at the very top of this mountain Bayrash Khan erected a large palace. When the palace was ready, he invited Mir who came together with his army.

Bayrash of Sviyazhsk met him with his army, led him to the palace at top of the aforementioned mountain, and welcomed him, saying, your servant Bayrash has built a palace for you; if you so wish, please, stay here. Lord Aksak Timur, having examined the palace, approved of it and gave a large part of his treasury to Bayrash Khan.

And so he spent a winter there and visited the grave of Mullah Hafiz Tashkendi. The Menzeli River flows into the Ik River. He was also a guest of Mustafa Khan. (An enumeration of adorations.) Upon his return he entered the palace built by Bayrash Khan on the Bagrash River. After spending a winter there, on the twelfth day of Gemini (May), Lord Mir Timur left along with his army and said farewell to Bayrash Khan. Bayrash Khan accompanied him up to the Ik state of Tugash Khan. (There follows worship of the followers.)

After that Mir-Timur, having said farewell, went to Samarkand, and Bayrash Khan returned to Sviyazhsk.

And thus Lord Mir-Timur, having crossed the Urals, appealed to the Kirghiz people and invited them to accept Islam along with the Turkmens. Those who accepted Islam he left and appointed khans from among their ranks; those who disagreed were turned into slaves and prisoners. Thus he reigned in Samarkand for three years; he passed in the fourth year on the twenty-seventh day of the month of Ramadan. The learned Taftazani passed on the day of celebration. This was in the year eight-hundred and seventy-two, in accordance the Hegira, in the year of the Dog.

Notes

¹ From the second part of 'Tewarih-i Bulgarie,' a Bulgarian narrative written by Husam-El-Din of Bulgaria (See Journal of the Ministry of Public Education, 1846, May, Dep. IV. Description of Turkish-Tatar manuscripts in Saint Petersburg, I. Berezina).

² *Jumu'ah* is the Muslim name for Friday and the collective prayer held on Friday.

³ In Muslim theology *Misr* is used to refer to any large city.

⁴ *Mir* (instead of *Emir*): Prince, Lord.

⁵ *Hidayet*, written by Almyurginani, and *Vikayet*, written by Mahmud Burkhan-esh-Shariat, are the theological guidelines of the Muslims of Turkestan.

⁶ Muslims have six different sciences that together comprise 'Esh-Sharia,' the science of faith and law; moreover, they have six degrees of jurisprudence, and here the term 'books of six legends' refers to those listed below.

⁷ I translated the word *Ashab* as 'associate' as they were associates of Muhammad in his military operations.

⁸ The Mujtahids are the three highest classes of Islamic legal scholars.

⁹ We know that the Bulgars had a city called Cuman: one wonders whether the name Kashan, which is alluded to in a Tatar story about Kazan tsars published in No. 12 of Kazanskiye Gubernskiye Vedomosti, 1852, is used here in its place.

¹⁰ Obvious error.

¹¹ According to a Muslim legend, Khidr reached a fountain of eternal life and is therefore immortal, roaming the world in the form of an old man. He brings luck to all houses he visits and people whom he meets. A folk legend.

¹² Mahdi, the last of the 12 Imams, is to appear at the end of the world according to a Muslim legend.

¹³ The original contains excessive details here.

¹⁴ Students of Muhammad's associates.'

Excerpts from a Kirghiz legend about Edigü

The introduction, the source, and the notes are cited from: Potanin G.N. *Otry'vki iz kirgizskogo skazaniya o Idy'ge, iz zapisej Chj.Valixanova*. (G. Potanin, Excerpts from a Kirghiz Legend about Edigu, from the Records of S. Walikhanov) // *Living Antiquity*. Periodical of the Department of Ethnography of the Imperial Russian Geographical Society / Edited by the Chairman of the Department of Ethnography, V. Lamansky, Issue IV, Saint Petersburg, 1891, pp. 156–163.

'While putting into order the papers of her late father K. Gutkovsky, K. Gutkovskaya discovered among them several of the letters of Shoqan Walikhanov among them, as well as several manuscripts; although they were partially hand-copied by K. Gutkovsky and partially by others, they seem to be copies of the records and articles of Shoqan Walikhanov. The manuscripts found included a Kirghiz legend about Edigu with fragments from its various versions, a passage from a Qara-Kirghiz tale about Manas (namely, the following episode: the death of Kukotay Khan and his funeral), notes about Shuno-Batyr, about Kirghiz beliefs, and other things. <...> Here we will present only the beginning of the legend about Edigu with its various versions, which is an interesting combination of several topics. <...>

'The Jir ('rhapsody,' from the verb *jirlamak*, which means to intone—*Editor's note*) of Edigu can be dated to the end of the 14th century, judging from the events described therein, and was probably composed at the beginning of the 15th century. This is evidenced by the presence of numerous antiquated words and expressions, which are now absent from the language. It is also noteworthy that there is not a single Persian or Arabic word in the entire rhapsody, even though at the time words from these two languages were being used even in conversations between commoners due to the spread of the Moham-medan religion'(S. Walikhanov—*Editor's note*).

Walikhanov seems to have recognised that the Kirghiz tale refers to the historical Edigu. At one point he says: 'The most remarkable historical Kirghiz jir is that of Edigu, that same Idege, Edeku, or Edigu that is mentioned in Toktamys's yarliq, the very same beg, mangab(?), and temnik who defeated Vytautas on the Vorskla River and defiantly commanded a horde during the reign of the four Khans.' In another place he says: 'The existence of Edigu cannot be disputed like the existence of Tokhtamys Khan and Tamerlane. It is evidenced not only by folk tales but also by written records. Ibn Arabshah says that Edigu was one of Tamerlane's devils. An anthology by Khalfin (published in Kazan) contains Edigu's genealogy, compiled based on Kazan Tatar legends. The western part of the Ulytau Mountain in the Central Horde, which is a completely separate cliff from the main ridge, is called Edigu. There is a mound on top of the cliff, built of flagstone and rubble; this mound has the same form as all oboo ('obo' in Mongolian)—that is, mounds erected in honour and remembrance of wounded or killed heroes—and is called Idygenyn Obasi; the mountain itself is called simply Idygi; Kirghiz people honour him as a national hero and sacred by birth, often offering sacrifices at his grave. Sometimes they slaughter cattle, which is now done very rarely, but more often they tie shreds of clothing or strands of horsehair to a bush growing nearby. A. Shrenk¹ visited the mound and composed a precise sketch of the cliff's appearance. It is unknown where the grave of Tokhtamys Khan is; his and Edigu's contemporaries (included) Ken-Janbay, Kara-Kipchak-Kublin, Kien-Bay (who is not mentioned in this rhapsody), Khuday-Berdy, Kos-Devlet, Qara Qoca; the Kirghiz people claim that the latter was the forefather of the Argyns²; Qara Qoca was the son of St. Okkesa Sabag; Rashid Al-Din seems to claim that Qara Qoca was Tokhtamys's messenger to Tamerlane. The mounds of these heroes are on the right bank of the Ishim River; it will be impossible to say whether these are their graves or simply monuments until these mounds are excavated.'

An excerpt taken by Walikhanov from an anthology by Khalfin, ed. of 1822, ch. IV, shows that the Kazan tale states that Baba Toklas descended from Abu Bakr; he was a descendant of Abu Bakr in the 15th generation; and Edigu was a descendant of Baba Toklas in the sixth generation. Baba Toklas was a sovereign in Mecca; here are his descendants: Termeul (appeared on the Volga River and the Yaik River), Kyzychi, Islyam-kaya, Kadir-kiya, Kutlukeba; and Edigu was the latter's son. Kutlukeba was killed by Urus Khan. According to one of the legends, Baba Toklas had four sons, and according to a different one, only three; the third of them Tyrme was on the Volga and Yaik Rivers. Pilgrims in Kaaba first bow to the Prophet's coffin, then the coffin of Alem-Murtaza Sayyid, and then the coffin of the wonderworker saint Baba Toklas. Uzbek Khan, after accepting the faith, sent his knight Uran to the

noble city of Mecca, who brought these three saints with him (that is, the three sons of Baba Toklas?), and then all the people accepted the faith.

Then Walikhanov says: 'Comparing the folk (?) Kazan tale preserved by Khalfin and the testimony of Ibn Arabshah with this steppe rhapsody, we can conclude with certainty only that Edigu was of spiritual origin; that he occupied a significant position during the reign of Tokhtamysh, as Tokhtamysh entrusted him with 'Crimean disputes and military affairs,' and then he called him a bey par excellence, saying: 'Have you ever heard of a khan fleeing and being pursued by his bey?'

Walikhanov's translation of the epic, or bylinas (poems), about Edigu, as is evident from his notes, is a combination of three copies made for him by his father, Chingis Valiyevich. The translation in the preserved manuscript took thirteen pages, two of which (pages 10 and 11) have been lost. In addition, two other variants of the epic's beginning are written on separate pages. Walikhanov seems to distinguish between two versions: the Kirghiz and Nogai. The full version of 13 pages is the Kirghiz version; the two variants stopping in the very beginning are apparently both Nogai. We do not exactly know what Walikhanov meant by the 'Nogai version.' This may mean that they were recorded by the current Nogai in the Caucasus, where Walikhanov had never been, or that it was found among the Kazan Tatars or other neighbouring Turks (but not the Kirghiz), or even in some written texts. Walikhanov himself surmises that these versions belonged to the ancient Nogai. Whatever the case may be, we present the beginning of the Kirghiz version (No. 1) at first and then the two Nogai versions (No. 2 and No. 3).

1. In ancient times there lived the saint Baba-Umur; being 15 years old he began to perform miracles. At this time a girl caught his fancy; she caught his fancy, and she became pregnant; having become pregnant, she gave birth to a son, a son named Baba-Tokty-Chachty-Aziz. When he reached the age of twenty-five years, Baba Tokty went out into the world to perform miracles. One day, having reached the sea, he saw a girl sitting on the shore and combing her golden hair with a golden comb. As soon as he approached and came near the girl, she saw him and hid herself under water. 'Am I not Baba-Tokty-Chachty-Aziz?' the saint said. 'Cannot I dive after her?' So he said, and so he jumped into the water after the girl.

Sixty white otavs³ were standing under the water; the girl was sitting in one of them. I would say her eyes were like the sun. I would say her mouth was like the moon... she was amazingly beautiful. Baba-Tokty looked at her and ran back in surprise. But the girl grabbed him by his garb and said: 'Where are you running, Jigit?'⁴ 'I cannot talk with you,' Baba-Tokty replied. 'If I talk with you, I will commit a great sin. Better to let me go; then I will run away from here.' But she replied: 'I've been looking for someone like you and now I've found you. If you leave me, not marrying me, you will commit an even greater sin.' Baba-Tokty stopped and began to think: 'If I do not take this girl, I will undertake a greater sin than if I did; it is better then to take her.' And so he decided to marry her.

Having gotten married, the girl now said to her husband: 'Now that you have become my husband, and I have become your wife, I beseech you to fulfill only three requests: when I take off my boots, do not look at my feet; when I take off my shirt, do not look under my arms; and when I wash my hair, do not look at my head.'

One time Baba-Tokty saw her taking off her boots and looked at her feet. He saw that her feet had hooves (as that of a goat). Another time, when she was taking off her shirt, he looked under her arms and saw her insides (lungs) through her skin. The wife realised this and rose up to heaven, crying out 'Oh, my dear!' and then fell back down to the earth. After some time Baba-Tokty entered her room and saw that his wife was removing the skin from her head and washing her hair, combing it with a golden comb. He looked at the top of her head and saw her brain through her skin.

His wife again realised this and rose to the sky, saying to her husband 'Hey, Jigit! Under my breast is a six-month old baby. He will fly away with me, but I will leave him on the banks of the Nile River, under the walls of the city Kum-Kent, for further I must fly. Go and find him there yourself, exactly where I have said.'

And she flew away. Baba-Tokty-Chachty-Aziz, in search of his child, went to the banks of the Nile River and found a baby wrapped in a silk kerchief under the walls of the city Kum-Kent. And since the child was born in a desolate desert, he named him Edigu.

Having tied the baby to his back, Baba-Tokty brought him to the lands of Tokhtamysh Khan, the ruler of a mighty nation. This nation was Nogai by origin. Baba-Tokty-Chachty-Aziz raised Edigu until he reached the age of three years. He then (later), having given him to some beys (chieftains) to study, himself flew off somewhere. Edigu studied until the age of eight years along with the other children, who equaled ninety in number. One time, having called altogether the children to fight in a field, he

defeated them all, gathered their clothes, folded them in a heap, sat on top of the heap, and said: 'Here I sit on the throne of Tokhtamysh Khan.'

One day it happened that Edigu was walking with some children in a field when he saw two men walking towards them; Edigu told the children that they should not be the first to welcome the coming people. 'If those coming will be the first to welcome, accept their welcome and say to them salaam. If they ask why you were not the first to say salaam, then I will answer for you.' The two men approached and the children did not tell them salaam. 'Why do you not welcome us, children?' they asked. 'Do not you see that we are older than you?' Edigu then replied: 'Who of us is older? Two of you or ninety children?' 'Of course we are older because you are children,' they answered. 'No. If I sum all the ninety children, we will be much older than you and therefore you must first welcome us.' The two men were taken aback by his response. One of the men then began to say to the other: 'Let's tell this child our argument; he shall judge us.' They then called out: 'Hey, child! To the court of Tokhtamysh Khan we go to resolve a dispute between us. Will you resolve our problem?' 'If God puts wisdom in my mouth, I will do it,' Edigu replied. 'This is the father of Alsin, Kok Jaldy the shooter; I'm the son of Kenes, Ken-Janbay. The Edyl and Jayiq⁵ lands belong to me; even a hare that runs through these lands is mine. On the banks of the Jayiq, near White Lake, I saw a lying white hare and went home for a bow, wishing to shoot the hare. But while I was going for the bow, Kok Jaldy (the Blue Mane) killed the hare and took it. Judge for us to whom does the hare belong.' Edigu then asked Kok Jaldy: 'How far were you when you shot at the hare?' Kok Jaldy indicated an approximate distance. Edigu then said: 'If I tell you both my decision, will you agree with it?' The two said they would agree. Edigu then gave a hare to one of the children and put him in the field at the very same distance at which Kok Jaldy had shot at the hare. He then told Ken-Janbay: 'Shoot! If you shoot the child, give a kun; if you shoot an arrow into the field, let the child go; if you shoot the hare, it shall be yours.' 'I am not satisfied with your decision,' Ken-Janbay said. Having grown angry, he went to Tokhtamysh Khan but soon returned back again, saying: 'Make the child hold the hare. I'll shoot!' He then shot the hare, exactly in the place it was assigned in the field without touching the child.' 'The hare that you saw then belongs to you,' Edigu said. But Kok-Jaldy the shooter was dissatisfied with the decision and, having grown angry, went away. Ken-Janbay and Kok-Jaldy the shooter went to Tokhtamysh Khan, and Kok Jaldy began telling him about the dispute and the decision of the boy. Having listened to them, Tokhtamysh Khan then said: 'This decision is fair, I am not able to make a more just decision.'

Having now reached the age of eight years, Edigu finished his studies and hoped to get hired to tend sheep to earn some money. Standing in a field, he saw four people driving a lame animal. The four people saw Edigu and said to each other: 'Let's tell our business to this shepherd with the dirty ass; let him judge us.' The four approached and said: 'All four of us are brothers; we all have a single property from our inheritance, this lame animal. The head of the animal is owned by the eldest brother, while each of us has one leg. This lame animal entered the ploughed field of one *kaur*⁶, and now we owe four hundred tilyas⁷ for the four steps it left in the ploughed field. We are now arguing on this issue. Can you judge our dispute?' Edigu replied, 'If God helps me then I shall decide the case. Who of you owes the lame leg?' 'I do,' the youngest of the brothers replied. 'Well, you do not have to pay. The elder brother who owns the head of the lame animal must pay two hundred tilyas because the eyes saw and the head led the whole body; the two middle brothers must pay a hundred tilyas each; the owner of the lame leg must not pay anything since healthy legs dragged the lame one and made the four steps in the field.' The three elder brothers, being dissatisfied with this decision, went to Tokhtamysh Khan. Once they announced that they were asking for justice, the younger brother told the Khan that they had already received a decision. The Khan asked how they had been judged, and the younger brother told him the story of their judgment. Afterwards Tokhtamysh said that he was not able to propose a more just solution. And so the four brothers left.

Once again it happened, when two men were leading a four-year male camel and, upon seeing Edigu in the field, said to each other: 'Let this shepherd with the dirty ass judge us.' They approached and said: 'Hey, shepherd! We have an argument regarding this camel. Judge us and tell us your decision!' 'Very well!' Edigu said. Then one of those disputing began: 'I lost this camel when it was one year old, and now when it is four years old, I have recognised it. This man is the thief who stole my camel.' 'Come on, now you tell me!' Edigu said referring to the other man. The other man then began: 'This camel was borne by my own female camel, and my own male camel is his father. The dispute on the part of this man is a wrongful accusation.' Then Edigu said to both the disputants: 'Do you have a camel who is the mother of this camel?' And when they both said that they did, he ordered them both to bring the mothers. He then took a lasso, wrapped the atan's⁸ hind legs with it, and started to roll the tied rope with a stick.

To the wail of the tortured atan one of the camels cried out. Then Edigu said to its proper owner: 'Take the atan for it is yours, and this person is truly a thief.' But the thief, dissatisfied with Edigu's decision, went to Tokhtamysh Khan and told him about the shepherd's decision. Afterwards Tokhtamysh Khan said: 'I am not able to propose a more just solution.'

Again while Edigu was grazing sheep, it happened that two women, two men, and one child between them were going across the steppe and arguing. Upon seeing Edigu, one said: 'What will happen if this shepherd with the dirty ass judges us?' 'Let him judge!' the others said, and all four of them approached Edigu. 'Hey, shepherd! Here we are in a dispute with one another, and we are in need of being judged. Will you decide our dispute?' Edigu agreed. Then one man and one woman said that this child was lost when it was a baby, and that now they recognise him as their own. Meanwhile, another woman began to say: 'This is my own child. I carried him in my belly for ten months; my sacrum was bent for ten months because of him, and the words of this woman are false.' Then Edigu took the child and gave his hand to both women, each of whom called herself a mother, and, raising a sword over the child, said: 'I will split this child into two halves for you,' truly intending to cut him. The first woman then said, 'Do what you want!' But the other cried out: 'Do not kill the child! Better give him to her! When the child grows up, he will find me, his real mother.' Edigu then said to her: 'Take your child for he is really yours!' But the first woman was dissatisfied with this decision and went to Tokhtamysh Khan for a judgment. When all four of them came to the Khan and told him what decision the shepherd had made, the Khan stated that the decision was fair, saying: 'I am not able to propose a more just solution for you.'

At last, Tokhtamysh Khan said: 'Who is this, he who decided such intricate matters four times? Bring him to me.' The Khan's retinue immediately brought Edigu to him. 'Are you the man who decided four cases in the desert?' the Khan asked. 'I am your humble servant,' Edigu replied. 'What's your name?' 'Edigu.' The Khan then ordered to take off his ragged clothes.

Here we stop the full story of Walikhanov's text and will tell Edigu's story in brief. Edigu pacified Tokhtamysh's enemies, pacified the kingdom, and became close to Tokhtamysh. One time the Khan's wife told the Khan that the destiny of this hired servant (that is, that of Edigu) was above even the Khan's own destiny. 'Hey, you stupid woman!' the Khan said. 'How did you know that his destiny is above mine?' The Khan's wife explained that she saw how the Khan involuntarily shuddered in fear whenever Edigu entered the Khan's headquarters; the Khan's wife offered, in order to check the truth of her statement, to attach the flap of the Khan's dress to the felt on which he was sitting⁹. Tokhtamysh then conspired for Edigu's death. On the advice of his wife, the Khan ordered to prepare an arab and sarab¹⁰, to make a sixty-headed¹¹ tent, and to gather people and make Edigu a peddler. When being entertained by people, Edigu would get intoxicated and then the Khan would kill him. A six-year-old boy, the son of Edigu's friend, heard this conversation and warned Edigu. And so the big tent was set up, people were gathered, and nine knights were placed at the entrance to the tent and sixty athletes in the steppe, all waiting in ambush. Edigu was indeed made a peddler. He tied goat fur to himself and drank only half of what was given, while the other half he poured into the fur. At this time Angusynt cut the left stirrups of the guests' saddles, climbed to the top of the tent, and sang out: 'Your large-hoof horse is ready,' etc. This was the agreed upon sign. Edigu flew out of the tent like an arrow and jumped on his horse, Torlamboz. The nine knights, who were all standing in the doorway, struck one another with their knives.

Edigu then fled across the Volga River. Ken-Janbay and the other knights caught up to him and invited him to come back across the Volga River. Edigu refused to return to Tokhtamysh. Running even further, he then came across a tent. Inside there he met a girl, the daughter of Sa-Temir-Khan, himself driven away by the alp¹² Deu-Kaban. He asked the girl to tell him when the alp would fall asleep. The girl sent him seven and a half boursaks¹³; Edigu understood that she wanted him to come at noon on the eighth day. On the eighth day Edigu returned, and the daughter of Sa-Temir-Khan then bared the breast of the sleeping alp; Edigu shot an arrow into his breast and cut the alp's body into two halves. However, the dying alp still managed to grasp the tail of Edigu's horse Torlamboz. Edigu then drove the princess to her father and married her. She gave birth to a son, a son who left to avenge his father. The son killed Tokhtamysh and brought his head back, although his father had ordered him not to kill Tokhtamysh¹⁴. Meanwhile, in order to create strife between Edigu and his son, Ken-Janbay the knight persuaded Edigu to share his bed, not only with his own wife but also, in the absence of his son, with his son's bride. When Edigu's son returned, he saw his father sitting between the two women and entertaining them. He shouted so loudly that Edigu's eye jumped out of its socket, and Edigu's leg broke¹⁵.

2. Edigu originated from Baba-Tuklas (Chakli-Aziz) and was of the 9th generation.

The Nogai legend about the origin of Baba-Tuklas is as follows: on his way one day a man saw a skull with an inscription on the forehead. It read: 'Alive, I killed innumerable people; dead, I can kill forty people.' The finder burnt the skull, collected the ashes in a bundle, brought it home, and gave it to his daughter for safekeeping. Out of curiosity the daughter unfolded the cloth and upon seeing white powder, took some with her finger. She then tasted it, after which she got pregnant and gave birth to a son, Baba-Tuklas.

When he was still a pupil, the boy displayed an extraordinarily acute mind. Once the Khan of that country had a dream that he was sitting on a bridge across a large river. Dragons emerged from the river—twenty from one side of the bridge and twenty from the other—and they wanted to eat him. After the dream the Khan called his scholars and demanded that they explain his dream, but the scholars could not do this. Then Baba-Tuklas suggested that he would solve the Khan's dream. The scholars brought him to the Khan. Baba-Tuklas begged the Khan to kick the scholars out for he was embarrassed by the presence of his teachers; and after they went out, he told the Khan that the dragons were his forty scholars, who were working for his wife. They would go to her one by one in the form of black, old women. The Khan then ordered they watch for this. And so it turned out that the interpretation of Baba-Tuklas was right. The scholars were killed and the words written on the skull with respect to the forty victims were thus fulfilled. Therefore, Edigu's descendants are called 'aksuyaks' or 'white bone.'

One time, Baba-Tuklas (the holy man) met on the seashore a girl who, having previously flown in the form of a pigeon, had now turned back into a girl. She was sitting on the beach and combing her golden hair with a golden comb. However, as soon as he approached the girl, she saw him and plunged into the water, leaving the kebe, or pigeon's skin, on the shore. According to some people, she was the daughter of the sun (Kun-Sulu); others believe that she was the daughter of Albasta the spirit. Having been left on the beach alone, Baba-Tuklas said: 'Am I not Baba-Tuklas-Chakli-Aziz? Cannot I dive after her?' So he said and so jumped into the water after the girl.

Further on is identical with the text of the Kirghiz version. Baba-Tuklas finds the girl there and wants to escape from her. The girl keeps him with the words that if he does not marry her, he would undertake a greater sin than if he were to marry. The passage then stops there.

3. Edigu descends from Baba-Tuklas-Azi in the ninth generation. Kutlu-Kiya (Azi) was his father. One time this holy man met a girl who, having flown in the form of a pigeon¹⁶, plunged into the water leaving the pigeon's skin on the shore (some people think this was the daughter of the sun Kun-Slu, others think this was the daughter of a spirit). Kutlu-Kiya seized keban. 'Let me go!' No! 'You shall not own me!' Agreement: 'Do not look at my head, under my arm, and at my heels.' Further on is identical to the Kirghiz version. Having found (...), Kutlu-Kiya went to Ulus to Tokhtamysh, to whom he was close. Tokhtamysh had a bird...¹⁷. Sa-Temir Khan asked Tokhtamysh for an egg of this bird (to raise) for himself a chick. Tokhtamysh did not give it, after which Sa-Temir turned for help to Kutlu-Kiya, who then stole an egg and sent it to Sa-Temir. This bird gave three eggs; the stolen one was shown (sic). Tokhtamysh, having learned about the theft, cut off Kutlu-Kiya's head and also wanted to kill his son Edigu. However the bey, whom Kutlu-Kiya had instructed to raise Edigu, gave his own son instead to be killed. Edigu then tended to the sheep together with other children. Now goes the first judgment of Edigu, concerning a duck shot in another's lake. As a result of this case, Tokhtamysh declared the boy fit for...¹⁸. Being at the Khan's court, Edigu decided two other cases that the Khan and all his beys could not solve. The first was a dispute about a child between two women, the second, between two beys about...¹⁹. The dispute between the two women about the child was the same as that about the Kirghiz camel—throw the child into the water and his true mother would follow²⁰. The Khan's wife (some say as a result of rejected love) again said to the Khan that the young man was dangerous to the Khan, would darken his greatness in the future, and causes the Khan to involuntarily shudder and jump up with his (pillow) whenever he comes. Then Tokhtamysh gathered his people and demanded that...²¹ this young man, because he should be not from an ordinary family judging by his prowess, and meanwhile he put some people.

Notes

¹ A traveller of the Kirghiz steppes in his forties.

² Argyns is one of the largest dynasties in the Middle Horde.

³ Otavs are generally yurts for newly married; this name (of the yurt) is retained (later); in the steppe yurts of married sons are called otavs if compared to those of their fathers (according to S. Walikhanov).

⁴ Jigit is a 'young man.'

⁵ The Edyl River is the Volga; the Jayıq River is the Ural (Yaik).

⁶ There is no explanation of this word in Walikhanov's papers.

⁷ Tillya is a golden coin.

⁸ Atan is a male camel.

⁹ Following the actions performed according to the Khan's wife's words, the following episode was included. The Khan's wife poured katyk (fermented cow's milk) into a cup, urinated into the katyk, and gave the mixture to Edigu who had come into the tent. He cut the katyk into a cross with a knife, mixed the middle, and drank. Asked by the Khan's wife whether the katyk was good, he replied: 'If the dish was not so old, it would be delicious.' Tokhtamysh explained to his wife that Edigu was speaking about her, but the Khan's wife explained to Tokhtamysh that cutting katyk into a cross meant that he would divide Tokhtamysh's people into four parts, and mixing the middle meant that a rebellion would start among the people.

¹⁰ Probably wine, similar to the strongest varieties of wine of the Mongols, the so-called ardza and hardza.

¹¹ The upper ends of lathes in the kerege (grid) of the tent are called heads.

¹² Alp is a giant.

¹³ Boursak is small flour balls fried in fat.

¹⁴ In the oldest version Edigu probably rebuked his son for raising his hand against the tsar.

¹⁵ The tale about Edigu was recorded by Radloff in two editions, Baraba and Kirghiz, and placed in his Proben, vol. III, and vol. IV, 35. In the Baraba tale Tsanpay was the secret friend of Edigu (that is, Ken-Janbay?): there is no Angusyn. Also the daughter of Sa-Temir-Khan was taken away by a Russian knight, Anisim (Orus Nadir Anisym).

¹⁶ Mongolian stories about a bird-girl include one, in which the hero, stealing the swan's clothes of the bathing divine maiden, was called Odyuge-bo (see the Essays on the North-Western Mongolia, IV, 24); the Kirghiz people sometimes represent Edigu as part of the Edigu-bi pair. Odyuge-bo was one-eyed; Edigu also became one-eyed as a result of his son's cry; in the Baraba edition (Radloff's) he becomes one-eyed after struck by a balalaika.

¹⁷ Was not finished.

¹⁸ Was not finished.

¹⁹ Was not finished.

²⁰ Is not similar to the above printed Kirghiz version.

²¹ Was not finished.

 Abaqa (Abağa) — 43, 193, 514, 516, 556, 567–569
 Abd-al-Razzaq Samarqandi (Kamal-ud-Din Abd-ur-Razzaq ibn Mawla Jalal ad-Din Ishaq Samarqandi) — 46, 364, 736, 741, 749, 754
 Abdallah Kashani — 44
 Abdallah — 301, 318, 319
 Abraham Cresques — 62
 Abu al-Faraj (Abu'l Faraj) — 107, 109, 111, 190, 192
 Abu al-Ghazi (Abu-l-Ghazi) — 82, 197, 251, 254, 256, 257, 260, 348, 377, 455, 680, 684, 685
 Abu Bakr — 190, 363, 459, 460, 623, 624
 Abu Sa'id — 44, 45, 48, 253, 571, 572
 Afanasiy Nikitin — 53
 Ahmad Jalairid — 738, 739
 Ahmad Khan (Ahmed, Ahmat, Ahmut) — 759, 760
 Akhmarov (Äxmärev) — 625
 Aksak Timur see Timur, Tamerlane — 223, 421, 433, 448, 449, 485, 738, 739–745, 749
 al-Bakri — 79, 619
 al-Garnati — 675
 al-Ghaffari (Ahmad ibn Muhammad ibn 'Abd al-Ghafur al-Qazwini, Ahmad al-Ghaffari) — 48, 227, 364
 al-Kalkashandi — 40, 226, 336, 348, 359, 364, 405, 431, 455, 456, 478, 599, 691
 al-Kholi — 237, 478, 638, 690, 738
 al-Malik an-Nasir — 359, 569, 713
 al-Maqrizi (Maqrizi) — 107, 112, 361, 478, 567, 574, 691, 715, 716
 al-Marwazi — 79, 675
 al-Masudi — 351, 478
 al-Mawsili (Ibn Nejam Abdarrahman ibn Abdarahman ibn Nasr al-Mawsili) — 678
 al-Nasawi (Shihab ad-Din Muhammad ibn Ahmad ibn Ali ibn Muhammad al-Nasawi) — 39, 82, 127, 138, 367
 al-Nasir li-d-Din — 311–314
 al-Nuwayri — 40, 181, 333, 365, 547, 561, 630, 63
 al-Qazwini — 48, 236
 al-Umari — 40, 81, 172, 203, 226, 231, 279–281, 283, 296, 300, 334, 351, 356, 364, 365, 369, 370, 394, 395, 396, 405, 431, 507–512, 558, 562, 564, 567, 630, 647, 674, 675, 677, 680, 691, 713
 Ala ad-Din Atâ-Malek Juwayni see Juwayni — 42
 Ala al-Din Muhammad-i Khotani — 134
 Ala al-Din Muhammad — 99, 134, 135, 331
 Alan Gua — 71, 90, 189, 376, 683
 Al Atuna (Yeli Khatun) — 97, 133
 Alchidai — 181
 Alekseev — 6, 249, 388
 Alexander the Great (Iskander, Iskander Dhul-Qarnayn) — 366, 478, 679, 760
 Alexander Yaroslavich (Alexander Nevsky) — 4, 13, 433, 522, 762
 Alexius, Metropolitan — 53, 348, 398, 496
 Alfonso V — 63
 Alghu — 186, 514, 555, 760
 Algirdas — 549, 551, 728, 731
 Ali-Zade — 26, 514, 559–561, 563, 564, 568, 571, 572, 632
 Ali ibn al-Athir ('Izz al-Din Abu al-Hassan Ali al-Jazari) — 39, 40, 87, 141, 142, 175, 176, 304, 365, 367, 455, 628
 Alikhova — 64, 221, 222, 400, 401, 500–502, 653, 655, 656
 Ali Rahim — 27
 Alishev — 31, 369, 468, 478
 Ali — 113, 236, 273, 349, 623, 624, 643, 741, 756
 Allsen — 34, 87, 140, 144–147, 150, 151, 163, 254, 304, 306, 616
 Alp-Arslan — 81
 Altun Tash — 79
 Ambaghai Khagan — 77, 92, 578
 Ambrogio Contarini — 238, 280, 282, 283, 285–287, 303, 342, 343, 378, 379, 396, 423, 428, 431, 495, 501, 529, 593, 644, 748
 an-Nasir ibn Qala'un — 39, 40
 an-Nasir — 39, 40, 471–473, 478, 569, 573–575
 Andrea Bianco — 63
 Andrei of Polotsk — 747
 Andronikos III — 41, 538–540
 Andronikos II — 300, 457, 535, 538–540
 Angelo Freduci — 63
 Anushteginids — 132, 628
 Arabshah — 81, 263, 302, 334, 347, 361, 484, 499, 679, 680, 704, 734, 742, 743, 745, 747, 748, 749, 752, 754
 Ardier — 132
 Arghun Aqa — 121
 Arghun — 43, 56, 258, 514, 569, 597
 Arghyn (Arghun) — 181, 344, 347, 348, 350, 351, 353, 354, 370, 379, 465, 466, 719, 737, 758
 Ariq Böke — 4, 186, 187, 192, 312, 313, 355, 471, 555, 559, 563, 631
 Aristov — 81, 82, 361
 Arslan Khan — 97, 133, 137, 391, 501, 662
 Arslanova F.Kh. — 585, 591, 592
 Arslanova — 16, 24, 39, 149, 151, 205, 359, 360, 370, 458, 552, 558
 Arzyutov — 259
 Asanbuka — 83
 Ascelin — 56, 522
 Ashin — 68
 Atlasi — 26
 Aziz Sheikh — 318, 319, 321, 481, 725, 731–733
 Bachman — 151, 163, 164
 Bagrov (Bagrow) — 62, 63
 Bahadur — 44, 254, 257, 524, 680
 Baibars — 40, 60, 115, 257, 258, 284, 294, 300, 301, 337, 359, 365, 378, 440, 463, 531, 536, 537, 560, 561, 566, 573–575, 618, 632, 643, 652, 679
 Baidar — 62, 63, 168, 507
 Bakhrushin — 340
 Balakan (Balagu, Balaha) — 257, 258, 514, 516, 564, 565
 Balard — 303, 304, 306–308, 408, 409, 457, 461–463
 Ballod — 10, 27, 64, 225, 230, 232, 605, 626, 646, 673, 764

- Banduchar (Baltuchak) — 147
 Banzarov — 12, 689
 Ban'duchar — 82, 83
 Barak (Barak Khan, Borak) — 251–253, 264, 275, 465, 556, 567, 756, 757
 Barakchin Khatun (Barakchin) — 118, 351, 630
 Barbaro — 238, 280–287, 301, 303, 342, 343, 378, 379, 396, 423, 428, 430, 431, 495, 501, 529, 593, 644, 748
 Barchuk — 96, 133, 137, 391, 687
 Bargut — 347, 354
 Bartold — 3, 8, 10, 13, 19, 23, 24–26, 41, 42, 44–49, 81, 84, 108, 110–115, 252, 256, 257, 274, 337–339, 342, 357, 358, 362, 372, 379, 382, 455, 465, 553–555, 557, 561, 562, 629, 630, 687, 690, 736, 744, 760
 Baryn (Bahrin) — 331, 344, 350, 351, 353, 354, 370, 379, 464–466, 551
 Bashkirov — 207, 650, 653
 Batachi — 69
 Battal G. (Taymas) — 27, 625
 Batu (Batu Khan) — 4, 9, 13, 17–20, 48, 50, 55, 87, 88, 110, 112, 113, 115, 118–120, 127, 145, 147–173, 176, 177, 182–186, 188, 191–195, 197, 201, 202, 204, 221, 229, 230, 239, 250, 251, 254–258, 293, 294, 305, 308, 311–313, 315–319, 328, 330–333, 338, 341, 347, 348, 351–353, 356, 357, 359, 360, 363, 364, 382, 392, 395, 396, 412, 414, 426, 438, 439, 452, 456, 457, 467–472, 472, 475, 497, 506, 508, 509, 514, 515, 522–527, 529, 530, 542, 544, 554, 555, 560–562, 564, 565, 568, 570, 578, 580, 581, 584, 587, 588, 596, 598, 600, 616, 619, 621, 629–631, 641, 687, 689, 716, 726, 728, 730, 762, 766, 768
 Bayan — 153, 164, 165, 251
 Bayezid — 57, 738, 744
 Baypakov — 16, 65, 261, 274, 276, 277, 585, 590–592, 602
