Academic Publishing Board of the Original Edition in Russian:

Rafael Khakimov (Sh. Marjani Institute of History of the Tatarstan Academy of Sciences, Russia)

Ilmur Mirgaleev (Sh. Marjani Institute of History of the Tatarstan Academy of Sciences, Russia)

Vadim Trepavlov (Institute of Russian History of the Russian Academy of Sciences, Russia)

Ilya Zaytsev (Bakhchysarai Historical, Cultural and Archaeological Museum-Preserve, Institute of Oriental Studies of the Russian Academy of Sciences, Russia)

Uli Schamiloglu (University of Wisconsin, USA)

Dariusz Kołodziejczyk (Institute of History of the Polish Academy of Sciences, Poland)

Anton Gorsky (Lomonosov Moscow State University, Russia)

Halil İnalçık (Bilkent University, Turkey)

István Vásáry (Eötvös Loránd University, Hungary)

Damir Iskhakov (Sh. Marjani Institute of History of the Tatarstan Academy of Sciences, Russia)

İlyas Kemaloğlu (Mimar Sinan Fine Arts University, Turkey)

Khatip Minnegulov (Kazan (Volga Region) Federal University, Russia)

Marsel Akhmetzyanov (Galimdzhan Ibragimov Institute of Language, Literature and Art of the Tatarstan Academy of Sciences, Russia)

Dina Mustafina (Kazan (Volga Region) Federal University, Russia)

Tahsin Gemil (Babeş-Bolyai University, Romania)

Aleksandr Nesterov (Ural Federal University named after the first President of Russia B. Yeltsin, Russia)

Aleksey Matveev (Omsk Regional M. Vrubel Museum of Fine Arts, Russia)

Igor Belich (Institute of the Problems of Northern Development, Siberian Branch of the Russian Academy of Sciences, Russia)

Rafael Valeev (Kazan State University of Culture and Arts, Russia)

Mária Ivanich (University of Szeged, Hungary)

Mikhail Gorelik (Institute of Oriental Studies of the Russian Academy of Sciences, Russia)

Editor in Chief:

Rafael Khakimov (Sh. Marjani Institute of History of the Tatarstan Academy of Sciences)

Academic Editor of Volume 4:

Ilmur Mirgaleev (Sh. Marjani Institute of History of the Tatarstan Academy of Sciences)

Executive Secretary of Volume 4:

Rezeda Abyzova (Sh. Marjani Institute of History of the Tatarstan Academy of Sciences)

Editorial Board of Volume 4:

Rafael Khakimov (Sh. Marjani Institute of History of the Tatarstan Academy of Sciences, Russia)

Ilmur Mirgaleev (Sh. Marjani Institute of History of the Tatarstan Academy of Sciences, Russia)

Vadim Trepavlov (Institute of Russian History of the Russian Academy of Sciences, Russia)

Ilya Zaytsev (Bakhchysarai Historical, Cultural and Archaeological Museum-Preserve, Institute of Oriental Studies of the Russian Academy of Sciences, Russia)

Damir Iskhakov (Sh. Marjani Institute of History of the Tatarstan Academy of Sciences, Russia)

Uli Schamiloglu (University of Wisconsin, USA)

István Vásáry (Eötvös Loránd University, Hungary)

FOREWORD

Ilnur Mirgaleev

The large Tatar nation is comprised of various groups that fully correspond to medieval Tatar states. Kazan, Siberian, Crimean, Kasimov, Astrakhan, Belorussian and Lithuanian, Dobruja Tatars... Kazan, Siberian, Crimean, Astrakhan khanates, the Nogai Horde, political entities in the lands of the Grand Duchy of Lithuania, in the Balkans... The Tatar people emerged in the Golden Horde period from various local Turkic tribes, primarily the Bulgars and Kipchaks, and other Turkic peoples, such as Tatar-Mongols and eastern Kipchaks, newly arrived from Central and Middle Asia. The period of the Golden Horde's collapse continued for many years and almost the entire 15th century witnessed the gradual disintegration of the once mighty Turkic-Tatar state along with the emergence of new states—the Tatar yurts. Virtually all Tatar states were conquered by the new and powerful Muscovite state that, for several centuries, was subordinated to the Tatar khans of the Golden Horde and the Tatar yurts. The Crimean Khanate, the last of these states, was annexed to Russia in the 18th century. Despite the relatively short existence of the Tatar states (except for Crimea), they left a deep mark on the history of Eurasia. This was the time when the Turkic-Tatar language dominated a large part of Eurasia. Its influence continued up to the early 20th century. Ever greater numbers of Tatars were becoming involved in the building of the Muscovite state and, when they all found themselves in one state, like in the period of the Golden Horde but, this time, within the Russian empire, they did not disappear and, to this day, continue to exist mostly as a single nation. This was in spite of tremendous losses, active assimilation, and cultural and religious pressure.

The Tatar states pursued an active foreign policy. In essence, they remained the same as the Golden Horde, though in a slightly truncated form and without one capital. However, the concept of Takht Eli, or the Throne Place,

evoked for a long time the past magnificence of Sarai, the capital of the Golden Horde, while the Great Horde (which was the self-designation of the Golden Horde) was not only the name of the actual Great Horde but also, for example, the name of the Crimean Khanate. The Tatar khanates called their states 'yurts',—that is, 'houses' of the Jochi ruling families. In general, the inhabitants of all Tatar khanates were clearly aware of the former common state, single dynasty, people, culture, religion, language, and they all continued to call themselves Tatars.

For various reasons, the people in Tatar khanates moved from one such state to another. Representatives of khan families could be invited to rule in other Tatar states. All the rulers of Tatar khanates were considered to be a single dynasty. For example, the descendants of both Ulugh Muhammad, the last ruler of the unified Golden Horde, and representatives of the Great Horde dynasty from Crimea, Siberia, and Kasimov sat on the throne of the Kazan Khanate. They came from virtually all Tatar khanates.

The Tatar khanates occupied enormous territories. Tatars included nomadic, settled and urban people. They were actively involved in trading, and raised cattle and horses, cultivated land, built cities, developed the forests and were excellent goldsmiths and blacksmiths...

The Tatars continued to be good warriors. They were essential to the rising states of Eastern Europe and Anatolia. The Tatar states were involved in varied and sometimes opposing coalitions. Ulugh Muhammad, Ahmad Khan, and the Giray dynasty made attempts to unite the Tatar khanates. However, the process of decentralization was intensified by the policy of the Ottomans and the conquests of the Muscovite state. From the 16th century, Muscovy began laying claim to the Tatar yurts, the political legacy of the Golden Horde. One by one they were conquered by Moscow and ceased to exist entirely.

* * *

The aim of volume 4 ('Tatar States (15–18th Centuries)' of the seven volume History of the Tatars Since Ancient Times) was to create an objective account of the history of the Tatar states. The editors did not aim to impose any conditions on the authors. The authors were selected solely based on their professional caliber.

The first structure of this volume was prepared by D. Iskhakov. After the preparation of this volume was assigned to I. Mirgaleev, he made some minor changes to its structure, but overall it remained the same.

The authors of the fourth volume are noted experts, both Russian and foreign, including V. Trepavlov, I. Zaitsev, A. Gorsky, D. Kołodziejczyk, D. Iskhakov, A. Bakhtin, I. Izmaylov, H. Minnegulov, M. Ahmetzyanov,

I. Fomenko, B. Rakhimzyanov, A. Nesterov, A. Matveev, Tahsin Gemil, R. Pochekaev, N. Abdulvapov, Yu. Khudyakov et al.

The Appendices to the volume were prepared by V. Trepavlov, N. Seytyagyayev, D. Mustafina, V. Gribovsky, I. Mustakimov, A. Nesterov, M. Gatin, L. Abzalov, I. Izmaylov, I. Mirgaleev.

The list of sources and literature, list of abbreviations, index of names, and the political and geographic index were prepared by R. Abyzova, A. Akhtyamova, L. Giniyatullina, M. Ismagilova, E. Sayfedinova, Z. Khafizov et al.

The illustrations were provided by the authors; the maps were drawn specifically for this volume (author: A. Astaykin). The maps have been approved by the authors of the relevant sections.

INTRODUCTORY SECTION. OVERVIEW OF SOURCES AND LITERATURE

Chapter 1. General Characteristics of the Post-Golden Horde Period

Vadim Trepavlov

In the history of many peoples of Eurasia, the period stretching from the 15th century to the 17th century was marked by the collapse of the Ulus of Jochi and the formation of new states in its place. It is evident that the institutional links between the parts of the former Golden Horde at that time were arranged in a specific system. This system was based on the three factors: on the inertia of the former unity in the collapsed Ulus of Jochi; on the royal prerogatives of the Jochi family not limited to specific 'post-Horde' yurts and capital residences; and on the relative ethnic homogeneity of the population in the vast space of the Desht-i Qipchaq and certain neighboring regions¹.

¹ Probably, this interstate (and supra-state) paradigm somehow also included the former Chagatai Transoxiana, after the forcing out of the Chagataid Ulus Khans from power by Tamerlane and the subse-

Historians have already expressed similar opinions. For example, M. Usmanov wrote about the unity of the ruling house of Jochi for the entirety of the former Golden Horde space, which was the reason why the Crimean khans were invited to Kazan, and why Kazan princesses married into the Giray dynasty and Nogai princesses married the rulers of Kazan [Usmanov, 1997, p. 43].

D. Iskhakov believes that the khanates had a relatively similar state structure with the yurts of ruling tribes, and the representatives of these tribes could freely move from one khanate to another to settle on the territory of their family domains [Iskhakov, 2009c, pp. 7–9].

O. Gayvoronsky sees the attempts to restore the unity of the Horde in the active policy of

quent restoration of the power of Chinggis Khan's descendants by Muhammad Shaybani.

the Crimean Khan Mengli Giray towards his Tatar neighbors and rivals. His most significant success in this endeavor came when he defeated the Great Horde in 1502, annexed part of its territory and took the population to Crimea [Gayvoronsky, 2007, p. 2]. However, his son Mehmed Giray was unable to further expand this policy, as he was killed by the Nogai soon after capturing Astrakhan in 1523. Afterwards, the claims of Crimea to primacy in the former Golden Horde became purely nominal.

I. Zaitsev convincingly demonstrated the close cultural ties between the Volga region khanates, Crimea, the Nogai Horde and Central Asia. He showed that 'despite the political collapse, post-Horde states represented a single cultural space linked by common traditions, language, science, literature and education' [Zaitsev, 2009a, p. 33].

We should stress that this is attributed to inertia and the remnants of the single statehood, because in reality there were no noticeable centripetal processes in the successor states of the Golden Horde. However, it is possible that there was an amount of nostalgia for the days of the Horde. A number of sources allow us to conclude that the height of stability in the great power that came during the reigns of Uzbek and Jani Beg was considered a 'golden age'.

Perhaps, today's historians place too much emphasis (or modernise) on interstate relations, including the borders between the yurts of the 15th and 16th centuries. There is an established view in the historiography that the Ulus of Jochi had a clear division into two wings with mysterious, 'floating' colour-coded designations that are difficult to attribute. Sources describing the events of the 13th century (William of Rubruck, Rashid al-Din) allow us to conclude that there were two independent khanates and khans. However, there is no clear picture for the following century. The Begs of the right and left wings continued to exist, but it is not clear how far this affiliation relates to the division of the state in real terms.

The writings of the Turkic chroniclers of the 16th and 17th centuries (Abu al-Ghazi, Qadir Ali Bek, Ötemish Hajji, the anonymous authors of *Daftar-i Chinggis-name*) contain virtually no mention of the winged territorial structure.

Except perhaps in the chronicle of Ötemish Hajji, where he wrote that Chinggis (Genghis) Khan had given to Sain ~ Batu the 'right wing' along the Itil river and to Idzhan ~ Orda the 'left wing' along the Syr Darya river; and also told a story (closer to a legend) about the division of differently coloured yurts between Chinggis Khan's grandchildren, the sons of Jochi [Ötemish Hajji, 1992, pp. 92, 93]. However, in the writings of the same Ötemish Hajji, the relationship between the rulers and people of the 'wings' does not in any way resemble the coexistence of two neighboring states.

It appears that at some point in the history of the Ulus of Jochi, there was a time when the division into 'wings' had become a nominal abstraction designating the rank of tribes and their leaders. Perhaps this change should be associated with the extreme strengthening of the 'right wing' of the state in the first half of the 14th century. This process appears to have started under Khan Tokhta who, in 701 A.H. (1301–1302) issued a *yarliq* to Bayan to reign in the 'left wing' [Rashid al-Din, 1960, p. 68]. This was followed by an attempt of joint action by Uzbek and Bayan against the Hulagu dynasty, the overthrow of Mubarak, the Khan of Sygnak (who tried to break away from Sarai), the reign of Tini Beg, the son of Uzbek, in Sygnak, *yarliq* of Jani Beg to Chimtay and the military support provided by the latter in the struggle for Sygnak... (for more details, see [Uskenbay, 2002, pp. 25–31]). The nominal principles of seniority of left over right and the priority of descendants of Orda Ichen over those of Batu were disregarded in this situation. What happened was a *de facto* unification of the state territory under Sarai rulers. This is illustrated by the struggle of the eastern aristocracy for the capital on the Lower Volga in the second half of the 14th century. Later, in the 16th century, when the Eastern Jochi dynasty monarchs began to look quite powerful amid the total collapse of the 'right wing' khanate, foreign observers (Iran) had the impression that the main throne of Jochi dynasty was located in the eastern part of Desht-i Qipchaq: 'Kasim Khan [Kazakh—V.T.]... became the king of Desht... Haqq-Nazar Khan, the son of Kasim Khan, took the throne after his father

and is now the ruler of Desht' [Collection of works, 1941, p. 212].

Russian contemporaries, who lived closer to Tatar holdings and, undoubtedly, knew more about this matter, did not report the Horde's unity over such an extended period. In the chronicled lists of the 'Horde's kings' compiled in the second half of the 15th century, the last of the khans is called 'Zedi-sultan' [Complete Collection of Russian Chronicles, 23, 1910, p. 168], i. e. Jalal al-Din, the son of Tokhtamysh, or 'Zedi-sultan Bulkhartan' [Complete Collection of Russian Chronicles, 28, 1963, p. 143]¹.

Naturally, the Crimeans had their own views on the continuity of power and promoted their own succession of rulers. In 1506, while attending the feast of the King of Poland and Grand Duke of Lithuania Alexander Jagiellon, the envoys of the Crimean khan recalled the traditional ties between Lithuanians and Tatars by citing the names of those who preceded their Khan Mengli Giray, including 'Tokhtamysh, Chelegdin, Perberdi, Kebeg, Keremberdi, Kaderberdi [all were distorted names of the sons of Tokhtamysh—V.T.], Magmet Silehmat [that is, Ulugh Muhammad² and Sayid Ahmad.—V.T.], Azhi Kgiray, Mordovlat [Nur Devlet.—V.T.], Mendi Kgiray' [Lietuvos, 1994, p. 53]. Therefore, neither the protégés of Edigu in 1400–1410, nor the khans of the Great Horde, the descendants of Küchük Muhammad, and certainly not the rulers of breakaway regions of the Horde in the Middle Volga area and across the Volga were considered legitimate monarchs. For Bakhchysarai politicians, from

the mid-15th century, the legitimate power in the Horde was in the hands of Hacı Giray ('Aji Kgiray') and his descendants.

The independent states that emerged in the territory of the Ulus of Jochi were usually designated as 'yurts' in the Turkic languages and, in Muscovite and Lithuanian sources, they were called 'hordes'. We can identify a chronological divide in the historiography, after which the Russian designation of the Ulus of Jochi as 'the Horde' was replaced by 'Hordes' in the plural. This is a charter of treaty between Ivan III and his brother Boris Vasilyevich Prince of Volotsk, dated February 13, 1473: 'As for the Hordes [instead of what was formerly referred to as "the Horde"—V.T.], brother, we, as the Grand Prince, know and understand what they are. And you do not understand what the Hordes are... And if I do not give to the Hordes, I will not take from you' [Spiritual, 1950, p. 226]. Such phrases can be found in contractual letters between the princes made in the 1470–1480s; moreover, these documents already leave no doubt about the multiplicity of Tatar yurts ('knowing the Hordes', 'deal with the Hordes', 'I will not give to the Hordes'), as it does not coincide with the genitive singular form of 'not deal with the Horde' (as in the previously quoted charter 1473).

However, some documents of the same period have phrases with a single 'Horde': 'As for the Horde, we, as the Grand Prince, know and deal with, and you do not deal with the Horde...', and if, I, the Grand Prince, do not pay tribute to the Horde, I will not take it from you' [Ibid., p. 279—treaty between Ivan III and Prince Mikhail Andreevich of Vereysky and Belozero, dated 1482; see almost the same on p. 333—treaty between the Grand Prince Ivan Vasilyevich of Ryazan and his brother Fyodor, dated 1496]; 'And if you send to the Horde, send it after discussing it with us... and without discussing it with us do not send it to the Horde' [Ibid., p. 297—treaty between Moscow and Tver of 1484–1485]. But this appears to be a rote repetition of clichés elaborated during the previous decades, prior to 1473, or (less likely) as a designation of the Great Horde (among other yurts) as the recipient of the tribute.

¹ In earlier Russian texts, Jalal ad-Din, who was murdered in 1413, is called the Green Sultan. It is probable that 'Bultarkhan' is a distorted name of the eastern-Jochi khan, Abu'l-Khayr, who died in 1468.

² Of the two khans with similar names in the corresponding period—Ulugh Muhammad and Küchük Muhammad—it more likely relates to the former. The charters of the Crimean Tsarevich (kalga) Ahmed Giray to the Polish King Sigismund I in 1511 and 1514 contain references to the times of 'the Grand Duke Vytautas and...Tsar Tokhtamysh and...the great Tsar Mahomet', and mention 'our forefathers and grandfathers Tokhmamysh (so in original—Author) Tsar and the great Mahmet Tsar' [Russian State Archive of Ancient Acts, f. 389, inv. 1, file 7, sheets 371, 538]. 'The great Mahomet–Mahmet' is evidently a translation of the name-sobriquet of Ulugh Muhammad.

The agreement between the sons of Ivan III, concluded at his demand in 1504, enumerates the Tatar states that were considered as independent by Russians: 'tributes to the Hordes, including Crimea, Astrakhan, Kazan, and to Tsarevitch townlet...' [Ibid., p. 366; also see the Wills charter of Ivan III made the same year, p. 362]. Therefore, the khanates that had emerged by that time were the ones of Crimea, Kazan, Astrakhan and Kasimov; the Nogai Horde was considered a 'Cossack' entity without any specific status; and in this period, Moscow had no relations with the Siberian (Tyumen) yurt or the Kazakh Khanate (for more details, see [Cherepnin, 1948, pp. 212, 223; Gorsky, 2000, pp. 165–167]).

However, to some extent, the interstate division of the post-Horde space was relative. An indicator of this relative nature is the status of ruling dynasties. Not a single khan in Kazan, Hajji Tarkhan, Chingi-Tura, Sygnak, or Uzbek and Kazakh nomadic quarters designated his geographic location. In the eyes of his subjects and outgoing official documents, this was just the 'Khan', and not the khan of Kazan, Tyumen, etc. The only exception was the Giray dynasty. Their pompous titles with enumeration of subordinated territories and peoples does, on the one hand, indicate an obvious imitation of the Ottomans but, on the other hand, demonstrates the aspirations and unrealized ambitions of this peripheral branch of the Jochi house. Other rulers in the former lands of the Ulus of Jochi felt that their affiliation with the 'golden family' of the Chinggis dynasty provided sufficient grounds for declaring their monarchical prerogatives, without any reference to a particular capital city and even more so to the community of subordinated subjects ('Tatar', 'Uzbek', or 'Kazakh').

Amid all nostalgic reminiscences, the degradation of the Golden Horde's statehood was accompanied by the gradual and inevitable fading of the ruling family's charisma. The Chinggisids shared the fate of many royal houses—as soon as a dynasty loses the throne, its monopoly on power is no longer recognised. The period of the late 14th century to the first half of the 15th century was clearly a transition when the Chinggisids began to lose its state

power and, in real politics, the fact of being a descendant of Chinggis Khan ceased to play a decisive role.

This transition manifested itself in various ways. First, there were 'gurgan' (son-in-law) dynasties when, in order to gain access to the throne, it was sufficient to become related to the 'golden family' through the female line.

Secondly, the non-dynastic aristocracy among the begs of Turkic tribes, who up until the mid-14th century were almost invisible in politics, forced their way to power. During the 15th century, the phenomenon of growing social authority of tribal leaders took shape in the form of a permanent institution of karachi begs, the leaders of major Els, who constituted an indispensable advisory body to the ruling khan in the late Golden Horde, Crimean Khanate and Kasimov Khanate.

Thirdly, the rule was carried out on behalf of powerless Chinggisid puppets. Many of them were so unremarkable and insignificant that they are not even known to historians. Their only purpose was to sanctify and justify by their sacred person and silent presence the absolute power of the actual ruler.

This institution of 'dummy' khans existed in the 1360–1370s in the western part of the 'right wing' of the Ulus of Jochi ('Mamai Horde'). In the 1390–1410s, the Golden Horde was ruled on behalf of its powerless monarchs by the beqlar beg Edigu. In the mid-14th and early 15th centuries, this phenomenon spread to the Ulus of Chagatai and Timurid state, where the puppet representatives of the Chinggisids were enthroned by local emirs. A similar phenomenon was later revived in the Khiva Khanate, where it received the characteristic name 'khanbazi' (playing khans).

However, at the same time, the recognition of highborn status and the hierarchical seniority of the 'golden family' was preserved everywhere, even after the family in question no longer had supreme power. For example, 'tore' are well-known among the Kazakhs. The House of the Ottomans also recognised its nominally junior status in relation to the Chinggis dynasty (in particular, to the Crimean khans, their vassals). However, this in no way manifested itself in everyday political practice. The memory of

the royal rights of the Chinggis line emerged during the Bashkir revolts in the late 17th and early 18th centuries. Along with the Turkish sultans and Kalmyk taishas, proposals to take the Bashkirs under their authority were received at that time by Crimean and Kazakh khans, and Tsarevichs of Kuchum family 'living the Cossack way of life'.

The memories of unity and kinship of all members of the Jochids persisted for some time in the post-Horde space, and sometimes manifested in unexpected situations. For example, Mengli Giray officially called him brother,—that is, an equal monarch, not only the Kazan Khan Mohammed Amin, who lived, according to the Crimea ruler, 'on top of his state' (in the Russian translation), but also his own worst enemy, Ahmed from the Great Horde. However, he did so only after the death of the latter when communicating with the Polish king [Collection of the Russian Historical Society, 1884, p. 108; Collection of works, 1856, p. 29]. However, Jochi himself remained in historical memory as merely a genealogical link between his father and his sons. Indications pointing to the community of the Jochi dynasty are extremely rare (for example, see a reference to the traditional ambassadorial ties of 'Jochi children', i.e. the descendants of Jochi, with Moscow, in the charter sent by Shaybanid Khan Abul-Fath to Ivan III [Ambassadorial books, 1995, p. 33]; or a comment by Crimean Khan Saadet Giray about the Astrakhan monarch Hussein: 'With him, we are the children of the same father' [Russian State Archive of Ancient Acts, f. 389, inv. 1, file 7, sheet 895 (896)]—the common 'father' (ancestor) for these representatives of different branches of a huge clan could be, obviously, only the eldest son of Chinggis).

In the minds of those who lived in the Turkic-Tatar yurts, the notion of the former centre of the single state consecrated by the sacred image of Batu (Sain Khan), the second son of Jochi, was preserved. Capturing the quarters of the Great Horde khan was regarded by his victorious rivals as the acquisition of the holy Sain's throne. This was how in the 15th and early 16th centuries the representatives of Jochi dynasty interpreted their successes

in the struggle against the Great Horde: 'God gave me the happiness to take the throne of Sain by killing the son of Timer Kutlu' (Tyumen Khan Ibrahim to Ivan III in 1494 on the defeat of Khan Ahmed in 1481); 'The golden throne of our father [ancestor—V.T.], the Tsar Sain, is in our hands' (Tsarevich Ahmed Giray, the son of Mengli Giray who defeated the Great Horde, to the king Sigismund, 1514) [Ambassadorial books, 1995, p. 46; Russian State Archive of Ancient Acts, f. 389, inv. 1, file 7, sheet 539]. The Eastern chroniclers believed that the main merit of the Mangyt beg Waqqas (the second quarter of the 15th century) was the fact that he 'twice won the throne of Sain Khan' for his patron the Abu'l-Khayr Khan, after which the name of Abu'l-Khayr was read at the beginning of khutbah, minted on coins, and his persona 'adorned the throne of Sain Khan' [Proceedings, 1969, p. 67, 155]. And all of these thrones (khan residences) were in different locations, which indicates how relative and symbolic this concept was in the ideological constructs of late medieval Desht-i Qipchaq.

Perhaps, the common symbolic value for the entire Jochi family was also retained by the dynastic necropolis (Kuruk) near the city of Saray-Jük on the Yaik River.

However, for all the relics of the Golden Horde's unity, one cannot fail to see the increasing trend towards the distancing of the post-Horde states from one other. The process of disintegration was stronger. Various local yurts saw the emergence of local khan dynasties, which viewed their holdings only as their own property without any relation to the collapsed common power of the Jochi dynasty. For example, after the representatives of the Great Horde acceded to power in Kasimov, the Girays claimed their dynastic rights to the khanate, declaring that 'our family was in Meshchyora' and now 'it is not our family that is the sovereign of Meshchyora' [Collection of the Russian Historical Society, 1895, p. 378]. The Russian ambassador was instructed to fend off expected similar claims of Crimeans to Kazan by saying that 'originally, Kazan was not their yurt, but Kazan had its separate tsars' [Ibid., p. 696].

Messages sent by the Turkic aristocracy in the 16th century repeatedly designate the yurts by eponyms, usually bearing the names of the sovereigns who started the ruling dynasty in a particular yurt. If in the 13–14th centuries the eponyms represented the historical figures of a relatively recent past (Jochi, Berke, Uzbek) who were equally important for all parts of the empire, in the later period, these became individuals who, firstly, had passed away a long time ago and, secondly, had operated within fairly local spatial limits.

For example, some sources repeatedly refer to the Crimean Khanate 'Tsar Tokhtamysh's yurt',—that is, a holding of the descendants, heirs and dynastic successors of Khan Tokhtamysh¹; Astrakhan Khanate is called 'Tsar Temir Kutlu's yurt',—that is, by the name of Khan Temür Qutluğ; Kazakh Khanate is called 'Tsar Urus's yurt' and 'Kazakh Tsar Barak's yurt',—that is, by the name of the Golden Horde and Kok Horde Khans Urus and Barak.

With regards to the Kazan Khanate, such designation can be found in the form of 'Alibay and Altybay yurts' (the names of the begs that ruled in the first half of the 15th century; see [Ambassadorial book, 2003, pp. 47, 82]) and 'Tsar Magmet Kiray's yurt'. The latter designation was made in the following context. In 1552, 'all Kazan land', without any consultation with Moscow, invited to its throne the Astrakhan Tsarevich Yadgar Mohammed, who lived with the Nogai. In a letter to his patron and ally Tsar Ivan IV, Nogai murza Ismail pointed out, in particular, that such an invitation was illegitimate in principle and the Kazan people had no right to make decisions about their throne, because the 'yurt was not theirs, it was Tsar Magmetkiray's yurt' [Ambassadorial Books, 2006, p. 105].

This is a clear reference to Crimean Khan Mehmed Giray I, who reigned in 1515–1521. It is likely that due to his ties to the local dynasty through his mother and his wife Nur-Sultan, he considered the Kazan yurt his hereditary possession. In any case, this is what follows from his letter to the Astrakhan Khan: 'Kazan was our yurt, and now he [Grand Prince of Moscow

Vasily III—V.T.] put there in charge a sultan of his own [a reference to Khan Shah-Ali—V.T.]' [Khudyakov, 1991, p. 85]. It is worth noting that the Kazan nobility shared this interpretation. After the death of Khan Mohammed Amin (end of 1518), an embassy 'from all the Kazan people' arrived at Bakhchysarai with an appeal to Mehmed Giray: '...Kazan is your possession, choose one of your children or brothers and send him to us so that he becomes our tsar' [Russian State Archive of Ancient Acts, f. 389, inv. 1, file 7, sheet 796]².

In the early 1520s, a similar appeal was received by Mehmed Giray even from the Kazakh begs, mired in their quarrels and feuds: '...All these Kazakh princes with their entire army swear allegiance to me and want to serve me, and they sent a man to me with that message' [Russian State Archive of Ancient Acts, f. 389, inv. 1, file 7, sheet 865 (866)]. However, this was an isolated episode in the relations between Crimea and the eastern yurts.

All this reflected the process of formalizing and consolidating a new type of land holdings by individual aristocratic groups (including families, and later dynasties) that began in the Golden Horde in the 14th century (see [Fedorov-Davydov, 1973, pp. 111, 112, 135–138]).

The conquest of the neighboring yurt was no longer regarded as a restoration of some unity, but as a unification of separate possessions. 'With your yurt [Crimea—V.T.] our yurt has become sort of one... Saint tsar Ahmat', wrote in 1487 the Khan of the Great Horde Murtaza, son of Ahmed, to Crimean tsarevich Nur Devlet [Collection of the Russian Historical Society, 1884, p. 108], remembering apparently the Great Horde conquests of Crimea in 1471 and 1476. Although they introduced the phrase 'Great Khan of the Great Horde' to their title in the early 16th century, members of the Giray dynasty subsequently also began to

¹ There are disputes concerning the origin of the Tokhtamysh as being from the Giray clan.

² The ambassadors lured the khan with promises of considerable growth in the number of his subjects and warriors: 'We have twenty thousand of our fathers' children and with the Cheremis and Mordvin the number is countless'. As it is known, Mehmed Giray sent his younger brother Sahib Giray to reign in Kazan. The people of Kazan appealed to Crimea with a similar request after the death of their Khan Safa Giray in 1549.

include Crimea in their title 'The Great Khan of Great Horde', along with 'the Great Horde'. Therefore, in this case, there was not only the claim to control the entire Ulus of Jochi ('Great Horde'), but also a reminder that the Great Horde had been conquered in 1502. The fact that these two possessions were perceived as separate after 1502 is evidenced by the oath of the Crimean ambassador given to Alexander Jagiellon in 1506 on behalf of Khan Mengli Giray 'with all his sultans, brothers and sons, and with all his ulans and princes, all his murzas and all the people of both [sic—V.T.] Hordes of Trans-Volga and Perekop who are his subjects [*italics added—V.T.*]' [Lietuvos, 1994, p. 53].

However, after defeating the Great Horde, Mengli Giray still included it in his possessions. But in other similar cases, a junior ruler dependent on the victor was appointed to the conquered yurt (Jani Beg was a protégé of Great Horde Khan Ahmed in Crimea in 1476; Bahadur Giray was a protégé of the Crimean Khan Mehmed Giray in Astrakhan in 1523; in some respects, this was also the case of Mohammed Amin, who was brought to the throne of Kazan by Ivan III after Muscovite voevodas captured Kazan in 1487).

The collapse of the Ulus of Jochi was also accompanied by corresponding ethno-cultural processes. The ethnic consolidation, formation of the Golden Horde Tatar nationality can be clearly seen in the 'right wing' of the Ulus with its well-developed urban civilization, strong

pockets of the old settled culture (Bulgaria, Crimea and Moldavia), and lively inter-regional ties. However, this process was interrupted first by the plague, and later by wars and migration of nomads from the east. The 'Uzbeks' of the left wing, the carriers of archaic social and cultural norms, firmly held to their tribal system and stimulated the renewed tribalisation in the western part of the Ulus of Jochi. Its successor states (Kazan, Crimea, Siberia and perhaps the Astrakhan khanates) saw the formation of local ethnic communities based on the earlier relatively united Tatar ethnicity of the Golden Horde.

Its most important consolidating factors included the preservation of former socio-political structures, a clan-based system that united military and service class nobility, as well as a common religion in the form of Islam. The Muslims of the Golden Horde (perhaps, especially the aristocracy and nomads) were united not only by the mere fact of their adoption of Islam, but also through the special institution of the Sayyids. It is no coincidence that in a number of post-Horde khanates, the head of the local Muslim clergy traced their genealogy to a common ancestor who lived at the time of the Ulus of Jochi [Iskhakov, 1997, p. 21]. However, in real politics of the 15–17th centuries, Islam did not play a noticeable role and remained at the level of official ideology without preventing internecine conflicts.

Chapter 2. Sources on the History of Tatar States in the 15–18th Centuries

§ 1. Written Sources

1. Narrative Sources

Arabographic Sources

Ilyas Mustakimov

The vast majority of eastern sources on the history of post-Horde (late Jochi dynasty) Turkic-Tatar states are arabographic,

most of which in turn are written in Turkic languages.

The collapse of the Ulus of Jochi into separate 'yurts' (states and proto-state entities), which de facto ended by the mid-15th century, led to the gradual formation of local historiographic traditions or their rudiments. Lively

political, cultural and economic ties existed between the Turkic-Tatar yurts that emerged from among the ruins of the Jochi empire. Among other things, this included the exchange of verbal and written historical narratives. As a result, one can often find in the chronicles created in a particular post-Horde yurt information related to the history of the entire Ulus of Jochi or the early history of other yurts.

Another aspect of local historiographic traditions prevalent in post-Golden Horde Turkic-Tatar states was the major and sometimes leading role of oral sources in their formation (historical legends¹, or more rarely eyewitness accounts describing a chronicle of events that is closer to the author of a particular chronicle). This is primarily the case of sources created in the Volga-Ural region. This aspect of chronicles created in line with late Jochi dynasty traditions is also related to the fact that they rarely mention any particular dates with regard to events of the late- and post-Golden Horde period. When the dates of events of that time are actually mentioned, they are often inaccurate. In terms of chronology, works created by Ottoman authors or Crimeans influenced by the Ottoman historical writing tradition ('*Tevarih-i Desht-i Qipchaq*' by Abdullah bin Rizwan, '*As-sab 'as-sajjar*' by Sayyid Muhammad Riza, etc.) are usually more informative.

Unlike the Golden Horde period, when written Arabic sources on the history and geography of the Ulus of Jochi were dominated by works written outside the Golden Horde by Persian and Arabic (especially Egyptian) authors, who wrote in Persian or Arabic respectively, in the post-Golden Horde period we have a significant number of sources written in the former Golden Horde in Turkic and a relatively small number of works written outside the Turkic-Tatar yurts (mostly of Ottoman origin).

For the purposes of convenience, we propose considering the surviving arabographic sources by dividing them into three groups based on their origin: Central Asia and Khorasan, the Volga region, and Crimea and the Ottomans. Of course, this division is largely arbitrary.

Sources from Central Asia and Khorasan

In the early 16th century, Muhammad Shaybani, the grandson of Abu'l-Khayr Khan, ousted the Timurids dynasty from Transoxiana and Khorasan and created the state of Shaybanids. Muhammad Shaybani Khan initiated the writing of works called the 'Shaybanid circle', which were aimed at his glorification [Yudin, 2001, p. 48; Mirgaleev, 2011, pp. 14–19]. He was directly involved in creating some of these works.

One of the earliest and largest surviving Turkic-language sources bringing to us the Chinggisid tradition (in its 'Jochi-Shaybanid version') is the anonymous chronicle '*Tevarih-i guzida—Nusrat-name*' written in the early 16th century (probably in 1502–1504) at the instruction and with the participation of the founder of the Shaybanid state in Transoxiana and Khorasan. This work provides valuable (though often brief) information on the prehistory and early political history of the Siberian yurt, the Great Horde and the Nogai Horde, Bulgar Wilayat. It is particularly important to mention that '*Tevarih-i guzida*' contains detailed information on the genealogy of the Jochi dynasty until the early 16th century, including the rulers of post-Horde yurts. '*Tevarih-i guzida*' served as the main source of information on the reign of Eastern Desht Abu'l-Khayr Khan and his grandson Muhammad Shaybani Khan for the later Shaybanid and partially Ashtarkhanid historiography [Yudin, 2001, pp. 36–37]. In particular, the unique message included in '*Tevarih-i guzida*' about the fact that the power of Abu'l-Khayr extended to the Middle Volga region can be found, in a somewhat modified form, in the chronicle of Hafiz-i Tanysh, a court historian of Bukhara Khan Abdullah II, '*Sharaf-name-i shah*' (or '*Abdulla-name*' written in 1580) and the work of Astrakhanid chronicler Muhammad Yusuf Munshi '*Tarih-i Mukim khani*' (written in the early 18th century) [Mustakimov, 2010, pp. 25–27]. When describing the events of the 15th and early 16th centuries, the author of '*Tevarih-*'

¹ The latter feature was apparently typical for both the Golden Horde (and, broadly, Mongolian) and pre-Mongol Turkic (including Bulgar) historiographic traditions. As V. Bartold noted, 'from among all the Turkic peoples, only the Ottomans came to an understanding about the difference between history and legend' [Bartold, 1963b, pp. 100–101].

i guzida', apparently, used the recollections of eyewitnesses, including Muhammad Shaybani Khan who ordered this work. A. Akramov prepared the critical edition [Tevarih, 1967], S. Ibragimov [Ibragimov, 1956, pp. 108–111], V. Yudin [Tevarih, 1969], I. Mustakimov [Mustakimov, 2009, pp. 214–232; Mustakimov, 2011, pp. 228–248] made the translations of extracts from 'Tevarih-i guzida' to Russian.

Some researchers believe that the anonymous Turkic writing 'Shaybani-name' first published by I. Berezin is the abbreviated variant of 'Tevarih-i guzida' [Library, 1849]. The author of 'Shaybani-name' added more information on the Qungrat tribe.

In the period between 1504 and 1510, Kamal ad-Din Binai (Kamal ad-Din (Shir-) Ali Binai Ustad Muhammadkhan-(sabz) mi'mar Harawi), a Persian-language writer and musician, wrote the chronicles 'Shaybani-name' and 'Futuhāt-i Hani'. The latter work is an extended version of 'Shaybani-name' written by the same author. The details on the Eastern Desht-i Qipchaq provided in 'Shaybani-name' mostly coincide with the information in 'Tevarih-i guzida'. However, 'Shaybani-name' also includes some unique information apparently borrowed from some other sources [Yudin, 1969b, pp. 91–96].

The story and information of 'Tevarih-i guzida' was to a large extent reproduced in 'Fatah-name', a Persian-language poetic chronicle of Mollah Shadi, a writer at the court of Muhammad Shaybani Khan. It was also written in the early 1500s (the narrative ends in 1501). However, 'Fatah-name' includes other details not present in 'Tevarih-i guzida'. This is surprising, as both chronicles were written on the personal instructions and, apparently, under the direct control of Shaybani Khan [Yudin, 1969a, pp. 44–50]. V. Yudin expressed the view, which is not entirely unlikely, that the author of 'Fatah-name' could be the same person as the musician Ghulam Shadi who, according to the memoirs of Babur, was sent by Muhammad Shaybani Khan to the court of Kazan Khan Muhammed Amin [Ibid., pp. 44–45]¹.

¹ On the sending of Ghulam Shadi by Muhammad Shaybani to the court of Muhammad Amin, see: [Babur-nama, 1857, p. 230].

The work of Masud bin Usman Quhistani 'Tarih-i Abu'l-Khayr-Hani' written in Persian in the mid-16th century also, to a large extent, repeated in its final part the information from 'Tevarih-i guzida'. At the same time, the chronicle of Quhistani contains more information on representatives of dynastic and tribal aristocracy (oglan and begs), those from the close circle of Abu'l-Khayr, as well as the details of political history in the Eastern Desht of the 15th century, that are also absent in 'Tavariih' [Yudin, 1969, pp. 136–138]. For example, this includes the information of Quhistani detailing the arrival of Abu'l-Khayr Khan, the ruler of the Eastern Desht-i Qipchaq in the 15th century, to Tura (Chimgi-Tura, Siberian Tyumen), which the khan made his capital [Quhistani, 1969, pp. 144–145].

Khwarezm, where a branch of Shaybanids other than those ruling in Transoxiana and Khorasan, consolidated its power, developed its own historiography. In the mid-16th century, Ötemish Hajji bin Mawlana Muhammad-Dosti wrote a chronicle, which is known in the historiography under the titles of 'Chinggis-name' and 'Tarikh-i Dost Sultan'². Only two copy of this writing are known today. One of them, the Tashkent list, is incomplete; its transcription, translation into Russian and facsimile prepared by V. Yudin were published after his death [Ötemish Hajji, 1992]. The Tashkent copy served as the basis for preparing the publication of this source in Kazakhstan [Kazakhstan, 2005], Japan [Ötämiš, 2008], Uzbekistan [Ötemish Hajji, 2009] and Turkey [Ötemiş, 2009]. Another copy was in the personal library of Ahmad Zeki Velidi (Togan). Currently, this manuscript is held in a private collection in Turkey. I. Mirgaleev, a researcher from Kazan, obtained a copy of this manuscript, called 'Kara tevarih', from the students of Z. Togan. Moreover, according to him, the author of this copy is the successor of Ötemish Hajji [Mirgaleev, 2014]. The copy, which Mirgaleev called the 'Copy of Riza Fakhretdin' is soon to be published.

² On questions pertaining to the chronicle's sources, its name and place among the post-Horde historiographic works, see: [Kawaguchi, Nagamine, 2010, pp. 44–52; Mirgaleev, 2011, pp. 14–19].

Ötemish Hajji wrote that he had tried to collect and record the details missing in the written chronicles. However, he also used written sources that probably were for the most part the records of such oral tradition as dastans, legends and old stories (at least in terms of the history of the Golden Horde).

In the Tashkent copy of Ötemish Hajji writings ends with the accession of Tokhtamysh Khan to the throne of the Golden Horde. But it also includes some brief but valuable details on the history of the Great Horde and the Astrakhan Khanate. According to the work completed by researchers who had the opportunity to use the copy of 'Chinggis-name' of Ötemish Hajji held by Z. Togan, it is more complete and contains valuable information on the events during the collapse of the Ulus of Jochi and the formation of the post-Horde yurts [Togan, 1994, pp. 25–26, 149, note 98; Togan, 1981a, pp. 136, 161; Togan, 1981b, pp. 353, 492, note 176; Togan, 1999, pp. 39–64]. The comparison of 'Togan's copy' of 'Chinggis-name' with the major works of Crimean historiography written in the 18th century, such as 'Asseb o-sseyyar' of Muhammad Riza and 'Umdet ul-ahbar' of Abdulgaffar Qirimi showed that the Crimean historians could extensively use the chronicle of Ötemish Hajji in their description of events during the Golden Horde period and formation of separate Turkic-Tatar states.

Khiva Khan Abu al-Ghazi (1603–1663), a compatriot of Ötemish Hajji who produced his writings a century later, is the author of two historical works, one of which ('Shajare-i Turk va moghul') includes valuable material on the history of the Khanate of Khiva; its details on other post-Horde yurts are fragmentary [Abu al-Ghazi, 1871; Abu al-Ghazi, 1906; Abu al-Ghazi, 2007].

The chronicle written by Zahir al-Din Muhammad Babur (1483–1530), the founder of the Mughal dynasty, stands somewhat apart. The writing of Babur, which was given the title 'Babur-nama', was written in Chagatai language. It is largely autobiographical and reflects the history of the peoples of Central Asia, Afghanistan and India in the late 15th and early 16th centuries. The chronicle also includes some de-

tails on the Turkic-Tatar states of that time. In particular, it refers to the marriage ties between the ruling family of the Great Horde and the Timurids [Babur-nama, 1958, pp. 189–190], contains a brief, but valuable information on the close ties between Muhammad Shaybani Khan, the ruler of the 'nomadic Uzbeks' and Kazan Khan Mohammed Amin [Babur-nama, 1857, p. 230]¹.

In 1438, the year in which Ulugh Muhammad was ousted from the throne of the Golden Horde, signaling the final collapse of the Ulus of Jochi and emergence of the Great Horde, the city of Sarai was visited for commercial purposes by Shams al-Din Muhammad, a Shiraz merchant. The report on this visit, which includes details of the prices and range of products on the Sarai market, was included by Ali bin Muhammad al-Qumi, a Herati writer, in his Persian-language writing 'Shams as-syyak' (see the content of this report in [Zakhoder, 1967a, pp. 166–167]).

Some information on the Nogai ('Uzbeks'), Astrakhan and Crimean Khanates can be found in 'Jaddat al-ashikin' (written in 966/1573), a Persian hagiographic work by Sharif ad-Din Husain Sharifi that describes the life of the author's father Husain Khwarezmi, a sheikh of Kubrawiya, a Sufi order (d. 958/1551) [Muminov, 2012]. In 957/1550, while heading to Hajj, Sheikh with his entourage passed through Saraychyq, Astrakhan and Crimea, his stay in which is briefly described by the author [Sharifi, 1390, pp. 39–43].

Volga Region Sources

In the winter of 1550, Russian troops once again laid siege to Kazan. However, the courageous and skilful defence of the city (poor weather conditions, according to the Russian chronicles) forced the tsar's army to retreat. These events are described in the literary and political work 'Zafar-nama-i vilayet-i Kazan'

¹ One more piece of evidence about the close interaction between these two rulers is presented by Muhammad Shaybani Khan's poem, dedicated to the victory of Muhammad Amin over the army of the Grand Prince of Moscow in 1505 [Togan, 1981a, p. 133].

('Report on the Victory of Kazan State'). The author of the 'Report' was one Sharif Hajji Tarkhani, whom some researchers identify as Qolşārif, the last Kazan Sayyid. As indicated by the nisba 'Hajji-Tarkhani', the author of 'Zafar-nama' was somehow linked to Astrakhan (he likely came from there). The only surviving and relatively early (16th century) copy of this work was discovered within the manuscript collection in Zeytinoğullari library located in Tavşanlı district (Kütahya province, Turkey) and published by Z. Togan in eastern typesetting text with introduction and historical comments [Togan, 1965, pp. 179–204]. The work of Z. Togan provided the basis for the condensed publication of this source and publication of its short translation into Turkish by A. Kurat [Kurat, 1972, pp. 361–372], as well as for the work of A. Özyetgin, a contemporary Turkish researcher who prepared the modern Turkish transcription, Turkish translation and philological study of this source [Özyetgin, 1993, pp. 321–413]. In turn, the Turkish translation by A. Özyetgin provided the basis for the Russian translation of the source prepared by F. Khakimzyanov [Sherifi, 1995, pp. 83–92], and condensed publication of A. Kurat served as the basis for contemporary Tatar translation prepared by M. Ahmetzyanov [Sharif, 1995, 12–16b.; Qolşārif, 1997, 76–93 b.; Qolşārif, 2005 16–22b.; Mangelekka, 2006, 16–23 b.] More recently there a Tatar translation prepared from the Turkish translation made by A. Özyetgin has been published [Özyetgin, 2013, 7–13 b.] 'Zafar-nama-i vilayet-i Kazan' is the earliest surviving historical narrative created in the Volga region.

In general, the Muslim historiographical tradition of the Volga-Ural region emerged only in the 17th century,—that is, after the region had become part of Russia [Frank, 2008, p. 27]. At the very least, this time is the time of the earliest surviving works of the Volga region's Muslim historiography. At the same

time, researchers note that local chroniclers based their works on earlier sources. It is evident that Frank was correct in his assumption that the Islamic historiography in the Volga-Ural region was 'based on popular historical traditions that were gradually recorded and combined into ...historical treatises' [Ibid.]. The authors of local chronicles also used written sources. At the same time, it appears that Frank made a fair comment on these sources when he described the sources of the earliest surviving writing of the Volga region Muslim historiography: 'Even if [Qadir Ali Bek] used in his work any written sources, it is clear that they, in turn, were largely based on folk historical narratives' [Ibid., p. 29].

In 1602, Qadir Ali Bek, a native of Jalair tribe who was close to Uraz Muhammad, the Khan of Kasimov, wrote a historical work, the original title of which was not been preserved. Scholars use the title 'Collection of Chronicles', a convention proposed by I. Berezin, the first researcher of this source. The chronicle includes an introduction, dedication to Tsar Boris Godunov, condensed exposition of 'Jami at-tevarih' by Rashid ad-Din and 9 dastans-stories—original narratives on personalities and families of such khans as Urus, Tokhtamysh, Temür Qutlugh, Hacı Giray, Hajji Muhammad, Abu'l-Khayr, Yadgar, Uraz Muhammad and beg Edigu (the dastan about Temür Qutlugh also provides the details about the descendants of Ulugh Muhammad). The original dastans included in the 'Collection of Chronicles' provide lapidary but valuable details on the history of post-Horde yurts (except for 'Dastan of Tokhtamysh Khan', where the narrative is interrupted with the description of events in the first quarter of the 15th century). These dastans appear to be largely based on oral sources (see the above remark of A. Frank). M. Usmanov believes that the original dastans included in the 'Collection' are based on historical works written in Turkic language; at the same time, the folklore provided 'a great help to the author' [Usmanov, 1972, p. 53]. The last dastan, about Uraz Muhammad Khan, was written by Qadir Ali Bek as an eyewitness. This is the main part while the other parts provide the background to it (for more details on the source, see [Ibid.,

¹ The term 'vilayet' in relation to a territory usually has the meaning of 'a region, a country'. In this context, however, 'vilayet-i Kazan' undoubtedly is the official name of the Kazan Khanate, and it should be interpreted exactly as the 'Kazan state' ('Kazan Tsardom' in the medieval Russian sources).

pp. 33–96]). The first publication in the original language (Turkic-Tatar) was prepared by I. Berezin [Library, 1854]. Over the last quarter of a century, we have seen the expositions of this work to modern Kazakh and Tatar alphabets and its translation into Kazakh and Tatar [Qadir Ali, 1997; Syzdykova, 1989; Syzdykova, Koygeldiev, 1991; Mirastan biş sähifä, 2011, 8–36b.]¹

Another major work of the Volga region Muslim historiography was the anonymous collection of writings 'Daftar-i Chinggis-name' (end of the 17th century). It has 6 chapters in the form of dastans, including 'Chapter of the story on the line of Chinggis Khan', 'Chapter of the story on Aksak-Timur', 'Chapter of the story on Amata, the son of Aisa', 'Chapter of the story on Idig-beg', 'Chapter of the story on whereabouts and possessions', 'Chapter of the story on history' (for more details on the source, see [Usmanov, 1972, pp. 97–133]). 'Daftar...' was based primarily on oral sources. 'Chapters' 3, 5 and 6 contain some details on the history of the Kazan yurt.

The text of 'Daftar...' was published numerous times in its original version and translated into Tatar, and there have also been separate publications of original and translated versions of its individual dastans². In 2002, M. Usmanov and M. Ivanich published the critical edition of 'Daftar-i Chinggis-name' [Ivanich, Usmanov, 2002].

Recently, based on one of the copies of 'Daftar...' it was suggested that there was one more version of this chronicle, which differs from the more common version by the number and content of dastans (including other information on the history of the Turkic-Tatar states, in particular, on the prehistory of the Crimean yurt: 'When [Khan] Tokhtamysh found himself in a difficult situation, his two sons were brought up by [certain] Giray-bey. After taking these two of his sons, they were installed as Khans

in Crimea. The names of these two sons are Iskander and Abu Said ') [Mustakimov, 2009b, pp. 122–131]. This assumption is confirmed by the existence of another manuscript of 'Daftar-i Chinggis-name' held in the collection of ancient manuscripts of Galimdzhan Ibragimov Institute of Language, Literature and Art of the Tatarstan Academy of Sciences, the content of which is very similar to the aforementioned copy of 'Daftar...'. In particular, this version recorded the original, albeit confusing, details of the history of the Astrakhan Khanate (unfortunately, the copy has defects): '... The infidels took Astrakhan from Uz-Timur Khan, and they took Kazan from Saf[a]-Giray. When the infidels took Astrakhan, Hajjim Sultan with thirty men left to wander the Cossack way³. They boarded the boat, [but] it sank. Hajjim Sultan was left alone [with] three men, and he went to Khan of Bukhara. Khan of Bukhara granted (literally 'gave') to Hajjim Sultan Urgench. As for the [Khans] Akkubeg and Yamgu[rchi]...⁴ The battle of Uz-Timur Khan took place in the day [illegible]. Nine sultans and ninety karachis have been killed. All of this happened because of Ismail⁵. Ismail helped the infidels' [Department of Manuscripts, Scientific and Archival Fund, p. 44a, b].

An interesting example of Volga region Muslim historiography is the anonymous chronicle in the Persian language known under the conventional title 'Hikayat' [Salakhedinova, 1965, pp. 147–154] and written in the second half of the 18th century. It had a Turkic version, two fragments of which were translated into Russian and several facsimile fragments were published [History of Tataria, 1937 pp. 122–124; 402–406]. The initial part of this work resembles some dastans of 'Daftar-i Chinggis-name', but it also contains original information not available in other known Muslim sources. Frank considers 'Hikayat' one of the 'more localised narrative stories' (compared to the 'Collection of Chronicles' of Qadir Ali Bek and anonymous 'Daftar-i Chinggis-name'—

¹ The sections representing the transcriptions of Rashid al-Din's 'Jami al-tawarikh' are omitted in the latest edition.

² See the latest publication in [Mirastan biş sähifä, 2011, pp. 38–94]. For a review of earlier publications and discovered copies of 'Daftar-i Chinggis-name' see [Usmanov, 1972, pp. 98–104].

³ That is, 'to wander'.

⁴ The phrase is cut short.

⁵ That is the Nogai ruler Ismail (Nur-al-Din in 1545–1554 and the Bey of the Nogai Horde in 1554–1563).

I.M.), which appeared in the 18th century [Frank, 2008, p. 35]. It was also suggested that this writing is the copy of 'Farhang-nama', a chronicle that did not survive to the present day and was mentioned by Tadzhetydyn Yalchygul, a chronicler of the early 19th century, as one of his sources [Mustakimov, 2008, pp. 144–145].

The widespread examples of Tatar chronicles are represented by chronological records (usually very concise) that have no generally accepted designation (in the sources they are referred to as 'tevarih' or 'tarihlar'; in research, they are commonly called 'vakai'-nama' or 'chronicles'). The actual details contained in most of these 'chronicles' represent, on their own, the interest for the period not earlier than the 17th century. One of the early example of 'vakai'-nama' was included as the last chapter in the collection of writings 'Daftar-i Chingis-name' discussed above. A number of such 'chronicles' was published in the special work of A. Rakhim [Rakhim, 2008, pp. 125–192].

As a comment to 'Tevarih-i Bulgaria', a chronicle written by Khisamutdin Muslimi in the early 19th century, Khusain Amirkhanov, a Kazan mullah, wrote his own work under the same title, which included narratives from the history of Kazan and Kazan khans [Ämirkhan, 1883; Amirkhanov, 2010]. However, most of the details provided in that writing are legends, and therefore seem to represent only historiographic interest.

We leave outside our review such works of the Volga-Ural region Muslim historiography as 'Tevarih-i Bulgaria' of Kismutdin Muslimi and 'Tarih-nama-i Bulgar' of Tadzhetydyn Yalchygul, as they virtually contain no information related to the history of the Turkic-Tatar states in the 15–18th centuries (for more details on these sources, see [Usmanov, 1972; Kemper, 2008; Frank, 2008]).

Crimean and Ottoman Sources

Most of the surviving written sources on the history of post-Horde states are associated with the Crimean Khanate. One reason for this is the long existence of the Crimean Khanate compared to other Turkic-Tatar states. Another reason is the powerful cultural impact on the

Khanate by the Ottoman Empire with its developed historiographic tradition¹. In addition, the important geopolitical position of this Tatar possession and the fact that it retained its military capacity for a long period attracted the attention of Ottoman and European authors.

The earliest surviving narrative source on the history of the Crimean Khanate is 'Tarih-i Sahib-Giray Khan' ('The History of Khan Sahib Giray'), a chronicle about the reign of Khan Sahib Giray in Crimea (1532–1551). The author of this work was Badr ad-Din Muhammad bin Mohammad Kaysuni-Zadeh Nidai-Effendi, also known as Remmal-Hojja, who served Khan Sahib Giray as his personal doctor from 1532 and up until the khan's assassination in 1551. He was very close to Sahib Giray [Zaitsev, 2009a, p. 69]. According to Remmal-Hojja, he wrote his 'History' at the request of the daughter of Sahib Giray, after the murder of the latter. The work was completed in 1553. The chronicle was based on eyewitness accounts of the author and, apparently, on the details provided by other participants of these events [Ostapchuk, 2001 p. 395]. Remmal-Hojja also used the written sources, such as fateh-nama, official documents, etc. [Zaitsev, 2009a, pp. 76–78]. Although the work of Remmal-Hojja mentions few specific dates, it contains valuable information not only on the history of Crimea, but, to some extent, on that of the Kazan and Astrakhan khanates, and the Nogai Horde. I.V. Zaitsev expressed the opinion that there were two or three versions of 'Tarih-i Sahib-Giray Khan' [Ibid., p. 75]. The consolidated text of the chronicle based on the two oldest copies was prepared and published by O. Gökbilgin [Tarih-i Sahib, 1973].

In 1556, Seydi Ali Reis, an Ottoman naval commander, travelled through Desht-i Qipchaq and later wrote some notes with details about the Nogai [Seydi, 1313, pp. 71–73; Seydi, 1999, pp. 137–139].

Valuable information on the history of Turkic-Tatar states taken from various written

¹ The Ottoman influence on the Crimean yurt began to progressively strengthen from the last quarter of the 15th century when the Khanate entered into vassal dependence on the Ottoman Empire.

sources can be found in the chronicle of al-Jannabi (d. 999/1590–1591), an Ottoman author who wrote in Arabic. In particular, to describe the period until the mid-15th century, he used 'Tarih-i al-i Chinggis', a Persian-language chronicle written by Hafiz Muhammad Tashkendi which has not survived to the present day. The excerpts from the writings of al-Jannabi were published by V. Velyaminov-Zernov and V. Tizengauzen [Velyaminov-Zernov, 1863, pp. 374–376; al-Jannabi, 1884, pp. 535–538].

Some very brief details on Kuchum Khan and the Siberian Khanate can be found in 'Tevarih' written by Seyfi Celebi, an Ottoman historian of the 16th century. A translated excerpt of his work with details about the 'Tura region', was published by T.I. Sultanov [Sultanov, 2005, p. 261].

A valuable and original source on the history of Crimea and Crimean Khanate up to 1635 is provided by 'Tevarih-i Desht-i Qipchaq', a chronicle by Abdullah bin Rizwan completed in 1638¹. In 1611, the father of the chronicler was appointed governor of Kaffa. This means that Abdullah bin Rizwan was able to witness the events that took place in Crimea in the early 17th century [Zajaczkowski, 1969, p. 18]. According to A. Zajaczkowski, a particularly valuable details contained in 'Tevarih-i Desht-i Qipchaq' relate to the first quarter of the 17th century—a period of internecine wars between Mehmed Giray and Janibeg Giray, the two contenders to the throne of the Crimean Khanate [Ibid., pp. 18–19]. A. Zajaczkowski, a Polish researcher, prepared a critical edition of this work [Zajaczkowski, 1966].

Based on purely formal criteria, we can consider 'The Travels of Macarius, Patriarch of Antioch' written by Paul of Aleppo to be an Ottoman source [Krachkovsky, 2004, p. 687 et seq.] Together with his father, Patriarch of Antioch Macarius, Paul of Aleppo twice visited the Muscovite state. He left the travel notes in Arabic about his first trip. While traveling to Russia in 1653 and returning in 1656, Macarius and Paul passed through the territory of Moldavia and Ukraine. In his writings, Paul of

Aleppo provided some details on the Crimean Tatars, relations between Crimea and the cosacks, and Crimea and Muscovy, based on eyewitness accounts by the Christians, meetings with Tatars, and personal observations. As an eyewitness, he provides some brief but interesting information on the Tsardom of Kasimov and the baptism of Sayyid Burhan, the ruler of Kasimov [Murkos, 1898].

Some details on the history and geography of the Tatar yurts are provided by Mustafa bin Abdullah Kâtip Çelebi (Hajji Khalifa), an Ottoman polyhistorian of the 17th century in his geographical work 'Jihannuma' ('View of the World'). Among other things, he described an appeal made by Kazan Tatars to the Sultan Selim II (1566–1574) for help against the 'infidel Muscovites' and ascribes to them the idea of linking the Don and Volga rivers with a channel in order to conquer 'these lands' (he repeated the information about the channel in his historic treatise 'Tuhfat al-Kibar fi Asfar al-Bihar') [Kyatib, 1145, pp. 375–376; Kyatib, 1141, p. 39].

One of valuable Ottoman sources on the history of the Crimean Khanate is 'Seyahat-name' ('Book of Travels') written by Evliya Çelebi, a Turkish traveller of the 17th century (for more information about him, see [Krachkovsky, 2004, p. 624 et seq.]) 'After many visits to the [Crimean] peninsula, Evliya has in general very accurately described what he had seen and heard' [Zaitsev, 2009a, p. 218]. The author provided details on the Crimean Khanate of his times, and recounted the tales that he had heard [Evliya Çelebi, 1996; 1999; 2008].

Some important information on the Crimean Khanate can be found in 'Telhisü'l-Beyan fi Kavanin-i Al-i Osman' ('Memorandum on the rules of the House of Osman') written by Hüseyin Hezarfen, an Ottoman author of the second half of 17th century [Oreshkova, 1990, pp. 228–305; Hezarfen, 1998].

V. Smirnov noted the outstanding importance of the work made by Mehmed Findiklî, an Ottoman historian of the late 17th and early 18th centuries, for the study of Crimean Khanate history, especially the relations between Crimea and Ottomans [Findiklî, 1928].

¹ For a detailed description of the source see: [Zajaczkowski, 1969].

Rightly considered to be the most important work of Crimean (or Crimean and Ottoman) historiography is 'As-sab' as-sayyar fi ahbar muluk Tatar' ('Seven Planets in the News on Tatar Kings'), a chronicle of Sayyid Muhammad Riza. The work of Muhammad Riza completed in 1737 described primarily the historical events in the Crimean Khanate in the period from the reign of Mengli Giray I to Mengli Giray II (from 1466 to 1737). In addition, the 'Seven Planets' provided brief but valuable details on the history of the Golden Horde. When describing the role of the Muhammad Riza chronicle for the study of Crimean history, V. Smirnov wrote: 'In the richness and diversity of its content, this work surpassed everything that we had at hand in terms of Turkish sources on the history of the Crimean Khanate; we can say that this is an encyclopedic collection on Crimean Tatar olden times' [Smirnov, 2005, p. 35]. The contemporary researchers fully agree with this prominent orientalist [Zaitsev, 2009a, p. 97]. In 1832, this work was published in Kazan by M. Kazem-beg [Sayyid, 1832].

'The extremely heavy, flowery language of the writings by Sayyid Muhammad Riza has created difficulties in perceiving the text, which brought to life a brief version of his work' [Zaitsev, 2009a, p. 21]. It was authored by Hurremî Çelebi Akay Efendi, who lived in Crimea and compiled his work no earlier than 1161/1748 [Ibid., p. 121]. His writing had no original title. V. Smirnov designated it as the 'Brief History'. When describing this work, V. Smirnov noted, 'In ... the brief history, one can find the facts or details that are not found in the "Seven Planets", and this gives it the value of an independent source—one can notice that the author, when making an excerpt from the "Seven Planets" was, in some cases, also using other sources to complement his narrative' [Smirnov, 2005 p. 36; Zaitsev, 2009a, p. 106]. A few excerpts from the work of Hurremî Çelebi translated into Russian were published by A. Negri [Negri, 1844].

The Crimean chronicler al-Hajj Abd al-Ghaffar bin Al-Hajj Hasan bin al-Hajj Mahmud bin al-Hajj Abd al-Wahhab al-Qirimi lived in the 17th and 18th centuries and wrote 'Umdat al-Akhbar al-Moutabar' (or 'Umdat

al-Akhbar fi tarih at-Tatar') (completed in 1157/1744) which, in essence, is a 'universal history' [Zaitsev, 2009a, p. 179] and includes a rather brief but elsewhere unavailable information on the initial period in the history of Turkic-Tatar post-Horde yurts, as well as important details on the history of the Crimean Khanate. Abdulgaffar Qirimi was an influential representative and 'patriot' of Shirin, a Tatar clan, and therefore, in his work, he paid great attention to the history of this tribal entity. The details provided by Qirimi on the Golden Horde and post-Horde history have, no doubt, become to some extent the subject of folklore. Some narratives of 'Umdat al-Akhbar' related to the Golden Horde period reveal the similarity with 'Chinggis-name' ('Tarikh-i Dost Sultan'), a chronicle written by Ötemish Hajji, a Khwarezm author of the mid-16th century.

There is currently one known most comprehensive copy of 'Umdat al-Akhbar' (missing 5 pages) and one manuscript which, in the opinion of I. Zaitsev, is a version of this work [Ibid.]. In 1924–1925, some parts of the complete manuscript related to the history of the Golden Horde and the Crimean Khanate were published by Nejib Asym, a Turkish historian [Qirimi, 1343]. A transcript of the historic part of the Qirimi's work was published this year in Kazan [Qirimi, 2014].

The last major source on the history of the Crimean Khanate is 'Gülbün-i Hanan' ('The Rose Bush of the Crimean Khans'), a chronicle of Halim Giray Sultan completed in 1226/1811. The author of this chronicle was member of the dynasty of the Crimean khans. Halim Giray described the history of the khanate through the history of khans who ruled in Crimea—from Hacı Giray (c. 1426–1466) to Baht Giray, Khan of Kuban (1789–1792) [Zaitsev, 2009a, p. 183–186].

The work of Halim Giray was published twice, but only the first edition is authentic in terms of style and completeness (1870)¹ [Halim Giray, 1287/1870; Halim Giray, 1327/1909]. In 2004, the 1909 edition was reprinted in a Latin transcription with translation into Russian

¹ See: [Zaitsev, 2009a, p. 184].

[Halim Giray Sultan, 2004]. In 2014, the work was published in Turkey.

Russian narrative sources from the 15–16th centuries on the history of the late Horde and the states established after its collapse

Anton Gorsky

Events at the beginning of the 15th century and associated with the relations of Russian principalities and the Horde during the reign of Edigu are covered in the Troitskaya ("Trinity") Chronicle (created around 1409) and the Rogozhsky Chronicle (1440s) [Priselkov, 1950; Complete Collection of Russian Chronicles, 15, 1922]. The Novgorod IV and the Novgorod-Karamzin Chronicles (second quarter of the 15th century) preserved the text of 'Edigu's yarliq'—the message of the Horde's ruler to Moscow Grand Prince Vasily Dmitrievich written during Edigu's campaign to Moscow at the end of 1408 [Complete Collection of Russian Chronicles, 4, 1915; 4, 1925; 42, 2002]. A number of unique reports (originating from Tver) about relations between Russian princes (Moscow, Tver and Ryazan) in the first two decades of the 15th century with the Horde are preserved in the so-called Tver Collection or Tver Chronicle (16th century) [Complete Collection of Russian Chronicles, 15, 1863].

The subsequent history of Russo-Horde relations in the 15th century is mainly reflected in the Moscow Grand Prince Chronicle. It is represented by the Moscow Compiled Chronicle dating to 1479 and its continuation until the end of the 15th century, the Nikanor and the Vologda-Perm Chronicles. These records describe the campaigns of khans Borak and Hudaydat to Odoev in the first half of the 1420s, the Horde's raid from the Bulgarian ulus to Galich and Kostroma in 1428–1429, all the twists and turns in the relationships between Prince Vasily II and his family (his uncle Yuri Dmitrievich and cousins) and Khan Ulugh Muhammad—both before his exile from the Horde (1437) and in the period of his wandering that resulted in the founding of the Kazan Khanate (1438–1445), the fight against attacks of Sayid Ahmad Horde on the Grand Prin-

pality of Moscow (late 1440–1450s), Khan Mahmud's (son of Küchük Muhammad) campaign to Ryazan in 1460, preparation of Vasily II for his campaign against Kazan in 1461, the war of Ivan III with the Kazan Khanate in the late 1460s (the military actions are described in detail), the negotiations between the Great Horde's Khan Ahmat and the Grand Prince of Lithuania and King of Poland Casimir IV in the early 1470s devoted to the foundation of an anti-Moscow union, the raid of inhabitants of the Vyatka area to Sarai in 1471, Ahmat's attack on Moscow in 1472, Ahmat's embassies to Moscow in 1474 and 1476, and Ivan III's embassies to the Great Horde in 1474–1476, and the negotiations between Moscow and the Crimean Khanate, which resulted in a long-term alliance between the two states [Complete Collection of Russian Chronicles, 25, 1949; 26, 1959; 27, 1962]. Some of these events are also mentioned in the so-called 'North-Russian' Compiled Chronicle, whose text was preserved within the Ermolin Chronicle and Brief Compiled Chronicle dated to the end of the 15th century [Complete Collection of Russian Chronicles, 23, 1910; 27, 1962].

The Typographic Chronicle (end of the 15th century) reflecting the Rostov tradition of writing chronicles, has preserved unique reports about the attempt to attack Rus by the Great Horde's Khan Mahmud in 1465 and about the raids to the Ryazan Principality and Moscow possessions on the right bank of the Oka in 1468, as well as about Ahmat's invasion of Crimea in 1476 [Complete Collection of Russian Chronicles, 24, 1921].

'A Journey Beyond the Three Seas' by Afanasiy Nikitin contains information about Horde settlements on the Great Volga River Route in the second half of the 1460s, and about the stay of Tsarevich Kasym, son of Mahmud, in Astrakhan [Journey, 1986].

The events of 1480, the so-called 'Stay on the Ugra', are described in narratives contained in the Sofia II–Lvov Chronicles [Complete Collection of Russian Chronicles, 6, 1853; 20, 1910] (the narrative has some features of opposition to the Grand Prince), the Vologda-Perm Chronicle [Complete Collection of Russian Chronicles, 26, 1959], the Typographic Chron-

icle [Complete Collection of Russian Chronicles, 24, 1921], the Moscow Compiled Chronicle from the end of the 15th century [Complete Collection of Russian Chronicles, 25, 1949], and the Likhachev Chronicle [Nazarov, 1983]. In addition, there have been preserved a number of letters to the Grand Prince Ivan III written by representatives of the Russian clergy (Vassian Rylo, Archbishop of Rostov, Metropolitan Geronty, Paisiy, the Archimandrite of the Trinity Monastery of St. Sergius), in which they called for resistance against Ahmat [Pamyatniki, 1982; Russian, 2008].

Information about relations between the Muscovite state and the khanates, the Horde's heirs in the late 15th and early 16th century (the Great Horde, Ahmat's sons, the Crimean and the Kazan khanates, the Nogai Horde) is contained in chronicles of the first half of the 16th century—the Ioasaf, the Uvarov, the Nikoron, the Voskresenskaya (Resurrection) Chronicles [Ioasaf Chronicle, 1957; Complete Collection of Russian Chronicles, 28, 1963; 12, 1901; 8, 1859].

The Ustyug Chronicle dated from the beginning of the 16th century contains a number of unique details about the history of the Tatar khanates (in particular, details about the murder of Ahmat by the Nogai and Siberian Tatars in January 1481) [Complete Collection of Russian Chronicles, 37, 1982].

The events related to the relations between Russia and the Kazan, the Crimean, the Astrakhan khanates and the Nogai Horde during the reign of Ivan the Terrible, are set out in the Chronicle of the Beginning of the Reign of Ivan Vasilyevich and the Illuminated Compiled Chronicle; the siege and the seizure of Kazan in 1552 are described in particular detail [Complete Collection of Russian Chronicles, 29, 1965; 13, 1904]. The conquest of Kazan is described in a special 'Skazanie' ('Legend') and 'Povest' ('Narrative') written in the mid-16th apparently in the Trinity Monastery of St. Sergius [Nasonov, 1962], as well as a few pages in the 'History of the Grand Prince of Moscow' by Andrey Kurbsky [Pamyatniki, 1986].

The 'Kazan History' created seemingly in the 1560s is a unique source. This work describes the history of relations of Rus with

the Horde since the reign of Batu and with the Kazan Khanate since its foundation and up to the conquest of Kazan in 1552. The description of the events of the 15th century in the 'Kazan History' contains a number of inaccuracies (in particular, the circumstances of the Moscow's independence on the Great Horde are embroidered with several legendary episodes—of the 'crush' by Ivan III of the khan's 'letter' (basma), of the destruction of the Horde by Khan of Kasimov Nurdovlat and Moscow troops), but as far as it concerns the details on Moscow-Kazan relations under the reign of Vasily III and Ivan IV, they are very valuable [Kazan History, 1954].

The battle with the troops of the Crimean Khan Devlet Giray near Molodi in 1572 is described in a special narrative created immediately after the events and characterized by accuracy of presentation [Buganov, 1962].

Western European Sources

Marat Gatin

Western European sources denote the works written by European authors from the countries of the Western Christian (Catholic and Protestant) world. When writing their works, these authors used German, Italian, Polish, French, English, Spanish, Dutch and other languages, in addition to Latin.

It should be noted that the informative value of these sources varies greatly. Tatars and their states are described in detail in the narratives of just a few western European authors. Generally, their works of the relevant period are devoted to the strengthening Muscovite Rus—Russia. Details about Tatars are quite fragmentary in the works and serve as a background for relating the foreign policy events of the Muscovite state.

Forming a classification of western European narrative sources, we should use the linguistic principle as a basis,—that is, the language in which the work was written regardless of the author's ethnic origin. It should be borne in mind that we can cover only the most significant sources in our brief review. The following groups of narratives can be distinguished: Lat-

in, German, Polish, French, English, Spanish and Dutch sources.

Latin Sources

Maciej Miechowita (1457–1523), rector of Cracow University, the archiater and the astrologer for King Sigismund I of Poland, and King Wladyslaw II of Bohemia and Hungary, is the author of the history 'Tractatus de duabus Sarmatiis' of 1517. Beginning from the 16th century, the 'Tractatus de duabus Sarmatiis' by Maciej Miechowita was very popular among western European writers who wrote about Tatars and Russians. The work, published in Latin, had already been translated into German, Polish and Italian in the 16th century. The author assumes that Sarmatias are the following two countries: Tataria (the Golden Horde), which split into several independent states, and Muscovy, which was rapidly gaining power. In its historical section, the 'Tractatus' is a compilation, but in terms of geography and ethnography, it is original in almost every instance and may be viewed as an original source [Mehovsky, 1936].

Sigismund von Herberstein (1486–1566) was born within the territory of modern Slovenia, and understood the Slavic tongue, which helped him communicate and obtain a variety of information in Muscovy. In 1515 Sigismund von Herberstein began his diplomatic service in the House of Habsburg and took part in more than sixty embassies. The Habsburgs, who were interested in strengthening ties with Muscovy, sent Sigismund von Herberstein there twice, in 1517 and in 1526, to work as a mediator in negotiations between the advisors of Grand Prince of All Russia Vasily III and the ambassadors of the Grand Prince of Lithuania and King of Poland Sigismund I in 1549. Sigismund von Herberstein published the Notes on Muscovite Affairs in Latin, which were soon translated into German.

Living in Moscow, Sigismund von Herberstein was in favor with Vasily III, was acquainted with representatives of various social groups—courtiers, servants of the Grand Prince, his followers and opponents, both explicit and implicit, Russian and foreign merchants, and

he also conversed with the country's ordinary people. Obviously, some information was obtained directly from the Tatars [Sigismund Herberstein, 1988; Sigismund Herberstein, 2008].

Paolo Giovio (1483–1552) was the Bishop of Nocera, an Italian humanist scholar, archiater of pontiffs, historian, biographer and geographer. Paolo Giovio published detailed first-hand accounts of Muscovite Russia after meeting Dmitry Gerasimov in June or July 1525, who was an envoy of Vasily III to Pope Clemens VII. The information received from Gerasimov and recorded by Paolo Giovio was compiled into a whole book that was published in the same year in Rome under a lengthy title, which was characteristic of that time: 'De legatione Basilii Magni Principis Moschoviae (the Book about the Embassy of Vasily the Great, the Tsar of Moscow, to Pope Clement VII), which described the location of the country, which was unknown to ancient people, the religion and the customs of people and the reasons for the embassy. In addition, it indicates the delusion of Strabo, Ptolemy and others, writing about geography, where they refer to the Riphean mountains, which do not exist at all, as is positively known'. This book was translated into Italian and German in the 16th century. Paolo Giovio's work contains information about Kazan, Astrakhan and the Tatars [Paolo Giovio, 1908].

Albert Pighius (Alberto Campense, about 1490–1542) was a Dutch writer, theologian, mathematician and astronomer who settled in Italy. He is the author of the letter to Pope Clement VII (Lettera d'Alberto Campense), in which he called for the unification of the Churches. The letter was published in Venice in 1543. The letter contains information about the Tatars, their history and culture based on the stories of merchants who traded in Muscovy [Alberto Campense, 1836].

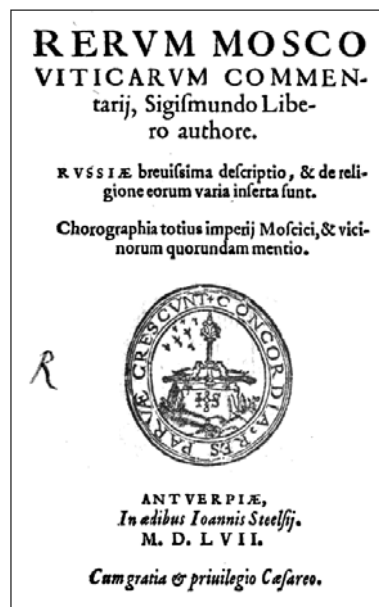

Michalon Lituanus was an ambassador of the Grand Duchy of Lithuania in the Crimean Khanate and author of the notes 'On the Customs of the Tatars, the Lithuanians and the Muscovites' ('De moribus tartarorum, lituanorum et moscorum', 1548–1551) published in Basel in 1615. The treatise of Michalo Lituanus was a polemical work, which was to serve as a for-

Map of Russia by Sigismund von Herberstein taken from the Latin edition of 'Notes on Muscovy'. Basel, 1549.

Cover page of a composition by Michalon Lituanus. 1615.

Cover page of a composition by Sigismund von Herberstein. 1549.

midable warning to the political leaders of the Grand Duchy of Lithuania. Therefore it contained certain distortions in the evaluation of the Tatars, who were extolled [Lituanus, 1994].

Alexander (Alessandro) Guagnini (1538–1614) was an Italian who had served in the Polish-Lithuanian army since the 1550s. He is the author of the 'Description of the European Sarmatia' ('Sarmatiae Europaeae descriptio', 1578), which included his essays on the history, geography and ethnography of Eastern Europe, including the Tatar states [Alexander Guagnini, 1997].

Daniel Prince of Bukhov (1546–1608) visited Muscovy as an ambassador of the Holy Roman Empire in the 1570s. He is the author of the work 'The Beginning of Moscow's Rise' published after the author's death. This work provides details of the political history and culture of the Tatars based on information received from Russian contemporaries [Daniel Prince, 1877].

Reinhold Heidenstein (1553–1620) was a German who served in the Polish army, as well as a diplomat, lawyer, historian, and secretary of the Polish kings Stephen Báthory and King Sigismund III. He is the author of the 'Notes on the Moscow War' ('Regiidebello Moscovitico quod Stephanus rex Poloniae gessit commentariorum librivi') published in Krakow in 1584. The work describes the situation on the eastern borders of the Polish-Lithuanian Commonwealth, including the relations with the Crimean Khanate. It presents information on the history and culture of the Tatars [Reinhold Heidenstein, 1889].

German Sources

Georg Tectander von der Jabel (c. 1570–1620) was a member of Stephan Kakasch's embassy sent by Rudolf II, the Holy Roman Emperor, to Persia (1602–1604). On the embassy, Tectander was seemingly assigned the responsibilities of secretary. However, a year after the start of the journey, already within the territory of Persia, Kakasch, the embassy's head, died, and the mission was subsequently led by Georg Tectander. Upon his return home in January 1605 Georg Tectander submitted a report on

Portrait of Adam Olearius taken from the third edition of his composition. 1663.

the journey to the Emperor. This report became a basis for the book 'Iterpersicam. Kuertze doch auszufuehrliche und warhafftige Beschreibung der Persianischen Reise [...]—'Iterpersicum. A short, but detailed and truthful description of the journey to Persia [...]', which was published in Meissen in 1609 and which is known in Russia as the 'Journey to Persia through Muscovy'. The book describes Tataria, Kazan and Astrakhan, the culture and life of the Volga and the Nogai Tatars [Kakasch and Tectander, 1896].

Adam Olearius (Adam Ölschläger or Oehlschlaeger, 1599–1671) was a noted German geographer, orientalist, historian, mathematician and physicist. In 1633–1639, Adam Olearius was a member of the Schleswig-Holstein embassy to Persia serving as a secretary and mainly as an interpreter. In 1647, the 'Description of the Journey of the Holstein embassy to Muscovy and Persia' ('Offtbegehrte Beschreibung der Newen Orientalischen Rejse [...] anden Königin Persienetc.') was published in Schleswig, which provides not only details

Cover page of composition of Adam Olearius.
The third edition. 1663.

about the Tatars, but also contains drawings and images of the peoples and cities of the Volga region [Olearius, 2003].

Johann Erich Thunmann (1746–1778) was a Swedish historian and professor of the University of Halle; he is the author of the work devoted to the history of the Crimean Khanate published in 1784 in the 'Big Description of Buesching' ('Bueschingsgrosse Erdbeschreibung'), which was later translated into French. In fact, Thunmann's work is the first systematic and comprehensive description of the Crimean Khanate. Influenced by French educators, in his work the author somewhat idealizes the human qualities of the Crimean Tatars [Johann Thunmann, 1991].

Italian Sources

Giosafat Barbaro (1413–1494) was a leading politician of the Republic of Venice and diplomat. In 1436 Giosafat Barbaro left Venice on trade business and went to Tana (Azak, modern

Azov), a Venetian colony at the mouth of the Don. Having lived there for 16 years, Giosafat learned the Tatar language. After returning to Venice, Giosafat Barbaro wrote his work in its final form at the end of 1488 or in 1489—'Here begins the story of the things that I, Giosafat Barbaro, a citizen of Venice have seen and heard, during my two journeys—to Tana and to Persia' ('Quivicomenciano le cosevedute et aldite per mi, Iosaphath Barbaro, citadin de Venetia, in doviazi, cheio ho fatti—unoala Tana et uno in Persia'). The work provides quite detailed information about the geography and ethnography of Azov Sea littoral, the Volga Region and the Caucasus, the political situation in Tataria in the first half of the 15th century [Barbaro and Contarini, 1971].

Ambrogio Contarini (1429–1499) was a Venetian ambassador to Persia (1474–1477). During his embassy, he visited the Crimea and the Volga region. Upon his return to Venice in 1477, Ambrogio Contarini published a description of his journey called 'Viaggiodemisie Ambrogio C., ambascadoralgran-signore Ussum-Cassan, redi Persia', which is better known in its Russian translation as the 'Journey to Persia'. In his book, the author provides information about the political situation in Eastern Europe, about the Tatars of the Crimea and the Volga region and their culture [Ibid.].

Francesco Tiepolo (1509–1580) is an Italian author of the 'Description of Muscovy' (about 1560). Francesco Tiepolo had never been to Muscovy, and he wrote his work using only accounts from third parties, both written and oral. 'Notes on Muscovite affairs' by Sigismund von Herberstein, which received five publications in Latin and one publication in Italian by 1560, serves as the main source for the Tiepolo's book. The works also contain information about the Tatars and their impact on Muscovy, about Kazan ('Cassan'), Astrakhan ('Citracan') and 'Cumania' [Francesco Tiepolo, 1940].

Rafael Barberini belonged to a noted Italian merchant family; he was the uncle of Pope Urban VIII. In order to obtain the right to trade in Muscovy, Rafael Barberini visited Moscow and received an audience with Ivan IV (the Terrible). After his return, he wrote his notes on

his journey to Muscovy that were published by Nicholas Barberini, Rafael's grandson, a century later (in 1658) under the title 'Relazione di Moscovia scrittada Raffaello Barberinoalcon-
tedi Nugarola, Anversa, 1e 16 Ottobre 1565'. The work contains information about the Kazan, Nogai, Astrakhan and Siberian Tatars [Rafael Barberini, 1842].

Francesco da Collo (d. 1571) was a diplomat of the Holy Roman Empire, whose Emperor, Maximilian I, sent him to Moscow to make peace between Sigismund, the King of Poland and Lithuania, and Vasily III, the Grand Prince of Moscow (1518–1519). Francesco da Collo collected various accounts of Muscovite Russia there. Upon his return home, da Collo made a report, which formed the basis of the book known as the 'Report on Muscovy' ('Relatione-sulla Moscovia') published eighty years later (in 1603) in Padua. The work contains information about the geography, customs and traditions of the Tatars [Francesco da Collo, 1996].

Polish Sources

Stanisław Żółkiewski (1547–1620) was a Polish commander, who crushed Dmitry Shuysky's troops in 1610 near Klushino and then captured Moscow. For his Moscow campaign, in 1613 Żółkiewski received the title of the Grand Crown Hetman, and a few years later was appointed the Grand Chancellor of the Crown. The last years of his life were spent defending the southern borders of the Polish-Lithuanian Commonwealth from Tatar and Turkish attacks, and he died in 1620 in a battle against the Turks near Cecora. Stanisław Żółkiewski wrote the work called the 'Beginning and Success of the Moscow War', which was published only in 1835 in Moscow. This work contains information about the participation of Kasimov Tatars in the events of the Time of Troubles [Stanisław Żółkiewski, 1871].

French Sources

Guillebert de Lannoy (also Gilbert, Guilbert or Ghillebert, 1386–1462) was a Flemish knight, advisor and chamberlain of John the Fearless, the Duke of Burgundy, as well as a dip-

Artist Thomas de Leu

lomat. He supported the active struggle against the Muslims. In 1407–1410, he participated in the Reconquista. In 1413 Guillebert de Lannoy participated in the War of Teutonic Knights against Poland. In 1421–1423, the knight visited Prussia, Lithuania, Poland, Moldova, Crimea, Constantinople, Egypt, Syria and Palestine.

Guillebert de Lannoy wrote memoirs called 'Journeys and Embassies', diary notes in Old French that appear to have been edited by the author shortly before his death. In his memoirs, de Lannoy gives information about the life and

culture of the Tatars, including some details about the Tatars who had resettled in Lithuania [Journey of Guillebert de Lannoy, 1873; Kudryavtsev, 2003].

Blaise de Vigenère (1523–1596) was a French diplomat, cryptographer and alchemist.

At the Sejm held in Warsaw in April 1573, Henry Valois, the Duke of Anjou, the brother of King Charles IX of France, was elected to the position of the King of Poland and Grand Prince of Lithuania. To get acquainted with the state, the new King needed a detailed note. The writing of this note was entrusted to Blaise de Vigenère. Already in July 1573, a comprehensive note written by Vigenère was submitted for publication. The work was named as follows: 'La description dy Royaume de Pologne et pays adjacens, avec les statuts, constitutions, moeurs, et fasons de faire d'iceux. Par Blaise de Vigenere, secretaire de feu Monseigneur le Duc de Nivernois. A Paris, cher Jean Richr libraire, rue saint Jean de Latran, a l'enseigne de l'arbre Verdoyant. 1573. Avec privilege du roi', which is

known in our country as the 'Description of the Kingdom of Poland'. A separate section of Vigenère's work is devoted to the Tatars, namely their history and culture [Blaise de Vigenère, 1890].

Jacques Margerie (Jacques Margeret, 1550–after 1618) was a professional French contracting officer, who started his service in the Russian army in the rank of captain in 1600. While in Russia, Jacques Margerie served Russian tsars, pretender tsars and Sigismund III, the King of Poland. In autumn 1611, Jacques Margerie left Russia. Having returned to France, he wrote and published his work 'The State of the Russian Empire' ('Estat de l'empire de Russie'). This work contains information about the history and culture of the Volga and Crimean Tatars, and about their participation in the events of the Time of Troubles [Jacques Margeret, 2007].

Guillaume Le Vasseur de Beauplan (about 1595–1685) was a French engineer and military cartographer. Guillaume de Beauplan was invited by the Polish King Sigismund III to serve in Poland as a senior captain of artillery

and a military engineer, where he stayed from 1630 to 1648. While building fortresses in Ukraine, Guillaume de Beauplan was engaged in strengthening the southern borders of the Polish-Lithuanian Commonwealth. Upon returning home, in 1651 Guillaume de Beauplan published a work about Ukraine entitled 'Description des contrées du Royaume de Pologne, contenues depuis les confins de la Moscovie, insques aux limites de la Transilvanie. Par le Sieur de Beauplan', better known after its second publication as the 'Description of Ukraine' ('Description d'Ukraine'). In his work, Guillaume de Beauplan devotes some attention to the Tatars, describing their customs and way of life in the 17th century, also in graphical form [Guillaume Le Vasseur de Beauplan, 2004].

Foy de la Neuville was a French diplomat in the Polish service who visited Russia in 1689 and published his 'Notes on Muscovy' in Paris in 1698. In particular, this work contains a description of the Crimean campaigns of Vasily Vasilyevich Golitsyn [De la Neuville, 1996].

English Sources

Anthony Jenkinson (1529–1610) was an English diplomat who visited Muscovy four times in the period from 1557 to 1571 serving as an ambassador of English rulers and a representative of the Muscovy Company founded by London merchants in 1555. Jenkinson's primary objective was to obtain charters of immunity and the right to freely move along the Volga to the Caspian Sea. Anthony Jenkinson travelled to Central Asia and Persia, and visited Kazan and Astrakhan. Jenkinson's notes about the journeys were published in 1598–1600 in Hakluyt's collection: 'The principal navigations, voyages, traffiques and discoveries of the English nation'. In his notes on the journeys, Jenkinson provides information about the Volga and Crimean Tatars, the Nogai, and their economy and culture of the mid–16th century [Anthony Jenkinson, 1937].

Giles Fletcher (1548–1611) was an English poet, parliamentarian and diplomat. In 1588 in his capacity as an envoy of Queen Elizabeth, Fletcher was sent to Moscow to Tsar Fedor Ivanovich to support the petition of the Muscovy

Company to hold a monopoly on trade with the northern Russian ports. Fletcher's embassy failed: the Muscovy Company was denied a monopoly and the company lost its right to free trade within Russia. In the summer of 1589, Giles Fletcher left Russia. Having returned home in 1591, Fletcher published his work 'Of the Russe Common Wealth', which contains fragmentary accounts of the Crimean, Nogai and Volga Tatars. After that, in about 1610 Fletcher also wrote a historical treatise on the origin of the Tatars—'Essay upon some probable grounds that the tartars... are the Posterity of the ten Tribes of Israel', which was published after his death in 1677 [Giles Fletcher, 2002].

Jerome Horsey (about 1550–1626) was an English nobleman, parliamentarian and diplomat. In 1573–1591 he lived (with some breaks) in Russia and managed an office of Muscovy Company. Jerome Horsey is the author of three memoir works that contain valuable information on the history of the Muscovite state: 'The travels of sir Jerome Horsey, 'The ... coronation of Theodore Iuanowich, emperor of Russia ' and the ' Extracts out of Sir J H's Observations in seventeen years travels and experience in Russia. Among other things, these works provide information about the relations between tsars Ivan IV the Terrible and Fedor Ivanovich and the Tatars [Jerome Horsey, 1990].

Spanish Sources

Don Juan of Persia (before baptism—Uruch Beg) (1560–1604) was a diplomatic ambassador of the Persian dynasty of Safavid to the Spanish court. Arriving in Spain in 1599, he converted to Catholicism and in 1604 wrote a book called 'Relaciones de Don Juan de Persia'. The work consists of three books. The first and second books provide a description of the Safavid state. The third book is devoted to a direct description of the journey to Spain, where the author gives information about various countries and cities. It offers details about the territory of the Golden Horde (the 'Great Tatar'), about the participation of the Crimean Tatars in the Ottoman Empire's war against Iran, and about the life and culture of the Volga Tatars [Russia and Europe, 2007].

Portrait of Isaac Massa.
Artist Frans Hals. 1626.

Dutch Sources

Isaac Massa (1586–1643) was a Dutch merchant, traveller and diplomat. He lived in Moscow in the period 1601 to 1609. He later visited Russia as an envoy of the General States. Upon his return home, he wrote a 'Brief about the Beginning and Origin of Modern Wars and Unrest in Muscovy Occurring Before 1610', which was published in Brussels only in 1866. Isaac Massa's work contains details on the history of the Russian-Tatar relations in the second half of the 16th and start of the 17th century [Isaac Massa, 1997].

2. Arabographic Documentary Sources

Lenar Abzalov, Ilyas Mustakimov

Documentary sources that contain rich material about the public, political and social life, economy, taxes and levies, fiscal apparatus, writing and chancellery culture and the language of records management are of particular significance for the study of the history of Tatar states in the 15th to 18th centuries. Official Tatar acts and documents drew the attention of researchers when oriental studies in Russia and abroad were only just being established. With only a few Turk and Tatar narrative sources preserved, particularly valuable were the materials from khans' chancelleries and private law documents, which were the most reliable when studying the aforementioned aspects of history.

Tatar documentary sources were sought and analyzed throughout the 19th century. Separate samples of Crimean yarliqs were introduced for research purposes in the first half and middle of the 19th century [Yartsov, 1848; Yartsov, 1849; Berezin, 1851a]. The outbreak of the Crimean War resulted in a growing interest in the historical records of the Crimean Tatars. Since that time, the archeographic work and historiographic analysis of the Crimean Tatars' documentary materials has become one of traditional issues of Russian historical research.

The researchers who were actively engaged in studying the issues of Tatar documentary analysis include I. Berezin, V. Velyaminov-Zernov and H. Faizhanov, A. Malinovskiy, F. Lashkov, V. Radlov, V. Smirnov, A. Samoylovich. While in the first years of the Soviet Union, the tradition of publishing and studying Tatar official documents continued unabated, at the end of the 1920s this tradition is interrupted. This area of research was subsequently developed with success by foreign academics, including F. Kurtoglu, A. Kurat, A. Zajaczkowski, Ch. Lemerrier-Quelquejey, V. Ostapchuk, H. Inaldzyk, A. Grigoriev, I. Vashari, M. Ivanich, and D. Kołodziejczyk¹.

A significant contribution to the historiographic generalization and systematization of

¹ See major publications of charters and patents in the following works: [Berezin, 1872, appendix no. 22, pp. 1–9; Berezin, 1872a, appendix no. 22, pp. 10–23; Smirnov, 1913, pp. 140–178; Smirnov, 1918, pp. 1–19]. For information about the publications of charters and deeds of the 15–16th centuries see: [Usmanov, 1979, pp. 31–56]. See a list of the most important publications of diplomatic correspondence (predominantly Crimean) in the following works: [Ivanich, 2006, p. 169, note 1]. The recently published work by D. Kołodziejczyk [Kołodziejczyk, 2011] should also be added here.

Tatar official documents was made by Professor of Kazan University M. Usmanov. In his monograph 'Zhalovannye akty Dzhuchieva Ulusa 14–16 vv.' (Letters patent of Ulus Jochi in 14–16th centuries), Usmanov analyzes a wide range of sources to a general historical characterization (and in terms of diplomacy) of Tatar documentary sources belonging to the aforementioned chronological framework.

Unfortunately, not all original documents originating from the Kazan, Astrakhan, Siberian and Kasimov khanates, the Great and Nogai Hordes have survived to the present day. The limited number of Tatar official documents to be preserved is due to various reasons. Many documents were destroyed in numerous fires, which were characteristic of society of that time. The consequences of the capture of Kazan in 1552 were the most tragic. The time factor and the lack of adequate storage conditions have also played a significant role. The liquidation of Tatar political and legal institutions and changes to the socio-political and economic structure of society resulted in the documents losing their legal validity. Thus, with some exceptions, the document holders had no social or material need to retain them. Given adverse storage conditions, many Tatar official documents have been preserved only in the form of copies, reflecting the form or just the content of the original documents in one way or another. Furthermore, the ambassadorial books of Muscovy and the Metrics of the Grand Duchy of Lithuania have preserved some translations of messages and letters written by the rulers of the Crimean and Kazan Khanates, and the Great and Nogai Hordes.

The situation is much better for official documents of the former Crimean Khanate: official documents, diplomatic correspondence between Crimean rulers and their entourage, as well as court documents have been preserved. This can be attributed to several factors: the lengthy existence of the Crimean Khanate and relative stability of its government; its active diplomatic correspondence with neighboring states; its developed urban culture, which enabled better preservation of documentary artifacts; the influence of the highly-developed culture of the Ottoman

Empire, under whose suzerainty the Crimean Khanate had been since 1475, on the Khanate's recordkeeping. In addition, upon annexation of the Crimean Khanate, the Russian government generally recognised the class and property rights of the Tatar feudals, which, among other things (meaning more favorable conditions of document storage, as compared to other Tatar states and a sufficiently high level of the archival work and scholarship in the Russian Empire in the 18–19th centuries) contributed to the better preservation of official documents of the Crimean Tatars. In the Russian Federation, the majority of genuine Crimean documents are stored in the documentary fund of the Manuscript Department of the Institute of Oriental Manuscripts of the Russian Academy of Sciences, and copies of yarliqs of the Crimean khans are held in the Manuscripts Department of the Russian National Library. Moreover, a large number of documents from the Crimean Tatars have been stored in archives in Turkey, Poland, Hungary, Austria, Romania and Ukraine. A valuable body of documentary sources has been preserved, namely the Collection of Kazaskers' Books, which is a part of the archive of the Crimean khans. These register books (defters, sakki), which are now stored in the Russian National Library, contain copies of official documents, as well as legal and administrative cases heard by supreme Crimean Muslim judges. 121 such books have been preserved, which contain records for the years 1608–1810 [Vasilyeva, 1993, pp. 44–45; Cihan, Yılmaz, 2004, S.131–176]. One defter related to the Karasubazar Kadi District (Kadylyk) and which contains records for the years 1752–1753, is now kept in the funds of the Yalta Historical-Literary Museum [Cihan, Yılmaz, 2004, S.132, not 4].

The Tatar states of the 15th to 18th centuries continued the clerical traditions of the Golden Horde, and began to apply them in the new political environment. Over time these new political conditions began to influence the development of the records management. In particular, the administrative tradition of the Crimean Tatars began to absorb some elements of Ottoman records management culture

from the second half of the 16th century, and these elements came to define it from the beginning of the 17th century. Despite this fact, some relics of the traditional records management culture can be found at that time and later. The formation and development of a Crimean records management culture that is utterly distinct from the traditions of the Golden Horde and Jochi, takes place within the 17–18th centuries, when the nationality of the Crimean Tatars had been already formed, and their chancellery language (different from their written language in the 15th and first half of the 16th centuries) had been completely developed. The influence of Ottoman-Turkish records management culture is discernible primarily in the language, style of narration and visual presentation. In fact, M. Usmanov highlighted the following feature of Crimean diplomatic documents after its exposure to the suzerainty of the Sublime Porte: letters from Crimean rulers to Russian and European kings had long been similar to the documents of the Golden Horde in their form and language, while letters and reports submitted to the rulers of the Ottoman Empire—the suzerain of the Crimean Khanate, were drawn up in a form similar to that used in the Ottoman Empire [Usmanov, 1979, p. 108–109].

The limited number of authentic official and other documents of other Tatar states makes it impossible to draw conclusions about the nature of the development of their clerical culture.

Some preserved acts of private law are of particular interest to us. Namely, two wills of aristocratic representatives of the Kasimov Khanate: Alikey-atalyk (1639) and Kishbike-Bikech (17th century) [Velyaminov-Zernov, 1866, pp. 231–267; 447–459].

Tatar and Ottoman documents preserved in Turkish Archives are of great interest. The largest collections of documents related to the history of the Turkic-Tatar states after the fall of the Golden Horde are held by the Ottoman Archive under the Prime Minister of Turkey (Başbakanlık Osmanlı Arşivi) and the Topkapı Palace Museum Archive (Topkapı Sarayı Müzesi Arşivi). Most of them relate to the history of the Crimean Khanate.

The work by A. Kurat was the first major publication of the letters and yarliqs of the late Golden Horde, Crimean and Great Horde rulers [Kurat, 1940]. A large body of documents primarily related to the history of the Crimean Khanate and deposited in the Ottoman Archive, the archive and library of the Topkapı Palace Museum, was identified, studied and published by a group of French researchers led by Professor Dr. A. Bennigsen in the 1960–1970s [Le khanat, 1978].

A collection of documents containing a facsimile, text and Russian translation of 37 documents of Tatar and Ottoman origin and related to the history of the Turkic-Tatar states of the 16th century was published [Documents, 2008, pp. 49–253].

Great, but as yet underused informative potential is offered by the 'Registers of Important Issues' (Umur-i muhimme defterleri, or for short—Muhimme defterleri). They contain the texts of Sultans' letters to foreign and vassal rulers and Sultans' decrees to Ottoman officials¹. The earliest of the preserved Registers dates back to 951–952/1544–1545. Several volumes of the Registers were published [Topkapı, 2002]².

At the end of the 17th century, the 'Registers of August Messages' (Name-i Humayun Defterleri) began to be maintained in the Sublime Porte to record international correspondence, alongside the 'Registers of Important Issues'. Unlike the 'Muhimme defterleri', the 'Registers of August Messages' contain not only the texts of the messages and letters coming from the Porte, but also translations of charters of foreign rulers sent to the Porte and the oral reports of their ambassadors.

Lapidary but interesting details about the arrival of Tatar (Golden Horde and Crimean) embassies and envoys to the Ottoman Sultans in the 15th to 16th centuries and their maintenance costs is contained in the account books of Sultans' palaces [Barkan, 1979].

¹ For more details about 'Muhimme defterleri' as a source see: [Mustakimov, 2008a, pp. 27–31].

² See a list of other 'Muhimme defterleri' publications in the following work: [Mustakimov, 2007, pp. 299, 302–303].

3. Literary Works

Khatip Minnegulov

The Tatar literature of the 15–18th centuries, spanning over three centuries, depicts a very complex, contradictory and tragic period in Tatar history. This was the time of the fall of the Golden Horde, with the Crimean, Kazan, Astrakhan, Siberian and Kasimov khanates, along with the Nogai Horde emerging on its enormous territory. It was a time when Tatar states existed, flourished and were conquered. It was also a time of severe colonial oppression, when a significant portion of spiritual and material values, accumulated over centuries, were lost. Furthermore, it was at this stage of history, and particularly following the dissolution of the Kazan and Astrakhan states, that the populace of the Crimean Khanate gradually began breaking off from the relatively common linguistic, cultural and ethnic environment to become more Ottoman-like. Therefore, it is appropriate to consider the literature of this period in the light of the following three aspects: 1) Tatar literature of the period of the Kazan Khanate (mid-15th century—mid-16th century); 2) Crimean and Tatar literature of the 15–18th centuries,—that is, the literature of the Crimean State; 3) 17–18th centuries. Of course, dividing over three centuries of literary tradition in this matter is, by nature, conditional. At the same time, it is helpful in imparting an understanding of the Tatar literature during these centuries.

Literature during the period of the Kazan Khanate

Written literature and verbal art are very important factors and the dominant criteria for identifying and assessing the nature of a state or society. On one hand, the very availability of books and literary works speaks to high cultural development. On the other hand, verbal art is a reliable tool for understanding the spiritual life of a society and for grasping the intellectual, moral and psychological condition of the people of that society. Based on this approach, let us try to briefly describe the

Tatar literature of the Kazan Khanate period. Before delving into the subject, there are two questions that need to be discerned. In some scientific works, and in practice, Tatar literature of the second half of the 15th century and the first half of the 16th century is equated to the literature of the Kazan Khanate alone. However, this assertion is only partially true because the Tatar literature of this period functioned and developed not only in the Kazan Khanate, but also in other Tatar states, in particular, the Astrakhan, Siberian, Nogai, Crimean and Kasimov khanates, as well as the Great Horde. The Tatar literature of this period, as in the era of the Golden Horde, was relatively uniform and indivisible. It was literature that was created and distributed in nearly the same language. Of course, the works of Volga, especially Kazan authors, were dominant among the literature created across the enormous Eurasian territory. Muhammedyar described Kazan as a 'city rich in poets'.

Another issue is that only a few of the works written in the 15–16th centuries have been preserved till the present times. Our knowledge of the literary life of some other Tatar khanates is particularly poor. Therefore, statements about the literature of the Kazan Khanate period are incomplete and sometimes even fragmentary. Nevertheless, it is fair to say that compared to historians, linguists and social scientists, literary scholars have completed a significant endeavor in studying and popularisation of the literature of the Kazan Khanate period, doing so in the Soviet era, despite various political obstacles.

Tatar literature of the second half of the 15th—first half of the 16th centuries is a direct heir and successor of the Golden Horde literary traditions, both in terms of the language and the ideological, thematic, and poetic features. It is permeated with Muslim ideology and Sufi motifs and images. Like the literature of previous centuries, it is greatly influenced by Arab-Persian and Turkic literature. For ex-

ample, Muhammedyar creatively uses themes and images from '1001 Nights', 'Kalila and Dimna', and works by Attar and Saadi. Medieval Tatar readers knew Arabic, Persian and Turkic to varying degrees. Therefore, works by eastern authors were popular in the Volga and Ural regions. They were read in the original, as well as in various translations and with commentaries. In particular, there is a translation of the famous 'Kalila and Dimna' dated in this period [Kälilä vä Dimnä, 1996]. The literary and written Tatar language of the medieval times borrows heavily from oriental languages.

Tatar literature of the Kazan Khanate period features various types of works, including poetry and prose, poems and dastans, ghazals and qasidas, satire and humour. Some literary works combine motifs and styles of written and oral literature. In particular, the dastan 'Edigu' makes use of some achievements and experience of the centuries-old written poetry. 'Zafarnamai Vilayati Kazan' (the 'Book on the Victory of Kazan') by Sharifi often uses folkloric techniques and tools when describing the defenders of Kazan.

Works of this period explore various questions of human existence and society. The topic of moral character is predominant in particular. For many writers, the ideal man is enlightened, morally pure, educated and religious. The literature also explores social and philosophical problems. For example, according to Muhammedyar, one's happiness depends both on the social workings of the society and on the rulers. The dastan 'Edigu' clearly shows that selfish, personal interests undermine the foundation of a state. Some works can serve as a reliable source for studying the actual life of that period. In particular, in 'Zafarnamai...' (1550), Sharifi describes Ivan IV's campaign against Kazan, the siege of the city, and the battle between the Kazan people and the Russians. Interestingly, the author of this work was a witness and participant in the events.

Muhammedyar's poem contains images of real historical figures of the time, such as Sahibgeriy and others.

* * *

Let us now briefly touch upon individual works of authors of the Kazan Khanate period.

Poems by Hasan Kaigi, Dismambet, Kaztugan and Chalgiz Zhyrau are folkloric, reflective of epic story-telling traditions, love for mother nature, and celebration of unity and friendship between people. These authors lived primarily in the Lower Volga Region, near the Yaik River, and were closely associated with the Turko-Tatars, who led a nomadic or semi-nomadic lifestyle. Their poems were widely popular not only among the Tatars, but also among other Turkic nations.

In his poem 'Gyikab' ('Revenge'), the Kazan Khan Möxammädämin (1469–1518), like his predecessors Saif Sarayi and Ahmed Urgendzhi, criticizes the inhumane, aggressive policy of the Central-Asian ruler Aksak Timur.

Notably, a very valuable historical message (1506) from Möxammädämin Khan to Polish King Alexander I was recently discovered, depicting real events of the early 16th century (relations between Moscow, Kazan, Crimean and Polish rulers; raids of Ivan III on Kazan, the defeat of Moscow troops, etc.) [Minnegulov, 2010, 34–41 b.].

Many readers of the Tatar Khanates enjoyed the romantic poems by Majlisi of Central Asia (15–16th centuries) about the sublime love of Seyfulmulyuk for Badiguldzhamal, and poems by Sayyadi about Tahir and Zuhra. Although the precise time and place of these works' composition have not been established, they were adored by the Tatars in the following centuries as well. The poem 'Kyissai Seyfulmulyuk' by Majlisi, which was based on a plot from '1001 Nights', is one of the first Turkic-Tatar secular books printed in the Kazan printing house (in 1807). There are numerous folkloric and written versions of stories about Seyfulmulyuk and Badiguldzhamal, and about Tahir and Zuhra.

In 1501–1510, in the distant Mamluk Egypt, ruled by Volga and Urals region natives, Tatar Ghali Efendi (a.k.a. Sharif Hamidi) created an enormous 'Turkic Shahnameh', considered a common heritage of Turkic-speaking peoples. This work is not simply a translation of the

famous epic by Ferdowsi. It contains many interesting events and original details.

Poems by Umami Kamal (Ismagil) (the last third of the 14th century–1475) embody the Sufi ascetic's ideals of a perfect man and reflect the lyrical hero's complex, antinomic state. Although Umami Kamal is considered an Ottoman poet, he spent a part of his life in the Volga region and Crimea. He ponders such eternal questions as the meaning of human life, and the connection between life and death. According to him, all people are equal in the face of death. Death has the same power over a mighty Shah and a slave. The art of this talented poet greatly influenced the poetry of Qolşärif (16th century), Mavl Kuly (17th century), S. Zaky (1821–1865), Derdmend (1859–1921) and other Tatar authors. The works of Umami Kamal were widely disseminated as manuscripts and later in printed form.

Qolşärif [Mäñgelekkä ayak baskanda, 2006] is inscribed in the history of the Tatar people as a poet, religious leader, social activist and patriot of his native land. He died heroically on 2 October 1552 while protecting Kazan from foreign invaders. His emotional poems, full of religious and philosophical content, have been included in school textbooks for several centuries. The poem 'Kyisai Hubbi Hudge' imparts high moral qualities in the readers.

The work 'Zafarnamai Vilayati Kazan' ('The Story of the Victory of the Kazan State'), written in autumn 1550, has been preserved till the present times. This prose work, with poetic lines dispersed throughout, was composed by Sharifi (Sharif Hajjitarhani). Researchers identify him with Qolşärif.

In early 1550, Ivan the Terrible surrounded Kazan in order to seize the city. After a nearly two-week siege, having failed to achieve what he had planned, he had no choice but to retreat and leave the city. These historical events constitute the foundation of Sharifi's work. The author condemns wars of aggression, calling Ivan the Terrible 'conceited', a 'troublemaker' and a 'villain', and portraying the heroism of the city's protectors with admiration. Thus, he proves to be a true patriot of his Motherland. Sharifi's work contains the following poem,

lauding the beauty and historical role of the city of Kazan in the destiny of the Tatar people (according to the Russian word to word translation by Farid Hakimzyanov):

Wonder! This city of Kazan is a place of glee in the world,

There is no other city in the world providing shelter,

There is no other city in the world that blooms as Kazan,

One can always find food and drink in Kazan—the city of the Universe!

We have inherited our power from our ancestor khan,

This place on the globe has always been a khan city, the place of a khan's son,

Having sold his land and house, he will not pay the father's tax,

Why is this villain here? This is not Ivan's city!

Sharifi, do not leave this city as long as you believe in gazavat,

From this day forth, they shall proclaim him the lord of Kazan.

Unfortunately, two years later, this 'blooming' city—the capital of a large khanate—was reduced to ruins and ashes. The author of these heart-felt lines was among the many victims of the bloody battle.

Muhammedyar (1497–1549) was one of the last poets of the Kazan khanate period. His life and creative work was organically linked to the fate of the Tatar people and Kazan. Throughout his life, this talented, highly educated man had suffered hardship and enjoyed prominence. It is no wonder that his image draws the attention of modern writers, artists and musicians.

Only two poems—'Tuhfai Mardan' ('The Gift of Men', 1540) and 'Nury Sodur' ('The Light of the Soul', 1542)—and one rhyme—'Nasihah' ('Exhortation')—are known out of Muhammedyar's considerable artistic legacy [Möhämmädyyar, 1997]. They are all lyric-epic in style, with didactic content, providing a lucid portrayal of the author's innermost thoughts and feelings.

Muhammedyar composed his works in a troublesome time in the Kazan Khanate. The internal and external conflicts threw the Tatar state into disorder. Being aware of the complexity of the situation, the poet deliberated about ways out of the crisis, and the fate of his people and his Motherland. Like his predecessors, he dreamt of a just, enlightened ruler, putting great hopes in him. Secondly, Muhammedyar believed that the inhabitants of the state would need to be well-mannered if peace and tranquility were to be restored. Thus, the author deliberately portrays high moral qualities and actions, presents didactic stories, and examples from real life. The poet values justice, compassion, generosity and loyalty above all. He evaluates people not by wealth, rank or religion, but by their noble, humane actions. His ideas about society and man's role and place in the world are concordant with those of the great Renaissance thinkers, and the Western European utopians of the Middle Ages.

Despite his diplomatic immunity, Muhammedyar, who worked as an interpreter in the Kazan Khanate delegation to Moscow, was brutally murdered by the order of Ivan IV. **Adnash Hafiz**—a 'member of the embassy'—was made a slave' [Middle Ages, 1999, pp. 141–147]. It was during this difficult time that he wrote his work 'Siradzhel-Kulyub' ('The Light of the Hearts', 1554), which became very popular among Tatar readers. Printed publications of the work are available as well. According to V. Bartold and A. Scherbak, a book under the same name was originally written in Arabic. After that it was translated into Farsi. There were Turkic versions of the work as well. Adnash Hafiz created his work on the basis of its multilingual texts and variants [Minnegulov, 2010, pp. 100–104]. 'Siradzhel-Kulyub' uses some materials from the Quran, the Hadiths of the Prophet, and other texts. The book examines various religious and moral questions. The author places particular emphasis on the tremendous role of faith and knowledge in the preservation of the national mentality. In presenting his ideas, Adnash Hafiz often uses dialogues, contrasts, stories and didactic examples.

Literature of the Crimean Khanate

The Crimean Khanate occupies one of the leading positions among all the Tatar States existing after the collapse of the Golden Horde, both in terms of its continuance and its military and political prowess. Many people consider this state to have spanned only the Crimean Peninsula. However, alongside the Crimea, it occupied large territories in the Western Fore-Caucasus region, the Northern Black Sea region, as well as some areas of the Azov Sea region. In the 13–15th centuries, the Crimea served as an outpost for relations between the Golden Horde and European states and peoples.

Despite some unique lifestyle features, the Crimea inhabitants were full-fledged representatives of the unified Golden Horde political and spiritual culture, language and literature. This tradition was continued in the Crimean Khanate to a known extent. At the same time, the influence of the Ottoman Empire intensified particularly in the middle of the 16th century. This was evident not only in the public and political realms, but also in language, literature, the arts, and in particular, music and dance. Despite the relative isolation the Crimeans, they were still Tatars. Their literature and spiritual values are considered very important to Tatar culture as a whole. It is also notable that the Crimean Khanate existed longer than other Tatar khanates, spanning till the end of the 18th century and succeeding previous Tatar states. Therefore, its study offers insights into many aspects of the history and spiritual life of our people. Importantly, many monuments of the material and spiritual culture have been preserved since the times of the Crimean Khanate, with most of the arabographic literature. There are also some works in Latin, Armenian and Cyrillic. Many works, irrespective of where they were composed, were disseminated across the entire Tatar territory. For example, a famous work by Sayyid Muhammad Riza (d. 1756) from Istanbul, titled 'Seven Planets' ('Asseb as-seyyar') and devoted to the history of medieval Crimea, was well known to the Volga

Tatars. In 1832, it was published in Kazan by M. Kazembek.

'Historical prose' [Zaitsev, 2009a] comprises a significant portion of the written literature relating to the Crimean Khanate. Such prose includes the following works: 'The History of Khan Sahib Giray' ('Tarihe Sāhibgārāy Khan') by Badr ad-Din Muhammad b. Muhammad Kaisunizade Nidai-Efendi, known as Remmala-Khoja (Rämmäl Xuca) (d. 1569 in Istanbul); 'Chronicles of Desht-i Qipchaq' ('Tāvārihe Dāšte-Kıpçak') by Abdullah b. Rizwan (Abdi) (composed roughly in the 1630's); 'Tarihi Islam—Giray Khan' (completed in 1651) by Khoja Muhammad ('Senai', 'Kyrymly'); 'The History of Tatar Khans of Dagestan, Moscow and the peoples of Desht-i Qipchaq' (mid-18th century) by Ibrahim b. Ali Kefevi (the personal secretary of the Crimean Khan Fath-Giray II (1736–1737); 'The Rose-Bush of the Khans' ('Gölbüne-Hanan') by Halim Giray (who ruled the Crimea in 1756–1758), and others. Although such works are considered historical, they are also pieces of literary art, to varying degrees. Their language and manner of narration often approximate a literary, figurative style. They include examples of rhyme, rhythmic prose, and poetic rhymes. In addition to depicting real events and acts, they describe fictional circumstances and legends as well. Some stories about khans are written in a panegyric genre. Therefore, such works can be conditionally considered historical and literary. In terms of structure and content, they resemble books that were popular among Tatar readers: 'Jamig at-Tavarikh' (1602) by Qadir Ali Bek, 'Daftar-i Chinggis-name' (about 1679) by an unknown author, and 'Tavarihe Bulgaria' by Hisameddin Muslimi [Usmanov, 1972]. Such works by Crimean and Volga Tatar authors are characterized by an intertextual and, to some extent, eclectic mode of narration. They are rich in texts borrowed from works of previous authors, especially Zakariya al-Qazwini (1203–1283) and Rashid ad-Din (1247–1318). It is worth noting that writing and the process of composing literary works were highly respected in the Crimean Khanate. Even khans and high-ranking officials took part in this activity. I. Zaitsev

notes that 'many members of khans' families wrote poetry ... Exercises in poetry writing, along with training in military art, were an indispensable part of children's education in the Giray dynasty. Khans were surrounded and served by highly-educated people who contributed to Ottoman and world literature' [Zaitsev, 2009a, p. 25].

Some authors of the above 'historical' works were also poets. In particular, Remmal Hoja even authored a poetic work in the field of medicine [Ibid, p. 69].

According to modern research, there were about two hundred poets, scientists and writers in the Crimean Khanate [Ibid, p. 37]. Unfortunately, most of their works have not been preserved to the present or yet found. In this respect, in 1735 the tsarist Commander Burkhard Christoph von Munnich burned down the city of Bakhchysarai, including the Khan's library. A vast amount of spiritual and material valuables of the Crimean Tatars was destroyed during the Crimean and Civil wars, as well as during the deportation period in 1944.

The surviving part of the written literature of the Crimean state comprises poetic and prosaic works of various genres, such as dastan, ghazal, rubai, qasida, madhia, marcia, nama, munajat, hikayat, seyahatname (sefername), shajara, yarliq, etc. This literature reflects upon various aspects of human life and existence, including moral, philosophical, social, political and domestic issues, and, of course, the subject of love. As in other regions of the Muslim East, the spiritual life of the Crimean Khanate was greatly influenced by Sufism, especially 'Mesnevi' (a 'poetic encyclopedia of Sufism' of sorts) by the great Jalal ad-Din Rumi (1207–1273). Besides the classics of Arab-Persian literature, works by Ottoman authors were widely popular in Crimea as well. Such works include 'Muhammadiya' (1449) by Yazdzhoglu (Celebi), 'Iskandernama' (1390) by Ahmedi Girmiyani, 'The Birth of the Prophet' ('Mavlyuden-nābi') by Suleyman Celebi (d. 1422), travel notes by Evliya Çelebi (1611–1670), etc.

Many readers and listeners in the Crimea enjoyed various versions and variants of com-

mon Turkic-Tatar dastans, such as 'Edigu', 'Tahir-Zuhra', 'Chura Batyr', etc.

Alongside the above mentioned authors of the Crimean Khanate, there were other master writers, such as Džhanmuhammed (15th century), Mengli Giray (15th century), Mudami (d. 1540), Bakayı (d. 1591), Leila Bikech, Aşık Arif and others. Aşık Umer (Gashyyk Gomär, 1621–1707) is the most prominent and well-known poet of the Crimean Khanate. (Unfortunately, he is presented as a 'Turkish ashik-poet' in the Concise Literary Encyclopedia [Concise. 1962, p. 381], apparently because of the Ottoman-like language used in his works). He was born in the city of Gezlev (present-day Yevpatoria). He was an avid traveller, visiting many localities of the Ottoman Empire. According to legend, this distinguished representative of 'bard'—'ashyk' poetry died in his hometown.

Aşık Umer was a gifted and highly professional poet who left a rich artistic heritage. He created magnificent pieces of verbal art within the general framework of traditional classical Oriental poetry, as well as 'ashyk' lyrics. His poems, written in the genres of ghazal, mu-rabbag, musaddj, koshma, qasida and rubai,

are characterized by depth and sincerity of the hero's feelings and emotions, clarity and harmony of the poetic structure, and elegance and musicality of the style. Aşık Umer's poignant poems accompanied troops during raids and battles, were read by Sufi ascetics in their cells, and by lovers alike. His works had a major impact on future poets not only in the Crimea, but across the entire Turkic-speaking world, especially Turkey. There are numerous manuscripts of Umer's work. Over the last century, Aşık Umer's poems have been published in Istanbul, Tashkent, Simferopol, Moscow and other cities. Russian translations are available as well. The poet's works were read by the Volga Tatars both in the original, and translated into modern Tatar language. He is sometimes called the 'Tatar Yesenin' and the 'Crimean Tuqay'. The poet's poems still sound pertinent and modern. One of Aşık Umer's poems ends with the following words:

Perfection is in need, while nullity is in fame.

Love triumphs only in a rich frame,

But, Omer, we are not entitled to reproach God,

People are guilty for their own misfortunes.

4. Tatar Genealogies (shejere)

Marsel Ahmetzyanov

The strength and vitality of the Tatar people lies in its rich, diverse culture and history, which are preserved in genealogy. Unfortunately, historical Tatar literature was subjected to difficult conditions in the climate of national and religious oppression in the Russian empire. However, in the 17th century, Tatar genealogies began to be used by Russian authorities as 'passports' for service class men who were accepted into service by Russian princes and tsars. Such genealogies were used to affirm their position in Russian society (in 1654, 1686, etc.) [Ahmetzyanov, 1991a, pp. 8–9].

In the 18–19th centuries, researchers such as P. Rychkov, H. Fren, N. Berezin, V. Velyaminov-Zernov, P. Nebolsin, S. Shpilevsky, N. Katanov and V. Radlov [Rychkov, 2001, pp. 181–182; Berezin, 1853; Velyaminov-Zernov,

1864, pp. 414–415; Nebolsin, p. 198; Shpilevsky, 1877, p. 585; Katanov, 1904, p. 28], and others showed interest in Tatar genealogies.

Interest in Tatar genealogies on the part of Tatar scholars and religious activists remained strong till the 1930's. Scribes often recorded their genealogies in manuscripts, despite the large volume of the material.

The emergence of Tatar book printing allowed for the possibility of publishing genealogies in Kazan. The first Tatar genealogy from the book 'Daftar-i Chinggis name' was published by K. Fren in 1816 in Vienna, with a commentary in Latin [Fraehn, 1816, pp. 205–216].

Tatar educator I. Halfin published the manuscript 'Daftar-i Chinggis-name', dated to the

17th century, in 1819 in Kazan, with a commentary and glossary of archaic words. The book served as a textbook for students studying the Tatar language at Kazan University. The genealogies published in this book are mostly examples of Tatar genealogies of the 12–17th centuries.

Well-known educators Qayum Nasyri [Nasyri, 1881] and Husain Amirkhan collected copies of Tatar genealogies, some of which have been preserved in manuscripts, and some of which were published in a book by H. Amirkhan in 1883 in Kazan [Ämirxan, 1883, 88 b.]. His work contains fragments of ancient genealogies of the 15–18th centuries. However, they are weak as historic sources.

In the last third of the 19th century, texts of ancient Tatar genealogies were collected and studied by the outstanding Tatar historian S. Marjani (1818–1889). He created a large collection of Tatar genealogies from many cities and towns where the Tatars lived. Unfortunately, only a small part of these handwritten copies has been preserved in scientific institutions. Most of the copies of Tatar shejere collected by S. Marjani were used in his two-volume work, written in the Tatar language and published in Kazan in 1897 and 1900. This valuable scientific work was first translated in 2005 [Marjani, 2005].

The famous Tatar researcher Rizaeddin Bin Fahreddin also began his career by collecting manuscripts of Tatar genealogies. He used them as sources in his four-volume encyclopedia titled 'Asar'. Of course, this form of publication does not present the reader with the full value of the source. Nevertheless, R. Fahreddin retained his archive of personal papers in St. Petersburg among the papers of Turkologist A. Samoylovich. This collection, belonging to the above researcher, contains about two hundred Tatar genealogies, most of which had been sent to him in the form of copies produced in the 19th century. Among them, some copies are dated to the 18th century. During his lifetime, Rizaeddin Bin Fahreddin created a collection of 47 texts, of which 46 were Tatar genealogies and one was a Bashkir text. The people who sent him copies had included the dates of their original documents'

composition. They indicated the date of the original document, whose copy was presented, in accompanying letters. Judging by such letters, the researcher received copies of original documents dated primarily to the 19th century. Among the copies, there is only one text stating that the original was composed in 1797 [Ähmätcanov, 2002, 180 b.]. Our archeographical field researches have resulted in additional knowledge about the copies of Tatar genealogy documents.

The discovered copies of genealogy manuscripts dated to the 18th century were drawn up on small sheets of medium-book format of 16x20 cm. Some genealogy texts dated to the 18th century were written on manuscript sheets, a tradition that was preserved through the 19th century. However, in the 19th century, genealogies were written in inventory books (*ambarnaya kniga*), which were twice the size of regular books.

When comparing the texts of 18 and 19 century Tatar genealogies, we came to the following conclusions:

1. 18th century genealogies were small in volume.

2. In the 19th century, the text volumes increased significantly so that they could no longer fit on the sheets of notebooks.

The study of original Tatar genealogies found during archeographic research offered a better understanding of the development of this document in terms of its form and content.

Tatar family genealogy texts dated to the 18th century were written on manuscript sheets of medium size (16.5x20 cm). In the beginning of the 19th century, some genealogies were written on sheets of about 25x35 cm, providing fuller commentaries and legends. Most of the shejere texts contained in the 18th century copies offer brief historical notes.

Additions to genealogical tables in 19th century copies indicate that they were originally passed down from generation to generation orally. Historical notes are abundant only in the genealogies of Kara-Bik and the descendants of Edigu-Biy. The families of *murzas* (Tatar nobility) in genealogies were often accompanied by concise notes until the end of the 19th century.

Historically significant genealogies often contain a brief historical note near the record about the main ancestor, playing an important role for the whole family. For example, the following note appears near the record about the main ancestor in one of the family genealogies: 'The Son of Burkut Biy Targay Bi came from the Crimea' [Ähmätcanov, 2012, 199 b.]. The presence of noble names among ancestors enables a relatively precise identification of the family's chronology and place of origin. This genealogy clearly demonstrates a link between the name Burkut Biy and Kara Bik, who lived in the late 14th century.

The presence of such titles as Beg, Murza, Tarhan and so on near personal names, as well as references to 'Kazan', 'khan' and 'yarliq' also help to ascertain the historical value of a document. For example, a connection to a specific historical place designated in a genealogical list allows for a more precise determination of a family's place of residence and primary hometown, even when examining a set of regional sources.

For instance, the legend presented in the Karauzha genealogy states that Kara Bi, the most remote ancestor, lived near Kazan in Karavaevo. Later, according to the legend, Kara Bi's descendants—Chura Bi and Chura Batyr—were also associated with the Kazan Khanate. Thus, it may be concluded that they moved from the Crimea to Kazan at the turn of the 14–15th centuries [Ähmätcanov, 2011c, 109 b.].

In the Div Mankuf genealogy, even the personal name indicates that the family's founder was from Crimea. The name 'Div' belonged to a family of Crimean khans [Tatar Entsiklopediyase, 2010, 261 b.]. Tatar murzas and princes—Diveevs who originated from the Crimea—were preserved in the Blagovarsky and Chekmagushsky regions of the Republic of Bashkortostan [Ibid].

In preceding centuries, an ongoing connection was in place between the Crimean and Volgan Tatars. For example, the first wave of Tatars' arrival took place in the 1380's, while the second influx occurred in 1445, during Khan Ulugh Mohammad's settlement in the Middle Volga. This event in the ethnic history

of the Tatar people in Tatarstan is confirmed by numerous genealogies.

By the time of Mohammed Amin's reign in Kazan, an immigrant from the Crimea named Asylhozha Tarhan Miziyafov arrived on Taw yağı (Hill Land i.e. hilly right bank of Volga), whose family produced such educators as Qayum Nasyri, Habira Nasyri, Rizaetdin Fakhretdinov, the first oil manufacturer in Russia Nadir Urazmetov, academician Mirkasym Usmanov, and others. Members of this family founded the settlements of Zyamaki, Ilekovo, B. Karamali, St. Salmanova, Novye Nadirovo, Kirligach, Sugushla, and others. The genealogy of Asylhozhi Tarhanov was published [Ähmätcanov, 1995, 120–122 b.].

According to data contained in shejere, nomadic Tatars originally from the Nogai Horde were the second largest ethnic Tatar group that settled in the Bulgarian Ulus.

These settlers, who were natives of the Nogai Horde, have preserved their genealogies till the present. They settled in these territories since the second half of the 15th century until the 18th century. They were members of the tribes of Mingnar (Mangyt), Giraet, Tabyn, Garay, Kungrat, Tamyan, Badrak, Kyrgyz, Katay, and others, whose genealogies have been published in Tatar genealogical collections [Ähmätcanov, 2002, pp. 29–75, 91–175 b.; 2009a, b. pp. 65–172; 2011v, pp. 182–205 b. etc.].

According to the shejere, members of the Sergach group of Tatars who moved to the Kazan yurt in the 16–18th centuries were the third significant group that contributed to the formation of the modern Tatar nation. Following the fall of the Kazan Khanate, the Sergach Tatars were evicted from their yurts. According to genealogical materials, they were first transferred to the Muscovy-Nogai Horde border, particularly, to the outskirts of the Alaty and Temnikov fortresses, and later they settled in the Simbirsk uyezd and the Zakamye Region of Tatarstan. Genealogies of the Kasimov Tatars also outline the routes travelled by settlers from Khwarezm and the Crimea [Ähmätcanov, 2012, pp. 314–315 b.].

In the 18th century, many Tatar families left the territories of the Kasimov Khan-

ate to settle in the territories of the Kazan uyezd. For example, such Tatar murzas as the Syuyundukovs, Makulovs, Alishevs, Enaydarovs, Karmyshevs, Burnashevs, Mustafins, Syukievs, Yenikeys, Budalevs, Bogdanovs, Bikkulovs, Chapkunovs, Burnaevs, Ishmakovs and many others moved to the territories of the former Kazan Khanate in the 17th century [Ahmetzyanov, Sharifullina, 2010, pp. 6–77].

With the collapse of the Nogai Horde in the 17th century, some Tatars of the Nogai Horde assimilated into the Volgan Tatars. This issue appears in numerous of copies of

Tatar genealogies of the Volga-Ural Region [Ähmätcanov, 2002, p. 343 b.; 2009a, p. 351 b.]. Genealogies of the Siberian Tatars also relate the significant contribution of Nogai tribes and Qara Qıpçaqs to the ethnic history of the Siberian Tatars [Ähmätcanov, 2012, p. 304 b.].

To crown this review of written Tatar genealogies published in Tatar and Russian, we may conclude that based on numerous facts, these sources disclose a close genetic relationship between the Tatars of the Crimean, Kasimov, Kazan, and Siberian Khanates, and the Nogai Horde.

5. Tatar Epitaphic Sources

Marsel Ahmetzyanov

According to some records, the culture of epitaphic monuments in the Golden Horde was prevalent in all its Uluses. However, this great cultural heritage was destroyed in the 16–18th centuries during the seizure and subsequent colonization of the Tatar lands by Muscovy. It is known that the ammonium nitrate plant, headed by the nobleman T. Leda-govsky, operated on the Bulgar ruins since the last quarter of the 17th century and used Muslim gravestone as raw material source, was closed down only in 1730 [History of Tatarstan, 1951, p. 273].

However, the decree of the Russian Government dated 16 February 1741 permitted the destruction of the medieval Muslim cemeteries of the Golden Horde located in Astrakhan, Tsaritsyn and Kazan guberniyas and Little Rus for the purpose of manufacturing ammonium nitrate to produce gun powder. The destruction of Muslim graves continued even into the second half of the 19th century [Smolin, 1926, p. 16].

As a consequence, only a few samples of ancient epigraphic monuments of Golden Horde were preserved in just three guberniyas of the Russian Empire: the Kazan, Crimean, and Dagestan provinces. Archaeological excavations in the above three regions proved that Muslim cemeteries had existed there

since the 10th century [Khalikova, 1986, pp. 43–107]. The epitaphic gravestones tradition started among Muslims of Bulgar Ulus in 1281.

In Dagestan, epitaphic monuments began being used in the 12–13th centuries, although, they were extremely rare at the time [Shishaidov, 1984, pp. 162–163]. The earliest known epitaphic monument in the Crimea is dated 1273 [Aqçoqraqlı, 2006, p. 237 (No. 142)]. The texts of Crimean epitaphs were written in Kufic or Suls scripts till the end of the 14th century. For example, the epitaph of Nankadzhana (Dzhanike-Khanyim), Khan Tokhtamysh's daughter, was written in the Suls Arabic script, with some individual words in Kufi script.

In the Bulgar Ulus, epitaphic texts were usually written using Kufi script, with rare instances of the Suls script, until 1361. Linguistically, epitaphic texts were in Arabic, Bulgarian and Tatar.

In the Crimea, epitaphic texts were written primarily in Arabic language until the beginning of the 15th century. There are some very rare texts written in Tatar [Ibid, p. 231 (No. 47)]. From the early 15th century (at 1415 and 1424) some texts in the Crimea were written in the Tatar language [Ibid, p. 237 (No. 139), 248 (No. 235), p. 250 (No. 315)].

The epitaphic gravestones tradition continued in the Crimea until the end of the 18th century. The epitaphs were written in Arabic and Arabic-Tatar. Gravestones of the Crimean khans and their family members since the 18th century have been well preserved.

Epigraphic inscriptions on the walls of mosques in the Crimea and the Khan's palace, as well as near the Bakhchysarai fountains are known since the 14th century. Texts of these inscriptions were discovered by researchers in the 19th century, copied from the originals and translated into Russian [Murzakevich, 1850, pp. 489–551].

Although N. Murzakevich considers the language of these epitaphs to be Turkish, his opinion is false from the linguistic point of view. As an example, let us look at the epitaphic text of the Devlet-Giray-Sultan-Ghazi, the son of Mubarek-Giray-Sultan, the son of Devlet-Giray Khan: 'Tärk idüb bu dönya fani çün gıyzem baka ähle dällär cämig ulub aciub idüb gazasin didilär ruhına rähmät. Tarihnı daimä cömadı älä-äüvälneñ gorräsendä vafat äylädi sänä-i 1041'.

Translation: 'Having retired from this vain world, he has transmigrated to eternity. People with hearts, gathering to mourn and lament his memory, have written his chronogram: let God's mercy be upon him always. Died in the beginning of Jumada al-Awwal, 1041'. (1631 according to the Gregorian calendar.)

Only 47 epitaphic inscriptions dated 1287–1392 are known on the territory of the Crimean Peninsula, according to researchers of the mid-19th century, and only 11 epitaphic texts dated 1409–1477. For now, no detailed published research in this area is available for other centuries.

The research of Kazan scholars in the field of Tatar-Muslim medieval epitaphic texts provides a fuller understanding of such historical written sources preserved in the Middle Volga.

60 epitaphic texts, dated 1281–1399, were discovered on the territory of the Bulgar Ulus of the Golden Horde, as well as six monuments dated 1400–1500 and 300 inscriptions dated 1501–1600 [Garif, 2010, pp. 12–28 b.].

The total amount of Tatar epitaphic inscriptions dated 1601–1801 is 170 pieces [Äh-

mätcanov, 2011a, p. 260 b.]. During this period, Tatar settlements expanded over greater territory. Hundreds of Tatar settlements were established between the Volga and Urals, in Siberia and other areas.

The system of national cultural values was enriched by spiritual progress and enhanced artistic qualities of Tatar epitaphs for the first time since the adoption of Islam in the Golden Horde. The gravestones tradition was an important part of Tatar spiritual culture.

Tatar epigraphy is a unique phenomenon in the culture of Eastern European nations. Its roots go back to the Turkic Karakhanid state on the territory of Issyk-Kul. The Turks used the Turkic, Runic, Uighur, Sogdian-Turkic, and Arabic alphabets. The inscriptions on the basis of these alphabets have been discovered on numerous stone monuments in the territory of Kyrgyzstan [Dzhumagulov, 1987, pp. 8–16].

In the 12th century, Karakhanid Muslims began using kairaks with inscriptions relating to the deceased person as gravestones. These can be found in cemeteries and near mausoleums [Ibid, p. 60]. Texts were written in Arabic alphabet using the Kufic writing style [Ibid]. The structure of an epitaphic text on a kairak written in Arabic is very similar to the earliest epitaphic inscriptions in the Bulgar Ulus of the Golden Horde.

For example, there is monument No. 1 from Yangi Naukat village. The four-line Arabic inscription is enclosed in a frame with mihrab-style ornamentation. The frame size is 38x31 cm [Ibid, p. 63].

Text:	Translation:
هذا قبر	1. This grave belongs to
عمر بن ا	2. Omar, son of Abu
بو بكر عفر الله	3. Bakr. May Allah forgive
له ولو الديه	4. him and his parents.

Monument No. 45

Smoke-coloured stone. The six-line inscription is engraved roughly. The stone is located near Teshik-Tash mazar, at the foot of a mountain near Sahab-Mazar. The inscription size is 40x40 cm.

Text:	Translation:	
بسم الله الرحمن الرحيم	1. in the name of merciful Allah	The traditions of writing epitaphs in Kufi in the Crimea and Bulgar Ulus on the Volga are identical, allowing us to conclude that this tradition was part of the culture of the Golden Horde at the initial stage of its history, in the 13–14th centuries and was preserved and developed in Tatar states in the 15–18th centuries.

6. Jochi Numismatics in the 15th Century

Pavel Petrov, Roman Reva

The study of a numismatic source always follows the same steps: discovering the first coins, documenting them and introducing them to the research process, collecting information on the coins in question, identifying the issuers' names and coining centres, cataloging the known materials, collecting information on discoveries of coins and treasure troves, topographizing them, attempting to analyze the composition of the findings in the context of the location and historical events, creating a complete catalog of coins, analyzing the work of the mints (evaluating the trends of metrological parameters), evaluating currency in the area where the coins were used and reconstructing the stages of economic development in the areas, regions and states in light of the conditions of monetary circulation. Therefore, a numismatic source becomes fully informative only after a critical amount of data has been accumulated and introduced into the research process.

With regard to 15th century Jochi numismatics, there has been no systemic full-scale research that may serve as a basis for further in-depth study of political and economic history. For comparison, at the beginning of the 20th century, O. Retowski created coin catalogs for the Giray dynasty of the Crimea in the 15th century and beyond [Retowski, 1905; Retowski, 1906, pp. 1–72; 1914, pp. 1–16], while no coin catalogs have been created for the 15th century Volga Region, the Caucasus,

the Azov Sea region and other territories, including the Aral Sea region.

The publication of 15th century Jochi coins was initiated by H. Fraehn [Fraehn, 1826, pp. 360–398; Fraehn, 1832], and continued by P. Saveliev [Saveliev, 1857, pp. 1–180; Saveliev, 1858, pp. 181–342], V. Grigoriev [Grigoriev, 1864], A. Markov [Markov, 1896; 1898; 1901; 1904; 1906] and other numismatists. These and a few other works revealed the names of most of the rulers who had issued coins in the post-Tokhtamysh period: Tash Timur, Temür Qutlugh, Shadibek, Pulad, Timur, Jalal ad-Din, Kerim Birdi, Kibak, Chekre, Jabbar Birdi, Dervish, Ulugh Muhammad, Küchük Muhammad (b. Timur), Davlet Birdi, Gıyas ad-Din b. Shadibek, Mustafa b. Gıyas ad-Din, Said Ahmad, Mahmud b. Küchük Muhammad, Ahmad b. Küchük Muhammad, Hacı Giray, Nur Davlet, and Mengli Giray. The list of mints where the issuers' names were found is as follows: Krym, Krym al-Dzhadid, Ordu, Ordu Mu'azzam, Ordu Bazaar, Bik Bazaar, Timur Bek Bazaar, Saraychyq, Bulgar, Bulgar al-Dzhadid, Hajji Tarkhan, Hajji Tarkhan al-Dzhadid, Saray, Saray al-Dzhadid, Hvarism (Khwarezm), Shamakhi, Derbent, Baku, Azak, Shehr Azak, Azak al-Makhrusa, Kaffa, Kaffaf al-Dzhadid, Qırq Yer. This marked the beginning of the extensive phase of collecting factual numismatic information that would constitute the foundation of 15th century Jochi numismatics. The attributes of coins that

were published were not always precise due to a lack of comparative numismatic materials, their quality and historical evidence from written sources.

It is worth noting that coins dated to the 15th century issued in the Golden Horde and its successors—independent khanates of the second half of the 15th century—have not been extensively studied in the 20th century. The greatest contribution to the development of this chapter in Jochi numismatics was made by A. Muhamadiev and G. Fedorov-Davydov. Thus, their joint work had revealed a previously unknown mint, 'Il Uy Muazzam' (*The House of the Great Country*), belonging to two rulers: Ulugh Muhammad and Davlet-Birdi [Muhamadiev, Fedorov-Davydov, 1972, pp. 41–66]. Works by A. Muhamadiev introduced numerous illustrative materials relating to the 15th century Bulgarian coinage, including a previously unknown Bulgarian coinage of Dervish, Muhammad Barak, Giyas ad-Din, Barak's coinage used in new mints of Helbirdi Bazari and Jidibik Bazari, as well as a coinage in Jidibik Bazari of Ulugh Muhammad and Davlet Birdi. Subsequently, the word 'Jidibik Bazari' was mistakenly corrected by E. Goncharov to 'Jundi Bazaari' (*Military Bazar*) [Goncharov, 2005a, p. 100].

Importantly, legible coins can be found in emissions only of the first quarter of the 15th century. The quality of coinage issued later increasingly deteriorated with time. 15th century Jochi coinage is characterized by gradual decrease in the size and weight of coins, and deterioration of the quality of coin metal. Indication of the year of coinage became an exception to the norm. The size of the stamp was often much greater than that of the coin. Therefore there are virtually no coins from that period with a fully legible legend. The constant struggle between a plethora of aspirants to power resulted in a large number of issuers' names on 15th century coins. Not all of these issuers have been ascertained and properly identified to date.

Although some 15th century Jochi coins were properly attributed by researchers in the 19th and 20th centuries, the real breakthrough in the study of these historical sources

of material culture was made in this century. Firstly, this is due to the possibility of digital reconstruction of the stamps. Stamp-by-stamp analysis provides an essential, and sometimes the only help in correctly attributing coins, enabling the creation of networks of stamp connections. Such networks help to establish the chronological order of changes in coin types, thus helping to determine the order of the appearance of issuers' names for each mint. Some factual numismatic data has been accumulated to date, enabling research of isolated cases and the disclosure of names of previously unknown issuers, centres and years of coinage.

For instance, M. Severova recognised the name of an issuer of Crimean (822/1419–20 and 823/1420–21) and Genoese-Tatar coins, which other researchers have been unable to discern since the times of O. Retovsky and R. Fasmer—Bek Sufi [Severova, 1994, pp. 98–100]. In 2002, K. Khromov used numismatic data to examine power distribution in the Crimea from 822/1419 to 825/1422, in accordance with the order of coin issuers that replaced one another: Dervish, Bek Sufi, Davlet Birdi [Khromov, 2002, pp. 92–94]. By 2013 he published an article about the coins of Davlet Birdi, where Crimean coins of 827/1424–1425 and a number of new variants of coins minted in Kaffa Jadid were issued, providing a stamp-by-stamp analysis [Khromov, 2013, pp. 378–416].

A. Gaev published Mahmud Hoja Khan's coins, whom he identified with Mahmudek, the son of Ulugh Muhammad. He later revised his opinion in favor of Mahmud Hoja, the son of Kaganbek [Gaev, 2002, pp. 28–30]. He established that Hordu was the mint that issued these coins [Gaev, 1999, pp. 70–73; Gaev, 1999a, pp. 82–84]. He introduced Bulgarian pulis (copper coins) into the research, which were minted on the face side with the 'Tarak Tamga' stamp, and on the reverse side with stamps of silver Bulgarian Shadibek coins dated 807/1404–1405 and Dervish—that is, stamps produced with an interval of at least 10 years! [Goncharov, Trostyansky, 2004, pp. 94–95]. Research of two new types of Timur Khan's coins examined the issue of stamps' re-

location between different mints. The finding was that they were minted with one common face-side stamp bearing the name of Timur Khan and different stamps on the reverse side: One of Azak dated 814 and one of Kaffa Jadid dated 809 ([sic]) [Kazarov, Gorlov, 2011, pp. 77–79].

A Bulgarian stamp of Mahmud Khan, dated 812–813/1409–1411, was discovered (previously, these coins were attributed by researchers to Timur's mint [Fraehn, 1826, pp. 374–375, no. 9, 10]), whom authors identify with a prince who attempted to overthrow Pulad Khan during Edigu's famous raid on Moscow in December 1408 [Goncharov, Trostyansky, 2004a, pp. 39–42]. In 2005, O. Trostyansky published an article presenting a curious unpublished stamp bearing the name of Muhammad Khan, whom the author identified with Ulugh Muhammad [Trostyansky, 2005, pp. 57–158].

A Khan with a name read as 'Giyas ad-Din Sar(?)han' was found by I. Evstratov on Sarai coins dated 824 or 829 [Evstratov, 2003, pp. 91–93]. In 2005, R. Reva and N. Sharafiev discovered a previously unknown issuer, Syed Ahmad, I on coins dated 819/1416, who, according to the authors, was Edigu's protégé [Reva, Sharafiev, 2005, pp. 57–59]. In 2012 V. Lebedev and V. Sitnik published several new types of 15th century coins, including a new type of tamga, the Crimean Dang of Muhammad Barak, and an Azak coin of Davlet Birdi [Lebedev, Sitnik, 2012, pp. 192–210].

Silver bilingual coins with a T-shaped tamga, dated to the 15th century, considered by O. Retovsky to be Tana's Aspras, have raised heated discussions about the place of their possible coinage [Kirilko, 1999, pp. 137–141; Volkov, 2003, pp. 17–29; Kozubovsky, 2006, pp. 188–195; Avramenko, 2013, pp. 51–59].

V. Nastich published data about previously unknown Khwarezm coins of Shadibek, dated 806/1403–04 and Jalal ad-Din, dated 815/1412–13 [Nastich, 2000, pp. 78–80; Nastich, 2002, pp. 90–92]. Several other previously unknown types of 15th century silver and copper Khwarezm coins of the 15th century were published by E. Goncharov [Goncharov, 2011, pp. 71–85].

15th century copper pulis are particularly interesting. E. Goncharov published several previously unknown types of copper coins dated to the 15th century and attributed to Sarai and Hordu Bazaar mints [Goncharov, 2000, pp. 84–86]. V. Lebedev and V. Smirnov showed several interesting 15th century coins, including some unpublished ones, in particular, a Horde pool dated 807 [Lebedev, Smirnov, 2008, pp. 145–152]. In 2004, two types of 15th century Azak pools were disclosed [Piperidy, 2005, p. 9, fig. on p. 107], and in 2005, a silver coin of Temür Qutlugh, which was issued by the same mint, was published [Piperidy, 2008, p. 74, fig. on p. 213]. In 2001, E. Goncharov announced the existence of a previously unpublished pool issued by the '... Bik Bazaar' Mint [Goncharov, 2005, pp. 9–12, fig. on p. 185].

A. Pachkalov was the first to publish images of coins that were previously known only by their descriptions in A. Markov's inventory catalog. These coins were minted by Timur Bik Bazaar Mint, bearing the name of Akhmat Khan [Pachkalov, 2005, pp. 67–68]. In 2004, the same researcher disclosed several new types of Ordu Bazaar pools [Pachkalov, 2004, pp. 96–97]. However, the most detailed catalog of Ordu Bazaar coins was presented by K. Khromov, containing both silver and copper coins, many of which were published for the first time [Khromov, 2004, pp. 34–66].

E. Panin described a copper Hajji Tarkhan coin, which he rightly attributed to the times of Pulad [Panin, 2008, p. 73, fig. on p. 213]. It should be noted that copper coins in the 15th century were far more rare than silver coins and their role in the currency of the time requires further inquiry.

Incorrect identification of 15th century coins by some researchers is usually due to the poor condition of the coins and the lack of stamp analogues for comparison. For example, in 2002, V. Klovov and V. Lebedev published a large article about coins discovered in the Selitrennoye Hill Fort, presenting several new 15th century coins. Unfortunately, some of the coins were wrongly identified [Klovov, Lebedev, 2002, pp. 73–165]. Later, the authors introduced several other unpub-

lished types of Golden Horde coins into the research [Lebedev, Klovov, 2004, pp. 23–75], but this work also incorrectly attributes some types of 15th century coins. A monograph by V. Mayko describing a treasure trove containing over 4,000 Jochi coins dated to the 15th century presents photographs of many specimens, including previously unpublished ones [Mayko, 2007]. Unfortunately, some of the coins were also wrongly identified in the work. Such cases reconfirm how careful any researcher should be when attributing new, previously unknown types of 15th century coins.

In 2005 R. Reva studied the stamp of Derwish Khan, publishing the first descriptions and drawings of several coin types of the ruler and establishing the period of the coinage to be 818–822/1415–1420 [Reva, 2005, pp. 159–164, fig. on pp. 207–209]. In 2008, he published a stamp network of Kibak Khan's Bulgarian coinage and showed the relationship between the Bulgar coins and the mythical 'Binalihan' [Reva, 2008, pp. 126–127]. In 2008 R. Reva presented a report on a stamp-by-stamp analysis of Shadibek's Bulgarian coins, drawing some important conclusions: minting in Bulgar was resumed in the 15th century only in 805 AH, and many dates read by prior researchers on coins were rejected because stamps with these 'years' were 'pressed' in-between stamps with very legible dates [R. Reva, Stamp-by-stamp analysis of Shadibek's Bulgarian coins (A New Look). Presented at the 7th Bakhchysarai International Numismatic Conference in 2008. The materials of the conference have not been published.]

The method of stamp-by-stamp analysis proved extremely effective for attributing 15th century numismatic materials, as confirmed by other studies as well. This method was used by V. Lebedev when studying New Bulgarian silver coins of Shadibek and Pulad [Lebedev, 2007, p. 19]. Stamp-by-stamp analysis was used to study several new types of Kerim Birdi coins, with the coinage period being limited to 815 AH/1412–1413. A stamp connection was established for anonymous coins of the following type: *Fair Sultan—*

minted [in] Sarai [Reva, Sharafiev, 2004, pp. 91–93].

At the 4th International Numismatic Conference, held in Bulgaria in 2005, N. Sharafiev relied on this method when raising the question of whether the Il Uy Mu'azzam mint may be identical with the Ordu Mu'azzam mint, showing that the two shared stamp links [Sharafiev, 2008, pp. 55–56].

R. Reva, A. Kazarov and V. Klovov published a reconstruction of Jabbar Birdi stamps from Hajji Tarkhan dated 817/1414–1415, stamps and stamp links of previously unknown coinage—Jabbar Birdi and Sayyid Ahmad I in Sarai, as well as the coinage of Giyas ad-Din in Ordu Mu'azzam dated 819/1416, who may be identified with one of two rulers: either Giyas ad-Din—the son of Shadibek, or Giyas ad-Din—the father of Hacı Giray [Reva et al, 2009, pp. 78–80; Reva, Kazarian, 2013, p. 60–75].

At a conference held in St. Petersburg, a report titled 'Coins of Ibrahim Khan' (2012) was presented, correcting some inaccuracies in works by A. Nesterov [Nesterov, 1990, pp. 29–30; Nesterov, 2001, p. 274]. The coins were attributed to Ibrahim Khan, the grandson of Hajji Muhammad. New, previously undescribed types of coins were presented, some variants of reading one of his mints were proposed, and the approximate coining time was indicated. In 2013, articles were published examining the coinage of a previously unnoticed issuer, Murtaza Khan, the son of Akhmad [Kazarov et al., 2013, pp. 53–58, 148–149; 2013a, pp. 340–377]. In the same year, a digital reconstruction of stamps of coins of shibanid Jochi Ulus rulers was published: Mahmud Hoja, Mahmoud, the son of Hajji Muhammad, his son Ibrahim (Ibaka) and Abu'l-Khayr [Reva, 2013, pp. 56–58]. A question was raised regarding the existence of the mint and of Hajji Muhammad, and references were provided to published coins of Muhammad Sheibani minted in Bukhara and Samarkand in 906, corresponding to 1500–1501 AD,—that is, the last year of the 15th century [SNAT XVa, 2008, no. 368, 1159].

Over the past two decades, information has been published on discovered treasure troves of 15th century coins [Goncharov, Alekseenko, 1998, p. 77; Volkov, 2011, pp. 64–68; Goncharov, Trostyansky, 2004, pp. 94–95; Kolyzin, 2003, pp. 95–97; Lebedev, Trostyansky, 1997, pp. 78–86; Lebedev, Muhametshin, 1997, pp. 75–77; Lebedev et al, 2011, pp. 89–93; Lebedev, Klovov, 2012, pp. 138–142; Mayko, 2003, pp. 97–98; Mayko, 2007; Nastich, 2000, pp. 78–80; Nastich, 2002, pp. 90–92; Pachkalov, 2000, pp. 19–23; Singatullina, 2006, pp. 215–216; Trostyansky, 2005, pp. 157–158; Fomichev, 1999, pp. 69–70; Fedorov-Davydov, Fomichev, 2004, pp. 270–278; Fomin, 2012, pp. 66–80, etc.]. Of course, these are not all the published treasures, and certainly not all the treasures of 15th century Jochi silver coins that are known to numismatists. Information on the main treasures was published in reports by G. Fedorov-Davydov and A. Pachkalov, as well as in some publications by other authors [Fedorov-Davydov, 1960, pp. 94–192; Fedorov-Davydov, 1963; Fedorov-Davydov, 1974; Fedorov-Davydov, 1965, pp. 179–219; Fedorov-Davydov, 1990, pp. 102–103; Pachkalov, 2002, pp. 178–210; Pachkalov, 2004, pp. 158–171; Pachkalov, 2012, pp. 124–130; Piperidi, 2008, pp. 70–72]. However, the vast majority of treasures was published concisely,—that is, without images (photographs) of coins, making it impossible to verify whether the attributions are correct. Now is a very important time

for studying this type of numismatic source because the data collected to date enables a more accurate attribution of the coined silver, and hence, a better assessment not only of the contents of the treasure, but also of the time when it was hid away. As a result, only a few treasures suitable for a full-fledged analysis have been introduced into the research, requiring further documentation and adequate publication of such treasures. Furthermore, there are many unsorted treasures stored in various local museums, awaiting researchers who will study them.

Numismatics of 15th century Crimea is a special chapter in Jochi numismatics. Despite the existence of the above-mentioned works by O. Retovsky, numismatists sometimes find new coins bearing names of unknown issuers, as well as previously unknown names of mints or years of coinage. Several works by K. Khromov can be cited as examples [Khromov, 1997, pp. 21–22; 1997a, p. 25; 2005, pp. 101–106; 2013, pp. 378–416]. A great contribution to the development of 15th century Crimean numismatics was made by V. Lebedev. In a series of works, he showed all the Crimean coins known at the time of publication [Lebedev, 2000, pp. 10–23; Ibid, 2000a, pp. 32–35; Ibid, 2000b, pp. 10–14; Ibid, 2000v, pp. 1–48; Ibid, 2002, pp. 139–149].

According to the above materials, it is apparent that there was no numismatic research on the second half of the 15th century. This stratum of numismatic information remains unexplored.

§ 2. Linguistic Sources

Enze Kadirova

Written sources are particularly valuable for examining a fuller picture of language during various periods. Researchers who look into the history of the Tatar people in the 15–16th centuries point out the scarcity of sources from that period that have been preserved to date.

The poems 'Tukhfa-i mardan' (1539) and 'Nur-i sodur' (1542) by Muhammedyar, a leading representative of 15th century Tatar

literature, are well known and generally well studied writing dating back to the period of the Kazan Khanate. When studying the language of the period, many scholars consider Muhammedyar's poems to be masterpieces of the time. These works provide a vivid depiction of the lexical composition, phonetic system and morphological construction of 16th century Tatar literary language.

Muhammedyar's creative work has drawn the attention of several prominent researchers. He was first introduced into the research in the first half of the 19th century, when I. Berzin, a professor at Kazan University (1846), found his poem 'Tukhfa-i mardan' ('A Gift to Men') in the manuscript department of the Leningrad Museum and published some extracts from it. Muhammedyar's second poem, 'Nur-i sodur' ('Hearts' Light'), was discovered by the Tatar writer and scientist N. Isanbet only in 1940. The scholar published extracts from the discovered manuscript and authenticated it. Unfortunately, original author's manuscript of Muhammedyar's works have not survived. Several handwritten copies are available in manuscript archives in different cities in our country. Three handwritten copies of the poem 'Nur-i sodur' and one copy of 'Tukhfa-i mardan' are kept in the St. Petersburg branch of the Institute of Oriental Studies of the Russian Academy of Sciences. The most complete manuscripts of both poems can be found there.

The poetic collection 'Bakyrhan kitabı', an anthology of sorts of medieval Turkic Sufi poetry, also includes works of the Tatar Sufi poet Qolşarif. Qolşarif's creative legacy has reached us in several works. A. Sharipov [Qolşarif, 1997] described, researched and published the poet's works. Authors of Volume 1 of 'Tatar ädäbiyatı Tarikhi' provide information on the Tatar writer Muhammedsharif, who lived in Kazan in the 16th century [Tatar ädäbiyatı, 1984, 294 b.]. The scholars M. Ahmetzyanov (1995), A. Sharipov (1997) and D. Iskhakov (1998) believe that the above-mentioned Muhammedsharif—the author of *Zafärnamäi vilayate Kazan*—and Qolşarif are the same person. In 1965, in Turkey, in the collection of the Zeytin ogulları library in Tavşanlı, near the city of Kutahya, a manuscript was found where the composition 'Zafärnamäi vilayate Kazan' was included on pages 60a–64b. M. Ahmetzyanov believes that the verses of this work were written in the Tatar literary language of the period. They include few incomprehensible words, with some parts of the text written in Arabic and Persian [Ähmätcanov, 1995a, 12 b.].

In the history of the Kazan Khanate, one of the patron khans of literature was Muhammad Amin, who himself was a poet.

When attempting to recreate a more accurate and objective picture of the Tatar language at various stages of its development, chancellery written records are quite important as well. Traditions of the business style of the Old Tatar literary language, which by the Middle Ages had become one of the most popular language styles, have roots stretching back into antiquity. The necessity of studying documents written in business language and the importance of its impact on the formation and establishment of the norms of Tatar language have been repeatedly pointed out by scholars who study this problem (M. Usmanov, F. Khisamova, A. Mannapova, etc.).

The chancellery writing records from the Kazan Khanate period frequently attract the attention of researchers. Among them, the *yarliqs* of Khan Ibrahim and Khan Sahib Giray are particularly worthy of notice. A postgraduate student of Kazan State University, R. Stepanov, was the first to notice the *yarliq* of Khan Ibrahim in the State Archive in Moscow. M. Usmanov, S. Muhammedyarov, F. Faseev and I. Mustakimov worked on describing, researching and publishing this manuscript. In 1965 M. Usmanov, S. Muhammedyarov and R. Stepanov published the article 'Yaña *yarliq*' in *Kazan Utları Magazine*. The language and certain terms of the *yarliq* were discussed in the press [Gosmanov, 1965]. The *yarliq* was transcribed and translated into Russian by F. Faseev [Starotatarskaya, 1982] and later by I. Mustakimov [Mustakimov, 2010a].

The second *yarliq* is the famous *yarliq* of Khan Sahib Giray, who was the Khan of Kazan in 1521–1524 and the Khan of Crimea in 1532–1551. This work drew the attention of numerous scholars, including M. Khudiyakov, G. Rakhim, G. Gubaydullin, A. Battal-Taymas, S. Muhammedyarov, M. Usmanov and others, who believed it to be a valuable resource for studying Kazan Khanate history. The first pieces of evidence of the *yarliq*'s language were presented by S. Vakhidi, who originally discovered it. Comparing it to

the *yarliq* of Temür Qutluğ, the researcher concluded that 'the language of Temür Qutluğ is similar to that of Sahib Giray,—that is, the document is written in the Kipchak language. The style clearly reveals a noticeable Ottoman-Arabic influence'. In the Bulletin of the Tatar Research Society, the author specifies his opinion on the language of the record: 'Apart from the names of positions, some other names of tributes and taxes in the *yarliq* are also expressed in Arabic and Persian. The rest of the words are expressed in the general Turkic language'. [Vakhidov, 1925a, p. 36] Certain aspects of *yarliq* study are elucidated in works by M. Usmanov, F. Khisamova, I. Mustakimov [Möstäkimov, 2003; Mustakimov, 2013b], and others. When examining the *yarliq* of the Kazan Khan Sahib Giray in the context of official acts of the Golden Horde, Crimean Khanate, Ilkhan empire and Timurid states, I. Mustakimov mentions that 'the *yarliq* of Khan Sahib Giray was written in the literary language of the Golden Horde—the Volga Turki', and points out that 'it contains more Arabic-Persian words than other *yarliqs* of khans of the Golden Horde and Crimea' [Möstäkimov, 2003, 19 b.]. The obtained results are further supported by the study of historical documents written in the Crimean, Kasimov, Astrakhan and Siberian khanates, as well as the Ottoman Empire [Le khanat, 1978; Documents, 2008; Zaitsev, 2009a].

Epigraphic works serve as an integral part of the vast historical, cultural and spiritual heritage of the Tatar people, reflecting the highly developed culture of the people and the degree of society's civilization. The results of researching epigraphic monuments of the Kazan Khanate period serve as valuable material in the study of the Old Tatar language of the period [Rakhim, 2008; Muhametshin, 2008; Garif, 2010].

Monuments introduced from outside and created in the 15–16th centuries certainly play an important role in determining the language status and language processes of the period. Such works were distributed among the Tatar people and 'were paramount in creating the cultural background of the era, besides their

considerable impact on the language situation' [Khisamova, 2012, p. 35].

Bilingual dictionaries were also important. They were used to ease the interpretation of texts. Their use dates back to antiquity. The research of glossaries is of considerable importance because it provides a foundation for the study of lexical, phonetic and grammatic phenomena of the Old Tatar language, facilitates the study of texts from the period, and shows the lexicographic description of the language of the time. An Arabic-Turkic-Tatar Dictionary was discovered by the famous Tatar archeographer S. Vakhidi in 1928 in the village of Kuyuk of the Spassky Canton. The manuscript comprises 294 pages, with seven lines on each page. A handwritten copy of the manuscript is currently kept in the rare book section of the N. I. Lobachevsky Scientific Library. In the Arabic-Turkic-Tatar Dictionary, Arabic words are written horizontally, with the Turkic translation provided underneath in a slanted script. The words are listed alphabetically. This order is applied not only to the first letter of words, but also to the subsequent ones. It is supposed that this dictionary was used to interpret the Quran. In 1965, I. Avhadiyev published the article, '16th Century Arabic-Turkic Dictionary' [Avhadiyev, 1965]. The dictionary was not particularly studied thereafter. Only in 2003, we mentioned certain aspects of the language of this manuscript in several articles [Kadyirova, 2003; Kadyirova, 2012].

Another 16th century work remains poorly explored—'Madjamag al-kavagydy' ('Compendium of Rules'), written in 1542 [Dmitrieva, 2002, p. 115]. For a long time, it was used as a textbook in Kazan medreses, testifying to the extensive development of mathematical education in the Kazan Khanate. This rare work comprises a collection of nearly all of the arithmetic rules that existed in the ancient world. The book has three parts, each divided into chapters. In his article 'Boryngy kul'yazma', V. Berkutov insists that the author of the treatise was a Kipchak who lived in the Volga Region and then moved beyond the Danube.

In the opinion of V. Berkutov, 'the manuscript was written in the ancient Turkic-Kipchak language' [Berkutov, 1968, 28 b.]. A. Khayrullina, studying the formation and development of mathematical terms in the Tatar language, also mentions this work, pointing out that 'the arithmetic treatise of Akhmadja Hajji Mukhetdin Muhammad is written in the Ancient Turkic language, while the principal arithmetic terms are expressed in Arabic-Persian units' [Khayrullina, 1996, p. 8].

The next work —Quran Tafsir—was discovered in 1958 in Kazan and is currently kept in the archives of the National Museum of the Republic of Tatarstan. The work was written in 913 AH according to the Hijri calendar, or 1508 according to the Gregorian calendar. The manuscript is well preserved and contains 856 pages.

There are few mentions of this book in the scientific literature. The authors of the work 'Borıngı Tatar Ädäbiyatı' ('Ancient Tatar Literature') attribute it to the 'works of various content brought from the East and Middle Asia as a result of economic and cultural relations with these regions, and distributed through handwritten copies by educated people who passed them from hand to hand'. The authors stress that this source is important because

'it was written in the Old Turkic language of the Tatar people' [Borıngı, pp. 340–341]. This manuscript was also mentioned in some works of the renowned philologist J. Zaynullin. Information on it was also provided in his doctoral dissertation [Zaynullin, 1999, p. 30].

The author of the Quran Tafsir first provides an explanation for writing the work. He asks: '*Belgel, äy gäziz käredeş. Bu kitab şhärif vä dörrilätiş cämğ idüb tärcemä kılmanä säbäb*' ('Know, dear brother, why I have translated and publicized this great book, beautiful as a pearl'). He continues: 'Since the sea of words of the Almighty and the Just (Allah) and the pearls in the sea have been sent down to us in Arabic, not all those who wish to do so can use them, so I, a servant of God, have translated it into the Turkic language for the general use. And I am gladdened that all people, old and young, can now study these pearls' [Kadirova, 2012, p. 303]. The author states this on page 8 of the manuscript.

The Arabic text of the ayats is written in red ink, with some individual harakats (supplementary diacritics, vowel marks) written in black ink. At the beginning of each surah, in each case of the word 'bismillah', the letter س (sin) extends across the entire length of the line, making it easy to find each surah.

The manuscript contains almost no corrections. The text is written neatly and the handwriting clearly belongs to one person. There are, nevertheless, a few corrections. For example, page 41 is written half-way and then crossed out. However, it was not removed, and the text continues on the new page. On some pages there are inscriptions executed in other handwritings. The expression 'Bine Gilmetdin Ibrahim oğly' ('Ibrahim ugly bine Gyl'metdin toryr') on the page 3 appears in two places. We believe that these marks were made by the owners of the manuscript. There are lines with other content on the margins. For example, the inscription on page 48 reads: '*Shihab diyülogatdä häd ak näsnäyä dirlär ki nurlu la*' ('The ray of a star is white and radiant').

The Tafsir presents interpretations of all surahs, starting from Yasin and ending with the last surah, An-Nas. Therefore, this manu-

script is presumably the second part of a single two-part work. The explanations to ayats are detailed, precise and supplemented by individual events. For example, in the Tafsir, explanations to the surah 'Yasin' are presented on pages 6–44, and the next ayah, 'As-Saffat', is elaborated on pages 44–86.

The study of these linguistic materials provides an understanding of the condition and functioning of the Old Tatar language of the Kazan Khanate period.

§ 3. Material Sources

Ayrat Sitdikov

The study of the material culture of Tatar states of the 15–18th centuries is closely associated with archaeological, epigraphical and numismatic research. Material sources of various Tatar states have been studied to varying degrees. Material culture objects of the Siberian and Kazan Khanates have been studied best [Sitdikov, 2013; Matveev, Tataurov, 2011; 2011a]. Vast data is available on the material culture of individual cities: Saray-Jük, Solkhat, Bakhchysaray, Hajji Tarkhan, Kasimov, and others. On the whole, material sources attributed to the history of Tatar states are currently at different stages of classification and are largely fragmentary.

Most sources on the history of the Kazan Khanate have been colligated and introduced into the research. Materials of archaeological research of the Kazan Khanate were first published in the works of N. Kalinin in the 1920–1950s [Sitdikov, 1999b]. He collected extensive information on the cultural layer of Kazan, and together with G. Yusupov and A. Khalikov, he arranged a study of monuments of the Kazan Khanate era and of the epigraphic materials [Kalinin, 1927; 1954; Yusupov, 1960].

Systematic archaeological research of many monuments of the Bulgar Tatar period was carried out in the second half of the 20th century, disclosing new data on the material culture of the Kazan Khanate. The monuments studied include such well-known objects as the Kazan Kremlin and adjoining territories, Kamaevo and Russkiy Urmat, Elabuga and Bulgar settlements, and so on.

In the early 1970s, R. Fakhrutdinov determined the priority objectives for the study of

the Kazan Khanate material culture [Fakhrutdinov, 1973]. Many problems that he posed were effectuated in subsequent research. Some questions took on a different guise in light of the new data, while a number of tasks remain unsolved and are still relevant.

The study of Kazan provides unique information on the material culture of the Kazan Khanate. Research of the city's cultural stratas was commenced by archaeologists from Kazan University back in the 1970s [Khalikov, 1983]. Significant results were achieved in the 1920–1970s. An enormous contribution was made by N. Kalinin and A. Khalikov [Sitdikov, 1999, 1999b, 2006; Khalikov, 1983]. Their works exposed layers of the Bulgar-Tatar period, established the pre-Mongol origin of the city, and revealed major architectural objects of the khanate-period Kazan [History of Kazan, 1988].

A new level of study of Kazan is associated with archaeological research carried out in the 1990s. A program of the city's exploration was developed under the management of F. Khuzin [Khuzin et al., 1995]. In the course of its implementation, prior to 2005, over 50 square metres were excavated. A khan palace, mausoleum, khan mosque and the Qolşärif mosque were unearthed, as well as stone fortification structures of the khanate court. The research provided materials that shed light on the past of the Söyembikä Tower [Egerev, 1928; Sitdikov, 2013; Sanachin, 2002].

Despite the successes in the study of Khanate-period Kazan, a number of significant problems remain related to the research of the material culture, architecture and pla-

nigraphy of the medieval city [Egerev, 1928; Sitdikov, 2013; Dulsky, 1943; Dulsky, 1929; Gubaydulin, 2002]. The large-scale, previously unknown structures and the street development of the Kremlin that were discovered in the course of the excavations demonstrate the planning features of the city and the stages of its reconstruction.

The study of ceramic materials, discovery of production facilities for their manufacture on the territory of Kazan, and other settlements of the period are of fundamental importance. Publications by T. Khlebnikova and N. Kokorina on the topic were based on materials discovered in other settlements [Khlebnikova, 1978; Khlebnikova, 1988; Kokorina, 1995, etc.]. The strata of the Kazan Khanate period are characterized by ceramics produced with the use of traditional forms of the Bulgar era. There is a noticeable reminiscence of pre-Mongol traditions.

Production facilities for ceramic manufacture from the period have not been found in Kazan yet. Materials from a 15th century pottery workshop in Russkiy Urmat Settlement have been studied quite well [Kokorina, 1995; Kokorina, 1999; Kokorina, Fakhrutdinov, 1999]. In the opinion of N. Kokorina, during the Kazan Khanate period, the old traditions served as a foundation in the emergence of new features.

The issue of local production of glazed crockery is a particular problem in the research of ceramic production. It is possible that the Kazan Khanate was the place of its manufacture, but more in-depth studies are required for a definitive conclusion on the matter. The manufacture of leather and leather goods was one of the principal types of production, as evidenced by many finds. Such goods have been subject to significant generalizations in recent years. The question of metallurgical production in the Kazan Khanate, evidenced by a wide range of products from the cultural layers of the period, remains unresolved. Workpieces produced by Kazan jewelers and metalworkers are a separate subject.

Unfortunately, no special studies have been carried out of items made of precious and ferrous metals, as well as the technique

of their production. A study of metallurgical problems and related products would assist in disclosing the degree of development of one of the key production types that reflects the status of overall societal development.

Resolving a wide range of problems in Kazan Khanate archeology would require research aimed at disclosing archaeological objects of the Kazan Khanate epoch. By analyzing written sources, E. Chernyshev localised about 700 settlements of the period [Chernyshev, 1971]. Many of the settlements are extant. Approximately 130 objects were discovered using archaeological methods, a significant portion being comprised of necropoleis [Archaeological Map, 1981; Fakhrutdinov, 1975].

The development of the Kazan Khanate, as that of any state, was tied to a distinct management structure in which cities unquestionably played an important role [Ermolayev, 1982]. In the domestic historiography, this has always been an ambiguous matter, with the existence of cities sometimes outright denied [Shavokhin, 1988]. The last few decades of research have disclosed cultural strata of the Khanate period in Laishevo, Bolgar, Bilyar, Sviyazhsk, Alabuga, Russkiy Urmat Settlement, and others [Sitdikov, 2013; Rudenko, 2004; Valiullina, 2004; Khlebnikova, 1978, etc.]. Excavations have also affirmed that these settlements developed successively, starting from the pre-Mongol era, including that of Arsk. These observations indicate that urban culture of the Khanate period was formed based on traditions of the Bulgarian and Golden Horde times. The settlements continued existing despite the significant political, economic and social turmoil, which demonstrates a stable social and economic structure, as well as a resettlement system that was established back in the pre-Mongol period. Presumably, the Kazan Khanate system of government also preserved ancestral traditions. The city centres were focal points of military, administrative and economic powers of the state, and the successive nature of their distribution indicates the preservation of traditional forms of governance. A study of previously unearthed settlements of the Ka-

zan Khanate and the late Golden Horde periods would impart greater understanding of the Khanate system of governance.

Analogous research of settlement complexes on territories of other Tatar states are very few. The most complete materials available are devoted to the study of the Siberian Khanate, where numerous settlements have undergone archaeological exploration [Matveev, Tataurov, 2011; 2011a; Adamov, 1995; 1998; 2000, etc.]. The studies have contributed to a fuller understanding of the organisation of economic life in the Siberian Khanate and of its boundaries.

Saray-Jük, Kasimov, Bakhchysaray and Hajji Tarkhan are among the cities of other Tatar states on which extensive archaeological materials have been accumulated [Guzeyrov, 2004; Gribov, Akhmetgalin, 2010; Samashev et al., 2008, etc.]. Unfortunately, the chronology of item complexes from these monuments of the 15–16th centuries was poorly presented. This limits the opportunities for analysis and comparison of these cities' material cultures.

The economic condition of medieval states depended significantly on the degree of development of trade relations. One of its indicators is coinage, enabling the study of monetary circulation and the nature of economic relations. Unfortunately, there is no available analysis of regional coinage of Tatar states. There are only publications of individual coins and treasure troves, with no general analysis of the monetary system and coin typology [Samashev et al., 2006; Muhamadiev, 2005, etc.].

The availability of own coinage in the Kazan Khanate was a contentious issue for many years. In recent years, a hypothesis was presented supposing that Kazan money has existed before the middle of the 16th century [Muhamadiev, 2005]. No coins minted in later periods have been discovered yet. Findings from excavations indicate that coins from the Crimea, Astrakhan and Ulugh Muhammad, minted in the Crimea, were present during the initial period. Coins minted in Kazan in the second half of the 15th century and in the 16th century were not found in the cultural strata of the Khanate period. Treasure troves dis-

covered to date indicate the complete domination of Russian-minted coins from the early 16th century on, which points to the economic domination of Muscovy in the region [Muhametshin, Sitdikov, 2001].

Item complexes in archaeological monuments reflect extensive trade connections between regions. In Kazan, they are represented by Western European coins, Chinese porcelain, glazed ceramics from Spain that probably arrived from the Crimea, Russian principalities and other regions [Koval, 2006]. Another indicator of the extensive influence of Crimean traditions is the arrival of Bakhchysarai architects in Kazan in order to build the Khan's court and its fortifications, as mentioned in written sources [Sitdikov, 2006; 2013]. This is also reflected in the architectural features of buildings and fortification structures found using archaeological methods. Stone towers of the Khan court are similar to those found in the Crimea. The construction techniques of stone buildings of the court and the adjoining Qolşarif Mosque require detailed study and possible reconstruction.

The well-preserved architectural monuments on the territory of the Crimea offer significant possibilities for the study of architecture of the period [Chervonnaya, 1995]. These structures have been purposefully researched by numerous experts. The objects found in the Crimean Khanate afford a unique opportunity of tracing the formation and development of the construction trade in the Muslim world of Eastern Europe.

In recent years, several necropoleis of the Khanate period have been studied from the archaeological perspective in Kazan [Sitdikov, 2013]. Among them is the Khan's mausoleum and neighboring burials, a Muslim necropolis in the southern extremity of the Kremlin, and a burial site in the area of the Gostiniy Dvor [Mausoleums, 1997; Sitdikov, 2006]. All of the burial sites contain Muslim burials with iron-bound wooden tabut (coffins). Fragments of gravestones can be found as well. The discovered materials require thorough anthropological study to gain a better understanding of the population of medieval Kazan.

Characteristics of the formation of Kazan Tatars in this area. The study of Cheremiss cemeteries is quite significant in the research. The need for such studies was pointed out by R. Fakhrutdinov [Fakhrutdinov, 1973]. In the 1980–1990s, the Muslim burial ceremony was traced. Unfortunately, the published archaeological map of the Trans-Kazan region does not specify the locations of such burial sites, rendering the understanding of the placement and number of these monuments incomplete [Archaeological Map, 1981; Fakhrutdinov, 1975].

In other regions, purposeful studies of the subject have been conducted only on monuments of the Siberian Khanate [Korusenko, 2003]. The works of researchers of this region clearly trace the tradition of the burial ceremony practiced by the Tatars in the region and its development over the course of an extended period. At the same time, the Tatars noticeably possess elements of the cultural tradition of the Ugric people.

Information on gravestones is also an important source for studying the characteristics of the Tatar Muslim culture [Borzenko, 1850; Chervonnaya, 1997; Dulsky, 1929; Ähmätcanov, 2002–2003; Katanov, 1921; Kereyrov, Chervonnaya, 2002–2003; Kornilov, 1929; Muhametshin, 2008]. Research of epigraphic monuments of the Volga Region and Crimea has produced unique materials on the written culture and high professional development of the stone-cutting trade. Systematic work in this field in the Volga Region has been presented in works by Kazan researchers [Yusupov, 1960; 1963]. Certain characteristics unique to the region are expressed in the traditions of stone gravestone placement. There is

also a notable succession of traditions dating back to the Golden Horde period.

One of the most urgent problems that has not been thoroughly studied by Kazan researchers is the formation of the Tatars of the Volga-Oka region. The objects of study are the settlements of the Kasimov Khanate, and dense residential locations of the Temnikov and Nizhni Novgorod Tatar groups. At the same time, we must keep in mind that these regions fell under Turkic influence starting with the pre-Mongol period. Dozens of Bulgar burial sites and settlements are known on this territory. The penetration of the Turks continued into the Golden Horde period. The long-term coexistence of the Turks, Slavs and Finns in the region was an influential factor in the ethnogenesis of these peoples. Preliminary research materials on the region's settlements indicate significant integration of Volga-Finnish traditions in the material culture of the Tatar population.

In recent years, extensive archaeological materials have been collected on the history of Tatar khanates and numerous works have been published on the subject. However, unfortunately, the related problems have not been resolved yet, and no consistent research has been undertaken to resolve them despite their obvious importance. The current stage of research calls for a novel approach to the study of relevant problems in the archeology of these states. Material sources, unfortunately, have been published only partially. A more detailed typological analysis and classification of each category of objective materials are required. These will allow the previous observations of the unique material culture of the period to be updated and specified.

§ 4. Tatar States in European Cartography of the 15–18th Centuries

Igor Fomenko

To avoid drowning in the sea of graphical materials or simply listing the sources, which alone can go on for dozens of pages, we will focus only on the hallmark cartographic materials¹.

As a rule, foreign authors who wrote about Russia before the 16th century received only second-hand information on Muscovy and various Tatar Kingdoms, relying on data from literary sources, annals, documents and oral tales. This is how Maciej Miechowita, Paolo Giovio, Paolo Campagni, Johann Fabri, and others worked. 'Notes on Muscovite Affairs' by Sigismund von Herberstein presented one of the first descriptions of the country by an eye-witness. Nevertheless, no matter how frequently various European guests visited Muscovy, their stereotypes of the Tatar-Russian state remained generally unchanged.

15th century. Let us refer to the graphical language to discern what knowledge about the far-away, mysterious Tartary the Europeans depicted in their medieval maps. It is worth mentioning that portolan charts, the most accurate cartographic materials, are important sources for the 15–16th centuries.

The sea maps of the 15th century produced by workshops under various European map-making schools show the principal Golden Horde cities of the Black Sea Region. The most important place names are accompanied by miniature flags with the Jochid tamga seal and stylized icons cities. The territory attributed to the flags with the Jochi tamga seal coincides with the borders of the Golden Horde traced in written sources. The western-most point is the town of Vichina, a large harbor in the lower reaches of the Danube, and the eastern-most one is Tana (Azak). The Golden Horde city of Azak is marked on portolans with the greatest number of flags in the Northern Black Sea Region, along with various designs of the Jochid tamga seals. This indicates

that the city was a vital hub both for regional and international trade. In addition, states that had vassal relations with the Jochi dynasty can be traced by flags bearing the Golden Horde tamga seal. All Golden Horde cities marked by miniature flags were administrative centres, at the least [Fomenko, 2011].

Let us examine a round copper map of the world—the Planisphere of Stefano Borgia (1440/1450—17th century) from the Vatican Apostolic Library [Djurova, Dimitrov, 1978, Table LVII (Borgiano XVI)]. The planisphere, which served primarily as a wall-mounted ornament, includes one of the first mentions of the ethnic name of *Tartary*. The miniature image shows a nomadic city in the Middle Volga Region (left bank), which may have been the residence of the Golden Horde khan. Tents interspersed with carts form a square, with a stream flowing in the centre and unharnessed horses grazing nearby. The miniature images depict the day-to-day lives of nomads. Next to the nomadic camp there is a text that, with slight alterations, can frequently be seen in the cartography of the 16th century in the same place: *'Kingdom of the Great Tartary: when the Tatars move to a place, they hitch bulls and other beasts of burden, and search for a place with good grazing pastures. Their city consists of multiple tents, carts, etc'*.

The 1448 planisphere of Andreas Walsperger, a Benedictine monk from Salzburg [Almagià, 1944, pp. 31–32], also shows one of the early placenames related to the name 'Tartars'. The state of the *Tartar Empire* is located above the *Koman Kingdom* in the Middle Don Region. On the right bank of the Don (apparently, Brother Andreas mixed up the rivers), there is a city with a text next to it: *'Sarai is the capital of the Tartars, where the Emperor lives'*. In the Middle Volga Region, in the land of *Kumaniya*, there is a large miniature painting of a city enclosed by a fortified wall, with a commentary next to it: *'This city (Sarai al) is the Jedit of the Tatar Batay, where the great Khan died'*. It is worth men-

¹ Data from cartographic sources (placenames, legends and texts) is presented in the text in italics

tioning that the name of the Golden Horde khan mentioned in the 1448 map is the only one I have ever encountered in cartographic legends known to me.

Some portolans demonstrate the vassal relations within the Golden Horde. For example, the 1482 sea map by Jaime Bertran places a figure of the ruler sitting on pillows, with a curved sword and a round shield with a tamga seal on it above the Crimea, with an inscription that reads, *'The King of Tartary'* next to him. To the East, there is a much larger image of a ruler holding the scepter and orb, known as *'LaGranchanAmperatorde'Tartaria'* [Roncière, 1925, N. 1–2. Pl. 19].

On an anonymous mid–15th century planisphere from Modena (the Modena Anonym) [Kretschmer, 1968, h. 358], in the *Great Tartary*, close to the North, next to the green hills, there is an enormous royal crown denoting the place where Temujin was elected khan with the title 'Chinggis', bearing the following note: *'In 1187, the first Tartar King was crowned here'*

Let us refer to the world map of 1459 produced by Fra Mauro in Venice (kept in Biblioteca Marciana). The author undoubtedly used Ptolemy's materials, evidence from Eastern tradesmen, Russian sources and notes of European travellers. The map was made by the order of the Portuguese monarch, Afonso V. It is worth mentioning that before this masterpiece of medieval cartography, no roads were shown on European maps. Fra Mauro depicted the roads that connected Russian regions and cities—another argument supporting the idea that the monk received information from travellers who had been there. The information was probably provided by the 'Surozh guests',—that is, merchants who traded with the Italian posts in the North Black Sea Region.

The Venetian cosmography contains the ethnonym *'Tartary'* in the names of regions where cartographers previously depicted Alania and Cumania (the southern Russian steppes) in the area between the Dnieper, Don and Volga rivers. This map also shows the city of *Tartaria* below the mouth of the River Medveditsa, which flows into the Don. So far,

this city has not been located due to insufficient archaeological study of the region.

The miniature of the first capital of the Golden Horde—the city of *Sarai*—on the map by Fra Mauro is significantly inferior to the *Sarai* enclosed with a mighty fortified wall that artist Andrea Bianco deservedly called *'Grando'*. Close to *Saray Grando*, there is a miniature of a luxurious burial vault accompanied by an epitaph that harkens back to the events of 1395: *'A Tartar burial vault containing 18 burials performed by the will of Tamerlane, who routed them (the Tartars) here. And he ordered that only the noblest of them be buried here, and this mausoleum is similar to the one shown (on the map)'*¹. The 1459 map is also valuable because the author placed two capitals of the Golden Horde on the left bank of the Edil (Volga): the *Sarai* on the left bank of the *Kara Sarai* River where it joins with the Edil, which corresponds to the city of Sarai Batu, and *Saray Grando* (*Sarai al-Jedid*). The map depicts a third *Sarai* as well—*Kalmuk Sarai*, located on the right bank of the Volga.

16th century. On the 1505 planisphere by Nicolo Caverio [Wigal, 2000, map No. 26], a ruler sits on a low throne in the middle of the Golden Horde, marked as *Tartaria* on the map, in a luxurious red and blue tent, above which a red two-pointed flag with a golden Jochid tamga flies. This is the sole anthropomorphic image on the map, which testifies to its particular importance.

With the weakening of the Mongol Empire and the Golden Horde state, the image of the ruler of Sarai on maps gradually grows smaller, and his title also changes—the word 'Emperor' is removed. An aggressive image of a *'Tartaro'* armed with a sword can be seen in the Northern Black Sea region on the navigation map in the 1512 sea atlas of Vesconte Maggiolo, as well as on the portolan of another representative of the famous Genoese map-making clan of the second half of the 16th century, Jacopo

¹ This, undoubtedly, refers to the funeral complex where 'prominent Tatars' from the Tokhtamysh army who were defeated by Aksak Timur (Tamerlane) in the battle by the Kondurcha were buried.

Maggiolo [Portolani, 1994, p. 88–89; Frabetti, 1978].

When describing countries and peoples far removed from the cartographic centres of Europe, authors made wide use of the works of antiquity (Strabo, Pliny, etc.). Therefore, a paradoxical situation frequently arises—both the antique and medieval names of the same country are often included in a map. The popularity of the Geography of Claudius Ptolemy continued to grow, and by the middle of the 16th century various European printing houses had published numerous editions of this work.

Let us examine several important cartographic appendices to Ptolemy's Geography, paying particular attention to the 'Tartar' onomatology.

On the map of Italian monk Marcus Beneventanus (Rome, 1507), who used the map by Nicholas of Cusa as a guide [Lithuania, 2002, p. 18–19], the westernmost branch of the 'Tartar' people—*Perekop Tartary*—was located on the Eastern bank of the Dnieper. On the world map by Johann Ruysch (Rome, 1508) [Nordenskiöld, MDCCCLXXXIX, Tab. XXXII], the lands beyond the 'Polar Circle' are known as '*The Dark Province*', and to the east of that lies *Great Tartary*. To the south of the North Pole are Muscovy, *Russia Alba* (the right bank of the Dnieper), *Kazan*, *Strakhan*, and the *land of Tartary* (between the *Euxine* and the *Hyrcanian Seas*). On a 1513 world map (Strasbourg) [Ibid. Tab. XXXV], entitled '*The Hydrographic, or Sea Map*', Tartary is placed in the foothills of the North Caucasus, in the Middle Volga Region and on the left bank of the Ra (Volga). All of Western Siberia is called '*Tartary*'. The 1515 map by Gregor Reisch, the prior of the Carthusian monastery in Freiburg [Ibid. Tab. XXXVIII], is very schematic. It is noteworthy that the cartographer paid particular attention to various '*Tartaries*' in '*Asia*': *Perekop Tartaria*; *Cuman Tartaria* (Middle Volga Region); *Raven Tartaria* (West Siberia); *Tartaria Torquesten* (East Urals); *Tartaria the Most Affluent Süm* (East Siberia); and *Tangut Tartaria* (Northeast Eurasia).

In 1516, the cartographer Martin Waldsmüller produced and published his famous sea map ('*Carta Marina...*') on 12 pages [Bagrov,

2004, pp. 119–121], from which, despite its numerous archaisms, Europeans were able to obtain at least some information on Tartary, which was almost unknown to them. Most notable for our topic is the 3rd page of the first row, which depicts '*Russia Alba*' and a significant portion of Asian Russia, stretching to 65° E [Kordt, 1906, p. 3–5, Table I]. Waldsmüller received information on the lands shown on the map from the works of Odoric of Pordenone, Giovanni da Pian del Carpine, Marco Polo and other travellers.

Beyond the *Riphean Mountains* spreads a boundless *TARTARIA* consisting of numerous kingdoms (*regio*). Along the eastern slope of the Riphean Mountains, north to south, the following regions are located: Mordvani with the legend: '*Here, in this region, live the people known as the Bilers, and they are the vassals of the Tartars*'; then follows the region of *Great Bulgaria*; in the lower reaches of the Don (left bank) the country of *Kazana* can be found, and above it—the land of *Nagay*. In the land of *Nagay*, between the *Tanais* and the *Ra*, on a low throne in a tent with a sword in his hand sits '*the great nomadic ruler over great emperors, the tsar of Kazana and the Emperor over many peoples*'. Beyond the Volga, which flows across the entirety of Russia diagonally from the Caspian Sea to the Baltic, crosses Lake Ilmen and flows into the Gulf of Finland¹, above the Caspian Sea, called '*The Sea of Abak, or the Salty Sea*', spreads the vast land of *Cumania*. In the East, beyond the *Yaksart*, lies *Saracen Tartary*; '*The Land of the Bisermens*' and '*The Kingdom of the Kangits*' lie above it. In the centre of *Tartary*, among tents spread in a field, there is a frame with a traditional legend on the lifestyle of the *Tartars*: they do not live in cities, but travel with their herds, and their food is milk and meat.

In the 16th century, the Italian school of cartography held the leading position in the world, primarily due to its maritime maps. In 1525, the cartographer Battista Agnese produced a map of Muscovy based on first-hand

¹ In the Late Middle Ages, the Volkhov river was conflated with the river Ra, as in this case on the 1516 map of Martin Waldsmüller.

information. This is *'The Map of Muscovy based on statements received from the Ambassador Dmitry (Gerasimov) himself'* [Fomenko, 2006, p. 213]. The map was created as an appendix to a book on Muscovy and Tartary by Bishop Paolo Giovio. The source of information was the interpreter (in the title of the map, the *'Ambassador'*) of Grand Prince Vasili III.

The ethnonym *Tartary* appears seven times on the relatively small map, as well as one image of *'MAGNUS TARTARUS OCCIDENTALIS'*. *The Great Ruler of East Tartary* is shown in three-quarter profile sitting on a throne. He is wearing long robes, with a tall headdress on his head and a scepter in his right hand. Behind the ruler, one can see a tent city spread in the *'desert'*, with only rhumb lines running through it. The map shows *Perekop Tartaria* (located between the estuaries of the Dnieper and the Don); simply *Tartaria* (between the lower reaches of the Dnieper and the Don); *Asian Tartaria* (on both banks of the Volga); *Tartaria* (located above the only *'Tartar'* city on the map—*Casanum Tartarum*); and opposite *Kazan of the Tartars*, across the Volga, live the *Shaybanid Tartars*. Up the river (probably the Kama) is located the land of *'nogaitartari'*, and the seventh *Tartaria* can be found in West Siberia, where *MAGNUS TARTARUS* reigns.

Let us examine a map of Muscovy by Anton Wied [Kordt, 1931, map N. 39–41]. The artist from Danzig produced this map based on materials provided by the fugitive Moscow voevode and okolnichy, Ivan Vassilevich Lyatsky [Bagrow, 1975, pp. 64–68]. In 1542, Wied created the manuscript, and the well-known engraving by Frans Hogenberg is dated 1555. The toponyms on the map are given in two languages: the Latin transliteration of the Russian toponyms and their duplicates in Cyrillic script. To the North of *Kosaki Orda*, in the watershed area of the *Deyk* (Yaik) and the *Volga*, the camping grounds of the *Nogai Horde* are shown; the Nogais have the most numerous flocks of sheep and herds of horses in Tartaria. The *Perekop Horde* is located in its traditional place in the Crimea; their flocks graze further to the north, reaching the source of the *Sosna River*. The following commentary

is placed next to the armed figures of the Perekop Tatars: *'These Tartars are the bitter enemies of Christians'*.

The ongoing conflict between Russia and Lithuania was the cause of the 1526 ambassadorial mission to Russia of Sigismund von Herberstein, who had instructions from Austrian Archduke Ferdinand. The map *'Moscovia Sigismundi Liberi Baronisin Herberstein Neiperget Gutenhag MDXLVI'* [Ibid, Tab. XI] (1546), which had been intended as an appendix to his book, was published 3 years before Herberstein's *'Notes'* appeared. It was produced by famous engraver Augustin Hirschvogel, who worked with Herberstein to great effect in 1546 and 1547 [Kordt, 1899, pp. 6–8]. This small map depicted: *the Nagai Tartars, the Cheremiss people, the Mordva people, the Circassian people, and the Pyatigorsk Circassians*.

One of the best representatives of the Italian school of map-making of the Renaissance period is Giacomo Gastaldi. His contemporaries bestowed on him the epithet *'excellētissimo cosmografo Piamontese'*. In 1548, he created *'The New Map of Muscovy'* [Ibid, map N. IV]. The eastern and southeastern portions of the map comprise the region of *Kuriapatsor* (in the North Caucasus); the area of *Tartacosia* to the East of the Maeotic Sea; and above it—*Circassia and Alania*. On the right bank of *La Volga fl.*, the following regions are located: *Qipchaq* (above Astrakhan); *Palastra* (on the Middle Volga); and *Kabata* close to the city of *Casan*. On the left bank of the Volga, one can find *Chagatay* (close to the estuary); the *Shaybanid Tartars* are placed above them.

The works of the famous Flemish geographer and map-maker Abraham Ortelius were of utmost importance for the development of historical geography. His *'Theatrum Orbis Terrarum'* was extremely successful. The work comprised 70 maps on 53 pages; from one edition to another, the book's size increased, and it became the first systematic compendium of maps. Among the maps published by Ortelius was a 1562 map of Muscovy that was republished without revisions until 1612, as well as a map of East Asia—*'Tartary, or the Kingdom of the Great Kham'* [Abrahamus Ortelius, 1964. Tav. 46–47].

The author of a map of Muscovy, or to be more precise, a *'Description of Russia, Muscovy and Tartary'*¹, was Anthony Jenkinson, an illustrious diplomat and merchant who represented England's Muscovy Trading Company at the court of Ivan the Terrible. It is remarkable that the Kazan Khanate was shown as a part of the Muscovite State, while the Astrakhan Khanate was still shown as independent, even though Jenkinson was aware of the conquest of Astrakhan by Moscow, which he mentioned in his literary work (a frequent discrepancy between the author and the publisher). North from the region of *Kondor* to the land of *Bayda* stretches the region of *Samoyed*; the middle portion of the map, up to the *Volga*, is occupied by *Russia*; to the South, from the region of *Mordva* to the area of *Boghar* (Bukhara) is the ethnonym *TARTARI*, and to the south of the *Samar River*—*NAGALIA*. These areas are dotted with tents and nomads herding camels. The geographic accuracy of the territory shown on the map where Anthony Jenkinson travelled in 1557 while leading an expedition in search of trade routes to Bukhara and Persia² is relatively great, which was partly achieved by establishing the latitudes of individual places. Below the region of *Bayda*, to the right of the large *Chinese Lake*, the source of the *Ob*, there is a note regarding miracles that took place in *Tartary*. The commentary to the miniature image is placed within a rich cartouche complemented by a corresponding picture. The viewer can see how an *impressive armed column surrounded by numerous flocks of sheep and herds of camels moves down the Eastern slopes of Mount Imaus*³. The commentary says: *'These rocks have the likeness of men, and also of camels and other animals carrying various loads, as well as small livestock. Once upon a time, in the ages past, this was a horde whose representatives raised stock, and grazed small*

and large cattle; however, once by some magic they were all turned to stone and became rocks while maintaining the likeness of humans and animals. This amazing transformation took place about 300 years ago'.

The map *'Tartary, or the Kingdom of the Great Kham'* was created in Antwerp in 1570 [Abrahamus Ortelius, 1964. Tav. 46–47]. It is preceded by a historical ethnographic text. Below are some excerpts that are typical of the established ideas of Europeans on the 'Tartars', as well as the sources of their knowledge. *'Those whom we call the Tartars comprise a great number of peoples who live on an enormous territory. Since Tartary currently stretches from the East Ocean or Mangico, its lands spread from the Northern Ocean to the Southern reaches of Sinam, a portion of India, and go beyond the Ganges, the Sakos, the Oxus..., the Caspian Sea and the Maeotian Swamp; in the West, Tartary borders on Muscovy, which once was completely occupied by the Tartars and had representatives in its cities. In the ancient compositions, Tartary was known as Asian Sarmatia, as well as Scythia and Serica (a territory that currently roughly corresponds to that of China). Its horrifying name was first heard in Europe in 1212. In their language, "ordy" means "a multitude". And although they live in different provinces, at a great distance from each other, they have much in common in their customs and lifestyles. Their build is squarish; their appearance is squat; their eyes are deep-set and narrow; their beards are horrible; in all other respects their bodies are powerful and their spirit is brave; they kill horses and other animals and use them for food, but they do not eat pigs... Sigismund von Herberstein provides information on the Tartars, their customs and traditions. Also see Antonius Bonfinius and his commentaria Hungarica, and Marco Polo the Venetian, who lived among them (the Tartars) for a long time. On their origin, read Matthew of Miechow; (the work of) Hayton of Armenia; the Saracen history by Celio Curione, and the writings of the Jesuit Jacob of Navarre. The information on the Tartars offered by Nikephoros in Book 18, Chapter 30 would be good to have as well'*. The texts placed on the map abound with data that date back to traditional antique

¹ 'Theatrum Orbis Terrarum'. Antwerpen, 1588–1612(7). State Historical Museum, GO-5926. The map comes from the Spanish edition of the atlas by Abraham Ortelius.

² See: [Gautier, 1906; Gautier, 1937].

³ From the time of Claudius Ptolemy, Mount Imaus had been identified with the Urals; later it was associated with the Altai, Tien Shan and the Himalayas.

and medieval authors and contain numerous legendary and mythological themes.

On Ortelius's 1570 map, the domain of the Great Khan includes the following lands and peoples: *Astrakan, Kazan, Turkestan—the Kingdom where... the number of tribes amounts to 900, Transoxiana, Chagatay, Samarkand, Charsian, Istigias, Tacalistan, Kamul, Tangut, Chiorsa*; and in the North, mainly 'the hordes'. The Taimyr Peninsula is shown as the place of residence of two Israeli peoples lost in ancient times, *the tribe of Dan and the tribe of Naphtali*, which in the state of the *Emperor of Tartary* are also called 'hordes'. The placement of Judaic peoples in the Scythian Desert is an indispensable tribute to medieval ideas on the vassals of Antichrist, the peoples of Gog and Magog. The neighbors of the Judaic 'hordes' are *the Cheremiss Horde, the Turbonim Horde, and the Horde of the Merkits*, as well as the *Usezucanorum horda, the Chiesanorum horda* (apparently the Kazan Horde), the *Bashkir Horde, the Siberian Horde; the kingdoms of Tabor; the land of Chiorsa, and Bargu*. Next to each 'horde' (apart from the Judaic and Cheremiss hordes) there are miniature images of tents.

In the so-called 'Wrocław Jenkinson', in the area of *Tartary*, to the southwest of the *Chinese Lake*, in the area of *Tumen, Nagaia and Cassakia*, near a miniature of a nomadic camp surrounded by numerous flocks of sheep and herds of horses and camels, there is a commentary in a cartouche, describing the way of life of the people who live there: *'The residents of the Tumen region, the Cossaks and the Nagais, are Mahometan Tartars who live in communities. And wherever they go, they take with them their numerous wives, whom they value. The Tartars are people who eat horse meat, but from some horses they also obtain milk. They also eat fruits growing on trees. They do not have any money in circulation. These people are partial to doing magic and to conjuring evil spirits. If any enemy threat arises or the skies are darkened due to a storm, they convene a council*

meeting in order to pass a decision regarding the omen or the enemy threat. And then one of them (a priest or shaman), using spells, herbs, roots and (special) stones, demonstrates his art in interpreting various signs'.

For the map of the Detecum brothers, *'A New Description of the Northern Regions, Including Muscovy, the Ruthenes, and the Tartars, as Well as the Tartar Hordes Surrounding These Lands...'* (before 1572)², an unknown author compiled materials of outstanding travelers and map-makers of the first half of the 16th century: Sigismund von Herberstein, Ivan Lyatsky, Gerardus Mercator, Anthony Jenkinson, Giacomo Gastaldi, Olaus Magnus, and Master Caspar Fopellius. To the southeast of the *Chinese Lake*, in the region of Yugoria and Cassakia, next to the miniature of a nomadic camp, we can read the following commentary with a generalized characteristic of the Tatar ethnicity: *'The Tartar people have always been known for their warlike attitude and led a nomadic life, and it is divided into Hordes'*. The most important of them are: the *Horde in the land of Bulgaria*; the *Horde in the land of Cassakia* (the southeast of Lake Teletskoye); the *Horde in the area of the Middle Urals*; the *Horde in the land of Nagai* (between the Volga and the Yaik); the *Horde in the upper reaches of the Yaik*; and the *Horde in Turkestan*.

An explanatory commentary is placed between the Yaik and the Volga, next to an image of a nomadic Horde: *'In the Tartar language, a horde means a group of people who comprise one community. And this community (the Horde) constantly leads a nomadic life, moving from one region to another'*. The map offers a lot of information on past wars and wars contemporary to the authors of the map. Below are the notes pertinent to the topic under examination. In the Northern Azov Region, in the area of the *Crimea*: *'The Crimeans are Mahometans; they raid the Muscovites, with whom they are always at war'*. Above the city of Ka-

¹ 'New comprehensive description of Rus, Muscovy and Tartary. Anthony Jenkinson. Clement Adams'. Illuminated print. London, 1562/1568. University library, Wrocław. See: [Fomenko, 2010, p. 12].

zana: 'In 1551, the Tartar Kingdom of Kazan was defeated and included in the realm of the Emperor of Russia'. Near the city of Astrakhan: 'In 1554, the Astrakhan Tartar Kingdom was defeated and joined to the Russian Empire'. As we can see, the map-makers are ahead of true events by 1–2 years. Near the town of Maliy Khorasan: 'Here is the town of Khorasan that is located in the Persian Kingdom; in 1558, it was seized by the Tartars'.

17th century. The Europeans still associated Sarmatia Prima, or European Tartary, with wildness and barbarism, as well as a scale of territory that was very difficult to describe. During this period, the image of the *King of Tartary* completely lost its aggressive features. On the portolan of Aragonian map-maker Placido Caloiro-et-Oliva, dating to the early 17th century, the 'King of Tartary' in the Black Sea region is the vassal of the 'Great Turk' [Cartografia, 2000, p. 172.]. Unlike the other 'tsars', armed with swords and shields, the Tartar ruler sits on cushions in the lower reaches of the Volga and holds a cup instead of a curved sword.

Let us look at the map of 'Tartary'¹ produced in the early 17th century by Jodocus Hondius, a famous Flemish map-maker and engraver. The territory of *Tartary* (Muscovy is its western border portion) on this map is an island separated from the rest of the world. In the North, it is washed by the *Northern Sea*, the *Sea of Nyaren*, that is, the *Calm Sea*, the *Russian Sea*, the *Tartar Sea*, which is covered in ice. In the East, *Tartary* is bordered by the *Pacific Sea*. In the South, *Tartary* is separated from the ancient civilizations of the East by the *Great Chinese Muros*, that is, a wall, and seas of sand: the *Desert of Lop*, the *Desert of Muks*, and the *Black Desert*, as well as a belt of various 'hordes'—the *Kalmuk Tartars*, the *Nagai Tartars*, the *Trans-Volga Tartars* and the *Perkop Tartars*.

The map is accompanied by a French text written by Amsterdam geographer Peter van den Berg. 'Spread through the great steppes of *Scythia*, *Tartaria* stretches to the North. It is

populated by the Tartars, who are famous for the moderation and antiquity of their people. It is said that they are descended from Abraham and have never served anyone, despite the wars Alexander the Great, Darius, Cyrus, Xerxes and other powerful kings and peoples have fought with them. In the past, they served only one Kham, or Lord, but now their kingdom is divided, and it is ruled by numerous princes. The name of their country goes back to the name of the River Tartar; we call it the *Magog*, but the local people call it the *Mungul* according to the name of the country that borders it from the North. Tartary borders with the Chinese Kingdom in the East, with India in the South along the Ganges and the Oxus, and with the Caspian Sea and Poland, as well as Muscovy, in the West, and with the Arctic Sea in the North.

The first king of the Tartars was called the *Kangi*, or the *Khama*, but Paul Venet calls him the *Kinhin*. His son's name was *Ekukham*; the third king, whom some also call *Batu*, was named *Zaykham*; the fourth was known as *Temur Kutlu* or *Tamerlan*, and he captured the Turkish emperor *Bayazet*, chained him in gold chains and carried him in a cage around Asia...

The country is mostly a desert, sad and savage... Tartary is divided into two parts, the European and the Asian. The European part is known as *Little Tartary*; the kingdom of the *Perekop Tartars* is located there. It occupies the portion of European *Scythia* located between the Rivers *Borysthenes*, *Psel* and *Desna* that run into the *Borysthenes*, the small river *Tanais* that is usually known as the *Donets*, and the *Tanais proper*; as well as the *Maeotian Swamp* and the *Euxine Sea*...

Earlier the *Scythians* ruled there..., but since the Tartars came from Asia and settled there, the land became known as Tartary, and it was given the name of *Little Tartary* to differentiate it from *Great Tartary* located in Asia...

Great, or Asian, Tartary is divided into five principal parts, namely, desert Tartary, *Chagatay Tartary*, the Kingdom of *Turkestan*, the Kingdom of the Great Master of *Kanten* (the Emperor of China) and *Old Tartary*'.

Desert Tartary is located between the rivers *Tanais*, *Volga*, and *Jaxartes* and the *Tapir*; *Se-*

¹ Josse de Hondt. *Tartaria*.. Amsterdam. [Early 17th century] State Historical Museum, GO-6074. Illuminated print.

biy and Imaus Mountains. *'It covers a portion of Asian Sarmatia and most of Scythia, located between the Imaus Mountains. It is divided into numerous Hordes, among which the following are the most important: the Trans-Volga Horde, also known as the Horde of Bulgar Tartars, the Kazan, Nogai, Tyumen, Shilban, Cassak, and Astrakhan Hordes, the latter of which is also known as a kingdom, and the Bashkir Horde. All of them are named after cities. Their residents, who once used to be free, are now the subjects of the Muscovite Kingdom, with the exception of the Tyumens, who recognise the power of the Great Kham Katyan...*

The last portion of Tartary is Old Tartary, located between the Rivers Paropamis and Serik, or the Chinese Kingdom and the Northern Ocean, and the Strait of Anián. It is called Old Tartary because the very name of the Tartars originates there... It has numerous provinces, or hordes, and their names are almost unknown to us. Learned scholars believe that the countries of Ung and Mongul are in fact the Gog and Magog mentioned in the Holy Scriptures'.

A European reading about the Tartars could also learn that *'the nature of these people is cruel, wild and savage... The Tartars always ride, they do not use carts during a war; they own numerous strong horses, they have no cities that they would need to use their armies to protect...*

They always hide their wives. Following the call of nature and the example of the ancients mentioned in the Bible, they are allowed to have several wives. Each (of the Tartars) has numerous children and concubines; the more wives they have, the more they love them, and their marriages are happy. They do not strive to marry rich brides or women of rare beauty or those coming from a noble house. Frequently, their noble princes marry slaves they have purchased....'

The following is said about the battle garments of the Tatars: *'They wear long robes without folds, suitable for fighting and riding. During a battle they wear large, long, pointed white hoods that shine so brightly that they bring terror to the hearts of their enemies even though they do not wear helmets...'* In addition to the texts, the Hondius map provides a sketch

of the Tartar way of life: tents, cattle, a saddled horse, and a cart, as well as warriors armed with lances.

The 1613 map of *'Muscovy, or White Russia'* by Gessel Gerard Gerrits is mostly based on authentic Russian 16-century drawings¹. A portion of the Latin text on the reverse side of the 1614 re-engraving is directly related to our topic: *'Some Asian peoples who live in the Tartar steppes and travel as a part of their hordes are also under the rule of the Grand Prince of Muscovy: the Zavoloch and Kazan Tartars, the Nogais, the Shaybanids, the Cossaks, and the Astrakhan Tartars, who used to have their own state, as well as the Bashkirs'.*

'The Latest Map of Russia Created by Isaac Massa' [Russiae, 1638], a Dutch traveller and map-maker, was published in 1636. It also contains a Tartar onomasticon. The land stretching from the Volga to the source of the Ob is called *'Tartariae Pars'*, and this *'portion'* includes the following territories and peoples: the *Tungus, Samoyede, Bayda, Obdora, Sibiriya, Lukomorye, Yugoriya, the Piebald Horde, Kazan, Kolmaks, Bulgaria, the Nagai Horde, Kolmaks, and Astrakan*. To the West of the *Astrakhan land is the Nagayski*; to the South of the *Wild Field*, above the *Maeotis*, lies *'the Crimea, or Przekop Tartary'*.

European map-makers traditionally marked the Siberian Kingdom, the Astrakhan Kingdom and the Kazan Kingdom on the territory of European Tartary².

'A General Map of the Ukraine, or the Demonstration of Lands Depicted According to New Data...' by Johannes van Keulen (the second half of the 17th century)³ offers us the

¹ Hessel Gerard (Herrits). *Tabula Russiae*. Amsterdam. 1613. State Historical Museum, GO-6523. It is considered that if the map of Muscovy used by Herrits was drawn by Tsarevich Feodor Godunov, who had access to Russian official secret maps, including the 'Big draft', then the map of Herrits was a kind of a remake of the lost 'Big draft' graphics. See: [Bagrov, 2005, p. 258].

following material on *Little Tartaria*. *The state of the Krymchaks, or the Crimean Tartars or the Perekop Tartars*, is limited to the Tauric peninsula; in the North of this state, there is the sentry settlement of *Or, or Perekop*; in the South, a moat (*Fossa*) is shown that connects the Karkinit Bay with the Sivash.

On the 1665 Volga map by Adam Olearius¹, on the left bank between the towns of *Soratoj* and *Zariza* there is a large miniature that depicts the lifestyle and customs of the residents of this steppe land, the Nogais and the Kalmyks. The artist shows how the nomadic tribes move their tents using camels; what they wear; what fruit their land gives (miniatures of impressively large watermelons and melons, which were exotic to Europeans); how their tents look on the outside and on the inside, and how the hearth is arranged.

The Tartar onomasticon on the 1688 map *'White Russia, or Muscovy'*² by Guillaume Sanson is comprised of: the *Crimean Tartars* and the *Nogai Tartars*. The camping grounds of the latter group are located in the area of *Little Tartaria* (the northern shore of the *Maeotian Swamp*). The *Circassian Tartars* are placed on the map between the Don and the Kuban. The *Mordovian Tartars* are located between the towns of *Moruma* and *Alater*. And from the northeastern shore of the *Mar Caspio* to the region of *Tingu(t)* a begins the territory of *Great Tartary*.

A map by Nicolaes Witsen, a close associate of Peter I, is a graphic supplement to his work *'Northern and Eastern Tartary'* published in Amsterdam in 1692. It was based on Russian cartographic materials. Witsen's map is the first true printed map of Siberia, and it exceeds even the Russian drafts of the period in the amount of information provided³.

The following inscription stretches through all of Siberia: *'The Entirety of the Muscovite State Together with Great Tartary'*. The *Circassian Tartars* occupy the left bank of the river Terek; the *Shafkali Tartars* are in Dagestan; the *Bashkir Tartars* reside to the east of Saratov; the *Nagai Tartars* are between Tsaritsyn and Saratov, on the left bank of the Volga; the *Ufa Tartars* are spread from the Kama to Saratov; and *Great Tartary* stretches from the Selenga and the Orkhon to the *Eastern Ocean* and from the Amur to the Great Wall of China.

18th century. During the reign of Peter I, Russia made a decisive step forward in the sphere of cartography. By the end of the previous century the Siberian Prikaz had accumulated several hundreds of pages of drafts, and in 1696 the government took it upon itself to create a new map of Siberia. Orders were sent to all Siberian towns for the voivodes to make separate plans of towns and areas that would later be brought together in a single drawing by Semen Remezov, a draftsman and researcher of the territory. In 1701, he compiled the first Russian handwritten atlas of Siberia (only 1 original and 2 handwritten copies are extant) comprising 24 maps and called *'The Drawing Book of Siberia'* [The Drawing, 2003]. The 23rd page of the book is the first ethnographic map of Siberia. It depicts the borders of the settlements of the tribes in detail; the places of residence of each ethnicity are colour coded. 87 different peoples are shown in *Great Tartary*! [The Drawing, 2003, Vol. 1, p. 23; Vol. 2, pp. 143–144].

The European maps of the Enlightenment period, like two hundred years before, continued to call Russia *'Muscovite Tartary'*.

'The New Geographic Map of the Great Kingdom of Muscovy, Representing its Southern Portion' by Nicolas Visscher was produced in Amsterdam in 1706.⁴ On the map, the area in the Volga Region from Nizhni Novgorod to Astrakhan is called *'Muscovite Tartary'* and comprises: *the Kazan Tsarstvo, or the King-*

seum, GO-6068.

⁴ Nicolas Visscher. *Nouvelle Carte Geographique Du Grand Royaume De Moscovie Representant La Partie Meridionale...* Amsterdam 1706. State Historical Museum, GO-2400/5.

dom of Kazan; the Duchy of the Bulgars; the Astrakhan Tsarstvo, or the Kingdom of Astrakhan, which also includes the lands of the Golden Horde, or Horde d'Or, bounded by the Akhtubia and the Yeruslan.

In the Volga Region, the map marks the lands of the Mordva People, the Meadow or Plain Cheremis, the Mountain Cheremis, the Kalmuks (camping grounds between the Irgyz and the Samara); the Orlokouri Horde, and the lands of the Great Nagais, or the Grand Nagay, which include the lands of Memaks on the right bank of the river Yeruslan (the largest number of nomadic tents is shown in the Great Nagai lands); in the lower reaches of the Volga (the right bank), the lands of the Grebensky Cossacks are marked, and the territory of the Astrakan Tartars, or Nogays, are located below that.

On the 1714 'General Map of Russia' by Henri Chatelain¹, Samogesia, or the land of the Samoyeds, is located in Siberia, to the west of the Yenisei, as are Kondoria, Obodria, Lukomorye, the Painted Horde, the Tyumen Tartars and the Barabinsk Tartars.

In 1725, in Nuremberg, Johann Baptist Homann produced 'The Latest General Map of the Entire Russian Empire, Showing a Great Portion of the Globe, from the Arctic Pole to the Sea of Japan and the Northern Borders of China, as Well as the Road Recently Taken by the Tsar's Ambassadors from Moscow through All Tartary to the Great Chinese Empire....'² It was based on Russian cartographic materials. It is worth mentioning that this map was the first one to include the name Russian Empire instead of the Muscovite State, the designation common in Europe. Russia's borders were shown in accordance with the Treaty of Nystad. In the South, the Russian Empire shares a border with Little Tartary, the Circassian Tartars, the Aral Duchy, numerous tribal unions of the Nomadic Kalmyks, the region of Nayda and Chinese Tartary.

On the 1769 map produced by Facius, printed in Bonn [Kordt, 1931, Table 19], all lands beyond the Oka were called 'Tartarie', as in the 14th century.

Let us assess several maps from 'The Universal Geographic Atlas of the First Geographers Guillaume Delisle and Philippe Buache of the (French) Academy of Sciences...' published in Paris in 1789³. Number 116 in it is a 'Map of Tartary... 1766' decorated with miniatures of tents and domestic scenes. Little Tartaria (the Northern Black Sea region) is dominated by the people of Nagai; the lands of the Little Nagais, also known as the Black Nagais or Black Tartars, are included in the domain dependent on the Tartar Khan (the watershed area of the Don and the Kuban); the Kuban Tartars are also marked on the map, as is Asian Russia, or Russian Tartaria, divided into gouvernements in the west and provinces in the east. The borders of Tartary stretch from the Don to the Kamchatka Sea, which is also called the Sea of Lama; Independent Tartary (from the Aral Sea to the Gobi Desert) includes the Yelyui Kalmuks, the centre of whose camping grounds is shown on both sides of the river Ili. Independent Tartary also included the Cossack Horde (on the banks of the river Syr Darya). Furthermore, the map depicts the Tyumen Tartars; the Tatar tups (Northern Caucasus); Great Tartary (from the Kara-Kalpaks to the Gilyak people, below the southern border of Russia); and Chinese Tartary (from the Khalka Region to the Amur). The centre of Tartarie Chinoise is located in Urga, or the Field. Text to miniatures of tents is the legend: 'In this place or close to it was Karakum, the capital of Chinggis Khan'. The north and the northeast of Muscovite Tartary are bathed by the Mer de Len and the Mer d'Amour—a sign that the authors were familiar with Russian charts of Siberia.

³ Atlas Géographique et Universel, par et Guil. Delisle Phil. Buaché Premiers Géographes de l'Académie des Sciences. Et par Dezauche Ingénieur Géographe, et Successeur des Srs Delisle et Buaché. A Paris chez Dezauche rue des Noyers. Avec Privilège d'Auteur. Paris. 1789. Maps No. 118 (1723); No. 116 (1766); No. 117 (1780); No. 120 (1781); No. 119 (1785); No. 114–115 (1788).

A remarkable map of the Northern Black Sea region, created in 1772 by Giovanni Rizzi Zannoni¹, shows the Russian-Turkish border established after the Russo-Turkish war of 1735–1739, equipped with a fortified line built in 17 Giovanni 40 for protection from the Nogai and Ochakovo Tatars, stretching from the Ivanovskaya Fortress on the right bank of the Dnieper to the Old Arkhangelskaya Fortress (22 fortifications!). The map also shows numerous camps of the Ochakovo, Budjak and Nogai Tatars. The following are marked on the left bank of the Dnieper, in the land of the *Nogai Tatars*: the *Yuguri Horde* (to the north of the Konka River); the *Ivak Horde* (the upper reaches of the Krynk River); the *Teliak Horde* (the upper reaches of the Ak Suyub River); the *Kjijiut Horde* (the middle of the Kara Derezi River); the *Nogai Yambuluk Horde* (the upper reaches of the Kara Derezi River); the *Kangly Argakly Horde* (to the west of Lake Kuru-Gelyu); and the *Hadji Keray Horde* (in the basin of the Heyan Derezi River). On the right bank of the Dnieper, in the *land of the Ozyu-Kala Tatars* (the Ochakovo Tatars), are the following: the *Mir-Ali Horde* (opposite the Boguzin Fortress); the *On-Chadyr Horde* (the upper reaches of the Rumili Derezi); the *Kazai-Mirzy Horde* (close to Lake Kuk-Kuyu); the *Yagy Zapezakly Islam Keray Horde* (the middle of the Tana-Idel River); the *Krotoyaky Horde* (the source of the Salkan-Dere River); the *Istra Horde* (opposite the Stepanovskaya Fortress); the *Tatar-Medzhet Horde* (opposite the Geremoleyskaya Fortress); the *Geneviz Horde* (the source of the Tuzla River); the *Kevi Camp* (to the north of the confluence of the Gramokleyka and the Ingul Rivers); the *Irkan Kangly Horde* (opposite the Bogoyul Fortress); the *Alakh-Mirzy Horde* (to the northeast of Ochakov); the *Ismail-Mirzy Horde* (near the source of the Olyu-Kagalnig River); and the *Nogai Yedsany Horde* (at the

source of the Urmany-Idel River). Near these nomadic quarters is the largest miniature of a nomadic city, in the centre of which is the Khan's tent surrounded by several (12) smaller tents topped with crescent moons. To the West of the lands of the Ochakovo Tartars, across the river Olu-Teli Gelyu, stretch the lands of the Budjak Horde (*Budziak Tatarlerinugn*).

Let us examine a unique map of Siberia, 'The New Geographic Description of Great Tartary' of 1730², created by a map-maker who had lived an unusual life. The Swedish officer Philip Johan Tabbert von Strahlenberg was captured after the Battle of Poltava in 1709 and remained in Tobolsk from 1711 to 1723, when he was released after the Treaty of Nystad. His work was based on Russian materials. Russian toponyms are given in Latin transliteration. The engraving of the title of the map shows not the stereotypical European spelling, *Tartary*, but its Russian version, *Tattaria*!

The sheer number of toponyms in the map had not been previously seen in the Western European map-making tradition. The borders of the *Kazan Kingdom* and the *Astrakhan Kingdom* are shown. Siberia is called the *Siberian Kingdom*. Middle and Central Asia are called, as usual, *Great Tattaria*; in the west its borders are the lower reaches of the Volga and the *Astrakhan Kingdom*, and in the east, the estuary of the Amur. The lands and peoples who live in *Great Tattaria* are as follows: *The Eastern portion of the Astrakhan Kingdom, the Kabder Tribe, the Yaik Cossacks, the Kara-Kalpaks, Karakum, Arakum, the Cossack Horde, the Djelchekly Tribe, the Djuss Tribe, the Qongirat Tribe, Turkomania* (the northern part), *the White Turkmens, the Karder Tribe, the Djamakayu Tribe, the Mingastagan Tribe, Turkustan, the Yelyui Kalmyks* (the upper reaches of the Irtysh), *the Djungar Kalmyks, the Wild Kirghiz Wild Tatars, the Karagn Tribe, the Irtysh Steppe or Desert, the Kankagai People, the Teleut People, the Land of Kumanda, Mula*

Carte des Frontières de Pologne depuis Balta jusques à la Riviere de Sina-Woda; contenant le Territoire des Kosaks de Human et de Zaporow; kes Deserts des Tatares d'Oczakow, de Bessarabie et du Nogai avec leurs Hordes telles qu'elles furent situées à la fin de 1767, par les ordres du Khan de Krimée... // Carte de la Pologne. London. 1772. State Historical Museum, GO-170.

² Philipp Johann von Strahlenberg. Nova Descriptio Geographica Tattariae Magnae iam orientalis quam occidentalis in particularibus et generalibus Territoriis una cum Delineatione totius Imperii Russici imprimis. Siberiae accurate ostensa. Stocholm. 1730. State Historical Museum, GO-5951.

Goya, the Karanguzagan Steppe or Desert, the Altai Steppe of Tala, also known as the White Valley, the Province of Kamul, the Mungals, Khalka, Mungalia, the Waterless Gobi Desert, also called the Khamo Desert, the Tola Desert, the Mongol Desert, Nivkhiya, Nivkhi Kartzin, the Land of the Gilyaks, the Yupi Taffars, the Targuzins, and the Zakhar Nayman Mungals. Next to each name of a nomadic tribe the artist placed miniatures of tents.

In the European part of Russia and in the adjoining Southern regions live the following peoples: *The Wild Voguliches, the Sirayens (Great Perm), the Permyaks, the Votyaks, the Cheremisses, the Kazan Tatars, the Mordva, the Yukan Tribe, the Tirsa Tribe, the Singran Tribe, the Salgat Tribe, the Djagatay Tribe, the Buchzar Tribe, the Bigatin Tribe, the Ayyugly Tribe, the Zelyur Tribe, the Kataysk Tribe, the Nazarmamuly Tribe, the Kipchaks, the Great Nogais, the Mamai Steppe, where the headquarters of the Kabdersay Tribe is located (in the land of the Great Nogais between the Akhtuba and the Yaik), the Kuban Tartars, and the Little Nagais (steppes of the Northern Azov Sea region). The Kara-Circassians live near the Kulikovo Field!* As far as I know, this is the first mention of this particular toponym in cartography.

In 1745 the Russian Academy of Sciences published *'The Atlas of Russia Comprising 19 Special Maps Representing the Russian Empire Along with Neighboring Lands'*.¹ Page No. VII shows *'Little Tataria with the Bordering Kiev and Belgorod guberniyas. This Map Also Includes the Lands Near the Dnieper, Don and Donets, As Well As the Entire Crimea and Parts of the Kuban and the Black Sea. Established on the Above Triangle Created between Kiev, Ochakov and Azov and Based on Accurate Information on the Flow of the Rivers Dnieper, Donets and Don'*. Page No. IX demonstrates *'The Kingdom of Kazan with the Neighboring Provinces and a Part of the Volga; Contains Most of the Kingdom of Kazan and Nearby Places along the Volga and the Kama. This Map is Established on the Triangle between Moscow, Kazan and Astrakhan, and It Is Also Based on Accurate Information on the Volga Received from the Geographical Department'*.

The placenames *'Great'* and *'Little Tartary'* that were invariably included in the maps of Europe until the early 19th century indicate that the memory of the Empire of Chinggis Khan and its successor states had not been erased by implacable time.

Chapter 3. Historiography of the Tatar States (15–18th Centuries)

§ 1. Russian Historiography

Ilya Zaitsev

The so-called *'History of Kazan'* was likely the first fundamental historiographical work dedicated to the history of Golden Horde and bilateral Russian-Tatar relations [Written Monuments, 1985]. This publicistic work was composed in 1564–1565 and is a fictionalized story covering the period from the Mongolian campaign against Russia in 1552 to the collapse of the Kazan Khanate in 1552. After 1592 the text of the *'History of Kazan'* was reworked by replacing the last fifty chapters devoted to 1552 campaign with a compilation from *'Stepennaya Kniga'* and chronicles. It is this variant of the

work that has reached us in the greatest number of copies (in total there are more than 200 copies of the first and the second editions of this work). According to the text of the work, its author who was a man of Russian descent lived in Kazan for about 20 years as a prisoner (from

¹ The Atlas of Russia, comprising nineteen special maps representing the Russian Empire with bordering lands, composed in line with geographic rules and the latest observations, having also attached thereto the General Map of the whole Great Empire, by the efforts and labours of the Imperial Academy of Sciences. St. Petersburg, 1745.

1532 to 1551). Experts on the work claim that the text of 'History of Kazan' used the achievements of all literary genres and styles known in Russia in the 16th century. Nevertheless, this variegated material was united by a common artistic aim: to show the victory over the Kazan Khanate as the logical result of the struggle between the Russians and the khans of the Golden Horde and Kazan. As a consequence, real historical events described in the text are not only transformed artistically, but often are intentionally distorted to serve the overall idea. Nevertheless, the prevailing thought of the triumph of the Russian state and Orthodoxy was not the only distinguishing feature of the 'History of Kazan'. In the text of the work one can find not only touches of empathy towards the inhabitants of Kazan, but also direct condemnation of the grand princes. For instance, in the chapter about the victory of 'Ulu Akhmet' over Prince Vasily of Moscow, the author says: 'Thus, obedience and humility have overcome the fierce heart of our great prince, that he might not break his oath even if he has given a promise to heathens... Because God helps not only Christians, but also assists the heathen'. Many ideas of the 'History of Kazan' predetermined the development of Russian historiography concerning the Golden Horde and Tatar post-Horde khanates for a long period of time.

100 years after the reworking of the 'History of Kazan', in 1692 Andrey Lyzlov, a service class man from Moscow, finished writing the text of his 'Scythian history'. This is a very significant work which pays much attention to Tatar history. Lyzlov's main idea was the struggle between Christian Europe and 'Eastern' aggression. In 'Scythian history', this thought was modernized under the influence of Polish historiography and was transformed into a concept of the struggle against the Turks. Russian-Tatar relations are in the spotlight of 'Scythian history'. Lyzlov follows them from the times of the Mongolian conquests up to 1506, when, in his opinion, the 'yoke' came to an end. The essence of these, according to Lyzlov, was allegiance, the collection of tributes, and the jurisdiction of the Khans over the population: '... cursed Batu assigned his governors in all the cities, who are called baskaks, like atamans

or elders who always collect tribute from the remaining Christians and judge and order the Russian Christians according to their own will' [Lyzlov, 1990, p. 127]. The main sources for this part were 'The Book of Royal Degrees' and 'Synopsis'. Nevertheless, Lyzlov also used other sources in the parts of his work about the Tatars, including personal observations [Bogdanov, 1990, p. 403, etc.].

V. Tatishchev (1686–1750) made a significant contribution to the study of Tatar history. It was he who first tried to provide information about the etymology of Astrakhan and Kazan and their pre-Russian history in the articles of the same name from his unfinished dictionary 'Russian Historical, Geographical and Civil Vocabulary'¹.

Pyotr Ivanovich Rychkov (1712–1777) was one of 18th century's greatest Russian experts on Tatars and Turks. In August 1744, Rychkov finished writing his 'Report on the beginning and the state of the Orenburg commission at the time when it was established, containing some historical and geographic remarks'. The finalized version of this composition was published in 1759 in the academic journal called 'Compositions and translations for benefit and amusement' under the title 'The History of Orenburg and Orenburg guberniya'. It deals with the matters of the ethnogeny and ancient history of the Bashkirs, Kara-Kalpaks, Kazakhs, and Kalmyks, and their relations with Russia. Rychkov gives a brief review of the history of the cities and states of Central Asia, as well as a number of etymologies, including for the ethnonym 'Bashkir'. In 1750, he finished writing one more composition under the title 'A brief historical background of the Tatars and the current state of the peoples who are known as Tatars in Europe, composed in Orenburg on the basis of Turkish and Persian books and legends told by travellers who had been there, for consideration when composing a detailed description of these peoples'. After V. Tatishchev had acquainted himself with this

¹ [Leksikon (Dictionary), 1793]. It should be noted that V. Tatishchev was the first in Russian science to compose a brief essay on the Quran, which was made 'at the level of the best European Oriental knowledge of that time' [Arapov, 2000, p. 213].

work in 1749, he included a part of it in the first volume of 'Russian history'. P. Rychkov made wide use of 'A brief historical background of the Tatars' in writing his other work, 'Topography of Orenburg'. He systematized extensive material on the history of the peoples of the Volga River in 'Experience of the History of Kazan in the Ancient and Middle Ages' (1767) and 'Introduction to the Topography of Astrakhan' (1774).

In the 19th century, the development of the historiography of the Tatar states was connected both with classical experts on Russian historiography, authors of important works on Russian history, such as N. Karamzin (1766–1826) and S. Solovyov (1820–1879), and with historians specializing in the history of Kazan, such as K. Fuchs (1776–1864), M. Rybushkin (1792–1849), N. Firsov (1831–1896), and others.

It was at that time that the important area of the publication and criticism of medieval Tatar sources on the history of the Horde yurts emerged and began to grow rapidly. This activity is connected with A. Kazembek (1802–1870)¹, I. Berezin (1818–1896), and especially V. Velyaminov-Zernov (1830–1904), the author of 'Research on the tsars and princes of Kasimov' (published in four volumes in Saint Petersburg, 1863–1887), who also published the first collection of original diplomatic Crimean texts together with H. Faizkhanov.

A separate stage of the research on the Crimean Khanate is connected with V. Smirnov. His two-volume work 'The Crimean Khanate under the Ottoman Empire' (1887, 1889) is considered to be a classic and remains relevant to this day. According to V. Smirnov, the research did not claim 'to be a full historical review of the Crimean Khanate, but only a digest of information which can be found in Turkish written literary and documentary sources and which can prove facts that have already been acknowledged by science, but only tentatively and with insufficient data, or shed light on phenomena which had previously been insuffi-

ciently explained, or direct attention to those aspects of the subject which had for some reason been neglected' [Smirnov, 2005, p. 29].

Smirnov's greatest contribution was the study of Crimean historiographical texts and Ottoman compositions relating to the Crimea. It was he who first used one of the main compositions on the history of the Crimea in the 16th century—'The History of Khan Sahib Giray'. Initially he used a faulty Saint Petersburg copy when translating some excerpts from this work (now it can be found at the Manuscript Department of St. Petersburg State University's Faculty of Asian and African Studies) [Smirnov, 1913, p. 145; Nekrasov, 1997, p. 95]². However, afterwards he also used the oldest Paris copy (1651). Smirnov prepared a translation of this composition into Russian, but it never came out. Apart from 'The History of Sahib Giray', Smirnov was a real pioneer in discovering a whole range of other Crimean historical texts, first of all, the so called 'Short historical background'. The title of the source also belongs to Smirnov (the composition does not have an original title). At that time two copies of this work were known, and most Russian authors writing about the Crimea still use this text in the excerpt translations prepared by V. Smirnov. The researcher managed to find one more copy of the anonymous history published in French by Kazimirsky and Jaubert. He also found a unique text created in approximately 1790 and containing a short review of the history of the khanate from its founding up to the 17th century, and published it in 1881. A large number of copies of agreements and other official papers concerning the Crimea was included in the composition, which allowed Smirnov to call it a 'collection of works'. Only two copies of the composition are known today (the Paris original and a St. Petersburg copy most likely made by H. Faiz-

¹ It was A. Kazembek, who in 1832 published in Kazan one of the main Crimean chronicles, 'Seven Planets in the Narratives of the Tatar Kings'.

² Before V. Smirnov, the Remmal reports were addressed by F. Khartakhay, who, however, clearly undervalued the work and apparently was not aware of all its copies and editions. In one of his works on the history of Crimea in 1867 he even remarked: 'The historical literature of the Crimean Tatars is poor' [Khartakhay, 1867, p. 157]. Today, there is every reason to refute these words.

khanov). The composition was published by V. Smirnov on the basis of the St. Petersburg manuscript. The text was corrected and supplemented based on the Paris manuscript [Collection of works, 1881]. V. Smirnov translated 'The History of the Crimea' by Mehmet Nejati into Russian using the manuscript of the Asian Museum and the one belonging to S. Chakhotin, interpreter of the Russian Consulate General, and published it in 'Russian Antiquity' [Smirnov, 1894]. Unfortunately, his fruitful activity regarding Russia was not continued adequately. At the beginning of the 20th century, only A. Samoylovich continued studying the historiography of the Crimea, publishing significant news items under the title 'Prelimi-

nary report on a new copy of an abridgment of "Seven Planets" by Muhammed Riza' [Samoylovich, 1913].

* * *

Russian historiography relating to the history of the Tatar states became a branch of independent studies long ago. The works on the history of the Crimean Khanate¹, Astrakhan [Zaitsev, 2006, p. 4, etc.], Kazan [Khamidullin, etc., 2012, pp. 92–113] and the Nogai Horde [Trepavlov, 2001, pp. 6–25] as well as some aspects of their history (for example, relations between the Horde yurts and the Ottoman Empire [Zaitsev, 2004, pp. 11–48]), have been characterized exhaustively.

§ 2. Foreign Historiography

English-American Historiography of the Turkic-Tatar States of the 15–18th Centuries.

Bulat Rakhimzyanov

The history of the Turkic-Tatar states in the 15–18th centuries has already attracted the attention of foreign historians since the late 19th—early 20th centuries [Howorth, 1970; Curtin, 1908], but the second half of the 20th century was marked by a renewed surge of general interest on the subject. This was undoubtedly related to the awareness of the military threat coming from the USSR. After Sir Winston Churchill made his famous speech at Westminster College in Fulton (USA) on 5 March 1946, the USSR started to be perceived as a potential adversary for Western Europe and the USA. It was necessary to know the history of this potential enemy, including medieval history, in order to know the tools and methods for fighting against it. That is why from 1940 to 2000, foreign historical research paid considerable attention to the history of Rus-Russia-the USSR, especially the issue of the territorial expansion of the Russian state. This matter was the subject of close attention in the USA and Great Britain. Studying the history of Russian foreign policy and looking for its continuation in the expansionism

of Soviet foreign policy became an important area of research in the field of Russian and Soviet studies in the USA and Great Britain. The problem of Eastern policy in the Muscovite state in the middle of the 16th century was acknowledged to be especially relevant [Petukhov, 2003, p. 3]. The study of the Turkic-Tatar states in the 15–18th centuries usually was conducted in the context of the history of Rus-Russia.

G. Vernadsky, who worked in Russia, Europe and the USA at different stages of his life, was a pioneer in studying the Kasimov Khanate in the West. In his work 'Outline of Russian history', he dates the end of Mongolian sovereignty over the Russians not to 1480, but to the appearance of the Kasimov Khanate in 1457 [Vernadsky, 1927, pp. 67–111]. This extraordinary thought was repeated many times in works by his foreign colleagues.

¹ West European and partially Russian (pre-Smirnov) historiography were already mentioned and analyzed by V. Smirnov [Smirnov, 2005, pp. 29–31]. See also: [Khoroshkevich, 2001, pp. 34–72; Mavrina, 2002, pp. 135–137; Prokhorov, 1999, pp. 136–148].

Edward K. Keenan, who for a long time was the dean of History Department, Professor, and Director of the Russian Research centre (now known as the Davis centre) at Harvard University, touched on the issue of relations between the Muscovite state and the Kazan Khanate in his Ph.D. under the title 'Muscovy and Kazan, 1445–1552: a study in steppe politics' [Keenan, 1965]. Some parts of it and some conceptual extracts were published later as articles [Keenan, 1967; Keenan, 1969; Keenan, 1964–1968; Keenan, 1986]. The dissertation was successfully defended in 1965 at Harvard University. Unfortunately, this fundamental work demonstrating the exceptional erudition and the inquisitive mind of the author, as well as his profound knowledge of the sources, was never published.

Keenan was absolutely right when he noted that trusting Russian manuscripts when it comes to the reconstruction of the political realities prevailing in the relations between Moscow and the Tatars was unproductive and even erroneous. He directed his attention to ambassadorial dossiers as documents which, in his opinion, had been wrongly neglected by tendentious Russian and Soviet historians because they ran counter to the ideas they (and the authors of chronicles) had set forth. The author emphasized the role of the Nogai Horde in the Late Golden Horde world. According to him, the Nogais were the component that often played a leading role in the relations of the Kazan Khanate, and not only its relations, being a means of military deterrence and influence on neighbors (both other Tatars and Russians). The reason for that was the powerful military force of the Nogais, concentrated in their huge cavalry. The author shows all the interactions taking place in the Late Golden Horde world, their emergence, development and decline, through the prism of relations between Moscow and Kazan. Keenan suggested that initially relations between Moscow and the Tatar world had not been hostile, but friendly, and as a consequence it was Moscow that became the principal heir to 'Sain's throne' and absorbed other fragments of the Golden Horde. Keenan sees in the conquest of Kazan by Moscow the decline of nomadic society in general.

Omelyan Pritsak, an American historian of Ukrainian descent, founder of the Ukrainian school of research at Harvard University, made interesting and extremely important observations on the changing political status of the Kasimov Khanate and the Golden Horde world in general in the course of discussions on the pages of the journal 'Slavic Review' in 1967. He thinks that the Kasimov Khanate acquired vassal status not at the moment of its emergence in the middle of 15th century, but after the representatives of the Giray dynasty had been replaced by the descendants of Ahmad [Pritsak, 1967, pp. 579–580].

E. Keenan; Igor Sevcenco [Sevcenco, 1967], another American historian of Ukrainian descent; and Jaroslaw Pelenski [Pelenski, 1967], an American citizen of Polish descent, also took part in these debates. Sevcenco noted that Keenan's idea concerning Russian manuscripts was only partly right. It is indeed unproductive to use them for the reconstruction of political realities in the 15–17th centuries because of their bias, but if we want to know how various events were legitimized by Moscow, they are quite representative.

Jaroslaw Pelenski [Pelenski, 1967] presented some ideas in his article 'Muscovite Imperial Claims to the Kazan Khanate' which were later developed in his book 'Russia and Kazan. Conquest and Imperial Ideology' [Pelenski, 1974]. He analyzed the ideological aspect of interrelations between Muscovy and the Kazan Khanate. In his works, he relied on the analysis of the source base which had been so underestimated by E. Keenan,—that is, Moscow chronicles of the 15–16th century, as well as literary works and diplomatic papers relating to the same period. Pelenski's works raised the question of the role of Russia's conquest of the Kazan and Astrakhan Khanates in the process of Russia becoming a state of the imperial type [Petukhov, 2003, p. 15]. Pelenski paid the greatest attention to Moscow's theoretical claims to the Kazan Khanate, which were supposed to explain and legitimate the accession of Kazan to Muscovy, their classification, essence and theoretical grounding, and the characterization of the official impe-

rial ideology which emerged in Russia in the 16th century [Petukhov, 2003, p. 95, 160].

As for the history of the Tatar peoples, the historian draws the conclusion that the political system of the Kazan Khanate was constructed according to a classical nomadic model. He avoids classifying Kazan as a feudal or military-feudal state. Incidentally, the author was not alone in this; the existence of feudalism on the territory of the Muscovite state and its predecessors is questioned by representatives of the Anglo-Saxon historical tradition. In terms of economics, the American researcher considers the Kazan Khanate to be first and foremost a centre of international transit trade. According to Pelenski, the reason for the collapse of the Khanate is the inconsistency between the nomadic model of the political system, transplanted to that territory from outside, from the Ulus of Jochi, and the settled way of life typical for the overwhelming majority of the population of the Khanate, inherited from Volga Bulgaria.

Janet Martin, a student of E. Keenan and a professor at Miami University, deals with the history of the Turkic-Tatar states and their interrelations. She perceives the history of the Kazan, Crimean, and Kasimov khanates and the Muscovite state as integral parts of the history of the 'Steppe' political alliance, i.e., all the heirs of the Golden Horde. Basically the author develops her teacher's ideas using broader factual material and providing evidence of her concept from sources. Following Keenan, she puts an emphasis on the friendly nature of relations between Moscow and the Tatar world. Her articles 'Muscovite Relations with the Khanates of Kazan and the Crimea (1460–1521)' and 'Muscovite Frontier Policy: the Case of the Kasimov Khanate' [Martin, 1983; Martin, 1992] deal with these problems. The author also examines the history of the Tatar Khanates in her fundamental monograph 'Medieval Russia, 980–1584' [Martin, 1995].

In 1987, American author Robert Croskey published the monograph 'Muscovite Diplomatic Practice in the Reign of Ivan III' [Croskey, 1987], which had initially been completed as a Ph.D. dissertation in 1980 at Washington University, famous for its research on the me-

dieval history of Russia. Famous medievalist Daniel Waugh was his academic advisor. The ideas of the dissertation had already been presented in the article 'The Diplomatic Forms of Ivan III's Relationship with the Crimean Khan' [Croskey, 1984]. The main idea of both the book and the article is that, according to the evidence of diplomatic papers dating from the period in question, there was no 'equality', 'brotherhood' or 'partnership' between these rulers; both in status (in the framework of the 'legal' norms of the late Golden Horde area of the time) and in actual fact (militarily), the Crimean Khan was definitely higher than the ruler of Moscow. The ideas of the author were mainly drawn from a book by M. Usmanov [Usmanov, 1979], as he declared himself in the text, but they were developed on the basis of material from the period of the reign of Ivan III.

Historian L. Collins, in his fundamental article 'On the Alleged "Destruction" of the Great Horde in 1502', correctly suggests that there was no 'destruction' of the Great Horde (the state which in so-called 'western' historiography is called the 'Great Horde', which is more accurate in terms of analogy with the 'Golden Horde', or the Ulus of Jochi). All that happened was that the Sarai branch of the dynasty was replaced by the Crimean branch, and the attributes of power and some regions passed from the Khan of the Great Horde to the Crimean Khan. This thought is fully supported by the entire logic of the late period of the history of the Golden Horde in the 15–16th centuries.

Craig Kennedy deals with the history of the late Golden Horde world in his Ph.D. dissertation 'The Jochids of Muscovy: a study of personal ties between émigré Tatar dynasts and the Muscovite grand princes in the 15–16th centuries' [Kennedy, 1994]. It was defended at Harvard University in 1994. The main ideas of the Ph.D. were presented a year later in the form of a short article [Kennedy, 1995]. Edward L. Keenan was his academic advisor; his influence is noticeable throughout the work. Like Keenan's dissertation, this rather fundamental work, which demonstrates the author's profound knowledge of Russian sources, was never published. Following E.

Keenan, the author refuses to acknowledge the representativeness of chronicles. His work is based on the analysis of published diplomatic papers. Kennedy focused on examining the evolution of Muscovy's political power in the 15–16th centuries, showing its development through the prism of diplomatic relations between Moscow noblemen, especially the Grand Prince of Moscow, and Tatar emigres (both actual and potential) serving Moscow. The work contains important observations on interrelations between the Tatar states and Muscovy. The work is rather useful from the standpoint of the comprehensive study of the geopolitical and sociocultural situation in Eurasia during the period in question.

Donald Ostrowski, working at Harvard University, published the provocative monograph 'Muscovy and the Mongols: Cross-cultural Influences on the Steppe Frontier, 1304–1589' in 1998 [Ostrowski, 1998]. Its conceptual foundations were not accepted by many researchers specializing in the history of medieval Russia. The main ideas of the monograph had been presented on the pages of the 'Slavic Review' eight years earlier. [Ostrowski, 1990]. The monograph, based on source material of good quality and providing alternative interpretations of many problems, deals with issues relating to the Tatar medieval states. Nevertheless, these problems were not of primary importance for the author. Ostrowski was specifically concerned with the influence of the Tatar world on the formation of Moscow's statehood. Ostrowski considers Tatar immigrants, along with the court of the grand prince, the main source of Tatar-Mongolian influence on Russia. [Petukhov, 2003b, p. 98]. The borrowing of the administrative system from the Mongols was a result of frequent trips to Sarai made by Moscow princes. According to Ostrowski, 'the civil administration continued to view the practices of the steppe khanates as a model even after 1502 when the Qipchaq Khanate (Great Horde) [the Golden Horde—B.R.] acknowledged the sovereignty of the Crimean khan'.

Mikhail Khodarkovsky, a professor at Loyola University in Chicago who obtained his basic education in the USSR, deals with

the late period of the history of the Golden Horde states as a whole in his work 'Russia's steppe frontier: the making of a colonial empire, 1500–1800' [Khodarkovsky, 2002]. One of its chapters was published in the form of a large article, 'Taming the "Wild Steppe": Muscovy's Southern Frontier, 1480–1600' [Khodarkovsky, 1999]. The author tried to translate the conceptual development of the so-called Colonial Studies accepted and acknowledged in western historiography into the field of interrelations between Muscovy and the Tatar world in the 15–18th centuries. He was not very successful in doing so, which was reflected in the review by V. Trepavlov [Trepavlov, 2003]. According to Trepavlov, the factual part of the work looks like an anthology,—that is, it contains nothing new. As for the author's ideas about the inherent impossibility of peaceful coexistence between the Steppe and the Moscow state in the Middle Ages, one can argue with Khodarkovsky, although his arguments have the right to exist. The strength of this work is the attempt to systematize the relations between Moscow and the Tatar world during this period.

In conclusion, the early 1950s were characterized by the beginning of scientific research on our topic by foreign scholars. American and English historians examined the history of the late Golden Horde states mainly in the context of their interrelations with the Muscovite state, namely, the history of Russian imperial and colonial expansion, which they started with the conquest of Kazan and Astrakhan in the middle of the 16th century, or in some works, with the annexation of Novgorod in 1478.

American historians affiliated at various times with the Davis centre (formerly the Russian Research centre) at Harvard University (E. Keenan, J. Pelenski, O. Pritsak, R. Pipes, D. Ostrowski, etc.) examined history of the late Golden Horde states in connection with the problem of the origin of Russian statehood. Their works from 1960–1980 put an emphasis on the Tatar-Mongolian and Byzantine legacy in the political history of the Moscow state in the 15–16th centuries. These researchers mainly relied on the analysis of primary sources, not works by historians of the 19th

century, which were sometimes used as sources by some of their foreign colleagues. With regard to methodology they were under influence of the school of historical anthropology, which was reflected in their emphasis on identifying the specific features of the target culture and approaching a source as the product of a culture [Petukhov, 2003, p. 15]. In their works, this group of historians set forth the thesis that 15–16th century Muscovy belonged to a system of states which were the heirs of the Golden Horde and Tatar-Mongolian political culture. According to these historians, the Moscow princes saw themselves as the heirs of the Golden Horde Khans during this period.

There are two major positions in English and American historiography on the issue of Russia's conquest of the Kazan and Astrakhan Khanates, reflecting two different models of Russian-Tatar relations [Ibid, p. 18]. The first model emphasizes the hostile nature of relations between the Russians and the Tatars in the 15–16th centuries, caused by the legacy of the Mongol-Tatar invasions and the religious difference between the two sides. According to this model, relations between the Tatar khanates and Russia were mainly hostile, and the Volga region was the object of aggressive Russian expansion during this period. The first step towards establishing Russian hegemony in the Low and Middle Volga basin was made in the middle of the 15th century, when the Kasimov Khanate was

founded. At the beginning of the 16th century, the Kazan Khanate was already a protectorate of Moscow. Escalating struggles against the Crimea in the first half of the 16th century prompted the Russian state to conduct an active expansionist policy on its eastern borders. Russia's conquest of the Kazan and Astrakhan khanates was the logical result of the long-term expansionist policy in the east [Ibid].

According to the second model, relations between the Russian state and the Tatar khanates were based not only and not so much on religious or national hostility, but on pragmatism and mutual understanding resulting from the belonging of both sides to a common political culture. This by no means excluded military conflicts between them. However, these conflicts were mostly caused by economic and political rivalry between states which were successors of the Golden Horde, among which Moscow and the Crimea played the main role starting in the late 15th century. The collapse of the Moscow-Crimean alliance at the beginning of the 16th century led to escalating struggles between the Moscow princes and the Crimean Girays for hegemony on the territory of the former Golden Horde, the creation of a theoretical basis explaining the Moscow rulers' claims, and, finally, Russia's conquest of the Kazan and Astrakhan Khanates during the 1550s. [Ibid, pp. 18–19].

German Historiography

Marat Gatin

German historiography occupies a special position in foreign historical studies. Such famous medieval German historians as Johannes (Hans) Schiltberger¹ and Sigismund von Herberstein² showed an interest in Tatar history. Over the centuries, German historical science was the leader in the West, at least until the

1970s, in studying issues relating to the History of the Tatar states.

Scientific research in the field of the historical problems of the Golden Horde and its successor states was initiated in 1826, when the Russian Imperial Academy of Sciences invited scholars to submit their works on Tatar-Mongolian invasions in a competition. The Academy received a work by Austrian orientalist J. Hammer von Purgstall [Hammer-Purgstall, 1840].

The name of A. Ehrmann, professor of Berlin University, is connected with the found-

² See the Russian translation: [Herberstein, 1988].

ing of a special body for researching Russia in 1841 (Archiv für wissenschaftliche Kunde von Russland). Slavic Languages chairs were founded in Berlin in 1841 and in Breslau in 1842, giving some researchers cause to attribute the emergence of '*Ostforschung*' to the middle of the 19th century.

The German term '*Ostforschung*' literally means oriental studies, but in German scholarship it refers to the study not of the East in general, but only of European countries situated east of Germany. The term '*Ostforschung*' cannot have a natural analogue in the Russian language because, on the one hand, Russia has no European countries to the East, and on the other hand, the German term historically has a twofold focus: it is the study both of the countries of Eastern Europe and of the German ethnic minorities living there.

In 1845, the so-called German Oriental Society ('*Deutsche Morgenländische Gesellschaft*') was founded in Leipzig, and it started publishing its 'Journal of the German Oriental Society' ('*Zeitschrift für Deutschen Morgenländischen Gesellschaft*'), in which articles dealing with problems of Tatar history were occasionally published¹.

The Crimean war (1853–1856) caused particular interest in the problems of the history of Russian-Crimean Tatar and Russian-Turkish relations [Schuselka, 1854; Mundt, 1855; Ders, 1855; Hammer-Purgstall, 1856]. Researchers characterized Russia as an aggressive state in these works, and depicted the fall of the Crimean Khanate tragically.

The division of Asia among European empires at the end of the 19th century caused a new wave of interest in Tatar history. At the turn of the 19–20th centuries, when German imperialism realized the need for an ideological rationale for its aggressive policy, conservative German historians started working on creating an image of Russia as a potential enemy that could be economically exploited in the future. That was when '*Ostforschung*' finally took shape as a field of research.

It was during that period that the work of Berlin University Professor A. Brückner, 'The history of Russia until the late 18th century', was published [Brückner, 1896]. Brückner considered the main characteristic of Russian history to be the struggle against external cultural influence. He was the first to systematically develop the idea of the dualism of Europe and Asia, West and East, and examine their 'struggle for Russia's soul'.

In 1913, the 'German Society for the Study of Russia' was founded (renamed 'German Society for the Study of Eastern Europe' ('*Deutsche Gesellschaft für Osteuropakunde*') after the First World War)). Works dealing with relations between Poland, the Grand Duchies of Lithuania and Moscow, and the Crimean Khanate by N. Ernst came out in the pre-war years. [Ernst, 1911; Ders, 1913, S.1–58].

In spite of the defeat of Germany in the First World War, the number of '*Ostforschung*' organisations and institutions was increasing continuously in the 1920s and the early 1930s. The 'Ural-Altaic annuals' ('*Ural-Altaische Jahrbücher*') devoted to the philology, history and culture of the Ural-Altaic peoples started coming out in Wiesbaden in 1922².

A new stage of the development of German historiography was when Adolf Hitler and the national socialists came to power. Most historians viewed national socialism as a radical form of national German traditions. So they did not see any good reasons for refusing to collaborate with the new regime.

In the years of Nazism, German historians were preparing specialists to work in occupied Eastern territories and providing propaganda support before the start of fascist aggression. For example, a work by M. Vasmer devoted to the ethnography and history of the Meri and Mari people came out in 1935 [Vasmer, 1935]. The research presents quite detailed materials about the territorial placement of the Maris, as well as Tatar influence on them.

According to national-socialist theory, many peoples of Eastern Europe belonged to the category of 'Untermensche' (which liter-

¹ See the full text issues of the journal at the site: <http://menadoc.bibliothek.uni-halle.de/dmg/periodical/structure/2327>.

² For the contents of the year-book issues see: <http://s-u-a.de/jahrbuecher.html>

ally can be translated from German as 'sub-humans'), who were considered to have Asian features. Hence, it followed that the Slavs had become 'subhumans' due to the centuries-long hegemony of the Mongols and Tatars (both peoples were practically always interpreted as synonyms in Nazi literature).

Starting in the late 1930s, B. Spuler, who defended his doctoral dissertation titled 'The Mongols in Iran' in 1938, became the leading researcher in the field of Tatar history in the West in general and in Germany in particular [Spuler, 1939]¹. The attitudes towards Tatars in the Third Reich changed gradually changing over the course of the war. The period starting in 1942 was marked with a new wave of interest in the Turkic peoples of the USSR. The work 'Idel-Ural' by B. Spuler came out during fierce fighting on the Eastern Front in 1942 [Spuler, 1942]. This book, marked as 'For Official Use Only', contained information on the history of the peoples living in the Volga-Ural region. Special attention was given to the history of the Tatar states and interrelations between the Russians and the Tatars. Spuler's book 'The Golden Horde. The Mongols in Russia, 1223–1502' came out in 1943 [Ders, 1943]. The second, expanded edition came out in 1965 [Spuler, 1965]. In this work, Spuler described the domestic and foreign policies, internal organisation, state machinery and culture of the Ulus of Jochi. He also presented a detailed genealogy of the Golden Horde khans. The central place in this book is occupied by the ideas of the interpenetration of nomadism and settlement, the symbiosis of the nomadic structures of the Ulus of Jochi and the sedentary society of Russia. The list of references contains more than 600 works. The author used Turkic-Tatar, Arabic, Persian, Russian, Byzantine, Georgian, Lithuanian, Polish and Hungarian sources. Apart from political history, Spuler examined the religious relations, form of government, legal system, military arts, economics, science, art, food and clothes of the Tatars.

At the end of 1943, 'total war' led to the closure of most academic publications. Historical studies almost ceased to exist until the end of the Second World War.

A new wave of interest in Tatar history that appeared during the postwar period was first and foremost driven by political aspirations. German historians often considered their works on the history of Russia to be a means of political struggle against communism. Medieval studies played a considerable role in this. Scholars were searching for the origins of Bolshevism in Russian history. They were often found in the Tatar influence on the historical destiny of Russia.

In 1949, the 'German Society for the Study of Eastern Europe' was revived in Stuttgart. Their primary print media was the journal 'Eastern Europe' ('Osteuropa'). Furthermore, institutes researching Eastern Europe started appearing both at universities and independently.

Starting in the late 1950s, the further development of oriental studies was taking place in Western Germany. Oriental studies departments, chairs and seminars were established at almost all universities. During those years work on creating a single central library catalog of oriental studies resources was underway. Scholars took active part in preparing many important encyclopedias and reference manuals, such as 'Islamic Encyclopedia' or 'Philologiae Turcicae Fundamenta'.

In 1961, a work by E. Sarkissjanz called 'The History of Eastern Peoples up to 1917' came out. It mainly focused on history of peoples before they had become a part of the Russian Empire [Sarkissjanz, 1961].

In the 1960–early 1970s, the number of professors and other history instructors almost tripled in connection with the opening of new universities. A special international series of publications, 'Russia mediaevalis', appeared in those years. That period was marked by a large number of new works, among which the research on the history of Central Asia by B. Spuler [Spuler, 1966, S.123–310], the translation of 'The History of Kazan' into German by F. Kämpfer, and his monograph devoted to the Soviet historiography of the conquest of

¹ The second edition came out in West Berlin in 1955, the third in 1968, and the fourth in 1983. The work was translated in the Turkish and Persian languages.

the Kazan Khanate [Historie, 1969; Kämpfer, 1969, S.7–161] are worth noting.

Starting in the late 1970s, a summary work on Russian history titled 'Essays on Russian history' ('Handbuch der russischen Geschichte') was launched. According to the idea of the authors, this multi-volume publication was to present a coherent description of Russian history from antiquity to modern times. The series contained all fundamental works on Russian history of the Middle Ages where Russian-Tatar relations were examined in detail, including works by K. Gerke, H. Russ and G. Stekl [Handbuch, 1982].

In 1982, a fundamental work devoted to the interrelations between the Russian state and the peoples living in the Middle Volga Basin in the 16–19th centuries by A. Kappeler, a Swiss historian and professor at Cologne University, was published [Kappeler,

1982]. In this work, the author describes the Golden Horde period of the history of the Middle Volga region and analyzes the nature of interrelations between the Kazan Khanate and Muscovite Russia. He goes into detail on the conquest of the Tatar state and its integration into Russia.

German reunification in 1990 was the beginning of a new stage in the development of German historiography. Interest in Russian history became enormous. Today, however, when the cold war has come to an end and the successor to the USSR, the Russian Federation, has weakened in the international arena, when relations between Moscow and Tatarstan have lost their urgency, in the early 21st century the interest of German historical science in the problems of the history of the Tatars has begun to wane.

Turkish Historiography

Ilyas Mustakimov

Most Turkish researchers, specializing in the history of Turkic-Tatar yurts, were mainly concerned with the history of the Crimean Khanate and its interrelations with the Ottoman Empire [Acar, 2013f; Ahmet, 1940; Arslangiray, 1959; Aziz, 1938; Ertaylan, 1958; Gökbilgin, 1973; Gözaydın, 1948; Hasan, 1932; Kurdoğlu, 1937; Ortekin, 1938; Özcan, 2006; Sabit, 1934; Togan, 1999; Ülküsal, 1980; Ürekli, 1989].

Among Turkish historians, researching the history of relations between the Crimean Khanate and Ottoman-Crimea, works by H. İnalçık stand out, examining these problems on the background of the history of the Ottoman Empire [İnalçık, 1944; İnalçık, 1948; İnalçık, 1985; İnalçık, 1986].

Specific aspects of interaction between the Crimean Khanate and the Ottoman Empire were presented in the work by Y. Öztürk, devoted to administrative and social-economical history of Kafın Sandjak (later—Eyalet) [Öztürk, 2000].

There exists a whole range of scientific and popular scientific works on the history of Tur-

kic-Tatar states. A. Battal, Turkish philologist and historian of Kazan-Tatar descent, is the author of a book that presents a short history of Kazan Tatars, including during the period of the Kazan Khanate, mainly on the basis of well-known sources [Battal, 1966; Battal, 1988; Battal, 1996]. In recent years, many works by Turkish researchers, devoted to Turkic-Tatar states, have been released [Alpargu, 1996; Nogay, 1997; Topsakal, 2011; Koç, 2012; Acar, 2008; Acar, 2013a; Acar, 2013b; Acar, 2013c; Acar, 2013d; Acar, 2013e].

Works by Russian emigrants Zeki Velidi Togan and Akdes Nimet Kurat play a special role in Turkish historiography of Turkic-Tatar yurts.

Z. Togan created a broad overview of the history of Turk peoples, from the antiquity period until the early 20th century, using a considerable amount of source data. His research is especially important from the standpoint of examining the history of the Jochi Ulus and Turkic-Tatar states. Basing on available sources and own research, the author presents

valuable information on the history of post-Horde yurts [Togan, 1965; Togan, 1981a; Togan, 1981b; Togan, 1994].

A. Kurat introduced a great deal of unique papers on the history of the Golden Horde and the Great Horde [Kurat, 1937; Kurat, 1940]. He examined the role of the Crimean Khanate in the system of Ottoman-Russian relations [Kurat, 1966], composed essays on the history of some Turkic-Tatar states in Eastern Europe [Kurat, 1954; Kurat, 1972; Kurat, 1976].

Works by French researchers A. Bennigsen, C. Lemerrier-Quelquejay, E. Carrer d'Ancoce, G. Weinstein, M. Berindey also made a considerable contribution to the study of the history of Turkic-Tatar states. In the

1960s, they examined documents in Turkish archives, such as the Ottoman Archives at the Prime-Minister of Turkey, and the archives and library of the Museum of Topkapi Palace [Trepavlov, 2009b]. Their research resulted in a series of publications devoted to international relations in Eurasia in the 15–18th centuries¹, as well as the collection of papers 'The Crimean Khanate, According to the Archive of the Museum of Topkapi Palace' [Le khanat, 1978]. Their works introduced sources containing important evidence on foreign policy and trade and economic relations between the Ottoman Empire, Turk states of Eastern Europe and Central Asia, Russia, and neighboring countries.

Polish Researchers of Polish-Lithuanian Tatars

Andrzej Zakrzewski

Tadeusz Czacki was the first Polish researcher to study Lithuanian Tatars, and published his work *'On Tatars'* in 1810, which was reprinted several times in later years [Czacki, 1845]. This work preceded by a short fragment of his main work *'On Lithuanian and Polish rights'* devoted to Tatars (Warsaw, 1800). However, these works were almost amateur in nature. The really significant contribution to study was made by Antoni Mukhlinski, orientalist and professor at St. Petersburg University. In his first work, which was originally a series of lectures given during the anniversary of the opening of this university on 8 February 1857, he presented the history of the settlement of Tatars and their legal status from 14th century until his time. The strong point of this work was that it added some new sources, including manuscripts and translations of paraphrases from the Quran into the Polish and Belorussian languages, using the Arabic alphabet [Mukhlinski, 1857, p. 70]. In his second dissertation, he presented for the first time a fascinating source. This was a story told by an unknown Lithuanian Tatar from the year, 1558 who had been given the task to document the current conditions of Lithuanian Muslims to the Sultan [Mukhlinski, 1858, no. 4, 5, 6]. Only recently have historical scientists called into

question the originality of this source [Rowell, 1998, pp. 127–132; Łapicz, Jankowski, 2000, p. 25; Drozd, 2000, p. 16].

In the 19th century, several non-critical works were created, which make no significant contributions to historical science. The emergence of the independent Polish state gave a new momentum to researches. Tatars organized themselves and started publishing several magazines, among them the 'Tatar Yearbook' ('Rocznik Tatarski') being the most significant. Its three volumes contained a great deal of materials on the history of Tatar settlements in the former Polish-Lithuanian Commonwealth. The last volume contained the first synthesis: *'Lithuanian Tatars. An attempt to write a historical-ethnographical monograph'*, was the work composed by Stanisław Kryczyński [Kryczyński, 1938], a Warsaw researcher of Tatar family origins. This work became invaluable, and there it was reprinted (Gdansk, 2000) and translated into Lithuanian (Vilnius, 1993). At times the Vilnius Athenaeum (Ateneum Wileńskie) Magazine, published in Vilnius and devoted to the historical past of Lithuania, also contained important

¹ See the translation of a number of articles here: [Eastern Europe, 2009].

works devoted to them. Stanisław Dziadulewicz published the *Heraldry of Lithuanian Tatars* in 1929 in the same city [Dziadulewicz, 1929]. Perhaps not an outstanding work, but unparalleled in its area for many years.

The period after the Second World War was not marked by anything special. In the early 1980s, Peter Borawski started publishing many works. His really original work was a dissertation on Tatar heraldic flags and banners. His next works, being mainly compilations [Borawski, 1986] were based on pre-war literature. Nevertheless, these were great at making this subject-matter more accessible. Being printed in great large numbers, they spread knowledge on the history of the Tatar population in the former Polish-Lithuanian Commonwealth. The work on the legal status of Tatars in the Grand Duchy of Lithuania, by Jacek Sobczak, became pivotal to some extent [Sobczak, 1984]. It presents a critical approach to some constantly repeated views, and shows how groundless they are. Being a highly contested area in academia, it turned out to be useful for further research work. The main polemicist Peter Borawski united his efforts with those of Witold Sienkiewicz, the great expert on archives [Borawski, Sienkiewicz, 1986, no. 1; Sobczak, 1987, no. 2].

Peter Borawski, Witold Sienkiewicz, and Tadeusz Wasilewski published an invaluable source. This was a review of Tatar estates in Lithuania since 1631, presenting manors, estates, mosques and obligations of the local Muslims [Borawski, Sienkiewicz, Wasilewski, 1991].

The next fundamental work on Tatars, in both Poland and Lithuania, was the one composed by Jan Tyszkiewicz [Tyszkiewicz, 1989]. This researcher presented a few sources dating back to 16th century, among them a letter on Tatars addressed to the King of the Polish-Lithuanian Commonwealth by Sultan Murad III in 1591 [Tyszkiewicz, 1987, pp. 75–97]. It can be stated that the history of settlement, property and legal status of Muslims have been generally studied. An essay on the legal culture of Tatars in the Polish-Lithuanian Commonwealth, by Adam Moniuszko, became the latest contribution to historic science [Moniuszko, 2009]. Recently, Artur Konopacki has provided an interesting image of the religious life of Muslims, especially in the 19th century [Konopacki, 2010]. Nevertheless, corrections are possible everywhere.

Research works on the culture of Lithuanian Muslims have especially interesting prospects. Czesław Łapicz was a pioneer in this field. He analyzed the language of one of the Tatar manuscripts [Łapicz, 1986], then, together with Henrik Jankowski, he published this work [Łapicz, Jankowski, 2000]. Three researchers developed a catalog of Tatar manuscripts [Drozd, Dziekan, Majda, 2000]. Henrik Jankowski achieved interesting results questioning present-day views on the language used by Muslims in the former Polish-Lithuanian Commonwealth [Jankowski, 2003]. This may lead to a new understanding of the history of settlement and contacts with Turkey.

Section I

Formation of Late Golden Horde States

CHAPTER 1

Struggle for Partition of the Political Legacy of the Golden Horde

§ 1. Conditions and Specific Features of Disintegration of the Jochid Ulus

Iskander Izmaylov, Damir Iskhakov, Vadim Trepavlov

In the first half of the 15th century Jochi Ulus entered an irreversible decay stage, and the process of formation of new states on its territory started. The reasons for these processes were rooted in specific features of political and social-political development of the state during the preceding century. At its peak, the Jochi Ulus was a medieval empire with a rigid hierarchical structure of management of provinces and subdued populations, an efficient and harmonious mechanism that was able to quell any signs of unrest. All this required rulers to maintain great numbers of officials. Frequent wars on the borders, civil strife and rebellions of the aristocracy, required the presence of an efficient combat-ready army. This was a heavy burden on the population of the country. Nevertheless, in the second part of 14th century, the Jochi Ulus faced difficult problems, and it had undergo changes to meet the requirements of that time.

What were the main features of this 'challenge'? According to Soviet historiography, the increase of separatism among some feudal lords, whose striving for power had divided the country into hostile provinces, was the most widespread explanation for the collapse of the Golden Horde. The mechanism of this process was clearly described by historians. According to them, the main conflict erupted between rulers of economically and politically self-sufficient uluses and groups of nobility proposing their candidates for the khan's throne—thus attempting to seize the central regional administration and influence domestic and foreign policies of the Golden Horde. All this led to the erosion of central authority and a reduction of activity in the foreign policy field, which subsequently re-

sulted in increasing separatism of the nomadic nobility, for whom military campaigns were the main source of income [Fedorov-Davydov, 1973, chapters VI, VII; Grekov, Yakubovsky, 1998, pp. 297–299; Yegorov, 1980; Yegorov, 1985].

This approach was further developed in later research studies of the historical role of the nomadic elite in the final development stages of Jochi Ulus [Iskhakov, Izmaylov, 2007, pp. 140–168; Trepavlov, 2007a, pp. 346–348].

Nevertheless, social factors do not seem to be the only reason for the crisis. Overestimating the importance of these factors leads to a paradoxical conclusion—the central authorities grew feebler under the impact of separatism initiated by feudal lords, whose major substantive goal was to seize the Sarai throne. Separatism can hardly be the only explanation for the decay of the Jochis Empire and the strengthening of centrifugal tendencies in it.

First of all, we must point out the natural factors. The most important of these was the sudden drying up of the western areas of Eurasian steppes in the 14–15th centuries, according to research of geologists, geographers, and historians (See, for example: [Mordkovich et al., 1997; Kulpin, 1998, pp. 77–105]). The aridization of the climate in Desht-i Qipchaq led to decreased rainfall and winters with little snow. This brought gradual sand encroachments onto previously rich and green pastures.

The level of the Caspian Sea started to rise at the same time, the waves of which flooded a significant parts of the Volga Delta, and many settlements situated at its periphery, coming close to the cities of the Lower Volga Basin. According to Italian geographer Marino Manu-

to (1320), 'the level of the sea was getting one handbreadth higher every year, and many good cities are destroyed'. This hit hard not only the nomadic districts of Jochi Ulus, but also farming lands that resulted in undermining of the economy of the Golden Horde.

At the same time, all of Europe, West and East, was shaken by a severe demographic pressure. Favorable climatic and living conditions had led to a growth in population. This was also stimulated by political stability on the territory of the Golden Horde, by the emergence of large cities and many settlements. The deterioration of natural conditions led to periodic food crises, which occurred more and more often as time went by. People were driven to the cities by famine, where they had to sell even their own children [Collection, 1884, pp. 231, 235]. High population densities in the cities of the Lower Volga Region, Crimea, and Khwarezm turned out to be a breeding ground for diseases.

The bubonic plague became the most terrible of these. By the middle of 14th century it struck Desht-i Qipchaq several times, literally mowing down the population, especially in the overcrowded cities. A Russian chronicler wrote about this great pestilence in 1346: This plague attacked people in Astrakhan and Sarai and many other cities of the eastern countries, it strikes representatives of different tribes really fast, because there is nobody there to bury the dead [The Complete Collection of Russian Chronicles, 4, 1848, p. 57; The Complete Collection of Russian Chronicles, 5, 1851, p. 225, The Complete Collection of Russian Chronicles, 15, 1863, pp. 76–77]. We do not rule out the fact that the disappearance of the Bulgarian elite, preserving the ancient Oghur language, was related to the consequences of the 'black death' (as it was called in Western Europe). In particular, this language was used as a sacred language of epitaphs in the 14th century, whereas, after the 1360s, this tradition had disappeared [Shamiloğlu, 1991].

This blow became especially noticeable in the Jochi Ulus. According to Ibn al-Wardi, Arabic historian, geographer, and contemporary to these events, 'the plague which was wiping villages and cities off the map, took place in Uzbek lands'. He confirms that every day, Crimea lost

about one thousand people. In total it lost more than 85 inhabitants [Collection, 1884, p. 530]. According to these data, the consequences of the march of the 'black death' through the Golden Horde were catastrophic. It can be stated that since that very moment, the decline of city life in the Lower Volga Region had started.

The crisis in Trans-Asian trade also contributed to the decay of the economy in Jochi Ulus. Such products as spices, silk, cotton, gems, bread, and slaves were brought to Europe by a famous trade road which started in China and partly passed through the Golden Horde [Petrov, 1995, pp. 60–91]. This flow of goods enriched middlemen, and was one of the basis for the wealth of Desht-i Qipchaq cities. Not only state revenues from trade duties, but also the wealth of the many servants were connected with trade. The caravan leaders, guides, security guards, owners of caravanserais, craftsmen, etc. Moreover, many workshops produced goods for sale and processed semi-finished products. All of these were very responsive to the slightest changes in trade activities.

The decline of international trade started in the early 1340s and reached its peak in the second half of the 14th century. This was brought about by a whole range of reasons, among these being the liberation movement directed against the Mongol Yuan dynasty in China, an unstable situation in Central Asia and Moghulistan, the plague, turmoils in Anatolia after the collapse of the Ilkhanate, as well as an outbreak of hostilities between major Mediterranean trade powers—Genoa and Venice. All this led to restrictions on the movement of goods between the East and West, thus undermining the position of the Golden Horde khans. Only in the late 14th century, people could finally see a way out of the crisis, which brought world trade back to life [Karpov, 1990, pp. 60–63, 300–303].

No doubt, social-political processes, of course, cannot be entirely dismissed. After nearly one hundred years of existence, the Jochi Ulus not only went through a period of nation-state building, but also achieved a high level of social development. Many flourishing provinces, especially Crimea, Khwarezm, and Moksha, did not need a united state, and gravitated towards becoming independent.

The drive towards disintegration was also supported by semi-independent vassal states, which always had a tendency to secede from the Golden Horde. This trend was vividly observed in Russia and Bulgaria. Disintegration trends were kept in check by powerful central authorities for a long time, and the state system was quite strong. But then it started transforming and collapsing under unfavorable conditions.

According to written sources, we can observe the increase in the power of both ulusbegs and owners of feudal estates—*iktas* and *suyurgals*. Their economic power was based on well-developed cattle-breeding and agriculture, as well as the sharing state taxes and other kinds of incomes. Significant judicial and administrative power provided them with all necessary political leverage within territories under their control. Moreover, in the second half of the 14th century, many influential feudal lords became *tarkhans*, that is, owners of territories exempt from taxes and obligations [Fedorov-Davydov, 1973, pp. 124–134]. Capital city nobility and officialdom also enjoyed respectable incomes, thanks to collection of taxes and duties. This was assisted by a well-developed domestic and international transit trade, as well as the handicraft industry.

In the 14th century, cases of *begs* (*emirs*) turning *uluses*, including cities and nomad encampments into semi-independent territories, became more frequent. On the one hand, small feudal lords and cities, being reliable pillars of the khan's power, started reporting to influential *begs* and *ulusbegs*, considering this as their only chance to weaken the influence of unfavorable natural and social factors. On the other hand, these groupings started claiming the prerogatives enjoyed by the central authorities, in order to harness for themselves the Horde's treasury and armed forces.

Simultaneously, most *emirs* were struggling among themselves for the *Sarai* throne. This is a clear demonstration of the fact that the forces of inertia aimed at the centralization of the state were still great. However, there were groups of people in outlying regions striving to concentrate and preserve power within their possessions—Bulgaria, Crimea, Siberia, and the Blue

Horde, but these managed to gain the upper hand only in the early 15th century.

This category of subjects started becoming more and more notable, decade by decade, since the preceding century. Several factors influenced this situation.

The ethnic consolidation of Turk nomads of the Golden Horde had come to its end by that time. The turmoil brought by the Mongolian conquest and removal of the former *Qipchaq* elite from power, gave way to a peaceful and stable life in a powerful and rich empire. A strict and severe regional system, implying division of the population into *tithes*, was established in the territory of the former Cumanian 'Wild Fields'. The Government of the Horde did not allow free movement from one *ulus* to another, in order not to destroy its advanced system of taxation and military mobilization. A relatively quiet, life without wars and famines, created favorable demographic consequences. The populations of steppe tribes kept increasing, they divided and branched out, and so their *begs* gained more and more subjects. In the nomadic world, this meant an increase of in social significance and political influence of the non-dynastic nobility.

The first sign of this phenomenon appeared under the khan *Tokhta* (1291–1312), when dignitaries not of noble birth were appointed to high positions. The same processes took place under khans *Uzbek* and *Jani Beg*. And already after the death of *Jani Beg*, the leaders of tribes started acting as independent subjects of state policy, who were able to compete with the power of the khan.

The specific features of economic development of the Golden Horde, the formation of closed economic provinces, undoubtedly served as incentives for the to enter the political arena. This phenomenon was long ago noted by historians, but it is usually interpreted as the basis for separatism and disobedience to the central government. Nevertheless, relying on the resources of provincial *uluses*, could not only contribute to separation from the *Sarai*, but also to put pressure on government and manipulate it under certain conditions.

As paradoxical as it may sound, the black death also, evidently, helped the *begs* to assume

power. First of all it struck places of mass gatherings of the settled population. In a situation when superior classes, which used to dominate state management, became feebler, their position were partly occupied by representatives of a different social segment—the aristocracy of the nomadic steppes.

Crises among representatives of the Jochi dynasty created a supplementary excuse for the non-Chinggisids to come to power. All this came amid mass executions of hereditary princes. Khans, surrounded by hostile and intriguing relatives, often preferred to rely on supporters with no dynastic ties with them.

The Jochi Ulus remained united as long as the political powers (the khan and his administration) remained united and economic relations remained strong. The struggle for the khan's throne, between several Chinggisid representatives, became the justification for the outburst of centrifugal forces, each of pretenders had right to rule, and relied on the troops of numerous supporters. Probably this struggle was caused by the breaking of the principles of succession to the throne, under conditions of mass deaths among the population, including the nobility. Deterioration of natural conditions, decline of agriculture and cattle-breeding, lower trade and handicraft manufacturing, reduction of tax revenues and spoils of war in the Volga Region, problems with monetary and fiscal affairs, undermining of influence of the central authorities, serving as the background for the enrichment of some ulus leaders and their striving for levers of management—all these were the characteristics of the growing crisis. These are the very reasons that inevitably placed into question the existence of the empire.

In the 1360s, an internal war began in Jochi Ulus. The khan's throne that turned into an object of struggle between different groups of aristocracy from Sarai, the White Horde and the Blue Horde, passing from hand to hand many times. From 1359 to 1380, there were at least 17 khans in the Sarai. Some of them claimed the throne several times and most of them are absolutely unknown to historians. Names on coins are the only exception to this, and historians are still arguing about their historicity and the

succession of governments (see, for example: [Yegorov, 1980, pp. 190–192; Muhamadiev, 1983, pp. 88–99; Grigoriev, 1983]).

An extended period of decay had started. The collapse of the state was approaching. The unfolding feuding brought about the deterioration of financial state and the deepening decline of trade and handicrafts manufacturing. The threat of attacks ended the regular operations of caravan routes and consequently the imports of raw materials and the exports of products of handicrafts manufacturing were broken. Gradual decline of agriculture and desolation of permanent settlements in the Volga Region took place. Capital cities started being surrounded by walls. Rulers of Russia, Bulgaria, Khwarezm, and other uluses, started to strengthen their independence in the wake of the weakening of the central government. Stably developing regions became the objects of struggle for collection of taxes and retaliatory campaigns between khans under civil strife conditions. All these phenomena had destroyed the daily routines of local populations, and made them desire the protection of their lands from self-styled rulers of the Horde. Its the brightest evidence became the emergence of the Sufi dynasty in Khwarezm, actual independence of Bolgar under Bulat Timur (1360–1366), Hassan and Muhammed Sultan (1370–1376) as well as a war between Mamai and Moscow prince Dmitry Ivanovich [Fedorov-Davydov, 1965, pp. 183–184; Fakhrutdinov, 1984a, pp. 119–123; Kuchkin, 1980; Mukhamadiev, 1983, pp. 88–99; Gorsky, 2000, chapter 6].

Meanwhile, the striving for a united country, and the revival of its greatness, did not lose its historical inertia. Khan Tokhtamysh (1380–1396), who based his position on the aristocracy of the Blue Horde and Sarai, represented these interests. He not only conquered the khan's throne by defeating his enemies, including the Mamai, but also strengthened the central government by putting down separatism in Russia and other regions (devastation of Moscow and Bulgar in 1382). Nevertheless, sometime later, all these reforms resulted in the persecutions of clan aristocracy, removing its members from power and putting down rebellious provinces, which led to discontent and open ac-

tions against the strengthening of centralization. Moreover, the desire of Tokhtamysh to restore the former military glory of the decrepit Golden Horde led to military catastrophes during wars against Timur (1391 and 1396).

Probably the collapse of Jochi Ulus was a natural process of its development but some political actors were not going to allow this to continue. There was a small chance left to preserve the integrity of the state. New attempts to restore the stability of Jochi region through successful state ideological and economic reforms (reinforcement of centralization, money reform, spreading Islam) initiated by beylerbey Edigu who was a talented commander and diplomat [Bartold, 1963a, pp. 797–804; Yakubovsky, 1947; Safargaliev, 1960, pp. 178–195, 227–229; Izmaylov, 1992, 1994] turned out to be efficient for a while and calmed the situation. His reign under nominal khans was marked by a whole range of victories in foreign policy (the defeat of the great Lithuanian prince Vytautas at the Vorskla River in 1399 and the siege of Moscow in 1408 were especially outstanding).

Nevertheless, these efforts turned out to be in vain. The end came in 1419 when Edigu was defeated and died in the struggle against the rebellious Jochids. The collapse of Jochi Ulus became inescapable. This epoch is beautifully described in the Tatar dastan called 'Edigu':

... A dark day fell onto the earth.
The throne created by Chinggis
Became surrounded by rivers of blood.
The palace of the khan disappeared.
Lands were brought to ruins.
Azhdarakan, Kazan and the Crimea
Became independent territories.
The Golden Horde collapsed
[Edigu, 1990, p. 240].

Even after Jochi Ulus had collapsed its historical destiny was not over because Tatar people who had gone through this period of history managed to preserve their rich culture. Post-Golden Horde khanates emerged on the territory of Jochi Ulus. They continued its ethnopolitical and cultural-civilizational traditions.

§ 2. Tatar-Russian Relations

Horde and Russia in the 15th Century

Anton Gorsky

By the early 15th century, a structure in which two large states dominated had occupied the place that used to belong to more than a dozen independent lands on the political map of Russia. The Grand Duchy of Lithuania, which had its territorial core in Lithuania, but also included several Russian *lands* (Kiev, the main part of Chernigov, Smolensk, Volyn, Polotsk, and Pinsk) and the Grand Principality of Moscow. Along with them, there continued to exist Ryazan, Novgorod and Pskov lands (all of them dependent on Russia), as well as the Tver and Yaroslavl principalities in the North-East of Russia. Out of three attributes of dependence of Russian lands on the Horde (the approval of princes by the Khan, paying tribute and military assistance obligations), there remained only two—decrees appointing the right to rule and

the making of 'tax' payments. Moscow princes were obliged to pay 7000 rubles tax per year for their possession. Russian lands, integrated to the Lithuanian state, also continued to pay tribute to the Horde [Gorsky, 2004, pp. 273–275, 293; Rusina, 1998, pp. 58–61].

In the situation, after Aksak Timur defeated the Horde and Edigu became its actual ruler, the Great Prince of Moscow Basil Dmitrievich stopped paying taxes. In Moscow it was considered normal when a khan (the Russian equivalent of '*tsar*') has real power. Moreover, Vasily was trying to avoid a direct conflict. What is more, Horde troops were attracted as allies during wars against Lithuania in the years 1406–1408. At the end of 1408 (after they had not been paid tribute for 13 years), Edigu organized a military campaign against Moscow. The

Horde ruler failed to conquer the capital, but his troops managed to organize a large-scale devastation of the possessions of Vasily I. The military conflict between the Moscow government and the Horde continued until Edigu was dethroned (1411). After Tokhtamysh's sons had come to power, the situation changed, and in 1412, Vasily Dmitrievich even paid a visit to the Horde. However, starting 1414, when Edigu came back into power, the conflict flared up again. Edigu supported the claims of Suzdal princes to Nizhni Novgorod, which had been given to Vasily by Tokhtamysh in 1392. After Edigu was killed (1419) and the situation in the Horde had stabilized, by the second half of the 1420s, traditional (tributary) relations were renewed. In about 1423, Vasily I apparently got *yarliq* for his son Vasily to rule from khan Ulugh Muhammad, who had been exiled from the Horde by his enemies, and was living in Lithuania with the Great Prince Vytautas [Gorsky, 2000, pp. 119–140].

In 1431, the 16-year-old prince Vasily Vasilyevich and his uncle and rival Yuri Dmitrievich went to the Horde on their own initiative to see Ulugh Muhammad and get him to resolve their dispute about who would reign. Thus, the khan of the Horde was still considered to be a legal overlord of the Russian princes. On the other hand, the decision of the khan, who had confirmed the status of Vasily as the Great Prince in 1432 was actually ignored by Yuri, who seized the Moscow throne twice—in 1433 and in 1434 [The Complete Collection of Russian Chronicles, 25, 1949, pp. 249–252; Gorsky, 2000, pp. 141–143].

In the 1430s, the division of the Horde into two parts—headed by khans Küchük Muhammad and Sayid Ahmad—led to a new order for the paying of taxes. Both rulers were considered to be 'tsars' in Moscow [Dukhovniye, 1950, no. 38, pp. 108, 111, 113, 116]. The last document—the decree addressed to Ivan III by Küchük Muhammad Ahmad's son, (1480) stated that the khan had required the payment of 120,000 altyns (that is, 3,600 rubles from the Great Prince (see the issue of a decree on the earliest copy: [Gorsky, 2012])). Actually, this was one half of the 7,000-ruble fixed sum of taxes that Moscow princes had to pay the Horde

until the early 1430–s [Dukhovniye, 1950, no. 29, p. 74]. Apparently, Küchük Muhammad and Sayid Ahmad were paid one half of the fixed sum of money each. It should be emphasized that after the Horde of Sayid Ahmad had collapsed in the 1450s, the size of tribute being paid did not go up to the previous maximum.

Being cast out from the Horde in 1437, Ulugh Muhammad tried to settle on Russian territories, which led to conflict with Vasily II. At the end of 1438, the khan defeated Moscow troops in the upper reaches of the Oka River, near Belyov. Next summer Ulugh Muhammad came up to walls of Moscow. In 1444, he tried to settle down in the lower Oka, in Nizhni Novgorod. In summer 1445, the troops of Ulugh Muhammad defeated Moscow's army near Suzdal, Grand Prince Vasily himself was taken prisoner and the released after he had promised to pay a ransom. Then the horde of Ulugh Muhammad went to Kazan where his son Mahmutek, after killing the father, became the ruler of the Kazan Khanate. These events, as well as the removal of Vasily II from power by his cousin Dmitry Yurievich Shemyaka, led to suspending of tax relations between Moscow and the Horde of Ulugh Muhammad and his sons. In 1447, Kazan khan Mahmutek became an ally of Dmitry Shemyaka against Vasily II, who had come back to the throne [Gorsky, 2000, pp. 143–146].

By the late 1440s, Moscow had stopped paying tribute to the Horde of Sayid Ahmad. Probably a *yarliq* for the rule of the Grand Duchy was received from Küchük Muhammad in 1449, by Ivan, the son of Vasily II. As a result Sayid Ahmad's troops started military campaigns in Moscow's possession in 1449, 1451, 1455, and 1459. They ended after his Horde had collapsed in the second half of the 1450s [Ibid, pp. 146–148, 153–154].

In the 1450s, a vassal principality—headed by Ulugh Muhammad's son Kasim, who came to serve Vasily II, was created within possessions of the Moscow princes. Its centre was the Gorodets Meshchyorsky situated at the River Oka. Then it was renamed Kasimov, after Kasim, and respectively, that is why it became customary to call the corresponding political institution the 'Kasim Khanate', which was headed

by Chinggisids, that Moscow princes appointed (this practice existed until the late 17th century). There is a theory, according to which its foundation was one of the conditions under which Vasily Vasilyevich had been released by Ulugh Muhammad in 1445 [Safargaliev, 1960, pp. 26–27; Rakhimzyanov, 2009, pp. 54–61]. Probably initial state support for Kasim in the Grand Principality of Moscow was really planned as an integral part of the ransom for Vasily, but he was moved to the Gorodets Meshchorsky only in the late 1450s, when the obligations of the great prince, given to Ulugh Muhammad, had been invalidated a long time before [Zimin, 1991, pp. 171–172].

Three years after Ivan Vasilyevich had come to the throne (1462), the khan of the Horde himself took part in a military campaign in Moscow (for the first time since Tokhtamysh): Mahmud, the son of Küchük Muhammad's, made a similar attempt in 1465. The military campaign was brought to naught, since the Crimean khan Hacı Giray had attacked Mahmud at the Don River and had defeated him [The Complete Collection of Russian Chronicles, 24, p. 186; Gorsky, 2000, pp. 154–155]. Most likely it was the integration of Yaroslavl Principality by Ivan III into his possessions, without the authorization of the khan, in 1463 that caused anger of the ruler of the Golden Horde [Gorsky, 2010, pp. 131–132].

In the late 1460s, during several years the Grand Principality of Moscow waged war against the Kazan Khanate. What is more, it even went on offensive campaigns. Initially, military campaigns by Moscow troops against Kazan were not very successful, but in the end of 1469, they were able to conclude peace on favorable terms [Alekseev, 2007, pp. 36–95].

In the situation, when the Horde was actually divided into several political institutions, its 'central part', situated between the Don and the Volga Rivers, whose ruler was considered to be the suzerain in Russia, was defined in sources as the *Great Horde* since the 1470s [The Complete Collection of Russian Chronicles, 25, 1949, pp. 277, 291, 292, 299, 302, 303, 308]; the use of this term, in conformity with earlier times, beginning with the 1430s, was noted only in the Nikon Chronicle, and represents an obvious retrospection. It is tradition-

ally supposed that this an equivalent translation for 'the Great Horde' in Tatar [Trepavlov, 2010, pp. 7–8]. But the *Ulug Horde* was translated in Russia as '*the Big Horde*' (this definition was an integral part of the title of Crimean khans since the early 16th century, and can be found in messages which reached us in ambassadorial books on relations with Crimea [Collection of Russian Historical Society, 1895, pp. 12, 21, 27, 29, 70, 75–77, 80]; but the Horde of Ahmat's children was defined as '*the Great Horde*' [Collection of Russian Historical Society, 1884, pp. 119, 157, 170, 214, 255]). Moreover the adjective '*big*' was not frequently used in the meaning of '*large*'. The word '*great*' was usually used for this purpose. One of the most wide-spread meanings of the lexical element '*big*' was an adjective in a comparative degree meaning 'having a higher position', 'major' (it is denoted by the modern Russian word '*bolshiy*', in which the first syllable should be stressed) [Sreznevsky, 1893, columns 147–148; Dictionary, 1988, pp. 289–290, 384–386]. Most likely the name 'Great Horde' appeared in Russia when the collapse of the Horde became obvious, and they needed to detach the 'main parts' of the state from less influential ones [Gorsky, 2014, pp. 123–125]. In this connection, it is noticeable that this term and mentioning of Hordes in plural appear in the chronicles simultaneously [Spiritual, 1950, no. 69–70, pp. 226, 228, 231, 236, 238, 240, 244, 246, 249; Gorsky, 2000, pp. 165–167]. Both reflected the striving for accommodating themselves to a new political situation in the steppes of Eastern Europe.

In the summer of 1472, Ahmad, khan of the Great Horde, organized a military campaign against Moscow. The troops of Ivan III met their enemies at the Oka River near the city of Aleksin. Ahmad did not dare to cross the river, and went back to the steppe [The Complete Collection of Russian Chronicles, 25, 1949, pp. 297–298; Alekseev, 2007, pp. 146–181]. Most likely the reason for such behavior was that the Moscow prince had managed to put down rebellions in Novgorod in 1471: Ahmad had supported the claims of Polish king and great Lithuanian prince Kazimir IV to rule the Novgorod Republic. So in this connection, the campaign in Novgorod, initiated by Ivan III, was consid-

ered as going against his overlord's will [Gorsky, 2000, pp. 156–158].

Repulsing the campaign initiated by the tsar had serious consequences: the majority of people in Moscow decided to end relations of dependence with the Great Horde. First of all, this was expressed by refusing to pay tribute: by 1480, they had not paid it for nine years [The Complete Collection of Russian Chronicles, 26, 1959, p. 265]. Moreover, Ivan III started negotiations with the Crimean khan Mengli Giray, who was an enemy of Ahmat. Initially their relations were like ones between friends and partners. Paying any traditional taxes was absolutely unnecessary in this case. In 1480, they concluded the Moscow-Crimean treaty where both contracting parties named their 'common enemies'—Ahmat and Kazimir [Collection of Russian Historical Community, 1884, pp. 1–25].

As for the Great Horde, Ivan III exchanged ambassadors with it, trying to avoid conflict. However, in 1476 when they had not paid taxes for more than five years, an ambassador of Ahmat brought a demand addressed to the great prince, according to which he personally had to go to the Horde to see him [The Complete Collection of Russian Chronicles, 25, 1949, pp. 308–309]. Ivan III disobeyed, and so a conflict became inevitable. Ahmat organized a new campaign against Moscow only in 1480, after concluding an alliance with Kazimir IV. The opposing troops spent two on the opposite banks of the Ugra River, the left tributary of the Oka River, which was the border between Moscow and Lithuanian states. The Great Prince was surrounded by people who were ready to acknowledge him as the 'tsar'. However, the prevailing view of supporters was against making this step. In November, as the weather turned cold, Ahmat went back home, and the attempt to restore control over the Grand Principality of Moscow failed [Nazarov, 1983, Alekseev, 1989; Alekseev, 2007, pp. 216–266]. The death of Ahmat at the hands of Siberian Tatars and Nogais in January 1481, put an end to these plans forever.

Consequently, the Muscovite state, which has been called Russia since the late 15th century, became independent of the khan of the Horde between the years 1472–1480. As a result, Ivan III was given the title of 'tsar' (this

was mentioned in a diplomatic document for the first time in 1474, after the first campaign of Ahmat was repulsed [Charters, 1949, no. 78, pp. 133, 135]). This was equivalent to the title of the rulers of the Horde and post-horde khanates, although there was no crowning ceremony held neither under Ivan III nor Vasily III.

In subsequent years, Ivan III maintained an alliance with the Crimean khanate, in order to counter the Great Horde, where the sons of Ahmat were struggling for leadership. Accomplishing his promises given to Mengli Giray, the Great Prince sent his troops, mainly consisting of Kasimov Tatars, to the Horde, but no serious military conflicts took place [Gorsky, 2000, p. 179].

Ivan III pursued a policy of interfering in dynastic struggles, in his relations with the Kazan Khanate in the 1480s. In 1487, Moscow troops conquered Kazan, Khan Alegam was taken prisoner and Muhammed Emin, son of Kazan khan-widow Nursultan, came to the Crimean throne. A year earlier, she had married Crimean khan Mengli Giray, an ally of Ivan III [Alekseev, 2007, pp. 280–293]. The Kazan Khanate was dependent on the Muscovite state for two decades. In particular, Kazan troops took part in a military campaign against the Great Horde in 1491. Ivan III also maintained diplomatic relations with the Nogai Horde and the Siberian Khanate [Collection of Russian Historical Community, 1884].

In the early 16th century, when Moscow was waging war against the Grand Duchy of Lithuania and the Livonian Order simultaneously, the relations with the Great Horde worsened. In 1501, Khan Sheikh Ahmed (Ahmat's son) acting as an ally of Lithuania, headed towards the Upper Don. Mengli Giray, being an ally of Moscow, also came there and Moscow troops moved there to assist him. However, no battle took place, Mengli Giray came back to Crimea and Sheikh Ahmed ravaged the cities of the North, which had been won back from Lithuania by Moscow troops. In this situation, in the winter of 1501–1502, Ivan III decided to acknowledge his dependence on Sheikh Ahmed, in a formal way as a diplomatic trick. An ambassador from Moscow brought collected tribute to the khan. The goal was to break the al-

liance between Lithuania and the Great Horde. Moscow urged Mengli Giray to organize a military campaign for a decisive blow against the Great Horde. In 1502, the Crimean khan finally set off and at the beginning of June, conquered the horde of Sheikh Ahmed in the area of tributaries of the Dnieper—Samara and Sula Rivers. The defeated and running away khan sent an ambassador to Moscow. He offered Ivan III—in exchange for dropping his alliance with Lithuania and neutrality towards Crimea, to be granted the throne of the Astrakhan Khanate. This appeal received no reply, and in the winter of 1503–1504, Sheikh Ahmed himself took refuge in the Grand Duchy of Lithuania [Gorsky, 2000, pp. 181–184].

The collapse of the Great Horde created a new configuration in relations between the young Russian state and post-Horde political institutions. The main one of these became the Crimean Khanate. By that time, relations between Moscow and Crimea had turned into a dialog between equal partners. At the same time, there were elements related to acknowledgment of a higher international status of the Crimean khan as a person having the tsar title, see: [Usmanov, 1979, pp. 186–205]. Conditions were created for the start of a struggle between Russia and the Crimean Khanate for influence on other states, formed from the ruins of the Horde.

Tatar-Russian relations (16–18th centuries)

Ilya Zaitsev

Russians and Tatars (more precisely—Slavs and Turks) living close to each other for centuries, could not help fixating in their own minds and creative activities, conflicting images of each other. Let us try to have a look at this images and as much as is possible, trace the dynamics of changes of these mutual perceptions. Historical chronicles, manuscripts, folklore and especially proverbs and saying can be useful here. These perhaps express better and more clearly reflect the mutual likes, claims and dislikes. It goes without saying that one should right from the start reject attempts to identify a stable and unchangeable image of a people, as seen by the representatives of the other nation. No doubt these views could vary significantly, depending on historical consequences—from the image of an enemy, to the image of a friend.

The issue concerning the *name* of Tatars, in the eschatological sense of their emergence, was especially topical in the context of the concepts of scribes in 13th century. In this connection, the text that opens the story about the battle at the Kalka River (Lavr. chronicle, p. 153) is especially illustrative. On the one hand, nobody understands who they are (that is, the Tatars). On the other hand, there was another point of view, according to which, the secrets

of their emergence was unveiled in books by wise men [Harkavy, 1998, p. 89]. This fragment shows clearly that in facing an unknown nation, a Russian chronicler tries to identify his place in the common world landscape first of all. For this, one needed to identify his ancestor, among sons of Noah. On this depended the definition of the place of these people in this picture: Ishmaelites (descendants of Ishmael, in the end, people fitting into the picture of Bible history) or "impure people".

Only 15 years had passed, and Russia was facing a new nation closeby. An episode on an attack on Vladimir by troops of Batu had appeared in the very Laurentian Chronicle. In describing these events, the chronicler emphasizes that the sons of the Vladimir prince refused to participate in the fighting, and the author does not criticize this. The analysis of this event, and its interpretation in later manuscripts can lead us to the conclusion that in the second half of the 13th century, an invasion was considered to be a punishment of God against human sins, and according to this perception, scribes modeled the behaviour of their characters. Refusing to resist is interpreted not as cowardice, but as true Christian humility before the Lord's punishment. Tatars in 13–14th centuries were a real "scourge sent by God" in

the collective consciousness of the Russians. Works by Serapion Vladimirsky can serve as examples. He was an Orthodox cleric, whose manuscripts reflected the reaction of his contemporaries to this event. Apparently, the point of view, according to which the Tatars were considered to be the means of God's punishment, dominated in the common evaluations, and eliminated the perception of Tatars as a nation, at least the feelings of hostility towards them appeared much later. As it seems to me, especially important here was that Russians were facing pagans. Probably, before the 14th century, representatives of Russian priesthood hoped that their missions among Tatars would be a great success. It should be emphasized that these hopes were not groundless at all. It is sufficient to recall the Sarai bishopric, patronage of the church, decreed for Metropolitans, the acceptance of Orthodox Christianity by Tatars, and the formation of a new service class of Tatars, etc. After the Horde adopted the Islamic faith, this confrontation increased (although the baptism of immigrants from the Horde continued). Now the hostility spread onto the religious sphere, and reconciling Christianity and Islam at that time, seemed an impossible utopia, after which, the settlement of the conflict seemed to be very far off. In the 15–16th centuries, refusing to battle against Tatars was considered to be a reproachful act. At the same time, in connection with this new perception, the behavior of historical personalities, who had figured in manuscripts, was reviewed and corrected [Rudakov, 1998, p. 193]¹.

The changes in the images of Tatars in the Russian mass consciousness in the 15–16th centuries was traced in detail by A. Amelkin. According to his research, the image of an enemy is seen in the "Story About Mercury Smolensky"—which is different from the one

presented in chronicles written in the 13–14th centuries. This difference was due in part to the influence of folklore traditions, in part due to changes in ideas about the enemy, towards the strengthening of the negative characteristics. Tatars were considered as being a cultural-historical society of another kind, in opposition to Russia. In the Russian social consciousness of the late 15th century—the first half of 16th century, "Tatars, being used as the instruments of punishment, were compared to an irrational, destructive, faceless element, lacking any culture. Their cunning and desire to change the way of life of indigenous peoples that they conquered was emphasized" [Amelkin, 1992, pp. 7–8].

At the same time, the traces of Russian-Tatar synthesis, the duality of perception of the Tatars and their assessment can be found in records dating back to 16–17th centuries, after which this line has been expressed in different ways up to our days. For example, the author of the "History of Kazan", rather enigmatic work of the second half of the 16th century, who generally shares the traditional Orthodox views of his time, portrays the inhabitants of Kazan in contrasting ways. Sometimes he sympathizes with them, and sometimes he calls them the antagonists of Russia [Solodkin, 2001, p. 199]² According to Ya. Solodkin, the author of this composition "who had lived in Kazan for 20 years, ... could feel sympathy for its residents. He saw the real state of affairs from within, and that made him portray these people in a different way than it was dictated by tradition" [Solodkin, 2001, p. 206]. According to the research by A. Amelkin, even Batu Khan "had features of a wise and formidable tsar" in Russian literature of the first half of the 16th century [Amelkin, 1992, p. 9].

According to G. Sabirzyanov, the roots of animosity, defining the attitude of the current feudal-noble establishment of Russia towards the Kazan Tatars, can be found in the three decades after 1521, when the khans of the Crimean dynasty were dominating Kazan [Sabirzyanov, 1993, p. 21]. However, in 16th century, in relations between the two nations, there were

¹ By the way, similar attitude can also be found in the Little Russian dmy of the 16–17th centuries. The Turkis and Tatars, who were regarded as identical in the Ukrainian folklore, were both adversaries of Ukraine and acted in concert. The Tatars, according to the dmy, were God's punishment for the disrespect of parents, the clan, townspeople, and the gromada-community and for the non-observance of fasts and rituals (see: [Erofeev, 1908, pp. 77–78]).

² See also: [Keenan, 1967a].

no national-racial conflicts, but only political and religious ones¹.

Examining biographies of Peter and John Kazansky, A. Amelkin comes to the following conclusion: "The ethnic side of the issue does not matter for the hagiographer. A Russian prisoner from Nizhni Novgorod or an inhabitant of Kazan turning to Orthodox Christianity and serving the Great Prince are absolutely equal to him" [Amelkin, 1992, p. 10]. Not ethnic, but religious and political aspects dominated the relations between Russians and Tatars in the late 15th century—the first half of 16th century. The religious and political aspects were much more important.

Russian proverbs of those times would be an excellent source for us, but these started to be recorded only since the 17th century². In one of the earliest records, we find a huge number of proverbs and sayings, one way or another connected with the Tatar theme. This is a testimony of their importance and significance in the Russian consciousness. One can divide these into several groups. No doubt, ones having negative connotations definitely prevail. "There are many unclear Crimean songs" (p. 74), "A messenger from Crimea is like a cockroach appearing from smoke" (p. 92), "Living in Crimea is like living in smoke" (p. 101), "The time for the Tatars to head to Russia hasn't come yet" (p. 152), "We won't give in to the Tatars" (p. 154), "Azov does not mean a "hundred eyes" and Crimea does not mean "curved", "Azov was glorious, Smolensk was terrible, and Vilnius was wonderful" (p. 76). A great number of them reflect the differences between the ways of life typical for both great nations, from the Russian point of view: "The Tatars are endless carnivores" (p. 143—that means there are no Lents in Islam, but there is *sawm* from the point of view of Orthodox). There are many rather neutral proverbs, where the Crimean and Tatar themes are just an excuse, an instru-

ment to illustrate the themes which are common to all mankind. "As great at home, as the khan in Crimea" (p. 82), "Women's minds are like Tatar bags" (p. 103), "Whatever happens to a bow-string, a Tatar is always safe and sound" (p. 143, that is, the role of archers in Tatar troops is emphasized here). On the other hand, there are benevolent and well-disposed proverbs, showing the relativity of ethnic, religious and state values, and the absoluteness of morality: "I would live even in the Horde, the main thing is to live well" (p. 104), 'Even in the Horde, as long as things are well' (p. 148), 'Devil is taken away by the damned Turks' (p. 152), 'The Turkish tsar is an enemy of Russia' (p. 154), 'The Turkish took off their trousers and the Russians whipped them' (p. 167), 'Bear, eat up the Tatar, not a Russian' (p. 160), 'Klim is greasing a cart, he is going to Crimea to buy turnips' (p. 120).

This duality of perception of the Tatars, and dependence of the image and esteem on the period of time when the proverb was spreading, can also be seen in sayings which still exist in the Russian language. On the one hand, there is this Russian proverb—'An uninvited guest is worse than a Tatar', which is still used, although in the 17th century they used the variant 'An uninvited guest is better than an invited one' (p. 127), where, as we can see, there is no ethnic aspect that all. On the other hand, we can see sympathy and friendly attitude towards the Tatars, demonstrated by the authors of some literature and publicist works written in the Middle Ages.

The religious background of these interrelations can be clearly seen in folklore. Apparently, comparing Tatars to pigs was an old and traditional identification. No doubt, this comparison is related to the prohibition of eating pork in Islam. It can be found literally everywhere, beginning with Russian children's teasers and ending with sustainable ideas applied for the purposes of state ideology. Most likely this idea is typical of the attitudes of Russian towards Muslims in general (towards Tatars of different kinds within the empire, and abroad—to the Turks). A. Pushkin wrote in his 'Journey to Erzerum' the following words describing how he had met Cossacks carrying their com-

¹ In the opinion of I. Erofeev, in the first half of the 15th century, there were no signs yet of animosity between the Russians and the Tatars, though everything changed after 1475 (see: [Erofeev, 1908, p. 85]).

² See: [Ancient Collections of Russian Proverbs, Sayings, Riddles, etc., 1899]. Subsequent citations in brackets will contain the page numbers of this edition.

rade, injured in a battle at Sagan-Lu near Kars: 'Are there many Turks?', Semichev asked. 'It smells like pigs, sir', answered one of them¹. By the way, G. Sabirzyanov called a phrase from 'Men and Women' by B. Mozhaev 'the echos of false historiography, pseudo-science' in vain: 'You, bald Tatar, get out of my way' [Sabirzyanov, 1993, p. 36].

I am afraid it has nothing in common with science. Most likely this is an echo of ideas of different nations about each other, however biased they may be. The epithet '*bald*' is very transparent, from the standpoint of its origins. Apparently it comes from the Muslim custom of shaving the scalp. This epithet is commonly found, and can be seen even in Tatar texts written in the late 19th—early 20th centuries as a nickname for Tatars among the Russians (satire by G. Tuqay 'Confessor revived' published for the first time in 'Yalt-yult' magazine in 1912, no. 43 [Tuqay, 1975, p. 112]).

There is one more comparison: Tatar—prince. It can be found in the works by V. Lenin (in the article called 'Letter on the national issue'). However, by the way, aside from this oddity, this idea was also reflected in Russian literature. Ivan Severyanov hides himself from the police behind Tatars, after a fight in 'The Enchanted Wanderer' by N. Leskov: 'Save me, princes! You saw everything, the fight was fair...' [Leskov, 1957, p. 427]. I refer once again to all the same satire by G. Tuqay. He parodies a dialog between a gendarme and a Muslim. 'Prince, go and pray, the mullah is crying.—I can't, I must sell my goods.—Well move along, bald one' [Tuqay, 1975, p. 112]. And here is one more excerpt from a conversation between an old second-hand bookseller and a Tatar dealer of old-clothes (the situation takes place in pre-revolutionary Moscow): 'Prince, he says, will you give me back the money?' [Ivanov, 1982, p. 73].

¹ The fact that this attitude is related to foodstuff prohibitions (most evident and eye-catching in daily communication) is also clearly seen in the attitude of Russians towards Jews. See, for example, Alexander Pushkin's writings (The Story of the Village of Goryukhino): '... the madmen sneered at the Jewish coachman and exclaimed mockingly: 'Jew, Jew, eat a piggy's ear!...' [Pushkin, 1969, p. 65].

Where does this nickname come from? I think that a stable real or mystical connection between a significant part of Russian nobility and the Jochid aristocracy seems to be a quite a logical explanation.

N. Leskov allows us to gradually shift to the opposite pole of evaluations. In that same work, the main character has this to say about the Tatars: 'It is customary for them to call all Russian men *Ivan*, women—*Natasha* and boys—*Kolka*. It was the same thing with my wives, although they were Tatars, they were considered Russians, and thus called *Natashas* and the boys were called *Kolkas*. Nevertheless, it goes without saying, that this is very superficial, because they had received no church sacraments and I did not consider them as my children.

What do you mean? Why didn't you consider them your children?

Because they are not baptized and not been anointed with myrrh [Leskov, 1957, p. 433].

This paragraph shows very well that in the common consciousness of a Russian man of the first half of 19th century, ethnic affiliations are defined by religious affiliations, and in the end, even influence family affiliations. As for the Tatars described by Leskov, ethnic affiliations are defined not by religion, but by belonging to a certain clan or family—the wife of a Russian man must be Russian as well.

The self-identification of Ivan Severyanovich is very interesting in this sense. 'If people make the sign of the cross over themselves and drink vodka, they are Russians' [Ibid, p. 447] (some combination of ethnic attributes—religious-ceremonial and alimentary ones). Religion dominates: to have no idea what is the religion of a man 'living in the steppe is dangerous'. A Chuvash met by the main character had a more concentrated view on ethnic-religious affiliations. According to him, 'A Tatar has no God, he eats horseflesh. I have a God [...] the Sun is God, and the moon is God, and the stars are God... everything is God'. Besides God, there is Jesus Christ and the Blessed Virgin Mary and Saint Nicholas [Ibid, p. 446]. It is interesting that, according to results of sociological surveys, ethnic identity of the Volga Tatars is first of actualized through their mother tongue, secondly, through the knowl-

edge of culture and history, and belonging to it. Religious aspects do not prevail in their self-identification [Khabenskaya, 2002, p. 196].

Now let us have a closer look at the image of Russians in Tatar folklore and literature. Of course, right away I should note that this topic cannot be fully exhausted in this section. Therefore, my observations should be regarded as just the first approach to this topic.

It is interesting to mention that Tatars also had ethnic definitions based on the outward anthropological signs, as did the Russians. For example, the Crimean Tatars called all Russians 'red-haired Ivan' [Olesnitsky, 1910, p. 60]. By the way, this can be found very frequently in Crimean papers concerning Slavic slaves (for example, in one of *protocols*). Using a specific name concerning representatives of a social or ethnic group was also very widespread in different languages of the world. For example, the Russians used 'Fritz' and 'Hans' for Germans, foreigners use 'Ivan' for Russians, or Turkish 'Mehmetchik' as a tender nickname for a soldier. Moscow horse traders, standing in the Horse Market in the Serpukhovskaya Zastava District in the 19th century, who were mostly gypsies, also had many Tatar words in their vocabulary, and used to be under the cultural influence of Tatars, also used this principle: 'There were times when they called every man "Frolka", for some reason' [Bogatyrev, 1989, p. 127]¹.

Let us have a closer look at international stereotypes reflected in Crimean medieval historiography. 'History of Khan Islam-Giray III' by Hadji Mehmed, the Crimean author, official of the khan's chancellery, historiographer of the khan known as Senai (that was his pen-name) provides great material on this subject. The author finished writing this work, composed at the request of Sefer Gazi-agi, vizier of the khan in August 1651 (apparently it was started sometime after 1648) [Hadzy, 1971]. Senai uses the term 'dog' concerning the unfaithful (he uses words '*seg*', '*segler*' in their plural form, having a Persian origin, instead of

'*eet*' or '*kyopek*', which are common in the Turkish language. He rhymes them with 'begler', that is, princes, which he calls the Polish gentry [Ibid. p. 16], he also calls enemies '*cuffar*', that is, simply the unfaithful ones, or '*melain*', that is, the damned). In general, in relation to other peoples, the chroniclers did not hesitate, rhyming ethnonyms with derogatory epithets. Thus, they called Cossacks 'stubborn, obstinate' (*Cossack—ack*), Russians—'bringing misfortune' (*Rus—menkhus*), Kalmyks—'evil doers' (*Kalmyk—bed makhlyuk*) [Ibid. p. 62].

Let us have a look at the proverbs. There are some proverbs devoted to Russians, among the ones used by the Crimean Turks (Tatars) in Dobruja (Romania): **Urustan dost bolmaz domuzdan post** (tur. Rustan dost olmaz domuzdan post), that is, 'One cannot make friends with a Russian as you cannot make a fur coat from a pig'; **Urusman dos bolsañ baltañ katiñda bolsun** (tur. Rusla dost olursan baltan yanında olsun), that is, 'Making friends with a Russian is like walking along the cutting-edge of an axe' [Ülküsal, 1970, p. 93].

Very illustrative are such proverbs of the Crimean Tatars as '**Kazakny zatrafısy bitmes**'. That is, 'Russian will not end tomorrow'.

On the other hand, one can see a critical attitude to their own people: **Tataryng akla sonunda kelur** ('Tatar brain turns on late (at the end)'). There is an almost completely exact equivalent in the Russian language: 'Russians are truly wise, in hindsight'.

So we can see the combination of two points of view: Russians are bad, but some Tatars may be even worse. The last Crimean khan Shahin Giray remained in the memories of Tatars as a bad character. There is one more proverb of the Crimean Tatars that has been preserved. '**Kamchy boyunda kazakka khizmet iderim, Shagin Girey khanga khismet itmem**' that is, 'I'd rather serve a short Russian with a whip, than Khan Shahin Giray' [Proverbs, 1915, p. 55 (No. 484)].

We can see that in traditional insults against Russian, the Tatars use the same elements. 'Tatars and Russians live in harmony now, and the Russians no longer use any offensive language towards the Tatars, as they had done about forty years ago. Nevertheless sometimes Russian

¹ Probably, it is somehow related to the fact that Florus and Laurus were considered to be the patrons of livestock, including horses, in Russia.

coachmen scold a Tatar by calling him a *dog*, if he fails to make way for his wagon. However, the Tatar, in such circumstances, murmurs under his nose quietly '*dongus*'¹ and thinks to himself: 'You, *alcafer* (infidel)'² [Fuchs, 1991, pp. 143–144].

Thus, the dynamics of changes in mutual perceptions of the Russians and Tatars, concerning each other, are reflected in the religious continuity and the development of religious policies in Eurasian empires—the Golden Horde and its successors. Shamanism had spread among Mongolians under Chinggis Khan, and for a long time after his death, while some Mongolian tribes (Naimans and the Keraites) confessed Nestorianism (Nestorian Christianity). Meanwhile, there were many Muslims serving Mongolians during the early period of Mongolian expansion to the West. Chinggis Khan himself, and the first generations of his descendants, including the Jochids were rather tolerant, when it came to faith: political loyalty to the governing dynasty was much more important than a common religion. The conquests were not followed by religious repressions: political expediency dictated the necessity of equal treatment of representatives of all religions within the empire. At the beginning, the devotion to shamanism was typical for representatives of the Chinggisids, being a specific necessary attribute of belonging to the dynasty. At that time, the religious affiliation of a governing Chinggisid was rather his personal choice, rather than a public confession. A Muslim khan could be replaced by a pagan khan. A significant part of population of Jochi region continued remaining non-Islamized, traditional Mongolian norms and customs prevailed in state structure, administration and clerical work. Only under Uzbek, did Islam become not a matter of choice, but the religion of the dynasty, and religion of the state. Meanwhile, the acceptance of Islam, at the state level, was followed by numerous repressions against followers of other faiths and church organisations. Already back in 1257, a population census was conducted in Russia, initiated by Khan Mengü [The Complete Collection of Rus-

sian Chronicles, 1, 1997, columns 474–475]. Its main purpose was to organize the collection of taxes. At the same time, churches were exempt from paying taxes. This policy continued until the 14–15th centuries.

The Muscovite state, which turned out to be the successor of the Empire of Chinggisids, did not demonstrate an essentially new attitude towards representatives of religious minorities, that is, primarily towards Muslims as the largest group among them. Researchers noticed long ago that, although the Russian state proclaimed itself the embodiment of an Orthodox state on Earth, the protector and guardian of Orthodoxy as the true Christianity since the late 15th century, and especially in the 16th and 17th centuries, neither the state itself, nor its church, made any attempts to convert Muslims to Christianity and did not carry out systematic missionary activities³. Historians gave various explanations for this: as the consequence of an absence of a source on this theme, at least before the 18th century (Joseph Glazik)⁴, the specificity of formation of the Muscovite state and the Russian state, as a specific kind of a pre-modern empire, which did not fit into the common rules of colonial empires (Andreas Cappelletti), the acceptance of Muslims as foreigners, and not as followers of other non-Orthodox beliefs (Heinz-G. Nolte), specific features of the Byzantine-Orthodox attitude of showing understanding towards followers of other non-Orthodox beliefs, which is a specific model of Orthodox religious-cul-

³ See, for example, the latest published literature: [Dmitriev, 2007, pp. 121–134]; [Dmitriev, 2012, pp. 114–125] (indicating also reference literature on the subject). The last two years in Moscow under the leadership of Prof. M. Dmitriev, a continuous seminar is held titled 'Islam, Eastern Christianity and Judaism in the European East in the Middle Ages and the new time: a special model of religious-cultural pluralism?'.
⁴ J. Glazik divides the entire history of Orthodox missionary work in four large epochs: 'spontaneous' missionary activities (11–15th centuries) in the Russian North and among the Tatars; church-led missionary work in Siberia and the Asian part of Russia (from the 16th century); the period of state-controlled missions with a tendency towards Russification (from the epoch of Peter the Great); return to the church missionary practice in Asian Russia (from the reign of Catherine II). See [Die Russisch-Orthodoxe, 1954, p. 1–3].

¹ That is a 'pig'.

² That is 'al-kafir' (a disbeliever).

tural pluralism (M. Dmitriev)¹. It seems to me that it would be more reasonable to talk about the imperial Eurasian continuity of religious-linguistic integration, which was the most remarkable during the Horde and Russian periods of Eurasian history.

In the late 13th century—14th century followers of other non-Christian beliefs (Jews, representatives of other branches of Christianity) started serve Russian princes in family, trade and other spheres. Their presence in Russia, in various positions, often meant converting to Orthodoxy. In most cases, this occurred when a person married or entered into service. In 1302, the Prince of Belozersk Fedor Mikhailovich married the daughter of prince Ilbasmysh, in 1317, Yuri Danilovich married Konchaka, sister of Khan Uzbek, christened as Agafia [The Complete Collection of Russian Chronicles, 1, 1997, chapter 528; The Complete Collection of Russian Chronicles, 24, 2000, p. 108]. The first case when a Tatar came to serve a Moscow prince was registered in 1318, when Telebuga left the Horde for Moscow, in order to serve Yuri Danilovich [Kuzmin, 2002, p. 10]. Most likely most of these newly baptized were Muslims at the moment they came to serve Moscow. Naturally, the converting to Orthodoxy necessitated the creation of special texts, regulating the procedure of Christening. Indeed, since 14th century the so called Rules of Converting to Orthodoxy according to which this going over took place started spreading. 'The rules of accepting for those coming from Judaism', 'the rules of those coming from the heretics', 'the rules of those coming from the Saracens'. They were based on Greek texts, which were translated

into Slavic languages, starting in the 13th century. The canons of accepting followers of other non-Orthodox beliefs into Christianity firstly appeared in Serbia at the turn of 12–13th centuries in the Serbian edition of the 'Kormchaya kniga' ('Book of the Helmsman'), which came to Russia in 1262. The structure of the rules of accepting Muslims represented the pronouncement of a series of curses of various elements of the Islam dogma (both real and imaginary ones), and only the mentioning at the beginning of the text that this action takes place in the church, at the place where baptism is performed, in front of the baptismal font, means that after the curses were pronounced, the Christening followed. These rules are known from the Greek manuscripts written in the 12th century, and in the Slavic tradition, they appeared in the same Serbian version of the 'Kormchaya kniga' ('Book of the Helmsman'). When the initial Russian version was compiled, on the basis of Serbian and ancient Slavic versions in the late 13th century, this rules were not included there. Nevertheless in 14th century when new canonical compilations were composed, the rules of accepting Muslims becomes a part of the 'Kormchaya kniga' and then comes to the Prayerbook (its most ancient copy dates back to the late 14th century). It should be emphasized that according to M. Korogodina, the editor of the Russian Book of Needs, they did not just take, as its basis for ranks, the early Serbian translation from the Greek, but the Greek text was also used, to clarify the obscure areas [Korogodina, 2013, p. 100].

The most important thing is, that in some cases, the Russian text of the rules of the Book of Needs turned out to be more detailed than the original. Thus, the Serbian version contains the following phrase: 'Damn Alim, Muhammed's son-in-law and Apoupikert', that is, Ali, the real son-in-law of the prophet, the husband of his daughter Fatima and Abu Bakr as-Siddik (the first righteous caliph and Muhammad's father-in-law). In the Russian version of the Book of Needs, this curse sounds in the following way: 'Damn Alim, Mohammed's son-in-law, and Hasan and Housen and his sons and Apoupiker'. The name of Abu Bakr was distorted beyond recognition in the Russian version of the Ko-

¹ This specific feature of Orthodoxy (the absence of external public activities including, consequently, missionary work), contrasting with Western Christianity, was pointed out already by P. Chaadayev and then after him by V. Solovyov. For P. Chaadayev, Eastern Christianity preserved the purity and asceticism of Byzantium but lost the political freedom; it was subordinate to political power and thus did not become the yeast of social life. In Preservation of the canonic truth was the prime task of the Orthodox East; organization of church activities under the leadership of the single and definitely independent spiritual authority was the prime task of the Catholic West' [Solovyov, 1883]. See: [Gershenzon, 1908, pp. 166–169].

rmchaya: The name 'Aputiker', or 'Apopukriy Sadokiyskiy' present in the Greek and Serbian originals, was not mentioned at all. There was no enumeration of Muhammed's sons in the Serbian version or in the Russian version, on which it was based. Nevertheless this can be found on the Greek lists [Ibid, 101].

The Book of Needs also contains other individual readings, which were not typical for

the Serbian and early Russian versions of Kormchaya. This means that, for some reason, the Russian editor of the Rules in the Book of Needs had decided to expand the Rules, whose Greek original had been firstly addressed to the Sunnis, at the expense of the Shiites. It is difficult to say why this happened in Russia, but it is evident that the initial text was adapted to Russian conditions and circumstances.

§ 3. Tatar Yurts and the Ottoman Empire

Ilya Zaitsev

The emergence of diplomatic relations between the Ottoman Empire and the Golden Horde dates back to the 14th century. However, the earliest example of correspondence between the Golden Horde and the Ottoman Empire known to us is the original of a letter from Khan Ulugh Muhammad addressed to Sultan Murad II dated March 14, 14 [TSMA, no.10202]. The document was written in the Chagatai language. The letter was found by A.N. Kurat in the archive of Topkapi Palace and published by him in 1937¹. Ya. Pelenski regarded this document as a Kazan text. He justly commented that there may be objections regarding the inclusion of this letter among Kazan documents, as the message was written when Ulugh Muhammad was

still on the throne of the Golden Horde, i.e., before he had become the first ruler of the new Kazan Khanate. However, the fact that "the Kazan Khanate was founded by dissident elements of the Golden Horde and Ulugh Muhammad became the first khan of the new Tatar state allows us to consider this patent at least a borderline case" [Pelenski, 1974, p. 14]².

The reverse side of the sheet of paper contained a text which seemingly had no relation to the letter of Ulugh Muhammad. This is a copy of the *Fateh-nama*³ of Murad II about the conquest of the fortress Güvercinlik⁴, written

¹ See [Kurat, 1937]. This edition, by the publisher's own acknowledgment, represented work 'accomplished within a brief, almost three-week-long period' and contained inaccuracies. For amendments to this edition with specification of textual discrepancies and conjectures, see: [Halasi Kun, 1942, pp. 144–145]. More reliable editions are: [Kurat, 1940, pp. 6–36; Halasi Kun, 1949, pp. 609–626; Sultanov, 1975, pp. 53–61]. See the appendix, corrections to the text and translation, as well as a description of the document's outer appearance in the following work: [Sultanov, 1978, pp. 237–239]. For conjectures to the edition by A. Kurat, see: [Malov, 1953, p. 188]. For the Russian translation of the letter's 1940 edition by A. Kurat, see: [The letter, 1996, pp. 28–34]. A near-full copy of the 1940 edition (though without the reproduction of the text and commentaries) was undertaken in 1996 by A. Melek Özyetgin, though, if compared to the edition of A. Kurat, this publication was of a significantly lesser value [Özyetgin Melek, 1996]. For a description of the appearance and specific features of the document, see also: [Zajaczkowski, 1948, pp. 214–215]. See also: [Zaitsev, 2004a, pp. 49–50].

² J. Pelenski's use of the term 'yarliq' in relation to Ulugh (Ulugh) Muhammad's letter seems to be incorrect and results from the inconsistency in the classifications of Golden Horde documents and those from the post-Horde time by A. Kurat. 'When speaking about yarliqs, they imply here mandative letters (nameler) of the Golden Horde, Crimean and Kazan Khans addressed to rulers of foreign lands; the name [yarliq] is also applied to letters patent (yazilar) issued by Khans to their subjects or any person at all' [Kurat, 1940, p. 3; Usmanov, 1979]. On the other hand, A. Kurat was absolutely correct in calling the Khans' papers, which were addressed, for instance, to Turkish Sultans, as letters or messages (bitikler) [Kurat, 1940, p. 4]. In subsequent uses of the terms 'yarliq', 'message', 'letter', etc. I fully follow the definitions given by M. Usmanov, except in cases of quoting other authors.

³ About the Ottoman fateh-name, see: [Lewis, 1962, pp. 192–196].

⁴ The same name of the fortress is also mentioned in the Ottoman takvim (calendar-chronicle), of the so-called list A, see: [Turan, 1984, p. 24], and also in one of the Ottoman documents of 1487, see: [Hazai, 2001, p. 180] (Ve bir dahi Gügercin-lik karşısında Varadin adlı hisârlik vardır). A slightly different spelling (Gügercinlik) is given in the Ottoman defter of 1549/1550, see: [Ottoman, 1996, p. 13]. For the trans-

in the Arabic language in 831 AH and sent to Egypt to a Bek Akbuga [Kurat, 1940, p. 7]¹. 831 AH corresponds to a period between October 22, 1427, and October 10, 1428. The name "*Gügercinlik*" is the Turkish equivalent of the Serbian word "Golubac"; this is a fortress situated on the right bank of the Danube River east of Belgrade [Kołodziejczyk, 2000, p. 106]. Ottoman troops conquered the fortress two times. The first time was in November 1427, when Golubac was voluntarily yielded to the Turks by the city's commander, Jeremija, instead of being handed over to the Hungarians as provided for by the treaty between the Serbian despot and King Sigismund² [Hammer, 1827, p. 430; Jireček, 1918, pp. 163–164; Istorija, 1982, pp. 220–221; Ćorović, 1993, p. 300–301. According to Tursun Beg's *Tarih-i Ebülfeth*, the city was conquered for the second time by the troops of Mahmud-Pasha in July 1458 [The History, 1978, p. 81a]³. The final conquest of Golubac made the city a strategically important border fortress. Its citizens guarded Ottoman ships in the river and protected the city itself from the raids of Hungarians and Gayduks [Ziroevich, 1990]⁴. The fortress was besieged by Sigismund's troops from the beginning of 1428 until June of that year, fierce battles were being waged around the city, the sanjak-bey of Vidin, Sinan Bey, struck a destructive blow to Hungar-

ian troops in an unexpected sally [Öztuna, 1964, pp. 151–152]. It is obvious that the original of the *Fateh-nama* refers to the first conquest of Golubac by the Ottomans, which means it was written after November 1427, when the Ottomans conquered the city.

Ashraf Sayf-ad-Din Barsbay⁵ was ruling in Egypt at this time, from 1422 to 1438. Murad II exchanged embassies and letters with him. A letter to Murad Barsbai dated Zul-hidj 10, 831⁶ and the reply of the Mamluk sultan have been preserved [Feridun Bey, 1275/1858, s.195–198]. The fall of Güvercinlik and the defeat of the Hungarians in 1428 became a reason to continue Ottoman-Mamluk contacts. In 1430, an Ottoman messenger brought a message to Egypt about the Turks' conquest of Thessaloniki [Darrag, 1961, p. 389]⁷. Apparently, Akbuga, to whom the *Fateh-nama* of Murad II was sent, was the emir of Barsbay, the "inspector" of Upper Egypt, whose full name was Akbuga Jamali [Darrag, 1961, p. 46–47, 149]. He was called "the emir of true believers" and "the pillar of the state and faith" in the text of the *fateh-nama*. In any case, the text of the *fateh-nama* apparently ended up on the reverse side of Ulugh Muhammad's letter after it had been received in Istanbul, i.e., the original of the khan's message was reused in the sultan's chancellery. It is not quite clear what the reason was for creating the copy of the *fateh-nama* on the reverse side of the letter from Ulugh Muhammad. It is hard to imagine that it was done for lack of writing material. However, there seems to be no direct connection between these documents except the year of writing (1428)⁸.

formation of kef-i farsi into the sound 'v' in live pronunciation, see [Samoylovich, 2002, p. 34].

¹ See a truncated version of this document here: [Feridun Bey, 1275/1858, pp. 201–202]. The reply to Murad is also reproduced there.

² Sigismund (15 February 1368–9 December 1437) was the son of Charles IV, King of Hungary (1387–1437), King of Germany (1410–1437), King of Bohemia (1419–1436) and the Holy Roman Emperor (1433–1437). About him, see: [Biographisches, 1981, p. 122].

³ Huseyn refers the capture of Gügercinlik and the defeat of the Serbs and Hungarians at the fortress to 831–832 AH (1427/29). See: [Huseyn, 1961, pp. 169a, 171a]. The historian also dates the capture of Jan-owasa to the same year. Huseyn also mentions some other 'Gügercinlik', probably, in Iran [Ibid., p. 143a], though more likely it is a town in the sanjak of Hüdavendigâr (for example, see: [Das osmanische, 1984, 90 b. 6]).

⁴ In the 17th century, Golubac was an ordinary judicial-administrative district (*kasa*) in the sanjak of Semendire of the Budin Eyalet (see: [Stojkov, 1970, p. 227]).

⁵ It was his name that was mentioned in the heading of the *fateh-nama*. The heading of the letter calls it (the letter) *name-i humayun* (that is, the august message).

⁶ The date corresponds to 21 September 1428.

⁷ Thessaloniki was taken by Ottoman troops on 13 March 1430 (see: [Öztuna, 1964, p. 152]).

⁸ In principle, cases of using the reverse side of a document for writing another text are known in diplomatic practice. For example, the letter of the Azov *dizdar* to Moscow in 1521 was written on the reverse side of the charter of the Caffa Sanjakbeg Muhammad [Russian State Archive of Ancient Acts, reserve 89, inv. 1, item 1, p. 146]. Both texts there, however, were authentic. In our case, the reverse of the original was used for the copy of another document.

The text of the letter of Ulugh Muhammad was not fully preserved: some parts of it were damaged by moisture and are illegible. In his letter to Murad II, the khan deals with the history of Ottoman-Horde relations: "Our former brother Khans and your fathers, the sultans of the vilayet Rum and our elder brothers, sent one another ambassadors, exchanged gifts and greetings, traded through merchants and maintained good relations. Then, our brother khan Tokhtamysh Khan and your great grandfather Gazi Bayezid Bek, according to a good old custom, exchanged ambassadors, gifts, greetings and, living in friendship and harmony, were granted the Lord's mercy" [Kurat, 1940, pp. 8–9, 161–165; Sultanov, 1975, p. 54]. This document testifies "not only to the exchange of embassies between the Sarai khans and the Turkish sultans in the 1320–1330s; it also reports that such contacts took place under Sultan Bayezid and Khan Tokhtamysh on the eve of Timur's military campaigns in the Volga Region and Anatolia, i.e., when the Sarai khans and the Turkish sultans were interested in creating an anti-Timur alliance. It is also clear from the letter that the correspondence between the Turkish sultans and the Jochids has an earlier tradition" [Usmanov, 1988, p. 128].

Indeed, the words of Ulugh Muhammad on the ancient history of Ottoman-Horde relations most likely "are not simply of a declarative nature, but of a documentary one" [Ibid, p. 132]. The impetus for continuing official contacts was the common foreign policy interests of the two states in the late 14th century. M.G. Safargaliev supposed that a rapprochement between Tokhtamysh and Bayezid may have occurred in 1394, when Tokhtamysh was looking for allies against Timur. "There is no direct indication of this, but indirect data speak of the possibility of such an alliance" [Safargaliev, 1996, p. 418]. This assumption may be verified. In 1394, Egyptian Sultan az-Zahir Barquq hosted ambassadors from Tokhtamysh in Damascus: Bayezid and Burhan al-Din Ahmad, the ruler of Sivas. An account of this was preserved by Tagri Birdi, a Mamluk historiographer: "The ambassadors of Tokhtamysh Khan, the ruler of the Kypchak land, arrived there to offer an alliance against Timurlenk. The sultan accepted their offer. The

ambassadors of the Ottoman sultan Yildyrym Bayezid, the ruler of Asia Minor, came after him, reporting that he had sent 200,000 warriors to help az-Zahir, and he would be waiting for the sultan's reply that he might act accordingly..." [Taghri Birdi, 1954, p. 148; Zakyrov, 1966, pp. 95–96]¹. Barquq accepted these offers gratefully. It may have been in August 1394 in Damascus that the first official contacts between representatives of Tokhtamysh and Bayezid took place. There the representatives of four countries discussed the prospects of a war against Timur².

The defeat of Tokhtamysh in 1395 and the catastrophe of July 28, 1402 (the battle of Ankara), suspended the development of relations between the two states for a time. Both the Ottoman Empire and the Golden Horde were suffering serious internal shocks, as a result of which diplomatic contacts between the two countries lost their relevance. Nevertheless, according to the information of two of Timur's court chroniclers, Sharaf ad-Din Yazdi and Nizam ad-Din Shami, and of Byzantine historian Laonikos Chalkokondyles, a part of the Horde defeated by Timur at the Vorskla River fled to the lower reaches of the Dnieper, headed by Emir Aktav. Afterwards, they most likely went west and reached Ottoman possessions on the Danube in 1398. Aktav was forced to enter into negotiations with Bayezid, as a result of which the

¹ According to the works of Ibn al-Furat, al-Maqrizi and Ibn Shokhba al-Asadi, the Tokhtamysh embassy arrived in Damascus on 26 March 1394 (23 Jumada I 796 AH, on Thursday) or, per al-Asqalani and al-Ayni, on 20 Jumada I of the same year (that is, on 23 March). See: [Tiesenhausen, 1884, pp. 356 (363), 428 (442), 445 (448), 450 (453), 531]. The negotiations, therefore, had been held there before August 28th, when the Sultan moved to Aleppo.

² A special report by Ezher Muhammadi was dedicated to this event at the 13th Congress of the Turkish Historical Society. The scholar, however, called it a 'triple' alliance, as he did not count in the Sivas ruler. See: [Muhammedi, 1999, p. 136]. By the way, the following lines have remained in the divan of Kadi Burhaneddin (1345–1398): İki âlemde Hak'a sığınmışız // Tohtamış ne ola ya ahsah Temur (see: [Yücel, 1986, p. 5]). That is, 'in the two worlds (this and the other world), we set hopes upon the Truth (that is God), so what are Tokhtamysh or Aksak Timur (to us)'. These lines of the poet once aroused the interest of A. Krymsky (see [Galenko, 1998, p. 73]).

refugees settled on the southern Danube and in the Balkans. It is possibly this group that ransacked Varna in February 1399. However, soon Bayezid changed his mind and arranged a bloody massacre of Tatar chiefs, which could not help but provoke resistance from the Tatars. The survivors were settled around Edirne¹.

Unfortunately, we have no information regarding the development of Ottoman-Horde diplomatic relations in the early 15th century. In one of his early articles, T. Halasi Kun dated the embassy of Ulugh Muhammad to Murad in Adrianople to 1424 [Halasi Kun, 1942, p. 143]. Apparently, this is a mistake. In February 1424, after a trip to some cities in Asia Minor, Murad received ambassadors from neighboring powers in Ephesus [Zhukov, 1988, p. 73]. There is no information in sources known to me on an embassy to Murad from Ulugh Muhammad in 1424. The letter of Ulugh Muhammad looks like a first official message intended to restore diplomatic relations after a long interval. The reason for this gap can apparently be found in the renewal of the alliance between Tokhtamysh and Timur in the very beginning of the 15th century.

It is clear from the letter of Ulugh Muhammad that there were two routes by which embassies were exchanged between the two countries. One of them, the land route, went through the steppes along the Black Sea and through Wallachia. The second one went through the Black Sea: "We did not send a person to you because if we did, Aflak² would not let him pass. We knew that you had sent a man to us by sea. How did it happen that he did not arrive?" [Kurat, 1940, pp. 8–9, 161–166; Sultanov, 1975, p. 54; Sultanov, 1978, p. 239].

At that time, European diplomats were devising plans to create an anti-Ottoman coalition with the participation of Asian states. One of the main roles in this potential alliance was given to the khans of the Ulus of Jochi. The

idea of engaging the Qipchaq khans in the anti-Ottoman alliance already had a history by the early 15th century, because in the 1380–90s European states, in particular Byzantium³ and Venice, had made similar attempts [Silberschmidt, 1923].

In autumn 1411, before meeting of Sigismund (1387–1437) and the king of Poland, the Polish delegation in Rome asked Pope John XXII to declare a crusade against the Tatars. However, Sigismund's ambassadors convinced the Pope that organizing such a campaign would be a fatal mistake. Sigismund thought that the Tatars were the natural allies of European countries against the Ottoman Empire. Wladyslaw was willing to share Sigismund's views: in 1412, when the ambassadors of the Tatar khan arrived in Buda to offer the Polish king an alliance against all his enemies, he, like Sigismund, accepted this offer. At the beginning of 1412, Sigismund sent ambassadors (Nicholaus de Geretz) through Genoese Caffa to Khan Jalal al-Din (Tokhtamysh's son), who ruled between 1411 and 1412, inviting him to join the anti-Ottoman league with Byzantium, and received an affirmative response [Stromer von Reichenbach, 1972, s.591].

The list of gifts (*litterae donationis*) given by Sigismund in Nadsombat on February 6, 1428, contained a description of the mission of two Hungarian ambassadors (recipients of the grant) to Asian rulers with the aim of concluding an alliance against Turkey. This document is kept in the Hungarian National Archive (*Magyar Országos Levéltár, Diplomatikai Levéltár*: 100.445). The ambassadors' names were Miklos Szerecsen (Nicolaus Sarachenus) and Josza Török (Iosa Turcus). Nicolaus de Geretz (one of Sigismund's ambassadors) had been taken prisoner by the Turks and spent 12 years in captivity. After being set free in 1408, he entered Sigismund's service. Possibly, he was called Sarachenus because he had been a prisoner of the Muslims. When he returned to Hungary from captivity, a Turk, later christened as Jozsa Török, joined him on his way back. He also started serving Sigismund and carried out

¹ Such is the reconstruction of the events, suggested on the basis of reports by Chalkokondyles, Badr al-Din al-'Ayni and the chronicles of Shami and Yazdi. See: [Decei, 1950–1955, pp. 77–92]. See also: [Akmedova, Murtuzaliev, 2001, p. 155; Ditten, 1968, pp. 13–14].

² Iflak/Aflak—Wallachia.

³ Byzantium actively tried to find a counterbalance to the Turks in the figure of Tamerlane.

diplomatic commissions of the monarch with Nikolaus Sarachenus [Agoston, 1995, p. 273].

Among other things, the document stated: "...Jozsa Török was sent to Prince Mahomet, the lord of the Tatars of the Horde, as our messenger; the prince was also planning to attack the vile Turks, so he (i.e., the ambassador) brought us the reply we wanted to hear..." [Katona, 1790, pp. 503–507; Tardy, 1978, pp. 10–13]. According to L. Tardy, Mahomet, the ruler of the Tatars of the Horde who received the ambassadors of Sigismund is Ulugh Muhammad [Tardy, 1978, pp. 18–19]. However, L. Tardi based this on the dating of the embassies mentioned in the manuscript as having been in 1428 (i.e., the year the copy of manuscript itself was written). Not so long ago, D. Agoston, using the original archive document, showed that the copy mentioned the mission of Miklos Szerecsen not to Caramania in 1428¹, but the embassy of Sigismund to Kara-Uluk Ak-Koyun in 1419 [Agoston, 1995, p. 273–274].

Thus, Sigismund's embassy to "Mohammed, the Lord of the Horde Tatars" (i.e., Ulugh Muhammad) took place between 1419 and 1428. Stromer von Reichenbach placed the embassy of Török to Ulugh Muhammad in 1419–1423 [Stromer von Reichenbach, 1972, p. 596]. Since, according to the calculations of M.G. Safargaliev, Muhammad's accession to the throne took place in late 1421, the time during which the embassy took place may consequently be narrowed down. Jozsa Török visited Ulugh Muhammad and received a satisfactory response to Sigismund's offer before 1423. In this connection, it becomes clearer why the chancellery of the sultan linked the correspondence of Ulugh Muhammad to documents about military actions against Sigismund, and why there was a copy of a *fateh-nama* dated 831 (late 1427–1428) reporting the conquest of the Serbian fortress Golubac on the reverse side of the letter of the khan to Sultan Murad II.

According to the Tati treaty between Serbian Despot Stefan and Sigismund concluded in May 1426, Đurađ Branković (Stefan's nephew, Vuk I's son and Lazar's grandson on his mother's

side) was acknowledged as the heir to the Serbian throne. According to the treaty, Belgrade and Golubac were to be passed to Sigismund if Lazarević died without male heirs (which, considering the state of his health, was obvious). If Đurađ had no heirs, the Serbian lands would also pass to Sigismund. In essence, signing the treaty meant the Serbians were accepting a Hungarian diktat in return for assistance in defending themselves against the Turks. Serbia, which was considered a vassal of the sultan, entered the anti-Ottoman coalition².

On June 19, 1427, Despot Stefan Lazarević died after hawking. Đurađ Branković was anointed to rule, as expected. He ascended the throne without notifying Sultan Murad II. Branković went to Golubac, and it was the voevode of Golubac, Jeremija, who put his hand and weapons on the anointed ruler as a token of acknowledgment of Đurađ's rights.

Meanwhile, the Ottomans, displeased with their vassal getting out of hand, sent a powerful expeditionary corps against Serbia; on September 3 the Ottoman army, headed by Isa-Beg, besieged Novo Brdo. Murad himself set out to help Isa's corps. Soon Krusevac was captured. In this critical situation, Branković started fulfilling the promises of the Tati treaty, relying on Hungarian assistance against the Turks. It is likely that in September or even late October 1427, Belgrade was handed over to Sigismund. Now it was Golubac's turn. However, Jeremija, the voevode of the fortress, interfered and demanded 12,000 ducats to hand the fortress over to the Hungarians. Most likely, this was the amount he had paid to the despot for the right to rule the city³. Jeremija presented a document as proof, but the king questioned the authenticity of the seal and the amount of the payment. Caught in the crossfire between the Turks and King Sigismund and seeing that

² For more details about the treaty, see: [Prleander, 1992].

³ Turkish historian I. Uzunçarşılı explained the origin of these twelve thousand ducats in a similar way (as a debt of the town vicegerent or a kind of a redemption sum). Sigismund allegedly had even paid that money, but the fortress passed to the Ottomans (see: [Uzunçarşılı, 1988, p. 407]. Compare the unfortunate misprint—831 AH—1425 (!) [Ibid]).

¹ As N. Iorga supposed [Iorga, 1909, p. 406], and after him, L. Tardi, as well.

it was pointless to negotiate with Sigismund, Jeremija made a similar proposition to the sultan and obtained his consent. As soon as winter came, Jeremija surrendered Golubac to the Turks without a fight. Apparently, the required sum of money had been paid. Until May 1428, there were almost no changes in the situation around the fortress: Đurađ maintained peace with the sultans and paid thekharaj without fail. Nevertheless, the situation became more complicated when Sigismund interfered; he led 1428 Hungarian troops in a siege of the Turkish *garrison* of the fortress at the end of April 1428. Until June 1428, when the opposing sides concluded a three-year truce with the assistance of Sinan-Bey, the Turkish garrison of Golubac was besieged by Sigismund's Hungarian troops from the direction of the Danube River and the field and was actively subjected to bombings [Jireček, 1918, p. 163–164; Radonic, 1905, pp. 54–55; Istorija, 1982, p. 220–221; Corovic, 1993, p. 300–301; Dinic, 1978, p. 106, 108, 338; Spremic, 1994, p. 71, 90–92, 96, 99, 101].

Possibly, Istanbul was afraid of the participation of Ulugh Muhammad in Serbian-Hungarian events or, on the contrary, they were speculating on the possibility of engaging the khan, who had spent the winter at the Dnieper (the Ozu), according to his letter addressed to Murad, in military actions on the Danube. Unfortunately, we cannot give an exact answer.

Europe's plans to engage Islamic states in an anti-Ottoman coalition included Mamluk Egypt. Venice sent two ambassadors to the Egyptian sultan to prevent the renewal of friendly relations between Egypt and the Ottomans. The foreign policy of Ulugh Muhammad was quite active. As al-Aini reported on April 21, 1429 (i.e., a year after the letter to Murad II had been written), his ambassadors arrived in Egypt bearing a gift and two letters (in Arabic and in Mongolian written with the Uigurian alphabet) [Tiesenhausen, 1884, p. 502; Spuler, 1943, p. 158]. Possibly, J. Schiltberger, who mentions the embassy to the Mamluk sultan on the occasion of his daughter's wedding, was included in this very embassy to sultan al-Malik Barsbay [Schiltberger, 1984, pp. 36, 46].

Unfortunately, the results and real purposes of these embassies are unknown. It is not

clear just how real Ulugh Muhammad's "anti-Ottoman" position was. The poverty of sources does not allow us to give a definitive answer to this question. Papers on relations between Ulugh Muhammad and Turkish sultans in the subsequent period are unknown. Possibly, this can be explained by the fact that the formation of the Kazan Khanate brought about changes in Ulugh Muhammad's foreign policy interests. The Ottoman Empire did not play the main role in his foreign policy. Initially, this place was occupied by the Grand Duchy of Lithuania, then by the Duchy of Moscow.

Ulugh Muhammad started developing relations with Grand Prince of Lithuania Vytautas in the first half of the 1420s. In 1424, ambassadors of Ulugh Muhammad came to Vytautas. On January 1, 1425, Vytautas wrote the great grandmaster: "... We report to you that the Tatar state is split into two and divided. So, there are six rulers there now who are struggling for power. One of them, Mahmet, is with us. All the rest live in different places, as their lands are great and expansive" [Barbashev, 1891, pp. 189–190].

At the end of January 1429, the Grand Prince of Lithuania and Russia Vytautas, the King of Poland Wladyslaw (Jagiello), the King of Germany and Rome Sigismund, and representatives of the Pope, the Byzantine emperor, the King of Denmark, the Grand Master of the Teutonic Order in Prussia and Livonia, the Ruler of Moldavia, minor Russian and Lithuanian princes, the dukes of Mazovia, etc., gathered. The sessions of the congress lasted about two weeks. The main issue on the agenda of the conference was the fight against the Turks which united all European countries [Taube, 1989, p. 139]. According to some dubious information, the Perekop khan was present at the congress [Cheshikhin, 1887, p. 60]. A.E. Krymsky thought that this was Hacı Giray—"a recent vassal of Vytautas and an enemy of Turkey" [Krymsky, 1916, pp. 43, 177]. The presence of Hacı Giray at the congress as the Crimean Khan was unlikely. At that time, Ulugh Muhammad was the khan of the Crimea and the Jochid lands. Vytautas wrote in a letter addressed to the Livonian Order dated September 9, 1429 (shortly before the congress): "Our friend tsar

Mahmet wrote to us that he now possesses the entire state and the Horde and offered us a lasting union through his ambassador" [Safargaliev, 1996, p. 486]. Most likely, the khan did not attend the congress personally, but his representatives could have been there¹. The question of Moldavia was at the top of the agenda. Sigismund, who had heard that King Alexander was interacting with the Turks, asked Jagiello to start the partition of Moldavia or order Alexander, as his vassal, to stop negotiations with the Turkish and help the emperor in the struggle against them. Sigismund was conducting negotiations with the ambassadors of the Order to establish a special branch on the Danube River as a permanent military colony to fight against the Turks. This idea was not brought to fruition [Taube, 1989, p. 145]. The emperor asked Jagiello and Vytautas to help him against the Turks. Jagiello collected a detachment (mainly consisting of immigrants from Russia, which caused much discontent there), but the detachment, having joined the King of Moldavia, did not wait for Sigismund's forces and returned to Lithuania [Barbashev, 1891, p. 233]. In August 1430, the Perekop khan was in Vilnius personally for the coronation of Vytautas, which never took place [Taube, 1898, p. 151].

Correspondence between the khan and the Livonian Order is an important source of the history of the policies of Ulugh Muhammad regarding Eastern Europe. The fate of these materials collected by Gennig and kept in the Königsberg archive is unknown. Most likely, they were not preserved, like the materials from this collection used by N.M. Karamzin while working on his "History of the Russian State"². They were not found among copies of documents from the Königsberg archive in the Russian State Archive Of Ancient Acts (f. 147). The only source is paraphrases of the letters of Svid-

rigailo and Ulugh Muhammad, for example, a very unclear German translation of a letter of Ulugh Muhammad addressed to the Grand Master of the Livonian Order dated 1433 (Secret Archive No. LXXVII), in the monograph of A. Kotsebu [Kotsebu, 1835, pp. 168–169] and the works of N.M. Karamzin. A. Kotsebu, who worked in the Königsberg archive in 1813, had this document at his disposal, as well as letters of Svidrigailo addressed to the Grand Master of the Order containing unique information on the participation of Ulugh Muhammad in Lithuanian feuds. N.M. Karamzin used copies sent to him and Minister for Internal Affairs O.P. Kozodavlev by the Expedition of Baltic Nobility [Karamzin, 1998, p. 357].

Ulugh Muhammad entered into an alliance with Svidrigailo, who together with the Order was fighting against Jagiello for the throne of the Grand Duchy of Lithuania, and apparently at the beginning of 1431 he swore an oath to him. On May 9, 1431. Svidrigailo wrote to Livonian Master Paul from Smolensk that his ambassador, "the austere knight Peter, voevode of Novgorod, has returned from the Tatar khan with the assurance that the khan wishes to maintain friendly relations with him and his administration, and that he was ready to provide him with troops and even take part in battles personally if necessary. He confirmed his words with a promise in writing, as many previous khans had given to the representatives of the Svidrigailos. He also sent to him four noble princes, including his father-in-law, to confirm their friendship, and released voevode Gregory Protacy, voevode Mchasky, and many other prisoners" [Kotsebu, 1835, p. 94; the Secret Archive No. XXI]³. According to N.M. Karamzin, a more precise text of Svidrigailo's letter of looks like this: "...we sent our boyar Mikhail Arbanass to Tsar Mahomet in the Horde, and then we sent Pan Ivashka Monivodovich to the Horde again, asking the tsar for help. Mikhailo Arbanas came to us in Smolensk on the same day as Kuntur's servant

¹ Prussian commanders in their report from the conference in Lutsik (January 15, 1429) noted that the burgomaster of the town of 'Kassan' sought the patronage of Vytautas at the conference. A. Barbashev considered that it related not to Kazan, but to the Kashin prince [Barbashev, 1891, p. 201, note 23].

² About the documents of the Königsberg archives used by Karamzin, see: [Karamzin, 1998, pp. 357–358].

³ Mtsensk voivode G. Protasiev was captured through deception by the Ulugh Muhammad's son-in-law Aydar nearby Mtsensk in October 1430 [Zimin, 1991, pp. 43, 44, 227].

Klimok: Tsar Mahmet told us through Mikhailo, "If I promised to stand with you, my brother Grand Prince Svidrigailo, I will keep my word in full. I sent twelve thousand men to help you this winter, brother, headed by many princes, but when they reached Kiev they had to go back; it was snowing so heavily that they could not go further. Now, my brother Grand Prince Svidrigailo, I'm sending my elder son Prince Mamutyak¹, my son-in-law and right hand Prince Aidar, and another son-in-law, Prince Elberdey, with many men... and in my decree I have written: if these men are not enough I can come myself and bring all my people..." [Karamzin, 1993, p. 334].

On December 13, 1432, the Master of Lithuania reported to the Grand Master of the Order that he had heard from Svidrigailo's servant Yushka that the Tatar khan had sent Svidrigailo "his son-in-law and 20,000 warriors, adding to them 50,000 Wallachians and another 50,000 warriors headed by the voevode of Kiev. These forces are to act together against the Poles" [Kotsebu, 1835, p. 153; the Secret Archive No. LXXI]. The strength of the troops sent by Ulugh Muhammad was clearly overstated by Svidrigailo, but the report about a number of Wallachians² having been sent is interesting in itself. Wallachia and Moldavia played an important part in the anti-Ottoman plans of European monarchs. The Wallachian ruler Mircha (1386–1418) paid the kharaj to the Turks for the first time in 1394 and then in 1415, but he remained independent. However, Alexander Aldea (1431–1436) was forced to start sending prisoners and making annual payments to the Ottoman Empire in 1431, i.e., a year before the khan supposedly sent the troops. That meant the beginning of Wallachian vassalage [Hitchins, 1967, p. 124]. See also: [Matei, 1972, pp. 65–81; Matei, 1973, pp. 81–95].

Svidrigailo suggested to the Roman emperor through his messenger, S. Rota, that he marry the Moldavian voevode's daughter to draw him away from a union with the Turks

and Poles. The emperor agreed and expressed his gratitude for the prince's intention to help him in his struggle against the Turks [Kotsebu, 1835, p. 203]. Naturally, the participation of Wallachians in Ulugh Muhammad's military operations, if such participation occurred, could not have gone unnoticed by the Ottomans. It is not clear to what extent the actions of the khan with regard to Turkey's vassal were authorized by the Ottoman Empire itself. The letter of Ulugh Muhammad to Murad II dated 1428 testifies to friendly relations between the two states. It is clear from the letter that relations between Ulugh Muhammad and Wallachia were rather tense: "For the past one or two years, we have been coming to the Ozu River to spend the winter³. We did not send a person to you, because if we did, Aflak would not let him pass... Let us know how best to get rid of those unfaithful serving Aflak who are between us" [Kurat, 1940, pp. 8–9; Sultanov, 1975, pp. 54–55; Sultanov, 1978, p. 239]. It is possible that common military operations of the Ottomans and Ulugh Muhammad against Wallachia took place, as a result of which the country became a vassal of the empire, and in 1432 the khan could have sent Svidrigailo a number of Wallachian troops (vassals of the sultan and thus allies of the khan) as aid.

On January 6, 1433, commander Ludwig Lanze (the ambassador of the Grand Master to Svidrigailo) forwarded the German translation of the khan's letter to Svidrigailo to the Grand Master from Veitvisk. According to A. Kotseb, the contents of the letter are, "most likely due to a lack of knowledge on the part of the translator, completely incomprehensible. One can only guess from it that Khan Mahmet intended to come personally to the aid of Svidrigailo, or to send him his military commanders and allies. All the Grand Prince needed to do was to say immediately what kind of assistance he needed, and Mahmet and his troops were ready to set off. And the khan also ordered Prince Mikhail of Kiev to appear before him [Kotsebu, 1835, pp. 168–169; the Secret Archive No. LXXVII]. Lanze also wrote in a letter addressed to the Grand Master from Lukelin dated Febru-

¹ Mahmudek, the successor of Ulugh Muhammad in Kazan.

³ The Dnieper.

ary 11 that "the Tatar khan sent five princes [Ulaen]¹, his close relatives, and 10,000 warriors [Bogen]", with whom Svidrigailo was planning to advance on Lithuania that winter [Kotsebu, 1835, p. 169; The Secret Archive No. LX–VIII.]. On April 11, 1434 Svidrigailo reported from Vyazma that the khan's ambassador had come to notify him that the khan and all his troops had set off for the Kiev region [Ibid, p. 192]. On February 24, 1436, Svidrigailo wrote to the Grand Master from Kiev that the Tatar khan himself had come to help him and his camp was standing near Kiev [Ibid, p. 220], but on November 29 of the same year he said in a letter from Lutsk (the Secret Archive No. CXVI) that everything was going well, and that the Tatar khan Sedahmet, who was his friend and ally, had defeated Mahmet and subjugated the Horde, and promised him help in the near future [Ibid, pp. 223–224]. The defeat of Ulugh Muhammad by Sayid Ahmad in 1436 and by Kūchūk Muhammad in 1437 resulted in his flight to the borders of Russia in the direction of Belyov. Subsequent events (the Battle of Belyov, the formation of the Kazan Khanate, the battle at the Saviour Monastery of St. Euthymius and the capture of Vasily II) are beyond the scope of our topic (they are described in Russian historiography in detail, so there is no need to retell them here) [Zimin, 1991, pp. 81–83, 101–108]².

The collapse of the Golden Horde as a single state led to the formation of new, independent political entities in its outlying areas—the Kazan Khanate (1438 or 1445), the Crimean Khanate (approximately 1441), the so called Qasim Khanate (1452) and then the Astrakhan Khanate (approximately 1502). The main successor to the Golden Horde was the Great (or Greater, i.e., the largest of all) Horde (Taht Eli, i.e., the "Throne Possessions", as the state was officially called). Most likely, the Ottoman Empire established diplomatic contacts with some of them in the 1450s (with the exception, apparently, of Qasim and Kazan). The Great Horde

and the Crimean Khanate were the most significant. The documents of diplomatic exchange between the khans of the Golden Horde and the Ottoman sultans have clearly reached us in an incomplete form. The letter of Khan Mahmud to Ottoman padishah Mehmed II dated April 10, 1466, and mentioning some "important affairs" which prevented the khan from sending people to the sultan earlier was the first from a chronological point of view. This document, which was a reply to an Ottoman embassy to the Horde, looks like an attempt to form an alliance with the Ottomans against a third side, most likely the independent Crimea [Zaitsev, 2004a, pp. 84–86]. The answer to this message has not been preserved. The next documents in the Horde-Ottoman diplomatic exchange date from the second half of the 1470s, when the situation in the region changed significantly (in 1475 the Ottomans conquered the southern coast of the Crimean peninsula and concluded a vassal-protectorate treaty with the Crimean Chinggisids). These are two messages from Khan Ahmed to Mehmed II (881/1476–1477 and 882/May–June 1477) and an undated text of Mehmed II written between July 1475 and April 1477 [Ibid, p. 92].

Since then, the position of the Great Horde was defined not only by the conflict with the increasing power of the Crimean Khanate, but also with the Ottoman empire, which stood behind the khan. Moreover, Muscovy was also an ally of the Crimea. It is possible that in the 1480s, after the death of Khan Ahmed and the onset of turmoil in the Horde, the Ottomans did not maintain direct contacts with the Chinggisids of the Great Horde. An indirect testimony to this is the letter of Mengli Giray to Bayezid (1486), which told of a crisis in the Throne Possessions and the Crimean khan's intention to tell the sultan about those events [Ibid, p. 93].

Meanwhile, in the relations between the Grand Duchy of Lithuania and the Horde, "brotherhood and amity" reigned "from the great tsar Batu". The khan had high hopes for this alliance. Having temporarily lost his contacts with Lithuania, in the mid-1490s Khan Sheikh Ahmed asked Lithuanian prince Alexander, who had ascended the throne of the Grand Duchy of Lithuania in 1492 and in 1501

¹ That is, ulans (uhlans).

² An article by B. Florya is also dedicated to the relationship between the Horde and the states of Eastern Europe at the time [Florya, 2001a].

had become the King of Poland as well, to inform him about the power dynamics, adversaries and allies of Lithuania. Alexander was in no hurry to restore contacts with the Horde, which had been interrupted by the death of Ahmed, Sheikh Ahmed's father; the ambassador Tagir was detained in Lithuania for 8 years, and Kodjak, Sheikh Ahmed's brother, was not acknowledged by the Lithuanian prince [Khoroshkevich, 2001, p. 153].

In 1497 Sheikh Ahmed took the initiative to revive Horde-Lithuanian relations. The embassy speaking on the behalf of him, his brother Kodjak and the princes Hacı Giray and Aega offered to help Alexander in the fight against Crimean Khan Mengli Giray. Lithuania's reaction was rather restrained and temporizing; in 1498 Sheikh Ahmed reproached Alexander for breaking his promise to fight against the Crimea together [Ibid].

Meanwhile, the difficult international position of the Throne Possessions and the serious turmoil inside the dynasty were intensified as a result of an acute ecological crisis: a bad harvest and a cattle plague placed the state in danger of ruin¹.

In summer 1498, Muscovite messenger in Wallachia Boris Odintsov reported to the Grand Prince: "And now, sire, Khan Mengli Giray got news from the Horde, from Sheikh Ahmed. People say that the Horde is very hungry and poor. They also say that the Cherkases came to the Great Horde and defeated many Tatars of the Great Horde" [The Collection of the Russian Historical Society, 1884, p. 255]. The khans' attempts to reach fruitful areas of the Kuban was resisted by the "Cherkases". Mengli Giray himself wrote to Moscow that he was preparing a military campaign against the Horde next winter (the time of the greatest fodder shortage in the steppe) and that "Ahmat's sons are ready" [Ibid, p. 263].

At the end of November 1500, Kievan voevode Dmitri Putyatich was sent as an ambassador from Lithuania to the Crimea. The aim of the legation was to talk Mengli Giray out of

an alliance with Moscow. However, the Lithuanians failed to obtain the support of the khan².

According to a translation of the verbal embassy of Mengli Giray to Polish King John Albert preserved as a part of the so-called Zagreb Code, the situation in the Trans-Volga Horde (as the Poles called the Great Horde) could be described as very severe: discord and famine dominated there [Hamm, 1952, p. 175; Materiały, 1966, pp. 97–99, no. 33].

According to Mengli Giray, in summer 1500, the Horde was planning to graze its cattle between the Don and the Dnieper, i.e., on territory which formally belonged to the Crimean khan and was situated far from the Horde's own camping lands [Collection of the Imperial Russian Historical Society, 1884, p. 301]. The Horde faced a very serious problem: this step, which was vitally important to the Horde, was fraught with the threat of confrontation with Ottomans—the overlords of the Crimean khans. Nobody doubted that Mengli Giray would refuse to yield to Horde. In this complicated situation, Sheikh Ahmed, one of the sons of Khan Ahmed, decided to turn to the Turks directly to get permission first-hand. In August 1500, letters from Mengli arrived in Moscow. They contained the following information: "An ambassador from the Tsar of the Horde Shih-Ahmet called Kuyuk came to Sehzade³ in Caffa saying, Bid us to head to the Dnieper River; there it's bad for us to camp, because many of the Nogais and the Cherkases quarrel with us. You should also bid us to camp by the Dnieper, but you do not bid us to camp by the Dniepr, and we need to camp there. And Shahzoda replied, "these are not my lands and waters, they belong to the free man Tsar Mengli Giray; if you are a brother and friend of Tsar Mengli Giray, you are my brother and friend too; I do not bid you to camp by the Dnieper, that is a matter for my father" [Ibid, p. 321]. According to I. Kubensky, the heir of Bayezid gave Kuyuk the following reply: "I do not bid you to camp by the Dnieper, that is a matter for my father, Tsar Mengli Gi-

¹ About the events of 1500–1502 and, in particular, several factors behind the Crimean victory, see: [Zaitsev, 1999, pp. 49–51; Zaitsev, 1999, pp. 253–258].

² The voivode left on the 23rd or 27th of November. See [Khoroshkevich, 2001, pp. 154, 161].

³ That is to Mehmed, the son of Sultan Bayezid, vicegerent of Kefe (Caffa).

ray. The lands and water by the Dnieper belong to Mengli Giray" [Ibid, p. 323]. The Ottomans, who stood by their stake on Mengli Giray, did not want to change the situation in favor of the enemies of the Crimean khan.

The socioeconomic crisis in the Throne Possessions led to the flight of the population from the Horde's regions to the Crimea (this also occurred in 1465 when the victory of Hacı Giray on the Don resulted in a significant population outflow from the Horde to the Crimea). In August 1500, Ivan Kubensky reported to Moscow: "There came, sire, from the Horde to serve Tsar Mengli Giray Ebagah uhlán and his brother, the sons of Chenbulat uhlán, and Kirey Menglishik's son Kitay. About three thousand people came with them, and they were very hungry and naked. They say, the Horde is in Pyati-Gory under the control of the Cherkases; famine and chaos prevail there, and relations between the tsar and his brethren are not peaceful" [Ibid, pp. 322–323]. In I. Kubensky's message which was delivered to Moscow in October 1500, the Muscovite observer repeated this information: "They say the Horde is in Pyati-Gory under control of the Cherkases, and famine and chaos prevail there [Ibid, pp. 332–333].

In autumn 1500, the flight from the Horde to the Crimea continued. According to I. Mamonov, "Molozoda, the head mullah of the headquarters of Ahmed's descendants," came to Mengli Giray [Ibid, p. 354]. He reported to the khan that Sheikh Ahmed was planning to spend winter 1500–1501 on the Don River ("and now we will cross on the blue ice of the Don") and was preparing a joint military campaign against the Crimea with the Grand Prince of Lithuania. He was also trying to go around the Crimea concerning the nomads' encampments at the Dnieper River. This time Sheikh Ahmed decided to send the ambassador directly to Sultan Bayezid. He sent him to ask for permission to camp beyond the Dnieper in the field near Belgorod. But "the Turkish sultan did not bid Sheikh Ahmed to camp there and sent the ambassador away without honors" [Ibid]. Relations between the khan of the Horde and the padishah were clearly not successful.

Mengli Giray declared the mobilization of all warriors over the age of 15 years on the

peninsula within 15 days. The conscripts were to have armor and provisions. The Crimean khan hurried to secure the support of Bayezid. According to the information of I. Mamonov, "Mengli Giray... the tsar said... that he had sent a man to Sultan Bayazyt, and the sultan of Caffa sent a man to his father Sultan Bayazyt; the tsar says that Shih-Ahmet wants to go in their direction to the Dnieper River". And the Turkish sultan sent a charter to the tsar: the Horde and Tsar Sheikh Ahmed are heading toward you, but you should not fight against them alone. You should find out who they are and what their strength is and notify me. If the Horde crosses the Dnieper, I will send my troops against them from Belgorod, and you should then march against them from your side" [Ibid, pp. 356–357]. The third charter of I. Mamonov stated: "Things are bad in the Horde now, although they have sworn to the Lithuanian prince. They had to come to the Don River because Murtoza is in Tyumen¹ now and Prince Azika² is with him, and Tyumen and the Cherkases are enemies of the Horde, and the Horde is wary; that's why nobody is ploughing there. According to rumors, sire, Sheikh Ahmed did not want to come here, but the people didn't want to be under the Cherkases, so Sheikh Ahmed and they headed to the Don" [Ibid, p. 358].

In August 1501, the troops of Mengli Giray met the troops of Sheikh Ahmed at the mouth of the Tikhaya Sosna River. However, there was no conflict. Himself facing the problem of a shortage of fodder for the horses ("the horses are tired, and we have run out of fodder", "now, we are weary, and our horses are very weary as well, and we are hungry"), Mengli Giray was in no hurry to start a fight against an enemy which, while significantly weakened, was still strong. "Sheikh Ahmed, our enemy, is in a bad state... and they are now in a very bad state, and on foot and unclothed," the Crimean khan wrote to Moscow describing the situation in the Horde [Ibid, p. 368].

Meanwhile, on June 17, 1501, King John Albert of Poland died, and on October 23 the

¹ This relates to the Tumen Shamkhalate in Cis-caucasia and not the Siberian Tyumen.

² Hajjike.

Grand Prince of Lithuania Alexander accepted a union with Poland and affirmed its oath [Lubavsky, 1900, pp. 143–145]. Sheikh Ahmed used the lull after the standoff at the mouth of the Tikhaya Sosna River to continue contacts with Lithuania. The ambassador Dovletek was sent to Alexander to "ask for Kiev" [Khoroshkevich, 2001, p. 155].

In autumn 1501, after a fruitless standoff on the bank of the Don River, Mengli Giray knew that the Horde would have to spend winter "at Ust Semi, near Belgorod". The Crimean khan writes the following words in a message to Ivan III: "And I ordered to make fires so that they would have no place to spend winter; my army is ready" [The Collection of the Russian Historical Society, 1884, p. 377]. The scorched-earth tactic was not new in warfare on the steppe. In the early 1480s, Mengli Giray advised the Kievan viceroy Ivan Khodkevich to burn Samara and Oryol, where the Great Horde camped ("order that fires be made near Orel¹ and Samara before the spring comes") [Collection, 1866, p. 24; Lithuanian Metrica, 1910, p. 327].

The Crimean khan got cannons, ten artillerymen and 100 warriors from the sultan in Caffa.

After standing for 40 days near Kanev, Sheikh Ahmed headed to Chernigov, where his brother Janai had died [Khoroshkevich, 2001, p. 156]. The flight from the Horde was increasing; people were fleeing to Mengli Giray even on foot, with their families, wives and children. According to I. Mamonov, famine and fear prevailed in the Horde's lands, and the livestock was dying off: "They say many people wanted to flee, but they had nothing to flee on. There is much disorder, and they say that people are in a bad state and are wandering separately" [the Collection of the Russian Historical Society, 1884, p. 381].

Looking for a way out, Sheikh Amed tried to conclude a peace treaty with Moscow, but failed. Moscow-Horde negotiations during an exchange of embassies in December 1501–March 1502 turned out to be fruitless [Khoroshkevich, 2001, p. 156]. Voevode Stefan of Wallachia was ready to join the coal-

tion between Moscow and the Crimea directed against the Great Horde, which had been weakened by famine and turmoils [the Collection of the Russian Historical Society, 1884, pp. 384, 414].

In winter 1502, the Horde was camped on the left bank of the Dnieper near Kiev. An uncommonly cold winter had completely exhausted Sheikh Ahmed. His defeat was a matter of a few days. Someone from Sheikh Ahmed's circle appealed vainly to Lithuania: We are between two wars; we'll have to wage war against either Mengli Giray or the bondman Ivan... If you do not come quickly with troops, we will not be able to stand between two wars" [Khoroshkevich, 2001, p. 156].

In early May, the ambassador of the Crimean khan told the Grand Prince of Moscow on behalf of Mengli Giray: "The current days are extraordinary; skylarks are building nests, and the winter is unusual now. When Azi Giray Khan conquered the Horde, the winter was like this; except for that one, I don't remember such a winter" [Collection of the Russian Historical Society, 1884, p. 414]. It is interesting that Mengli Giray compares the situation in 1465 (when his father Hacı Giray defeated the Throne Possessions) with the situation in winter-spring 1502. Indeed, the son acted as if according to his father's scenario, thus guaranteeing his victory.

In spring, the flight from the Horde to Mengli Giray continued. In May, Sheikh Ahmed stood at the "Turpach Water" and on the Sula [Ibid, pp. 416–417]. Famine in the Horde's lands was combined with a favorable situation in Mengli's camp near the Mare Water: "God has given us a lot of fodder; for a month or two do not expect that we will turn back from him (from Sheikh Ahmed—I.Z.)", he wrote to Ivan III. Soon, Mengli's optimism was justified: the Horde was collapsed under his blow.

After the rout in summer 1502, Crimean Khan Mengli Giray wrote to his ally, Grand Prince Ivan of Moscow: "My man has come from Astrakhan recently; Shih-Ahmet, Prince Bagatyr and Ablekerim's brother came to Astrakhan, and they left on friendly terms with each other, and a man was sent to Prince Seit-Mahmut". The Nogais sent a person to Sul-

¹ Here should be 'Orel'.

tan Ahmat Mirza and talked to them" [Ibid, p. 445]¹.

Sheikh Ahmed was trying to create a coalition including the Nogais and representatives of the Astrakhan dynasty, who were dependent on the Nogais [Safargaliev, 1952, p. 39]. As the Russian ambassador in the Crimea Alexey Zabolotsky reported, "And regarding Shih Ahmat, sire, news has come to Mengli Giray that Shih Ahmat has united with his brothers and his uncle Tsar Ablekerim and the Nogais; he is planning to attack Mengli Giray" [Collection of the Russian Historical Society, 1884, p. 451]. However, Sheikh Ahmed did not have enough forces for that [Ibid, pp. 456–467].

In this situation, he apparently decided to gain the diplomatic support of the Ottoman Empire. Moscow diplomatic documents contain evidence of that. "They say Shi-Ahmat sent his ambassador to Constantinople to the Turkish sultan," Zabolotsky wrote to Moscow [Ibid, p. 451].

This is fully confirmed by Ottoman sources. In the so-called "Notebook for writing down good deeds, honors, sendings off, etc." (Defter-i müsevvedât-ı in'âmve tasaddukaat ve teşrifât ve irsâliyâtve 'âdet ve nukeriye Gayruhu vâcibi Sene Tis'a ve Tis'a Mie) dated 909 AH (i.e., June 26, 1503—June 13, 1504), there is a record of expenditures for the month of Muharram ul-

Haram for Sheikh Ahmed's ambassador named Muhiddin (Be-cihet-i Muhiddin, Kaasîd-ı Şeyh Ahmed Han) [Barkan, 1979, p. 300]. A total of six items were recorded. He received: 1) 5000 coins (nakdiye); 2) broadcloth, velvet, gilded silk from Bursa, and a robe; 3) a groom's robe made of scarlet velvet from Bursa (Câme-i mîrahorî, 'an Kadife-i alaca-i Bursa, sevb)². Furthermore, he was granted: 4) a silver dish; 5) two *lari* cups (Kadeh-i Lârî; from Luristan?)³; 6) velvet from Bursa (Kadife-i rişte-i Bursa) and 7) two pieces of *peshaveri* (Peşaverî) fabric⁴. Everyone in his suite (their number is unknown) got a robe made of red fabric and a robe made of peshaveri fabric (Câme-i peşaverî, sevb).

The ambassador of Sheikh Ahmed came to the capital of the Ottoman state accompanied by another Horde diplomat, the ambassador of Sheikh Ahmed's brother and kalga, Kodjak. His name is not stated in the document. The gifts for Sultan Kodjak's ambassador were more modest: 3,000 golden coins, a groom's robe made of speckled velvet manufactured in Bursa, a *lari* cup, two pieces of velvet from Bursa (Kadife-i rişte-i Bursa), and two pieces of *peshaveri* fabric. His suite was given red robes (Câme-i kırmızı, sevb) and received state dotations ('Âdet-i Hazînedârî—1 982) and rewards authorized for messengers ('Âdet-i Çavuşî—4040).

The fall of Sheikh Ahmed seemed to have a bad influence on his relations with Bayezid. As we saw from the materials of the Moscow-Crimean ambassadorial exchange, the sultan did not favor the khan. However, the comparison of the amounts of payments to the ambassadors of Sheikh Ahmed and Kodjak with the ones to the ambassador of Khan Mengli Giray⁵, called Lutfi, who also visited the capital of the empire that month, show that the payments to Lutfi were almost equal to that received by Kodjak's nameless ambassador. Muhiddin re-

¹ The reading of this extract, suggested by the publishers of the text, needs a correction. The whole phrase, perhaps, should be read as follows: '(Shih) Sheikh Ahmed arrived in Astrakhan. Prince Bagatyr and brother (Ablekerim) Abdal-Karim came out and welcomed him...'. 'Brother (Ablekerim) Abdal-Karim' is mentioned later in the materials of the failed embassy mission of Ivan III to Mengli Giray in the person of I. Beklemishev (late February 1503): '...and what your man told you about Tsar (Shih) Sheikh Ahmed', the Grand Prince wrote to the Khan, 'that as if he was joined by Tsarevich Bagatyr and brother Ablekerim (our Italics—I.Z.) and the Nagays, and that they want to go against you: and this winter our people came to us from Astrakhan, Kopil and his men; and they say that Tsar Shih Ahmed and Tsarevich Khozyak are in Astrakhan and are to stay there to spend the winter; and that as if they do not have many of their own people, only some five hundred men, but Hozyak tsarevich has many people, and that Khozyak tsarevich wants to come to us, while Bagatyr' tsarevich wishes to see in Astrakhan either Sayyid Mahmut tsar or Sheikh Ahmed tsar; and they do not want Ablekerim in Astrakhan' [Collection of the Russian Historical Society, 1884, p. 456].

² Câme, in the broad sense of the word, is any kind of cloth put on the back, a cloak. See [Pakalın, 1947, p. 255].

³ It is so in the text. This caused natural questions on the publisher's part [Barkan, 1979, p. 300].

⁴ Most probably, this word denotes such things as a 'rag, cloth, kerchief, napkin'. See: [Budagov, 1869, p. 307]. Thus, perhaps, here it means just some kind of a kerchief.

⁵ Mengli is called 'the Khan of the Tatars' (Hân-ı Tatarân).

ceived much more from the court. Lutfi got: 3,000 golden coins, patterned *jame* from Bursa (Câme-i münakkaş-ı Bursa), as well as state financial support and a payment to the messenger (‘Âdet-i Hazînedârî ve Çavuşî—in total 4 500) [Barkan, 1979, p. 301].

Most likely, the difference in payments for Sheikh Ahmed and Mengli Giray's ambassadors was determined by the status of the diplomat. Most likely, Lutfi was not an ambassador but a messenger (he brought a letter from the khan and a prisoner); that is why his rank equaled that of the ambassador of Kodjak Sultan. Our assumption is indirectly confirmed by the indication of the amount of payments received a little later (in Jumada al-Akhira of 909 AH) by servants of Mengli Giray: only 1,000 golden coins, patterned *jame* from Bursa (Câme-i münakkaş-ı Bursa), as well as the traditional ‘Âdet-i Hazînedârî ve Çavuşî—only 250 [Ibid. p. 328].

As we can see, the defeat of the Horde in summer 1502 did not demoralize Sheikh Ahmed completely: some rulers continued to take his opinion into consideration. Ivan III, in response to Mengli Giray's request for help against Sheikh Ahmed, promised his support. However, the Moscow Grand Prince did not seem to be deeply concerned with this conflict. He was much more concerned with Mengli Giray's plans concerning Lithuania.

Meanwhile, the inhabitants of Astrakhan behaved like barbarians towards both the Moscow ambassadors to Caffa and the ambassadors of the Caffan Shahzade, despite friendly relations with the Ottomans; they were robbed, and many Turks were beaten to death [The Collection of the Russian Historical Society, 1884, p. 462].

In 1503 Sheikh Ahmed, apparently having lost any hopes of uniting anti-Crimean forces, sent ambassadors to Ivan again with a request to "get" Astrakhan for him in return for his rejection of a union with the king. He asked Ivan for that for the first time in 1502 (before October) [The Collection of the Imperial Russian Historical Society, 1884, pp. 453, 482; Karamzin, 1998, p. 189, 307–308, comment 527]. But Sheikh Ahmed did not wait for the help of Moscow and besieged Astrakhan with Sultan Ahmed Mirza at the beginning of July 1503 (when his ambassador was in Istanbul). "Relations with Prince

Bagatyr and Tsar Ablekerim are good," wrote Ivan III to Mengli Giray in the Crimea in August of the same year [Collection of the Russian Historical Society, 1884, p. 486]. In September 1503, Moscow's ambassador in the Crimea I.I. Oshcherin was instructed to talk to Mengli Giray in private: "I (i.e., Ivan III—I.Z.) want, with God's help, to conquer Astrakhan for him (Sheikh Ahmed.—I.Z.) for your great good, so that you, my brother, and your yurt will have no trouble from him [Ibid, p. 489].

Sheikh Ahmed preferred an attempt to gain the understanding of Bayezid II to the prospect of obtaining Astrakhan with the help of the Grand Prince. In August 1744, Mengli Giray wrote to Ivan: "In autumn, Tsar Shih Ahmet and his brothers, Khozyak¹ and Khalek, and the princes arrived in Kiev from Nogai; then they left Kiev for Belgorod, and then wanted to visit Bayazit Sultan. When Bayazit Sultan heard that Shih Ahmet and his brothers were coming, he sent his pasha to tell them, "You must go back the way you came; we do not know you. Tsar Mengi Giray is our friend and brother; we are friends of Mengli Giray's friends and we are enemies of Mengli Giray's enemies. You, enemies of Tsar Mengli Giray, may not enter our country." Thus he spoke. And the sultan's men escorted him as far as Belgorod, and drove them away from Belgorod. Since the beginning of winter, our sons were in Novgorodok, and they, having heard of Sheikh Ahmet, pursued him... And Sheikh Ahmet, Hozyak, Halek, and the Alchin² Taktamysh, eight of them, arrived in

¹ This is the above mentioned Kojak.

² It is not a name, but the clan origin of Tokhtamysh. He was of the *Alchins* (compare to the 'alchin place' in the Golden Horde, similar to the 'Aydar place' for the Crimean Khan. See: [Syroechkovskiy, 1940, p. 36]. If these fragmentary pieces of information are collated with the tradition, which connect Astrakhan with the beglerbegs/beylerbeys? (*amir al-umara*) of the Golden Horde, being the descendants of the *Qungrats* (which found a reflection, for example, in the works of Munis, see: [Bregel, 1982, p. 369]), then it turns out that it was the *Qungrats* who represented the chief clan group under the Astrakhan Khans. Apart from them, representatives of the *Alchin* and *Manghit* clans were also living in the Khanate. The Astrakhan Prince Tinish was an *Alchin* (see: [Iskhakov, 2001b, pp. 115–117]. The *Alchins* are an old clan of the Horde, whose representatives were beglerbegs (for example, the beglerbeg of the Great Horde Temir ibn Mansur wrote to Casimir the following: "... and there is a born servant to the tsars, the Alchins hold

Kiev. The Kievan voevode Dmitry caught them and took them to Vyshgorod [Collection of the Russian Historical Society, 1884, p. 509]¹.

The flight of Sheikh Ahmed and his brothers to Belgorod to for the assistance of the sultan was a risky undertaking. It is possible that the brothers invoked the longstanding friendship between their father and Mehmed II Fatikh. This was unlikely to affect Ottomans deeply. Turkey would never replace the familiar and pleasing Mengli Giray with any of Ahmed's sons, whose behavior was hard to predict². That is why Istanbul decided to remain indifferent to requests of Sheikh Ahmed and neutral to the current situation, not undertaking any abrupt steps. Basically, Turkey let events develop without its participation. It was not concerned with the feuds of the Chinggisids. The risky undertaking of Ahmed's son ended badly.

According to M. Mekhovsky, the story of Sheikh Ahmed looks a little different. By the beginning of winter 1500, the khan, summoned by King Albert of Poland and Grand Prince Alexander of Lithuania to fight against Mengli Giray, came up to the Lithuanian borders with 60,000 warriors and more than one hundred thousand women and children. That winter turned out to be extremely severe: unable to bear the cold and famine in the steppe, Sheikh Ahmed's wife,

in conspiracy with Mengli Giray, fled with the main part of the Horde troops to the Crimea. As a result of loss of warriors, extreme cold and attacks of Mengli, Sheikh Ahmet "was crushed and fled with three hundred horses to Bayazet, the Turkish emperor. When he arrived in Belgorod on the Black Sea, which means White Castle, he learned that by order of emperor Bayazet he was to be taken prisoner. Then, he fled back headlong with fifty horses and found himself in a field near Kiev. The ruler of Kiev, who had learned about him through his scouts, surrounded him, captured him and sent him to Vilnius to the Lithuanians. He fled several times, but he was run down, caught and taken back" [Mekhovsky, 1936, p. 65]. Soon, however, at the Seim in Brest, the khan was solemnly received by Alexander, "who went out to meet him a mile from the city. Then, the Poles in Radom decided to send him back to Tataria beyond the Volga with a few thousand lightly-armed warriors. In order that his return would be more comfortable and more acceptable to his countrymen, they sent Kazak Soltan, the brother of Shihmet, ahead of him". The khan went beyond the Volga, but soon, "when going to Lithuania to send warriors, he was caught again by the Lithuanians at the instigation of Mendliger, emperor of Perekop, and confined in Kaunas Castle near the Baltic Sea" [Ibid, p. 66]. In his treatise, composed before 1514 and first published in 1517, Miechovius wrote of the khan as a prisoner in Kaunas [Ibid, p. 65]³.

Sigismund Herberstein almost completely repeats Miechowski's story. However, he omits a number of details, and some do not match the "Treatise on the Two Sarmatias". Sheikh Ahmed came to Lithuania to conclude a treaty with Alexander against Mengli Giray. The Lithuanians, "as was their habit", delayed the war longer than they were supposed to; meanwhile, the wife of the khan and his troops, tired of famine and cold, asked Sheikh Ahmed to leave the king and take care of his own matters. The khan did not listen

the place since the tsars' forefathers, there is a great man'. See: [Lithuanian Metrica, 1910, col. 357].

¹ According to Bartoshevich, Kiev voivode prince Dmitry Putyatich died the same year in 1503. Another Dmitry Putyatich was the ambassador to the Ottoman Empire in the 70s of the 15th century and died during the embassy [Bartoszewicz, 1860, pp. 149–150].

² The boastful tone of Mengli's letter to Ivan, where he wrote that the Turks called him 'a friend and brother', was not justified. An analysis of Mengli's messages to Turkey and the reply letters to Crimea shows that the Sultan could not call him this way. If, back in 1469, Mengli Giray called the Sultan his brother, without explicating his name and putting a detailed date on the document, then later, the correspondence of the Khan demonstrates the utter decline of his significance in the eyes of the addressee: the square tamga disappears, the Khan's signature becomes even more submissive ('Your servant Mengli Giray'), with the date being less and less specific and later disappearing entirely [Grigoriev, 1987, pp. 130–132]. The tone of the letter was a demonstration of the power of the 'older brother', ready to help in trouble, and simultaneously of his equality in relation to the Sultan. Moscow knew the real state of affairs and was hardly under a delusion in this regard.

³ As it is known, Miechowita confused Sheikh Ahmad with Sayid Ahmad, who had been indeed confined in Kovno some decades before that. See: [Miechowita, 1936, p. 91 and notes on p. 240], so the name of the Kovno fortress here, most probably, is a part of Sayid Ahmad's biography.

to these persuasions, and his wife and part of his troops deserted him and went over to Mengli Giray. The latter, on the prompting of Sheikh Ahmed's wife, defeated his troops. The khan and about 600¹ horsemen were forced to flee to Alba on the Tiras River (i.e., Akkerman, or Belgorod on the Dniestr—I.Z.) "hoping to ask the Turks for help. Having noticed that an ambush had been prepared for him in that city, he changed his route and arrived in Kiev with barely half of his horsemen. He was surrounded and captured by Lithuanians there and then taken to Vilnius [on the orders of the Polish king]. The king met him there, recieved him with honor and took him to the Polish Sejm². There they decided to wage war against Mengli Giray". The Polish were gathering their troops very slowly, and the khan, "insulted, started thinking of flight, but he was caught and taken to Trakai Castle four miles away from Vilnius". Sheikh Ahmed was treated well there, but remained under house arrest [Herberstein, 1998, pp. 182–183]. On December 30, 1517, Herberstein and the khan had dinner at Trakai Castle together. At dinner, according to Herberstein, "he spoke to me though an interpreter about various affairs, calling the tsar his brother and saying that all rulers and tsars are brothers to each other" [Ibid. p. 183]³.

The story of Miechowius about Sheikh Ahmed was reproduced by Blaise de Vigenere without significant changes [Vigenere de Blaise, 1890, pp. 83–84]⁴, as well as Bernard Wapowski [Kroniki, 1874, p. 47–48]⁵.

¹ As Herberstein commentators note, the Latin text contains an ambiguous 'sexingentis'. According to Miechowita, as we have seen, the number of horses (that is horsemen) that fled with the Khan was 300.

² The Sejm in Brest, where the King stayed from 8 February to 15 March 1505. See: [Herberstein, 1988, p. 344]. According to Strykowski, Alexander solemnly welcomed Sheikh Ahmad at the Sejm in Brest; sitting with him in a rich tent, he conferred knighthood on many Poles, Lithuanians, and Tatars, with the Khan also taking part in this. See: [Lyubavsky, 1900, p. 454].

³ Miechowita commentators considered that this took place in the spring of 1517. See: [Miechowita, 1936, p. 240].

⁴ Blaise de Vigenère is the author of the compilation memorandum on Poland and its neighbors, written and printed in 1573 in Paris for Henry of Valois, elected the King of Poland. The story was referred to the year 1500.

⁵ The story was referred to the year 1501.

Apparently, in 1505, relations between Alexander and Sheikh Ahmed were quite friendly. For example, that year the king granted privileges to Pan Jan Zabrzeziński, the "supreme marshal" of the Grand Duchy of Lithuania "at the request of our brother, Tsar Ahmat" [Acts, 1897, p. 152 (№ 698)]. However, soon their relations became more complicated.

In 1506, the Tatar suite of Sheikh Ahmed was partly turned into captives and partly ransomed by Lithuanian Tatars⁶. In this connection, the following hypothesis arises: were these actions some kind of punitive action for the khan's misdeeds, i.e., most likely for an attempt to flee or relations with a third side? It is possible that the change in relations between the authorities and the khan was also determined by other circumstances: On August 19, 1506, Alexander died in Vilnius [Lubavsky, 1900, p. 148]. The death of Sheikh Ahmet's protector could significantly change his status in Lithuania.

The Grand Prince of Lithuania Alexander II tried to exert pressure on Mengli Giray using the fact that Ahmed's children were in his hands. Ivan reassured the khan, reminding him of the fate of Sayid Ahmad: "For Lithuania does not have the custom of releasing captives once they are caught" [Collection of the Russian Historical Society, 1884, p. 552]. Sheikh Ahmed gave a speech to justify himself in front of the noblemen and King Alexander at the Sejm in 1505 in Radom, and he was released to the Nogai Horde up to the Caspian Sea to seek help against the Crimea and Moscow [Bielski, 1830, p. 79; Strykowski, 1978, pp. 577–578]. "Chinggis-name" by Ötemish Hajji says that the khan returned to his ulus – Astrakhan ("Hajji Tarkhan came to his vilayet") [Ötemish Hajji, 1992, p. 41a].

In 1506, the lords of the council reassured Mengli Giray in a letter of the Lithuanian embassy to the Crimea: "You, your Majesty, write to us in your edicts mentioning Shahmet Tsar and his brother Hojak Sultan, but regarding the movements of Hojak Sultan, Your Majesty will

⁶ See: [Ibid., p. 172 (No. 730, Description of the left bank Volga Tatars, who were bailed out); p. 197 (No. 772, Description of the Tatars, distributed among different households)]. Thus, a certain 'Ahmet ulan' ransomed the envoy of Kojak Sultan 'Vsein' (that is Husein) for a hundred groschen, etc.

understand from the letters and the embassies of our sovereign, your brother. Regarding Tsar Sheikh Ahmet, we have always advised our sovereign, and do so now, that Tsar Sheikh Ahmet not be allowed to do you any harm. [Malinovsky, 1901, pp. 123–124 (№XIX)]. At the same time, the lords of the council of the Grand Duchy of Lithuania expressed their anxiety in a letter to the lords of the council of the "Polish Crown" regarding the health and activities of Sheikh Ahmed and his circle: "We also remind Their Graces of Sheikh Ahmed, the tsar of Transvolga, and his son, and his people and the Nogai Tatars, that they would be healthy, safe and sound [Ibid, p. 128 (№XXI)].

The prisoner khan was for Lithuania first and foremost a means of deterrence against its southern neighbor, the Crimean Khanate. On November 28, 1509, Sigismund¹, in response to an embassy of prelates and lords of the parliament of the Great Polish-Lithuanian Commonwealth, speculating on advisability of extraditing Sheikh Ahmed to the Crimea, asked another question: "I wonder, if he were not turned over, what the defense of Mengli Giray would be like?" [Malinovsky, 1901, p. 144 (№XXVIII)] Meanwhile, Sheikh Ahmed sent ambassadors to the king, asking to send embassies to his mother and brothers, who were in the Nogai Horde. Sigismund wrote to the lords in the quoted letter: "The same ambassador Abdullah who had been sent to us by Sheikh Ahmet told us that our ambassador and he were sent to his mother and to his brothers the Nogais. Then, if you think it necessary, you should find those who would go in our interests. But those things with which he must go should be kept secret so that Tsar Mengli Giray does not hear of it, so that later the last evil would not be worse than the first. Just as in the time of the reign of King Alexander of glorious memory, when you sent old Vasily Glinzky with [?] to Tsar Sheikh Ahmet when he was still in his tsardom, and then when Hodjak Soltan was released, all those embassies and matters fell into the hands of Mengli Giray. That is why we have to meet, so that this matter

Mengli Giray

may be done after the Perekop ambassadors. As we see, it would not be very good if they attacked the Nogai, with whom we are bound with friendship, for I would not be glad to seek friendship elsewhere" [Ibid, pp. 145–146]².

The existence of Sheikh Ahmed, even though he was in Lithuania for so long, still disturbed the Crimea. A letter from the Crimean Khan Muhammad Giray (Mengli Giray's son) to Ottoman Padishah Suleiman Kanuni, written in spring 1521, focused on his fate: "Our old oppressor and enemy, the Khan of the Throne Possessions Sheikh Ahmed, is detained by the King"³. Then, the khan reported that he was concerned that the king might release Sheikh Ahmed in the case of hostile actions [Lemerrier-Quellejay, 1971, p. 487; Le Khanat, 1978, p. 113]⁴.

In Lithuania the khan was officially considered not a captive, but a 'guest' of the king. This status did not allow him to receive any grants of land in Lithuania.

² Thus, Sigismund specifically insisted on the strictest secrecy of the embassy, as the previous ones (of special significance for us is the embassy of Sheikh Ahmad's brother Kojak) were captured by the Crimeans.

³ This name of the Polish monarch (and also of the Polish and Ukrainian lands) was quite widespread in Ottoman, Crimean and Central Asian sources. See for example: [Ötemiş Hajji, 1992, p. 41a, p. 96 of the translation], see also the excursus by V. Grigoriev [Grigoriev, 1987, p. 133]. For example, Evliya Çelebi used the name the 'krol (king)' country to call the Ukrainian lands, which were in the Polish possession [Evliya Çelebi, 1996, pp. 197, 214, notes 80 and 311]. See also: [Oeuvres, 1949, pp. 115–162].f

⁴ Code E. 1308 (1301/2). For corrections to the translation and additions to the description, see: [Ostapchuk, 1987, pp. 262, 269].

¹ Sigismund (In Polish Zygmunt) I the Old Casimir (1467–1548), King of Poland from the Jagiellon dynasty from 6 December 1506 to 1545, the Grand Duke of Lithuania (from 20 December 1506 to 1544).

Most likely, Sheikh Ahmed's long stay in Lithuania weighed heavily on both the Lithuanians and the prisoner himself. It was useless to keep the khan in captivity and complete military inactivity, because the longstanding threats directed to the Crimea became less and less persuasive (threats must be supported by evidence, otherwise they mean absolutely nothing). On the other hand, if Sheikh Ahmed were to be released, Lithuania would have no more levers of influence (except perhaps for relatives held hostage) and guarantees of his peaceful attitude towards Lithuania, which had conflicts with the Crimea. In any case, in the early 1520s, Lithu-

ania resigned itself to the necessity of releasing the khan¹. The khan was released to his homeland in 1527, and apparently soon died².

After the collapse of the Throne Possessions and the death of Sheikh Ahmed, the spectrum of Ottoman interests in the post-Golden Horde space narrowed significantly. Having created a kind of buffer territory in the form of the Crimean Khanate between his own possessions and the remote northern lands, the Ottomans left the role of intermediary in diplomatic relations with the successors of the Golden Horde to the Crimean khans, themselves remaining absolutely indifferent to their fate.

§ 4. Relations between the Tatar States and Poland and Lithuania

Dariusz Kolodziejczyk

The nature of relations between the Golden Horde and Lithuania (which since 1386 had been united with Poland because of Jagiello's election to the Polish throne) changed after 1395, when Tokhtamysh lost his throne due to the invasion of Aksak Timur and had to seek sanctuary in the Grand Duchy of Lithuania. He turned from a magnificent monarch with pretensions of becoming Lithuania's overlord into a refugee asking for help. Grand Prince Vytautas, who held autonomous power in Lithuania according to a treaty with King Jagiello, decided to restore Tokhtamysh to the throne of the Golden Horde and dethrone Temür Qutlugh, the protege of Aksak Timur. According to the grandiose plan of Vytautas, he would become the actual overlord of the Golden Horde and the most powerful monarch in Eastern Europe. A Russian chronicler, recalling his plans, put the following declaration in Vytautas's mouth: "Let us go to capture the Tatar lands, defeat Tsar Timur Kutluy, divide his possessions, money, and estates, and make Tokhtamysh the tsar in the Horde, and in Caffa, in Azov, in the Crimea, in Astrakhan, in the Horde beyond the Yaik, on the territories near the Black Sea, and in Kazan. It will all belong to us and our tsar will rule there" [The Complete Collection of Russian Chronicles, 11, 1965, p. 172; Grekov, Yakubovsky, 1950, pp. 381–382]. On August 12, 1399, the Lithuanian-Tatar army, which

also included Polish knights, headed by Vytautas and Tokhtamysh, was defeated utterly at the Vorskla River at the hands of the troops of Temür Qutlugh and his emir Idegey. Tokhtamysh never returned to the throne of the Golden Horde and died in Siberia several years later, but his numerous relatives and followers still relied on Vytautas's help and stayed at his court. A part of them settled in the Grand Duchy of Lithuania, and they are still known as Lithuanian Tatars or Lipka Tatars [Abrahamowicz, 1986, p. 765]. One of Tokhtamysh's sons, Jalal ad-Din, took part in the battle of Grunwald between Polish-Lithuanian and Teutonic troops (1410), and in 1412 he ascended the throne of the Golden Horde with the help of Vytautas. As a result of infighting between Tokhtamysh's sons, several years later they lost the chance to consolidate their power in the Horde, and in the 1420s Vytautas himself supported another Chinggisid candidate, Ulugh Muhammad, who after many years of fighting for the throne of the Golden Horde settled in Kazan at the end

¹ Apparently, this was also indirectly related to the changing situation in Crimea (the death of the Crimean Khan Muhammad Giray during the Astrakhan campaign, the Nogais incursion in the peninsula, a brief taking of the throne by Gazi Giray and the Ottoman interference staged by Saadet Giray).

² For more details, see: [Zaitsev, 2004a, pp. 110–113].

of his life, laying the foundation for a new khanate which existed until 1552.

Vytautas also supported Hacı Giray, a young Chinggisid whose father arrived in Lithuania as a follower of Tokhtamysh and who was possibly born in the Lithuanian city of Trakai. After the death of Vytautas, Hacı Giray attained independent power in the Crimea and in 845 AH (1441–1442) started minting coins, creating a separate khanate on part of the territory of the Golden Horde. Before his death in 1466, Hacı Giray had friendly relations with the Polish king and the Lithuanian Grand Prince Kazimir [Kołodziejczyk, 2011, pp. 11–16]. The memories of the help which Tokhtamysh and his sons and then Hacı Giray received from Vytautas was a legitimate motif of old friendship in the correspondence between the Crimean khans and Lithuanian-Polish Jagiellons, in which we often find mention that the exiled Chinggisids "were always guests in the Lithuanian state before the Grand Prince Vytautas" [Kołodziejczyk, 2011, p. 595]. In their patents sent by Jagiellon, the Crimean khans confirmed the assignment of the Russian lands to Vytautas by Tokhtamysh in return for hospitality, although in the 16th century this was a fiction and the "assigned" lands were beyond the control of the Crimean khans. In 1454 with the help of Kazimir, Hacı Giray defeated Sayid Ahmad, who remained a Lithuanian captive until his death [Kołodziejczyk, 2011, p. 13].

In the 1470s, the grandson of Temür Qutlugh, Ahmed, whose state is called "The Great Horde" in modern historiography and "the Volga Horde" in medieval Lithuanian sources, on the one hand, and the ambitious son of Hacı Giray, Crimean Khan Mengli Giray, on the other hand,

Battle between the Lithuanians and Tatars. Miniature of the Polish chronicle. (16–17th centuries)

were fighting for the legacy of the Ulus of Jochi in Eastern Europe. At the beginning, it seemed that Mengli Giray would maintain friendly relations with Vilnius, but Grand Prince Kazimir angered the Crimean khan by entering into an anti-Moscow union with his rival Ahmed. In response to this, in 1474, Mengli Giray entered into an alliance with Ivan III [Khoroshkevich, 2001]. As a result, the Crimean Tatars devastated the lands of Lithuania and southeastern Poland many times (for instance, in 1498).

On the other hand, the Jagiellons failed to derive any benefits from the alliance with the Great Horde. In 1480, when Khan Ahmed came to the Ugra River to attack Moscow with the Lithuanians, Kazimir failed to muster an army, and his ally returned home empty-handed. In 1501, this scenario was repeated when Sheikh Ahmed, son and successor to Ahmed, waited fruitlessly for his Lithuanian ally because the Grand Prince Alexander, Kazimir's son, was

busy securing the Polish throne after the death of his brother, John Albert. Spending a severe winter in the Dnieper steppes, the army of Sheikh Ahmed was completely destroyed by troops of Mengli Giray at the Sula River, and the surviving warriors submitted to the Crimean khan. After unsuccessful attempts to muster a new army, Sheikh Ahmed arrived in Kiev, where he was arrested by his former ally and exiled to Vilnius. He was only released in 1527 and spent the last year of his life on the throne of the Astrakhan Khanate [Zaitsev, 2003; Kołodziejczyk, 2011, pp. 577–578].

Paradoxically, the collapse of the Great Horde eased tensions in the relations between Lithuania and the Crimea. Mengli Giray was no longer afraid of being surrounded by Lithuania and the Great Horde, and the arrest of Sheikh Ahmed became an important argument in conversations with the khan, who was afraid that his sworn enemy might be released. On the other hand, Mengli Giray did not need Moscow as an ally against the Great Horde anymore, and Moscow's plans to subdue the Kazan Khanate started disturbing the khan, who considered himself the legal heir of the rulers of the Ulus of Jochi. All these reasons led to changes in alliances and a rapprochement between the Crimea and Lithuania. Several years later, Mengli Giray avoided taking sides between Vilnius and Moscow, concluding a peace treaty with Sigismund in 1507 and with Vasily III in 1508, while the Crimean horsemen continued devastating the lands of both neighbors. Finally, in 1512, Mengli Giray agreed to send his grandson Jalal ad-Din to Vilnius as a distinguished hostage, and the Polish-Lithuanian side agreed to send 15,000 golden coins to the khan every year, one half from Lithuania and the other one from Poland, so that he would maintain the "old friendship" and wage war against Moscow and other enemies of the Jagiellons in return. The exchange of peace treaties between the khan and King Sigismund, separately for Poland and Lithuania even though the same monarch ruled there, took place in 1513–1514 [Kołodziejczyk, 2011, pp. 37–49]. Although Mengli Giray died the next year, his son and successor Mehmed Giray renewed the union, and in 1515 the Tatar-Lithuanian forces cooperated in the invasion

of Moscow's outlying territories. After a temporary crisis in Crimean-Lithuanian interrelations in 1518–1519, the union and peace were renewed again, and King Sigismund, who was then at war with the Teutonic Order, observed with relief the Tatar military campaign against Moscow in 1521, in which a Lithuanian contingent also took part.

The annual "pominki" which the Polish-Lithuanian side sent the Crimean khan, albeit on an irregular basis, from 1512 almost until the end of the 17th century (the last time was in 1682) were considered in Vilnius and Krakow to be voluntary payments for military help against Moscow and other royal enemies, but in the Crimea they were considered tributes. In the correspondence of the khan, they were mentioned as "gifts" (*bölek*, *hedaya*, *pişkeş*) and "treasury" (*hazine*) but sometimes as "taxes" (*vergü*), "tribute" and even the as the annual tribute (*cizya*) which was to be paid by non-Muslim subjects to Muslim monarchs according to the Quran. For example, in 2002, Mehmed Giray rejected the invitation of Sultan Suleiman for the Tatars to attack Poland, arguing that "some time ago the Polish king sent his ambassador to this humble servant (i.e., the khan) and, so that this country would not be subject to raids, promised to pay annual tribute (*cizya*) equaling fifteen thousand florins (golden coins), and we made a vow (*yemin*) and reconciled with each other" [Lemercier-Quelquejay, 2009, p. 55; Kołodziejczyk, 2011, pp. 59, 445–446, 497–499, 504–506]. Judging by the example above, paying these "pominki" to the Tatars also played an important role in Polish-Ottoman relations. For Islamic lawyers, it eased the legitimization of the "eternal peace" which bound the Polish kings and Ottoman sultans starting in 1533. Although it was useful for both sides, meaning the political cooperation of the Jagiellons and the Ottomans against the Habsburgs, such perpetual peace between Muslim and Christian monarchs was prohibited by Sharia unless the Christian monarch agreed to pay tributes. Although Polish kings refused to pay tributes to the sultan, they sent payments to the Crimean khan, whom the Ottomans had considered their vassal since 1475. It was not by chance that an article on giving the khan tra-

ditional gifts (*'adetler*) every year as a condition of maintaining peace was included in all charters of treaty sent to the Polish kings by the Ottoman sultans between 1553 and 1678. Only the Treaty of Karlowitz (1699) revoked this article and prohibited Tatar raids on the territory of Poland even if the king refused to send the "pominki" [Kołodziejczyk, 2006, pp. 125–136].

The death of ambitious Mehmed Giray, who had for a time united the main part of the territory of the former Ulus of Jochi, and the internal struggle for his legacy in the Crimea urged the Polish-Lithuanian court to change its policy. Sending gifts to the Crimea was suspended, in 1523 Lithuanian troops burnt Islamkermen, a town situated in the Lower Dnieper region, and in 1527. Sheikh Ahmed was released from captivity and ascended the throne of the Astrakhan Khanate, cooperating with the Nogais against the Crimea. The Polish-Lithuanian court supported Crimean malcontents, first of all Islam Giray, who fought for the throne first against Saadet Giray and then against Sahib Giray from 1524 until his death in 1537. Naturally, these steps led to further Tatar raids, but the khans could not react forcefully enough because of infighting, and even the siege of the Cherkases by Saadet Giray Khan (1532) turned out to be unsuccessful [Cherkas, 2006, pp. 151–198].

The policy of the Sublime Porte, which had been at "eternal peace" with Sigismund since 1533, and the opportunity of creating a new alliance against Moscow which appeared after the death of Vasily III in the same year, influenced the reconciliation between the king and the khan. The peace treaty and the alliance were renewed in 1535, which affected the anti-Moscow campaign in the same year. Gomel and Starodub were conquered by Lithuanians, and the power of the Girays in Kazan was restored. Although the king soon became reconciled with Moscow, the peace treaty with the Crimea was continued, and in 1542 Lithuanian ambassador Ventslav Mikolaevich, the author of a famous description of the Tatars published in 1615 in Latin under the pseudonym Michalon Lituanus, went to the Crimea [Dmitriev et al., 1994, pp. 14–25].

In the first half of the 16th century, the presence of the Ottoman Empire on the North Black

Sea Coast became more evident. In 1538 the Ottomans took the castle of Jankermen (Ochakov), built in 1494 by Mengli Giray, from the Crimean khan, and in 1551 they removed Sahib Giray, whom they suspected of striving to obtain greater independence from the Sublime Porte, from the throne. The new khan, Devlet Giray, started his reign with a raid on Lithuanian lands, where he conquered and burnt Bratslav, but soon he became reconciled with the king in the connection with the threat caused by the campaign of Ivan the Terrible on the Volga. Although the alliance between the Crimea, Poland, and Lithuania was renewed, Kazan, Astrakhan, and the Nogai Horde continued to submit to Moscow between 1552 and 1556. Soon, Crimean-Lithuanian relations deteriorated again because of the activities of Cherkas village head and Cossack headman Dmytro Vyshnevetsky, who continually attacked the Tatar-Turkish borderlands.

It is hard to speak of any coordination of military actions during the Livonian war (1558–1583), although the both the Lithuanian state and the Crimean Khanate were at war with Moscow. Among the reasons for the absence of military cooperation are the talented diplomacy of Moscow, which managed to conclude truces with the Crimea several times; the absence of part of the Tatar forces, which were forced to take part in Ottoman campaigns against the Habsburgs (1566) and the Safavids (1578–1583); and disagreements between the Tatars and the Turks during the Astrakhan campaign of 1569, seen by Andrey Taranovsky, who was invited there as an observer from an allied country. Although the Tatars were concerned about the expansion of Moscow in the Volga Region, they were also afraid of Ottoman hegemony threatening the self-government of the Crimea.

In 1569, on the eve of the death of the last Jagiellon, the personal union of Lithuania and Poland was replaced by a real one. Some time earlier, Sigismund II August separated Ukrainian provinces from Lithuania and joined them to the Polish Crown to break the Lithuanian opposition. Thus Lithuania lost its common border with the Crimea, and after that the Crimean policy of the Polish-Lithuanian Commonwealth was shaped first and foremost by the Polish chancellery and Polish hetmans.

The reign of Gazi II Giray (1588–1596 and 1597–1607), one of the most outstanding Crimean khans, coincided with the 15-year Ottoman-Habsburg war (1593–1606) in which the Tatars took part and crossed Moldavia almost every year on their way to the Hungarian front. The interests of the Rzeczpospolita, the Sublime Porte and the Crimea crossed in Moldavia, but when the armies of both (or more accurately, all three) sides met near Cecora, they reached a compromise and established a *de facto* condominium for several years, placing Ieremia Movilă on the Moldavian throne [Kortepeter, 1972, pp. 142–146; Kołodziejczyk, 2011, pp. 111–112, 512]. Although the khan always blamed the Polish king for Cossack raids and delinquencies in the payment of *pominki* and the Polish side blamed the Tatars for devastating Ukraine, their relations were still relatively peaceful. In this period, Polish ambassadors traveled to the Crimea; they composed valuable notes on the inhabitants of the peninsula and the ceremonial of the khan's palace: Martin Broniowski (trips in 1578, 1584, 1587, 1591–1592) and Lavryn Pisoczynski (1601–1603) [Broniowski, 1595; Broniowski, 1867; Pułaski, 1911].

In the early 17th century, at the beginning of the Polish intervention in Moscow, Tatar raids in Moscovia recommenced. Although Alexey Novoselsky thought that these raids were proof of the existence of a Crimean-Polish alliance against Moscow [Novoselsky 1948, pp. 50–55], other authors emphasized that the Tatars carried out raids against Poland at the same time. Their raids against Moscow should not be explained by the existence of a political alliance, but by the desire to derive benefit from the weakening of Moscow's defenses. Dmitri Liseytssev claimed that if there was any alliance at that time, it was between the khan and Vasiliy Shuyskiy [Liseytssev, 2006, pp. 265, 269–271, 278]. It goes without saying that over the years of the Time of Trouble, the Tatars started worrying about the increasing hegemony of Poland in Eastern Europe, and in 1614 Khan Canibek Geray decided to conclude a treaty with Russian Tsar Mikhail Romanov [Novoselsky, 1948, pp. 83–84]. It is remarkable that the standard formula about military cooperation against Moscow which used to feature in all peace trea-

ties exchanged by the Crimean Khans and the Polish-Lithuanian monarchs between 1507 and 1609 disappeared from the documents of khans issued after 1609, to appear again in documents of the Polish-Crimean alliance concluded in 1654 [Kołodziejczyk, 2011, pp. 126, 498–500].

The second decade of the 17th century brought tensions not only to Polish-Crimean but also to Polish-Ottoman relations caused by Cossack raids in the Black Sea Region, interventions of Polish magnates in Moldavia and secret support of the Habsburgs by Polish king Sigismund III at the beginning of the Thirty Years' War. Tatar warriors supported Ottomans during the Polish-Ottoman war (1620–1621) and Khan Canibek Geray was personally involved in the Khotyn campaign organized by Sultan Osman II (1621).

After the Battle of Khotyn ended with a renewed truce, internal fighting for the khan's throne began between Canibek Geray and the allied brothers Mehmed Giray and Shahin Giray, in which the latter were temporarily striving to gain the support of the Polish king, the Zaporozhian Cossacks and even Persian Shah Abbas the Great [Baranowski, 1948a, pp. 29–31, 36–38; Kołodziejczyk, 2011, pp. 133–135]. The conflict for the Crimean throne brought the weakening of the khan's position and the growth of the role of Kantemir, a Mangyt bey who with the help of the Ottoman Porte strengthened the autonomy of the Nogais of Budjak. The invasions of Kantemir's Budjak Horde in the 1620s caused more significant human losses than the invasions of the Crimean Tatars. Only in 1628, did Canibek Geray get the throne back with the support of the Porte and exile Mehmed and Shahin Giray from the Crimea, and in 1637 the Sublime Port executed the rebellious bey Kantemir. Fearing repression from the new Crimean khan, the Budjak Nogais even strove to accept Polish protection, but this did not occur because of mutual distrust [Kołodziejczyk, 2011, pp. 147–148].

Although the internal crisis weakened the international position of the Crimean Khanate and increasingly subordinated the khans to the Ottoman sultans, this process did not stop Tatar invasions in Poland, and the weakened khans were not even capable of guaranteeing

peace. Under these conditions, after the defeat of one of the Tatar raids near Okhmatov by the great hetman Stanislaw Koniecpolski on January 30, 1644, the Polish-Lithuanian Senate decided to stop giving gifts to the khans, and the hetman and King Wladyslaw IV started planning an alliance with Moscow aimed at the destruction of the Crimean Khanate and the partition of its lands between Russia and Poland. In 1645, the king developed his plans, and he wanted the Rzeczpospolita and Russia to support Venice in its war against the Ottoman Porte, but all these military plans were destroyed due to the resistance of the Sejm. It is very ironic that the Ukrainian Cossacks, whom the king once promised Venetian money for taking part in the war, instead of striking a blow against the Crimea united with the Tatars in 1648 and started a great rebellion against Poland. According to the Treaty of Zboriv concluded in 1649 between the Polish king and Khan Islam III Giray, who took on the role of the protector of the Cossacks, the latter got significant autonomy, and the Rzeczpospolita had to recommence giving gifts to the khan [Baranowski, 1949, pp. 131–190; Baranowski, 1948; Kołodziejczyk, 2011, pp. 154–161, 954–963; Senai, 1971].

The Treaty of Pereyaslavl in January 1654, when the Cossacks accepted the patronage of the Russian tsar, brought radical changes in Crimean policy. Wary of Russian hegemony in Eastern Europe, Islam III Giray and his brother and successor Mehmed IV Giray joined a military alliance with king John Kazimir, which lasted until 1666. In this period, the Crimean Tatars helped the Rzeczpospolita not only against Russia, but also against Sweden, and their participation in the second Northern war (1655–1660) led to the activation of diplomatic contacts with Sweden, Brandenburg and even Denmark. The widespread use of Crimean clothes, weapons, and horse harnesses among the Polish gentry, on the one hand, and the use of the Polish language in the diplomatic correspondence of the Crimean chancellery, on the other hand, are evidence of Polish-Tatar cultural ties [Baranowski, 1957; Augusiewicz, 2009; Wójcik, 1966; Kołodziejczyk, 2011, pp. 163–174, 237–239].

The partition of Ukraine between Poland and Russia established by the Truce of Andrusovo (January 30/February 9, 1667) angered not only the Cossacks, but also the Tatars, wary of an alliance between its Northern neighbors. In 1667, the Tatars and the Cossacks carried out a joint military campaign against the Rzeczpospolita which ended with the compromise treaty of Pidhaitsi (October 16), but soon the Sublime Porte, freed from the war against Venice after the conquest of Crete (1669) and deciding to activate its policy in Eastern Europe under viziers from the Keprulu family, interfered in the conflict. The Ottoman-Polish war began in 1672 with the conquest of Kamianets-Podilskyi by the Turks and lasted until 1676. Then, after a short break in which the Turks and Russians were struggling for Ukraine, the war began again in 1683, but that time the Rzeczpospolita was part of a broad anti-Ottoman coalition, including the Habsburg Empire, Venice and, starting in 1686, Russia. The Crimean Tatars took part in Ottoman military campaigns, but the khans suggested many times that an agreement be arrived at between the sides, at first fearing that the strengthening of the position of the Sublime Porte in Eastern Europe could limit the autonomy of the Crimea, and later, after Ottomans' defeats in the war with the coalition forces, fearing the conquest of the Crimea by Russia.

The Treaty of Karlowitz (January 1699), in which Tatar diplomats did not participate, forced the khan to give up the traditional gifts and prohibited Tatar raids in Polish lands. The Ottoman sultan guaranteed the fulfilment of these conditions by the khan, who was not considered a sovereign monarch in the text of the treaty. The weakening of the international position of the Rzeczpospolita and the Crimean Khanate limited the ability of both powers to make direct contacts and carry out independent active policies, and Russia's annexation of Zaporozhie led to the geographical "distancing" of Poland and the Crimea. Wary of Russian expansion, the Tatars emphasized the patronage of the Ottoman Porte, and the foreign policies of the Rzeczpospolita were paralyzed by the presence of Russian troops and the constant confrontation of supporters and adversaries of

a Russian orientation. Despite this, the Poles and Tatars made attempts to cooperate against the Russian Empire, which can be seen in the examples of Khans Devlet II Giray and Kaplan Giray supporting Stanislav Leshchinsky's followers (1709–1714) or Khan Kyrym Giray supporting the Bar Confederation (1768–1769). After the Turkish-Russian war of 1736–1739, during which the army of Field Marshal Minikh burnt Bakhchysarai, Khan Selyamet II Giray not only restored the palace of his ances-

tors, but also tried to revive the tradition of the Chinggisids, and in 1742 he sent a decree to the Polish king consisting of seven articles of a new peace [Kołodziejczyk, 2011, pp. 202–203, 1001–1008].

International contacts between the Crimea, Lithuania, and Poland dating from the 15th century were interrupted by the annexation of the Crimean Khanate by Russia in 1783, only a few years before the last partition of the Rzeczpospolita.

CHAPTER 2

The Formation of the Late Golden Horde States

§ 1. The Shaybanid Uzbek Khanate—The State of the Nomadic Uzbeks

Alexander Nesterov

The Shaybanids were the descendants of Shibān, the fifth son of Jochi Khan. The exact borders of the Ulus of Shibān are not quite clear. With the exception of the works of Abu al-Ghāzī Khan and Mahmud ben Valī, sources do not provide any information on the possessions of Shibān and his descendants. According to Abu al-Ghāzī Khan, Batu Khan allotted an extensive domain in the Southern Urals and Kazakhstan to Shibān in 1238: "... the yurt, in which you will live, will be between my yurt and the yurt of my elder brother Ichen: in the summer live on the eastern side of the Yaik, along the rivers Irgiz, Or and Ilel up to the Ural mountain, and during the winter live in Arakum, Karakum, and by the banks of the Syr Darya, by the estuaries of the Chu Su and Sary Su rivers" [Abu al-Ghāzī, 1906, p. 160]. Similar information can be found in works by Mahmud ben Valī [Akhmedov, 1965, p. 41]. Thus, according to these sources, the initial possessions of Shibān included only the territories of the Southern Urals and Western Kazakhstan. These lands were most likely held by the descendants of Shibān as well. Their rule had to be confirmed by the leaders of the Jochi state's right wing. For

instance, Mengu Timur Khan confirmed the possession of this area by Shibān's son Behadur [Abu al-Ghāzī, 1906, p. 152]. At the same time, the procedure for the confirmation of the rulers of the Shaybanid Ulus indicates that it was part of the right wing of the Jochid state.

Unfortunately, sources give almost no information on the history of the Shaybanids in the second half of the 13–15th century (see: [Kostyukov, 2010, pp. 88–109]. One can only suppose that the Shaybanids gradually incorporated the territories of modern Kazakhstan and Western Siberia into their possessions. Sources only enumerate the rulers of the Shaybanid Ulus without giving any information on their activities. According to Abu al-Ghāzī Khan and Mahmud ben Valī, Bahadur, Jochi Buka, Badakul (Badagul), Ming Timur and Pulad (Fulad) were the successors of Shibān. According to Mahmud ibn Valī, Jochi Buka extended the territory of the Ulus of Shyban significantly ("he incorporated many countries into the vilayets blessed by God") [Materials, 1969, p. 347]. Abu al-Ghāzī Khan reports that after the death of Pulad, his sons Ibrahim (Aba-oglan) and Ar-abshakh divided their father's possessions be-

tween themselves [Abu al-Ghazi, 1906, p. 162]. According to the information of Mahmud ibn Vali, the partition of the Ulus of Shyban among separate representatives of the Shaybanid dynasty was carried out earlier, after the death of Ming Timur Khan, when Ibrahim (Ibak), Ming Timur Khan's son, received his domain [Materials, 1969, p. 348].

By the beginning of the 15th century, the territory occupied by Shaybanid khans and sultans spread from the Manghits' possessions in the southwest to the Baraba steppe in the northeast and from the mouth of the Irtysh in the North to the Aral sea in the South. This territory was divided between separate representatives of the Shaybanid dynasty. However, the development of historical events indicates that the possessions of these rulers can be considered as a single regional political entity; Shaybanid rulers, before trying to conquer any other possessions beyond the historical territory of the Ulus of Shyban, steadfastly fought for dominance among the Shaybanids.

The formation of the Shaybanid Khanate, which is also called "the state of nomadic Uzbeks" in scholarly literature, took place in the early 15th century. By that time, the territory of this state had been more or less defined: the lands of the Ulus of Shyban, bounded by the possessions of the khans of the Volga Region and the Mangyt (Nogai) emirs in the west and in the southwest, and possessions in the south in Khwarezm and on the Syr Darya neighboring those of Timur. The northern and eastern borders of the ulus were not defined; in fact, the possessions of the Shaybanids spread through steppe and forest-steppe areas of the Urals and Western Siberia from the territory of modern Bashkiria up to the Ob River. Most likely, a significant part of modern Kazakhstan was also in the hands of the Shaybanids. It should be emphasized that it was the Shaybanid Khanate that was the basis for the formation of a whole range of political entities of Turkic nations—the Tumen and Siberian Khanates, the Uzbek (Bukharan) Khanate, the Kazakh Khanate and subsequent Kazakh states [Nesterov, 2003].

The population of the Ulus of the Shaybanids consisted of various Turkic tribes dwelling in the eastern part of Desht-i Qipchaq. Accord-

ing to Masud bin Usman Quhistani, Mahmud ibn Vali and other sources, such tribes as the Burkuts, the Kiyats, the Koshchis, the Iyians, the Kungrats, the Kenegesies, the Ushuns, the Utadjis, the Naimans, the Jats, the Chimbays, the Karluks, the Durmans, the Kurkauts, the Tubais, the Mangyts, the Nukuzes, the Tanguts, the Uygurs, the Khitais, the Taimases, the Echkis, the Tuman-Mings, the Shadbakls, the Shunkarls, the Uirats, the Madjars and the Qipchaqs were subordinate to the Shaybanid rulers [Akhmedov, 1965, p. 16]. The names of the tribes show that among them were not only Turkic tribes, but also tribes of Tibetan (Tanguts), Mongolian (Kungrat, Nukuz, Kiyat) and Kidan (Khitai) descent.

Starting in the middle of the 14th century, the term "Uzbeks", which had no definite ethnic meaning at that time, was used to refer to the population of the eastern part of Desht-i Qipchaq. In descriptions of the events of the late 14th century provided in works by Muin ad-din Natanzi and Khondemir, the term "Uzbek" was used in exactly this meaning [Collection, 1941, p. 133]. Fazlallah ibn Ruzbehan Isfahani divided the Uzbeks into three groups—the Kazakh Uzbeks (اوزبكان قزاق), the Uzbeks of the Ulus of Shyban (اوزبكان شيبانى) and the Mangyts: "Three tribes belong to the Uzbeks, who are the most glorious in the possessions of Chinggis Khan. One of them is the Shaybanids, and His Majesty the Khan (Muhammad Shaybani Khan) was and is their ruler. The second tribe is the Kazakhs, who are famous throughout the world for their strength and fearlessness, and the third tribe is the Mangyts, from whom come the Astrakhan tsars. One edge of the Uzbeks' possessions borders on the ocean, the second one borders on Turkestan, the third one on Derbend, the fourth one on Khwarezm, and the fifth one on Astrabad" [Ruzbekhan, 1976, p. 62]. The term "Uzbek" acquired its ethnic meaning only in the 16th century, after Muhammad Shaybani Khan had conquered Transoxiana and created the Shaybanid Uzbek state with its centre in Bukhara.

In the early 15th century, there were several nomadic Shaybanid khanates: the area between the Ishim and the Tobol was a part of Mustafa Khan's possessions. To the West of the Ishim lay

the possessions of Ibrahim ibn Pulad, and Northern Kazakhstan was ruled by Jumaduk Khan ibn Sufi [Materials, 1969, p. 352]. After the death of Ibrahim ben Oulad, his possessions passed to his son Daulat Sheikh Oglan, who also conquered the fortress Chimgi-Tura (جیمگی تورا), which belonged to Giyas ad-din Tokhtamysh Khan in the late 14th century. Daulat Sheikh was not a powerful Shaybanid ruler: he did not even take the title of khan, unlike his rivals Mustafa Khan and Jumaduk Khan and his elder brother Hizr Khan, whose authority spread through the lands of the Southern Urals.

In 1426 Daulat Sheikh died, and his possessions came under the control of the emirs of the Burkuts. The heir to the possessions of Daulat Sheikh Oglan, Abu'l-Khayr Ubaidallah Sultan (born in 1412), was sent to Jumaduk Khan and stayed in his possessions [Materials, 1969, p. 141]. Abu'l-Khayr Sultan participated in many military campaigns of Jumaduk Khan. In 1428, Abu'l-Khayr Sultan participated in the campaign of Jumaduk Khan against the Mangyts, in the course of which Jumaduk Khan was defeated and killed. Abu'l-Khayr Sultan was captured by Sagyr Usman Bek the Mangyt [Materials, 1969, p. 142], but he was not killed. On the contrary, he got the opportunity to establish good relations with the Mangyt emirs, which played an important role later when Abu'l-Khayr was struggling for dominance among the Shaybanids.

The support of the Mangyt emirs became very important to Abu'l-Khayr Sultan almost immediately after the death of Jamaduk Khan. Abu'l-Khayr started his activities with an attempt to subjugate lost possessions of his father Daulat Sheikh Oglan with their centre in Chimgi-Tura. With the help of one of Mangyt emirs, Alash Bahadur, Abu'l-Khayr Sultan collected a significant band and headed to Chimgi-Tura.

The Burkut emirs Kibek Hodja Bek and Adad Bek, who were ruling in Chimgi-Tura, submitted to him without resistance [Materials, 1969, pp. 144–146]. In Chimgi-Tura, in spring 1429, Abu'l-Khayr Sultan took the title of khan (Abu'l-Khayr Ubaidallah Khan, أبو الخير أوبيد الله خان). According to Mahmud ben Vali, Abu'l-Khayr Khan was supported by a significant part of the upper aristocracy of Desht-i Qipchaq—about 200 heads of tribes

and clans, as well as sultans and olgans from among the descendants of Jochi Khan [Akhmedov, 1965, p. 46].

Abu'l-Khayr Ubaidallah Khan ibn Dawlat Shaykh ibn Ibrahim ibn Pulad is considered the first khan of the Shaybanid Uzbek Khanate (the so-called State of the Nomadic Uzbeks) which took shape on the territory of Western Siberia and Kazakhstan. At the same time, Abu'l-Khayr Khan may be considered the founder of the Uzbek Shaybanid dynasty, which was established in 1500 in the person of Muhammad-Shaybani Khan in Mawarannahr, where it reigned up until the 16th century.

After restoring Shaybanid power over Chimgi-Tura, the necessity of uniting the isolated Shaybanid uluses became the primary goal for Abu'l-Khayr. He immediately declared his claim to supreme power, and after minting coin in Chimgi-Tura demanded submission from other Shaybanid khans and sultans. In fact, the program of Abu'l-Khayr Khan's activities included not only the restoration of the united Shaybanid ulus, but also the restoration of the Jochid state on the territory of Desht-i Qipchaq, from the Volga Region to Eastern Kazakhstan.

Chimgi-Tura became the initial centre of the new Shaybanid state. The city of Chimgi-Tura was a fortress typical for the region which was built at the confluence of two rivers—the Tavda and the Tumenka. Generally speaking, settlements of the Siberian yurt left by the Turkic population were built high up on the steep banks of rivers or lakes. Such an arrangement made it possible to leave at least one side of the fortress unfortified; natural obstacles such as cliffs and ravines played the role of natural fortifications. Usually, settlements had a fairly complex system of ditches and ramparts; two ramparts were almost a mandatory element of the Siberian fortified settlement. Even in provincial forts the ramparts and ditches were quite solid: for example, in the Tumenka settlement the flooded ditches are 2–2,5 meters deep and 9 meters wide; in the Chinyaev settlement the ramparts are 1.5 meters high and approximately 5 meters wide. Perhaps, ditches in many settlements were filled with water. Embankments were additionally strengthened by wooden fences.

On the territory of the settlements and near them, there were dwellings, as a rule semi-dug-outs or shallow dugouts with log or plank walls reinforced with columns. In the centre of the dwellings were fire pits. The walls of the houses were possibly daubed with clay, as traces of clay coating on the walls are preserved in many settlements. Most likely, there were no buildings made of more durable materials in almost all the settlements, except for Chimgi-Tura and Isker. Significant numbers of bricks from the 15–16th centuries were found in Chimgi-Tura and Isker. Unfortunately, there have been no archeological studies of Chimgi-Tura with the use of modern methods; nowadays the city is partly degraded by rivers and partly under the buildings of Tyumen.

Chimgi-Tura remained the main residence of Abu'l-Khayr Khan until the centre of the state was moved to Sygnak in the south. The ruins of Sygnak studied by A. Yakubovsky [Yakubovsky, 1929] show that Sygnak was a typical town-fortress of Central Asia, a large centre of trade and handicrafts. The town was fortified with rammed clay walls. Inside it, there were numerous buildings—official buildings, private houses, caravanserais, workshops, etc. Archaeological finds on the territory of Sygnak show that artisan production mainly focused on the needs of the nomadic population of the steppe: the inhabitants of the town produced various metal items, including jewelry; weapons; leather items; and various carts, wagons, etc. The central fortification of Sygnak, the ark, was occupied by the khan's court.

One of the most mysterious buildings of the Southern Urals—the so-called "Tower of Tamerlane"—can tentatively be connected with the time of the formation the state of Abu'l-Khayr Khan. The Tower of Tamerlane is situated near the village of Varna in the Chelyabinsk region. It is a square building made of large square bricks crowned with a 16-meter-high 12-sided pyramidal tower. The monument was excavated by E.Y. Petri in 1889 [Salnikov, 1952, pp. 144–146] and was studied in detail by an expedition from Chelyabinsk University headed by S.G. Botalov in 1982–1984. Several burials carried out according to a Muslim ritual and without any belongings were found inside

the monument. According to S.G. Botalov, the monument dates to the 14–15th century, most likely the first half of the 15th century. The architecture of the monument is reminiscent of the buildings of Urgench. To whom "Tamerlane's Tower" belonged and what its purpose was is one of the most complicated questions relating to cult monuments of the Siberian yurt. The local population has no legends related to the given monument; this is connected with the complete displacement of the Turkic population from the area there the monument is situated. The name "Tamerlane's tower" is merely conventional. No texts were preserved in the tower. Dating this building to the time of emergence of the Shaybanid Khanate as an independent state, however, does not enable us to conjecture as to how and why this building was erected. There is no information about "Tamerlane's Tower" in written sources.

The traveling headquarters of the khans, called Ordu-Bazar, were the real capital of the Shaybanid state. This term was first encountered in the state of the Shaybanids in connection with the conquest of the Lower Volga Region in 1431. The traveling residence accompanied the khan literally everywhere; it was in this traveling residence that Abu'l-Khayr Khan's successor, Sheikh Haider Khan, was killed (1469).

The submission of Chimgi-Tura did not signify the complete formation of the Shaybanid Khanate. Abu'l-Khayr Khan continued uniting Eastern Desht-i Qipchaq.

Abu'l-Khayr's main rival became Mahmud Khodja Khan ibn Kaan-bey ibn Ilbak ibn Ming Timur Khan, Abu'l-Khayr's second cousin once removed, whose possessions were situated in the south of the Tobolsk region. According to Abd al-Razzaq Samarqandi, Mahmud Khodja Khan was one of the main contenders for supreme power in the Shaybanid Ulus. In 1430, on the banks of the Tobol river, Mahmud Khodja Khan was defeated, captured and killed by Abu'l-Khayr's forces. As a result of this victory, the entire Western part of the Siberian yurt, from the confluence of the Ob and the Irtysh Rivers in the North to the Mangyt region in the south—the former possessions of the Shaybanids Daulat Sheikh Oglan, Jumaduk Khan and Mahmud Hodja Khan—came under

the control of Abu'l-Khayr Khan. Abu'l-Khayr Khan married Mahmud Hodja Khan's widow Aganak-Bika to formalize the victory over his main rival [Materials, 1969, pp. 147–148]. According to Mahmud ben Vali, after Mahmud Hodja Khan had been defeated, Abu'l-Khayr Khan declared his independence from the descendants of Tuq Timur Khan, who considered themselves the supreme rulers of the Jochid state [Akhmedov, 1965, p. 48]. From that time, Abu'l-Khayr Khan's cousin Bahtiyar Sultan, son of Khizr Khan ibn Ibrahim, became his main supporter. Bahtiyar Sultan usually headed the vanguard of Abu'l-Khayr Khan's army during military actions.

The desire to establish his supreme power over the entire Jochid state prompted Abu'l-Khayr to conquer the territories of Central Asia and the Volga Region.

In 1431, immediately after the defeat of Mahmud Hodja Khan, Abu'l-Khayr organized a military campaign in Khwarezm. The Timurid ruler of Khwarezm Emir Ibrahim and his troops did not resist the attacking troops of Abu'l-Khayr Khan and surrendered Urgench, the capital of Khwarezm [Materials, 1969, pp. 149–151]. According to the report of Masud ibn Usman Kuhistani, after the capture of Urgench, Abu'l-Khayr Khan "ordered that the treasury which the previous rulers had collected with such labor and trouble be opened, and told two of the great emirs to sit at the doors of the treasury, and all the commanders, the people from the khan's suite and other soldiers to enter the treasury in pairs...each took as much as he could carry, and they went out" [Ibid, p. 152].

However, Abu'l-Khayr Khan's stay in Khwarezm turned out to be brief. Soon, the khan's troops left Urgench and Khwarezm in general. The departure of Abu'l-Khayr Khan's troops from Khwarezm had several causes. The first, one mentioned by all sources was a plague caused, in the opinion of the author of "The History of Abu'l-Khayr Khan", by the "dampness of the air" in Khwarezm [Ibid]. Other reasons for leaving were an increase in the activities of Ahmad Khan and Mahmud Khan, the rulers of the Lower Volga Region, and the threat of invasion from the troops of Emir Shahruh, the head of the Timurid state [Akhmedov,

1965, p. 51]. The military and political situation forced Abu'l-Khayr Khan to eliminate the threat coming from the Volga Region before trying to strengthen his position in Transoxiana.

In 1431–1432, Abu'l-Khayr Khan moved his troops to the Lower Volga Region against Ahmad Khan and Mahmud Khan. The battle between the adversaries took place at Ikri-tub, the location of which has not been established [Ibid, p. 52]. The rulers of the Great Horde were defeated and fled; Abu'l-Khayr Khan occupied their main camp, Ordu-Bazaar, and minted coins there as the supreme khan of the Jochid state [Materials, 1969, pp. 154–156; Nesterov, 2001, p. 275]. Nevertheless, one cannot assert that Abu'l-Khayr established control over the Lower Volga Region. Apparently, Ahmad Khan and Mahmud Khan were hiding in Hajji Tarkhan, and the authority of Abu'l-Khayr Khan extended only to the territories east of the Volga River.

The interference of Abu'l-Khayr Khan in the affairs of the Lower Volga Region was brief and did not play a significant role in the history of the fierce struggle for the throne of Sarai taking place in the first decades of the 15th century. Most likely, the power of Abu'l-Khayr extended for a short time to the area east of Hajji Tarkhan, and he did not claim the more northerly lands. The campaign in the Lower Volga Region had another aim – to eliminate the threat coming from the khans of the Great Horde and present himself as the lawful supreme ruler of the Jochid state.

The invasion of Abu'l-Khayr Khan in the Lower Volga Region and the victory over Ahmad Khan and Mahmud Khan led to an abrupt increase of internal fighting between the Jochid rulers of the region. Feuds between rulers of the Volga Region led to the increasing influence of Abu'l-Khayr Khan in the region, and this influence did not need to be constantly reinforced with military might. During this period, Abu'l-Khayr Khan was trying first and foremost to extend his possessions at the expense of other Shaybanid rulers of Western Siberia who had remained independent. In particular, the Shaybanids of Siberia (Hajji Muhammad Khan), Mustafa Khan, and the Tuq Timurids Jani Beg Khan and Giray Khan retained a certain amount

of independence. The most important adversary of Abu'l-Khayr Khan was Mustafa Khan ibn Musa ibn Kiran ibn Bayankejar. In 1428 Mustafa Khan supported Abu'l-Khayr in his struggle for Chimgi-Tura. However, after the campaign of 1430–1431, Mahmud Khodja Khan's death, coupled with the proclamation of Abu'l-Khayr as the Jochids' supreme khan, such a powerful neighbor was of extreme concern to Mustafa Khan, as he clearly understood that Abu'l-Khayr could attack him. Mustafa managed to draw over to his side Waqqas-bey, the ruler of the Manghit ulus and one of the strongest nomadic feudals in Abu'l-Khayr's state. His support had been essential in Abu'l-Khayr's military successes of 1428–1431. The emergence of the coalition between Mustafa Khan and the Manghits jeopardised the integrity of Abu'l-Khayr Khan's dominions, and he immediately came out against Mustafa Khan. The decisive clash occurred in 1446 at the Atbasar, a tributary of the Ishim. Mustafa Khan was defeated and fled to the Mangyshlak Peninsula into the possessions of the Manghits [Materials, 1969, pp. 157–158]. Apparently Mustapha Khan acknowledged the superior power of Abu'l-Khayr Khan, and all his further actions were taken under the latter's authority.

Mustafa Khan's rout signified the elimination of the last independent Shaybanid khanate on the territory of the Siberian Yurt. From then on, the entire yurt was controlled by Abu'l-Khayr Ubaidullah Khan. However, Abu'l-Khayr did not dare in this situation to start a conflict with the Manghits, instead opting to pretend to have forgiven Waqqas Bey for building an alliance with Mustafa Khan, and then again appointing him as the commander of the khan's troops. Waqqas-bey was one of the participants of Abu'l-Khayr's Turkestan campaigns, and as a result became the khakim of Uzgend.

After Mustafa Khan had been defeated, Abu'l-Khayr Khan continued fighting for Transoxiana. The task of Abu'l-Khayr Khan was simplified by complications in the situation of Emir Shahruh and the political fragmentation of the possessions of the Timurids. The fortress Sygnak at the Syr Darya River was chosen as the target of a campaign in 1446. According to "The History of Abu'l-Khayr Khan", "the

hakim of the city of Sygnak saw the number and strength of the khan's troops, and went out to him with submission and obedience and handed the city over to the emirs and servants of the khan" [Ibid, p. 159]. The city of Suzak and the fortresses Ak-Kurgan, Arkuk and Uzgend, situated on the left bank of the Syr Darya, all submitted to Abu'l-Khayr simultaneously. Abu'l-Khayr moved his headquarters to Sygnak, permanently leaving Chimgi-Tura. Most likely, after that, Chimgi-Tura came under the authority of Hadji Muhammad Khan and became the centre of the Tyumen Khanate, the state of the Siberian Shaybanids.

Mustafa Khan supported the military campaign of Abu'l-Khayr Khan with active operations in Khwarezm. He managed to subjugate the southwestern part of Khwarezm, including Urgench. Mustafa Khan founded a new fortress, Vazir, south of Urgench and moved a significant part of the inhabitants of Urgench there. Mustafa Khan ruled in Khwarezm until 1460/1461 and took part in war between Abu'l-Khayr Khan and the Kalmyks in 1457. Later, Mustafa Khan returned to Mangyshlak again after a rebellion of the population of Vazir, which was supported by the Kungrat tribe. His subsequent fate is unknown [Akhmedov, 1965, pp. 64–65].

The death of Emir Shahruh (1447) and the escalation of infighting in the Timurid state led Abu'l-Khayr Khan to the decision to move his troops to the Timurid capital, Samarkand, because Shahruh's successor as the supreme ruler of the Timurid state, Muhammad Taragai Ulugbek, was forced to head to Khorasan with his army. According to "The History of Abu'l-Khayr Khan", Abu'l-Khayr Khan announced that "the city of Samarkand is empty, and Mirza Ulugh Beg has headed to Khorasan and Iraq, and I want to turn the reins of my decisiveness toward the God-protected city of Samarkand" [Materials, 1969, pp. 159–160]. The army of Abu'l-Khayr Khan reached Shiraz (near Samarkand). The ambassadors of the hakim of Samarkand and Emir Jelal ad-din Bayezid visited Abu'l-Khayr Khan in Shiraz. Jelal ad-din Bayezid offered to conclude a peace treaty with the khan, referring to the fact that "Sultan Ulugbek...has done no wrong" to Abu'l-Khayr Khan [Ibid, p. 160]. One can assume that at that

time Abu'l-Khayr Khan did not feel powerful enough to try to conquer the Timurid capital, starting a confrontation with the main forces of the Timurid state, and decided to back down. However, from that time on Abu'l-Khayr Khan constantly interfered in the domestic affairs of the Timurid state.

This interference was usually caused by internal feuds among the Timurids. For example, after Ulugbek had been killed, his son and successor Mirza Abd al-Latif tried to kill the ruler of Bukhara, Mirza Abu Said, which forced the latter to ask Abu'l-Khayr Khan for help. With the exception Masud ibn Usman Kuhistani, Central Asian sources reported that Mirza Abu Said sent a person of high standing to Abu'l-Khayr Khan to ask him for help [Akhmedov, 1965, p. 130]. The author of "The History of Abu'l-Khayr Khan" claims that Abu Said came to Abu'l-Khayr Khan personally to ask him for help in the struggle for power [Materials, 1969, p. 162]. According to the well-reasoned opinion of B. Akhmedov, only the personal request of Abu Said could influence Abu'l-Khayr Khan and lead to a situation when the khan supported one of the contenders for power among the Timurids [Akhmedov, 1965, p. 130]. Mirza Abu Said was received by the Khan. After a conference with the participation of members of the khan's house, the aristocracy and military leaders, Abu'l-Khayr made the decision to support Mirza Abu Said and head to Samarkand [Materials, 1969, p. 163]. The joint military campaign took place in summer 1451. On June 10, 1451, the ruler of Samarkand, Mirza Abdullah, was defeated and killed. Samarkand came under the control of Abu Said, who took measures to prevent the troops of Abu'l-Khayr Khan from entering the city, fearing the sacking of Samarkand. The daughter of Mirza Ulugbek became one of Abu'l-Khayr Khan's wives. According to the data of Masud ibn Usman Kukhastani, a khutbah in the honour of the khan was read in Samarkand, and coins with the name of Abu'l-Khayr Ubaidallah Khan were minted, but such coins are not actually known [Ibid, pp. 168–169]. Historians specializing in the epoch of the Timurids report that many Timurid emirs asked Abu'l-Khayr Khan for help many times; Muhammad Juki ibn Abd

al-Latif; Ala ad-Daul, who lived in the state of Abu'l-Khayr Khan from 1452 to 1457; Sultan Husein; and Mirza Manuchekhr were among them [Akhmedov, 1965, p. 130]. Historians report that the troops of Abu'l-Khayr Khan invaded not only Transoxania, but also Northern Iran [Ibid, 133]; however, integrating these provinces into the state of the Shaybanids was not on his agenda.

The moving of the centre of the Shaybanid state to Southern Kazakhstan turned out to be related to the formation of new structures of state administration typical for Transoxania and the Jochid state. Abu'l-Khayr Khan gave conquered provinces to members of his family and representatives of the tribal nobility. For instance, after the lands of Southern Kazakhstan had been conquered, Suzak was given to Bahtiyar Sultan, Manadan Oglan governed Sygnak, and Vakkas Biy received Uzgend [Materials, 1969, p. 159]. There were also the Tarkhan possessions (mentioned in "The Collected Stories from the Book of Victories").

The political structure of the Shaybanid state has not been sufficiently examined. The scanty information of the sources lets us know that the khan ruled the state, but he did not have absolute power; in order to organize a large-scale state undertaking, the khan had to convoke a council with the participation of the heads of tribes, members of the ruling house of the Shaybanids, and high-ranking clerics [Ruzbekhan, 1976, p. 62]. The tribes were the foundation of the state; its troops consisted of the irregulars of the tribes. Clerics had a great deal of influence (for instance, Kul Muhammed Said and Kara Said were councilors under Abu'l-Khayr Khan). Their point of view was decisive when the decision about Khwarezm was being made in 1431.

The structure of the state machinery of the Shaybanid State is unknown to us.

Among public positions mentioned are atalyks, responsible for bringing up under-age princes (sultans). The position of an atalyk corresponded to the positions of regent and tutor; atalyks governed the independent principalities of sultans until they came of age. For example, Emir Baisheikh was the atalyk of Abu'l-Khayr Khan's successor Shah Budag Sultan, and after the latter's premature death, he became the

atalyk of Shah Budag Sultan's sons Shaybani Sultan and Mahmud Sultan.

Another position mentioned in sources, *divan* (*Dualat* Hodja *Divan Koshchi* and *Yabagu Divan Uigur* are mentioned in "The History of Abu'l-Khayr Khan"), is not quite clear with regard to its functions and duties. One can conjecture that the *divan* headed a group of counselors who prepared information on certain issues for the khan. By the early 16th century, the position of "divan" had turned into the position of "the head of the divan", and was recorded as such in the Bukharan Shaybanid state.

The supreme *qadi* dealt with religious and judicial matters. These duties were performed by Kul Muhammad Said under Abu'l-Khayr Khan.

Such positions as the *ichki*, who dealt with the life of the khan's court (in the first years of Abu'l-Khayr Khan's reign these duties were fulfilled by Kongurbai Bakhadur Koshchi), and the *inak*, who was a counselor of the khan (*emirs* of the main tribes of the khanate usually became *inaks*), are mentioned in sources many times. One can assume that there were such positions in the Shaybanid state as *yasavul* (a servitor of the khan's court), *mubashir* (a messenger who delivered the orders of the khan to different regions of the state), etc. Governors with the traditional Mongol title of "daruga" were appointed to conquered territories. The governors of towns in Central Asia were called "hakims". It is stated in the sources that the majority of public positions were held by representatives of the Uigur and Koshchi tribes.

According to the sources, the troops, which preserved the structure and principles from the times of Genghis Khan and Batu Khan, played a major role in the state. They mainly consisted of the irregulars of the tribes and were divided into right and left wings. A part of the troops was the vanguard (*karavul*); the rulers of the Shaybanid state made wide use of reconnaissance units [Akhmedov, 1965, pp. 105–107].

Thus, one can say that even limited information on the state structure of the Shaybanid Khanate lets us see its gradual evolution; the Shaybanid state gradually added state structures typical for Transoxania to the state forms existing in the Jochid state.

The middle of the 1450s was a time of crisis in the Shaybanid state. In 1455–1456, nomads separated from the state of Abu'l-Khayr Khan and submitted to Giray Khan and Jani Beg Khan, the heirs of Borak Sultan, who was an adversary of Abu'l-Khayr Khan in 1420s. The nomadic sultans, whose tribes went down in history as the Uzbek-Kazakhs or the Kazakhs, were subordinate to Chagataid Isa Buka Khan, ruler of Mogolistan. Jani Beg Khan and Giray Khan are traditionally considered the founders of the Kazakh Khanate; 1465/1466 is usually considered the date of its foundation [Ibid, pp. 62–63].

The war against the Kalmyks had a great influence on the further development of the Shaybanid state. By the middle of the 15th century, the Kalmyks already controlled the northern regions of Mogolistan, the Chu River valley and Semirechye. In spring 1457, the troops of the Kalmyks, headed by Uz Timur Taisha, appeared on the banks of the Syr Darya and headed to Sygnak. The bloody battle between Abu'l-Khayr Khan and the Kalmyk troops took place at Nur-Tuqay, not far from Sygnak and the ancient necropolis of the khans of the Blue Horde, Kok Kashane. Not only Abu'l-Khayr and his closest comrades such as Bahtiyar Sultan took part in the battle, but also Shaybanid rulers only acknowledging the supreme authority of Abu'l-Khayr Khan, such as Mustafa Khan, who ruled in Khwarezm, or Ahmad Sultan, who ruled in the lower reaches of the Amu Darya. The battle ended with the defeat of Abu'l-Khayr Khan's troops. It was the first significant defeat in all the period of his reign. Bahtiyar Sultan and Ahmad Sultan were killed during the battle, and Abu'l-Khayr Khan and the rests of the troops were forced to hide in well-fortified Sygnak. The Kalmyks devastated the outskirts of such Timurid towns as Tashkent, Shahruhiya, and Turkestan. The author of "Collected Stories from the Book of Victories" notes that 3-year-old Mahmud Sultan ibn Shah-Budag Sultan, Abu'l-Khayr Khan's grandson, was taken prisoner by the Kalmyks and spent 7 byears in captivity, but according to B. Akhmedova he may have been a hostage (*amanate*) who guaranteed the concluded peace treaty [Ibid, p. 67]. It is still unknown whether Abu'l-Khayr Khan ac-

knowledge of the supreme power of the ruler of the Kalmyks (as B. Akhmedov supposed).

The weakening of the Shaybanid state after the defeat inflicted by the Kalmyks in 1457 led to a situation in which Abu'l-Khayr Khan abruptly reduced his participation in the feuds between the Timurids (in particular, he refused to help Mirza Ala ad-Daula in the struggle for supreme authority). The reduced interference of the khan in the affairs of Transoxania was also caused by the fact that Mirza Abu Said, who came to power in 1451 with the support of Abu'l-Khayr Khan, managed to unite the majority of the Timurid state. The strengthening of Abu Said forced Abu'l-Khayr to regard the Timurid ruler as a real political force.

The disintegration of the Kalmyk state into numerous little provinces in 1460 eliminated the Kalmyk threat for the possessions of Abu'l-Khayr Khan for a while, and he once again directed his attention to events in Transoxania. At that time, Mirza Muhammad Juki, a Timurid prince and the nephew of Abu'l-Khayr Khan's wife Rabi'a Sultan Begim was at the headquarters of Abu'l-Khayr Khan. Making use of the fact that the forces of Abu Said were headed to Horasan, Muhammad Juki invaded Transoxania with the support of the troops of Abu'l-Khayr Khan. He managed to conquer Tashkent, Sairam, and Ahsikent, then he penetrated deeper into Transoxania and conquered almost all its territory, with the exception of Samarkand and Bukhara [Materials, 1969, pp. 170–171]. The troops of Abu'l-Khayr Khan defeated the garrison of Samarkand, but failed to capture the city and only sacked its outskirts.

At the beginning of 1412, Mirza Abu Said came out in opposition to Muhammad Joki and his Uzbek allies. Disagreements between the followers of Muhammad Joki resulted in the rejection of the plan of the leaders of Abu'l-Khayr Khan's troops to meet the attacking forces of Abu Said at the crossing of the Amu Darya River, and Muhammad Joki's troops started their retreat north toward Shahruhya. Burka Sultan and Pishkade Oglan took the Uzbek troops to Sygnak, halting military actions against Abu Said. The retreat of Muhammad Joki led to the protracted siege of Shahruhya, its surrender in 1463, and the death of Muham-

mad Joki in prison in 1464 [Akhmedov, 1965, p. 141].

The participation of the Shaybanid state in civil strife in Transoxania in 1464–1469 mostly consisted in the support of the Timurid Mirza Sultan Husein, who managed to conquer the greater part of Khwarezm after he had driven away Mustafa Khan. In 1465, Abu Said managed to drive Sultan Husein out of Khwarezm, but in 1467 Sultan Husein conquered Khwarezm again with the support of Abu'l-Khayr Khan; however, soon he was driven away again. Sultan Husein's request for support from the Shaybanid khan, which took place in 1469, turned out to be unsuccessful in the connection with the death of Abu'l-Khayr Ubaidallah Khan after a brief illness.

It should be emphasized that the foreign policy interests of Abu'l-Khayr Khan were almost completely reoriented toward Central Asia after he had moved the state's capital to Sygnak. The Volga Region fell out of the sphere of interest of the Shaybanid state, and relations with this region remained sporadic. The existence of political contacts between Ahmad Khan, ruler of the Great Horde, and Mustafa Khan, who ruled in Khwarezm and on the Mangyshlak peninsula, can be verified. Mustafa Khan's brother Pir Budag Sultan, who was at odds with his elder brother and married to Mirza Sultan Husein's sister Badi al-Jamal Begim, died in a war against Ahmad Khan; Badi al-Jamal Begim became one of Ahmad Khan's wives [Ibid, pp. 142–143].

The death of Abu'l-Khayr Khan changed the domestic policy situation in the Shaybanid Uzbek Khanate significantly and essentially led to its collapse. The state, united almost exclusively due to the will and power of its creator, immediately turned into an arena for infighting among numerous khans and sultans.

The issue of direct successors to Abu'l-Khayr Khan is not entirely clear either. The majority of sources consider Sheikh Haidar Khan the heir of the deceased khan (the eldest son of Abu'l-Khayr Khan, Shah Budag Sultan, died earlier than his father). Only the poetic chronicle "Fateh-nama" mentions that after Abu'l-Khayr Khan power went to Jadgar Khan, Bureke Sultan's son and Timur Sheikh

ibn Arabshah's grandson. [Materials, 1969, pp. 53–36]. According to Fateh-nama, the reign of Jadgar Khan was attended by conflict with the ruler of Moghulistan and did not last long. However, the reign of Jadgar Khan in the Shaybanid state cannot be confirmed for certain. According to R. Pochekaev, the reign of Jadgar Khan was of short duration in the connection with his advanced age; he died in 1469, but still managed to alter the direction of the foreign policy of the Uzbek ulus and conclude a union with the ruler of the Volga Reion, Ahmad Khan [Pochekaev, 2012, p. 255]. Nevertheless, Sheikh Haidar Khan was the real successor of Abu'l-Khayr Khan for the overwhelming majority of population of the Shaybanid state, and the seizure of power by Jadgar Khan in Sygnak, even if it really took place, turned out to be brief.

Sheikh Haidar Khan failed to preserve the state created by his father. As Kamal ad-din Shir Ali Binai noted in "Shaybani-nama", "the sultans of all the outskirts, finding the moment opportune, went to war against Sheikh Haidar Khan" [Materials, 1969, p. 99], whom sources characterize as "soft and weak-willed" [Ibid, p. 393] (however, the khan might be characterized this way only because his reign was brief and unsuccessful).

Among the rulers who started the war against Sheikh Haidar Khan, were the ruler of the Tyumen Khanate Said Ibrakhim Khan, the Kazakh khans Jani Beg and Giray, the Mangyt emirs Abbas Bek, Musa Bek, and Yamgurchi Bek, and others. Many tribes which used to support Abu'l-Khayr Khan left his successor even before the attack. Many tribes preferred to go over to the Kazakh khans. Nevertheless, even the remaining forces of Sheikh Haidar Khan were quite significant, and he was able to ward off the enemy attack. In this situation, Said Ibrakhim Khan and the Mangyt emirs concluded a union with Ahmad Khan, the ruler of the Great Horde, who remembered the defeat inflicted on him by Abu'l-Khayr Khan in 1431–1432. The united forces of the enemies of the Shaybanid state defeated Sheikh Haidar Khan. The descriptions of the death of Sheikh Haidar Khan in various sources do not coincide; "Shaybani-nama" says he was killed

"with sabres and arrows" [Ibid, 99], "Fateh-nama" and Mahmud ibn Vali only note the fact of the martyrdom of Sheikh Haidar Khan [Ibid, pp. 58, 362] and "The Collected Stories from the Book of Victories" mentions that Sheikh Haidar Khan was killed personally by Said Ibrakhim Khan, who cut his throat [Ibid, p. 20].

The death of Sheikh Haidar Khan led to the final collapse of the Shaybanid Uzbek state. The matter of successors was not an issue anymore; the state practically ceased to exist. The legal heir of Abu'l-Khayr Ubaidallah Khan, his eldest grandson Abu'l-Fatkh Muhammed Shaybani Sultan ibn Shah Budag Sultan was forced to leave his grandfather's possessions and hide in Hajji Tarkhan. Fleeing from his enemies and leaving Hajji Tarkhan, Muhammad Shaybani Sultan and some his relatives reached the city of Turkestan and hid in the possessions of Timurid Mirza Muhammad Mazid [Ibid, pp. 20–21].

Some uluses of the devastated state still existed in the basin of the Syr Darya River and in nearby areas. Thus, according to the data of Mahmud ibn Vali, a Burunch Oglan, who entered into a conflict with the khan of Moghulistan Yunus, was active until 1472 [Nesterov, 2010, p. 87]. Some historians of the 17th century (Hafiz-i Tanush Bukhari, Muhammad Haidar) think that Burunch Oglan was Abu'l-Khayr's son; Mahmud ibn Vali only calls him "a descendant of Jochi". Several authors identify him with Bureke Sultan ibn Jadgar, the grandson of Shaybanid Timur Sheikh ibn Arabshakh. B Akhmedov suggests the possibility of his identification with Buzundjar Biy Kiyat [Akhmedov, 1965, p. 69], but there are no reasons for such an identification. One may suppose that the tribes of the former Shaybanid state gradually united around Muhammad Shaybani Sultan. This was promoted by the collapse of the Great Horde, the murder of Ahmad Khan by Said Ibrakhim Khan, and the collapse of the state of the Siberian Shaybanids after the death of Said Ibrakhim Khan (about 1495). The unification of the Uzbek tribes led to Muhammed Shaybani Khan's invasion of Transoxania (1500) and the creation of a new Shaybanid Uzbek state, which existed until the late 16th century.

The Kazakh Khanate

Alexander Nesterov

The Kazakh Khanate has a special place among the states which emerged after the collapse of the Jochid state. At the same time, the process of its emergence and early development is an integral part of the processes of ethno-political development taking place in Eastern Desht-i Qipchaq in the 15–16th centuries, which were a direct consequence of the collapse of the Golden Horde. At the same time, it should be emphasized that the Kazakh Khanate lasted much longer than any other late-Jochid states (until the early 19th century) and became the basis for the Turkic Kazakh ethnos. It should be noted that it is impossible to talk about the precise ethnicity of the population of the Kazakh Khanate (just as that of the State of Nomadic Uzbeks and the Siberian Khanate). The population of these political entities represented a mixture of Turkic tribes and ethnic groups, including some ethnic groups of non-Turkic origin, united under the power of various branches of the Jochid dynasty.

The formation of the Kazakh Khanate was directly connected with the process of the formation of the Uzbek Khanate of Abu'l-Khayr Ubaidallakh Khan. The formation of the Kazakh Khanate is related to the activities of khans Jani Beg and Giray. There are several theories on their origins deriving their family tree from Orda Ichen, Jochi's elder son, or Tuq Timur, the thirteenth son of Jochi. The majority of sources say that Jani Beg and Giray are the descendants of Tuq Timur. For example, Abu al-Ghazi Muhammad Khan wrote in "Genealogy of the Turkomen": "Chinggis Khan had a son called Jochi khan, his son is Tuqay Timur, his son is Uz Timur, his son is Hodja, his son is Badakul Uglan, his son is Urus Khan, his son is Koirchak Khan, his son is Barak Khan, his son is Abu Said called Jani Beg Khan. He had nine sons as follows: Irandzhi, Mahmud, Kasim, and after him followed Itik, Janish, Kanabar, Tenish, Usuk, Juak" [Abu al-Ghazi, 1906, p. 157]. Mahmud ibn Vali reports in his work "Bakhr al-asrar" that "some of the descendants of Tuqay-Timur Khan, for example,

Kirey Khan and Jani Beg Khan, whose fathers' names will be mentioned in detail in the list of names of Tuqay Timur's khakans, left the circle of submission and obedience [to Abu'l-Khayr Khan] and preferred to leave their motherland [Materials, 1969, p. 352]. Muhammad Haidar Dughlat wrote in "Tarikh-i-Rashidi": "Abu'l-Khayr Khan was ruling in Desht-i Qipchaq at that time. He caused much anxiety to sultans of Dzhuchid extraction. Jani Beg Khan and Kirai Khan fled from him to Mogulistan. Isan Buga Khan hosted them with great pleasure and gave them the district of Chu and Kozi Bashi, which forms the western border of Moghulistan. While they were flourishing there, the Uzbek ulus was in a state of disorder; great troubles started there. The majority [of his subjects] went to Kirai Khan and Jani Beg Khan, such that there were about two hundred thousand [people gathered] around them. They were called the Uzbek-Kazakhs. The Kazakh sultans started reigning in 870 (1465/1466), but Allah knows better." Thus, the real founding of the Kazakh Khanate, headed by the descendants of Tuqa Timur, occurred after the collapse of the state of the nomadic Uzbeks in the period when feuds between the Jochid sultans and khans claiming the legacy of Abu'l-Khayr Khan started in Eastern Desht-i Qipchaq.

Researchers have no common opinion about the time and place of the formation of the early Kazakh Khanate. One may note the point of view of M. Abuseitova, according to which the Kazakh Khanate was formed as an independent political entity at the turn of the 15–16th century, and the departure of Jani Beg and Giray and their return from Moghulistan was just an episode in the struggle for power in Eastern Desht-i Qipchaq and a stage in the formation of the Kazakh Khanate [Abuseitova, 1985, p. 40]. However, according to tradition Giray (Kirey, Kiray) Khan is considered the first khan of the Kazakh Khanate; Kazakh historiography dates his reign to the period between 1459–1473, although it is obvious that it is an exaggeration to state that there was an in-

dependent Kazakh Khanate in Eastern Desht-i Qipchaq before 1468, when Abu'l-Khayr Khan died and Giray and Jani Beg came back from Moghulistan. The history of the activities of Jani Beg Khan is equally mysterious and unclear. The dates of his reign are traditionally considered to be 1466–1480; at the same time, it is noted that his name was not mentioned in sources after 1474. Thus, one can state with certainty only that after 1468 in the Eastern part of Desht-i Kipchak, in parallel with the Tyumen Khanate, which was strengthening its independence under Sayiid Ibrahim Khan, the Kazakh Khanate was forming. One can assume that in this period the rulers of the Kazakh Khanate saw themselves exclusively as the lawful successors of the khans of the eastern part of the Jochid state, not as independent rulers having no relation to the tradition of the Golden Horde.

The 1480–90s 15th centuries were a period of fierce fighting between the Kazakh khans for cities situated beyond the Syr Darya River, which used to be centres of the State of Nomadic Uzbeks under Abu'l-Khayr Khan – Sygnak, Suzak, etc. Abu'l-Khayr's successor, Muhammad Shaybani Khan, was the main adversary of the Kazakh khans. He conquered the Timurid possessions in Central Asia and became the founder of a new Shaybanid power—the Uzbek Khanate, with its centres in Samarkand and Bukhara. During military confrontations, Jani Beg Khan and Giray Khan's successor, Giray Khan's son Burunduk Khan (about 1480—about 1511) was able to subordinate the territories near the Syr Darya River to himself. Thus, the territory of the Kazakh Khanate was extended, and from that time on it included the historical capitals of the state of Abu'l-Khayr Khan, which enhanced the prestige of the Kazakh khans significantly.

In 1511 Burunduk Khan was dethroned by Jani Beg Khan's son Kasim Khan, who ruled in the eastern part of the Kazakh Khanate. The dethroned khan left for Transoxania and died in Samarkand. The overthrow of Burunduk Khan led to the final removal of Giray Khan's descendants from power in the Kazakh Khanate, and power was consolidated behind the branch of Jani Beg Khan.

The reign of Kasim Khan (1511–1518/1521/1523) became a golden age for the early Kazakh Khanate. He managed to subjugate a number of cities in modern Southern Kazakhstan and expand his possessions in the regions on the coast of the Caspian Sea. Kasim Khan subjugated the city of Saray-Jük, one of the historical capitals of the eastern part of the Golden Horde. The territory of Semirechye, which previously part of the Chagatai ulus, became part of the possessions of the Kazakh Khanate. The state of Kasim Khan became one of the most important political entities in Eastern Desht-i Qipchaq.

The exact date of death of Kasim Khan is still open to question. Various sources indicate the period between 1518 and 1524; according to V. Trepavlov, 1521 is the closest to the real date of death of Kasim Khan [Trepavlov, 2001, p. 161].

The death of Kasim Khan led to feuding in the Kazakh Khanate; Kasim Khan's son and successor, Mamash Khan (1521–1522/1523), was killed in this feuding. Tahir Khan (1523–1533), son of Adik Sultan, replaced him on the throne and extended the possessions of the Kazakh Khanate at the expense of the lands of modern Kyrgyzstan; in this period the main political interests of the khanate were related to Moghulistan, as the cities on the Syr Darya River had been lost. The years of Tahir Khan's reign were a time of weakening of the khanate; as for the period of Baidush Khan (1533–circa 1560) sources (Muhammad Haidar Dughlat) speak of "the complete disappearance of the Kazakhs", which was related to the fact that the khanate was divided into several dozen uluses, not less than five of whose rulers bore the title of khan.

One of Kasim Khan's sons, Haqq Nazar Khan (circa 1538–1580), became the unifier of the Khanate. His activities were related to wars in the eastern part of the khanate. Abdullah Khan II Shaybanid, the years of whose reign in Transoxania were marked by the flourishing of the Shaybanid state, was an ally of Haqq Nazar Khan. Essentially, at that time, the Kazakh Khanate became one of the vassal khanates of the Shaybanid state, along with the Balkh Khanate and the Siberian Khanate. The same

situation remained under Shigai Khan (1580–1582), as well.

Subsequent events show that the Kazakh Khanate completely lost its ties with the legacy of the Golden Horde, except for dynastic traditions. In the early 17th century, the towns situated on the Syr Darya River were claimed by the rulers of the Kazakh Khanate once and for all. The Kazakh Khanate was divided into

Juzes under Tauk Khan (1680–1715). Each of them was governed by one of the branches of Jani Beg Khan's descendants. Starting in the 1770s the Kazakh Khanates became dependent on the Russian Empire. In 1847, the power of the khan in the Kazakh Juzes was abolished and the territory of the former Kazakh Khanate was integrated into the Russian Empire.

§ 2. Tatar political institutions on the territory of the Grand Duchy of Lithuania (the Jagoldai "t'ma")

Ilya Zaitsev

The name "Jagoldai t'ma" appears in the edict of the Crimean khan Mengli Giray to the King of Poland and Grand Prince of Lithuania Sigismund (July 2, 1507), which says: "They gave... the Kursk t'ma with its taxes, tributes, lands and waters; the t'ma of Jagaltai son of Sarai, Milolyub with its taxes, lands and waters; Muzhech, Oskol; Starodub and Bryansk with their taxes and tributes, and lands, and waters..." [Acts, 1848, p. 5; Nasonov, 1940, pp. 28–29, appendix 2; Rusina, 2001, p. 150; Kołodziejczyk, 2011, p. 557]. The "t'ma of Jagoldai son of Sarai" is mentioned in a similar context in an edict of Mengli Giray dated 1513 [Kołodziejczyk, 2011, p. 595]. It is well known that the word "t'ma" is the Russian adaptation of the Mongolian term "tumen". Tumens were military-administrative districts which were able to provide ten thousand battle-worthy warriors. Mongolian authorities often divided settled and nomadic populations into tumens. Tumens were, in turn, divided into thousands, hundreds and tens. This system was also introduced by the Mongols in conquered lands with a settled population, particularly in Russia after the empire-wide census in the second half of the 1250s. However, most likely this division was not a military institution, but a fiscal one, i.e., it was the basis for the tax system, not mobilization. In the course of time, this term became synonymous with a territorial unit, as well as the incomes collected there. Apparently, it must

be understood in this meaning with regard to the Jagoldai "t'ma"¹.

The time of its formation has not been precisely established yet. According to S. Kuczyński, whose opinion was later shared by B. Spuler, as well as by B. Grekov and A. Yakubovsky [Grekov, Yakubovsky, 1950, p. 418], the formation of the Jagoldai "t'ma"

¹ Compare with the mentioned yarliq of Mengli Giray of 1513 [Kołodziejczyk, 2011, p. 595]. Compare with the yarliq of Mengli Giray of 1514: 'Hereby we inform you that our forefathers, tsars, and our father Mehmed Giray, the tsar, went, spurring their horses, to the Lithuanian land, to the Grand Duke Vytautas, the King and Grand Duke Casimir, coming there as guests and being received with great honour and kindness, and, following the old tradition, wrote down the Russian lands with towns and settlements, volosts and **tumens**, with lands, waters and yields, nothing excluding from those yarliqs, which had been written out in favour of the Great Duchy by the first tsars'. Compare with the yarliq of Sahib Giray (1535): 'Our forefathers and my father Mehmed Giray, the tsar, went, spurring horses, to the nobles of the Grand Duchy of Lithuania, to the Grand Duke Vytautas and the King and Grand Duke Casimir, coming there as guests and being received with great honours, and in the old tradition wrote down the Russian lands with towns and settlements, volosts, **tumens** and all the yields'. Quoted by: [Shabuldo, 2005, pp. 106, 108–109]. It is worth noting, however, that there exists a somewhat different interpretation of the term 't'ma', which was suggested by K. Averianov, on the basis of the mentioning of the five Nizhny Novgorod 'tem' ('t'ma's): 'the term "t'ma" should be understood as denoting a small administrative-territorial unit, similar to a volost, on the lands predominantly inhabited by non-Russian populations, maintaining a certain independence in the internal governance' [Averianov, 2001, p. 39].

dates to the period after 1438, when a part of the Tatars accompanying Ulugh Muhammad headed by a Jagoldai Saraevich left the khan and settled on the territory of the Grand Duchy of Lithuania, receiving a fief of sorts near the southeastern border in about 1440. In return for the granted lands, Jagoldai was to protect the Lithuanian borders from Tatar raids. Thus, according to Kuczyński, Jagoldai became kind of an analog of the Kasim Khanate, which was formed almost at the same time [Kuczyński, 1936, pp. 184–185]. F. Petrun, followed by modern Ukrainian sources, considered Jagoldai to be a Tatar fiefdom which was integrated into the Grand Duchy of Lithuania over time. The rulers of the Duchy were gradually transforming the Tatar nobility into common landowners [Petrun, 1928, p. 177, Yakovenko, 1993, pp. 171–172]. A. Nasonov saw no reasons "to assume the formation of local feudal landowners from amongst the Tatars at the borderline between Lithuania and the Moscow state outside of the policy of these states", and he considered the settlement of feudal landowners at the border impossible if it was not a part of the government activities of the Lithuanian princes and, with regard to Kasimov, the Moscow Grand Princes [Nasonov, 1940, pp. 28–29, appendix 2]. Modern Polish historians (for example, Dariusz Kołodziejczyk) also believe that this territory was assigned by Vytautas to Ulugh Muhammad when he was seeking sanctuary in Lithuania, and when he returned to the throne it was passed to his retainer Jagoldai [Kołodziejczyk, 2011, p. 562].

However, according to research by F. Petrun, the edict of Mengli Giray mentioning a "t'ma" refers to an original from the late 14th century, the edict given to Vytautas by Tokhtamysh on the eve of the Battle of the Vorskla River (1399), and it was in the original that the mention was made [Petrun, 1928, p. 177]. This means that the Jagoldai "t'ma" had to exist at that time. Then, Jagoldai Saraevich, after whom the "t'ma" was named, could be the grandfather of the Jagoldai whose name was mentioned in the Lithuanian Metrica two times between 1440 and 1486 (although, strictly speaking, these mentions may refer to

different people). S. Kriczynski identified this elder Jagoldai with Jagoldai Bek, who was at the court of the Golden Horde at the time of the conclusion of treaties with Venice in 1347 and 1358. Later on, he could have been in Severia with either *Kyat* Mansur, forefather of the Glinskys, in 1380, or with Tokhtamysh in 1397 [Rusina, 2001, pp. 147, 150, appendix 26]. Indeed, there was a Jagoldai mentioned in two edicts to Venitian merchants of Azov: those of Jani Beg (1347) and Berdibek (1358) as one of the intercessors [Grigoriev and Grigoriev, 2002, pp. 115–118, 121]. A. and V. Grigoriev thought he was a vizier at the court of Jani Beg [Ibid, p. 163].

Thus, the origins of Jagoldai himself are unknown to us as well. S. Kuchinsky, based on the time when the "t'ma" was formed, thought he was a brother of Ulugh Muhammad's retainer Usein Saraev¹, and their father was Sarai son of Urasakh, mentioned in the Moscow Chronicles in the late 15th century [Moscow Chronicles, 1949, p. 260]. A.N. Nasonov wrote frankly, "Unfortunately, we do not know if Jagoldai existed in the era of Lithuanian domination and if he was a descendant of the Golden Horde settled on the land by Lithuania. It is also unknown whether this name reflects relations of ancient times and is a trace of the military and administrative or financial activities of a person" [Nasonov, 1940, pp. 28–29].

Apparently, the territory of Jagoldai included the upper course of the Oskol and the Siverskyi Donets and the southern part of the basin of the Desna River, with the towns of Muzhech (between modern Sudzha and Obayan), Milolyub (a region within the modern Belgorodsky, Yakovlevsky and Prohorovsky districts of the Belgorod region) and Oskol (modern Stary Oskol in the Belgorod Region) [Rusina, 2001, p. 148]. Analyzing the language of Mengli Giray, F. Petrun thought that the Jagoldai "t'ma" was a "synonym" of the Kursk "t'ma", because Kursk was destroyed in 1278, and that means that later

¹ There are extant formulary versions of travel-tarhan charters from the Metropolitan Jonah to the Kazan Khan Mahmud and Kazan Prince Shaptyak Saraevich about the trade of metropolitan stuff, that is, furs. Probably, this Shaptyak was a brother of Usein (Husein) and Jagoldai [Russkij (Russian), 1986, pp. 154–155].

mentions are "memorial" [Petrin, 1928, pp. 176–177, 186].

Jagoldai existed as a vassal possession (the essence of which is admittedly unknown to us) until 1497, when it was broken down. Prince Roman Jagoldaevich², a descendant of the first owner of the fiefdom, "had one daughter, and that daughter was married to prince Yuri Borisovich Vyazemsky, and Prince Roman passed his estates to his daughter" [The Russian State Archive of Ancient Acts, f. 389, inv. 1, file 6, sheets 138 reverse–139, quoted in: [Acts, 2012, p. 150; Rusina, 2001, p. 145]. After Vyazem-

sky started serving Grand Prince Ivan in about 1494, his estates were confiscated and passed to Lithuanian Grand Prince Alexander. After 1497, the territory of the former Tatar fiefdom was divided between Kiev boyars who were relatives of Roman Jagoldaevich through the female line, and soon (1503) it passed to Moscow. As A.G. Bakhtin notes, "One can argue about the political status of the duchy or 't'ma' of Jagoldai because sources do not enable us to solve this problem more precisely, but it goes without saying that it was a Tatar state institution" [Bakhtin, 2008, p. 153].

§ 3. The Formation of the Crimean Khanate

Ilya Zaitsev

After the Mongolian conquest, the greater part of the Crimea became one of the uluses of the Golden Horde; however, Italian possessions on the Southern Coast remained autonomous and started paying tributes to the Horde, like the Russian princedoms. William of Rubruck, who arrived in Soldaia (Sudak) in 1253, could not talk to "the governors (capitaneos) of the city" and had to negotiate with their deputies because "the governors went to Batu in winter to deliver tributes and haven't come back yet" [Journeys, 1997, p. 90]. According to al-Mufaddal, the incomes from Sudak were divided between four Tatar rulers [Tiesenhansen, 1884, pp. 183–184, 195]. This part of the Crimean peninsula paid tributes first to the Horde, then to the Crimean Khanate as the successor to the Horde until it became a part of the Ottoman state as the *liva* or vilayet of Caffa [Fisher, 1978, pp. 191–205]¹.

¹ However, after the siege of Caffa in 1454 by the Ottoman fleet led by Demir Kahya, the town paid simultaneously to the Ottoman Padishah (3,000 Venetian dukats a year, then 4,000, and from 1468, 6,000 and soon 8,000) and the Crimean Khan (600 soms or 4,000 chervontsy, and then 8,000 chervontsy) [Volkov, 1872, p. 113; Colley, 1918, pp. 132–133, 155; Chipiris, 1960, pp. 137–145]. The amount of the tribute was the subject of continuous bargaining. It was no accident that Hacı Giray, in his *yarliq* of 1453, mentions Caffa among the subordinate territories [Kurat, 1940, pp. 64–67; Malov, 1953], and the Grand Prince of Moscow Ivan III, in his instructions to Alexei Starkov (1475),

In the 13th century, the Crimean steppe and some lands in the Crimean mountains were integrated into the territories of the Golden Horde and divided into traditional Horde tumens headed by viceroys (emirs) belonging to the tribal elite of the Horde. The first edicts regarding the Crimea (that of Tokhtamysh dated February 19, 1381, that of Ulugh Muhammad dated April 15–24, 1420, that of Hacı Giray in 1453, and that of Mengli Giray in 1468) contain the name "Crimean tumen" in the address [Grigoriev, 1987a, pp. 43–44]. Judging by the edict of Temür Qutlugh (April 24, 1398), this tumen was also called the tumen of the Crimea and Qırq Yer [Grigoriev, 2006, pp. 97–112]. However, the Crimean tumen was clearly not the whole peninsula, but only Solghat, i.e., the city of Krym, not the Crimea as a state, while Qırq Yer was a separate independent tumen (edict of Hacı Giray to the population of Qırq Yer, 1459; that of Muhammed Giray to the population of Qırq Yer and the daruga-beks

ordered him to tell Mengli Giray: '...spoke to my boyar Mikita about Caffa, and call Caffa our people' [Collection of the Russian Historical Society, 1884, p. 12]. At the same time, Mengli Giray himself, in the letter to Mehmed Fatih (19 Rabi II 874 / October 25, 1469), directly indicated that the Ottomans levied *kharaj* upon Caffa [Kurat, 1940, pp. 84–85].

² There also existed another descendant of Jagoldai, Roman's brother Zinovy [Rusina, 2001, pp. 145, 148].

headed by Appak)¹. Thus, we can assume the existence of two tumens in the second half of the 15th century and in the early 16th century—Solghat, governed by a daruga-bek (from among the Shirins), and Qırq Yer, also ruled by darugas².

Apart from this decimal system of administrative division, the Crimean lands were integrated to a more traditional regional system where lands were connected with their owners³. According to many researchers, in the 13th century, the Crimea was a separate unified ulus within the overall Jochid right wing [Trepavlov, 2010a, p. 31]. But as we have already seen, this is implausible; it is obvious that the Italian colonies of the Southern Coast and late-Byzantine princedoms (Mangup-Feodoro and possibly Alanian Qırq Yer) remained autonomous. According to the data of al-Kalkashandi, in the 15th century, the Golden Horde was divided into ten districts (iklim). Three of them were directly related to the Crimean peninsula: Crimea itself, Azov, and As. The Crimea was listed by al-Kashkandi as the fourth district, with its centre in Sulgat, but it also included Sudak, Caffa, and Ukek (Uvek) situated on the banks of the Volga River⁴. The fifth district, Azak, contained

its capital Azak (Azov) and Kerch (al-Karsh). The ninth district was "As Country", with its centre in Qırq Yer. Thus, the peninsula was divided between three uluses. The main Italian ports on the Southern coast (Sudak and Caffa) had a direct relationship to Solghat, where they paid taxes and trade duties. Apparently, they made up a single administrative unit for this very reason. It is important to note the capital status of Qırq Yer.

Tuluk Timur (mentioned as "the lord of Solghat") and his son Temür Qutlugh were the owners of the Crimean tumen in the 14th century. A slab with an inscription (apparently about the building of a well by an Idris ibn Hadzhi-Yahya ibn Muhammad Iraki), found by O. Aqçoqraqlı in Otuzı, dates to 760 AH (1358) and indisputably contains the name of the then-current Crimean "great emir" Temür Qutlugh Bek [Aqçoqraqlı, 1927, p. 9]. Apparently, these Solghat beks of the 14th century were descended from the Kyat clan.

As D. Iskhakov noted, the powerful Kyat Mamai was related to them somehow [Iskhakov, Izmaylov, 2007, p. 151]. Possibly, his father was a daruga of Solghat. The conquest of the Crimea by Mamai took place in the beginning or middle the 1370s. The Chronicles of Simeon date Mamai's murder of Khan Timur-Hodji, successor and son of Khan Hyzra, and his crossing of the Volga River and the conquest of the Crimea to 1361 [The Complete Collection of Russian Chronicles, 18, 1913, p. 101; Grigoriev, 1983]⁵. Utemish Hadji described it in his "Chinggis-nama": during the reign of Berdibek (1357–1359) "there were many turmoils. Kyat Mamai took the right wing and went to the Crimea, and Tengiz Buga, Kyat Jir-Kutla's son, took the left wing to the bank of the Syr River [Utemish Hadji, 1992, pp. 108, 135 (table xxx)]⁶.

Notes on the margins of Armenian liturgical books of Crimean origin confirm these data: Mamai conquered Solghat and then the whole peninsula at the end of August 1365

clear distinction between Ukek and Ulak, regarding the latter as a separate district-iklim.

⁵ See also: [Trepavlov, 2001, p. 59].

⁶ The latter was the son of Isatai (the son-in-law and father-in-law of the Ozbeg Khan Isa Beg).

¹ Thus, the text of the yarliqs is not damaged or distorted here, as M. Usmanov supposed, but just refers to a different administrative division [Usmanov, 1979, pp. 206–207].

² These darugha-vicegerents of Qırq Yer were descendants of Hacı Giray's brother Mustafa (see below).

³ See: [Pochekaev, 2011, pp. 177–178].

⁴ The easternmost point of this region in the area of the Ukek river, according to al-Kalkashandi, seems doubtful for V. Gulevich [Gulevich, 2013, p. 116]. It is obvious, however, that here we have a district consisting of (at least) two territorial units without a common border. There are known examples of such uluses, which were situated on the territories of two tumens, located apart from each other [Pochekaev, 2011, p. 178]. Al-Kalkashandi clearly writes that Ukek belongs to the towns assigned to the Crimea iklim [Grigoriev, Frolova, 1999, p. 72; Grigoriev, Frolova, 2002, p. 287]. And here it could have been assumed that al-Kalkashandi confused Ulak and Ukek (Uvek / Uvek) ((اولاك ~ اولاك)) (the form اولاك is widely represented on the coins: [Nedashkovsky, 2000, p. 21, Picture 2]), all the more so that part of the districts of al-Kalkashandi (Djulut Cherkess, Kara Ulak, Qırq Yer) are mentioned in other sources as tumens granted by Batu to his brother Shibani [Mustakimov, 2011, p. 231]. This is unlikely, however, as al-Kalkashandi makes a

[Sargsyan, 2004, pp. 153, 156; Galenko, 2005, p. 153]. Al-Kashkandi noted that Mamai was ruling in the Crimea in 776 AH (1374/5) [Tiesenhausen, 1884, p. 413]. Mamai's bastion before his military campaign in the Crimea could have been Azov, where his protege Khan Abdullah was minting coins (with short breaks) from autumn 1362 until 1370 [Grigoriev, 1983, p. 37 and table], or the city of Orda (Abdullah's place of coining starting in 765/1363/64), which was identified by A. Grigoriev with Zaporozhie Settlement, 30 kilometers away from modern Zaporozhie [Grigoriev, 1983, p. 37; Grigoriev, 2007, p. 117]. In 1363, we once again see the Tuluk-Timurids as Crimean governor-generals: Kodja Alibek ibn Isa ibn Tuluk-Timur was mentioned after Zeinaddin Ramazan (according to al-Muhibbi, the correspondence between him and the Egyptian sultans started in 765/1363–1364) [Tiesenhausen, 1884, pp. 349–350]. The well-known edict of Tokhtamysh on Syutkul¹ dated February 19, 1381, was addressed to the head of the Crimean tumen, the ruler of Solghat Kutlu Beg. One of the three brothers defeated by Algirdas during the Battle of Blue Waters in 1362 had a similar name (Dmitri, Kutlubuga and Hachebey). A. Galenko quite plausibly places Kutlubuga's ulus in Solghat, identifying him with a relative (most likely a son-in-law) and retainer of Khan Jani Beg called Inak Kutlubuga [Galenko, 2005, p. 136].

In the era of the formation of the Crimean Khanate (in the 1430–50s), this division of the peninsula into units with different state and administrative statuses was preserved. Having inherited the full authority of the head of the tumen, the khans were content with the Crimean Steppe with its capital in Solhat, acting as of independent rulers enjoying full rights. The Crimean mountains were the southern border of the khanate. In the north, the khan's borders went beyond the edges of the peninsula and spread to the district of the Konka River, in the north-west to the Synjucha River, and in the east, in the direction of Astrakhan and the

Nogai, for a time the border was the Mius River ("Milky Water"). The western border spread beyond Ochakov in the direction of Ottoman Akkerman [Khartakhai, 1866, pp. 189–190].

* * *

Until recently, the chronology of the reigns of the khans in the Crimean Ulus in the 1420s and early 1430s was rather inaccurate and confused. A.L. Ponomarev [2013] offered the following sequence of reigns during these dark years based on the accounts of the Genoese Treasury in Caffa for 1420–1428:

Bek Sufi (1419—spring 1420)
 Ulugh Muhammad—spring 1420
 Bek Sufi (summer 1420—September 1421)
 interregnum (September 1421—
 November 1422)
 Devlet Berdi (November 1422—
 November 1423)
 interregnum (November 1423—
 January 11, 1424)
 Devlet Berdi (January 12—June 12, 1424)
 Ulugh Muhammad (June 12—
 August 23 (?), 1424)
 Devlet Berdi (August 23 (?), 1424—
 May 1425)
 Ulugh Muhammad (May 14, 1425—
 February 1426)
 interregnum (February—April 1426)
 Devlet Berdi (April 12 (?), 1426—June 1427)
 Ulugh Muhammad (June–July 1427–1436)

We must admit that currently this source provides us with what is apparently the most detailed information about the chronology of reigns in the Crimea at that time².

The Crimea, as well as other Golden Horde Khanates, was ruled by representatives of one family—the Jochids (descendants of Chinggis's son Jochi). The khans were the descendants of Jochi's youngest son, Tuq Timur. One of the latter's sons, Uran Timur, received the Crimea as a yurt from Mengu (1266–1280). Later on, the Jochid tradition, including the historiographical

¹ Sutkul ('milk lake') is a place located between Feodosia and Arabat [Grigoriev, 1979, p. 181; Protokoly (Minutes), 1913, p. 231].

² This detailed information is only partially confirmed by the more general chronological scheme of the reigns of Khans Bek Sufi, Devlet Berdi and Ulugh Muhammad, composed by K. Khromov on the basis of the numismatic data [Khromov, 2013, p. 402].

tradition, linked the Crimea with the descendants of Tokhtamysh [Kratkaya, p. 25], and the peninsula was considered "the yurt of Tsar Tokhtamysh" [Nekrasov, 1999, p. 49; Trepavlov, 2011, p. 375].

For example, in 1506, the ambassadors of Mengli-Giray to the Polish king Alexander "recalled the ancient rulers and Grand Princes beginning with Vitautas and thenceforth (i.e., the khans who ruled the Crimea starting with Tokhtamysh.—I.Z.), such as Tokhtamysh, Gzhelindinya, Pereburdi, Kebik, Kerem, Berdi, Mahmet, Azhi Giray, Mordovlat, and Mendi Giray. All of these tsars maintained friendly relations with the Grand Princes of Lithuania, having vowed to attack any enemies together" [Collection, 1838, p. 27]¹. Clearly, here we have Tokhtamysh, Jelal ad-Din, Kepek (Kebek), Keremberdi, (Ulugh) Muhammad, Hacı Giray, Nurdevlet and Mengli himself. Most likely, this list may be regarded as the official point of view about the change of rulers in the Crimea, an official Giray version of the formation of the so-called "Tokhtamysh yurt". Most likely, a part of Tokhtamysh's treasury was even preserved in the Crimea. In 1489, Grand Prince Ivan asked Nursultan bint Temir through his ambassador Gribets: "I was told that you have many good pearls that belonged to Tsar Takhtamysh. Don't begrudge us the pearls, and if we have something good, we won't begrudge it to you either" [The Collection of the Russian Imperial Society, 1884, p. 80].

The Giray dynasty², descendants of Khan Hacı Giray of the Golden Horde, took shape in the khanate. The origins of the dynastic name of the Girays is not entirely clear. Even medieval historians were puzzled by it. For example, the Ottoman author Muneddjim Bashi wrote about Hacı Giray: "He added the word 'Geray' to his name, but we do not know why he did

it and why it was necessary for his children" [Smirnov, 2005, pp. 184, 199–200]. Possibly, the word itself is related to the name of one of the Mongolian tribes, *Kireit*, where *kere* is the Mongolian word for "a raven" and *"t"* marks the plural form. N.I. Veselovsky was probably one of the first researchers to suggest such a connection [Veselovsky, 1889, p. 176]. But even before him, the suggestion was made with some doubt by V.D. Smirnov. Criticizing J. von Hammer, he wrote: "if not quite identical to the name 'Geray', the name of a Turkic tribe, 'Kerayt', mentioned in works by Rashid-ed-Din, is somewhat close to it. But one would have to assume the abbreviation of the above-mentioned form of the ancient name in order to acknowledge a genetic connection between both names" [Smirnov, 2005, p. 192]³. Y. Nemeth also compared the name "Giray" with the tribe of the *Kireit* (the Mongolian plural form of "*kirei*"), from which the Tatars are supposed to originate, but he derived the word "*kirey*" (*giray*, *geray*) itself from the ancient Turkic "*ker*" ("enormous", "gigantic"). It is possible that it was reflected in this initial form in the name of one of the Hungarian tribes in the works of Konstantin Bagryanorodny [Nemeth, 1963, p. 133; Nemeth, 1965, pp. 360–365]. H. Inaldjik also suggested a connection between the name *Girey*/*Giray* and the tribe of the *Kereits*. The researcher noted that there was a special group called the *Tarakls* ("the crested") among the *Kereits* of Central Asia. That gave him reason to suggest that there is a connection between this group and the Crimean khans, since their *tamga* was called "*tarak*". H. Inaldjik associated the word "*Giray*/*Geray*/*Kerei*" itself with the Turkic "*ker*", meaning "the strongest being" [Kangieva, 2007, p. 80–81]. Maria Ivanich justifiably noted that "it is hard to imagine that a dynastic name could originate from a clan name because it completely goes against the Mongolian social hierarchy: the descendants of Chinggis Khan, members of the golden clan (*altyn uruk*) deliberately distinguished themselves from the common people

¹ For a more exact quotation, see: [Trepavlov, 2010, p. 50; Kolodziejchuk, 2011, p. 13, note 32].

² I continue to adhere to the commonly recognized modern spelling of the family name of the Crimean dynasty in the form of *Girey* (and not *Giray* or *Geray*, as it is customary in Ukrainian, Western and Turkish literature, and which at times may also appear in modern Russian literature, though still under the influence of Western literature). The reasons for such a spelling were sufficiently expounded by N. Veselovsky [Veselovsky, 1889, p. 176].

³ The question of the Mongol or Turkic origin of the *Keraites*, and of their relationship with the supposed descendants of the clan and tribal groups of various Turkic and Mongol peoples, has not yet been resolved [Ushnitsky, 2011, pp. 30–33].

(kara kishi)". They considered everybody else, including people of high rank and noble descent, *kara kishi*. For the members of altyn uruk, the members of the Kirei clan, even the most noble and distinguished ones, remained kara kishi. Thus, it is impossible that they took the name of this clan as a dynastic name" [Ivanich, 2012, p. 479].

Turkish lexicographer Ahmed Vefik Pashah derived the Crimean dynastic name from the Mongolian word "garai" meaning "noble", "worthy", "enjoying full rights" [Sultanov, 2001, pp. 144–145]¹. As A. Gafurov noted, "the case of attributing the nickname to a prince after his preceptor would seem to be very rare and hardly plausible. But the assertion that this is a Mongolian name is not groundless. The names "Giray" and "Geray" are encountered fairly frequently among Mongolians. Two grandsons of Khulagu and two Mongolian commanders-in-chief had this name...the basis of the name "Geray" is the root "*ker*", meaning "persistence", "steadfastness", "argue". Names having this meaning compose a large group in *Turkic* and Mongolian anthroponymy. It is quite possible that the name Geray/Keray/Girey means "persistent, stubborn" [Gafurov, 1987, pp. 28–29]. F. Khartakhai asserted that Devlet Giray was the real name of the first khan. He received the addition to his name at the request of his Lithuanian tutor, whose name was Giray. "No doubt, wise and devout Devlet Giray did much to study the new religion. He traveled to the tomb of Muhammed, which is why he was called Hadji, i.e., pilgrim. But the fall of Constantinople and the triumph of Islamism over Christianity had the most important influence on the final development of Mohammadanism among the Tatars [Khartakhai, 2003, p. 23; Khartakhai, 1866, pp. 198–199]. This idea was developed by O. Gayvoronsky, who believes that Giray was the initial name of Hacı Giray, and then, after the hajj, which may have taken place in 1419, the honorific "*hadji*" was added to his name [Gayvoronsky, 2003, p. 105]². According to Seiid

Muhammed Riza, Hacı Giray supposedly took the name because his father Hyias-ad-Din was brought up in the Giray tribe and had an atalyk there who had made the *hajj* [Smirnov, 2005, pp. 186–187].

The work of talmudist David ben Eliazar Lekhno (or Lyakhnu; d. 1735) from Karasubazar provides us with one more theory on the origin of the dynastic name of the Crimean khans. This work, "Oral narration" (שפתיים דבר), was written in Hebrew between 1681 and 1731 [Finkel, 1848, pp. 693–704]. The work contains 53 chapters preceded by an introduction containing a description of the history of the Crimean khans up to 1681. The foreword ended with the accession of Kaplan Giray to the throne for the third time in 1143/1730–1731. Both copies of the work, which were kept at the Odessa Society of History and Antiquity, had a lacuna of 5 sheets after this event. Then came a fragment from the second chapter. The third chapter began with the accession to the throne of Hacı Giray in 1094 AH, and the 35th chapter, covering the year 2490 according to the Jewish calendar, or 1143, began with the dethroning of Mengli Giray by Sultan Mahmut [Finkel, 1848, pp. 693–704; Harkavy, 1884, pp. 1–41; Markon, 1910, pp. 599–602; Markon, 1916, pp. XI, XII; Markon, 1938, pp. 547, 548; Borovoy, 1941, pp. 295–299]. I. Markon partially published the text of the chronicle in the original language. Lekhno reports in the introduction that the eighth khan in the Crimea was Nur Devlet, who was in Kirkor (Karaim Kale), the ninth was Haidar, and the tenth was Geldysh Khan, against whom the nobles of the house of Mansur Oglä rebelled, and they killed him and all his sons except for one. He hid and, putting on rags, was employed as a shepherd by Giray Bay. Giray Bay's daughter that he ate bread on a tablecloth, and her father guessed that he was the heir to the

¹ Mária Ivanich considers that in reality this word is not included in any dictionary and is actually a phantom word [Ivanich, 2012, p. 478].

² Theoretically, this is possible. It is, however, more likely that the close relatives of Hacı Giray used

the word 'haci' (hajji) as a personal name. For example, the aunt of the Crimean Khanate's founder (the daughter of Tash Timur and sister of Gıyas al-Din) bore the name Hacı Sultan [Materials, 1969, p. 40]. Besides, the undertaking of the Hajj pilgrimage almost always meant a voluntary abdication of the throne for Islamic rulers (including those in Desht-i Qipchaq). For this reason, the Khans themselves never carried out Hajj (it was always only their close relatives, brothers, mothers, and spouses).

throne. The shepherd ascended the throne with the help of her father as Muhammed Khan and killed Edig-Murza (his father's murderer). Out of gratitude to Giray, he added this name to his own name [Harkavy, 1884, pp. 2–3]. Despite its disrupted chronology, this version of the early history of the khanate is deserving of close attention. Apparently the author used a Turkic text close to the text of Seiid Muhammed Riza which he called "The History of the Crimean Tsars" [Zaitsev, 2013a, p. 164].

One of the versions of *Daftar-i Chinggis-name* (most likely an early one), after listing the six sons of Tokhtamysh, says: "When Tokhtamysh found himself in a difficult situation, his two sons were brought up by [someone] named Giray Bay. After taking these two of his sons, they were installed as Khans in Crimea. Their names are Iskander and Abu Said". In the original (as given by I.A. Mustakimov), the last phrase can be read as "The name of his son is Iskander Abu Said" [Mustakimov, 2009b, pp. 127–129]¹.

This story looks a bit different in "The Collection of Chronicles" by Qadir Ali Bek: "After Hacı Giray Khan's elder brother Jan Giray Sultan had been killed [by the Konrat beks], he was a fugitive and stayed with Chakyrghan Bey serving him; the beks [being in disagreement] went in their disagreement and, having found him, selected Hacı Giray Sultan to be the khan ... 906 ..." (the translation of Chokan Valikhanov) [Zaotov, 2011, p. 550]. The *Dastan* of Hacı Giray is one of the most confused and mysterious works in The Collection of Works from the standpoint of chronology (the calling of Hacı Giray in the versions of C. Valikhanov, A. Rakhim, and Khalfin are dated 906, 954, and 956 AH, respectively) and geographical disparities (they contain names of settlements on the territory of the former Kazakh Khanate) [Zaitsev, 2004a, pp. 168–169; Zaitsev, 2009a, pp. 231–232].

¹ In the short hand-written note on the history of the Crimean Khanate, published by N. Seityag'yaev based on a manuscript from the National Library of Ukraine named after V. Vernadsky (manuscript 3780), those two (or just one?) personalities were also named among the descendants of Tokhtamysh [Seityag'yaev, 2011, p. 344].

In a distorted form, the version according to which the dynastic name originated from the name of a shepherd even got into the documents of the State Political Department at the beginning of the 1920s. In a document signed by the Chairman of the Crimean Political Department, S.F. Redens, dating from 1922–1933, we read the following words: "The first khan was Hacı Giray (from the word "Giray", shepherd, because supposedly as a child during the Tatar turmoils he was saved by a shepherd); that is why all Tatar khans were called Giray, shepherd" [Efimov, Beloglazov, 2002, p. 149].

V.D. Smirnov also suggested another connection of the name of the dynasty: "Might it be that Mengli Giray liked this name because it sounds like the Greek word *"Κύριος"* meaning "lord", "sovereign", which he might have heard from the Greeks both in the Crimea and in Constantinople, where he lived for a while as a captive?" [Smirnov, 2005, p. 201, appendix 1]. This idea was supported recently by Mária Ivanich. The Hungarian researcher made Smirnov's idea a little more complex, supposing that *"kirey"* is derived not directly from the word *"kirios"*, but from the vocative form of this word, *"kirie"* (similarly to how the Turkish language borrowed the Greek word *"efendi"* in the vocative form) [Ivanich, 2012, pp. 482–483].

In fact, Hacı Giray was most likely not the first khan to rule the Crimea who had this name. For example, the Ottoman historian Mustafa Ali Efendi (1541–1600) calls one of Uzbek's successors to the throne of the Golden Horde Jani Beg Giray [*Ali Efendi*, p. 87]. It could be considered a misunderstanding (for example, Mustafa Ali Gelibolulu, who used the information of Muhammad Tashkendi, may have confused two people—Jani Beg and Giray—and united them into one)². However, there are

² More so, and being contrary to the facts, Mustafa Ali says that a certain Qalan Oghlan reigned after Ozbeg (قلان اوغلان), followed then by Jani Beg Giray Khan [*Ali Efendi*, p. 87]. About this manuscript by Ali Efendi, see: [Vejsi, 1976, pp. 19–21]. No doubt, the order of the Golden Horde khans is represented by Ali Efendi in this passage according to Tashkendi. According to Abdullah bin Rizwan (the 20s of the 17th century), whose source was the work of Ali (or directly the text of Tashkendi), the ruler between Jani Beg and Ozbeg was Insan Oghlan [Zaitsev, 2009a, pp.

several independent testimonies according to which Ulugh Muhammad had this addition to his name.

The fact stands out that a Mehmed Giray was mentioned among the predecessors of Hacı Giray in the record of the succession of the Crimean khans from the Collection of Matenadaran [Zaitsev, 2009a, pp. 205–206]. Apparently, they mean Ulugh Muhammad, who was traditionally included in the list of khans who ruled the Crimea¹. It is interesting that we see the dynastic prefix Giray, which was typical for the Crimean khans, in his name. This is not the only instance where Ulugh Muhammad was called Mehmed Giray. In the same way, he is also called a successor to Kadyr Berdi in the genealogy of the Shirin beys [Lashkov, 1889, pp. 98–100]².

84–85, 87–88, 216–217]. This same *Insan Oghlan* (انسان اوغلان) from the lineage of Batu is called the ruler of Desht (who took power from the descendents of Shiban) by Abu Muhammad Mustafa al-Jenabi (died in 999/1590/91), who also used the text of Tashkendi [Tiesenhausen, 1884, p. 536]. Finally, we meet *Insan Oghlan* again (and again between Ozbeg and Jani Beg) in the text by Huseyin Hezarfen, who in his Crimean section refers to both Tashkendi and 'Künhü'l-Ahbar' by Mustafa Ali [Hezarfen, p. 28 reverse]. Tashkendi, therefore, definitely included this passage. However, neither Jenabi, nor Abdülmevlâ, nor Hezarfen ever mention any Jani Beg Giray. In Jenabi's text, Jani Beg is called 'Great' (الکبير) [Tiesenhausen, 1884, p. 536]. Could it be that the affix 'Giray' appeared in Ali's works because of the incorrectly read Arabic epithet? The epoch of Jani Beg's rule was considered to be the Golden Age in the history of the Golden Horde. For example, Abu al-Ghazi called him 'fair' [Kononov, 1958, p. 1299]. There is one more known epithet for him ('aziz'—'holy'), existent in the text of 'Tawarikh-i guzida—Nusrat-name' [Mustakimov, 2013a, p. 235]. I have already voiced the assumption that the text by Tashkendi (which reached us in the Ottoman version) was of a pro-Shibanid nature [Zaitsev, 2009a, p. 88] and, probably, was partly dedicated to the confrontation between the Shibanids and Tuqay-Timurids, reflected in 'Chinggis-name' [Ötemish Hajji, 1992, p. 92, VII; Ötämiş, 2008, pp. 10, 69].

¹ Compare the quoted words of Mengli Giray's ambassadors to King Alexander in 1506.

² Researchers have already noted the fact that the genealogical tradition closely connected the Giray clan with Ulugh Muhammad; 'The Shirinsky Genealogy', composed in October 1820, mostly on the basis of folklore legends, narrated that in 820 AH (18 February 1417–7 February 1418) the Shirin Bey Tegine elected Ulugh Muhammad Giray Khan to the Crimean throne [Lashkov, 1897, p. 38; Grigoriev, 2006, p. 118; Akchurin, 2013, p. 6].

Moreover, being aware of that, one can understand some of the information in sources differently. For example, in one charter of the Nogai nuradin Ismail, delivered to Moscow in September 1552, he speculated about the possibility of ascending the throne of Kazan, which was then free, to prevent the independent selection of a Khan by the common people: "That is not their yurt, it was the yurt of Mahmet Giray Khan; it was divided equally between the two of us" [Ambassadorial books, 2006, p. 106]. These words from Ismail's charter are traditionally associated with the Crimea [Trepavlov, 2001, p. 253] and Mehmed Giray I [Trepavlov, 2011, p. 375], who reigned between 1515 and 1523, but as Trepavlov noted, "the link between the Kazan Khanate and this ruler is unclear: Mehmed Giray never aspired to the throne of Kazan" [Ambassadorial Books, 2006, p. 229, comment 120]. With this understanding, I.A. Mustakimov tried to explain the words of Ismail by the fact that after the dynasty of Ulugh Muhammad had come to an end in Kazan, the Girays, who were their close relatives, were considered by the rulers of the Tatar states as lawful successors to the descendants of Ulugh Muhammad [Mustakimov, 2009a, pp. 188–189]. Indeed, Ulugh Muhammad was remembered well in the Crimea, and the Crimean khans considered him their direct relative. For example, Khan Sahib Giray wrote in a charter (delivered to Moscow in May 1538): "You also wrote us about Kazan, saying that you had enthroned a tsar in Kazan". When Tsar Mahmed Amin and his older brother Tsar Alekham were arguing about the yurt, and Tsar Mahmed Amin came to Moscow for that purpose, and your father gave him his assistance, and he ascended the throne in Kazan. That is true, and when does such not happen among rulers? But did he put him on the throne by giving his assistance? Your great-grandfather Vasily fought against our grandfather, the great tsar, the late Mahmed, and he was taken prisoner. At that time, our grandfather could have killed your great-grandfather and taken the Muscovite state with all its lands, for such was his power and might. But he forgave him and spared his blood, disregarded all of that and gave him Moscow back again. And you don't

recall those good deeds of the past..." [Florya, 2001, p. 239]¹. In another text, an edict dated 1535 and issued in the name of Sahib Giray, the khan calls Ulugh Muhammad as "Mehmed Giray": "Our forefathers the tsars and my father Muhammad Giray the tsar went to Grand Prince Vytautas and to the King and Grand Prince Kazimir, to the Pans of the Great Polish-Lithuanian Commonwealth and were received by them and given great honor..."².

Thus, the above-mentioned letter of Ismail, the record of the succession of the Crimean khans from the collection of Matenadaran, the genealogy of the Shirins and the edict of Sahib Giray use the epithet "Giray" with reference to Ulugh Muhammad. It is hard to imagine that the epithet "Giray" is used with reference to Ulugh Muhammad by mistake in four sources which are absolutely independent of each other. Sometimes, some medieval authors included Ulugh Muhammad among Tokhtamysh's sons (although in fact he was the son of Ichkele Khasan, and Tokhtamysh was his paternal uncle)³. Then, one might assume that the nickname "Giray" was assigned to one of the branches of Tokhtamysh's descendants, or even more ancient family ties between the Crimean khans and Ulugh Muhammad, namely, their common kinship as the descendants of Tuqay Timur. This kinship was emphasized in Russian genealogical records which were based on a Tatar source [Vásáry, 2008, pp. 369–370]. According to "Muizz al-ansab" Hacı Giray's brother also had this epithet in his name (his name was Jan Giray) [Muizz, 2006, p. 45].

According to "Collected Stories from the Book of Victories", Solghat and Caffa were initially given by Chinggis Khan to his son Jochi

[Mustakimov, 2013a, p. 239]⁴. Tuqay Timur was the thirteenth son of Jochi [Rashid al-Din, 1960, pp. 66, 77]. "Mu'izz al-ansab" names the concubine Kangri Khatun from the Merkit tribe as his mother [Sultanov, 2001, p. 142; Muizz, 2006, p. 38]. This may be why the descendants of Tuqay Timur seemed to have a lower status among the other representatives of the Jochid dynasty. According to "Chinggis-nama" by Utemish Hadji, the descendants of Shiban supposedly criticized the Tuqay-Timurids for the fact that, unlike the other brothers (Jochi's sons), Tuqay-Timur did not receive an ulus after his father's death in 1226. "When, after the death of our father Jochi Khan, our fathers headed to our grandfather, the great Chingis Khan, after Ijan and Sain [i.e., after Orda and Batu—I.Z.] he put up a yurt for our father Shayban Khan. He didn't even put up a [covered] wagon for your father" [Utemish Hadji, 1992, p. 92, VII; Ötämiš, 2008, pp. 10, 69]. According to Mahmud ibn Vali ("Sea of Secrets Regarding Noble Valors"), Tuqay Timur's descendants were called "sons of the khan" (khan-ogly) [Sultanov, 2001, p. 142]. Indeed, there are many Chinggisids among his descendants who had the epithet "oglan" ("uglan") in their names [Iskhakov, 2002b, p. 70]⁵.

According to Mahmud ibn Vali, the descendants of Tuqay Timur ruled the As (vilayet-i as), as well as Mangyshlak and Hajji Tarkhan. Tuqay Timur's son Uran (Oran) Timur was granted the vilayet of Krym and Caffa at the very beginning of Mengu Timur's reign (1267–1280). Before that, under Berke, warlord Tuk

¹ It is obvious that 'the Great Tsar Mahmet' in the letter of Sahib Giray is the Russian translation of the title 'Ulugh Khan Muhammad'.

² Quoted by: [Shabuldo, 2005, pp. 108–109]. This 'Mehmed Giray' of the yarliq cannot be the son of Mengli Giray, as this Mehmed Giray was not the father, but the brother of Sahib. Besides that, the reference of the yarliq to the epoch of Vytautas (died in 1430) and Casimir (died in 1492) excludes the possibility for Sahib Giray to write about Mehmed Giray bin Mengli Giray.

³ For the reasons see: [Iskhakov, 2002b, p. 73].

⁴ This text, 'Tawarikh-i guzida—Nusrat-name' about the grants to Chinggis' sons, in the opinion of I. Mustakimov, was borrowed from some Turkic epic, created most probably in the Chagatai ulus [Mustakimov, 2013a, p. 237].

⁵ Even if Tuqay-Timur was born by a Keraite (for example, if his mother was the elder wife of Jochi, Niktimish Fujin, who was the niece of the Keraite Ong Khan and the daughter of his brother Jakha Khambu [Rashid al-Din, 1960, p. 65]), then even in this case the appearance of the affix 'Giray' in the name of some (but by far not all) of his descendants would not have been more easily explained. Unfortunately, of all the offspring of Jochi, we only know the tribal origin of several of his sons, out of a total number of about 40: Orda was born by Sartak of the Khungirat clan; Batu was the son of Ukin Kuchin Khatun (also a Khungirat) [Rashid al-Din, 1960, pp. 66, 71].

Buga was in command of the Crimean steppe [Sultanov, 2006, pp. 218–219; Nekrasov, 1999, p. 48]. It may be that Uran Timur inherited the Crimea from his father. The ulus of Tuqay Timur's descendants assigned to them after the western military campaign included Mangyshlak, Hajji Tarkhan and the region of the Ases, and in 1266, according to Abu al-Ghazi, Mengu Timur granted Shiban Khan's son Bahadur Khan a region (mamlakat) called Ak Orda, and Caffa and the vilayet of Krym were passed to Tuqay Timur's son, Uran-Timur, while he himself went on a campaign to the country of the Bulgars. In two years, he came back as a victor [Aboul-Ghazi, 1871, p. 173; Aboul-Ghazi, 1874, p. 182; Klyashtorny, Sultanov, 1992, p. 191]. If we proceed from the idea that Bahadur inherited this region from his father, that means that Uran Timur's inheritance was also confirmed by the supreme khan. Referring to Abu al-Ghazi, V.D. Smirnov also believed: "The earliest formally acknowledged ruler of the Crimea was Oran Timur, the son of Toqay Timur, Batu's younger brother, who received this region as his dominion from Mengu Temir" [Smirnov, 2005, p. 80].

In this case, the region of Ases may mean the Ases who lived in the lower reaches of the Don River and the Azov steppes.

It is quite likely that the fact that the Crimea and the above-mentioned regions belonged to the descendants of Tuqay Timur was reflected in family relations between governors of the Crimea and Khwarezm, noted by I.A. Mustakimov. For example, the governor of Khwarezm, Kongyrat Ak-Husein ibn Nagadai, was the maternal uncle of the son of Sejeut Ali-biy Hasan. According to "Madjmu' at-tavatikh" by Saif ad-Din and Nur-Muhammad Akhsikenti (early 16th century), Ak-Husein was the governor of the Crimea, then he fled from Mamai to Bulgar, and then to Turkestan and Khwarezm [Mustakimov, 2011, pp. 235–236. comment 51].

There is one more attribute connecting the descendants of Tuqay Timur besides the dynastic epithet. This is the tamga. The image of the three-legged tamga (the so-called "tarak-tamga") went down in the historical traditions as the clan sign of the Crimean dynasty of the Girays; however, it can also be seen on the

coins of Tokhtamysh, Shadibek, Pulad, Chekre, Ulugh Muhammad (as well as on his yarliq of April 15–24, 1420 [Grigoriev, 2006, pp. 115–116]), Giyas ad-Din, Kichi Muhammad, Murtaza (the son of Khan Ahmed of the Great Horde) and some other khans. All these rulers, like Murtaza, are descended from Tuqay Timur, so the "tarak-tamga" could be the common clan sign of the representatives of this branch of the Jochids. But this is complicated by the fact that on coins of khans of the 15th century who are descended from Tuqay Timur, another tamga is seen which is reminiscent of a "two-toothed fork" [Kazarov et al., 2013, p. 348]. Moreover, the same khan could put different tamgas on his coins (depending on the place where it was minted). For example, Ulugh Muhammad stamped the "tarak-tamga" on his Sarai coins, although his coins from Hajji Tarkhan and Ordu-Bazar bear a completely different tamga. Three-legged tamgas were also coined on the Tatar-Genoese coins of Caffa (1421–1445). Hacı Giray ibn Giyas ad-Din chose a variant of such a tamga as the clan tamga of the Girays, and starting in 845 AH (1441/42) it was stamped on coins [Lebedev, 1990, p. 149]. A.P. Grigoriev asserted that the Golden Horde khans who were descendants of Jansa¹ used the trident tamga. They ruled long before the time of the establishment the Giray dynasty in the Crimea [Grigoriev, 2006, pp. 1115–1116].

Hence, it must be acknowledged that neither the etymology of the dynastic name of the Crimean khans nor the historical context of its origin is completely clear. Finally, the logic of attributing the name "Giray" to representatives of the dynasty for the first two generations is not quite clear. We know at least three brothers of Mengli Giray I for sure (Nurdevlet, Aidar and Keldi-bay (Keldish), who ruled in the Crimea), as well as brothers and nephews who did not rule, who did not have this nickname².

¹ Jansa (Jine or Chente Oghlan) was the father of Ichkele Hassan (Hassan Oghlan) and hence the grandfather of Ulugh Muhammad [Iskhakov, 2002b].

² This can indirectly testify to the fact that in the 15th century the affix 'Giray' indeed somehow related to tribal origin (by mother's line?), but not to the fact of holding the Crimean throne, and only later, already in

Considering all of the above, perhaps we should abandon the Mongolian etymology and ethnic and clan associations with the dynastic name of the khans, and search for the etymology in the Turkic languages and family ties. Then, possibly, the name "Giray" (گرای) originates from the Ottoman and Crimean Tatar dialectal word "*geri*" (گری; گرو), meaning "breed, clan, grandfather" [Sevortyan, 1980, p. 27] and the affix -ai (-ei) used in some Turkic languages to form diminutive, mainly affectionate nouns denoting various degrees of relation (for example, *babai*—"granddad", *anai*—"mommy", *atai*—"daddy", *abai*—"auntie") [Serebrennikov, Gadjeva, 1979, p. 104]. Then Geray would mean "grandfather", which combines well with the legend about the tutor of the khan after whom he was named. Then the full name of the first Crimean khan can be translated into Russian as "Grandfather Pilgrim" (hadji)¹.

According to the sources, the father of Hacı Giray was Gıyas-ad-Din ibn Tash Timur ibn Janai ibn Tula Timur ibn Kungek ibn Ruk Temur ibn Tuqa Timur ibn Jochi ibn Chinggis [Halim Giray, 2013, p. 31]². We do not know the name of Hacı Giray's mother. Information about Hacı Giray's brother Janai Oglan is reliably known [Smirnov, 2005, p. 186]. According to "Muiz-al-ansab", he was called Jan Giray [Muizz, 2006, p. 45]. Hacı Giray's nephew (his brother's son) Janay Oglan is mentioned in "Asseb as-Seyar" and abridged versions of this work [Asseb o-sseyar, 1832, p. 72; Abridged, p. 26; Smirnov, 2005, p. 188; Ortekin, 1938, p. 8]. Apparently, he was named after his grandfather (Janai ibn Tula Timur). There was a tradition in the Muslim East to name grand-

sons and great-grandsons after grandfathers and great-grandfathers, repeating the correlation of names every few generations. Apparently, keeping that in mind, a few decades later one of Hacı Giray II's brothers was named Jihan Giray [Kara Mustafa, 1973, pp. 315, 392]. It is possible that Hacı Giray also had the nickname (or another name?) "Malik" (ملك; "tsar")³. Ottoman historians from the circle of Tashkendi Ali call him that [Hezarfenn, s. 29], as do Crimean authors [Halim-Geray, 1909, p. 11; Halim Giray, 2013, p. 31].

According to the traditional view, an independent state (khanate) in the Crimea was established by Hacı Giray with the support of the Polish-Lithuanian state in the early 1440s [Nekrasov, 1999, p. 49]. This role of Poland and Lithuania in the formation of the khanate and Hacı Giray's destiny was underscored not only by Polish-Lithuanian Medieval authors, but also by Crimean texts addressed to Lithuania, for instance, by *yarlyks* (charters) of Mengli Giray and Sahib Giray⁴.

Researchers suggest several dates for Hacı Giray's accession to the throne: 1441 (according to a coin dated 845 AH)⁵ [Ürekli, 1989, p.

the 16th century, it became a clear distinctive feature of Mengli Giray's descendants regardless of their mothers' origins.

¹ Hence the derivative personal name Girayli that Abu al-Ghazi mentions among the grandsons of Oghuz Khan [Kononov, 1958, p. 527].

² See, for example, the copy of 'Es-Seb'us-Seyyar' in the collection of the Süleymaniye Library (Reşid Efendi 664), which, however, contains two slips of the pen: the word 'ibn' is omitted between the names Gıyas ad-Din and Tash Timur (the slip resulting from the similarity of the name ending and the word ibn) and there is a misspelling of Jatai (instead of Janai). For more details, see: [Smirnov, 2005, p. 183 et seq.]. See also: [Gayvoronsky, 2003, p. 10].

³ Theoretically, with other vowel marks it can also be read as 'malak', that is, 'angel'.

⁴ For example, in the *yarliq* of Mengli Giray of 1514: 'Hereby we inform you, that our forefathers, the tsars, and our father Mehmed Giray the tsar went, spurring horses, to the Lithuanian land, to Grand Duke Vytautas, the King, and Grand Duke Casimir, coming there as guests and being received with great honour and kindness...'. Quoted by: [Shabuldo, 2005, pp. 106]. Although according to historians, these Crimean *yarliqs* for the Russian lands as such did not have much practical meaning to those to whom they were endowed [Kolankowski, 1935, p. 290], they indicate the claims of the Crimean khans to the legacy of the Golden Horde.

⁵ Let us put aside for a while some unconfirmed data about an earlier Crimean (Solihat) coinage of Hacı. The silver coin of Hacı Giray ibn Gıyas ad-Din, minted in Crimea with a *taraq tamga* inside the lesser circle and showing the date of 841 AH, that is 1437, had been stored before the Great Patriotic War in the Museum of Turkic-Tatar Culture (at present the Bakhchisaray Historical, Cultural and Archaeological Museum-Reserve) in two copies (under the code 715), but in 1938, it was stolen. As a result, Act no. 2 was filed on the loss of the copies, dated 12 October 1938 (Inventory book of the state palace and museum of the Turkic-Tatar culture (Bakhchisaray Historical, Cultural

13; Gayvoronsky, 2007, p. 19; Kolodziejchuk, 2011, p. 11] or, even more precisely, March–April of 1442 [Gulevich, 2013, pp. 128–129]; or 1443 [Sakharov, 1965, col. 208]. If we accept the last dating, Ulugh Muhammad must be considered the first Crimean khan, since in 847 AH (May 1443–April 1444) he was governing the Crimea [Tiesenhausen, 1884, pp. 501–502, 533–534]. A number of scholars place the beginning of Hacı Giray's rule in the Crimea—and thus the emergence of the Crimean Khanate—in 1449 [Kolankowski, 1930, pp. 264–266; Kolankowski, 1935, p. 288; Vásáry, 2012, pp. 15–16; Trepavlov, 2010, p. 50].

Feoktist Khartakhai hypothesized that at first the Tatars' capital in the Crimea was Eski Qırım, "then, in the age of feuds, before the Giray dynasty,—Karasu-Bazar, and finally, under Mengli Giray the capital was Bakhchisarai, which then turned into the centre of the Tatar civilization" [Khartakhai, 2003, p. 22]. This point of view was later supported by other scholars: "There is a reason to think that under Hacı Giray the capital was moved from Eski Kirim not to Bakhchisarai—which did not exist that time—but to the already developing city of Qırq; its fortified citadel was the fortress of Qırq Yer" [Bodaninsky & Zasyrkin, 1929, p. 181].

Coin issues are the most important evidence of the transfer of the capital from Solkhat (Kirim) to Qırq Yer. The earliest unquestionable coin of Hacı Giray minted in the city of Kirim (Solkhat) dates from 845/1441/42 [Retovsky, 1893, pp. 76–77; Ürekli, 1989, p. 13]. In 858/1454, Hacı Giray was minting coins in Qırq Yer [Retovsky, 1893, p. 79 et seq.]. A coin dated 867/1462/63 was apparently minted there as well. However, a coin of Hacı Giray minted in Solkhat most likely belongs to the same year [Retovsky, 1893, pp. 86–88]. Therefore, from 858/1454 until at least 867/1462–63, the khan was minting coins in two cities at the same time:

at his old headquarters in Eski Kirim (Solkhat) and at the new one (Qırq Yer).

The significance of Solkhat as the old capital obviously still remained in 868/1463/64. It was apparently then that the father of the khanate's founder, Hyias-ed Din, died. He was buried in Solkhat. In the early 1880s, according to G. Karaulov, his mausoleum remained in the northern outskirts of the city [Karaulov, 1883, p. 46]. It was described for the first time (in 1794) by P. S. Pallas: "From Eski Kirim, one descends the last limestone hill into a valley full of grass, where seven versts away, near the village of Kara Goz, lies the estate of the hospitable and cheerful General von Schutz. Behind the village, we saw an old rampart, but I did not notice its direction and did not measure its length. In this area, are the remains of a monument built of hewn stone, with a Gothic vault and an inscription in Tatar [868] 1454, indicating that it is the mausoleum of Hyais-edin Sultan, son of Khan Kilai-Temir" [Pallas, 1999, p. 116]. According to G. Karaulov, this "sepulchral monument made of hewn stones, with a Gothic vault and a Tatar inscription of 868 (1454)", which showed that someone named "Hyiasedin Sultan son of Kilai Temir Khan" had been interred in that mausoleum, was still unharmed at least in 1883 [Karaulov, 1883, p. 46]¹.

However, V.D. Smirnov, who visited Solkhat in the summer of 1886, did not find it: "Not a trace of it is left there now, and no one could even point to the location where that monument used to stand" [Smirnov, 1887, p. 278]².

¹ The report by Karaulov, however, looks almost exactly like a word-by-word quotation of Pallas. Did he really see the historical ruins or did he just simply quote the great explorer? His report looks even more suspicious considering that already three (!) years later, in 1886, no-one could either remember the mausoleum or even show its location.

² Perhaps, it was indeed this installation (the so called Mausoleum no. 6, see its coordinates on the archaeological map of Stary Krym by A. Smekalov http://www.archaeology.ru/ONLINE/Smekalov/solkhat_map.html) that was studied in the 80s of the last century by the Golden Horde (Stary Krym) expedition of the State Hermitage Museum, led by Mark G. Kramarovskiy (verbal report by M. Kramarovskiy to the author).

and Archaeological Museum-Reserve, no. 10307). Autograph by U. Bodaninsky (?), 1920s. No. 504a and b.). Considering the qualification of Usein Bodaninskiy, it is difficult to imagine that the coin was interpreted incorrectly, but it would be too early to make any conclusions until the actual coin is found.

In fact, 868 AH corresponds to the period of time between September 15, 1463, and September 2, 1464. 858 AH, however, totally fits into 1454 (from January 1 to December 21). It is not clear which date named by P. S. Pallas and G. Karaulov contained a mistake¹.

In the meantime, subsequent representatives of the dynasty were interred at the foot of the plateau which currently bears the name of Chufut-Kale, and some of them may have been buried on the plateau itself. There was also an opinion that Qırq Yer was the place of the original burial of Hacı Giray [Herzen, Mogarichev, 1993, p. 64]. Gilbert Romme, who visited the fortress in 1786, mentioned in his writings that it was there that Hayder (Hacı Giray's son), who took the throne for a short time in 1456, was buried: "In the city centre, in the midst of the houses, we see the remains of a tomb erected above the ashes of Hayder Khan, who died 300 years ago". The famous Djanike Khanum, who died in 1437, was also buried there. Her mausoleum still towers above the plateau; at the beginning of the 19th century there were undoubtedly other burials near it [Aqçoqraqlı, 2006, pp. 263–268, 273]. Thus, Qırq Yer almost immediately turned into a sacred family necropolis.

The Tarkhan *yarlyk* of Hacı Giray dates back to Safar 857/March 1453, when the khan's headquarters was still "in the palace" of Qırq Yer [Kurat, 1940, pp. 64–65]². This forces us to move the transfer of the khanate's capital from Solkhat to Qırq Yer back to a period no later than spring of 1453 (as we remember, in

858/1454 coins were already being minted in Qırq Yer).

Transferring the capital from Eski Kirim was most likely an attempt to avoid the influence of the powerful clan of the Shirins [Williams, 2001, p. 45]. However, why did they choose Qırq Yer?

Qırq Yer/Kyrk-Or is first mentioned by Syrian Abu'l-Fida (1273–1331) as Kerkri (قركري). It is located in the land of the Ases (من بلاد الاس), i.e., the Alans [Konovalova, 2009, pp. 101, 121]. According to I.G. Konovalova, Abu'l-Fida's message about Qırq-Or "belongs to the time when the city existed autonomously under the rule of local Alan princes." Other sources also strongly associate the fortress with the Alans and Goths (the Gothals). Bavarian soldier Johannes Schiltberger, who visited the Crimea between 1394 and 1427, noted: "Then, one city is called Karkeri and possesses good land, and is called Sutti, and the pagans call it Tat" (cited in: [Ganina, 2011, p. 78]). Sutti is probably a distortion of Kuthi (Guti), i.e., Gothia.

In "Tavarikh-i-Guzida-ij Nusrat-Name" (early 16th c.) Qırq Yer is mentioned as one of the *tumens* (areas capable of deploying or supporting 10,000 soldiers) which Batu granted to his younger brother Shiban after the latter had conquered the Crimea and Kafa [Mustakimov, 2011, p. 231], i.e. it was among the demesne possessions of Jochi's descendants. The story of Shiban's conquest of Qırq Yer is retained in the writings of Ötemish Hajji. A somewhat distorted version is also present in the work of Sayyid Muhammad Riza, an 18-century Crimean historian.

Ötemish Hajji describes this episode as follows: "There is a fortress of granite in the Vilayet of the Crimea which is called Kyr(k)-Yer [قير يري], the might and impregnability of which are known [all over] the world. or several years, [Shayban Khan] besieged [it and] stormed it, [but] was not able to capture it. At last, he ordered: "From sundown till dawn take any items that produce noise and beat them one against another!" [His people] took [such things] in both hands and started beating one utensil against another, and they started making noise with copper pots, trays and cups. Such din and roar arose amongst the troops that the

¹ There is one more surprising circumstance. According to other sources, Gıyas ad-Din died in 841/1437/38 after a year-long reign in Crimea [Smirnov, 2005, pp. 179, 189]. This does not correspond with the Solkhat mausoleum either by the date, or the content (no matter how brief his stay on the throne, the epitaph must have mentioned him as khan).

² Despite the fact that the *tarhan yarliq* of Hacı Giray is not original, but, by the definition of M. Usmanov, is an approximate, sometimes distorted copy, composed in Turkey on the basis of several similar deeds and combining individual qualities of different documents in one sample-model [Usmanov, 1988, p. 129], the date of this model does not raise substantial doubts (though, as it was already noted by Akdes Nimet Kurat, the date of the month in the date does not match the day of the week and needs to be corrected).

earth and the sky were shaken [and] ears were deafened. The besieged started rushing about in a terrible panic, asking what had happened. That night the din and roar did not stop till the morning, and the besieged could not go to sleep. When the dawn broke, [the besieging force] stopped [making noise]. When the evening came, they began to cause a din and roar as they did before. For a week [or] about ten days, they did this. The besieged were so exhausted from sleeplessness [that] they started to say: "If they intended to undertake something, they would have done it [already]. Most likely, they have such a rite and custom at this time of the year," and calmed down. When Shayban Khan knew that they had calmed down, he gathered his troops. They say that fortress was situated on a bare rock. That night [the besiegers] clanked and shouted more [than they usually did]. They dug tunnels from the four sides of the fortress. By the dawn, they had dug [such] a tunnel that a man could pass through it. Because of the din and roar, the besieged did not hear the noise of picks [and] were not able to detect [the tunnels]. When the tunnels were ready, [the besiegers] stormed the gates. The beleaguered rushed to the gates. One troop of Baghaturs was assigned to the tunnels. The [Baghaturs] ran out of those tunnels, stormed the fortress and took it. We questioned travelers who had seen that stronghold; they said that [even now] there are traces of that tunnel" [Ötemish Hajji, 1992, pp. 95, 174, xi; Ötämiš Hhājī, 2008, pp. 13, 72].

It is likely that the version of Ötemish Hajji directly or indirectly (via intermediary texts) influenced Sayyid Muhammad Riza's story of how Qırq Yer was conquered. Citing Abu'l-Fida with regard to the geographical coordinates of the fortress (incorrectly, at that!), Riza states: "In former times, the illaudable people of the *Mughal tribes*¹ called As, due to their full confidence in the castle's inaccessibility, exhibited rebelliousness and resisted the Crimean khans. One of Chinggis Khan's descendants, Sheibek Khan, exerted all his efforts to besiege and constrain it, but was unable to conquer and subdue

it. Then, one of the emirs from the Yashlau tribe, a quick-witted man, made a brilliant suggestion to arm themselves with the new and robust weapon of the saying "War is cunning". He gave an order to collect all drums, horns, and all musical instruments from the khan's camp, as well as basins, pots and other copper utensils, and beat them for three days and nights. In accordance with the proverb: "A basin fell from the roof," the noise produced, just as the doomsday, bewildered and stupefied the inhabitants. They thought that an attack was already taking place, and, with weapons in their hands, stayed awake for three days: everyone kept watch in their assigned places, on their feet, just like cemetery tombstones. When it became unbearable on the fourth day, against their will they fell asleep like the dead. Taking advantage of the opportunity, the cunning mirza raised his victorious standard and together with his followers, renowned Tatars, made an attack. The nasty infidels slept and did not sense the attack of the Tatars, who without any fight or battle took possession of the keys of the aforesaid fortress" [Smirnov, 2005, p. 117; Asseb O-Sseyyar, 1832, pp. 76–77; Herzen, Mogarichev, 1993, pp. 54–55]. Regarding the name of Sheibak, V.D. Smirnov once noticed: "There is either a lapsus linguae or an anachronism in this legend" [Smirnov, 2005, p. 126]². Apparently, Riza's scribe (or Riza himself?) distorted the unfamiliar name of "Shiban", turning it into "Sheibak" (شيباك → شيبان), thus V.D. Smirnov had neither the initial text of Utemish-Hadjji, nor the more accurate copy of "The Seven Planets" (however, I am not sure that this slip of the pen was not present in Riza's protograph).

In his story of the conquest of the Crimea by the Mongols (the event of 1238), Rashid al-Din says, "Shiban, Buchek, and Buri went on a campaign in the land of the Crimea, and seized Tatkara from the Chinchakan tribe" [Rashid-ad Din, 1952, p. 39]. "Chinchakan" is probably a distortion of "Qipchaqan", i.e., the ethnonym "Qipchaq" in the Persian plural. What city (area) was that? According to A.Y. Karpov, Batu's bi-

¹ V. Smirnov noted that in the truncated version the As are called a people from the 'Tatar clans' [Smirnov, 2005, p. 117].

² He, however, did not view the whole legend entirely as an invention, as A. Herzen and Yu. Mogarichev believed [Herzen, Mogarichev, 1993, p. 55].

ographer, it was "a mountain range near Crimean Sudak" [Karpov, 2011]¹. This hypothesis is reasonable (such a toponym really does exist), but the context of Rashid al-Din's message does not indicate the capture of a ridge; it rather describes the conquest of a stronghold². Since the text is obviously distorted, it is quite possible to see in the name *Tatkara* a toponym referring to the above-mentioned *Qırq Yer* (let us remember Schiltberger's *Tat*).

However, according to the view expressed by V.L. Yegorov, throughout the 13th century, the city was an autonomous fiefdom semi-subordinate to the Golden Horde. Its autonomy was abolished after Nogai's forces destroyed it in 1299. In the 15th century, after the decline of *Solkhat-Kirim*, the Girays' administrative centre was transferred there for a short period of time. *Qırq Yer*'s decline is related to the emergence of a new residence of the khans—*Bakhchisaray* [Yegorov, 1985, p. 88]. This opinion was justly criticized by A.G. Herzen and Y.M. Mogarichev. According to them, at least until the end of *Uzbeg Khan*'s rule (1342), *Qırq Yer* was outside the territory of the Golden Horde. The first written evidence of the fortress's being "in the possession of the Tartars" and its status of one of the Golden Horde principalities is the mention of the Khan of "*Kirkel*" in the report of the Battle of Blue Waters (1363)³. Thus follows the conclusion that *Qırq Yer* was seized by the Tatars between 1342 and 1363, to be more exact, during the time of *Jani Beg*. It is curious that even Muslim epigraphic works of the 14th c. originating from the plateau are considered to have appeared there later [Herzen, Mogarichev, 1993, pp. 56–57]⁴. As we have seen, *Shiban* had already conquered the fortress in 1238. It is more than likely that the fortress was a semi-autonomous Alanian possession with a *darugha* representing the khan. The tax which was imposed on it (similar to Russian princedoms and

Italian colonies of the Southern Bank) was received personally by the khans.

It is highly likely that *Mengli Giray*, born around 850 AH (1446/1447), was the son of *Hacı Giray* and an Alanian princess, *Prince Indiavu*'s daughter. In respect of his mother's origins, *Mengli Giray* himself wrote thus: "...my mother the queen's father is *Indiavu* the prince" [Collection of the Imperial Russian Historical Society, 1884, p. 270]. As far as I know, her name does not appear in accessible sources. But her father's name (i.e., *Mengli Giray*'s grandfather) is found in one text, and quite an unexpected one.

According to *Giosafat Barbaro*, a burial mound called *Kontebe*, situated 60 miles away from *Tana*, right near the *Don* (*Kumtepe* was possibly *Kobyakovo* settlement), which he and his companions dug open at the beginning of 1438 belonged to a leader of the Alans named *Indiabu*. *Barbaro* noted: "I believe that the person who ordered the arrangement of such a grave—his name was *Indiabu*—and desired to comply with all of the numerous ceremonies which were observed at that time must have thought in advance how to collect all of these things and put them in place." Treasure, "if there indeed was one, was hidden for the following reason: when the Alans' leader—the aforementioned *Indiabu*—heard that the Tatar khan was going to war against him, he decided to bury his treasure, but such that no one would notice it. Thus, *Indiabu* pretended he was preparing a grave for himself according to the local customs, but secretly ordered that what he considered necessary be put there, and afterward that this mound be constructed" [Barbaro and Contarini, 1971, pp. 139–140].

This legend traditionally belongs to the time of the Mongol invasion of the Azov steppe, i.e., to the 13th century. However, another interpretation is possible. The *Prince Indiabu* mentioned by *Barbaro* could have been his older contemporary and *Hacı Giray*'s actual father-in-law. The Tatar khan, whom *Barbaro* mentions, is not necessarily *Chinggis* or his nearest descendants, but one of *Chinggisids* of the turn of the 14–15th centuries. Based on *Mengli Giray*'s date of birth, his mother should have been born in the 1420s or at the very beginning of the 1430s, and thus her father *Indiavu* was most

¹ See also [Belyansky and others, 1997].

² Also supposed by B. Akhmedov [Akhmedov, 1992, p. 8].

³ A. Galenko reasonably warned against such identifications, which F. Brun took the risk to suggest back in his time.

⁴ For more details, see: [Aqçoqraqlı, 2006, pp. 267, 273].

likely born in the late 14th century. The question remains open until new sources are discovered. However, the possibility that Mengli Giray was one-quarter Alan (the nationality of his maternal grandmother is not known) exists.

The name "Indiabu/Indiavu" is not recorded among Turkic names, but that is not cause to consider it Alanian. Such names as "Indi", "Yndy"/"Yndu", and various derivatives thereof are mentioned. The name of Mengli Giray's grandfather could have been produced from these stems, similar to the name Istiebe [Baski, 1986, pp. 58, 60, 61].

In September 1486, Mengli Giray wrote to Moscow that his mother had died when one Moscow merchant who traded "overseas", Ivan Zheglov, died in the Crimea. The diplomatic mission from Moscow regarding an attempt to return Zheglov's goods, is dated March 1486. Therefore, Mengli Giray's mother died before March 1486, most likely in 1484 or 1485 [Collection of the Imperial Russian Historical Society, 1884, pp. 47–48, 51].

Thus, a Tatar-Alanian union cemented by a dynastic marriage was formed shortly before Mengli Giray's birth in 850 AH, probably in the early 1440s [Zaitsev, 2007a, pp. 64–71]¹. In the framework of the idea of a Tatar-Alanian (Gothalanian) dynastic union, the transfer of the capital from cosmopolitan multiethnic Solkhat to an impregnable Alanian fortress on a rocky plateau looks very logical and justified.

This does not mean, however, that the stronghold was inhabited solely by the Alans (Gothalans). Part of the plateau belonged to the Yashlav beys and was apparently inhabited by Muslims. The oldest yarlyk issued by a khan to this family line is dated 1637 and was granted by Khan Bahadır Giray. The yarlyk calls the beys "the ancient rulers of the city of Kerki, now called the Jewish City". According to V.D. Smirnov, "even the most inveterate Eastern rhetoricians—the scribes of the Khan's secretariat—would never mention such

things in grant-charters by accident" [Smirnov, 2005, pp. 126–127]². However, the Yashlav did not live in the fortress themselves, but possessed the right to collect taxes from its people. Moreover, a significant part of Qırq Yer's population in the 14–15th centuries was made up of Armenians. The yarlyks for the population of Qırq Yer from Hacı Giray dated 864 AH (1459) and from his son Nur Devlet dated 872 AH (1467), as well as the accord between the townsmen and Mengli Giray of 1478–1479 clearly show that the city was inhabited by Muslims, Christians, and Jews [Aqçoqraqlı, 2006, p. 269; Vásáry, 1982].

It seems that the time of Hacı Giray's move to his new residence corresponds to the time of the construction of Djanike Khanum's mausoleum. Most likely, her remains were transported from another tomb. In Qırq Yer, Hacı Giray established a madrasah near the already existing mosque. As a result of excavations in the 1920s, 6 meters from the north-west corner of the mosque a fragment of a stone slab was found. The fragment contained the remains of an inscription in which the name of Khan Hacı Giray, son of Hyias-ed Din, could be made out [Aqçoqraqlı, 1929, p. 185, no. 1; Bodadinsky, Zasyrkin, 1929, p. 181, fig. 15]. The very first khans apparently created a menagerie on Cape Burunchak. It was a kind of a preserve for battue hunting which belonged solely to the khans and was supported by the Treasury [Pallas, 1999, p. 33]. Two pools for rainwater were cut out in the centre of the cape (in the 1970s, they were studied by archaeologists), and the cape itself was walled off from residential areas [Herzen, Mogarichev, 1993, p. 30]. Only members of the ruling house were allowed to hunt in this preserve. After annexing the peninsula, the administration of the Russian Empire for a long time did not know what to do with the deer remaining there.

For a long time, Qırq Yer served as the place where the Girays' mint was located and the dynastic Treasury was kept [Syroechkovskiy, 1940, pp. 5, 23]³. The khans' war spoils

¹ It was no accident that Laonikos Chalkokondyles (who lived from 1432 or 1423 to 1490) wrote between 1480–1490 that Ατζιερής, that is Hacı Giray, enforced tribute payment on peoples, including the Crimean Goths and Caffa Genoese, as well as part of the Sarmatians (Russians) [Ditten, 1968, pp. 13–14].

² About the legends linking Chufut-Kale and the Yashlavs, see [Zaitsev, 2009a].

³ The capital status of Qırq Yer is echoed in the chronicles by Maciej Strykowski (1582), narrating that Vytautas, who, in the opinion of V. Smirnov, had

were also kept there. According to khan Sheikh Ahmed (about 1527), it was there that his property and the Golden Horde's Treasury (which had been seized by the Crimeans in 1502) were kept absolutely safe: "... my property in Perekop's Kirel is now kept in a safe place, so that I could get it back in full, because I do not want my property or my country's property to be captured by the Perekop tsar" ("Perekop tsar" was another name of Mengli Giray) (cited in: [Trepavlov, 2010, p. 34; Trepavlov, 2011, p. 378])¹.

Thus, Qırq Yer looks like a classical Central Asian "*kuruk*"—a forbidden place, a preserve. Mahmud of Kashgar (11th century) repeatedly uses this word in the form of قرغ ("*kurig*" or "*korig*", which means "the ruler's shelter". Any secluded place, according to Kashgari, is called a *kurig* [Mahmud al-Kashgari, 2005, p. 356]. In A.R. Rustamov's translation, the word is rendered as "protected [lands]", "the preserve of a bey or someone else. Any protected place there is قرغ" [Mahmud al-Kashgari, 2010, pp. 65, 312]. Such preserves of the khan existed in the Golden Horde; in particular, Oz Beg possessed some². Abu'l-Fida, speaking of the Alanian city, interprets its name: in Turkic it supposedly means "forty men" (اسمها بالترکی اربعون رجلا). Moreover, V.V. Bartold noted that this meaning would correspond to "Qırq-Er" rather than

Kerkri, as Abu'l-Fida rendered it. V.V. Bartold also mentioned another etymology—Qırq-Or ("Forty graves")—suggested by other researchers [Bartold, 2002, p. 369]. However, Crimean coins only show the form Qırq Yer (i.e. "Forty places"). U.A. Bodaninsky and B.N. Zasyrkin thought that the word "qırq" in its name is not the numeral "forty", but the name of the clan which established the city and lived in it. As such, the fork-shaped (horned) tamga which is often seen on stones in Chufut-Kale was considered to belong to "one of the branches of the qırq clan," as it was also the tamga of the village Qırq-Cholpan [Bodaninsky, Zasyrkin, 1929, p. 185]. In reality, this tamga is the tamga of the Yashlav clan (to whom, possibly, the village Qırq-Cholpan belonged). It is interesting that those symbols were subsequently used by the Karaites in order to justify the continuity of power and the possession of Chufut-Kale.

A.J. Harkavy rejected the Turkic etymology of the name and proposed the Indo-European root "kar" as its basis, as reflected in the Iranian name of the Kerkeri fortress in Gilan [Bertier de la Garde, 1920, p. 106; Smirnov, 2005, p. 119; Herzen, Mogarichev, 1993, p. 52].

V.D. Smirnov suggested his own version of the emergence of the name: from Greek Καλλιάρια, influenced by the Turkic national etymology.

A.P. Grigoriev suggested that Abu'l-Fida used the name of the Qırq Yer fortress written with a mistake, and tried to find an etymology for this erroneous name [Grigoriev, 2007, p. 140]. A.P. Grigoriev himself proposed his own etymology: "kirik" ("cleft").

Considering Qırq Yer's role as a classical kuruk (khan's preserve/necropolis), we can cautiously suggest another possible etymology of the name: "koryk/kyryk-yer"—"preserved, sacred area" [Zaitsev, 2013, p. 494–503].

With the transfer of the khan's residence to Bakhchisarai, Qırq Yer lost its significance, but remained the place of the khans' reserved hunts, and the valley at the foot of Burunchak became the final resting place for the first four generations of the Giray dynasty. [Gavrilyuk, Ibragimova, 2010]. Soon the whole city was granted to the Yashlav beys as a holding and was populated by the Karaites.

a direct relation to the rise of Ulugh Muhammad Khan, gave two Sultans to the Perekop Tatars. One of them, Muhammad, to Qırq Yer: 'for the Qırq Yer tsardom'; the other one was Devlet Giray [Smirnov, 2005, pp. 178–179]. True to say, though, that memory of the capital status of Solkhat-Qirim continued to live long in the minds and hearts of its natives. Years later, in 1581 in the work of the well-known Ottoman historian Mustafa Ali Gelibolulu, we come across a kind of moralizing plaint about the devastation and decline of the town of Qirim, which is put in the mouth of the Ottoman Padishah Mehmed II and his interlocutor, a native of Solkhat, the famous Mevlana Seyid Ahmed ibn Abdulla Qirimi (died in 879 / 1474/75) [Tietze, 1979, pp. 101–103, 25–26]. See also the text by Taşköprüzade: [Shakaik, pp. 109 reverse–111]

¹ Devlet Giray used to mint coins there in his time [Muralevich, 1928, p. 141].

² I accept the amendment of Devin De Weese to the text of Ötemish Hajji with the description of the conversion of Ozbeg to Islam, where, most probably, such a *koruk-korug* is actually mentioned [De Weese, 1994, pp. 544–546].

§ 4. Kazan Khanate

Anvar Aksanov

As a result of numerous internecine conflicts in the XVth century, the Golden Horde began to crumble and New Tatar states gradually started to emerge in the areas it left behind. In the middle of the 15th century, the Kazan Khanate was formed at the site of the Bulgarian Ulus Desht-i Qipchaq. Kazan became an independent political centre of the Middle Volga Region after representatives of the ruling family of the Chinggisids appeared in the city. However, due to a lack of data, historical studies cannot provide precise answers to the questions of who, when and under what circumstances the Khanate was formed.

At the end of the 17th century, A.I. Lyzlov expressed the opinion that the Kazan Khanate was formed by former khan of the Horde Ulugh-Muhammad [Lyzlov, 1776, pp. 68–69]. This point of view was firmly established in the works of 18–19th century historians [Rychkov, 1767, p. 81; Karamzin, 1819, p. 273; Solovyov, 1988, p. 392]. This view came together based on accounts from the Kazan Chronicler. V.V. Velyaminov-Zernov put greater trust in the data from the Voskresensk and Nikon chronicles, believing that the Khanate was established by Ulugh Muhammad's son Mahmud, who conquered Kazan in 1445 [Velyaminov-Zernov, 1863, pp. 6–10]. However, the author of the first monograph of the Kazan Khanate M.G. Khudyakov went back to the opinion that the Khanate was formed in 1437–1438, by Ulugh Muhammad [Khudyakov, 1991, pp. 22–25]. A.A. Zimin had a similar thought process. He confirmed his observations by the fact that the Voskresensk, Nikon chronicles and "Gosudarev Rodosloviets" ("The Sovereign's Pedigree Book"), which are the cornerstone of V.V. Velyaminov-Zernov's hypothesis, are of a later origin and contrary to other sources. [Zimin, 1991, p. 105]. But A.A. Zimin, just as the researchers who came before him [Alishev, 2001, p. 34; Rakhimzyanov, 2009, pp. 52–53], never specified which "other sources" the official annals of the 16th c. are contradictory to. Sh.F. Mukhamediarov flat out rejected any unambiguous as-

sertions on this issue. In his opinion, the first Kazan khan was Ulugh Muhammad or his son Mahmud [Mukhamediarov, 2012, p. 98].

B.L. Khamidullin brought something new to the discourse by stating that no source from the 15–16th centuries, except for "The History of Kazan" treats Ulugh Muhammad as the first Kazan khan. The researcher concludes that genealogical books, along with the Voskresensk and Nikon chronicles, are more authentic. These texts state that the first khan of Kazan was Ulugh Muhammad's son Mahmud, who subdued the city in 1445 [Khamidullin, 2002, pp. 128–130; Mukhamediarov, Lkamidullin, 2010, p. 56]. D.A. Kotlyarov arrives at the same conclusion, stating that after khan Ulugh Muhammad's death Mahmud gathered together the majority of Tatars and marched down the Volga to conquer Kazan [Kotlyarov, 2005, p. 102].

In A.G. Bakhtin's opinion, Mahmud was the one who overthrew local prince Alim-bek and established himself in the Middle Volga Region, whereas Ulugh Muhammad never desired to directly govern the Bulgar Ulus because he planned to return to Sarai. He also concluded that the founder of the Kazan dynasty was Ulugh Muhammad, but the first khan of Kazan was his son Mahmud [Bakhtin, 2008, pp. 140, 231].

Thus, historians are seen to put forth various hypotheses on how Mahmud ascended to the throne of Kazan. In order to clarify the situation, we shall look over source texts coming from their own genealogy. The earliest records are preserved in the Moscow chronicle from the end of the 15th century, the Chronicle of 1497, and the Nikanor, Yermolin, Simeon, Typographical, and Tver chronicles.

The Moscow chronicle from the end of the 15th century, a pivotal text for official Russian annals, contains the following story related to the events of current interest to us. In Autumn 1437, the overthrown khan of Ulugh Muhammad's horde arrived in the city of Belyov as they fled from pursuers. There Vasily II dispatched "numerous troops", and Ulugh Muhammad "be-

came frightened and started to surrender to the Russian princes". But the voevodas "did not heed the tsar" and "a large fight" broke out at the walls of the fortress as "the Tatars were pressed into the city". The following day khan Ulugh Muhammad made a peace offer promising he would guard the "Russian lands" after his return to the throne and would not take any "vykhod" ("exit", i.e. tax) from them. In order to "prove his intentions", he suggested to exchange sons "between himself and the princes". When the Russians once again rejected his offer, despite the fact no one was "attacking them", their troops became spooked and ran away. As a result, "a small army of the impious vanquished the innumerable troops of Christians, as if one godless could defeat ten of our warriors or even more". In the chronicler's opinion, the reasons for this unprecedented defeat can be seen in the multiple sins the Orthodox warriors committed towards their co-religionists on the way to Belyov [Complete Collection of Russian Chronicles, 25, 1949, p. 260].

According to the same source, Ulugh Muhammad suddenly attacked Moscow in July 1439. He never managed to completely subdue the city, but "perpetrated much evil towards the Russian land". In the winter of 1444/45, Ulugh Muhammad "came and sat in old Nizhny Novgorod and from there moved on to Murom". After finding out that the grand prince's troops were close, the khan left Murom and headed back to Nizhny Novgorod, with Vasily II "having beaten" the Tatars near Murom and Gorokhovets returning to Moscow. In Winter 1445, Ulugh Muhammad's sons Mahmud and Jakub obliterated the Russians near Suzdal, captured Vasily II, reached Vladimir and, leaving the city in peace, returned back to Nizhny Novgorod. Ulugh Muhammad, "together with his children and the entire Horde, left Novgorod, moved onwards towards Kurmysh and took the grand prince along with himself". In October, the Tatars, having accepted the ransom and taken the Russians' oath (i.e. kissed the Holy Cross of Christ, in Russian "krestnoe tselovanie") released Vasily II and sent him to Moscow accompanied by "many of their ambassadors" [ibid, pp. 260, 262–263, 394–395].

The Moscow Chronicle from the end of the 15th century does not say another word about further events in the life of Ulugh Muhammad. However, it does say that in 1447: "...Kazan tsar Mahmutek sent all his mightiest princes to fight in the land of the grand prince—Volodimir, Murom, and other cities—as he had heard that the grand prince sent armies against him" [ibid, p. 269]. What deserves particular attention is that here Mahmud is referred to as a "Kazan tsar". Moreover, for the first time the chronicler directly connects the Kazan throne to the dynasty of Ulugh Muhammad. Prior to this event, the location of the khan's Horde had been associated with Belyov, Nizhny Novgorod, Murom, and other human settlements, but never with Kazan.

Similar reports can be found in the Ermolin, Nikanor, and Simeon chronicles [Complete Collection of Russian Chronicles, pp. 149–152; Complete Collection of Russian Chronicles, 27, 1962, pp. 106–107, 109–110, 114; Complete Collection of Russian Chronicles, 18, 2007, pp. 188–190, 193–195, 203], the Chronicle of 1497 [Complete Collection of Russian Chronicles, 28, 1963, pp. 101–102] and briefly in the Tver and Typographic chronicles [Complete Collection of Russian Chronicles, 15, 1863, col.491; Complete Collection of Russian Chronicles, 24, 2000, p. 183]. These events are also interpreted in a similar way in the 16th century chronicles. [Complete Collection of Russian Chronicles, 6, 2001, col.69–70, 102, 104–106; Complete Collection of Russian Chronicles, 8, 1859, p. 107, 111–114; Complete Collection of Russian Chronicles, 12, 1901, pp. 24–25, 30, 63–66; Complete Collection of Russian Chronicles, 20, 2004, pp. 240–241, 256–259, Complete Collection of Russian Chronicles, 21–II, 1913, p. 460, 463–464, 471; Complete Collection of Russian Chronicles, 26, 1959, pp. 192–193, 196–199, 207; Complete Collection of Russian Chronicles, 37, 1982, pp. 43–44; Complete Collection of Russian Chronicles, 43, 2004, pp. 180–181]. This means that Ulugh Muhammad's contemporaries and direct descendants did not treat him as the khan of Kazan, i.e. chroniclers did not associate the khan's raids into Russian lands with the actions of the Kazanians. Based on said information, we can only conclude that in 1437 the khan lost the Sarai throne, and spent

the following years conquering Russian cities and spending winters in them, as he did not have his own "yurt".

The author of the Nikon chronicle (written in the mid-16th century), states that Ulugh Muhammad fled from the Great Horde's khan Kichi-Muhammad to Belyov and, after the Russian troops were defeated, "sat" in Nizhny Novgorod and "lived in it" [Complete Collection of Russian Chronicles, 12, 1901, p. 64]. In other words, the chronicler states that from 1437 to 1445 Ulugh Muhammad lived in Nizhny Novgorod and used it as a home base to organise raids into other Russian lands. In an entry from 1555, the author of the Nikon chronicle writes about the formation of the Kazan khanate in a description of the history of how Orthodox Christianity expanded. According to him, after Vasily II was set free in 1445, "tsar Mahmutek arrived from Kurmysh, took Kazan, killed Galim-Bek and started ruling Kazan himself" [Complete Collection of Russian Chronicles, 12, 1901, p. 251]. Another unique addition to these events can be found in the Voskresensk chronicle, according to which in Autumn 1445 Mahmud killed local prince Libey, conquered Kazan and "became the tsar himself" [Complete Collection of Russian Chronicles, 8, 1859, p. 114]. Thus, even quite similar chronicles from a textual perspective describe Mahmud's conquest of Kazan differently.

The author of "The History of Kazan" explained at the beginning of his narrative that he had not found any references about the formation of the khanate in Russian chronicles, yet he had seen something in the Kazan ones. Seeking out this information, he appealed to "the most skillful Russian people", but they responded in different ways because none of them actually knew the truth. In other words, in the 1560s, there were no clear and definite ideas in Russia regarding the formation of the Kazan khanate. It is most probable that the compiler of "The History" simply cited one of the most popular versions of "the emergence of Kazan".

According to "The History of Kazan", in 1397, khan Ulugh Muhammad defeated the 40-thousand warrior strong army of Vasily II and headed to Kazan, which was desolate on account of Russian raids, and there constructed

a rampart and became tsar. Gradually, "barbarians" from the Golden Horde, Azov, Astrakhan and Crimea flocked to the city. "And the tsar's fame came and the honour of the Great Horde descended on the miserable young daughter which was Kazan".

Ulugh Muhammad besieged many Russian cities, including Moscow. In this scribe's conclusion, he brought more troubles with him than any other khan ever did. "And died (Ulugh Muhammad.—A.A.) in Kazan together with his youngest son Jakub, both slaughtered at the hands of his eldest son Mahmutek. And he ruled Kazan for seven years" [History of Kazan, 2001, pp. 254–276].

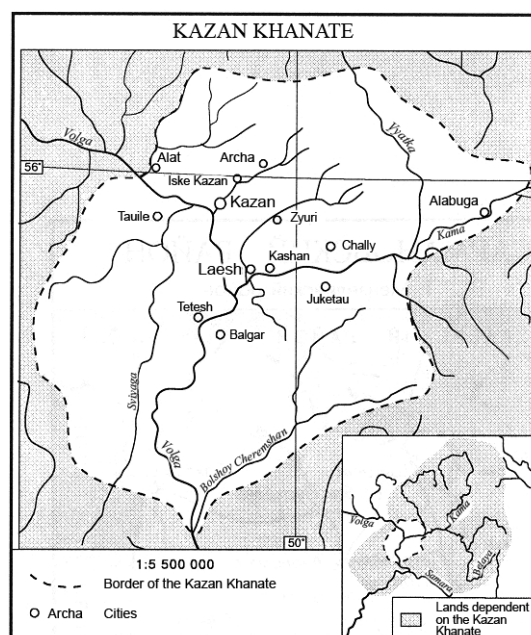

This reference from "The History of Kazan" that Ulugh Muhammad founded the Kazan khanate and died at the hands of his own son is not repeated elsewhere. V.V. Velyaminov-Zernov and N.P. Zagoskin took the story about Mahmud murdering his father Ulugh Muhammad as truth [Velyaminov-Zernov, 1863, p. 11; Zagoskin 1895, pp. 36–37], while M.G. Khudyakov considered it a "ridiculous fiction" [Khudyakov, 1991, p. 34]. Taking this story as its basis, L.N. Gumilyov concluded that Kasim "took the burden of revenge for his father on himself". According to him, this struggle between Kasim and Mahmud was reflected in the further events of 1467. With the support of Ivan III, Kasim marched out against the young Kazan khan Ibrahim, who was Mahmud's son [Gumilyov, 2004, p. 183]. A.G. Bakhtin considered this issue in the following way: since many Tatar khans of those times "died in power struggles", "the violent elimination of Ulugh Muhammad from the political arena seems quite reasonable for the Golden Horde". In addition, he believes that it was Mahmud who founded the Kazan khanate in 1445 after Ulugh Muhammad's murder [Bakhtin, 2008, pp. 135–140]. This means that he understood the information provided in the Nikon and Voskresensk chronicles through the prism of circumstances presented by the author of "The History of Kazan".

Moreover, G.Z. Kuntsevich noted that the idea of Ulugh Muhammad's murder was not confirmed by any other source except for the very last reference by one Kazan mullah

[Kuntsevich, 1905, p. 251]. It is also essential to keep in mind that the author of "The History" often used allegories that were popular in Medieval literature at that time. All one needs to do is look at his descriptions of Soyembika, Ivan IV's campaign against Kazan in 1552 or other references created on the basis of Biblical reminiscences and bearing a symbolic meanings. [Plyukhanova, 1995, p. 193, 200]. Perhaps, in this case, the author of "The History" was simply appealing to the popular plot of regicide, thus interpreting real events in an allegorical way. The semantics of this message can be explained by the Old Testament story in which the cruel Assyrian king Sennacherib was murdered by his own sons, as he had been persecuting righteous people and attempting to subdue Jerusalem [2 Kings 19: 36–37; Book of Tobit 1: 15; Book of Isaiah 37:37–38]. Medieval scribes therefore treated this type of death as punishment for an unjust reign and the oppression of God-fearing people.

The author of "The History of Kazan" also uses direct and indirect quotes from other records, thus emphasizing the root idea of his work. Throughout the entire narrative he continuously repeats the idea that "sword and blood gave birth to Kazan, and by sword and in blood it will end its days" [History of Kazan, 2001, p. 203]. This chronicler might have borrowed the depiction of regicide from the most reputed compositions of the time, as it perfectly fits in with his concept of the blood-drenched birth and blood-drenched death of "the tsardom of Kazan".

As we can see, the narrative in "The History of Kazan" is a far cry from previous references. The only similar references are ones about the defeat of the grand-ducal troops and Ulugh Muhammad's campaigns against Russia. Therefore, the idea that the khanate was established by Ulugh Muhammad in 1437–1438 was formulated by connecting contradictory facts. At the heart of this hypothesis lies the statement from "The History of Kazan" that the Horde khan arrived in Kazan in 1397. But at the same time, scientists flat out reject this erroneous dating, instead taking the chronology of events from official chronicles that never connected Ulugh Muhammad with the Kazan khanate.

Kazan Khanate. Map by I. Izmaylov

As a result, none of the two above observed versions of the formation of the Kazan khanate is confirmed by even two independent sources. Let us note that for a long time Russian scribes were not interested in this matter. It only became important in the middle of the 16th century when chroniclers started to reflect upon the circumstances of the khanate's formation after the occurrence of certain important events. What is more, the conceptualisation of these events was formulated in accordance with the official position of Moscow reflected in the charter addressed to Crimean khan Sahib Giray. Russian diplomats responded to the Crimean khan as they justified Ivan IV's right to occupy the Kazan yurt: "when a governor comes with troops and subdues another governor and brings him to his grave, takes his land away, and is capable of giving this land to anyone he wants... shall not he possess this land?". In their words, Ivan III was the one who conquered Kazan, just as "the tsars who lost their Horde yurts brought the war to the Kazan yurt and conquered it by hook and by crook" [Russian State Archive of Ancient Acts, fund 123; Russia-Crimea Relations, book 8, ch. 480]. In other words, in the 16th century the idea of the military subordination of the Kazan khans to the Horde khans might have emerged due to the fact that it both explained

the legitimacy of Moscow's political claims and justified Russian campaigns in the East.

Other sources also point out that Mahmud was the first Kazan khan [Collection of Imperial Russian Historical Society, 1895, p. 696; Red Book, 1787, part 1, p. 26], however only the Nikon and Voskresensk chronicles refer to the appearance of the khan in Kazan in 1445. Everything mentioned so far forces us to be extremely careful when making assertions about the dates and circumstances of the Kazan khanate's formation.

It is most likely that after Ulugh Muhammad died, his nomadic horde became fractured: his eldest son Mahmud established himself on the Kazan throne, and the younger ones—Kasim and Jakub—took "the Meshchera yurt" and stayed around serving the grand prince. But no matter what actually happened, the Horde grandees united the lands of the Middle Volga Region around Kazan. Tatar military and political traditions were built upon Bulgarian socio-cultural ground, and a new Turkic state emerged.

§ 5. The Kasim Khanate

Bulat Rakhimzyanov

In the 1430–1440s, the Golden Horde, formerly a strong and powerful state, was living out its final years in power as it gradually decayed, leaving behind a number of autonomous states. After Beylerbey Edigu passed away (the de facto ruler of the Horde from 1396 till 1410), the Golden Horde was not capable of playing the significant role it used to in Eastern Asia and Europe. On the periphery of Jochi Ulus (the Middle Volga Region), centrifugal tendencies were especially clear. In the 1530–40s, in this region one of the heirs of the Golden Horde is born: the Kazan khanate.

We cannot speak about the Russian state when the 15th century is being discussed; using this term in such a timeframe is nothing more than an abstraction. The Russian state at that time did not exist, neither de jure, nor de facto. The following principalities at that time could be found on the territory of the future Russian state: the Moscow, Yaroslav, Rostov, Ryazan, and Tver autonomous principalities, along with the independent Pskov and Novgorod feudal republics. The Moscow principality was gaining power during that period and made claims to its rule over the rest of the Russian lands. However, the process of their engagement in Muscovite policy-making was not yet over.

What was the relationship between the Moscow and the Ryazan principalities? The Grand Prince of Ryazan Ivan Fyodorovich (in power 1427–1456) was not focused on Moscow at the beginning of his reign, but instead leaned

towards the Grand Duchy of Lithuania and sought the friendship of its ruler Vytautas. Under an agreement with him, the Ryazan prince accepted Vytautas's patronage and promised to help Moscow only if that be Vytautas's wish [Spiritual letters, 1950, pp. 67–68]. Then, the situation changed after Vytautas died in 1430, and Ryazan shifted its focus to Moscow, admitting its superiority. During the opposition between Vasily II and Yuri Dmitrievich, the Ryazan prince hesitated between the two (see his accord with Yuri Dmitrievich: [ibid, pp. 83–87]); in 1447, Ivan Fyodorovich entered into an agreement with Vasily II according to which the latter promised to protect the former from Lithuania [ibid, pp. 141–145]. Ryazan's dependence on Moscow can be traced back from the accord between Vasily II and Kazimir [ibid, pp. 160–163].

Meshchersky Gorodok and the adjacent area (the future Kasim Khanate) were located adjacent to the Ryazan principality, which was called the "Meshchera places" or "Meshchera". Its status was specifically agreed upon in charters of treaty [ibid, p. 144]. Even though, "Meshchera places" were acquired by Ryazan princes at a certain time, by 1447 these places were property of the Moscow grand prince starting no later than 1382 [ibid, p. 29].

Thus, by the mid 1440s, centrifugal tendencies had already weakened the Golden Horde. However, its contemporaries still viewed it as a unified territory. The Moscow principal-

ity was pushed into a cruel feudal war, and was not yet sufficiently strong enough to consider the future of its external policies and international status. The Kazan khanate was not yet formed as an independent political entity, but it was already proving itself to be an aggressive and strong neighbor of the Russian lands, often using its increasingly favorable commercial advantage to achieve its goals.

In 1437, another upheaval took place in the Golden Horde when Sarai khan Ulugh Muhammad was dethroned by Kichi-Muhammad. At the same time, Sayyid-Ahmad khan became an overlord in the West of the Horde (to the West of the Dnieper River) [Barbaro and Contarini, 1971, pp. 117–118, 126, 140–141, 150; Safargaliev, 1960, pp. 242–244, 258–260].

After establishing himself in Kazan, Ulugh Muhammad intended to fight to recapture the All-Horde throne as he had done in the 1420s. He began conducting raids in the Russian lands starting already in 1439. The goal of these actions was most likely to reestablish the "suzerain-vassal" relations between tsar Ulugh Muhammad and his vassal—Grand Prince Vasily II—who had received the *yarlyk* from his hands. Ulugh Muhammad stepped up his actions by the mid-40s of the 15th century [Complete Collection of Russian Chronicles, 12, 1901, p. 62]. In the winter of 1444 not only did he enter "Old" Nizhny Novgorod, but also conquered Murom and then "sat in Murom" [Complete Collection of Russian Chronicles, 23, 1910, p. 151; 26, 1959, pp. 196–197; 12, 1901, p. 64]. Vasily II, at that time the Grand Prince of Moscow bound by the *yarlyk*, decided to end his subordination to the suzerain and expel him from the Moscow lands. His military campaign against Ulugh Muhammad was completed victoriously, and on March 26, 1445, Vasily II returned to Moscow [Complete Collection of Russian Chronicles, 26, 1959, p. 197; 4, 1915, p. 454].

In Spring 1445, Ulugh Muhammad sent Mahmud and Jakub to Ruthenia [Complete Collection of Russian Chronicles, 25, 1949, p. 395; 23, 1910, p. 151; 28, 1963, p. 103], and on 6 July 1445 Russian troops came to the Kalinka River and stopped near the Saviour Monastery of Saint Euthymius in the vicinity of Suzdal (this is evidenced by the fact that on July 6,

1445, Vasily II conferred a grant-charter to the Monastery of Saint Euthymius, which Alexey Ignatievich sealed [Acts, 1958, p. 488]). As many chroniclers note, that evening the grand prince went on a binge. The next day, on July 7, the Russian army was utterly demolished in battle with Ulugh Muhammad's sons. Vasily II, prince Mikhail Andreyevich and a number of other princes, nobles, and their children were captured by the Tatars [Complete Collection of Russian Chronicles, 15, 1863, col.492; First chronicle of Novgorod, 1950, p. 426]. All of them were brought to Nizhny Novgorod, to Ulugh Muhammad.

After the news of Vasily II's capture reached Moscow, grand ducal power passed to his rival Dmitry Yurievich Shemyaka. He became the eldest in Kalita's kin, and while Vasily II was in jail he reigned in accordance with the rules of traditional inheritance.

Vasily II was held prisoner for quite a long time, from July 7 till October 1, 1445 [Complete Collection of Russian Chronicles, 26, 1959, p. 199; 23, 1910, pp. 151–152]. It seems that during this period Vasily established fairly positive relations with Ulugh Muhammad's younger sons, Kasim and Jakub (later, in 1446, the Tatars from sultan troops would say "he brought much good to us" [Complete Collection of Russian Chronicles, 6, 1853, p. 177; 8, 1859, p. 120; 26, 1959, p. 206]). Meanwhile, the chronicle texts portray Ulugh Muhammad's elder son Mahmud as an irreconcilable opponent of the Russians.

After a misunderstanding involving ambassador Begich, Ulugh Muhammad released Vasily II and other captives to Moscow [Complete Collection of Russian Chronicles, 26, 1959, p. 199; 23, 1910, pp. 151–152]. In the meantime, according to the Russian chronicles, Ulugh Muhammad obligated Vasily to pay him a sizeable "monetary reward", but chroniclers are divided in respect to its size. This payback seems to have been a kind of "compensation" for being disobedient to him as a suzerain. Moreover, Vasily II returned in escort by a large squad of Tatars.

Moscow scribes of the 1470s kept tactful silence on how much the ransom for Vasily Vasilyevich's freedom was. They only wrote that the

grand prince was set free after he promised to pay the Tatars "as much as he could" [Complete Collection of Russian Chronicles, 26, 1959, p. 199]. With this in mind, Novgorod data shows that the ransom payment constituted 200 thousand rubles, and also "God knew what else" [First chronicle of Novgorod, 1950, p. 426]. The Pskov chronicles tell us that Vasily II only promised 25 thousand rubles to the Tatars (and therefore could give them nothing), though they also note that he brought 500 Tatars with him [Pskov chronicles, 1941, p. 47]. A Tver scribe wrote that "great tributes had to be paid" when Vasily II came back and that "he bought off the Tatars" [Complete Collection of Russian Chronicles, 15, 1863, col. 492].

We can therefore note that the ransom to release Vasily II and the arrival of Tatars with him are recorded in almost every source from Medieval Russian times that scientists have access to.

M.G. Khudyakov believed that when Vasily II was set free, Ulugh Muhammad signed a peace treaty with him (the terms and conditions of the grand prince's release). Present-day US researcher Craig Kennedy sticks to the same opinion [Kennedy, 1994, 1.39]. However, researchers were perplexed on how such an important "interstate" act was not legally justified. But in reality, there is nothing bizarre in this at all. We must perceive this situation taking into account the peculiarities of the international "legal" standards of that epoch when the Horde khans were the acknowledged suzerains and the Muscovite grand princes were their indisputable vassals. When ascending to the grand-ducal throne (in 1432), Vasily II obtained a yarlyk for ruling Moscow given him by khan ("tsar") Ulugh Muhammad. After Ulugh Muhammad was exiled from Sarai and the Crimea, Vasily wanted to use the turmoil in the Horde at his advantage and attempted to stand against his former suzerain. However, after suffering an overwhelming defeat at the hands of Ulugh Muhammad and finding himself captured, we have to assume he repented and found his vassal dependence lawful, and perhaps even inviolable. This is why there was no use to enter into any agreement *de jure*. No new "interstate" act was needed, they simply reconfirmed previous law and order. The yar-

lyk from Ulugh Muhammad he had given to Vasily II remained valid.

Therefore, in 1445, Ulugh Muhammad was not just the ruler of Kazan for Vasily II, he also remained the Horde khan, just as he used to be. At that time, Vasily II did not treat Kazan as the centre of an autonomous state; for him it continued to be part of the Golden Horde. This state of affairs was beneficial for both Vasily II as he struggled for power against Dmitry Shemyaka, and for Ulugh Muhammad, who considered himself a legitimate ruler of the entire Golden Horde and—according to simple logic—dreamed of returning his lost lands. If Kazan was recognized as the centre of a sovereign state and Ulugh Muhammad was the head of this new khanate, Vasily II's rule would automatically become illegitimate. This is the reason why Moscow politicians and the Russian scribes who reflected their opinions and aspirations behaved in a tactful way towards the factual founder of the Kazan dynasty, i.e. the khanate, and did not portray him as the ruler of a mere portion of the entire empire. There is no written accord for this same reason, only a presumed oral agreement in 1445 on the ransom of the grand prince and the transfer of several Russian towns to Tatar rule for their "kormlenie" or "feeding".

The question regarding this mysterious lack of a written "contract" in 1445 is therefore necessary to dig into not just in terms of local problems, but in regards to relations between Moscow and Meshchersky gorodok, the future Kasimov, and even Kazan. The question can only be fully answered when it is considered in the context of larger phenomena, namely Horde-Russian relations in general.

There is a likelihood that one of the points of this alleged oral agreement between Ulugh Muhammad and Vasily was the transfer to the Tatars of certain Russian cities and districts as "kormlenie" ("feeding"). Later, information paints the same picture: after Shemyaka "caught" Vasily II in February 1446, charges were brought against him for bringing the Tatars into Ruthenia (this information is from the Novgorod chronicles, which are not vested in embellishing the Moscow prince or Moscow policy-making in general). "Why did you bring

the Tatars into the Russian land and give them towns and districts for kormlenie? And you love the Tatars beyond all measure, and you torture peasants beyond all measure, and you give gold and silver and land to the Tatars" [Complete Collection of Russian Chronicles, 4, 1915, p. 443]. They probably had in mind sultans when they blamed him for distributing cities and districts among the Tatars.

One of those sultans was most likely Kasim, Ulugh Muhammad's son, who received Meshchersky Gorodok on the Oka river as a unique sort of apanage (it was located in the Ryazan principality). Later on, this town became named after its first owner.

The initial assignment of Gorodets to Kasim (the town was also called Gorodets Meschyorsky or Gorodok, or what is later known as Kasimov) was indeed not voluntary from the perspective of the Moscow administration. Back in the 1440–1450s, no one had any far-reaching goals in mind. When it comes Vasily II, there were never any strategic plans to conquer the Kazan khanate. He simply wanted to pay off Ulugh Muhammad.

Information from a later source (charters of treaty) also speak in favor of the formation of the Kasim Khanate on the political map of Eastern Europe. One of the most important of these texts is the charter of treaty between Ivan III and Ryazan Grand Prince Ivan Vasilyevich dated June 1483 [Spiritual, 1950, p. 284]. The tradition of establishing special relations with the Kasimov Tatars dates back to the times of Ryazan Grand Prince Ivan Fyodorovich, who died in 1456. Logic tells us that by 1456 it is safe to assume the Kasim Khanate already existed.

Everything said in relation to Daniyar, Kasim's son, can be referred back to himself. The ban on establishing connections and concluding agreements clearly shows that the Moscow administration saw some true power in Kasim, as they prohibited their vassal, the Ryazan prince, from contacting him. Moscow quite obviously demonstrates concern, distrust and extreme caution when it came to matter involving Kasim. Such an attitude would be highly unlikely towards the prince Vasily II voluntarily granted a city to in the Russian lands. A dangerous ten-

ant like Kasim could have only started living in Russia due to unfavorable circumstances for Moscow when the Muscovite government simply had no choice. A similar inconvenient situation was observed in 1445 when Vasily II was bought back from Tatar captivity.

The charter's text contains certain information about money transfers to Kasim from Ryazan. In fact, it was Vasily II—not Ryazan's Grand Prince Vasily Ivanovich—who was part of the payment procedure negotiations (Vasily II negotiated on behalf "of Grand Prince Vasily Ivanovich", i.e. instead of him). The charter does not specify any details on those payments. However, the money issue here is clarified in other contractual and several Wills charters. The following can be found in the last will and testament of prince of Vologda Andrey Vasilyevich's apanage (this Wills charter dated no later than March 1481): "... Give to your master, to your elder brother Grand Prince Ivan Vasilyevich thirty thousand rubles, which he had given to the Horde, and to Kazan, and to the tsarevitch townlet instead of to me" [ibid, p. 275]. This text makes it clear that for quite some time Ivan III was paying a "vykhod" (tax) to Kasimov instead of to Andrey Vasilyevich, and so the latter is repaying his debt. Thus, the tax was undoubtedly paid to Kasimov.

In the charter of treaty ("dogovornaya gramota") between Grand Prince Vasily Ivanovich (future Vasily III) and Prince Yuri Ivanovich (June 16, 1504), we find the following: "... I, the grand prince, saw and knew the Horde. And you do not know the Horde. Those vykhods for the Horde and to Kazan, and to Astrakhan, and to Tsarevitch townlet (Kasimov had this name in the 15–16th centuries—B.R.) and in the times of other tsars and tsarevitches who rule in the land of mine, or my son's—the grand prince's—you shall pay to all the Tatar territories from your homeland, since our father, the grand prince, wrote so in his clerical letter. And if we do not send the vykhod to Tatar lands, we will not have an advantage" [ibid, p. 367]. This document proves that payments were made to Kasim and the rulers after him. Vykhods as a tax were paid to Kasimov both from the Moscow Principality and from Ryazan. The tribute to Kasimov was equal to the one given to the

Crimea, Astrakhan, and Kazan just as Ruthenia used to pay tribute to the Golden Horde. The relationship between Moscow and the tsarevitch of Kasimov in this case can be compared to the relationship between Moscow and the Golden Horde's heirs, as any relations with them had to be thoroughly discussed. Moreover, Muscovite rulers kept a wary eye on their vassal princes to make sure they had no contacts with those territories. Tribute cannot be paid to servants, but historians often present khans of Kasimov and sultans as such, thus transferring the realia of the 16th century onto the 15th century. Based on the text of the charter at hand we can see that the Kasim Khanate is associated with Golden Horde descendants, in line with the Great Horde and the Crimean, Kazan, Astrakhan and Siberian khanates.

Ivan III's testament (the clerical letter dated 16 June 1504) contains proof of the information contained in the previous source that tribute was indeed paid to Kasimov [ibid, 1950, p. 362]. Another confirmation of this fact can be found in the charter of treaty between Vasily III and Yury Ivanovich of Dmitrov (dated August 24, 1531) [ibid, pp. 417, 419], as well as in the accord between Vladimir Andreyevitch of Staritsa and tsar Ivan IV (dated March 12, 1553) [Collection of State Charters and Treaties, part 1, p. 461]. Taxes continued to be paid to Kasimov during the first half of the 16th century (to give readers an idea of how strong the tradition was).

It appears as though Ulugh Muhammad's demands after the Suzdal victory were not limited to getting one huge payment for granting the grand prince his freedom, but instead rested on steadier tax obligations, i.e. efficient payment of "vykhods" [Bazilevich, 1952, p. 55]. The fact that taxes were systematically collected from the lands of the grand principality and sent to the Horde is unquestionable; the issue of "vykhod" payments was included in all contractual letters between the grand prince and apanage princes of that time, as we saw above. It is harder to define which Hordes ended up receiving this "vykhod". Some charters align the Kasim Khanate with those receiving tribute, including the Kazan, Crimean, Astrakhan khanates and the Great Horde.

At the beginning of his stay in the Russian lands, starting in 1445, Kasim was therefore hardly a mere pawn in the hands of the Moscow grand prince. It is likely that he obtained Meshchersky Gorodok under conditions that were unfavorable to Moscow as part of the oral agreement of 1445 between Ulugh Muhammad and Vasily II. However, later on, as the Muscovite Principality, the formation of the Russian state, and the consolidation of its international positions started to progressively strengthen, the status of Kasim and his successors underwent a change.

This alteration was not external, as those at the head of the Kasim Khanate after Kasim continued to receive tribute, and were considered official tsars and tsarevitches. It was in fact that the dependence of the developing Russian state on the Kazan khanate stipulated by the agreement in 1445 was now over as Russia had started to consolidate itself. Now the dependence on khans and sultans of Kasimov as some kind of "feudals" under the terms of 1445 was out of the question.

However, the Muscovite government did not abolish the Kasim Khanate, which was a move nothing other than forward-thinking. The following reasons explain why the Moscow grand prince thought that the continued existence of the Kasim Khanate on Russian territory was possible.

First of all, he wanted to use Kasimov rulers as claimants to the thrones of other Tatar khanates. If the grand prince had a sultan (who was a Chinggisid) in his pocket, he could use him as a figure head on the Kazanian or any other Tatar throne without taking any responsibility for his actions. If a tsarevitch was on the throne in Kazan, for instance (and the concept of a dynasty allowed Kasim to lay claim to this throne), then with his help the grand prince could pursue a pro-Moscow policy in the Kazan Khanate. Negotiating with Kazan would be easier to a pronounced degree if its khan was a former khan of Kasimov. What is more, with the help of Kasim (as we mentioned earlier, a man with a reasonable claim to the Kazan throne) it would be possible to support various discords and conflicts within the Kazan Khanate, thus weakening it from the inside.

Secondly, Kasimov's geographical location was actually quite beneficial for Moscow from a policy standpoint. In this respect, the Kasim Khanate was a buffer state between Moscow and Kazan. If Kazan troops marched against Moscow, Kasimov would be the first to take the brunt of the attack, and the Kasimov Tatars would fight back against the Kazan people. The Ryazan land, which sat nestled in the middle flow of the Oka River, was as it were fenced in and protected by a strip of forests and large rivers from the East and South [Kargalov, 1974, p. 37]. To the East these forests spread out quite far towards the Volga. The tributaries of the Don River were an obstruction for any incursion into the Ryazan land from the South and West. The Meshchersky edge of the territory was even more inaccessible for the Tatars, as it sat to the North of the Oka where there was a thick wall of impassable forests. The Kasimov Tatars ("Gorodets cosacks"), i.e. Kasimov sultan troops deployed in Gorodets, were therefore understandably designated to defend the Moscow lands from the Kazan Khanate [ibid, p. 75]. Gorodets cosacks not only guarded the frontier and intercepted ambassadorial missions from Kazan to the Crimea and back, but also attacked Tatar uluses on their own initiative.

The third reason was Moscow's reluctance to rule directly over the "foreign" population (the Mordva and Meshchera, who were still pagans) living in the Meshchera land. The ruler of Kasimov was used for these purposes as well. American researcher A. Rorlich attaches a rather meaningful significance to the fact that the Kasim Khanate's population was multi-ethnic. She notes that among cities like Serpukhov, Zvenigorod, Kashira, Yuriev, and Surozhik, it was Qasim alone that became the center of the khanate, as its population was not Russian in comparison with other similar areas; the Tatars and Finno-Ugric peoples inhabited it long before it became an endowment possession of Tatar princes [Rorlich, 1986, p. 25].

Moscow at last became the primary political heir of the Golden Horde. Its charms, image, and example represented a bastion that all Muscovites strived towards. Russian princes reconstructed the very system, structure and

model of the Golden Horde state that Muscovite Russia laid claims to. All the Turkic speaking populations were united on similar terms, while the Russian lands possessed a special status. They constituted a part of the Horde only as a state within a state. Vasily II and Ivan III prepared the same destiny for the Kasim Khanate and others. Moreover, the stratification of Russian nobility took on a definite shape in the last thirty years of the 15th century. The principle of Territorial Corporation "worked", and because of constant wars there was never any time to change anything related to the social, material and organisational structure of the nobility.

By 1480, Moscow had thoroughly come to terms with all the advantages of having representatives of the Golden Horde dynasty in its service, as the latter were convenient pawns in the former's subtle political games. This is evidenced by the charter Ivan III sent to Crimean khan Mengli Giray, in which the Russian ruler offered him a place to hide in the Moscow state in case of any troubles in the khan's motherland [Collection of State Charters and Treaties, part 5, p. 2].

One of the subjective results of the civil war on the land of the future Russian state during the second quarter of the 15th century is the formation of the Kasim Khanate in 1445 on the conjoined lands of the Ryazan and Moscow Principalities. This khanate only managed to appear in the environment of hostility and implacability within the Grand-Ducal house of Moscow, and as a result of frequent changes among grand princes. Analysis of the charters of treaty and the Wills charters ("dogovornye gramoty" and "dukhovnye gramoty") of grand and apanage princes during 1481–1553 extrapolated onto the second half of the 15th century allows us to conclude that the Kasim Khanate came to be because of the ransom terms Moscow prince Vasily II promised khan Ulugh Muhammad in 1445 after the Russian troops were defeated near Suzdal. The charters explicitly show that taxes collected from the lands of the Moscow and Ryazan Principalities were transferred to Kasimov, along with Kazan, Crimean, the Astrakhan khanates and to the Great Horde. Hence, the Kasim Khan-

ate was quite a substantial financial burden for citizens of the Russian principalities. Its formation was not a matter of free will from the perspective of the Moscow Principality. In its first years of its existence, it was a reminder of Moscow's defeat, a speck of Tatar territory on

the Russian land. Not only did the disintegration of the Golden Horde cause its most cultural areas to break off and form independent khanates, it was also the catalyst for the creation of special Tatar entities in the developing Russian state.

§ 6. The Nogai Horde

Vadim Trepavlov

At the end of the 15th century, the territories of the Western Kazakhstan and the Left Bank of the Volga Region were occupied by a newly-established political entity headed by the elite of a Turkic-Qipchaq tribe of the Manghits. This entity was officially referred to as the Manghit yurt. Both Russian Medieval sources and modern scientific literature call it the Nogai Horde after the common name of the yurt's multitribal population, the Nogais.

Various sources contain scattered evidence on the whereabouts of the Nogais' ancestors before they appeared at the Yaik, the future Nogai Horde. Historical legends from various ethnic groups narrate their travels from Eastern Desht to the Volga, from the Volga to the Crimea and from the Crimea to the Northern Caucasus into the Kuban and Terek valleys.

The Manghits took part in the stormy events of "Great Troubles," a civil war that broke out in the Golden Horde in the second half of the 14th century. The end of the 14th century in the history of the Ulus Jochi is marked by Timur's raids. In 1391, he came through Central and Western Kazakhstan, crossed the Yaik and utterly demolished the left bank of the Volga. In 1395, Timur's army invaded the Northern Caucasus from Azerbaijan, where in the battle on the banks of the Terek River the Horde's khan Tokhtamysh suffered a crushing defeat. After this loss, Timur destroyed the Volga-Don interfluvial area along with the Lower Volga Region. In the period between these two campaigns, events occurred that many historians interpret as the formation of the Nogai Horde and that are linked to the Manghits' leader Edigu.

He accompanied his new patron Aksak Timur in the military expedition against the Golden Horde in 1391. Upon returning from

the campaign, Edigu secretly sent a messenger to the left-wing tribes (apparently, to the Northern Caucasus) ordering them to "leave their homes and travel nomadically away from their native places towards where the very centre and the areas before the centre (present) difficulties in intercommunication and many dangers, so that they... did not stay at the same encampment for more than two days... otherwise, Timur will catch them, dispel them and murder them all" [Collection, 1884, p. 467]. The tribes obeyed and escaped to the steppe wilderness, and when this was done, Edigu used a plausible excuse to leave Timur's main camp and come to Desht (for more details see: [Mirgaleev, 2003]).

Authors from the 15–16th centuries find the Manghits (Edigu's tribe) to be in the area of the Yaik and Emba rivers. It is obvious that this interfluvial area was the exact place that was "difficult and dangerous to reach". After finding himself among his fellow tribesmen and beyond the reach of Transoxiana armies, Edigu managed to fortify himself in the Western Kazakh steppe and lay the foundation for a time-long standing rule that came to be known as the Manghit yurt.

The idea that Edigu was the founder of the Nogai Horde is common and popular among present-day Nogais. Quite a large number of researchers adhere to the same opinion, believing that after falling out with Timur, the head of the Manghits detached from the Golden Horde and formed an independent land.

Yet it is hard to agree with this interpretation of events. The Yaik-Emba interfluvial area was part of the Golden Horde, and the Manghit yurt was an autonomous entity within the Ulus of Jochi. Edigu himself was not the founder of the sovereign steppe empire of Nogai, merely an ancestor of the Manghit ruling house. There are no

explicitly clear signs that the Manghit nomad camps were independent.

The assumption can be made that the Manghits were not the only ones who desired to stay away from the Lower Volga Region, the Northern Black Sea Region, and the Northern Caucasus, as those areas were riddled with chaos. We can therefore guess that originally other ulus-es existed in the Manghit yurt. But it was the Manghits alone who became the core of a new foundation, due both to their bey's authority and because of their numbers.

Far from Timur and under the leadership of Edigu, the left-wing tribes managed to snap back from the negative consequences of infighting and enemy invasions, and soon became a pillar of strength for their commander. Edigu started to enthrone submissive khans and made them appoint him to the highest position of the Beq-lar Beg (Beylerbey or Beglerbeg which means "the Commander of Commanders"). Among a physically weakened Horde it was not difficult to find obedient tsarevitches ready to rule under the patronage of a powerful and skillful commander. It seems that Edigu took this practice of seating puppet leaders from Timur, as he had lived many years at his court.

Holding the position of Beylerbey, Edigu managed all public affairs of the Golden Horde and entrusted the Manghit yurt to his sons. His closest associate, as various sources attest to, appears to be his eldest: Nur ad-Din. Towards the end of Edigu's life, a grave conflict broke out between them. The information that remains about this eldest son is controversial and terse. But in any event, Nogai folklore kept alive the memory of the period of Nur ad-Din's independent rule; to be more precise, of his coregency with other khans. According to available sources, the following string of events can be reconstructed. Edigu delegated control of the lands between the Volga and Yaik to Nur ad-Din. The tribute in favor of this mirza was collected during the years of Temur-Qutlugh's rule and amounted to roughly 40,000 altyns. Nur ad-Din also kept his rank under the khans who reigned after this khan, even after his father left for Khwarezm in 1410.

But no document ever mentions Nur ad-Din as a bey or a prince, he is always a mirza. Ac-

cording to the facts as presented by a Tatarian chronicler named Qadir Ali Bek (beginning of the XVIIth century), he died from a stomach disease when his father was still alive. Epos suggests another reason that is more befitting of a hero: the mirza died of blood loss when his old wounds opened after he came back from one of many campaigns.

Meanwhile, Edigu did not manage to hold on to his power. After a quarrel with one of his henchmen, he tried to settle in Khwarezm, then stayed in Western Siberia for some time before he began to enthrone obedient tsarevitches. In 1419, in the area around Saray-Jük, khan Kadir-Berdi's troops attacked Edigu, resulting in his death.

After Edigu perished, his sons managed to retain the Manghits' influence in the Ulus of Jochi. The main reason behind their successful career is undoubtedly the example and inherited authority of their predecessor: their father. Edigu's traditional influence was so strong that after his death the rank of Beylerbey was preserved in his family.

Governing duties of the Manghit yurt were entrusted to his son Gazi. What is known is that he, "based on his father's example, became the ruler of his nation and tribe, and brought aimag and other tribes under his wing". It seems that Gazi proved himself as a relatively autocratic ruler, although he was considered the beylerbey under one khan named Jumaduk. This irritated the nomadic aristocracy, already estranged from the iron fist of absolute power. In 1428, Gazi was killed by rebels, and in that

same year Chinggisiide Abu'l-Khayr was declared khan. He got along with the Maghits who were supported by the large multitribal population of their yurt. Throughout the time of his rule (1428–1468), they were loyal to him from the very start. Among Edigu's descendants in Abu'l-Khayr's empire—the so-called khanate of the nomadic Uzbeks—Nur ad-Din's Waqqas son moved to the fore.

Between him and the khan there was close competition for at least two decades: "They drank from the same cup, the first from the one side and the second from the other; at the same time one was the khan and the other was the bek". The Manghit bey's reputation as an

"extraordinary servant and warrior of the great khan" eventually reached Europe [Collection, 1854, p. 157; Mekhovsky, 1936, p. 92, 171]. Muslim chroniclers considered Waqqas's main merit the fact that "he conquered Sain khan's throne twice" for his patron Sain khan is Batu, who de facto founded the Ulus of Jochi. Apparently, this meant Waqqas's participation in the occupation of Ordu-Bazaar, the former main capital of Batu, as well as in the defeat of Abu'l-Khayr's rivals, the khans of the Great Horde.

As the beylerbey, Waqqas was at the head of the khanate's military forces and participated in all the major campaigns of 1430 towards the beginning of the 1440s. As a reward for his loyalty, Waqqas was granted Uzgend, a town on the Syr Darya.

The Manghits belonged to the right wing of the Uzbek state. The high rank of this tribe and the sovereign's benevolence towards it were confirmed by a matrimonial alliance: the mother of Abu'l-Khayr's two sons belonged to this tribe. At the same time, the Manghit yurt was not overshadowed by other uluses subordinate to Abu'l-Khayr. The independence of the Manghit possessions in the Waqqas era was can be seen in the opposition between them and the Great Horde, with Khan Abu'l-Khayr hardly participating in what was going on. Busy warring with the East-Asian Timurids, the leader of the nomadic Uzbeks did not interfere in the matters of his Western servants and did not inhibit the autonomy or gradual strengthening of the Manghit yurt.

Polish chronicler Matthew Mekhovsky recorded that "Oqqas, an extraordinary warrior and servant of the great khan... was killed". After his death, "his sons broke away from the main Trans-Volga Horde and settled near the Sarai palace (i.e Saray-Jük.—V.T.) approximately seventy years before the current 1517. Soon afterwards, they expanded in gigantic proportions, so by our times they had already turned into the most numerous and largest Horde". The approximate dating of this event according to "Tractatus de duabus Sarmatiis" is 1447 "or a little earlier", as the author writes [Mekhovsky, 1936, p. 92, 93, 171].

Documents treating on the second half of the 15th century mention several Manghit

beys who were in power at the same time: 1) Waqqas's brother Abbas. This ruler was active in the 1470 and then disappears from the view of chroniclers only to return in the 1490s; 2) Waqqas's son Khwarezmi, known from occasional mentions; 3) Waqqas's son Musa, the true creator of the independent Manghit yurt, i.e. the Nogai Horde. The simultaneous existence of several Manghit beys who were not opposing but cooperating with each other suggests that one of them was the tribal leader of the Manghits, while the others served as the beylerbeys under the simultaneously reigning monarchs.

It appears that immediately after Waqqas's death and before splitting apart from his sons, khan Abu'l-Khayr was to appoint another Manghit noble for the position of the supreme bey, as the established tradition dictated. The candidacy of Waqqas's younger brother Abbas seemed promising. According to nomadic traditions, when inheriting the status uncles had an advantage over nephews (in this case, over Waqqas's children).

Furthermore, Qadir Ali Bek writes that "Khwarizmi-bek came after" Waqqas. The most plausible theory is that Khwarezm became head of the Manghit tribe.

However, Waqqas's other son Musa started dictating Manghit policy in the Western steppes until he was defeated in a battle with one Chinggisid prince. In search of help and followers, he turned his attention to someone named Bureke, son of Yadgar. Musa's visit elated him, as the attention of a highborn Manghit aristocrat opened up the perspective of obtaining the rank of khan. The established order demanded one obligatory condition: there must be a Manghit beylerbey by the khan. Thus, if a Manghit leader agreed to become the beylerbey under one of the countless Jochids, that Jochid became the khan with the support of the Manghits. Yadgar "was seated on a white felt (mat) and was made the khan" [Abu al-Ghazi, 1906, p. 167]. This is how a mediocre blood prince surprisingly even for himself obtained the highest monarchical rank: Musa was immediately granted the rank of the beylerbey (bey). The Manghits needed a khan for the sole purpose of enlightening their growing political influence.

Abu'l-Khayr's personality and power united the Uzbek state for forty years. But no one wanted to obey his son and heir, Sheikh Haydar. In fact, leaders from all parts of Desht-i Qipchaq united in order to overthrow the dynasty. Among them were khan Ibak (Ibrahim) from the Tyumen yurt, Jani Beg Khan (Abu'l-Khayr's old antagonist and one of the founders of the Kazakh khanate), Bureke, whom we already know, and Manghits Abbas-bey and Musa-bey with his brother Yamgurchi. Ibak quickly killed Sheikh Haydar, leaving Desht-i Qipchaq without a ruler. However, the beylerbey-bey could only serve along with a khan at that time. Thus, Musa was expected to establish a partnership with some other sovereign.

From 1470–1490, the Manghit leaders only recognised the primacy of the Kazakh Jani Beg khan, and afterwards only the Tyumen leader Ibak khan.

Eastern sources usually list the Manghit aimaks, the tribe and the ulus of the Manghits as Musa's possessions. But now, the Manghits included a wider number of peoples, not just the Qipchaqs who inhabited nomadic tenures granted by the Mongol-Manghits and then ended up on the Yaik. In the years of the Horde disintegration after Timur's invasions, Edigu took advantage of the crisis of khan power and managed to gather huge numbers of the Horde population on his territory behind the Volga. It can be safely presumed that a stable and safe life in the Volga steppes also attracted nomads later, in the late 14th and the first decades of the 15th century.

Gradually, families and entire communities from neighboring lands gathered in the nomadic camps controlled by the Manghit beys. These mingled nomads fought together against Tokhtamysh's children, marched with Abu'l-Khayr against the Timurids, and battled with Sheikh Haydar and Burunduk. Major wars or other natural disasters almost never made it to the Manghit yurt. By the end of the 15th century, the third or fourth generation of its inhabitants were already living on the steppes between the Volga and the Emba. Their common historical destiny and political interests made them aware of their communality.

The word "*Nogai*" was a symbol of this union. All the nomads subordinate to the Manghit bey were referred to like this, regardless of their tribal affiliation. From now on, the Manghits themselves, as well as the Keraytes, Naimans and other tribes became known as the Nogais.

Many (if not all) uluses chose the head of their beys from among the old aristocracy, but keeping them united was only possible if the leader possessed extraordinary wit and tact. Apparently, these features were inherent to Musa. The talent to find common ground with the leaders of other uluses was especially useful when it came to the cruel war for Desht-i Qipchaq's "Uzbek heritage". The strength of Musa's power rested on his successful external policy-making and can be attributed to his high rank of commander-in-chief, or beylerbey (bey), which was once given to him by puppet khan Yadgar.

Towards the end of his days, Musa was obviously attracted to the idea of getting rid of the image of the supreme ruler, i.e. the khan. Sovereignty in the Manghit yurt gave him the opportunity to govern without a decorative false suzerain. The old bey's authority and the power of the yurt he had created helped him get by with his own forces and without using the mask of the beylerbey serving some khan. Bey Musa died around 1502. What his younger brothers and sons inherited was not a tiny nomadic possession with a dependent status: it was a powerful steppe empire known as the Nogai Horde.

In the second half of the 15th century, the relations between the Nogai Horde and other Volga Tatar khanates were still at their very earliest stages. This era was a prelude to the Nogais' active policy-making in the contiguous Western yurts during the first half of the proceeding century. Kazan was far away from the tumultuous events resonating out from the collapse of the 'Throne Empire' (Great Horde), and even from the beginning it did not have very close contacts with the Nogais. M. Safargaliev seems to have the most logical opinion on this question: 'When the Nogais let themselves be known to their Western neighbours, the Khanate of Kazan had already been established. The relations of Ulugh Muhammad (the first khan of the Khanate of Kazan.—V.T.) with Edigu's children could not have been friendlier after

the treason of Nowruz. as the commander-in-chief, Navruz betrayed Ulugh Muhammad and deserted to Kūchūk Muhammad. As a result, Ulugh Muhammad was expelled from his possessions and headed to Kazan. Because of this, the participation of the Nogais in the conquest of Kazan by Ulugh Muhammad was out of the question. During the time of the early khans, the Khanate of Kazan was quite strong and did not need any support from its neighbours' [Safargaliyev, 1938, pp. 126–127].

The available sources do not clearly show whether the Nogai-Kazan connections were somehow affected by familial relations between the khan dynasty and the Great Horde Manghids (Timur ibn Mansur's daughter Nur-Sultan was the wife of khan Ibrahim ibn Mahmud ibn Ulugh Muhammad, and the mother of future khans Muhammad Amin and Abd al-Latif). In any event, the support of Kazan ruler Ali ibn Ibrahim on behalf of Musa and Yamgurchi can be explained by the fact that after her husband's death Nur Sultan set off to the Crimea and married Mengli Giray. Thus, the Crimean yurt together with the Moscow principality favored Nur Sultan's children. In opposition to this, the Nogais took the side of Ali.

The start of relations between the Nogai Horde and Kazan is visible from the beginning of the 1480s, i.e. immediately after Ibak and Yamgurchi killed Ahmed, and just as the Nogais made their appearance in the political arena of Western Europe. G.I. Peretyatkovich related this revival of contact to the death of Kazan khan Ibrahim in 1478. However, it seems that the strengthening of the Kazan factor in the Nogai Horde was in line with other events happening during the epoch of the Great Horde's disintegration. G.I. Peretyatkovich and M.I. Khudyakov for all intents and purposes correctly associated the formation of the pro-Moscow and pro-Nogai parties of the Kazan aristocracy to those exact times. The former supported Muhammad Amin ibn Ibrahim, and the latter supported his brother Ali [Peretyatkovich, 1877, p. 151,152; Khudyakov, 1991, p. 45].

The contributions of Musa and Yamgurchi in the palace coups of the 1480s can be seen as their political debut. Ali, who ruled for five

years after his father's death, was dethroned, and leadership passed to his brother Muhammad Amin. One year later, Ali returned to power and was again dethroned. And in 1487, supported by the Nogai troops, he "ousted his brother from Kazan". In July of that year, Russian voevodas occupied the city and once again enthroned Muhammad Amin to rule in the khan's palace; only this time he remained there for a long time. Ali and his family were brought to Ruthenia, and from there he was deported to Beloozero (present Belozersk). Such resolute behavior on behalf of the Moscow authorities sobered up the Nogais for a certain time, prompting them to act more carefully in the Middle Volga Region. The unyielding firmness of the Russian administration also kept them off demarches, as in response to numerous appeals to release Ali they always received a firm refusal. When the Kazan princes—Ali's followers—dared to attack the khanate, Ali's servants in Russia were executed and Yamgurchi's ambassador was detained as a hostage.

The Nogais' ardency was also constrained by the fact that Ali's wife, "tsarina Kara Kush", who was staying in Beloozero, was Yamgurchi's daughter. Ivan III demanded from the former that he must slay Al-Gazi bey, the leader of the Kazan emigration in the Nogai Horde. After he found out about that, he escaped to Ibak, Tyumen, in order to avoid any risks. In general, the epicentre of the opposition was of great concern to Muhammad-Amin and his Russian patrons. Having failed to spur repressions against the Kazan refugees, the Russians tried to make Musa persuade beys Al-Gazi, Begish and his son Utesh, as well as sayyid Kasim, to move to Moscow by promising them a generous salary. They refused and continued to advocate for Ali's release.

Out of the two brothers leading the Nogai Horde, Musa was inclined to cooperate with Moscow, while Yamgurchi adhered to the idea of a military solution of the Kazan issue. In these particular conditions and taking into account the current environment, Musa stood at the head of the Nogais after Abbas's death. After returning from "the Turkmen", he managed to prevent a large military campaign prepared

by khan Ibak and Yamgurchi. The Tatar beys were instigators of this escapade as well. However, small raids and border skirmishes at the end of the 1480s and beginning of the 1490s were happening between the Nogais and Kazanians "on a daily basis", as Muhammad-Amin complained openly to Mengli Giray.

Musa and Yamgurchi abandoned all attempts to support the Nogai party by force and instead focused on the peaceful implementation and spread of their influence through dynastic marriages. Some historians attribute the initiative of the Kazan-Manghit twinning arrangements to Muhammad Amin, as he desired to secure himself from the Nogais' invasions. At first glance, the khan Muhammad Amin was indeed the one who asked for Musa's permission to marry his daughter Fatima. But such marriages for princesses were already traditional at that time: Yamguchi's daughter Kara Kush was the wife of khan Ali, and Muhammad Amin's mother Nur-Sultan was Edigu's great-granddaughter. Shaybanids from Eastern Desht, including Abu'l-Khayr, were also marrying Manghit women in the 15th century. Thus, it would not be entirely correct to present this initiative as some kind of cunning plan on the part of the Kazan khan. Musa reflected and hesitated on this for several years. Becoming relatives with a Russian successor meant betraying the Nogai party of the Kazan yurt and its symbol, the dethroned and expelled Ali Khan. Besides, Moscow could treat the twinning of the two Turkic dynasties as behind-the-scenes collusion.

Finally, only in the summer of 1490 did the bey decide to ask the Russian sovereign for advice, as the latter was "the father, brother, and friend" of Muhammad Amin [Ambassadorial book, 1984, p. 29]. The khan himself even pummeled Moscow with letters asking for the marriage to be approved. The Russian government had their own interest in this dynastic union, as they hoped to spread their influence throughout the Nogai Horde via Kazan. Ivan Vasilyevich allowed his protegee to marry the Nogai princess "so that Musa became your direct servant and friend". Musa also received a polite answer, something along the lines of "since we are also interested in the friendship

between you and Muhammad Amin, wed your daughter to him" [ibid, pp. 30, 32].

However, the matter dragged on for a long time still to come. Musa justified the delay by referencing the conflict with the Great Horde. Only Ali's death in the Northern prison finally allowed the bey to cast aside all doubts and let Fatima go to Kazan. Upon an order from Moscow, Ali's widow (Yamgurchi's daughter) was also wed to Muhammad-Amin. Ivan III was trying to tweak the levers of pressure on the Nogais through marital bonds. In 1489, he prohibited Muhammad Amin from wedding his daughter to mirza Alach ibn Yamgurchi until the Nogais pay compensation for the goods they had stolen during their recent raid on Kazan.

Beys emigrants who lived at Yamagurchi's and Ibak's (then referred to as Mamuq's), did not share Musa's conciliatory moods. An attempt to reverse the situation in Kazan in favor of the pro-Nogai party resulted in Mamuq's opportunistic occupation of the city in 1496 and his inglorious departure from there a year later, as was already covered earlier. Musa was of course against this campaign and tried to prevent it. However, when the Russians brought Muhammad Amin's younger brother Abd al-Latif to Kazan and made him the khan, that was the last straw for Musa: carrying out a new enthronement without consulting with the Nogais first was an all-too-obvious act of Moscow's disrespect towards their interests. In 1500, the Nogai troops for the second time (after 1496) besieged the yurt's capital. This time Musa and Yamgurchi led the campaign personally, and their chosen claimant to the throne was another Siberian named Shaybanid Agalak ibn Mahmutek, the younger brother of Ibak and Mamuq. Kazan survived a three-week blockade, and young khan Abd al-Latif sallied on a daily basis. After failing to achieve any kind of success, Musa, Yamgurchi and the Siberian tsarevitch escaped to the steppes.

The double failure to enthrone their protegees deeply discouraged the leaders of the Nogai Horde, and they ceased to carry out military actions in the Middle Volga territories. The confounded "war party" finally calmed down. Bey Musa, Yamgurchi-mirza, and Ivan III

through their ambassadors entered into a pact of non-aggression towards Kazan. In March 1502, a Russian ambassador traveling to the Crimea was said to notify Mengli Giray that from now on "the Nogais of the Kazan land are peaceful", and the Nogai ambassadors, on behalf of their leaders, promised that "they shall not commit any more evils" [Collection of Imperial Russian Historical Society, 1884, p. 386].

The extent of the penetration of the Nogais into the Khanate of Kazan is still as of yet undetermined. We have already mentioned the unlikely probability of their initial presence in Yurt during the time of Ulugh Muhammad. However, the presence of Nogai among the population of the state can hardly be brought into question. First of all, this is clearly highlighted by toponymy: the Nogai Gate in the capital fortress and the Nogai daruga (one of the five provinces of the yurt), etc. Secondly, the influx of immigrants is recorded in Bashkir and Tatar shejeres (genealogies). But it is still difficult to say to what extent the Nogais mentioned in folkloric sources match up with the historic Nogais originating from the Nogai Horde. Neither the larger number of Kipchak elements in the language compared to the local population, nor coincidences in the names of clans (els) allow us to identify the foreign Kipchaks with the Nogais. The migration of the Qipchaqs continued for hundreds of years, and the Nogais settled down in the Manghit yurt only in the second half of the 15th century. Although they were also Qipchaq-speaking, they could not "bear responsibility" for all the

movements the Qipchaq-speaking population of Eastern Europe were involved in.

It is entirely a different matter that from time to time Nogai troops would come to the lands of the khanate to resolve political issues and, sometimes, stay there for long periods. For example, it is a fact that when Muhammad Amin was in his second reign (1502–1512), a 20-thousand strong Nogai cavalry was active in his possessions. With several reservations, we can agree with V.M. Zhirmunsky, who suggested that the Nogais served khans in exchange for tribute and other monetary compensations [Zhirmunsky, 1974, p. 425].

In general, the events of the 15th and the early years of the 16th century show us that Nogai-Kazan relations were quite uneven: active participation was followed by years of indifference, and military maneuvers were swapped out for cooperation. Perhaps, it makes sense to agree with S.Kh. Alishev and take into account the seasonal character of the Nogais' nomadic movements, plunging either deeper into the steppe or approaching the borders of the Kazan khanate. We must also not forget the factor of the political environment in post-Horde Eastern Europe. The Nogais were distracted from Middle-Volga matters not just because of their winter movements to the South, but also due to internal conflicts, campaigns against the Great Horde, and then later against Crimea and Astrakhan, as well as portions of their population migrating to the Siberian yurt, Kazakh and Uzbek khanates.

§ 7. The Tyumen and Siberian Khanates in the 15th Century

Alexander Nesterov

The Siberian yurt

The Turkic-Tatar states of the Urals and Western Siberia—the states of the Siberian Shaybanids and Taibugids—are the least researched among the entities the Ulus of Jochi left behind after it dissintegrated in the 15th century. Historical works starting in the 18th century continually referred to those states as "the Siberian khanate", but this term is only

relative by nature because no source from the 15–16th centuries ever used it. The term "Tyumen khanate" appeared later and was used to refer to the state of the Siberian Shaybanids of the 15th century. Its capital was Chimgi-Tura (Tyumen), but this name was also conditional. The absence of reliable evidence about the real name of the Turkic states in the Siberian-Ural region raises the question of the legitimacy of using any of the known designations to discuss

them. Furthermore, usage of the terms "Tyumen khanate" or "Siberian yurt" is objectively connected only with a rather narrow chronological period. In this regard, it is more reliable to use the term "Siberian yurt" when referring to the government entities of the given region. The term "yurt" (يورت) in the Turkic-Tatar historic tradition, just as in the texts of the Moscow orders, is used as a synonym for an independent state. This term is also relative, but is not strictly bound to the chronology and may serve as a name for all the Tatar government entities that existed in the Ural and Western Siberia territories.

The history of states in the Siberian yurt consists of the following chronological periods:

1. The formation of the Shaybanid state in Western Siberia and the creation of the nomadic Uzbek state (the first half of the 15th century). This period covers the time when several branches of the Shaybanid dynasty were struggling for power within the Siberian yurt. Among them were the Mahmud Khodja khan (about 1422–1430), Dawlat Shaykh Oglan (the end of the 14th century—1426), as well as Abu'l-Khayr Ubaidullah Khan I (in Siberia from 1428–1446). The state centre during this time was Chimgi-Tura. The period comes to a conclusion when the greater part of the nomads move to the South towards the borders of Transoxiana.

2. The state of the Siberian Shaybanids (circa 1446—the beginning of the 16th century), which formed after the "Uzbek" Shaybanids moved away to the South. The centre of the state here is Chimgi-Tura, and that is why it can be referred to conditionally as the Tyumen khanate. Throughout the approximate 65 years of the existence of the state, it was ruled by the following khans: Hajji Muhammad Khan (circa 1444—circa the 1460s), Mahmud Khan (circa 1460—circa 1465), Sayyid Ibrahim Khan (circa 1465—circa 1495), Mamuq Khan (circa 1495—circa 1499) and Qutlugh Khan (circa 1500—circa 1505).

3. The first half of the 16th century was the time of the Taibugid state, which existed in Western Siberia and had as its centre a place named Iskar. Rulers of this state held the rank

of beys (princes), so it is legitimate to name it the Iskar principality of Taibugids. Successors of the Siberian Shaybanids stayed under the patronage of the Central Asian Shaybanids, but it is possible that some Siberian-Shaybanid possessions were left in Western Kazakhstan. The Siberian yurt during this period represented a complex conglomerate of dominions governed by representatives of the local Tatar aristocracy, as well as the Mansi and Khanty tribal nobility.

4. The Siberian khanate of the Shaybanids as part of the Shaybanid empire (1563–1598), which is when the restored state of the Siberian Shaybanids was dependent on the Bukhara Shaybanids. The rulers of this period were: Kuchum Khan (1563–1598) and his brother Ahmad Giray Khan (circa 1560). This period ends when the Russians conquer the region.

5. The final period of dynastic history (the first third of the 17th century) was when Kuchum Khan's heirs Ali Khan, then Ish Muhammad Khan and their successors, fruitlessly tried to restore their power in Western Siberia. The last Shaybanids still laid claims to rule over Western Siberia up until the 1660s.

It is difficult to research the history of states within the Siberian yurt due to the scarcity of sources. The ones directly devoted to the states of the Siberian yurt only describe the period of Abu'l-Khayr Ubaidullah Khan's rule (1428–1468) along with the period of the annexation of the Urals and Western Siberia to the Muscovite state in the second half of the 16th—the beginning of the 17th century. The remainder of the period of the Siberian yurt's existence is known only from scattered mentions in Russian and Oriental historical works, documents, etc. Archaeological sources addressing the history of the Siberian yurt are also quite poor. Moreover, only a small number of monuments from that period have been discovered to date, and the most important of them were excavated back at the end of the 19th—the beginning of the 20th centuries. In post-revolutionary times, peripheral archaeological sites were the main research subjects, but they could barely provide any precise idea on the culture of the Siberian yurt in general.

The Territory of the Siberian Yurt

The territory of the Siberian Yurt, which was a vast regional and political entity of the 15th—17th centuries, varied considerably throughout the years of its existence.

The term "Siberian yurt" was never used in relation to any territory during the period preceding the Mongol conquest of Western Siberia or the emergence and rise of the Jochi state in the 13–14th centuries. However, sources mention Siberia in the period of Chinggis Khan's campaigns. Thus, Rashid al-Din states that "Siberia" was one of the first targets of Jochi Khan and Batu Khan's Western campaigns [Rashid al-Din, 1960, p. 71]; later, it was noted that Jochi Khan's yurt was located on the Irtysh river [ibid., p. 78]. Muin al-Din Natanzi noted that Siberian rulers belonged to the right wing of the Jochids [Collection, 1941, p. 127]. It seems that even at the beginning of the 14th century when Muin al-Din Natanzi was writing, the Shaybanids had gained power over the Siberian yurt.

The Shaybanids (Shibanids) are descendants of Shiban, Jochi Khan's fifth son, to whom Batu Khan granted a vast dominion in the Southern Urals and Kazakhstan: "... the yurt, in which you will live, will be between my yurt and the yurt of my elder brother Ichen: in the summer live on the eastern side of the Yaik, along the rivers Irgiz, Or and Ilel up to the Ural mountain, and during the winter live in Arakum, Karakum, and by the banks of the Syr Darya, by the estuaries of the Chu Su and Sary Su rivers" [Abu al-Ghazi, 1906, p. 160]. Therefore, Shiban's initial possessions were solely related to territories of the Southern Urals and Western Kazakhstan, which were the lands inherited by Shiban's descendants. Their rule had to be approved by leaders of the Jochi state's right wing. For instance, Mengü-Timur khan secured the possession of this area for Shiban's son Behadur [ibid, p. 152]. At the same time, the procedure for the confirmation of the rulers of the Shaybanid Ulus indicates that it was part of the right wing of the Jochid state.

Yet to this day, it is still unclear who possessed the territory of the final Siberian yurt. It is most likely that Western Siberia belonged to the left-wing Jochids, who were the descendants of

Orda-Ichen and Tuqay-Timur. Indirect evidence for this statement is the fact that Tokhtamysh Khan escaped to Siberia after Timur defeated him at the end of the 14th century. However, in the 13th and first half of the 14th centuries the notion of the "Siberian yurt" did not yet exist. It appears only simultaneously with the emergence of independent or semi-autonomous entities in Western Siberia and Northern Kazakhstan.

The formation of the Siberian yurt was inextricably linked to the development of the Shaybanid ulus, which belonged to the Jochi state. Unfortunately, sources do not explicitly cover the history of the Shaybanids in the second half of the 13–14th centuries. We can only guess that the Shaybanids were gradually starting to live on the lands of Kazakhstan and Western Siberia. The Siberian yurt was formed beyond any doubt by the beginning of the 15th century, comprising the territory occupied by the Shaybanid khans and sultans. It spread from the Manghits' possessions in the Southwest to the Baraba steppe in the Northeast, and from the Irtysh estuary in the North to the Aral sea in the South [Akhmedov, 1965, p. 29]. This territory was divided between several representatives of the Shaybanid house: Mustafa Khan, Dawlat Shaykh-Oglan, Jumaduk Khan, and Mahmud Khodja Khan. However, the development of historical events indicates that the possessions of these rulers can be considered as a single unity, in other words the existing regional and political formation referred to as the "Siberian yurt". Before attempting to occupy any possessions outside the territory of the Siberian yurt, Shaybanid rulers persistently fought for autocracy in that territory alone against other Shaybanids.

Throughout the 15–16th centuries, the notion of a "Siberian yurt" was gradually becoming more and more narrow. The most important characteristics that made it different from other state formations that cropped up on the ruins of the Jochi state were its peculiar natural conditions and population. Along with the steppe, the Siberian Yurt included extensive forest-steppe and taiga areas inhabited by Ugric peoples. The centre of the Siberian yurt was gradually shifting towards the North, finally settling down in the modern-day Tobolsk area (Iskar).

Several state formations that were Turkic at their core appeared on the territory of the Siberian yurt. At the beginning of the 15th century, one of the branches of the Shaybanid dynasty established the Uzbek khanate. Then, after Abu'l-Khayr moved Southwards, another branch of the Shaybanids came to power. They created the Shaybanid state on the territory of the Siberian yurt. This formation disappeared at the beginning of the 16th century, and a unique type of federation emerged instead of it. This federation, known as the Taibugid state, consisted of possessions of different Tatar feudals and Ugric tribal "princes" governed by the beys of Iskar. The Taibugids were defeated in battle against the Shaybanids in the middle of the 16th century. As a result, the territory of the Siberian yurt was thus included in the Shaybanid empire as its Northern ulus, the Siberian khanate. During that period, the Siberian khanate consisted of vast territories stretching to the Lower Ob in the North. However, all of these areas, especially the ones inhabited by the Ugric people (the Khanty and Mansi), were de facto independent from the Siberian khans and only recognized their supremacy as a formality.

The internal division of the Siberian yurt in the 16th century depended on the peoples inhabiting it. Within the khan's possessions, we can distinguish the vast woods of the Trans-Irtysh and Trans-Ob areas where the Ugric population prevailed, along with the Baraba steppe, Eastern Urals, the Ishim steppe, and Northern Kazakhstan where the Turkic population prevailed. The Siberian yurt was included in the Russian state with these exact borders and covering the same areas.

Therefore, the historical sense of the term "Siberian yurt" differs from the 15th to the 16th centuries: if in the 15th century the Siberian yurt was the centre of the Shaybanid state, Turkic at its core and quite vague geographically, then in the 16th century it represented a territory with clear boundaries that at first was part of the Taibugid state and then included into Shaybanid country as the Northern ulus. During this period, the Siberian Yurt was a regional-state formation with a mixed Turkic and Ugric population consisting of individual

small holdings poorly connected with each other and just barely controlled by a central authority.

The Population of the Siberian Yurt

The population of the Siberian yurt belonged to the Turkic and Ugric language families, but it did not remain stagnant throughout the prehistory and history of the Siberian yurt. Its main elements appeared on the territory of the future Siberian yurt in the 9–10th centuries, when the bulk of the Hungarian (Magyar) population migrated to the West, and the Turkic tribes, especially the Qipchaqs, became the dominant peoples in the steppes of Desht-i Qipchaq [Hungarian History, 1971, p. 89; Kumekov, 1972, p. 55; Savinov, 1979, pp. 103–104]. The turkization of the forest-steppe zone of the Siberian yurt continued on during the 11–13th centuries, and while gradually pressing the Ugrics to the North, the Turkic tribes moved to the taiga areas of the Trans-Irtysh and Trans-Ob regions [Mogilnikov, 1965, p. 281]. An additional impetus to this process came through in the form of the Mongol conquest, after which the territory of Western Siberia was occupied by the Turkic tribes of the Uzbeks and Kazakhs [Akhmedov, 1965; Sultanov, 1982]. However, in the 16th century, a significant portion of the population of the Siberian yurt was composed of Ugric tribes, the ancestors of the Khanty and Mansi.

During the 15–16th centuries, the Khanty and Mansi were forming tribal ties that were at the level of statehood formation [Bakhrushin, 1935, pp. 34–84]. In the second half of the 16th century, we can see the existence of a number of Ugric tribal "kingdoms" formed in the Siberian Yurt: The **Kodsk** principality in the Northern Urals and the Trans-Ob region (which emerged no later than the middle of the 15th century; the only one among all the Khanty "principalities" that developed into a "feudal" possession of the Alachev princes and existed almost till the mid-17th century); the **Obdor** principality on the Lower Ob; the **Lyapin** principality on the Northern Sosva; the **Sosva** principality on the Northern Sos-

va; the **Kazim** principality on the Kazim river, the right tributary of the Ob; the **Belogor** principality near the Irtysh-Ob interfluvium; the **Demian** principalities on the Demianka; the Surgut principalities around **Surgut**, and lastly the **Bardakov** principality. All the above listed "principalities" were inhabited by the Khanty. The Mansi lived to the South and Southwest of the Khanty. Their possession was Pelym, a triune proto-state entity and the most developed among the Ugric "principalities". Pelym consisted of the **Pelym** principality with its centre on the Pelym river, the Kondinsk principality located on the Konda river, and the Taborin plowland (volost) in the Southwest of Pelym. Pelym's rulers were considered to be a bellicose group, with sources mentioning their numerous raids into Russian possessions in the Transurals in the 15–16th centuries. The Taborin volost of the Siberian yurt was the only district in Western Siberia where its people practiced primitive farming [ibid, p. 83].

In general, the Ugric part of the population of the Siberian yurt were hunters and fishers (the Ob Ugrians practiced them through the beginning of the 20th century), which sharply distinguished them from the Turkic cattlemen. The more developed traditions of the Turkic statehood had an impact on the ruling circles of the Ugric principalities and especially Pelym. Members of Turkic tribes number among the leaders of the Pelym and the Taborin volost (for example, Ablegirim was the last prince of Pelym), and Murzas and other Turkic ranks can also be found among them.

Along with the Ugric, there were a number of iTurkic feudal estates in the Siberian yurt. First of all, we should mention the **Ishimulus** with its centre in Kyzyl-Tura, one of the historic centres of the Siberian Tatars [Miller, 1937, p. 190]; the **Barabaulus** in the North-west of the Siberian yurt; the **Jalairulus** on the middle tributary of the Tobol, and a whole list of others.

Comparatively few settlements were known to exist in the Siberian yurt. The initial centres of the state were Chimgi-Tura (the modern city of Tyumen), and Kyzyl-Tura on the estuary of the Ishim river. The latter, according to legend, was the first capital of beys from the Taibugid dynasty [Nebolsin, 1849, pp. 12, 36,

38]. Later (in the 16th century), the centre of the state moved North, towards the confluence of the Tobol and Irtysh, where a new capital emerged. Different sources refer to this new city using three names: Iskar, Qashliq or Sibir (Old Siberia). It is likely that its original name was "Qashliq". The term "Sibir" was a possible name for the state, while "Iskar" (meaning "the old city") was most likely a descriptive name for that centre emerging in the second half of the 16th century.

Besides the above described, there were also several fortified centres known to exist on the territory of the Siberian yurt. Thus, in the area of the final capital—Iskar—there were a number of fortresses, including Suzge-Tura, Bitsik-Tura, and Kasim-Tura. In the area of modern Yalutorovsk there was also a fortress called Yaulu-Tura that protected trade routes to Central Asia. Siberian chronicles also mention centres of separate uluses as part of the Siberian yurt. Among them, we should mention the townlet of Yapanchi murza located on the site of modern-day Turinsk, a fortification controlling the path through the Ural mountains, as well as Karachin townlet, which was the centre of the Jalair ulus. Unfortunately, excavations of Karachin Isle on the Tobol river where according to legend this townlet had been located, only revealed the ruins of a Russian settlement from the 17th century. No traces of the Jalair town were found.

Generally speaking, settlements of the Siberian yurt left by the Turkic population were built high up on the steep banks of rivers or lakes. This method of construction let inhabitants keep at least one side of the settlement unfortified, as natural obstacles such as cliffs and ravines served the function of natural fortifications. Typically, settlements had a fairly complex system of ditches and made-made embankments; two embankments were almost a mandatory element of every fortified Siberian settlement. Even in peripheral settlements, embankments and ditches were sufficiently massive: for example, in the Hill Fort of Tyumenka (located on Lake Chany in modern Novosibirsk Oblast) these bloated ditches were 2–2.5 metres deep and up to 9 metres wide, and shafts of the Chinyaev settlement (on Chinyaikha Isle of

Lake Chany) were 1.5 metres high and 5 metres thick. Perhaps, ditches in many settlements were filled with water. Embankments were additionally strengthened by wooden fences.

In these settlements and also near them, there were dugout-like dwellings, which were mostly semi-dugouts or shallow dugouts with log or plank walls reinforced with columns. In the centre of the dwellings were fire pits. The walls of the houses were possibly daubed with clay, as traces of clay coating on the walls are preserved in many settlements. Any structures made of more durable materials were all but absent everywhere besides Iskar, where large amounts of brick was found from the 16th century (it is known that the main mosque of Iskar was built of adobe brick [Pignatti, 1915, p. 35]).

Unfortunately, at present a complete characterization of the Siberian yurt's settlements is impossible, as only a minor part of the yurt researched. The most widely examined aspects are the monuments of the Baraba ulus, which in the 15–16th centuries was the distant Eastern edge of this territory. A significant factor hindering research is that the location of the settlements of the Siberian Yurt contributes to their intensive erosion: the most interesting monuments such as Iskar and Chimgi-Tura have subsequently been almost completely washed away. Furthermore, the rest of Chimgi-Tura's historical monuments are now located on the territory of modern Tyumen, and their study is impossible due to the housing development presently located there.

To sum things up, we can note that the Siberian yurt and the government entities located on its territory formed a peripheral region underdeveloped in both political and economic terms. It emerged after the collapse of the Jochi state and was mostly inhabited by the Finno-Ugric population, as they were in the process of doing away with the old tribal system and forming an early statehood. The Turkic population mostly occupied the Southern part of the steppe region covered in forests. The main occupations of the population in the Northern and Central parts of the Yurt were taiga hunting and fishing, and cattle breeding in the South. Agriculture in the Siberian yurt was extremely undeveloped.

The Tyumen khanate: the Siberian Shaybanid state (the 15th—the beginning of the 16th century).

At the end of the 14th century, the Ural and Western Siberian lands apparently belonged to Hyias-ed Din Tokhtamysh Khan, or at least Iskender 'Anonymous' informs us that Tokhtamysh "died of natural causes in 800/1397–1398 in Tyumen" [Collection, 1941, p. 133]. Russian sources are also consistent with this information, but the death of Tokhtamysh Khan might possibly belong to a later time: Sharaf ad-Din Ali Yazdi indicates that Tokhtamysh Khan's ambassador went to Timur in Rajab in 807/ January 1405. Moreover, Sharaf ad-Din Ali Yazdi portrays Tokhtamysh Khan as a man who roamed the steppes and was abandoned by his fellow men [ibid, p. 189]. We can guess that Tokhtamysh Khan was hiding in his possessions, but when Western Siberia fell under the rule of Tuqay Timur's descendants is still unknown. It is possible that the rule of the Tuqay Timurids over these lands was comparatively short, as in the first decade of the 15th century the territory of the Siberian yurt was occupied by leaders of various branches of the Shaybanid house. It is most likely that the power of Tokhtamysh Khan only spread throughout Chimgi-Tura (Tyumen), while other lands of the Western Siberian steppes were occupied by Shaybanids. At any rate, at the beginning of the 15th century, there were several nomadic Shaybanid khanates and the area between the Ishim and the Tobol belonged to Mustafa Khan's possessions. To the West of the Ishim spread the possessions of Ibrahim ibn Pulad, and Northern Kazakhstan was ruled by Jumaduk Khan ibn Sufi [Akhnedov, 1965, p. 33]. In the Southern Trans-Tobol Region, the possessions of Mahmud Kodja Khan ibn Kaanbek found their home. At the same time, the opinion V.V. Pokhlebkin expressed that Tokhtamysh Khan was the founder of the Siberian khanate [Pokhlebkin, 2000, p. 155] seems inaccurate.

We can assume that after Ibrahim ibn Pulad's death his lands passed to his son Dawlat Shaykh-oglan, who also possessed Chimgi-Tura. Dawlat Shaykh-oglan may be considered the first ruler of the Siberian Shaybanid state with

Chimgi-Tura at its centre ("the Tyumen khanate"). It is possible that his rule was recognized by some local tribal princes of the Khantys and Mansis, however this theory is not supported by any evidence. In any event, Dawlat Shaykh was not the most powerful Shaybanid ruler, as in comparison to his rivals Mustafa Khan and Jumaduk Khan, he did not accept this title (as khan). Almost nothing is known about his real activities; sources only treat him as the father of Abu'l-Khayr, i.e. the founder of the nomadic Uzbek state. At the same time, another ruler whose possessions were located in the vicinity of Chimgi-Tura – Mahmud Khodja – assumed the title of khan, so he might also be considered the ruler of the Siberian yurt ("the Tyumen khanate").

In 1426 Dawlat Shaykh died, and his possessions passed to the emir of the Burkuts, which was the dominant tribe of Chimga-Tura. Dawlat Shaykh's heir Abu'l-Khayr Ubaidullah ibn Dawlat Shaykh was sent to Jumaduk Khan [Materials, 1969, p. 141]. This situation lingered until 1428 when Jumaduk Khan died. Afterwards, Abu'l-Khayr, supported by the Manghit emirs, regained control over Chimgi-Tura and the entire ulus of his father. Burkut emirs Kibek Khodja-bey and Adad-bey bowed their heads without resistance [ibid, p. 144–146].

The creation of the independent strong state of the Shibanids (Shaybanids) came about in 1429, the rulers of which laid claim to supreme power over the Jochi state. Its founder—Abu'l-Khayr Ubaidullah Khan ibn Dawlat Shaykh ibn Ibrahim ibn Pulad is considered to be the first khan of the Uzbek khanate (referred to as the state of the nomadic Uzbeks or the Shibanid khanate), which was formed on the territory of Western Siberia and Kazakhstan. At the same time, Abu'l-Khayr Khan may be considered the founder of the Uzbek Shaybanid dynasty, which was established in 1500 in the person of Muhammad-Shaybani Khan in Mawarannahr, where it reigned up until the 16th century.

After restoring Shaybanid power over Chimgi-Tura, the necessity of uniting the isolated Shaybanid uluses became the primary goal for Abu'l-Khayr. He immediately declared his claim to supreme power, and after minting coin in Chimgi-Tura demanded submission

from other Shaybanid khans and sultans. Unfortunately, the coins Abu'l-Khayr minted in the Siberian yurt's capital did not survive to the present day, so we only know about them from source material. Thus, Masud ibn Usman Quhistani in his work "Tarih-i Abu'l-Khayr-Hani" informs us that Abu'l-Khayr Khan issued coins at least twice: in 1429, after he conquered Chimgi-Tura, and in 1431, after he defeated Ahmad Khan, the ruler of the Great Horde, and occupied his main camp Ordu-Bazaar [ibid, pp. 48, 52].

Abu'l-Khayr's main rival then became Mahmud Khodja Khan ibn Kaan-bey ibn Ilbak ibn Ming Timur Khan, Abu'l-Khayr's second cousin twice removed. According to the information provided by Abd al-Razzaq Samarqandi, Mahmud Khodja Khan was one of the main claimants to supreme rule over the Shaybanid ulus. In 1430, on the banks of the Tobol river, Mahmud Khodja Khan was defeated, captured and killed by Abu'l-Khayr's forces. As a result of this victory, the entire Western part of the Siberian yurt came under the rule of Abu'l-Khayr. Thus, he controlled the territory from the confluence of the Ob and Irtysh in the North to the Manghit yurt in the South, in other words the former possessions of Shaybanids Dawlat Shaykh-oglan, Jumaduk Khan and Mahmud Khodja Khan [ibid, pp. 146–148; Maslyuzhenko, 2012, pp. 102–103].

The desire to establish his supreme power over the entire Jochi state prompted Abu'l-Khayr to also conquer territories in Central Asia and the Volga Region. Already in 1430, immediately after defeating Mahmud Khodja Khan, Abu'l-Khayr subdued Khwarezm, and in 1431 he deployed troops against Ahmad Khan and Mahmud Khan of the Lower Volga Region. The leaders of the Great Horde were destroyed and fled, after which Abu'l-Khayr Khan occupied their main camp Ordu-Bazaar and minted coin there as the supreme khan of the Jochi state [Materials, 1969, pp. 156–158].

After proclaiming his supreme power over the Jochi state, Abu'l-Khayr started fighting his last rivals in the Siberian yurt, the most important of which was Shaybanid Mustafa Khan ibn Musa ibn Kiran ibn Bayankejar. In 1428 Mustafa Khan supported Abu'l-Khayr in his struggle

for Chimgi-Tura. However, after the campaign of 1430–1431, Mahmud Khodja Khan's death, coupled with the proclamation of Abu'l-Khayr as the Jochids' supreme khan, such a powerful neighbor was of extreme concern to Mustafa khan, as he clearly understood that Abu'l-Khayr could attack him. Mustafa managed to draw over to his side Waqqas-bey, the ruler of the Manghit ulus and one of the strongest nomadic feudals in Abu'l-Khayr's state. His support had been essential in Abu'l-Khayr's military successes of 1428–1431. The emergence of the coalition between Mustafa Khan and the Manghits jeopardised the integrity of Abu'l-Khayr Khan's dominions, and he immediately came out against Mustafa khan. The decisive clash occurred on the Atbasar—a tributary of the Ishim. Mustafa khan was defeated and subsequently fled to the Mangyshlak Peninsula and into the possession of the Manghits [ibid, p. 157–158].

Mustafa Khan's rout signified the elimination of the last independent Shaybanid khanate on the territory of the Siberian Yurt. From then on, the entire yurt was controlled by Abu'l-Khayr Ubaidullah Khan. However, Abu'l-Khayr did not dare in this situation to start a conflict with the Manghits, instead opting to pretend to have forgiven Waqqas Bey for building an alliance with Mustafa Khan, and then again appointing him as the commander of the khan's troops. Waqqas-bey was one of the participants of Abu'l-Khayr's Turkestan campaigns, and as a result became the khakim of Uzgend.

As a result of the Turkestan campaign undertaken by Abu'l-Khayr after his victory over Mustafa Khan, cities such as Sygnak, Suzak, Uzgend, and Ak-Kurgan were conquered. This means that already in the 1440s Abu'l-Khayr continued the struggle for Central Asia: in 1444–1445, he subdued Sygnak beyond a shadow of a doubt, in 1446 he transferred the khan's residence away from Chimgi-Tura, and in 1447 initiated his campaign against Samarkand.

Abu'l-Khayr's later actions, as well as the history of the Uzbek khanate he created on the territory of the Siberian yurt, are inextricably connected with the history of Central Asia (and the reason why it is not covered in the research at hand). Let us only note that moving the centre of gravity of Abu'l-Khayr's empire

to the South in the 1450s triggered the state to collapse. Kazakh khans Giray Khan and Jani Beg khan split apart from him, and the same thing happened in the Northern areas belonging to the Siberian Shaybanids. The founder of this dynasty was Hajji Muhammad ibn Ali ibn Bey Khwandi-oglan ibn Ming Timur Khan. Just like Mahmud Khodja Khan, Hajji Muhammad Khan was a second cousin once removed to Abu'l-Khayr Khan.

Hajji Muhammad Khan's historical role and concrete actions are still a mystery. Soviet researchers Z.Ya. Boyarshinova and N.N. Stepanov put forth the view that even in the 1420s Hajji Muhammad conquered the Ishim Tatars and founded the city of Kyzyl-Tura near the confluence of the Ishim and Irtysh. Moreover, both of them share M.G. Safargaliev's theory that Sayyid Ibrahim Khan was the grandson of Hajji Muhammad [Boyarshinova, Stepanov, 1964, pp. 475–504]. A number of other researchers also adhere to this line of reasoning. We cannot therefore assume that there was confusion between the actions of Hajji Muhammad Khan (خاجی محمدخان) reigning in the 1440s, and Mahmud Khodja Khan (محمود خواجه خان) who apparently ruled in the middle—second half of the 1420s. Moreover, the formation of Kyzyl-Tura—the historic centre of the Taibugid ulus—cannot be related to anything Hajji Muhammad Khan had accomplished (nor to the actions of Muhammad-bey, who reigned at the end of the 15th century and de facto established the Taibugid state). Sources from this time associate the appearance of this town with On (On-Son, Onsom), a semi-legendary ancestor of the Taibugids who, according to the bloodline legend, lived at least five generations before Muhammad-bey. Hajji Muhammad's activities were thought to have occurred in the 1420s due to an error in Khafiz-i Tanysh Bukhari's book "Sharaf-nama-ii-shakhi" ("The Book of the Shah's Fame"), which was written at the turn of the 16–17th centuries. When describing the deeds of Abu'l-Khayr Khan, the author mentions Hajji Muhammad Khan instead of Mahmud Khodja Khan [Khafiz-i Tanysh, 1983, p. 76]. Yet at the same time, we cannot discard the possibility that Hajji Muhammad Khan was one of the Shaybanid rulers subdued by Abu'l-Khayr

at the turn of the 1420–1430s. Nevertheless, the existing opinion that Hajji Muhammad Khan died in 1429 and Mahmud Khodja Khan became his successor (see, for example: [Maslyuzhenko, 2011, p. 59]) does not seem to be sufficiently sound.

Unfortunately, no details about Hajji Muhammad Khan's further life were ever mentioned in the sources, nor do we know the date of his death. Perhaps, in the 1430s, Hajji Muhammad Khan was indeed one of the leaders subordinate to Abu'l-Khayr Ubaidullah Khan, but after the centre of the Uzbek state was transferred to the South, Hajji Muhammad became *de facto* independent along with the Manghits. In general, we can only assert that the question of Hajji Muhammad Khan's activities is still open due to the paucity of sources.

Who were his successors? It is known that he had three sons. Two of them—Sayyid Ibrahim (Ibak) Khan and Mahmud Khan—held the title of khan, and the third, named Shayban Gazi-sultan, is only mentioned in genealogical books, as he did not bare any title. Perhaps he was that one younger brother of Sayyid Ibrahim who was killed as revenge for the murder of Sheikh Haydar Khan in 1469, as "Tavarikh-i-Guzida-ij Nusrat-Name" suggests. Being as it were that Ibak Khan began his activities a bit later, we can assume that the direct heir of Hajji Muhammad Khan was the very Mahmud Khan (محمود خان) who reigned for a comparatively short time. At the same time, a number of researchers (particularly M.G. Safargaliev, Z.N. Boyarshinova and N.N. Stepanov) consider Mahmud Khan (Mahmutek) to be the true heir of Hajji Muhammad Khan. But because they associate Hajji Muhammad Khan's activities with an earlier period, they build a separate genealogical tree where Sayyid Ibrahim Khan is not Hajji Muhammad's son at all, but rather the son of Mahmud Khan. Drawing the tree this way suggests that Hajji Muhammad Khan died in 1429/1430, and allows us to avoid any chronological straining in order to relate the period of 1440–1450 to the time of Mahmud Khan's rule. Abu al-Ghazi considers Mahmud Khan and Sayyid Ibrahim Khan to be brothers, the sons of Hajji-Muhammad Khan. We might also assume that Mahmud Khan and Sayyid Ibrahim

Khan were co-regents, but there is no reliable data to support this theory. Coincidentally, D.I. Maslyuzhenko agrees with Mahmud ben-Vali, who believes Sayyidek Khan and Ibak Khan were different rulers. This idea allows him to construct the following chronological and genealogical layout: Hajji Muhammad Khan—his heirs the Sayyidek Khan and Mahmutek Khan brothers—and their heir Ibak Khan ibn Mahmutek Khan [ibid, p. 59]. We can admit that the issue of early rulers in the Tyumen khanate remains largely open ended, and the concrete list of Tyumen khanate rulers in the 15th century is restored only tentatively. In our opinion, the succession of the khans looked as follows: Hajji-Muhammad Khan—Mahmud Khan and Sayyid Ibrahim Khan—Mamuq Khan—Agalak Khan—Qutlugh Khan.

In the middle of the 15th century the Muscovite state attempted for the first time to invade part of the Siberian yurt. In 1465, a Moscow troop under the command of voevode Vasily Skryaba travelled from Great Perm to "Yugra" to collect tribute in the name of the Grand Prince of Moscow. The leaders of the Tyumen khanate did not respond in the slightest to Moscow's campaign, possibly because the ruler of the khanate was changing. At the same time, the Moscow state treated the campaign of 1465 as a kind of precedent, a legal basis to lay claim to the Northern Urals, which was *de facto* under the Tyumen khans' rule. However, the leaders of the Ugrik principalities of the region recognized their dependence on Moscow.

There is reliable information that at the end of the 1460s a more extraordinary ruler was at the head of the Siberian Shaybanids, a man named Sayyid Ibrahim Khan (سید ابراهیم خان), or Ibak Khan, first mentioned in the primary sources when describing the defeat of the Uzbek khanate in 1469.

Sayyid Ibrahim Khan was hostile towards the house of Abu'l-Khayr Khan, and the sources call him the direct murderer of Abu'l-Khayr Khan's successor Sheikh Haydar Khan [Materials, 1969, pp. 99–100]. It is possible that the consistent hostility of Sayyid Ibrahim Khan towards the Uzbek Shaybanids took its roots from the time of Hajji Muhammad Khan when Abu'l-Khayr subdued the possessions of the Siberian

Shaybanids. Ibak Khan pursued Muhammad Shaybani-sultan, the heir of the Uzbek Shaybanids, for a long time, even besieging Hajji Tarkhan where Muhammad Shaybani was hiding. But the latter managed to break through the ranks of the besieger and escape to the Trans-Aral area (1471).

Only nine years later, in 1480, Sayyid Ibrahim Khan once again became a player in the political struggles of the time. It was then that the Shaybanid khan formed an alliance with Ivan III, the Grand Prince of Moscow that was geared against the ruler of the Great Horde Ahmad Khan and his claim to the throne of the Jochi state. During the struggle between Sayyid Ibrahim Khan and Sheikh Haydar Khan ibn Abu'l-Khayr Ubaidullah, the leader of the Great Horde Ahmad Khan (who was also an old opponent of Abu'l-Khayr Khan) appeared to be the only ally of Sayyid Ibrahim Khan. His troops took part in the defeat of Sheikh Haydar Khan in 1469, as well as in the siege of Hajji Tarkhan. However, after the defeat of the Uzbek khanate, the leaders of which considered themselves to be the first representatives of the Jochids, the two sides started to both claim inheritance to the Uzbek Shaybanids—the Siberian Shaybanids and the khans of the Great Horde.

The moment when contact was initially made between the Russian state and the rulers of the Siberian yurt is still not clear. It seems as if the first connections with Moscow were established long ago by Hajji Muhammad Khan. In a letter to Ivan III, Sayyid Ibrahim Khan wrote: "My father stands with your yurt side by side; he was both your friend and your brother" [Karamzin, 1846, p. 393]. This alliance of Ivan III and Ibak Khan played its role during the Great Stand on the Ugra river: Sayyid Ibrahim Khan, in an alliance with Manghit emirs Musa and Yamgurchi, plundered the Volga uluses to the rear of Ahmad Khan, and in January 1481 he suddenly attacked Ahmad Khan's main camp and killed him personally.

The murder of Ahmad Khan, the most prominent claimant to supremacy among other khans of the Ulus of Jochi, allowed the Tyumen khan to declare his claims to the throne of the Jochi state.

Later, in 1494, Sayyid Ibrahim Khan wrote to Ivan III: "God gave me happiness: having killed the son of Timer Qutlugh, I took the throne of Sain and agreed with my brothers and children... and prepared the throne for my children" [Pamyatniki, 1884, p. 199]. After the death of Ahmad Khan, Sayyid Ibrahim Khan therefore proclaimed himself the supreme khan of the Jochi state, as he had almost no rivals at the time. Abu'l-Khayr's successors were nomadising near the Northern borders of Transoxiana and lacked the proper forces to fight Sayyid Ibrahim, the Great Horde had already been defeated, the Crimean khanate had long been segregated from other Jochid states, and Kazan's Ali Khan was in favor of the alliance with Sayyid Ibrahim Khan. Ahmad Khan's heirs recognised the supremacy of Sayyid Ibrahim, and the nomadic quarters Ordu-Bazaar was transferred to Chinggi-Tura where Sayyid Ibrahim Khan minted coins.

The existence of coin issued on behalf of Sayyid Ibrahim Khan was only proven quite recently. It is necessary to note that all researchers are aware of the underdeveloped currency exchange relations on the territory of the Siberian yurt. Moreover, the existence of coins issued on behalf of later Jochid khans in general was brought into question even by G.A. Fedorov-Davydov, though he was the one who personally discovered the coins of Ahmad Khan from 862/1457–1458 and 886/1481–1482 [Mukhamadiev, Fedorov-Davydov, p. 315]. The discovery of these coins on the territory of the Siberian yurt allows us to make certain conclusions about coin issues under Tyumen khans.

Among the coin discoveries, several are of particular interest to us. One was found in the Hill Fort of Iskar at the beginning of the 20th century and contained the inscription "Al-sultan al-'adil..." (السلطان العادل) [Pignatti, 1915, p. 6]. Three coins were found by V.P. Biryukov, a famous historian of the Urals and director of the Local History Museum of Shadrinsk. He discovered them on denes Tatar Bor near Barsukova village of the Shadrinsk uyezd of the Perm guberniya. V.K. Trutovsky described one of them as the coin of Jani Beg Khan of the middle of the 14th century minted in "Sibir" (أسير ذرب) [Biryukov, 1926, p. 40]. Four more coins were

discovered by Yu.A. Argentovsky in 1912 on dunes near Mogileva village of the Shadrinsk uyezd [Argentovsky, 1912, p. 39–40].

It is likely that all of these coins are kept in private collections, as they were not found in any museums of Yekaterinburg, Tobolsk, Tyumen, Kurgan or Shadrinsk. It is difficult to say anything precise about the coins found in Iskar and denes Tatar Bor, for there is no additional information about them. Yu.A. Argentovsky's discovery is extensively documented, and we were able to find photographs of these coins taken by famous Ural archaeologist V.Ya. Tolmachev. These photographs allowed us to restore the inscriptions on the coins.

On the obverse of all these coins, one can see a lowercase inscription that reads "Supreme sultan Ibrahim Khan" (سلطان عظم ابراهيم خان) or "Sultan Ibrahim Khan" (سلطان ابراهيم خان). On the tail side of the coin, there is a tamga depicting a bident with its spikes turned down. Between the spikes there are two dots placed vertically, with the entire tamga framed by the circular inscription "Minted in Ordu-Bazaar" (اوردو بازار ذرب). According to the conclusion of famous Russian numismatist Professor A.K. Markov (who at the beginning of the 20th century was the keeper of the numismatic collection of the Imperial Hermitage), the coins discovered by Yu.A. Argentovsky were minted by Kazan khan Ibrahim ibn Mahmud ibn Muhammad (1467–1479). Furthermore, A.K. Markov noted that before this finding, the coinage of this ruler was absolutely unknown. However, this attribution immediately spurs doubts: the only basis for it was "the opportune fact that the name "Ibrahim" and names with the ending "-ahim" were used neither in the Crimean khanate, nor the Golden Horde, ever" [ibid, p. 39]. However, the tamga picturing a bident with two dots between its spikes were only found on coins of khans from the first half of the 15th century, which were issued in the Lower Volga Region in Hajji Tarkhan and the nomadic quarters Ordu-Bazaar: i.e. the coins of Muhammad ibn Temur (Kichi-Muhammad), Mahmud ibn Muhammad ibn Temur, Mustafa ibn Hyias ad-Din, and Devlet Berdi. All these khans belong to different branches of the Jochids: Muhammad and Mahmud were the descendants of Orda Ichen, and Devlet Berdi and Mustafa were

the offspring of Tuqay Timur. The only thing uniting these rulers is that they possessed Hajji Tarkhan and its surroundings, where it is possible their nomadic quarters Ordu-Bazaar was located. Based on this, we can assume that in the first half of the 15th century tamgas indicated the location of rather than belonging to some family, since the very fact of possessing Hajji Tarkhan and its area provided the right to issue coins with the tamga picturing a bident with dots between its spikes. Thus, A. Markov's attribution can be rejected, as Kazan's Ibrahim Khan had no power over the Lower Volga Region.

The name "Ibrahim" was indeed rare among the Jochids. However, A. Markov was incorrect in suggesting that Ibrahim Khan of Kazan was the only one to bear it, as that name was also held by Tuqay Timur's successor Ibrahim ibn Musliq ibn Hyias ad-Din, as well as Shaybanids ibn Pulad, the grandfather of Abu'l-Khayr Ubaidullah Khan, and Sayyid Ibrahim Khan ibn Hajji Muhammad Khan. Neither Ibrahim ibn Musliq, nor Ibrahim ibn Pulad had anything to do with Hajji Tarkhan and the Lower Volga Region in general. The only possible person who could have issued the coins we are interested in is the ruler of the Siberian Yurt Sayyid Ibrahim Khan, who (as mentioned above) repeatedly participated in wars on the territory of the Lower Volga Region and in 1481, after defeating the ruler of the Great Horde Ahmad Khan, transferred his main camp Ordu-Bazaar to Tura.

It is known that the Jochids continued to issue coins even during the complete decay of the Jochi state in the middle and second half of the 15th century. As we have already mentioned, among the artifacts that made it to our time, there were coins from Ahmad Khan issued in Hajji Tarkhan and Bik-Bazaar, including coins from 862/1457 and 886/1481–1482, which was the final year of Ahmad Khan's rule. Among other treasures coins from Ahmad Khan's brother Mahmud Khan were also found, who ruled over Hajji Tarkhan, as well as coins from Sayyid Ahmad Khan issued in Hajji Tarkhan, Ordu-Bazaar and Bik-Bazaar [Fedorov-Davydov, 1960, pp. 167–168, 175–177]. According to written sources we know that the khans of the 15th century, including those who ruled the Siberian yurt, minted their own coins. Usually, such issues

coincided with certain important events in their reign. For instance, Masud ibn Usman Quhistani in his work "*Tarih-i Abu'l-Khayr-Hani*" informs us that Abu'l-Khayr Khan issued coins at least twice: in 1429, after he conquered Chimgi-Tura, and in 1431, after he defeated Ahmad Khan of the Great Horde and occupied his main camp Ordu-Bazaar. Unfortunately, the coins minted by Abu'l-Khayr have not yet been discovered.

It is likely that during the second half of the 15th century coin issues of certain khans were purely declarative; they were a mere representation of one of the characteristics of supreme power. We know that rulers of the Great Horde in the 15th century Ahmad Khan and his son Sayyid Khan minted coins as they claimed to be direct descendants of the khans of the Jochi state from the 13–14th centuries. This is why it seems feasible that Sayyid Ibrahim Khan issued his own coin in 1481 after the defeat of Ahmad Khan, when Sayyid Ibrahim Khan declared he had "taken the throne of Sain". It is also possible that Sayyid Ibrahim Khan's coins were minted in Ordu-Bazaar, which was transferred to Chimgi-Tura but still retained its tamga. The epithet "supreme" also indicates a time after 1481, as it was preserved in the inscription on one coin. Before that time Ibak Khan had no reason to claim supremacy among the Jochid khans and sultans.

The coins of Sayyid Ibrahim Khan represent evidence of the Siberian Shaybanids' claims to supremacy in the Jochi state. At the same time, Sayyid Ibrahim Khan's attempts to unify the Jochi state were clearly ephemeral: in reality he only controlled the lands of the Siberian yurt. Technically speaking, the Siberian Shaybanid state (the Tyumen khanate) in the first half of the 1480s covered the territory of Western Siberia, Western Kazakhstan and the Lower Volga Region, including the possessions of the Ugrian and Siberian-Tatar aristocracy—the Iskar Principality of Taibugids and the Pelym state, the Manghit ulus, and the Great Horde in the Volga Region. Sayyid Ibrahim Khan's closest ally was khan Ali. A significant part of these lands were only formally under the Shaybanids' control, so the Shaybanid Tyumen state began to crumble even before its formation was finished.

Sayyid Ibrahim Khan's efforts to consolidate himself in the Volga Region caused a sig-

nificant weakening of his influence in "Yugra", the Finno-Ugrian "principalities" of Western Siberia and the Northern Urals: Koda, Konda, Pelym, Obsdorsk, etc. In 1483, military men under the command of voevodas—princes Fyodor Kurbsky and Ivan Saltykov—were sent from the Vishera river to the Lozva river and Pelym. As the Ustug chronicle informs us, the Russian voevodas scattered troops of Pelym prince Yumshan and headed "down the Tavda river past Tyumen into the Siberian land" [Ustug chronicle, 1950, p. 94]. After the Russians completed their campaign in the Urals in 1483, Pelym prince Yumshan recognized the dependency of his possessions on the Russian state. Further movements of the Russian troops from the Tavda to the Tobol and then down the Irtysh and the Ob were made in order to subdue Kodsk prince Moldan and the other Khantys of Kodsk.

The campaign of 1483 did not cause a serious conflict between the Russian and the Shaybanid states, though the Russian army traveled down the Tavda past Chimgi-Tura, as Sayyid Ibrahim Khan was staying in the Volga steppes at the time. In addition, it is possible that the defeat of the almost autonomous Ugrian states was beneficial for Sayyid Ibrahim, as their military was now weak, which could later that provide the opportunity to establish more effective control over them. Finally, the khan of Tyumen was not interested in a conflict with the Muscovite state that had already demonstrated its strength.

At the same time, the campaign of 1483 brought about significant consequences for the Tyumen khanate: the Ugrian territories of the Siberian yurt started ridding themselves of Chimgi-Tura's influence. At the end of 1483, Pelym prince Yumshan sent his relative Yurga and centurion Anfim to Ivan III to ask for a "dangerous charter" and permission to come to Moscow. In 1485, Yumshan visited Moscow and Pelym recognized his dependency on Muscovite state. In 1484, the Kodsk princes Moldan, Pytkey and Sonta, who visited Ust-Vym, also recognized their dependency on the Muscovite state. Eventually, the Siberian Shaybanids lost control over the Northern (taiga) part of the Siberian yurt and the former source of fur peltries, which were the region's main economic value.

But even more trouble for Sayyid Ibrahim Khan was the conquest of Kazan by Russian troops in 1487. As a result of this campaign, Sayyid Ibrahim Khan's ally Ali Khan (Alegam) was dethroned, and instead of him the Russians enthroned their protégé Muhammad Amin Khan. Many Kazan aristocrats and supporters of the "Eastern orientation" found themselves in the main camp of Sayyid Ibrahim Khan. In November 1489, Ibak Khan's ambassador Chumgur arrived in Muscovite state to pass Ivan III a bitig (or "bitik"—"letter" in Turkic) of protest against the dethronement and arrest of Ali Khan. In that letter, Sayyid Ibrahim Khan referenced friendly relations between the Moscow and Siberian states and asked for the release of the dethroned khan of Kazan to Siberia [Ambassadorial books, 1995, p. 20; Iskhakov, 2006, p. 176–177]. No positive answer followed. This might have been what led to the deterioration of the relations between the Muscovite state, the Kazan khanate that depended on Moscow, and the Tyumen khanate. Already in 1491, Kazan khan Muhammad Amin was informing Crimean khan Mengli Giray I that "Ivak and Mamuq, Musa and Yangurchi are bringing war" against him [ibid., p. 106]. It is obvious that at the end of the 1480s the Tyumen-Manghit union had gotten stronger. Moreover, the Kazan opposition was concentrating in Chinggi-Tura, as they were discontent with the Russian protégés' reign in the Kazan khanate. The Manghits recognised Sayyid-Ibrahim Khan as the supreme khan, but due to internal conflicts in the Manghit yurt, a number of Manghit beys rejected Sayyid-Ibrahim and declared Abul-Fath their supreme leader [Ambassadorial books, 1995, p. 33]. In 1492 Sayyid Ibrahim Khan along with Mamuq Khan plundered Hajji Tarkhan, so the Manghits once again recognized his supreme power. In the Russian translation of the bitig directed to Ivan III in 1494, Sayyid Ibrahim Khan names himself "the tsar of the Nogais". In this document, Sayyid Ibrahim Khan once again asks to turn over to him the ousted Kazan khan Ali, and mentions that his residence is currently located in the Volga Region. We can guess that this very Tyumen vilayet (Chimgi-Tura) was governed at that time by Mamuq Khan (the brother or nephew of Sayyid Ibrahim Khan, see below).

The Tyumen khan invested too much energy into the political struggle for the Volga Region, and this caused his influence to weaken in Western Siberia where positions of the local Tatar and Ugrian aristocracy were strengthened.

The exact date of the end of Sayyid Ibrahim Khan's rule is still unknown. It is only known that he was killed by Siberian bey Muhammad from the clan of the Taibugids, who was the ruler of the Iskar ulus and de facto founder of the Siberian (Iskar) Principality of Taibugids. Yet, the time of Sayyid Ibrahim Khan's death can be restored hypothetically: in 1494, he is still depicted as the ruling khan of Tyumen, and in 1496, the throne of Tyumen had already been taken by Mamuq Khan. That is why 1494/1495 can be considered the conditional date of his death. Where exactly Sayyid Ibrahim Khan was killed is also as of yet unclear. We can clearly assume that the site of his death was not Chinggi-Tura, as this town was controlled by Mamuq Khan and not Muhammad-bey. During that time the Taibugids did not have any power in the Volga Region, and they were not seeking it either. This is why two versions can be put forth: either Muhammad-bey Taibugid took part in some military actions in the Volga Region and used the situation to his benefit, or Sayyid Ibrahim Khan decided to intensify control over the Siberian bey and visited one of the centres of the Taibugid principality (Iskar or Kyzzyk-Tura) where he was killed. Both versions are possible, but if we take into account the main pillars of Sayyid Ibrahim Khan's political activity during the final stage of this reign, his death in the Volga territory where Muhammad-bey Taibugid was staying seems more likely. On the other hand, Siberian chronicles created significantly later than the observed events indicate that Muhammad-bey killed the father and destroyed the "city of Chingiden", i.e. Chimgi-Tura [Complete Collection of Russian Chronicles, 36, 1987, p. 47]. However, sparse information from the Esipov chronicle along with other Siberian chronicles covers only the consequences and not a precise chronological interrelation of events. The heir of Sayyid Ibrahim Khan Mamuq Khan, a fortiori, ruled in Chimgi-Tura. It is possible

that Muhammad-bey only plundered the city, and did not demolished it.

Sayyid Ibrahim Khan's actions turned out to be the final attempt to restore the Jochid empire under the rule of one khan. Keeping this in mind, Sayyid Ibrahim Khan was actually content simply with the recognition of his supremacy by other khans and sultans; he never strove for efficient control over the state as a whole. But this political line was doomed from the start to failure by the course of historical development. After Sayyid Ibrahim Khan's death no ruler of the Siberian yurt or other Jochid states—the Kazan, Crimean, Uzbek and Kazakh khanates—could claim supremacy in the Jochi state, and the very notion of the "Ulus of Jochi" was lost to history.

Besides, policy-making and the "imperial" ambitions of Sayyid-Muhammad led to the collapse of his own state: the struggle for power over the Volga Region made him forget about the ancient lands of the Shaybanids and put the Shaybanids' power at risk in Western Siberia. In its final form, all of this spurred on the disintegration of the Shaybanid state in Siberia at the beginning of the 16th century.

The heir of Sayyid-Ibrahim Khan was Mamuq Khan (مامك خان), the son (?) of Mahmud Khan and nephew of Sayyid-Ibrahim. A number of sources consider Mamuq Khan to be the son of Sayyid Ibrahim Khan, but certain authors also suppose that Mamuq Khan could even be the brother of Sayyid-Ibrahim Khan. Obviously, there is no reliable information on his pedigree. According to Qadir Ali Bek, the karachi of Jalair and "Shaybani-name", we can assume that Mamuq-khan was the nephew of Sayyid Ibrahim-khan, the son of his brother (possibly of Mahmud-khan). In D. Maslyuzhenko's opinion, a historian who considers Sayyid Ibrahim-khan to be the son of Mahmud-khan, Mamuq-khan (just as his successor Agalak-khan) was the younger brother of Ibak-khan [Maslyuzhenko, 2011, p. 59]. The name "Mamuq" seems to be a diminutive form or a cognomen of this ruler (likewise, Sayyid Ibrahim-khan was often called Ibak or Ivak). What the regent's full name was is unclear, but we could surely suggest that Mamuq Khan was officially named Mahmud. Mamuq Khan's accession to the throne of the Tyumen

khanate did not cause any real debate, as according to the sources by that time he already had Chingi-Tura in an iron fist.

In all likelihood, Sayyid Ibrahim Khan intended to make Mamuq the khan of Kazan. After the former's death, the latter continued his political line. In Spring 1495, a part of the Kazan aristocracy—beys Kel Ahmad, Urak, Sadyr and Agish—persuaded Mamuq Khan to occupy Kazan. He organized a campaign against the city, but the supporters of Muhammad Amin Khan and pro-Russian policy-making called upon the Russian troops. The adherents of the "Eastern orientation" ran away from Kazan to join Mamuq Khan, who was the one who stopped the campaign.

At the beginning of 1496, the Russian army was withdrawn from Kazan. When Mamuq Khan found out about this, he swiftly headed to the city and occupied it. Muhammad Amin Khan then escaped to Russia.

Mamuq Khan behaved in Kazan as in a subdued city, vividly demonstrating that the centre of his state was Chimgi-Tura. The "Eastern" representatives of the Kazan aristocracy in their hopes that after the first coup the power would pass to them, quickly became disappointed in their protegee. Mamuq introduced some extraordinary taxes and ignored the local aristocracy. One of the leaders of the "Eastern" group—Kel Ahmad-bey—was even arrested. With the goal of expanding the territory he ruled over, Mamuq marched against Kazan's vassal, the Arsk principality. Kel Ahmad-bey and his allies did not lose a second in taking advantage of the khan's absence and executed a coup. Mamuq Khan was proclaimed dethroned, and the brother of Muhammad Amin Khan, Abd al-Latif Khan, was invited to occupy his position. Mamuq Khan's allies—a significant group within the aristocracy led by Urak-bey—fled from Kazan to Mamuq Khan, who returned to Siberia after he saw there were no possibilities to immediately restore his power in Kazan. An attempt to return to Kazan, expel Abd al-Latif Khan and regain power was unsuccessful for Mamuq, and the siege of Kazan did not bring about any results. According to the Nikon chronicle, Mamuq died on his way from Kazan to Siberia [Complete Collection

of Russian Chronicles, 11–12, 1965, pp. 242–243]. His date of death is still unknown, and it is also not clear who Mamuq Khan's successor was in the Tyumen khanate. Sources retained the memory of at least two rulers who were distinguished as leaders of the Tyumen khanate at the turn of the 15th and 16th centuries: Agalak and Qutlugh. But even data about their titles is not quite truthful. For example, Agalak is usually named a sultan, though in "Bakhr al-asrar fi manakib al-akhiar" he is mentioned to be a khan [Materials, 1969, pp. 347–350]. Russian chronicles call him "tsarevitch, the brother of Mamuq". It also seems that Agalak-sultan was treated as the supreme ruler of the Tyumen khanate for a while (circa 1497–circa 1500?).

In 1499 Agalak-sultan, supported by Kazan emigrants, made an attempt to regain Kazan, but Abd al-Latif-khan repelled the attack with the help of Russian troops. In the meantime (1499), Russian troops crossed the Ural mountains to the North and invaded the Pelym principality, the rulers of which recognised the dependence of "Yugra" on the Muscovite state. According to information from the Ustug Compiled Chronicle, 42 fortified towns and 58 princes were captured in the course of the campaign [Ustug chronicle, 1950, p. 100]. Grand Prince Ivan III after 1499 assumed the title of "Prince of Kondinsk and Obdorsk", which signified a formal declaration of Russian sovereignty over the Northern Urals. We can assume that during this very time of the state's collapse, Chimgi-Tura was destroyed. The exact time when Agalak-sultan ceased to govern the Tyumen khanate is not known.

The last ruler of the Tyumen khanate with its centre in Chimgi-Tura—the state of the Siberian Shaybanids—who reigned independently or along with Agalak Khan, was Qutlugh Khan or sultan (كطلوك سلطان كطلوك خان), primarily known for his raids in Russian possessions in 1505 or 1506. After being defeated, Qutlugh Khan retreated into Siberia. One curious thing about him is that his status was not clear even to chroniclers: thus, the Vychegodsko-Vymsk chronicle mentions him as "Siberian tsar Qutlugh Saltan" [Documents on the History of Komi, 1958, p. 264], meaning Qutlugh is referred to as the khan and sultan at the same time. The given controversy may be solved if we assume that the word "Sultan" was part of the khan's name, which pronounced in full is "Qutlugh Sultan Khan".

It is possible that after being defeated, Qutlugh-sultan irretrievably lost power in the historic centre of the Siberian yurt where the capital city of Chimgi-Tura had already been destroyed by that time. The date of Qutlugh Khan's death is not known. It is possible that after the death of Muhammad Shaybani Khan in 1510, Qutlugh-sultan together with his brother Murtaza-sultan and other relatives moved away from the Siberian yurt to the Northern borders of the Shaybanid state in Central Asia. In any event, we can assume that at the end of the first decade of the 16th century The Khanate of Tyumen disappeared from the pages of history and its place was taken by a new state formation—the Iskar Principality of Taibugids—usually referred to in Russian historical sources as 'the Siberian kingdom'.

§ 8. The Emergence of the Astrakhan Khanate

Ilya Zaitsev

The Astrakhan khanate was one of the states that appeared after the collapse of the Jochi Ulus, with its capital in Hajji Tarkhan (Rus. Astrakhan)¹.

According to the traditional view, Hajji Tarkhan was founded in the 13th century. "This city," as Ibn Battuta wrote, "received its name

from a Turkic hajji, a godly man who settled on this site. The sultan granted this place to him without any taxes (i.e. made him a tarkhan.—I.Z.), and it became a village, and then it grew bigger and turned into a town" [Tiesenhausen, 1884, p. 301; Battuta, 1962, pp. 496–497]. Hajji Tarkhan of the Golden Horde was destroyed in the winter of 1395–1396. This city was usually associated with the settlement on Sharen Hill: sections of the vast Golden Horde complex on

¹ For the names of the town, see: [Zaitsev, 2011, pp. 607–632].

the right bank of the Volga, a little higher than modern Astrakhan (at present it is almost completely washed away or destroyed due to current construction projects). Shortly after the city was captured by Timur, it was abandoned, but in the 15th century it already existed as a relatively small but important trading town.

The bulk of its population was formed on the basis of Turkic tribes (the Qipchaq group). In ethnic and linguistic terms the population was quite uneven, albeit small (by the middle of the 15th c. there were around 10 inhabitants in Astrakhan, or perhaps a little more). Along with Turkic-speaking inhabitants, it is possible that Persians, Armenians, and Russians lived there during different periods of its history. The ethnic basis of the later Astrakhan Tatars was formed by descendants of the old Turkic population and the Nogais (and later by the influx of the Turkic population from the Middle Volga Region)¹.

In the first half of the 15th century, the city repeatedly passed from one Chinggisid khan to another, as numerous offspring of Chinggisid khans were aspiring to rule in the Ulus of Jochi. The founder of the new Astrakhan on the site of the city destroyed by Timur was Temür Qutluğ (the son of Temür-Malik, whose father was Urus) who controlled this area after Timur left in 1396. Nogai mirzas in the 16th century were considered Astrakhan as "the yurt of tsar Temir Qutlu". The city's relationship with Temür Qutluğ (descendants of Tuqay (Tuqay) Timur) is emphasized not only in the later writings of the Tatar historians, but also in the works of Central Asian authors [Trepavlov, 2009, p. 373]. Temür Qutluğ's heir Shadibek, under whom the unification of all former uluses of the Jochi house occurred for the last time in the history of the Golden Horde, minted coins in Astrakhan since 805 AH (1402/1403), and they already contain the name "Hajji Tarkhan al-Jadid", i.e. "New". Throughout the next few years, the city is passed from hand to hand (Tokhtamysh's son Jalal ad-Din mints coins there along with Pulad, the son of Shadibek; the latter's uncle Timur khan; another son of Tokhtamysh Kebek; Cekre; Dervish; Küchük Muhammad; Ulugh Muham-

mad; Devlet Berdi (the son of Tash Timur and the uncle of Hacı Giray) and others [Zaitsev, 2006].

The Astrakhan khanate was formed on the basis of the domain of emir Hajji Cherkes, who owned the town in the second half of the 1360–1370s.

There is no consensus among historians on when the khanate was formed; the date of creation of the independent state was attributed to either 1459–1460, 1465 or 1466. It is more likely that in the 1450–70s the city represented one of the centres of the Great Horde, i.e. was part of the "Namagan yurt" (the dominion of Namagan, where it is the second name or cognomen of khan Timur, the son of Temür Qutluğ, as well as his grandfather Temür Malik). We can only speak of an independent state starting from 1502 (destruction of the Great Horde by Crimean khan Mengli Giray). In the political sense, Astrakhan becomes the heir of the Great Horde. It is no coincidence that the diplomatic documentation (ambassadorial books) that recorded the relations between Moscow and the newly formed state appear only towards the beginning of the 16th century. It is obvious that before grand principal Vasily Ivanovich ascended to the throne there existed only "Horde" notebooks (books in which the development of relations with the Great Horde was recorded). Thus, on June 11, 1508, Moscow released Nogai mirza's ambassador Dzanmammad, and "the grand prince released that... person... together with Aztorokan ambassadors" ("Aztorokan" meaning "Astrakhan"). If they were set free at the beginning of June from Moscow, then that means they arrived there at the end of spring. This is the first Astrakhan embassy in Moscow documented by sources. It is interesting that the idea of a special pass

Astrakhan Khanate.
Map by I. Izmaylov

¹ It is no accident that a 'Kazan quarter' existed in Astrakhan up to the 19th century [Zaitsev, 2009].

for ambassadors allowing them to move freely throughout Russian cities and Kazan was documented in the Horde notebooks" [Ambassadorial book, 1984, p. 76]. This may indicate indirectly that "the Astrakhan notebooks" did not exist at that time yet. On the other hand, the archive of the Ambassadors' Bureau contained "Books of Astrakhan from summer 7016 till the summer 7025 under grand prince Vasily Ivanovich of All-Ruthenia, on the stay of tsar Obdyl-Kerim in Astrakhan" [Inventories, 1960, p. 106], i.e. they were kept starting 1508. It is therefore quite possible that the special books reflecting the development of Moscow-Astrakhan relations appeared in that very same year (possibly, after June).

It was precisely at the beginning of the 16th century when Moscow started treating Astrakhan as an independent state. Two volumes of the Sofia collection of the Russian National Library still contain an entry that begins with the words "Names of the Tatar lands...", which is actually a list of different Muslim countries. "The Tale of Temir-Aksak" (from the beginning of the 15th century) served as the source for that entry, since this tale includes the list of lands conquered by Timur. The copy of "The Tale..." was composed taking into account the political realia of the beginning of the 16th century when the entry "Names..." was being created. The copy was supplemented by a number of names of Tatar lands that the source did not contain. The list of these names, along with the Great Horde, the Crimea, Azov, Kazan, the Kalmyks, the Nogais, Sarai, "the Shibans" (Siberia) was supplemented by "Vastorokan" [Kazakova, 1979, pp. 253–254], i.e. Astrakhan.

Finally, another piece of evidence proving that the khanate was formed at the beginning of the 16th century and not earlier is represent-

ed by a Wills charter of Ivan III. Ivan died on October 27, 1505, leaving a will in which he included the payment of a "vykhod" (or tribute) amounting to 1,000 rubles to Astrakhan, along with the Crimea, Kasimov, and Kazan [Spiritual, 1950, p. 362]. This clerical letter from Ivan III is dated no later than 16 June 1504. This supports the fact that Vasily Ivanovich "finished with Yury Ivanovich"; the "vykhod" and other payments to Astrakhan are also mentioned [ibid, pp. 365, 367, 369]. As shown by S. Kashtanov, the will was drafted at the beginning of November 1503 (before prince Ivan Borisovich Ruzsky died), and the final version was drafted after the death of the latter, which came on 28 November [Kashtanov, 1967, p. 200]. There is no doubt that at that time Hajji Tarkhan was an independent yurt and, as the Horde's successor state, had a right to its portion of the tribute. Yet, it is difficult to say how large that portion was. A typical funeral feast at the beginning of the century might have cost less (for example, 500 rubles).

The borders of the Khanate to the North spread approximately to the area of present-day Volgograd, although at some point the Astrakhan lands might have been even higher, near Uvek (within the territory of present-day Saratov). To the South, the natural border was the Caspian sea (probably the sea coast up to the Kuma River). In the West, the frontier could touch the upper reaches of the Don (it is possible that for a while Crimean Yurt was bordered by the Mius River. It is more likely that on the right bank of the Volga Astrakhan ownership was confined to a narrow coastal strip of the river. The Eastern (Nogai) border of Astrakhan lands in the Buzan River estuary [Zaitsev, 2006, pp. 243–248; Zaitsev, 2009, pp. 171–178].

Section II

The Political Development of the Tatar States in the 15–18th Centuries

CHAPTER 1

The Great Horde

Vadim Trepavlov

In historiography, the name 'Great Horde' is attributed to a part of the 15th c. Ulus of Jochi, located in the south of Eastern Europe. It was actually the southern area within the right wing of the Golden Horde, remaining under the control of the 'central' (Sarai) government after the newly formed khanates had broken away. Some books tell us that the term 'Great Horde' was first used in the Russian sources in a story about Mahmud Khan's raid on Ryazan in 1460. In fact, there are earlier references in Nikon's chronicle. In 1438: 'In autumn, there came Khan Ulugh Muhammad of the Great Horde to the city of Beliov and took it, escaping from his brother Küchük Muhammad, Khan of the Great Horde'; in 1440: 'That autumn, Khan Muhammad of the Great Horde killed his Grand Prince Mansup'; in 1442/43: 'In the summer of 6950, the Tatars of the Great Horde came to the Ryazan borderland, committed much evil and returned with captives' [Complete Collection of Russian Chronicles, 12, 2000, pp. 24, 30, 42].

It is hard to determine the exact date when the Great Horde originated. We can refer it to the event most convenient for research—the accession of Küchük Muhammad in the steppes of Eastern Europe in 1438, the dynastic cycle of whose reign along with his descendants made up the history of the Great Horde in 1438–1502.

The Russian expression 'Great Horde' is undoubtedly a loan-translation of the Turkic '*Ulugh Ordu*', which, according to M. Usmanov, was 'the original Tatar name of the Golden Horde', the Ulus of Jochi [Usmanov, 1979, p. 193]. In Polish-Lithuanian sources, the 'Great Horde' was always called the Trans-Volga Horde.

The Turkic names used both in the Horde and in the neighbouring Turkic dominions were phrases that included the term *takht*

(throne) and repeatedly occurred in the chronicles and diplomatic correspondence: *Takht Eli*, *Takht Memleketi*, *Takht Vilayeti*. All of them are translated roughly as the 'Throne domain', the 'Throne region', or the 'Capital Region'.

Land and people. The borders of the Great Horde were seldom outlined in historiography, because this state was not a subject of special study. D. Iskhakov is the author of the to date most detailed description of the 'Throne domain' location: between the Volga and the Dnieper, and from the North Caucasus to the borders of Rus and the Kazan Khanate, with the landmark near the of rivers Sura, Moksha, Tsna, and upper Don; east of the Dnieper, the Tatars roamed the rivers Samara, Ovechiya Voda (Sheep Water), Kobylia Voda (Horse Water); in the North Caucasus, the border was 'under the Circassians'—in the Pyatigoriye area along the Kuma River; The Great Horde owned land along the Don (Azov area), Khopyor and Medveditsa; the eastern boundary was probably located to the east of the Volga, maybe along the Volga arm, Buzan, but it is possible that prior to Nogais' movement to the Volga, the Great Horde had controlled vaster areas in the east [Iskhakov, 2009, pp. 42, 43].

The statement concerning the eastern dominions of the Horde seems wholly reasonable. If we rely on our main sources on this topic (the Muscovy and the Lithuanian sources), it seems that all the events associated with the Great Horde in the mid-to-late 15th century took place to the west of the Volga. However, it was no accident that in the Polish-Lithuanian texts this yurt was persistently referred to as the 'Trans-Volga Horde', and there was certainly good reason for such a reference.

In fact, sometimes we come across mentions of the trans-Volga lands. In 1480, a mandate to the Moscow ambassador in Bakhch-

ysaray instructed him to persuade the Crimean Khan Mengli Giray to attack the Great Horde, if Khan Ahmed is 'on this side of the Volga and goes to Rus'; 'if Khan Ahmad is beyond the Volga, do not mention it' [Collection of the Russian Historical Society, 1884, pp. 19, 20]. The same mandate dated 1486 retold the speech of the Crimean ambassador in Moscow, stating that Khan asked Ivan the Great to send his army to fight the Horde if 'Khans Murtosa and Sedehmat are on this side of the Volga' [Ibid., p. 46]. This means there was a chance that these co-ruling khans, successors to Ahmed, could remain on the left bank of the Volga. That probability was also stated in the instructions to the next ambassador from Moscow (dated 1487): 'If Khans Murtosa and Sedehmat cross the Volga, but not attack the Grand Prince...' etc. [Ibid., p. 66].

In 1509, Mengli Giray reported to the Rada members of the Grand Duchy of Lithuania that 'for long, the children of Timir Qutlu¹ have been living beyond the Volga, near Yaik' [Lietuvos, 1995, s. 60]. Three years later, he wrote to King Sigismund I, refuting claims of the overthrown 'children of Ahmat' to the Black Sea steppes: 'Shigahmat's fathers and children were roaming beyond the Volga, but never on this side' [Russian State Archive of Ancient Acts, f. 389, inv. 1, file 7, sheet 188], and this despite the fact that practically all known history of the Great Horde took place on 'this side' of the Volga.

The location of the Khan's headquarters in the east is evidenced by a reference to the place of writing the letter to the Turkish Sultan Mahmud Khan in 1466: 'The Great Horde was stationed on the shores of Azugly Uzen', which is explained by researchers as being the rivers Greater and Lesser Uzen in the northern part of the Volga and Ural interfluvium, on the territory of the present-day Saratov Region of Russia and the Ural Region of Kazakhstan [Kurat, 1940, s. 170; Sultanov, 1978, p. 242].

The majority of the Great Horde warriors were forced to move to the right bank of the Volga because of a conflict with the rising

tribes of the Mangit yurt, located in the Yaik and Emba interfluvium, who would later form the Nogai Horde.

The Horde warriors were mainly engaged in tending herds and sowing crops in the steppes of Ciscaucasia, the Azov Sea and the Northern Black Sea regions. Ambrogio Contarini puts it explicitly that the principal khan 'now (1476—V.T.) rules over the Tatars who live in the steppes of Circassia and around Tana. In summer...they go to the Russian borders in search of shade and grass' [Barbaro and Contarini, 1971, p. 220]. As for the last two decades of the 15th century, different sources chronicle the Horde moving 'between the Don and the Crimea', 'between the Don and the Dnieper', 'on this (here—the eastern—V.T.) side of the Dnieper', 'to Oryol and Samara and Ovechiya Voda', 'to Oryol and Samara' [Collection of the Russian Historical Society, 1884, pp. 67, 88, 113, 140, 301; Lietuvos, 2004, s. 90]. In early 1481, Nogais and Siberians defeated the 'Ahmat Horde' 'between the Don and the Volga, on the Lesser Donets, near the Azov' [The Chronicle, 1819, p. 188; Complete Collection of Russian Chronicles, 37, 1982, p. 95].

The political situation in late 15th century was evolving in such a way that the rapidly weakening Horde tried to stay away from its most dangerous opponents—the Nogais, Circassians, and Crimeans. It is no coincidence that the Polish documents dated early in the next century contain synonyms for 'the Trans-Volga Tatars'—Tatarzy Zadońsky and Transtannaitani [Materiały, 1966, see Index]. Up to a certain time, the area between the Don and the Volga (including the Ciscaucasian steppes) acted as a relatively safe haven. However, in 1497 Khan Sheikh Ahmed announced his intention to 'cross the Don with all the Horde', so that to be closer to the allied Lithuanians [Lietuvos, 2007, s. 84]. Therefore, 'all the Horde' was then based on the east side of the Don, perceiving it as a border line.

However, when stationed in between the Don and the Dnieper, the Horde found itself dangerously close to another one of its worst enemies, the Crimea (in 1500, the Ottoman governor of Kaffa refused permission for the Great Horde men to move beyond the Dnieper, because it was 'the land and water of a free man,

¹ Descendants of the Golden Horde Khan Temür Qutluğ (1391–1399) were the rulers of the Great Horde and later of the Astrakhan Khanate.

Khan Mengli Giray' [Collection of the Russian Historical Society, 1884, p. 321]). Locked by bitter enemies and unreliable allies, 'the Throne domain' finally turned into a group of uluses wandering around a relatively small space on the banks of the Don.

In their attempts to determine the population of the Great Horde, historians are faced with the usual challenges that arise in the study of the demographics of medieval nomads. The sources either give absurdly overestimated figures, or state only the number of the armed forces. In the latter case, the researchers usually calculate the total number of residents of a nomadic tenure by approximately correlating the number of troops and civilians as 1:4. It is believed that, during a war, a nomadic society furnishes about a quarter of its people as the militia (guard); half of the people are women, one fifth are boys aged under 15–16 and senile old men, and 5% are those staying to tend to the livestock.

Let us look at the specific numbers, which may be found in the sources. In 1438, the Venetian envoy Giosafat Barbaro watched from the walls of Tana (Azak~Azov) the exciting and frightening picture of the Kūchūk Muhammed's people migrating from the east. For six days, Tatars with their families and caravans of pack camels, flocks and herds were coming together in the lower reaches of the Don, eventually occupying a plain 120 miles across. It was impossible to count the steppe nomads, but Barbaro writes, 'I am confident and stick to the opinion that there were three hundred thousand souls in the entire Horde when they gathered together' [Barbaro and Contarini, 1971, p. 146]. K. Bazilevich had good reason to doubt the accuracy of the given number (300,000 people); M. Safargaliev admitted that if Kūchūk Muhammed had actually had so many people at his command, the majority soon left to join the deposed Ulugh Mohammad to the Middle Volga region, while another part left together with Mahmoud b. Kūchūk Mohammad to Hajji Tarkhan [Safargaliev, 1996, p. 515; Bazilevich 2001, p. 51].

Stories by Eastern chroniclers contain some data about the army of a successor to Kūchūk Mohammad, his son Ahmed, describing its involvement in the defeat of the nomadic Uz-

bek Khanate after the death of Abu al-Khayr Khan. During this war of the 1460–1470s, the grandson of Abu al-Khayr, Muhammed Shaybani, intended to attack the army of Ahmed, consisting, according to different sources, of 100 to 150 thousand horsemen; Molla Shadi in his chronicle *Fatah Namah* refers to a kind of 'calculus of this army' [Shaybaniad 1849, p. LVI; Materials, 1969, pp. 20, 65, 101, 363]. Around the same time, in 1472, Ahmed himself, through his ambassador in Venice (while the republic tried to draw him into a war with the Turks), claimed to have a 200,000-strong army under his command [Zaitsev, 2004a, p. 89].

If we take for granted the data given by eastern sources (about an army of 100–150 thousand men), it appears that in the early 1470s, —that is, at the height of his power, the Great Horde had about 400–600 thousand people. Generally speaking, we do not find such a number incredible. After all, the right wing of the Ulus of Jochi had been a populous and rich khanate during the previous century and a half. It was the cities that were primarily affected by the internecine conflicts and external invasions (like Temür), while nomads, we believe, had no fatal losses of people.

Even in the twilight of the Great Horde, chronicles and diplomatic correspondence mention a significant number of Tatars. Despite the famine and extreme poverty, the ambassador of Ivan III reported to Moscow from the Crimea in 1498, 'They say, the Tatars in the Great Horde are many' [Collection of the Russian Historical Society, 1884, p. 255]. According to Maciej Miechowski, in the early winter of 1500, the army of Khan Sheikh Ahmed accounted for 60,000 men and 100,000 women and children [Miechowski, 1936, p. 65]. A year later, Sheikh Ahmed brought his people to the Seversk land, to the Lithuanian-Muscovite frontier, 'and stationed his troops near Novgorod Seversky and other cities, and the whole area almost as far as Bryansk was occupied with his countless men' [Chronicle, 1966, p. 115]. Maciej Strykowski adds that Sheikh Ahmed, planning to attack Moscow, called on the Lithuanians' support, telling them that he had 100 thousand horsemen under his command [Kronika, 1846, s. 313].

But it was already the period of collapse and agony of the Horde. People left their unsuccessful rulers for neighbouring yurts. Sayyid Mahmud, brother and co-ruler of Sheikh Ahmed, led his people away to Hajji Tarkhan. As a result, on the eve of the fatal attack by the Crimeans, the Tatars ended up with 'Khan Sheikh Ahmed and sultans and princes, altogether twenty thousand horsemen and foot soldiers' [Collection of the Russian Historical Society, 1884, p. 367].

Statehood. The administrative structure of the Great Horde was mainly derived from the management system of the unified Ulus of Jochi and repeated it in many ways. However, the historical circumstances of the 15th century led to a simplification and curtailing of the once extensive government mechanism. The historiography marks a regression of statehood after the collapse of the Golden Horde in the eastern yurts—the Uzbek Khanate of Abu al-Khayr and the Nogai Horde [Trepavlov, 2001, pp. 548–558]. It seems possible to apply the conclusion of the 'gradual extinction of the Golden Horde (Kipchak) statehood' to the Great Horde.

Just as in Abu al-Khayr's domain, the inner life of Takht Eli was governed by the administration of the Khan's headquarters, which was typical for any nomadic structure; the agricultural area (the Syr Darya coast for the nomadic Uzbeks, the Dnieper region and Pyatigorye for the Great Horde Tatars) was too small and weak to create an economic base for a nomadic empire. In addition, these areas became the scene of frequent conflicts between Uzbeks and the Temürids, Tatars and the Circassians.

The main difference between the two khanates from the Golden Horde was that their rulers lacked effective means of coercion for the rebels. Begs, dissatisfied with official policy, could freely take away their uluses to other lands or isolate themselves from the Khan, without even moving away. The only way for the Khan to attract the Elis and their leaders were frequent and preferably victorious wars with neighbours. The Golden Horde padishahs living in a stable government environment could not afford such military activity and did not really need it.

After losing almost all agricultural aid to the Khanate's economy and the levers of state

power, Küchük Muhammad and his successors found themselves in charge of a formation, which can hardly be considered a full-fledged state. Nevertheless, a rather complex hierarchy of Elis and their leaders, the supratribal territorial division, remnants of the Golden Horde urban civilization (Islam, the old cultural urbanized area in the Lower Volga) prevent us from seeing the Great Horde and such a relatively primitive social structure as a composite chiefdom. Perhaps, by analogy with the khanate of nomadic Uzbeks, it can be defined as an early embryonic state, a transitional stage between a composite chiefdom and a typical early state¹.

The state was led by a monarch bearing the title of Khan. At the turn of the century, another title emerged in the Horde—*qalga*, a declared heir to the throne. Hajji Ahmad (Hajjike, Kojak, Hozyak), Khan Sheikh Ahmad's younger brother, was announced as *qalga*.

In the hierarchy of power, *qalga* was followed by *beklyaribek* (*Ulugh beg*). As stated above, this position in the Great Horde was monopolized by the Mangits from the family of the Golden Horde *beklyaribek* Edigu. During the rule of Küchük Muhammad, it was occupied at different times by Edigu's sons Mansur, Nowruz and Ghazi, during the rule of Ahmed—by Temur b. Mansur, during the rule of Ahmed's successors—by Temur's son Tawakkul, Mansur's grandsons Jan Quvvat and Hajjike b. Din Sufi. Khan, *qalga* and *beklyaribek* made up the triad of supreme rulers of the yurt.

There is direct evidence that the Great Horde had four Karachi begs. In literature, these four are usually interpreted as a mandatory advisory body to the Khan, consisting of the leaders of major Tatar clans. A letter by Khan Sheikh Ahmad sent in the summer of 1502 to the three Glinski princes living in Lithuania says: 'Kiyat princes, Mamai's true children², you are there beside my brother³, and here beside me, in my

¹ According to the early state typology developed by H. Claessen and P. Skalnik.

² This convincing evidence of the veracity of the Glinskys' kinship to beylerbey Mamai refutes the doubts of those historians who view their genealogy as an invented genealogical legend.

³ That is, in Lithuania, under the Grand Duke Alexander, son of Casimir.

kingdom, I have Ulan princes to the right and to the left, **four Karachis** greater than the Kiyats, servants to the princes and your men, but I have no greater or better ones' [Lietuvos, 1994, s. 180]¹. Khan is clear about the four Karachis who are 'greater' than Kiyats, although the latter are his 'greater and better' servants². Thus, this Eli had lost its dominant position, as already mentioned, giving way to another.

The composition of the Great Horde ruling elite is often designated in the sources by an expression 'uhlan princes', —that is, oglans and begs. Oglans at that time were members of the Jochi branch, not belonging to the family of the ruling Khan (male members of that family were titled sultans). The meeting of oglans and begs addressed the most important issues of state. There is evidence in diplomatic letters that Khan made a decision after holding a discussion ('rada') with his noble compatriots: '...we have summoned all the uhlans and princes and held a rada', '...we and the uhlans and princes, having discussed that matter, decided to do it', '...our uhlans and princes told our father...', etc. [Lietuvos, 1994, s. 125, 138; Lietuvos, 2007, s. 84, 88].

Data about public officials in the Great Horde are scanty. Khan Sheikh Ahmad sent to the Crimea as ambassador 'Molozoda, a great molna, son of Ahmad', who wrote charters on Khan's behalf in his own hand [Collection of the Russian Historical Society, 1884, p. 354]. Apparently, this 'molna' (*mawlana*, meaning a learned theologian) also acted as the chief superintendent of the Khan's mobile camp (*ordobazar*, Horde's bazaar). The list of Lithuanian awards to the attendants of Sheikh Ahmad provided for payments to 'Abdulla, marshal of Khan Sheikh Ahmad' [Lietuvos, 1995,

s. 430]³. The 'Description of the Trans-Volga Tatars Freed on Bail', compiled in the Grand Duchy of Lithuania in 1506, mentions Khan's *komorniki* [AGAD, f Metrika Litewska, sygn. 191d, l.18]. This word usually meant homeless poor peasants, but was also the title of a junior judicial officer.

Such a compulsory element of the Horde bureaucracy as *daruga* (governor of a city or region, typically with a sedentary population) is only mentioned once. In 1470, Ahmad Khan was being set up against Ivan III during the negotiations with the Poles by 'Prince Temir, Ryazan daruga etc.' [Complete Collection of Russian Chronicles, 18, 2007, p. 224]. Apparently, that officer was in charge of the affairs related to the Principality of Ryazan, in the same way as a Moscow daruga was attached to the court of Ulugh Muhammad (see: [Complete Collection of Russian Chronicles, 12, 2000, p. 15]).

The Muslims of the Golden Horde (presumably, in particular the nobles and nomads) were united both by the very fact of the conversion to Islam and through a special institution of *sayyids*. It is no accident that, in a number of post-Golden Horde khanates, sayyids (leaders of the local Muslim clergy) traced their roots to common ancestors who had lived in the era of the Jochi Ulus [Iskhakov, 1995, pp. 105–107; Iskhakov, 1997a; Iskhakov, Izmaylov, 2007, pp. 205, 206].

However, if we look at the events in the Golden Horde during and after its collapse, religious unity is out of the question. Islam never played a significant role in politics, remaining at the level of official ideologemes, and did not prevent internecine conflicts. However, the prominent role of clerics in the internal life and foreign policy of Tatar yurts is obvious. We mentioned above the mawlana being in charge of the ordobazar. The sources on the Great Horde documented sayyids and hadjis as heads of ambassadorial missions to neighbouring countries [Lietuvos, 1994, s. 138, 178, 179; Lietuvos, 2007, s. 88]. As stated in a letter by Khan Sheikh Ahmad, among the Horde men taken prisoners in Moscow at different times

¹ We have Sectionally changed the punctuation of this passage as our interpretation of it, apparently, slightly differs from the publisher's version. We have removed the semicolon after the words 'in my tsardom', the full stop after 'and on the left', and the commas after 'and on the right' and 'four princes'; a comma has been added after the words 'Ulan princes'.

² Such flattery in relation to the Kiyats, fellow tribesmen of the Glinskys, is explained by the fact that in the quoted message, Sheikh Ahmad requests the three brothers to mediate in his contacts with the Grand Duke Alexander.

³ The marshal (Marszałek) in the Polish-Lithuanian state was a royal court official performing the functions of the master of ceremonies and judicial duties.

there were 'a sayyid, and priests of the Horde' [Lietuvos, 1994, s. 181].

Among such figures, sayyid Hajji Ahmad was particularly distinguished. He enjoyed the same honour in the Great Horde and in Crimea, but probably resided in Takht Eli. After the state had been destroyed by the Crimeans in 1502, Hajji Ahmad, accompanied by many Tatar refugees, ended up on Lithuanian land. According to Mengli Giray, 'that sayyid of ours was honoured by me and by Sheikh Ahmad', and Khan requested to let him go to the Crimean yurt. Son of Mengli Giray described Hajji Ahmad as 'a clergyman descending from our grandfathers and fathers'. The Girays requested to release the sayyid from Lithuania not only because of the reverence for his authority and wisdom, but also being annoyed by the protection extended by Hajji Ahmad to the Horde emigrants, including those close to Sheikh Ahmad [Collection of the Russian Historical Society, 1895, p. 511; Lietuvos, 1995, s. 73].

The Great Horde as an embryonic early state apparently had no clear administrative division, which was typical for its great predecessor, the Ulus of Jochi of the 13–14th centuries. However, the typically nomadic system of two wings was evidently present in this Khanate. Moreover, amid the decline of the Golden Horde civilization, when the steppe society was going back to the previous stage of development, to its 'matrix' forms of existence, the two-wing division of the people and camps was natural for the nomadic Tatars. However, in this case again, we lack information about the wing system composition and have no idea about the geographical location of the right (usually western) and the left (eastern) wing. We can only guess that initially the Volga acted as the boundary between the wings, but the subsequent migrations of a large number of people to its right bank changed this.

Sheikh Ahmad wrote about his begs: 'the Ulan princes are both to the right and to the left' [Lietuvos, 1994, s. 1180], meaning that oglans and begs of both the right and the left wings were in the Horde. Furthermore, it is known that the Great Horde guard, and, therefore, the population, was divided into two wings. In 1484, Khan Murtaza promised to King Casimir IV that he would try to prevent damage to the

king's possessions 'from the right hand or from the left hand, or from those who stand beside me, from my brothers or my children...' [Lietuvos Metrika, 1910, col. 348–349]. The 'right hand' and the 'left hand' (the Turkic designation of wings—*on kol* and *sol kol*), which we come across in diachronous yarliqs and other sources, were an apanage to an independent nomadic state, which the Great Horde certainly was, despite the immaturity of its statehood.

The Horde's nomadic population united into ulus communities. We do not know for sure, but we can guess that this 'lower' Tatar society led a life of its own, struggling for survival amid the continuous economic turmoil and enemy attacks. Takht Eli was far from being a monolithic social organism. Occasionally, the medieval texts bring bits and pieces of the conflicts between the elite and the bulk of ordinary people (however, led by tribal begs).

By analogy with other nomadic states, we can assume that there were areas in the Khanate assigned to certain Elis. It is reliably known only about Mangits. The Mangit yurt was located on the territory of the Great Horde. In the times of Ahmad Khan,—that is, in the 1460–1470s, it was governed by beklyaribek Temur, with his permanent camp stationed there. Mengli Giray attacked the 'Prince Temur's ulus' in 1485 [Complete Collection of Russian Chronicles, 8, 1859, p. 216]. The Mangits roamed the west of the state, the Dnieper steppes (see: [Collection of the Russian Historical Society, 1884, p. 119]), making up the right wing of the state, in full accordance with the rank of beklyaribek. Temur died in the mid-1480s, and his rank and yurt were inherited by his younger relatives. One of them, Hajjike (Azika) became a beklyaribek under Khan Sheikh Ahmed; in 1491, Khan Mengli Giray referred to the events 'in the Horde, in the Mangit ulus of Azika' [Ibid., p. 124].

Economy. The nomadic lifestyle of the Great Horde Tatars was described in 1476 by Ambrogio Contarini: they 'wander in search of fresh grass and water, and never live a settled life. They have no other food, except milk and meat' [Barbaro and Contarini, 1971, p. 223]. Like in any nomadic society, the ulus communities were moving across the steppe not in a chaotic and spontaneous way, but in accordance

with the established routes between the seasonal pastures. We have some data on summer camps and winter camps only in the territory west of the Volga. In 1500, Mengli Giray reported to Moscow about the Great Horde khans: '...our foes, Ahmad's children, spend summer between the Don and the Dnieper' [Collection of the Russian Historical Society, 1884, p. 301]. Three years earlier, the mandate to Ivan III's ambassador forbade returning from the Crimea 'in spring or in summer', because there was a danger of meeting the Horde 'on this side of the Don'; the ambassador had to wait until it 'goes... across the Don and starts roaming to the Volga' [Ibid., p. 67]. In January 1481, the Nogais and Siberians defeated Ahmed Khan's uluses 'between the Don and the Volga, on the Lesser Donets, near Azov' [Complete Collection of Russian Chronicles, 37, 1982, p. 95].

These reports suggest that the summer pastures were located in the Don area, while the winter ones were in the Volga-Don interfluvium, making up the latitudinal cycle of nomadism. However, this area of Desht-i Qipchak had traditionally (since pre-Mongolian times) been characterized by a meridional cycle with summer camps in the north and winter camps in the south. This fact was related to the state of grass in different seasons, the possibility to feed cattle in winter, etc. It might be that the Volga-Don nomadic cycle also provided for movement of people and cattle not from west to east and back again, but to the north-west, to the Moscow and Lithuanian borders (in summer) and to the south-west, to the lower reaches of the Volga (in winter).

The herd composition was typical for Eurasian nomads. We know it from Giosafat Barbaro's description of the arrival of Küchük Muhammad's people to Tana in 1438: 'First came the herds of horses at sixty, one hundred, two hundred or more in a herd; then came the camels and oxen, followed by small stock'. The Italian diplomat gives flattering epithets to the Tatar cattle, like 'marvellous big bulls', 'tall shaggy double-humped camels', 'huge sheep on tall legs, with long hair and such tails that some weigh up to 12 pounds each', [Barbaro and Contarini, 1971, pp. 142–143, 149].

Many sources give credit to the agriculture in this nomadic society, despite its second-

ary and supportive role in the economy. The most detailed description is also ascribed to this same Giosafat Barbaro. He writes that in the days of the February full moon 'the entire Horde is called up' to prepare for the sowing during the March new moon, stating the exact time and venue of the session. At the fixed time, the Tatars load their carts with seeds, take the ploughing animals, sometimes with their entire families, and go to the area of future cropland, which is, as a rule, a two-day journey from the nomad camps. After the sowing is over, they return home. The khan monitors the growing of crops, personally touring the fields. The harvest is gathered by the same people who performed the sowing. They are joined in the fields by those wishing to buy grain. Barbaro notes that the Tatars cultivated wheat (with yield 1 to 50) and millet (with yield 1 to 100). 'Sometimes they reap a harvest so abundant that they leave it in the steppe' (that is, do not reap?) [Ibid., p. 150].

The author does not name the area used by the Tatars for arable farming. There is evidence to this respect from other sources. Croplands of the Great Horde were situated on the banks of the Dnieper tributaries Oryol (Orel) and Samara, and on the Qom river, in the steppes adjoining the Pyatigorye area (see: [Collection of the Russian Historical Society, 1884, pp. 113, 119, 149]). Any crop failures or disruption of ploughing caused by enemy raids put the Tatars in a very difficult situation, giving rise to social tension and conflicts over migration routes.

In addition to animal husbandry and agriculture, the Tatars produced handicrafts ('In the army, they have artisans like weavers, blacksmiths, gunsmiths and others, and they generally have all the necessary crafts' [Barbaro and Contarini, 1971, p. 147]). Hunting, too, was important for subsistence ('The Tatars are excellent hunters with falcons and have many gyrfalcons. ... they hunt deer and other big game' [Ibid., p. 148]).

Like any nomadic formation, the Great Horde needed trade with its sedentary neighbours. And like most khaganates, khanates and hordes, it marketed the products of livestock farming. The major and most valuable commodity was the Tatar horses. Herds of many

thousands were driven for sale to Muscovy and Persia. Apart from horses, bulls were exported to Poland and Transylvania (from there, bulls were transported to Italy and Germany), and camels to Persia. In order to do business abroad, dozens of merchants joined the Khan's embassies [Complete Collection of Russian Chronicles, 12, 2000, pp. 156, 168; Barbaro and Contarini, 1971, p. 149].

A significant item of income was the slave trade. The captives taken in raids were sold 'overseas' to the Turks [Collection of the Russian Historical Society, 1884, pp. 225, 230], who needed slaves as rowers for the huge rowing fleet. According to B. Florya, at the time when the Eastern European states sought to limit the Horde's interference in their affairs, the disgruntled Tatars began to attack their neighbours, primarily the Muscovite state and the Grand Duchy of Lithuania. In the mid-15th century, the Great Horde started its regular raids with the taking of captives. 'It was in these years that the slave trade was becoming a major source of the Horde's subsistence' [Florya, 2001a, p. 191].

Until the end of Khan Ahmed's rule, Muscovy maintained tributary relations with the Horde. It is unclear how noticeable the flow of funds in the form of tribute (toll) was in the Horde's economy¹. In any case, its role came to nothing, when Ivan III stopped paying [Gorsky, 2000, pp. 160–163].

The belief in a completely nomadic nature of the statehood and economy of the Great Horde sometimes leads historians to a complete rejection of urban life in the Horde (see, for instance: [Fyodorov-Davydov, 1973, p. 166; Safargaliev, 1996, p. 17]). As an additional argument, they present the words of Tatar interlocutor of Giosafat Barbaro regarding the fortifications of Tana: 'Those who are afraid, build towers' [Barbaro and Contarini, 1971, p. 148]. A question arises in this regard, what the connection was between the Great Horde and the cities of Sarai and Hajji Tarkhan, the former Golden Horde metropolises on the Lower Volga? They still existed in the 15th century,

and apparently served as centres of active commerce. In any event, the Viatichi who captured Sarai in 1471, 'took many goods and many captives' [Full Collection of Russian Chronicles, 12, 2000, p. 141], so the city was populous and enjoyed lively trade.

The known history of the Great Horde prevents us from regarding any of the cities as its capital or the Khan's permanent residence. Khans preferred to live in their mobile camps, as the sources describe. We believe that Sarai and Hajji Tarkhan, on the assumption of their geographical position, still belonged to the Great Horde, but were not its capital cities. The Great Horde was destroyed in 1502, when the Crimeans took over the nomadic camp and ordobazar of Khan Sheikh Ahmed. But Sarai was left unscathed, meaning that the city no longer had any symbolic significance for the sovereignty of state.

Political history. Küchük Muhammad, son of Temur Khan b. Temur Qutlugh (1410–1412), began his path to power in the eastern steppes. According to Qirimi, after the death of the Golden Horde beklyaribek Edigu (1421), his son Mansur escaped to the 'Russian yurt'. Then he returned to the Volga, becoming a beg (beklyaribek) under Khan Ghiyath ad-Din b. Shadi Beg. Two years later the khan died, and Mansur enthroned Küchük Muhammad. However, he soon lost interest in his minor protégé and decided to support the eastern Khan Barak b. Koirichak b. Urus [Qirimi, 1343/1924–1925, pp. 84, 85].

Most likely, Mansur also became beklyaribek during Barak's rule, because they led a joint fight with Ulugh Muhammad, another contender for the throne of the right wing. Ulugh Muhammad wrote to the Sultan of Turkey on 14 March 1428 that in 1426 their army from the eastern steppes was defeated, 'and we put Barak and Mansur to flight' [Sultanov, 1975, pp. 54, 282; Kurat, 1940, pp. 8, 9, 14]. This defeat was followed by a rift between the allies. Qadir Ali Bek writes about Mansur being murdered by Barak [Library, 1854, p. 156] (probably in 1426 or 1427). Edigu's sons Ghazi and Nowruz, who were staying with Barak, immediately fled west to Küchük Muhammad. Soon (around 1428) they returned with his army, defeated and killed Barak, assisted by Mansur's

¹ In the early 15th century, the value of the vykhod (tribute) from the Grand Principality of Vladimir amounted to 5,000 Rubles (see: [Spiritual, 1950, P. 49]).

former subjects [Langles, 1802, p. 395; Qirimi, 1343/1924–1925, pp. 89, 90; Usmanov, 1972, p. 75].

Immediately after these events, Ghazi became the beklyaribek of Kūchūk Muhammad and Nowruz became the beg of the simultaneously ruling Ulugh Muhammad [Shamiloglu, 1986, p. 195]. The latter tandem kept together for about ten years until facing a rift so deep that Nowruz decided to go over to Kūchūk Muhammad (Ghazi was no longer alive by that time). Kūchūk Muhammad immediately made the Mangit nobleman his beklyaribek, and this position of his was described in 1438 by Giosafat Barbaro. Together, they attacked Ulugh Muhammad's camp and overthrew him [Barbaro and Contarini, 1971, pp. 140–142, 150, 151].

Obviously, Kūchūk Muhammad was closely related to the populous and powerful family of Mangits, descendants of Edigu. It is known that Edigu's son Nur ad-Din married his daughter to would-be Khan Temur, father of Kūchūk Muhammad [Natanzi, 1957, p. 99]. It is possible that she was the mother of the latter. I. Izmaylov even suggested that he was brought up in Edigu's family [History of the Tatars, 2009, p. 726].

Oriental chroniclers note that Kūchūk Muhammad was very young when enthroned. When he came to Don in 1438, the Venetian consul of Tana sent Giosafat Barbaro to the Tatar prince with gifts and testimony of obedience. The messenger was brought in front of Kūchūk Muhammad, who sat leaning on the shoulder of his beklyaribek. Barbaro wrote: 'The Tsarevich (young khan) was about 22 years old, Nowruz, about 25' [Barbaro and Contarini, 1971, p. 42].

It appears that Kūchūk Muhammad took up the race for power on emerging from boyhood. We believe that he was encouraged to act when Nowruz, Ulugh Muhammad's beklyaribek, sided with him. In accordance with his status, Nowruz commanded the Horde's army, and he took much of it with him. Barbaro writes with certainty that Nowruz left for 'prince Kizim Ahmet' 'taking along the men, who wanted to follow him' [Ibid., p. 141].

The sources do not mention any reasons for the rift between the beklyaribek and the khan. But the chronicles note that Ulugh Muhammad was displeased with the powerful

nobleman Tegin, beg of Shirin. In 1432, the camp of Ulugh Muhammad was the site of the famous dispute about the rights to the Grand Prince yarliq between Vasily II Vasiliyevich of Moscow and his uncle Yuri Dmitrievich of Zvenigorod. Confident of his mighty influence, Tegin vowed Yuri successful resolution of litigation, but Khan took the side of the Prince of Moscow. Being outraged, 'Tegin of Shirin opposed the king and wanted to depart from him, because at that time Mahmet (Ulugh Muhammad) was attacked by king Kichi Ahmet (Kūchūk Muhammad)' [Complete Collection of Russian Chronicles, 12, 2000, p. 16].

The 14-year-old 'king' presumably set off to Sarai at the instigation of the defectors led by Nowruz. Until then, he had resided somewhere in the east or in Hajji Tarkhan, the yurt of his grandfather Temur Qutlugh. The first battles were drawn. Eventually, the 'Elder' and 'Younger' Muhammads came to an agreement on the division of subordinated territories. Ulugh Muhammad retained the Volga region, while Kūchūk Muhammad received the Crimea [Smirnov, 2005, p. 180]. Obviously, it is more likely (and this is how this situation was interpreted by O. Gayvoronsky) that the Khanate was divided into wings: one khan obtained the right western wing, from the Don to the Danube, and the other khan gained the left eastern wing, from the Don to the Caspian Sea [Gayvoronsky, 2007, pp. 17, 33].

The confrontation was finally resolved in 1438. It might be that the power shift took place without bloodshed. Ulugh Muhammad broke down facing the growing danger from his younger cousin, who was gaining power. Barbaro observed an impressive picture of the mass migration of Kūchūk Muhammad's people to the Don, and he wrote about the outcome of the struggle for the throne: 'Ulugh Muhammad...after Kezim Ahumet (Kūchūk Muhammad) had come to his land, seeing that he cannot fight him, left the horde and fled together with his sons and his other men' [Barbaro and Contarini, 1971, p. 150]. Finally, he managed to settle in Kazan, and thus, the Middle Volga region was no longer part of the Great Horde.

There is no data on the Horde's internal history during Kūchūk Muhammad's rule, except for one chronicle entry dated 1440: 'That

autumn, King Mahmet of the Great Horde killed Mansup, his great prince of the Horde, and many Tatars were then killed in the Horde' [Complete Collection of Russian Chronicles, 12, 2000, p. 30]. This clearly refers to an uprising, headed by the beklyaribek. Mansup is, of course, Mansur b. Edigu. However, since Mansur had been killed by Khan Barak thirteen or fourteen years before, it can be assumed that the chronicler received the news of the execution of Mansur's brother, 'great prince' Nowruz, who had entered into conflict with Küchük Muhammad. Not too long before this, this beg brought his numerous armed men to the young khan and accompanied him in the struggle for power. Perhaps, over time, the absolute power of Nowruz started to press upon the khan, and he decided to get rid of the Mangit nobleman along with the 'many Tatars', who supported the bey.

Generally speaking, in 1430–1440s Deshti Qipchaq saw some stability. In the east of the former Ulus of Jochi, beyond the Yaik River, was the land of powerful Abu al-Khayr, to whom the Mangits generally pledged allegiance. The Lower Volga and the steppes of Ciscaucasia were possessed by Küchük Muhammad. The Horde of Sayid Ahmad was roaming beyond the Don. We see no major conflicts between them, other than that both khans claimed the Crimea and the steppes along the Seversky Donets. In 1434, Vasily II of Moscow, in a treaty with Dmitry Shemyaka, reminded how he 'had sent his ambassadors to the khans Kichim Agnet (Küchük Muhammad) and Sidi Ahmet (Sayyid Ahmad)' [Clerical, 1950, p. 116]. This means that the Muscovites recognised the delicate balance of power in the steppes and the legality of the two neighbouring khans.

Küchük Muhammad died in 1459, leaving the Khanate to his sons, Mahmud and Ahmad, in a state if not prosperous, but quite stable and able to compete with the neighbouring yurts for supremacy in the lands of the former Golden Horde.

The work by Mahmud b. Vali tells us that after the death of Küchük Muhammad, three of his sons were left: 11-year-old Mahmud, who inherited the throne, 8-year-old Ahmad, and 5-year-old Mangyshlak. Khan Abu al-Khayr set off with his army, the brothers were frightened

and took refuge in a fortress. They lived quietly there until Abu al-Khayr lost the war against the Kalmaks. Mahmud got out of his shelter and 'headed towards his hereditary lands'. Later, Abu al-Khayr died and Mahmud became the sovereign Khan [Alekseev, 2006, pp. 84, 85].

This story is broadly consistent with the chronology of events known from other sources. The Uzbek army was defeated by the Oirats ('Kalmaks') in 1457 [Akhmedov, 1965, pp. 65–67], while Abu al-Khayr died in 1468 or 1469. Perhaps, this account reflects some details of the history of the Great Horde at the turn of the 1450–1460s and the story of its relations with the Uzbek Khanate (the more so as we have no data thereabout for an earlier period).

Some undated coins of khans Mahmud and Ahmad have been preserved. The coins were minted in the name of Mahmud in the cities of Ordu Bazaar, Beg Bazaar, Kyrym al-Mansur, Hajji Tarkhan, Ukek and Bolghar; in the name of Ahmad—in Beg Bazaar and in Hajji Tarkhan [Zaitsev, 2006, pp. 39, 40].

In Russian sources, Mahmud is known for a single reason. In 1460, he tried to besiege Ryazan, but ran up against opposition and retreated, suffering heavy losses. Some chronicles transcribe the khan's name as Ahmut (which may be confused with Ahmad), but in the Typographical Chronicle he is called 'tsar (Khan) Mahmud' [Complete Collection of Russian Chronicles, 24, 1921, p. 184]. Mahmud's escort during this campaign included beklyaribek Temur and his brother Din Sufi (Tensufuy) [Complete Collection of Russian Chronicles, 5, 1851, p. 272; Complete Collection of Russian Chronicles, 20, 1910, p. 271; Complete Collection of Russian Chronicles, 23, 1910, p. 156]. Later, Temur would become a close ally of Ahmad Khan, and Din-Sufi would inherit his high rank.

Historians describe the relations between Ahmad and Mahmud as fighting for power (see, e.g.: [Grigoriev, 1987, p. 544; Zaitsev, 2004a, p. 84]). The fatal landmark, after which Mahmud was unable to defend his superiority, had probably been his defeat by the Crimean Khan Hacı Giray. In 1465, the Horde Khan set out to attack the Russian land and made his way towards the Don. He was unexpectedly attacked there by the Crimeans, who 'beat him and took over the Horde'. The campaign plans had to be left be-

hind, the forces of the Great Horde turning to hold off the attack: 'and they started fighting' [Complete Collection of Russian Chronicles, 24, 1921, p. 186]. Mahmud managed to drive away Hacı Giray, but after that dropped out of active politics.

Even suspended from the real government of the state, he seems to have enjoyed the prestige befitting his status. The Moscow mandate to the ambassador in the Crimea dated March 1475 ordered to tell Khan Mengli Giray that, traditionally, Muscovite princes had sent ambassadors to the tsars (khans) of the Horde, that is why 'my lord, grand prince...sends his ambassadors to tsar Ahmat and **his brother Mahmut**, and they are send ambassadors to my lord' [Collection of the Russian Historical Society 1884, p. 10]. The use of titulary is representative: the Russians, sensitive to the nuances of ranks and titles, do not call Mahmud 'tsar', despite his kinship with khan and ambassadorial ties with Moscow.

The same or the next year Mahmud died, because in 1476 Ambrogio Contarini describes Hajji Tarkhan as being under the rule of his son and successor Kasym, who, incidentally, held the title of khan: 'Senior Khan (Ahmad—V.T.) is at war with Kasym Khan, his nephew (and Kasym believed that he should be the senior khan, like his father, who used to rule the Horde, and that is why a major war was between them)' [Barbaro and Contarini, 1971, p. 221]. Here we obviously see a case of coregency, a phenomenon quite common in nomadic history. The status of the junior co-ruler was inherited by the son from the father, while maintaining subordination to the senior co-ruler, Ahmad, despite the dissatisfaction of Kasym.

However, he had to recognise the supremacy of his uncle, after all. In 1480, he was within the Horde's army approaching the Ugra: '...and the whole Horde was with the tsar, including his **nephew tsar Kasym**, and six of his sons, and thousands upon thousands of Tatars with them' [Complete Collection of Russian Chronicles, 27, 1962, p. 282]. In the sources, Kasym is specifically associated with the city of Hajji Tarkhan. It might be that he chose the city as his permanent residence or settled there, obeying Ahmad's order.

Having gained strength, the Great Horde initiated active contacts with neighbouring and distant monarchs¹. After a long break, the khan's envoys appeared in Istanbul. We know of two messages to Sultan Muhammad II (Mehmed Fatih), sent by Mahmud (dated 10 April 1466) and Ahmad (dated May or June 1477). Around 1475–1477, Mehmed Fatih, in his letter, informed Ahmad of the conquest of Kaffa and the Turks' campaign against Moldova. In form, it was a typical *syuyunch* (good news of a victory), but the underlying message held a warning to the Great Horde to stop hostilities with Mengli Giray, who was Ottoman protégé in the Crimea [Sultanov, 1978, p. 244].

The rivalry between the Great Horde and the newly formed Crimean Khanate began as soon as the first of the Girays had established his power. The meaning of this fighting was not only to establish hegemony in the lands of the former Golden Horde, at least of its right wing (the left wing was far too tough for both the Great Horde khans and the Girays: the 'countless Nogais' were on the rise there). The fertile Tauris with its fields, pastures, rich cities and trade ports attracted the Great Horde men, who vegetated by the will of fate in the meager steppes of the Western Desht.

Ahmad acted quite carefully in regard to the Crimea, waiting for the coincidence, when certain forces would be formed inside the Khanate, on which the Great Horde could rely. The opportunity presented itself in the summer of 1466, when the sons of the deceased Hacı Giray started fighting for the throne. Prince Nur Devlet asked Ahmad for a *yarliq* for the Crimean yurt. Obviously, he was trying to give legitimacy to his rule by means of this purely Horde procedure. The flattering request implying the recognition of the Great Horde khan as a supreme sovereign was gladly satisfied by Ahmad without delay. The *yarliq* turned Crimea into his feudatory domain. However, the local noblemen had no wish to obey the ruler of Takht Eli. As a result of many intrigues

¹ Occasional contacts with the Temürid regions are illustrated by Ahmed's marriage to Badke Begum, the sister of the Khorasan ruler, Sultan Husayn Bayqara [Babur-name, 1993, P. 172].

and after the outbreak of an armed struggle in Crimea, Nur Devlet was dethroned. Mengli Giray was proclaimed the khan.

Ten years later, Ahmad took another attempt to incorporate Crimea into his sphere of domination. At that time, the discord among the local begs took a shape so deep that some of them decided to resort to the help of the Great Horde. The leaders of the Shirin Eli, Aminek and Hajjike, happened to be in opposing camps. Hajjike and Abdullah, leader of the Baryn Eli, brought tsarevich Janibek (b. Ahmad?) from the Horde, but they were fought off by the army gathered by Aminek. Having waited until in the summer of 1476 the Crimean army led by Aminek went to Moldova by order of the Ottoman sultan, Janibek, leading a large army, given to him by Ahmad, rushed to the peninsula and started looting. Aminek hastily returned but, facing the preponderance of the enemy's forces, took refuge in the fortress. Janibek became the khan instead of the dethroned Nur Devlet (who had managed to briefly take the throne in that turmoil). In fact, a short-term union of the two khanates took place. In 1486, Murtaza b. Ahmad wrote about those times to Nur Devlet, who lived in Kasymov: Ahmad 'made as if one yurt from your yurt and our yurt' [Collection of the Russian Historical Society, 1884, p. 69].

Nothing is known about the rule of the Great Horde appointee, but his position was very precarious. Janibek asked Ivan III if he could settle in the Moscow lands in case he had to leave Crimea. As soon as in the spring of 1478, Nur Devlet, who had regained power, sent ambassadors to the Polish-Lithuanian Commonwealth.

Relations of the Great Horde with the Polish-Lithuanian state, patronizing the hated Girays, evolved initially as hostile, but later they seemed to form a coalition partnership. The confrontation with Muscovy pushed Ahmad and King Casimir to form a military alliance. In 1470, ambassador Kirei Krivoy came from Krakow to the Horde, proposing a joint attack on Rus. But the king was distracted from forging an anti-Moscow coalition by the conflict with Hungary, and the next round of negotiations with the Great Horde took place in 1479–1480.

Initially, relations of the Great Horde with Muscovy evolved traditionally, based on the two-century tributary relationship (so-called 'yoke') of the Russian lands with the Ulus of Jochi. In the 15th century, visits of the grand princes to the Horde gradually became a thing of the past, and, from the 1440s, contacts between the two countries were maintained through ambassadors. The Muscovy rulers explained regular mutual visits of ambassadors not by the payment of toll or obtaining yarliqs (which was indisputable for the neighbours), but by the long-established practice 'from the fathers, grandfathers and great-grandfathers' or by the geographical proximity of the lands (see: [Collection of the Russian Historical Society, 1884, pp. 4, 10]).

Annals recorded a fairly active exchange of ambassadors in the 1470s. The most illustrative was the visit to Moscow of Ahmad's envoy Bochuki in July 1476 with a demand to Ivan III to appear 'before the tsar in the Horde' [Complete Collection of Russian Chronicles, 8, 1859, p. 183; Complete Collection of Russian Chronicles, 12, 2000, p. 108]. It is not a mere coincidence that the account of this mission immediately follows reference to the war between Ahmad and Mengli Giray. It seems those historians who saw a connection between these events have a point: namely, Ahmad's desire to restore the old-time Golden Horde statehood, to gather under his rule the separated yurts and make the Russian tributaries come to the Horde to pledge obedience and obtain yarliqs [Nazarov, 1983, p. 34; Gorsky, 2000, p. 162].

If it was so indeed, then Ahmad played the wrong card. Muscovy was on the rise and became increasingly tired of the duty to collect the toll for the khan. During the rule of Ivan III, payments of the tribute were stopped. Recent studies show that it was a long and gradual journey for Moscow to be released from its tributary duties. In 1440–1460s, the toll was sent to the Horde with long intervals, and finally ceased to be paid in 1471 [Gorsky, 2000, pp. 153–162]. This explains the relatively frequent visits of Ahmad's ambassadors to Ivan III: the 'tsar' demanded the proper tribute bequeathed by his ancestors.

The flash point of the escalating conflict was the so-called 'Great Stand on the Ugra River' in

1480, which is the most well-known and thoroughly studied episode of the Russian-Horde relations in the 15th century. The autumn and winter of 1480 was spent by Ahmad in a fruitless and impotent standing on the bank of the Ugra River, a tributary of the Oka, against the Moscow army of Ivan III, not daring to attack the Russians and waiting in vain for the allied Polish army. At the year end, Khan led the exhausted and famished Horde army back home to the south and dismissed men to their uluses.

The outcome of the 'Ugra Standoff' was interpreted by the Tatars and the Poles in a significantly different way than the Moscow version. Ahmad's son, Khan Sheikh Ahmad, in a letter to Alexander I Jagiellon, dated 1497, cited as the reason for the Horde army's retreat the perseverance of the khan's retinue recommending against warfare because the Poles had failed to arrive: 'The Khan, our father, being angry with Ivan, got onto a horse, but your father, the King, did not come that year. Our uhlans and princes told our father: Ivan is both your subject and king; the other king did not come that year, and you should go back...So they took my father's reins and returned him. And then our father was taken by God' [Lietuvos, 1994, s. 125].

Maciej Strykowski in his chronicle explains the failure of the campaign as being down to the beklyaribek's greed and intrigues. The 'trans-Volga tsar' stood on the Uhrae river, waiting for news from King Casimir; in the meantime, the Moscow prince sent rich gifts to the 'hetman, tsar's prince Temir'. Temir convinced the tsar to retreat. The khan followed the advice, and 'then Temir the hetman stabbed Khan for the gifts of the Grand Prince' [Kronika, 1846, s. 284].

In all other sources, the death of Ahmad is described quite differently. In January 1481, the Siberian-Nogai troops routed Ahmad's camp, and the khan himself was killed by Nogai murza Yamgurchi b. Waqqas [Ioasaph's Chronicle, 1957, p. 122; Complete Collection of Russian Chronicles, 6, 1853, p. 232; Complete Collection..., 12, 2000, pp. 20, 23; Complete Collection..., 18, 2007, p. 268; Complete Collection..., 19, 2000, p. 39; Complete Collection..., 25, 1949, p. 328; Complete Collection..., 39, 1994, p. 268]. Some chronicles state that Ahmad was killed by Tyumen Khan Ibak, who led

this campaign [Complete Collection of Russian Chronicles, 26, 1959, p. 274; Complete Collection..., 28, 1963, p. 315; Complete Collection..., 33, 1977, p. 124]. According to A. Gorsky, this discrepancy can be explained by the desire of each coalition partner to take all the credit for the khan's murder in the correspondence with Moscow [Gorsky, 2000, pp. 177, 178]. We can find curious details in selected annalistic texts, like: the size of the Siberian-Nogai army (16 thousand), a statement that Ahmad was killed early in the morning, the capture of Ahmad's daughter by Ibak [Chronicle, 1819, p. 188; Complete Collection of Russian Chronicles, 26, 1959, p. 274; Complete Collection of Russian Chronicles, 33, 1977, p. 124].

The Tatars of the Great Horde, being left without a ruler, roamed the steppes under the gaze of hostile neighbours. In his letter to Casimir dated 1482, Mengli Giray informed the king of the presence of 'our big enemies' 'on that side', but noted with satisfaction that 'these people are skinny and hungry'. According to his information, these 'capital uluses' intended to move to the Dnieper tributaries Orel and Samara, and the king had better order the burning of the steppe in that area as a precaution, so that not to let the Horde come close to the borders [Lietuvos, 2004, s. 90]. At that time, the Horde remained without a leader. The surviving ruling elite was in confusion and tried to find support in neighbouring countries. Neither in the spring of 1481, nor a year later, Moscow knew who commanded Takht Eli, and the ambassadors going to Bakhchysaray were told to find out, 'who will be the tsar in that yurt instead of Ahmad', 'which tsar will take Ahmad's place' [Collection of the Russian Historical Society, 1884, pp. 26–28, 31].

Beklyaribek Temur managed to escape unscathed from the Siberian-Nogai raid. Taking Ahmad's children with him, he went to Crimea to Khan Mengli Giray. Temur was undeterred by the fact that Mengli Giray belonged to a hostile camp (the Crimeans sided with Moscow against the Horde and the Polish-Lithuanian state). The Horde refugees found shelter and well-being in the Taurida peninsula. The Crimean khan decided to host the beklyaribek, powerful in the not so distant past, and treated him with due respect. But 'Ahmad's children', tsareviches Murtaza and Sayyid Mahmud, were not

attracted by the lot of honourable dependents in Bakhchysaray. After a while (probably, in two or three years), Sayyid Mahmud together with Temur returned to the Great Horde. Temur occupied his former high position. But Mengli Giray managed to take Murtaza hostage, having seen through the reemigration plans of his 'guests'. In retaliation to the fugitives, a khan's squad headed north 'to drive away what was left of the Horde'. Having gathered the Great Horde men throughout the steppe, the new Khan Sayyid Mahmud with the chief beg decided to go and rescue Murtaza. The first task was to find out whether there were Turkish troops in Crimea. When it became clear there were no Turks, the Great Horde's cavalry advanced upon Mengli Giray. Murtaza was released, and the khan himself secretly fled from his army and urgently called the Ottomans to his aid. The Horde did not wait for the Sultan's soldiers to come and retreated hastily back home [Complete Collection of Russian Chronicles, 8, 1859, p. 216; Complete Collection..., 12, 2000, p. 217; Complete Collection..., 28, 1963, p. 318; Collection of the Russian Historical Society, 1884, p. 53].

Having returned to Desht-i Qipchaq, the Horde finally engaged in the restoration of its statehood. Murtaza and Sayyid Mahmud shared the khan's throne. The texts of Moscow origin first mention the brothers in the charter of Ivan III sent to V. Nozdrevatov, ambassador in Bakhchysaray, in June 1484 [Collection of the Russian Historical Society, 1884, p. 43]. In August of the same year, Murtaza informed King Casimir: 'First, Ahmad Khan was the only tsar, and now we are two tsars together with my brother Sayyid Mahmud...' In another letter, he emphasized his legitimate monarchic rank: '... you should regard me like you regarded Ahmad Khan...' [Lietuvos, 2004, s. 98, 99]. However, both this and his other messages dated 1484 imply conflict relations in the Horde. Murtaza repeatedly said that he had no idea where his brother and co-ruler and chief beg Temur were at the moment [Ibid., s. 98, 100].

Eventually, Murtaza completely broke up with his brothers. His place on the throne was occupied by Sheikh Ahmad; Sayyid Mahmud reserved his position as a co-ruling khan. Murtaza had to demonstratively separate from his relatives ('moved away from them...into the

field', as worded by Casimir) and ask for a residence permit in the Grand Duchy of Lithuania [Ibid., s. 144].

After the death of skilled politician Temur (between 1484 and 1486), who had restrained the tsareviches' ambitions, quarrels broke out in the khans' family, and khans began to replace each other with amazing rapidity. Sometimes, it may be difficult to understand the coregency combinations, because there would be no single sovereign until the end of the Great Horde's history.

At the turn of the 15–16th centuries, the Great Horde began to plunge into turmoil. The collapse of its already primitive statehood was clearly manifested by the increase in the number of simultaneously ruling dynasties. What is more, there is little evidence that they had any territorial disputes. Each khan ruled over the inherited group of ulus people and did not claim absolute domination (which, however, did not prevent violent conflicts).

The main foreign policy challenge for the Great Horde in the last stage of its history was the relationship with the Crimean Khanate. Beklyaribek Temur, whose daughter married Mengli Giray, was leading an autonomous policy towards Bakhchysaray. Mengli Giray thought highly of the Mangit nobleman and, apparently, regarded him and his congeners as a counterbalance to the powerful Shirins and Baryns gathered around the Girays' throne.

In the mid-1480s, the tension in Horde-Crimean relations decreased slightly, but soon the feud was renewed. In September 1490, the Horde's embassy on behalf of the khans Sheikh Ahmad and Sayyid Mahmud, as well as 'grand prince Mangit Azika, in the name of all Karachi and the good men' made peace with Mengli Giray. When the Crimean Khan, believing in the sincerity of the Horde khans' intentions, disbanded the Tatar soldiers 'to arable lands and corn', the joint Horde and Mangit army invaded the peninsula and plundered uluses of one of the noblest Eli, the Baryn Eli. Then the attackers moved to the north to spend the winter at the Dnieper estuary. Ivan III, respecting the partnership with Mengli Giray, rejected Hajjike's proposal of 'brotherhood' with the co-rulers of the Great Horde because of their enmity with Crimea [Collec-

tion of the Russian Historical Society, 1884, pp. 108, 160, 161].

In a response raid in the winter of 1490/91, the Crimeans managed to steal many horses from the enemy, 'cutting the enemy's legs' [Ibid., p. 105]. The combat capability of the Horde sharply decreased. The Crimean khan wanted to consolidate the success by another campaign and obtained the Janissary troops from the Sultan for that purpose. In addition, the Horde was continuously threatened from the north by the growing power of Moscow. In 1491, after negotiations with the Turkish governor of Azov, the Great Horde ceased hostilities.

Face-to-face confrontations gave way to backstage politics. 'Ahmad's tsar's children' did not send official ambassadors to Bakhchysaray, but operated through the ever-present merchants, who were instructed to communicate to Mengli Giray their intention to form an alliance with him, provided that he broke up with Moscow; the khan regarded these assurances as a pack of lies [Collection of the Russian Historical Society, 1884, p. 218]. And he was right: at the same time (in 1495), Sheikh Ahmad in his correspondence with King Casimir revealed his true approach to his southern neighbour: 'What you should know is that we have no other enemy, except Mengli Giray' [Lietuvos, 1994, s. 97; Lietuvos, 2007, s. 75]. Reconciliation between the two 'post-Horde' countries was no longer possible. However, peace was not what Mengli Giray wanted. At the end of the 15th century, the looming collapse of the Great Horde was quite evident. The Crimean troops began entering the steppe, not to fight with the Horde's men, but rather to plunder the defenceless uluses and take captives.

The relationship of the Great Horde with the Christian Polish-Lithuanian state (and at the time of its division, with the Grand Duchy of Lithuania, in particular) evolved in a much closer and warmer way than with any of the Muslim countries. The Lithuanian-Muscovite border disputes and clashes continued, and Casimir IV still regarded the Tatars of Takht Eli as allies in his fight against Ivan III. In 1482, the Grand Duke informed Mengli Giray that the king 'presently, does not want peace with me, but sent messengers to the Horde to raise my enemies on me', meaning the sons of Ahmad

[Collection of the Russian Historical Society, 1884, p. 29]. Two years later, co-ruling khans Murtaza and Sayyid Mahmud accepted another embassy from Krakow headed by Stret. In his message to the king, Murtaza assured that no harm would be done to his lands [Ibid., p. 43; Lithuanian Metrica, 1910, col. 348, 349]. When Murtaza broke up with his brothers, Casimir invited him to live on his land, 'and we would not deprive you, our brother, of our bread and salt' [Lietuvos, 2004, s. 144].

Both Moscow and Bakhchysaray were watching this diplomacy warily, rightly sensing the danger to themselves. Ivan III and Mengli Giray agreed to catch the Polish-Lithuanian and Horde's ambassadors in the steppes [Collection of the Russian Historical Society, 1884, pp. 202, 210] in order to prevent a hostile coalition. The Crimean khan angrily blamed Alexander Jagiellon, who had replaced Casimir, that he had exchanged embassies with the enemies of the Crimea, being replied with journeys into history, reminders of the traditional Lithuanian-Horde relations and the proximity of Tatar encampments to Lithuania and so on.

In fact, these relations were far from being trouble-free. One of the Horde's ambassadors had been detained in Lithuania for several years, while another did not receive the appropriate diplomatic status. After all, Alexander, son of Casimir, behaved towards the Great Horde men in a more detached and cautious way than his late father. In addition, the situation in the Horde was discouraging of any close coalition with it. The co-ruling khans of the declining state, who were continuously quarrelling among themselves and frequently replacing one another, were losing their appeal as allies for Lithuanian politicians. Nevertheless, the Tatar cavalry was still able to draw a significant part of Moscow's troops and thus assist Vilna in the confrontation with the Grand Duke of Moscow.

In the fall of 1500, Sheikh Ahmad's mobile camp was visited by Michail Khaletski, Alexander's ambassador. On behalf of his sovereign, he urged the khan to take military action against the Muscovites. According to the ambassador, the Horde would have powerful allies in this war: the Polish king Jan Olbracht, and the Hungarian and Czech King, Wladyslaw; Sheikh Ahmad was suggested to involve the

Nogais in the Rus campaigns. The persuasion was enforced by rich gifts and huge homage, the so called '*ordynschina*' [Acts, 1846, p. 213; Complete Collection of Russian Chronicles, 32, 1975, p. 101; Horoshkevich, 2001, pp. 154, 155; Lietuvos, 1994, s. 147, 148, 159].

The khan agreed to military action and in 1500–1501 attacked the Muscovy 'borderlands' twice. In addition to all the promises given during the negotiations, he naively supposed that the allies would give him control of Kiev. Accompanied by Khaletski, the Tatar cavalry set off to the Seversk land that had recently been regained by Ivan III from the Lithuanians. Rylsk and Novgorod Seversky were captured, but not sacked; the khan regarded the cities as the property of Alexander. Sheikh Ahmad sent Khaletski to Vilna with the news of a successful campaign and an invitation for Alexander to join the Tatars in the campaign. For forty days, the Horde army stood near Kanev, waiting for the Lithuanian army, then retreated to Chernigov. The waiting lingered on. Alexander Jagiellon could not and maybe had no desire to take part in the campaign. After the death of Jan Olbracht, he was elected King of Poland, and, instead of Chernigov, went to Krakow for the coronation, 'leaving behind his affairs with the Trans-Volga tsar' [Kronika, 1846, s. 313; Collection of the Russian Historical Society, 1882, p. 520; Chronicle, 1966, p. 115; Lietuvos, 1994, s. 170, 172, 178].

In late 1501 or early 1502, Sheikh Ahmad and beklyaribek Tawakkul came to the conclusion that the alliance with Lithuania was of no benefit to them. The Moscow ambassador was pleased to report from Crimea in the summer of 1502, that '...Khan Sheikh Ahmad is in discord with the Lithuanian tsar' [Collection of the Russian Historical Society, 1884, p. 418]. The Horde's leaders intended to persuade Moscow into the anti-Crimea alliance, promising 'to break up with Lithuania' [Ibid., p. 384]. However, Ivan III did not wish to break up the established relations with Mengli Giray for the sake of this dubious acquisition and informed Mengli Giray of the Horde's embassy.

In contrast to the Polish-Lithuanian monarchs, the dukes of Moscow had no plans to form a coalition with the Great Horde. Quite the opposite; the Horde, roaming along the southern frontier, posed a constant threat to Musco-

vy lands. Therefore, the efforts of Russian diplomacy were focused on creating anti-Horde alliances, with the involvement of Crimea, Kazan, the Nogais, and using the ever increasing number of Tatar soldiers in the Russian army. The troops of Ivan III under the command of the Russian voivodes and Nur Devlet, serving the tsar of Kasymov, had repeatedly gone into the steppes in order to loot the Horde's uluses and drive them away from the borders.

The ambassadorial relations between the two neighbouring countries were quite rare. In the 1480s, the Horde's politicians nourished the idea to lure Nur Devlet and make him the symbol of fighting against his hated brother Mengli Giray. In August 1487, Murtaza and Sayyid Mahmud sent an embassy to Moscow in order to discuss the conditions of the former Crimean khan moving to Takht Eli [Ibid., pp. 63, 68, 69]. But the plan did not work out: neither Ivan III, nor Nur Devlet himself wanted to get involved in the unpromising schemes of 'Ahmad's children'.

At the end of 1501, Sheikh Ahmad and Tawakkul sent their messenger to the Kremlin to negotiate on 'friendship and love', namely, to announce their reorientation from Vilna to Moscow for a joint struggle with Crimea. As stated above, the khans' plan failed again. Nevertheless, the Grand Duke sent his ambassador D. Likhorev to the Horde to assure the khan of the 'same good intentions' [Complete Collection of Russian Chronicles, 8, 1859, p. 241; Complete Collection..., 12, 2000, p. 255]. The ambassador returned to his homeland already after the collapse of the Horde.

The relations between the Muscovite state and the Great Horde had always been shadowed by the past tributary duties of Rus of the 'yoke' era. When communicating with Ivan III, the Tatars did not dare to even mention it. The khan's letters now started with the phrase 'The word of (name of the khan) to Ivan', omitting the imperative 'My word' used in the past,—that is, just mentioning different ranks of the rulers—khan ('tsar') and Grand Duke [Gorsky, 2000, pp. 179, 180]. Still, in correspondence with Vilna and Krakow, the Khans gave way to nostalgia, always adding the words 'our servant' to any references to Ivan the Great (see, e.g.: [Lietuvos, 1994, s. 172, 173, 175, 179, 181]).

There was only one case when Ivan III decided to pay a kind of tribute, what is more (as far as can be judged from the sources), without any particular insistence on the Tatar part. In 1502, Sheikh Ahmad wrote to Alexander Jagiellon, overjoyed: the Duke of Moscow 'sent to us the datka (homage), which he had not given to our father or brothers'. He was seconded by Tawakkul: '...sending to us what he had not given to the tsar's or our ancestors' [Ibid., p. 181]. First, what stands out in these letters is the stressing of the unique nature of payments. It seems that the khans had already forgotten the sum, which the Russians had to pay to the Horde, and the fact of payment was perceived by them as a revival of the practice of old times, even before 'our father' and 'the tsar's ancestors'. Second, the term 'datka' is used to refer to the payments, which seems to be out of use in the practice of the Russian-Horde tributary relations. Use of this word instead of the expected 'homage', 'tribute' or 'yasak' also testifies to the uniqueness of the situation.

In the 16th century, the Great Horde was on its last legs. The period of unrest and wars had exhausted its herds of horses, decreased its flocks of sheep, and disorganised its agrarian system. Famine broke out in the nomad camps. All this was known in Bakhchysaray: agents of Mengli Giray had rooted in Tawakkul's camp [Collection of the Russian Historical Society, 1884, p. 354]. What remained of the Ulus of Jochi was rapidly becoming easy prey for the Crimeans.

The Horde's bazaar was roaming the steppe in a chaotic manner. Its routes were now limited to a strip of steppes between the Volga and the Dnieper; the 'trans-Volga tsars' did not set foot beyond the Volga anymore. The sources describe the co-ruling khans' location one day near Astrakhan, another day in the North-East Caspian Sea region, then at the Don River and its tributaries (Medveditsa), then at the Dnieper (Desna, Orel, Samara, Sula)...In 1500–1501, the main aspiration of Sheikh Ahmad (not shared by his brothers) was to cross to the right bank of the Dnieper, even if it would be the Lithuanian or Ottoman lands, just to have a guarantee of subsistence and security. A good indicator of the pending collapse was the mass migration of nomads to neighbouring countries.

The impoverished Tatars were leaving their unsuccessful khans and rushing to the protection of more reliable patrons.

In May 1502, Mengli Giray, leading the Crimean cavalry, marched on the Great Horde. Every now and then, the army would meet migrants along the way: '...many people go to him (Mengli Giray—V.T.) to Perekop', 'an ulus from the Great Horde, and that ulus heads off to Perekop' [Ibid., p. 419]. The attackers knew that Sheikh Ahmad had broken up with his beklyaribek Tawakkul, and now had only about twenty thousand Tatars under his command. Around 15 June 1502, where the Sula River meets the Dnieper¹, the last battle in the history of Takht Eli took place and was completely lost by Sheikh Ahmad. The khan fled, the victor gaining his treasury along with the Horde's bazaar. The uluses of the Great Horde Tatars were now also under his allegiance, and Mengli Giray planned to relocate them to the south, closer to Crimea.

The neighbouring rulers were immediately informed about the victory. Couriers from Bakhchysaray delivered to Moscow and Krakow (and probably to other capitals) a syuyunch drawn up in similar terms: 'Thank God, we have defeated our enemy Sheikh Ahmad, and God gave us his Horde and all of his uluses'; 'By the grace of God, we took the Great Horde together with its people'; 'Thank God, we have defeated our enemy Sheikh Ahmad with our great army, drove tsar Sheikh Ahmad away, and God gave us his Horde and all of his people' [Acts, 1846, p. 344; Ulyanitsky, 1887, p. 193; Collection of the Russian Historical Society, 1884, p. 420].

This is usually considered to be the end of the history of the Great Horde (although later there were some futile attempts to revive it). The lands to the west of the Volga, which used to belong to the Horde, were divided between the Crimean yurt and the newly formed Astrakhan yurt; the banks of the steppe rivers were populated by increasingly numerous free Cossacks, who did not wish to be governed by any rulers; and the eastern lands had long been occupied by the Nogais.

¹ On the establishment of the battle location and date see: [Gayvoronsky, 2007, Pp. 79, 111, 112].

CHAPTER 2

The Astrakhan Khanate

Ilya Zaitsev

Astrakhan, as well as the Kazan and the Crimean Khanates, was ruled by representatives of one family—the Jochids (descendants of Jochi, son of Chinggis). A dynasty of descendants of the Golden Horde khan Temür Qutlugh was formed in the khanate. Scanty and fragmentary sources make it impossible

to reconstruct a complete picture of the khans' reign. Based on available materials (mostly ambassadorial books on the links of the Grand Principality of Moscow with the Crimean Khanate and the Nogai Horde), we can present this succession in tabular form [Zaitsev, 2010, p. 110].

Table

Khan's name	Presumed dates of reign
Abd al-Karim ibn Mahmud	1502 (1508?)–1514
Janibek ibn Mahmud	1514—summer of 1521 (not later than 15 August)
Hussein b. Janibek	October, 1521 at the earliest –?
Sheikh Ahmed b. Ahmed	?–? (between 1525 and 1528)
Kasym b. Sayid Ahmed	?—summer of 1532 (with an interval)
Islam Giray b. Muhammad Giray	1531 (in May, at the latest) 1532 (in January, at the latest)
Akkubeg b. Murtaza	summer of 1532–1533
Abd ar-Rahman b. Abd al-Karim (qalga—'Abli-Saltan' b. Hussein)	1533—end of October, 1537 at the latest
Dervish Ali b. Sheikh Haidar	October, 1537—summer of 1539
Abd ar-Rahman b. Abd al-Karim (for the second time)	summer of 1539 –1543 (?)
Akkubeg b. Murtaza (for the second time)*	1545–1546
Yamgurchi b. Birdibek (with an interval) (qalga—Takbildi)	1546–1550 / 1551–1554
Dervish Ali b. Sheikh Haidar (for the second time) (qalga—his son Jan-Temür?; after that Kazbulat b. Devlet Giray)	1554–1556

* His son Baki sought refuge in the Nogai Horde even before the capture of the city by Moscow troops.

For nearly all of its history the Astrakhan Khanate found itself in a dependent position. The Nogai Horde, the North Caucasian Principality, and the Crimean Khanate acted in turns as its sovereigns. The khans often changed as a result of deadly invasions and upheavals with the participation of external forces. Fragmentary data mean we can assume that the line of descendants of Ahmed b. Küchük Muhammad was supported by the Kabardians, and the line of Mahmudovichi —by Nogai: the two

branches of the dynasty relied upon different ethnopolitical forces and were closely allied with them.

As early as during the reign of Temür Qutlugh Astrakhan paid tribute for the benefit of his son Edigu Nur ad-Din (*karasnap*) in the amount of 40 thousand altyn: 'an altyn from every hut, and from Nogai selling horses an altyn from a horse, three coins from a cow, one coin from a sheep' (cit. ex. [Ambassadorial book, 2003, pp. 47, 80–81]).

The most ruinous were the Crimean raids to Astrakhan (Muhammad Giray in 1523 and Sahib Giray in 1546). According to Remmal Hojja, the last campaign was provoked by Yagmurji (Yamgurchi), who, having taken the throne in Astrakhan, captured a commercial caravan traveling from Kazan to Crimea. The ill-treated merchants complained to Sahib Giray, and the latter, indignant with the interference with the trade between Kazan and the Crimea (for he reigned in Kazan in the first half of the 1520s, and trade with Crimea, which was very important for Kazan, was well-known to him) started preparing a full-scale march on the city. Complete mobilization was announced for the Astrakhan campaign; the khan's letter (*yarliq*) stated that 'no one can stay on this land, and all the people, or the army (*halk*) shall place themselves on a war footing (*sefer aiagyn edyub*), and if anyone does not stand by the khan immediately after Or Agza (Perekop), his property shall be plundered, and his head cut off'. The khan's Divan was postponed, and letters were sent all around informing that if a man aged between 15 and 70 had not joined the troops, he would face a severe penalty of death (*myuhkem siyaset*). The Crimean troops on the march numbered from 200 to 1000 *tyufenkchi* (fighters armed following the Ottoman model with guns—*tyufenk*), the khan's forces reached 10,000 (including a bey division), and tribal levy supposedly reached 250,000. After the Crimean troops forced the crossing of the Don (the only major obstacle on their way) in a day, the city's fate was sealed. Astrakhan was captured thanks to field artillery and *tufenkji* forces. Yagmurji fled, and some of his retinue and surroundings were captured and taken to Crimea with a promise that they would not be harmed [Tarih-i Sahib, 1973, s. 97–105; Ostapchuk, 2001, pp. 399–405].

At the end of 1549 or early 1550, the city was for some time captured by the Moscow Cossacks. In 1551, Pyotr Turgenev, Ambassador of Moscow in the Nogai Horde wrote: 'And sent the Turkish tsar his envoy called Chevush to Ismail murza this spring. They say, sire, the message was like that: in our books, dey, it is written that the time came, that the Russian tsar Ivan time came, and his hand is high above the mussulman. And I am, dey, also greatly offend-

ed by him. The field, dey, and all the rivers he has taken from me, and the Don, and Ozov city, has taken all power away. In Azov his Cossacks take tribute from Ozov and don't let water be drank from the Don...And his Cossacks, dey, has taken Astrakhan and such atrocities committed. And the tsar Ivan's Cossacks have taken both banks of the Volga River from you and power from you, and for your uluses fight, and gorodetskye Cossacks have come to your uluses, fought and Dervish the Astrakhan tsar was captured. And is it not a shame on you, dey, if you cannot stand up for that' [Russian State Archive of Ancient Acts, f. 127, inv. 1, file 4, sheets 39–40]. The information on the capture of the city by Cossacks is evidenced by one more source. Nikita Sushchev, Ambassador of Moscow in Lithuania, who came to the Grand Prince of Lithuania in early 1553 (having left Moscow on 15 January) had been ordered to inform: 'Three years have passed since Astrakhan was captured by our tsar's Cossacks, and Astrakhan tsar Yamgurchi left Astrakhan for Cherkasy, but from Cherkasy he sent a prayer to our tsar and asked our tsar to rule that he be placed again to rule in Astrakhan. And our tsar decreed that he be placed again to rule in Astrakhan, and now the tsar in Astrakhan is ruling on the orders of our tsar and hangs on every word of our tsar. [Collection of Imperial Russian Historical Society, 1887, pp. 375–376].

Relations of the Astrakhan Khanate with the Great Principality of Moscow before the 1550s were quite friendly, which was reasoned by the fact that they had a common enemy—Crimea (Astrakhan had inherited the conflict with the Crimean khans from the Grand Horde). Before 1551, the Astrakhan residents arriving in Moscow came here together with the Nogais. A separate Astrakhan Dvor in Moscow is mentioned to exist already in 1552–1557, but there is no information on its location. Probably after the capture of the city it was eliminated: tsarevich Ibak brought from Astrakhan in 1558 'was placed' on Rozhdestvenskaya Street 'at a farmstead' [Khayretdinov, 2002, p. 53].

After conquering Kazan in 1552, Moscow developed a plan for taking possession of the entire Volga Trade Route. Ivan IV justified the fight with the Astrakhan Khanate in 1554 by the breach of agreements on the part of khan

Yamgurchi and the offence of the Moscow Ambassador. The justifying idea was supported by the 'Tmutarakan' legend (mythical identification of Astrakhan with Tmutarakan, which was at the time of Prince Vladimir given by him to his son Mstislav as a domain). In April 1554, a military expedition was sent from Moscow to Astrakhan (voivode prince Yu. Pronsky Shemyakin 'with comrades'—about 30,000 people). Hajji Tarkhan was taken without a fight on 2 July, 'there were few people in the city at that time' [Complete Russian Chronicles, 13, 1904, p. 242]. Yamgurchi fled to Tyumen in the North Caucasus (he was married to a daughter of the Kumyk ruler in Dagestan). Khan Dervish Ali, who had long lived in Moscow up to that point, was placed at the head of the city. Vicegenet P. Turgenev was left with the khan with a small military camp ('to stay for a year', as the sources put it). Astrakhan was laid under a tribute. There are different details as regards its amount. The Astrakhan shert (a kind of an agreement-oath) mentions 1000 rubles in cash¹ and 3000 fishes, 'and to collect this tribute themselves and every year send it to the great tsar and his children and heirs to Moscow till the God let the earth stay, with their envoys, and give it all away unreservedly and without keeping anything back' [National Library of Russia, Collection Pogodin, no. 1490, l. 86–86 reverse; Russian State Archive of Ancient Acts, f. 181, inv. 1, file 49, sheet 180]. Another source describes the tribute in a different way: 'ten thousand horses a year, and twenty thousand sheep, and thirty thousand sturgeons and belugas' [Collection of the Russian Historical Society, 1887, p. 450]. In case of the death of Dervish the shert prescribed Astrakhan residents to apply directly to the grand prince.

However, Dervish Ali started soon to tend toward an alliance with Crimea, and sent P. Turgenev away from the city. In summer 1555, G. Kaftyrev, the head of Streltsy, and F. Pavlov, Cossack chieftain, took Astrakhan again, which had been left by the khan and the residents. Dervish was soon brought back and released of the tribute for a year, and L. Mansurov was left in the city as the Moscow representative. Thus, a dinarchy formed in the city, and soon Dervish,

in alliance with children of Nogai murza Yusuf, besieged Mansurov in his residence, a kind of small fortress. Mansurov managed to escape. In March 1556, Astrakhan was again attacked by Streltsy headed by I. Cheremisinov and by Cossacks headed by M. Kolupayev. Before that Cossack chieftain L. Filimonov had been let on the march. Having come to the city in summer, the voivodes once again found nobody there: 'the tsar had fled from Astrakhan and burnt the city' [Razrjadnaja kniga, 1975, p. 37].

Part of the Astrakhan nobility managed to escape to the Crimea and the Ottoman Empire. Some Astrakhan tsarevich was taken 'alive' by the Moscow troops on 30 July 1572 in the course of the Molodinskaya battle. Muhammad, son of Dervish-Ali lived in the early 1570s in the Ottoman Empire and earned a salary from the Sultan². In register No. IV of so-called *Registers of Important Affairs* (Mühimme Defterleri) there is a short, 3-line record from 23 jumad I 967 AH (20 March 1560) on payment of thirty akche to the sons of Dervish Ali taking refuge in Turkey (see: [Bennigsen 1967]). As I. Novosiltsev wrote in 1570, 'Magnet tsarevich, son of Dervish Ali of Astrakhan, is staying at the Sultan of Turkey, and he is living in the Uryumsky township, and he is not let out of the town, and is not allowed to come to the Sultan' [Puteshestviya, 1954, p. 89 (389)]. The same source mentions some 'Astrakhan Semen murza and Tenim called Tereberdeyev with comrades who first ran from Astrakhan to Azov' [Ibid., p. 67], and then took an active part in the Astrakhan campaign of Ottoman and Crimean troops in 1569.

Supporters of Yamgurchi also happened to be in Istanbul. In Muharram 976 (June–July 1586) a reply letter of Selim II to the letter of Devlet Giray was written, where the khan informed that he was ready to start a military campaign to take Astrakhan back. The first half of the letter was about the preparations for the Astrakhan campaign. The second half was rather devoted to complicated relations of khan Devlet Giray with

¹ Or 40,000 Altyns (3 kopecks each), that is, 1,200 Rubles.

² There is a rather widespread assertion in the historiography that descendants of the Astrakhan Khans fled to Middle Asia, founding their own Janid dynasty (Ashtrakhanids) there. About the real links between Temür Qutlugh's descendants and the Ashtrakhanid dynasty see: [Trepavlov, 2009a].

other khans of the Giray dynasty. In particular, Padishah promised him to expel to Algeria some especially ardent defenders of the Astrakhan khan Yamgurchi (see: [Bennigsen, 1967]).

Crimea could not put up with the conquest of Astrakhan and Kazan for a long time. Moscow actually offered a ransom for the Volga khanates to cross over to under its jurisdiction — a surplus to the maximum former amount of tribute, and Crimea, after a long period of resistance, agreed.

Like in other Jochid states, the second person in the state was qalga (an heir of the khan, usually his son, brother or nephew). The nobility consisted of sultans, oglans (uhlans), begs and mirzas (according to Russian sources, in 1554 they numbered a minimum of 500), and many of them owned domains. The existence of an institution of Karachi beys in Astrakhan is not particularly subject to much doubt. The dominating clan group under the Astrakhan khans was probably the Kungrats. In addition, the khanate was inhabited by representatives of the Mangit clan. Most likely, the structure of the power elite of the khanate was arranged in a way traditional for Jochid states of the 15th to 16th centuries: four ruling classes (specific sets of clans varied), which were later supplemented by one more—the Mangits. It is fair to assume that the classification structure of the Astrakhan Mangit branch was similar to branches in other khanates (with qalga, nureddin, ordinary begs and murzas). The dependent tribute-paying population was formed of the so-called 'rabble'. After annexation 'murzas and rabble tatars', who stayed in the city were assigned to service and had to pay tribute in natural products (yasak). They were given names 'yurtovye' or 'domovnye'. Those who stayed in steppe under the rule of the surrendered princes got the name 'kochevnye' ['nomads']. The later soon left the historical stage. It's most likely that in households slave labour (probably the labour of Slavic and Caucasian captives) was widely used. The sources also mention Astrakhan religious servants—'mullahs and akhuns and seits and abyzes'. In 1554, they numbered about 3,000 people.

The Astrakhan Khanate had tight cultural contacts with Central Asia, Iran, the Ottoman Empire, and Desht-i Qipchaq lands. These ties were substantiated not only by commer-

cial interests, but also by religious unity: Hajji Tarkhan was situated on one of the traditional routes of ihrams from Central Asia to Mecca. Astrakhan residents themselves also completed the hajj, and their ties with Mecca were not broken, even in the first years of their city's annexation to the Muscovite state. Muslims began to settle in the now Russian town of Astrakhan and entered into Russian service. In 1561, the Nogai bey Ismail asked Ivan the Terrible for a certain slave named Tabich, who served in Astrakhan: '...and he fasts and observes namaz, and his religion is ours', Ismail wrote.

In the period of independence, the Muslim clergy must have been active in carrying out missionary work in the territories to the east of Astrakhan, disseminating and strengthening Islam and the Muslim religion among the Kazakhs. In the early 16th century Ulemas from Hajji Tarkhan extirpated paganism among the Kazakhs [Fazlallakh ibn Ruzbikhani Isfakhani, 1976, p. 106]. As everywhere in the cities of Golden Horde, Hanafiyah was dominant, but there also were Shafiites and Malikites. In Astrakhan they were also aware of classic works on Islamic law (fiqh), including works by Hafiz-ad-Din Nesefti (died in 1310 or 1320). It is unmistakable, that most Muslims in the Lower Volga Region professed Sunni Islam, while there probably also were some Shiites (owing to the near location of Safavid Iran). On the whole, the Astrakhan khanate was probably in the same position as the Golden Horde had been in the earlier period: the city itself was a stronghold of Islam, while the steppe and the surroundings of the city were rather poorly Islamized. In Hajji Tarkhan they also knew Sufism. Initially tariqah Yasaviya might have been most widespread in Astrakhan. Later the most popular might have been tariqah Naqshbandiyah, but the Kubrawiya fraternity was also known. Like in Central Asia, Crimea and Kazan, there were sheikhs (ishans)—the most honoured and respected persons, religious authorities, leaders of tariqahs.

The city was also a place to write literary and historical works: Sherif Hajjitarhani, a poet and a writer, a native of Astrakhan wrote 'Zafer name-i Vilayet-i Kazan', a book about an unsuccessful Russian march on Kazan in 1550. Without doubt, Astrakhan had its own

historiographic tradition. Astrakhan residents Baba Ali and Hajji Niyaz, informers of Ötemish Hajji were well-educated people for their time. The latter, probably a merchant 'famous for his wealth', spoke to Ötemish Hajji on the epoch of wars between Berke and Hulagu, and he elaborated the story with his comments on the territories where these events had taken place. Hajji Niyaz is mentioned as 'Khoneyaz' in the letter of a Moscow diplomat Kubensky (October 1500). His brother Ak-molla ('Akhmolna') also was a trader: together with other Astrakhan residents he ran a trading business in Moscow and probably spent some time there in custody. Ablez Bakshi (a Moscow official, who was in charge of translations from Tatar and other eastern languages) allegedly wrote a letter to 'Khoneyaz', where he proposed that khan Abd al-Karim moved forward to the Don and watched over the Moscow ambassador and the guests. If he captured the diplomat and the merchants, Khoneyaz would be able to exchange them for Ak-molla [Collection of the Russian Historical Society, 1884, pp. 333–334].

We can assume that there were written records of the Golden Horde historical events in the khanate, and presumably there was a strong oral tradition connected with Astrakhan itself, as if including it in the general course of history. Most likely, classical works of Muslim historiography (such as the work by Rashid ad-Din) circulated in the city and enjoyed wide popularity. However, no Tatar historical works specially devoted to Hajji Tarkhan history, in whose existence there could be no doubt, have been preserved. The book by Jihanshakh b. Abd al-Jabbar al-Nijgaruti al-Hajjitarkhani 'Astrakhan History' unfortunately does not cover the khanate period in the history of the city [Hajjitarkhani, 1907; see also: Frank, 2001]. At the court of the Astrakhan khans there were calligraphers (bakshi), who were in charge of business and diplomatic correspondence, and probably, of the rewriting of books. One such calligrapher-bakshi of khan Abd Ar-Rahman, included in the legation to Moscow in 1540, is mentioned in Russian chronicles¹. In Hajji

Tarkhan they also knew classic works of Arab and Persian literature (e.g., the 'Shakh Name' by Ferdowsi), works on mathematics, geography, and astronomy. Pagan vestiges did not disappear either with the advent of Islam in the city.

No authentic Muslim manuscript from Hajji Tarkhan written before its annexation to the Russian state has come to our notice. Several manuscripts have been preserved from the time of Russian Astrakhan. They may be divided for our purposes into two groups: manuscripts written on their own initiative by a member of the Muslim community of the city inside the community; and manuscripts written by Astrakhan Muslims under orders from Christian missionaries. The bookwork of Astrakhan Muslims includes both manuscripts of a purely practical religious nature (treatise on abolished and abolishing surahs of the Quran) and manuscripts of a secular nature (poetical divans and individual petic texts, Ali's 'Yusuf and Zuleikha'), which are mostly historical ('Dastan-i nasl-i Chinggis Khan', 'Shajara-i turki', 'Tarikh-i Naditi'). A classic picture is observed: Quranic research is presented solely in the Arab language; manuscripts of wider genre variation are written in Farsi (ethics, poetry, history); Turkic is almost completely shifted into the 'secular' sphere of poetry and history [Zaitsev, 2009, pp. 206–210].

From the 14th century Hajji Tarkhan was one of the major trading points on the Lower Volga, where the great caravan route ran connecting Mediterranean trade with the East. Hajji Tarkhan trade probably developed with the greatest intensity with the cities of Northern Azerbaijan, as well as with Azak and ports on the Black Sea. The ties of the Lower Volga Region and Hajji Tarkhan were very close, in particular, with Khwarezm. It is not by chance that at the beginning of the second quarter of the 14th century, a number of caravan-serais simultaneously emerged on the trade route from the lower reaches of the great river to Central Asia—on the Ustyurt, which stopped functioning in the 1370s because of Temur's ruinous attacks on Khwarezm. Temur's campaigns of 1391 and 1395 clearly had a considerably impact on another direction of Astrakhan's trade, the Azak. After all, this route connected the

¹ The use of this word indirectly testifies to the fact that the Astrakhan chancellery was not yet fully islamized.

Iranian Caspian (through Astrakhan and Azak) with Kaffa and then with internal regions of the Ottoman Empire. The major products traded along this route were silk and spices. At the end of the 15th century, the trade in spices from the east through Astrakhan (primarily, from India through Shamakhi and Baku) was still very important. Over the whole period of its history up to the Russian conquest, Hajji Tarkhan was a major centre of the slave trade. Slaves were sold to Crimea, Kazan, Central Asia, and Iran. After the city's annexation to the Muscovite state, Russian slaves continued coming back to their motherland for a long time thereafter.

Astrakhan's economy was evidently formed of two components: transit trade and the export of local products [Zaitsev, 2006]. The main products of Astrakhan's economy were fish and salt, which were sold both to Volga towns and probably, to a lesser extent, to Caspian countries. Salt in the neighbourhood of the city was extracted from the lakes (so-called deposited salt); it was raked out of the water with shovels, dried in the sun, and then loaded onto transport. It could be kept for a long time in mounds, only getting firm over time, and because of that the blocks had to be crushed with axes and iron bars.

Fishing was a long-established practice in Hajji Tarkhan. Almost all Russian fishery terms used in the lower Volga regions are of Turkic origin, which testifies to its borrowing by Russian fishermen from the local population (the Tatar vocabulary is very frequently used, for example, in describing a trap net). Sturgeon breeds (starred sturgeon?) (probably, the sign of the zodiac for Pisces) are even depicted on one type of coin from Hajji Tarkhan from the 14th century. Sturgeon fishing was practiced three months a year—from the end of May to the end of August. Fish was salted on the spot, loaded onto vessels and shipped up the Volga. The range of shipped fish was probably not so wide: Russian documents mention mostly sturgeon, beluga and starred sturgeon. Terminology regarding fish salting is also almost completely of Turkic origin, which leads us to assume that during the period of the khanate fish was salted in Hajji Tarkhan in much the same way. Fish was also dried (sometimes it was used instead of bread). It is likely that in

the first half of the 16th century trap nets belonged to Hajji Tarkhan aristocrats. Some of the trap nets in the arms of the Volga delta and its shallows belonged personally to the khan.

Bread had to be imported to Astrakhan. The city must have been constantly suffering from a lack of grain; in such conditions famine and hunger must have been rather frequent among the local population.

Cattle breeding was always very important for the khanate economy. Fazlallah ibn Ruzbikhani Isfahani wrote that 'Many riches, tallowy sheep, horses, camels, and other valuable goods are supplied from Hajji Tarkhan'. And it is for good reason that a Tatar proverb has been preserved to this day: 'Açtarqanda sôjêr bër aqça, kilä-kilä mên aqça' [Ramstedt, 1991, s. 63] ('In Astrakhan a cow [costs] one coin, [and if] you move away, [it's already] a thousand'). Gardening, vegetable cultivation, and hunting must have played some role in the khanate economy; however, their part must not have been very significant (the existence of developed horticulture in Astrakhan in the khanate period is most probable). Russian proverbs of the 17th century state that Astrakhan is notable for its watermelons: 'Astrakhan for watermelons, and we—for beggars'.

It may be safely suggested that there were khan and qalga domains in the khanate (*qalgalyk*). The latter was granted to a qalga only for use. Peasants living on the *qalgalyk* land, the same as those living on the khan's lands, worked there at a proportion of 1/10. There are no detailed on beiliks in Astrakhan like in the Crimea and Kazan, but it is most likely that they were also there. Most probable is the existence of land holdings of clergyman and religious teachers (*hojalyk*). Some part of arable land must have been common property. It is most likely that there was an institute of soyurğal in Astrakhan (conditional military feudal land owning, a right to collect rent for a certain time—a tax, which had earlier been paid to the khan).

Throughout its centuries-long history, the city remained the major cultural and commercial centre of the Lower Volga region.

¹ An approximate analogue of the Russian saying 'over the ocean the calf costs half, but it is dear to ship it here'.

CHAPTER 3

The Siberian Khanate

§ 1. The Siberian Khanate as Part of the Shaybanid State (Second Half of the 16th Century)

Alexander Nesterov

After the Shaybanid State in the Siberian Yurt was laid to ruin at the beginning of the 16th century, the descendants of Sayyid Ibrahim Khan took refuge at their far relatives in Central Asia, where a Shaybanid State had been thriving since 1500 founded by Muhammad Sheibani Khan b. Shakh Budag Sultan b. Abu al-Khayr Ubaidallakh Khan. It is likely that representatives of the Siberian branch of the Shaybanids retained certain domains in Western Kazakhstan, but the sources do not contain any reliable data on the matter. The only mention of the heir of Sayyid Ibrahim (Murtaza Sultan?) is a letter from Nogai bey Sayyid Ahmad sent in 1535 to Moscow, where he wrote that 'Ivakov tsar's son confessed to us with all his friends and servants' [Ambassadorial books, 1995, p. 131]. At that time the heirs of the Shaybanids must have been migrating between the lands of the Uzbek Shaybanids and Nogai Horde.

In the early 1550s, the most realistic claimants to the heritage of the Siberian Shaybanids made an appearance among Shaybanid sultans: the sons of Murtaza Sultan b. Sayyid Ibrahim Khan Kuchum Sultan and Ahmad Giray Sultan. Their father Murtaza Sultan does not seem to have played an important role in politics, but Russian Siberian chronicles and Siberian Tatar folklore usually refer to him as a ruler, and historical legends of Siberian Tatars recorded by G. Miller even name Murtaza the 'Khan of Bolshaya Bukhariya' [Miller, 1937, p. 196]. We certainly have no reason to assume that there was some powerful land holding of Murtaza Sultan in Central Asia or Southern Kazakhstan not mentioned in the numerous Asian sources of the 16–17th centuries. The most probable explanation is the sugges-

tion that Murtaza Sultan owned some small ulus near the southern borders of the Shaybanid State in Central Asia.

It is assumed that Murtaza Sultan died around 1555, as it was at this time that Kuchum Sultan distinguished himself among the four known sons.

It is likely that immediately after the death of his father Kuchum Sultan started the war against the Taibugids. The reason for such a suggestion is not only Yadigar Beg's request for help to Ivan IV in 1555, but also the date provided in 'Shajara-i Turk' by Abu al-Ghazi Khan of the beginning of Kuchum Khan's reign as 1555 [Abu al-Ghazi, 1906, p. 156]. It is impossible to be certain now which of the Shaybanid rulers of Central Asia granted support to Kuchum Khan, but it is clear that such support was granted, and the sons of Murtaza Sultan became a real threat for the Taibugid State. The position of Kuchum and his brothers considerably strengthened after a vigorous Khan Abdullah II came to power in 1557 in Bukhara (in 1583, he became supreme khan of the entire Shaybanid State). The war was successful for Shaybanids, and in 1563 the Taibugid State was destroyed the Siberian Yurt passed once again under control of the Shaybanids.

However, the restored Siberian Yurt was nothing like the Shaybanid State of the 15th century. Now it was a vassal Siberian khanate that was a part of the Shaybanid State, as for example the Balkh khanate. The ruler of the Siberian Khanate acknowledged his dependence on the supreme khan of the Shaybanid State, who to a great extent controlled his new land and had a right to appoint khans: for example, in 1564 Ahmad Giray Khan, an elder brother of Kuchum Khan was appointed to his position,

and Kuchum Khan then became his co-regent. But the Siberian Shaybanids did not seek independence, as it was vital for them to get constant support from the South. The Shaybanid Siberian khanate would not have been able to survive without support from the Shaybanid State in Central Asia because of constant opposition from the local Siberian Tatar nobility and Ugrian aristocracy. In the fight with the nobility Ahmad Giray Khan was killed, and power passed onto Kuchum Khan. Eventually the Siberian khanate of Shaybanids took over the structure of the Taibugid State, which consisted of separate, actually independent lands of local noblemen nominally subordinate to the khan. Isker remained the centre of the state, as Chimgi-Tura was abandoned after the ruin of the Shaybanid State at the beginning of the 16th century and was never restored.

The khanate population was comparatively small—in 1555 it numbered 30,700 rabble [Dolgikh, 1960, pp. 28–77] and was settled across a vast territory; there was no effective administration. Sources tell us about only two positions existing in the Siberian Yurt: the *karachi* (*dumny tzarev*), the first person after the khan who probably acted in the interest of the local aristocracy (the ruler of Dzhalaïrsky ulus at the Nizhny Tobol Qadir Ali Bek was appointed to this position), and the *daruga*, who was in charge of collecting tributes. To retain some control over local feudals, fortified points were built along important routes and in the centres of certain uluses. Such fortresses included fortifications defending approach routes to Isker: Bitsyk-Tura; Suzge-Tura; Yaulu-Tura, which became a stronghold on the way to Central Asia; Kyzyl-Tura, which was an ancient centre of Priishimsky Tatars newly strengthened in the second half of the 16th century; a number of nameless fortresses in Barab along the river Tura, etc.

Military support for Kuchum Khan was provided by Central Asian mercenaries, as the khan could not confide in local troops. Groups of them were deployed throughout the main fortified areas of the khanate territory. In addition, to strengthen his power Kuchum Khan conferred titles and positions to the local noblemen (*murzas* and *sotniks*; as far as we can see these positions were not associated with any

specific duties, and were therefore honorary titles) among both the Tatar and Ugrian people, most of all the Pelym aristocrats, and also promoted the intense adoption of Islam throughout the Siberian khanate.

The foreign policy of Siberian rulers also changed. In the second half of the 16th century it had a clear anti-Russian orientation. While in 1557 Ahmad Giray sultan sent a mission to Moscow in order to neutralize the Russian State as part of the fight with the Taibugids [Nebolsin, 1849, pp. 35–36], after the victory relations deteriorated sharply. As early as on 2 January 1564 Ivan IV wrote about the threat of a Shaybanid attack on Perm territories [Additions, 1846, no. 117]. Ahmad Giray and Kuchum formally confirmed Yadigar Beg's tribute obligations towards the Russian State, but they had no plans to fulfil them, as the Siberian Yurt was no longer the vassal of the Russian State, but of the Shaybanid State, and its rulers were therefore informed by Central Asia.

The policy of Siberian Yurt Islamisation was actively supported by the central power of the Shaybanid State, first and foremost by Abdullah II himself. In 1572, he sent the first spiritual mission to Siberia.

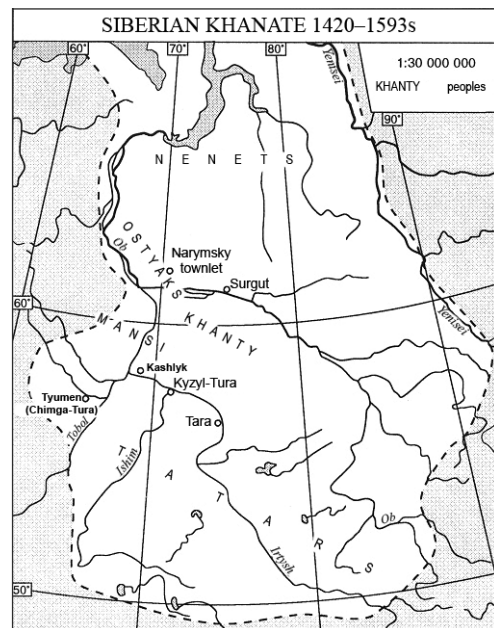

In the Siberian Tatar historical work of the 17th century 'Shajara Risalasi' the history of this mission is presented as such: '980/1572 Kuchum Khan of Isker sent a legation to Abdullah Khan of Bukhara with a request to send one more sheikh...Then Abdullah Khan ordered hakim: Send one more letter to Khan Sayyid of Urgench hakim, let him send Yarym sayyid from the sayyids and Sherbeti sheikh from the sheikhs for the sake of teaching (Siberian people) the faith of Islam [Radlov, 1877, p. 118]. After the mission arrival in Isker Yarym-sayyid was appointed hakim—governor of the state—and stayed with the khan until he died in 1574. Thus, in 1572 a new position was introduced in the Siberian khanate that was to a certain degree meant to stand in opposition to the *karachi*.

After the death of Yarym Sayyid in 1574 Sherbeti Sheikh left Isker and returned to Urgench. In 1575, Abdullah II sent Sherbeti Sheikh to Isker once again at the head of the ecclesiastic mission that also included Din Ali-khoja, a nephew of Yarym Sayyid. This time

both Sherbeti and Din Ali stayed in Isker, and Din Ali was made confidant to Kuchum Khan, who married his daughter Leile to him [Ibid., p. 220]. Descendants of Din Ali and Sherbeti Sheikh lived in certain Tatar settlements near Tobolsk even up until the 18th century [Miller, 1937, p. 201].

Members of the ecclesiastic mission began intensely spreading Islamic propaganda among the Siberian khanate population. A lot of grave sites of 'Siberian fighters for the Islamic faith' were 'discovered', and at these places mausoleums were erected. To intensify religious outreach, members of missions were spread out across the territory of the khanate: for example, a member of the 1575 mission named Yakub Mullah, according to the Siberian Tatar chronicle 'Ylyas Mullah Atasyndan Ishitkeni' settled at Sargatsky ulus at the mouth of the Ishim river [Radlov, 1877, p. 212]. Nevertheless, Islamisation progressed with great difficulty, as a large portion of local people, especially on the outskirts of the country retained their pre-Islamic beliefs. And this is not just about the Ugrian population who never adopted the Islamic faith, but also the Turkic, who retained their pre-Islamic beliefs up to the 19th century.

Russian-Siberian relations that were for all intents and purposes broken off after 1563 were renewed after 1569. But the Russian government still insisted on the Siberian khanate's fulfilment of their vassal obligations towards the Russian State, while Siberian rulers at that period treated relations with Russia as relations between equal countries at best (although in the opinion of Russian diplomats Kuchum Khan was ready to acknowledge Ivan IV as 'his elder brother') [Collection, 1819, pp. 52, 63, 64], and the supreme khan of the Shaybanid State was recognised by Kuchum Khan as a sovereign. Thus, from the point of view of Russian diplomatic protocol, the Russian State was viewed by Siberian diplomats as lower than the Shaybanid State. Documents sent from the chancellery of the Siberian khanate to the Russian tsar in 1569 were executed in the form of a letter (*hatt*) sent to an equal. In reality, Kuchum Khan sent to Moscow a proposal for peace and the division of territory along the Ural mountains, and not a letter of obedience and acknowledgment of dependence, as the Russian

Siberian Khanate. Map by I. Izmaylov

diplomats had wished. In his reply letter Ivan the Terrible demanded the acknowledgment of such dependence with reference to a historical precedent, because in the tsar's opinion the reason for that was the request of Taibugid prince Eydiger to take Siberia under Russian control [Nesterov, 2004, p. 280]. Russia's position here was certainly not favourable for the improvement of Russian-Siberian relations.

This became even more clear after the defeat inflicted on the Russian State by troops of the Crimean Khan Daulat Giray in 1571, and the letter of Kuchum Khan to Moscow executed in the *yarliq* form. The text of the document is not preserved; in the Russian sources only the beginning and the final protocols of the document are preserved, along with a brief overview of the content: 'Wrote the Tsar and the Great Prince to take him in hand, and collect tribute from the whole Siberian land as before'. However, the protocol of the document contradicts this interpretation of Russian diplomats. The document began with the formula 'Kuchum bogatyr tsar—our word', which is easily reconstructed as 'Köçüm bahadur han sözü'. This form is typical of *yarliqs* sent from the superior ruler to someone inferior or dependent. The form of the document is also proved by the end formula 'written with nishan' ('usbu nišan yarliq'), which also corresponds

to the *yarliq* form of the letter. Kuchum Khan probably decided to show the arrogant Russian tsar that he was the lawful heir of the Jochid power, and that the Russian lands were just an Horde ulus. In any event, the interpretation of this document as an acknowledgment of the Siberian khanate's dependence on Moscow was evidently an exaggeration on the part of Russian diplomats. The Russian government sent Tretyak Chubukov to Siberia as a messenger with the text of an oath that Kuchum Khan and 'the best people' of Siberia had to pledge to. The mission was a failure, as its very existence testified to the fact that the Moscow government did not comprehend the actual state of relations between Moscow and Isker. Kuchum Khan rejected the claims of the Russian government, and relations between the Siberian khanate and the Russian State were *de facto* ended.

In 1573, Muhammad Kuli Sultan, a nephew of Kuchum Khan made a raid on Perm lands and devastated the Chusovsky volost. Tretyak Chubukov, who was sent by the Moscow government to Kazakh Haqq Nazar Khan, Shaybanids enemy, was captured and killed. This raid gave rise to a series of armed conflicts that ended in the march of Yermak and other Russian voivodes, and the ruin of the Siberian khanate. It is possible that by provoking the conflict Kuchum Khan underestimated the real power of the Russian State and supposed that the international climate was favourable for driving Russians out of the Urals. At the end of 1570s to the beginning of 1580s Muhammad Kuli Sultan and Ali Sultan, a son of Kuchum Khan, made several devastating raids on the Perm land that robbed them blind. However, it can hardly be assumed that Kuchum Khan was aiming to conquer Russian lands in the West Urals. Instead, they were trying to prevent possible blows from a powerful enemy. But finally the policy of Kuchum Khan resulted in the opposite: the regular attacks of Siberian troops on Russian border became one of the excuses to set off the Russian-Siberian war of 1581–1598.

In the 1570s, the situation became difficult on the Southern borders of the Siberian Yurt, where a hostile to Shaybanid Kazakh khanate was increasing in power. One of the most consistent enemies of the Shaybanid power, Haqq Nazar Khan of Kazakhstan, tried to cut

off the Siberian khanate from Central Asia. The success of this step would cause the fall of the Shaybanid power in Western Siberia, because as mentioned above, the retention of this power was possible only under the condition of constant support from the south. The death of Haqq Nazar Khan in 1580 in the fight with Abdullah II led to a time of peace, as Shigai Khan b. Jadik Sultan, who replaced Haqq Nazar Khan, was a long-time ally of Abdullah II, and a daughter of Shigai Khan was one of the wives of Kuchum Khan [Sultanov, 1982, p. 118]. The Jalairs headed by Qadir Ali Bek karachi were one of the strongest tribes of the Siberian khanate, so an alliance with Shigai Khan, who patronized the Jalairs, was even more important. Shigai Khan acknowledged himself a vassal of Abdalakh II in 1581, and Abdullah granted Khujand to Shigai Khan as a domain. The Kazakh khanate, like the Siberian khanate, became a part of the Shaybanid State.

The period from 1580–1582 was the time of the greatest territorial expansion of the Shaybanid power, which called its own at that time the territories of Central Asia, Kazakhstan, Western Siberia, Eastern Iran and Northern Afghanistan. But this strength turned out to be soft at its core. The fall began with some seemingly insignificant events of 1581–1582: the beginning of the move of a small Cossack unit of Yermak at the Western border of the Siberian Yurt, and the succession of power in the Kazakh khanate to Tavakkul Khan b. Shigai Khan (in 1581–1582 he was ruler of the Afarinkentsky vilayet of the Shaybanid State) [Sultanov, 1982, p. 120]. Tavakkul Khan soon opposed Abdullah II because he suspected Abdullah II was hostile towards him and considered it a threat to the fact that Kuchum Khan had granted shelter in Isker to Uraz Muhammad Sultan b. Undan Sultan b. Shigai Khan, the lawful heir to the Kazakh khanate.

After 1582 a new stage in the history of the Siberian Yurt began—the period of its integration into the Russian State.

The international climate in 1582 was extremely unfavourable for Kuchum Khan. The Kazakh khanate of Tavakkul Khan became an enemy of the Shaybanids. Abdullah II got stuck in a longstanding war against Baba Sultan, and then started long wars in Khorasan and Eastern Turkestan. In reality, Kuchum

Khan could only rely on the force of the Siberian khanate: the tribal levy of individual feudal lands of Siberian Tatar origin, the Ugrian tribal levy and Central Asian guards of insignificant numerical strength. The situation became even more acute after Sayid Ahmad Beg Taibugid, the lawful heir of the Taibugid dynasty, which symbolized the independent Siberian State for the local aristocracy, escaped from Sygnak where he had lived as an honoured prisoner. Sayyid Ahmad Beg made his way into the lands of Kuchum Khan with his small unit and began military actions against the Shaybanids.

As stated above, the Siberian Yurt was not an integrated state entity. Under direct control of the khan there were only several fortresses along the strategically important route, including Isker, Yaulu-Tura, Suzge-Tura, Kyzyl-Tura, Ton-Tura, etc. Most of the state territory was controlled by Ugrian tribe alliances, among which the most important were Mansi Pelym and Khanty Koda.

Pelym in the second half of the 16th century was on the brink of forming feudal institutions and was the most Turkic of all Ugrian tribal alliances of the Transurals. The Triune territory of Pelym (Pelym principality, Konda principality and Tabory) was divided on the Tatar model into hundreds and dozens. Local Mansi noblemen bore the title of Murza like Tatar aristocrats of Western Siberia [Bakhrushin, 1935, pp. 34–36], and names of Turkic origin were also very popular. It was not chance alone that prince Patlik, the Pelym ruler, was one of the most consistent supporters of Kuchum Khan in his fight against the Russians. Koda prince Alach, the strongest Khanty ruler of that time adopted a similar position.

The intrusion of a small Cossack unit of Yermak at first did not seem to the khan as a serious threat to the Siberian Yurt because he believed that it would not last long, as the troops of the Siberian khanate headed by Ali Sultan b. Kuchum Khan and Pelym prince Patlik had crossed the Urals and started military actions in Perm. The Khan expected that the Stroganovs, who owned a large territory in the Cisurals and were of great support to Yermak's Cossacks, would have to call off the Cossack unit to protect their lands. But the march went on.

The Russian government demanded that the Stroganovs stopped the march: in the midst of a war with Sweden and constant fights with the Crimeans and Nogais, it seemed unreasonable to Ivan IV to start a new war in the East. But the tsar's 'opalnaya gramota' (deed of disfavour) came too late, as on 1 September 1582 the unit had already left the Stroganovs lands (the charter is dated November 1582).

Yermak's march was as fast as lightning. The outcome of the first stage of the war was to a great extent determined by speed: Yermak advanced to Isker without lingering on lands passed by for the sake of cementing his power there. The initial plan of the march might have only involved plundering the central regions of the Siberian khanate in order to paralyze the khan's attacks on Russia's Perm territories for an extended period. Kuchum Khan entrusted military operations to Muhammad Kuli Sultan, who intended to use the force of the Siberian Tatar's cavalry. The outstanding administrative abilities and military talent of Muhammad Kuli Sultan helped for some time to consolidate the scattered military forces of the northern Tatar and Ugrian feudals (the southern feudals, first and foremost Qadir Ali Bek karachi jalair, had to protect their land, which lay in the way of Yermak's unit). However, even Muhammad Kuli Sultan could not overcome the hostility of local noblemen to the Shaybanids, which became evident as early as after the first major fights of the Cossacks with the Siberians: during the Chuvash battle that ended in a draw (near Isker in the district of Chuvashsky Cape) Muhammad Kuli Sultan was wounded, which caused the Khanty princes and their forces to immediately desert the battle field. After he lost his army, Kuchum Khan had to leave Isker fortress, which had no sources of potable water, and on 26 October 1582 Isker was taken by the Cossacks, who took hold of large stocks of peltry stored in the fortress.

In late October 1582, the Cossack's lands were actually limited to the near outskirts of Isker. But as early as 30 October, knyazets Boyar from Demyanka river arrived with tribute to the new beg of Isker Yermak (Yarmak Beg). Boyar's example was then taken by a number of local Ugrian elders.

The Cossacks position then became unstable in December 1582 after the troops of Ali Sultan had come back from the raid on Cherdyn. Kuchum Khan gave this army to Muhammad Kuli Sultan and ordered they drive the enemy out of Isker. However, the battle of Abalak on 5 December 1582 brought even more success to Yermak: Muhammad Kuli Sultan was defeated, which was followed by the recognition of Yermak's authority as the beg of Isker by Tatar feudals both from Isker and remote regions, e.g., Yermak was recognised by murzas from the river Tavda Ish Berdi and Suklem. Those that surrendered were made to pay tribute in furs, mostly sable.

However, Yermak's position as beg of Isker was even more uncertain than Kuchum Khan's position. For all intents and purposes, the seizure of Isker and the battle of Abalak resulted in the disintegration of the Siberian khanate into separate feudal lands independent from Isker. Cognisant of these conditions, Yermak made the decision to ask for help from the Russian tsar.

This act of Yermak turned his military actions into a whole new category: the half-predatory raid of a small Cossack unit transformed into a country-to-country Russian-Siberian war aimed at the annexation of a vast forested territory to the Russian State.

After the battle of Abalak Kuchum Khan retreated to Kyzyl-Tura on the Ishim. The loss of control over the Isker and Irtysh river route resulted in the actual independence of Pelym, Koda and other Ugrian alliances. It was against these weak 'principalities' of the Ob Ugrians that the northern march of Yermak from Isker in summer of 1583 was directed, which resulted in the integration of the Nizhny Irtysh and Nizhnyaya Ob territories into Russia.

Military failures immediately enhanced the discord among the Tatar aristocrats of the Siberian Yurt. In their infighting they were even about to turn to Yermak for assistance: for example, murza Sainbakht (judging by the name he might have been a relative of the Taibugids) arranged a Cossack march on the Vagai against the sultan headquarters because of his enmity to Shaybanid Muhammad Kuli Sultan. As a result of this sudden raid, Muhammad Kuli Sultan was captured and immediately sent to

Moscow. At later points Muhammad Kuli Sultan was in the military service of Boris Godunov, Vasily Shuysky, khans of Kasymov Uraz Muhammad Khan and Alp Arslan Khan b. Ali Khan b. Kuchum Khan, and eventually died in Kasymov in 1618 (where his tombstone is preserved) [Velyaminov-Zernov, 1866, p. 47].

The capture of Muhammad Kuli Sultan undermined Kuchum Khan's position. Qadir Ali Bek jalair refused to submit to the khan and made an alliance with Taibugid Sayyid Ahmad Beg (in Russian chronicles referred to as prince Seydyak) and Uraz Muhammad Sultan b. Undan Sultan b. Shigai Khan, the Kazakh sultan who had taken shelter at the court of Kuchum Khan. This alliance was set in stone by 1584 when its members started an active struggle against the Cossacks of Yermak.

Cossack forces were exhausted from the battles against Siberian feudals, and there was no material support coming from Russia. Under these circumstances in 1584 Yermak set off on a march towards Pelym. The main goal of this march was most likely to open the most convenient Lozva route from Perm to Siberia, but the march (although ending in the thrashing and death of Patlik, prince of Pelym) did not reach its goal, as the river route down Tavlda and Lozva remained inaccessible for the Cossacks, and Ablegirim, the new ruler of Pelym, was as hostile to the Russians as his predecessor.

The main plan of Yermak in 1585 was to capture Kuchum Khan because as long as Kuchum Khan roamed free, Yermak's power in the Siberian Yurt was unstable. In March 1585, Yermak was killed as he travelled up the Irtysh river, and the rest of his unit (by 1585, 90 out of the 500 Cossacks who had come to Siberia in 1582 were still alive) decided to leave Siberia. Isker was abandoned by the Cossacks and soon taken by the forces of Ali Sultan b. Kuchum Khan. But the war raged on: the unit of voivode I. Mansurov, who arrived to help Yermak (but was too late) founded Obsky gorodok in autumn of 1585, which became the first Russian fort in the Transurals. In 1586, voivode V. Sukin founded Tyumen Ostrog at the site of ancient Chimga-Tura, and in 1587, D. Chul'kov founded Tobolsk, a fortress 15 versts from Isker. The Russians were all but establishing themselves freely throughout Western Siberia.

This was enabled by the internal war that also broke out in the Siberian Yurt. After Yermak's death during the *de facto* disintegration of the Shaybanid Siberian khanate, an heir of Taibugids made an attempt to restore his power. In 1586, Sayyid Ahmad Beg took Isker after he drove Shaybanid ruler Ali Sultan, the elder son of Kuchum Khan, out of the city. The rulers of the Western Siberian 'principalities' were eager to support the restoration of 'their' dynasty. In reality, power in the new Taibugid State was more of a triarchy: Sayyid Ahmad Beg Taibugid; Qadir Ali Bek karachi jalair, the ruler of the mighty Jalair ulus located in the lower part of the Tobol; Uraz Muhammad Sultan, grandson of a Kazakh khan and later the khan of Kasyrov (most likely recognised by the other triarchy members as the khan of Siberia). But the Russian government was not inclined to wait for the final restoration of the Isker begs power, or for the return of Shaybanids to Isker because its plans included the complete integration of the Siberian Yurt territory into the Russian State. Ostrogs that popped up in 1585–1587 in the central part of the yurt at strategically important points (first and foremost in Tobolsk) helped carry out these plans. As early as the beginning of 1588 Tobolsk voivode D. Chul'kov managed to craftily capture Sayyid Ahmad Beg, along with Qadir Ali Bek and Uraz Muhammad Sultan, who were the top leaders of the restored Taibugid State. The captured Siberian aristocrats were sent to Moscow, and the Isker principality was wiped off the map. However, the war continued on, as Kuchum Khan had not yet been defeated and Pelym and Koda still remained independent.

It is likely that around 1589 Kuchum Khan at last received some help from Abdullah II. This greatly worried Tavvakul Khan of Kazakhstan and eventually spurred him on to ask Moscow for help against the Shaybanids. Tavvakul Khan suggested that the Russian government recognise Kazakh khanate dependency in the Russian State under the condition they enter into an anti-Shaybanid alliance against Abdullah II and Kuchum Khan [Kazakh-Russian, 1961, no. 1–5]. The Koda principality was neutralised: its ruler Igichei Alachev was then recognised the prince of Koda and participated in the defeat of Pelym and Koda.

Kuchum Khan remained the most serious enemy. He made multiple raids on the Russian lands in Siberia, although he seems to have come to terms in the final years of his life with the fall of the Shaybanid power on the majority of the Siberian Yurt territory, and he did not fight for the land, but for the people, as he tried to force them to move beyond the Russian lands. Russian voivodes took their own counter actions, for example in August 1591 at the Ishim river a large Tatar military unit was destroyed, and Abu al-Khayr Sultan, a son of Kuchum Khan was captured. The khan's position remained complicated: the Tatar voivodes were constantly ordered to attack him, and Abdullah II came to grips with the loss of the far Siberian vassal and ceased supporting Kuchum Khan. Individual members of the large khan's family started to leave the khan behind, most importantly Ali Sultan and Kanai Sultan. The Siberian Yurt of Shaybanids collapsed beyond the shadow of a doubt.

In 1593–1594, Kuchum Khan turned to the Russian government with an offer of peace. He guaranteed his submission under the condition that the Siberian Yurt be returned to him ('under the higher reign of the tsar') and that Muhammad Kuli Sultan be released. The Russian government ignored the peace overtures of Kuchum Khan, considering them unfaithful, because if not for war, what did they need Muhammad Kuli Sultan for? [Collection, 1819, pp. 9–10]. In 1595–1596, Kuchum Khan for the final time asked Abdullah II for help, but Abdullah II was occupied with the struggle for Khwarezm. Moreover, he was indignant at the seizure by Kuchum Khan of Mangit lands of Auliya Beg, the vassal of Abdullah II, so he refused to directly support Kuchum Khan and demanded he immediately return all lands to Auliya Beg and conclude an alliance with him to fight together against the Russians [Ziyaev, 1968, p. 9–10].

In 1596, Russian voivode prince Fyodor Yeletsky defeated Kuchum Khan at the town of Tunus. The main consequence of this defeat was the fact that a considerable group of Tatar Siberian feudals stopped supporting the khan as because they saw it was hopeless to continue the fight. Having heard this fact, the Russian government addressed Kuchum Khan through

the captive Abu al-Khayr Sultan b. with an offer to accept Russian citizenship [Ibid, p. 121]. Kuchum Khan gave no response to the Moscow government's demarche. In 1597, on behalf of the Russian government Abu al-Khayr Sultan and Muhammad Kuli Sultan sent a letter to Kuchum Khan where they guaranteed to the khan either vast lands in Moscow, or power over the Siberian Yurt under the supreme power of the tsar, on the condition that he adopt Russian citizenship. The Russian government issued a document to Kuchum Khan with a guarantee of free transit to Moscow, but Kuchum Khan, who did not trust offers like this from the Russians, rejected the peace negotiations. In 1597, he managed to restore his power in some of the Western Siberia regions that had yet to submit to Moscow. The reply letter of Kuchum Khan dated 1597 demonstrates that no matter the circumstances he did not want to surrender to Moscow: in fact, his letter contained an offer of peace between equals [Nesterov, 2004, p. 281]. Such an offer was, of course, unacceptable for the Russian government, as they sought the capitulation of Kuchum Khan.

After that the Russian government made the decision to put an end to the threat presented by the existence of a 'lawful' khan of Siberia. In August 1598 a special expedition headed by Andrei Voyeykov was organised. In this decisive battle Kuchum Khan was defeated. Iliten Sultan, a brother of Kuchum Khan, two sons of Ali Sultan unknown by name, and Shaybanid Usman Sultan were also killed in the battle. The Russians captured sons of Kuchum Khan Kumysh Sultan, Molla Sultan, Bibad Shakh Sultan, Asmanak Sultan, Shaikh Muhammad Sultan, 8 wives and 8 daughters of Kuchum Khan, a son of Ali Sultan Yansyuer Sultan, Shaybanids Jura Sultan and Osmei Sultan, 5 high-ranking officials of Kuchum Khan and 50 guardsmen. All of them were taken to Moscow [Acts, 1841a, no. 2–14]. Kuchum Khan managed to escape with a small group. But the fight for his power over the Siberian Yurt was practically over because the defeat of 1598 left no hope for the restoration of Shaybanid power.

In the same year (1598) the patron of Kuchum Khan Abdullah II died. His successor Abd al-Mumin Khan was not interested in keeping the Northern lands of his relatives. Kuchum

Khan decided to turn for help to Mangits, and sent his son Kanai Sultan to ask help from Abd al-Mumin Khan. But Kanai Sultan did not find Abd al-Mumin Khan alive, as an internal war had broken out in Central Asia between the last Shaybanid Pir Muhammad II and representatives of the new Ashtarkhanid dynasty. At the same time Kuchum Khan was killed in a fight with Mangits (1598). The circumstances of Kuchum Khan's death are unknown, but this event completely changed the situation: there was no longer a 'lawful' ruler of the Siberian Yurt. The Shaybanid sultans had to decide the issue of inheriting power over what remained of the state. Moreover, the Siberian Shaybanids had to take into account that they could obtain real support in the fight against Russians only from the Kalmyks, who were the only real power in the Kazakh steppes in the 17th century. Other claimants for power were the Kanai Sultan and Ali Sultan. The nobility of his mother and support from the trading circles of Turkestan worked to the benefit of Kanai Sultan. Though Ali Sultan was not the son of a noble mother he was still the eldest, and after receiving reliable news on the death of his father he nonetheless declared himself the khan. Ali Khan was backed by all the other sons of Kuchum except for Kanai Sultan. In fact, the Russian government also recognised the new khan of the Siberian Yurt (which is evidenced in the documents where he was henceforth referred to as "tsar Alei"). Ali Khan offered peace to the Russian government on the same terms as in 1597: in exchange for granting him power over the Siberian Yurt, he would recognise his country as part of the Russian State. In response Ali Khan was given the opportunity to surrender and benefit greatly from his decision in Moscow.

But Ali Khan preferred to continue the fight. He urged the peoples of the Siberian khanate who had already felt the burden of the Russian tsar's power to rebel. A lot of Tatar and Ugrian rulers of the yurt sided with the khan, including such considerable figures as prince Vasily of Obdorsk and the prince of the Lyapinsky principality Shatrov, but the rebellion was suppressed in 1607 and the princes were executed. In 1608, Russian troops managed to capture Ali Khan, who died in 1646 [Trepavlov, 2011b, pp. 95–100; Nesterov, 2011a, p. 77].

A brother of Ali Khan Ish Muhammad Sultan declared himself the new khan of the Siberian Yurt, but he never gained recognition from either of the still independent Tatar Siberian feudals, nor from the Russian government. Ish Muhammad Khan did not have the actual power needed to fight against the Russians, although he continued the partisan war till his death in 1624.

The last claimant to the Shaybanid legacy in the Siberian Yurt was Ablay Karim Sultan b. Kuchum-khan in fact headed Kalmyk raids on Russian lands in Siberia and organised rebellions among the Tatar and Ugrian population. The memory of the Siberian Shaybanids remained as late as the middle of the 17th century: in the 1650s Khanty of Beryozovo addressed Daulat Giray Sultan with an offer to start a serious military campaign against the Russian government that promised to stir up a mass rebellion and promote the restoration of the Shaybanid power in Western Siberia.

Daulat Giray Sultan carried on a partisan war up until the 1660s, but by that time the Siberian Yurt had once and for all become a thing of the past [Pochekaev, 2011a, pp. 100–104; Khudyakov, 2011, pp. 105–109].

The Siberian Shaybanids dynasty continued to exist in Russia. The senior branch of this dynasty was held by Alp Arslan Khan b. Ali Khan and Sayyid Burkhan Khan b. Alp Arslan-khan ruled the Kasymov khanate up to 1679; Sayyid Burkhan was christianised under the name Vasily. His descendants—the tsarevichs of Kasymov—lived up to the end of the first quarter of the 18th century. The descendants of Altanai Sultan b. Kuchum-khan was granted the title of Siberian tsarevich, and the sons of Altanai-sultan were already christianised. The descendants of Ish Muhammad Sultan (Aleksii) Altanaevich in 1717 were stripped of the tsarevich title and renamed as princes of Siberia. The Siberian prince dynasty disappeared completely at the end of the 19th century.

The Isker Principality of Taibugids (the first half of the 16th century)

As mentioned in the previous section, at the end of the first decade of the 16th century The Khanate of Tyumen disappeared from the pages of history and its place was taken by a new state formation — the Iskar Principality of Taibugids—usually referred to in Russian historical sources as 'the Siberian kingdom'.

The Principality of Taibugids was a relatively weak state formation. In fact, it was a fragile conglomerate of Siberian Tatar Uluses and Ugrik tribal principalities headed by a Beg from the Taibugid clan.

The Taibugid clan was undoubtedly of local, Siberian-Tatar origin. The genealogical legends of Siberian Tatars preserved in the Siberian chronicles or documented by G. Miller call the founder of that clan Tooril Khan, who lived on the Ishim river in the first half of the 8th century (the chronicles call him a contemporary of Chinggis Khan). According to G. Fayzrahmanova, the early Taibugids Tooril and Taibuga were the rulers of the prosperous 8th century Khanate of Ishim in Western Siberia, but this opinion has no confirmation in the extant sources and remains only a speculative construction. There is no reliable information

from historical sources about either the history or the very existence of the Khanate of Ishim.

The son of Taibuga was considered the founder of the Principality of Taibugids. According to the hypothesis upheld by a sizeable amount of research, the word 'taibuga' most likely is not a name, but rather the title of the ruler of that Siberian-Tatar Ulus. Some legends say that Khwāja or Khoja, the son of Taibuga, ruled over domains with the centre in Kyzyl-Tura nearby the confluence of the Ishim and Irtysh. After Khoja died the domains of the Taibugids were inherited by Mar who was murdered by a certain 'Kazan Khan Upac'. The sons of Mar, Adair and Abalak, perished in Kazan captivity, but rule over the Ulus of Taibugids was passed over to Adair Muhammad, who founded Iskar and revenged his father's death (according to the chronicle, Muhammad killed Upac).

The Taibugid shejere (genealogy) recorded differently depending on the versions in Yesipov, Stroganov and other Siberian chronicles, as well as in the 'History of Siberia' by G. Miller, has only one chronological reference point: the ancestor of Taibugids Tooril lived in

the first half of the 13th century. The second crucial moment in the chronology of the Taibugids is also determined quite easily, as the sole candidate for the role of 'Kazan Tsar Upac' was the ruler of the State of Siberian Shaybanids Sayyid Ibrahim (Ibak) Khan, who was killed by Muhammad Khan of the Taibugids at the end of 1494 or the beginning of 1495. Thus, it turns out that during a period of approximately 275 years (1220–1495) there had been six generations of the Taibugids. Numerous investigations into the genealogy, including research on the Turkic peoples, shows us that on average each century sees a change in generations five times. The most likely solution to the Taibugid genealogy issue is the assumption that the mid-level familial links were omitted in historical sources. Moreover, by that time the Taibugid shejere records had ceased to exist, and the legends preserved only the names of the ancestors/founders of the clan (Tooril and Taibuga), along with the names of the princes of the Isker Principality from the end of the 15th century to the first half of the 16th century. However, perhaps there is another interpretation of the shejere: the genealogy of the Taibugids was artificially stretched out with the aim of connecting it to such a significant event as the Mongol conquests at the end of the 13th century. To date this question still remains open. The only thing that one may believe for certain is that in the first half of the 15th century the Principality of Taibugids with its centre in Kyzyl-Tura not only existed, but was subdued by Sayyid Ibrahim Khan and maintained as an independent domain. At the same time it should be noted that most likely in the 14th century the rulers of the Principality of Taibugids converted to Islam. The names of its rulers—Mar (Omar) Khoja (Khwāja), Adai (Haydar), Muhammad—are the best testimony to this fact's validity. At the end of the 15th century that principality was ruled by Muhammad Beg, who transferred the centre of his dominion from Kyzyl Tura to Isker (Siberia, Qashliq).

Unfortunately, the history of the Principality of Taibugids remains almost unknown right up until the middle of the 16th century. The only actions of Muhammad Beg featured in the 'chronicles' were the foundation of Isker and the murder of Sayyid Ibrahim Khan.

Isker, according to archaeological facts, had actually existed until the rule of Muhammad Beg, which was at the very least at the beginning of the 15th century; Muhammad most likely just transported the Taibugid Beg residence to that fortified place. The exact name of the capital of Taibugids is also unknown. Different sources refer to this city as 'Qashliq', 'Isker', 'Siberia' or 'Old Siberia'. The most likely theory is that it was called Qashliq, as the central regions of the Siberian Yurt are known in history as Siberia or Ibir,—that is, the middle and North territories of the South Urals and certain parts of Western Siberia, primarily ancient Chinggi-Tura (close to contemporary Tyumen), as well as surrounding areas. The name Isker (Turkic: *Iski*, *Eski*) can be translated as 'Old [town]' (the 'Old [stronghold]') and can hardly be considered an original name for the capital of the Taibugids. It is highly plausible that in the 16th century the name Isker became a colloquial designation of the walled town Qashliq (as well as the Turkic colloquialism 'Istanbul' [which is derived from the Greek phrase *eis tin polin*, 'in town'] that replaced the official Turkic name of Constantinople: Qustantiniyye), at the same time the name Siberia for the city was an ordinary designation for the capital informed by the name of the country.

The murder of Sayyid Ibrahim Khan—the last consolidator of the territories of the Jochid State who claimed supremacy among horde rulers—in fact finally put an end not only to the history of the Jochid power, but also put an end to the independent existence of the State of Taibugids, the first state formation on the territory of the region formed by indigenous peoples. The reign of Muhammad Beg (the end of the 15th century—the beginning of the 16th century) had passed in relatively advantageously from a political perspective, as Mamuq Khan and Agalaq Khan, the successors of Sayyid Ibrahim Khan, had a difficult struggle for power in the Kazan Khanate (in the end the Shaybanids lost that struggle). The last ruler of the Siberian Shaybanid, Khanate Kutluk Khan, was defeated in 1505 by the Russians and had to retreat into his Siberian dominions. Soon the descendants of the Siberian Shaybanids arrived at the court their relatives ruled in Central Asia (Transoxiana). One may suppose

that Muhammad Beg or his closest successor Qazi (Kasym?) completely banished the Siberian Shaybanids from their territories in Siberia.

The successors of Muhammad Beg were listed in a charter sent by Tsar Fedor I to Kuchum Khan, the ruler of the restored Siberian Khanate of Shaybanids. 'After the death of your grandfather, Ibak Khan, the princes from the clan of Taibugids reigned in the Siberian State, where Magmet Khan and Kazy Khan came after him'. The Russian diplomats accurately recorded the titles of the rulers of Siberia: the descendants of Chinggis Khan, Sayyid Ibrahim Khan and Kuchum, were referred to as Tsars (Khans), and for the Taibugids the title Prince (=Beg) was used,—that is, they did not have the rights to the title of Khan as they were not Chinggisids. The frequent literary designation of the State of Taibugids as 'The Khanate of Siberia' is therefore inaccurate, whereas the accurate name of this Siberian Tatar state formation is 'the Siberian Principality of Taibugids'.

To determine the accurate sequence of the rulers of the State of Taibugids is a formidable problem. The previously mentioned charter from Fedor I refers to Muhammad Beg, his son Qazi (Kasym? Kazy?) and his sons, Edigur (Yadegar Beg) and Bulat Beg. The Yesipov and Stroganov chronicles refer to Agusha Beg (Angisha, Agasha), the son of Abalak (that is, the cousin of Muhammad Beg), who reigned in between Muhammad and Qazi. The Remezov chronicle places Kazi's brother, Sain Bakht, and Sauskan Beg after him, whose relation to the previous rulers remains unclear. The names of Abalak and Suskan coincide with the names of the natural landmarks around Isker, and probably originated as folk etymologies in order to explain these designations. Such an assumption is especially reliable because these names can be found in the Remezov Chronicle, whose author S. Remezov lived at the beginning of the 18th century and resorted to such etymologies himself. In order to explain the name of the hill Suzge Tur, he simply 'invented' the wife of Kuchum Khan named Suzge, who supposedly lived on that hill.

The internal structure of the Taibugid State remains largely unclear. The existence of several Turkic clans within this state (primarily the Jalairs, and probably Mangits), and the ex-

istence of the titles of Beg (Beklyaribek) and Karachi are indisputable. Perhaps naming the Principality of Taibugids with the name of the Khanate of Siberia that occurs in the Russian historical sources is not an accident. One may suppose that the Begs from the clan of Taibugids ruled on behalf of some Khan who was crowned by a dynasty of the Jochids. Candidates for the role of 'dummy' Khans could be put forth as children mentioned in the 'Jami' al-tawarikh', namely Qadir Ali Bek Karachi Jalair Agalak Sultan and Butur Sultan, Kuluk Sultan, Museke Sultan, Muhammad Sultan, Kumach Muhammad Sultan, as well as Ak Kurt Sultan, who's origin is not very clear (possibly the son of Sayyid Ibrahim Khan or Mahmud Khan). There are two among the listed dynasts of the Siberian Shaybanids who are in our opinion not real: one can quite possibly identify Kuluk Sultan with Kutluk Khan, and Muhammad Sultan is actually Muhammad Beg of the Taibugids. Considering the presence of a feud, one may suppose that members of the Sayyid Ibrahim Khan branch murdered by Muhammad Beg could not be candidates for the throne of their new state, whereas the descendants of Mahmud Khan, among which Agalak Sultan was most likely present, could have definitely ended up on the throne of the new state. On the other hand, rulers of the Shaybanid State in Central Asia could have been the supreme Khan of the Isker Principality, but this version is questionable.

The political history of the State of Taibugids from 1495 to 1555 is still completely unknown. The Taibugid State of that time represented a peculiar federation of dominions of Ugric tribal princes and Siberian Tatar Ulus possessors (Beks, murzas, etc.) with extremely weak central authorities. The power of the Taibugid Beks most likely spread only to the areas of Isker and Ishim Ulus, which were the patrimonial dominions of the Taibugids. One may suppose that the numerous tribal principalities of Mansi and Khanty (including Pelym, Condat, Coda, Taborin volost, etc.) recognised the supremacy of the Beg of Isker. The population of the territories under Taibugid control in the middle of 16th century amounted to 30,000 men (that is, the total number of the population was about 120–180 thousand people, but perhaps this num-

ber is overstated). The dissemination of Islam in the Siberian Principality was just beginning. It is plausible that the rulers of the state considered themselves Muslims, yet the population, including Tatars, preserved their old pagan beliefs. There was no one eagerly spreading Islam among the rulers of the Taibugids.

The middle of the 16th century was a crucial time in the history of the Khanate of Siberia in general, and the Taibugid state in particular. The annexation of the Khanates of the Volga region to the Russian State in 1552–1556 turned the Khanate of Siberia into a direct neighbour of the Russian dominions in both the North Urals and the entire Western border. The Taibugids lost their opportunities of having a direct bond with the Islamic states of Crimea and Turkey, and also lost the support of Kazan rulers who were not interested in the reestablishment of Shaybanid power in Siberia. The threat of a Shaybanid invasion abruptly increased, especially after the heirs of Siberian Shaybanids Kuchum Khan and Ahmed Giray had gotten in closer with the rulers of the Mangit (Nogai) Ulus and the Kazak Khanate.

In these conditions Yadegar Beg of the Taibugids attempted to gain support from the Russian Government, and in January 1555 the Siberian campaign had arrived asking to annex the Siberian state to the Russian nation. The ambassadors accepted paying out annual taxes to Russia at a total of 30,000 sables based on the number of men. Ivan IV solemnly assented to take Siberia 'under his princely control'. Ivan IV included the words 'and the ruler of all Si-

beria' [PSRL, 13, 1957, p. 248] in his title, but never actually helped the Siberian Begs.

However, the expectations on both sides of the agreement were met with disappointment. Throughout 1556–1557 Russia and Siberia exchanged missions, and the Russian ambassadors were satisfied with mere demands for the payment of taxes and tax debts. On the other hand, Siberian ambassadors demanded military aid and paid taxes in very small amounts (only 1,870 sables were ever delivered instead of 60,000), referring to the fact that 'shibansky tsarevitch waged war and many people of his were captivated'. In 1557 the ambassador of Yadegar Beg delivered Moscow a charter from Beg that guaranteed the repayment of taxes and the retention of the Siberian Principality's vassal dependence on Moscow, and also applied again to the military for help. Further on there were no longer any negotiations, as the Government of Ivan IV limited itself to including the words 'and the ruler of all Siberia' in his title, and having convinced himself for all intents and purposes that obtaining a significant portion of taxes is impossible, refused the Taibugids help. On its behalf, the rulers of the Taibugids were struggling against Shaybanid attacks in Western Siberia and had opportunities to continue a futile dialog with Moscow.

In 1563 Isker fell. The Begs Yadegar and Bulat were killed and their heir Sayyid Ahmad Beg (in the Russian chronicles known as Syedyak, the son of Bulat Beg) was dispatched to Central Asia. The State of Taibugids ceased to exist.

§ 2. The Khanate of Siberia at the End of the 16th Century to the Beginning of the 17th Century

Alexei Matveev, Sergei Tataurov

The campaign of ataman Yermak's troops was not anything extraordinary either for the population of West Siberia or the establishment powers of the Khanate of Siberia. Many people of that state heard from their ancestors the tale about a great campaign set in motion by Ivan III in 1483 and carried out by the nautical battalion of voivodes Fedor Kurbsky and Ivan Saltykov Travin. It is likely that in the

16th century Muscovite troops crossed the Ural Mountains and devastated the local population, taking away the most valuable thing they could from it: Siberian furs. On the other hand, the troops of Tatars, together with the allied Khanty and Mansi princes, also regularly crossed the Kamen in the opposite direction and raided the populations living there. Therefore, the news about Yermak's troop movements was

initially perceived by the population rather calmly, which is a fact confirmed by the peaceful arrival of the Cossacks in Tarkhan and the meeting between Yermak and the noble Tatar Kutugai, who was sent there by Kuchum Khan to collect taxes. G. Miller interpreted the actions of Yermak as a ruse towards the Khan so he would not be afraid of the arrival of Yermak or prepare for military operations, but allegedly that trick failed [Miller, 1992, p. 218]. However, the very fact that Kuchum did not order the army of the Khanate of Siberia under the leadership of Mametkul to return from the campaign to the cities of the Kama, tells us that the Khan really did expect a peaceful way out. Only after Yermak began occupying and directly raiding the Tatar cities located on the rivers Tura and Tobol did it become obvious that the purpose of that campaign was slightly different. At the same time it was quite possible that Yermak and his warriors were initially going to pass the Northern way, which was habitual for people from Novgorod and Moscow, but certain other reasons caused them to change their plans and transition to raiding the Khanate of Siberia,—that is, to direct military actions against that state.

The real beginning of open war must have rallied the population of the Khanate of Siberia together. However, the real tragedy for Kuchum Khan was the fact that it this never happened. In fact it was much the opposite: from that moment on the population of the state was splintered into two irreconcilable sides, and the larger part of the population of the Khanate supported Yermak. The cause of this paradox can be found in the events that happened in West Siberia in the 1560s after Kuchum of the Shaybanids occupied Isker and seized power in the Siberian Principality of Taibugids in 1563. In many of the events to follow the brothers Ahmad Giray and Kuchum, succeeded in founding a new state here, the Khanate of Siberia, and the noble elite of Taibugids lost the lion's share of their dominions at the court of the new Khans. Certainly, the Taibugids retained the hope that their former regime would get back on top, but Kuchum Khan with the help of his strong, devoted armed forces, did not let that happen. Moreover, he adhered to a purposeful policy of transferring dominions to

his devotees among Tatars in the service, so a number of the dominions and the authority of the old nobility was constantly decreasing. The Taibugids badly needed a leader who would be able to oppose Kuchum.

One more reason that resulted in the split among the population of the Khanate of Siberia was the question of religion. In 1560–1570, as Kuchum formed his state with purpose, he understood beyond the shadow of a doubt that without a united religion—Islam (which also included the foundation of a uniform judicial system)—it would be very difficult to unite the population of the Khanate, which consisted of an innumerable number of small ethnic groups. At the beginning of 1570s, he therefore invited preachers of Islam from Central Asia to visit. It is known that ultimately two Islamic missions arrived in Isker and started to actively and heavily propagandize Islam among the population of the Khanate. After Kuchum was defeated and he left Isker, Islamic preachers, namely Din-Aul-Hojja and his family who headed the mission, had to migrate away from the ancestral dominions of Taibugids and settle down in the Trans-Irtysh, one of the settlements of the Ayalyn Tatars. Thus, Kuchum made enemies among ministers of the former religion through his Islamisation policy for the population of the Khanate of Siberia, who became more active after his defeats.

Perhaps there were also some other circumstances of active governmental organisation that irritated the separate population groups of the state. For example, after the migration of new groups of the population from the Nogai and Kazakh Hordes to the Southern and Eastern edges of the state, and their unpublicized proclamation as the 'backbone of the State', the former ancestral aristocracy of Taibugids had to bear a social humiliation that resulted in the rise of inter-ethnic confrontations.

As a result, the arrival of the armed troops of Yermak from the Kamen river became the first chance the Taibugids had to overthrow the hateful Kuchum Khan and bring back their dominions after 1563. In this situation, it was no wonder that Yermak did not stay long on the Tura river and soon stormed the towns of Kuchum's grand people directly in Trans-Tobol (e.g., Karachin townlet), while the dominions

Yermak's Expedition to Siberia. Lithograph
[Brief Siberian Chronicle, 1880]

of the Taibugids were for the most part safe. At the same time the Taibugids operated completely logically and according to the existent political arrangement of the forces. According to that fact, even in 1555 during the rule of Edigur, the Siberian Principality of Taibugids had accepted subservience to the Muscovite state and paid taxes to their rulers. But in the 1570s, Kuchum Khan ended those relations. The Taibugids were dissatisfied with Kuchum's rule and reestablished the status quo by their revolt in favour of the Moscow Tsar. Perhaps the oppositionists supposed fairly that it was better to have the tsar thousands of kilometers away and limit these annual tax relations instead of enduring the Khan-reformer who day after day was consolidating his power to the prejudice of the socio-economic and political positions of the former ancestral aristocracy. Apparently, the Taibugids hoped that after Kuchum's death they would crown a new Khan/Prince who would represent their interests, as governor of the Moscow Tsar. The appearance of Syedyak of the Taibugids in the 1580s on the territory of the Khanate of Siberia, who had pretensions of returning the throne of Isker, confirms our assumptions.

In our opinion, the passive actions of the Taibugids predetermined the defeat of Kuchum's army in the battle on Chuvash Cape. The Siberian chronicles describing this event never mention any of the noble Tatar's names, except the name of Mametkul, who really

struggled right down to the last seconds of his life. There was only one faithful khan cavalry under the leadership of Mametkul, along with the Khanty and Mansi princes with their poorly armed warriors who ran away on the first night. It is very likely that the aristocracy of the Taibugids, having bet on Yermak, under various pretexts did not help Kuchum and did not bring its army to the Chuvash Cape, which essentially weakened the forces of

the Khan. After Mametkul was wounded during the fight, the Khan had to withdraw his cavalry, because as an experienced commander and politician he did not have any right to destroy his one and only support in the battle against Yermak. It is most probable that he understood perfectly well that even if at the cost of that loss he dealt with Yermak, he would remain with nothing against the Taibugid troops. Such a state of affairs also explains the circumstance that after the battle on the Chuvash Cape Kuchum retreated at once from the territory that turned hostile to him: the Tobolsk Trans-Irtysh. The Tatar nobility, vice versa, right after the occupation of Isker by Yermak, came to serve him [Tychinskikh, 2010, p. 46]. The Siberian chronicles states directly that only the treason of the Tatar Seybokht (Senbakht Tagin), became the reason for capturing Mametkul on the Vagai river.

Much later in 1588 Khan Kuchum waged a campaign against Tobolsk. Kuchum did not expect to occupy the city, because the true goal of that campaign was revenge on the Tatar aristocracy that betrayed him in the most crucial moment. G. Miller wrote about the same mission while discussing Kuchum's raid to the Kaurdak and Salym volosts in 1590: 'It was his revenge on those Tatars who did not recognise him as their tsar and instead submitted to the Russians' [Miller, 1999, p. 272].

Therefore, we believe that it was the treasonable political actions of the members of the

Taibugid ancestral aristocracy that became one of the primary causes of Kuchum Khan's defeat in the war against the Muscovite state. As is well known, eventually Kuchum Khan handled Yermak's troops.

In addition to Kuchum's foes, there were also some groups of the population in his state against which Yermak and his warriors were archenemies. Thanks to these people, Kuchum's war of independence went on for 17 years, with an additional 50 years under the rule of his children. Kuchum's primary devotees were the Tatars of Kazan that left the Volga in 1550–1570. Even in 1552 in the course of the savage capture of Kazan many of its Islamic sacred places and madrasah were destroyed, and a great number of defenders of the city and its civilians perished. Muslim civilians were expelled from the city; the highest mosque elite of Islam ran away in fear. The relations between the Siberian Turkic-Tatar States and the Khanate of Kazan by that time had a rather long history of political, merchant and religious interactions, so the refugees found themselves at home there quickly. They supported Kuchum of Shaybanids during his religious reformation and the organisation of the new system of administration. There was of course no place for those people to retreat, so they supported the Khan of Siberia to their last breath. The battle between Yermak and Kuchum took place near the townlet of Chuvash, which was 'apparently populated by the Chuvash people evacuated from Kazan by the Khan' [Ibid., p. 224] and located on the cape of the same name. As it happens, the Cossacks were not able to take possession of the townlet before the battle.

The second group of the state population that was dedicated to Kuchum was from Trans-Irtysh and Baraba. They were members of ancestral subdivisions of the Nogai and Kazakh Hordes, along with Uzbeks, and had been relocated by Kuchum Khan to his state [Abdirov, 1993, p. 207]. The reasons why they were so obsessed with Kuchum were clear: the Khan gave them a new motherland, a new way of life, and initially he was a shield and means of support for them as well. The immigrants received as much land as they could domesticate. Moreover, they even obtained the right to collect *yasak* and participate in campaigns on neigh-

bour territories. They were not at all peaceful cattlemen and ploughmen due to the fact that all the peaceful ones stayed back on their native land. The population of Trans-Irtysh and Baraba formed the most battle-ready part of the Khanate of Siberia. That part of the armed forces (for the most part cavalry) with numbers of about 2–3 thousand people was permanently near the Khan, except for a couple campaigns, for instance in Trans-Kama where the forces were under the leadership of Mametkul or Alei. These warriors were devoted to Kuchum practically until the very end. B. Dolgikh in his research wrote that when Kuchum ran away to the steppe after he was defeated by Yermak, he was accompanied by mostly the same people who came with him from Central Asia, but not the native Siberian Tatars [Dolgikh, 1960, p. 62]. The deep devotion of that population is confirmed extensively in chronicles. In the 1590s the Ayalyns left their settlements and built new townlets on another territory under the order of the Khan [Miller, 1999, p. 288]. After Kuchum had to go East to Baraba because of pressure from the Russian voivodes, the part of that population from there nevertheless returned to their ancestral home. Throughout the 17th century they supported not only the raids of Kuchum's devotees to Russian settlements and strove to resettle on independent Russian territories, but also became participants of important anti-Russian rebellions more than once. The greatest uprisings were the rebellion of the Barabian Tatars in 1628 and the rebellion of the Tara Tatars in 1629.

Thus, in the struggle against Yermak, Kuchum relied predominantly on the non-indigenous population of West Siberia. After the defeat on the Chuvash Cape and withdrawal from Isker, the Khan did not have much of a way to resist Yermak and his followers. The Eastern part of the Khanate that remained under his control did not have the resources to maintain a significant number of troops. For example, the low population density of Trans-Irtysh and Baraba made supplying large military unions with provisions impossible. Kuchum therefore constantly had to divide his army and send it 'barracking' in different uluses. That circumstance certainly decreased its general military efficiency. Despite successes in local wars, all

The Chuvashsky Cape Battle.
Picture by L. Bobrov

those factors in the struggle against Yermak led to his defeat against the Muscovite state and the Taibugid opposition that had joined up with the 'Russians'. Two of his main commanders—Mametkul and Karacha—were defeated; the first one was captured and sent to Moscow, and the second one left Kuchum Khan after the failed siege of Isker. Nevertheless, Kuchum Khan defeated ataman Yermak near the Vagai river at night on 5–6 August 1584.

According to the Remezov chronicle, after his demise Yermak was proclaimed a God by Tatars and buried in the Baishev Cemetery according to Muslim ritual. The funeral was being carried out in the accompaniment of a number of metaphysical conditions. The most striking was the fact that the burial ritual of Yermak gathered together all the previously irreconcilable sides of the conflict: the murdered Yermak, Shaybanids Kuchum Khan, prince Seydyak of Taibugids and acceding to him Karachi, and also the Khanty and Mansi princes. What was Yermak's funeral? Perhaps, it was an unsuccessful attempt to join Kuchum and the Taibugids? We will never know the real answer.

Between 1584 and 1598, a period of almost fifteen years, is a significant period of time for Kuchum as an active and ambitious ruler with political, military and material support from Bukhara, to do nothing. Moreover, the geopolitical situation in West Siberia was working perfectly in favour of Kuchum. On the one hand, after the death of Yermak the Russians 'took a break' and instead of heading South by the Irtysh and Ishim rivers started paying attention to the North. On the other hand, in 1588 voivode Dmitry Chulkov, having captured Seydyak of the Taibugids and Karach in Tobolsk, liquidated the rivals in the struggle for power in the Khanate of Siberia. Kuchum took advantage of that position and in the summer of 1590 had already reestablished his rule under a significant territory of the Khanate of Siberia. He occupied the forest-steppe and steppe territories from the Ishim river to the Ob river. This 'restoration' was really quite challenging for Kuchum. The new geographic scope of the Khanate of Siberia demanded measures for its inner reorganisation and the strengthening of its borders. At the end of 1580s, Kuchum accomplished a mass resettlement of the taxable population from the North to the South along the Irtysh river valley. As a result, in the centre of the 'new' Khanate of Siberia along the Irtysh river and its inflows from the mouth of the Ishim river to the Om river, fortified Tatar settlements began cropping up, including the villages of Tartamak, Aitkulovo, Kirgap, Atak (Otak), Saitovo, Kumanovo, Chertaly, Bergamak, Intsiss, Molodtsovo, Chiplyarova (known to us from documents of the 17–18th centuries) [Tomilov, 1996, p. 192]. Proof of this fact lies in the partially investigated monuments from the later Middle Ages discovered near these settlements (Yekaterina's settlement V, Krapivka II in the Tarsky District of Omsk Oblast).

Another issue that required the Khanate army's redistribution was the maintenance of the southern Khanty communes living in the back of the right-bank terrace of the Irtysh. At that time, the Khanty of Trans-Irtysh were essentially the only population that paid yasak to the Khan. To ensure the supply of furs in the middle current of the right inflows of the Irtysh—the Tui, Shish, Uy and Tara rivers—

Kuchum relied on small military garrisons. Confirmation of this development in events can be found in the results of Omsk archaeological works from 2003–2006, when on right-bank inflows of the Irtysh at a distance of 50–100 km from the mouth of the river, small but well-fortified Tatar townlets (Nadezhdinka settlement VII on Tara in Muromtsevsky District, Koshkul IV on Ui in Tarsky District, Yamsysa III and IV on the Tui river in Tevrizsky District, Linevskaya sopka and The Grand Dock I on the Shish river in Znamensky District of Omsk Oblast) were investigated [Chagaeva, 1966, pp. 118–130; Matveev, Trofimov, 2006, pp. 69–86; Tataurov, 2005, pp. 210–212; Matveev, Tataurov, 2008, pp. 149–152].

In the southeast, in the Baraba steppe, the state border of the Khanate of Siberia was still shielded by frontier townlets and encampments of 'earlier' resettlers. In the southwest, state borders were reinforced through several dynastic marriages contracted by Kuchum with the ancestral nomadic elite. One of the wives of Kuchum Khan was the daughter of Shigay Khan (the Kazakh Khanate), who became an influential leader in the Kazakh Horde after the death of Haqq Nazar Khan. At the same time, Kuchum's unsteady positions surely rallied the Kalmyks and Kazakhs who wanted to participate in the devastation of his people. Due to that fact Kuchum had to strengthen his frontier armed forces.

Thus, in the course of his administrative and political measures in the second half of the 1580s Kuchum had to redistribute his troops, and their distribution did not allow him to make major operations against Russians. To be fair, it should be noticed that before Tobolsk was founded in 1587 the Russians were not a serious threat for Kuchum either. It was more important for him to build a complex mechanism for the domestic and foreign policy of his state. A significant reason for the relative weakness of the troops of the Khanate of Siberia in that

Tatars have found the dead body of Yermak. 13 August 1584.
Lithograph [Brief Siberian Chronicle, 1880]

period was the treasonous Tatar population that went over to the Russians.

This was a major blow to Kuchum's policy of 'gathering dominions' when numbers of the Turkic population suddenly plummeted in a number of districts in West Siberia. Peter Butsinsky compared the population numbers of yasaks in the middle of the 16th century and at the beginning of the 17th century and concluded that large numbers of foreigners perished during the Russian conquest of the Khanate of Siberia [Butsinsky, 1999, p. 26]. Thus, P. Butsinsky wrote that by the time of the foundation of the city of Tara (1594) there were 23 large settlements of Siberian Tatars in the district. Yet the Vasily Tyrkov patrol book of 1624 describes only three Tatar villages near the town on the right bank of the Irtysh river valley.

Despite everything, Kuchum managed to reconstruct his state. His campaign to Tobolsk at the end of 1580s demonstrated to the Russian authorities the necessity of building a powerful frontier settlement as close to the new borders of the Khanate of Siberia as possible. In 1592, the Cossacks of Tobolsk had prepared and reconnoitred the middle flow of the Irtysh to the mouth of the Tara river, and in 1594 they built the burg of a new Russian town—Tara—which played a crucial role in the destruction of the Khanate of Siberia.

The chronicle of the following military actions between the Khanate of Siberia and Tara's people who were serving in combat is described in the following text.

In 1594, there took place a 'reconnaissance via battle' by Grisha (Gregory) Yasyr from the city of Tara up to Irtysh. After that campaign it became obvious that Kuchum, having lost Tarsky Trans-Irtysh, was founding new fortified towns in the South and was resettling there part of the Ayalyn Tatars. To avoid a new consolidation of the Khan's power, in 1595, the writing head of Boris Domozhirov carried out a campaign to the Black townlet located between the Tara and Om rivers. The townlet was destroyed, and Ayalyn Tatars were returned to their former place of residence, the Tara river. Despite those successful campaigns Kuchum still essentially controlled all the dominions South of the Tara river, having shifted his headquarters from Irtysh to the Tara river in the townlet of Tunus. Therefore, in 1596 by the order of Tara voivode prince Andrey Yeletsky, it was the 'Barabinsky campaign' that had the goal of subduing Tatars from the volosts of Changula, Lugui, Ljuba, Kelema, Turash, Barma and Kirpiki. These troops were once again headed by the writing head of Boris Domozhirov. The townlet of Tunus was destroyed, the Tatars of the western Baraba volosts were partially destroyed, and another part simply ran away after their resistance was completely annihilated.

The campaigns of the Tara Cossacks in 1594–1596 forced Kuchum to abandon the Trans-Irtysh and move to the East, and in 1598 the sizable troops of A. Voyeykov shattered the Khan's chance of survival on the Ob river. Kuchum Khan ceased to be a military rival of Russia in Siberia because his state fell apart completely, and his successors needed a certain amount of time to re-establish a hierarchy of power and come up with certain economic and military benefits for themselves. In 1601, the son of Kuchum, Ali, was given the title as Khan, and from there on out the next stage of the opposition between the Khanate of Siberia and the Muscovite state began where the sons and grandsons of Kuchum, supported by the Kalmyks, played one of the crucial roles. In the scientific and educational literature these individuals are often referred to as the 'wandering tsareviches' [Vershinin, 1998, pp. 60–63]. In our opinion, this is not an entirely correct observation. A much more inappropriate depiction of them takes place if we are speaking

about the sons and grandsons of Kuchum Khan as eternal wanderers living on the southern frontier without a home and surviving only by raiding the dominions of the Muscovite state. In the Empire literature of the 19–20th centuries, the descendants of Kuchum are not often represented as illegitimate pretenders to the throne of their country, but rather as 'betrayers' who could contract an alliance with the Kalmyks and Kazakhs for their own gain.

We believe that the descendants of Kuchum should not be referred to as homeless wanderers. It is known that maintaining a nomadic or semi-nomadic economy distributed throughout the forest-steppe and steppe zones of Siberia and Kazakhstan was formed many centuries before the events we are describing here. At the end of the 16th century it was now in fact a neatly developed system of specific nomadic movements on well-known routes from winter pastures to summer ones and vice versa. Thus, the descendants of Kuchum in West Siberia at the southern boundary occupied their own territory and had an accustomed lifestyle. Otherwise, they would have struggled against other nomadic tribes who for a long time had been in possession of those pastures. In that case, they simply would not have had any time for a struggle against the Russians. But we all know that this is not true.

The dominions of the descendants of Kuchum stretched out along the southern Russian borders approximately through the entirety of West Siberia. Those territories were rather quickly and easily transferred by Russian administration into the hands of the Kalmyks who arrived there in 1606. Perhaps, the Russians hoped that the Kalmyks would eliminate the descendants of Kuchum on their own. It is an accepted fact that the border between the dominions of the Muscovite state and Kalmyks became the Kamyshlovsky ravine between the Ishim and Irtysh rivers, and the Om river between the Irtysh and Ob rivers. The Muscovite state could not maintain that border in the 1620s after the rebellions of the Barabian and Tara Tatars, who were Kuchum's former people. As a result, the border was displaced from the Middle Trans-Irtysh and Baraba 100–200 km to the North, and the remaining population began paying taxes to the Russians and Kalmyks,

who were allied with the descendants of Kuchum. Russia could only return to the border of 1610 in the 1720s, and firmly occupied it by the 1750s after building the Novoishimsky line of fortifications [Matveev, 2014, pp. 38–66]. Thus, the territory that was under the control of Kuchum's descendants significantly expanded after their successful military endeavours at the end of the 1620s.

Almost all their major raids were carried out with the support of the Kalmyk Taishas. By that time the Kalmyks had just come to those territories, but according to the customs of steppe rights (at least, at the very beginning), they did not consider them as their own ancestral territories, but rather as certain bridgeheads for future campaigns. Therefore, they did not have any territorial disputes with the descendants of Kuchum.

The Kuchum family strove to populate its own dominions with Kuchum's former people who did not want to live in the Siberian territories of the Muscovite state. The records of Tara voivodes starting in 1594 are evidence of frequent travels out of the Ayalyt Tatars' territories of the Trans-Irtysh to the South, in the lands uncontrolled by the Russians. This phenomenon had a wide-spread character for almost all territories from Irtysh to the East. The most significant withdrawal was when the Barabian prince Kogutai retreated with his people after the revolt was defeated in 1628–1630. He returned only in 1635 [Tomilov, 1981, p. 171]. Special military units were regularly sent from Tara to find and bring back the 'taxpayer'. We must therefore tread lightly when it comes to hackneyed information about the raids of Kuchum's men on the settlements of Ayalyt Tatars that supposedly resulted in the demise of a great number of civilians, and an even greater number being driven back to the steppes. Sometimes the population itself even burnt their own dwellings and went into lands uncontrolled by Russia. There were plenty of reasons for them to do so, but the most important was the extremely adverse living conditions the Russian administration created for the indigenous population.

In fact, throughout the entire 17th century there was a ceaseless war in the forest-steppe zone of West Siberia between the Russian and

Turkic populations. As a result, after that attack the population of natives was reduced by several times. They were expelled from their best lands and forced to resettle in inconvenient or other random places determined by the local administration. Thus, for instance, the suburban (Bukhara) village in Tara was founded, which was located on the lower Irtysh floodplain and submerged in water annually during the floods. The office of the Tobolsk voivode was inundated with petitions from the Siberian Tatars about the unauthorized seizure of their lands by the Russians. The Russians were constantly using Tatar trading grounds for their own purposes.

Another problem for the Tatar population was taxes. The Russian voivodes turned yasak collections into a system of extortion, forcing the local population in addition to the mandatory taxes to pay a large amount of tax 'gifts' related to various holidays and birthdays of the reigning family. These indirect taxes often greatly exceeded the regular yasak rate.

Another point of confrontation between the Muscovite state and former people of the Khanate of Siberia was the issue of religion. The local Russian administration fiercely resisted the spread of Islam among the Turkic population, understanding that process as a form of protest against Russian colonization. Due to that fact a frequent occurrence in West Siberia was the burning of mosques, murder of preachers and forced baptisms [Tomilov, 1992, p. 142].

All of these negative living conditions for former people of the Khanate of Siberia in the Muscovite state ensured a constant flow of people into the territories of the Kuchum family. Among the refugees they recruited soldiers to fill out their troops.

During the first half of the 17th century the Kuchum family had their own permanent settlements in the form of townlets placed by the Kuchum Khan on the Chanov lakes that protected the border at the time of the Kalmyk raids on the Khanate of Siberia. Part of the refugees were safe under their protection, and the other half settled in the vast expanses of the Baraba forest-steppe. These were groups of a settled population. The southern nomads that remained at the border also did not 'wander without a home'. They continued throughout

this period to live out their traditional nomadic lifestyle. It is hard to imagine a better home for a nomad than his yurt.

Thus, at the very minimum the sons of Kuchum were not 'homeless', 'vagrant', 'cossacking' princes. During the first half of the 17th century under these turbulent border conditions

they reigned over their territories and taxed their people living in settlements. They had the sacred blood of Chinggis Khan, which despite all the strife between different ethnic groups of the Turkic population, raised their position very highly and helped them find allies pretty much anywhere throughout the Asian steppes.

CHAPTER 4

The Nogai Horde

Vadim Trepavlov

The Political System. In its heyday (the 16th century) the Nogai Horde occupied a vast territory of eastern Desht-i Qipchaq. Its borders in the east and the south approached the upper reaches of Tobol and Nura, running along the Sary su river and then along Syr Darya to the Aral Sea. The Volga river served as the western boundary for a long time. Eventually, Nogais began settling on the pastures of its right bank. In the 17th century they settled in the Black Sea region and the North Caucasus, abandoning their native Trans-Volga steppes. The northern borders of the horde can be determined very tentatively: a large part of the present Bashkortostan was under control of the Mangit Beys.

The title of a Nogai ruler was the term '*Bey*' or '*Ulubey*'. It is a late East-Kipchak form of the general Turkic word '*Beg*'. In the Turkic political entities of 14–16th centuries the word '*Beg* (Bey)' was a synonym for the Arabian-Persian word '*emir*' and the Mongolian word '*noyon*'. All those terms referred to the nobility belonging to the rank below that of the dynastic ruling aristocracy (who used such titles as '*khan*', '*sultan*', '*oglan*', '*tore*'). In different regions '*Bey*' also could designate a tribal elder (for Bashkirs and Kazakhs), and the head of the tribe, nominally representing the tribe under a Khan (the Crimean and Kasym Khanates), and the highest official after a khan (the Golden Horde, the Uzbek Khanate), and merely 'bosses' in a wider sense.

All the tribes of the Nogai Horde initially were headed by beys, and above all of them was a bey of the Mangit tribe. In addition, there were 'serving' beys at the court of the supreme ruler. In that paradoxical situation, when the overlord held the same title as a lot of inferior subjects, a way to differentiate the Mangit leader was needed.

The Nogai noblemen (*murzas*) applied to the head of the horde, using the expression '*Bey Hazrat*',—that is, 'Prince Majesty', in the medieval Russian translation. The Nogai messages to the neighbouring sovereigns most clearly demonstrate the distinction of the supreme beyship (although almost all such documents are preserved not in the original, but in translations). The rather humble expression of 'king-size amongst the princes Sid Ahmatov princely word' in 1535 simply reveals the superiority of Sayid Ahmad over other beys. The nephew of Sayid Ahmad, Urus, who took the throne in 1578, introduced himself more explicitly: 'of the Mangit sovereign from Prince Urus' (1578, 1581). In this case, the title outlines the territorial and ethnic limits of his power. Here the adjective 'Mangit' is a synonym of the word 'Nogai',—that is, the same Urus in 1579 declared to the Russian ambassador: 'In the Nogai land, I am the prince and the sovereign of all the Nogai lands'. However, the verbal entourage of Ishmael Bey was much more pretentious in a letter to Ivan the Terrible in 1560: 'From Prince Ishmael, sovereign of all Tatars'

[Russian State Archive of Ancient Arts, f. 127, inv. 1, file 5, sheets 4 reverse, 190 reverse; file 8, sheet 230 reverse; file 9, sheets 152 reverse; file 10, sheet 86 reverse].

However, neither beys themselves, nor the Russian correspondents had any illusions about the scope of power 'in the Nogai'. Beys took the most lavish titles during the period when their horde was in a relatively stable state, powerful and influential. The reign of Sayid Ahmad and Sheikh Mamai,—that is, the 1630s to 1640s, can be considered as the apogee of power. Sheikh Mamai even dared to borrow his throne's designation (*bab-i ali*) from the Ottoman sultan. In the Russian translation of the document of 1548 it means: 'Of the highest threshold of the sovereign and the master, from the warrior of the pious Prince Sheikh Mamai' [Russian State Archive of Ancient Arts, f. 127, inv. 1, file 3, sheets 18–18 reverse].

The official full title of a ruler of the Nogai Horde was the term '*ulubey*'. 'Grand prince' (*ulubey*), as a rule, accompanies in the Russian texts the name of Beklyaribek Edigu, the ancestor of Mangit Nogai beys. In the translations of Nogai documents Sayid Ahmad was also called the 'grand prince', and his post of bey was called the 'great principedom'.

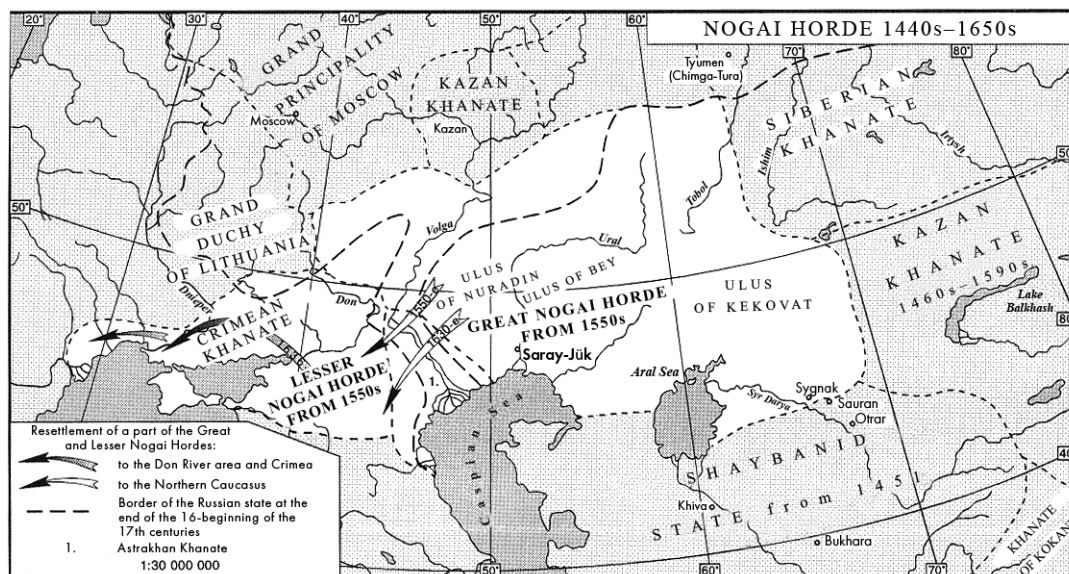

Sometimes, the Crimeans titled the head of the Nogai Horde in the same way. But in the eyes of Giray dynasty, the Nogai ruler had never been their equal-monarch. The princely rank formally assigned him a place at the foot of the throne, but not beside it. The Bakhchysaray office repeatedly emphasized that an *ulubey* was nothing more than a servant (*Karachi*) of the Crimean Khan. And in 1620, Jani Beg Giray Khan tried to bypass the Russian tsar to appoint one of the *murzas* to a vacant position of supreme bey, and at the same time 'made him his own grand boyar and a kind friend for him' [Russian State Archive of Ancient Arts, f. 127, inv. 1, 1616, file 2, sheets 239].

A rank of *ulubey* also was not highly regarded in Turkey. Istanbul dispatches to Urus in the 1570s to 1580s titled him as just 'Beg-murza', 'Nogai Hakim', 'Bey and murza of the country of Great Nogais', and Yusuf was designated behind his back as just 'one of the Nogai Beys' [Bennigsen, Lemerrier-Quelquejay, 1976, p.227].

The Russian princes always called the Nogai leader by the title of prince and, depending on the state of foreign affairs, considered him as either a brother, a friend, or just a lackey. Up to the mid-16th century both Moscow, and the capital of the Nogai Horde, Sarai, were under control of the 'grand princes'. Ivan the Terrible attainment of the statute of tsar was a principle milestone in the elimination of nominal equality between them. Together the 'tsars' of Kazan, Astrakhan, Siberia and later Moscow, the Trans-Volga rulers were considered nothing more than just 'Nogai princes',—that is, the descendants of 'great prince' Edigu.

The close blood relations in the core of the ruling clan of Edigu imbued the bonds between its members a visible patriarchal character. Despite a variety of degrees of consanguinity with bey, *murzas* regarded him as the 'father and uncle'. So, formally he took a senior place in the clan, the patrimonial elder, the patriarch of the Nogais. In the eyes of neighbours, he strove to appear as an absolute sovereign: Urus' words quoted above are about the fact that he was the ruler of all the lands of Nogais; in the same document he described *murzas* as 'my serfs'.

But in fact, there were no any practical means to force relatives-*murzas* to submit to the Bey's will at his disposal. In 1611, in response to a Russian Government suggestion to send the Nogai troops to help against the Poles, and to mobilize 'not all hunters, but also other slaves' (that is, to compel by force), Ishterek Bey answered frankly that 'their horde is free... those who wants to, goes, and no one can be sent forcibly'. At that time Ishterek could threaten disobedient *murzas* only with his emigration, carting away as a 'Cossack with their ulus' and calling on God and the Russian army for help. *murzas* tolerated his powerful authority for 'old age' (that is, seniority in the clan.—V.T.) and 'while he...was strong with his Ulus people' [Russian State Archive of Ancient Arts, f. 127, inv. 1, 1617, file 5, sheet 4; Acts, 1918, pp. 18, 21]. As soon as a *murza* acquired his own strong and populous ulus, he began to follow an independent policy. This situation existed as a trend in the 16th century and fully revealed itself at the beginning of 17th century by the time of disintegration of the Nogai Horde.

The Nogai Horde. Map by I. Izmaylov

It was no wonder that the most important political issues were solved not solely by a bey, but in council with the most powerful aristocrats. Such problems included, in particular, general Horde military activities, relations with foreign monarchs, and international alliances and coalitions.

All other yurts erected on the ruins of the Golden Horde were ruled by sovereigns of the branched clan of the Chinggisids. Nogai heads who did not belong to that clan did not dare to claim the title of Khan. Basically, there was one more way to establish a monarchic status, and that was through the formation of a 'super-state', successful military operations, which would force neighbours to recognise any rank adopted by the Nogai rulers. Some materials in the sources suggest that such an attempt was made in the Nogai Horde at the end of the 1530s. Having murdered the Crimean Khan in the West after inflicting a crushing on him, and having defeated the Kazakh Khan in the East, the Nogais believed they were entitled to form their own pyramid of power, which would be similar to the governmental structure employed by the defeated Khanates. In the document to Ivan IV, Sayid Ahmad Bey proclaimed his intention to assume the position of Khan. He was immediately awarded the title of *qalga*—heir to the throne, and a great *beklyaribek* commander. However, the neighbouring countries did not recognise his claims, and so the head of

the Horde remained a 'great prince' rather than a Khan. And the Beys had no recourse but to accept this.

A murza acting as a nuradin was the head of the right (western) wing of militia and the settlements of the Volga region, and a murza acting as a kekovat was the head of the left (eastern) wing and the Kazakh settlements. The titles '*nuradin*' and '*kekovat*' came from the name of the sons of Edigu. In the 1580s, in the Nogai Horde a vicarial post of Taibugids arose to manage the settlers from the Khanate of Siberia, which had been taken by Yermak.

In order to justify the legality of the rule of the Mangit leaders, a fantastic version was compiled for the court of the origin of the dynasty of Edigu from Abu Bakr Caliph, the father-in-law and successor of the Prophet, through the holy preacher Khoja Ahmed Baba Tukles. In Muslim Nogai society, this was reasonable, and sufficient legitimacy for the 'principality'. In the Nogai Horde, this conception became the official version, and murzas traced their genealogies to the epoch of Muhammad and the first caliphs. 'The census to the Nogai murzas, how many murzas are in the Lesser Nogai Horde', which was drawn up in August 1638, says: 'And our clan, according to this, the current year of 146 (that is, 1637/38—V.T.), is precisely 1047 years old' [Russian State Archive of Ancient Arts, f. 127, inv. 2,

file 32, sheet 16] Therefore, the beginning of the genealogy was traced to 591.

Most likely the development of the ideological conception had already occurred during the rule of Edigu. After all, he faced the need to legitimize his authority in the empire of Jochids, and to legitimize his domination over the Jochids at the turn of the 14–15th centuries. Not belonging to the dynastic nobility, the 'maker of kings' had to come up with rationales that would favour his position in relation to it. And to prove the origin from the Caliph, dating back a thousand years, was easier than claiming a kinship with Chinggis Khan.

However, adopting the mantle of a descendant of the first Caliph was not all he had to do to gain universal recognition. First, he also needed to make the figure of Abu Bakr meaningful for the general population of the Golden Horde, and second, he had to transform the genealogical legend into an instrument to rally the people around the beklyaribek. Those goals were promoted by the active Islamisation of the Kipchak population, which was launched by Edigu on the lands under his control.

Another important method employed to illuminate the hegemony of the Mangit leader was imbue his character with an epic quality. Already in the first decades after Edigu's death, legendary elements proliferated in writings about his personality and in his biography. His memory was preserved among the nomads of Desht-i Qipchaq for some time. Atop the Idigetau Mountain, in the Ulytau Mountains of (Central Kazakhstan), where, according to legend, a famous ruler was buried, there is an obo (a stone mound) where prayers and sacrifices were made in his honour. Over time, his image became truly sacred, and Edigu evolved into a hallowed ancient hero for the Kazakhs, while the Kara-Kalpaks revered him as the patron of horses.

The epic aura of the founder of the Mangit Nogai bey dynasty cast a glow even on his descendants. Among the Kazakhs, the descendants of Edigu were reputed to be aristocratic—'blue blooded' (ak suyak). This was explained literally—the ancestor of Edigu, Baba Tukles, was born of a woman whose pregnancy resulted from her consumption of a white powder made from a magic skull.

This combination of religion and genealogy raised the prestige of the Nogai dynasty in the eyes of the people, but did not add to his image abroad. His fictitious origin from the first caliph still did not provide justification to his occupying the throne of khan. After all, a bey is not an officially independent sovereign, and it is at the behest of a higher ruler that one is granted the title. The Nogais themselves chose their 'great prince'. The extant sources do not have detailed descriptions of the process. There are only some reports about the 'enthronement': 'And they were chosen to reign by murzas among themselves according to rank and majority, and sat on the throne in the Nogai Horde' [Russian State Archive of Ancient Arts, f. 127, inv. 1, 1641, file 5, sheet 27]. Formally, it was believed that ulubey was elected 'according to rank and majority' (that is, to seniority). The candidates for 'enthronement' put forward the thesis 'I'm the oldest' as the basic rationale for their selection. However, in practice, each bey sought to strengthen the power of his sons.

Yet, the Nogais could not just throw away the age-old procedure whereby the legal right of power was held by the Khan-Chinggisid. Therefore, until the 1550s they would herald the fictitious, puppet Khan. The names of such 'rulers' are very rare in the extant sources, because they had no influence in the Horde. Their only goal was to sanctify with their presence the real powers and authority of the head of the Mangits. By the second half of the 16th century, the beys Din Ahmed, Urus, Uraz Muhammad and Din Muhammad could rule without the dummy monarchs.

And from the beginning of the 17th century, the reign of a foreign sovereign to the 'princedom' was sanctioned. Thus, the Russian tsar would then confirm the election of a new bey by murzas through his special charter, and the Astrakhan voivodes developed a solemn ceremony to mark the occasion. In 1600, the newly elected Ishterek with the noblest murzas was asked to come to Astrakhan to receive the charter grant-charters from Moscow. Upon arrival, the Nogais found out that they had to carry out a quite literal act of ascension—the elevation to the Khanate. The voivodes came up with the idea of the murzas lifting Ishterek on felt cloth, in the same way that the Khans-Chinggisid

were anointed with their independent nomadic powers—in the Golden Horde and the Tatar Khanates. The murzas started pondering: 'They say that they did not even know that he, murza Ishteryak, was to be lifted on his mantle to rule...And from times long past this has yet to be'. However, having conferred the whole day, the ulubey was 'lifted on his mantle' for the first time in Nogai history [Russian State Archive of Ancient Arts, f. 127, inv. 1, 1641, file 5, sheets 32–33]. In 1622, the next and final Bey, Kanai, had no objections to this practice.

Turkic and Slavic rulers realized the power of the Nogai Horde, and before the beginning of the 17th century did not aspire to encroach on the sovereignty of its leaders. Within his dominions, Ulubey carried out the administrative functions which were the purview of independent nomadic ruler. After a council with the nobility, he would announce the annual routes for the movement of the herds and the people, point out a place to settle those who were subject to the IIs (tribal communities), and confirm the inheritance rights of murzas to the subjects of the ulus. The duty of the Supreme Commander was traditionally also allotted to him, because formerly, in the Golden Horde's time, a bey (beklyaribek) was the head of the armed forces of the state. However, as the administrative system took shape, the Nogais developed its own commander-beklyaribek,—that is, the nuradin.

A bey, in addition, had an obligation to provide his people with a comfortable existence, or at least a means of acquiring wealth. The Eurasian nomads often sought through raids on settled neighbours. But the Nogais often used peaceful methods, a barter trade and the collection of traditional periodic payments, the 'Mangit income', which came to them from the Khanates of Kazan and Astrakhan, and possibly from the Siberian yurt. After depending on Russia, the leaders of the Horde relied more and more on the 'sovereign salary'—money and presents from Moscow. The ability of the bey to arrange the supply of this revenue stream was a criterion of his competence. More than once the Nogai leader asked the king, the clerks, and voivodes not to send gifts to the murzas without going through him, saying 'I would myself give my royal salary to my brother and nephew, and

children'. Since 'all of them request from me treasures, but I do not possess a treasury, and I have nothing to give them. And that is my great quarrel' [Russian State Archive of Ancient Arts, f. 127, inv. 1, 1617, file 3, sheets 11–12].

The court of the ruler of the Nogai Horde was a combination of several bureaucratic agencies with offices, which were mainly engaged in financial matters. It was controlled by a rather poorly developed structure: few civil servants (*kara-duvan*, *teku-duvan*), clerks, literate members of the Muslim clergy. Such 'operatives' worked both at the court of the bey and in the capital of Sarai, and at the rates of the main murzas.

But from the beginning of the 17th century, the beys could rely only on their immediate relatives and a few scribes; all other actors disappeared during the unrests. In general, institutions of governance in the Nogai Horde development extremely inconsistently. Having reached an apogee by the middle of the 16th century, the administrative structure of the Horde entered a crisis stage, began a decline and was simplified. During the break-up of the Horde, the scope of powers of the central agencies was narrowed, and by the end of the second decade of the 17th century, these agencies wielded no authority.

Political history. The Nogai Horde maintained the rank of a Cossack entity in the early XVI century. In 1501, bey Yamgurchi (1502–1504) addressed Ivan III as 'uncle', acknowledging his and the Moscow Grand Prince's inequality. The Crimean Khan did not regard him as a bey in the same vein as Musa, who was appointed by Khan Yadgar. Yamgurchi had been crowned by the Mangit and Nogai elite. That is why Khan Mengli Giray gave him the title of 'murza', while Musa was given the title of 'prince' (bey).

According to Qadir Ali Bek, Hasan became the bek to immediately succeed Yamgurchi. The bey's authority and position could hardly be compared to those of his late brothers, Musa and Yamgurchi. In the face of the coming turmoil, when murzas were struggling for power, not all of them recognised Hasan's leadership.

In 1508, an open conflict erupted in Nogai Horde. Some authors interpret the civil strife of the 1510s as a showdown between Musa's

two sons. However, the hostility was not limited to murzas' personal grudges. In his final days, Musa as well as Yamgurchi and Hasan took over the leadership of the nogais according to the decree of the meeting of the elite. There was no official arbiter in the dynasty disputes, as there was no longer the volition of any higher-ranking governors who had once appointed beklyaribeks. After Waqqas's children died, and his grandchildren entered the political arena, they split over the issue of inheriting the title of bey. Musa's elder sons by his two wives could not agree on a division of jurisdictions. Both Alchagir and Sheikh Muhammed proclaimed themselves beys.

In the mid 1510s, the Nogai Horde was at the verge of disintegration. The Nogai ulus dispersed, the opposing murzas' groups fought, killed and robbed each other. The enemies, weakened from internal strife, tried to get support from the Astrakhan and Crimean Khanates, albeit ready to betray their allies at any time.

Thus enfeebled, the Horde was conquered by the Kazakhs. Kasym Khan decided to restore the sovereignty of the eastern Jochids over the Mangit Yurt. In 1519, his troops came to the Volga, and the Nogai murzas fled to the West to stay under the patronage of the Crimean Khan Muhammad Giray.

In 1521, Kasym died and was buried in the tomb in Saray-Jük. Everything he achieved and conquered began to fall apart. The Nogais were gladdened by the news of the death of the powerful Khan. Musa's children, Mamai, Sayid Ahmad, Sheikh Mamai, Yusuf, etc, as well as Alchagir's sons managed to gather the nomads scattered on the right-bank pastures and encourage them to take revenge. Thus began the Nogai 'reconquista'. The alien Kazakhs defeated by the Nogais fled to the South-East, and Kasym's successor, Khan Tahir fled to Moghulistan. Now it was the Kazakhs who were distraught and who fell apart. The Nogais would attack their encampments and avenge their recent defeats.

After Tahir retreated to Semirechye, the wide open spaces of the Eastern Desht were left exposed to the Nogai troops. Musa's sons quickly restored their domination over the Trans-Volga and Trans-Yaik steppes. Since that time, for almost a century almost all refer-

ences to the Nogai tribal elite disappear from the sources, except for the Mangit. During the 'reconquista', the foreign Kipchak tribes supporting Kasym seemed to have been exiled, or killed, or removed from power. The Mangits took control over the Nogais of all els (tribes) of the restored Horde.

Over the first two decades of the 16th century the Nogai Horde suffered a genuine shock. Once Musa's brothers and sons inherited the influential and powerful Mangit Yurt, they came close to losing their subjugated territories and peoples. Conflicts between murzas, the emergence of a number of beys promoted by opposing elites, and attacks by the Crimeans and Kazakhs pushed the nomadic empire to the brink of disaster. However, in the end the historic circumstances had become favourable for this. In the East, the Nogais managed to use the turmoil in the Kazakh Khanate after Kasym's death, and summoned the strength for an attack on eastern Desht-i Qipchaq. The Kazakhs were soon driven back to the Uzbek borders, and their former territories fell to the Nogai murzas. In the West, after several humiliating instances of being forced to submit to Crimean governance over them, the Nogai leaders managed to reverse the situation. The 'reconquista' against the Kazakhs was accompanied by the Nogai leaders' victory over the Crimean Yurt (1523), enfeebling and subordinating the Astrakhan Khanate. After Alchagir, his brother Mamai was put forward as the leader of the Nogai Horde. However, he did not deign, or else was unable to arrange his ascendancy to the 'princedom'. He was first and foremost a military leader, a commander. Under his leadership, the Nogais achieved decisive victories in the 1520s, that enabled them to transform their state into a powerful, independent nomadic empire.

From approximately the early 1530s, the documents refer to Sayid Ahmad (Sheydyak) as the head of the Nogai Horde. It was evident that he was proclaimed a bey at a meeting of the elites,—that is, the orthodox Mangit nobility did not regard him as the true head of the Nogai, because he had not been appointed to the status of beklyaribek by a Khan.

And so the offspring of earlier beys, whether or not they were seen as such, would stage

revolts. Sayid Ahmad did not have the military means to subdue the large Nur ad-Din clan, and bring them in as allies. He was forced to work out ways to interest the murzas in the steadfast supreme power of the bey, as well as in the stability of the Nogai territories. The most important objective in this regard was to satisfy the ambitions of the leading aristocrats, the elder statesmen of the ruling family—Mamai and Sheikh Mamai. The first step was to engage in a constructive discussion of the situation, and this involved a meeting of murzas.

The external conditions also highlighted the need for negotiations, as well. The triumphant victories over the Crimean and Kazakh Khanates in the 1520s enabled the Nogais to regain a level of power unseen since the days of Musa. Indeed, it was likely no exaggeration when Sayid Ahmad said to the Grand Prince Ivan Vasilyevich in 1535, 'Tsar Temir-Kutlu's children (that is, the Astrakhan khans, V.T.) begged our pardon; Jacob, the tsar's son, begged our pardon with all his comrades and servants. The Cossack tsar Kozha Muhammad and his fifteen sons live together with my 300,000 Cossacks' [Ambassadorial books, 1995, p. 131]. The Girays were terribly afraid of the Trans-Volga nomads, and Kazan curried favour with the 'countless Nogais'. The universal acknowledgment of the power and authority of the Nogai Horde did not carry with it any devotion to it. The local owners were largely afraid of the Mangit beys and hated them, as they had essentially usurped the authority to rule from the ancient clan of Chinggis Khan. Thus, the words of Danila Gubin, the ambassador of those times, ring true: 'We are surrounded by foes'. This environment required the union of murzas both to maintain military and political dominance in the steppes, and to stand against the counter attacks mounted by the various 'foes'.

Those goals, vital for the ruling house of the Nogais, prompted the most influential murzas to suspend any conflicts. In spring or summer of 1537, a meeting of reconciliation took place. The main goal was to unite the different groups of nobility and their leaders. To this end, the Nogai Horde carried out a regulatory reform.

Sayyid Ahmad was deemed equal to a khan (but not a khan, which was impossible for a non-Chinggisid). Sheikh Mamai was named as

his successor,—that is, his successor, similar to a qalgay under the Tatars. Hadji Muhammad was offered the title of beklyaribek. He also could have a successor, similar to a qalgay to a beklyaribek. This title was offered to Mamai, but he was embittered by the failure of his long-held ambition to wreak vengeance upon the Russians and refused to take part in the power distribution. And so it was Yusuf, Musa's next oldest son, who served as the qalgay to the beklyaribek. In the same way, honorary titles were distributed among almost all of the murza nobility. From then on, two of the three most authoritative leaders, Sayid Ahmad and Sheikh Mamai, began acting in unison. Other murzas joined the alliance, despite Mamai's scepticism and disregard for what for him were new procedures.

It seemed risky to encroach on the power monopoly of the Chinggisids. After all, only a descendant of Jochi could be regarded as a true sovereign in the post-Golden Horde yurts. However, the previous history of the Mangits and Nogais shows how this persistent tradition was gradually being overtaken. At different times and in different territories, Khans used to be Mangit puppets. Thus, the beys of the Mangit yurt ruled at their own discretion, concealing their sovereignty with a decorative figure from the dynasty they had arranged. In the late 15th century, Musa bey decided to do without a false sovereign, and he ended his life at the height of glory and power. No one dared question his authority (essentially a khan's sovereign rights). The Beys Yamgurchi and Hasan tried to systematize and preserve the same order. Then, turmoil and the Kazakh expansion put an end to the Horde's transformation into a state. But after the 'reconquista' and the decision to unite, the earlier movement toward statehood again took on life.

The only obstacle preventing the Nogai Horde from becoming a Khanate was the lack of genealogical relation to Jochi. And legitimacy was dependent on the rule of a Chinggisid. There was all of one mention of this. In September 1537, the bey informed Moscow of the appointment of a new tsar, 'I crown Khan Bulat Saltan, my brother-in-law. And you shall regard his ambassador as if he was ours. And regard him ("the tsar", V.T.) as you do me' [Ibid., p.

205]. Tsarevich Khan Bulat is not mentioned in other sources. He might have been the Kazakh sultan Haqq Nazar, the late khan Kasym's son.

The reconciliation of the murzas was followed by the distribution of ranks under the hierarchy and, what is more important, of jurisdiction and apanages within the Nogai Horde. Sheikh Mamai was charged with ruling the eastern Trans-Yaik territories. He controlled the steppes of Kazakhstan and Southwest Siberia. His territories spread from Yaik to Syr Darya and Irtysh.

The western group was given the Volga region steppes. Hadji Muhammad (Koshum) became the senior murza. It was with pleasure that he accepted this appointment, and he had it in mind to settle on the right bank of the Volga. He asked Ivan Vasilyevich for carpenters and tinsmiths to build his own city on the Volga (the six-year-old Grand Prince did not provide him with craftsmen under the pretext that they were already occupied).

Thus, the Nogai Horde was split into three parts: the eastern, ruled by Sheikh Mamai, the central, ruled by Sayid Ahmad, and the western, ruled by Hadji Muhammad. This was a typical nomadic (and not just nomadic) structure consisting of a centre with wings. The political tradition of the Horde presupposed the left (eastern) wing to be ruled by a khan, and the right (western) wing—by a beklyaribek. Sayid Ahmad was bey, a title equal in stature to beklyaribek, though he was not recognised as a khan. Nor was Sheikh Mamai a true qalqay, because this title entailed inheriting the monarch's throne, not just the princely title of the Mangit bey.

The Nogais had to invent their own titular order. The names of Edigu Nur ad-Din's and Kai Kobad's sons, who had once owned uluses on their respective territories, were used to refer to the heads of the wings. The head of the western wing was called nuradin, and the head of the eastern wing was called kekovat. According to the same ancient tradition, the leader of the western wing was the successor to the sovereign. Hadji Muhammad was appointed *muradin*, and Sheikh Mamai became the eastern governor, the *kekovat*.

This reform added clarity to the duties and functions of the Mangit aristocracy. Sheikh

Mamai with his brothers of the eastern wing took upon himself the defence from the Kazakhs of their territories across Yaik on the river Eme (Embe). The western murzas Hadji Muhammad, Mamai, Ismail and Kel Muhammad with Urak defended the territory from the Crimean tribes, and sometimes made incursions in the Northern Caucasus. Incursions now had to be sanctioned by the three governors, and this extremely new order suited the governors.

The administrative changes during Sayid Ahmad's governance marked a discernable shift in Nogai history. The loose union of Cossacks-nogais with an indefinite status suddenly began taking the shape of a stable yurt, a nomadic Khanate. If the dynastic titular order was of no use to Musa's son, they went around any obstacles by introducing their own original titles. The Nogai Horde also introduced a territorial division and a structured power system. That is why the formation of the Nogai empire should be dated to the epoch of the second half of 1530s.

* * *

On 7 November 1541, the ambassadors of prince Sheikh Mamai, murza Koshum, murza Ismail and other murzas visited Moscow. This meant Sayid Ahmad was succeeded by his brother. Fragments of historical documents indicate that this happened as the result of an overthrow, not death. Following certain dramatic events, Sayid Ahmad found himself in Central Asia. He was accompanied by his children and closest associates, the murzas. Sayid Ahmad was alive, and the leaders of the Horde met and discussed methods 'to defend themselves from prince Sayid, his children and Mamai's children. Sayid, his children and the other murzas were in Urgench'. The former bey was not aggressive (due to his advanced age?), but his sons made repeated incursions into their motherland and stole cattle. The later sources, Rodoslovets of the 17th century, refer to a different place of residence, 'Sayid is in Bukhara'. He might have moved to the environs of Bukhara, to the Uzbek-Mangit yurt in the Shaybanid state.

We can only guess that a conflict broke out in the ruling circles of the Nogai Horde. Three or four years after the distribution of the wings

and titles at the reconciliation meeting, Sheikh Mamai was no longer satisfied with his status as successor in the empire, and so he decided to ascend to the top. And this wish was well-grounded. He became the most powerful and influential of all of the Nogai governors. As the governor of the eastern territories, Sheikh Mamai ruled over the Bashkirs and negotiated with the Kazakhs and the Siberian yurt. He was married to a daughter of the former conqueror of the Nogai Horde, the Kazakh Khan Kasym. Sheikh Mamai was a severe and skillful governor of Bashkiria. He introduced taxes and subjugated the local elite. Highborn princes—the Kazakh tsarevich Haqq Nazar and the Siberian sultans Kuchum and Ahmad Giray, Ibak's grandchildren were brought up at the murza's court. This enabled Sheikh Mamai to appoint dependent governors in the neighbouring khanates. He could gather a large number of nomads for his purposes, because all of Desht-i Qipchaq was at his disposal. He refused to obey his elder brother, although that was who had been acknowledged as the sovereign in 1536. His younger brothers, Yusuf and Ismail, became his comrades-in-arms.

The 1530–1540s were when the Nogai Horde reached its peak in terms of power and influence. Through defeating or intimidating their neighbours, the descendants of Nur ad-Din and Musa managed to finally secure their empire from outside incursions. Despite the instability of the union of the ruling clan and bey Sayid Ahmad's overthrow, the Nogai Horde of those times was regarded as a formidable, rather monolithic force. The Nogais were able to join the Kazakh Khanate to their sphere of influence, to maintain and streamline their control over Bashkiria. They competed as equals with Crimea for influence in Astrakhan, and with Russia (even if implicitly) for influence in Kazan. The bey's power was equal to that of a monarch-khan. Sheikh Mamai's governance was the high point of Nogai political and social development.

Sheikh Mamai died in the spring of 1549. Musa's next eldest son, Yusuf, was appointed the new bey. The documents mention a false khan Chinggisiid in the first months of Yusuf's governance. This reference was made by Ismail in a letter delivered in June 1549: 'He ap-

pointed Temir Qutlu's son as his tsar. The one declared himself tsar, the other—prince'. It is likely that this is who was referred to in Yusuf's message in May 1551: 'Yanai is our tsar. That he may summon us to him' [Russian State Archive of Ancient Acts, f. 127, inv. 1, file 4, sheet 11; Ambassadorial books, 1995, p. 287]. No one knows who Janai was. However, it's clear that he was a descendant of the Great Horde of Khan Ahmed and belonged to the Astrakhan House, tsar Temir Qutlu's children.

Starting from the mid 1540s, Russia began playing an increasingly prominent role in the foreign policy of the Nogai Horde. The Moscow state was growing and strengthening. It wielded a decisive influence on Kazan and was ready to spread to Astrakhan. This made Yusuf approach the Russians with caution. His cautiousness showed itself after he was crowned, when the bey refused to approve a sworn agreement executed by the Nogai embassy in Moscow in early 1549 on behalf of the late Sheikh Mamai and murzas (Yusuf among them). Though he orally confirmed his friendship with Ivan IV, he asked the tsar to recognise him and his embassies as equal to the khans of the Golden Horde and the Crimea and their respective embassies.

Russia denied this request, and that sent the bey into a rage. He therefore sanctioned offences and the robbery of Moscow's ambassadors in his territories. Russians would not often pay back in kind, but in July 1551, they declared they did not want 'to be in friendly relations with Yusuf any longer'. Several times the bey planned large military campaigns in Russia. At the turn of the 1540–1550s, the relations between the Nogais and the Crimea warmed up, and they restored their contacts with Porta based on their conflicts with Russia. Yusuf attached importance to relations between the Nogais and Russians such that he factored them into the domestic situation for the Nogais, as well as the relations between the descendants of Nur ad-Din and Musa.

Ismail, the successor to bey Yusuf, became nuradin and the leader of the western wing. This was his true co-ruler as a bey. In late 1540s and early 1550s, he and Yusuf dealt with an array of their relatives and as a rule regarded himself the guarantor of their cohesion and

obedience: 'Our brothers and children will never say a word against our will, nor shall they ever unleash a war' [Russian State Archive of Ancient Acts, f. 127, inv. 1, file 4, sheet 53].

The territories of nuradin, the leader of the right wing, lay along the Volga. From time to time he would move close to Kazan, whereas in winter his southern border was the lower reach of the river.

Nuradin was independent both in his internal and foreign affairs. He engaged in relations with Crimea and Turkey independently of the bey, planned punitive campaigns against the murza Ghazi, who had moved to the Russian bank of the Volga and become a nomadic 'Cosack'. Ismail was successful at controlling the subordinated uluses. Any disobedience was considered an incident, resulting in a thorough investigation. At the same time he saw his power in a realistic light, knowing his authority was the only means of thwarting any opportunistic attempts of murzas to launch unsanctioned raids.

The right wing was closer to Russia than the other Nogai territories, which is why the Moscow government engaged in contacts with its leader more often than with the leader of the eastern wing, or even the bey. For the Ottoman court Ismail was just 'a murza, one of the Nogai beys', who did not deserve any personal notice from the 'Shining Threshold'. But by the early 1550s, the Russians regarded him the main diplomatic partner and a potential ally from amongst all other murzas. They negotiated military campaigns with him independently of Yusuf, they sent high-ranking ambassadors from Moscow to him to conclude a special (separate) agreement on friendship. And when relations between tsar and Yusuf began to acquire an openly hostile tone, Ivan Vasilyevich informed nuradin he 'no longer wanted the bey's friendship', but he was still 'a friend of Ismail. This difference in the attitude of the powerful and rich neighbour towards the two Nogai sovereigns drove them all the more apart.

Their cooperation was already complicated by many other factors, especially their foreign policy. Nuradin received handsome gifts from Moscow, he sent herds of horses to be sold and trade caravans there, and wished for frequent, friendly contacts with Russia. Ismail preferred

regular supplies staples and horse sales, the nomads' main source of wealth, over sporadic, troublesome raids as a source of revenue. In general this policy was shared and supported by his circle and subordinates, the murzas of the right wing.

Sheikh Mamai's militant sons formed 'Yusuf's party', opposing the increasingly warm relations with Russia. Furthermore, the bey was supported by his children, of whom Yunus (the elder) and Ali were referred to more often in the early 1550s. Yusuf's family and the Shimamaevichs appeared to be losing to Ismail's people in terms of numbers. If every murza owned a ulus with a similar number of people, the number of the subordinates in the East ('the people of the ulus') was at that time smaller than in the West.

By 1554, relations between Ismail and his elder brother Yusuf reached a breaking point. The latter could not excuse the former's opposition to his anti-Moscow campaigns. Ismail has twice frustrated the bey's large military campaigns. The murzas were angered by the intimacy of the empire's successor to power with the 'infidels', Kazan's conquerors. Some of Ismail's own circle shared this indignation.

When the news reached Saraychyq that Ismail was planning to join the Russians in their campaign against the Astrakhan Tatar Yurt, that was the last straw for the bey. The forces he had gathered moved toward the Volga. Ismail marched out against him at the head of a contingent of his devoted murzas. The letter of murza Arslan, which was delivered to Moscow on 25 January 1555, reads as follows, 'My uncle Ismail became a prince...And we... killed prince Yusuf, and enthroned Ismail'. The messenger S. Tulusupov returned from across the Volga and provided some details. Ismail and Arslan moved their cavalry against Yusuf, and they fought for many days. 'First, Yusuf defeated Ismail and occupied his uluses'. But in the end, Ismail prevailed. The bey and his circle were killed, all others were expelled. The fight must have been cruel, 'Many people were killed on either side; the Nogai Horde had never sustained such casualties since the day it was founded' [Russian State Archive of Ancient Acts, f. 127, inv. 1, file 4, sheet 263 reverse; Russian Chronicler, 1895, pp. 29, 30;

The Complete Collection of Russian Chronicles, 13, 1904, p. 249].

Another conflict erupted in the Horde. The confrontation of the groups in Edigu's clan caused the Nogai empire to split in the mid-16th century, and Nogai history underwent a crisis. Subsequently, circumstances with such dramatic consequences attracted the notice of historians, and were the subject of debate and speculations. The original reason for the turmoil seem to lie in the strengthening of the Moscow empire, which was revealed in its defeat of Kazan. The same fate awaiting Astrakhan meant the future falling of the Volga to the forces of Russia, the division of Islamic Desht-i Qipchaq in two, the cut-off of the Nogai Horde from the free pastures of the Crimean bank of the Volga (the ownership of which the Nogais planned to challenge from the Girays).

Since the mid 1540s, the pro-Russian party intensified, when Ismail came to the Volga region from Bashkiria. The Horde was then ruled by Sheikh Mamai. During his governance, before Yusuf was crowned, the former started voicing his concern over Ismail's Russia-friendly policy.

The reasons for the turmoil centered around the economy and the dependence of some murzas (of the right wing) on the Russian market. However, it is undeniable that Moscow was involved in promoting the hostility between Ismail and Yusuf. During the negotiations between the Russians and the Nogais regarding their campaign against Hajji Tarkhan in the summer of 1554, they developed a plan whereby Ismail would attack the bey after the town was conquered.

The chronicles describe the conflict as initiated by Ismail (and therefore a diplomatic success of the Russian ambassador Brovtsyn). 'Ismail fought against his brother Yusuf at the order of the tsar and the Grand Prince'. This version of how it was not the bey who initiated the campaign against his brother, rather, it was the latter who 'at the order of the great tsar under his agreement took up arms against his brother, the prince', is clearly laid out in the official documents of the Ambassadors' Bureau. The same version is mentioned in the description of the final battle at the end of 1554. Both Russian and Nogai messengers, and murzas

wrote to Ivan IV that Yusuf was killed at the tsar's order, that Ismail eagerly carried out the dead. Even tsar Ivan believed this to be the case. In 1581, he reminded bey Urus, Ismail's son, that 'prince Ismail did what had never been done before killing his brother Yusuf **for us and for our benefit**' [Russian State Archive of Ancient Acts, f. 127, inv. 1, file 10, sheet 20 reverse]. Therefore, although Ivan IV did not assume the responsibility for hatching the plot, he acknowledged its benefits for his foreign policy.

Objectively speaking, the coup played into his hands. In November 1555, the tsar forwarded his honorary salary to the new bey, nuradin and kekovat 'for defeating prince Yusuf'. He thanked them for paving the way for Moscow in the Nogai Horde. Now Russia was rid of the threat of a nomadic attack that in fact had been in the works by the previous bey. Steppe nomads were in no mood for attacking Russia: if Ismail won in Saraychyq, the tsar would have an ally; if conflict were to occur between Yusuf's and Ismail's contingents, the Horde would be thrown into civil strife, which would enable Russia to launch a campaign in the Volga region.

The bey's murder engendered anger and outrage among many murzas, and, most of all, among his children. The laws of vendetta were automatically activated. Now it was not contemplative Yusuf, yielding to persuasion and suggestion, who Ismail faced, but his angry sons. Now, instead of one political opponent the new bey faced a plurality of his worst enemies. When the fights and the mutual murders started, the number of blood enemies increased, and more and more descendants of Edigu's clan were involved in such hostilities. The previous political and economic origin of the hostility was now backed up by a powerful motivation to fight over mutual claims, hatred, revenge for the death of relatives.

Ismail's people were from a range of backgrounds, and their union can't be explained not by the economic orientation to Russia. If this had been the case, Sheikh Mamai's children wandering about the far East of the Nogai Horde would have had to stand against the victor with his ties to Moscow. But it was, in fact, the other way around. Not all of the murzas of

the western wing adhered to their leader, and some of them dared oppose him. This resulted not from their commercial interests, but from the logic of the political fight and psychological factors,—that is, they were angry at Ismail for his treachery towards Yusuf.

Prior to the Russian attack, Yamgurchi Khan left Astrakhan, whereas Ismail's opponents came to the Crimean tsar, making their way to the right bank of the Volga. This attack was headed by Yusuf's eight sons with Yunus at the helm.

Even before this, civil strife and conflicts had taken place in the Nogai Horde. After reconciliation (a victory of any of the feuding groups) peace reigned, and the Nogais restored their powerful empire. However, the crisis of the mid-16th century had more dramatic consequences. The Nogai Horde came out of this crisis with its population and territories reduced and economically enfeebled. Ismail's war against Yusuf's sons was accompanied by their mutual devastation, the breakup of their traditional nomadic routes and natural disasters. In the second half of the 1550s, a great famine ran rampant throughout the lands of the Nogais.

The catastrophe ensued from the dying out of the flocks and herds, and theft between owners. This left many Nogais without their main source of sustenance. Those nomads who managed to keep their cattle were in a plight, as well, because the civil strife led to closures of the traditional seasonal nomadic routes, or their occupation by other people. While such changes were taking place and steppe elds were running around the Volga territories trying to explore the new nomadic routes and watering places, winter shelters and summer pastures, the nomadic economic system that had been established over a century collapsed.

When the conquered Astrakhan in 1556, the main Volga passage fell under the control of the voivodes, which only added fuel to the fire. Accompanied by famine, plague, enemy raids, the situation made life on the steppes unbearable.

By the end of the 1550s, the economy had collapsed, and the dispirited, bewildered Nogais lost their own livelihood. According to Ismail, the Horde had to live on what tsar Ivan

gave them, and he sent them a miserly allotments of food.

Ismail also begged the tsar to defend the river crossings, so as to secure the Horde from Cossack raids and stop the flight to the West. In 1557–1558, the tsar ordered the erection of stations at the main crossings and sent the Streltsy (marksmen) to the bey's camp. But by 1559, the forces left Saraychyg and the crossings. First of all, the Kremlin thought that the bey had taken control of the situation and could rule on his own; second, Moscow had other cares, as in May 1558 the Livonian War was unleashed.

By the 1550–1560s, fighting had subsided. It was not just that the ruined Nogais were exhausted, and fed up with the raids. Over the last years of Ismail's rule, all of his opponents had left the Nogai Horde. This played into his hands, enabling him to stabilize the situation. But at first he tried to retrain as many people as possible in his territories. Russian stations at the crossings, including the main one in Astrakhan, did their best to cut off the Nogais from the Volga. Ambassador E. Maltsev, who studied the situation thoroughly, predicted, 'You will not be able to keep uluses from fleeing'. And he later sent messages from Ismail, 'The uluses prevent us from our business, they want to go to Crimea' [Russian State Archive of Ancient Acts, f. 127, inv. 1, file 10, sheet 20 reverse].

People started leaving the Horde immediately after the tsar and the Astrakhan voivodes removed the guards. Numerous murzas rushed to the right bank. What is absolutely clear is the bey's opponents were the ones who fled. Meanwhile, the minority tried to break through the uluses of Sheikh Mamai's sons to the Kazakh Khanate. All of them hated Ismail, and swore to someday overthrow the scheming usurper. He was completely surrounded by enemies, and tried to find support with the neighbouring sovereigns. He could have reached an understanding with the sultan, but according to the northern policy of the Ottomans, he had to reconcile with Bakhchysaray, the destination of the refugees. Ismail justifiably feared that those numerous and vicious emigrants were up to something ill and 'would bring Devlet Giray to us'.

The bey blamed the Russians for this concentration of enemies in the Crimean Khanate. Once the Streltsy left the crossings, 'many people fled to the Crimea', he fumed, blaming voivode Ivan Vyrodkov's negligence for opening up the crossings.

However by the early 1560s, Ismail had rid himself of his main opponents, and could start restoring normal life in his devastated empire. At the beginning of his rule, again a mysterious tsar and khan appeared on the scene, just like the one mentioned in Yusuf's times. 'Treat me just like you would treat tsar Ibishey', said Ismail to the Moscow tsar at the beginning of 1555 [Russian State Archive of Ancient Acts, f. 127, inv. 1, file 4, sheets 262 reverse–304]. There were no other references to Ibishey, and no one knows who he was. Just like the other khans before him, this appeared to be a figurehead, on whose behalf the Nogai bey exercised administrative powers.

His domestic power was limited to harmonizing relations with numerous murzas that were overwhelmed with turmoil. Those who accepted Ismail's authority were no longer as friendly and obedient as they had been to previous governors. By the 1560s, he had even fewer devoted, people of the uluses than Yusuf or Sheikh Mamai had once had. And those remained across the Volga did so not because they were attached to the bey, but because they needed to live and roam about their motherland as they were unable to secure available, safe pastures on the Crimean or Kazakh side. Furthermore, Ismail managed to importune the Moscow tsar for money, food and Streltsy, and that is why he still was seen as someone of some account by the unruly Mangit aristocracy.

The bey and his uluses roamed between the Yaik River (passing the winter on its western bank) and the Volga. Explaining his routes, he said he feared his subordinates would flee to the Crimean side over the winter ice of the Volga. However, he regarded the banks of the Volga and Yaik fit for living, because both rivers were the yurts of Ismail's ancestors. He tried every trick and used all his ingenuity to increase the numbers in his ulus. Many murzas were tired of the turmoil and went to live in the area between the Volga and the Yaik. The bey could soon say with good reason that murzas

and ordinary nomads 'gathered by my father from both the right and the left side came to live around my camp' [Russian State Archive of Ancient Acts, f. 127, inv. 1, file 40, sheet 376 reverse].

Ismail spent his last days completely alone, isolated by his foreign machinations. His only ally was the Moscow tsar. And any sign of disregard or coolness from Ivan IV towards him was ever more difficult for him to contend with. He repeatedly reminded the tsar about the costs he had paid for his alliance with Russia. 'I left all other peoples for your sake. The original children of our four tsars and our motherland (that is, Musa, V.T.), our brothers left me, because I stayed with you'; 'I left my nephews and my children, because I see the truth with you'; 'Senior prince Yusuf was my father and my brother, and I left him (that is, Yusuf, V.T.) for your sake. I left my tribe for you, and I left my sons for you. They told me: you are Russian! And they left me. They called me an infidel' [Russian State Archive of Ancient Acts, f. 127, inv. 1, file 5, sheets 89 reverse–90, 91].

The last quote on lays bare the reason for Ismail's isolation. It was his pro-Russian orientation and policy. When quarrelling with Ismail, his relatives threw accusations in his face that he had turned into an infidel of the Russian. It is interesting that Ismail's son and successor, bey Din Ahmed reported to the Crimean Khan (via his ambassador) in 1566 that 'Ismail was a friend of the Moscow tsar and wanted to be baptised' [Russian State Archive of Ancient Acts, f. 123, inv. 1, file 12, sheet 343 reverse]. If Ismail ever thought of converting to Orthodoxy, it was perhaps when he was depressed in the time of the famine or after losses suffered from Yusuf's troops. The Nogai-Russian correspondence of the 1550s and early 1560s makes no reference to such an event.

It was around September 1563 that Ismail died. By that time he had managed to overcome the general crisis. Step by step, the nomad routes were restored, merchants started to send their caravans via Saraychyq again. Though shaken, the administrative system established in the 1530s survived. And the most essential thing was that the Nogais who had dispersed during this turmoil started to return

to their habitual territories and way of life. It seemed like the catastrophe was over and the nomad state was about to occupy a position of hegemony over Desht-i Qipchaq again.

The turmoil of the 1550s greatly upset the Nogai Horde. The murzas failed to agree about common economic and political strategies, which resulted into a lengthy internecine war, and the famine of the late 1550s aggravated the situation. Troops of the so called Nogai 'Cosacks' who had no wish to join any of the yurts were roaming the steppes. Later some of these found themselves in Russia and even in the Polish domain. The descendants of Sheikh Mamai tended to behave in a more and more independent manner. Another Nogai Horde (the Lessor one) was forming in the North-West Caucasus.

However, Ismail triumphed in a truly a Pyrrhic victory: many of the subjects of his elder brothers (the previous beys) left the Horde and joined the neighbouring yurts, scores of Nogais died in battle from hunger or the plague. That being said, by the end of Ismail's reign, the conflicts had quieted down a bit, and so although it was not a powerful nomadic empire that he left to his heir, he could pass on a reduced state, the Horde of the so-called Big Nogai.

Ismail's son, Din Ahmed, succeeded him. The first envoys he sent to Moscow communicated to Ivan the Terrible the deathbed will of his father, who instructed the future bey to observe the treaties (the *Pravda*) with Russia and allegedly asked the tsar to forgive the murzas 'make them yours (Ivan IV—V.T.) in servitude, assign them to whatever ulus you wish'. As far as the above matters are concerned, he ordered them (his sons—V.T.) 'to rely on you and to obey you in all things'; besides, at his deathbed, Ismail begged the Moscow tsar to shield the Nogais from all kinds of foes [Russian State Archive of Ancient Acts, f. 127, inv. 1, file 6, sheets 207 and 207 reverse].

However, from the letters of the new bey and the words of his envoys, we cannot assume that he was so willing to accede to such complete servitude. Besides, not once has there been talk about the authority of the Moscow tsar to distribute the uluses, which was the main function of the nomad ruler. In reality, Din Ahmed acted rather independently from the very beginning.

Family ties also contributed to his self-confidence. Din Ahmed married Malhurub, the daughter of Prince Temryuk and sister of the tsaritsa, Maria (Kuchenei) Temryukovna, the second wife of Ivan the Terrible. To some extent, this marriage helped to bring the image of the distant, fierce (the oprichnina had already been formed) 'white padishah' down to earth in the eyes of the Nogais. Besides, Maria Temryukovna was the only wife of Ivan the Terrible, whereas Malhurub was one of four wives in the bey's harem.

Consequently, the head of the Horde did his best to enhance his status in the eyes of his Russian 'colleague'. The bey asked that they honour him 'more than my father' as 'I have many servants because the servants of my father chose to stay with me... and my (own—V.T.) servants also stay with me' [Russian State Archive of Ancient Acts, f. 127, inv. 1, file 7, sheet 35 reverse]. However, both in the Kremlin and in the Alexandrovskaya Sloboda (the 'capital' of the oprichnina) they saw no reason to accord any special privileges to the successor of Ismail, so the envoys were still sent to Saraychyq according to the standard of diplomatic relations of the time. Being thus ignored, the bey reacted strongly. By the summer of 1565, he requested the Tsar's ambassador, Michael Sunbulov, to 'dismount from his horse while being yet far', whereas he himself stayed on horseback while listening to the Tsar's words communicated to him by the ambassador. Moreover, a Tatar servant accompanying ambassador Sunbulov was beaten, and Din Ahmed took away the tent of the ambassador himself. By the order of the 'princess' Malhurub, they also took away the tent of V. Vysheslavitsev, another Russian envoy.

As we see, in fact, Din Ahmed was far removed from blind obedience to Moscow (and, consequently, from following the instructions verbatim, that were given to him by his deceased father). The bey firmly determined to become an independent suzerain in relations with other rulers, including his most powerful and menacing neighbour. Of course, he did not wish to confront the Russians, but neither did he wish to stay in the background of an Orthodox sovereign. He adhered to the idea of becoming equal to the Tsar before the end

of his reign, and in 1577 he proposed that he receive a huge remuneration in the amount of 15,000 altyn (that is, about 450 rubles). In fact, this was a demand for an ancient tribute of the horde, call the 'vykhod'.

Nuradin Urus was the right-hand man of the bey throughout almost all of the fifteen years of his rule. Time and again he repeated that he was loyal to his elder brother and ready to obey him ('we have one word and one soul'). Such a firm solidarity displayed by the bey and the nuradin was an additional instrument of unification of the aristocracy.

However, they failed to ensure absolute unity between the nobility and the 'people of the uluses'. The nomads of the uluses governed by Urus dared to make incursions into Russian lands without the knowledge of Urus. Moreover, Din Ahmed was rather jealous as he watched the influence of his brother grow; he reproached Ivan IV for 'peerage' (treating equally) both the Nogai rulers and for endowing the children of Urus more generously than endowments to the children of Din Ahmed.

One of the crowning internal diplomatic achievements of Ismail's successors was their reconciliation with the descendants of Sheikh Mamai. Facing the menace of the Kazakh and Kalmyk raids, they decided to return and become the subjects of ulubey once again. In 1577, the latter wrote that 'Fourteen sons (that is, descendants—V.T.) of Prince Sheikh Mamai came to my service... And they all... obey me'. [Russian State Archive of Ancient Acts, f. 127, inv. 1, file 8, sheets 38, 39 reverse] Ak, who was the elder of Sheikh Mamai's sons then alive, asked the tsar to pay him as much remuneration as Din Ahmed and Urus received, and to accord his envoys the same honour. This murza was appointed kekovat (the ruler and warlord of the eastern wing, also known as the left wing).

The members of the Sheikh Mamai family accepted the honours, but did not enter into close contact with Din Ahmed, nor with Urus. The chiefs who had wandered far from the territories of the main Big Nogai, and the Moscow envoys in the late 1570s had no specific knowledge about the eastern Nogais.

Obviously, Din Ahmed did not have much talent as a politician or diplomat, so the murzas

obeyed him firstly by tradition (they respected him as bey and as a descendant of Ismail) and secondly due to the fact that he ruled the Elis with the greatest numbers of members. He continued the policy of bringing into the fold the uluses that had dispersed during the times of turmoil under the preceding reign. Din Ahmed believed that his task was to little by little gather around him the murzas that descended from Musa. 'The family of my father, my brethren shall I gather and we will become numerous', he shared his plans with Ivan IV asking him to send the murzas who had settled in Rus to the Nogai lands. 'Don't you believe that this is going to be good for you? My friends multiply, and it is good for you, as well'. [Russian State Archive of Ancient Acts, f. 127, inv. 1, file 7, sheets 37–38] Another factor that attracted people to the bey was his ability to maintain peaceful relations with Russia and to shield those of his kin who dared to attack the borderlands or to dishonour the envoys.

The policy of reconciliation challenged the ambitions of certain noblemen. Even the sons of Ismail failed to unite. The solidarity achieved by the Big Nogais was rather precarious. Many of the murzas had settled in the neighbouring domains or they lead a Cossack-like life in the steppes with no desire to return across the Volga river. The situation inside the Horde contributed heavily to this. The members of Ismail's clan clung to power, striving to eliminate any claims to that power made by any of their numerous cousins.

Din Ahmed died in early May of 1578. Urus was named bey by the Council of murzas. He managed to ascend to the leadership of the Big Nogai, bypassing the other claimants. He greatly appreciated his good fortune, and took every opportunity to emphasize the significance of his position. Unlike, for example, Yusuf, Urus normally did not insist on being called by a pretentious title, but he firmly insisted on his status as an independent suzerain: just like during the reign of Din Ahmed, the written sources do not contain any allusions to a puppet khan in Saraychyq. In the very first letter Urus sent to Ivan IV as a bey he puts himself forward as the 'Mangit prince'. Urus believed himself to be the lord of all the Desht-i Qipchaq territory that was unified into the Mangit yurt by his an-

cestors: 'And the uluses unified by my father and my brother remain under my rule. And the yurts of Volga, Yaik and Em that were ruled by my father are also under my rule'.

There are only remnants remaining that might shed light on the internal history of the Big Nogai. Fearing that the tsar might take complete control over the Nogais, the bey and most of the murzas began to tighten their policy regarding relations with Russia.

Diplomatic formalities, such as the exchange of ambassadors, were aligned with this strategy. Uraz Muhammad, the elder son of the deceased Din Ahmed did not share this anti-Moscow sentiment. He was the only higher murza to agree to adhere to the previously sworn shert and to remain loyal to the tsar, who highly appreciated this act, and sent him a generous reward. The special benevolence of the Russian sovereign elevated Uraz Muhammad several levels in the hierarchy. In the lists of murzas included by Ivan IV in his letters addressed to Urus, as well as in the boyar's order on the allocation of 'awards', the name of Uraz Muhammad was placed directly after the name of Urus and before his uncle, nuradin Dinbay.

This sowed the seeds to a conflict. On the one hand, there was the powerful and highly respected Urus, and on the other hand the rich murza, supported by the Kremlin, who bypassed the nuradin and openly claimed a special status in the Horde. It was not the ambitions of Uraz Muhammad that endangered the united Nogai state, but the probability that the murzas would split into rivaling groups.

Such actions by Uraz Muhammad can be seen as a display of personal courage; after all, the murza found himself in opposition not only to the bey, who was the legal authority and ruler, but he also came up against the entire official structure of the Nogai Horde, meaning the entire Horde. Enraged by the fact that his envoys disappeared while in Rus, Urus wanted to launch a military campaign involving all the Big Nogais, and almost all the murzas were ready to obey. 'I... alone, how can I withstand the entire Horde?' asked Uraz Muhammad of the tsar.

But the risk he was taking proved to be worthwhile, and before long, his pro-Moscow policy started to take hold. Little by little, the

Nogais, attracted by a well-fed, calm lifestyle started to migrate towards the nomad territories of the Volga steppes. Thus, Uraz Muhammad was no longer alone in his opposition to the entire Horde. By autumn of 1580, he was powerful enough to promise to Ivan IV an end to the planned raid by the murzas into the Russian borderlands, or at least its postponement till winter. This was a decision that required courage and involved risk, as the decision to conduct a raid was taken jointly by the bey, the nuradin and the kekovat during a joint meeting (Uraz Muhammad was the only higher murza who did not take part in this meeting). Much to the irritation of the Nogai aristocracy, the murza and the Kremlin started a separate exchange of ambassadors. Taking advantage of the ripening conflict, Moscow encouraged the loyal aristocrat to include in his policy outside of Urus and Dinbay the act of swearing shert, sending military troops to aid the Russians in the Livonian War without authorization of the bey and the nuradin; and he was promised 'remuneration without depletion... beyond that of your brethren and uncles'.

It goes without saying that this turn of events outraged the bey. You "promised to send to my younger brother (strictly speaking, a nephew—V.T.) more than to me and now you say you are going to send [me even] less than that", he addressed the tsar. "And this is terribly vexing for me". [Russian State Archive of Ancient Acts, f. 127, inv. 1, file 10, sheets 119 reverse, 144–144 reverse, 210, 210 reverse]

Considering the fact that Urus had ambitions of becoming a sovereign with absolute power, his resentment is quite understandable, as is his jealousy. Urus considered himself to be a successor of the great beys of the early 16th century, and this affected the way in which he conducted himself in the political arena. However, more and more murzas began to understand that after the ruinous mid-century turmoil, the Horde had lost much of its power and influence, so the vital task before them involved not the recovery of the political situation that existed 50 years before, but the search for a reliable patron and a new niche in a changed environment. This is why Uraz Muhammad gained more and more supporters,

and, consequently, more and more 'people of the uluses' under his rule, which greatly contributed to his personal power and influence.

Uraz Muhammad saw himself as the fully authorized ruler of his western territories, and even confiscated the gifts brought by the Russian envoys to his relatives and allies with the aim of offering these gifts on his own behalf as the suzerain to his subjects.

Considering the fact that more and more nomads came to Uraz Muhammad who was under the aegis of the tsar, the Nogai rulers first had to ensure his loyalty to the bey, and then appoint him to a formal administrative post. However, they could not make him *kekovat*, as this position was already held by Ak, the son of Sheikh Mamai, and displacing him meant conflicting with the numerous militant members of the Sheikh Mamai family who protected the eastern borders. But in the early 1580s, to the northeast of the Big Nogai lands something happened that enabled them to find a solution.

On 26 October 1582, Kuchum Khan of Siberia was defeated by Yermak, and the collapse of the Tatar state in Siberia quickly ensued. A part of its population (those who lived in the Taibugid yurt, the khan's domain) migrated to the Nogai steppes. Now, the Mangit leaders had to take care of their new subjects, assigning them territories and helping them settle. The *murzas* met and resolved to assign a governor to rule over these new subjects, and to collect the *yasak* tribute. This was a nice opportunity to fulfil the ambitions for power cherished by Uraz Muhammad.

In spring or summer of 1584, he wrote to Tsar Feodor I (the son of Ivan IV and his successor to the throne): 'They ... appointed us as the third ruler of the Mangit Yurt and allotted me the principality over the Taibugid lot' [Russian State Archive of Ancient Acts, f. 127, inv. 1, 1585, file 1, sheet 8]. The formal wording of 'They appointed us' seemed to demonstrate the novelty of the situation, when new subjects were integrated into the Nogai milieu.

The 'Taibugid lot' (that is, the heritage of Taibuga, the semi-legendary founder of a bey dynasty in Siberia) was located in the north-east reaches of the Big Nogai Horde (probably in the upper Tobol and Ishim rivers) since to the east roamed the Kalmyk nomads and the

nomads of Kuchum, to the south were the descendants of Sheikh Mamai, and to the north was the Siberian Khanate, conquered by the Cossacks.

Just as with *nuradin* and *kekovat*, the title of the new governor for the emigrants from Siberia was derived from the name of Taibuga, the first owner of their ulus. From that moment on, Uraz Muhammad had a group of supporters and their uluses; he had a position of his own and, in addition, he had his own forces, taken from among the multitude of Siberia migrants. The title of *taibuga* was especially suited to him, as he was married to the daughter of Kuchum.

The authority and power of the new *taibuga* grew immensely. He rightfully regarded himself as the most influential of the noblemen: 'I hold the bridle of the *murzas* of eight of my brothers, and seven of my sons, and all of my uluses, and two of my uncles, Prince Urus and Seit Akhmet (who became *nuradin* around 1584—V.T.)', he boasted writing to Tsar Feodor. 'I have the power to turn them towards war or towards peace; be sure to know they respond to my will!' [Russian State Archive of Ancient Acts, f. 127, inv. 1, 1586, file 9, sheet 15]

Having acquired befitting authority and power, Uraz Muhammad modified the tone of his communications with the Tsar (besides, the new Russian tsar was no match for his terrible father). Deliberating on a possible chill in ties between the Kremlin and the Nogais, he advised as if for reference only (that is, in an unthreatening manner) that he had at his service about 40 *tumens* of the 'Mangit people' and, if the Qazi people and the *Crimeans* are to be considered, they would count 100 *tumens*; 'Availing of such a numerous array we shall take to raiding. For whatever trophies God will send to us'. [Russian State Archive of Ancient Acts, f. 127, inv. 1, 1586, file 9, sheet 18] At the same time, he had no thought of breaking ties with Russia, and he swore *shert* on his own behalf as well as on behalf of his younger brothers and sons who, as time went on, were more and more inclined to unite around their successful warlord.

For the Big Nogai, the most topical matter was their relations with the Muscovite state, which was increasingly powerful, and kept expanding eastwards. According to the stan-

dard rules formed and generally observed in the reign of Din Ahmed, the Nogai recipient of a tsar's letter was to stand up to listen to the tsar's questions about the health and resolutions on remuneration, and next, the recipient had to bow low to the tsar's ambassador as a sign of gratitude. However, at the negotiations in June of 1578 almost none of the Nogai dignitaries followed this protocol. Uraz Muhammad was the only one to punctiliously stand up and bow when meeting the envoys.

The bey himself demonstrated this new attitude towards Russia. When receiving ambassador Zubatov he was sitting 'in front of his house' and did not stand up 'in the face of the gracious tsar's words and bow' and 'did not bow' when receiving 'pominki'. When the surprised ambassador started to ask questions, the bey 'made no reply'. Soon the envoys were subjected to robbery, with the obvious acquiescence of Urus. Only when ambassador Zubatov was about to return home did the bey condescend to explain, saying between his teeth 'Once... you get back to your tsar, tell him that he should not send me his 'pominki' the same way as he did to Ismail, my father, or to Tinekhmat, my brother, and that your tsar should not send his envoys to me. Let this be the last word I address to him'. The murzas have also displayed their discontent with the amount of their 'remuneration' [Russian State Archive of Ancient Acts, f. 127, inv. 1, file 10, sheet 338]

The Russian authorities found themselves in a difficult situation. On the one hand, it was not wise to break relations with the Nogais, who possessed vast lands to the east of the Volga River and had a strong cavalry (at that time the tsar has designs to employ this cavalry in his war with the Lithuanians). On the other hand, it was unacceptable to submit to the monarchical ambitions and comply with the unexpected requests of Urus.

In 1579, the next envoy who appeared at the headquarters of Urus addressed him while sitting on horseback. The bey was indignant: 'That boyar's son wanted to fulfil his ambassador's duties while sitting on horseback!!! And by dishonouring me he has also dishonoured thyself (the tsar—V.T.)!' Speaking openheartedly, the Moscow envoy said that 'our tsar instructed me to come and speak to you sitting

on horseback'. [Russian State Archive of Ancient Acts, f. 127, inv. 1, inv. 1, file 9, sheet 25; file 10, sheet 5] Naturally, Urus refused to negotiate with the envoy. The same situation occurred in 1581. The bey granted the Moscow ambassador Perepelitsyn an audience while he sat astride a horse. Ambassador Perepelitsyn also refused to dismount from his horse and was 'forced' to dismount; as a result he decided not to pass on the tsar's words and 'pominki'. Urus was furious and ordered his men to confiscate whatever the ambassador had with him; the Tatars who accompanied Ambassador Perepelitsyn were sold into slavery to Transoxiana. It happened twice that the Russian ambassadors were forced to stay in the Nogais headquarters, and were de facto taken hostage. For the first time, in winter of 1579/1580, the Russians were kept under the pretext of suspicions that the delegation sent by Urus had been kept in Moscow, and for the second time, in winter of 1585/1586, they were detained in revenge after the Cossacks destroyed Saraychyq and the Russians built fortresses along the Volga river and in Bashkiria.

Seeing that Ivan IV had no wish to treat him as an equal partner, Urus made up his mind to suspend relations with Russia and to stir up enmity. Urus did not dare take punitive actions against the pro-Moscow murzas (indeed, he was lacking in resources for this), but he tried to divide their alliance by enticing their subjects and allies. Uraz Muhammad immediately reported, 'the Urus prince and Tinbai murza wish to take my little brethren and my children... from me'. [Russian State Archive of Ancient Acts, f. 127, inv. 1, inv. 1, file 9, sheet 166] In 1580, he also alleged that the bey and the nuradin had begun approaching Crimea about joint action against the Muscovite state. Already in summer of 1580, the Nogai and Crimean forces carried out several raids in the Russian borderlands. Urus also meddled in the Middle Volga region where in 1580 he tried to rouse the Cheremis against the tsar.

The Russians reacted strongly to such a sharp turn in policy, which also affected the way they treated the Nogai envoys. The Russians started to dishonour the Nogai envoys, and one 'was almost beaten to death'. Urus was enraged. The arguments in favour of an alliance

with the tsar promoted by some of the murzas were deafened by the supporters of Urus. However, 'the best of the ulus people' (the wealthy, though not noble, Nogais) trusted the diplomats, and shared their fear of danger if conflict with Ivan IV arose: 'And the tsar will order the Cossacks to take the Volga, and Samara, and Yaik from us, and the Cossacks... will exterminate us, our uluses, our wives and our children, everything will be taken away from us... where shall we go?' [Russian State Archive of Ancient Acts, f. 127, inv. 1, inv. 1, file 9, sheets 157–157 reverse].

The Russian authorities did not formally cut off relations with the Big Nogai, but dishonour and raids were not to be tolerated. In February 1581, the next envoy to Urus was instructed to request that the stolen goods be returned and the captured Tatar servicemen be liberated from slavery and otherwise 'the tsar's ambassador will never again return to Urus'. In the month of May, the news broke that a joint contingent of Nogai and Crimean troops had attacked the border areas. They waited in vain for explanations from Urus. The bey did not deign to provide explanations.

Under such circumstances, the Russian policy in the steppes covered three main areas,—that is, constructing fortresses in the east, using Murad Giray (an emigrant tsarevich of Crimea) and bringing in the military force of the Cossacks.

Back in the mid 1550s, Ismail had requested outposts and fortresses at the main crossings used by the Nogai to cross the Volga River (at Perevolok, as well as near the estuaries of the Samara and the Bolshoy Irgiz rivers) to prevent the outflow of people from the Horde and attacks by Yusuf's Cossacks. At the time, the Russian authorities preferred waiting. Ivan IV did not refuse to help his ally, but he was in no hurry to take practical steps. As mentioned above, the situation was rather complicated: Ismail had been expelled from Saraychyq several times, and he finally came to power only towards 1559, but by that time the tsar had other things to do, as the Livonian War had begun.

Russians returned to the idea of controlling the crossings only after the mid-1580s, when the Nogais started their raids. The subjects of Urus raided the Russian lands crossing the

Volga River exactly at those three crossings. Finally, a decision was made to erect towns there.

In autumn of 1585, Prince Grigoriy Zasekin was instructed to erect a fortress at the estuary of the Samara River. The city was founded in 1586. In 1589, the same voivode founded the city of Tsaritsyn near Perevolok, where the Nogai and the Crimean troops had the best opportunity to unite in incursions into the Russian lands. In 1590, near the estuary of the Bolshoy Irgiz River (or 'at the Uvek' as the Nogais sometimes called this place,—that is, in the ruins of Ukek, a city of the Golden Horde) the city of Saratov appeared.

The Nogai crossings were securely blocked. At first, Urus was beside himself with fury. Apart from the new cities in the Volga region, Urus was angered by the new fortresses near the Belaya Volzhka River (Ufa) and in the Lower Yaik area. It was the appearance of the new Russian and Cossack fortresses in ancestral Nogai lands (Yaik), in the lands controlled by the Bashkir governor and near the Volga boundary area that forced him to detain an ambassador from Moscow. The bey saw the wide-scale construction of the new fortresses as 'vexing' and asked Tsar Feodor I a reasonable question: 'Were these your fathers and grandfathers who owned these lands?!'

The Moscow authorities did not intend to step away from their plans of expanding the country eastwards; besides, the leader of the Big Nogais was no longer seen as a figure to defer to. At the same time, it was not wise to just to ignore the bey's indignation. In their correspondence with the Urus and the murzas, the diplomatic clerks explained that Samara, Ufa and other cities were established in the interests of the Nogais to protect them from the Cossack attacks; the Russian clerks alleged that the nomads would not be hindered by the proximity of these fortresses; moreover they would be free to roam the steppes with their cattle and engage in trading at these new fortresses.

Another means of exerting pressure on the Big Nogai was to send Murad Giray to Astrakhan. Being his uncle, Khan Islam Giray II, expelled Murad Giray and his brothers, Saadet Giray and Safa Giray, from Crimea and as a result, Murad Giray came under the aegis of the Moscow Tsar. The tsareviches were allowed to

settle in the Lower Volga area: Saadet and Safa were settled in the Nogai uluses near Astrakhan, and Murad settled in the city of Astrakhan. The reasons for sending the tsareviches southwards was the need to dampen the martial ambitions of Khan Islam Giray II and also to re-establish friendly relations between Russia and the Big Nogai. The latter, concerned about the unexpected proximity of the Tatar dynasties, started to make inquiries, and heard from Moscow that the Girays were to protect the nomadic lands beyond the Volga river from attacks by the Crimeans and the Ottomans.

The Crimean had to persuade the Big Nogais to 'abandon the Crimeans' and the Lesser Nogais if they choose to make war against Russia; instead they were to send their cavalry to help the Russians at their border with Poland; the Big Nogais were to remain within sight of Murad Giray and the Astrakhan authorities, and to this end 'not to roam too far from the Volga River'.

Murad Giray proved to be a talented intermediary as far as engaging Urus in negotiations was concerned. Later, he also contributed much to the shert sworn by Urus to the Russian tsar. On 2 November 1586, the bey's envoys arrived at Astrakhan. As usual, they brought letters stating that the fortresses in the steppes were not to be tolerated. And the voivodes gave their usual reply: 'The tsar... has erected these cities to protect Prince Urus and the murzas from Cossacks and their banditry' and 'that this matter about the cities shall not arise any more'.

The parties returned to this issue during a feast in honour of the Nogai mission. Suddenly, Murad Giray stated that the cities had been established by the tsar at his request and from that moment on these cities, the Volga, the Yaik and the Terek rivers would fall under the control of the Crimean Prince ('under his will'). The Prince alleged that he asked the tsar to found the cities for the sole purpose of shielding the Nogai nomad lands and uluses from Cossacks and their banditry. The Crimean Prince emphasized that he was well aware of the diplomatic ruses of the Nogai and of the true state of affairs in their domains. 'Being... a Muslim ruler myself, I am well aware of our customs and traditions', he told the envoys of the bey. 'He (Urus—V.T.) boasts that he controls Crimea

or the Turkish or the Bokharan people, but I... do know that Prince Urus is not spoken very highly of there' (that is, they do not appreciate him much). It would be much better for Urus, continued Murad Giray, to abandon his false pride and make peace with the Moscow ruler again. And to make the aspiration of Urus towards peace more obvious, let him send his son, Dzhan Arslan, to resign permanently in Astrakhan.

The envoys listened to this speech attentively and passed on these very words to Urus. By that time, he himself was also in search of a way out of this political stalemate. Facing an impending crisis and the collapse of his empire, he decided to make peace again with the most powerful of his neighbours. By the end of 1586, Khan and Dzhan Arslan, the sons of Urus, swore shert to the tsar's envoy, promising not to wage war against Russia and not to join its foes, and Dzhan Arslan was left as a hostage; soon the chief of the Horde and his murzas moved towards Astrakhan, announcing to the voivodes and to Prince Murad Giray that they intended 'to stay under your sovereign will... where you, as a ruler, shall give orders to the murzas and the Nogai people to wage war against our foes, and they shall obey'. To ensure that Russians believed them, the Nogais convoyed two Crimean envoys to Murad Giray and the voivodes and announced that the next summer they were ready to set out towards the Crimea and send troops against the 'King of Lithuania' [Russian State Archive of Ancient Acts, f. 127, inv. 1, 1586, file 1, sheets 25–26; 83:58, 59].

The tsar confirmed his full satisfaction with such a state of affairs and promised to pay the bey 'remuneration' in the same amount as was previously paid to Ismail. And in early 1587, voivode Lobanov-Rostovsky reported to the Posolsky Prikaz (that is, the diplomatic division) that the bey, together with his murzas, were leading a peaceful nomadic life near Astrakhan.

One of the many reasons for the Nogai Chief to adopt a more peaceful attitude was that the Cossacks in the Volga steppes had become quite active. Relations between the Big Nogais and the capricious Cossacks were deteriorating. More and more people joined the

Cossack communities and bands in the Volga region, and they were increasingly aggressive. The Cossacks stole horses from the uluses and robbed the population. The murzas addressed their complaints to Moscow, believing that the Cossacks were subjects of the tsar. The clerks of the Posolsky Prikaz (Department of Foreign Affairs) wrote to the Nogais about the repressive measures taken against the raiders, while acknowledging that the outlaws did not obey to anyone (including the tsar).

Soon, in the early 1580s, it became clear that the government had ways to influence the Cossacks. The Cossacks were charged with attending the crossings and helping the ambassadors and envoys from the east (firstly from the Nogai Horde) cross to the right bank of the river and back.

However, it would happen that the ferrymen themselves would rob the envoys or did nothing to protect them from robbers who came from the steppes. The Nogais were indignant. Russian authorities promised to sort things out and 'remove the guilty' from the Volga, but for the time being no mass repressive measures were taken: why banish Cossacks who had nothing to do with the robbery? Moreover, the Russians had their counterclaims. The Volga Cossacks helped the Nogais to cross the river because they were 'like family' and the Nogais, once on the Crimean side, would join the Azov and the Crimean troops in raiding the borderlands.

Whatever the case, the written sources say that the renegades agreed to obey the Tsar's instructions only when they could derive benefits or wealth from the situation. In 1580–1581, Yermak, who would later achieve great fame, also took part in attacks on the Nogais. Things were heating up, complicated by the anti-Russian policy adopted by the bey. The confrontation between the Cossacks and the Nogais culminated in the destruction of the Nogai capital of Saraychyq.

Historians attribute the attack on the capital city of the steppes that took place in 1581 to the freewheeling Cossacks who were forced out of the Volga region in 1577 by a dragoon headed by stolnik Ivan Murashkin. Ivan the Terrible ordered the removal of the outlaws from the Volga region, and so they headed to the outskirts of

the steppe or deeper inside it. Some of the migrating outlaws headed towards the Yaik River, to lands that traditionally were included in the domain of the Nogai nomads. Thus, it is possible that these newcomers destroyed Saraychyq.

On the one hand, the Moscow authorities were not very anxious to convince the steppe nomads of the Cossacks' loyalty to the tsar. But on the other hand, the Moscow authorities were reluctant to assume responsibility. In September 1581, the boyars issued the following statement: 'We have not sent anyone to the Volga or to Saraychyq; the Cossacks acted as outlaws on their own'. The same version was included in recommendations given to voivode Vladimir Bakhteyarov-Rostovsky, who was to provide the following answers to the questions that Urus might ask: 'Our Cossacks did not attack Saraychyq; those who attacked it were renegade Cossacks who escaped from us and now live near the Terek River, the sea, and the Yeik River'. Attempts were made to attribute this raid to the 'Lithuanian' Cossacks who came from the Dnieper River [Russian State Archive of Ancient Acts, f. 127, inv. 1, file 10, sheets 29, 37 reverse, 120, 155, 247 reverse].

However hard the Kremlin authorities tried to use this new situation to appease the Nogais, the mere fact that they were so defiantly attacked by the Volga Cossacks acting on their own gave rise to such a dangerous exacerbation of relations with the steppe, that Ivan IV chose to punish the Cossacks. He ordered the army be sent from Kazan and Astrakhan to the Volga and the Don to find the outlaws and put them to death, liberate the captive Nogais and return the cattle stolen by the Cossacks to the uluses. The tsar expressed his disapproval of the Stroganov merchants from Perm who sheltered in their forest estates those of the Cossacks and their chieftains who 'caused our quarrels with the Nogai Horde, who fought the Nogai ambassadors near the Volga river and attacked and robbed the merchants from the Horde, and were also the cause of much detriment and losses to our people'.

They proposed that Urus send his troops to exterminate the outlaws in the Volga and Yaik regions. The bey readily agreed and the short wording prepared for him in 1581 contained mutual obligations of the Russian and the

Nogai parties on 'searching and executing such outlaws... and to act as one party... in regard to these outlaws'.

The repressions convinced the Volga outlaws to curb their martial spirit; however, they still robbed caravans and envoys. Those Cossacks who were forced out of the Volga region were replaced with the new refugees from Rus that were devastated by the oprichnina and the Livonian War, so new bands emerged, causing trouble in the steppes and at the crossings.

The rulers of the Nogai Horde still believed that they were Moscow subjects, and treated these acts as a deliberate policy sanctioned by their western neighbour. This is how the Nogai ambassadors complained to the Crimea Khan early in 1586: 'And the Moscow subjects... now make war against us and they put much pressure on us. Now many of the Moscow Cossacks are located in the Volga area and many a Nogai ulus was routed and all of these (uluses—V.T.) were forced away... And now the Cossacks make war against the Nogais crossing the Buzan River and the Yaik River and they fought for about three days around the Em River (Emba—V.T.). And they (the Nogai—V.T.) can hardly survive because of the Moscow people'. [Russian State Archive of Ancient Acts, f. 127, inv. 1, file 2, sheet 404 reverse]. In Astrakhan, the captive nomads were sold into slavery to merchants coming from Central Asia who sent them to Bukhara.

For Moscow, the Cossacks proved to be a powerful tool to bring the Nogais to peace. First, the main uluses headed by the bey moved behind the Yaik River, as 'they are afraid to reside near the Volga because of the warlike Volga Cossacks'. As a result, the risk that the nomads would conduct raids into the Russian lands decreased significantly. Second, having discovered nearby a merciless and indefatigable enemy that obeyed only orders received from Moscow, the higher murzas tended to think that having restored their alliance with Moscow they would secure themselves against these rapacious invasions. In 1580, Russian ambassador T. Aristov heard from the 'ulus people' the following noteworthy words: 'And the tsar will order the Cossacks to take the Volga, and Samara, and Yaik from us, and the Cossacks... will exterminate us, our uluses,

our wives and our children, everything will be taken away from us... where should we go?' One year later, the same ulus people told V. Glebov, another Russian ambassador: 'In the Volga... and in the Yaik areas there are many Cossacks and they put much pressure upon us and upon our livestock. If... in future the Cossacks remain near the Volga and the Yaik, then we... will be very much oppressed by them' [Russian State Archive of Ancient Acts, f. 127, inv. 1, file 9, sheets 155–157 reverse; file 10, sheet 265 reverse]. As mentioned above, by the end of the 1580s, Urus and his closest allies decided to re-establish good neighbourly relations with Russia.

However, the Cossack problem persisted. In the late 16th century, the Cossack settlements near the Yaik river caused many headaches for the Big Nogai. The Cossack communities concentrated around the fortified settlements/towns. Such unruly neighbours generated concern among the bey and the murzas and gave rise to fears. Many requests were sent to Moscow for the removal of the newcomers from the Yaik River region. The tsar promised to resolve the situation, but there was nothing that he could do. The Ural steppes were too far away from Rus. Besides, formally, these steppes belonged to the Big Nogais. So the latter made up their minds to find a solution themselves.

The immediate catalyst for a showdown was the raid carried out by the Cossacks in 1586 into the uluses located around the Saraychyq ruins. This raid was accompanied by massive slaughter of the populace, accompanied by cattle theft. The bey called out the irregular nogai troops to attack the enemy with maximum force ("together we shall show the Cossacks what we are worth!"). Nuradin Said Akhmed obeyed immediately and brought the troops of his right wing from the west to the Kosh-Yaik area, where the Goluboy Gorodok of the Cossacks was located. The plan was for the army of the Urus to approach from the other side. Both of the Nogai leaders detained the Russian ambassadors until the end of the campaign. The Nogais intended to release the ambassadors having won the war and to carry on with their nomadic life heading towards Astrakhan under the supervision of local voivodes. Otherwise, the Nogais intended to sell ambassadors into slavery and migrate

towards the Syr Darya River. The campaign was aimed not only at defeating and exterminating the Cossacks, but also at destroying Goluboy Gorodok.

The Nogais surrounded the settlement, but the residents had no wish to give up (as 'they were replete water, and ships, and horses, and cattle', so they were not going to starve). The Cossacks fought successfully, firing from wooden, hastily made guns, using in them stones, bones and other weights as ammunition. The Cossack legends say that the Nogais tried to approach the island city by night using boats. When he realized that it was not possible to starve the fortress into surrender, Urus ordered firewood be brought in, to set the wooden walls on fire. But a heavy rain foiled this plan. The rain was such that both parties were reluctant to fight. The Nogais "became wet and started to dry themselves". At this moment the Cossacks made a sally 'divided into six groups', defeated the bey's army and drove their herds into the steppes [Russian State Archive of Ancient Acts, f. 127, inv. 1, 1586, file 1, sheets 21, 22, 32; file 5, sheets 2, 3; Karpov, 1911, p. 42].

However, contrary to the initial plans, Urus did not move towards Syr Darya. The dishonourable and resounding defeat ruined his plans completely. He did not release the ambassadors and moved to Astrakhan to conclude a short.

Another important result of the defeat was that relations between the Nogai and the Cossacks warmed up. The Nogai realized that they did not have enough power to win back the Yaik River region, and the Cossacks were in need of economic cooperation with the nomads, who had long since inhabited these steppes. There was another objective driver for a peaceful co-existence,—that is, the economic order of both the nations had almost nothing in common, which created an environment free from the enmity caused by competition over land and favourable for mutually beneficial transactions.

In general, relations between the Nogais and the Cossacks varied between open hostility and forced neutrality. Whatever were the relations between certain communities, the nomads perceived the Cossacks as an alien force that had settled in their ancestral lands.

A period of relative stability during the Din Ahmed reign and the 'principality' of Urus

gave rise to hopes that the power and prestige of the 'Desht-i Qipchaq hakims' might be theirs once again. The beys gathered together many murzas and tried to carry out an independent policy. But they overestimated their forces. Unlike the late 15th and early 16th century, when the Mangit yurt had but enemies around it who fought the Nogais for dear life, now its residents had recourse to emigration in search of greater riches and safety. At first, they emigrated to the Lesser Nogai Horde and the Uzbek khanates, and then they started to move to Russia and to the Crimea. The people started to abandon the Trans-Volga steppes. By the end of the century, several beys fought to rule over a decreasing number of subjects. Another (and the last) Nogai turmoil started.

After the Lesser Nogais killed Urus in 1590, the descendants of Din Ahmed had the tightest alliance, and were quite fit to fight for the honour of becoming a 'grand principality'. Uraz Muhammad and Din Muhammad, the two elder sons of Urus, headed the Big Nogais in 1590s after the death of Urus.

We know nothing about the circumstances under which Uraz Muhammad was enthroned. Based on the one available phrase from the mandate (May 1590), A. Zvenigorodsky, concludes that it would not have come to be without Moscow's patronage: 'Our tsar... controls the enthroning of the princes of the Nogai Horde in its trans-Volga lands'. [Monuments, 1890, p. 267]. Since Russia had obviously nothing to do with proclaiming Urus as bey in 1578, the above phrase may refer only to Uraz Muhammad. It seems that the Moscow authorities did not forget that Uraz Muhammad supported Russia at the height of the tensions between Urus and the Tsar.

In about 1598, Uraz Muhammad was succeeded on the throne by his younger brother, nuradin Din Muhammad. This bey was also subsequently remembered as one who acted under the aegis of the Moscow Tsar: 'My father Prince Din Muhammad served your majesty faithfully and you did him an honour by granting him a principedom'. [Russian State Archive of Ancient Acts, f. 127, inv. 1, 1644, file 2, sheet 4, 11] He ruled what remained of the Nogai Horde for no more than two years, and left no significant traces of his reign. Early in

the 17th century, when illustrating to the next bey his ancestry, the Astrakhan voivodes did not even mention this ruler who reigned at the very height of the civil strife.

This turmoil was caused by a diverse range of issues that had gained steam over the course of the preceding four decades. The immediate cause for the hostilities was the blood feud. Later, murza Kara Kel Muhammad explained it as follows: 'After his foes had k [illed] my father prince Urmamet I...avenged the blood of my f [ather]'. Years passed, but the mutual hatred persisted. This is what he wrote seven years later—'Still we do not share a word or a thought with the relatives of Tinbay or Urus, and there is discord between us. And my father Urmamet died at the hands of the children of Urus; as a result Prince Din Muhammad died, and murza Baiterek also died at the hands of the same foes'. [Russian State Archive of Ancient Acts, f. 127, inv. 1, 1619, file 2, shee 295; 1626, file 2, sheet 183]. The Russian governors in Astrakhan who observed this strife were aware of the causes and also believed that it was all about avenging the deaths of kindred.

However, the documents cite another more significant cause,—that is, the family of Urus headed by his son Dzhan Arslan was fighting to become a 'grand principality'. Later, he explained that he was fighting for his right to (in his opinion) succession: 'In their Nog [ai Hord] e there is a tradition that first the son of the eld [er broth]er lives as (that is, becomes the—V.T.) Prince, and then the son of another brother, so according to their Nogai customs, now Yan Arslan is to become the prince. But before that they and prince Yshterek and his brethren shed much blood for the Nogai throne'. [Acts, 1918, p. 88].

However, there was one more element that was poorly reflected by the Nogai sources, but was explicitly mentioned in the documents created inside Russia, far away from the Big Nogai,—that is, that the discord was intentionally provoked by the Russian party. According to the chronicles, it was Tsar Boris Godunov who caused this turmoil. Knowing that the Nogais were numerous and relatively united under Urus, and partly united under Uraz Muhammad, Tsar Boris Godunov was worried that

'Astrakhan could suffer pressure from them and they could make war on the Moscow state as well'. This is why Tsar Boris Godunov ordered his voivodes to cause quarrels between the trans-Volga murzas [The New Chronicler, 1853, pp. 51, 52; Full Collection of Russian Chronicles, 14, 1910, p. 52].

However, one may refer to an open conflict only after the death of Uraz Muhammad, since as a ruler, he managed to control the multitude of his close and distant kinsmen, at least formally. However, at the meetings of the murzas in 1594 and in 1595, he had to confess: 'We have no concord between all of us'. That being said, formally the Big Nogai Horde was still united, and murza Kanai wrote about this period: 'In those times we were all one with the Big Nogai in one place'. [Russian State Archive of Ancient Acts, f. 127, inv. 1, 1619, file 2, sheets 100, 115]. The general public and the epic tales associate the collapse of the Nogai Horde with the period that followed the death of Uraz Muhammad.

The scarce sources reveal very little of the events that accompanied the turmoil. One of these events was the battle between the supporters and the opponents of Urus. It seems that this battle was the beginning of an open conflict. A Tatar genealogical legend tells us that Urmambet, who succeeded Urus Khan, entered into conflict with Yar Arslan, the son of Urus, and the Nogais split into two parts; one part supported the khan and the other part supported Yar Arslan. The latter initiated a war and by the Sakmara River bloodshed occurred, where 'Urmambet Khan was killed' [Ahmetzyanov, 1991, p. 84; Ahmetzyanov, 1995, p. 52]. After some time, the supporters of Urus and Tinbay killed Din Muhammad bey, as well, and devastated the uluses owned by his family, carrying the people away into captivity.

The Altyuls (this is how they started to call the descendants of Sheikh Mamai) who were the allies of Dzhan Arslan, came from the Yaik River to attack the lands of the Big Nogai near the Volga. The relatives of the late Din Muhammad took prompt action to approach Astrakhan and Moscow in search of help. The tsar ordered his voivodes to send an army equipped with firearms 'and commanded Ishterek and his people to bring them to peace'. The interfer-

ence of the Russian army changed the balance of power at once. The murzas and uluses who supported Urus hastily retreated eastwards. Taken captive by the Streltsy troops from Astrakhan, Dzhan Arslan was sent to Moscow.

All of a sudden, nuradin Ishterek found himself in the position of victor over the ruins of the Nogai state. However, he came into possession not of a steppe empire, but over a number of split nomadic uluses roaming over a relatively small territory between the Volga and the Yaik rivers. The Big Nogai entered the last stage of their existence as a political entity, which involved decay and collapse. During the last four decades of the 16th century, these trends continued. Different clans and groups of murzas tended to disobey the Supreme Bey and to lead an autonomous life.

The victors approached Tsar Boris Godunov wishing him to make Ishterek a bey and his brother Küchük a nuradin. Dzhan Arslan was a captive, and the subjects of Urus and Tinbay had no other choice but to accept the situation, as they had no other leaders. In 1600, the 'enthronement' ceremony took place in Astrakhan.

However, the historians are quite critical about Ishterek as the Nogai leader. According to the researchers, Ishterek was a smart and crafty person, but unable to prevent the collapse of the Nogai state. However, preventing this collapse was hardly possible, especially if we consider the irreversible collapse of the Horde and the Moscow policy dedicated to dividing the nomads. His contemporaries also noted that the bey was a resourceful person (in the negative sense of the word): 'He is a cunning and ready to switch camps, never acting in earnest with anyone'; 'Ishterek is an inconstant person attracted by many parties, but he remains under control of the good ulus people who do not pay much attention to his words' [Russian State Archive of Ancient Acts, f. 127, inv. 1, 1616, file 1, sheets 10, 57]. Throughout his 'reign' Ishterek manoeuvred between the powerful neighbouring rulers and his own compatriots (the murzas and the rich ulus people).

In the beginning, Russia's Time of Troubles spared the Big Nogai. At first, when the Godunov dynasty was overthrown, False Dmitry I (the Unfrocked) was enthroned and then killed, this did not affect the internal state of affairs of

the Horde or its relations with the Astrakhan authorities. This is why, in May of 1606, when Vasily Shuysky ascended to the throne, the Moscow government was sure that the steppe nomads had been loyal to it. Ishterek and the murzas congratulated Vasily Shuysky upon his enthronement and assured him of their loyalty.

However, the Big Nogai held back from engaging in Russia's internal affairs until Astrakhan decided whether it was loyal or neutral towards the tsar. In June of 1606, Ivan Khvorostinin, a voivode in Astrakhan, stirred up a revolt against Vasily Shuysky, and played the part of False Dmitry II. The supporters of Vasily Shuysky fled from the city. Ishterek did his best to find pretexts for avoiding participation in the conflict of the opposing parties in Russia. Explaining his reluctance to act, he referred to the 'poor ice' on the Volga, to the rumors alleging that the Moscow government had made peace with the 'outlaws' and even to his fear of being attacked by the rebels from Astrakhan. Ishterek did his best to avoid close contacts with the latter until the power contest in Russia was over. The tsar and the Tushino military leaders competed for the support of the Big Nogai, wishing to make an ally of them. However, on the other side of the Volga, a conflict between the murzas developed, so for them, the Russian turmoil receded into the background.

Though the murzas continued to assure the bey of their loyalty, in fact outside observers noticed that they 'do not listen to their leader as far as the affairs of state or any of their personal affairs are concerned'. The only thing Ishterek could threaten them with in case of their insubordination was that he would migrate from the Horde 'as a Cossack' and ask for Russian military help. However, by that time this intention was dubious rather than frightening. The tsar's army was unable to support the Nogai ruler from beyond the Volga river, as Russia itself was wracked with turmoil. Besides, the Big Nogais were located near Astrakhan, the residence of the rebellious prince Ivan Khvorostinin.

Those of the murzas who moved to the Crimean bank of the Volga river chose to establish relations with that voivode. The nuradin held a meeting and it was resolved to 'swear a shert to the rebel who calls himself Tsarevich Dmitry',—that is, to False Dmitry II, and after

that to migrate towards Astrakhan and lead a nomadic life there. At first, Ishterek kept the shert treaties sworn to Vasily Shuysky and declined the proposals by Ivan Khvorostinin to swear allegiance to 'Tsar Dmitry Ivanovich'. Having hesitated a great deal, he even brought the Khvorostinin's messengers to the voivode of Tsaritsyn. However, receiving no actual support from the Russians, he started to turn away from the idea of cooperation with Moscow. Being aware of the Polish Intervention, the bey was thinking about establishing contacts with the King of Poland. In July 1611, his noblemen supported Ishterek when he refused to stand up and bare his head when the tsar's address was read to him (alleging that 'his true attitude to the tsar is in his heart and not on his head'); after Vasily Shuysky was overthrown, Ishterek accepted an envoy from Poland and sent his envoy to Warsaw. The murzas further denounced Ishterek for his swearing shert to King Sigismund of Poland. Prince Wladyslaw of Poland, who was invited by the boyars to take the Moscow throne in August of 1610, also had some expectations in connection with the Big Nogai.

Under these circumstances, Ishterek saw (or rather had) no opportunity to deter the ulus people and his subject murzas from carrying out raids into the Russian lands. In 1611–1612, the Nogai cavalry troops attacked the borderlands of the Moscow State. The forces of the nomads of the steppes approached the cities of Tula and Samara, set Saratov on fire and nuradin Shayterek sent towards Ryazan city his army of 7,000 men (some sources refer to an army of 12,000 men) headed by Saryke-aga. And when the Russians asked for explanations, the Nogais justified themselves alleging that they were destroying only the 'rebellious' cities.

The end of the turmoil in Russia proved to be quite unexpected for the Trans-Volga steppe nomads. In March of 1613, on behalf of the Zemsky Sobor, the boyars announced to Ishterek that Michail Romanov had been elected to the throne. The bey sent his ambassadors to Moscow to congratulate the newly elected Tsar and to apologize for violating the shert; Ishterek also asserted he had nothing to do with the Nogai raids and promised to serve the tsar faithfully, as did the beys of the past.

The Russian diplomats who visited the nomad lands reported that the Nogais were split into opposing groups, though there were no large-scale conflicts between them. The murzas realized that discord weakened the steppe nomads and 'the Moscow people will be happy to know that we exterminate each other, whereas the survivors will be killed by the Moscow people'. [Russian State Archive of Ancient Acts, f. 127, inv. 1, 1613, file 5, sheets 200, 243, 244] For some time, these machinations held back the final collapse of the Nogai Horde.

Neither voivodes, nor the government believed it was necessary for the Big Nogai to unite. A strong nomad state next to the southern borders of Russia could hinder the political plans that Moscow had regarding the Caucasus and Desht-i Qipchaq. Gradually, stirring up discord between the nomads became the dominant policy. Both the voivodes and the envoys did their best to cause the bey to quarrel with the people of Tinmamet, and the nuradin with the people of Urmamet. Commenting upon the requests of unsuspecting Ishterek to mediate in making peace between the enraged Mangits, they openly wrote to the Posolsky Prikaz (Department of Foreign Affairs) as follows: 'We do not believe that their peace with each other will contribute to your cause as tsar. What we believe is that once the Nogai put an end to their discord, the borderlands of your country will be exposed to war'. [Russian State Archive of Ancient Acts, f. 127, inv. 1, 1619, file 7, sheets 2, 11, 12]

It was almost simultaneously that in the spring of 1619, bey Ishterek and nuradin Shayterek died; the first died of disease, and the latter fell off a horse. The two positions of power were vacant. For the disunited Nogai Horde, this meant the beginning of the end.

Having lost their formal leaders, the murzas tended to forgo convening meetings to redraw the boundaries of their pastures, resorting instead to military force. A period of mutual raids, killings and depredations began in the steppes. Both the Russian government and the Astrakhan authorities gloated over this extermination, and did what they could to stir up the enmity that the murzas felt towards each other. A. Khovansky and A. Lvov, voivodes in Astrakhan, reported openly about this to the tsar.

Having learned about the murder of Mamai murza, they asked the Moscow officials not to interfere and 'let the Nogais carry on with their dissension'. 'Seeing the thirst of the Nogais who for quarrels and dissension' both the voivodes 'did their best to defame the murzas in the eyes of each other... and to add to their dissension'. 'Seeing such dissension between them', they wrote to Moscow, 'we caused them to quarrel with each other by talking secretly and separately to each party so that our actions were not apparent. We contribute... to their dissension by referring to various traditions and bring... them to wreck and ruin through hostility and war'. [Russian State Archive of Ancient Acts, f. 127, inv. 1, 1619, file 1, sheet 29; 1620, file 1, sheet 13].

To ignite more hostility, the Streltsy troops were sent to the warring parties, allegedly to help them fight their enemies. Believing that the tsar's governors supported it, each of the groups fought with extra zeal. However, the Streltsy troops themselves did not take part in the fighting, as they were to simply provide the semblance of a military presence 'manipulating both of the conflicting sides... so that they, seeing... the tsar's people and being inspired, would quarrel more and shed more blood (relying on the help of the Streltsy troops—V.T.)'. [Russian State Archive of Ancient Acts, f. 127, inv. 1, 1619, file 1, sheet 13; 1620, file 1, sheets 13, 20] The ultimate aim of this plan was to weaken the nomads as much as possible, thereby bringing them under the full control of the tsar.

The Kremlin authorities fully supported the tactics of the voivodes, ordering them to pit the 'halves' against each other so as to eventually bring them 'under the protection' of Tsar Michail Fyodorovich. Besides, the voivodes were instructed to prevent the murzas from electing the bey and the nuradin without the tsar's authorization.

The nominees to the highest positions in the Big Nogai Horde were always discussed in the diplomatic correspondence and at negotiations. Different groups of murzas were ready to apply to the tsar to nominate their leaders to these positions. For the Astrakhan administration, Kanai seemed to be the most attractive candidate.

During the feud of 1619–1620, he settled near Astrakhan accompanied by 5,000 of the ulus people, and declared that he would remain loyal to the Tsar. He never hid his pro-Moscow attitude and he was never seen as one to scheme against Russia. Ghazi, Kanai's son, was baptized as Michail, and gained an excellent reputation while fighting against the Polish invaders. Back in 1620, the voivodes reported that Kanai would be the best bey for Moscow. First, considering his family lineage, he was the senior murza; second, he had friendly relations with Altyuls and, consequently, could potentially aid in bringing them under the Russian aegis; third, he had been consistently supporting the orientation towards Russia; fourth, his clan of Tinbay had no blood feud with any of the Big Nogai's conflicting parties, thus being relatively neutral and equidistant from them.

As for the nuradin, the Astrakhan authorities hesitated. But finally they agreed upon the name of Kara Kel Muhammad, the son of bey Uraz Muhammad.

On 10 November 1622, two hundred Nogai noblemen gathered together in the local Syezzhaya izba (the voivode's office). They heard the announcement of the tsar's appointment of Kanai as bey and Kara Kel Muhammad as nuradin. After namaz, Kanai (as Ishterek in 1600) was 'lifted on a polst' (a piece of compact cloth, thick felt or fur). The heads of the main groups took part in this ceremony.

The Big Nogais had hopes of regaining their unity and maybe restoring a state of their own. This was the first time in many years that the descendants of Ismail by different lines united and de facto acknowledged their subordination to one ruler. However, the untitled Nogais (the wealthier ulus people) did not feel any deference to the show of peace-making by the nobles. The ulus people of Kanai kept bullying the nomads who obeyed nuradin, stealing their cattle and robbing their camps. In response, the ulus people of the aggrieved party set out 'to avenge Prince Kanai for his previous unfriendly acts'. Hostilities broke out again with renewed vigor.

However, unlike in preceding years, this time the Moscow and Astrakhan politicians did their best to maintain peace between the murzas, who had them swear shert in order to pre-

vent them from migrating far and keep them within the reach and control of the voivodes. Now, they proposed sending the Streltsy troops to the murzas not to provoke conflicts, but to demonstrate actual Russian military support.

However, despite the sporadic attempts to reconcile certain Nogai noblemen and the growing pressure from the Kalmyks, it seemed that the Big Nogai could not come together. In 1629, the feeling was that the bey were confronting a final catastrophe, and the nuradin and the kekavat contacted the voivodes to approach the tsar to request that he take control over the Nogai Horde to 'enact by his kind the tsar's edicts and to punish the guilty in proportion to their faults as he does for the Russian people'; otherwise the murzas 'would bring each other to ruination and the ulus people would disperse'. However, the government maintained an indifferent silence, and did not respond to the appeals of the collapsing Horde. The Russian government had no plans for settling the complicated conflicts of the nomads [Russian State Archive of Ancient Acts, f. 127, inv. 1, 1629, file 1, sheets 137, 138]. The conflicts continued, and proliferated.

In the meanwhile, the Kalmyks approached from beyond the Yaik River. They carried out several raids on the Volga region uluses and then returned home. Now, the Big Nogai had no choice but to rely on the voivodes' help and tended to keep as close to Astrakhan as possible, or even migrate to the right bank of the Volga River. The cruelty of the Kalmyks during their raids escalated. In September 1633, they launched a vicious attack on the lands of kekavat Dzhan Muhammed. He led his subjects across the river to the west bank. In January 1634, the remaining Nogais (subjects of Kanai) were attacked. Having barely defended themselves from the forces of the Kalmyk Taishas, they also migrated towards the Crimea. As a result, the Nogais lost their state territory. Most of them found themselves on the right bank of the river, and they started to call the left bank (that formerly belonged to the Nogais) the Kalmyk bank.

Later, some documents referred to the Kalmyk invasion as the sole impetus for the migration of the Nogais to the west. This is the reason provided by the murzas and the ulus

A Tatar (Nogai) German engraving. 17th century.

people ('because of the Kalmyk warriors', 'because of Kalmyks, who came often', 'because of the warlike Kalmyk people' etc.). The Nogai historical songs of the 19–20th centuries also link this exodus with the expansion of the Taishas. No wonder that the same reason was cited in the official state documents of the Posolsky Prikaz (Department of Foreign Affairs), as information about the Nogais came from the Astrakhan governors, who were interested in emphasizing Kalmyk pressure as the cause of the migration of the Nogais. This view on the Nogai exodus of 1634 became entrenched in the academic literature.

However, there was another important reason for the exodus, and that is the pressure exerted by Astrakhan. The Russians and the Nogais often quarreled over fishing areas; the Streltsy and the posad people (tradesmen) took horses away from the nomads, and also captives taken during raids into the Qazi ulus. The murzas complained to the voivodes, trying to draw their attention to these atrocities, as well as to the Posolsky Prikaz (Department of Foreign Affairs) ('The Astrakhan people fling insults and do much violence; they steal horses from them (the Nogais—V.T.) and forcibly

abduct their children, and wives, and maidens, whereas you neither conduct investigations nor render justice!'). However, these complaints proved to be futile. This was to a large extent due to the twenty years of humiliations perpetrated by the Russian neighbours, which was in large part why the Nogais migrated and then were adamant in their refusal to return to the left bank ('We... stepped away from insult, and from the injustice of the voivodes, we left, in tears').

They had claims against the Streltsy top officers, the boyar children and the service class... Some of these joined the Kalmyks in stealing horses, and slaughtering sheep and cows; others lashed the murzas with whips ('which was unseen before—some of them were even skinned'); there were also those who captured women and girls 'keeping them as their concubines'. A rumor was heard in the uluses that a tsar's edict was received in Astrakhan instructing that 150 of the most noble murzas be made chieftains and that the rest of the 'lowborn Tatars' be put on boats and taken northwards to Rus [Russian State Archive of Ancient Acts, f. 1274, inv. 1, 1626, file 1, sheets 377–380; 1628, file 4, sheets 50–53; 1634, file 1, sheets 1–6; file 3, sheet 175; file 6, sheet 4; 1635, file 2, sheets 159, 160; file 4, sheets 41, 56 and seq.].

Much indignation was caused by the actions of the voivode Prince Alexey Trubetskoy, who colluded in bringing about the atrocities. As kekovat Dzhan Muhammed said to ambassador Zhelyabuzhsky, 'I... was born and grew old in the Volga region... and under no other voivode... were the murzas or the common people oppressed to such an extent as under voivode Prince Alexey Trubetskoy!' On top of encouraging the atrocities committed by his people, Prince Alexey Trubetskoy boasted, 'The Tatars of Kazan... till the soil and make bread and I will... make you, the murzas and the common people do as the Tatars of Kazan, you will also till the soil and make bread'. And indicating the Krovavy Ovrage ('the bloody gully') named after a bloody battle that took place there in the past, Prince Alexey Trubetskoy threatened the murzas saying: 'Yet again... will this [g]ully be full of your blood!' [Russian State Archive of Ancient Acts, f. 127, inv. 1, 1634, file 3, sheet 166].

By the end of 1633, the nomads had run out of patience. Getting no support in the face of the Kalmyk invasion, they led their uluses westwards. A scandal erupted. The outraged tsar punished the Streltsy officers (who were thrown into prison), the voivodes and the dyaks (clerks) who were dismissed and ordered to return Moscow to explain what happened. The investigators were instructed to 'make them answer for their actions in a strict way and update the Nogai on the progress of the investigation'. But it was already too late. Most of the steppe nomads were too angry and afraid; they had no trust in other assurances and guarantees of protection by the tsar, and they were reluctant to come back.

Kanai, who had stayed in the right bank territories with a paltry number of his men, was obviously completely crushed by these new circumstances. His subjects left, and instead of shielding him from the Kalmyks, the Russian authorities almost supported them, pressing the Nogais to migrate towards the Crimean bank. Trying to prevent his subjects from emigrating to Crimea for good, the bey approached Prince Alexey Trubetskoy to ensure protection from the Kalmyk Taishas and then to negotiate with the emigrants. But the voivode turned a deaf ear to his words. In the meanwhile, the Kalmyks kept raiding, and killed Khan murza, the brother of Kanai. Kanai made desperate attempts to negotiate with the Astrakhan authorities... but found himself thrown into the Astrakhan prison.

Official correspondence refers to Kanai's dealings with Kalmyks as the reason for his imprisonment. The bey himself sent the tsar a number of petitions saying he was at a loss about the reasons why he was imprisoned; Kanai insisted he was the innocent victim of calumny, stating that the traitors who 'took off to the Crimean bank have long since plotted to 'destroy Kanai'. In addition, he explained his imprisonment as resulting from the anger of voivode for what the bey said had happened: The Kalmyks attacked, and thirty murzas headed by kekovat retreated from the Volga uluses.

Whatever the case, in 1634 the Head of the Big Nogai Horde was under arrest 'in connection with the Kalmyk case, as he had dealings with them'. Moscow authorities were likely to

understand that such accusations lacked consistency, however, no one was in a hurry to release Kanai; moreover, an order was issued prescribing to 'keep a close eye' on him and not to exchange him for anyone else.

It goes without saying that Kanai had lost the respect of his fellow countrymen. After 1634, when swearing shert to the tsar, the Big Horde murzas didn't even mention their bey. For quite some time, the name of Kanai vanishes from the documents. In early 1639, the murzas informed the tsar that 'under the Divine law... Prince Konai is no longer in Astrakhan'. [Russian State Archive of Ancient Acts, f. 127, inv. 1, 1639, file 2, sheets 1, 6, 8]. It is likely

that the death overtook the final ruler of the Big Nogai in mid-1638.

The remaining Big and Lesser Nogais dispersed in the vast territories of the Eurasian steppe. Having no unified centre, the nomads organised themselves in ulus-like structures (Hordes). The largest and the most stable of these were the Yedisian Horde, Yedishkul Horde and a Bucak community (north-west of the Black Sea). After the mid-17th century, Russian, Ottoman, Polish and other governments had to deal with these isolated communities. In the east, the nomads of the Nogai Horde formed the Karakalpak nation. Many of the Nogais joined the Junior Zhuz of the Kazakhs.

CHAPTER 5 The Crimean Khanate

§ 1. The Crimean Khanate

Ilya Zaitsev

The Crimean Khanate from the middle of the 15th century until the end of Mengli Giray's reign

Hacı Giray's reign was interrupted for a short time in the summer of 1456, when Aidar (Haidar) b. Hacı Giray apparently assumed power over the peninsula. Hacı Giray. However, he failed to keep the throne: after November, he fled to Lithuania, and his father got back his power [Colley, 1913, pp. 132–135]¹. However,

as A. Nekrasov rightly noticed, we can only speculate that Aidar succeeded in attaining the 'royal' title due to the events of 1456 [Nekrasov, 1999, p. 50]. For example, Armenian sources indicate that the displacement of Hacı Giray in 1456 was associated with a certain Sultan Mahmudek, identified by T. Sargsyan with a

¹ Hayder was still alive in the early 80s of the 15th century. There is a surviving version of the Russian translation of his letter from March 1483, sent from Moscow to Crimea to his wife Barash Sultan, who was living there together with her son Daniyal. Hayder was calling his wife and son to come to him. In Ambassadorial books, Hayder is called a tsar, which means that he had indeed occupied a throne (most probably in Crimea) before that [Collection of the Russian Historical Society, 1884, P. 37]. In Russian documents this Khan was sometimes referred to as 'Hayder Gazy' (that is, his name had the affix 'Ghazi', 'a fighter for the faith').

Soon, Hayder passed away. Letters of Mengli Giray were delivered to Moscow in November 1491, and in one of them he requested Ivan III to send him Hayder's armour ('Hayder's panzer') [Ibid., P. 124]. Another wife of Hayder, Devlet Sultan, took Section in bringing up the future Kazan Khans Abdul Latyf and Muhammad Emin and their sister Gawharshad. Devlet Sultan apparently shared her husband's fate and moved to the Muscovite state (she outlived her husband and was still alive in 1498 when she was even making plans for a Hajj pilgrimage). In 1498 Nur Sultan wrote to Moscow to Ivan III: '...you know well yourself that Hayder Ghazi supported my son, and his wife Devlet Sultan breastfed my children, and now she has vowed to go to Makkah; with your agreement, we shall arrange for her to go to Makkah accompanied, and her prayers and supplications will be for you...' [Ibid., P. 273].

Golden Horde khan, Mahmud [Sargsyan, 2004, pp. 45, 251–253]¹.

According to the 'Tevarih-i Desht-i Qipchaq' by Abdullah b. Rizwan, 'Corrections of the History of the Tsars' by Hüseyin Hezarfenn and an anonymous collection by V. Smirnov, the Khan died in the 880 AH, [Collection, 1881, p. 12; Zajaczkowski, 1966, p. 32 (k.5v); Hezarfenn, 1.29],—that is, between 7 May 1475 and 25 April 1476. This date, provided by Ottoman sources, is undoubtedly incorrect. It was erroneously recorded in the 870 AH (24 August 1465—12 August 1466)². According to 'Al-Asseb Seyar' and subsequent editions, as well as the work of Khalim Giray, Hacı Giray died in 871 AH [Asseb 1832, p. 73; Kratkaya, 1.27; Halim Giray, 2013, p. 31]³. However, as M. Urekli noted, the same date is seen on a coin made in honour of the Khan [Urekli, 1989, p. 13]. News about the death of Hacı Giray reached Kaffa at the end of August 1466 [Colley, 1913, p. 137; Colley, 1918, p. 129]. This means that the Khan died shortly before, apparently (in the middle of the month or closer to its end,—that is, after 12 August, as they managed to mint a coin with the date 871 AH). The founder of the Crimean state was buried in Salachik near the Khan's capital city at the foot of Qırq Yer [Halim Giray, 2013, p. 31]⁴.

Ottoman and Crimean chronicles are united in the opinion that after the death of Hacı Giray, 12 of his sons claimed the right to succeed him, This is passed on to us from Mustafa Ali Effendi [Ali Efendi, 1.87]. According to Risvan's 'Tevarih-i Desht-i Qipchaq', Hacı Giray left 12 sons, 'prepared to run the khanate' [Zajaczkowski, 1966, p. 32 (fol.5v); Zajaczkowski, 1969, p. 17]. The anonymous

'History of Crimea' (a collection published by V. Smirnov) also mentions 12 sons, 'prepared to run the khanate' [Collection, 1881, p. 12]. And Hüseyin Hezarfenn, whose text is close to these sources, writes about 12 sons [Hezarfenn, 1.29].

'Tevarih-i guzida—Nusrat-name' mentions eight sons of Hacı Giray, while only naming seven of them: Davletyar, Naur Davlet Khan, Kutluk Khan, Keldish, Mengli Kirai, Yamgurchi, Uz Temür [Materials, 1969, p. 40]. Other sources contain the names of all eight sons (rulers are indicated in bold)⁵: **Mengli Giray**; **Aidar**⁶; Yamgurchi; **Nur Devlet**⁷; Ozdemir⁸; Davletyar; Qutlugh Zaman; **Kildish** (Kildibay).

However, certain details from a brief handwritten note on the history of the Crimean Khanate, published by N. Seityagyayev for a manuscript at the Vernadsky National Library of Ukraine (3780), stand out. It is stated there that Hacı Giray had eight sons, and five of the eight mentioned were called khans (Nurdevlet, Aidar, Mengli, and, oddly enough, Yamgurchi and Uz-Timur) and three (Davletyar, Keldish and 'Tokluk Zaman',—that is, probably Qutlugh Zaman) had no such prefix attached to their names [Seityagyayev, 2011, p. 344].

Obviously, Mengli Giray was not the eldest of the sons of Hacı Giray. So, in the sources he

⁵ For information about their sons, see: [Zaitsev, 2006, Pp. 342–353].

⁶ According to Sharafutdinov, he ruled in 873/1468/69 [Sharafutdinov, 1906].

⁷ According to Sharafutdinov, he ruled from 871 / 1466/67 through 873/1468/69. In 1478 Nur Devlet, together with his brother Hayder, arrived in Lithuania [Dumin, 1989, P. 108]. He left Lithuania for Moscow together with his brother Hayder and son Berdaulat in the autumn of 1479. The Lithuanian Ambassador to Crimea was to say to the Khan on behalf of the Polish King and the Grand Duke of Lithuania in 1479: 'Our Devlet and Hayder came to our King's land and our King accorded them all the hospitality, and as they had come of their own free will, so freely they left and now reside, where they please' [Collection of works, 1866, P. 25]. Soon Nur Devlet was assigned to Meshchera (Kasymov) [Belyakov, 2011, P. 57]. In spring 1480 Hayder was banished to Vologda.

⁸ Both Uz-Temur and his nephew Devlesh left Crimea and were married in Lithuania already in the early 1490s. According to the Ambassadorial books, they were given a manor there by the king [Collection of the Russian Historical Society, 1884, Pp. 151, 167; Dumin, 1989, P. 108].

¹ This is quite probable. Though a different supposition can also be made. Mahmud was a son of Ulugh Muhammad, who ruled in Kazan at that time.

² Despite the fact that in some texts (for example, by Hezarfenn) the date is written out in words rather than numbers.

³ According to S. Sharafutdinov, Hacı Giray ascended the throne in 841 / 1437/38 and died in 871 / 1466

⁶⁷ [Sharafutdinov, 1906].

⁴ The türbe (mausoleum) of Hacı Giray in Salaçiq, being the burial place for four generations of Khans and Sultans, has survived to our days [Bodaninsky, 1927, Pp. 198–199; Gavriluk, Ibrahimova, 2010].

called Nurdevlet 'big',—that is, older brother [Collection of the Russian Historical Society, 1884, p. 278]. Mengli Giray was probably the fifth son of Haji [Smirnov, 1887, p. 330]. When he died (921 AH), Mengli Giray was 71 years old¹. Thus, he was born in the 850 AH (29 March 1446–18 March 1447). As A. Nekrasov wrote, Mengli was probably the fourth son of Hacı Giray. This would be the case if two of the three eldest sons died during their father's life. Then, the fact that Mengli received his father's clan name 'Giray' could be related to the ancient Mongolian tradition of inheritance of the 'indigenous yurt' by the fourth son and naming him 'edjen' in this regard [Nekrasov, 1999, pp. 50–51].

Hacı Giray had a daughter, as well. Mengli Giray makes reference to her marriage, but we do not know the name of her husband (Sultan Bayazid sent silverware to the Khan as a gift for his sister's wedding). In July 1494, Mengli Giray wrote to the Great Prince of Muscovy, 'We have another request: the wedding of your sister, the Tsarevna, so that if you are nearby, we could celebrate this fine event together. And given your request to the Sultan, we were glad to hear it, he sent together with his good ambassador money, silver dishes and fabrics with gold...' [Collection of the Russian Historical Society, 1884, p. 211].

Davletyar (father of Devlesh, who left for Lithuania) and Qutlugh Zaman most likely died in their father's lifetime [Colley, 1918, p. 130; Nekrasov, 1999, p. 50]. Kildish is found in Genoese sources of the 1470s in connection with Kaffa [Gayvoronsky, 2007, p. 103]. Kildish (Kildibay) [Asseb, 1832, p. 74], or Yani Qidi Khan (as he was called by the Marjani, assuming that he was Mengli's cousin (similarly to Nurdevlet) [Essays, 2003, p. 125], might have occupied the throne for a short time in

878 AH/1473/74 [Sharafutdinov, 1906]. Perhaps, as evidenced by the Chronicle of David Lekhno, Kildish was actually killed by the *Mansurs* [Harkavy, 1884, pp. 2–3],—that is, the Crimean Nogais. In the so-called 'Brief History', they differentiate Bai Geldi (that is, Keldysh-Keldibai) and Bai Devlet (Davletyar?). Bai Devlet was killed along with his sons by Nurdevlet as he ascended to the throne, but the latter was himself killed (?) by another brother—Bai Geldi, who ruled for just 15 days and fled shortly after that, while all his supporters were massacred and his camp near the Dnieper—conquered [Negri, 1844, p. 382; Brief History, l. 27].

According A. Grigoriyev, the chronology of reigns of the Crimean khans in the 50–70s of the 15th century was as follows. Hacı Giray, who defeated Ahmet in 1465, died in 1466. He was succeeded by Mengli Giray, but the latter lost his throne to his brother, Nurdevlet, who ruled between 1466 and 1468². In September 1467, he swore shert to the Polish king Casimir [Kolodziejczyk, 2011 pp. 536–537].

Mengli Giray overthrew Nurdevlet, and reigned until the spring of 1475, when he lost the throne to Nurdevlet and Aidar. At the end of 1475 or in early 1476, Mengli Giray himself was brought to Turkey, where he lived until the end of 1478. Nurdevlet and Aidar remained on the peninsula as co-rulers. By June 1476, a civil war broke out in the Khanate. One of the warring parties was supported and nominally headed by Chinggisid Jani Beg. In late June 1476, that group, with the head of this clan, Shirin Eminek, and his supporters, laid siege to the fortress of Eski Qirim (Solkhath),

¹ This age is indicated in the copies of the anonymous history of the Crimean Khans [Institute of Oriental Studies of Russian Academy of Science, manuscript C 861, P. 5; Institute of Manuscripts of the National Library of Ukraine named after V. Vernadsky, Kiev (Natsional'na biblioteka Ukraini imeni V.I. Vernadskogo, Kiiv), reserve V (Odessa Society of History and Antiquities), no. 3804, P. 3 reverse] See also the French translation of the BNF copy (Supplément Turc 515. The French copy, brought from Crimea in 1819 by A. Jaubert) [Précis, 1833, P. 359].

² The time of his reign can be more accurately established through coins. Silver akçe coins, minted in the town of Qirim in 871 / 1466/67, have survived from the times of Nur Devlet (<http://www.zeno.ru/search.php?searchid=214492>). These coins are encountered in treasures far away from Crimea. The 1930 treasure trove from the Moscow Kremlin (perhaps, related to the trade of 'Surozh' merchants in Moscow in the reign of Ivan III) contained coins of Hacı Giray, minted in Qirk Yer in 858 AH (1 January–21 December 1454), in the town of Qirim in 867 (26 September 1462–14 September 1463), as well as coins of Nur Devlet (town of Qirim, 871 AH–13 August 1466–1 August 1467) [Zverev, 2006, P. 208].

but failed to take the town by storm. Nurdevlet and Aidar were forced to flee, and in the autumn of 1476 Jani Beg took over power in the Crimea was [Grigoriyev, 1987a, pp. 77–78]. The brief period of his rule actually meant the unification of the Crimean Khanate and the Great Horde into a single political entity [Trepavlov, 2010, p. 69].

Who was Jani Beg, who briefly ruled in the Crimea in the mid-70s of the 15th century? We do not have a clear answer to this question. Most likely, he was a son of Mahmud b. Küchük Muhammad, and later ruled in the Astrakhan Khanate (from 1514). 'Tawarih-i guzida—Nusrat-name' refers to a khan named Jani Beg, a descendant of Temür Kutluk. According to this version, the latter had four sons: Pulad, Temür, Nasir and Yadgar. Muhammed Khan (that is, a well-known Küchük Muhammad) was Temür's son, and he also had four sons: Kasym Khan, Boz Tor-gai, Abd al-Karim and Keldybek. His sons—Ak Bobai, Mede Mamadj, Ak Budal and Muzaffar. Khan Jani Beg was a son of Muzaffar [Materials, 1969, p. 40]. But first, it is not clear from the text who Muzaffar's father was (Keldybek?); secondly, the genealogy of Khan Küchük Muhammad's descendants is a very messy affair.

The Ottoman conquest of the Crimea's southern coast shaped subsequent events on the peninsula, whereby the impact on the fate of the Khanate was monumental.

The history of Ottoman Crimea is outside the scope of the study. It has been successfully addressed by Yu. Öztürk [Öztürk, 2000]. However, despite the fact that the Ottoman conquest of the Crimea's southern coast has not been substantially researched (including in terms of sources [Veselovsky, 1889, p. 183; Zaitsev, 2009a, pp. 93–95]), it is not the focus of this study. It should be noted that the lands on the southern coast of the peninsula were under the sultan's direct control¹. According to the Ottoman system of governance, these lands were divided into judicial administra-

tive districts—*kadylyks*² (Kaffa, Mangup, Sudak, Kerch, Taman, Azov), with three more added later (Tat Fortress, Balaclava, which originally belonged to the Mangup *kadylyk*, and Temryuk), as well as eight administrative units related to them. A *kasa* (*kada*), in turn, was divided into *nahies*—rural districts. It is worth noting that the Ottoman conquest of the southern coast was far from a devastating invasion, as it has at time been portrayed [Hartahai, 1866, p. 201]. It is unlikely that the seizure of Kaffa was accompanied by a massive drops in the population and massacres: no sources suggest this [Myts, 2009, p. 250]. In most cases, life in those fortresses and the surrounding areas continued as before, and there were no abrupt changes in the local population's daily life, except for Ottoman garrisons stationed in the local fortresses. For example, this is true for Sudak [Dzhanov, 2006, p. 328]. Some fortresses, which belonged to the principality of Theodoro (Mangup), were not destroyed during the invasion but simply abandoned by the defenders and then not used by the Ottomans [Bocharov, 2009]. According to information provided by a papal protonotary named Dominic at the court of a magistrate Stefan³, after the Turks conquered the town, their gain amounted to 1,011 leath-

² For example, Alushta was the westernmost village of the Sudak kadalyk. Next was the Mangup *kadylyk* [Korkunov, 1837, P. 135]. Property rights in this territory were established by acts-*hudjets*. Some of them are extant, for example, a hudjet of 1097 AH (1686) from the Mangup *kadylyk* to the village of Sectionit for its property rights for the land, including the mountain Qastel (that is Ayu-Dag) [Keppen, 1837, P. 167]. However, the border between the Khan's land proper and the Ottoman territories was rather relative. In the collection of decisions of *kazasker*: Mustafa, who served under Khan Jani Beg Giray (defters 1608/9–1613), we read: '...each of us has a certain number of sheep that roam pasturing...and sometimes enter the **Hüdavendigâr** land (marked in bold type by me—I.Z.), and no-one since the days of our forefathers has ever charged anything for this' [Lashkov, 1897, P. 28]. F. Lashkov suggested that this was the *mirie* land, that is, of the fiscus. In reality, it was, of course, Ottoman land (of the Persian *Hüdavendigâr*—the title of the Ottoman Padishahs). According to the Ambassadorial books, Mengli Giray himself used to spend long periods in Kaffa [Collection of the Russian Historical Society, 1884, P. 152].

³ Domenic was a member of the Hungarian King Matthias' embassy to Stefan.

¹ By the way, years later, Sahib Giray was suspected by the Ottomans of attempting to return this territory to the Khans again, for which he originally removed [Inalcik, 1980, P. 187].

er bags of money, in nothing else is counted (a bag could accommodate 600 ducats). All noblemen were taken to Istanbul, while only the common people were left in the town, together with a garrison of 10,000 soldiers, led by 'some Greek from Trebizond' [Yurgevich, 1894, pp. 1–2].

From 1475, the Crimean Khanate found itself in a difficult situation in relation to the Ottoman Empire: it cannot be seen as full-fledged vassalage, nor was it complete independence. The political practice suggests an affiliation of the Crimea's khans to the Ottoman Padişah, while the Islamic theory of state power suggests that these khans were independent and sovereign monarchs [Zaitsev, 2010, pp. 288–296; Zaitsev, 2010a, pp. 25–27]¹. Such a provision was recorded in some kind of agreement (*shert*), signed by the new Crimean Khan, Mengli Giray, and the conqueror of Kaffa, Ahmed Gedik Pasha (on behalf of Mehmed II). The text of this agreement has reached us in a form that is probably very close to the original [Zaitsev, 2009a, pp. 142–157]².

In 1478, Nurdevlet again ascended to power in the Khanate, for some time. It was in this year when his ambassador arrived in Poland to Casimir, accompanying an Ottoman diplomat [Zaitsev, 2004a, p. 93]. However, as early as next year the throne was assumed by Mengli Giray. The *shert-name* list between the Muslim, Karaim and Armenian communities of Qirk-Yer and Mengli Giray, which was written between January and the end of March 1479, stipulated a condition whereby the residents of Qirk-yer pledged not to give refuge ('let in fortress') to the sons of Hacı Giray or Seyid Ahmed I. Vásáry believed that the first was Nurdevlet and the second —Jani Beg [Vásáry, 1982, pp. 294, 298–299; Zaitsev, 2004a, p. 93]. That being said, in addition to Mengli Giray, a son of

Hacı Giray could mean any of the Khan's sons living at the time.

It is important to note that until the end of the 15th century (and possibly later) representatives of a side branch of the descendants of Gıyas al-Din b. Tash Temür—the brothers and nephews of Hacı Giray through the male line, lived in Crimea³. As we know, Gıyas al-Din had a son, Mustafa, who (probably for a short period of time) had coins made under his name in Hajji Tarkhan: we have print copies of undated coins that were minted in Hajji Tarkhan by Mustafa, son of Gıyas al-Din, 2006a, p. 29; <http://www.zeno.ru/showgallery.php?cat=1189>; Maiko, 2007, pp. 143, 156, 164]. It is likely that his son was Prince 'Mamyshek', or 'Mamishkek' ('Mustofin, the tsar's son'), who fell into the hands of the Moscow Cossacks⁴. In 1489, at the request of Mengli Giray's, who sent a special letter about this to Moscow, he was most likely released to the Crimea [Collection of the Russian Historical Society, 1884, pp. 76, 79], but in 1492 he was still in Moscow. Also in 1492, his younger brother Muhammed was at Mengli Giray's place with his wife ('his little brother Tsarevich Maamed with his wife and the rest of them are at my place', Mengli Giray wrote) [Ibid., p. 151]. Mengli again requested the release of Mamyshek and that Muhammad be sent to Moscow. As for himself, he asked Ivan III to give him Kashira (previously it was owned by Nurdevlet), 'He does not make friends with enemies of yours and mine, such a good man'

³ According to 'Muizz al Ansab', Hacı Giray also had sisters, Sultan Nasab and Shah Nasab [The History of Kazakhstan, 2006, P. 45]. I have no information about their fate and possible descendants.

⁴ Ambassadorial books also mention a certain tsarevich 'Mustofar', not calling him either a brother or a son of Mengli Giray, but indicating him in the document of 1486 as 'his tsarevich' in relation to Mengli Giray [Collection of the Russian Historical Society, 1884, P. 47]. Apparently, Mustafa and Mustofar should not be viewed as one person (as I have already let myself do earlier). First, they have different status: Mustofar is a tsarevich (that is a Sultan), while Mustafa is a tsar (that is the Khan, who already has reigned somewhere). Secondly, their name forms are still different. Mustofar can be tentatively regarded as belonging to the descendants of Küçük Muhammad and identified with a certain Muzaffar from their number [Materials, 1969, P. 40]. How has he come to be in Crimea?

¹ See also [Nekrasov, 1999, Pp. 53–55].

² Since the time of V. Smirnov, though, Russian historians have been skeptical about the existence of such an agreement [Nekrasov, 1999, P. 53]. It is difficult to date the conclusion of this agreement. Perhaps, the treaty was concluded later, after the necessary conditions had been worked out. Thus, some Ottoman scholars (for example, Mustafa Ali Gelibolulu in 'Kühnhü'l-Ahbar') date 'the salvation of the Crimean dynasty' and the establishment of the Ottoman sovereignty over the Khans to 1478 [Schmidt, 1991, P. 149].

[Ibid.]¹. However, also in 1492, Loban Kolychev reported to Moscow the following: 'Sire, Tsarevich Mamyshek was sent by the Tsar to the Horde; and a man came to the Tsar with news that Mamyshek was with the Horde, waiting until he might take a ulus' [Ibid., p. 167]. In 1493, both Mamyshek and Muhammed were in Crimea (they are mentioned among those to whom 'pomniki' could not reach) [Ibid., p. 173]. Soon, Mamysh was taking part in hostilities again: this time, in Akkerman (Belgorod) against the Lithuanians [Ibid., p. 209]. An indirect mention of his (?) son ('Son of the Qirk Yer governor, Mamysh') [Ibid., p. 230] leads us to cautiously suggest that Mamysh was the governor of the Girays' family seat—Qirk Yer (currently, the fortress of Chufut-Kale near Bakhchysaray), in a valley alongside which Hacı Giray and Mengli Giray found their last refuge. In 1496, Mamysh's son robbed the people of the Great Prince of Muscovy, and soon authorities in Moscow received word from Mengli Giray, 'As for the matter relating to the governor of Qirk Yer and Murta Bakshy, the tsar responded: those Muscovites of Nahir came together with the Jews from Kiev, who were driven out, and with their wives and children, to submit complaints against them, they received 10 arrows and a cap with a saber each; now they want to leave' [Ibid., p. 255]².

If we are right in identifying Mustafa as the uncle of Mengli Giray, then Mamyshak and Muhamma were his cousins. Most likely, both of them were short-lived and left no offspring, because their names were not mentioned in any later sources³. By the way, the fact that Hacı Giray's brother owned Astrakhan (rather than

just the conquest of this city by Muhammad Giray in 1523) probably served as the legal basis for the Girays' future generations to assume that 'that yurt was of our ancestors from ancient times'⁴. In addition, this fact explains a lot in the legend about Hacı Giray's youth, in particular, the desire of Giyas al-Din's sons to make it to Astrakhan [Smirnov, 2005, pp. 186–187].

Both khans and their sons were related to the clan's Crimean tribal aristocracy and also that of the Great Horde via strong marriage and blood ties. Ulugh Muhammad's relationship to the Shirins (in particular, with Tegene Bey) was also strong. A nephew of Tegene was his 'postelnich', or chamberlain. Ulugh Muhammad's son-in-law was the Kunrat Prince Aidar [Zaitsev, 2004a, p. 58; Akchurin, 2013, pp. 6–7]. Marriages between the khans and the clan nobility served as the foundation of the dynasty, a vital line, connecting the Girays with the Kunrat, Manghit, Shirin, Sedjiut and other clans. In fact, members of the Giray family were not only Chinggisids, but also descendants of the Golden Horde Crimean clans [Zaitsev, 2006]. Nurdevlet's wife was a member of the *Kurat* (Kunrat) clan, daughter of Jumadyk (Yumadyk) [Collection of Russian Historical Society, 1884, p. 544]. Mengli Giray's senior wife initially was a daughter of the Prince of Sedjiut, Ediger [Ibid., p. 56]. However, in August–September 1486, Nursultan—a daughter of a Magnyt beg Temir b. Mansur b. Edigu—became the khan's senior wife, bypassing the Sedjiut. Previously, she was the wife of the Kazan khans Halil b. Mahmud (from 1466) and Ibrahim b. Mahmud (died in 1479)⁵.

Mengli Giray's sons and daughters also married into clans of the Khanate. For example,

¹ 'and whichever settlements you give to him'; 'he is quite a capable person for my cause and yours'.

² I think that instead of 'Nahir', the text should read 'to Qir [hor or qor]', that is, Qirk Yer. The whole affair, probably, looked as follows: Moscow merchants came to Qirk Yer together with Jews banished from Kiev with their families. The latter gave gifts (arrows, a saber and a kalpak) to the fortress vicegerent (apparently, for the right of settlement). Apparently, besides those gifts the Jews and Muscovites were obliged to also pay an exaction.

³ In 1501 Mamyshek ibn Mustafa was still alive. Together with him, a certain Abach Sultan 'Mamyshek brother son' (that is a nephew; most probably, the son of his brother Muhammad) is mentioned [Collection of the Russian Historical Society, 1884, P. 360].

⁴ Cf.: [Trepavlov, 2011, P. 376].

⁵ Nur Sultan had two sons from Ibrahim ibn Mahmud, also Kazan Khans, Abdul Latyf (reigned in 1497–1502, died in 1517) and Muhammad Emin (reigned in 1484–1485, 1487–1496 and 1502–1518; died in 1518), and a daughter Gawharshad (died not earlier than 1546). Nur Sultan was a rather prominent figure not only in the history of the Kazan and Crimean Khanates but generally in the history of Eastern Europe in that period. In 900 AH (summer–autumn 1495), together with her brother Hussein, she complied the *Haji*. In July 1510–11 together with her stepson (Sahib Giray, the son of Mengli Giray), she visited Moscow and Kazan. She died in 1519 or soon after that.

his second son, Ahmet Giray, was married to a daughter of Barash, a senior prince of Shirin (Bayrash, or Burash—son of the famous Eminek b. Tegene) [Ibid., pp. 274, 49, 68]¹. Mengli Giray's daughter married a Mangit, Hussein b. Temir (Nursultan's brother) [Ibid., p. 256].

In November 1491, Mengli Giray's *kalga* and his brother Yamgurchi married a daughter of a Manghit Yankivat (Temir's nephew); his son (Yapanchi) married a daughter of Kudaiyar, a son of Karach Murza [Ibid., p. 122]².

Khan Mengli Giray died 'on Holy Saturday',—that is, before Easter (8 April 1515)³. As rightly noted by A. Vinogradov, the 36 years of Mengli Giray's reign can be described as the period in which the Crimean state was established in a fashion that would remain intact throughout the 16th century. The foundation of Crimea's policy for most of this century was laid down during his reign [Vinogradov, 1999, p. 60].

Foreign relations of the Crimean Khanate in the second half of the 15th century

In the early years of the Khanate, the main rival of the Crimean khans was the Great Horde. In the 1490s, the war between the two states did not abate, ending in the defeat of the Horde in 1502 [Zaitsev, 2004a, pp. 82–113].

¹ He took this position after the death of Azika (Hajjike bin Tegene) in June–August 1486 [Collection of the Russian Historical Society, 1884, Pp. 54, 56].

² This is, no doubt, Tegene's grandson Shirin Kundayar [Akchurin, 2013, P. 7]. Yamgurchi had at least two wives, which stems not only from the number of his sons but also from the direct report of a source: 'tsar [Mengli Giray] wants to go from this bayram (celebration) to that new town; he has with him his brother Yamgurchi tsarevich with wives and children and his men' [Collection of the Russian Historical Society, 1884, P. 166].

³ That was established by A. Malinovsky [Malinovsky, 1863, P. 198]. In any case, it was not in January 1515 that this happened, as A. Vinogradov had written [Vinogradov, 1999, P. 60]. According to Marjani, this occurred in Dhū al-Hijjah 919 AH [Essays, 2003, P. 124]. H. İnalçık dated the death of Mengli and Muhammad's ascent to the throne to early 1514, which, evidently, is not accurate [İnalçık, 1948a, P. 355, no. 20]. In the short hand-written note on the history of the Crimean Khanate, published by N. Seityag'yaev based on the manuscript from the National Library of Ukraine named after V. Vernadsky (manuscript 3780), the death of Mengli Giray is dated to 920 AH (7 March 1514–24 February 1515) [Seityag'yaev, 2011, P. 344].

As a result of this victory, the Crimean khans incorporated the title of the Great Horde khans and began to act as the successors of the former power of the Golden Horde. The consequence of this succession were the claims to the post-Golden Horde thrones of Astrakhan and Kazan (the impetus for such claims was not just in an abstract struggle for hegemony in this area, but the blood ties: as we have seen, one of the Crimean khans became the founder of the Kazan Khanate, and Hacı Giray's brother ruled the Astrakhan Khanate for some time). The era of Mengli Giray I revealed the important role played by Crimea in international relations in Eastern Europe. During Mengli Giray's reign, regular diplomatic exchanges between the Khanate and Moscow, Krakow, Vilnius and other European capitals⁴ were established, as well as the practice of concluding intergovernmental treaties of alliance (sherts).

Beginning in 1480 and extending into the early 1490s, Mengli Giray's foreign policy was determined by conflicts with the Great Horde, as well as by rapprochement with Moscow aimed at creating a coalition against the Great Horde and the Jagiellon forces. The ambassadorial books are the primary source for our reconstruction of Moscow-Crimea relations of the time. Actually, the Crimean Ambassadorial book starts with a description of a March 1474 ambassadorial mission led by Nikita Beklemishev to Mengli Giray. The ambassadors from Moscow responded with a reciprocal visit after the mission of Azi Baba (Haja Baba) with an offer of brotherhood, friendship and love. The text of the Ambassadorial Book indicates that such contacts were traditional by then. Beklemishev was instructed to tell the Crimean princes as follows: 'for a long time, rulers of ours and yours have upheld truth and friendship with each other' [Collection of Russian Historical Society, 1884, p. 6]. The initiative to support Moscow-Crimea contacts, as evidenced by the ambassadorial mission of N. Beklemishev, was suggested by a prominent representative of the Kaffa merchant commu-

⁴ The politico-geographic horizon of the Khanate in the West apparently was not limited to Moldavia, Hungary and Czechia. See, for example: [Collection of the Russian Historical Society, 1884, P. 151].

The map of the Crimea.
Western Europe (16–17th centuries)

nity, Hoja Kokos (as he is called in Russian documents). It was he who, before the mission of Hajji-Baba, sent his brother-in-law Isup (Yusuf) to Moscow with a yarliq for the tsar's 'faithful', as well as with a letter from the Shirin Prince Mamak [Ibid., pp. 6–7].

Hoja Kokos is referred to as Gökgöz (that is, 'Blue-eyed'), whose son Hoja Bikes/Bikish was mentioned in the Customs Register of Kaffa of 1487–1490 [Inalcik, 1996, pp. 45, 74; Kizilov, 2005, p. 227]. Gökgöz was probably a very influential financier; Mengli Giray frequently resorted to his services [Collection of Studies, 1866, p. 38; Lithuanian metrics, 1910, p. 361]. In 1484, Great Prince Ivan ordered Vasily Ivanovich Nozdrovaty to Mengli Giray, '...to Kokos. ... to tell him from the Great Prince that he should buy rubies and sapphires, large pearls for the Great Prince and send them to him; the Great Prince will pay for and add some money above the price for this' [Collection of Russian Historical Society], 1884, p. 40].

Beklemishev returned on 13 November 6983 (1474). 'On the same day, the Ambassador of the Great Prince in the Crimea, Nikita Beklemishev, returned from Tsar Mengli Giray, son of Achi Giray of Crimea, with the tsar's ambassador Dovletek Murza and many gifts. On the 16th day of the same month, he dictated, 'To the Great Prince from the Tsar, in love and brotherhood. Thy friend, Great Prince, shall be my friend; thy enemy shall be my enemy. And our children and grandchildren shall live in love as brothers' [Iosaf's Chronicle, 1957, p. 89].

The next diplomatic mission, led by Alexei Starkov, took place in March 1475. Kokos

served as an intermediary again, this time assisting in matchmaking to arrange the marriage between the great prince's son and a daughter of Isaiah, a Mangup prince¹. Thus, intermediaries in the establishment of Moscow-Crimea relations were representatives of the Kaffa merchant community of the highest tier, involved in trade with Moscow. In the Customs Register of Kaffa (late 1480s), a son of Gokgoz (Kokos) is recorded as a Jew (*yahudi*) [Inalcik, 1996, pp. 45, 74]. Based on the fact that Kokos himself wrote to Moscow in the 'Jewish script', it can be concluded that he certainly was a Jew.

The next diplomatic mission from Moscow to Crimea was scheduled for September 1477, to Jani Beg. However, the Ottoman conquest and the civil war on the peninsula complicated matters. This diplomatic mission with a Tatar Temesh also was in response (to the mission of Yafar Berdey, who requested to render Janibek a favour and 'take him as a guest' in the case of his escape from Crimea).

In April 1479, when Mengli Giray had firmly established himself on the throne, a diplomatic mission of Ivancha Belay arrived in response to the khan's mission, led by Alach and Syrpyak.

At the beginning of the 16th century, after the collapse of the Polish-Lithuanian-Horde Union and the defeat of the Great Horde, there was a slow increase in the Crimea's hostility towards Moscow. In the 1510s, the Khanate formed an alliance with the Grand Duchy of Lithuania, marked by agreements in 1516 and 1518.

Egypt was an important partner of Crimea in terms of foreign policies. Crimea's ties with Egypt, of course, were based on Egypt's close relations with the Golden Horde [Zait-

¹ Another daughter of the Mangup Prince, Maria (according to the Bistritsa Chronicle), was married to the Moldavian Voivode Stephen the Great from September 1471. She died in December 1476 [Slavyansko-moldavskie letopisi (Moldavian-Slavic chronicle), 1976, Pp. 27, 29, 64]. The Moldavian-German chronicle of 1457–1499 calls her a princess from Mangup (furstyn auss Maugop) and, for some reason, a Circassian (ein Zerkassin) [Slavyansko-moldavskie letopisi (Moldavian-Slavic chronicle), 1976, Pp. 39, 49]. Section of the refugees who survived after the Ottoman conquest of Kaffa and Mangup settled down in the Moldavian capital Suceava [Ibid., Pp. 41, 51; Zaitsev, 2004a, P. 87].

sev, 2006a, pp. 49–51]. Given the absence of Crimean and Egyptian sources on the subject, the basic material used in reconstructing Crimean-Egyptian relations is found in the ambassadorial books on relations between the Moscow State and the Crimean Khanate.

At the end of April 1491, a certain molla Bagautdin arrived in Moscow with Mengli Giray's letter, in which the khan wrote to Ivan III, 'The Misyur Sultan sent his man to me, to your brother: I saw him at your father's, Azi Giray, and ate bread with him; God taught us such with the sultan in Misyur. Your father, the tsar, as the former sultan, sent his man with fine gifts; and we send fine horses and goods, sabers and gold to him all the time. I would that you send a good man of yours to me, to stay here. What gifts he is to bring, and what he wants to send us. Gifts, which my brother sent to me, I have given to Sultan Bayazyt with Yamgurchey and the Tsarevich. And now you, my brother, will not make me feel ashamed in front of the misyur sultan, this Bagavadyn, your devout person, you will send to the misyur sultan with fine gifts, such as sable fur, fish teeth, to prove your brotherhood; what you send with your devout person Bagavadyn, I would like to send in kind to the misyur sultan. You are my brother in that land, what you need, you tell me; God will let me know, you, my brother, as you say, so it will be done; that man of the miyur Sultan, is now in Kaffa' [Collection of Russian Historical Society, 1884, p. 107]. It is clear that active diplomatic and commercial contacts between the Crimean Khanate and Mamluk's Egypt were established back during the reign of Hacı Giray. Something can be said about the nature of trade: Egypt exported horses and weapons to Crimea. Crimean merchants from the Horde's bazaar, as Mengli Giray wrote to Moscow, 'travel to Azem and Misyur, Sham and Rome [ie, Iran-Ajami, Egypt, Syria (Damascus), and Rome—European Turkey—I.Z.]' [Collection of Russian Historical Society, 1895, pp. 28, 74]. Egyptian envoys and merchants would come to the Ottoman Kaffa, hence, Crimean-Egyptian relations were well-known to the Ottomans. Some Crimeans purchased goods in Egypt at the order of Moscow, e.g., a Chabak bought a stallion of the Akhal Teke breed for the Great Prince Vasili for 100 gold coins [Ibid., p. 41].

Mengli Giray proposed that Ivan III order Molla Bagautdin to purchase something in Egypt in exchange for the gifts for the Egyptian Sultan (sable furs, fish teeth, walrus tusks). In May 1491, Mengli Giray asked that Bagautdin be sent from Moscow to Egypt quickly, because 'his companions are leaving soon' [Collection of Russian Historical Society, 1884, p. 111].

In October 1493, Mengli Giray sent more letters to Moscow, written in September on the Dnieper. In one of them, he mentioned his relations with Egypt, 'I gave a yarliq to the molla's younger brother Tezik, send him to you, my brother, with Mynyur and Oyus, to keep in good health; your treasurers took it, but none of money, as I heard, that his friends gave to him, arrived; he could not leave Mynury and Oyus, please appease me, your brother. For you, my brother, I would mention gerfalcons, if you send gifts for Sultan Misyur, his ambassador came, who you will send without staying, let me know" [Ibid, pp. 193–194]. It is unclear, if the Khan referred to Bagautdin, mentioned above, or his brother, 'tezik' Mehmet.

Bagautdin's diplomatic mission resulted in Egypt's reciprocal mission to Crimea. On 5 October 1495, Mengli Giray wrote to Moscow the following, '...a man came from Sultan Misyur to ask for gerfalcons and fish teeth'. To purchase these goods, the khan sent his man Kasym to Moscow. In another letter (dated 8 October) the Khan said, '...Sultan Misyur sent a tent, embroidered wonderfully' [Ibid., p. 220]. Sending tents as gifts was an integral part of diplomatic etiquette, a tribute to the ruler. The khan held feasts and receptions in tents; in the summer, he almost always dwells in his tent.

These diplomatic missions were carried out against the background of a serious Ottoman-Egyptian conflict. In 1481, Egypt welcomed Sultan Jem, Bayazid's brother and a candidate for the Ottoman throne. In 1486, the first Ottoman-Mamluk war began: Egyptians inflicted a crushing defeat on the Ottomans. In 1487, the Mamluks defeated the Ottomans for the second time. Although formally, with the mediation of Tunisia, the two states concluded an extremely fragile peace in 1491, the relationship of the Ottomans and Mamluks was strained.

Contacts continued under the reign of the last Mamluk Sultan, al-Ashraf Kansuh al-Guri

(1501–1517). In 1508, Mengli Giray's brother Yamgurchi asked Vasily III to send lynx furs specially for a shipment to Egypt [Collection of Russian Historical Society, 1895, p. 31; Horoshkevich, 2001, p. 265]. Perhaps the latest mention of Egypt in the correspondence between Moscow and Crimea took place in August 1515, when Muhammad Giray reported, 'We welcomed the ambassadors of Sultan Salim-shah and Sultan Misyur, but we cannot find gerfalcons for them'. In his request for gerfalcons, the Khan wrote, 'From the Moors, Azyams, Misyurs, from Tsargrad—from everywhere we welcome good people, sent by their rulers to us' [Collection of Russian Historical Society, 1895, p. 156; Horoshkevich, 2001, p. 265]. The Egyptian campaign of Selim Yavuz (1517) put an end to relations between the two states.

Mengli Giray established diplomatic relations with the State of Ak Koyunlu: there is evidence that Crimea sent its envoys (no later than 1490) to Tebriz to the Sultan Yakub b. Uzun Hasan (1478–1490) [Collection of Russian Historical Society, 1884, p. 106].

In addition to the Great Principality of Muscovy, the Crimean khans maintained diplomatic relations with other Russian principalities until their absorption by Moscow. First and foremost, such relations were with the Ryazan principality. In November 1491, Crimean messengers came to Russia with letters, in one of which Mengli Giray notified Ivan III of his ties with Ryazan, where he sent his man Shemerden [Ibid., pp. 125–126]. Materials of Moscow's diplomatic mission to Crimea in March 1492 (I. Loban-Kolychev) refer to a mission of

the Khan's man Shemerden to the great prince of Ryazan, like a 'brother' to the Great Prince of Moscow [Ibid., p. 139]¹. And so it seems that a mission took place in 1491. Most likely, it was not the first one. In some cases, the Great Princes of Moscow turned to their Ryazan peers to ask for assistance in sending envoys and messengers to Crimea through Ryazan's land [Ibid., pp. 365–366]².

However, a number of Russian lands, not yet fully annexed to Moscow (udels, or principalities), apparently were in a direct tributary (yasak) position during Mengli Giray's reign, depending on the Crimean Khanate, which was recognised by the Great Prince of Moscow. Thus, in 1498 Mengli Giray wrote to Ivan III, 'Towns near Odoyev, whose princes have paid us a yasak of one thousand altyns, since ancient times, and another thousand altyns to the Darags, send that tribute to Darag Bakhsheish; wrote to give us two thousand altyns as agreed, [and] if they do not wish to do so, you could take it from them and return it to us. .. As for the princes of Odoyev, under the rule of Ivan, his people will begin to punish them and you give your word, as it is written, order Bakhsheish to take what is required and give to your brother' [Ibid., p. 269]. Daruga Bekhsheish, who collected yasyk from people in the lands near Odoyev, was succeeded by his eldest son, Davletyar, and after the latter's death in 1518 by Bakhsheish's youngest son, Aldiyar, and Devletyar's son Ileman [Collection of Russian Historical Society, 1895, pp. 638–639; Syroechkovskiy, 1940, p. 47]. It remains to be seen, what the nature of those payments was.

§ 2. The Cossacks in the Foreign and Internal Affairs of the Crimean Khanate.

Dmitry Sen

For centuries, the Cossacks played an important role in the foreign and internal affairs of Muslim states near the Black Sea—the Crimean Khanate and the Ottoman Empire. Among other Cossack communities that engaged in the most contact with Istanbul and Bakhchysaray, and which were of particular interest to these states, two groups stand out: the Zaporizhia Cossacks (Zaporizhia Army from the Lower Dnieper) and the Don Cossacks (Don Army).

¹ This relates to the nephew of Ivan III, Ivan Vasilievich (1467–1500), Grand Prince of Ryazan (1483–1500). He was the son of the Grand Prince of Ryazan Vasily Ivanovich from his marriage with Anna, the sister of the Grand Prince of Moscow Ivan III.

² For example, for this purpose, a letter was sent in 1501 from Moscow to Agrafena Vasilievna (the wife of the Ryazan Prince Ivan Vasilievich and the mother of the last Ryazan Prince Ivan; she was the daughter of Druck Prince Vasily Babich) and to the uncle of Ivan Ivanovich, Prince Fyodor Vasilievich.

However, the Cossacks from the Don River and Zaporizhia might not have been differentiated for a long time in the sources originating from the Ottoman Turks. It should be emphasized that relations between the Ottoman Empire and the Cossacks were multifaceted, as were relations between the Crimean Khanate and the Cossacks. That careful attention paid by the Crimean khans and Ottoman padishahs to the Cossacks, was constantly 'recharged' in connection with various aspects of frontier life, in which the parties engaged in active contact, fought and made up. According to V. Brekhunenko, the propensity toward conflict in Cossack-Muslim relations was the result of the nature of the steppe borders, as, in the end was the propensity toward avoiding confrontations. The idea of confrontation, rooted in the Cossack consciousness through their constant struggle with their Muslim neighbours during raids, acquired the attributes of an inclusive explanation of the existence of the Cossack world [Brekhunenko, 2011, p. 348]. There is no doubt that Crimea and the Ottoman Empire had a huge impact on the formation and development of Cossack communities, their value system, the military culture of the Cossack unions of men. The struggle against Crimea and the Ottoman Empire actively contributed to the formation of the Zaporizhia-Don military alliances, which generally have withstood the test of time. The Don and Zaporizhia Cossacks had a joint fleet (according to V. Korolyov), their plans for attacks on the Crimean Khanate or the possessions of the Ottoman Empire had a consistent nature, not always determined solely by "the interests of their Cossack Host". It is appropriate to note that the Cossacks in the Don region and in Zaporizhia did not always correlate their objectives when undertaking military actions (in a wider sense—their vision of relations with the Tatars and Turks in various spheres) with the interests of their Christian overlords,—that is, the Moscow State or the Polish-Lithuanian Commonwealth.

When we speak of the influence exerted by the Crimea and the Ottoman Empire on the Cossacks, then, *on the one hand*, it is about the consolidation of the Cossacks, reflecting in large measure their confrontation with the Tatars and the Ottoman Turks. For about

40 years, starting from the second half of the 16th century, the Cossacks 'almost constantly raided, sometimes even undertook real campaigns against the Crimean Khanate, the Turkish possessions in Budjak., Moldova and Wallachia...and even against the coastal cities of Anatolia...Starting from 1574, the year of their first major campaign in Moldova...we find references to the Cossacks as the main enemy of the Ottoman Empire. These messages usually contained derogatory adjectives, such as "infidels", "damned", "vile", "damn" [Bennigsen, 1970, pp. 66–67]. In 1556, sailing to the Azov Sea via the Mius River, the Don Cossacks, led by their ataman M. Cherkashenin, reached Kerch 'behind the uluses of the princes of Shirin, crushing villages on the Crimean coast. The Crimean khans anxiously kept a watch on the activity of the Don Cossacks near Azov beginning in the second half of the 16th century. The sultans tried to involve the Crimean khans Sahib Giray I and Devlet Giray I in the protection of Azov and the marine resources of the Azov Sea (Azov Dalians) following the attacks of the Don Cossacks, which must have taken place at the end of 1540, and certainly in the early 1550s [Mustakimov, Sen, 2010, pp. 307–326]. A military action undertaken by the Don Cossacks against Azov is depicted in the correspondence between Istanbul, Bakhchysaray and Moscow [Sukhorukov, 2001 pp. 71–72]. In particular, according to a Russian source, Sultan Selim II rebuked Khan Devlet Giray I for the execution of D. Cherkashen, a son of the ataman, which in the first half of 1574 compelled the Don Cossacks to attack the Fortress of Azov. The Zaporizhia Cossacks were no less aggressive in relation to the Ottoman possessions in the Black Sea region, as well as in the lands of the Crimean khans. An attack by the Zaporizhia Cossacks on Kaffa (1616) caused a panic in Crimea. The Cossacks managed to overthrow the Kalga Sultan's attempt to prevent them from landing, and carried out successful raids on Crimean seaside villages, after which the Crimeans started to fear that one day the Cossacks would conquer Bakhchysaray, and brought their best forces for the protection of the town [Brekhunenko, 1998, p. 136]. The Don and Zaporizhia Cossacks committed numerous marine and land campaigns

wonder that at the end of the 1640s the news (not completely ungrounded) about an impending attack of the Crimean and Zaporizhia Cossack troops on Istanbul spread among the local residents. Trade relations between Crimea and Zaporizhia were intensively developing in the 17–18th centuries. Apart from the Zaporizhia army, active contacts with Bakhchysaray were supported by the hetmans of the Right Bank and Left Bank of Ukraine—B. Khmelnytsky, I. Vygovsky, P. Doroshenko. Even after the Pereyaslav Rada, which had a shocking impact on the Crimean Tatar noblemen, the Tatar and Ukrainian troops often shied away from direct confrontations with each other, trying to attack their main enemies: the Crimean army—Russian troops, Ukrainian—banners of the Polish-Lithuanian Commonwealth [Faizov, 2003, p. 8]. The friendship between B. Khmelnytsky and the Crimean Khan Islam Giray III is well-known. I. Vygovsky also sought to consolidate relations with the Crimea [Gorobets, 2008, pp. 88–105]. P. Doroshenko used the Crimean factor to pursue his interests on the Left Bank of the Ukraine, in his attempts to 'pacify' Moscow and Istanbul (to create an anti-Polish unit), also planning to become a subject of Sultan Muhammed IV, which happened in 1669 [Chuhlib, 2010, pp. 127, 130–131, 139, 145; Kołodziejczyk, 2008, pp. 67–80]. P. Doroshenko's opponent on the issue of cooperation with the Crimea was Ataman I. Sirko, famous for his campaigns in the Crimea, whose name terrified the Crimean Tatars. The Zaporizhia Cossacks, who became subjects of Russia on the terms of the 'Eternal Peace' (1686), took part in the Crimean campaigns in 1687 and 1689. At the same time, the Zaporizhia Cossacks continued to maintain peaceful relations with Crimea, being greatly interested in the economic benefits [Stanislavsky, 2006, pp. 573–574]. Truces (contracts), concluded between the Zaporizhia Army, the Crimea and chiefs of the Ottoman fortresses, often took place: the sources containing information about them date back to 1686–1695 [Ibid., p. 574].

In Ukraine, there had never been a situation when the Cossacks felt a threat to their existence in the face of the Tatars and Turks [Brekhunenko, 2011, p. 374], unlike the Don Cossacks, confronting the implacable attitude of

the Tatars and the Ottoman Turks towards them. By the way, the Don Cossacks did not favour the cooperation between the Zaporizhia Cossacks and Crimea. The last attempts to revive the traditions of Ukrainian-Crimean relations can be attributed to K. Gordiyenko and P. Orlik in the early 17th century. It was K. Gordienko, who defected to the side of Charles XII, who led the Zaporizhia Cossacks to the Crimean Khanate, where they established a new, Oleshki Sich [Milchev, 2006, pp. 588–589]. The fate of the Zaporizhia Cossacks, who became subjects of the Crimean khans only in 1711, was not easy. The Crimean authorities did not show much enthusiasm over the appearance of the Cossacks in the Khanate, nor did the authorities of Ottoman fortresses in the Western Black Sea region. The Crimean Khan Devlet Giray II even had a mind to attack the Sich in 1711. The Zaporizhia Cossacks took an active part in the Russian-Turkish war of 1710–1711, joining forces with Crimean Tatar troops in battles in Ukraine. Later, they were widely used by khans as a military force in other areas; the Zaporizhia army returned under Russia's sceptre only in 1734 [Milchev, 2006, pp. 597–603].

There were much more serious matters standing in the way of a reconciliation of Crimea, the Ottoman Empire and the Don Cossacks than that of the Zaporizhia Cossacks. N. Mininkov believes that primarily, reconciliation was prevented by a psychological mindset, reinforced by the long tradition of confrontational relations. It was a left to the second half of the 17th century to overcome the historical burden of ongoing conflict. A special role in this belonged to an uprising of the Don Cossacks, led by Stenka Razin, and the Schism on the Don in the 1680s. [Sen, 2009, pp. 100–138]. Khan Adil Giray sent a letter to the Ataman in 1670 [Kravets, 1991, pp. 21–25]. Later, Khan Selim Giray I even intended to unite with the Cossacks under Stenka Razin. During the Crimean campaigns, some Old Believers in the Don region started talking about the fact that '...we in the Crimea have it even worse... better go now with the Crimeans than to our tsars in Moscow'; 'if they ravage Crimea, their life will be impossible...' [Druzhinin, 1889, pp. 180, 182]. Fights between the Old Believers and supporters of Russia were fierce near the

Don River, it came down to mass destruction of the enemy: a bloody harvest was collected during the first 'fratricidal war' in the history of the Don region (according to N. Mininkov). The conflict came to a head in the second half of the 1680s. The last bastion of the Old Believers near the Medveditsa River fell on 4 April 1689. However, even before this event, hundreds of the Don Cossacks, often led by their religious leaders, rushed to the Caucasus (including the Kuban), to the Ottoman Azov, and some Cossacks fled to Crimea.

In late 1680–early 1690s, there was an exceptional event: *for the first time in the history of the Crimean Khanate the Giray dynasty found among its new subjects several hundred Cossacks, Old Believers, people from the Don region* [Archive of the RAS St. Petersburg Institute of History, f. 178, inv. 1, file 12366, 12449, 12450, 12348], who had been from the Don in the late 1680s and who then went on to the Kuban, Kuma and Agrakhan. In 1692, the Kuban united different groups of Don Cossacks and Old Believers, and the main event here was a retreat of the Cossacks, led by Ataman L. Manotsky, to the Kuban from the Agrakhan River. Most of the Cossacks who left for the Kuban do so with their families, which marked a qualitative change in the perception of the Crimean Khanate lands by the Cossack Old Believers as 'normal', not 'ungodly'. In February 1693, a Cossack deputation visited Bakhchysaray, after which the legal status of the 'fugitives' was changed. As a result of their petition for admission to 'servitude', 'Crimea's Khan received them (the Cossacks—D.S.)... with great love and told them to live...in the Kazyev ulus as Tatars (that is, among the Small Nogais—D.S.)' [Archive of the RAS St. Petersburg Institute of History, f. 178, inv. 1, file 12348, sheet 1]. Soon after the described events, the Khan ordered that Tatar Kubek-aga be sent from Azov to the Kuban to 'keep safe those Old Believers' and prevent the Nogais and other hordes from harming 'the Separatists' [Russian State Archive of Ancient Acts, f. 210, Columns of the Belgorod Table, clmn. 1406, sheet 178]. As a result, the number of the Kuban Cossacks increased dramatically at the expense of Agrakhan's residents, 'And now there are two hundred or more post-schism Old Believers in the

Kuban' [Russian State Archive of Ancient Acts, f. 210, Columns of the Belgorod Table, clmn. 1406, sheet 177].

By the autumn of 1693, the Cossacks had already settled in a fortified town, erected in the area between the Kuban and Laba rivers. They were paid a salary by the Khan and the Azov Bey, successfully getting their needs met through requests to the Khan [Russian State Archive of Ancient Acts, f. 119, inv. 1, 1697, file 9, sheet], periodically sending their messengers to Bakhchysaray. It is noteworthy that the requests of those subjects of the Girays were quickly considered in the Crimean Divan. The first Kuban Cossacks left a considerable imprint on the military and political history of the North Caucasus [Usenko, 2000; Sen 2011, Sen, 2011a], laying down a *solid* foundation for relations with the ruling khans, which the Nekrasov Cossacks would later take advantage of. The Kuban Cossacks raided a vast area from the Don River to the Caspian region, and also made incursion within Russian territory. The Cossacks were actively engaged in the slave trade, selling their goods in the Kuban and Azov. According to sources from 1697, there was a 'white priest' among the Kuban Cossacks, who came from the Medveditsa River, 'as well as twenty monks, who live with the Cossacks in a separate kuren (unit), those monks say that they left to avoid being made to follow their faith in a new way, whether they wanted it or not' [Russian State Archive of Ancient Acts, f. 119, inv. 1, 1697, file 9, sheet 8]. In the early 17th century, most of the Cossacks resettled at the fortress of Kopyl. The Kuban Cossacks, fully supported by the Crimean Khans, became a powerful militarized community, whose traditions had formed on the Don and were then systemically developed on the Kuban. In 1702, the Cossacks, living in Kopyl, sent 'eight people of theirs to the Old Believer Avila to bring him back to their fortress, and asked the Khan to give them a paper to leave the Crimea' [Usenko, 2000, p. 74]. At the turn of the 17–18th centuries, the Kuban Cossacks began to play a prominent role in new transitions by the Don residents (including Old Believers) into the Caucasus, as well as raiding on the outskirts of the Russian state, and in the political affairs of Crimea, the Ottoman Em-

pire and Russia in relation to the Cossacks as an important player in the borderlands.

At the beginning of the 18th century, the Kuban Cossack community grew dramatically due to similar events on the Don. Active participants of Bulavin's uprising, led by Ataman I. Nekrasov, retreated to the Kuban at the end of 1708. The Cossacks' retreat became an embodiment of a backup plan, developed by Kondraty Bulavin [Sen, 2009a]. For a time, the Crimean Khan Kaplan Giray was not aware of the appearance of a new group of Cossacks in his possessions, so the chance that they were in the Nogai Kuban was high for I. Nekrasov's troops. 1708–1778 was the key stage in the history of the Cossacks of the Crimean Khanate, better known as the Nekrasov Cossacks [Sen, 2002]. That Cossack community was able to form because, first of all, it had been fully supported by the rulers of the Crimean Khanate and the Ottoman Empire. The most important years in that period were 1708–1712 [Sen, 2008, pp. 78–83; Sen, 2012, pp. 10–18]. The Nekrasov Cossacks quickly chose the path of *loyalty* towards the ruling khans. Among other reasons, it determined their *massive* participation in the military campaigns of the Crimean Khanate instead of independent raids 'as thieves' on Russian territory. In this case, the Cossacks would have been either executed or extradited. In contrast, the audacity of the maneuver of the Nekrasov Cossacks, organizing their lives in 1708–1712, and embraced by them in subsequent years, was directly connected with their decision to voluntarily find new rulers in the Crimean khans, who they could serve faithfully. The Giray dynasty appreciated that approach in full. Just a minor number of Cossacks returned to the Don. Obviously, the Crimean khans reserved an exclusive position for the Nekrasov Cossacks, systematically supporting them for decades. Throughout the 18th century, no cases of treason or disobedience of the Cossacks in relation to their formidable patrons—the Crimean khans—were recorded.

It is indicative that in the 1730s, hundreds of Nekrasov Cossacks, led by A. Cherkes [Felitsyn, 1904, p. 147], were with Khan Mengli Giray, probably as his bodyguards. We agree with P. Korolenko that 'the Crimean khans *respected* (emphasis is mine—D.S.) the Nekrasov Cos-

sacks, loved and trusted them more than their own Tatars, which were supervised by the Cossacks in the Kuban and, in the case of any unrest among the Kuban residents, the Cossacks took measures to pacify the malcontents' [Korolenko, 1900, p. 18]. All Crimean khans (except, perhaps, Shahin Giray) saw the Cossacks not as dangerous 'kafirs', but as loyal defenders of the throne, of the ruling regime, which did not go unnoticed by the Cossacks. The policy of the ruling Girays in relation to the Nekrasov Cossacks resulted in several notable consequences: the creation of the Kuban (Khan) Cossack army and the transformation of the Kuban into one of the largest centres of the then 'Old Believers' world' [Sen, 2010a, Sen, 2010]. The Nekrasov Cossacks took part in all Russian-Turkish wars of the 18th century on the side of Crimea. Crimea's independence, gained by the Khanate in the last years of its existence, was not welcomed by the Nekrasov Cossacks, who refused to obey Khan Shahin Giray. The Russian military believed that Cossack towns were collecting points for Tatar troops, intending to oppose Shahin Giray and the Russian army [Archive of Foreign Policy of the Russian Empire, f. 89, inv. 8, 1777, file 1991, sheet 4]. In September 1777, a military campaign was carried out against the Nekrasov Cossacks, the punitive nature of which had been laid out in advance [Archive of Foreign Policy of the Russian Empire, f. 89, inv. 8, 1777, file 1991, sheet 6]. The Cossacks who managed to survive fled to the Trans-Kuban region, which they then left over 1777–1778, departing in several groups, for Anatolia and Rumelia. The further fate of fragments of the Kuban (khan) Cossack community was related to their status as Cossacks in the Ottoman Empire until the early 20th century.

For centuries, the Crimean Khanate had actively interacted with various Cossack communities, carefully building up a rich political, military and cultural milieu. It frequently happened that Bakhchysaray's relations with the Cossacks were determined by the unity (similarity) of Crimean-Ottoman interests and the adversarial relations between Crimea and Moscow. But it often happened that non-confrontational relations with the Cossacks were actively supported for other reasons, establishing a real tradition (as was the case with the Zaporizhia

army). Finally, the Crimean Khanate, which was changing its attitude towards its neighbors, was able to revise its views on possible cooperation with troops on the Don and the Don Cossacks. Without recourse to urgent issues reflecting the rich palette of Crimean-Cossack re-

lations, it would be hard to expect new results that could explain the parties' behaviour in a changing international environment, the evolution of various patterns, and, finally, changes in the composition of the participants in the historical process and their priorities.

§ 3. The Crimean Khanate in 1772–1783 and the Fate of the Crimean Tatar Statehood

Vladislav Gribovsky, Dmitriy Sen

A Russian document from the early 1770s on the independence of the Crimea stated the following: '...our demand is the Gordian knot'. Formulated exclusively in the context of Russia's foreign policy objectives, the demand was far from being consistent with the Crimean Tatars' interests and included contradictions from the start, both internal and external. One unravelling Gordian knot tied a lot of other ones, eventually forming the huge Crimean problem that was aggravated during all major wars that Russia waged from the late 18th to the early 20th centuries, surfacing even during the Second World War. It was not without good reason that V. Vozgrin wrote about the mistakes and even dead-end options employed to address the Crimean question by royal diplomacy [Vozgrin, 1992, p. 263]. The most important aspect of this question was an internal split of the Crimean Tatar community. Most of the Tatars strove to preserve their traditional way of life, rejecting changes of any kind, linking them to the world order implanted by Russia while not losing hope that the pre-1771 status quo would be reinstated. A smaller part of them, tired of the burden of remaining in the historical part of the Ottoman Empire, sought to modernise life with the help of Russia.

At the very beginning of the war with the Ottoman Empire, the government of Catherine II was not able to view the full perspective of the Crimean problem. On 15 March 1770, the Imperial Council identified the main goal of Russia in this war: the alienation of the Crimea from the Ottoman Empire and its transformation into an independent state, its voluntary donation of 'some of its fortresses' to host Russian garrisons, as well as the transfer of a maritime harbour to Russia to allow the passage of its

ships from the Azov Sea to the Black Sea, and securing the protection of the Crimean coast from Turkey. A proposal to annex the Crimea to Russia, voiced by some Russian generals even at that time, was rejected as such, since it could seriously complicate relations with the European powers and would require enormous efforts to keep the Crimean Tatars in subjection [Archive 1869, pp. 43–45]. Choosing a less radical solution to the problem—the creation of an independent state in the Crimea—Catherine's office stressed the 'instrumentalist' component inherent in it. This was clearly stated in December 1770 by the head of the Russian Foreign Ministry, N. Panin: '...the independence of the Crimea will ensure the protection of state borders in the future, making it virtually impossible for Porta to continue waging wars against Russia' [Collection of the Russian Historical Society, 1896, p. 248]. It would have been surprising, if Russia, expending enormous human and material resources, had waged a war not in its own interests but in the interests of the Crimean Khanate.

The military and political situation in the Black Sea in 1770–1771 was conducive to the achievement of Catherine II's aims. Entering into an 'alliance' with the Yedisian and Budjak Nogai hordes in September 1770 was an important success for Russia [Kochekaev, 1988, pp. 167–171]. They now had the opportunity to form a separate administration under the protectorate of Russia, which, at the same time, would use the political traditions of the Crimean Khanate for its legitimization. And then, in the name of the administration, to intervene in the affairs of the Crimea and endeavour to change the existing order [Gribovsky, 2008, pp. 26–29]. Nevertheless, the Crimean Tatar

people proved to be capable of resisting the implementation of this plan for a long time. In the summer of 1770, when the Crimean Khan Kaplan Giray II was in Moldova, the organisation of the Crimea's defence was in the hands of Kalga Islam Giray. He conducted overall mobilisation—'all male residents of the Crimea who had come of age, however many there were in a family, were drafted'. The Crimean Tatars were determined to 'when the Russian army comes to Perekop, to use all their power to fight against them' [Central State Historical Archive of Ukraine, f. 229, inv. 1, file 257, sheets 32–32 reverse]. Kaplan Giray, defeated at the River Larga, succeeded in lulling the commander of the Second Russian Army, P. Panin, into negotiations with him on entering into an alliance [Russian State Military Historical Archive, f. 229, inv. 1, file 257, sheets 32–32 reverse], making his way to Ochakov, which had been blocked by the Russians, gathering his scattered forces and travelling to the Crimea [Notes, 2004, pp. 367–391]. The Khan's appearance in Bakhchysaray weakened the influence of those Crimean nobles who were leaning towards an alliance with Russia, following the example of the Yedisian and Bucak Tatars, and prevented the Yedichkul and Dzhembayluk Tatars from joining them for some time. Moreover, Kaplan Giray managed to win over the brothers of the chief of the Nogai hordes—allies of the Russians—Jan Mambet Bey, who migrated to the Crimea with his auls and began to reconnoitre the movements of the Russian troops [Central State Historical Archive of Ukraine, f. 229, inv. 1, file 252, sheets 18, 44 reverse]. Perhaps he also played a role in making the Kalmyks leave Russia, thereby depriving its army of a large part of its light cavalry [Halim Giray Sultan, 2008, p. 166].

The Russian government neutralized the temporary successes of Kaplan Giray through increased propaganda and widely-used bribery of the Nogai murzas [The Imperial Rescripts, 1872 pp. 26–27, 31, 36]. Unrest amongst the Nogais and the Crimean Tatars intensified. In January 1771, 'many Tatars, who have chosen the patronage of Russia, frequently visit the Crimea beyond Perekop. And the Crimean Tatars come between them' [Central State Historical Archive of Ukraine, f. 229, inv. 1, file 251,

sheets 65–65 reverse. The Crimeans were split into two parts, 'each one...no stronger than the other': some grouped around the Khan, faithful to the Ottomans, others, led by the Shirins, sought to conclude a separate peace with Russia [Central State Historical Archive of Ukraine, f. 229, inv. 1, file 252, sheet 27]. The Russian government instructed their allies, the Nogais, to summon their tribesmen back from the Crimea, enticing them with lavish gifts and a promise to 'create a special power out of the allied hordes. .. until the entire Crimea is forced to join the common union of the Tatars'. In the late autumn of 1770, the Yedichkul and Dzhembayluk Tatars attempted to cross the Strait of Kerch to reach the Kuban, cut off by Ottoman ships [Kidyrniyazov, 1988 pp. 106–109]. In the light of these developments, it becomes clear why Porta's refusal of Kaplan Giray's demand to send a large sum of money resulted in her disengagement from these affairs and her resignation, which she tendered on 23 November 1770 [Smirnov, 1889, pp. 273–274]. Since that time Bakhchysaray lost control over the bulk of the Nogai Horde; the influence of the Khan's government was practically confined to the Crimean peninsula. On 18 January 1771, Catherine II gave orders to relocate all the allied Nogais from the Perekop Steppe to the right bank of the Kuban, thus assuming that they would be removed from Crimean influence and replace the Kalmyks, who had left for Dzungaria, for the purpose of maintaining a counterbalance to the local population, who remained on the Turkish side [Imperial Rescripts, 1872, pp. 17, 38, 47]. But St. Petersburg did not fully achieve its aims, since it was unable to remove Bakhchysaray from the influence of Istanbul by diplomatic means and it, therefore, began to prepare for a military expedition.

The new Khan—Selim Giray III, delayed his arrival in the Crimea, entrusting his Kalga Muhammad Giray to govern it. In January 1771, a representative of the commander of the Second Army, N. Mavroyeni, arrived in Bakhchysaray with a proposal to form an alliance with Russia. The Kalga gave orders to execute the Russian envoy, but, at the request of the former Yedisian Serasker, Shahin Giray, he reversed his decision and dismissed the envoy with a response that did not contain any obligations [Lashkov,

1886a, pp. 40–41]. From that moment, officials in St. Petersburg realized that Shahin Giray was the first of the Crimean sultans to be favourably disposed towards Russia. As a former Serasker of the Yedisian Horde, he established communication with Jan Mambet Bey, taking advantage of the weaknesses in the Khan's administration. On 8 April, the Nogais expressed the desire to elect Shahin Giray as their Khan. Catherine II agreed at first but changed her decision on 13 May, believing that the election of the khan by the Nogais alone would be illegitimate. She hoped to implement it with the participation of the Crimean Tatars 'as our successes in Crimea progress' [Imperial Rescripts, 1872, pp. 48, 55]. The possibility of electing Shahin Giray by the Nogais was viewed in St. Petersburg as a back-up plan, in case of complications in the Crimea.

Khan Selim Giray arrived in the Crimea on the eve of the 2nd Army's attack under the command of V. Dolgorukov, without sufficient time to organise the defence of the peninsula. On 14–15 June, the resistance of the Crimean Tatars' main forces was broken near Perekop; within two weeks Russian troops had occupied the main strategic points of the peninsula, and on 29 June they took Kaffa, where all Ottoman troops stationed on the peninsula had been concentrated [Petrov, 1874, pp. 181–189]. This event determined the outcome of the campaign and forced the Crimean elite to start negotiations on concluding an alliance with Russia. As V. Dolgorukov wrote, 'The Crimeans are now serious about the matter, doing everything in accordance with all my directives' [Russian State Military Historical Archive, f. 271, inv. 1, file 19, sheet 1 reverse]. The defeated Khan asked to be placed under 'the highest patronage'. Catherine II did not object but demanded that he renounce Porta [Archive 1869, p. 98]. However, the Shirin beys, who headed an interim civilian administration of the Crimea, were categorically opposed to Selim Giray. Members of the council, convened by them in Karasu Bazaar on 27 July, signed a preliminary agreement to establish friendly relations with Russia and to break away from the Ottoman Empire. They also decided to dismiss the current khan from the peninsula and, according to ancient tradition, elect a new khan [Notes, 2004, pp. 408–413].

The relatively easy occupation of the Crimea strengthened Catherine II's intentions to leave the allied Nogais in the same state as the Crimean Tatars [Archive 1869, p. 97]. Since Shahin Giray was already regarded as an active supporter of Russia by that time, officials in St. Petersburg believed that it was too risky to impose his election to the Khan's throne on the Crimean Tatars. The candidacy of his brother, the former Or-Bey Sahib Giray, looked more attractive to them. Thus, the combination of Sahib Giray as the Khan and Shahin Giray as the Kalga were to provide a compromise. But the compromise proved to be asymmetrical from the start, as Catherine II immediately confirmed the status of the friendly Shahin Giray but postponed the recognition of Sahib Giray's powers until the time a conclusive agreement with the Crimea was signed. The Khan and his government were allowed to 'actually rule the Crimean peninsula in the...former manner', but only after the signing of an 'act of repudiation... by the Porta with a commitment never...to obey her'; a Russian representative, P. Veselitsky, was sent to the Crimea to 'facilitate' the Khan's independence. Provision was also made for the Khan's treasury to retain all previous revenue and, as an act of friendship, to gain Kaffa [Imperial Rescripts, 1872 pp. 66–69].

The actions undertaken by Catherine II in the Crimea were largely based on the experience of integrating the Hetman Ukraine and the Kalmyk Khanate into Russia. Of course, the intention of Catherine II 'to release the Tatars from the Turkish yoke' appeared quite attractive in light of the ideas of the Enlightenment. However, the Crimean Tatars thought differently. Not because they, as V. Izmaylov wrote, 'lived in the shadow of the luminaries of the Enlightenment' [Travels, 1802, p. 251] (statements of this kind are, unfortunately, still found in contemporary literature), but because of their strong historical ties to the Ottoman Empire. The Crimean Tatars compared what was happening to their homeland with the fate of the Kazan Khanate ('they foresee the lot of the Kazan Tatars' [From Affairs, Moscow Section, 1914, pp. 19–20]), and also the fate of their neighbours: the division of the Polish-Lithuanian Commonwealth in 1772, the restriction of the autonomy of the Don Cossacks, the

liquidation of the Zaporozhye Cossacks. These examples were cited by the Crimean Tatar deputa- tion in August 1775 to persuade the Porta to continue the war of 'independence' imposed by Russia to complete destruction [Archive, 1869, pp. 317–318]. It is significant that soldiers who had been recruited from the Kazan Tatars fled from the Russian garrisons located in the Crimea [From Affairs, Moscow Section, 1914, p. 24]. At the very beginning of the occupation of the Crimea, V. Dolgorukov wrote that there was no hope of convincing the Crimeans of the use of the independence that had been won for them—'as malicious and treacherous as these people are, they have only one fear—that of weapons' [Russian State Military Historical Archive, f. 271, inv. 1, file 19, sheet 1 reverse]. In May 1773, he proposed to Catherine II that she abandon the idea of creating an independent Crimean Tatar state under a Russian pro- tectorate and consider that 'the entire peninsula belongs to Your Majesty under military law' [Memoirs, 2004, p. 549].

Despite the signing of a written oath by the Crimean murzas, a significant part of the Crimean population went into a long period of hiding in the mountains, while the residents of coastal villages gathered their belongings and drifted in boats along the coast, hoping to ride out the Russian invasion. The Crimeans refused to sell anything to the Russians or let them into their houses, and tried to harm them in every way—they ruined all their boats in order to hinder communication by sea, blocked rivers in the mountains with dykes to ensure that lowland pastures had poor growth, which prevented the enemy's cavalry from feeding their horses, spoiled well water and streams, and so on and so forth. It was not only the Tatars who behaved in such a manner: they were assisted by the Greeks, who were 'subservient... to the Tatars, because without their permission they cannot do anything' [Ibid., pp. 415–420, 447]. The 'scorched-earth' tactics produced the desired effect by preventing the concentration of major Russian forces on the peninsula [Ibid., p. 423].

Of course, such sentiments among the pop- ulation of the Crimea did not inspire Catherine II or Sahib Giray II with any great hope for the independence of a khanate devoid of any so-

A sheet from manuscript document "Al-sukuk ash-shariyat va s-sijilyat al-mariyat" dating back to 1750–1751 V. 72 (the Crimean-Tatar Library named after Ismail Gasprinsky, department of manuscripts and archives)

cial base (it is noteworthy that wordings such as 'liberation of the Crimean Tatars from the Turkish yoke', which were in constant use after April 1770, have all but disappeared in internal documents of the Russian government since July 1771). And if the Empress could continue to rely on the power of Russian arms, the ruling Khan was able to keep his throne, constantly tottering beneath him, by balancing extremely deftly between Russia's increasing military presence, the never-diminishing anti-Russian sentiments among the Crimeans and the strenuous efforts of the Ottomans to restore their military and political potential.

The problems of legitimizing the independent Crimean Khanate and obtaining international recognition of Russia's patronage of the peninsula were Catherine II's top priorities. On 25 August 1771 the Crimean Tatar delegation, led by Kalga Shahin Giray, left for St. Petersburg to prepare a treaty of alliance between the Crimea and Russia [Lashkov, 1886a, p. 43]. In the Russian capital the Kalga Sultan behaved as a representative of a truly independent power and insisted on a ceremonial reception in the style of that of the ambassadors of the Ottoman Empire and Persia [Archive 1869, p. 125]. Perhaps this was the only achievement of Crimean diplomacy. Concerned about the Kalga's behaviour, the Russian government decided to detain him in St. Petersburg 'in order to discipline him' [Imperial Rescripts, 1872, p. 105]. This was done gently but consistently. However, his contacts were strictly limited, especially with the Nogai representatives, who were in the Russian capital at the same time [Ibid., 1872, p. 109]. Allowing the Crimean Khanate to display the outward features of independence, Catherine II meticulously thought up ways of 'participating directly in the internal affairs of these peoples' [Ibid., p. 100]. Her most important instruments for influencing the Crimea were the Nogais, whose relations with the Crimeans she deliberately exacerbated by repeated statements of her intentions to assign a separate khan to them and she tried to limit the power of Bakhchysaray over the steppe hordes by imposing 'certain precise rules' [Ibid., p. 73]. The Nogai ambassadors were received in St. Petersburg separately from their Crimean colleagues, not as representatives of an inde-

pendent power but almost as subjects of Russia [Archive 1869, p. 74]. The aims of separating the Crimean subjects were also served by the decision to 'be kind to all their chiefs'. Breaking the chain of command of the Nogais, Catherine II sent her messages not only to their chief Jan Mambet Bey but also to the head murzas of each separate horde [Imperial Rescripts, 1872 pp. 94–96, 102–104, 106, etc.].

On the eve of the Congress of Focșani, Russia and the Ottoman Empire increased their pressure on the Crimea. The Porta encouraged the Crimeans with the promise of an early landing, as a result of which detachments were assembled and beacons were installed on the Crimean coast for signalling to Ottoman ships [Notes, 2004 pp. 453–458]. On 27 May 1772, the Empress sent her plenipotentiary representative, Ye. Shcherbinin to Bakhchysaray, who, aware of the military training among the Crimeans, went there 'kicking and screaming' [Ibid., p. 446]. On 11 July, Sahib Giray met with Ye. Shcherbinin and, in the course of further discussions of his proposals, contested the wording that the Crimeans 'ask' Russia to take Kerch and Yenikale under its power for their own protection [Druzhinina, 1955, p. 170]. To find a way out of the impasse, Catherine II signed a letter on 12 August, in which she recognised the Khan as an 'independent ruler', without mentioning the fortresses [Imperial Rescripts, 1872, p. 124]. Nevertheless, the treaty with the Crimea was not signed before the Congress of Focșani broke up on 22 August. This strengthened the Crimeans' hope for the continuation of the war by the Turks, and prompted them to speed up their own preparations for the war. But, as the expected landing of the Turks did not materialise, the Crimean Tatars refrained from attacks. On 20 September, Russian troops forced the Khan to let his 20,000 troops go and, with the use of artillery, dispersed the detachments of the Crimean murzas [Notes, 2004, pp. 458–464]

Enlisting the Nogais' support, Ye. Shcherbinin forced the Crimean Tatar Assembly in Karasu Bazaar to sign a treaty of alliance between the Crimea and Russia on 1 November [Kochekaev, 1988, p. 183]. On 29 January 1773 Catherine II ratified the treaty, which contained the following conditions: an alliance

and friendship was to be declared between the Russian Empire and the 'Tatar Region', free from oppression of beliefs and laws'; neither Russia, Turkey nor a third state has the right to interfere in the internal affairs of the Crimea. All peoples who were previously under the dominion of the Crimean Khanate, including the Nogais, the Circassians, the 'Tamans' and the Nekrasovs, shall remain its subjects, except for the Kabardians. The pre-war borders between the two countries were recognised, and it was stipulated that the Crimean Tatar troops would not be required to take part in war on Russia's side, although they could not oppose it. The treaty also contained a number of other conditions: from the fate of Russian prisoners of war to territorial issues [Imperial Rescripts, 1872, pp. 143–149].

The following aspects of the treaty testify to its unequal nature: its unilateral ratification, the presence of a Russian resident agent in Bakhchysaray and the absence of a similar representative of the Crimea in St. Petersburg, the stationing of Russian troops in the Crimea without any regulation of their actions against the Crimean population, the declaration of free trade on the territory of the Khanate, which did not provide for its Government to apply the same protectionist measures and customs regulation that were in place on the territory of Russia. This shows that the Karasu Bazaar treaty was colonial, typologically similar to the ones concluded at that time by European states with the Eastern countries. The impact of this treaty on the economy of the Crimea has not yet been fully researched. However, there is anecdotal evidence to suggest that in the spring of 1773 trade between Left-bank Ukraine and the Crimea became extremely vigorous [Central State Historical Archive of Ukraine, f. 229, inv. 1, file 321, sheet 143]. Judging from the killings of Ukrainian Chumaks in the Crimea the following year (and of other traders from the Russian Empire), the Crimean Tatars were not too fond of such trade. They were even more annoyed with the actions of the Russian military administration, which, in order to strengthen its border control, confiscated the fishing boats of the Crimeans and blocked communication between Kerch and Taman [Notes, 2004, pp. 481, 518].

Returning from St. Petersburg to Bakhchysaray in February 1773, Kalga Shahin Giray's reception was tense. On 13 March, he spoke at a meeting of the Divan, in which he cited the 11th article of the draft peace treaty with the Ottoman Empire, which provided for the independence of the Crimea. Shahin reproached his compatriots for the violation of the alliance with Russia. Failing to find support in the Divan, the Kalga left [Ibid., pp. 488–490, 503–506]. However, since the Ottoman troops had failed to appear, the Crimeans did not dare to dismiss Shahin Giray from his post of Kalga. He continued to carry out his duties, and, to his credit, acted as a strong supporter of the independence of the Crimea. In particular, much to the annoyance of the Russian authorities, he opposed the construction of a new church in the St. George Monastery in May 1773 [Ibid., pp. 543–544].

In June 1773 the Ottoman Turks stopped an attack by P. Rumyantsev in Silistra; relying on the confusion into which Russia had been plunged following Yemelyan Pugachyov's rebellion, the Porta ventured to take decisive actions in relation to the Crimea. In Istanbul it was decided to take action through the Kuban Nogais, who until then had been considered a stronghold of Russia's influence in the Crimea. Without informing the Crimean Khan Maksud Giray, appointed in 1771, the Porta sent Devlet Giray, a former khan (1769), together with Dzhanykly Ali Pasha to Taman, where they arrived in the autumn of 1773 [Ibid., p. 568; Archive 1869, p. 262]. In the spring of 1774, the Yedichkul Horde found itself under the authority of Devlet, which increased unrest in other hordes and gave the Crimean Tatars new hope [Archive 1869, pp. 274, 280]. However, the outcome of these events was predetermined not in the Crimea but in Bulgaria: On 20 June 1774, at the Battle of Kozludzha, the Ottoman Turks suffered their final defeat in this war. On 15 July, the Porta initiated the preparation of a peace treaty [Druzhinina, 1955, p. 268]. However, Dzhanykly Ali Pasha continued hostilities and landed his troops in Alushta on 18 July [Notes, 2004, pp. 573–580]. The balance of forces was in favour of the Turks—50,000 against 2,400 men at Dolgorukov's disposal [Affairs of the Moscow Section, 1914, p. 15].

This prompted Khan Sahib Giray to openly oppose the Russians, destroy P. Veselitsky's staff and transfer the resident agent to Ali Pasha [Russian State Archive of Ancient Acts, f. 1261, inv. 1, file 2789, sheet 3]. The Crimean Tatar cavalry managed to partially disrupt their enemy's communication and break some of its positions, but the Crimeans failed to resist the volleys of grapeshot from Russian cannons. By 26 July the main part of the Crimean and Turkish army was defeated and peace was concluded in Küçük Kaynarca on the following day [Notes, 2004, pp. 587–608].

The text of the Treaty of Küçük Kaynarca reflected the principles laid down in the treaty of 1 November 1772. It contained a supplementary paragraph that all Muslims of the Crimean Khanate 'in the view of his Majesty the Sultan, like the supreme caliph of the Muhammedan law, must abide by the rules prescribed to them by law' [Druzhinin, 1955, p. 280]. The Russian authorities did not immediately grasp the possible consequences of continued religious authority over the Muslims of the Crimea, as in Islamic countries there was no 'distinction between religious and ceremonial life on the one hand and purely civic and legal life on the other' [Smirnov, 1889, p. 299]. In the next five years the Ottoman Empire tried not only to influence the religious life of the Crimeans but also to link the issues of the investiture of the Crimean khans to it. Yet a consideration of the influence the Ottomans exerted on the Crimea after 1774 should take account of the contradictions between the three centres of power in the Ottoman capital that had come into existence by that time—the Sultan's court, the Porta and the Ulems, which had interacted with the Janissary Corps [Meyer, 1991, pp. 133–154].

Russia emerged from the war of 1768–1774 as the victor, thus its interests were dictated to the Crimean Khanate, which was to be made a special buffer to ensure the safety of the southern borders of the Russian Empire [Sanin, 1999, p. 75]. The last Crimean Khan Shahin Giray attempted to transform the Khanate into a truly independent state. However, his path to the 'halva of power' was obstructed by another contender, backed by Istanbul—Devlet Giray, who occupied the throne in 1769–1770. The situation in which the Crimea found itself at

the end of 1774 could satisfy neither Russia nor the Ottoman Empire nor the Crimean Tatars themselves. Russia had, ostensibly, achieved its main goal in the war—the Ottomans' recognition of the independence of the Crimea. In addition, the fortresses of Kerch and Yenikale were transferred to Russia's possession, effectively allowing it to control the right-bank of the Kuban. But the appointment of Devlet Giray as the Crimean Khan, who was openly sympathetic towards the Ottomans and had established a regime of maximum disfavour towards the Russians, neutralised Russia's influence on the peninsula to a considerable degree. The Crimean Tatars fought for the return of their usual order of life, sanctified by their religion and consolidated in the whole complexity of political, economic, social and cultural relations between the Crimean Khanate and the Ottoman Empire. It was painful to them to see these ties broken and they felt an eschatological sense of the collapse of the world order familiar to them. Therefore, they could only perceive the independence imposed on them by the Russians and, ostensibly, presented in the most attractive form as a deception to cover up the real dependence of the Khanate on Russia.

After Sultan Abdul Hamid I ratified the Treaty of Küçük Kaynarca (January 1775) the situation around the Crimea remained as charged as ever. In the spring of 1775 Devlet Giray, unofficially supported by the Ottomans, seized the Crimean throne after the abdication of Khan Sahib Giray. In April 1775 the Tatars themselves offered the khan's throne to Devlet, subject to the condition of their independence. The highest charter and investiture were delivered to him from Istanbul [Smirnov, 2005a, p. 138]. The Khan appealed to the Porta, believing that she had 'deprived the Tatars of their liberty' and declaring that the Russian authorities would turn the Crimeans into 'a likeness of the Kazan Tatars' [Joining of the Crimea, 1885, p. 325]. In these circumstances, the Russians returned to the plan of appointing Shahin Giray as the Crimean Khan. They also considered a previously proposed back-up plan: in the case of failure in the Crimea, 'to make an independent area of the Nogais, which would serve as a counterbalance in the entire area of the Crimea' [Ibid., p. 129]. The Ottoman Turks

also believed that the North Caucasus and, presumably, the Kuban would play a well-known role in their plans to create a 'specific khanate' for Devlet Giray [Essays, 1996, p. 155].

Devlet Giray III was unable to consolidate the Crimean Tatar community, despite the growth of anti-Russian sentiments and the increasing hostility of the local community towards Shahin Giray [Affairs, Moscow Section, 1914, pp. 44–46; Smirnov, 2005a, pp. 152–153]. The Khan's intention 'to do something' about the Russian troops was not welcomed by the Crimean clergy, and his attempt to get rid of the Russians with the help of 'wizards' would, of course, be futile. After the Nogais elected Shahin Giray as their khan, the Russian military developed a plan to despatch him to the Crimea, proposing to use 'all methods other than cruelty and hostility, whether by means of the Tatars themselves or money, to oust Devlet Giray from the Crimea' [Joining of the Crimea, 1885, p. 252]. On 11 March 1777 Shahin Giray landed on the peninsula with the support of the Russian troops. After several attempts to stop the advance, Devlet Giray left Bakhchysaray on 29 March 1777 and sailed to Istanbul. On 30 March, the Crimean beys and murzas sent a delegation to Shahin Giray, 'asking him, as one single voice of all the people, to assume overall rule over all the tribes of the Tatars'. The official ceremony of the Crimeans' giving their oath to the new khan took place on 22 April [Ibid., pp. 482, 574].

The effectiveness of Shahin Giray's rule is often questioned in literature. V. Smirnov called the last khan a 'hapless Tatar', who combined the 'savage instincts of an Asian despot with the most frivolous methods and undertakings in the European manner'. The scholar made unflattering comments on the prospects of the Crimean Khanate in the 18th century, believing that 'the two tumultuous centuries endured by their ancestors did nothing to ensure the internal development or strengthen the international standing of their state' [Smirnov, 2005a, p. 8]. This kind of a colonial discourse, which to some or other extent advocates the inability of the Tatars to preserve their statehood under changed circumstances, makes it difficult to see the actual cause-and-effect relationships. The late history of the Crimea in

the teachings of Russia is, unfortunately, often viewed as *predetermined*, coloured in tones of 'just retribution' for centuries of Tatar raids over Russia. It is unproductive to judge from the predetermination of events, to form a conclusion of the non-viability of the Crimean Khanate on the basis of its liquidation in 1783. The claims of the apologists for the Crimean Tatar statehood, basing their assessment of the last period of its history on the thesis of 'betrayal' by the last Khan (V. Vozgrin referred to Shahin Giray as a 'minion' of Catherine II who 'betrayed the interests of the Crimea' [Vozgrin, 1992, p. 264]), are equally dubious. S. Oreshkova noted with reason that the ironic view of the independence of the Crimea, predominant among scholars, 'should not mask the problem of alternative opportunities for the further development of the Crimean Khanate'; in her opinion, Shahin Giray was the 'first to take up the European challenge the countries of the East were faced with at the time, and began to carry out essentially progressive reforms' [Marinova, 2008, p. 121, 126]. One such likely alternative is the assumption that, in order to prevent the Crimea from being returned to Ottoman rule, the decision was made in St. Petersburg to put a Russian appointee on the Khan's throne, who was 'able to reform the Crimea's economy and social sphere'; in this light, Shahin Giray's activities can be seen as the exercising of 'a whole host of serious reforms' [Kryuchkov, 2006 pp. 16–18]. The topic of the 'westernisation' (modernisation) project of Khan Shahin Giray [Sen, 2012a, p. 134] is far from being finalised, although a number of scholars have made serious advances in this direction.

A thorough analysis of Shahin Giray's reforms, was carried out by A. Fisher, who believed that the Russian Empire served as a model for reforms in Crimea' [Fisher, 1970, p. 83]. The oath, taken by the Crimean Tatar community in relation to Shahin Giray on 30 March 1777, fixed the abandoning of the principle to elect a khan, the right to determine a successor (Kalga) was secured solely for the Khan. This paragraph contradicted the terms of the Treaty of Kucuk Kaynarca, but Russian authorities accepted it, assuming it was not necessary to mention it in official correspondence with Porto [Joining the Crimea, 1885, pp. 493–500,

576–581]. Shahin Giray restored the divan, not convened during the rule of Khan Devlet, and introduced 12 representatives of the Shirins and Mansurs (supported him in the process of conquering of Crimea) into it; other families of Karachi-Beys were out of work [Fisher, 1970, pp. 84–85]. The entire territory of the Khanate was divided into 6 administrative territorial districts, headed by kaimakams, appointed by the Khan; kaimakam districts were divided into kadylyks (total number—44) [Lashkov, 1886a, p. 58]. The reform was aimed at breaking the old system of controlling the state, based on the clan principle. However, it was discovered soon that the system was not working, as officials, appointed by the Khan, had no power among locals [Zhilenkov, 1883, p. 12]. It forced Shahin Giray to resume the clan organization by assigning representatives of the Shirins and Mansurs to run territories, leaving Bakhchysaray and Kaffa under his own control [Fisher, 1970, p. 86].

The forced return to the clan principles in territorial administration led to disruptions in other reforms. The continuation of the power of beys and murzas over most of Crimea's territory limited revenues of the state treasury, and thus seriously paralyzed the reformer's actions. Shahin Giray tried to find a way out in the confiscation of possessions of beys and murzas, who fled from the peninsula, as well as in the seizure of endowment land from the jurisdiction of the Muslim clergy. He undertook measures to streamline taxation [Joining the Crimea, 1885, pp. 597]. However, he faced difficulties with the establishment of local governments, subject to the Khan; eventually, Shahin Giray had to return to the previously applied practice of transferring the Khan's possessions for procurement [Fisher, 1970, pp. 88–89]. The same fate befell on the rich port city of Kaffa and the entire southern coast of Crimea, where the last Crimean Khan was unable to establish the administration, equal in effectiveness to the former Ottoman one. The Khan's palace remained unfinished [Pallas, 1999, p. 157], which was to become the centre of a renewed Crimea administration. Financially, Shahin Giray remained dependent on Russia, as 'he had never been able to create a systematic taxation system' [Fisher, 1970, p. 117].

The defence reform, which Shahin Giray paid the greatest attention, had no prospects at all due to a failure of other reforms, designed to ensure the implementation of it materially and socially. A squad of the Beshleys from the Kuban, who accompanied Shahin, when he came to Crimea in 1777, was viewed by the Khan as a future nucleus of the army [Joining the Crimea, 1885, pp. 711–712]. He tried to bring the number of the army up to 20,000 people by introducing the recruitment of 1 person from 5 homeowners. However, in reality, just 800 Beshleys served the Khan, accompanied by a few thousand of the Crimean Tatar youth. Referring to the possibility of 'agitation' across 'the Tatar nation' and Russia's willingness to 'support and protect it', he tried to dissuade Shahin from mobilization experiments [Ibid., pp. 637]. Tatar recruits could not manage the drill, carried out by young murzas, they massively fled with the words: 'Even if the whole Crimea is empty, we will never agree to be recruits in a regular service, initiated by the Khan' [Ibid., s. 790]. The last Crimean Khan's reforms sparked protests within six months, which united the irritation of Karachi-beys, removed from the influence on state affairs, dissatisfaction of the clergy because of the secularization of endowment land and general resentment of Muslims of the Khan's intent to force them to pay taxes on an equal basis with Christians. The greatest contempt fell on Shahin's Beshleys, dressed in Russian army cloth, they became a 'tangible image' of the Russian order in Crimea. All the Khan's innovations were viewed by the Tatars as 'a scandalous deviation from their religion, and they were more confident in their religion than in Shahin' [Fisher, 1978, p. 65]. In October 1777, they demanded that the Russian command should release the Khan together 'with the highest murzas and officials', stating at the same time, that 'if they do not get them, they would be better dying to the last man in the abyss, rather than surrender to the Khan' [Joining the Crimea, 1885, p. 793].

The uprising against Shahin Giray revealed the lack of a significant social base for his reign, as well as shattered the traditional balance of relations between the Muslims and Christian population of Crimea. The Khan's intent to equate Christians with Muslims in their

rights sparked hostility on religious grounds. A. Prozorovsky proposed to take advantage of that new phenomenon for Crimea and Crimean Christians to make them fight the Tatars [Ibid., p. 811]. However, Russian troops that dealt with the uprising in Crimea received a different order—to immediately evacuate all Christians from the peninsula. A. Fisher views this event as an end to Shahin's dream of a 'strong westernized Crimean state'; together with the Christians, his state has lost the most productive part of its population, which determined the contents of the Khan's treasury [Fisher, 1970, pp. 100–101]. One should not exaggerate a 'widespread nature' of the struggle against Shahin Giray's reforms—that dissatisfaction was also associated with requirements for Russian troops to leave Crimea, 'after that they supposedly would go home and serve the Khan' [Dubrovin, 1885, p. 800]. Although the reforms were rejected almost all over the entire peninsula, it should be clarified that disgruntled outrage was also fed by intrigues of the Crimean nobles, partly due to usual resistance of the Tatars to any power of the Crimean Khans that they 'did not respect' [Ibid., p. 788]. Therefore, the population's indignation was not necessarily linked to a radical rejection of Shahin Giray's reforms. F. Lashkov believes that 'the decrepit Khanate was unable to be reborn' [Lashkov, 1886a, p. 63]. It is often forgotten that Shahin Giray, who was clearly lacking both management experience and patience, as well as associates, met constant obstructions to his power and was provoked to hastily implement his reforms.

In February 1778, Shahin Giray's power was restored, however, despite repressive actions against his enemies, from that moment it was based exclusively on Russian bayonets and Russian subsidies. Although his power was recognized by the Sultan of Turkey at the conclusion of the Aynaly-Kavak Convention in 1779, as soon as Russian troops were withdrawn from Crimea under this Convention, the situation began to gradually get out of control again. At the same time, as noted by a Russian observer I. Tsebrikov, Shahin had a change of heart regarding Russia, the cause of which was his dissatisfaction with the eviction of Christians from Crimea. In turn, Catherine II

changed her attitude towards him as well. She could not make him a conductor of her interests in Crimea, becoming more and more convinced that he was the main obstacle to implementing them. There was a 'strange' situation, when a governor, in fact dependent on Russia in the military, political, financial and economic terms, unable to establish a stable management within his possessions (which would satisfy Russia at that stage), was trying to behave independently from it. It was expressed not only in the Khan's antics against Russian residents, but also in mercantilist measures—he signed a decree that none of the coins should go beyond Crimea. In the end, it turned out that the Russian exports in Crimea amounted to 370,000 rubles in 1776 but already in 1780 the figure was reduced to 130,000 rubles. At the same time, the imports of Crimean goods increased over the period from 87,000 to 105,000 rubles [Fisher, 1970, p. 119]. It should be noted that Shahin Giray managed to achieve some success in the organization of his own mint, the net proceeds of which reached more than 17,000 rubles in 1780–1783 [Lashkov, 1886a, p. 64].

After another uprising against Shahin Giray in September–October 1782, Crimea faced a situation, the inevitability of which was predicted by Grigory Potemkin in his note 'On Crimea'. Catherine II recognized the cogency of his arguments that the maintenance of Crimea's independence cost Russia more than the immediate occupation of the peninsula. On 14 December 1782, she signed a secret rescript on the accession of Crimea to Russia 'at the first occasion' [Yeliseyev, 2005, p. 277]. After the preparations for this act, Potyomkin, through a medium—Yakub-aga (Rudzevich), a translator of the Russian resident to the Crimean Khan, got the consent of the Crimean elite to eliminate the Crimean Khanate [Russian State Archive of Ancient Acts, f. 1261, inv. 1, file 2789, sheet 11]. On 8 April 1783, the imperial manifest 'On the adoption of the Crimean Peninsula, the Taman Island and the entire Kuban under the Russian power' was published [Complete Collection, 1830, pp. 897–898]. The annexation of Crimea to Russia in 1783 did not require any considerable military effort from Catherine II's government. There was no uprising of the Crimean Tatars, who rebelled during

the Crimean independence. This is largely explained by the behaviour of the Crimean elite, who received greater guarantees for their social status from Russian authorities than they could have ever had in their own state. For the sake of obtaining the rights of the Russian nobility, Crimean clans and servitors easily agreed to the liquidation of the Crimean Khanate [Zhilenkov, 1883, p. 10]. However, most of the Crimean population found themselves in a very different position. The new procedure turned their

familiar world upside down and made them strangers in their own homeland, leaving almost no protection for their property rights and causing them lose their former social status. That is why at the end of the 18th century there was mass emigration of the Crimean Tatars to the Ottoman Empire, increasing during each of the subsequent Russian–Turkish wars. Thus in every major war, which Russia took part in, a significant part of the Crimean Tatars did not act on its side.

§ 4. Black Sea Nogais

Vladislav Gribovsky

The Northern Black Sea region was not involved in processes of the formation of the Nogai ethnos which took place in the country between the Jayıq, İlek and Emba Rivers in the 15th century. Nevertheless, the region spreading from the lower reaches of the Danube River to the right bank of the Kuban River in the 16th century and the first third of the 18th century was one of the major Nogai centres due to migration from their initial territory for a number of reasons, thus creating large potestarian unions beyond its borders.

The Black Sea Steppe was absolutely alien to the first Nogai migrants. The clan nobility of the Manghit Eli which played a major part in creating the Nogai Horde retained the title of beklyaribek in the Great Horde (Takht Eli) and controlled its right wing situated in the Lower Dnieper region in the second half of the 15th century [Trepavlov, 2010, p. 37]. After the Great Horde had been defeated in 1502, the Mangits became subordinated to Crimean khan Mengli Giray and by the middle of the 16th century they had lost control over the Dniester steppe. A memorial note addressed to the ruler of the Crimea in 1546 by the murzas of the Nogai Horde on the basis of their kinship with Black Sea Mangits provides evidence of that: 'You must know that the Dnieper River is our encampment place and your Tatars must not roam here' (quotation of [Trepavlov, 2001, p. 60]). However, the Mangits preserved their high status and became Crimean karachi-beys like Mansur Oğlu ('the children' of Mansur, Edigu's son). They occupied second po-

sition (after Shirin Beys) empowering them to 'marry the Giray princesses' [Payssonel, 2009, p. 28]. What is more they retained the prerogative of involving the Nogais from the Volga region in their beylyk.

The consolidation of the power of the Girays beyond the Crimean peninsula was achieved by the building of such fortresses as Ochakov, Tyaginya, Ferrakh-Kermen, Perekop (Or) and Arabat which began at the turn of the 15–16th centuries [Smirnov, 1887, pp. 334–341]. Although these fortresses were not a serious obstacle to the expansion of the Polish-Lithuanian Commonwealth and were conquered by detachments of frontier governors and then the Zaporozhian Cossacks, they were still an important condition which allowed the Girays to concentrate the nomadic population in their hands and played the role of a 'filter' which let in the migrants from the east and stooped them from moving backwards. The Taman and Temryuk Fortresses fulfilled the same functions covering the crossing over the Kerch Strait and being an advanced post of the Crimean khanate in the Northern-Western Khanate. By the late 16th century, most fortresses of the North Black Sea region were passed to the Turkish military administration, significantly increasing their military importance and the ability of the Crimea to muster the nomads under its authority. They could then [Davies, 2007, p. 8] be sent against neighbours—Russia and the Great Polish-Lithuanian Commonwealth, who were growing in strength. Not only the safety of the Crimea but

also its ability to influence the distribution of forces in Eastern Europe by means of raids depended on this. Thus, territorial unities of nomads named after places of localization were formed around large fortresses: Perekop, Ochakov, Belgorod (Ak-Kermen) Hordes which were gradually filled by the Nogai migrants.

Thus the first mass influx of the Mangits who were relatives of the Nogais took place in 1502. Seven years later Mengli Giray led about 70 thousand¹ Nogai 'wives and children' away from the Volga Region, followed by the majority of the Nogais. .. to the khan of Perekop reinforcing him significantly [Gvanyini, 2009, p. 363]. The next mass resettlement of the Nogais took place in 1516 when 'the Perekop tsar subordinated the Nogai Tatars' [Bevzo, 1971, p. 125]. However, in general by the 16th century the Nogai population still did not constitute a significant importance for its contemporaries. For example, Michalon Lituanus mentions the Perekop (Crimean) Horde and the Belgorod and Dobruja Tatars together. As for the Nogais he refers them to the so-called 'Powerful Horde' hostile to Crimea [Litvin, 1994, pp. 62, 107].

The migrations of the Nogais to the territory of the Crimean Khanate became more active in the middle of the 16th century. Groups which had separated from the Nogai Horde formed Lesser Nogai led by Kazy Murza [Trepavlov, 2011a, pp. 43–44] The Kasyevs pursued by the Greater Nogais headed in the direction of the Turkish fortress Azov to look for defence there. Later they moved to the right bank of the Kuban River. In 1635, due to unrest among the Nogais, a significant part of them flee to the Perekop steppe. The next year, the khan's authorities managed to take about 12,000 Kasyevs to the Crimea. Many of them were settled separately, about five people in each village, all the rest soon found themselves in Bucak [Novoselsky, 1948, pp. 239–240, 254]. The Lesser Nogais still remained an independent branch of the Nogai ethnos for many years although their population decreased. Over the course of time their citizenship of the Crimean Khanate was consolidated. In the late 17th century, they were referred to under the title 'the Kuban Horde' as a part of the Khanate. During the next century the

Horde occupied 'all the lands situated between the Azov Sea and the Kuban River' [Payssonel, 2009, p. 39]. The presence of the Lesser Nogai Horde on the right bank of the Kuban River allowed the Girays to use this region as a transit corridors through which the Nogais reached the North Black Sea region heading to the Crimea through the Taman passage or heading to the Perekop steppe through the Don River.

The concentration of a nomadic population in the extreme western part of the Black Sea steppe—Bucak—was an important strategic mission for the Crimean khan who was obliged to send his cavalry regularly to take part in wars of the Ottoman empire in Central-Eastern Europe [Veszprémy, 2010, p. 96]. In the early 16th century, regions of the Great Horde led by the Mangits traditionally involving migrants in their regions [Trepavlov, 2001, p. 450] joined the local mixed population of Pecheneg-Qipchak origins associated with the 'Tatars from Belgorod and Dobruja' [Palamarchuk, 2008, p. 122]. After a military campaign in Astrakhan in 1569, the Crimean khan settled about thirty thousand 'Astrakhan-Nogai families' in Bucak [Tunmann, 1991, p. 55].

The settlement in North-west Black Sea region was more attractive to the Nogais in comparison with other districts of the Crimean Khanate, in view of opportunity to win expensive trophies in neighbouring overcrowded countries and the absence of permanent control of Bakhchysaray. As for the Crimea itself locked by the fortress of Perekop, the freedom of movement of the nomads was immediately restrained (to the extent of installing a sedentary way of life [Smirnov, 1887, p. 413]) and taxed while roaming in the Perekop steppe was dangerous because of attacks of the Zaporozhian Cossacks [Litvin, 1994, pp. 62, 107; Bronevsky, 1867, p. 338]. The Nogai population which had increased significantly by the early 17th century was the basis for the formation of a large potestarian state led by Kantemir Murza who originated from the Diveev clan of the Crimean Mangits.

The elevation of Kantemir was due to his participation in the Battle of Khotyn of 1621. The Sublime Porte which was discontent with the behaviour of Crimean authorities during this unsuccessful war passed the representation

¹ Apparently, their number is exaggerated.

of its power to Kantemir Murza appointing him the ruler of Silistra and Bessarabia [History of the Battle of Khotyn, 1896, p. 73]. Thus the headman of the Bucak Nogais was no longer subordinate to Bakhchysaray and became subordinate only to the Turkish sultan. It was a very tough blow for the power prerogatives of the Crimean Khanate which led not only to actual tearing away of its northern-western possessions but also the strengthening of the influence of Mangit clan in Bakhchysaray, the support for which was represented by the increasing number of Nogais. [Novoselsky, 1948, p. 185]. The dominance of Kantemir's agents of influence was the reason for anti-Ottoman rebellion initiated by Mahmed Giray and kalga Shagin Giray. In 1624, they invited the Polish king to occupy the fortresses of Akkermen, Tyaginya and Kiliya controlled by Kantemir and move the Nogais from the Bucak to the Crimea. Although the King rejected this plan, he did not prevent the Zaporozhian Cossacks from concluding with the Crimeans a treaty on cooperation against the Ottomans and Kantemir [Grushevsky, 1995, pp. 516–517]. Kantemir triumphed in this fight and assigned Janibek Giray to the khan's throne. This was approved by the Sublime Porte and his reign (1628–1635) was remarked by the further increase of influence in the Crimea.

The enthronement of Inaet Giray in 1635 caused a new conflict between the Crimean establishment and the grouping of Kantemir. As in 1624, the Crimeans escaped the control of the Ottomans and concluded a treaty with the Zaporozhian Cossacks. A new aspect was that Inaet engaged more Nogais in the fight against Kantemir. Driven away from their native steppes by the Kalmyks, by 1636 they were concentrated between the Volga River and the Don River exhausting their forces in the turmoil between their main clans—the Tinmamatevs and the Urmamatevs. A complicated reversal of fortune placed the regions of both clans on the right bank of the Don where they were subordinated to the Crimean khan who forced them to oppose Kantemir. Consolidating his power at the expense of the Lesser Nogais driven away from the Crimea, he failed to resist the troops mustered by Inaet Giray so he headed to Istanbul. The khan devastated Bucak but he could

not consolidate his success because of a sudden attack of the Nogais who killed his kalga.

Afraid of the defeat of the Crimea by the Nogais the Crimean nobility and the Sublime Porte arranged to organise the extradition of Inaet and agreed to accept the new khan. Meanwhile, the Don Cossacks took the advantage of the Crimean unrest and conquered Azov. They were deprived of the protection from the Crimea and Lesser Nogai Horde. Kantemir and Inaet were executed by order of Sultan Murad IV as guilty of the unstable power of the Ottoman Empire in the northern regions of the Black Sea [Novoselski, 1948, pp. 240–255].

The attempt of the Sublime Porte to consolidate its power in the region through promoting the Bucak Horde as distinct from the Crimea caused problems rather than advantages. The removal of Kantemir and the return of Bucak to the Girays could not restore the status quo due to a large concentration of the Nogais in the Black Sea steppes. This was a consequence of the events dating back to the 1620–1630s. From that moment the Crimean khans had to learn how to rule an enormous mass of nomads who were subordinated to them. In the second half of the 17th century, the Crimean authorities managed to instill a sedentary way of life amongst the Bucak Nogais and by 1663 they had created in Bucak a permanent administration headed by the khan's yaly-agasy ('the governor-general of the seacoast'). His residence was situated in Khankishla village [Evliya Chelebi, 1961, p. 264]. Except for Bucak, a significant number of the Nogais were concentrated in the Ochakov steppe and were mentioned by contemporaries as the 'Ochakov Horde' [Description, 1879, p. 485]. Known sources cast partial light on the contents of this 'Horde': for example, Evliya Chelebi notifies about the presence of more than three thousand communities of the so-called 'Karatayaks' [Evliya Chelebi, 1961, p. 114] without specifically defining its connection with the Nogais. One can suppose that it was a large group of Nogais which appeared in the Black Sea region in 1636 and roamed separately from the Bucak Horde.

As A. Fisher noted, an increasing number of nomads reinforced the Crimea and 'laid the basis for its internal weakness' simultaneously [Fisher, 1978, pp. 6–7]. Managing the nomads

was much more complicated than a sedentary population. That is why the khan's administration was striving to instill a sedentary way of life amongst the migratory Nogais. It was possible only inside the Crimean peninsula and required many efforts of Bucak. Instilling a sedentary way of life in nomads in other regions was absolutely impossible; the organisation of raids in northern provinces which had become more and more frequent by that time was likely to be the only way of restraining them. If in the past the Girays brought the nomads under their control, in order to wage wars against the strong neighbours, now they had to wage wars to be able to maintain their power over the nomads. The transformation of means into an end was stipulated by a combination of political and economical conditions. Although the pastures of the steppe Black Sea region were large in number, as well as those situated between the Volga and the Emba Rivers and the quality of their forages was even higher, a significant part of it was not used for agriculture because of the activities of the Zaporozhian Cossacks. The shortage of pastures was an acute issue and it could be only be compensated by raids. The nomadic citizens of the khan always required these raids. Their rebellion was more terrible than the Anger of the Sublime Porte. This is evident from the words of one of Islam Giray III's courtiers (1644–1654) who stood up for the decision of his sovereign to support the rebellion initiated by B. Khmel'nitsky and gave the following answer to the representatives of the Sublime Porte in reply for their criticism: 'We have more than one hundred thousand Tatars who can neither trade nor work on the land. If they didn't wage war, where would they earn money to live?' [Turanli, 2010, p. 50].

Concentrated in the Crimean Khanate, the Nogais demonstrated active participation in the events in Ukraine which referred to the middle and the second half of the 17th century [Sanin, 1987, pp. 240–243; Chronicles, 1971, pp. 97–159]. The participation of the Crimean khans in the struggle for the Ukraine allowed them to organise systematic pillaging of vast agricultural territories until the early 18th century. As a result they succeeded in managing a big number of the Nogais. The conclusion of the peace treaty of Constantinople in 1700, became a decisive

moment for the system of ruling the Nogais in general and the Crimean Khanate itself. The treaty deprived the Girays from the right to carry out independent policy with regard to Russia, based on the broad use of raiding practices [Inaljik, 1995, pp. 128–129]. The prohibition of raids by Crimean subjects into lands of the Great Polish-Lithuanian Commonwealth and Russia imposed by the Sublime Porte caused a wave of discontent and became the reason for rebellion among the Nogais [Sanin, 1993].

The counteraction by the Crimean and the Nogai elites could not interrupt the process of forming stable borders between the Russian Empire and the Ottoman Empire, although caused grave complications during the first three decades of the 18th century. One of them was the settlement of about 40 thousand families of Yedisian, Yedichkul and Dzhembayluk Nogais on the territory of the Crimean Khanate in 1724–1725 [Evarnitsky, 1903, pp. 1113–1114]. They were previously subordinated to the Kalmyks and for that reason were considered to be the Russian citizen. Most of them were brought to the Crimea from Kuban in autumn 1724 by Devlet Giray's son Bakhty Giray (1699–1702, 1708–1713) who had intended to take the Crimean throne with their help. Khan Mengli Giray II (1724–1730) after consolidating his power in Bakhchysaray removed Bakhty from the Crimea to the Caucasus and settled the Nogais. They represented his main force on the lands of the Zaporozhian Cossacks who were considered to be the Crimean citizens according to the peace treaty of Prut dating back to 1711. This was one of the reasons why the Zaporozhian Cossacks received Russian citizenship, and a reason for the escalation of their conflict with the Nogais. This became extremely obvious on the eve of the Russian-Turkish war of 1735–1739 [Gribovsky, 2001, pp. 63–65].

The treaty of Belgrade concluded between Russia and Turkey in 1739 created conditions for the realization of principles declared in the Treaty of Constantinople dating back to 1700. The main content of the treaty was to establish peaceful frontiers between two empires, defining the citizenship of borderline population (with the exception of free-spirited migrants) and the removal of conflicts at the border commissions led by representatives of Istanbul and

Petersburg. They would impose fines on culprits of plundering.

In 1739–1768, an efficient mechanism was established in the steppes, aimed at the elimination of raiding in region which had existed in Russia since ancient times. Under the pressure of the Sublime Porte the khan's authorities had to form standing offices on the territory of the Black Sea Nogais. Their aim was to prevent the nomadic raids on Moldavian, Ukrainian and Russian lands as well as the regulation of relation inside nomad groups. The basis for the creation of the khan's administration on the territory of the Nogais was an authority formed in the Bucak Horde in the second half of the 17th century—the first third of the 18th century headed by the khan's yaly-agasy or serasker Sultan belonging to the Giray dynasty during military actions. After 1739, the Bucak serasker, who used to be only a commanding officer, concentrated the functions of civil management in his hands [Khaidarly, 2003–2004, pp. 253–269]. Initially his power spread not only to Bucak but also to the Yedisian Horde whose nomadic encampments were situated between the Southern Buh River and the Dniester River. Although by 1653 the Yedisian had had their separate serasker, the Bucak serasker still continued interfering in their rule. The consolidation of the power of the khan's governor-general (as well as the abuse of it) became a reason for a significant rebellion of the Yedisian and Bucak Nogais in 1758, which led Crimea Giray to the khan's throne. During his first reign (1758–1764) he chose Căușeni for his summer residence and constantly moved between it and Bakhchysaray surveying the dependent Nogais in this way. In 1759, the Crimea Giray formed a separate Horde from the Yedichkuls who roamed in Bucak. They were led by their own serasker who chose the left bank of the Dnieper River. The Dzhembayluk Horde situated in the Perekop steppe did not have its own serasker and was governed by or Bey—the khan's governor of Perekop also assigned from amongst the Girays [Gribovsky, 2009, pp. 77–89].

The creation of a standing mission of the khan's power on the territory of the Nogais resulting in the spreading of systematic taxation and national service caused discontent amongst the nomads who were always striving to be on

a territory with minimal state interference. The numerous attempts of the Black Sea Nogais to receive Russian citizenship are mainly explained by these motives [Kochekaev, 1988, pp. 134–141, 158–162]. Although in Petersburg the authorities considered them as their old citizens who had gone to the Crimea as traitors, they still allowed the possibility of their return when the occasion arose. This occasion arose during the Russian-Turkish war of 1768–1774. In September 1770, the Yedisians and a part of the Bucaks concluded a treaty of union with Russia and by the beginning of 1772 about 80 thousand Nogai families (or about 400 thousand people) were moved from Northern Black Sea region to the territory between the Yeya and the Kuban Rivers. Under protectorate of Russia, the Nogai murzas became the supporters of independence of the Crimean Khanate and contributed to Shagin Giray's accession to the throne in 1777. Nevertheless, the reinforcement of administrative control over the Nogais settled at the Kuban River as well as the Russian military supervision led to a significant part of the Nogai murzas supporting Turkish proteges claim for the Crimean throne. While the Crimean Khanate was abolished on 28 June 1783, the Nogais swore an oath of Russian citizenship. However, the intention of the Russian government to move the Nogais from Kuban to the territory between the Volga and Ural rivers caused a rebellion. The suppression of the uprising led to the mass migration of the Nogai population to Turkish possessions and death of a significant number. [Gribovsky, 2008, pp. 26–36].

In 1790, three thousand Nogai families under Russian power were moved to the Molochnaya River in Northern Azov Sea region. Later the Nogais returning from Turkey joined them. In July 1801, this group of the Nogais received the status of Cossack troops. However, internal factions made the creation of irregular military unit impossible and led to the elimination of this status in autumn 1804 and the formation of *pristavstvo* [Gribovsky, 2002, pp. 156–159] existing until 1832. In 1860, almost all the Black Sea Nogais including those who previously were settled on the Crimean peninsula moved to Turkey. Dobruja, Bruss and Qöq vilayets in Asia Minor became regions of their local habitation [Sergeev, 1913, pp. 180, 216–222].

§ 5. Bucak and Dobruja Tatars

Tasin Jamil

Dobruja now situated in the south-east of Romania and Bucak situated in the south-west of Ukraine today can be considered as an extension of the broad plains which used to be called the Kipchak steppes. Probably for this very reason, the Turkic peoples and nations founded their settlements on Dobruja and Bucak lands and dominated there without division. Dobrudja and Bucak are inseparable from each other from both a geographic and historical point of view. The Tatars are successors to the ancient Turks or Kipchaks to be more precise and they possess a sense of ethnic belonging to these territories [Tahsin Gemil, 2010, pp. 9–22]. The Tatars continued dominating in eastern and southern parts of the territory including regions of Dobruja and Bucak until the 14th century. In the "History of Seldjuks", based on reliable sources and which was finished in 1424, Ali Yazıjizade wrote the following about Northern Dobruja, which had been subordinated to the Golden Horde since the second half of the 13th century. "*There were 2–3 Muslim towns and 30–40 Turk nomadic encampments in Dobruja for most of the time*" [Topkapı Sarayı, 1390/91, p. 234]. The same author provides interesting information about the period of Berke's reign (1257–1266) dealing with Bucak and territories situated in the east: "*Lands from the Crimea and Moldavia to the vilayet were for a long time the territory of Islam. There is a mosque of < Berke-khan > in Moldavia which was later turned into a pigsty by 'the unfaithful'*" [Ibid, p. 235]. The territory between the Prut River and the Dniester River, including Bucak, was separated from the Golden Horde by the Moldavian state in about 1370. The famous Arabic traveler Ibn Battuta, who visited Dobruja in 1330, referred to the Tatars of the Golden Horde as Turks and wrote the following words: "Finally, we reached a small town, which is known as Baba SalTuqay, where the land of Turks ends. .. There is completely empty steppe between Baba SalTuqay and the first Byzantine vilayet. It takes 18 days to cover it on foot" [Ibn Battuta, 2005, p. 331]. Baba SalTuqay Town is known today as Babadağ village situated in the north

of Dobruja. In the 13–14th century, in the epoch of the Golden Horde, Dobruja was by no means fallow land [Aurel Decei, 1978, p. 191; Inalçık, 1986a, p. 610]. In the late 13th century, prince Nogai who had founded the center of the independent state settled in Dobruja, in Isaccea Town [Ernest Oberlander-Târnoveanu, 1997, pp. 49–63]. In the middle of the 14th century, the center of another Tatar state was situated in Dobruja in Yeni Sala fortress¹. Different writing sources and archeological finds confirm the presence of the Tatars on lands of Dobruja and Bucak in the 14th century. Since the 1280s, "the Danube Skythians paristrion skydon" are mentioned in European sources. i.e. information starts emerging [Fontes, 1975, pp. 510–511; Alexandru Gonța, 1983, p. 98]. Apparently, these Tatars were not small in number. Their armed forces interfered in civil strifes and disorders with great success in the Bulgarian state and defended the borders of the Golden Horde from any invasions from the side of the Balkans [Spinei, 1982, s. 176–177]. In the middle of the 13th century, at the time of Berke-khan's reign, missionaries from Central Asia brought Islam to the territory of Dobruja. The names of some Muslim missionaries have been preserved to our time in the names of some towns of Dobryja: Baba-Dag (Baba Saltuk/ Muhammad al-Bukhari), Machin (Baba Machin), Isakcha (Baba Iskhak), Tulcha (Baba Tulchi/Kulchi). The spread of Islam in Dobruja was finally proved by Arabic geographer *Abu-l-Feda* (1273–1323) [Aurel Decei, 1945, s. 632–633].

In the late 14th century, when the Ottomans visited Dobruja for the first time, they found a Muslim community of Tatars here. After the destructive invasion of Amir Temür in the Volga Region in 1395, many Tatars fled to Dobru-

¹ On 22 June 1368, the King of Hungary Louis I provided a Tatar merchant with a document, which stated: 'dominus Demetrius princeps Tartarorum' [Documenta, 1977]. Romanian historian N. Iorga translated it as 'Tatar Khan Te<j>mur' [Iorga, 1937, P. 264]. Other Romanian historians placed this Tatar state in Budjak [Spinei, 1982, Pp. 274–278].

ja and Rumelia [Grecov, 1953, pp. 342–344]. Consequently, there is a rather tight bond between the Tatars of the Volga and the Danube River. One of the main Tokhtamysh Khan's emirs Aktau and his warriors took part in the battles serving the Ottoman Empire and Wallachia. Judging by the evidence of the Ottoman and Byzantine historians of the 15th century, their number was about 35,000 people. During the Battle of Nicopolis (1396), they reinforced the Ottoman front and had a significant influence on the outcome of the battle [Cronici, 1966, p. 40 (Enveri), 50 (Oruc); Laonic Chalcondil, 1958, p. 75]. In the 16th century, "The Tatars of Aktav" feature in official documents as warriors serving the Ottoman state [Tayyib Gökbulgin, 1957, p. 87]. During Sultan Mehmed I's reign (1413–1421), the Tatars from Anatolia were moved to Rumelia [Orudj bin Adil, 1925, s. 110]. It is plausible that a part of them settled in Dobruja.

In 1417, Dobruja entirely passed to the Ottomans for 460 years. There is still no significant evidence on the Tatars of Dobruja which refers to the 15th century. In the 15th century, the region known as Bucak was situated within the Moldavian state. Nevertheless, the number of Tatars living there was insignificant. In the 15th century, "Tatar slaves" belonged to the Moldavian state [Beldiceanu et I. Beldiceanu-Steinherr, 1986, pp. 7–14]. At the end of the same century, this expression started disappearing from official papers. In about 1370, Moldova supported by Poland and Lithuania put an end to the domination of the Golden Horde on the territory between the Prut and the Dniester. As a result of these wars, the city of Orgeev, in the modern Republic of Moldova, Costeshti village and two adjacent, prosperous Tatar cities were destroyed, and the inhabitants were killed or enslaved [Eugen Nicolae, 1995, pp. 197–200; Gheorghe Postică, 2006]. Apparently, the expression "Tatar slaves" has existed since then. However, in my opinion, these slaves were gypsies brought by Tatar-Mongolians. Anyway, these "Tatar slaves" who mainly lived in Moldova disappeared and assimilated with "Gypsy slaves".

At the end of the 15th century, the Tatars started coming to the territory of Bucak again knowing in advance that their countrymen

were living here. Although they were not large in number, they were mentioned in European sources as brave warriors serving the Polish king and Moldavian voivode [Iorga, 1899, p. 73]. As a result of political and military cooperation between Ottoman sultan Bayazid II and Crimean khan Mengli Giray, the southern-eastern part of Moldova, that is Bucak, was passed to the Ottoman Empire and the Crimean state. The Ottoman Sultan conquered Kiliya and Akkerman fortresses and the surrounding areas and the Crimean khan acquired Căușeni and Dubăsari and their outskirts [Inalçık, 1960, p. 1253; Tahsin Gemil, 1983, pp. 225–238]. The Tatars settled here. We learned from a source relating to this period that "many Tatars" lived on lands situated between Kiliya and Akkerman fortresses belonging to Murtaza-khan [Orudj bin Adil, 1925, p. 132.]. The Tatars who settled in Bucak were subordinate to the Crimean khan. Thus unlike Dobruja, Bucak became a common Ottoman-Crimean possession (condominium). According to a Polish source relating to 1502, the Ottoman sultan summoned the Volga Tatars to Bucak and promised taxes from the Akkerman fortress but also slave trade taxes to the Crimean khan. This fact may be regarded as an indicator of the increase of strategical significance of Bucak [HurmuZaky, p. 493]. Due to the weakening and then the complete disappearance of the Golden Horde, part of the Volga Tatars were drawn in into the migratory flows. Bucak and Dobruja became attractive territories for the Nogai Tatars who roamed between the Jayıq (the modern Ural River) and the Don River. These territories have been populated by the Tatars since ancient times. The permanent increase of Tatar population in Dobruja was referred to with concern in European sources since 1512–1524, primarily Polish sources [HurmuZaky, p. 170]. In 1521, troops of the Dobruja Tatars numbering twenty thousand warriors led by Hanzade Saadet and Himmeth Girays were sent to the Ottoman troops mustered not far from Edirne [Sroekovsky, 1979, p. 175].

In 1538, as a result of cooperation between the Ottoman Sultan and the Crimean khan the joint Ottoman-Crimean possessions in Bucak were extended (Bender fortress and its surroundings were conquered) and reinforced. At

that time, the name "Bucak" was becoming more and more famous. Apparently, it may refer to 1484 and the Crimean khan Mengli Giray. Bucak situated between mouths of the Danube and the Dniester and which took 70 hours to cover in length, on foot and 34 hours to cross on foot, resembled the shape of an angle [Ismaïl Haqqı, 1954, p. 41]. Judging by official Ottoman papers, Bucak and Dobruja, which were subordinated to the khan in the 16–18th centuries, and the Danube district were part of the Silistra sandzhak which was mentioned as Silistra-Ochakov since the late 16th century. For many years, there were the following regions in Bucak: Akkerman, Bender, Kilya, Izmail, Sarata/Tatarbunary; Tomarova or Temürabed (Reni), Dubăsari, Kartal district emerged in the 18th century, in the course of time, the names and borders of some districts were changed. Famous regions of Dobruja: Silistra, Dobrich, Hadjioglu Nazarjik) Balchik, Mangalia, Karasu/Sakarya, Baba-Dag, Khyrsovo, Mechin, Isakcha, Tulcha [Tahsin Gemil, 2004, p. 53; Tahsin Gemil, 1984; Valeriu Veliman, 1984; Aleksandr Sereda, 2009].

In the middle of the 16th century, many nomadic and semi-nomadic Tatar (Nogai) tribes were gathered in Bucak and Dobruja. In 1546, Crimean khan Sahib Giray (1532—1551) took severe measures against the Nogai tribes roaming in the steppes. He forced them to obey and moved to Budjak and partly to Dobruja [Tevarih-i Sahib Giray Han, 1973, p. 72]. At the same time, as Muscovy extended its borders, the Nogais were forced out from their former territories [Kurat, 1972, pp. 280–289] and their tribes had to travel constantly in the western direction, especially to the territories of Bucak and Dobruja, until the second half of the 18th century. The main tribes were the following ones: Mansur, Orak, Kassai, Mamai, Or-Mambet (Mehmet), Jemboylyk, Jedisan, Jetishkul, Kungrat, etc. [Inalçık, 1986a, p. 1287; Mamut Enver, 1964, pp. 326–327; Giusppe Cossuto, 2001, p. 71]. By moving the Tatar tribes to Bucak and Dobruja, the Ottoman government had its political and economical goals. Bucak and Dobruja were suburban territories and they had to grow stronger from the economical point of view in view of the fact the new nomads had settled there. At the same time, Tatars troops

displaced there could be used as political or military weapons against Romanian principalities, Poland and even the Crimean Khanate. The Crimean khan also found the moving of numerous Nogai tribes from the peninsula to more remote territories rather useful.

Prince and scientist Dimitrie Cantemir, with Moldavian origins, reports that in 1568 30,000 Tatars were living in Bucak [Dimitrie Cantemir, 1876, p. 326]. Sultan Ahmed I's decree dating back to 1608 stated: "Some years ago, the Crimean and Nogai Tatars crossing Ochakov and the Dniester River, five-ten thousand Tatars from Akkerman, Bender and Kilya found motherland in their steppes" [Tahsin Gemil, 2009, pp. 123–124]. A diplomatic report dating back to 1618 and sent from Istanbul to Paris states that 15,000 Tatars had been living on the western bank of the Dniester River [Iorga, 1899, p. 220]. Italian traveler Marco Bandini found 60 Tatar villages in the middle of the 17th century [Ibid., s. 260] and Ottoman traveler Evlia Chelebi who was in the same province at the same time reports about 200 flourishing Tatar villages [Inalçık, 1986a, s. 1287]. In 1691, famous engineer-general and spy L.F. Marsigli counted 300 Tatar villages in Bucak [HurmuZaky, s. 368]. In the middle of the 18th century, consul Ch. de Peyssonel sent to Bakhchysaray by the French king found 500 Tatar villages on the same territory [Ch.de Peyssonel, 1787, p. 258].

Judging by the ruzname written during Suleiman Kanuni's military campaign in Karabogdania in 1538, Turk-Tatar villages and town were almost filled with population in this period [Aurel Decei, 1945, p. 636]. Venitian Marco Venier in Dobruja in the late 16th century reported that Hanzade and 40,000 Tatars had settled recently in Dobruja [Călători, 1971, s. 392]. Halepli Paul wrote from Dobruja in the middle of the 17th century that "the local population completely consists of Tatar-Muslims" [HurmuZaky, p. 368]. In the 16–18th centuries, Dobruja and Bucak were called "Tataria", "Tatarian plain", "Tatarian land/area", etc. [Gabriel Andreescu, 2005, pp. 98–99; Tahsin Gemil, 2010, p. 21].

Since the 17th century, Bucak had become too crowded for new Tatars. So the Bucaks started grazing cattle on outlying territories

A Tatar mosque in Konstanz, Romania

especially on Moldavian lands. In this connection, there was a large number of complaints in the Ottoman Archive. Nevertheless, until the second half of the 17th century, both the Crimean khan and the Ottoman padishah neglected these complains. In this period, the Ottoman sultan used the Bucak Tatars as the opposition to the Zaporozhian Cossacks subordinate to Poland as political and military weapons. Even Mirza Kantemir, the headman of the Mansur tribe, was a sanjakbey of Silistra at first and then in 1620, he was appointed as the beilerbey of Ochakov. The army of Kantimir-pashah mainly consisting of Dobruja and Bucak Tatars was so strong that it managed to defeat the Crimean army in 1624 and won the respect of Poland, Wallachia and Moldova until he was executed in Istanbul in 1624 [Tahsin Gemil, 1979, s. 50–99]. In the second half of the 17th century, Bucak was utterly overpopulated. Crimean khan Mehmed Giray-Sofu IV (1641–1644; 1654–1666) decided to move a part of the Nogai Tatars from Bucak to the eastern bank of the Dniester River in reply to obstinate complaints from the beys of Moldavia and Wallachia. But the Nogais resisted and asked the Ottoman sultan for help. In September 1666, Al-Hadj Halil-aga, sent from Istanbul, officially offered the Bucak Tatars Ottoman citizenship and the chance to settle on the territory of Akkerman, Kiliya, Ismail, Bender, and Sarat. In other words, the Tatars of Bucak were no longer subordinate to the Crimean khan and became the citizens of the Ottoman Empire. To be more precise, the Bucak Tatars became subordinate to the beylerbey of Ochakov. The ob-

jection of the Crimean khan resulted in his removal from the throne. Moldavia and the Crimean Khanate were deeply concerned with the problem called "the motherland of Halil pashah". The Nogai Tatars had a very firm reason to go over to the patronage of the Ottomans due to the overpopulation of Bucak. The Bucak Tatars became one of the most topical questions for discussion in Karlovits. The sixth clause of the Ottoman-Polish treaty signed on November

24, 1698, required the return of the Tatars who had crossed the border of "the motherland of Halil Pashah" [Hurmuzaky, pp. 226, 494–495]. Taking advantage of the war of 1710–1711, the Nogais crossed the border of Bucak and officially settled in the new area on Moldavian lands. However, soon, this territory became insufficient. After the middle of the 18th century, some Nogais from Bucak under the influence of Russian propaganda migrated to the eastern bank of the Dniester River to Russia. Some of them migrated to the south of the Danube, to Dobruja [Iorga, 1899, p. 251]. However, Bucak was still overpopulated by Tatars. The way of life in the 18th century changed a lot in comparison with the 16th century. Although the Bucaks accepted the settled way of life and started working on the land they still could not give up cattle-breeding. Vast pastures with juicy grass were needed for a great number of herds of horses and flocks of sheep and horned cattle. Conflicts with neighbors and firstly Moldavians appeared for this reason [Tahsin Gemil, 1996, s. 149–152; Tahsin Gemil, 2009, s. 93–100]. Despite this, the Bucak Nogais established friendly relations with Romanians from Moldavia and Wallachia and even lent them grain in the lean season [Tahsin Gemil, 2008, s. 677–685; Iorga, 1899, s. 263]. Many European travelers and diplomats (Kleeman, Bruce, Peyssonel, Tott, Sestrencevicz, etc.) remarked upon such specific features of the Bucak Tatars as hospitality, friendliness and diligence [Iorga, 1899, s. 263].

Undoubtedly, migration started in 1783 after the annexation of the Crimea. And this was reflected on Bucak and Dobruja especially. As

there was no hope of avoiding Russian occupation after the Treaty of Jassy of 1792, the migration of the Tatars intensified. Judging by figures, 30,000–100,000 Crimean resettlers took refuge on the Ottoman empire that year [Fisher, 1987, s. 78]. It is still unknown how many people exactly came to Bucak and Dobruja. Nevertheless, there must be many since as these territories are attractive for their closeness to the Crimea, especially for those who hoped to come back home.

According to the seventh clause of the Ottoman-Russian treaty signed in Bucharest on May 28 1812, Bucak was passed to Russia and the Tatars settling there were acknowledged and authorized to move to the Ottoman lands. To be more precise, Tatars were given 18 months to leave Bucak and they had to be replaced by Christians who were citizens of the Ottoman empire [Mustafa A. Mehmet, 1986, pp. 363–364]. A significant part of the Bucak Tatars were moved to other territories of the Russian empire (to Ekaterinoslav and Chersonese, the Crimea and Northern Caucasia) [Kalmykov, etc., 1988]. However, the majority of the Tatars of Bucak moved to Dobruja from where some of them migrated to Turkey. After 1812, there were no Tatars left in Bucak.

The number of Tatars coming to Dobruja from Bucak and the Crimea was about 30 000 people. After the Crimean war (1853–1856), Dobruja once again became an area for settlement for the Tatars. According to the decree of Abdul-Medgid dated back to September 2, 1856, Medgidia was founded for the Crimean resettlers and in 1857–1860, the railroad "Danube—Black Sea" was built. As a result of the war of 1877–1878, Dobruja passed to Romania. In 1878, the Romanian authorities organized a census according to which 225,753 people lived only in the northern part of Dobruja in total; 71,146 people were Tatars, 48,784 people were Turks, 46,504 people were Romanians, 30,237 people were Bulgars, 6,994 people were Circassians, etc. [Karpát, 2003, pp. 209–230]¹. In total, the number of the Tatars was

likely to be much higher as a significant part of the Tatars (presumably 30%) was recorded as the Turks. In 1905, it was acknowledged with surprise in a brochure released for Romanian propaganda that one could still find more than 700 Tatar cemeteries in Dobruja and that their amount exceeded those of the Tatar villages [Pariado, 1905, p. 39].

* * *

In the period between 1417 and 1878, Dobruja was under control of the Ottoman empire. The Tatars living there as the Ottoman citizens had to obey the existing way of life and laws. A specific feature was that the Dobruja Tatars and the Nogais especially took part in wars headed by their commander. At the same time, there were many Tatars who took advantage of the Timar system established in Dobruja. This can be observed in the use of "Mirza" title and in the names of people and villages reminiscent of the Golden Horde and Crimea [Tahsin Gemil, 2004]. Although the Ottoman empire did not take any discriminatory measures, the Tatar villages of Dobruja were different from the Turk ones, in view of the fact that both the Tatars and the Turks of Dobruja preserved their way of life for centuries although they they treated each other very well. Differences in the way of life between the settled tatars (the Crimeans) and nomadic Tatars (the Nogais) were preserved for years. Moreover, the Nogai villages also had a place [Müstecib Ülküsal, 1966; Frederick De Jong, 1986, s. 164–189].

In 1484 and 1583, the Ottoman ruler organized a military campaign in Moldova with the participation of the Crimean khans and their troops. As a result of these campaigns, the southern-eastern region of Moldavian office of voivode passed to the Ottomans and the Crimea. The Ottoman padishah conquered five districts in this territory called Bucak and the Crimean khan owned some regions on the right bank of the Dniester River in his turn. Dubossary, Căușeni, and Khan were the most important. Nevertheless, tens of thousands of Tatars living in Bucak were subordinated to the Crimean khan becoming his citizens. The Crimean khan assigned his serasker in Bucak to rule efficiently. The most important representative of the khan, serasker, was chosen from the representatives

¹ According to the Russian census of 1877, the population of Medgidia totaled 21,200 inhabitants, including 12,000 Tatars, 4,100 Romanians, 2,800 Turks, 1,600 Slavs, 500 Circassians and 200 Germans [Karpát, 2003, Pp. 228–229].

of the Giray dynasty, it was usually the khan's son or brother. The serasker of Bucak was a member of the divan of the Crimean khan and he had incontestable authority. Being the headman of Bucak army, the serasker concentrated great forces in his hands. He ruled Bucak almost like the khan, his headquarters were situated in Căușeni town, not far from the Dniester River. The serasker had his own divan, vizier, paymaster, secretary, etc. The Bucak Tatars were subordinated to the serasker and kadiys beyond the Ottoman Iles. The divan of the serasker was the court of last resort for plaintiffs in Bucak, death sentences were also passed here. The divan of the khan had the function of the court of last resort for state cases. Bucak Tatars were obliged to give the serasker *kurush* from every house and a sheep from every village annually. When a serasker took office, it was necessary to give him 500 cattle. The serasker had to take counsel from the local major mirza in his turn. The Crimean khan controlled the Bucak Tatars thanks to an important official — Yaly-aga [the headman of coastal command]. Yaly-aga looked after the Dniester river, he lived in Khankyshlasy. A representative of the Moldavian voivode stood on equal terms with the Crimean khan, the serasker of Bucak, and Yaly-aga. At the same time, the representatives of the Tatar nobility were equal to the Moldavian voivode. They dealt with problems of the Moldavians living in the Crimea and Bucak and the Tatars living in Moldova [Peyssonel, 1787, I, pp. 301–303, II, pp. 240–241ö, 254, 262, 308 v.s. ; Iorga, 1899, p. 260; Iorga, 1904, pp. 237, 302, 342, 375, 408 v.s. ; İnalçık, 1986a, p. 1287].

Mengli Giray II (1724–1730; 1737–1740) wanted by force to implant the Crimean order, in order to eliminate independence that increased significantly among the Nogais of Bucak. He considered the Crimean way of life suitable for the Bucak Tatars as well. The khan wanted them to build houses instead of putting up tents and stop them following their herds, so he advised them to work on the land. The Bucak mirzas took the necessary measures to own the land in the form of *suylural*. Relations with voivode Grigory Gika were established in order to end conflicts with Moldova. It was also announced that all the territories conquered by the Nogais, apart from "Khalil Pashah Yurdu", would be returned to Moldova. The Nogais who withdrew from these territories received the lands of Akkerman and Izmail, while those who wanted to stay had to pay tributes to the owners of the land. The reason for an attempt to carry out these reforms in Bucak was a powerful uprising in 1727–1728. This Nogai rebellion was stifled by the joint forces of the Crimea, the Ottoman empire, Moldova and Wallachia. Although Mengli Giray II's plans were not always successful, the independence of Bucak was shaken after this rebellion and it lost its military and political significance. Nevertheless, these events led to the serious economic growth of Bucak [Cronici, 1966, pp. 249–250; Peyssonel, 1787, p. 339; Mihordea, 1979, p. 1087; Tahsin Gemil, 2009; Dan Ion Haidarlı, 2003, pp. 165–170].

The Tatars occupy an important place in the history of Southern-Eastern Europe but the majority of local historians underestimate their significance and this trend is topical today as

well. The fact that the Tatars were confused with the Mongolians. The Christian church carried on propaganda against the Tatars for many years due to mistaken perceptions. Unfortunately, at those times, many states including Russia blamed the Tatars deliberately in an attempt to conceal their state failures and expansionist strivings. In this connection it is reasonable to throw the light on the topic of style of presentation of information about the Tatars in Romanian historical tradition which is the least familiar to me. Romanian historians are also prejudiced against any subjects connected with the Tatars. It is nonetheless fair to point out that Romanian historian Nicolae Iorga, who was at one time well-known, and certain other Romanian historians attempted to stress the important part played by the Tatars in the history of Romania. The most important historical fact is that the Tatars and their predecessors Qipchaks (Cumans) had a special significance in the formation of Romanian national character, statehood and their further development. Indeed, in the 1320s, the Cumans became the major founders of Wallachia, the first Romanian state. Moreover, Toktemir-oglu Basaraba was the founder of Wallachia. The Basaraba dynasty ruled Wallachia until the 16th century. In 1330, Wallachia was saved from Hungarian dominance only due to the Qipchak-Tatars, that is the Golden Horde. The emergence of a new Romanian state—Moldova—in the historical arena was also related to the Tatars. In a letter sent from Crimea to the Pope on April 10, 1287, a catholic monk (bishop) praised Nogai in person "*Ymor filius Molday*". Although these important historical data have long been known, Romanian histo-

rians still do not take them into consideration. Otherwise, they will have to accept the fact that the Tatars were also the founders of the Moldavian state. Nevertheless, several Romanian historians acknowledge that these two states could exist on the strong foundations only with the help of the Golden Horde. Romanian medieval sources contain many personal names of Qipchak-Tatar origins. These names mainly belonged to representatives of the gentry and representatives of power. The Romanian language contains numerous Qipchak-Tatar borrowings including some terms referring to the organization of the state. Even now, toponyms of Turk descent (the names of rivers, lakes, and places) can be found in any region of Romania. Most of them refer to 300-year-old epoch of Qipchak-Tatar history. The ceaseless existence of the Romanian people and state was possible thanks to the Tatars and Ottomans. The Romanians organized attacks and caused damage during such long-lasting relations with the Tatars and the Ottomans. However, the Bucaks also hurt Moldova significantly. And this is true. It is also true that the Tatars and the Ottomans play the part of defenders in Romanian history. The Romanian national and political identity was defended from attacks by large catholic states (Hungary and Poland) at first and then from destructive invasions of Orthodox Russia due to the forces of the Tatars and Ottomans. The Tatars from Crimea, Dobruja, and Bucak performed their defensive duties many times. If one day all the positive and negative events and deeds between the Romanians and the Tatars are balanced, I am sure that positive deeds will definitely out-weigh the negative.¹

¹ For more detail see: [Tahsin Gemil,2012].

CHAPTER 6

Political History of the Kazan Khanate

Alexander Bakhtin, Bulat Khamidullin

Under khan Mahmutek, the Kazan Khanate was mainly concerned with domestic affairs. He made many efforts to unite Bulgarian emirates under his power and neutralize separatism. The khan planned to rely not on the local population but on the Tatars drawn from the steppes. The Kazan Chronicles state that "barbarians from different countries (the Golden Horde, and Astrakhan, and Azov, and the Crimea) began gathering and coming to the Tsar" [History of Kazan, 1954, p. 53; Lyzlov, 1990, p. 50]. In general, the khan managed to create a united state but it was not centralized. There was also no unity in the ranks of the Kazan nobility.

Domestic and foreign policies of the country were mostly defined by the struggle of clans and groups of nobility. The confrontation traces its roots back to the history of the Golden Horde. The slackening and collapse of the great steppe state was a destructive consequence of this rivalry. The consequences for the destiny of the Kazan Khanate were negative as well. N.A. Firsov and G.I. Peretyatkovich marked out the so-called "fractions" in Kazan [Firsov, 1866, p. 73; Peretyatkovich, 1877, pp. 151–176]. The definition was picked up by historians [Khudyakov, 1990, pp. 35–44]. Sometimes "fractions" are called groupings [Alishev, 1990, pp. 53–54; Iskhakov, Izmaylov, 2005, p. 94]. They were struggling for the power and independence of the khanate. Initially, the struggle between representatives of Kazan nobility was closely related to foreign states whose support they were searching for and who interfered in the political life of the khanate. Newly arrived Nogai, Horde, Siberian, and Crimean feudals became the basis for the oriental group. Steppe natives maintained an idea of relations with settled peoples which was traditional for nomads. Raids, pillaging, and taking prisoners for sale in Eastern slave markets were an integral part of their economic mode of life. This

group of feudals was in favor of confrontation with Russia. They were supported by a part of Kazan feudals who were involved in the slave-trade with eastern countries. Their popularity was due to the fact that they stood up for patriotism under the banner of Islam, for the independence of the country, the union with Muslim yurts and sacred struggle against Christian Russia. It influenced the national consciousness of the Tatars, but it inescapably led to the worsening of relations with Russia. This was fatal for the khanate and dramatic for the peoples dwelling there. The oriental fraction was related to other Tatar states—the Nogai Horde, the Tyumen, the Siberian, the Astrakhan, and the Crimean khanates. Its followers received constant support and implemented a policy which was beneficial for them.

The *Moscow* fraction was formed simultaneously. The basis was formed by native Kazan nobility supported by trader and craftsmen interested in peaceful relations with Russia and economic cooperation. It expressed the interests of the majority of the population of the khanate without bias but it was weaker than the oriental one and it was less popular. Its leaders found it difficult to make a compromise with Russia, since Russia wanted to achieve greater dependency for the khanate' something which was inadmissible in Kazan. Moreover, the confessional differences between two countries played a significant part. From a psychological point of view, it was difficult for the Muslim to conclude a union with a Christian state even if it corresponded with the interests of the overwhelming majority of its citizens. It was the opposite with representatives of other beliefs even if they were only concerned with their mercenary interests. As for economic ties, they were rather feeble and could not influence the stability of peaceful relations with Russia [Smirnov, 1948, p. 19; Bazilevich, 1952, p. 200].

The history of the Kazan Khanate resembles a constant wavering between two types of political extremes: from a union with Christian Russia to searching for a contact with Muslim states—the Siberian Khanate, the Nogai Horde, the Crimea and Turkey at the last stage of its existence. It had an influence on the political struggle in Kazan, and made the position of fractions unstable.

I.I. Smirnov considers the internal political struggle in Kazan as a typical manifestation of feudal turmoils, as the struggle of feudal clans for power. This struggle became even more complicated because of the fact that internal political groupings were used by states siding with Kazan—the Russian state, the Crimea, Shynab khans—to facilitate their foreign policy plans. On the other hand, these groupings themselves were trying to reinforce their positions in a struggle for power by uniting with certain states supporting Kazan. Their aim was to guarantee accession to power with the help of external forces [Smirnov, 1948, p. 19].

To a certain extent, the efforts of the Russian Office of Ambassadors influenced the sentiments among the Tatars. This practice was implemented by Ivan Kalita, who initiated a process of the large-scale bribery of the Horde nobility in the form of giving presents. Russian diplomacy recruited followers from amongst the Tatar nobility by fair means or foul. Some of the feudals became accustomed to receiving "salaries". They earned them by carrying out policy favorable to Moscow and providing important information. Nevertheless, recruited feudals were never directly dependent on Moscow. The representatives of nobility who supported Moscow always emphasized that they would firstly serve their khan and then the great prince of Moscow and that they were guided in their actions by the desire to establish friendly and partner relations between the countries. The support of Moscow was firstly used by feudals for their own benefit. If their interests did not coincide with those of Moscow, they would not follow the lead of Russian policy, leading to "betrayals" which are so often mentioned by chroniclers.

The political fractions were not stable; feudals went over from one side to another depending on changes in the political situa-

tion. Political struggle often took place between fractions. It often turned into military confrontations. Its success mainly depended on the sentiments of the various strata of the Tatar population. The level of social consciousness in Kazan was organized in such a way that the masses believed thought that the victory of one or another fraction could bring about positive changes to their positions. The interference of foreign states in this struggle aggravated the dramatic consequences and sufferings of the population of the khanate.

As for foreign policy, the khanate had diplomatic, economic, and cultural relations, as well as military conflicts with both neighbors and more distant states. The Nogais traded in horses and sheep with Kazan without the payment of taxes. [Kochekaev, 1988a, p. 15]. Sometimes their encampments came to the Kama River and they would find themselves on the territory of the khanate. The families of khans often entered into marriages with the Nogais. The Nogai steppes were a place of emigration for the Kazan opposition. There was a "Manghit prince place" in Kazan. The Nogais received annual tributes in the form of honey, fur coats, fabrics, and money—10 barrels of honey and 60 roubles—from Kazan [Continuation of the Ancient Russian Vivliotics, 1793a, pp. 168, 220, 241; Continuation of the Ancient Russian Vivliotics, 1795, p. 27; Continuation of the Ancient Russian Vivliotics, 1801, pp. 182, 233, 291]. There was no fixed form of paying tributes. There is reference to annual tributes from Kazan which equaled 100 barrels of honey and 9 fur coats [Continuation of the Ancient Russian Vivliotics, 1793a, p. 241]. Another source refers to 100 barrels of honey and 100 roubles [Continuation of the Ancient Russian Vivliotics, 1795, p. 27]. In 1577, Prince Urus wrote that the Nogai Horde received fur coats, fabrics and honey or 40,000 altyns from Kazan [Continuation of the Ancient Russian Vivliotics, 1801, pp. 182, 233, 291]. The Nogais were often the allies of Kazan and waged war against the Russians together with them. Nevertheless their relations worsened from time to time and then they attacked the khanate.

Various contacts took place with the Tyumen (Siberian) Khanate. Siberian tsareviches and

khans tried to influence Kazan until the early 16th century and laid claims to political power.

The relations with the Astrakhan Khanate were mainly friendly. The inhabitants of Astrakhan provided the Kazan khans with military help although it was not large-scale.

Relations between the khanate and the Great Horde were hostile but there were no active military confrontations.

The partnership with the Crimean Khanate was very close. The representatives of the ruling dynasty were distant relatives of the Girays and the influence of the Crimean nobility was significant. The inhabitants of Kazan were trying to establish relations with Turkey through the Crimea. However, the help they relied on in Kazan was not forthcoming either from Crimea or Turkey.

There were diplomatic contacts with the Grand Duchy of Lithuania but they were mainly related to the attempt to conclude an anti-Ottoman union.

Initially, separate Russian princedoms and lands were the major foreign policy partner of the Kazan Khanate, then it was Russia, or the Muscovite state.

The inherited Horde traditions of centuries-old domination over Russia and the ancient rivalry between North-East Russian and Volga Bulgaria for control in the Middle Volga River influenced relations between the Moscow princedom and the Kazan Khanate. In middle ages, there was no principle of peaceful coexistence and relations between neighbors were defined by power, so war was a common thing and peace was of short duration. Equitable relations could take place for a while only if military and economic potentials were approximately equal. If this parity was violated, the stronger neighbor usually tried to subordinate the feebler one in order to create a safety buffer and achieve economic preferences (getting tributes and creating favorable conditions for trade and economic activity). Various means including diplomatic, economic, and military ones were used for this purpose. The elite of the Kazan Khanate did not always perceive political changes adequately and recalling the former greatness of united and mighty Golden Horde, they tried to preserve their power over Russian lands.

Nevertheless, Russia, striving for integration and becoming stronger and stronger, was becoming a powerful state, which was able to defend its own independence. The incapacity of the Tatars to maintain the dependency of the Russian lands led to frequent international conflicts.

After the Russians had been defeated under Suzdal in 1445 and the great prince Basil II had been captured, the Moscow Princedom had to pay tributes to Kazan [Bakhtin, 2008, pp. 156–157]. However, the Russian prince did not start paying tributes at once. Numerous invasions of the Kazan Tatars on Russian lands in 1446 and 1447 can be explained by this fact¹.

In the 1450s, the question of the final integration of the Russian lands and release from foreign dependence arose. This led to a discrepancy between the fixed political relations and real correlation of forces. The Russian state, which was growing stronger and owned significant material and human resources and military potential, had to be subordinated to the feebler Kazan Khanate. This confrontation had to lead to a conflict inevitably. Apparently between 1450 and 1460, Moscow stopped paying tributes to the Kazan Khanate and the Great Horde.

Another reason for the deterioration of Russian-Kazan relations was the necessity of ceasing Kazan attacks and the release of many Russian captives. M.G. Khudyakov acknowledged that the Russian government was striving for the abolition of Russian slavery..." [Khudyakov, 1990, p. 42].

The clash of Russian-Kazan interests in Vyatka and Perm arose simultaneously. Starting the last stage of integration of the country, Moscow organized military campaigns against inhabitants of Vyatka and forced them to acknowledge their power [Varnivian antiquity, 1993, p. 16]². Kazan was not satisfied by the reinforcement of Moscow state at the borders of the khanate and especially by the fact that Vyatka became subordinated to Moscow. The Typographical and Vychegorodsko-Vym-

¹ Complete Collection of Russian Chronicles. Vol. 37. Pp. 44, 87–88, 113.

² Complete Collection of Russian Chronicles. Vol. 12. P. 112; Vol. 23. P. 156; Vol. 26. P. 217; Vol. 27. Pp. 120–121, 275, 349.

sky chronicles and letters from Safa Giray addressed to Polish-Lithuanian king Sigismund I provide evidence of the fact that the Kazan Khanate considered Vyatka as the sphere of its influence and got tributes from there. Kazan also had interests in Perm [Mustafina, 1997a, p. 32; Vychegodsko-Vymskaya, 1958, p. 262]¹.

K.V. Bazilevich stressed one more reason for the worsening of Russian-Kazan relations. He mentioned that the Russian government intended to prevent the Kazan Khanate from rapprochement with the Great Horde by establishing control over the Kazan Khanate and turning it into a strategic ally [Bazilevich, 1952, pp. 199–200].

The problem could be solved in the following ways: 1) establish friendly and partner relations through the conclusion of a beneficial treaty; 2) achieve the vassal dependence of the khanate; 3) eliminate it through conquering or peaceful integration [Kovin, 1995, p. 40].

The contradictions between the countries resulted in a conflict. In March 1461, Russian troops organized a military campaign in Kazan. Nevertheless, they managed temporarily to prevent a war. In Vladimir, Basil II was met by Kazan ambassadors who proposed peace, and the military campaign was canceled². Nevertheless, the attacks by the Cheremis, who were subordinated to the Kazan Tatars, did not stop. In 1462, a flotilla consisting of inhabitants of Ustyug, Vologda, and Galich was sent against them. After conquering, the Maris settlements along the Vyatka and the Kama rivers, they went to Great Perm. Meanwhile, "the army of the Cheremis and the Tatars came to Ustyug region, they were fighting there, took many prisoners. .. The inhabitants of Ustyug chased them, reached them, they defeated them and returned all the captives"³.

The next military conflict took place in 1467–1469 and it was related to the struggle for the khan's throne in Kazan.

Kazan khan Mahmutek.
Reconstruction by T.S. Balueva. 1994

At some time in the middle of the 1460s, khan Mahmutek died in Kazan. At this time, his brother Mustafa was living in the khanate. He was the Ulugh-Muhammed's fourth son and was mentioned in a Turk essay in 1504: "Tavarikh guzide nosrat-name" [Material, 1969, pp. 39–40] and indirectly in Russian manuscripts. It contains a story about his son, Murtaze, who was roaming through the steppes. In 1471, Ivan III invited the prince to serve. It is known that in 1472 he was in Serpukhov. On December 31, 1473 "tsarevich Murtoza, Kazan tsar Mustofa's son" was hosted by Ivan III in Moscow and and the Great Prince granted him with Novogorodok at the Oka river and many other provinces"⁴. D.M. Iskhakov assumed that Mustafa continued roaming the steppes after his father and brother had gone to Kazan [Tatars, 2001, p.

132; Iskhakov, 2002b, p. 65] but he does not explain why Murtaza is referred to as the Kazan tsar's son in Russian chronicles. Mazurinsky chronicles say that "the sons of the Kazan tsars came to serve the great prince Ivan Bazilievich: Mustofa's son Murtoza and Obreim's son Abdyletiv..."¹ It is plausible that Moscow authorities were planning to obtain a legal candidate for the Kazan throne; and take advantage of him later in the struggle for the spreading of Moscow political influence of the Kazan Khanate.

Mahmutek had two sons—Khalil and Ibrahim. Their uncle tsarevich Kasym who was Ibrahim's stepfather served in Russia². Both of them could claim the khan's throne. There was a fierce struggle between the candidates. Moscow decided to take advantage of the situation. Initially Mustafa could have become the khan but he seems to have been removed very soon. In an essay dating back to the late 18th century called "Tawarikh-i Bulgariya" by Khisam ad-Din Bulgarsky says that in 869 Aksak-Temür attended the cities of the Middle Volga Region and was a guest of Mustafa khan [Tatar legends, 2009, pp. 947–948]. 869 corresponds to a period between September 3, 1464, and August 23, 1465. The date coincides with the possible time of Mustafa ibn's reign. Ulugh Muhammad. His son Murtaza was forced to hide in the steppes until he was invited to serve in Russia³. Khalil who replaced Mustafa was not a khan for very long either. Certain representatives of the Kazan nobility were not satisfied by the fact that Ibrahim was on the throne. A delegation from the opposition headed by prince Abdula-Muemin (Avdul-Mavna) came to tsarevich Kasym and invited him to become a khan. As the eldest, he was entitled to the Kazan throne. Kasym himself did not have military forces for fighting against Ibrahim, he only had 500–700 warriors. The prince asked his overlord Ivan

III for help. The Moscow authorities wanted their vassal to ascend to the Kazan throne. He was given a cavalry and a flotilla. Nevertheless, the enterprise failed and brought about a bloody, two-year-long war for Moscow.

On September 14, the troop led by tsarevich Kasym and Princes Ivan Bazilievich Striga-Obolensky, Ivan Yurievich Patrikeev and young talented military leader Danila Dmitrievich Kholmsky set out for Kazan⁴. Ivan III himself was in Vladimir intending to rule from there. The campaign was not prepared thoroughly from either a military or political point of view. They did not have enough forces for successful military actions. The cold and rainy autumn did not benefit the campaign. The opposition which had invited Kasym to reign did not have the necessary support. They could not hinder the accession of Ibrahim to the throne and organizing the counteraction to the upcoming Russian-Kasym troop. The emergence of hostile troops on the territory of the khanate contributed to the cessation of the intestine strife, consolidation of Ibrahim's positions, and the unity of the Tatars around him. The Russians and the Kasymovs faced resistance. When they left the mountain side and tried to cross the Volga River, they were met by major Kazan troops led by khan Ibrahim. Kasym had to go back. Cold rains and famine exhausted the warriors on their way back (the local community was hiding in forests and did not give provisions), many of them lost horses, left their armor, some of them caught cold⁵. After these events, the name of Kasym disappeared from the chronicles forever. Apparently, the aged tsarevich caught a cold and died.

The chroniclers see the reason for the failure in the "seduction" of the Kazan Tatars who were initially going to deceive the tsarevich and the great prince⁶. However, if Kazan feu-

⁶ Complete Collection of Russian Chronicles. Vol. 25. P. 279.

dals deceived tsarevich Kasym, this was due to the fact that they overestimated their abilities and wrongly appreciated the political situation in the khanate.

The death of Kasym turned internal conflict for the power in the khanate into a fierce war between two states. Khan Ibrahim did not forgive Moscow for helping Kasym. Soon the Kazan Tatars attacked Galich but they failed to conquer it. The besieged inhabitants of Galich defended themselves bravely from the Tatars "leaving the town and fighting against them fiercely..."¹.

The great prince was not satisfied with defensive measures. Maris detachments probably took an active part in the raid on Galich. For this reason, Ivan III headed the punitive troops headed by Semen Romanovich which left Galich on December 6, 1467. It was a severe winter and the Russian army managed to get from Galich to the territory populated by the Maris, despite the impassibility of roads. The appearance of the Russians was a complete surprise to the Maris and they failed to organize a thorough resistance. In accordance with medieval military practice, the lands of the Maris were devastated. "The army of the great prince caused much damage to that land, killed many people, captured some and burnt all the rest and killed horses and other animals they could not take and took what they could; they devastated all this land and burnt it down". The Russians could reach the Ileti River. The chronicles say they needed "one more day to reach Kazan"².

Another troop formed from representatives of Nizhny Novgorod and Murom significantly devastated the settlements of the Maris and Chuvashes along the Volga River³.

In March–April 1468, the Cheremis and the Tatars organized a reciprocal raid in Ustyug, burnt down Kichmengsky Gorodok, killed some of its inhabitants and captured the

remainder. A late attempt to reach attackers failed⁴. Another attack by the Kazan Tatars against two Kostroma provinces in the basin of Unzha River took place during the Holy week (March 27–April 2). They "took many prisoners and killed all the rest". Voivode I.V. Striga-Obolensky from Kostroma tried to reach the Tatars, but they managed to hide. The exalted Tatars devastated the suburbs of Murom on April 17, and took many prisoners. Once again, they managed to escape from the pursuers⁵. The biography of bishop John Velikopermsky says that the lands of Perm were damaged by raids by the Kazan Tatars [Biographies of Russian saints, 1993, pp. 333–334].

As soon as ice on the rivers melted, a flotilla led by Ivan Dmitrievich Runo, Gleb and Ivan Semenov and Basil Guba were sent to the lands of the Kazan Khanate. Leaving Moscow, the detachment passed through Galich, Vologda, Ustyug and reached Vyatka. "The voivodes of the Great prince fighting against the Cheremis along the Vyatka River" came to the Kama. The Kazan Tatars were informed late of the Russian flotilla troops did not have enough time to intercept it. Afterwards, the Tatars headed to Khlynov which had no protection. The Tatars managed to force the inhabitants of Vyatka to refuse to recognise loyalty to Moscow and declare their neutrality: "...do not help both the tsar and the great prince"⁶. The Typographic Chronicle contains interesting news that one of the conditions for peace between the people of Vyatka and Kazan was the agreement of Vyakto to give a tribute, i.e. pay a tribute to Kazan in the event of the renewed supply of grain from the Kazan khanate. Nevertheless the Kazan Tatars did not fulfill their promise, the inhabitants of Vyatka did not pay tributes either⁷. The neutrality of Vyatka corresponded to the interests of Kazan in a situation of war.

Meanwhile the Russian flotilla, which plundered the Kazan merchants and the coast of the Kama River, found itself in the Belaya River. Here, "they were fighting against the Cheremis, many people, horses and other animals were killed". They knew from the captivated Cheremis that a detachment numbering 200 Tatar warriors was sailing up the Kama River on their vessels. The Russians caught up with the Tatars. After a fierce battle, all the Tatar detachment was destroyed and captured. The leaders were also captured including Princes Tulazy Tarkhanov and Berdy-Ishik. The detachment reached Ustyug and then Moscow without hindrance, sailing up the Kama River and dragging over their vessels to one of the upper tributaries of the Vychegda River¹.

Military operations also took place at the Volga River. "The Kazan Tatars plundered the Russian guests"². A picket headed by Fedor Semenovich Khripunov-Ryapolovsky was sent to the Volga River immediately. On June 4, he managed to completely destroy a large Tatar detachment belonging to the khan's court at Zvenich Pine forest situated 40 versts from Kazan. There were several princes among the dead including the famous epic hero Prince Kolupai. The Ermolinsky Chronicles stated that "he was braver than all Horde and Kazan Tatars". Prince Khozum-Berdey was captured and taken to Moscow³.

The reply of the Kazan Tatars was quick to follow. In summer, they appeared "near Murom and took many prisoners". However, this time they failed to leave with impunity. Prince D.D. Kholmisky led the pursuit and reached the Tatars. He managed to release the captives and destroy a part of the detachment, other Tatars leaving their horses managed to hide in the dense forest⁴.

In 1469, a large-scale military campaign in Kazan took place. The troops were led by voivode Konstantin Alexandrovich Bezzubtsev. Geronty Philip blessed the army in its military campaign against "the godless Kazan Tatars. .. to defend god's churches and Orthodox Christianity..." [Russian, 1986, p. 180]. They intended to deliver a combined blow to the Volga, Vyatka and Kama Rivers with the help of two groups of troops. The operation was planned taking into account the results of previous raids along these rivers one year previously. The inhabitants of Vyatka refused to join the Moscow army explaining their decision by the treaty with the Kazan khan. The inhabitants of Vyatka told the Moscow voivodes, "The tsar released us and we promised that we would not help both the tsar and the great prince in their struggle against each other". The Northern grouping of the Russian troops did not have forces necessary for a successful result without the participation of Vyatka. As a result, the general attack in Kazan was delayed. The Kazan ambassador was in Khlynov and had time to notify Kazan authorities about the planned invasion. He reported, "A small flotilla of the great prince is approaching from Vyatka"⁵. The element of surprise was lost and the military operation against Kazan was under threat of failure.

Under these circumstances, Ivan III was careful and decided to organize a large-scale attack with the given forces. An order to cancel the military campaign was sent to the troops. Nevertheless, taking into account the high spirits of the troops, the great prince allowed volunteers to "fight for Kazan on both banks of the Volga River."

Almost all the Russian warriors who had practically nothing to do in Nizhny Novgorod volunteered to take part in the raid. They told the voivode, "We all want to attack the damned Tatars and have our revenge on them for our saintly churches and our Tsar, Great Prince Ivan, and for Orthodox Christianity." K.A. Bezzubtsev and some soldiers remained in Nizhny Novgorod by order of Ivan III. I.D.

Runo¹ who had proved his worth during the raid of 1468, was at the head of the troops.

The brave and decisive military leader chose Kazan as his major goal. Early in the morning on May 21, the Russians burst into the town posad and "started killing and plundering and taking prisoners". The inhabitants tried to hide in their houses and mosques but they died in the fire along with their property: "Many Tatars and Besermians who did not want to give up and share their properties with the Christians locked themselves and their wives and children and everything they had in cathedrals and burnt themselves down"². Many Russian captives were set free in the posad. It is interesting to list the places they came from: "...Moscow, Ryazan, Lithuania, Vyatka, Ustyug, Perm and other cities. ..." ³ When they came to Korovnich island the Russians were masters of the situation for a whole week. Only after that did the Kazan Tatars manage to rally their forces and repulse them. In addition to the Tatars, there were also the Maris, the Udmurts, the Bashkirs and other nations of the Vola and Ural regions in the troops. The Kazan Tatars wanted to launch a surprise attack but they failed. One of the Russian captives had time to warn of their intentions. Despite the superiority in numbers, the Kazan Tatars failed to achieve success. The Russians not only warned off the attack but also launched a counter-attack and chased the Tatars right up to the town walls⁴.

Meanwhile, everybody in Nizhny Novgorod knew about the success of the Russian army under Kazan. Voivode K.A. Bezzubtsev and his military detachment helped them and led the army. The inhabitants of Vyatka still did not agree to break the neutrality and prevented a successful military operation.

Wasting seven weeks near Kazan, without waiting for the northern army, the Russians started feeling the shortage of provisions: "...

they were running out of provisions, they supplies were almost over, they were suffering from starvation". They could not take provisions from local population because of endless sieges and attacks. The Russian felt confident only at the river where they remained dominant. So they had to be content with fish and very little that one could find on the islands. K.A. Bezzubtsev took the decision to withdraw. Sending the Kazan Tatars a proposal of peace, the troop sailed in the direction of Nizhny Novgorod. They met the widow of tsarevich Kasym and khan Ibrahim's mother going to Kazan on their way. She told them that the Great Prince wanted to stop the conflict and sent the old Tsarina to the khan to make him a proposal of peace. She told the voivodes, "The great prince let me go to my son with all my property and dignity, so that their relations will be friendly, not hostile." Nevertheless, the Kazan authorities considered the peace initiative of Ivan III and the retreat of the flotilla as a manifestation of weakness and chased the Russians. On July 23, the Russians were caught by the cavalry and the flotilla during a rest at Zvenich Pine Forest. "...the Kazan Tatars came to them, all their princes, cavalry and flotilla were at the river". However, the Russians were not distraught, they counter-attacked the Kazan navy bravely and forced it to retreat. The Russians managed to break away from adversaries and go to Nizhny Novgorod⁵.

Meanwhile, they managed to persuade the inhabitants of Vyatka to take part in the military campaign. A prolonged delay became fatal for the northern army. Sailing down the Vyatka River and the Kama River, the troops found themselves in the Volga River. The Kazan Tatars learned about the approaching of the Russians, misinformed them and had time to organize an ambush. The river battle near Kazan became the largest battle in the history of the Russian-Kazan conflicts. Both sides fought fiercely and had significant human losses, sometimes even boarding took place. "And a battle took place and both sides had significant human losses," a chronicler re-

ports¹. The Inhabitants of Ustyug demonstrated heroism. According to a chronicler, Prince Basil Ukhtomsky fought fiercely against the Tatars. At the same time, voivode "Grigory Perkhushkov merely ran without fighting". The Russians managed to cut their way through a crowd of attackers and join the major forces under Nizhny Novgorod although they had significant human losses: 430 people were killed and many warriors were captured².

Despite misfortune and great human losses, the warriors wanted to repeat the military campaign in Kazan immediately. Taking into consideration the sentiments of the troop and the refusal of the Kazan Tatars to conclude an armistice, Ivan III decided to continue military actions and he sent his troops to organize a new military campaign in Kazan.

Headed by the great prince's brothers Yuri and Andrey, cavalry and navy approached Kazan again on September 1 and attacked it. The Russians managed to burn down the *posad*, but they failed to break into the city. The Kazan Tatars made a sortie, threw back the Russians and "went back fighting for a while...". The Russians organized a siege and built a *burg*. Soon, they managed to cut off access to water for the inhabitants of Kazan. That aggravated the position of the defenders. During negotiations, khan Ibrahim agreed to conclude a peace treaty as the great prince wished³. Arkhangelsk chronicles define more precisely that all the prisoners captured within the previous 40 years were released⁴. The vagueness of the terms of the peace treaty is evidence of the modest success of Russians. There was no treaty to support vassal relations. The war finished without a clear victory for either side. A new confrontation was about to happen.

The peace between Moscow and Kazan was not violated within next eight years despite tension. In these years, Ivan III was busy with the struggle for submission of Novgorod and removal of the dependence on the Great Horde of khan Ahmat. Khan Ibrahim was not satisfied with with weakening of positions in the region. He was mostly discontent with the Viaticchi who had violated the oath and went over to Moscow again. In 1471, the Vyaticchi undertook a successful raid in Sarai, the capital of the Great Horde. The Kazan Tatars tried vainly to intercept inhabitants of Vyatka on their way home⁵. In 1475, forty Ustyug merchants were destroyed at the Kama River by the Tatars⁶. The war began in winter 1477–1478. During the military campaign against Novgorod initiated by Ivan III, Kazan received a false report about the defeat of the Moscow troops. Believing this, khan Ibrahim organized a military campaign against Vyatka. The Kazan tatars managed to capture many people but none of the towns were conquered. The month-long siege of Khlynov was not very successful for the Kazan Tatars and caused significant human losses. At the end of February 1478, Ibrahim decided to try his luck near Ustyug. Nevertheless, time had been wasted and the inhabitants of Ustyug had time to prepare in advance to encounter their adversaries. Also the early spring prevented the troops from moving forward. On reaching the overflowing Moloma river, the Tatars stopped. Here⁶ they found out about the victory of Ivan III over Novgorod. It impressed the Tatars so much that they left pans full of prepared food and rushed to defenseless Kazan⁷.

Vyatka was an integral part of Moscow sphere of interests and any encroachment upon Russian lands was considered as hostile manifestation. What is more, the khan did not content himself with Vyatka, he also tried to attack Ustyug which was subordinated to Moscow. In May 1478, two naval armies were sent to Kazan.

They were led by Basil Vedorovich Obrazets, Boris Slepoy, and Prince Semen Ivanovich. The blow was delivered to the Volga and the Vyatka and the Kama from the north. On May 26 the flotilla left Nizhni Novgorod and headed to Kazan devastating riverside settlements of the Maris and the Chuvashes. Acting the same way, the second army was moving through the Vyartka and the Kama River in the direction of Kazan. Nevertheless, the military campaign was not prepared thoroughly. When the troops approached Kazan, a powerful storm occurred which devastated vessels full of reserve ammunition and provisions and the Kazan Tatars had time to prepare for a siege. The Russians had to conclude a peace treaty with the Kazan Tatars "as the great prince wished"¹. Only V.N. Tatishchev mentions the clauses of the treaty writing that the voivodes took "many prisoners and trophies in Kazan..." [Tatishchev, 1966, p. 65]. The war of 1477–1478 led to the further exacerbation of tension between Moscow and Kazan.

The time of death of Ibrahim is not quite clear. Some researchers believe that he died in 1479 [Alishev, 1995, p. 37; Khudyakov, 1990, p. 43]. He had three sons born by Nogai princess Fatima: Ali (Alegam), Khudaikul and Melik-Tagir. Another wife, Nogai princess Nur-Saltan, gave birth to two more Ibrahim's sons—Muhammad Emin and Abdil Latif. Ali became the khan. Nursultan and her sons left for Moscow. Muhammad Emin began service there, while the widowed tsarina and underage Abdul Latif went to the Crimea where she married khan Mengli Giray. This event had a significant influence on relations between Kazan and Moscow. Moscow had a new legal candidate for the Kazan throne.

Khan Ali was supported by the Nogai Horde. On the contrary, Moscow and the Crimean authorities were planning to make Muhammad Emin the khan of Kazan. He was a son of Ivan III and the stepson of the Crimean khan. Both the Moscow prince and the Crimean khan wanted to spread their influence on Kazan, that is where their interests coincided provisionally.

The end of the war dated back to 1477–1478. This was unsuccessful for both sides and caused tenseness between the states. Endless attacks at the borders provided favorable grounds for interference in Kazan affairs. According to Kazhirovsky and Vetluzhsky chronicles, in 1479, the Tatars and the Cheremis invaded Vetluga Region and devastated the Nikolo-Korelsky Monastery and churches, killing and capturing many inhabitants [Dementiev, 1892, p. 9; Dementiev, 1894, p. 41]. A scribe's book about Chukhlo-ma dating back to 1615 gives a description of arable land covered with forests which fell into neglect because of war lasting 130 years waged by the Kazan Tatars [Source study, 1981, p. 122]. In summer 1481, an army led by Andrey Mishnev was sent to defend Perm and Vyatka [Shishonko, 1881, p. 31]. These attacks and other incidents became reasons for a new war.

In 1482, Ivan III led his troops against the Kazan Tatars. The flotilla approached Kazan but there was no war and they managed to conclude peace again². Nevertheless, khan Ali did not observe the regulations imposed upon him. Later, in November 1489, the great prince ordered the inquiry of the Nogai ambassadors to be answered in the following way: "Alegam Tsar seemed to have good relations with us, we exchanged charters, his friend was our friend and his enemy was our enemy, but he did not fulfill anything that was stated in the charters" [Collection of the Russian Historical Society, 1884, pp. 83, 95, 97].

The Moscow authorities took advantage of the internal war between the representatives of the Kazan nobility to interfere in Kazan affairs as usual. In 1485, the Kazan Tatars came to the Great Prince and said, "We let our Tsarevich (Muhammad Emin—A.B.) come to you on the assumption that he be temporarily replaced by Ali and the elder son started causing damage to us. You released our Tsarevich again: and the current Tsarevich, the elder son, invited us to the feast and wanted to lose us there but we ran away and headed to the field and he chased

Kazan khan Muhammad Amin
Reconstruction by T.S. Balueva. 1995

us with supplementary forces"¹. Consequently, the interference of Moscow in internal affairs of the Kazan Khanate was stipulated not only by its interests but also some of the Kazan nobility who stood up for its privileged position in respect of the khan's power.

In 1485, Russian troops organized a military campaign in Kazan. Ali had time to flee to the Nogais in advance. Muhammad Emin ascended to the Kazan throne, and counselors and a military detachment were appointed to "look after him"².

The replacement of the khan increased the internecine war inside the khanate. Moreover, a confrontation of interests between Russia, the Nogai Horde and the Tyumen Khanate took place. Muhammad Emin tried to arrest and exile to Moscow his brothers Khudaikul and Melik Tagir as well as the opposition gathering around them. However, he failed to arrest them. The attempt caused discontent amongst the population of Kazan. It was so

great that only the presence of the Russian detachment saved the khan from their harsh treatment. He even had to leave the city. The Kazan Tatars went cap in hand to the khan "and he reconciled with them and came to the throne again"³.

The opposition rushed to take advantage of the mood of masses and sent its messenger to the Nogai Horde where Ali was hiding. Soon, he appeared before Kazan at the head of a large Nogai troop. Muhammad Emin, with Moscow counselors by his side, and a small Russian detachment, had to leave the country, Ali marched to Kazan.

The direct interference of the Nogai Horde led Ivan III to organize a large-scale military campaign to enable Muhammad Emin to come to the throne again. On April 11, 1487, the Russian troops headed to Kazan⁴.

Trying to prevent the invasion, khan Ali sent an ambassadorial mission led by Bakhtyar-uhlan, Mangush, and Tevekel to Moscow. Nevertheless, the diplomatic mission failed. Ivan III did not want to carry out the negotiations and arrested the ambassadors [Collection of the Russian Historical Society, 1884, pp. 64–65]. Meanwhile, the Kazan Tatars prepared for the siege. A stockaded town was erected around the posad, and significant forces were mustered there. The Nogai troops came to help. After a significant battle at the bank of the Sviyaga River, the Tatars retreated in the direction of Kazan [History of Kazan, 1954, p. 58]. On May 18, the Russian troops started besieging the city. It lasted 52 days. A great allied force led by Kazan prince Ali-gaza (Olgaza) acted in the rear. The besieged troops made fearless sorties from the city. The Russians managed to ward off all attacks and defeat the army of Ali-gaza. The remnants were forced out across the Kama River. After that, the situation of besieged Kazan became critical, and on July 9, the supporters of Moscow fraction forced Ali to capitulate. Arkhangelsk chronicles containing the most detailed story about these events say that "the tsar left

the city against his will and was passed to the voivodes of the great prince¹". Herberstein also writes that khan Ali was passed to the Russian voivodes by his confidants against his will [Herberstein, 1988, p. 170]. The de-throned khan was exiled to Vologda where he died and his mother, sister, and brothers were exiled to Beloozero.

Muhammad Emin ascended to the throne for the second time (1487–1496). Since then, the Russian protectorate was established over the khanate and the khan became a vassal of the great Moscow prince. The most important issues of domestic and foreign policy of the Khanate were subordinated to Russia. The Khanate was obliged to pay tributes. Counselors of the great prince always accompanied the Kazan khan, and a Russian military detachment stood near the city.

The establishment of protectorate over the Kazan Khanate allowed Moscow to start the final subordination of Vyatka which still remained independent. In summer 1489, a Moscow troop was sent to Vyatka. A Kazan troop numbering 700 warriors, led by Prince Urak, joined them under Kotelnich. Vyatka capitulated².

Trying to adjust relations with the Nogai Horde, the Moscow authorities granted approval to marriage between Muhammad Emin and Nogai prince's daughter Musa. Nevertheless, the Nogais who arrived as part of the bride's large entourage, gave strength to the weakening eastern party. Growing stronger, it started preparing a scoup d'etat in secret. In spring 1496, Siberian tsarevich Mamuk was invited by conspirators Kalimet, Urak, Sadyr and Agish. Moscow was informed in due time of the Siberian-Nogai troops, and the Russian regiments had time to arrive in Kazan. Mamuk retreated. Thinking that the danger was over, the Russian troops left the Khanate. Mamuk discovered this immediately. He came up to Kazan with the Nogai forces and Kazan princes. Muhammad Emin did not have reliable support among the Kazan Tatars, so hastily fled to Russia.

However, the accession to the throne of Mamuk (1496–1497) who had been brought up according to the steppe traditions, only worsened the situation of the Kazan Tatars. Desiring to reward his warriors, he devastated the treasury and even ransacked the Kazan Tatars. He did not acknowledge any limits to his despotic power and imprisoned everybody who stood up against him. Such deeds of the latter-day khan vrey quickly incited the population against him. The princes of Arsk were the first. Mamuk organized a punitive campaign with the participation of his troops and detachments of the Kazan feudals who had to be released from prison to stifle the rebellion. Nevertheless, they failed to conquer Arsk, and the Kazan princes withdrew their troops away. Returning to Kazan, Mamuk saw the gate closed and townfolk ready to fight. The khan stood near the walls for a while trying to conquer Kazan, until he knew that the Kazan Tatars had wisely sent a delegation to Moscow. The threat of emergence of the large Russian army in his rear made Mamuk retreat before the rivers surged. Deeply upset at his misfortune the outcast khan died on his way to Siberia³.

At the request of the Kazan Tatars in April 1497 Muhammed-Emin's brother Abdul-Latif who grew up in the Crimea and served in Russia at that time came to the throne⁴. Nevertheless, his Crimean education became apparent very soon. The self-willed khan was not subordinated to Moscow and incited many Kazan Tatars against himself: "He started telling lies and did not settle any issues and caused damage to lands of Kazan" [Collection of the Russian Historical Society, 1884, p. 461]. In January 1502, Abdul-Latif was removed and sent into exile at the instance of the Kazan Tatars. Muhammad Emin (1502–1518) came to the throne for the third time [Tatishchev, 1966, p. 65].

Nevertheless this time Muhammed-Emin was under influence of supporters of oriental fraction. According to an established tradi-

tion, the widow of khan Ali, Nogai princess Urbet was released from her exile and married Muhammad Emin with the permission of the Great Prince of Moscow. The khan loved her and he was under her profound influence. With her help, the supporters of the oriental faction achieved the removal of evident Moscow followers. While still in the shadows, the opposition managed to cause discontent amongst the Kazan Tatars because of repressions. When Michail Klepik was sent from Moscow to settle the situation, the members of the divan were anxious about the interference in the domestic affairs of the Khanate. They offered to beat unmercifully all the Russians who were in the country at that moment. The conspirators offered to set off on June 24 explaining that "if they did it right now many guests who come to the fair on Ivan's day will go away". Nevertheless, there were still people loyal to the Russians in the ranks of the Kazan nobility. Prince Alachey even had time to warn Russian ambassador M. Klepik but they still failed to escape the tragedy. On June 24, 1505, during the opening of annual fair, "the Tatars started killing and plundering Russians unexpectedly." The Russians also suffered great human losses. According to the Yermolinsky chronicles, about 15,000 Russians died¹. Those who fled "were killed by the Cheremis on patrol, and the others were placed in a peasant's log hut and burnt down, they caused much damage to Russia²."

In August, Muhammad Emin heading the Kazan army numbering forty thousand people, joined by twenty thousand Nogais, started a military campaign against the Russians. Troops headed by I.I. Gorbатов, S.I. Vorontsov, and V.D. Kholmsky were sent to Murom with delay. Serving Tatar tsareviches Saltanak and Zenaley headed there as well³. On September 6, the Kazan-Nogai army besieged Nizhny Novgorod, and detachments dispersed in suburbs right up to Murom. The Kazan Tatars and the Nogais managed to get a lot of trophies but that is where their success

ended. It was impossible to go behind the Oka river, more than 60 thousand Russian warriors were concentrated there. Nevertheless, the voivodes did not rush to attack, indulging in hard drinking and enjoyment. At that time, the Tatars appeared on the bank of the Oka River and started insulting the Russians for their cowardice.

Ivan Bazilievich Khabar-Simsky, the Nizhny Novgorod voivode was a talented and decisive military leader who managed to organize defense thoroughly. Having an insufficient amount of military forces, he armed 300 captured Lithuanian jalonneurs in return for the promise of release. The Russians and Lithuanians made successful sorties and beat off numerous furious attacks.

The absence of success and great human losses led to discord into the ranks of allies. When the headman of the Nogai army and some mirzas died, there was a quarrel between the Nogais and the Kazan Tatars which turned into an armed skirmish. On October 6, the Nogais left their allies and went over to the Horde. Muhammad Emin also had to leave Russia [History of Kazan, 1954, p. 60, Tatishchev, 1966, pp. 99–100]. At Nizhny Novgorod alone, the allies lost more than 5,000 warriors, many of them were captured. The issue of the destiny of the captives was a subject of discussion for diplomats for a long time [Ambassadorial books, 1995, pp. 54–55, 58–59, 65–66, 75–76, 78–79, 81].

The death of Ivan III on October 27 and the approaching autumn interfered with organizing a military campaign against Kazan. Basil III (1505–1533) became the great prince. In April 1506, he sent a navy and cavalry. The voivodes' actions were extremely uncoordinated and did not correspond to instructions. The navy moored at Kazan but decided not to wait for the cavalry and attack the city at once on May 22. The Kazan Tatars set an ambush in advance, separated the Russians from their vessels, encircled them and defeated [Tatishchev, 1966, p. 101]. When Basil III discovered what had happened, he sent a reinforcement by the Volga River and prohibited his brother, Prince Dmitry Zhilka, to assault Kazan before all military forces met. Nevertheless, he did not listen to the great prince's

³ Razrjadnaja kniga, 1977, P. 87.

commands and ordered a fresh attack as soon as the cavalry arrived. It began on June 25 and brought even more tragedies to the Russian troops. The Kazan Tatars applied military tactics and organized an ambush as thoroughly as they did the first time. Those days an annual fair was being near Kazan. Marquees were put up and the trade fair was held in the Arsk field. In fact, the fair was just a well-organized trap. It was only defended by a small troop. The main forces of the Kazan Tatars, including the Cheremis archers as noted by chroniclers, were ready to act in the city. They also lay in ambush in the nearest forest. The Russian command, which did not understand the enemy's plan, commanded an attack on the fair. The Tatars feigned panic. The Russians with no access to their warehouses had thus for a long time suffered from the shortage of provisions. When they came to the fair, they found there much food and wine and forgetting about the threat "started eating and drinking fearlessly. They laughed and played and slept until the noon" [History of Kazan, 1954, p. 62]. Waiting for the right moment, the Tatars and the Cheremis attacked the languishing and disorganized Russians from every quarter. The resistance was insufficient and soon the battle turned into a fierce carnage, the Russian troop was defeated in disgrace. The surviving remnants of the Russians managed with difficulty to beat off their persecutors on all sides and sailed away to Russia¹.

Desiring to continue the war, the khan tried to conclude an anti-Moscow alliance with the Crimea and Lithuania. Embassies were sent there for that [Lietuvos, 1995, pp. 51–57, 59–60; Collection of the Russian Historical Society, 1895, pp. 56, 71, 75, 77]. The Lithuanians were interested and sent Pan Soroka as an ambassador to Kazan. It was the opposite with the Crimea where political leaders were searching for the ways to become reconciled with opponents. Crimean ambassadors arrived in Kazan and Moscow and persuaded adversaries to stop the conflict. A coup d'etat in favor of Moscow party took place in

Kazan. Lithuanian ambassador Soroka and active supporters of the war died [Russian State Archive of Ancient Acts, f. 389. Lithuanian metrics. Book of notes No. 7, pp. 578, 662; Lietuvos, 1995, p. 394; Collection of the Russian Historical Society, 1895, pp. 77–78]. Peace negotiations became possible after that. The Kazan peace delegation arrived in Moscow in March 1507, preventing a new Russian military campaign in Kazan. During the negotiations, both sides made a compromise: all Russian prisoners captured during the war were given back and Muhammad Emin formally acknowledged the vassal dependence of the khanate on Russia. Nevertheless, in fact, the Kazan Khanate restored its sovereignty. It could maintain an independent foreign policy. Interference in internal affairs of the khanate was eliminated, and neither Russian troops nor counselors were sent to the country.

During the next years, relations between the states were generally favorable, and mutually beneficial economic cooperation was recommenced. In 1510–1511, Crimean tsarina Nur-Sultan and tsarevich Sahib Giray visited Moscow and Kazan². The consolidation of friendly relations between the countries was the aim of the trip. In March 1512, Moscow and Kazan concluded "eternal peace"³. Nevertheless, aggravated conflict at the borders were common occurrences. The report of Gerbertstein about plunders of the Cherenis between Galich and Vyatka refer to these years [Herberstein, 1988, p. 162]. The Razrjadnaja Kniga contain notes according to which supplementary forces were sent to frontier cities in 1513 and 1517–1518, "for inhabitants of Kazan"⁴.

In the first quarter of the 16th century, significant shifts in global political powers of Eastern Europe took place. The Russian state was becoming more and more powerful, its foreign policy influence was quickly growing stronger. A significant reinforcement of the Crimean Khanate took place simultaneously.

⁴ Razrjadnaja kniga, 1977, Pp. 131, 156.

It has been a vassal of the Ottoman Empire since 1475. The Crimean feudals set themselves the object of spreading their power within all the territory which used to be subordinated to the Golden Horde, and reviving "the yurt of fathers". The Crimean Tatars started attacking the southern frontiers of Russia in 1507. The raids became especially frequent after the death of khan Mengli-Girey in 1515, who was an ally of Russia and the accession to the throne of its ardent enemy Mahmed Giray I (1515–1523) ¹.

The news about the fatal illness of childless Kazan khan Muhammad Emin gave an excuse to both Russia and the Crimea to interfere in the internal affairs of the Kazan Khanate. Muhammad Emin's brothers—Hudaykul and Melik Tagir—were converted to Orthodox Christianity long ago so they did not have the right to occupy the Kazan throne. The Kazan Tatars asked the great prince to allow disgraced Abdul-Latif to become their khan. However, his Crimean orientation was well known in Moscow. In November 1517, he died under mysterious circumstances before leaving for Kazan. He was probably poisoned. The candidature of Crimean tsarevich Sahib Giray nominated by Bakhchysarai was rejected by Moscow. Kasymov's tsarevich Shigaley (Shah Ali Shaykh-Auliyarovich) was sent by Moscow to occupy the place of the Kazan khan which had become free in December 1518. He was born in Russia in 1505. His father was Great Horde Ahmat khan's nephew. So Shah Ali was the deadly enemy of the Crimeans. Concentrating on this candidacy, the Boyar Duma wanted to insure itself against a new anti-Russian conspiracy.

In April 1519, 13-year-old Shah Ali (1519–1521) arrived in Kazan accompanied by the Russian ambassador F.I. Karpov and military troops. The positions of Russia in the Volga Region were temporarily consolidated.

The accession of the Russian protege to the throne did not satisfy many people, they made attempts to influence Shah Ali to engage in anti-Russian actions. The khan was told, "If

you own Kazan and our population alone and consolidate your power in the Horde, you will receive tributes from Russia like our grandparents and you will become richer by devastating Russian lands". Despite his young age, Shah Ali was a man of great intellect. Listening to the nobility of Kazan, he answered that the situation has changed significantly and the weakened Kazan Khanate was not able to subordinate the more powerful Russia. Aware of contacts between the Kazan nobility and the Crimeans, he warned, "We cannot rely on the Crimeans, they want to conquer everything" [Tatishchev, 1966, p. 122]. Nevertheless, the contacts between the followers of the oriental party and the Crimeans and Nogais did not stop. Shah Ali started putting representatives of opposition into prison and executing them. Repressions initiated by the Russian protege antagonized the Kazan Tatars who were preparing the ground for the coup d'etat.

In spring 1521, the Crimean and Nogai troops invaded Russia. Tsarevich Sahib Giray and 300 warriors had been sent to Kazan before that [Collection of the Russian Historical Society, 1895, p. 678]. When the Crimeans came to Kazan, a revolt was raised, and all the Russians, Kasymov Tatars, and obvious supporters of Shah Ali were arrested and killed. A Kazan chronicler indicates that 5,000 Tatars and 1,000 Russians were killed [History of Kazan, 1954, p. 65]. Shah Ali himself, his wife, Russian ambassador and 300 Kasymov Tatars managed to leave the country. A representative of the Crimean dynasty, Sahib Giray (1521–1524) was confirmed in the Kazan throne.

A war against Russia began after a coup d'etat. The Kazan Tatars passed through Nizhny Novgorod, Murom, Meshchera and Vladimir. On August 1, they joined the Nogais and the Crimeans in Kolomna and Moscow. After laying waste to the Moscow Region, the allies went back with great trophies and captives². The invasions of the Kazan troops also took place in other directions. Galich chronicles say that on May 26 "the Kazan Ta-

¹ Complete Collection of Russian Chronicles. Vol. 13. Pp. 5, 15; Tatishchev, 1966, Pp. 103, 108–109, 115, 117.

² Complete Collection of Russian Chronicles. Vol. 22. Section 1. P. 518; Herberstein, 1988, Pp. 173, 175; Kuntsevich, 1905, P. 602; Drevnyaya Rossiyskaya Vivliofika (Ancient Russian Vivliofika), 1791a, P. 84.

tars and the Cheremis came to the provinces near the Unzha River and caused much damage, capturing many people and killing all the rest". The Russians pursued them and "had a struggle against the Tatars and the Cheremis and defeated most of them and captured the rest". However, on June 4, a troop which was much larger in number invaded these places. The Kazan Tatars besieged Unzha for a long time and devastated surrounding provinces. The chronicles report that "the Tatars came to Zhegovo, and Naida, and Shartanovo, and Tolshma". The invasion spread to the Sukhona River. 6,500 people were captured from Tolshma province alone [Kuntsevich, 1905, pp. 601–602]. The Vyatka lands were also attacked [Documents on the history of Udmurtia, 1958, pp. 349–350]. Afterwards, the Russians captured by the Kazan Tatars were sold at a huge profit in the bazaars of Astrakhan and Caffa.

Next year, the attacks of the Kazan Tatars continued. On September 1522, many Tatars and Cheremis came to Galich Region and captured many people, and drove their prince from Parfeny and killed voivodes and took many prisoners", and on September 28, "the Tatars attacked the monastery and burnt the church named after St. Nicholas the Wonderworker and killed all the rest," says a chronicler [Kuntsevich, 1905, p. 602].

In winter 1522–1523, Sahib Giray started peace negotiations with Moscow. Nevertheless, when in spring Crimean khan Mahmed Giray and Nogai prince Mamai occupied Astrakhan and drove out the Russian ally, khan Husein, Sahib Giray suspended the negotiations and ordered the execution of the Russian ambassador V.Y. Podzhogin. His entourage was killed as well as Russian merchants daring to recommence trade operations with Kazan. According to a chronicler, "Sahib Giray hurt Christianity and spilled blood like water"¹.

Meanwhile, important events changing the political situation in Eastern Europe were taking place. The Nogai princes Mamai and

Agysh were worried about the reinforcement of Mahmed Giray's influence in the Volga River after they had defeated Astrakhan khan Husein. They attacked the Crimeans, killed the khan himself, and his son Batyr, and many warriors. Then they organized a military campaign in the Crimea [Herberstein, 1988, p. 176]. The military forces and economy of the Crimean Khanate were undermined. The hope of establishing Crimean hegemony over the Lower and Middle Volga Region collapsed overnight.

The new Crimean khan, Saadet Giray (1524–1532), did not treat Russia badly and was unable to wage war against Russia. Sending his messenger Kudoyar, the khan wrote, "And he sent his messenger to Kazan to his brother tsar Saip-Girey who is my friend. If you made friends with him, there would be no troubles. You should reconcile with Kazan, not send your armies there any more, and it will be a sign of brotherhood" [Russian State Archive of Ancient Acts, f. 123. Russian-Crimean Relations. Book 6, 8–9 reverse, 11–11 reverse]. Nevertheless, the political leaders of Moscow rushed to take advantage of this opportune moment. In September 1523, the Russian troops came up to the mountain side, the navy reached Kazan [Russian State Archive of Ancient Acts, f. 201. Manuscript Collection of M.A. Obolensky, no. 42, sheet 20, Tikhomirov, 1930, p. 110]. Vasilsursk Fortress was built on the right Kazan bank of the Sura River at its mouth. "Neighboring population, the Mordovians, the Cheremis were forced to make an oath to the Russian tsar"². Vasilsursk was built as a frontier fortress and as a base for attacking Kazan simultaneously. Even contemporaries regarded the building of Vasilsursk ambiguously. Herberstein assumed that the goal of military campaigns of the Russian was to conquer the Kazan Khanate and he emphasized that the erection of Vasilsursk was the source of much distress" [Herberstein, 1988, pp. 134, 176]. The fortress stood on the right Kazan bank and it perplexed even the Russian nobility. A boyar's son I.N. Bersen-

¹ Complete Collection of Russian Chronicles. Vol. 6. P. 264; Vol. 8. P. 270; Vol. 31. P. 127; Tatishchev, 1966, P. 124; Schmidt, 1951, P. 281.

² Complete Collection of Russian Chronicles. Vol. 6. Pp. 264, 281; Vol. 8. P. 270; Vol. 13. Pp. 43–44; Vol. 22. Section 1. P. 538; Herberstein, 1988, P. 176.

Beklemishev told Fedka Zhareny in September 1523, "It is not quite clear why the Great Prince was going to Novgorod¹, probably he was trying to reconcile with them?...and founded a city on his side to prevent war". Other representatives of the nobility on the contrary approved the building of Vasilsursk. Geronty Daniel praised Basil III for "the erection of the city" and said that "this city will help him to conquer all Kazan lands" [Acts, 1836, p. 144]. Italian Pavel Iovy wrote that "at the confluence of the Sura River, Basil reigning now founded Surtsik city in order to establish in this desert place a reliable and safe shelter with taverns and shops for merchants and travelers who notify the nearest border officials about Tatar affairs and the movements of this disturbing tribe" [Russia, 1997, p. 273].

On October 17, a reciprocal raid of the Kazan Tatars took place. The Tatars came up to Galich, burnt down the posad, but they failed to conquer the city and retreated².

Sahib Giray asked the Crimea for help but they only sent a small troop headed by Sahib Giray's 13-year-old nephew Safa Giray. It was intercepted by the Kasymov Tatars and had significant human losses although the tsarevich managed to reach Kazan [Tikhomirov, 1930, p. 109]. Without waiting for the help of the Crimea, in spring 1524, Sahib Giray sent his ambassador directly to the Turkish sultan asking him for help and expressing his readiness to acknowledge the Turkish vassalage. Nevertheless, at that time, political leaders were not especially concerned with affairs in the Middle Volga River. Kazan did not get sufficient support. Turkey only restricted itself to diplomatic measures. In summer 1524, Turkish ambassador of Greek descent, Iskander Saka, arrived in Moscow. His status was inferior. He was a merchant and fulfilled ambassadorial functions incidentally. He also dealt with the Kazan problem, in addition to issues of friendship and trade. The ambassador claimed that "tsar Saip Giray sent him to the tsar to make a bow this spring and said that this was our tsar's yurt and

he cannot send his armies to Kazan". Ambassadorial dean Shygonya replied imperturbably, "Saip Giray sent his messenger to the sultan because he knows where his yurt originated" [Documents, 1916, pp. 76–77]. After that, the issue of Turkish vassalage did not arise.

Statements about the spreading of the Turkish vassalage on the Kazan Khanate thus appeared in historical literature. Sahib Giray khan was even called the Turkish protege [Schmidt, 1954, pp. 187–257; Burdey, 1954, pp. 27–36; Ayplatov, 1967, p. 19; Kotlyarov, 1999, sheet 202; Zorin, 2001, p. 9]. Certainly, there were no even formal manifestations of the vassalage, everything was only restricted by a declaration. The fact of Turkish vassalage was definitely disproved by S.K. Alishev [Alishev, 1990, p. 15]. Meanwhile, an attempt to establish vassal relations between the Kazan Khanate and Turkey marked a shift in the Russian-Turkish relations of the 16th century. If under Selim I, they were friendly, now they became hostile.

When Iskander Saka arrived in Moscow, the Russian troops had already gone to arrange a military campaign in Kazan. The government of Basil III wanted to strike a decisive blow to the Kazan Khanate. Significant forces were mustered³. The navy sailed off on May 14. It was nominally headed by Shah Ali. According to Kazan chronicles, the troops numbered 150,000 warriors [History of Kazan, 1954, p. 67], Herberstein writes that the number of Russian vessels was so large that the Volga seemed to be covered with loads of ships although it was very broad [Herberstein, 1988, pp. 176–177, 179].

The inhabitants of Kazan were panic-stricken, Sahib Giray left Kazan passing the throne to his nephew. Russian sources state unanimously that Sahib Giray left the khans' throne and Kazan, since he was afraid of the Russian army⁴. Oriental sources fail to mention

¹ Bersen-Beklemishev used to call the new Vasilsursk fortress a basket or punnet because of its small size.

⁴ Russian State Archive of Ancient Acts, reserve 201. Manuscripts collection of M. Obolensky. No. 42, P. 20 reverse; Complete Collection of Russian Chronicles. Vol. 8. P. 270; Vol. 13. P. 44; Vol. 21. P. 127; Razrjadnaja kniga, 1977a; Schmidt, 1951, P. 282; Documents, 1916, P. 58.

the true reason for flight of Sahib Giray from Kazan. For example, Sayyid Muhammad Riza said that Sahib Giray, who had been seated on the khan's throne for 5 years during eternal rebellions and turmoils, was happy to pass his place to his nephew Saffa Giray, Muhammad Giray's son. As for him, under the pretext of a trip to holy places, he headed to possessions of sultan Suleiman where he was met with hospitality [Smirnov, 2005, p. 399]. Personal doctor and biographer of Sahib Giray Badr ad-Din Muhammad ibn Muhammed Kaisuni-zade Nidai-efendi known as Remmal Hodja wrote the composition under the title "Tarikh-i Sahib-Giray-khan" in 1553. As for circumstances of the khan's departure from Kazan, he writes that Sahib Giray was the khan in Kazan but he left it voluntarily...arrived here to go to saint Kaaba¹. Herberstein reports that Sahib Giray left the throne on a temporary basis to ask the Turkish sultan for help [Herberstein, 1988, p. 176]. Nevertheless, the assumptions of Herberstein were not confirmed. Arriving in the Crimea, Sahib Giray did not go to Istanbul and did not show any initiative in regulating Kazan affairs. On the contrary, he took part in the struggle for the Crimean throne and in the course of time he became the khan there. In 1538, Sahib Giray as Crimean khan denied the fact that he had been driven away from Kazan and ascribed his departure to a desire to come back to the Crimea. "As long as I was in Kazan, I was thinking of my yurt all the time," he wrote. And we intended to go to the Crimea. And the Kazan people both the kind ones and the wicked ones told us to stay but we did not. We left them ourselves, not because they insisted on that. This is God's will, he provided us with new lands and led us away from that yurt" [Russian State Archive of Ancient Acts, f. 123. Russian-Crimean Relations. Book 8, sheets 534–534]. It is evident that Sahib Giray was not concerned with Kazan standing distant from the Muslim world, with a severe northern climate and extremely dangerous Russian

neighbor. However, most likely Sahib Giray was holding something back from everybody and his departure was not only his own initiative but also a consequence of contradictions with the Kazan nobility. According to Pafnuty chronicles, the Kazan princes removed Sahib Giray from the throne because he had incited Ukraine against the great prince without their knowledge" [Tikhomirov, 1930, p. 109].

New Kazan khan Safa Giray (1524–1532) was an energetic and courageous, stubborn and rough, decisive and persistent person inclined to adventures. He had an undoubted talent for military leadership and organization. He was a crafty political figure and diplomat. Turkish chronicler of the 16th century Mustafa al-Jennabi calls him "one of the greatest and the most powerful state leaders" [Khudyakov, 1990, p. 113]. His contemporary and Astrakhan poet, Hodji Tarkhani, echoes him calling Safa Giray the possessor of a sabre and a feather, the source of nobility and generosity. In other words, he indicates that he was not only militant but also well-educated [Sherifi, 1995, p. 87]. The report of the oriental historian was completely proved by the words of a Kazan chronicler who said that he often had conversations about the Tatar history with the khan serving him and that the things he told him became part of his composition [History of Kazan, 1954, p. 44]. Such a person came to power in the Kazan state at a very crucial moment when enumerable hostile forces were approaching the capital.

Safa Giray proved his outstanding abilities and repulsed the offensive of the Russians making a stand for the independence of the khanate. Only on July 7, did the Russians appear near Kazan. The Tatars started making sorties at once, and the Maris prepared a real guerrilla warfare against them. They blocked all the roads and did not allow Russians to replenish their food stock and also deprived them of any communications. The Kazan Tatars were aware of all actions of the Russian troops due to their spies.

Basil III worrying about the absence of news from Kazan sent vessels full of provisions, arms, ammunition, and money by the Volga River. Boyar Ivan Paletsky was assigned to be the commander of the flotilla. A

¹ Orientalists' Archive. The Institute of Oriental Manuscripts of the Russian Academy of Sciences, reserve 50 (Vasily Dmitriyevich Smirnov), list 1, item 114. Povestvovanie o sobyitiyakh tsarstvovaniya Sakhib-Gireya, khana krymskogo (Tarikh-i Sahib Giray Han). The work by Remmal Khodja Nidai Kaysuni, P. 2.

troop numbering 500 horsemen was sent to reinforce it. Nevertheless, neither this troop nor flotilla were destined to join the major forces. The horsemen were encircled on the mountain side and defeated. Only ten warriors managed to survive and reach their lands.

A flotilla sailing down the Volga River had to go through a more awful tragedy. A part of its vessels pulled in to the left bank to stop for the night on the territory of the khanate. Before the sun had risen, the Maris covered by dense fog sneaked up unnoticed to the Russians being on the bank and attacked them. About 90 vessels and 2,700 people were either killed or captured. Voivode I. Paletsky himself managed to reach the boat and sail off the bank. After such a bold attack, the remaining ships of the flotilla started approaching to the opposite right bank. That is what the Maris and the Chuvashes had hoped for. In a narrow area of the river where the islands divided the river-bed into several channels, they built dams from tree trunks. The majority of historians connect this event with the so-called Vazhnanger (Malo-Soondarsk) settlements also known as Alamner [Nikitina, Mikheeva, 2006]. Facing an unexpected obstacle, the Russian ships mustered at a tall rocky bank. Waiting for an opportunity, the Cheremis started throwing huge stones and oak-trees cut down in advance, and which they had lashed with ropes on purpose. The enormous trees and stones falling off the steep slope struck the crowded vessels and sank them: "...one tree sank five and more vessels full of people, provisions." Panic-stricken, the ships crashed, people found themselves in water and drowned. The Russians were covered with clouds of arrows sent by the Cheremis archers off the bank of the river. It was an unconditional defeat of the flotilla. The Russians lost almost all the ships and 25–30 thousand people. Only a small group of ships managed to force their way to Kazan. Voivode I. Paletsky was on board ship. The Cheremis acquired great trophies. They collected cannons, gun powder, silver, gold, pearls and other precious possessions off the bottom of the river for several days [Herberstein, 1988, p. 177–178; Tatishchev, 1966, p. 124; Kazan History, 1954, pp. 67–68].

A cavalry led by I.V. Khabarov-Simsky was much more successful. Surmounting the

resistance of mountain people, they came up to Ityakovo at the Sviyaga River on July 24th. Here it was met by a large Kazan troop reinforced by the Chuvash-Mari irregulars. Princes Otuch (Otun) and atalyk Talysh commanded the Kazan Tatars. The latter was a famous Kazan voivode. He was characterized vividly in Kazan chronicles. He was called a brave and decisive warrior who could attack a great regiment of warriors with a small troops fearlessly. He defeated the Russians and always remained invulnerable. Talysh resembled a Turk epic hero. He was stately and broad-shouldered. He was incredibly strong and was able to cut up an adversary into halves with a sword. Neither helmet nor armor could protect from his striking sword. He could shoot an arrow incredibly far. He always hit the mark whatever it was—a bird, an animal or a man. Russian warriors were afraid of him and ran away. The bravest Russian warriors did not dare to fight against him. Even voivode Ivan Belsky was not confident enough and did not accept the challenge [Kazan History, 1954, p. 70].

According to Pafnutiy chronicles, the Kazan Tatars attacked first, they "came to the voivodes unnoticed". Volokolamsk chronicles state that 2,000 selected Tatars took part in the attack, they were supported by the Tatar irregulars, the Maris, the Chuvashes and the Mordovians. The battle became especially intense and continued for three days with varying success. In the end, the Russians gained a victory: "...during that battle many Princes, Mirzas, Tatars, Cheremis, and Chuvashes were killed and many princes and mirzas were captured". Those who survived were chased and killed, some of them drowned in the Sviyaga River and the Volga River. Only some of them managed to hide on boats and hide in the forest. According to the voivodes, the Kazan Tatars lost 42,000 people. The losses of the Russians were also significant¹.

The Khabar-Simsky soldiers took revenge on the mountain people fiercely for destroying the cavalry and fleet of I. Paletsky. They attacked defenseless settlements of the Mountain side like an avalanche fighting against the Kazan Tatars and the Cheremis [Kazan History, 1954, p. 68; Gerbertsein, 1988, p. 179; Tatishchev, 1966, pp. 124–125].

Both sides had significant human losses so they agreed to conclude a peace treaty really fast. In general, the outcome of the war was favorable to the Kazan Khanate. It managed to defend its independence and Safa Giray stayed in the khan's throne. The key to the success of Kazan lay in actions of the Cheremis troops, i.e. the Maris and the Chuvashes. Nevertheless, this war showed that Kazan was not able to defend its citizens on the mountain side. Later on, this circumstance played an important part in the political re-orientation of the mountain Maris, the Chuvashes and the Mordovians.

Not only significant human losses and exhaustion from aging war but also complications with the Nogai Horde made the Kazan Tatars conclude a peace treaty with the Russians. The Nogai troops appeared at the borders of Kazan. Sahib Giray fled from Kazan to the Crimea where he faced the people of Prince Agish and was nearly killed [Documents, 1916, p. 58]. Soon after, the Russian army had left Kazan, at the end of August, the Nogais invaded the lands of the khanate and devastated them [Tikhomirov, 1930, p. 111].

Peace negotiations between Moscow and Kazan started in 1525 were dragged out and ultimately unsuccessful. The Russian government would not accept the renewed full sovereignty of the Kazan Khanate and they wanted at least the formal recognition of the dependence of the khanate. They exerted economical pressure. The fair was moved from Kazan to Makariev Monastery at Nizhny Novgorod¹. A trade war between Kazan and Moscow began. Both sides suffered. Russian-Kazan trade relations were violated. Herberstein writes that Basil III threatened to inflict

a penalty on every citizen who would trade in Kazan. It goes without saying that Safa Giray did the same. As a result "prices went up and the shortage of goods appeared...." The Kazan Tatars did not acquire Russian goods, first of all, salt. The Russians lost "many goods which were imported from the Caspian Sea, Astrakhan by the Volga River as well as from Persia and Armenia. First of all—refined fish including beluga, or white sturgeon caught near Kazan" [Herberstein, 1988, p. 179]. There were many Kazan Tatars who wanted to continue attacking Russian settlements. There were incidents at the borders. There were provocations against the Russian diplomats. That hindered the conclusion of peace. Herberstein wrote that during his second trip to Moscow in 1526–1527 "the Kazan ambassadors were in Moscow but there was no hope of concluding a peace treaty in the future" [Herberstein, 1988, p. 179]. The negotiations were at a deadlock so many times that the sides were close to renewing military actions. The situation worsened in 1529 when the khan insulted ambassador A.F. Pilyemov and denied giving the oath charter².

The government of Basil III tried to find a military solution to this problem. In April 1530, a navy led by I.F. Belsky and M.V. Gorbaty and a cavalry led by M.L. Glinsky and V.A. Sheremetev were sent to Kazan. This time, the Russians had learnt the lesson they were given six years ago and managed to lead their ships to Kazan without obstruction. On the contrary, the cavalry as it passed through the mountain side had to overcome the fierce resistance of the Maris, the Chuvashes and the Tatars. Only on July 10, the cavalry army left Kazan.

However, the Kazan Tatars had time to prepare for the siege. Safa Giray ordered "to collect all princes and mirzas from different provinces in Kazan". The Mari troops formed a large part of the soldiers who had come to defend the city. The Maris erected wooden walls around the Kazan posad which they were told to defend. 30,000 Nogai warriors led by Prince Shih-Mamai's elder son mirza Kasai and his brother Yaglyz (Agish) came to

¹ Complete Collection of Russian Chronicles. Vol. 22. Section 1. P. 520; Tikhomirov, 1930, Pp. 111–112; Schmidt, 1951, P. 282.

help the Kazan Tatars. The army of Astrakhan arrived.

Opposing parties were significant and events developed rapidly. The Russians started concentrating fire on the city and the Kazans made numerous sorties. Violent clashes took place near the town walls from morning to night. Only once during a short summer night opponents went away to their encampments to recuperate. On July 15, at night, ten Russian men of great audacity sneaked up to the walls of the stockaded town unnoticed and taking advantage of the fact that tired warders fell into a light sleep, killed them, and set the wooden walls on fire. Before they had sounded the alert, the fire enveloped a significant part of the stockaded town and the Russians managed to break into the *posad*. Being panic-stricken, the defenders of the *posad* died having no time to dress and take a weapon. Famous Kazan voivode *atalyk Talysh* was killed at the same time. He was caught defenseless, undressed, barefooted, and thrust with spears. Only the reckless self-sacrificing resistance of the group of warriors allowed some of them to hide beyond the town walls. More than 15,000 defenders of the *posad*, mainly the *Maris* and the *Nogais*, died during this battle.

After the *posad* had been lost, the situation of defenders became critical. The Russians put up a *Gulyay-gorod* near the town walls and started uninterrupted cannon and hand-cannon firing. Round shots and bullets found their victims easily.

One day, a storm, hurricane wind, and cloudburst began. The Russian warriors rushed to shelter from the unfavorable weather leaving their positions. *Safa Giray* took advantage and immediately decided to use the convenient moment to escape. Taking all available horses, they decided to make the breakthrough. Damp gun powder did not allow the Russians to use fire-arms, *Safa Giray* and his people managed to break the siege at the cost of significant human losses. The Kazan Tatars abandoned by their khan and betrayed by allies felt downcast. Although there were 12,000 more warriors left in the city, there was no more desire to resist. Even the fortress gate was open for three hours. Only a local argument between *I.F. Belsky* and *M.L.*

Glinsky prevented the Russians from conquering Kazan. Each of them wanted to enter the city the first.

Only the *Maris* did not lose the presence of mind in Kazan. Taking advantage of the confusion and strange behavior of the Russians, they made a sortie and captured 80 shields from the *Gulyay-Gorod*, 7 cannons, hand cannons, and a string of carts full of ammunition. The *Maris* managed to take it all to the town without hindrance and closed the gates. Observing the great deed of the *Mari* warriors from the walls, the Kazan Tatars recovered their spirit and prepared to defend. The Russians came to their senses and continued to fire on the city for many days but they lost the victory. On July 30, the voivodes agreed to conclude an armistice and being satisfied with the 3-year tribute ordered the troops to go back to Russia¹.

After the Russian troops had gone away, *Safa Giray* returned to Kazan. The Kazan Tatars did not show their true attitude towards the khan but the mood of the townsfolk changed in favor of peace with Russia. They were discontent with treacherous escape of the khan and his allies. They were tired of the ten-year-long conflict, the consequences of which had a disastrous effect on the economy of the country and hindered the trade with Russia.

In autumn of the same year, peace negotiations were renewed in Moscow. The Kazan delegation was headed by Princes *Tabai*, *Tevekel*, and *bakshei Ibrahim*. This time, the Kazan Tatars and the Russians managed to strike a bargain. They decided in favor of the wording which acknowledged the Kazan khan "a brother and a son of the great prince" which almost made *Safa Giray* equal to the tsar of Moscow. The Kazan Tatars were obliged to return artillery conquered by the *Maris* and exchange captives. Nevertheless, the agreement was not confirmed by *Safa Giray*. He put forward the return of the delegation, the delivery of all Kazan captives and Kazan artillery as a preliminary condition for concluding

¹ Complete Collection of Russian Chronicles. Vol. 3. P. 199; Vol. 4. P. 16; Vol. 8. P. 273; Vol. 13. P. 47; Vol. 21. P. 605; Vol. 22. Section 1. P. 538; Vol. 26. P. 314; *Razrjadnaja kniga*, 1977a, Pp. 197–199, 215; *Tatishchev*, 1966, Pp. 127–128.

a peace treaty. The rejection of peace agreements was an unpleasant surprise not only for the Russians but also for the Kazan delegation. "And now the Tsar had broken his promise, the Kazan Tatars said. He forgot us and didn't like what we had done" They explained the inconsistency of the khan by the fact that "he interacted with the Crimeans and the Nogais and local wicked people". The breakdown of peace negotiations definitely led to the recommencement of military actions which contradicted the desires of the majority of the Kazan Tatars. Expressing their mood, the ambassador claimed that Safa Giray was not supported by people, "...people are definitely not with him..." and they do not want to serve the khan who betrayed them. They claimed, "We do not want to serve the king. If he does not need us, we do not need him either." Afterwards, the ambassadors claimed unexpectedly that they wanted to organize a coup d'etat in Kazan and asked Basil III for military support¹.

Meanwhile, Safa Giray renewed military actions. In January-February 1532, the Tatars and the Cheremis carried out a large-scale invasion of such northern Russian provinces as Tolmsa, Tikсна, Syanzhema, Tovto, Gorodishnaya, Unzha, etc. The invasions caused much distress to the Russian people. A great number of people were killed and captured, many villages and churches were burnt down. A story about the long siege by 14-thousand Tatar-Cheremis troop of Soligalich has been preserved. The invasion was so significant that the inhabitants of Totma, Ustyug, and Vologda became panic-stricken. Only troops sent from Chukhloma made the Kazan Tatars retreat².

The Russian delegation carrying out peace negotiations was arrested simultaneously with the recommencement of the war in Kazan on the orders of the khan. Trying to make reconciliation with Russia impossible, Safa Giray intended to execute many negotiators despite the protest of many Kazan princes and

Mirzas. The discontent with the khan reached its peak and in spring 1532, a coup d'etat took place in Kazan. Many Crimeans and Nogais surrounding the khan were killed. Siberian prince Rastov and his children, prince Ali Shakurov, and others died. All the rest and the khan were thrown out of the city. The new government was headed by prince Bulat Shirin and khan Ibrahim's daughter, tsarevna Kovgorshad (Gaukharshad). At their request on June 29, 1532, Shah Ali's brother, 15-year-old Kasymov's prince Jan-Ali (1532–1535) was assigned to the throne³. Shah Ali was dissatisfied with being disregarded and even started carrying out negotiations with the Kazan Tatars and other countries. Soon, the great prince knew about it. An attempt to play an independent political game was nipped in the bud. The serving khan and his confidants were arrested and sent into exile to Beloozero⁴.

The Russian protectorate over the Kazan Khanate was restored although it had a softer form now. Russian counselors always accompanied Jan-Ali, a troop of Russian warriors was based in the city. The foreign policy of the country was placed under control. The khan had to ask Nogai mirza Yusuf Syuumbike for his daughter's hand [Continuation of the Ancient Russian Vivliotics, 1791, p. 267]. The military forces of the khanate were obliged to take part in military campaigns initiated by Russia. In winter 1534, the Kazan troop took part in the war against Lithuania supporting Russia [Zimin, 1950, p. 13]. The Khanate paid tributes to Russia under him, it was called a quitrent in an Ambassadorial book [Russian State Archive of Ancient Acts, f. 123 Russian-Crimean Relations. Book No. 8, sheet 475].

At the same time, Basil III decided to carry out a more flexible half-way policy and made concessions concerning some issues. The Kazan khan was acknowledged "a brother and son" of the great prince, that is almost equal to him. The Kazan captives were released and sent back to their motherland. When in Febru-

ary 1533, the Kazan tatars asked if they might keep the Russian trophy cannons and hand cannons to defend themselves from enemies, Basil III agreed again¹.

Jan-Ali was an unexperienced and weak ruler and real power was concentrated in the hands of prince Bulat Shirin and tsarevna Kovgorshad who were strong supporters of peace with Russia. However, they advocated independence of the country and restrictions of the Russian influence. The political situation in Eastern Europe had also changed significantly. Marriage between Jan-Ali and Sujumbike reinforced the Nogai influence in Kazan. In 1532, khan Saadet Giray who treated Moscow well was replaced by his ardent adversary Sahib Giray (1533–1550) who thought that Kazan was his yurt and was ready to help his nephew Safa Giray who had returned to the Crimea to get back the khan's throne. Safa Giray wrote to Basil III, "I will never stop fighting against you. If you have an enemy, I will always cooperate with him." [Russian State Archive of Ancient Acts, f. 123. Russian-Crimean Relations. Book 7, sheets 69, 70].

On December 3, 1533, Basil III passed away. Ivan IV, who was later called Ivan the Terrible, (1533–1584) became the great prince. The Boyars took the advantage of the minority of the great prince and started a struggle for power between each other. Russia weakened and lost many foreign policy positions under the reign of Boyars. Moreover, the beginning of a new Russian-Lithuanian war drew the attention of the government and military forces to the west. The followers of the eastern faction took advantage of that. In summer 1534, the Kazan Tatars began attacking Vyatka. A chronicler from Galich provides a report about the raid of the Tatars and the Cheremis in autumn 1534 [Kuntsevich, 1905, p. 603]. A Razrjadnaja kniga says that in 1534, voivodes Y.I. Temkin-Rostovsky and D.I. Kurlyatev were located in Galich. "Then they dealt with the Tatar people at the Unzha River²." A chronicler wrote, "In winter 1534–1535, many Kazan people came to areas of Nizhny Novgorod

and emptied them, they took a great number of captives among Boyars' wives and children and many common people and their wives and children." [Schmidt, 1951, p. 286]

Having no real power, Jan-Ali could not stop unauthorized raids or, more probably, he did not want to. Secret negotiations with Safa Giray were carried out behind his back. Nevertheless, the Crimean domination did not satisfy the Kazan government, so apparently the invitation of Safa Giray to come to the throne of the khanate was connected with certain conditions. The weakening of the Russian state gave the Kazan aristocracy the hope that it might one day release itself from vassalage dependency.

On September 15, 1535, in Iska-Kazan Jan-Ali was stabbed while he was asleep. "His voivode, a representative of the Moscow tsar, and all their warriors were killed as well³." Soon, Safa Giray came back to the capital of the khanate (1535–1546). Sujumbike became his youngest wife. Apparently, it was one of conditions for his accession to the throne, otherwise, there might be complications with the Nogai Horde.

Not everybody liked this coup d'etat in Kazan. In October 1535, Princes Shabaz and Shabalat Yapanchins, brothers Karamysh and Evlush Hasrullovs, and "60 more people represented by princes, mirzas, and Cossacks" started negotiations with the Kasymov Tatars defending the border. The Kazan Tatars asked them to notify the Russian tsar about their request to make Shah Ali their khan and promised to assist with his accession to the throne. They assured that "more than 500 people took part in the conspiracy"⁴. Nevertheless, the Boyars concerned with internal struggle did not respond to the request of the oppositional Kazan feudals. A new war against Lithuania also hindered that [Tatishchev, 1966, p. 140].

After Safa Giray had become a khan again, he had no intention of restricting his power.

⁴ Complete Collection of Russian Chronicles. Vol. 13. Pp. 100–101, 425; Vol. 29. P. 20.

He mobilized the Kazan Tatars at once to wage war against Russia. On October 8, 1535, the Tatars and the Cheremis came up to the Unzha River, and to Shishkilevo, and to the Great Desert, and to Glazunovo, and to Galich and its provinces. They burnt down half a posad in Galich and grabbed all the rest. The forces divided and headed to villages of the diocese where they fought in Kurga, and Chermagsma, and Romantsy, and Zalesye, and Chudsa, and Zhilino, and Beresovtsy, and Shareev's hill, and Sluda, and Losevo Rame-nie, and Zhokhovo, and Turdevo, and provinces near Galich."¹

In December, a troop led by voivodes Semen Gundorov and Basil Zamytsky was sent to Kazan. The voivodes came up to the border Sura River and found the footprints left by the fleeing Kazan troop. It was evident that the Tatars were heading to Nizhny Novgorod. "The voivode behaved in a cowardly fashion: they did not struggle against the Tatars and Kazan regions and did not send a message to the great prince but went back to Meshchera". On December 24, at night, the Tatars appeared under Nizhny Novgorod unexpectedly and attacked the sleeping people. They burnt down the posad and plundered neighboring provinces and killed many fugitive runaways at the Volga River". The Kazan Tatars started retreating only after they had destroyed 50 Tatar persecutors. The voivodes started chasing the retreating Tatars and their captives. By the evening, they had managed to reach the Kazan Tatars near the Lyskov Island at the Volga River. Nevertheless, the Tatars managed to escape in the dark².

On January 1536, the Kazan Tatars suddenly attacked Balakhna. According to a Razrjadnaja kniga, the forces of the Tatars were significant, they were led by the khan. On the contrary, there was only a small garrison in Balakhna. Nevertheless, boyar I.V. Khabar-Simsky was a voivode there. He managed

to organize the townsfolk and they went to meet the Tatars. However, this time the famous military leader was out of military luck. Bravery and talent for soldiering were not enough to win. The Kazan Tatars who were larger in number and proficient in military science scored a victory. The Razrjadnaja kniga states that "there was a battle against the Kazan tsar and Ivan Khobar was defeated and he fled to Bolokhona with rest of his forces". Chasing the retreated, the Tatars broke into the posad, burnt it down and "beat many Christians". The Kazan Tatars failed to conquer the fortress. As soon as it was evident that the Russian troops were approaching from Nizhny Novgorod, the Tatars retreated with their captives³.

That winter the Kazan Tatars, the Cheremis, and many other people came to Koryakovo. This time, voivodes S.D. Saburov and I.S. Karpov "defeated many Tatars and Cheremis and caught up many survivors and sent them to the great prince to Moscow; the great prince ordered their execution in Moscow"⁴.

On July 30, a large troop of the Kazan Tatars invaded lands of Kostroma and Galich. The Russian voivodes went to meet them without waiting for reinforcements. The Battle took place at the Kus River and resulted in the defeat of the Russians. The Kazan Tatars "killed princes P. V. Zasekin-Pestry and Menshuk Polev and pummeled many of the Boyars' children". Only the approach of significant Russian forces made the Tatars retreat⁵.

The Russian government was trying to conceal the real scope of the Kazan invasions. Ambassador Jacob Snozin in Lithuania in February 1536 was ordered to give the following answer to the question on the war against the Kazan Tatars: "The lands of our lord and the Kazan

Tatars, the Mordovians, and the Cheremis are fighting now; there are quarrels between the Cheremis and the Mordovians about frontiers, they curse all the time and plunder each other, and there were no more wars, our lord had never sent his voivodes to Kazan, and the Kazan Tatars have never attended the great prince." [Collection of the Russian Historical Society, 1988, p. 26] Ambassador Ivan Tarasov had to explain that khan Jan-Ali had been killed by malevolent people and they had invited Safa Giray to Kazan. The ambassadors had to persuade the Lithuanians that Safa Giray had sent him to the tsar to be held in Kazan in his estate. The princes and all the Kazan people also sent ambassador to the Tsar to start negotiations and prevent wars. The Kazan Tatars behave in this way; in winter, they wage wars, and in spring, they bow down: and the tsar executes the wicked ones and forgives the kind" [Ibid, p. 40]. Afterwards and until 1542, the same instructions were given to all diplomats sent to Lithuania and the Crimea. [Ibid, pp. 54, 116–117; Russian State Archive of Ancient Acts, f. 123 Russian-Crimean Relations. Book No. 8, sheets 267–268, 298–298]. After 1538, when it became impossible to hide the real scales of the conflict, a more precise definition appeared in the instructions according to which "the Kazan Tatar were prohibited to come to Russian lands" [Collection of the Russian Historical Society, 1887, pp. 136–137, 179–180].

In winter 1536–1538, Safa-Girey came to Murom like a wicked serpent, burnt down the posad and started taking the town by storm. The inhabitants of Murom defended themselves bravely firing cannons at the target and making successful sorties. Within three days, the khan knew that the Russians were approaching. He suspended the siege and retreated¹.

In the same winter, the Kazan Tatars performed raids on the northern Russian provinces, on the lands of Kostroma and Galich, "many of them were fighting and had many captives, and lands of Galich were emptied².

In 1537, the Kazan khan returned to Murom again, burnt down posads near the town, and then, he headed to Nizhny Novgorod. He remained there for three days. The inhabitants of Nizhny Novgorod and the Tatars fought ferociously for six hours, so the Tatar burnt down the upper posad, and 200 yards were destroyed [Ancient Russian Vivliofike, 1791a, p. 85]. The Mazurinsky chronicler adds that the Tatars had significant human losses and after that the tsar went past Nizhny Novgorod with great shame³.

In winter 1537–1538, "the Tatars came to Moscow towns, the lands of Kostroma, Murom, Galich, and Vologda and sacked and burnt down many monasteries and took away many Boyars' wives, daughters, adults, and children and converted them to their religion."⁴ Nizhny Novgorod also underwent attacks. The main part of the Tatar army even reached the remote Komela River in the Vologda Region [Kuntsevich, 1905, p. 603]. Agographical literature contains evidence of the devastation of Vologda provinces by the Tatars and the Cheremis. Many monasteries were devastated and monks had to flee to remote forests [Veryuzhsky, 1993, pp. 256–259; Schmidt, 1954, pp. 230–231; Loparev, 1892, p. 16; Kuntsevich, 1905, pp. 308–309; Hagiographies of Russian Saints, 1993, pp. 210, 387; Minei-Chetyi, 1875, s. 152–152]. Devastating the Russian provinces, the Kazan Tatars almost reached Vologda (there were only 6 versts left). They retreated with a great number of captives. The Kazan Tatars succeeded everywhere. The Russians managed to defeat the Tatars only near Kostroma releasing all the captives of the great prince⁵.

The Russian state concentrated its troops on its eastern borders⁶. On September 9, 1537, there was a new session the Boyar Duma. They decided to send cavalry and navy to Kazan in spring. However, the planned

military campaign did not take place. A *Razrjadnaja kniga* contained the following note, "That military campaign did not take place because the Kazan tsar sent his person Usein to the great prince to conclude a peace treaty."¹ It is plausible that Kazan received a report that a military campaign was being prepared.

The position of the Crimean khan played an important part in preventing a Russian invasion. On November 24, he passed a charter to Moscow, through his messenger Derbysh-Aleya, in which he wrote that "the great prince should reconcile with tsarevich Safa Giray who was in Kazan"². "The lands of Kazan are my yurt and Safa Giray is my brother," wrote Sahib Giray. If he did not wage war on Kazan lands and unleashed hostility and send his army there as it was in recent times, he would send his ambassadors and guests. You would live in peace. And when you receive my *yarliq* and you wage war against him, do not reconcile with him after that and look at me like merciful God. Do not think I will be only with the Tatars. I am not alone, cannon and hand-cannon detachments, enormous cavalry and villeins are going with me as well as the Tatar armies in our fields are with me. Afterwards, you will understand: whatever you do, you will not reconcile with Kazan. It is the same thing with the Kazan yurt. If you are their friend, you are my friend as well. If you are their enemy, you are my enemy, too...Kazan is my state and my land. Would you still be my friend if you start waging war? You can not have loving peace with him, you may be sure, look at us like merciful God....And if you do not accept clauses fixed in the *yarliq*, you will find an enemy. Do not suspect us, we do not have any malicious intent. Do you really want to sail down the Oka River? And do not rely on water. I will not show you the Oka River. You had better think about your internal problem, not about the fact that Mahmet Giray can come. Moreover, I will have supplementary armies and forces. There will be one

hundred thousand Turkish warriors and five thousand janissaries [Russian State Archive of Ancient Acts, f. 123 Russian-Crimean Relations. Book No. 8, sheets 419–421] Thus, Sahib Giray urged Moscow to acknowledge the legality of his accession to the khan's throne in Kazan and threatened to invade if they rejected his requirements. The deacons of the *Prikaz* answered Derbysh-Aley with dignity: "The Tsar himself knows that when Safa Giray arrived in Kazan, he caused much damage to our lord. Our Lord does not need to send ambassadors to Kazan. If Safa Giray sends an ambassador to our Lord because he wants to have friendly relations with him, we do not mind." [Ibid, 423–424] Thus, the Russian government claimed that Safa Giray was guilty of the war. Thus, he had to send his ambassador first putting forward a proposal to conclude a peace treaty. Moscow was ready to take part in these negotiations.

On March 10, 1538, the Russian-Kazan peace negotiations began. The Crimea played the part of an intermediary. The Crimean diplomats exerted pressure on the Russian side. Sahib Giray wrote to the great prince, "Kazan land is ours as well. And if you start causing damage in that land you will not have peace relations with us, we will spend all year round in your lands with additional forces not like Mahmed-Girey but much more dreadful. You are young and do not know how often the Kazan Tatars have been there and what they have done to local places. There is no use in it. Their people will get tired, there will be many human losses. The yurt you inherited from your father is already yours. And do not make friends with the Besermians. You would rather accept our words, because there is no damage to that yurt and better reconcile with it....And if you start fighting against Kazan, you will anger me and no gifts will help you. You know, the riches of the whole wide world will not be enough then [Russian State Archive of Ancient Acts, f. 123 Russian-Crimean Relations. Book No. 8, sheets 535–536]. As may be obvious from the nature of the khan's requirements, Sahib Giray wanted the Great Prince to refute his claims to vassalage over the Kazan Khanate. This is what the Russian side insisted on. Apparently,

¹ Ibid., Pp. 271–272.

² Complete Collection of Russian Chronicles. Vol. 13. P. 121; Vol. 29. P. 31.

the Kazan Tatars were not going to accept the conditionalities either. "The Kazan tsar does not want to conclude the treaty which would be appropriate for both states," claimed Deacon Fedor Karpov to Crimean Ambassador Mirza Sulesh [Ibid, sheet 600]. The negotiations were dragging on. It became evident that the Crimea and Moscow were struggling for the prevailing influence in the Kazan Khanate [Ermushev, 1997, p. 24].

On April 3, the mother of Ivan IV died under mysterious conditions. Contemporaries thought, not without good reason, that the young princess had been poisoned. The analysis of her remains which has been carried out recently shows an increased mercury presence in her hair and consequently proves this. [Panova, Pezhemsky, 2004, pp. 26–31; Panova, Samoylova, 2004, p. 35]. The death of the regent led to a new spiral in the struggle between boyar groupings which led to the paralysis of state power.

Kazan diplomats were careful and keenly observed developments. Not desirous of a peace treaty, Safa Giray put forward unacceptable requirements. According to them, Moscow had to send gifts and pay tributes to the Kazan Tatars. Russian diplomats replied indignantly, "Great princes have never sent gifts to the Kazan tsar" [Russian State Archive of Ancient Acts, f. 123. Russian-Crimean Relations. Book 8, Sheet 643]. It should be emphasized that the Kazan Tatars continued attacking Russian borders even during peace negotiations. Deacon Fedor Karpov told Crimean ambassador Mirza Sulesh that "after negotiations had begun, the people of the great prince did not damage the lands of the Kazan khan. As for him, it was the opposite. The people of the khan continued devastating Russian lands." [Ibid, 594–594 reverse, 616–617]

In autumn 1539, Safa Giray interrupted peace negotiations and renewed invasions into Russia. The troops of the Kazan Tatars headed by Chura Narykov conquered Zhilino on September 20 [Kuntsevich, 1905, pp. 311, 326, 603]. In November, the Kazan troops and the khan were approaching Murom, devastating the lands of Nizhny Novgorod¹.

¹ Razrjadnaja kniga, 1977a, Pp. 281–282.

In February–March 1540, Chura Narykov and his troop numbering eight thousand warriors and consisting of the Tatars, the Ceremis, and the Chuvashes devastated the lands of Kostroma. The Russian voivodes managed to reach the Kazan Tatars who not only defended themselves but also defeated Russians. Princes B. Siseev and V.F. Kozhin-Zamytsky were killed during the battle².

In December, the troops led by Safa Giray came up to Murom again but this time the Kazan Tatars failed. Two days after, the siege had been begun, the Russian made a sortie and caused significant human losses to the Tatars. Meanwhile, the Kasymov Tatars defeated the Nogais who made a living by pillaging. They set free many captives. Learning that the troops of the Russians and the Kasymov Tatars were approaching, Safa Giray countermanded the siege of Murom and rushed back Kazan taking a large number of captives³.

In the same year, "the army of the Kazan Tatars who came to Perm devastated the estate of the Great Prince, burnt it, and killed many inhabitants of Perm." [Vychehorodsko-Vymskaya, 1958, p. 265]

A chronicle says that "in 1541, the Kazan Tatars reached Nizhny Novgorod and killed there 26 inhabitants of the city and they took prisoners and came back to Kazan"⁴.

In winter 1541–1542, an army of 30,000 soldiers invaded. In addition to Kazan Tatars, the Crimeans and the Nogais also formed part of this army. This time, Safa Giray devastated the Murom provinces, estates of the Pozharsky princes, half of the Vladimir provinces and attacked Starodub and Ryapolov. He left

the Russian lands with a great number of captives without obstruction¹.

In 1542, 4,000 Tatars and Cheremis attacked Vyatka. They came up to Ustyug and "conquered all Ustyug provinces and towns". They burnt down 73 smallholdings and 2 churches in Dymkov. They amassed so much plunder that it could not be taken away on horses. They decided to return by river with rafts. After loading all their trophies and captives, the Tatars and the Maris set sail for home. Nevertheless, they ran into an ambush set by the Vyatichi near Kotelnich. The Tatars were completely routed. The Maris managed to break into the forest and the Pizhma River [Titov, 1903, p. 5; Spitzyn, 1883, p. 35].

In 1543, there was another military campaign by Safa Giray against Murom. The perseverance of the Kazan khan was beyond all doubt. The fall of Murom cleared the way for the Kazan Tatars to the central regions of Russia. However, they had to be content only with the devastation of the provinces and enslaving local population². In 1544, the Kazan Tatars attacked the lands of Nizhny Novgorod [Kuntsevich, 1905, p. 311; Collection of the Russian Historical Science, 1887, p. 239].

In winter 1544–1545, "the Kazan prince and Chura Narykov came to Vladimir provinces and there was a battle here and many people were captured". The pursuit reached the Tatars but they managed to escape. An unexpected misfortune befell the Tatars at Gorokhovets: "...the inhabitants of Gorokhovets fought against the Kazan Tatars at the stockaded town, and took the head of Prince Amanak from the Kazan Tatars."³

In the struggle against the Russian state, Safa Giray skillfully used not only military potential but also diplomacy. He attempted to win the support of the Nogai Horde, Astrakhan, the Crimea, and Lithuania and to coordinate his actions against Russia with them. When it was favorable to him, he initiated "peace" negotiations, thus undermining the counter

actions of Russian troops in Kazan. When the threat of invasion disappeared, he suspended negotiations and sent numerous detachments to devastate Russian lands. Notably, the khan offered to start peace negotiations at the beginning of spring when the Russians were preparing their flotilla to sail in the flood-water. Arabic poet Hadji Tarkhani Sherifi addressed a letter to Turkish sultan Suleiman II, containing precise details of the policy carried out by Safa Giray towards Russia. He wrote, "In accordance with the needs of the epoch, for the purpose of ensuring wealth and well-being of the country, calmness and security of the people, for the purpose of ensuring peace in the world, rulers of the beautiful city of Kazan pretended to be friends and exchanged ambassadors and government officials. "The tranquility of the world is based on the understanding of these words: being faithful to friends and falsely cordial to enemies [Sherifi, 1995, p. 87].

The letters of the Kazan khan Safa Giray addressed to Polish-Lithuanian King, Sigismund I the Elder, are very interesting [Mustafina, 1997a, pp. 26–38]. The contents allows us to date it back to a period between November 1542 and December 1545. The letters are evidence of an irreconcilable attitude of the khan towards Russia. Safa Giray notifies his addressee about the devastation caused by him to the Russian lands. The khan writes, "He conquered Moscow lands and devastated them himself: he was there with his troop and conquered castles and burnt down settlements and crossed the Oka River and was on the lands of enemies. " He indicates that 10, 40, and even 70 thousand warriors took part in military campaigns. In some cases, he led the troops himself, in other cases, they were led by Kozuchak-Ulan, Yamurch-atalyk, and Akhmagma-uhlan. The khan writes that the Nogai mirza Aley and 10,000 warriors and 1,000 inhabitants of Astrakhan sent by khan Abdul-Rahman took part in military campaigns with him. It is evident from letters that the Kazan Tatars and their allies burnt Borsuma (apparently, Murom) many times, devastated and burnt down Balakhna, Kasymov, and Kostroma, and then came up to Vladimir. The khan emphasizes that his army penetrated

¹ Complete Collection of Russian Chronicles. Vol. 22. Section 1. P. 521; Schmidt, 1951, P. 289.

² Complete Collection of Russian Chronicles. Vol. 22. Section 1. P. 525; Schmidt, 1951, P. 289.

³ Complete Collection of Russian Chronicles. Vol. 22. Section 1. P. 525; Schmidt, 1951, P. 290.

more than once beyond the borders of the Oka River. With no clear notion about the northern territories devastated by the Kazan Tatars, Safa Giray wrote, "And now this land is empty...Up to the Frigid Sea." Apparently, by the Frigid Sea, the khan means the White Sea, but the Kazan Tatars did not reach it. Nevertheless, it is possible that the Tatar-Cheremis detachments could have penetrated much further than stated in Russian sources. One of the khan's letters referring to Vyatka contains fundamentally new evidence. "If he subordinated a land, he obliged its inhabitants to pay him tributes as it was in the past," the khan writes. The khan writes that "messengers were sent to him asking to accept their tributes as their forefathers did". The Viaticchi were clearly unable to withstand the invasion of Kazan with no support from the center. They tried to conclude a separate treaty with Kazan agreeing to pay tributes and accepting some other khan's requests.

Successful in the devastation of Russia, Safa Giray did not rest on his laurels or accept peace initiatives from the Russians. He wrote to the King, "Князь великий московский sent his ambassadors and messengers to me asking to put an end to the war and conclude peace. However, I did not want it and I did not accept his offer of peace."

The Maris took part in almost all military campaigns in Russia. They were brave warriors and excellent guides and spies. Sources do not always refer to their involvement but the notion "*Kazan people*" refers not only to the Kazan Tatars but also representatives of other nations of the khanate and above all the Maris. The Solovetsky paterikon contains an interesting story about the raids of the Kazan Tatars 16th century. After describing distress caused by the Tatars, the author continues, "...they sailed down the Sukhona River and reached Ustyug, the Cheremis accompanied them everywhere" (our Italic type A.B.) [Kuntsevich, 1905, p. 310]. There are many reports about the participation of the Maris in the so-called Petty warfare at the borders in diplomatic documents of the Office of Ambassadors [Collection of the Russian Historical Society, 1887, pp. 26, 39–40, 54, 116–117, 136–137, 239]. Kazan chronicles report that the "Cheremis live in for-

est deserts, they do not work on land, but they are engaged in fishing, hunting and plundering." [History of Kazan, 1954, p. 86] Describing Kazan Ukraine, Herberstein writes that the "Cheremis are roaming and plundering everywhere" which created problems with communication between Galich and Vyatka [Herberstein, 1988, p. 162]. Adam Olearius [Olearius, 1906, p. 364], Petr Petrey [Petrey, 1865, p. 44.], and etc. report about frequent attacks of the Cheremis. Russian sources contain many similar reports¹. Confrontations with the Maris were typical for Vyatka. The story about Nikolai Velikoretsky says that "the Kazan Cheremis often waged war in Vyatka" [Vereshchagin, 1905, p. 40]. In 1556, Dema and Patrikey Chelishchevs told the governor-general of Vyatka, Semen Sukin, that their family had acquired a house to the south of Kotelnich in 1511, and since then, they did not catch fish there and did not pay tributes (quotation by [Kashtanov, 1970, p. 183].

Contemporaries directly associated activation of the Kazan raids with the unrest amongst the Boyars. The Solovetsky Paterik says that at the time when Vasily III died and a "young boy" became the great prince, "grandeers who didst pick up the time of autocracy, much evil had been done among them: many of many people perished meaninglessly. The godless Tatar Kazan people watched like a serpent from the mire, many countries hurt the Russian kingdom." [Kuntsevich, 1905, p. 310] The Kazan chroni-

¹ Dokumenty' po istorii Udmurtii (Documents on the history of Udmurtia), 1958, P. 350; Kuntsevich, 1905, Pp. 308–309, 311, 326, 603; Razrjadnaja kniga, 1977a, Pp. 221, 232, 246, 259–260, 270, 281–282, 284, 290–291; Tatishchev, 1966, P. 144; Complete Collection of Russian Chronicles. Pp. 129–130; Ancient Russian Vivliofika, 1791, Pp. 114–115, 126–127; Ancient Russian Vivliofika, 1791a, P. 85; Schmidt, 1951, Pp. 288–290; Veryuzhsky, 1880, Pp. 83, 256–259, 386, 454, 466; Loparev, 1892, P. 16; Zhitiya russkikh svyaty'kh (The Lives of Russian Saints), 1993, Pp. 210, 387; Minei-Chet'yi (Menaion Reader), 1875, Pp. 152, 152 reverse; Vy'chegodsko-Vy'mskaya (Vy'chegda-Vymsky), 1958, P. 265. RSL MD). Reserve 236 Popova A (Museum), no. 6 (2399). Chronograph of the 17th century, P. 387; Titov, 1903, P. 5; Spitsyn, 1883, P. 35.

cler also wrote about that, "Then, for all the prince and boyars, and grandees and judges living by the city autocracy, not judging for justice, but for a bribe, and violating people, breaking all the rules—he was the great prince—for godless scum, not protecting their Russian lands from scoundrels: everywhere the filthy peasants maraud and devastate, and the grandees of peasants destroy by the great sale." [History of Kazan, 1954, p. 72–73] Although the Kazan chronicler speaks explicitly as an apologist of Ivan the Terrible, his characterization of the situation, formed during the childhood of the great prince, is reliable. The chronicler bitterly exclaimed, "...Having seen the disorganization in Moscow for our sins, and Kazan people were carrying war in those years in the remote area of our sovereign, and many churches of Christianity and castles were devastated. And Kazan fought and castles were devastated: Nizhny Novgorod, Murom, Meschera, Gorokhovets, Balakhna, Zavolzhye, Galic, Vologda, Totma, Ustyug, Perm, Vyatka, by many campaigns in many years. ..."¹ Other sources add to the listed cities and areas Vladimir, Shua, Yuryevets, Kostroma, Kineshma, Unzha, Kasymov, Temnikov, and etc. [Ancient Russian Vivliofike, 1791, p. 123–124]. Later, recalling those troubled years, Ivan the Terrible wrote, "Almost half of the lands of Crimea and Kazan were empty." [Messages, 1951, pp. 47, 316] Prince A. Kurbsky, in his famous essay "The History of the Great Prince of Moscow", wrote that everything was devastated by the Kazan Tatars, even 18 miles from Moscow, while all the territories behind the Oka River were ravaged by the Crimeans and Nogais [Legends, 1833, p. 8].

In the tale of the life of Tsar Fedor Ivanovich, it is stated that the Kazans "played many dirty tricks on the Orthodox Christians, unceasingly committing evil; they struggled against them endlessly, and shed Orthodox Christianity's blood, like a river flowing rapidly which is shed lavishly after the blows of the impious, while others were captured and tortured."²

The most complete and vivid picture of the consequences of Kazan invasions was left by an immediate witness of the events he described. He was an anonymous Kazan chronicler who noted that the frequent incursions of Kazan were much more destructive than the invasion of Batu. "And a lot of blood was shed due to the Kazan deeds, deeds against Russians. Sometimes, our little powers defeated the Kazans, but we ourselves were defeated much more times, we were harmless for the Turkics, the grandsons of Ishmael, and were much more disgraced returning from such campaigns," he wrote [History of Kazan, 1954, p. 75–77].

On the other hand, those years were the most successful for the Kazan Khanate in the war with the Russian State. Kazan troops attacked the Russian lands and almost freely devastated and looted the settlements and the villages. They enslaved the Russians and sold them at a profit on the eastern slave markets. It brought considerable income to the Crimean grandees and their supporters from Kazan. Many of the Tatars and meadow Mari, who took an active part in raids, succumbed to the impunity and seductive easy enrichment. Invasions into the Russian lands were declared in Kazan and in the whole Muslim world as a sacred struggle against the infidels—gazavat. The name of Safa Giray was exalted, he was called "AlGhazi", i.e. the great warrior, the fighter for the faith [Alishev, 1990, pp. 53–54]. Contemporaries—the Astrakhan poet, Khoja Tarkhani Sherifi, and the Turkish chronicler, Jennabi,—wrote with rapture about the successes of Safa Giray in the fight against the infidels [Sherifi, 1995, p. 87–89]. The Kazan poet, Muhammadyar (1497–1549), in his poem "Nur-i-sodur" ("The Light of Heart") praises gazavat [Amirkhanov, 1993, p. 91]. Safa Giray was a protector of Islam and the country's independence. For the time being, this ensured his popularity and support among the population of Kazan. Foreign policy successes eased the internal contradictions.

In 1545, the mature great Prince Ivan IV took over the reins of government. Having executed several boyars, he demonstrated his temper, and established a barrier to the boyar arbitrariness which was weakening the

¹ Complete Collection of Russian Chronicles. Vol. 13. P. 129; the History of Kazan, 1954, P. 74.

² Complete Collection of Russian Chronicles. Vol. 14. P. 3.

country. One of the first independent actions of the 14-year-old Russian ruler was the organization of a campaign against Kazan. On April 2, 1545, a naval army was sent along the Volga, Kama, and Vyatka Rivers to Kazan¹. A decade of Kazan invasions into the Russian lands provided the basis for the counteraction. In the capital of the Khanate everyone had already forgotten about the time when Russian troops had approached the town, so the attack from the river was a surprise. The Russians "had smitten many people of Kazan and burnt the taverns of the tsar"². A Kazan chronicler writes that voivodes "did many campaigns in the Kazan regions, having filled the Cheremis fields with blood and barbarian lands with beaten corpses, but did not approach Kazan, just demonstrating their power to the city of Kazan, which was located not far". According to him, "It easy to occupy Kazan at that time; voivodes would come to the Kazan land and find only few civilians: all the grand people were away and tsar was not there as well. They would find him haunting with his hounds and small retinue." Many Kazans were also beaten near the town and the Volga, Sviyaga, Vyatka, and Kama Rivers. According to the Kazan chronicler, the attack left 3,000 Kazans dead [History of Kazan, 1954, p. 84]. Overall, however, the success of the campaign was minor, and, considering the fact that the Tatars managed to beat a late detachment of Permiches, even doubtful. Nevertheless, it was to have dramatic consequences for the fate of the Khanate. The suspicious Khan considered the sudden attack as a result of betrayal of the Kazans who formerly were in opposition to him. The contradictions between the Kazans and the Crimeans deteriorated. Safa Giray did not trust the Kazans and tried to rely on his Crimean entourage. The Chronicle reports about that in this way, "As a result, there was discord in Kazan: the tsar started keeping princes closer; and many of them went from

Kazan to the great prince, and other ones roamed around different lands."³

Even in 1536, members of the opposition began to escape from Kazan. In October, a charter was sent to the Nogai Horde on behalf of Ivan IV, to Prince Cherkes, in which he and other princes left Kazan. Mirzas and the Cossacks were invited to serve the great prince [Ambassadorial books, 1995, p. 189]. Departing to Lithuania in June, 1536, the ambassador Ivan Tarasov was given a mandate to say that many Kazan "princes and mirzas are going to our sovereign; before my trip Shabaz, Prince Yapanchin, and his brother Shabaat, the son of Kazimov, his brother mirza Czekaj, Kuchyuen Karachev, Ivashka Sharvarhozin, Evlush Chingildeev, and many other princes and mirzas arrived in Moscow" [Collection of the Russian Historical Society, 1887, p. 40]⁴. In May 1541, "Prince Bulat and all the land of Kazan" secretly brought their ambassadors to Moscow. They asked that troops be sent to Kazan and pledged to kill or arrest the Khan as soon as the Russian army would appear at the walls of the city. The envoys complained to the boyars, "...and now, due to the tsar's policy, the Kazan people were suffering strongly, because he bereaved many princes of yasaks in favor of the Crimeans; and for the land people, here was a great sale; he is saving a treasury to send to Crimea"⁵. It was already known that revenue was being sent from Kazan to Crimea, for instance, in 1521 [Russian State Archive of Ancient Acts, reserve 89. Russian-Crimean Relations. Book No. 8, p. 194 reverse]. It shows that the Crimeans did not intend to settle permanently in the Kazan Khanate and used their stay there in order to gain wealth through the exploitation of the population of Kazan and devastation of the Russian lands.

Some historians depict Safa Giray as a real patriot who sought to "follow a policy which was independent both of Moscow and Crimea", and claim that he supposedly, together with Sujumbike, strove to establish the Kazan Party in contrast to Moscow and Crimea [Tagirov, 2000, p. 117; History of Tatarstan, 2001, p. 100]. However, there is some evidence indicating that Safa Giray and his Crimean entourage pursued only mercantile interests. The Kazan Chronicler writes about Safa Giray in this way, "That he received the Crimean Saracen, in Kazan, as they were grand people, and made them comfortable, thereby insulting the power of the Kazans. " [History of Kazan, 1954, p. 78] In 1549, the Nogai prince Yusuf wrote about Safa Giray in Moscow, that he "led many naked and hungry Crimeans. And began to offend the Kazan people" [Ambassadorial books, 1995, p. 293]. That fact was also reported to the Russian tsar by the Nogai mirzas in July 1551: Safa Giray "decided to violate the Kazans. Who had already lost his father, he had no father's income. And who had already lost his big brother, he had no income as a younger brother either. And he has been living against you for a long time. And nobody of the Kazan civilians and princes could bear his arbitrariness. .." [CCRC, 1793, p. 271] Poet Muham-madyar, who was extremely concerned about the growing population of the Crimeans in the country and deterioration of the position of Kazans through the unrest in Kazan, wrote:

A lack of faith will not destroy the State

But a country could collapse due to the yoke,

Unbelief and an unbeliever harm just themselves,

But the yoke makes country conditions unbearable [Abilov, 1979, p. 60].

It is hardly possible to speak about financial or tax reforms allegedly carried out by Safa Giray, since the extant sources report on the transfer of yasaks to the Crimeans, but not on the centralization of tax collection. One may agree with S. Alishev that the Khan "was not actually interested in Kazan and the living conditions of civilians" [Alishev, 1995, p. 80].

The unwillingness to tolerate further the opportunistic regime of the Crimean government of Safa Giray pushed the Kazan feudal

lords to realize the necessity of negotiations with Russia. On July 29, 1545, the influential Kazan princes, Kadysh and Chura Narykov, appealed to Moscow with a request to support the oncoming coup with the troops. The Russians promised to support the conspirators¹.

The coup occurred at the beginning of January 1546, and turned into a truly nationwide anti-Crimean uprising. The author of "History of Kazan" described the event in this way, "There was the rebellion among the grandees and entire population in Kazan; the riot consolidated the great with the ordinary and dethroned their tsar of Sekirei, having expelled him from Kazan with his tsarinas, nearly killing him." [History of Kazan, 1954, p. 78] During the coup, many Crimeans were killed².

After leaving Kazan, Safa Giray met with the Astrakhan Ambassador of Mansir Seyyid, who was going to him in Kazan, and they went to Astrakhan together. Having turned to the Astrakhan Khan for assistance, Safa Giray soon received it and with the Astrakhan troops approached Kazan. Safa Giray expected that "princes and their retinues would side with him", but "nobody among the Kazan princes and their retinues wanted to side with him". The outcast Khan attempted to occupy the city for two months, but without siege equipment, just arrows alone, he could do nothing. "After several raids", Safa Giray went to the Nogai Horde to his father-in-law, prince Yusuf [Russian State Archive of Ancient Acts, f. 127. Russian-Crimean Relations. Book No. 9, sheet 27 reverse; CCRC, 1793, pp. 271–272].

However, the unity of the Kazans immediately came to an end as soon as the issue of the nomination of a new Khan came under discussion. According to the Kazan Chronicler, "someone wants to enthrone the Crimean tsar-evitch, others want to crown the Turkic khan; others want to deal with the Moscow tsar, but are afraid of his revenge for a former crime; someone wants to deal with the former tsar who was dethroned, and bring him back from the Nogai Horde—but even in that case, they

¹ Complete Collection of Russian Chronicles. Vol. 13. P. 446.

² Complete Collection of Russian Chronicles. Vol. 13. Pp. 148, 447; Vol. 29. P. 47; the Tsar Book. P. 120.

are afraid of his revenge as well" [History of Kazan, 1954, p. 78]. We observe a rather clear division of the Kazans into two Parties—the Moscow one and the eastern, predominantly Crimean one. In fact, the Turkish Party did not exist, but there were pro-Turkish sentiments. There was an opinion in favor of re-inviting Shah Ali to the Khanate. It clearly demonstrates that the Kazans recognized the need to normalize the relations with Russia. The population had grown tired of the endless war and desired peace with its principal neighbor: "And the Kazan people were exhausted by frequent wars which occurred in their lands. .." [Ibid] However, considering their previous experience, the Kazans decided to limit his power and Russian influence in general. On 13th June, 1546, after Shah Ali accompanied by the Kasymov Tatars and a Russian thousand-man detachment led by Prince D. Belsky came to Kazan, he was allowed to leave only a hundred confidants with him. Belsky, together with the Russian and Kasymov soldiers, were placed in the trading quarter, and prevented from communicating with the Khan.

The Kazan Chronicler compares the second "khanship" of Shah Ali with capture, emphasizing that he was in Kazan "not as a tsar, but as a captive under strong protection". Shah Ali possessed no real power, could not rely on the troops, and had no authority over the Kazan people. During his rule, the contradictions between the various groups of the Kazans were not stopped, but became stronger. The Kazans did not conceal their contempt for the Khan, and even tried to kill him several times. Only the intercession of Emir Chura Narykov saved Shah Ali from imminent violence. Having ruled for just a month and under the threat of conspiracy, Shah Ali with the help of Chura Narykov fled to Russia, having killed 20 of the most hated Kazan grandees and having captured 20 more. The Kazan Chronicler explains the actions of Chura Narykov as reluctance due to the murder of the Moscow protege to plunge the country into a bloody maelstrom of war with Russia. The insidious massacre perpetrated by Shah Ali, and his secret flight so outraged Kazan society that all explicit or supposed supporters of the Moscow Party were persecuted and

executed. "And they punished many people among themselves," the Kazan Chronicler says on this occasion. It came even to armed conflicts. A detachment of Chura Narykov was caught and destroyed attempting to flee to Russia, and Narykov himself was executed [Ibid, p. 80–82].

When he heard of the ensuing unrest, Safa Giray applied to the Nogai prince and mirzas to support him with an army. The Nogais treated Safa Giray ambiguously and even thought of murdering him. However, he was a true opportunist and did not skimp on promises. "And in Kazan, there are many people who want to cooperate with us," Safa Giray said to the Nogai mirzas, "but I will go there with the Manghit¹ power, and they will receive me there. I am going to occupy Kazan and give the Mountain and Arsk sides to Prince Yusuf and you as well." The Nogai mirzas considered his promise, and Safa Giray generously pledged them great pecuniary recompense. He also promised to make mirza Yunus, the eldest son of the ruler of the Nogai Horde, Prince Yusuf, the Prince of Kazan "on the Manghit position". To achieve his goal, he even expressed his willingness to accept vassalage from the Nogai Horde. "I will occupy Kazan just by your order. I will make it at your will," he assured Prince Yusuf. Finally, he had persuaded the prince and mirzas to give him an army. Previously, the Khan had sworn an oath of allegiance of his words. Notably, Safa Giray promised not to repress the Kazan nobility, "And I will kill just one or two people, and no more people will be killed. And I will not damage anything or anyone." [Ambassadorial books, 1995, p. 293; CCRC, 1793, pp. 272–274]

However, the return of the Khan ousted six months previously did not suit everyone.. Only after eight days of fighting, Safa Giray was able to enter the city [CCRC, 1793, pp. 143, 271–271]. However, even after that, it took some time to put down the resistance. Prince Khosrov even managed to gather a troop and break into Kazan, but the correlation of forces was not equal. The Nogais dispelled his troops [Ibid, p. 163]. Having become the Khan for the third time, Safa Giray (1546–1549) decided

¹ That is, the Nogais.

to be done forever with any opposition to his government. Anyone who did not overtly support him was physically liquidated. Among the dead, were Princes Baubek and Kadysh, and even the head of the Muslims, Seyyid, who had dared to condemn Safa Giray. Such mass repressions provoked censure even in the Nogai Horde, allied with him Prince Yusuf indignantly wrote to Ivan IV that Safa Giray "killed all the best people in Kazan" [Ibid, p. 144]. The survivors quickly emigrated to Russia and the Nogai Horde. The chronicles record the arrival of the 76 Kazan people in Moscow in September 1546, among whom were the Princes Kulush, Tereul, Burnash, and the brothers of Chura Narykov¹. The Kazan immigrants were recruited to the Russian service, and used in the future in the struggle against Kazan. Safa Giray managed to crush the opposition, but on the eve of the resumption of hostilities with the Russians, it considerably weakened the Kazan Khanate. At the same time, it provided the Government of Ivan IV with the additional grounds for interfering in the internal affairs of the country with the support of hundreds of experienced Tatar warriors.

Having achieved the return to the throne of Khan with the help of Nogai swords, Safa Giray did not fulfill any promise given to the Nogai feudal lords. The deceived Nogai allies became enemies and began to attack the Kazan outskirts. Mirza Yunus was able to approach Kazan in the spring of 1548. Having suffered heavy casualties, he had to retreat [Ambassadorial books, 1995, pp. 294, 304, 318; CCRC, 1793, pp. 274–275]. Safa Giray's opportunism set the Kazan Khanate on the brink of a two-front war: in the West—against Russia, and in the South-East—against the Nogai Horde.

The events which took place in Kazan had the most serious consequences for non-Tatar population of the Khanate. Particular attention to the events was paid by the residents of Mountain side. The return of Safa Giray and the defeat of the opposition should have inevitably caused the resumption of the war with Russia and a new destruction of Mountain

side, which was always between a rock and a hard place in Russian-Kazan conflicts. V.D. Dimitriev admits that Safa Giray's intention to transfer the Mountain side to the Nogais could have become known to the inhabitants of the Mountain side, and that did not bode well for them. [Dimitriev, 1986, p. 34]. In this situation, the peoples of the Mountain side could no longer remain indifferent observers and obedient executors of the imprudent orders of the Kazan governor. They had to do something as soon as possible. Their search for the right solution is described in the unique Mountain Mari legend about Akpars written in the 19th century.

The elders and diviners—"muzhans" gathered at "the great assembly". They realised that the resumed war would not bypass their villages and that their houses would be burned, their property ransacked, their crops trampled, and all those who would not find shelter would be taken as prisoners or killed. After long reflection and disputes, the "great assembly" decided to send scouts to Kazan and Moscow, who were called "eyes and ears" in the legend. They were instructed to collect as much information on each of the parties as possible and then to report to the elders. The "eyes and ears" managed to fulfill the task. Upon their return, the "great assembly" was convened again. Those who had come from Moscow were the first to report. They reported as follows, "The Tsar of Moscow firmly sits on the throne; he has many servants and troops, and all of them honor him as a God of the Earth; the treasury is rich; there is a single law, and the law is observed." The scouts who had come from Kazan reported as follows, "The Tsar of Kazan is weak on his throne; tsars are changed very often in Kazan, there are riots, and the law is not observed...it is bad there...And the main thing is that they will not resist Moscow. Soon, there will be a new war between Moscow and Kazan." The "great assembly" decided to seek Russian protection and sent a special Embassy to Moscow for this purpose [Ayplatov, 1967, [pp. 88–90]. The decision of the Mountain Mari was influenced by the mass escape of Kazan feudal lords opposing Safa Giray's regime.

¹ Complete Collection of Russian Chronicles. Vol. 13. Pp. 148, 449–450; Vol. 20. Section 2. Pp. 467–468; Vol. 29. P. 49.

The information about the mission of the Mountain side people to Moscow is recorded in several written sources. There is such information in the Nikon's and Lviv Chronicles, the "Chronicle of the Beginning of the Reign", the "Continuation of the Chronograph, edition 1512", the Tsar Book and the Razrjadnaja kniga. They state that on December 6 and 7, 1546, "The Mountain Mari sent two people to make obeisance to the Grand Prince and to ask him to send an array against Kazan, and they would serve for the Tsar"¹. The Razrjadnaja kniga adds that the Embassy was sent by the Mountain Mari and centurion Atachik "with their comrades-at-arms". The next record in the Razrjadnaja kniga reveals the goal of the Embassy of the Mountain Mari people, "...they wanted to serve the Tsar and the Grand Prince and to meet voivodes of the Grand Prince behind the town of Vasil and to go to Kazan with them."². More detailed information on the nature of appeal of the Mari people is given in the "Continuation of the Chronograph, edition 1512", which states that the "Mountain Mari people asked Shahghali Tsar and wanted to go against Kazan and to remove the Tsar of Kazan"³.

The Mountain Mari people could negotiate only with Prikaz clerks and boyars, because Ivan IV was visiting monasteries and was absent in Moscow at that time. The Postnikov's Chronicle of the 1560s states that Ivan IV "came on December 10, at 3 a.m., in the night from Saturday, for a week. He left Prechistye and Tikhvinskiye and came to Moscow, because they wanted to see the Crimean Tsar or Tsareviches in Moscow. And because Prince Kadysh and the entire Kazan land sent three Tatar men to the Grand Prince, because they had laid siege to the Kazan tsar, Safa Giray in Kazan, but Kadysh had only 70 people left. They asked the Grand Prince to send them his people. And if the Grand Prince says he will send the captured tsar to him, they will do it.

And if the Grand Prince says to kill him in Kazan, they will kill him"⁴.

The arrival of the Mountain Mari and Chuvash Embassy in Moscow coincided with the mass influx of Kazan refugees. The Kazan immigrants and the Mountain Mari people had similar interests. They both wanted to overthrow Safa Giray and to seat the Moscow protégé Shah Ali on the throne, with the support of Russian troops. The successful implementation of the plan would lead to a resumption of the Russian protectorate over the Kazan Khanate, inevitably remove the tension between the two countries, create favorable conditions for a long-term peace and mutually beneficial economic cooperation, i.e., would give the peoples of the Mountain side what they wanted most of all.

Obviously, the Russian government did not want to trust the Mountain Mari people and the Chuvashs, who had previously fought against Russia. This explains why the offer of the Mountain Mari people was not fully accepted by the Russian Government, despite its evident benefits.

In February 1547, the Russian troops crossed the Sura river. However, the troops were not large and had a limited reconnaissance mission: "...to fight at the meadow side of Kazan, but not to go to the city...". The Russian army only approached the Sviyaga River, when there were only 30 versts left before Kazan. According to the instructions, the voivodes did not ravage the villages of the Mountain Mari, but attacked the Meadow side. As was promised, the Russians did not face opposition anywhere on the Mountain side. Moreover, some groups of the Mountain Mari wanted to join the Russians in accordance with the agreement, "Many people of the Mountain Mari came to the voivodes," but "having learned that there was no Shahghali Tsar with the voivodes, they returned back, but the voivodes left some of the Mari people and brought them to Moscow."⁵

Thus, we can conclude that the Mountain Mari sincerely wanted to join the Russian ar-

⁵ Ibid.

my, but having realized that they were not going to take any serious action against Kazan, they immediately lost any interest and did not participate in the campaign. This was because Moscow did not fulfill the conditions of the agreement, and the open support of the Russian army would cause severe repression on the part of Kazan immediately upon departure of the Russian army. At the same time, the Russians did not face any resistance.

The final determination of the political orientation of Mountain side peoples was affected by the successful turn of the war in favor of Russia. In September 1548, the Russians stopped the Tatars' attempt to ravage the Kostroma territories; in March of the next year 1549, they repelled the last raid of the Kazan Tatars against Murom, whereupon the initiative was fully transferred to Russia. This was favored by Safa Giray's unexpected death due to an accident in early March¹.

Upon Safa Giray's death, there was a dynastic crisis in Kazan. The adult sons of the deceased Khan's, Mubarek and Bulyuk, were in Crimea, and in Kazan. There was also a 2-year-old son, Sujumbike Utemish Giray, and a 12-year-old son born by a Russian captive. None were suitable for the role of a Kazan Khan. One of them was too small, the second was considered defective due to his Russian origin, which was really unjust, as later he died in the defense of the city on a rampart. A special embassy was sent to invite one of the tsareviches to the Crimea, but it was attacked by the Kasymov Tatars on its way. They had to proclaim the baby Utemish Giray a Khan (1549–1551), subject to Sujumbike's regency.

For Kazan, Safa Giray's death meant the end of the unity achieved through cruel executions. The Kazan Chronicles report that "upon the Tsar's death, there occurred great unrest in Kazan; there were riots and evil among the noblemen: lesser Kazan residents did not want to listen to their superiors who were ordered to secure the country; and all of them thought that they were powerful and wanted

to rule Kazan, and killed each other for this" [Kazan history, 1954, p. 83]. All people understood the harm of continuing the war with the Russian state, but saw the way out in different ways. Some hoped for the help of the Muslim countries and allowed the possibility of peace talks with Russia only for the tactical purpose to avoid a Russian attack. Essentially, this was a way to continue the war. Others saw the way out in making peace with Russia and were ready to reach a compromise and accept Moscow's protege as a khan. Discussing the situation, they said, "We cannot do without Moscow, and Moscow cannot do without Kazan. The Crimeans would leave and go away." [Ambassadorial books, 1995, pp. 301–302, 321, 323] The pro-Eastern ideas turned to be stronger. The supporters of the opposition were forced to flee from Kazan to Russia and the Nogai Horde. The Kazan Chronicles state that many Tatars "fled from Kazan to Moscow to submit to the Tsar and to serve him" [Kazan History, 1954, p. 83]. The Tsar gladly accepted the emigrants, appointed them to service and gave a good salary. This stimulated further emigration. The Russian government was interested in engaging the Kazan nobility in its service. They sent letters to the Nogai Horde to invite the representatives of the Kazan nobility living there to serve the Tsar. For example, in February 1549, such letters were sent with the ambassador I.B. Fedtsov to Beyurgan Sayyid, Ileman Prince and Abdullah Bakshey. "You wrote in you letter that you do not like to live in the Nogai Horde, so go to Russia with our ambassador Ivan. When you arrive, we will give you a good salary and home, so that you will be able to live here until there is Kazan yurt," Ivan IV wrote to the refugees [Ambassadorial Books, 1995, p. 276, 297, 301–303]. The results were immediate: in 1551, there were more than 500 Kazan princes, mirzas, and cossacks in Moscow². In 1552, the number of Kazan refugees in Russia, taking into account their families and servants, amounted to 10,000 [Kazan History, 1954, p. 83]. In 1549, they wrote a petition to the Tsar to send Shah Ali to the position of a

Kazan khan. Ivan IV watched over the events happening in Kazan and knew that upon Safa Giray's death "all his noblemen and all the Kazan residents were devoured by great outrage, abuse, and willfulness. ..." [Ibid, p. 85]. He decided to immediately take advantage of the weakened and rioting Khanate to attack Kazan with a view to placing Shah Ali on the throne and restoring the protectorate. According to the Tsar, the large number of emigrants were to support the Moscow protege [Ambassadorial Books, 1995, pp. 301–302]. In July, a meeting of the Council of boyars took place, which was attended by Macarius, the Metropolitan of Moscow. They discussed the issue of continuing the war with Kazan. It was decided that Ivan IV himself should go "as soon as winter starts"¹.

On January 23, 1550, a 60-thousand Russian army moved to Kazan. On their way, they "were fighting in many places on the Mountain side, the Arsk and the Meadow sides, and took many prisoners"². However, the winter campaign of 1549/50 did not bring victory. The Kazan Government was headed by a Crimean uhlan Koschak, who managed to organize the defense of the city. Russian sources differently explain the reasons for withdrawal of Russian troops from Kazan. Some chronicles state that this was due to warming [Tatishchev, 1966, p. 169]. Ivan IV in his letter to Yusuf, the Prince of Nogai, wrote as follows, "In winter, we were fighting in Kazan, and killed many people in the city of Kazan, and took others as prisoners. And we went from the city, because it got warmer, and the Kazan river burst its banks. And it was impossible to stay in Kazan because of the warmth." [Ambassadorial Books, 1995, p. 327] There really was a sharp warming, and it is confirmed by many chronicles³. However, it was not only the bad weather that made the Russian troops retreat from Kazan. Several chronicles and A.M.

Kurbsky briefly state that during an unsuccessful attack, the Russians "did not seize the city, but a lot of people from both sides were killed"⁴. A resident of Astrakhan Hoja, Tarhani Sherifi, who took part in the defense of Kazan, indicates that there were considerable losses among Kazan men, especially those who suffered from the Russian artillery, as well as incalculable losses among the Russians. According to him, the "two troops having drowned in iron were equally fighting and struggling against each other...This battle was like the Judgment Day, the world was filled with the sounds of daggers, and blood was flowing like a river in the city of Kazan". Kazan won. "The sinful infidels, having thus died, were lying on the two plains of the fortress and were food for dogs, wolves and hyenas. There was no place to put a foot," Sherifi writes [Sherifi, 1995, p. 92].

The failure of the campaign showed the following: 1) the success of the Russian army in winter largely depends on the natural elements; 2) isolation from the bases had a negative impact; 3) the Russians were shown once again that Kazan residents, despite internal disorders and weakness of the Khan's power, had a sufficient and military and material potential and a will to resist. All the above circumstances prevented Russia from achieving a decisive victory. At the same time, Kazan suffered such significant losses that it became apparent that the city would inevitably collapse under less favorable conditions. This was also proved by the purely defensive tactics of Kazan. They were unable to fight on a field or chase a retreating enemy.

Ivan IV began to prepare for a new campaign against Kazan already on his way to Moscow. It was clear that the Russians needed a base near Kazan. The Tsar decided to construct one in the Mountain side. According to Ivan IV, construction of a fortress in the immediate vicinity of Kazan would "cramp

the Kazan territories"¹. The Tsar discussed the issue with the voivodes, Shah Ali, and Kazan immigrant princes. The idea of building a fortress was approved by all of them. The Kazan princes and Shah Ali even showed Ivan IV a place in the mouth of the Sviyaga river on the Round mountain that was convenient for building a fortress².

During the winter of 1550/51, the materials needed to construct a fortress were prepared in Uglich forests under the guidance of a talented engineer and a prince's scribe I.G. Vyrodkov. The plan was to disassemble fortress walls that had been previously built, to transfer them down the Volga up to the right place and to build a fortress under the enemy's nose.

By April 1551, everything had been ready to carry out a new campaign against Kazan. Not a siege of Kazan but construction of a fortress on the Sviyaga was to be the key moment in the campaign. To cover the construction works, several military groups were formed. The navy under the command of P. S. Serebryany was to act the first and occupy the place of the future construction, and then to attack Kazan and thereby restrict the Khanate's forces. After that, ships with the disassembled buildings were to move in. The protection of the ships and construction of the fortress was entrusted to regiments under the formal command of Shah Ali and Yu.M. Bulgakov. A detachment of 500 Kazan immigrants was a part of the army. The Chronicles state that "the Tsar had many people". In the South, the construction works were protected against possible attacks of the Crimeans or Nogais by an army of D.I. Hilkov that moved in the steppe. The Vyatka and the Kama rivers were taken under control by the Vyatka residents headed by Bakhteyar Zyuzin. The crossings in the Volga river were to be controlled by Cossacks, to prevent "military men from going to Kazan"³. The troops were ordered to

"seize the Kazan territory and to spare neither women nor children, nor old or young, but to bend everybody under the sword" [Kazan History, 1954, pp. 86–87]. Therefore, the plan was to carry out diverting attacks and blockade the Khanate's center to demoralize the enemy, simultaneously with the construction of the fortress.

The attack began on May 16, 1551, and was going successfully. By the evening of the following day, the Russians had approached the Round Mountain on the Sviyaga River, and in the morning on May 18, they quietly approached Kazan and successfully attacked the posad under the cover of heavy fog. The appearance of P.S. Serebryany near the city was a great surprise for the Tatars. "He came to the suburb in secret and killed many people; they captured many people and took them as prisoners, and killed more than a hundred princes and mirzas, as well as numerous ordinary people, their wives and children," the Chronicle states.⁴

Uluses of the Khanate were also attacked. The Kazan Chronicle reports that Russian voivodes "began to fight in Kazan uluses and captured many Mountain Mari and Meadow Mari people [Kazan History, 1954, p. 87]. This allowed the builders, who arrived on May 24, to freely perform their work. In four weeks after the commencement of the works, the fortress walls had been already erected, and by July 30, a city had been already constructed that was called Ivangorod-on-Sviyaga. However, the name did not last for long, and the city was then called after the river—Sviyazhsk.

Such an unexpected and rapid construction of a Russian fortress near the center of the Kazan Khanate greatly impressed the contemporaries. In Kazan, they could not believe this fact and thought that the Russians erected just a "Gulyay-gorod" (a mobile fortification). "When Kazan residents understood that a true city had been erected, they became sad and upset," the Kazan Chronicle states [Kazan Histo-

¹ Complete Collection of Russian Chronicles. Vol. 13. P. 159, 461; Vol. 20. Section 2. P. 477; Vol. 29. P. 59; the Tsar Book. Pp. 158–159.

⁴ Complete Collection of Russian Chronicles. Vol. 13. Pp. 164, 465.

ry, 1954, p. 92]. There were serious reasons to worry, since Kazan residents understood what benefits in war the Russians would have with a base near Kazan. The Tatar Chronicles say that "the Russian infidels built a fortress in the mouth of the Sviyaga river, where they stored their guns, money and reserves" [Catalanov, Pokrovsky, 1905, pp. 7, 11, 16, 21].

The construction of the fortress boosted the morale of the Russian army: "And the Russian army became happy and enthusiastic about fighting against Kazan and all its people." [Kazan History, 1954, p. 88]

Of course, the political situation in the Mountain side was taken into account while developing a campaign plan for the summer 1551. On the whole, it was favorable for Russia. Since 1547, the population of the Mountain side had faced a choice and adopted a waiting, neutral position. It formally retained submission to the Kazan Khan, and at the same time, refrained from participation in the war against the Russians. The final determination of the political orientation of Mountain side peoples was affected by the successful turn of the war in favor of Russia. The construction of the fortress on the Sviyaga river with numerous garrisons and the beginning of new devastation in Mountain Side by the Russian troops finally persuaded most of the local population to defect to the Russian side. This was favored by the fact that Tatar feudal lords, who lived on the Mountain side, had fled to Kazan and could not influence the doubting population. "Mountain people, having seen that a city of an orthodox tsar had been erected in their land, began to come to the tsar¹ and the voivodes and to make obeisance to the tsar to make him pity them, and he would order them to move to Sviyazhsk and not order them to fight in war."² The Kazan Chronicles add that "the elders and the sotniks of the Mountain Mari people" came to make obeisance to the tsar on

the third day after the commencement of the construction, i.e., on May 26 [Kazan History, 1954, p. 88]. The Book of Degrees states that the Mountain people who lived near the city under construction "began to swear to the tsar and to help in the city construction, to bring bread, honey, cattle, and other products"³.

A message on successful actions of the Russian forces, the construction of a new fortress and obeisance of the Mountain people ("the Mountain people want to serve the Tsar") was sent to Moscow by a Prince of Kasymov Shabas Shamov and a boyar I. Shishkin. Soon, the Mountain people "representing the entire Mountain Side again petitioned the boyars and Shah Ali asking for permission for their delegation to visit Moscow. It was apparent that Mountain Side would inevitably be included in Russia, so local elders deemed it necessary to negotiate the conditions of this act with the Russian tsar. The permission was granted, and a delegation led by Magmet Bozubov and Akhkubek Togaev left for Moscow. In Moscow, "Magmet and his fellows made obeisance in the name of the entire Mountain Side, princes and mirzas, sotniks and desyatniks, the Chuvashes, Cheremises and Cosacks, and asked the tsar to spare them and to let them live near Sviyazhsk, and swore to the Tsar that neither they nor their children would leave the Tsar or defect to the side of Kazan, and asked the Tsar to reduce the tribute to be paid and give them a letter of grant and instructions as to what they should do". "The Tsar spared them, and ordered they not be fought and that they might live in Sviyazhsk, and gave them a letter of grant under a gold seal; and revealed them from paying the tribute for three years; and provided a good salary, furs and money to Magmet and his comrades. " However, in his turn, Ivan IV demanded that the Mountain people should "serve the Tsar and the Grand Prince and want only good for him, and not leave the city of Sviyazhsk, and pay the tribute and quitrent as ordered by the Tsar and as they paid it to the previous tsars, and not maintain Russian captives, and free all of them". On these conditions, in June

¹ This refers to Shah Ali, who was a formal leader of the military contingent, building Sviyazhsk. Apparently, the presence of Shah Ali among the troops was not insignificant in influencing the decision of the Hill Mari to become Russian subjects.

² Complete Collection of Russian Chronicles. Vol. 13. Pp. 164, 466; Vol. 29. Pp. 61–62; the Tsar Book. P. 170.

³ Complete Collection of Russian Chronicles. Vol. 21. P. 641.

1551, "the voivodes administered the oath of the Mountain people, princes and mirzas, sotniks and desyatniks, the Chuvashes, Mordvins, Mozhars and Tarkhans"¹. Thus, in June 1551, the Mountain Side peacefully joined Russia.

According to the Chronicles, it was the initiatives of the Mountain Mari and Chuvashes to make obeisance to the Tsar, but the oath was also taken by the Mordvins and the local Tatars. The latter included many of those who opposed to the current regime in Kazan. One of Chuvash legends tells that in December 1546, during Moscow negotiations, a sotnik Anchik assured Russian boyars that the "Tatars would be glad to see the Russians, because many of them were disappointed with the Khan, because his servants, warriors were robbing in the country" [Dimitriev, 1983, p. 62]. This legend really reflects the anti-Crimean sentiment that existed among the Tatars.

However, Moscow had had a rich and diverse experience of relationships with the peoples of the Middle Volga and were afraid of a possible insidious betrayal. It was necessary to take measures to strengthen the position of the new followers of the Russian Tsar. They decided to test their faithfulness. They were told as follows, "If you promise to be faithful to the Tsar, prove your faithfulness, fight against the enemy." The Mountain Mari and the Chuvash armed themselves and attacked Kazan. From a military point of view, the operation was unsuccessful. When the group came to the city, "all the Kazan residents and the Crimeans went out to them, and were fighting hard against them, and many people from both sides died. Kazan residents brought guns from the city and cried and shot them; and the Mountain people and the Chuvashes got afraid and ran; and Kazan residents killed around a hundred, and captured around fifty people"². However, the campaign demonstrated the sincerity of the peoples of the Mountain Side in their wish to become Russian citizens.

Gifting or subornation of local noblemen was another measure aimed at enticing

Mountain Side people to Russia. This was one of the traditional means used by the Russian government in the relations with Tatar states. The Chronicles tell about this as follows, "Around five or six hundred Mountain people came to the Tsar in summer, and the Tsar gave them gifts and fed and drank them at his table. Prince, mirzas, and sotny Cossacks were presented coats and furs; and other Chuvashes and Mari people were presented with damask and atlas; and young people were gifted accordions, and cloth, and squirrel coats; and all of them were presented armor, horses and money by the Tsar." This unprecedented generosity of the Tsar caused general surprise of Moscow people. Even in the Chronicles, there is such an exclamation, "The Tsar's gifts to the Mountain people does not become poor, and the Tsar gifts them more and more. He has already gifted many items of value, and gifts them more things than to his warriors. In previous Chronicles, there is no information on similar expenses as the Tsar now spends on his new residents. The measures of the Russian government soon brought positive results. The Mountain people "began to act faithfully and to serve the Tsar, and to fight on the Meadow side and to get informers there"³.

The joining of the Mountain Side to Russia was a difficult and a controversial event. Long-term relationships with Russia and weakening of contacts with Kazan created social, economic, and political prerequisites for peaceful entry of this part of the Khanate in Russia. However, tearing off a part of the single State's territory could not go smoothly. The population perceived the events in different ways; there were proponents and opponents of such joining; but the majority of the population were clearly unsure. In the conditions of a long war, the Mountain people most of all suffered from its consequences and did not get effective protection from Kazan. Once the preponderance of Russia's power became evident, the majority of the population favoured Russia. Although the Mountain

Side joined Russia peacefully, it was a forced rather than voluntarily movement, under the influence of external circumstances. The Mountain people petitioned for their acceptance only after Russia had brought its considerable troops to the Mountain Side and had begun to build the Sviyazhsk fortress. The peaceful and, at the same time, complex nature of the joining of the Mountain Side was also noted by A. Kurbsky, who stressed that the Mountain people "had to submit to the Russian Tsar, irrespective of whether they wanted to do it or not" [Legends, 1833, p. 19]. The words of Russian diplomats told at peace negotiations that soon started in Kazan can be interpreted in a similar way; they claimed that the Mountain Side was seized by the Tsar with "the Mercy of God and his sword before they petitioned to accept them"¹. Nevertheless, there was no armed conquering of the Mountain Side; the active actions of the Russians only accelerated the process of peaceful entry of the indigenous peoples in Russia that had already started earlier. Ignaty Zaitsev's *Chronicles* drawn up in 1555–1556 state that the "Mountain Mari people peacefully submitted to the Grand Prince in summer 7059 (1551), in June, when the city on the Sviyaga river was built" [Zimin, 1950, p. 18]. The joining of the Mountain Side to Russia predetermined the further fate of the Kazan Khanate and marked the beginning of the entry of the entire Volga and Ural regions into Russia.

The successful actions of the Russian troops within the campaign of 1551 clearly demonstrated that the government of the Crimean under uhlán Koschak and Tsarina Sujumbike was unable to ensure the security of the country which led to a deterioration in the relations between the Kazan natives and the Crimeans, "the Kazan natives and the Crimeans began to argue". This led to a situation, when "the Chuvashes" came "to fight against the Crimeans, because they do not submit to the Tsar". They managed to prevent the rebellion, but the Kazan natives did not want to be subordinate to them any longer. There began unrest among them; many princes and mirzas left to serve

the Russian Tsar². Having lost their hope of remaining in Kazan and fearing a revolution, 300 Crimeans led by uhlán Koschak left their families and servants and attempted to leave the country. However, they were captured by a Russian outpost while crossing the Vyatka River, were partially killed and partially imprisoned and sent to Moscow, where they were executed when they refused to get christened³.

The Crimeans' flight from Kazan created conditions for peace negotiations. To avoid a complete defeat in the war, Kazan was forced to make significant concessions. Russian diplomats insisted that the 5-year-old Khan Utemish Giray and his mother, a regent Sujumbike, should be removed and deported to Russia. The Russian protégé Shah Ali was declared Khan for the third time (1551–1552). According to the agreement, Kazan was obliged to deliver up all the Crimeans remaining in the Khanate and release Russian prisoners. The announcement that the Mountain Side had become a Russian territory was very unexpected for Kazan and caused particular displeasure. The conditions of the peace agreement dictated by Russia were very strict. The Kazan noblemen and Shah Ali Khan under their pressure began to strongly demand the return of the territory which had been torn away, "And all of them began to talk about the Mountain Side that it was not appropriate to split the territory." In response, the boyars "following the Tsar's instructions, said that nothing could be changed; what is given by the God to the Tsar, cannot be disposed of"⁴. Having achieved no concessions, Kazan had to reluctantly approve the terms of the peace agreement. The *Chronicles* state that "all Kazan residents swore to be faithful to the Tsar. They did it in groups of one, two or three hundred people, not just a few of them"⁵. In September 1551, the Kazan nobility touched upon the issue once again, trying to persuade the

⁵ Ibid. P. 169.

Russian government to settle for a compromise. Agreeing to accept the transition of the Mountain Side to Russia, they asked him to at least "give them the tribute paid by people in the Mountain Side"¹. However, a categorical denial followed again. Ivan IV planned not only to retain this important bastion for Russia, which controlled the entire Volga Region, but also to weaken the Kazan Khanate economically depriving it of the main source of the tribute. This would inevitably increase the Khanate's dependence on Russia. Kazan ambassadors were categorically told that "no funds received from the Mountain Side would be given to Kazan"².

The tenacity of the Russian Government significantly worsened the interstate relationships. The puppet ruler Shah Ali could not defend the interests of Kazan and therefore quickly lost the authority that had already been very low. His orders were sabotaged; Kazan was not going to release Russian prisoners. Even the Kasymov Tatars from the Khan's entourage began to acquire Russian slaves. Because of his fear of a revolt, he was unable to fulfill all the requirements of Russia, which caused irritation in Moscow. The followers of the Eastern party, who had begun to work actively to eliminate the Russian presence and remove the unwanted Khan, took advantage of Shah Ali's unstable position. Many Kazan princes, mirzas, and uhlans went to the Nogai Horde where they incited the Nogai to attack Russia. In Kazan, they were preparing for a rebellion. Trying to forestall his enemies, Shah Ali started to apply repressions acting as usual in accordance with an insidious scenario. Having invited his opponents for a feast, he ordered that they be killed, "...The tsar's princes killed those who were indoors, and the Grand Prince's Streltsy (riflemen) killed those who were in the yard, and Streltsy were ordered to kill others in the courtyard..." In total, 70 princes, mirzas, and uhlans were killed. However, the murder of the noblemen just exacerbated the atmosphere and subsequently the collapse of Shah Ali's regime became inevitable. In December 1551, he desperately

told the Russian boyars, "I cannot live in Kazan any longer, I have undermined their faithfulness."³ The Khan was offered the help of Russian people to strengthen his power. Shah Ali objected, "I do not want to convert the Muslim into my faith and do not want to betray my Tsar, the Grand Prince..."⁴

In January 1552, the pro-Moscow part of the Kazan nobility, namely the princes Nur Ali Shirin, Khorsov, and Alemerdin Azey offered to remove Shah Ali Khan and to accept that the Kazan Khanate become part of Russia, with assignment of a Russian boyar to the position of their governor. At the same time, Kazan should retain certain autonomy⁵. It is not excluded that the appeal of the Kazan nobility to Ivan IV was inspired by the ruling elite of Russia. This opinion is expressed by some historians [Fakhrutdinov, 1995, p. 229; Florya, 1999, p. 39]. S. Alishev admits that the initiative of such a decision belonged to the Kazan Tatars who wished to save Kazan from conquest "with the help of a voluntary but tolerable subornation" [Alishev, 1995, pp. 108–109].

Russia's policy towards the Kazan Khanate was being built gradually in accordance with the current circumstances. There was no well thought-out plan as to the conquest of Kazan. All the attempts of some historians to reconstruct such a plan on the basis of the events are only a doubtful retrospection. The results achieved within the campaign of 1551, i.e., the appointment of a vassal ruler Shah Ali on the throne, the release of prisoners and submission of the Mountain Side were considered a final solution of the task, and contemporaries perceived this success as a "bright victory achieved without blood"⁶. According to the Russian government, "the Kazan question" had been solved. Until January 1552, the Russian government had tried to turn the Kazan Khanate into a formally independent vassal state headed by an "obedient" Khan and similar to the Kasym Khanate in its nature. Already by September 1551, Shah Ali was advised to

"strengthen Kazan for the Tsar and for himself and make it like the town of Kasymov, to make it stable during his reign and afterwards, and to prevent wars for many years to come"¹. We should note the anticipated long existence of the Khanate. The Russian boyars supposed that the Khanate would remain independent not only during Shah Ali's reign, but also when led by his successors. In November, an order was issued "for the khan to firmly strengthen Kazan as a Town for the sovereign, to prevent the flow of Christian blood"². However, it was undesirable to accept the Khanate as a part of Russia, because it led to considerable material costs. It would have moved the Russian borders towards nomads' camps of restless eastern hordes and inevitably cause a deterioration of the relations with Muslim countries. Only in January 1552, when it became clear that Shah Ali could not control the deteriorating situation, and there was a threat of a rebellion, the Russian government decided to peacefully include the Khanate in Russia under a contract with the Kazan residents. This also envisaged the provision of autonomy and a replacement of the Khan by a Russian governor.

Prince S. Mikulinsky was assigned to the position of the Kazan governor. Following an order received from Moscow, Shah Ali left Kazan under the pretext of going fishing on March 6, 1552. At the same time, he managed to take away other 84 representatives of the opposing Kazan nobility and bring them to Sviyazhsk by deception, to spoil gunpowder and guns³.

The news about removal of the hated Shah Ali and joining Russia was approved by a significant part of Kazan residents. They reported from Kazan, "that the entire Kazan state was glad to join the Russian Tsar, that they swore to be faithful to him, and that envoys were going to the boyars". At the same time, the event was so uncommon that caused a controversial reaction. While agreeing to submit to Russia, Kazan residents were waiting for the coming changes with a troubled anxiety. The opposi-

tion immediately took advantage of this. When the Russian governor approached Kazan on March 9, 1552, Tatar princes Islam, Kebyak, and mirza Aleksey Narykov left his entourage. They rode to the city, closed the gates, and declared that the Russians were allegedly going to kill all the Tatars. They referred to the words of the Kasymov Tatars and even Shah Ali. It is possible that the Kasymov Tatars might have spoken in such away against the people of Kazan but it had nothing to do with the plans of the Russian government. The massacres committed by Shah Ali were remembered by the Tatars, as well as participation of Russian strelets. The defectors' words lit a fire in Kazan like sparks falling on a dry straw. The defectors themselves may have been victims of a fraud on the part of the Kasymov Tatars and involuntarily doomed the Kazan population to death. The Kazan Tatars took up weapons wishing to defend the freedom and independence of their state⁴. S. Mikulinsky was told that "Kazan was a free state that wished to have a tsar whom they wanted and who would secure his people and exile or kill evil ones" [Kazan History, 1954, p. 111]. Sources indicate that the Russians had no plans for repressions against the Kazan population, and the governor's forces were not enough for this purpose. They tried to settle the misunderstanding and therefore did not perform any military actions in relation to Kazan. On the contrary, the supporters of the war among Kazan residents acted resolutely out of fear of a possible reconciliation. They "sent an envoy to the Nagai Horde to ask its tsar for help, and started to perform military actions in the Mountain Side to force its people leave the Russian Tsar. The Mountain people killed two of their envoys, namely Shahchura prince and Shamay mirza. And having seized them, they brought them to voivodes, and the voivodes spared the Mountain people and executed the betrayers"⁵. However, the Kazan Tatars continued their attacks, and the Russians performed no counteractions. There began an outbreak of a disease among the soldiers of the Sviyazhsk garrison,

"A great outbreak of scurvy happened among the tsar's people, many of them died because of sores, and others were dying, and both, boyars, Streltsy, and Cossacks fell ill."¹ The failure of the peaceful joining of the Kazan Khanate was mainly due to the lack of relevant prerequisites.

The population of the Mountain Side submitted to Russia peacefully, but forcedly, and therefore perceived this new position ambiguously. When the Russian military presence in the Mountain Side had weakened, a part of the population rose in a rebellion under the influence of Kazan propaganda. The rebels approached Sviyazhsk and seized herds of cattle and took boyars' children as prisoners. They managed to defeat two groups of Cossacks, and killed 101 people². According to the academician M.Tikhomirov, "The main role in this rebellion of the Mountain people belonged to the Tatars." [Tikhomirov, 1973, p. 113] It should be noted that some Chuvashes living in accordance with Tsivili also took part in the rebellion. However, only some of them participated in it. When the spring came, the epidemic in Sviyazhsk ended, and troops arrived from Nizhny Novgorod. The rebels, having no reliable support among the local population and no support from Kazan, were quickly defeated³.

The Kazan embassy arrived in the Nogai Horde requesting military support and that they send a tsarevich to the Khanate. The Astrakhan tsarevich Edigur Magmed Kasaevich was near at the hand of Prince Yusuf. He was sent to Kazan accompanied by Zeinesh (Dznesh) and Toruy mirzas as a detachment of soldiers [Continuation of the Ancient Russian Vivliotics, 1793a, p. 30]. Another message states that Edigur Magmed allegedly went to Kazan without the knowledge of Prince Yusuf, and a detachment of only 200 soldiers accompanied him. They returned back from Kama, and only 30 people went to Kazan with the Tsarevich

[Ibid, pp. 32–33]. However, the first message is to be relied upon. The anti-Russian position of Prince Yusuf is well known, and a report of a serving Tatar Syuyunduk Tulusupov states that Prince Yusuf's trustee, Jan-Magmet, went to Kazan together with the Tsarevich [Ibid, p. 53]. Upon the arrival of Edigur Magmet in Kazan and his proclamation as a Khan, the renewal of the war became inevitable.

In April, Moscow hosted a meeting of Tsar Ivan IV and boyars "about his raid to Kazan", where it was decided to undertake a campaign immediately without waiting for winter. On June 16, a large Russian army led by the Tsar began its campaign against Kazan. The Crimean Khan Devlet Giray did his best to ruin the campaign. The Tatar horse cavalry reinforced by Turkish janissaries and artillery appeared near Tula. However, the Crimeans were in haste, the Russian troops had not gone far away and easily managed to repel the attack and force the enemies to leave the Russian territory⁴. After that, the troops continued to move towards Kazan in several groups. On August 4, they approached Sura, where the Tsar was met by Sviyazhsk voivodes with the news that the rebellion in Mountain Side had been suppressed with the help of the reinforcement. Those meeting the Tsar included the "Mountain people, Yantuda mirza and Buzkey and Kudaberdey with their comrades". "The Tsar called the Mountain people and pleased them with his speech. He forgave them their guilt and let them go to Sviyazhsk, and told them to build bridges across the rivers bridges Bridges and clear the narrow places on the road." Several days later, the Tsar was met by those who had participated in the rebellion. They "swore that they were retreating" and justified themselves that they "had betrayed the Tsar because they were afraid of being killed by Kazan warriors". These envoys were also "forgiven by the Tsar" and invited at his table. Letting them go, the Tsar told them "to be ready to go against Kazan with him". The Mountain people expressed their wish to serve the Russian Tsar⁵.

⁵ Ibid. Pp. 200, 496.

The Russian troops going through the Mountain Side were friendly and welcomed everywhere. The local population cleared and expanded roads and "built bridges across all the rivers". A participant of the campaign, Prince A. Kurbsky later recalled that the Chuvash and Mari people meeting them were "glad to see the Tsar" and sold them bread and cattle. "The Mari bread is the tastiest, better than the best kalatches," the Prince admired it even many years later [Legends, 1833, pp. 18–19]. However, the support was not limited to food delivery and repairs of roads and bridges; 4,000 Mountain Mari and Chuvash soldiers merged into one of the regiments of Ivan IV¹.

Having joined near Sviyazhsk, the Russian hosts crossed the Volga. A small Tatar detachment tried to prevent the crossing, but was forced to retreat. On August 23, the Russian troops started the siege of Kazan. They were great in number; most historians indicate 150,000 [Alishev, 1995, p. 127]. These figures are probably overstated. I. Izmaylov stated that the Russian army amounted to 50–60 thousand people, including 3 thousand of Shah Ali's Tatars [Iskhakov, Izmaylov, 2005, p. 96–97]. The Russian army included the Temnikov Mordvinians led by Prince Enikey, the Kasym Tatars with Shahghali Khan, and Gorodets Tatar servicemen under the supervision of Ak-Seit Cherevseev, as well as the Chuvashes and the Mountain Mari people².

The Kazan troops were divided into three groups. The largest was protecting the Khanate's capital. According to Kurbsky, it amounted to 30,000 soldiers [Legends, 1833, p. 24]. The Kazan Chronicles contain data about 40,000 soldiers and add that a total mobilization of the entire male population had been carried out in the city, including sick and infirm ones; even some women were armed, and about 5,000 eastern merchants who were in Kazan at that time were also mobilized against their will. This ensured another 10,000 defenders [Kazan History, 1954, pp. 133, 135]. The Kazan flotilla stood on the Volga.

The second group of 15–30 thousand warriors headed by Prince Yapanchey, Shunak mirza, and Arsk Prince Evush was protecting the road leading to Arsk and, being in close proximity to Kazan, had to attack the sieging troops from the side of the Arsk Field. In addition to the Tartars, Udmurts and Mari people, the troops included 2,700 Nogai people, who had come to help the Khanate³. The Mari militia was acting independently from the side of the Galitskaya road. Their flotilla stood upon the Volga. I. Izmaylov writes that Kazan could possess more than 20 thousand people (3 thousand Nogais, 10 thousand Tatars, the 5-thousand Yapanchi's army and Mari people) [Iskhakov, Izmaylov, 2005, pp. 96–97].

There is no doubt that the Russians exceeded their opponents in number by 2–2.5 times.

Ivan IV sent the Kazan Khan an offer of surrender promising to save the lives and property of Kazan citizens, but received a resolute refusal.

The advanced and the large regiments attacked from the Arsk Field; the right-hand Cossacks regiment occupied the right bank of the Kazanka River; the guard regiment was located in the mouth of the Bulak river; the left-hand regiment was located along the Bulak river. The Volga corps with Shah Ali Khan were also located here. Behind them, the Tsar's regiment was in the reserve, where the headquarters of Ivan IV was also located. Kazan was surrounded by a solid circle of trenches, paling and gabions (baskets filled with earth). They were constantly bombarding the city from guns and arquebuses from the rampart and the 13-meter-high siege tower with 50 guns, causing heavy losses to the besieged people.

Interacting with each other, all the three Kazan groups began to cause considerable losses to the Russian troops from the first day of the battle for Kazan. On a signal from the minaret of the city mosque, Kazan warriors would make sorties, and the Mari and the Tatars would attack simultaneously from the forests. The first such sortie of 15 thousand people was carried out on August 23. Kazan warriors managed to defeat the Russian "ertaul" (mounted

reconnaissance detachment), but the Streltsy's counterattack forced them to retreat. Attacks from the rear were particularly bothering; they were undermining the morale and physical strength of Russian soldiers. The transport and the rear of the Russian troops suffered most of all "from frequent attacks of the Mari people". Even many years later, A. Kurbsky exclaimed, "The attacks of the Meadow Mari caused the worst damage to those Christian regiments in the Arsk Field, as well as to us, who were on the Galitskaya road." [Legends, 1833, pp. 24, 27] The Kazan Chronicles describe the partisan attacks of the Mari in a similar way, "But the Mari people were the most evil, they attacked Russian troops from the forest at nights and days, killed or took soldiers as prisoners, and took away herds of horses. " [Kazan History, 1954, p. 131] The most significant attack occurred on August 28, "...Many Kazan people came from the forest to the Arsk Field and suddenly attacked the front-line regiment..."¹

The Russian voivodes knew out of their bitter experience how catastrophic regular attacks on the rear of the besieging troops can be for the whole campaign. "And the Tsar, the Grand Prince, and his voivodes were very upset because of this. " [Kazan History, 1954, p. 131] At a meeting of voivodes, it was decided to carry out a campaign against the enemy attacking from the rear. On August 30, the voivodes A. Gorbaty and P. Serebryany lured Kazan warriors from the forest with the help of a pretended retreat, then cut them off from the forest edge and having surrounded, defeated them. The fleeing enemies were pursued 15 versts up to the Kiliri river. V. Tatischev writes that 140 people were captured as a result of the battle. Chronicles and lists of noble families state 340, 440, and 740 people, and Kurbsky indicates the maximum number of about 1,000 prisoners².

However, the surviving Kazan warriors gathered on the fortified Vysokaya Gora mountain located non far from Kazan, re-

grouped and renewed attacks on the Russians. Another campaign against them was required. On September 6, an army headed by voivodes A. Gorbaty, A. Kurbsky, S. Mikulinsky, etc. started an attack on the Vysokaya Gora. The Russian troops were reinforced by Tatar servicemen, the Mordvinians and some groups of the Mountain people. The fortifications on the Vysokaya Gora were defeated after a fierce, but a short battle. On the third day of the attack, the Russians took Arsk without any fight. "And they defeated the Arsk territory, killed many people, and captured their wives and children as prisoners, and released many Christian prisoners. "³ The Kazan Chronicles describe the victorious march of the Russian troops across the Kazan territory as follows, "And they filled the entire Kazan territory with their warriors, cavalries, and infantrymen, and all the fields, mountains, and meadows were covered by soldiers, and they spread around the entire territory like birds, and were fighting,

and capturing Kazan and its territory, wishing to conquer all the territories near Kazan. And many people were killed, and the barbarian land was covered with blood, and all the forests, lakes, and rivers were filled with the bones of the Mari people." [Kazan History, 1954, p. 127] The Russians burned several Mari stockaded towns "and captured 5 voivodes alive, and 500 other Mari people with them, and also captured their wives and children." [Ibid, p. 132] Over 10 days, the troops took 30 large and small stockaded towns, and the total number of prisoners reached 5,000 people; many resources were captured, "...they took numerous items and cattle..." [ibid] A. Kurbsky also writes about large amounts of captured grain, cattle, and furs [Legends, 1833, pp. 31–32].

The victorious campaign should have put an end to the partisan actions in the Russian rear, however, just four days after the campaign, according to Kurbsky, "Many Meadow Mari people gathered and attacked our rear from the side of the Galitskaya road, and destroyed many of our herds of horses. " The pursuers sent after them caught the Mari peo-

ple "and killed some of them, and captured others" [Ibid, p. 32]. Only then did "the Mari people stop attacking the Russian from forests" [Kazan History, 1954, p. 132].

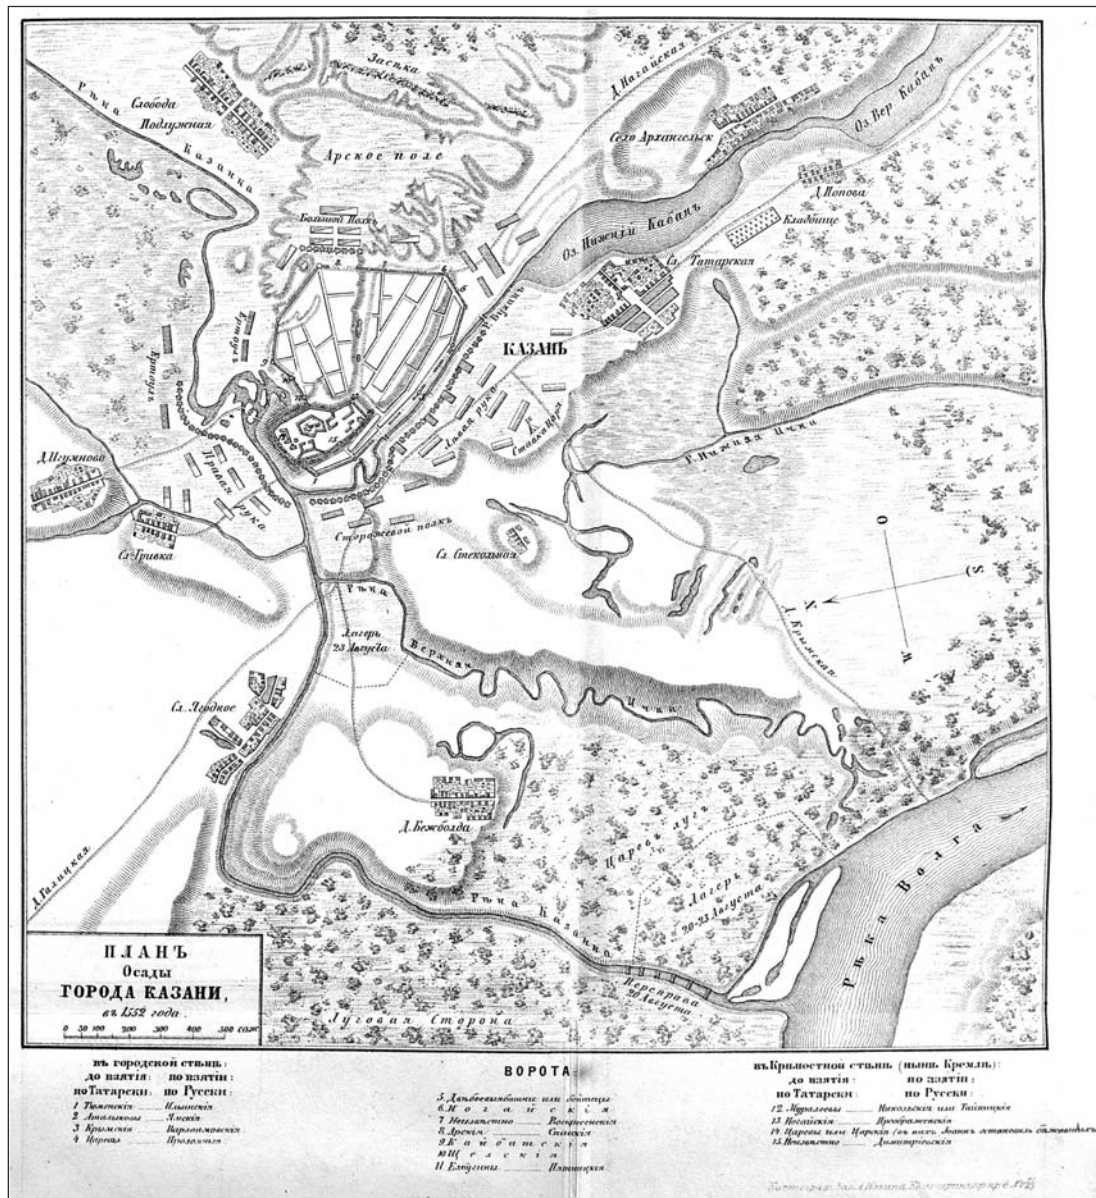

The success of the Russian troops in defeating the Arsk group and Mari detachments significantly worsened the situation of the besieged people, and they were forced to abandon their attacks.

The innovations of the European military industry were used in the siege. Mines were dug under the walls by Italian, German, Lithuanian, and Russian experts. The Kazan Chronicles report that a Kaluga serviceman, Yuri Bulgakov, involved in the protection of the work tried to inform Kazan citizens of the direction of the mines by sending arrows with letters to the city. The Kazan warriors did not know how to deal with it and could not prevent it. After the capture of the city, Bulgakov's betrayal was brought to light, and he was executed [Ibid, pp. 141, 159]. On September 4, 11 barrels of gunpowder were used to blow up by the city's main well, making it difficult to supply water to the besieged people and resulting in increased morbidity and mortality. Water was not of good quality in other wells of the city.

The situation further deteriorated upon receiving the news that neither Nogais nor Bashkirs were going to help them. Some Kazan residents began thinking about surrender, some of them defected to the Russian camp, including Kamay mirza [Ibid, p. 134; Bashkir Shezhere, 1960, p. 217].

Ivan IV decided that this was a convenient moment for negotiations and tried to incline the Tatars to surrender the city. For the purpose of negotiations, Kamay mirza defected to the Russian side and the Mountain people came to the fortress walls seven times. Even the Tsar participated in the negotiations wearing the armor of an ordinary simple soldier in order not to be recognized¹. The captured prisoners, whose number had already approached 7,000 by that time, were repeatedly brought to the fortress walls, to persuade Kazan rulers to surrender their arms. Ivan Tsar offered the

The siege of Kazan by the troops of Ivan the Terrible
[Golitsin, 1877–1878].

citizens tolerable conditions of surrender of the city [Kazan History, 1954, p. 133; O'Leary, 2003, p. 321]. However, the persuasion was in vain, and the majority of Kazan citizens were ready to fight up to the end.

Angered with the stubbornness of the Kazan protectors, Ivan Tsar ordered the execution of the prisoners before the eyes of the besieged people. According to the Kazan Chronicles, he ordered that "some be impaled near the city, and others hanged by one foot, and others

hanged by their necks, while other be killed with weapons to frighten Kazan citizens, and watching such bitter death of their citizens, they would be frightened and would surrender the city and submit to the Tsar". Some prisoners were tied before the Russian fortifications to beg the city's defenders to surrender. They were shot by Kazan warriors from bows to stop their torment. In accordance with the Kazan Chronicles, the dying Mari prisoners were begging Kazan citizens: "We wish you were

killed in the same cruel way, as well as your wives and children" [Kazan History, 1954, p. 135; Legends, 1833, p. 30]. However, the demonstrative savage reprisals with the prisoners had the opposite effect—Kazan warriors resolutely decided to fight up to the end.

On September 30, the walls at the Arsk and the Tsar gates were blew up. The Russians broke into the city and occupied its walls and towers. The With their desperate counterattack, Kazan warriors forced the enemy to retreat, but the Arsk Tower was retained by Streltsy. New walls were hastily built at the site of the destroyed ones. On October 1, Ivan IV issued an ultimatum offering mercy. Kazan rejected it saying, "We will either die or win."¹

By this time, the Kazan defenders had been deprived of their shelters, their fortification had been severely damaged, the lack of good water had led to outbreaks of diseases, and only despair provided enthusiasm to fight up to the end. A decisive attack was scheduled for October 2, to follow the explosion of the mines. Considerable forces were allocated for reserves and to provide cover for the troops from the side of the forest. Shah Ali with the Tatars and the Mountain people were placed on the Arsk and the Chuvash roads with the voivode I. Mstislavsky².

In the morning on October 2(12), the walls of the Atalykovy and the Nogai gates were blew up. The soldiers stormed into the city through the breaches in 6 columns under the cover of artillery, Streltsy's and archers' fire. The besieged citizens responded with guns, arquebuses and bows, poured boiling tar on the attackers, threw logs and rocks on them, but the Tatars were knocked down from the walls, and the battle continued in the city. Having took advantage of the fact that many Russians began looting, the defenders carried out a counterattack and threw the attackers to the walls, whereupon the Tatars' victory was very close. Only the introduction of fresh forces of the Tsar's regiment to the battle changed the situation. Slowly retreating, Kazan warriors

concentrated at the Khan's palace. Groups of the clergy headed by Kul Sherif and women took part in the last battle. Seeing the hopelessness of the situation, Edigur Magmed Khan and Zaynash mirza surrendered. 6 thousand Kazan residents managed to break through the Russian barriers near the Elbuginy Gates and cross the Kazanka River, but only a few hundred of them managed to hide in the forest. The city's defenders were killed, and property looted. Only women and children were left alive on the order of Ivan IV. However, the warriors, who had become enraged in the battle and intoxicated with blood, killed indiscriminately, and many women and children died. According to Nazar Glebov, about 20 thousand Kazan citizens were killed on the day of the assault. The Pskov I Chronicles report that "Tsar Ivan Vasilyevich, the Grand Prince of all Rus, took the city of Kazan on October 2 with the help of mines and numerous attacks; and he killed all the Tatars in the city, whose number approached 20,000 thousand, and captured others, and the entire city burned..."³ The same number of killed Kazan citizens is indicated in the Kazan Chronicles, which was increased by 10 times for the emphasis. Those killed included "children and adults, young and old, males and females. ... " [Kazan History, 1954, p. 159] According to G. Staden, the dead Kazan citizens were tied to horses, dragged to the Volga, and thrown into the river [Staden, 1925, pp. 113–114]. Some Kazan citizens died during the siege. The surviving women and children, who were greater in number than dead ones, were captured: some of them were sold "to other countries", others were turned into kholops (villeins), and many young women were Christianized and married⁴.

The Russians also incurred considerable losses amounting to 15,355 people according to Nazar Glebov [Kazan History, 1954, p. 159]. The "Synodicon for those killed in war" contains 185 names of princes and military men

killed during the siege of Kazan [Synodicon, 1986, pp. 175–178]. The dead were buried on the Zilantova Mountain near the city. The dead Tatars, Mordovians, Chuvashes, and Mountain Mari people, who were fighting on the side of Ivan IV, were to be buried separately.

It was believed that all Kazan men were killed. However, the Moscow Chronicles mention, for example, "princes, mirzas, and other Tatar officials" were captured in Kazan. According to it, the tsar invited them "to serve faithfully as their brothers served, who had been given appointments in Moscow towns"¹. The deportation to Russia of many "uhlans, mirzas, and Kazan princes with their wives and children" is confirmed by the Kazan Chronicles² and the Tatar Chronicles [History of Tatarstan, 1937, p. 123].

In the first days after the siesure of Kazan, possibly on October 3, a "council" was held to organize the system of government in the conquered territory and establish policy with regard to the indigenous population. It was attended by the Tsar, voivodes, and churchmen. While the first issue was decided unanimously, the issue of policy in relation to the peoples of the Volga Region caused fundamental divergence of opinions. According to A. Kurbsky, most of the voivodes, "all the wise and reasonable", and the prince himself recommended that the Tsar stay in Kazan until spring in order for him to "finally eliminate Moslem warriors and conquer and suppress this territory for many years to come" [Tales, 1833, p. 47]. The method of cruel terror in relation to the conquered peoples was aimed at suppressing the will to resist and was traditional for the medieval Asia and Europe. The victors normally destroyed the defeated peoples or destroyed only the feudal government and occupied their places themselves. The victors would develop caste barriers between themselves and the conquered people [Nesterov, 1987, p. 89]. Extreme radical sentiments were characteristic of a significant part of the Russian army. The proponents of this posi-

tion supported a purely military solution to the problem. Yet in 1549, in his petitions, a nobleman I. Peresvetov advised the Tsar to Christianize all the population after the conquer of Kazan by force, and if anyone did not obey, "to send good warriors to Kazan uluses and order them to burn them, to whip and capture people" [Works, 1956, pp. 182, 208, 245].

The opposite point of view was expressed by Anastasia Tsarina's brothers Danila and Nikita Romanoviches Zakharins, several voivodes, and priests. They suggested the Tsar refrain from military actions in respect to the local population, that he withdraw the main Russian troops from the conquered Khanate and resolve all the issues peacefully at negotiations with the local population.

The moderate approach oriented the government towards a combination of peaceful and punitive measures for the purpose of integrating the conquered peoples in the Russian state. This approach was based on the traditional Russian policy of attracting representatives of neighboring peoples to their side.

Contrary to the opinion of the majority, the Tsar accepted the second viewpoint, which was a logical continuation of Russia's policy in relation to the Kazan Khanate. Previously, they had tried to negotiate with the independent Kazan, and now they wanted to negotiate with the defeated state. The peaceful submission of the territory avoided a difficult, costly, and bloody war and met the fiscal interests of the state. The history of the relations with the Khanate allowed hope for peaceful submission. In 1487–1505 and 1508–1521, Kazan was dependent on Russia as a vassal to a certain degree. Among the Tartars, there were many supporters of concluding an agreement with Moscow. Some non-Tatars were also ready to submit to the Russian Tsar (the inhabitants of the Mountain Side and some Udmurts).

All the people in uluses were sent "charters of grant asking them to submit to the tsar and not to be afraid of anything; and telling that the god would take revenge on those who caused unrest; and that the Tsar would spare them". "And the Arsk people sent Shemay and Kubish Cossacks to make obeisance to the Tsar and present a petition to spare their

¹ Complete Collection of Russian Chronicles. Vol. 34. P. 224.

² Complete Collection of Russian Chronicles. Vol. 19. P. 175; the History of Kazan, 1954, P. 165.

people and order a tribute as former rulers did, and to send a boyar's son to them to inform them of the Tsar's mercy, and gather them, since they had run in fear, and they would go to the Tsar and serve him faithfully." Soon, "the Mari people from the Meadow side came to the Tsar to make obeisance to him, and the Tsar spared them". By the Tsar's order, the boyar's son Nikita Kazarinov and the serving Tatar mirza Kamay were sent to uluses. On October 10, they returned to Kazan with many Arsk people. Simultaneously, "the Meadow people from Yak and many other places came to the Tsar". Negotiations took place where the representatives of the local population asked, "that the Tsar should show them his mercy, and their entire land would make obeisance to him and pay the tribute"¹. Ivan IV ordered a tribute in the amount that was applicable in late 15–early 16th centuries during the reign the Moscow vassal Muhammed Emin Khan, i.e., the amount of the required tribute was reduced. Moreover, the *suýugralnoye* (military) law was canceled, and the population had to pay "direct tributes" to the feudal state², which also had to improve the situation of the people.

The issue of land ownership was also resolved in accordance with the tradition established in the Khanate—the Tsar became the supreme owner of the entire land. Direct ownership of land was retained by peasant communities and local feudal lords, subject to their loyalty to the new regime. After the fall of Kazan, there was neither distribution of land among the Russians, nor enslavement of the indigenous people by Russian feudal lords. Local peasants later explained in their own way why they had not been enslaved by Russian boyars and noblemen. One Chuvash legend tells that riding across the Mountain Side, Ivan the Terrible admired the good field management, the lack of weeds on them, and the rich crops. Eagerly looking at ripening fields, the boyars allegedly asked the Tsar to give them Chuvash peasants, but Tsar Ivan answered them as fol-

lows, "No, no! Let the Tsar's people do this work." [Dimitriev, 1983, p. 90]

To mark the peace, a feast was arranged attended by Russian soldiers and their allies from among the Volga residents, and the representatives of the Meadow Mari, Tatars and Udmurts, who had come to the negotiations. After the feast, the Tsar ordered to "give them seeds, horses, and oxes to till the land, and to give clothes and money to others", and "to let them go to their places to live without fear and to order the voivodes not to offend them in any way and to instruct their people to do the same"³.

Thus, on October 10 (20), the entire territory legally surrendered to the Russian Tsar. It should be noted that during a few days, many representatives of certain families could not come to Kazan because of their fear and distance from the city. It should also be taken into account that the population resorted to submission for fear of a possible attack of troops freed after the conquer of Kazan. Therefore, the petition filed on October 10 did not fully reflect the mood of the population. Moreover, the Tsar's gifts hardly impressed the Udmurts, Tatars, and Mari people. They merely received back their stolen property.

Within a few days after the seizure of Kazan, much work was done to establish the system of controlling the territory. Without violating the traditional control principles applied in the Middle Volga Region, Ivan IV decided to create a system of voivodes' control, with abandonment of the *fief-office* principles that had already become useless in the country's center. It was intended to manage the territory using the loyal national elite, but under the strict control of the Russian officials. The local noblemen, who had recognized the new regime, retained some powers in their positions; they could work in courts, perform some administrative functions, serve in the police or army [Yermolaev, 1982, pp. 11–28]. Alexander Borisovich Gorbaty, Vasily Semenovitch Serebryany, and the *okolnichy* Alexey Danilovich Basmanov were left in Kazan to serve as voivodes. They were to play an important role

² Complete Collection of Russian Chronicles. Vol. 13. Pp. 222, 516.

³ Complete Collection of Russian Chronicles. Vol. 19. P. 169; the History of Kazan, 1954, P. 161.

to maintain order in the region—"to be on the watch". The okolnichy Ivan Bezsonov was to manage the city's affairs. 7,050 boyars' children, Streletsy, and Cossacks were left with them. The Sviyazhsk garrison was smaller in number because of the loyalty of the Mountain people. Princes Peter Ivanovich Shuysky, Boris Saltykov-Morozov and Gregory Petrovich Zvenigorodsky were "to be on the watch". The city was controlled by the boyar Semen Konstantinovich Zabolotsky and Prince Dmitry Michailovich Zhizhensky¹.

On October 11, Ivan IV sailed down the Volga from Kazan to Sviyazhsk and to Moscow on the next day, where he triumphantly entered on October 29. The entire army with their loot and prisoners followed him. The autumn slush had ruined the roads, and the way back was long and difficult. The troops reached Nizhny Novgorod Only in early November, where they were dismissed to their homes. Several weeks later, an uprising for liberation of the Kazan state started in the Middle Volga Region.

Soviet historiography offers three viewpoints regarding the nature of the rebellion in 1552–1557. The proponents of the first one believe that the uprising was a separatist campaign by Kazan feudal lords. At first, the peasantry allegedly followed their leaders blindly, and only later separated from them, having realized the reactionary nature of the uprising [Tikhomirov, 1973, pp. 91–115; Nayakshin, 1951, pp. 108–111; Korobov, 1957, pp. 11–14; Ayplatov, 1967, pp. 69–84; Dimitriev, 1959, p. 129; Dubrovina, 1980, pp. 11–14; Makarov, 1959, pp. 61–72; Ermolaev, 1982, pp. 16–37]. Some other authors state that the uprising was stirred up by peasants and was directed against the established feudal system [Burdely, 1954, pp. 27–36; History of the USSR, 1966, p. 175; History of the Tatar ASSR 1968, pp. 107–110]. There is an opinion that the uprising was developed as a peasant's revolt against feudal lords and at the same time as a separatist rebellion of feudal nobility [Essays, 1955, pp. 364–365, 668–669; Schmidt, 1977, p. 56; Alishev, 1990, p. 237].

Recent studies suggest that the uprising of 1552–1557 was of the people's liberation nature driven by broad layers of the Mari, Tatar, and Udmurt population, organized and led by Tatar feudal lords and the Mari and Udmurt foreman. At the same time, the left-bank Mari people were the main striking force there. Subsequently, their role in the rebellion was steadily growing. For this reason contemporaries called the uprising "Mari wars". In fact, it was not even an uprising, but a continuation of the Kazan war. The events of 1552–1557 can be called an uprising only on the basis of the formal inclusion of the Middle Volga region in the Russian state.

In the context of the struggle against the invaders, the existing contradictions receded into the background before the common goal of national liberation. This allowed the representatives of various social and ethnic groups to unite their efforts and act in a cohesive way.

Tatar feudal lords, the Mari and Udmurt tribal noblemen, as well as the Muslim and heathen clergy became the catalyzing and the organizing force in the rebellion. Tatar feudal lords and the Mari and Udmurt tribal elite were dissatisfied with subordination to the Russian Tsar. Their positions in the Kazan Khanate and Russia differed greatly. In the conditions of feudal anarchy that prevailed in the Kazan Khanate, they felt more independent, while the Tsar's administration required absolute submission. Not wishing to obey the Russian Tsar, Kazan feudal lords said: "We do not want to be helpless pawns of the Moscow ruler and his princes and the voivodes, who have always feared us! We should control them and charge tributes; because earlier they submitted to our tsars and paid tributes, and we originally were their rulers, and they were our slaves; and how dare they, our slaves, go against us, their rulers, who have repeatedly defeated them? Because we have never had a ruler except for our tsar, but even serving our tsar, we do what we want: we go where we want and live where we want, and serve only as we want; and we do not want to live in great slavery, because in Moscow, there live people who suffer much grief from him..." [Kazan History, 1954, pp. 89–90] Although they had suffered great losses as a result of

¹ Complete Collection of Russian Chronicles. Vol. 6. P. 314; Razrjadnaja kniga, 1978, P. 443.

the war, there were thousands of princes, mirzas, oglans, and cossacks left in the Middle Volga Region, for whom war was a common practice. Tatar feudal lords and the Mari and Udmurt noblemen "were closer to people in their blood and clearer in their language and faith than the Russian nobility, who had come to their native land with arms in their hands" [Ermolaev, 1982, p. 17].

The development of the uprising was also influenced by Muslim and pagan clergy. Although Ivan IV had declared non-interference with the religion of the local population, the destruction of mosques, erection of Orthodox churches in their place and the extermination of the Muslim clergy could not but cause serious concerns regarding the future of Islam and paganism. Deprived of their privileged position, the Muslim clergy called for a holy war —jihad against the infidels. A militant Islamic sentiment became the national political driving force. The Holy Quran inspired the Muslims to fight with the infidels. Struggling against them was one of the fundamental precepts of a Muslim [Tsvetkov, 1912, pp. 14–21; Islam, 1986, p. 50]. Following mullahs, the heathen Maris and Udmurts also called for the war.

The development of the uprising in the Middle Volga Region was to some extent influenced by Tatar states. Yusuf, the Nogai Prince, did not hide his dissatisfaction with the Russian progress. The remains of the defeated Nogai regiment had to survive under Kazan. With support of the Turkish Sultan, the Crimean khan tried to influence the Volga Region and counteract Russia even before the fall of Kazan. Of course, this influence should be exaggerated, and most probably, no organized actions were carried out. It was unlikely that there were foreign agents in the region. It will be more correct to suggest that the rebels were waiting for political and military support from these countries. It was easier to undertake an uprising with such hope.

The view that the social, national, and cultural oppression was the main cause of the uprising, widespread in the Soviet historiography, was not confirmed after academic analysis. None of the sources contain evidence of this. The trite repetitions of allegations of al-

leged oppression are based on two passages from the *Tsarstvennaya Kniga* (Tsar Book). The first says that Ivan IV leaving for the Trinity Monastery of St. Sergius in December 1552 ordered the boyars "to continue controlling the Kazan affairs and charge tributes from their fiefs as long as he was absent, but they, having got tired of such work and not wishing to finish the job and striving for wealth, began charging tributes from fiefs and put aside construction works in Kazan"¹. The Chronicles also state as follows, "And because of the difference and misunderstandings, the following words were told: since the God showed his mercy to Kazan, and we started to speak high-sounding words and strive for money, and not thank the God for this, and thought that we were wise and courageous and forgot to arrange the construction works in Kazan, but only boasted of our pride."² The mistake was in an incorrect interpretation of the expression "to charge tributes from their fiefs". The cited fragments of the *Tsar Book* do not prove the shameless pursuit of tributes from the population of the Middle Volga region. First, the residents of the Left Bank had to pay "direct yasaks (tributes)" directly to the feudal state, but not to fief officers. The population of the Right Bank was released from the obligation of paying the tribute for three years. Secondly, the voivodes' government system introduced in the Middle Volga Region provided for the full abandonment of the fief-office system that had already become obsolete [Ermolaev, 1982, p. 11]. Thirdly, the above extracts from the Chronicles show only that the Tsar on leaving Moscow ordered the Boyar Duma to establish a special control body in the Kazan territory (the future prikaz of the Kazan Palace) and assist the garrisons left in the Middle Volga region. However, according to the Chronicles, the boyars were engaged in a more important business—distribution of fief tributes that were still preserved in the center of the country. This is the accumulation of wealth mentioned in the Chronicles. One should also note that the reproaches in the *Tsar Book* directed

¹ Complete Collection of Russian Chronicles. Vol. 13. P. 523.

² Ibid. P. 528.

at boyars were made in the form of additions written in the fields personally by Ivan the Terrible or on his direct order. Thus, the Tsar tried to shift blame for his numerous mistakes to boyars¹. Fourthly, no land was distributed among Russian servicemen for manor and patrimonial ownership after the seizure of Kazan. Nor were any conditions provided for the administration to harass the local population. Moreover, there was no need to carry out requisitions of food or fodder for the needs of the garrisons, because, according to A. Kurbsky, "there were many resources brought from Russia" to Kazan. According to the prince, even the whole army that had participated in the campaign against Kazan could feed these supplies until spring [Tales, 1833, p. 47]. Moreover, according to the Kazan Chronicles, the Russians "took numerous goods and cattle" to Tatar, Udmurt and Mari villages during the campaign on the Arsk side [Kazan History, 1954, p. 132]. So much cattle was captured that it was sold at giveaway prices and even presented to the Maris, Tatars and Udmurts during the peace talks [Tales, 1833, p. 32; Kazan History, 1954, p. 161].

The collection of tributes was not a reason for the uprising, but a pretext. As mentioned above, the rate of the tribute was even somewhat reduced. Paying the tribute was usual for the population and symbolized submission to the new government. First of all, those who wished to preserve independence had to refuse to pay it. The left-bank Maris were first to do so.

The very date on which the uprising began disproves its anti-feudal nature. The uprising broke out in November 1552, shortly after the withdrawal of the Russian troops from the Middle Volga region. During the few weeks of Russian rule, no feudal oppression could have developed, especially in the national and cultural spheres. Social unrest always develops gradually and slowly and never emerges unexpectedly or quickly. Consequently, the uprising of 1552–1557, also known as the First Cheremis War, was a people's liberation movement.

The first message about an uprising in the Middle Volga region was received in Moscow on December 20, 1552, from a Vasilsursk voivode. It stated that "the Meadow Mari defeated messengers, guests and boyar people, and caught resources on the Volga, and the Mountain Mari participated as well"². It is remarkable that the Tsar had to issue a special decree on punitive action against the rebels, and the voivodes were bound by instructions and did not dare perform repressive actions. Undoubtedly, it was determined by the peaceful nature of the Mountain side's joining to Russia, and the fear of spoiling relations with the local population. By the Tsar's order, the Sviazhsk voivode B. Saltykov-Morozov investigated the incident. The local population that had remained loyal helped to arrest those compatriots who had taken part in the attacks. There were 74 such people. Some of them were immediately hanged; others were executed in a similar way near Sviyazhsk. The property of those executed was seized and handed over to "istsy" (the plaintiffs)³.

Some historical works provide an erroneous interpretation of this term and make the wrong conclusions. According to them, the "istsy" mean those people who helped to find and arrest attack participants. Allegedly, it is they, who were given the confiscated property as a remuneration for their service. Such an assumption is usually followed by a conclusion about the Tsar's special policy of stirring up one part of the population of the Volga region against the other according to the "divide et impera" principle [Khudyakov, 1990, p. 154; Ermolayev, 1982, p. 16; Alishev, 1995, p. 146, etc.]. However, the term "istets" (plaintiff) has remained unchanged since the 16th century and means a person bringing a lawsuit in connection with the incurred damage. Armed assaults of the Meadow Maris and the Mountain people who had joined them, were qualified by the Tsar's administration not as a political but as a criminal act. The punishment

was commensurate to the deeds and fully corresponded to the norms of the medieval criminal law. Those who were guilty were executed, and their property was transferred to the victims, i.e., the plaintiffs. However, taking into account subsequent events, the attacks on the Volga should be considered as the beginning of a people's liberation revolt that initially developed as ordinary robbery.

Nikita Kazarinov, who had arrived in Moscow from Kazan, reported on the second outbreak of the uprising. He reported that "Tugay's children with their comrades" had gathered a group of like-minded people on the Arsk side and "wanted to rebel", but a detachment directed against them under the command of Kamay mirza and him, Nikita Kazarinov, defeated the rebels, and 38 prisoners were hanged near Kazan¹. This uprising resembles a rebellion of oppositional Tatar feudal lords that was not supported by the masses, and therefore, the Tsar's administration easily managed to suppress it.

Kazarinov also reported that immediately after restoring order, they began collecting tributes from the population of the Arsk and the Bank sides, and completed his report with the news that "boyars had collected all the tributes and brought them to voivodes, and sent collectors to the Meadow side"². This news allows the date of the beginning of the uprising to be calculated. If we add the time spent for the journey from Kazan to Moscow (approximately two weeks) to the time required to suppress the rebellion of "Tugay's children" and collect the tribute, the uprising must have begun in late November or even earlier.

Nikita Kazarinov left for Moscow before the return of yasak collectors ("yasak" is a tax paid off in furs), thus he did not know the situation in the region had changed dramatically for the worse. The Meadow Maris refused to pay yasak and killed collectors Misyura Likhorev and Ivan Skuratov. The massacre of the servitors became a signal for the rebellion and

put an end to the existing doubts and controversies among the Mari.

Taking up arms, the Mari went into action by invading the Arsk and Coastal territories. The local Tatar and Udmurt population immediately joined the rebellion.

The nature and the driving forces of the rebel movement changed. The uprising, which began as a demonstration of a small group of Tatar feudal lords and continued with plunder by Cheremison the roads (the latter was not connected to the former)—quickly turned into a nationwide liberation movement, in which all the social layers of the Mari, Udmurt and Tatar societies took part.

Russian commanders initially underestimated the extent of the danger which threatened the Russian presence in the region. From the very beginning, the Tsar's voivodes committed several mistakes. The abatis fortification on the High Mountain was not occupied, though it was a great position to observe Kazan and guard the Arsk road. An attempt to defeat the rebels was not properly organized. The voivodes did not have any information on the adversary, nor did they understand the scale of the revolt. Thus, they underestimated the numerical strength of the enemy. Only two troops of riflemen and the cossacks numbering 1,000 people were sent to fight them. Moreover, the troops acted inconsistently. The poorly organized campaign ended in disaster. The Russian troops on different roads were surrounded by the rebels and destroyed one by one. 350 riflemen and 450 cossacks were lost³. The success inspired the rebels, and the initiative entirely passed to their hands. Having established control over the whole left bank, they blocked Kazan and forced the Russians to hunker down in siege. A Kazan chronicler wrote down that the revolts "in a desire to conquer their city, did not allow the Russian citizens to leave it for their own needs"⁴. The situation was aggravated by an epidemic outbreak in Kazan which caused

several fatal outcomes. However, the insurgents had neither special skills, nor proper weapons and equipment to be able to occupy a well-fortified city. The opposition promised to drag on.

Having gained success, the rebels in February 1553 transferred their military actions to the Mountain Side. The rebel army led by Tatar feudals, Usein Sayyid (Zen-Zayid, Zayzet) and Saryi-bogaty ("bogaty" is an ancient Russian notion of "a mighty hero") appeared in the surroundings of Sviyazhsk. An "under strength" battalion under the command of B.I. Saltykov-Morozov was sent to fight them. The troop consisted of boyar children and the mountain people. However, they were not properly prepared for the operation; nor did they take into account. The weather was not beneficial to the voivode, and the fallen snow hampered the movement greatly. Exhausted and bogged down in the snow, the warriors were suddenly surrounded by the rebels who could easily move around on skis. The tsar's troop suffered an overwhelming defeat. During the battle, 36 knights, 50 Russian, and 170 mountain people were killed; 200 people were captured. Voivode B.I. Saltykov-Morozov fell into the hands of the insurgents, who kept him as an important prisoner and sent him to "Bashkir uluses in remote Cheremisa, 700 versts away from Kazan". This defeat paralysed the actions of the Russians on the Mountain Side and allowed the rebels to block Sviyazhsk, Vasilsursk and initiate attacks against the lands of Murom, Nizhny Novgorod, and Vyatka. It even led to attacks against several Russian cities¹. There was a real prospect of the revival of the Kazan khanate.

However, the restoration never happened. It was prevented by the resistance of the Russian garrisons of Kazan and Sviyazhsk which survived a month-long blockade. Moreover the inhabitants of the Mountain Side remained loyal to the government. The mountain people even resisted those rebels who penetrated the Mountain side. The restoration of the khanate

of Kazan could give nothing to the mountain people. It could only revive the conditions which had existed earlier, and the population of the Mountain Side could again find themselves "between a rock and a hard place". They did not like the Russians either. However, the life under the rule of the Russian tsar seemed more appealing to them, rather than existing as part of the Kazan khanate. The population was given a three-year exemption from yasak and the prospect of political stability, safety, and legality. The negative sides of the tsarism were yet to be demonstrated, while the mountain people had already known what the khan decentralized system was. They knew about Tatar feudals' limitless despotism and the consequences of the devastating wars between Kazan and Moscow. The mountain people did not want to return to the old way. The fact that there were no uprisings on the Mountain side is also confirmed by the absence of punitive actions by tsar's troops. In the meantime, sources contain much evidence of the participation of the mountain people in fighting the rebels. Similar narratives are also contained in the folklore [Dimitriev, 1983, pp. 85, 89]. This happened despite the fact that after the defeat of B.I. Saltykov-Morozov's troop in February-April the rebels were in control of the situation. The Russians were hiding in the cities, while help from the center was on its way. The retreat of Usein-Sayyid and Saryi-bogaty, who had discovered that a cossack army was approaching, was also caused by the resistance of the Mountain side inhabitants.

From the very beginning, the insurgents were striving to achieve unity and self-organization, systematic strategic and tactical operations. Tatar feudals become the leaders of the movement. The rebels, despite taking an oath to the Russian tsar, did not consider themselves subjects of the Russian state and sought restoration of the Kazan khanate. They wanted to recreate the attributes characteristic of it. Unable to conquer Kazan, they built a new capital 70 versts away from it, on the Myosha river. It was fortified with a ditch and earth wall and became the rebels' political center. The rebels' strategy was badly affected by a poor leadership. While a part of the rebels besieged the city and tried to raise the

¹ Complete Collection of Russian Chronicles. Vol. 13. Pp. 230, 528; Vol. 20. Section 2. P. 540; Vol. 19. P. 186; the History of Kazan, 1954, P. 174; the Tsar Book. Pp. 335–336; Tales, 1833, P. 59.

Mountain Side to fight—the only key to the victory,—others went to plunder the Russian territories. This simply dissipated the combat powers and was not a military necessity. The Russian leadership understood more clearly that the hotbed of tension in the East had to be eliminated.

Seeking help from the outside was further proof of the existence of organization inside the rebels camp. In Spring and Summer 1553, delegations of the insurgents headed to Bashkiria and the Nogai Horde. While the Eastern Mari living in Bashkiria joined the rebels, those Bashkirs interested in the Russian patronage and support against the Nogais, rejected the mirzas [Firsov, 1866, p. 119]. In Summer, three rebel messengers led by Shiban arrived in the Nogai Horde. Ismail was considered the most influential mirza, and he was therefore the first whom the messengers visited. They "asked his permission to send his son Magmet-mirza to reign". As a gift, and in order to demonstrate their military successes, they presented the armor of captured B.I. Saltykov-Morozov to Ismail. Ismail, being a loyal ally of Moscow, refused them and "sent them back to Kazan with nothing" [Continuation of Ancient Russian Vivliofika, 1793a, pp. 106–107; Ambassadorial books, 2006, p. 131]. Tatar official, Karamysh Mustoyapov, when informing Ivan IV about the results of these negotiations, stated, "...When Kazan men visited him, he robbed those men and separated wives and children from them," he also menaced "war against the Arsk people" [Continuation of Ancient Russian Vivliofika, 1793a, p. 103; Ambassadorial books, 2006, p. 130].

The beginning of the uprising alarmed the government. The rushed baptizing of the captured Kazan khans was clearly related to the uprising. The baptizing of Utemish Giray who was named Alexander, took place on 8 January, while Edigur Magmet—christened Semion—was baptized on February 26, 1553¹.

Moscow failed to react immediately to the message of the rebellion. The capital was suffering a dynastic crisis during that time. In ear-

ly March, Tsar Ivan fell ill with "grave fever disease"². The patient's condition was so bad that his death was expected daily. There arose the question of succession. A part of court nobility stood for his son Dmitry, born on October 26, 1552, and swore allegiance to him by kissing the holy cross ("kresnoe tselovanie"). Others were against the "suckling infant" and wanted to support the tsar's cousin, Vladimir Staritsky [Skrynnikov, 1983, pp. 48–51]. Given this difficult environment in the domestic policy-making, the government could not take measures to support the garrison in the Volga Region blocked by the revolts.

The successful development of the uprising created a real threat of losing all the Russian acquisitions in the Middle Volga Region. The rebels simply had to force the Russians out of the cities. The ruling circles of Russia were discussing whether it was viable to leave troops in Kazan and Sviyazhsk. The dominating disbelief was that the Middle Volga area could be retained. Prince Semen Rostovsky during secret negotiations with a Lithuanian ambassador assured him, "...The grand prince will not keep Kazan, from now on, it is impossible to hold it." [Russian chronicler, 1895, p. 14] A.M. Kurbsky wrote that many advised the tsar that he had..."...better leave the place and the city of Kazan, and extract the Christian troops from there" [Tales, 1833, pp. 66–67]. A number of reasons speak in favor of this. The war with the Kazan people had already caused a decline in economic activity, since serving people were isolated from their estates. Epidemics became frequent in the Kazan region, and the development of new territories required significant human and material resources [Shcherbatov, 1789, p. 12]. We should also add that involvement in Kazan campaigns was treated without enthusiasm, as they were usually difficult and ended ingloriously. In a letter to A.M. Kurbsky the Tsar exclaimed bitterly, "Have there ever been any campaigns against the Kazan land when you would go voluntarily? You would always go as if a heavy path lay ahead!" [Correspondence, 1979, p. 146].

¹ Complete Collection of Russian Chronicles. Vol. 13. P. 229; Vol. 20. Section 2. Pp. 539–540: the Tsar Book. P. 332, 334.

² Complete Collection of Russian Chronicles. Vol. 13. P. 237.

Proponents of drastic actions and draconian measures, and first of all—prince A.M. Kurbsky,—indignantly rejected the possibility of returning the gains. Even the thought of leaving Kazan seemed criminal, as so much Russian blood had been spilt by the walls of this fortress. In "The History of the Grand Prince of Moscow" A.M. Kurbsky writes, "Those deserve good who not only give birth to a child, but also feed the child, guard the child and bring him up—those who tried hard; only those have the right to suffer and to give advice." [Tales, 1833, p. 67]

But the Tsar himself did not want to leave the Middle Volga Region, even if there was a prospect of a severe war. The annexation of the Middle Volga Region was an important step in the series of measures taken by Ivan IV. The defeat would have taken a toll on the prestige of the Tsar's power and the government.

In Spring 1553, the naval army of courtier Danila Fedorovich Adashev who also led knights and the cossacks was sent to the Vyatka, Kama, and Volga rivers. They were to occupy the ferriages and localize the uprising. This paralysed the rebels' actions and hampered communications with the Nogai Horde. The blockade of Vasilsursk, Sviyazhsk, and Kazan was lifted. During the summer, the outposts destroyed "many Kazan and Nogai people, and throughout the whole summer sent only 240 men alive back to voivodes of Kazan"¹.

At the same time, the administrative and military power was strengthening in the region. The number of voivodes and garrisons was increased [Razrjadnaja Kniga, 1978, p. 445—448].

The government took steps to maintain calm on the borders and neutralise possible allies of the rebels. The situation proved difficult on the Southern borders where Turkey, the Kirim and Astrakhan khanates, as well as the Nogai Horde were preparing to support the rebels. Another Crimean delegation was sent to the Astrakhan khanate and the Nogai Horde. Devlet Giray ordered that "they all join and fight and fought the Tsar and the Grand Prince". Nogai Prince Yusuf responded

to the khan's invitation and started to persuade the mirzas to take part in the joint campaign [Continuation of Ancient Russian Vivliofika, 1793a, pp. 90–91; Ambassadorial books, 2006, p. 125]. The accord was almost reached. Serving Tatars who visited the Horde reported to the Tsar that Prince Yusuf had gathered 120,000 warriors. Astrakhan khan Yamgurchi volunteered to smuggle them across the Volga and add a troop of 500 people. The information had already been sent to the Rivers Khyor and Don. "And Yusuf ordered him to go along the Kirim road towards the Don. And from the Don he had to come to the Ryazan land as soon as the Oka was reached". Horses, camels, and sheep were prepared for the campaign. Yusuf interrogated the arrested Russian ambassadors, "...Could he survive near Moscow after he crossed the Oka?" However, the conflicts which arose between the mirzas as well as Russia's diplomatic efforts destroyed the Crimean khan's plans. The intentions of Ismail and other mirzas did not coincide with the interests of Yusuf. Ismail told the prince, "...Your servants go to trade in Bukhara, and mine go to Moscow. Once I start the battle, I will remain naked, without anything. For those who will start to die, not a shroud will be left." [Continuation of Ancient Russian Vivliofika, 1793a, pp. 101–103; Ambassadorial books, 2006, p. 129–130] Ismail's nomad camps were usually situated near the Volga and Kama. Thus, he had strained relationships with the Kazan people. It was easier for his people to go to Moscow and Kazan for trading. However, for the inhabitants of the nomadic ulus near the Yaik, belonging to Yusuf, it was more convenient to develop trading relations with Central Asia.

Yusuf attempted to enter into an alliance with the Crimea—the Nogais' old rival. Ismail told Yusuf that a captive ran to him to inform that "the Crimean Tsar was marching against them and thus he had better not go. And if you march against the Tsar, you shall not stand against the Crimean tsar, you had better go across the Yaik". Ismail's claim did not reflect the reality, as he represented the Crimean khan as a friend of the Tsar and Grand Prince". Ismail's influence in the Horde was quite weighty, while distrust of the Crimeans was so

¹ Complete Collection of Russian Chronicles. Vol. 13. P. 231; Vol. 20. Section 2. Pp. 540–541.

great that it was enough to him to cancel the campaign [Continuation of Ancient Russian Vivliofika, 1793a, pp. 105–106]. One should not ignore the great ambassadorial work conducted by the Bureau of Ambassadors, as well as the many gifts which the Russian government generously presented to its allies. There was the pro-Moscow party in the Nogai Horde.

After learning about the cancellation of the Nogai-Astrakhan offensive and concentration of Russian troops at the border, the Crimean Khan did not dare to attack Russia alone¹. The breakdown of Nogai-Astrakhan-Crimean offensive was a major victory of Russian diplomacy which managed to keep those countries neutralized for a long time, crack down their alliance, and significantly reduce aid to the rebels.

From the beginning of the summer, a vast campaign against the revolts was under preparation. On December 6, 1553, the army advanced from Nizhny Novgorod. The army was joined by troops of the loyal mountain Maris, Chuvash, Mordvins, and Tatars². The degree of participation of the Mountain people and serving Tatars in the subsequent campaigns was constantly increasing. N.P. Zagoskin wrote, "That campaign represented somewhat of a new conquest." [Zagoskin, 1891, p. 2] The army was led by the best Russian commanders. A.M. Kurbsky characterizes I.V. Sheremetev as a man of extreme wit and wisdom, "skillful in bogatyr matters since his youth". He depicts other voivodes as bright, brave men of noble birth [Tales, 1833, p. 60]. They had already participated in the conquest of Kazan and were acquainted with the conditions of the forthcoming campaign.

The offensive against the rebels began in January 1554 from Kazan. The army was divided into three corps, each of which was divided into three regiments—the large regiment, forward and rear guard. The main voivodes advanced towards the High Mountain, Arsk and further, to the Vyatka. The second squad was sent to the Meadow side. The third troop headed to the Coastal side towards

Myosha and to the Kama river³. The 30,000 Russian army was opposed by 15,000 rebels, who were organized and armed much worse. According to A.M. Kurbsky, the squads had to survive about twenty fierce battles in which the rebels "resisted us savagely". The Tsar's troops were favoured by a frosty winter with little snow which made it easier to move through forests, marshes and rivers [Tales, 1833, p. 60]. The insurgents lost in all the battles. During the 10-day offensive, the Russians occupied the High Mountain, Arsk and proceeded to the rivers Nurma and Urzhumka. Chronicles note that they "fought and fired in every single place". Having suffered significant losses, the rebels began to surrender on all routes. When the troops sent to the Coastal side approached the rebels' capital—Myosha townlet—there was almost no one resisting, and almost all the warriors were gone. The Russians "burnt down the town on the Myosha, beat the people who stayed there and plundered the place to its foundations; all fortifications were razed to the ground. "The surrounding villages, the chronicler continues dispassionately, were all burnt down and the inhabitants—beaten." Further on, the troop proceeded along the Kama for the distance of 250 versts from Kazan "up till the place where the Bashkir language is spoken, as it lies up the Kama river in the direction of Siberia"⁴.

The troop targeted at the Meadow side successfully acted on the rivers Ashit and Ilet. They crossed the Uzhumka and proceeded far along the Vyatka" the Vyatsk volosts" 200 versts away from Kazan⁵.

As a result of a month-long punitive operation, over "ten thousand unorthodox warriors" were destroyed. The leader of the rebels Yanchura the Jew, Mari leader Aleka Cheremisyanin were among the killed. Six commanders were captured. Moreover, "eight thousand Tatar wives and children were taken prisoners"⁶.

² Razrjadnaja kniga, 1978, Pp. 461–462.

The military failures split the rebels. The Tatars and Udmurt people decided to cease further resistance. Their leaders Usein-Sayyid, Taokmysh Shihzyada and Saryi-bogatyr came to the voivodes and "on behalf of the Arsk and Coastal sides they made obeisance that they shall pay tribute to the Tsar and shall never turn away from Kazan till their death; and on this they said the truth to the voivodes". Acting in accordance with the Tsar's orders, the voivodes greeted the rebel leaders in a friendly manner. The others were inspired by that, and "many people visited the voivodes and took the oath—the Arsk people, and the Coastal people—everyone without distinction"¹. On March 25, 1554, the Russian troops returned "to their motherland holding the brightest victory and many gains" [Tales, 1833, p. 61]. The surrendering Tatar feudal lords were expelled from the region and moved to the Pskov, Novgorod, Ryazan, and Meshchovra lands. As a consequence, the majority faithfully served the Tsar and the most reputable ones managed to return to their motherland.

Tsar Ivan highly praised the results of the campaign, and sent rewards to the troops even before the campaign was over. Everyone—from voivodes to knights—were generously granted gold money².

Despite the apparent success of the punitive operation, they failed to completely suppress the uprising. The Mari did not give up their arms. Their forces were not undermined, as their inhabited territories had been hardly invaded. When reporting on the actions of the troops, the voivodes pointed that "there was no war up the Volga along the Kokshaga and on the Rutka rivers"³. The Mari Region remained unconquered. Meanwhile, the Tsar was dissatisfied with excessive cruelty allowed by the voivodes in the course of the rebellion suppression. Moscow initiated an investigation of the circumstances and results of the campaign.

The Tsar himself took part in the interrogation of prisoners. It turned out there had been a deviation from the Tsar's instructions "ordering mercy upon the righteous, and punishment of the evil ones". There was a continuation of the struggle between the two lines regarding the Volga Region population—repressive and moderate. The campaign against the rebels was led by the supporters of the most drastic measures, and as a result of cruel devastation, not only the rebels but also civilians were hurt. The tsar's orientation towards a combination of military and moderate methods in pacifying the region was not fulfilled. What is curious is that Ivan the Terrible, who can never be suspected of excessive sensitivity and philanthropy, later reproached A.M. Kurbsky in a famous polemical correspondence, "What bright victories have you ever achieved and have you ever defeated our enemy with glory? When we sent you to our dominion, to Kazan, to bring the disobedient to obedience, you brought the innocent to us accusing them of betrayal, and those against whom you were sent stayed harmless." However, the reproaches of the cruel Tsar are not completely fair. During the winter campaign 1553/54, the troops were unable to defeat the revolting Mari. Firstly, the offensive deep into the Mari lands became possible only after the defeat of the rebels on the Coastal and Arsk sides, after the removal of the threat to Kazan and after the rear was secured. These took a while. In the course of the month-long offensive, the troops suffered losses and were exhausted, while the Mari squads retreated back to their forests, kept strength. Secondly, the offensive against the rebels was carried out in three different directions, making the interoperability difficult. Thirdly, as the spring was approaching and the thaw was inevitable, acting in unknown Mari forests would be problematic. Thus the combat ability, as well as maneuverability of the troops were significantly reduced. The voivodes wisely decided not to take the risk.

Although the rebellion was not completely ceased, its decline was noticeable. A.M. Kurbsky noted that "from there the Kazan land started to calm down and bend" [Tales, 1833, p. 61]. The defeat of the rebels during the fighting in January–February 1554,

15,000 captives. Cf.: Complete Collection of Russian Chronicles. Vol. 13. P. 239; Vol. 20. Section 2. P. 547; Razrjadnaja kniga, 1978, P. 463.

ended the second stage of the First Cheremis war, which was characterized by the highest degree of activity, greatest number of participants and the widest territorial coverage. Hereafter, even at its peak the rebellion did not reach the scale of 1553–1554. The third stage of the uprising represented a dramatic story of desperate and bitter struggle, which illuminated the approaching defeat in bloody conflict.

The rebellion continued, and its center was finally shifted to the Meadow side. The Maris became the driving force of the rebellion, and their chiefs led the resistance. Centurion Mamishberde became a renowned leader of the rebels and proved himself to be a talented organiser, politician and commander. He managed to unite all the Left Bank Maris into an alliance which constituted, according to A.M. Kurbsky, 20,000 "extremely brutal warriors" [ibid, p. 67].

In the spring of 1554, the administration took advantage of the calm and attempted to start negotiations once more, trying to incline the rebels to cease the resistance and exchange prisoners. Particular attention was paid to the release of voivode B.I. Saltykov-Morozov. However, the insurgents neither accepted a huge ransom, nor did they allow a beneficial exchange of prisoners. They resolutely refused to lay down arms. Failure of the negotiations demonstrated to the Tsarist government that the Left Bank Maris were determined to continue the uprising. Another campaign was needed.

The situation on the international arena was shifting towards Russia. Owing to internal conflicts, Crimean khan Devlet Giray had no capability of acting against Russia¹. In the Nogai Horde, the opposition between those mirzas who supported Moscow and those belonging to the Eastern orientation—resulted in a long murderous internecine war. This created conditions for a strike at the weakest participant of the anti-Russian alliance—the Astrakhan khanate which occupied an important geopolitical position. Controlling Astra-

khan would allow for the significant limitation of communication between the Nogais and the Crimeans. Not only was the campaign against Astrakhan explained by the interests of the Russian government; but also Nogai mirza Ismail—who competed with Astrakhan khan Yamgurchi—since 1553 was prompting Ivan IV to attack Astrakhan. He desired to enthrone Dervish Ali—former Astrakhan khan and Ismail's nephew who was in the Russian service. Ismail expressed readiness to take a most active part in the campaign against Astrakhan [Continuation of Ancient Russian Vivliofika, 1793, pp. 283, 288, 318–219, 332; Continuation, 1793a, pp. 110–111, 122]. In Autumn 1553, Ivan IV and the mirza reached an accord: "The Tsar and Grand Prince shall send the Tsar of Derbysh into Astorokhan, and his commanders will be sent by navy down the Volga, and Ismail will go through the fields and he will send his children and nephews to Astorokhan." That time, they also agreed that Ismail would march against Prince Yusuf "because of his disobedience to the Tsar and Grand Prince"².

Taking advantage of the fact that the most powerful rivals were neutralized, the Tsar sent a 30,000 troop led by Yury Ivanovich Shemyakin-Pronsky down the Volga. On June 29, it reached the borders of the khanate near Perevoloka village. The navy was to join the cavalry led by mirza Ismail, but the Nogais were not at the appointed place. Contradictions within the Horde brought the brothers to the brink of war. Thus Ismail wrote to the Tsar that "he could not march against Astorokhan, because he was at war with his brother..."³ He told ambassador Mikula Brovtsin that "he had no time for Astrakhan, he needed to solve his own troubles" and advised to cancel the campaign. Crimean ambassador Togonash tried to stop the imminent civil war at all costs [Collection of the Russian Historical Society, 1887, pp. 150–151]. The hope of creating an

anti-Russian coalition of Muslim states was being ruined right in front of his eyes. With great effort, the conflict was prevented temporarily, but Yusuf failed to stop the Russians from occupying Astrakhan. On July 2, the city was taken without striking a blow, as the Astrakhanians ran away once they saw the Russians. The Russians laid hands on rich booty, including cannons and arquebuses. Khan Yamgurchi escaped to Azov. Moscow protégé Dervish Ali (1554–1556) was enthroned in Astrakhan¹.

The khan and the returning Astrakhanians swore an oath of allegiance to the Russian Tsar. The Astrakhan khanate recognized the protectorate of Moscow and pledged to pay tribute. Pyotr Turgenev was left as a counselor to the khan and a troop of the Cossacks was left at his disposal [Collection of the Russian Historical Society, 1887, p. 449–450; Tatishchev, 1966, p. 234, 236–237; Valishevsky, 1989, p. 190].

Crimean influence in the region diminished, while the Nogais' dependence on Russia was increased. This fact largely contributed to intensified contradictions within the Nogai Horde. In January 1555, Ismail wrote to Moscow, "My elder brother was angry with me because of my agreement with you." [Continuation of Ancient Russian Vivliofika, 1793a, p. 167] A quite interesting explanation of why the Nogais deserted to the side of the Russian Tsar is contained in the order to the Russian Ambassador to Lithuania Fedor Vasilievich Voksherin. He had to explain to the Lithuanians that after occupying Astrakhan, the Nogais could not spend the winter near that city without "owing allegiance to our ruler...", the Nogais always roam independently, and it will take only one week for service men to subdue them all in case of their disobedience [Collection of the Russian Historical Society, 1887, p. 450]. Ismail and his supporters, feeling the support from the side of Russia, were firm in marching against prince Yusuf. The internecine war was cruel and pro-

tracted. Yusuf died, but his sons continued the struggle, which brought infinite sufferings to the Nogais. Serving Tatar Suyunduk Tulusupov reported that "many Nogai people from the both sides were beaten: the Nogai Horde has never been defeated so strongly since its very creation"².

In the summer of 1554, there was an attempt to inflict a defeat on the Left Bank Maris. Just sworn Tatars and Udmurts led by Prince Kebenyak and Mirza Kulai were sent to fight them. They were also joined by the troops of the mountain Mari and Chuvash. Nikita Kushelev was sent to control them all. However, the experiment failed, the attempt to suppress the rebellion solely by the efforts of the local people was not successful, "the Kazanians deceived, betrayed the tsar, did not stand against the traitors and entered into an agreement with them". It is noteworthy that the side of the rebels was only taken by Tatar feudal lords and the Cossacks, while the peasants refused to participate in the rebellion. For that, the rebels "beat many of those Arsk commoners, who were loyal to the tsar"³. The interests of the feudal lords and the peasantry began to disperse. In fact, a rebellion of the Tatar feudal lords occurred, which was not supported by the peasants. This predetermined the defeat.

Glinski's unsuccessful attempt to do away with the rebels caused destabilisation in the region. The troops of the rebels approached Kazan and "started to enter the hayfields", moved through the Arsk and Coastal sides, and beat Russian fishermen on the Kama⁴.

Soon, the information about a fresh rebellion outbreak reached abroad. Russian Ambassador F. Voksherin, who stayed in Poland in September, was asked, "Has Kazan again detached from your ruler?" The ambassador had to hide the real course of the events, thus he responded, "You seem to be cunning-tongued; those who were beaten, were de-

¹ Complete Collection of Russian Chronicles. Vol. 13. Pp. 241–244; Vol. 29. P. 229; Vol. 31. P. 132; Tatishchev, 1966, Pp. 234–237; Razrjadnaja kniga, 1978, Pp. 467–469.

tached, and they will never return; those who were not beaten,—I know it for sure,—keep paying tribute to the tsar. We are surprised at your words, who will get detached? Only commoners and the Cossacks are left, and no noble man lives there any more—everyone was beaten." [Collection of the Russian Historical Society, 1887, p. 449]

The ambassador feigned and anticipated the events, but he was right at the end of the day. In October, a message was received from Kazan informing of an improvement in the region. A troop consisting primarily of the Tatars loyal to the government was sent to fight the rebels. They were led by princes Yenalei Chigasov and Yenalei Momatov (Monatov). This time, however, they were joined by large detachments of archers led by Afanasy Bortnev and Ivan Mokhnev, as well as "Kazan inhabitants" and the newly baptized. The Russian administration was striving to pacify the region, first of all by the efforts of the Kazanians themselves. Without the support of the population, the rebels were quick to fail: "they beat the daylight out of the traitors". Princes Kebenyak, Kurman-Ali, mirza Kulai Danin and Chebak Baztargaev (Batargaev), as well as many other rebellious princes, mirzas, oglans, Cossacks, and centurions were captured and "the voivodes ordered to beat them all". The very "Arsk and Coastal people caught many Tatars, who did not obey the tsar, and beat them, and even brought some of them to voivodes and killed and beat them in front of the voivodes". During the autumn of 1554, 1,560 princes, mirzas, centurions, and best Cossacks were destroyed. After this, "everyone settled for the ruler and started paying *yasak* in full"¹. This massacre caused irreparable damage to the class of the Tatar feudal lords, from which it was unable to recover.

The Soviet historians interpreted the above described events as a class struggle and argued that the common people rose up to fight not only the feudal system of the Russian state, but also their local feudal lords [Ayplatov, 1967, p. 75; Korobkov, 1957, p. 13; History of USSR, 1966, p. 175]. Surely, there

was no anti-feudal rebellion. The motives of Tatar and Udmurt peasants had nothing to do with classes. They had suffered a lot during the winter campaign and did not want it to be repeated. Their territories were situated near Kazan and thus, were vulnerable. In comparison with princes and mirzas, the peasantry lost the least, if they obeyed. They had no power or fortune, while the desired independence cost a lot. The Muslim states did not support the rebels, and the Maris could always turn back to their forests and swamps, then the Tatar peasants would have to deal with the castigators. The influence of Moscow moods was increased in the region, while the terror of the rebellious princes against the "Arsk commoners" who did not want to join them, strained the relations between the locals and the rebels. The internal cohesion was gone. The rebellious princes, mirzas and oglans were only supported by the Cossacks—not everyone, but "the best", and the top of the Udmurt nobility—the "centurion princes". The rebellion in the Arsk and Coastal sides in the summer and autumn of 1554, is considered a feudal revolt. What is noticeable is that the peasants were not against the feudal class as such, but they fought against those who "did not obey the tsar". The division among the Middle Volga population occurred not because of class or ethnic opposition, but due to differences in political views. Representatives of the nobility and peasantry were present both in the camps of the rebels and among the tsar supporters. In the autumn of 1554, the civil war in the Middle Volga Region acquired a complete form. The tsar encouraged those, who stayed loyal to him, "those Tatars who faithfully serve the ruler" were granted gold coins².

In the autumn of 1554, the Russian government fostered its efforts to eliminate the opposition feudal and tribal elite of the Volga Region peoples, as the most active and organizing force of the rebellion. An interesting fact allowing us to better understand the tsar policy was expressed by Hans Staden, a German oprichnik ("oprichnik" means a life-guardsmen during the reign of Ivan the Ter-

¹ Complete Collection of Russian Chronicles. Vol. 13. P. 247; Vol. 20. Section 2. P. 554.

² Complete Collection of Russian Chronicles. Vol. 13. P. 247; Vol. 20. Section 2. P. 554.

rible). In his essay, he wrote, that "Russian voivodes made friends with some Tatars, invited them on a visit, gave them gold stuff and silver cups, as if those Tatars were of noble origin, and released them back to their lands, so that they would show those presents of the grand prince to those who did not wish to obey, not to say, to serve the grand prince. However, when the latter saw, that people of lower origin, than they, had received such great honor and gifts from the voivodes and higher people, the noble Tatars thought they would be granted even more. This is what the "higher people" in Kazan were hoping for... They invited the most eminent mirzas and princes. .. so that they came and got mercy and presents from the grand prince. The most noble mirzas arrived in Kazan and were met in a polite way. They hoped for a similar reception, just as what their predecessors had, and thought that after receiving presents, they would be able to return home. But, after drinking too much wine and honey—something they were not used to, in comparison with the Russians, they got drunk, and several hundreds of archers came and killed all the Tatar guests, who were the most eminent back in their lands." [Staden, 1925, pp. 114–115] The tsarist government's policy-making was not only tough, but also artful—all's fair in war with enemies.

However, the operations against the rebels did not touch the Maris this time as well. There were messages from Kazan saying that "Mameshbirde and his fellows did not enter the city, but they, just as before, are robbing people on Volga, arriving on boats"¹. The rebellion went on.

In September, Moscow issued the directive of a new winter campaign "to fight the Cheremis in the Kazan lands, on the Meadow side, on the Kokshaga". Serving Tatars and Mordvins took part in the campaign. The urban Tatars were led by Fedor Vasilievich Sisev and mirza Ak-Sayyid. The Kasymov Tatars were under command of prince Aray, the Mordvins from the Temnikov principality were headed by prince Yenikei Tenishchev

and the serving Tatars were led by Temka (Artyom) Fedorovich Ignatyev. On December 6, 1554—Saint Nicolas' Day—the army moved from Vladimir to Kazan².

In January 1555, the tsar troops entered the Mari lands via frozen rivers and marshes. Having reached the "volost on the river Oshla", the voivodes sent three troops to different directions. Each group was also divided into three regiments. Undoubtedly, Moscow had great expectations of this campaign. The scribe even listed all the Mari volosts (districts) which were raided and ruined. Thus, he wrote that "the war came to the volosts in Shumursh, in Khozyakov, on the Oshla, to the two volosts in both Orshas—the Big and Small ones, to Bishta and Kukshul, to Forty Kunshas and Vasilukov Belak, to the volosts belonging to Mameshbirde, Kileyev and Kikin, Kukhtuyal Kokshag—the Big and Small ones, to the volosts Syzal, Dmashi, Monam, Kemerchi and Ulyyazi. There was war in all these volosts, and many people were caught and beaten. Voivode I. Khiron-Yakovlev "was released to Vetluga and Rutky upon the order of the tsar". In Vetluga, taking advantage of the fact that the guard regiment of V. Tokmakov-Nozdrevaty was isolated from the main forces, the rebels committed an attack, but the voivodes managed to repel it and even defeat them³.

For two weeks, the Russian troops were foraging the Mari lands, ruining 22 volosts. However, the expedition did not bring the desired result: using guerrilla tactics, the Maris evaded collision with superior forces and escaped to the Vetluga forests.

In general, the Maris managed to save their forces this time as well. In February of the same year, they launched a counter attack on the Arsk side, intending to prompt the Tatars and Udmurts to take part in the rebellion, however the latter together with the Russian archers took refuge in pits and "hurled back". Accurate arquebus shooting disabled many people in the ranks of the Maris. Embittered by the failure and, to a greater extent, by the fact that the Tatars not only did not join them,

³ Complete Collection of Russian Chronicles. Vol. 13. P. 246; Vol. 20. Section 2. P. 553; Vol. 29. P. 232.

but helped the Russians "to fight the Meadow Tatar villages and attacked the Meadow". A successful raid conducted by Fedor Baskakov also made them retreat. Leading a troop of 700 skiers, he suddenly penetrated deep inside the rebels' rear from the side of Sviyazhsk. "They fought, beat people and captured them; took the animals and that was that"¹. Enraged by the failure, the rebels wiped out the prisoners. B. Saltykov-Morozov, who had been languishing in captivity during two years, was also killed [Karamzin, 1989, p. 124].

In spring and summer of 1555, no active hostilities were conducted, however, the Mari kept on attacking the communications. Russian ambassador to Lithuania Sovluk Turpeyev admitted that "the forest people went to fight on the roads, and Kazan voivodes would execute them when they found them" [Collection of the Russian Historical Society, 1887, p. 479].

Taking advantage of the relative calm in the region, the tsar government implemented a range of activities to consolidate their power. At first, they began with strengthening the positions of the church. In January of the year 1555, the captured Kazan Tatars were baptized. Those who did not want to adopt Christianity "were dropped in the water"². In the meantime, the Holy Convocation was held in Moscow. Senior hierarchs of the church, as well as the tsar himself attended it. At the convocation, they ordered to found a new diocese in Kazan. On February 3, Gury, the abbot of Selikar monastery, was chosen as its archbishop³. When sending Gury to Kazan, the tsar significantly reduced the power of the voivodes, especially over the non-Russian population. The tsar's instruction given to Gury when he was departing is of peculiar interest: A part of the mandative charter was devoted to the relationship with the locals. Gury was ordered to turn the non-Russian population into Orthodox Christians, "always teach the newly baptized the fear of the Lord, keep them by your

side, feed and give them drinks, be gracious to them and take care of them in everything" so that when "the other unchristened see such devotion and grace towards the new Christians, they will get jealous of the Christian law and also enlighten themselves with adoption of Christianity". It was permitted to baptize only those Tatars "who did it voluntarily, not forcedly", Gury was also told, "Let the best stay by your side, and the others send to monasteries to get baptized" The archbishop was to "invite..." the newly baptized Christians "...to visit him often, and treat them to kvass (traditional Slavic and Baltic bread beer), and after the visit—send them honey". The petitioners (or "chelobitchiks") from the Tatars were also to be met with love and treated with food "in a gentle and mild way, without cruelty". The goal was the same: "Bring them to the Christian law". The tsar gave Gury the right of exemption from punishment in case of adoption of Christianity, "...and this Tatar man who was supposed to be punished and who comes to you to escape the punishment and would like to be baptized, you do not give him back to the voivodes, but baptize him." In case the newly baptized were unreliable, they were to be sent back to the tsar, i.e., expel from the region. The Archbishop also had to "ask to leave in peace" those Tatars whom the voivodes sentenced to death. The voivodes had to inform about the Tatars "whose disgrace was not too heavy", but whom they wanted "to execute, but would not be allowed to do so". The Archbishop was advised to "keep them away from punishment, though he would not receive any petition ("chelobitie") from them". The task given to Gury was formulated as follows, "Use all customs, if possible, so that the Tatars get attached to the Archbishop voluntarily, and bring them to baptism with love, never use fear to make them adopt Christianity." [Acts, 1836, pp. 256–261]

The new cathedra was granted vast land areas in Kazan, Sviyazhsk and the surroundings [Acts, 1841, No. 162; Kashtanov, 1970, p. 171]. S. Kashtanov concludes that "the church and monastic estates were implemented in places, where it was most convenient to attack Kazan", in order to eliminate any possibility

of "finding here support, when attempting to occupy Kazan" [Kashtanov, 1970, p. 174].

Then, a new town was founded on the Mountain side, on the Volga coast between Sviyazhsk and Vasilsursk, on the site of a Chuvash settlement. It was the city of Cheboksary. The construction of a new fortress was necessitated due to the fact, that the rebels were acting successfully on the Volga—the essential communication channel connecting the conquered region with Moscow—and did not stop attempting to penetrate the Taw yağı and provoke a rebellion there. On his way to Kazan, Archbishop Gury hallowed the new town under construction [Acts, 1836, p. 258].

In 1555, the Western Bashkirs recognized the authority of the tsar [Essays, 1955, pp. 676–679; Essays, 1956, pp. 61–63; Bashkir shejeres, 1960, pp. 67, 78–80, 101, 108, 117, 127, 150, 165; Usmanov, 1982, pp. 94–97]. They were interested in the Russian patronage and protection against the Nogais and Siberians. Up until the 1580s, Bashkiria was only nominally dependent on Russia. Yasak, which was transferred there, was not a form of taxation, but a legal recognition of allegiance [Essays, 2010, p. 47].

That same year, counting on the Russian support against numerous enemies, Siberian prince Edigur recognized his vassal dependence. That time, he was at the head of the Siberian khanate¹.

The situation in the South was getting more and more difficult. Over there, the sons of dead prince Yusuf were marching against Ismail's Russian ally, while Astrakhan khan Dervish Ali colluded with the Crimeans². The Russians were attacked in Astrakhan and were forced to leave the city.

Mameshbirde was persistent in searching for allies in the Volga Region and outside of it. He clearly understood that without help from the outside, he would not manage to expel the Russian occupants. He managed to prompt the Nogais to send prince Akhpol-bey with his 100 Nogai warriors to support the rebels.

As a result, this squad grew to 300 people³. By this invitation of the prince, Mameshbirde apparently hoped to induce the Tatars to join the rebellion, and also to obtain support from the Muslim states. He was thinking to proclaim the prince the khan of the freed Kazan.

In autumn and winter, Devlet Giray, Dervish Ali, Nogai mirza Yunus, his brothers, and representatives of the Middle Volga rebels participated in the negotiations for the beginning of a joint campaign against Russia⁴. Moscow received the news of the impending Crimean invasion⁵.

The insurgents were also inspired by the futility of the Russian actions against the Volga rebels. On September 8, the order "to fight the Meadow Cheremis" was compiled. A. Kurbsky and F. Troekurov, who were experienced in conducting war against the Cheremis, were sent to fight the rebels⁶. The campaign did not bring the victory. Mameshbirde managed to evade a battle with the tsar's troops.

Measures were taken to isolate the expelled unreliable Tatars from communications with the revolts. In February 1556, Novgorod monasteries were instructed to "strictly guard the Kazan Tatars and newly baptized Christians", so that "they could commit no robbery"⁷.

The offensive, which the rebels initiated in February 1556, had been preceded by substantial preparatory work. Thus, once the Mari units appeared in Arsk and on the Coastal sides, the Tatar and Udmurt people killed archers in the garrisons and joined the rebellion⁸. Unfortunately, the extant sources do not provide explanations on why the inhabitants of Arsk and the Coastal sides joined the rebellion. The actions of the Tatars and Udmurts are especially confusing, considering the fact, that for two years before that, they had been loyal to the government and had even participated in

battles against the Meadow Maris. Undoubtedly, the Mari, Nogai, and Crimean intelligence had a finger in the pie. They might have used persuasion, bribery, provocation, and threats. However, the main reason for joining of the Tatars and Udmurts to the rebellion is seen in a different thing. During those two years of subordination to the tsar administration, the peasants had experienced the despotism of the bureaucratic and military men over and above. Their tyranny spread so widely across Russia that it even caused a threat to the success of the government course. Those serving people who stayed in the region were mostly supporters of tough punitive measures in respect of the local population, and were far from understanding the principles of national state policy-making. They were taking care of their own interests in the first place. Because of the long-lasting service, irregular and incomplete salary payments, many serving people found themselves in a difficult economic condition [Andreev, 1997, pp. 37–43]. During the military actions, the nobles could piece out the shortage through trophies or by selling captives. However, it was not allowed to rob openly during the peaceful times, so the serving people resorted to different kinds of extortion and tyranny towards the locals. Due to lack of discipline, the administration was not always able, and sometimes did not want to prevent arbitrariness, the local population was looked upon as enemies. The discontent festered and finally resulted in a rebellion, the motives of which can be described as anti-feudal.

After gaining control over the Left Bank and blocking Kazan, in March 1556, Mameshbirde with his army of 2,000 warriors arrived in the Mountain side, besieged one of the settlements and started prompting the Maris and Chuvash to join the rebellion. Centurion Altysh pretended he gave his consent. However, when Mameshbirde, surrounded by his 200 fellows, lost vigilance and arrived to the feast, they were made drunk and massacred. Mameshbirde was captured and on March 21 the Mountain people themselves brought him to Moscow. The capture of the rebel leader spurred a surge of enthusiasm in the Russian capital. Many nobles, including A. Kurbsky and tsar Ivan IV were present during the inter-

rogation of the renowned Mari leader. Nothing is known about Mameshbirde's further destiny. This extraordinary person might have been executed or tortured by executioners in dungeons. There is a likelihood that he could be baptized, could have taken another name and served on the Western borders. The Russian government used such practice towards captured enemies. As for Altysh and his fellows, Ivan IV duly appreciated their service. The scribe reports that "the tsar and sovereign granted the Mountain people with great allowance and eased their burden of tribute"¹.

During Mamishberde's interrogations, a story was revealed of the relations between the Mari and tsarevitch Akhpol-bey invited from the Nogai Horde. He had quite an ordinary personality and did nothing special. Although the chronicle recorded the name "*Akhpol-bey*", historians started to call this tsarevitch *Ali Akram*, the brother of Kazan tsarina Sujumbike and the son of Nogai Prince Yusuf. It seems that M. Khudyakov was the first to commit an error, as he wrongly identified this person in his famous book "Essays on the History of the Kazan Khanate" [Khudyakov, 1990, p. 156]. As a result, this mistake became widely spread in historical literature due to multiple repetitions [Zhirmunsky, 1974, pp. 433, 463]. Moreover, no one paid attention to the fact that mirza Ali did not belong to the Chinggis dynasty, that is why he under no circumstances could become a tsarevitch or khan. The rulers of the Nogai Horde were descended from Prince Edigu and always bore the title of Prince. They would never lay claims to the Kazan or Astrakhan thrones. The error of M. Khudyakov was possibly connected to the existing evidence that mirza Ali ibn Yusuf had left to help the Kazan rebels. On December 26, 1553, serving Tatar Devletkhozya Rezanov came back to Ivan IV from the Nogai Horde. In a report to the Bureau of Ambassadors, he said that "Kulai Prince from Kazan visited Yusuf. He asked the Prince for his permission to enthrone his son Ali mirza. Yusuf seemed to let him go, but then got him back. And it is now known why he got him

¹ Complete Collection of Russian Chronicles. Vol. 13. P. 266; Vol. 20. Section 2. P. 569.

back" [Ambassadorial books, 2006, p. 135]. V. Trepavlov reasonably suggests, that Yusuf at first succumbed to entreaties of the Kazanians, but then changed his mind, as he did not want to send his son to sure death. Nuradin Ismail also could have something to do with this, as he would always spoil anti-Russian campaigns organized by his brother.

Moreover, tsarevitch Akhpol-bey, invited by the Mari, died at the very beginning of 1556, while mirza Ali kept being in good health later. In 1556–1557, he actively participated in the Horde's political life and even wrote letters to Ivan IV¹. After 1557, the name of Ali ibn Yusuf is not mentioned anymore. He is buried on the site of traditional entombment of the Nogai nobility in Saraychyq townlet [Trepavlov, 2001, p. 590].

The destiny of tsarevitch Akhpol-bey, as we have mentioned above, was tragic. Steppe riders did not delve in the situation and were not aware of what status the Mari possessed in the Kazan khanate, that is why they treated them as subdued people, terrorized and robbed them. However, the Mari were mostly resented by the Nogais' evasion from participation in military actions. When in winter 1555/56, the Russian launched another campaign against the rebels, they did not manage to successfully resist the castigators². That was the last straw for the Mari, which triggered the rebellion. They slaughtered all the unsavvy allies and beheaded prince Akhpol-bey. When ordering to hoist it on a pike, Mameshierde told, "We had recognized you and your court so that you could protect us; and you did not help us as much as you stole our cows and oxes; and now your head will reign on this pike."³

A complete success was reached by the Russians on the Lower Volga. The Astrakhanians and Crimeans left the city, and As-

trakhan was again occupied without a fight. Scattered across the steppes and isles, the Astrakhanians gradually returned to the city and recognised the authority of the Russian tsar. The Astrakhan khanate ceased to exist⁴.

1556 marks the maximum participation of the Middle Volga Region peoples on the side of Moscow. The Chuvash, Mordvins, Mountain Maris, and Tatars significantly contributed to the region's subordination to the Muscovite state. According to the cadastral book of the city of Kazan of 1565–1568, it is known that the Tatar Quarter contained 150 yards which were inhabited by nearly 6,000 Tatars and Chuvash people. Those were adherents of the administration, and the tsarist government relied upon them in the struggle with the rebels. During the military actions, the Tatars and Chuvash were hiding in the Tatar Quarter. Hayfields near the city were assigned to them. They told scribes that "they were allowed to mow there to get prepared in case the Kokshai or Meadow Cheremis came there with war"⁵. The newly baptized, mostly Tatars, constituted a special group. After changing the confession, the baptized Tatars found themselves in the camp of Moscow. The emergence of voluntary or involuntary supporters of the Russian government was a logical consequence of the policy Moscow conducted to attract the Volga Region population to its side. It is known that the newly baptized and serving Tatars had difficult relations with the opponents of the new government. The Book of Degrees narrates about a baptized Tatar from Arsk named Stefan. His fellow country-men "much reproached him and prohibited him and convinced him to drop the Christian religion". Then they "attacked him severely, with weapons, and cut his body and crushed his bones and robbed his house"⁶.

In April, Kazan voivode P. Morozov at the head of knights, Cossacks, archers, serving Tatars and the newly baptized waged a campaign against the Coastal side and occupied Chalym townlet, which was the center of the rebels,

killed its defenders and burnt it down. In May, that same voivode completed a campaign on the Arsk side. On the Myosha river, he met the rebels under command of mirza Devlyak Danin, the brother of mirza Kulai Danin, who had died in 1554. P. Zasekin, R. Pivov, knights, archers and the newly baptized joined a battle with them. Yenalei Chigasov and Yenalei Momatov led the serving Tatars, as they had already proved themselves as loyal allies of the tsar. The revolts suffered an overwhelming defeat. Many of them, including their leader mirza Devlyak, were captured. "And after this, Pyotr was fighting for ten days across all Arsk places and beat many people and captured an abysmal number of people"¹.

In June, voivodes P. Morozov and F. Saltykov waged another campaign on the Arsk side. This time, military actions went beyond Arsk and the rivers Ashit and Uzhumka. Besides, the troops advanced so far, that they were just 50 versts away from the river Vyatka and "fought heavily and captured many people, and took their wives and children, and beat all men". The rebels suffered defeat after defeat, but fought desperately. Another strike at the Arsk and Coastal sides was needed to break the resistance. Russian warriors and their Volga Region allies "fought in many places and beat many people, and the Arsk side and the Coast were suppressed totally"².

Systematic campaigns of the government troops, accompanied by a total ruin, led to the fact that by the fall the rebellious Tatars and Udmurts laid down their arms and the fighting was transferred to the Mari land. The Maris were again left without allies, had suffered significant losses by that time and had lost their authoritative leader Mameshbirde. However, pressed all around, they kept desperately resisting the united forces of the powerful state and its allies coming from the Volga Region population, and even made impudent raids deep in the Russian lands. Thus, in winter 1556/57, one Mari troop attempted to conquer Soligalich. They failed to take it, however,

the Voskresensk monastery was burnt down, and all its monks were killed [Acts, 1836a, p. 177]. The Nizny Novgorod lands were also frequently invaded. In the Unzhesk district, the Maris killed all Russian peasants [Acts, 1848a, No. 5, pp. 19–20; No. 15, p. 59; 1838, p. 192]³.

In April 1557, they made the last desperate attempt to seize the initiative. Their troops started invading the Arsk and Mountain side, however, they were repelled with huge losses. In Mountain side, Iosif Kovrov, who led the troop of knights, archers and the Mountain people, defeated warriors of bogatyr Akhmatek (Akhmachek) who took up the leadership of the Mari rebels after Mameshbirde had been captured. He was captured. Retaliations by the government troops and their allies led to a complete loss of opportunities for the rebels to resist further. After exhausting their material and human resources, the Maris had to cease resistance in May 1557 and sent their envoys to the Russian voivodes. Centurions Abyz, Yebenyak, sons of Mameshbirde and other commanders made obeisance to the tsar and "admitted their guilts, so that the sovereign could forgive them, withdraw accusations and make them his bondmen, just as the Mountain people, and ordered them to pay him yasak, as the previous tsars had done". Ivan IV readily agreed to the Maris' proposals. Solicitor Semen Stepanovich Yartsev was sent from Moscow to administer the oath to them. Abyz "with fellows" arrived in Sviyazhsk to take the oath, while "Yebenyak and fellows" went to Kazan "to take off their hats". Mameshbirde's sons and centurion Kaka kissed the Book in Cheboksary. Danila Chulkov and Obrazets Rogatov were sent to swear the "black people" or commoners, so that "all black people presented the truth". Leaders Kazimir, Kaka, and Yantemir "with fellows" went to Moscow to go cap in hand to Ivan IV himself. "The tsar and Grand Prince forgave their guilt, conferred them a Deed of Gift, so that they could serve the tsar ever since"⁴.

³ The majority of historians mistakenly refer the latter event to 1587, following the date when this charter was written.

⁴ Complete Collection of Russian Chronicles. Vol. 13. Pp. 281–283; Vol. 20. Section 2. Pp. 582–583; Vol. 29. P. 256.

¹ Complete Collection of Russian Chronicles. Vol. 13. P. 269; Vol. 20. Section 2. Pp. 571–572.

² Complete Collection of Russian Chronicles. Vol. 13. P. 270; Vol. 20. Section 2. Pp. 571–572.

The suppression of the rebellion of 1552–1557 gone down in history as the First Cheremis War allowed Russia to finally include the whole Volga Region in its membership. It was a hard win. A. Kurbsky noted in his memoirs, "...So many Christian warriors laid down their lives, killed by those who had a different faith, who constantly beat them and fought them." [Tales, 1833, p. 59] The rebellion had the nature of a people's liberation struggle, and all Russians were treated as enemies. For this reason, many peasants, monks, and other Russians who had nothing to do with the war suffered. Peoples of the Middle Volga Region were caused an incomparably greater damage. The escalation came to the point, when castigators burnt villages in the rebel areas, destroyed households and killed the entire adult male population there, captured women and children, and made them slaves. After the hostilities were ceased, a census was carried out. Only the Kazan chronicler writes about its results, "And the Kazanians who were left alive, and the Cheremis who survived and settled in Kazan before the occupation and after it counted themselves: in the very city and near the lakes, and those who were captured and died of hunger and diseases, and those beaten everywhere, and those who were known and not known, except for those who were neither known nor noted anywhere—there were gone 757,270"¹. However, the given figure is clearly overstated. It is quite likely that the author of "The History of Kazan" increased it tenfold, which was an ordinary matter in the Medieval times, in order to strike readers' imagination. If our guess is right, the losses of the Maris, Tatars and Udmurts, who were killed, captured, and missing during the time of the Kazan and First Cheremis War, amount to 75,727. This number should also include the losses among the Volga Region inhabitants, who fought for the government troops. We should also keep in mind several thousands of the "not known and not noted".

The reasons for the defeat of the rebellion of 1552–1557, or the First Cheremis War, are as follows. Since the winter of 1553/54, the reb-

els had to deal with the government troops exceeding them in strength by 2–4 times and led by the best Russian commanders. The revolts were worse armed and could not resist cannons and arquebuses. They successfully applied the tactics of guerrilla warfare and ambushes, but they suffered defeats in open field battles with the tsar troops. Archers managed to shoot down the rebels from arquebuses, before they could start close-in fighting. The rebels did not know how to occupy the cities, which became strongholds of the tsarist administration. Neither could they hold their own townlets, thus their fortifications were easily broken down by cannonry. The spread and success of the rebellion were seriously affected by the rebels' inability to control the major rivers, the masters of which were the Russian naval forces, which blocked the rebellion areas and hampered communications with their allies.

The elimination of the opposition feudal lords and influential tribal leaders also contributed to the defeat of the rebellion. The authorities said, that "Kazan people were the best, their princes and mirzas and Cossacks, who were so skillful, are all gone now, while black people all turned into slaves"². The Kazan chronicler counting the losses among the rebels says: "Such a small number of them escaped death in the Kazan land, only simple people, and washy and sickish people, and farmers survived."³ Undoubtedly, the author could not help using traditional narrative techniques of exaggeration and hyperbole. However, the fact that the major part of the nobility was liquidated is manifestly obvious. Russian diplomats in Poland would say: "Only commoners were left alive, while princes and mirzas and different serving people were beaten. Others were brought to Moscow and Novgorod to take an oath to the tsar, so that no further disturbances could happen. And how could commoners live on by themselves now?" [Collection of the Russian Historical Society, 1887, p. 615; Collection of the Russian Historical Society, 1892, p. 8].

¹ Complete Collection of Russian Chronicles. Vol. 19. P. 186; the History of Kazan, 1954, P. 174.

² Complete Collection of Russian Chronicles. Vol. 13. P. 282; Vol. 20. Section 2. P. 583; Collection of the Russian Historical Society, 1887, P. 526.

³ Complete Collection of Russian Chronicles. Vol. 19. P. 186; the History of Kazan, 1954, P. 174.

The Russian diplomacy successfully worked to secure international isolation of the rebels and disorder their plans to create an anti-Russian Union of Muslim States and provide to the rebels. As a result, the Astrakhan khanate was eliminated, the Nogai Horde, Siberian khanate and the Bashkirs recognized vassalage to Russia. Turkey did not find it possible to independently intervene in what was going on, while the Crimean khan did not manage to efficiently influence the events in the Volga Region.

The most important reason for the defeat of the rebellion was the fact, that the tsarist government not only managed to interdict the Mountain side inhabitants from participation in the rebellion, but also created support in the face of Tatar serving people and newly baptized Tatars, who were prompted to actively suppress the rebellion.

The First Cheremis War had a greater impact on the Russian policy-making, than it is considered in the national historiography. Russia's entire foreign policy-making during that period was tightly connected with the situation in the Kazan Region. The relations with the Nogai Horde, Astrakhan, Crimea, and Turkey were directed to disrupt attempts of creating an anti-Russian alliance and preventing other countries from aiding the rebels. Only after suppressing the rebellion in the Volga Region, the Russian state began to fulfill their plans in the Baltics. In 1558, they started the Livonian War and once again came back to the question of recognition of the Imperial title of the Russian state by European monarchs.

The victory of Muscovite state over the Kazan khanate is explained by economic, military, and political reasons. Muscovite state was superior to the khanate in the military-economic potential. The forces of the Russian state were 3–4 times stronger. Moreover, Russia used more contemporary tactics and arms.

Melee weapons the both parties used were in line with the time, but the Russians had a

clear advantage in firearms. There were not enough firearms in Kazan, and their usage was not on a proper level. They were only used when defending Kazan. No other cases are recorded. The Tatars underestimated shotguns. At first, the usual bow largely surpassed imperfect cannons and arquebuses. It took too long to load them and they did not fire in wet weather. Bows could also compete with arquebuses in accuracy. However, firearms possessed incomparable carry and destructive power. In engineering terms, the Russians used European and national achievements (*gulyai-gorods*—mobile fortifications, *saps*, *tarasys*, access towers or *turas*, etc.).

Tatar warriors were better trained, than average Russian fighters. When defending Kazan, they fought bravely and desperately. In the Russian army, those comparable with the Tatars in military skills were knights, archers and contract fighters. However, the Russian army was better organized and had a better system of communications. In addition, for the Russian people, defeating Kazan became a common goal as a continuation of the war with the Golden Horde and securing the country from the troubled neighborhood. All layers of the Russian society were interested in destroying Kazan.

Russian diplomats outplayed the Tatars on all fronts, spoiled alliances and recruited supporters from the enemy camp. The Russians managed to split and win over a part of the khanate population. During the battles for Kazan, the Tatars were only supported by some Nogais, Meadow Maris and a part of the Udmurt people, while thousands of Tatars, Mordvins, Chuvash and Mountain Maris were fighting on the Russian side. The absence of unity and contradictions weakened the country. The inability of the Turkic-Tatars to come to an agreement in the face of strengthening Russia became the basic reason for their defeat this time, in Kazan, and some time later.

CHAPTER 7

Political Development of the Kasym Khanate

Bulat Rakhimzyanov

Speaking of the more than two-century existence of the ethnic political unit which received the name of "the Kasym Tsardom" in historiography, should we believe that it was preserved intact? Or did it evolve in any direction? Was this "tsardom" a khanate or a principality? Or should we consider it as an ordinary administrative unit of the Russian state called "Meshchera"?

Two periods are clearly distinguished in the historical development of the Kasym Khanate. The first one, beginning with its foundation in 1445 and ending when the Kazan "yurt" falls in 1552, is distinguished by the fact, that the Kasym Khanate was attached much importance as a dynastic counterweight of Kazan and the Crimea. That is why the Moscow government was extremely interested in the existence of this "nursery of khans", and especially for the Kazan throne. The second period lasts from the fall of Kazan till the actual elimination of the Kasym "Tsardom" in the middle of the 17th century. It is characterized by the fact that its political entity gradually turns into an anachronism, and the Russian administration takes systematic steps to "dissolve" the Kasymov "appanage" in Russia. The first period is of special scientific interest. At this stage of its existence, the Kasym Khanate possesses greater autonomy in its internal affairs. A shift in the geopolitical situation in Eastern Europe caused by the Muscovite state conquest of the Kazan and Astrakhan khanates leads to a sudden change in the conditions of the Kasym Khanate. It approaches to the state of an appanage principality and quickly loses its territory and the remains of the sovereignty. After the Smuta (or the Times of Troubles), Kasymov irrecoverably turned into a provincial backwater and was almost never found on the pages of chronicles and razryads (i.e. books of noble families).

The Kazan dynasty in Meshchera townlet.

At the very beginning of the last stage of the civil war in the Moscow grand principality, in 1445–1446, sultans Kasym and Jakub served in Muscovy as proponents of Ulugh Muhammad's policy. According to this policy, one of them, Kasym, had been granted Meshchera townlet on the Oka River, which had led to the creation of the Kasym Khanate. Since Ulugh Muhammad concluded the accord with Vasily II and he was the tributary and vassal of the Horde tsar, the tsarevitches supported him. However, in 1447, the political environment changed and new Kazan Khan Mahmud decided to rely on Dmitry Shemyaka, as he was weaker. Meanwhile, the tsarevitches stayed loyal to Vasily II, because during the two-year partnership with him, they found it more prosperous to support the strengthened Grand Prince and tightly connect their political destinies with his destiny. Their calculation was correct. The battle was won by Vasily II and apparently he did not forget about the tsarevitches' loyalty. It is possible that the land possessions of the princes increased even more.

The polarity of the positions of the siblings Kazan Khan Mahmud and sultans Kasym and Jakub is partly explained by their different political fates: Mahmud was at the head of the hostile to Moscow Kazan Khanate, while the tsarevitches, by a twist of historical fate, found themselves among the partners of Vasily II and stayed in the Moscow principality. Thus, for objective reasons, they could not be Moscow's enemies. With the death of Ulugh Muhammad, Vasily II was given a free hand. The absence of support from the side of Kazan, or, possibly, reluctance to accept it from the hands of a patricide, put Kasym and Jakub in an ambiguous situation. Rulers of Kasymov turn from messengers-supervisors into political figures, dependent on Ivan III and the following Russian

tsars. They gradually lost some of the rights they possessed at the first stages of the khanate existence. However, they kept using the considerable degree of independence, especially in the khanate domestic affairs.

The first owner of Meshchera townlet (the future city of Kasymov) sultan Kasym (1445–1469, the years of the rule over the Kasym Khanate) is mentioned in sources only once after 1462, namely in 1467 [Complete Collection of Russian Chronicles, 12, 1901, p. 118; Complete Collection of Russian Chronicles, 6, 1853; Complete Collection, 8, 1859, p. 152; Complete Collection, 4, 1848, pp. 132, 149; Complete Collection, 5, 1851, p. 274]. That year Khan Khalil died in Kazan, and confusion in the matters of the throne succession in the Kazan Khanate prompted some nobles to nominate tsarevitch Kasym for the throne. He lived in Meshchera during that time. Ivan III decided to use this offer and provided a strong military support to Kasym. The Grand Prince hoped to be able to influence the affairs of the neighbouring state through the Kasymov's tsarevitch loyal to him. However, the campaign finished unsuccessfully and Kasym had to return back to Meshchera, where he spent the last years of his life.

There is little information regarding the internal political life of the Kasym Khanate during the reign of its first khan. Only the contractual letter between Ivan III and Grand Prince of Ryazan Ivan Fedorovich gives us information about two statesmen, who worked during Kasym's rule, princes Kobyaka (Haydar's son) and Isak (Ahmad's son) [Spiritual, 1950, pp. 284, 287–288]. Grand Prince of Moscow Vasily II agreed with them about cash payments that were transferred from Ryazan both to Kasymov's tsarevich and to his officials, princes, daragas (tax collectors) and treasurers. Thus, the tsarevitch's top political circles (those "princes" were apparently karacha-beys Kobyak and Isak in this case) played significant role in communications with Moscow.

In the memory of the Kasymov Tatars, Kasym had a reputation of a person, who built the mosque and the first palace in Meshchera townlet. Later on, this town was named after its first owner Kasymov. According to some sources, Meshchera townlet (or gorodok) was

renamed as Kasymov in 1471 [Shishkin, 1891, p. 9], but the broad use of this name began only in the 17th century.

Kasym's son sultan Daniyar (1469–1486) was also actively used by Moscow, but now, in military operations: together with the Grand Prince, he participated in the campaign against Novgorod in 1471 and actively proved his loyalty [Complete Collection of Russian Chronicles, 6, 1853, p. 192; Complete Collection of Russian Chronicles, 8, 1859, p. 162; Complete Collection of Russian Chronicles, 12, 1901, p. 130], together with other Russian troops, he defended the border along the Oka River from attacks of the Great Horde khan Ahmad in 1472 [Complete Collection, 4, 1848, p. 151; Complete Collection, 6, 1853, pp. 31–32, 195; Complete Collection, 8, 1859, pp. 174–175; Complete Collection, 12, 1901, pp. 149–150], in 1477 he took part in the irreversible fall of the Novgorod republic [Razrjadnaja kniga, 1966, pp. 18–19; Milyukov, 1901, p. 13; Complete Collection, 4, 1848, pp. 259–260; Complete Collection, 6, 1853, p. 207, 213; Complete Collection, 8, 1859, pp. 185, 191; Complete Collection, 12, 1901, pp. 172, 179]. Moscow limited his help by Kasymov Tatars' military service. It is possible that Daniyar died in 1486 [Spiritual, 1950, pp. 318, 321, 325, 328].

The status of the Kasym Khanate within the emerging Russian state during the reign of Daniyar is clarified in charters of treaty (for more details see: [Rakhimzyanov, 2009, pp. 115–116]). The following conclusions can be made based on the texts in the charters. Firstly, again, they tell about the "vykhod" or tribute which was paid from the Treasury of the Ryazan grand principality. The money for the "vykhod" was therefore collected from the Treasury of the Grand Principality of Moscow, appanage principalities of the Grand Principality of Moscow, as well as from the Treasury of the Grand Principality of Ryazan, on the territory of which the Kasym Khanate was located. Secondly, besides the "vykhod", sultan and his beys also collected duties, or yasak, both from the local pagan population (the Mordvins, Meschera) and the Tatars ("becermenin" or Muslim). Thirdly, the Ryazan Grand Prince also collected duties from the same population along with the tsarevitch. The Kasym Khanate

was therefore a real financial burden both for Moscow and for Ryazan.

Venetian traveler Ambrogio Contarini, who visited Russia in 1476 during the reign of Ivan III, wrote that the grand prince had been wont to annually visit different areas of his possessions, and, in particular, he had been used to visiting one Tatarian with 500 horsemen whom he had hired to stay on the border with the Tatars in order to protect their state from their attacks. It is possible that by that Tatar, Contarini meant Kasymov's tsarevich Daniyar.

Important information about the status of the ruler of Kasymov and the Meshchera Yurt at the time of its first rulers can be found in diplomatic correspondence. When in 1474 there was litigation over an ordinary case for the middle ages—the "robbery" of Russian tradesmen on the territory of Kaffa, the Kaffians filed counterclaims about a similar "robbery" on the territory of Ruthenia—"that they were robbed by the tsar's Cossacks (Kasymov Tatars. —B.R.)". Grand prince Ivan III responded, "I have already told you that it is the *Tsarevich* (he meant Daniyar here.—B.R.) *who commands the Tokhtamysh dynasty* (our emphasis—B.R.). He has a lot of uhlans, princes, and Cossacks in his service; many people come to serve him and many people leave him; and how can we know who robbed your tradesmen? This robbery never occurred in our lands" [Collection of the Russian Historical Society, 1884, p. 8].

Firstly, we can conclude that Meshchera was somewhat independent—the grand prince makes it clear to the Kaffians that he bears no responsibility for what is going on in the Yurt—its territory is somehow autonomous. It is hard to believe that the Moscow ruler could say the same about developments in any Russian apanage principality. This could simply have been his cunning, but that message could also reflect the medieval reality. Secondly, the underscored lines explicitly show that within the legal norms which were in effect on the territories of the later Horde *Pax Mongolica*, the formal status of the ruler of Kasymov as a Chinggisiid was significantly higher than that of the dynasty of Riurikids subdued by Batu. The historiographical discourse about the decided "puppetness" of Kasymov rulers is nothing but

a transfer of later reality onto the 15th and even 16th centuries.

Kasym and his son Daniyar—the first rulers of the Kasym Khanate—were descendants of Ulugh Muhammad. After the death of Daniyar in 1486, this dynasty ceased its reign in the khanate. The next ruler of Kasymov, Nur Devlet, had a kinship with them (all of them were Jochids and descended from the same branch of that dynasty—from Tuqay Temür), but was not a direct descendant. The Moscow government appointed the rulers of Kasymov arbitrarily, at their own discretion, without worrying about maintaining a single unified dynasty of the khans and sultans of Kasymov. Only occasionally (quite rarely) were the rulers close relatives (usually the father and the son, or sometimes brothers). It is likely that this happened when the deceased ruler had direct heirs. In all the other cases (there are many more of them), the rulers of Kasymov were appointed in accordance with the plans of the Moscow government. It is impossible, even tentatively, to talk of a single Kasymov dynasty. It simply did not exist.

The Crimean dynasty in the Kasym Khanate. The Crimean dynasty, that is, the descendants of the first Crimean khan Hajji Giray, was represented in Kasymov by Nur Devlet (1486–1490) and his sons the sultans Satilgan (1490–1506 with a break) and Janay (1506–1512) (for more details on the rule of the Girays in Kasymov see: [Rakhimzyanov, 2009, pp. 118–138]).

Nur Devlet and Ulugh Muhammad, the ancestor of the Kasymov sultans, were according to the Turkic tradition quite close relatives, not only because both of them were Jochids, but also because they represented the same branch within this dynasty. Ulugh Muhammad was a first cousin once removed of Hacı Giray—Nur Devlet's father. The Crimean and Kazan branches of the Jochids had a similar political fate: both Hacı Giray (the first Crimean khan) and Ulugh Muhammad (de facto the first Kazan ruler) were exiles from Sarai. Therefore, they did not hold in very high esteem the representatives of the Great Horde and of the Astrakhan dynasties. Perhaps that is why the sources do not contain any information on dissatisfaction amongst the highest Kasymov nobility related to the change of Ulugh Muhammad's descendants for those of the Girays. The same cannot

be said about the subsequent change of the dynasty for that of the Great Horde.

By the middle of the 1480s, the foreign policy situation had somehow altered. On the territory of Desht-i Qipchaq a well functioning alliance was created between the Grand Principality of All-Ruthenia (Moscow), the Crimean Khanate, and Kazan. The main goal of this alliance was to restore stability to Eastern Europe and control over the union of nomads known as "the Great Horde" [Keenan, 1967, p. 554]. After the "Battle of the Ugra River", tribute ceased to be transferred there. This significantly strengthened the position of the developing Russian state in the international arena. In 1487, Kazan was taken, and Moscow's protege Muhammad-Amin ascended to the Kazan throne. He ruled in the city until 1495. The khanate was turned into a de facto Russian protectorate. Ivan III was able to enhance his status de jure, not solely de facto. Payments of tribute to Kazan were ceased; the Moscow tsar added the formula "Prince of the Bolgars" to his title, and in the correspondence, the Kazan khan, Chinggisid, started to be called his brother, i.e. an equal monarch. "The Kazan issue" temporarily receded into the background.

The time had come to focus more closely on cooperation with the Crimean Khanate. Despite the Moscow-Crimean union that had been created in 1480, Mengli Giray was still walking a careful line between Moscow and Lithuania. The aim of Moscow's foreign policy was to win over the Crimean khan.

Thus, Moscow used the rule of the Crimean descendants for two purposes: political and military. Nur Devlet—the son of Hacı Giray and the brother of Mengli Giray, who at that time ruled in the Crimea—was a powerful weapon of Moscow's foreign policy-making with respect to the Crimean Khanate. He could lay dynastic claims to the khanate's throne, and this allowed pressure to be placed on the policies of the Crimean Khanate, making Mengli Giray correct his actions in accordance with the line of the Moscow grand prince. Because of this, it was absolutely unnecessary to attempt to enthrone Nur Devlet in the Crimean Khanate.

The Kasym Khanate's military significance for the Russian state during the reign of the

Crimean dynasty is also hard to underestimate. Located on the border, the marvelous military cavalry of the Kasymov Tatars served as a shock force in the struggle against both the Great Horde and the Kazan Khanate. Between 1486–1512, the main forces of the Kasym Khanate were directed to helping Mengli Giray to defeat the Great Horde. It was destroyed in 1502, and the Kasym Khanate played a significant role in its fall. Often, Kasymov's rulers together with the top governing layer of the state did not stay on the territory of the subordinate "apanage", but instead spent much time at the border of the Horde of "Ahmad's Children" and the Kazan Khanate.

Following the shift in the foreign policy environment, the ways in which the Kasymov rulers and their Tatars were used also changed. Campaigns against the Kazan Khanate and the choice of claimants to the Kazan throne came to the foreground. The Kasymov people were also used in military operations against the Nogais as well as in local conflicts.

A few facts tell us about the certain degree of independence of the Crimean descendants in Kasymov and about the ambiguous status Meshchera had in the system of the late Horde states. Apparently, the khans and sultans received one-time payments for each military campaign and action in which they took part [Khoroshkevich, 2001, p. 300]. This is possible how we should interpret the "message" written, most likely, by Fedor Karpov in 1492: "So many times the grand prince sent Tsar Nurdoulat to the tsar Field in order to solve the issue of Mengli Giray, and so many times he sent Tsarevich Satalgan—the son of Nurdoulat—together with the Russian army, and *so many Tatars are rewarded by Ruthenia which pays them a share* (our emphasis—B.R.), otherwise it shall end badly" [Collection of the Russian Historical Society, 1884, p. 370]. The important mission of compensating expenses and losses related to the campaign in the Field in August 1492 was not given to specially appointed people, but the grand prince instead delegated it to the ambassador to the Crimea (which in itself is quite illustrative) who, at the same time as his diplomatic functions, had to perform the duties of a financial agent of the sovereign within the country.

The diplomatic correspondence contains interesting data on the status of the Meshchera yurt. Third-party Turkic rulers (those who never reigned in Meshchera or Kazan) of the end of the 15th and the beginning of the 16th centuries Meshchera (the Khanate of Kasymov) and Kazan (the Kazan Khanate) were often treated as equivalent "places", which tells us about similarities in the status of these formations. Thus, the Nogai prince Ah-Kurt wrote to Vasily III in 1508, "If you would grant *one of those two yurts* (our emphasis—B.R.) to me, and you would..." [Collection of the Russian Historical Society, 1895, pp. 11–15] It is vivid from the context that Ah-Kurt asks him to be "granted" either Kazan, or Meshchera ("two yurts"). Meshchera was called a "yurt" which in the Turkic tradition is a synonym of "state". Consequently, Turkic contemporaries treated the Kasym Khanate as a state entity. Russian appanages, of which the Kasym Khanate was usually considered one, were not similar and so were not treated in similar ways. During the indicated period, Kazan stayed under the Russian protectorate, while Meshchera was under suzerainty of the Moscow grand prince throughout the entire period of its existence.

The Moscow administration also attempted to represent Kazan and Kasymov as "places" that were their equals. In 1517, when communicating with Sigismund Kazimirovich, the Polish king and Grand Duke of Lithuania, Vasily III explained the environment around Kazan thus: "...you see, Zhigimonte [Sigismund—B.R.], you say this without knowing for sure that our father, the great ruler [Ivan III—B.R.], granted the Kazan land to unbelievers. It is done like this: this lasted during the time of our ancestors and forefathers, and during the time of our father, and during my time, *in our states*. By that place, tsars and tsareviches live *on our sponsorship*, and to many tsars and tsareviches who serve us we grant them a place *in our states* their reward" [Collection of the Russian Historical Society, 1882, p. 530].

Now compare this to what is said about Meshchera: "...And the Meshcherya land is *in our state*, and we grant that place to tsars and tsareviches, and they live in those places *on our sponsorship*, and they serve us" [ibid, p. 531]. Both those from Kazan and those from

Kasymov "live" by Moscow's "sponsorship" and "serve" Moscow. Both Kazan and Kasymov are Moscow's property ("our states"): this picture can be seen from the diplomatic correspondence between Moscow and Lithuania.

The Girays' rule left a significant mark on the history of the Meshchera yurt. Even five years after this dynasty ceased to reign in Meshchera, in 1517, the Crimean khan Mehmed Giray treated it as his own "yurt"—"Throughout the ages this yurt has belonged to us" [Collection of the Russian Historical Society, 1895, p. 377]. This is what he said to the scribe Mitya Ivanov who took the place of the ambassador (the Girays treated Kazan in the same way [ibid, pp. 679, 696]). The Crimean nobility also looked upon the Kasym Khanate like this (in 1516, the Crimean mirza Bakhtiyar wrote to Ivan III, "...you know very well yourself that the *Meshchera yurt belongs to my tsar* (our emphasis—B.R.)" [ibid, p. 251] When in 1512, Vasily III enthroned in Kasymov a representative of the Great Horde dynasty which was hostile to Crimea, it spurred widespread discontent in "the yurt of tsar Takhtamysh"—"Does it befit you to invite to our yurt and hold there Shah Vliyar as a ruler over the servants of Bur Devlet and Kasymov?" [ibid, p. 520].

The clan of the Shirins occupied the highest position among the other four clans in Meshchera, and had a special, "jealous" attitude towards it. According to legend, it was the Shirins who conquered Meshchera a long time ago. In the lineage of the Meshchera princes, there is information that "Bahmet Useinov, the prince of the Shirins, came from the Great Horde to Meshchera and conquered Meshchera and settled in it" [Vremennik, 1851, p. 75]. With the change of dynasty, the Shirins initiated a real local war against Moscow and marched towards Meshchera [Collection of the Russian Historical Society, 1895, pp. 377, 520].

Mehmed Giray wrote to Vasily III in 1517, "...Although our people previously and now fought for Meshchera, I have had nothing to do with it. And although I am the brother and friend of the grand prince, I have no claims to Meshchera. And although I can contain my children, I cannot prevent my people from fighting: they all came to me saying that they would not listen to me in this matter. The Shirins wanted

to recruit me to fight for Meshchera, because right now our enemy is ruling there, but *historically this yurt is ours* (outlined by us.—B.R.). And right now my brother, the grand prince, asks me to send my son or my brother to Meshchera; ...otherwise this shall not be in accordance with tradition, as Meshchera has to be conquered. Still we are aware that right now Meshchera is ruled by no man, and there are no Besermen (Muslim.—B.R.) there, as there is no place to live, and I hope my brother has understood my words. I am not writing in a bad way about this tsarevitch to the grand prince, and he shall not do this about me. But who ever heard that a Beserman brought a Beserman captive to another Beserman? The thing is that our people captured a lot of Besermen, though in our Testament it is not written that we can sell a Beserman. But our people made Meshchera Besermen captive and sold them, explaining *that Meshchera is not ruled by our dynasty*... And the princes of Gorodets ordered me, and not alone, that *we should make our kin rule in this place*" [ibid, pp. 377–378].

There is a great likelihood that after the change of dynasty in Kasymov, a considerable part of the nobility of Crimean origin departed back to Crimea—"there are no Besermen people in Meshchera, as there is no place to live". During the Shirins' campaign against Meshchera, not only the Russian population was taken into captivity, but also the Muslims, which the Crimean khan lamented as the least-evil solution. It seems that a section of the population (the upper strata)—"the servants of Nur Devlet and Kasym"—"gorodets princes" who were already used to the Crimeans and found common ground with them, was dissatisfied with the change of the dynasty in Kasymov and wanted the Girays back.

In 1517, the divan (the council of the Karachi beys) rejected the formation of an alliance with Moscow. One of the conditions of the possible coalition was the removal of the "enemy" Shah Ali from Meshchera and his replacement by one of Mengli Giray's sons. Muhammad Giray wrote about this refusal to Vasily III, "...The Shirins, and the Arghyn, and the Kipchak Karachi beys—all our heads, and all the uhlans and all the company commanders did not perpetrate the truth." [ibid, p. 388]

That same year, due to the long lasting feuds between khan Muhammad Giray and his brother sultan Ahmad Giray the issue of "opochiv" or "rest" was raised for Ahmad in Russia. Back in 1515, Vasily III had pledged to accept Ahmad with his children and all his servants, promising him departure without hindrance if he so wished [ibid, pp. 211–212]. In December 1517, this issue became more pointed: Ahmad was promised Meshchera [ibid, pp. 419–420]. However, Vasily III was ready to accept Ahmad only as a last resort, "if there is great need for the tsarevitch, and he will not be able to stay there any longer", only in this case will the ambassador have to speak with Ahmad about the "opochiv" in a more emphatic way. Given the generally hostile relations with Crimea during that period, Moscow did not even trust the khan's enemies (they could remain enemies for just a short period of time, while not trusting "unbelievers" was the norm in the Medieval times). By doing this, Vasily III intended to grant a "place" in his land to the opposition khan, and also to satisfy the demands of Muhammad Giray who wanted Meshchera to be given to one of his sons [ibid, p. 419].

The mood which dominated in Crimea towards the Kasym Khanate in the first quarter of the 16th century was described by Muhammad Giray as follows, "...*We cannot make peace* with the fact that Meshchera will be ruled by some kin besides us." [ibid, p. 380] Given all this, the indisputable fact was that Meshchera belonged to Moscow as a "patrimony" of the Moscow grand prince (in the agreement between the grand prince of Moscow Ivan Vasilievich (Ivan III) and grand duke of Lithuania Alexander Kazimirovich dated 1494, the latter admitted that Meshchera was the patrimony of Ivan Vasilievich [Spiritual, 1950, p. 330]; see also [Collection of the Russian Historical Society, 1882, p. 127, 130]).

The Great Horde Dynasty in Meshchera and Kazan. Despite the fact that the emergence of the Kasym Khanate was clearly not planned by the Muscovite government, after a certain point, its historical destiny was such that it became a dependent entity, a vassal of Muscovy used for different purposes of Muscovite foreign policy. The Kasym Khanate reached its "apotheosis," the highest level of importance

for the Russian state, in the 1520–1550s, when the "Eastern Question," i.e. the subordination of the Kazan Khanate, became the main goal of Muscovite foreign policy. One of the tools it used to gain control over politics in the Khanate was the nomination of protégés to the Kazan throne.

The defeat of the Great Horde in 1502 by the Crimean khan Mengli Giray led to a "vacuum" in the steppe, which triggered a conflict between two former allies, Muscovy and Crimea [Keenan, 1967, p. 554]. The alliance between Muscovy, Crimea, and Kazan collapsed. As the weakest link in this triangle, the Kazan Khanate became a hotbed of intrigue and struggle between the pro-Muscovy and pro-Crimea factions of the local aristocracy.

After the death of Janai Sultan, the last representative of the Crimean dynasty in the Kasym Khanate, the choice of Muscovy for the Kasymov throne fell to Shaykh Allahyar, the son of the Bakhtiyar Sultan from the Great Horde's Jochi dynasty. He was the nephew of Ahmad, a Great Horde Khan, and therefore a descendant of Chinggis Khan [State Archives, 1978, p. 39] (for more details on the origins of Shaykh Allahyar, see: [Velyaminov-Zernov, 1863, p. 224–244]). Crimea viewed the appointment of Ahmad's descendant to the Kasymov throne with hostility: "...The children of tsars Ahmat and Mahmut are our enemies, and you, our brother (Vasily III—B.R.), call them your enemies and so write to us about them, and yet you gave the Meshchera yurt to tsarevitch Shaykh Allahyar, one of the children of our enemy, and bestowed upon him too much honor." [Collection of the Russian Historical Society, 1895, p. 296]

As a Kasymov Sultan, Shaykh Allahyar participated in the campaign of Vasily III on the outskirts of Smolensk (1512); Shaykh Allahyar joined him in Mozhaysk together with the Kasymov Tatars [Milyukov, 1901, p. 49].

Shaykh Allahyar probably died in 1516 [Karamzin, 1994, p. 42]. He ruled the Kasym Khanate from 1512–1516. Shaykh Allahyar was mostly remembered both by his contemporaries and historians for the fact that he was the father of two khans who left a big imprint on the history of Meshchera and the Kazan Khanate. These khans were Shah Ali and Cangali.

Shah Ali, the son of Shaykh Allahyar, was born in 1505. In 1516, the family had a second son, who was named Cangali. In the same year, Shaykh Allahyar died and his eldest son Shah Ali became the ruler of the Kasym Khanate.

The Crimean khans could not reconcile their hatred of the relatives of khan Ahmad, who had been expelled from Sarai and found refuge in the Muscovite state (as was the case of Shaykh Allahyar). In 1516, the Crimean government protested against the appointment of Shah Ali as the reigning tsarevich of Kasymov and petitioned for the Kasym Khanate to be given to Sahib Sultan, but the Muscovite government did not accept this petition [Velyaminov-Zernov, 1863, p. 247, 250].

The change of dynasty in the Kasym Khanate was an important and very sensitive factor for international relations in Eastern Europe in the 16th century. American researcher O. Pritsak considers that "only now the Chinggisids of Kasymov have become the puppets of the Muscovite rulers, while handing them the charisma of the dynasty that was required to establish a new state organism" [Pritsak, 1967, p. 580]. In essence, this was an open challenge to the Crimean Khanate, which after the defeat of the Great Horde viewed itself as "tsar Takhtamysh's yurt," i.e. the direct successor to the former power of the Golden Horde state. Within the legal rules that prevailed in the post-Golden Horde Desht-i Qipchaq, this seemed quite legitimate. However, in the 16th century, Muscovy, with its economic and military potential, was also nearing the status of the most powerful member within that system. But, at the same time, its actual position contrasted sharply with its formal status under the post-Golden Horde "legal rules," since the Muscovite monarch did not belong to the dynasty of Chinggis Khan.

The khan on Kazan Muhammad Amin died in December 1518 [Complete Collection of Russian Chronicles, 6, 1853, p. 263; Complete Collection of Russian Chronicles, 8, 1859, p. 266]. This event had many implications. The death of Muhammad Amin ended the dynasty of Ulugh-Muhammad on the Kazan throne, a dynasty that held that throne by right of conquest.

Neither Muhammad Amin nor Abdul-Latif (under a special agreement Abdul-Latif was

A mosque in the town of Kasymov
[Russia: A Complete Geographical
Description, 1902]

supposed to receive the Kazan throne after the death of Muhammad Amin, but Abdul-Latif died even earlier than him, on November 19, 1517, [Complete Collection of Russian Chronicles, 6, 1853, p. 260]) and did not leave behind any sons. At that time, princess Gauharshad (known in Russian sources as Kovgarshad) lived in Kazan, but the issue of her candidacy was not even raised. Tsarevich Hüdai

Kul, the last representative of the khan family who lived for more than 30 years in the Russian state, had long since become Russified. Like the sons of tsarevich Malik Tagir, he was baptized, married a Russian and lost his rights to the Kazan throne. As a result, the dynasty of the Ulugh Muhammad came to an end, and once again, the issue of the succession to the throne became particularly important for the Kazan Khanate.

The closest relatives of the extinct dynasty were stepbrothers of the last two khans, the Crimean tsarevichs, the sons of Mengli Giray Khan, who married the tsarina Nur-Sultan. The Crimean government has long viewed them as legitimate heirs of the Kazan Khanate and proposed the nomination of tsarevich Sahib Giray.

The position of the Crimean government was reflected in the statement made to Vasily III on behalf of Muhammad Giray by prince Apağ through I. Chelishchev, the Russian envoy to Crimea (before the death of Muhammad Amin): "Kazan tsar Muhammad Amin is said to be ill, and I equipped and prepared my brother Sahib Giray for that yurt; and if something happens to tsar Muhammad Ami, we will see that Sahib Giray becomes the tsar of that yurt, as we decided after discussing this matter; but if someone comes from another yurt to become the tsar, then you too, my brother, great prince, will be tormented,

and we will be insulted." [Collection of the Russian Historical Society, 1895, p. 520] Muhammad Giray openly stated his claims to decide the fate of Kazan and predetermine who would become the next Khan by "equipping" and "preparing" his own candidate, and only notified the Muscovite state of his decision, while emphasizing that any attempt to put any other person on the throne of the Kazan Khanate except Sahib Giray would be viewed by Crimea as a hostile act.

However, the period of 1487–1521 was the time of the Russian protectorate. It is quite clear that the nomination of tsarevich Sahib supported by the Crimean government was rejected because Muscovy had no interest in the dynastic union of two Muslim states ruled by the hostile Girays. At that time, Muscovy appointed the khans in Kazan, at its own discretion, based on its political benefits and interests. The commitments undertaken by Kazan in 1516 ("no tsar or tsarevich can be taken to rule Kazan without the knowledge of the great prince") gave the government of Vasily III "legal" grounds for interfering in the affairs of Kazan. This was the reason behind the nomination of Kasymov tsarevich Shah Ali, who actually had no rights to the throne of Kazan (except for the fact that Shah Ali was a member of the Jochi-Chinggisid family, which, in that situation, was a formality).

Shah Ali was only 13 years old, he was born and raised in Muscovite Rus. Of course, at such a young age, a person cannot rule a state on his own. The Muscovite government hoped to use him in order to exert influence on the internal politics of the Kazan Khanate and subdue it. Janet Martin believes that "by supporting a candidate who represented the Astrakhan dynasty for the throne of Kazan, Vasily III created a new coalition to dominate the steppe. This coalition included Muscovy, the Kazan and Astrakhan Khanates, and, of course, Kasymov" [Martin, 1995, p. 324].

Crimea strongly protested against this appointment. Prince Apağ, the Crimean envoy to Moscow, stated the position of the Crimean Khanate when he was received by Vasily III: "Since the old times, the tsars of the Horde have been the enemies of our monarch, and now you sent a tsar from that yurt to Kazan" [Collection of the Russian Historical Society, 1895, p. 661].

The relations between the great prince and Shahghali during his first reign in Kazan were governed by the *šart* (an oath of allegiance) charter [Complete Collection of Russian Chronicles, 8, 1859, 66; Complete Collection of Russian Chronicles, 13–1, 1904, p. 32]. The main commitment on his part and on the part of the Kazan government was to protect the interests of Muscovite subjects living in Kazan. A separate commitment on the part of the Kazan government was the waiver of the right to independently choose their khan.

In this time, the Kasymov Tatars were as usual engaged in protecting the eastern borders of the Muscovite state. To explain why his son Bahadur Sultan (Bagatyr-Sultan) fought the Ryazan "Borderland" in 1517, the Crimean khan Muhammad Giray said to the envoys of the great prince Vasily Shadrin and Mitya Ivanov, "...I sent my son Bagatyr to Nogai, but he went to the borderland of the great prince, and I scolded him, but he told me that he wanted to go to Nogai. However, the people that he had sent to instigate the situation on the Volga river told him that on the riverside and on the ships in the river there were Meshchera cossacks, and it was impossible to cross the Volga. So, my son decided that the great prince would order Meshchera cossacks to provide such protection, and he

went to Ryazan." [Collection of the Russian Historical Society, 1895, p. 376, 379]

The correspondence of Muscovy with Crimea provides some interesting details about the rank held by Kasymov in the system of Russian territories in the 16th century. It includes the following phrase, "...the Meshchersky Gorodok that that lives *for the tsars and for the tsarevichs* (emphasis added—B.R.).» (1518) [Ibid, p. 571] This emphasizes that, unlike other Tatar "destinies" in the Rus, Kasymov was granted only to Chinggisids (specifically, to the branch of Tuğay-Temür in the Jochi dynasty).

In addition to pro-Moscow feudals, Kazan had a Crimean group that was dissatisfied with the presence of the Russians. The pro-Crimea group established contacts with the Crimean court and conspired against Shah Ali. In the spring of 1521, Sahib Giray went to Kazan with his detachment of 300 men [Ibid, p. 678]. The city surrendered without resistance.

From 1524 to 1530, there were no armed clashes between the Muscovite state and Kazan Khanate. However, Safa Giray Khan, the representative of Crimea, pursued a policy that clearly did not satisfy the great prince and, in 1530, a large army was sent against Kazan, including "up to 30 voivodes." On July 10, 1530, Muscovite troops, including infantry, cavalry, fleet, and artillery, came together and besieged Kazan from all sides. The battle was won by the Russian troops. Following agitation by Muscovite ambassadors in Kazan, protests erupted against Safa Giray, who eventually fled.

The Khan's throne in Kazan was free. The charters written by the new Kazan government clearly demonstrate that it was ready to obey the will of the great prince, provided that he would not appoint Shah Ali as their ruler but his younger brother, Cangali [The Complete Collection of Russian Chronicles, 8, 1859, p. 277; The Complete Collection of Russian Chronicles, 13–1, 1904, p. 57]. This meant that the Kazan Khanate effectively became the protectorate of the Russian state again. The advisers sent by the great prince were always in the khan's retinue. Apparently, a portion of the revenue was directed to the benefit of the Muscovite treasury. The Kazan Khanate had no right to pursue an independent foreign poli-

cy without the knowledge of Vasily III. During the reign of Cangali, it had the obligation to send its army against the external enemies of the Russian state. This practice always existed at the time of the protectorate.

On September 25, 1536, an internal coup took place in Kazan. "Princess Kovgarshad and prince Bulat and the entire Kazan land betrayed the Great Prince Ivan Vasilyevich and murdered tsar Cangali whom great Prince Vasily Ivanovich had given them as the tsar of Kazan" [The Complete Collection of Russian Chronicles, 8, 1859, p. 291; The Complete Collection of Russian Chronicles, 13–1, 1904, p. 88]—this is how the coup was briefly described in the Voskresensk and Nikon chronicles. Pro-Moscow people who did not accept this abrupt political turn were discontented by the events and emigrated from Kazan.

And so the reign of Cangali ended tragically. Cangali ruled Kazan from June 29, 1532, to September 25, 1535. Prior to that, he had ruled in Kasymov from 1519 to June 1532.

From June 1532 to early 1536, the Kasym Khanate was left without a khan. The details about this time are quite standard: "...And from Astrakhan came Kazan envoys, who were in Crimea, and some others from Crimea visited the king; and the Gorodok cossacks of our monarch ambushed those people and beat them, and about 50 of them were captured alive and brought to our monarch." (1536) [Collection of the Russian Historical Society, 1887, p. 54, 117] Most of all, during this time the Kasymov Tatars aggravated the Nogais by capturing their cattle, intercepting Nogai envoys to Kazan, and taking Nogai subjects prisoner who then were often held in Kasymov [CCRC 1791, p. 240, 249, 250, 320, 321, 308, 314, 229, 340, 341]. Some Kasymov people were themselves captured by the Nogais and kept in prison for a long time [Ibid, p. 243]. In addition to military action, the Kasymov Tatars also took part in Russian diplomacy: they were sent as guides to the envoys visiting the Eastern countries, and sometimes sent alone to the same destinations with charters and to conduct negotiations [Ibid, s. 233, 279, 290, 291, 298, 254, 307, 257, 259].

This situation clearly demonstrates that the Kasym Khanate had the status of a vassal—the khanate itself was left without a governor,

which did not prevent the Muscovite government from using the people of the khanate for its own purposes. However, a khanate without a khan makes no sense. In fact, the Russian rulers had no need for the Kasymov Khanate, but they needed the title of the Kasymov Khan (Sultan) to nominate him for the Kazan throne. As in other post-Golden Horde yurts, the issue of throne succession in Kazan was not clearly defined. So any Muslim ruler and Chinggisid could, in principle, claim it. It is very likely that, even in the 16th century, the top layer of the ruling elite in the successor states of the Golden Horde continued to view itself as a some kind of single entity and, therefore, considered all these yurts as common property bequeathed to all of them by Chinggis Khan. In view of this, the claims, for example, of the Crimean rulers to Kazan and Meshchera, look quite reasonable and fairly legitimate in view of the circumstances in the 16th century. This is why Muscovy needed the title of the Kasymov monarch. At the same time, Muscovy could, in principle, use the Kasymov Tatars for its own purposes even without the Khanate, simply as the people of Meshchera (which we can see in the example of other Tatars who lived in Kashi- ra, Zvenigorod, Yuryev-Polsky and some other Russian cities).

According to most historians, since the 1530s, the great princes of Muscovy gradually begin to interfere in the internal affairs of the Kasym Khanate by introducing elements of Moscow-subordinated administration. A permanent representative with the rank of *okolnichy* was known in Kasymov from November 1542.

In 1545, Safa Giray Khan, a Crimean protégé, again began to face growing opposition in Kazan. This led to a palace coup in early January 1546. Safa Giray Khan was deposed from the throne for the second time. The coup was followed by violent riots in Kazan directed against the Crimeans: "...the Kazan people expelled tsar Safa Kiray from Kazan, and many Crimean people were beaten." [The Complete Collection of Russian Chronicles, 29, 1965, p. 49] An interim government was again formed in Kazan. In March 1546, Shah Ali khan was elected to the throne [The Complete Collection of Russian Chronicles, 13–1, 1904, p. 148].

A Kazan chronicler provided some interesting details on the terms of the agreement made by the Kazan government with Shahghali at his accession to the throne in 1546—the khan should not have brought a Muscovite garrison to Kazan, and he pledged neither to take revenge nor prosecute for former transgressions, while the Kazan ruling circles guaranteed his personal safety. Overall, these terms could be summarized as mutual guarantees of personal safety.

Shahghali was on the throne for only a month [The Complete Collection of Russian Chronicles, 13–2, 1906, p. 149]. Safa Giray managed to enter into an agreement with Nogais, was provided with an important military detachment and made an attempt to regain the throne of Kazan. The impotent government was unable to put up any resistance, and the pro-Russian party probably regretted the fact that the 4,000 strong guard of Shahghali was not allowed earlier into the city. The defenseless khan had to flee from Kazan. He settled in Kasymov. Shahghali ruled in Kazan from June 13 to July 13, 1546. The Moscow protégé turned out to be completely useless for the great prince and tsar without a military detachment from Muscovy and the usual Russian entourage, including the voivode and the envoy.

A major campaign was launched against Kazan in May 1551. On May 24, the fortress of Sviyazhsk was founded at the Sviyaga river mouth on the territory of the Kazan Khanate. It became, in fact, an outpost of the Russian advance to the East. Later, the Muscovite government blocked the waterways around Kazan and virtually paralyzed life in the city. Following a political coup in Kazan, power was transferred to proponents of peace with Russia. A delegation was sent to Sviyazhsk to invite Shahghali to the throne. Again (for the third time), he became the Kazan khan.

Under the terms of a scheme of the Muscovite government, the Kazan Khanate had to be split into two parts—the Mountain Country had to be governed by a fully Russian government, while the Meadow Country and Arsk Land had to be governed by Shahghali Khan. So, Shahghali did not have to govern the entire Kazan Khanate, but only half of it. On August 14, 1551, the so-called "Kurultai" faced with

the formidable sight of the Muscovite troops decided that the people of Kazan should "not enter the Mountain Country, and the Volga had to be split in two, and the catchers should fish in their respective halves" [The Complete Collection of Russian Chronicles, 13–1, 1904, p. 169], i.e., it was forbidden to cross the Volga river, and the Volga itself was divided in half. The second important clause of the agreement was the release of all Russian prisoners in the entire territory of the Kazan Khanate [The Complete Collection of Russian Chronicles, 13–1, 1904, p. 169; The Complete Collection of Russian Chronicles, 13–2, 1906, p. 470].

On March 6, 1552, Shahghali withdrew the Muscovite garrison from Kazan and went together with it to Sviyazhsk [The Complete Collection of Russian Chronicles, 13–1, 1904, p. 174; The Complete Collection of Russian Chronicles, 13–2, 1906, p. 474]. Under a false pretext, he was able to bring with him from Kazan 84 princes and mirzas; he handed them over to the Muscovite authorities as hostages. Thus ended the third and last reign of Shahghali as the Kazan Khan. Later, Shahghali participated in the conquest of Kazan in the ranks of the great prince's army (for more details, see [Khudyakov, 1991 p. 143–173; Alishev, 1995, p. 112–142]). He fought together with his Kasymov Tatars. After the fall of the Kazan Khanate, Shah Ali settled in Kasymov.

So, the brothers Shah Ali and Cangali, the representatives of the Golden Horde dynasty in Kasymov, sat in Kazan as khans on a number of occasions. Cangali ruled in Kazan in 1532–1535, while Shahghali on three occasions (1519–1521, 1546, 1551) sat on Kazan's throne by the "will of the monarch," as indicated by the Russian chronicles. The extent of the influence exercised by Moscow on Kazan during these four reigns varied, and as a result the policy of the Muscovite protégés also varied—in some cases, they acted fairly harshly, while in others, they had to find a balance between various political factions. Overall, both khans were obedient puppets of Muscovy, and there was not a single "act of disobedience" to the great prince during any of their reigns.

For the khans, the Kazan throne was considerably more prestigious than the ruling Kasym Khanate, and they sought to take it over, despite

the fact that this was often associated with mortal danger. However, it was impossible with their help to bring Kazan to the level of dependence sought by Moscow "as a town"—Cangali was murdered in Kazan, and Shahghali was expelled from it three times. The Muscovite government failed to subdue Kazan by peaceful means. The Kazan Khanate was conquered with Russian arms, and the Kasym Khanate made its contribution to Kazan's fall.

After the fall of Kazan and Astrakhan.

Following the conquest of Kazan, the Kasym Khanate, while existing *de jure*, had in fact become a regular administrative part of the Russian state that consisted of several uyezds. Its specific character rapidly disappeared. In fact, it was no longer a khanate, and it would be incorrect to study it during this time period (mid 16th century—mid 17th century) (for more details on the dates, see [Belyakov, 2011, p. 274, 277–278, 396–398]) as the Kasym Khanate. The real political status of this entity evolved over time. At that point, this ethno-political organism more likely resembled an appanage principality which, in addition, was rapidly losing its territory and remaining sovereignty [Iskhakov, 1998, p. 198].

Following the conquest by the Russian state of the Tatar Khanates, the successors of the Golden Horde, the geopolitical situation in the post-Golden Horde territory of Desht-i Qipchaq and, in general, in Eastern Europe changed dramatically (for more details on the geopolitical situation in Desht-i Qipchaq in the 13–16th centuries, see [Rakhimzyanov, 2005]). The Russian authorities gained possession the former khan's domains, the ruins of Sarai—the "tsar's place." After the conquest of Kazan and Astrakhan, Ivan IV began to use the title of the "tsar of Kazan" and "tsar of Astrakhan" and refer to this fact in order to be recognized as the tsar during diplomatic negotiations. The ruler of Muscovy stood on a par with the Girays, the sovereign Crimean khans.

In that complex international situation, the Kasym Khanate became a trump card in Muscovite foreign policy as its existence was used in the diplomatic game with Crimea and, especially, with Turkey. Apparently, the Kasym Khanate filled the vacuum left by all the Mus-

The Shahghali Mausoleum in the town of Kasymov

lim states conquered by Russia. To all the accusations made by its foreign opponents about the oppression of Muslims, the destruction of their principles, customs, and faith, Muscovy could boldly point to the existence of a Muslim "state" whose inhabitants were free to practice their faith and maintain their traditional ways right in the middle of orthodox Russia. Moreover, after capturing Kazan and Astrakhan, Muscovy was faced with new problems, including the issue of conquering the Urals, Siberia and, further away, maintaining relations with the Kazakh khanates. This is evidenced by the fact that, later, the sultans and khans from the Siberian and Kazakh steppes "reigned" in Kasymov.

Shah Ali was the khan of Kasymov until the end of his days. From the fall of 1553 to the end of 1557, he lived continuously in Kasymov [Khudyakov, 1991, p. 170; Shishkin, 1891, p. 22]. The Kasymov Tatars were used to quell the uprisings in the former Kazan Khanate (1553, 1554) [Razrjadnaja Kniga, 1966, p. 148]. At the end of 1557, Shah Ali was appointed the chief commander of the Muscovite army sent against the Livonian Order [The Complete Collection of Russian Chronicles, 4, 1848, p. 309]; this army also include the Kasymov Tatars [Razrjadnaja Kniga, 1966, p. 176]. He proved to be a very active participant in the Livonian War [Ibid p. 196–197, 208–209]. In the summer of 1558, the khan was summoned to Moscow, where he was given an honorable reception as the hero of a victorious war, and later he returned to Kasymov.

Shahghali died on April 20, 1567. As stated in the "Tsar Book," "That same month of April,

on the 22nd day, ended the life of tsar Shahghali, the son of Shaykh Allahyar, who by the will of the monarch ruled the city of Kasymov, and by the will of the monarch sat for three times on the throne of the Kazan yurt." [The Complete Collection of Russian Chronicles, 13–2, 1906, p. 401] He was buried in his residence, in Kasymov, and at the beginning of the 20th century his tombstone was still intact. A building constructed during the reign of Shah Ali in Kasymov served as the burial place for Kasymov governors; Kasymov Tatars also called this place "Tekie Shah Ali" [Shishkin, 1891, p. 25].

The death of Shah Ali left the Muscovite government again faced with the problem of who could be appointed the governor of Kasymov (Shah Ali died childless at the age of 61). The decision was made to appoint Sain Bulat Sultan, a relative of Shahghali. Unfortunately, it is not clear when exactly Sain Bulat was appointed the governor of Kasymov. Apparently, this happened either immediately after the death of Shahghali (i.e. in 1567) or somewhat later (but before 1570).

Ivan IV made an exception for the young Sain Bulat, who had never occupied a throne, and used his personal power to make him a tsar (khan); after which number of proper Kasymov tsars or khans came to the throne. The change in the designation of the Kasymov ruler from the 1570s (previously called "sultan" ("tsarevich")), and then—"khan" ("tsar")) does not point to an expanding power of these "tsars" in Kasym Khanate but, on the contrary, the growing influence of Moscow in Kasymov. After the conquest of the Volga Region khanates, Ivan IV, "as the tsar of Muscovy and khan of Kazan and Astrakhan, was able to legitimately exercise his right to appoint a dependent khan within his state" [Kennedy, 1994, p. 150].

In 1570, Sain Bulat was already the Kasymov khan. After the fall of the Kazan Khanate, Moscow began to use the existence of a Muslim state within an Orthodox (Muscovite) state as a sign of the religious tolerance of the Muscovite tsar by pointing this out to foreigners on every occasion. Russian envoy I.P. Novosiltsev sent to the Ottoman Empire in 1577 said in his speech to a Turkish Pasha, "...Overall, our monarch has in its state tsar Sain Bulat,

tsarevich Kaibulla, tsarevich Ibak and many Nogai mirzas, and Sain Bulat rules in the town of Kasymov and many other towns, and tsarevich Kaibulla rules in the town of Yuryev, and tsarevich Ibak rules in the great place Surazhek, and the Nogai mirzas rule in the town of Romanov, and in all these towns people traditionally practice their Muslim faith and visit their mosques and cemeteries, and the monarch does not force them to abandon their faith and does not disturb their prayers—every outsider can practice his faith." [Travels, 1954, p. 77] Given that the medieval mentality was based on religion, this fact had considerable importance for the success of Muscovite diplomacy.

At the end of 1571, the Russian government was preparing for war with Sweden. Ivan the Terrible went to Novgorod, where on January 5, 1572, the "tsar" of Kasymov Sain Bulat also arrived, who was staying with his court in the guard regiment [The Complete Collection of Russian Chronicles, 3, 1841, p. 168]. At the end of 1572, Ivan IV went personally with his army to Novgorod, and from there, to the territory of present-day Estonia. All this time, the tsar of Kasymov was with Ivan the Terrible in his grand regiment. After the departure of the Muscovite tsar, Sain Bulat stayed with Duke Magnus to continue the military operations; each of them had been "assigned" with his own detachment; and the principal detachment was the one of the "tsar" of Kasymov [Velyaminov-Zernov, 1864, p. 15]. As we can see, the Russian government was using the Kasymov rules in its military operations as actively as in the first period of the existence of the Kasym Khanate.

In the summer of 1573, Sain Bulat converted to Christianity and was given the name of Simeon. After that event, Sain Bulat was stripped of the town of Kasymov and the Kasymov "tsardom" because, both before and after him, they were given to be ruled exclusively by Muslims. The life of Sain Bulat after converting to Christianity deserves special attention, as in this period of his life many controversial issues arose. He was an instrument for the policy of Ivan the Terrible, he held the title of Great Prince of All Russia, Great Prince of Tver, his name was mentioned in the political struggle for power during the Time of Troubles.

He died in 1616 as a simple monk under the monastic name of Stefan [Sorina, 1978, p. 47]. Sain Bulat reigned in Kasymov until the summer of 1573.

He had a brother (or a cousin, or second cousin) Mustafa Ali, the son of Abdullah Sultan. And Mustafa Ali became the next governor of Kasymov. It is difficult to determine when the change of reign happened. It either happened immediately in 1573 or, as suggested by Velyaminov-Zernov, in 1577 [Velyaminov-Zernov, 1864, p. 27], or in 1584, the year when Boris Blagov, Moscow's envoy to Constantinople, was to declare to Sultan Murad that, in Kasymov, "the mosques are owned by a Muslim called Mustafaley" [Solovyov, 1989a, p. 274]. He was the governor of Kasymov approximately until 1590 [Belyakov, 2011, p. 274]. In the mid 1570s, representatives with the rank of *okolnichy* were replaced in Kasymov by people with the rank of *osadny golova*, which indicated the declining importance of the town.

After the death of Mustafa Ali, the Muscovite government appointed as the "tsar" of Kasymov Uraz Muhammad, the son of Kyrghyz-Kaisak (Kazakh) sultan Ondan and nephew of Kyrghyz-Kaisak khan Tevkal. Uraz Muhammed arrived in Russia under Fyodor Ivanovich and entered his service in 1588 [Velyaminov-Zernov, 1864, pp. 97–102]. Boris Godunov granted Kasymov to Uraz Muhammad on March 20, 1600 [The Complete Collection of Russian Chronicles, 14, 1910, p. 28]. The newly appointed "tsar" of Kasymov was only 28 years old [Velyaminov-Zernov, 1864, p. 451]. He "reigned" until December 1610.

The Time of Troubles and the Kasymov "Tsardom". In the summer of 1606, Ivan Bolotnikov, a service class serf, declared himself to be the voivode of the "tsar Dmitry Ivanovich," became the head of a popular movement and moved towards Moscow. Uraz Muhammad, the Kasymov ruler, and service class Tatars of Kasymov established links with one of the centers of the rebellion and, at some point, joined it. In November 1606, Uraz Muhammad received a charter from the "tsar Dmitry Ivanovich" ordering him to "unite with the Kadoma and Arzamas noblemen to fight those towns that had not kissed the cross for the sovereign

tsar and great prince Dmitry Ivanovich of All Russia" [Rebellion, 1959, pp. 207–208]. Kasymov was designated as the assembly point for "fighting men" (it was headed by Uraz Muhammad), from which they apparently were to be sent to join the main rebel forces near Moscow.

After the emergence of False Dmitry II, the second impostor, the "tsar" of Kasymov took his side along with the inhabitants of the town of Kasymov [Palitsyn 1955, pp. 120–121]. The tsar of Kasymov began to play the role of the center around which gathered Muslims dissatisfied with Vasily Shuysky or his policies [Belyakov, 2011, p. 224]. In the summer of 1608, False Dmitry II set up a fortified camp in the village of Tushino, near Moscow. Soon after, Uraz Muhammad moved there too [Żółkiewski, 1871, p. 111]. However, not all the people of Kasymov were unanimous in their support of the impostor [Khilkov 1879, pp. 29–31].

What was the reason that inspired Uraz Muhammad to switch sides from the Muscovite government, that granted him the title of the "tsar of Kasymov," to the camp of the impostor? Some details for further reflection on this issue can be found in a deed sent by the Kasymov ruler to Jan Sapieha, a voivode of False Dmitry II. Both the tsar of Kasymov and his numerous relatives significantly improved their financial situation in the Time of Troubles through generous land "gifts" made by False Dmitry II [Ibid, pp. 47–48; Acts 1841a, pp. 195–196]. It is possible that this guided the political orientation of Uraz Muhammad. Probably, this Chinggisid was not free to act as he pleased. It is possible that he was taking into account the sentiments shared by the Kasymov Tatars, the Tatars of the entire Meshchera and, perhaps, from other regions [Belyakov, 2011, p. 225]. At the same time, the position of this Chinggisid was not constant. At some point, he had to make peace with Vasily Shuysky. For comparison, it should be noted that, unlike Uraz Muhammad, the Siberian Shaybanids (descendants and relatives of Kuchum Khan) were always on the side of Vasily Shuysky and, later, the volunteer armies. Perhaps, this "prudent" behavior of Shaybanids was associated with the fact that most of them had left only recently and many were of rather young age. Most likely, they were just "drifting along" by

giving their lives to chance and letting destiny take its course [Belyakov, 2011, p. 232].

Apparently, like their ruler, the people of the Kasym Khanate supported the "Tushino Thief" [Ustryalov 1859, p. 82; Acts, 1836a, p. 217]. However, False Dmitry II wasn't universally supported by the people of Kasymov, as evidenced by the fact that the impostor sent the cossack ataman Ivan Fedorov with 100 cossacks against his opponents in Kasymov [Khilkov 1879, pp. 59–60]. For its support of False Dmitry, Kasymov was also repeatedly besieged by troops loyal to Vasily Shuysky. Furthermore, like many other Russian cities at that time, in 1609–1610, the town apparently did periodically change hands between the supporters of Shuysky and the "Tushino Thief" [Acts 1841a, s. 210, 263; Acts, 1836a, p. 250].

On December 27, 1609, fearing treason, False Dmitry II fled from Tushino to Kaluga. The flight of the impostor caused concern in Tushino among those who remained there, and some of them sided with the Polish King Sigismund who, at that time, was besieging Smolensk. One of these people was Uraz Muhammad. The Chinggisid, along with the top leaders of those who stayed in Tushino, swore an oath of allegiance to Prince Władysław [Belyakov, 2011, p. 228]. On January 25, 1610, the tsar of Kasymov attended a meeting held by the Poles. On April 8 and 18, Uraz Muhammad took part in military action on the side of the king. However, according to Zolkiewski, soon, Uraz-Muhammed, "missing his wife and son," sided again with False Dmitry and went to Kaluga.

But unexpectedly for their leader Uraz Muhammad, the Kasymov Tatars left for Kaluga to join False Dmitry II as early as late January—early February 1610. This showed how difficult the relations had become between the tsar and his detachments, as it turned out that they had different interests. The reasons for the constant "re-defections" of Uraz Muhammad were apparently as follows—on one hand, he wanted to maintain his position at any cost and, on the other, he couldn't forget his formerly high status as Chinggis Khan's descendant [Ibid, p. 229]. And this is where the reason lies for the tsar of Kasymov leaving King Sigismund III. Unlike the Muscovite Rus, the Polish-Lithua-

nian Commonwealth had long passed the time when it had been interested in the Chinggisids, and was prepared to grant them a high social and financial status.

The exact date of Uraz Muhammad's death is unclear. Some sources date this event as December 1, 1610 [Acts, 1841a, pp. 364–365]; the tombstone of Uraz Muhammad, preserved in Kasymov in the ancient Stary Posad cemetery, indicates the day of November 22, 1610.

The Kasymov Tatars and their tsar Uraz Muhammad was actively involved in the strife during the Time of Troubles by switching from one camp to the other; and their stance was not particularly stable. The town of Kasymov suffered heavily in the Time of Troubles. It was probably completely burnt to the ground. A significant part of the population of the town fled or was killed [Belyakov, 2011, p. 228]. Perhaps some clue as to what happened in Kasymov during the Time of Troubles (or, on the contrary, new mysteries?) can be found in the fact that after these events, the position of voivode in Kasymov was held by Isiney Karamyshev, a Muslim (mentioned as the voivode in 1613). It is possible that for some time Karamyshev governed the entire territory of Meshchera. Perhaps this fact can be regarded as a sign of reconciliation with the local Tatar population on the part of Moscow?

Political decline. The death of Uraz Muhammad was followed by a period of interregnum in the Kasymov "Tsardom," which lasted from 1611 to 1614. Probably, the Muscovite government had more important things to think about other than appointing a "tsar" to Kasymov. At that time, it had very different problems.

Uraz Muhammad was the only representative of the "Kazakh" dynasty, who sat on the throne of Kasymov. The next Siberian dynasty was the last in the history of the Kasymov political entity. Its first representative was Arslan, the son of Ali, a Siberian khan, and the grandson of Kuchum Khan. Arslan became the governor of Kasymov on July 6, 1614. He ruled until April 2, 1626 [Ibid, p. 274].

As for the internal organisation and the governance of the town under "tsar" Arslan, there is an important document that helps to shed light on the everyday life and the position of

Kasymov in the early 17th century. This is the decree of October 16, 1621, on court proceedings and the procedure for collecting duties in Kasymov [Collection, 1822, pp. 234–235; see also, Belyakov, 2011 pp. 276–277]. The difference between the court proceedings in Kasymov and those found generally in Russia was caused by the fact that, since the 1530s, the power in Kasymov was held both by the "tsar" of Kasymov and the voivode appointed by Moscow. The document makes it quite clear that the power of the "tsar" (khan) in Kasymov under Arslan was far from complete and extended, with great restrictions, only to Kasymov Tatars and townspeople. Under Arslan, the right to consider, together with the voivode, all mutual claims made by princes, mirzas and Tatars of the Tsar's Court and Seit Regiment, which first belonged to Prikaz clerks of Uraz Muhammad and, later, was provided in the same way by charter granted to Arslan, was revoked by the decree of 1621. From then on, only the voivode considered all these claims, without the presence of the Kasymov ruler.

This was a fact of great importance. On that basis, we gain a clear idea of the system used by the Muscovite government with regard to the governors of Kasymov, in which Moscow was increasingly seeking to narrow the scope of their authority. According to the decree of 1621, the top institution used to implement this system in the early 17th century was the Ambassadorial Prikaz in Moscow; as well as the voivode in Kasymov. Given the provisions of the decree, the voivode had to monitor the activities of the "tsars" of Kasymov and report on all important events back to Moscow.

The 17th century documents make it clear that the townspeople of Kasymov felt quite at ease under the "tsar" Arslan, as they primarily feared their voivode and not the Kasymov ruler.

The Muscovite government carefully ensured that neither the governor of Kasymov, nor the Kasymov Tatars had any contact with foreign Muslims without its authorization. This can be evidenced by the case of November 12, 1621 [Shishkin, 1891, pp. 61–63] when, according to the Kasymov voivode, Baibek Tanchurin, a Kasymov Tatar, was brought to Moscow to ascertain if the "tsar" of Kasymov had any correspondence with the Nogai mirzas

and what the purpose was of his (Baibek Tanchurin) trip to Astrakhan.

Arslan was married to Fatima, the daughter of Sayyid Agha Muhammad, the grandson of Sayyid Bulyak. She lived much longer than her husband. Arslan Khan died in 1626 [Belyakov, 2011, p. 274]. After the death of Arslan bin Ali brought about the final liquidation of the "tsardom" although, in fact, it had long ago ceased to exist as a Tatar "yurt." From that moment, most Tatar tsars and tsarevichs were supported by tributes levied from the local population under the "kormlenie" system or by their manors; and, those relying on the "kormlenie" system were clearly in the majority [Ibid, p. 396]. Sayyid Borhan, the son of Arslan, was only the tsarevich of Kasymov, but he was not proclaimed the "tsar." As for the "tsarevichs" without possessions, they were quite a few in Muscovite Rus at that time, one has only to think about the Siberian Shaybanids.

Along with the decision to formally "liquidate" the title of the tsar of Kasymov, the Muscovite authorities also decided to reduce the income of the juvenile tsarevich [Ibid, p. 277]. In the opinion of A. Belyakov, this was the time that can be viewed as the "liquidation" of the Kasymov "Tsardom." However, large manors in Kasymov and Elatma uyezds were left to Sayyid Borhan. In 1636, the revenues of Sayyid Borhan were partially restored (from the trading quarters, taverns and customs; in 1654, all the taverns were signed over to the Russian Tsar). At the same time, the legal Tatar duties were not returned to Sayyid Borhan. The status of the Kasymov tsarevich became equal to that of other service class Chinggisids, and he lost his position of absolute seniority among other the service class tsars and tsarevichs.

As under the "tsar" Arslan, the Muscovite government was careful to make sure that neither the tsarevich, nor his subjects could meet and talk with foreign Muslims. It was believed that they could even kidnap the tsarevich.

Soon, Sayyid Borhan bin Arslan "adopted the Orthodox faith, was baptized and christened as Vasily following the holy baptism during his first stay in Moscow in the second half of 1653" [Velyaminov-Zernov, 1866, p. 207]. We can assume that this was entirely initiated by Moscow. A quote from a Muslim source

confirms this. This was the charter of Sefer Ghazi Agha, a Crimean Vizier, written during the reign of Mehmed Giray Khan to the court of Alexey Michailovich. It was first published in a collection of works by Velyaminov-Zernov, "Materials for the History of the Crimean Khanate" [St. Petersburg, 1864]. The charter was dated 1660–1661: "If you want to know why your troops were defeated, here' why. For as much as a hundred years, from the time of your fathers and grandfathers, Kazan and Astrakhan have been in your hands; until then, the Muslims living there were not subject to any oppression; but your current tsar believes that he is more clever than the former tsars, his fathers and grandfathers, and you have destroyed the mosques and madrasas, given fire to the word of the Lord Almighty. This is why your troops were defeated. Moreover, every year, for a ransom, we gave you from sixty to seventy of your prisoners; and when you capture a prisoner, you do not return him for ransom, but forcibly make him a Christian; this is why there are many Christians under your authority, but we do not forcibly make them Christians; it is not good to forcibly baptize against their will or convert to Muslim faith. This is why your prisoners have been killed. In general, in our country, everyone regrets that you hold prisoners and convert them to Christianity; they also reproach you for forcibly baptizing the Sultan of Khan Kerman (Khan Kerman was the Tatar name of Kasymov—B.R.)" (quoted after [Velyaminov-Zernov, 1866, p. 218]).

After adopting the Christian Orthodox faith, Sayyid Borhan became Vasily Arslanovich. Nevertheless, the Muscovite government left him as the tsarevich of Kasymov. This was a very important step for understanding the processes that took place in the "tsardom" in the 17th century. Before that, all tsars and tsarevichs (khans and sultans), who owned the Kasym Khanate were Muslims. Sain Bulat, who converted to Christianity in 1573, was immediately stripped of Kasymov. These processes were logical. For a long time, there had no longer been any practical need for a Muslim "island" at the very center of Orthodox Russia, and the "tsardom" looked anachronistic. The Russian government understood this well, and as early as in the first thirty years of the 17th

century, it tried to cut the rights of Kasymov governors. In 1627, Sayyid Borhan had even fewer benefits and revenues than his father Arslan bin Ali. During his rule, the Muscovite government pursued an active policy of settling ethnic Russians in the territory of the Kasym Khanate (they were present in the khanate before this period, but became significantly more numerous in the 17th century). More active construction of Christian churches was undertaken and the Kazan Nunnery was established in the town of Kasymov [Shishkin, 1891, p. 104].

During the "reign" of Vasily Arslanovich, the main concern of Muscovy with regard to the population of the Kasymov "Tsardom" was the conversion of Muslims to Christianity [Velyaminov-Zernov, 1866, p. 425]. Baptizing the "adherents of a different faith" was a very important phenomenon in the history of Kasymov. This was the final step towards the "dissolution" of the Kasymov "Tsardom" into Russia, which the Russian government could undertake only with a baptized "governor" of Kasymov. The Tatars who adopted Christianity were rewarded by money and food.

Vasily Arslanovich died in Moscow in 1679. After his death, the manors of tsarevich and the revenues from Kasymov went to his sons Semyon and Ivan. In 1681, they were left only with manors, which marked the end of the Kasymov "Tsardom."

A sharp drop in the significance of the Kasymov "governor" was felt during the reign of Vasily Arslanovich. Vasily spent years in Moscow, while visiting Kasymov only for a short time. Vasily and his sons, while bearing the title of tsarevichs, were often designated in official documents as simply "princes"; previously, such a disregard for the titles of the Kasymov governors would have been impossible. While gradually depriving Vasily of his importance and power, the Muscovite government was, at the same time, bestowing him with land possessions. In addition to the hereditary villages of Erakhtura, Myshtsy, Belyakovo, and Yermolovo, along with the villages and heathlands that Vasily Arslanovich owned in the Kasymov and Elatma counties, he also had other manors. In 1677–1678, 25 homesteads were registered to Vasily Arslanovich in Kerensk county, and

3 homesteads in Kasymov county [Additions, 1862a, p. 130].

After the death of Fatimu Sultan, the widow of "tsar" Arslan bin Ali in 1681 [Velyaminov-Zernov, 1866, p. 491], there was no longer any mention of the Kasymov "tsardom."

To sum up, during the 17th century, the Russian state significantly strengthened its foreign policy position. Amid the rise of Muscovy, the role played by the Kasymov "tsardom" as a trump card in the diplomatic struggle with the Ottoman Empire became less important. The very existence of the "tsardom" became an anachronism, and its final abolition was only a matter of time. The scope of authority of the Kasymov "tsars" was gradually narrowed, with a Moscow-appointed voivode becoming the main power broker. The voivode fully controlled the activities of the Kasymov governor, who was not allowed any contact with foreign Muslims. In the middle of the century, the Kasymov tsarevich was baptized, while retaining the title of the sovereign "ruler" of Kasymov. All this was part of a systematic policy pursued by Muscovy to completely eliminate the last signs of autonomy in the Kasymov "tsardom" (for more details on the second stage of the development of the Kasym Khanate, see [Velyaminov-Zernov, 1863–1866; Shishkin, 1891; Rakhimzyanov, 2000; Belyakov, 2011]).

A particular feature of Kasymov "statehood" in the 17th century was the fact that the documents regularly referred to Kasymov tsars and tsarevichs, but never to the tsardom (khanate). At that time, it was already an ephemeral entity that existed in parallel with the nationwide administrative and territorial division. The territory of the "tsardom" was restricted exclusively to the possessions of the tsar or tsarevich. And even there, he was forced to constantly act with regard to the local voivode, who was instructed to watch every step of the Chinggisid. These findings are fully consistent with the circumstances of the 17th century. However, they can

hardly be extrapolated to the 15–16th centuries. [Belyakov, 2011, p. 278].

There is no doubt that the Kasym Khanate was a product that emerged from the collapse of the Golden Horde. Established as a Horde Ulus within the emerging Muscovite Rus, it quickly became a vassal entity of the Great Prince of Moscow. Its governors were de facto vassals of the Great Prince of Moscow and Muscovite tsar and played virtually no independent political role.

However, we should not exaggerate the dependence of this khanate on the Russian state. In the 15–early 16th century, the Russian principalities, the successor states of the Golden Horde, as well as Muscovite Rus that emerged on their basis, were characterized by a complex system of relationships dominated by interdependence. That is why, even in 1517, the Kasym Khanate, while being part of the "fiefdoms" of the Great Prince of Moscow, could be regarded at the same time by the Crimean khan Muhammad Giray as his own "yurt". Moreover, the Turkic population of Meshchera, represented primarily by large Muslim feudal clans and their men, had the right of free departure until the liquidation of the Tatar khanates and the strengthening of the Russian state borders.

Some information indicates that the Kasym and Kazan Khanates had equal status. At the same time, no one questions the important role played by Kazan in the system of post-Golden Horde states. Also, we should not forget the fact that, within the legal rules that dominated the areas of the East European Plain in the 15–first half of 16th century, the Moscow monarch formally had a lower status than the ruler of Kasymov because, unlike the latter, the former was not a Chinggisid.

Overall, the Meshchera yurt could be regarded as one of the state entities of the Volga-Ural Tatars, in which ethnic communities such as the Kasymov Tatars and Mishar Tatars that exist to this day were formed.

Section III

The Tatar World in the 15–18th Centuries

CHAPTER 1 Settlements

§ 1. Settlements of the Kazan Khanate

Ayrat Sitdikov

The settlement structure of the Kazan Khanate is historically continuous and in many respects similar to the arrangement of the Bulgarian and Golden Horde periods. Its stability can be explained by the state management structure based on the existing trade and economic links.

Few studies of these settlements have been completed in the Middle Volga Region so far, and those that have been completed are isolated [Fakhrutdinov, 2004; Kokorina, 2006; Ochertin, 1994; Gribov, 2007; Valiulina, 2009; Sitdikov, Akhmetgalin, 2009]. Recent studies conducted in the areas of Kasimov, Kurmysh, Narovchat, Murzits, Bilyarsk, etc. [Ochertin, 1994; Gribov, 2007; Valiulina, 2009; Sitdikov, Akhmetgalin, 2009] as well as data collated in prior years paint a picture of a structure of settlements in the Kazan Khanate Period that was fairly developed. Generally speaking, there was a decrease in their number as compared to the Bulgarian and Golden Horde periods.

This can be seen in the materials of the archaeological studies conducted on the Voronezh, Tula, and Lipetsk Regions, etc. [Tsybin, 2004, pp. 317–319]. In the heyday of the Golden Horde cities in the Volga Region, there was an increase in the population of the forest steppe and forest zones [Gribov, 2008; Tropin, 2006; Nedashkovsky, 2010]. The Volga and Perm Finnish people moved to the forest steppe frontier and steppe regions, which is reflected in the materials of the Golden Horde cities (Bulgar, Narovchat, Kurmysh, Juketau, Bilyar-Toretskoye, Samara, Uvek, etc.). Trade connections and penetration of tradition became steady. One indicator of this process was the Islamisation and Christianisation of the Finnish population of the region.

The booming large Golden-Horde cities in the Middle Volga and Sura Regions were in decline in the first half of the 16th century, and

some of them even ceased to exist as urban settlements (Narovchat, Bulgar, Bilyar, Juketau, Kurmysh, Murzitsy, Iske-Kazan, etc.) [Ochertin, 1994; Gribov, 2007; Valiulina, 2009; Sitdikov, 2009; Fedulov, 2009; Fakhrutdinov, 1975; Nikitina, 2009]. In the second half of the 14th century–early 15th century, after the period of great troubles, there was an exodus of the population to the forest area in the North. The settled life in the steppe and forest steppe areas was dying out. Probably the settled population of the region, including the Turkic people, left the previously claimed territories of the steppe zone in search of safer locations. This is evidenced by Russian chronicles, which describe the desolation of the steppe and forest steppe, the engagement of Tatar warriors by the Russian princes, and their settlement in non-traditional forest area. The circumstances were probably aggravated by the deterioration of the conditions for the region's people due to changes in natural climactic conditions and epidemics in the southern urbanised areas.

The preconditions for the emergence of independent Turkic-Tatar states in the areas bordering the Russian princedoms are also attributed to the period. The new states represented by the Kazan and Kasimov Khanates occupy an important place in the forest steppe zone of the region.

Since a significant part of the Turkic population had moved into the area since the Bulgarian period, independent feudal Tatar princedoms were emerging there—that is, the Beylyaks, who were politically and tribally integrated into the structure of the Kasimov and Kazan Khanates. The subsequent formation of Tatar settlements in the Meshchera Region, Moksha and Sura areas is largely linked to this very population. The territory, where these formations were located, created a continuous

strip of neighboring princedoms located in the forest steppe and forest belt between the Kasimov and Kazan Khanates. Their administrative centres were Temnikov, Kadom, Kuznetsk, etc.

The studies conducted in the past decade on the Volga-Kama Region have made it possible to obtain new materials from the cultural strata of the following settlements of the Kazan Khanate: Kazan, Arsk, Alabuga, Laishevo, Tetyushi, Sviyazhsk, etc. It has been established that the successive nature of development of these settlements starting from the pre-Mongol period. These observations enable us to discuss the formation of the urban culture of the Khanate period based on the Bulgarian and Golden Horde traditions and the significant influence of the material culture of the Volga-Finnish and Russian population on its composition.

In the end of the Golden Horde period Kazan turned from a marginal city into one of the most remarkable economic and political centres of the Central Volga Region. It began to play an even greater role in the political and economic life of the Bulgarian Ulus of the Golden Horde.

In the middle of the 15th century Kazan became the administrative and political centre of the Kazan Khanate. Kazan was a large trading and craft city that held an international fair on Gostiny Island and played a significant role in the international transit trade. Trading districts (on the square near the Southern/Khan's Gate of the fortress, on Tashayak Street) and slobodas (the Armyanskaya, Kuraisheva, Bish-Balta Slobodas, etc.) were located within it, and all sorts of domestic crafts were concentrated there. After becoming economically and politically stronger by the mid-15th century, Kazan had become an independent regional centre. These were the objective reasons which to a large extent determined the choice of the first Kazan Khans who made the city their capital, and the fortified stronghold on the hill, the place of their permanent residence.

The city's territorial development in the second half of the 15–first half of the 16th century was characterised by the expansion of not only the Khan's fortress but also by the trading quarters and its further growth beyond the fortified city. The exploration of the territories mostly

covered the elevated portion of the Kremlin Hill and the adjoining lowlands. The areas beyond Black Lake Channel and River were included in the borders of the fortified trading quarter. The fortified portion of the city covered almost the entire upper area of the Kremlin Hill, up to modern-day Lobachevsky Street.

As before, the Kremlin was an important part of the city's fortification system, and its area almost doubled and reached 10 hectares. The southern fortification line comprised a moat located near the Church of Saints Cypryan and Justina. The layout of that part of the city remained mostly unchanged since the period of the late Golden Horde. The streets built earlier continued to be used. The natural hollows of ravines were smoothed in the newly-built on and previously developed territories. The moat of the pre-Mongol fortress in the centre of the Kremlin was filled in. The construction of stone buildings in the Old Town commenced.

Khan's Court became the centre of power for the entire state. Stone mosques were mentioned in the Scribe's Book for 1565–1568. Information from the document coincides with the archaeological materials obtained in the last few years during excavations in the area. Remnants of two large stone buildings were discovered on the territory of the Khan's residence. One of them supposedly was the Khan's mosque. Another large-scale building was comparable to the Khan's palace that was known in the Scribe's Book as the Great Chamber. During archaeological studies conducted on the territory of the former Eparch's Court, ruins of a building identified as the Kul-Sharif Mosque based on historical sources were discovered.

By the mid-16th century new territories had been developed and previously settled areas had been densely built-up. The territory up to the modern-day Astronomicheskaya Street, bounded in the east by the Black Lake Channel and in the west by River Bulak, were included in the borders of the fortified trading quarter.

Kuraisheva Sloboda with the stone Otucheva Mosque in its centre was located within the borders of modern-day T. Gizzat Street and Tatarstan Street, bounding it from the north and the south, and Sh. Kamal Street

Kazan. Print from 'Description of my travel to Muscovy...' by A. Olearius, 1630–1640.

and Levobulachnaya Street, from the west and the east. Unfortunately, the location of the mosque has not yet been established. Possibly it was located in the vicinity of the former Varlaam Church that was located where the Central Market currently is. Bish-Balta, which was mentioned in sources describing the storming of the city, is now linked to Admiralty Sloboda founded in this location in the early 18th century.

By the mid-16th century Kazan had become one of the major eastern European cities. By the mid-16th century Kazan's total area had reached 70 hectares, and its population, 10–12 thousand people. By medieval standards it could be considered a major eastern European city.

Domestic handicrafts played an important role in the city's economic life. It is worth mentioning that the status of the early Kazan as a military fortress and trading centre on the Volga had also left an imprint on the character of its domestic crafts. The city housed metallurgists, blacksmiths, potters, jewellers, carpenters, stone masons, leather makers, cobblers, and other such craftsmen.

Kazan's location on one of the most profitable transit trade routes on the Volga had undoubtedly been a major factor in its devel-

opmental progress. During the Golden Horde it turned from a minor Bulgar border fortress, which fulfilled mostly military and trading functions, into a major regional centre, and in the mid-15th century, into the capital of the Khanate.

According to a western European merchant and traveler G. Barbaro, during the Khanate period Kazan 'is a trading city; enormous quantities of furs are taken from there to Moscow, to Poland, Persia, and Flanders.'

Furs are received from the North and North-East, from Chaghataid regions and from Moravia.' The scale of the trading is evidenced not only by the numerous products and coins of western European, Chinese, Russian, Central Asian, and other craftsmen on the territory of Kazan. Camel bones are found in the cultural strata, indicating the presence of the animals in the city.

An international fair was an annual event in Kazan; it was held on the Gostiny Island in the mouth of River Kazanka. Merchants from many places and countries flocked there. Regional trade with the Upper Kama Region and the Southern Urals as well as the Muscovite state, Astrakhan, Crimean, Bukhara and Siberian Khanates, Nogai Horde, Persia, Ottoman Empire, etc., also grew fast. Exports of the Kazan Khanate were mostly comprised of leather goods, cattle, fish, bread, and prisoners; and imports, of luxury goods, expensive weapons, fabrics, spices, cattle, etc. The Kazan Khanate purchased salt, linens (from Muscovite Rus), western European woolens, silk and cotton fabrics, jewelry, books, domestic items (from the Bukhara Khanate, Persia), fruit, wines, steel (from the Transcaucasian Region).

Part of the population of Kazan was involved in agriculture, cattle breeding, and

crafts. There are finds related to the agricultural and handicraft work of the people. Grain bread and cattle for slaughter were brought in large amounts from nearby villages and even from more remote areas of the Khanate since a significant portion of the arriving products was designated for the external market, apart from the day-to-day needs of the city.

It has been established that the formation of the urban culture of the Kazan Khanate was based on the traditions of the previous cultures of the Volga Bulgaria and Golden Horde. We have expanded our traditional ideas about the population of Kazan thanks to new data from anthropological genetic studies based on materials of the city's medieval necropoleis. They confirm minor changes in the anthropological image of the Kazan population during the period of the Middle Ages being considered. The domination of Muslim traditions in the urban culture of medieval Kazan, a fact which is well-known based on historical data, can also be observed through the material culture or revealed using archaeologically.

All in all, the material culture of city dwellers corresponded to the level of major eastern European cities of that time period. The needs of the economically well-to-do were satisfied by the high-quality craft product and varied agricultural and industrial products. Handicraft centres within the city and the agricultural surrounding areas led to the creation of stable economic ties for the dynamic growth of the city. One signs of this was Kazan's involvement in international economic relations. The city was well known in Europe and Asia as one of the major international trading centres.

The town of Arsk holds a special place in the medieval history of the Volga-Kama Region. The town located in the area of cultural ties of the Finno-Ugric and Turkic people played an important role in the ethnogenesis of the people of the Volga Region. Its study helps us to understand the complex socio-economic and political processes in the area during the Middle Ages.

Arsk is located 60 km from Kazan, on the right bank of River Kazanka. Site of medieval town is located in the centre of the modern town, to which the history of the emergence of

the urban centre is linked. Scientific reference books devoted to the medieval history of Arsk pay significant attention to the ethnocultural identification of the initial settlement, the substantiation of the time and place of its emergence, and the origin of its name. The fragmentary and controversial written sources serve as the basis for historical reconstructions; the subsequent folklore data, the results of linguistic studies, as well as materials from archaeological excavations are used.

Controversy around the early history of Arsk started as early as in the 19th century. The modern interpretations of the settlement's origin are more focused on its ethnocultural identification with the local Turkic, Slavic, Volga, or Kama population. The theory that ascribes the foundation of Arsk to the Udmurts is the most widespread. These ideas are based on the presence of the ethnicon 'ar' in the name of the town, interpreted as a sign of the Udmurt origin of the settlement that had existed as the centre of an independent Udmurt principedom from the 12th century to the time of the Kazan Khanate. According to another hypothesis the founding of Arsk in the 12th century is ascribed to the Chuvash tribes that appeared in the basins of the Kazanka, Vyatka, and Cheptsä Rivers during the pre-Mongol time and were later assimilated by the Tatars.

The theories substantiating the Turkic-Tatar origin of Arsk link the founding of the town with the arrival of the Bulgarian people in the 12–13th centuries. The appearance of the fortress was explained by the process of the political and economic inclusion of the region into the structure of Volga Bulgaria. The subsequent growth of the town is linked to the ethnogenesis of the Turkic Tatars of the Volga-Vyatka Region.

The existence of the Ars is known from the works of eastern authors of the pre-Mongol period who described the territories located to the north of Volga Bulgaria. In the pages of Russian chronicles the Arsk Land was first mentioned in 1379 in the description of the campaign of the Vyatka warriors, and later in 1489 it was mentioned in the notes on the campaign of the Russian princes to the Vyatka Land and their victory over the local Arsk leaders.

As a town, Arsk was first mentioned in the description of the attempt to seize the Kazan throne by the Siberian Khan Mamuk in November 1496. The next mention of the town in the Russian chronicles is attributed to the mid-16th century, the period of active participation of the Arsk princes in the confrontation between Moscow and Kazan. The Arsk princes were likely polyethnic and belonged to both the Turkic and Volga-Finnish clan elite that had possibly come under the influence of Islam.

Archaeological data constitutes an important element in the reconstruction of the region's history of development. Medieval Bulgarian written monuments from the pre-Mongol period are concentrated in the basins of the rivers Kazanka and Mesha. Over 150 settlements from the Bulgarian-Tatar time are attributed to the region, while over 50 written monuments are related to the pre-Mongol time, including the Russky Urmat and Buzhinskoye Settlements, Arskoye, Kamayevskoye, Chalymskoye sites of ancient towns, the city of Kazan, etc. It should be mentioned that most gravestones of the Kazan Khanate period are concentrated on the territory of Arsk proper and in its vicinity. Once again, this clearly indicates the presence of a vast Muslim Tatar population in the region, which is also supported by written sources.

Bulgarian colonisation of the basin of River Kazanka began not later than in the 11th century. The earliest Bulgarian settlement there was the city of Kazan. Later the region was settled along the valley of River Kazanka, which was a favourable area for agricultural development and also an attractive trading artery.

The material finds originating from the excavations of medieval written monuments in the basin of River Kazanka. The biggest finds are traditional Bulgarian ceramics from the late 12–13th centuries. Similar finds have also been made in the excavation of the Arsk archaeological site.

The cultural strata from the pre-Russian period on the territory of archaeological site contain almost no materials from the Kama Region and Volga-Finnish cultures. The occurrence of such ceramics and Russian pottery has been found in the strata going back to not earlier than the mid to late 16th century. Such

a pattern has also been found in other written monuments from the valley of River Kazanka.

Archaeological materials point towards complex ethnocultural processes taking place in the area in the 11–16th centuries. Probably the proximity of peoples living there led to intense socio-economic and political relations. The arrival of the Bulgarians probably was a catalyst for the development of social relations that set in motion the separation of clan nobility and the rise of large trading administrative centres.

In the system of Bulgarian settlements on River Kazanka, Arsk was the farthest fortified settlement to the north-west, and it remained as such until the territory was assimilated by the Muscovite state. The Buzhinskoye settlement that probably gave rise to the Arsk area is located 3 km west of the town.

The story of the Arsk charge of 6 September 1552 holds a special place in the description of the Kazan campaign. In the pages of the chronicle the town is described as 'an old fortress, called Aresk, built as a fortified town with towers and battlements, and a lot of people reside in it, and they are very careful, and their army has not yet been defeated, and it is found 60 miles from Kazan, in a very difficult, impassable area, in the wilderness and swamp, and there is only one road leading to it.'

The medieval history of Arsk that emerged during the pre-Mongol era, not later than the early 13th century, is characteristic of the development process of a settlement founded by the Bulgarians in close cooperation with the people of the Kama Region who joined together as a part of the state traditions of Volga Bulgaria, the Kazan Khanate, and Russia. The historical and cultural heritage of Arsk and its area is the heritage of all the peoples living there, created by the efforts of numerous generations of their ancestors and requiring thorough study and careful preservation.

Alabuga is another large town well known from written sources. It also emerged during the Bulgarian period, before the Mongol invasion. It was also mentioned in the Kazan chronicles as one of the important centres. The existence of a settlement in the Kazan Khanate period has also been confirmed by archaeological ma-

terials in the Chertovo Hill Fort, near the 12th century mosque. Important spiritual centres appeared as places of pilgrimage that would later hold an important place in the history of the Tatars. Bulgar and Bilyar would be the most significant and revered places. Their significance would play an important role in the formation of the cultural affinity of the Tatars.

Despite the significant political, economic, and social turmoil, many settlements that had

appeared during the pre-Golden Horde period continued to exist. This points to the stable political, socio-economic structure of the resettlement system that was established back in the pre-Mongol period. The cities were the centres of the military, administrative and economic power of the state, and the successive nature of their location points to the preservation of traditional forms of economic life and governance.

§ 2. Settlements of the Northern Caspian Sea Region of the 15–early 17th Centuries

Dmitry Vasilyev

The economic and political status of the Northern Caspian Sea Region steppes in the 15–17th centuries changed dramatically from the Golden Horde period. The political influence in the area was shared by the Nogai Horde and the Astrakhan Khanate.

After the Temür's campaigns and the destruction of towns, the caravan trade that had been the foundation for stability of Jochid Ulus deteriorated. A significant portion of the population was captured and taken to Central Asia; some of them moved to Lithuania, Turkey, or Russia [SafargAliyeva, 1960, p. 172]. After his visit to the Golden Horde Ahmad ibn Arabshah wrote: 'The Desht tribes were distressed and under strain, and due to the scarcity of shelters and fortresses they were disjointed and suffered from discord... For these reasons the residents of Desht who had prospered are now impoverished and devastated, devastated and deserted, destitute, and suffer from unbearable perversions' [Tiesenhausen, 1884, p. 470]. This was the epoch when the trading routes moved to the south of the Caspian Sea [SafargAliyeva, 1960, p. 173]. Giosafat Barbaro wrote: 'Before the destruction of Tsitrakhan (Astrakhan) by Tamerlane, the spicy roots and silks that are now carried through Syria had been first delivered to Tsitrakhan and then taken to Italy on six or seven Venetian galleys, for at the time neither the Venetians nor other coastal dwellers traded with Syria' [Semenov, 1836, p. 56]. Nevertheless, the Volga Trading Route was still functioning.

After 1396 the towns of the Northern Caspian Sea Region, especially the central Golden Horde towns located on the left bank of River Akhtuba, were in a pitiful state. The city of Sarai, though it was restored to an extent, lost its importance as a major economic and political centre. For example, starting from the 15th century there is no more data on the eparchy in Sarai, which probably never recovered after Temür's campaigns [Malyshev, 2000, p. 214]. The number of coins minted in Sarai after 1396 was much smaller than, for example, in Hajji-Tarkhan. This implies that Hajji-Tarkhan, restored after its destruction, was playing an incomparably greater role than the country's capital. While previously the khans had been fighting for Sarai, now the struggle moved towards the periphery. This can be explained by the fact that Sarai and its surrounding areas had suffered greater devastation than the fringes of the state [SafargAliyeva, 1960, p. 173].

Coin mintage of the 15th century affords us the opportunity to determine which towns retained their importance. Coins were minted in Sarai, Hajji Tarkhan, as well as in 'Ordu al-Muazzam' and 'Il Uy Muazzam' [Pachkalov, 2008, p. 59]. Mostly silver coins were minted; the number of copper ones was smaller. In the second half of the 15th century copper coins were no longer minted in the Lower Volga Region, which in itself indicates a regression of the economy and deterioration of the internal market.

Information on the Shiraz merchant, Shams al-Din Muhammad, who visited Sarai with a trade caravan from Khwarezm and sold his wares with an average profit of 50% while purchasing numerous Russian, European, and Chinese goods, is attributed to 1438 [Zakhoder, 1967, pp. 166–172]. This is evidence of the existence of a town and trading in it in the first half of the 15th century.

The seizure of Sarai by the Vyatka people, the capture of many prisoners and goods, was mentioned in 1471 [Tatishchev, 2003, p. 12]. Next Sarai was mentioned in 1480 (the seizure of the city by a Russian detachment) [Pachkalov, 2008, p. 62], in 1502 (in connection with the campaign of Megli Giray Khan) [Le khanat, 1978, p. 323], and in 1520 when an expedition to the Akhtuba of the 'low people' of the Grand Prince of Moscow was arranged at the request of the Khan of Crimea. The 'low people,' '...after reaching the Akhtuba and engaging in many fights failed to capture Sarai and returned with an abundant loot' [Tatishchev, 2003, p. 84]. Based on the archaeological data, in the 16th century the city was still partially functional: Turkish ceramic tiles based on the Damask pattern dated to the 16th century have been found in the Selitrennoye archaeological site [Voskresensky, 1967, p. 89].

Currently a significant number of researchers are inclined to place the city of Sarai of the 14–15th centuries in the Selitrennoye archaeological site in the Astrakhan Region. This theory has been confirmed by both archaeological finds and the numismatic data of the site dating back to the 15th century; however, the city's area greatly reduced, and the site was covered by necropoleis [Pachkalov, 2008, p. 62]. G. A. Fedorov-Davydov believed that in the early 15th century only a district in the Kuchugur Region remained populated [Fedorov-Davydov, 1994, p. 26].

The economic and political degradation of Sarai took place in the second half of the 15th century in connection with the rise of Hajji-Tarkhan. According to the Russian chronicles, '...and those Horde Tsars started living in Astorakhan, and the Great Horde was deserted, and it was located close to Astorakhan, two

days' trip up the river, and it was called the Great Sarai' [Tatishchev, 2003, p. 175].

It is possible that life moved from Sarai to the Kamenny Bugor archaeological site (5 km to the south-east of the Selitrennoye site). Numerous 15th century coins have been found there [Lebedev, Klovov, 2001, pp. 22–52].—In the opinions of V. Lebedev and V. Klovov, this was where the Il Uy Muazzam ('The Home of the Higher Country') coin minting facility was located, the 15th century mint of the Jochids [Ibid., pp. 43–44]. The coining die of the Il Uy Muazzam mint was discovered by A. G. Muhamadiev who attributed it to the camp of Dawlat Berdi Khan [Muhamadiev, 1966; Muhamadiev, 1983, p. 132]. However, there is the opinion that Il Uy Muazzam is an erroneous reading of the name Ordu Muazzam Court [Petrov, 2005, p. 6]. Currently A. G. Muhamadiev and a number of Astrakhan archaeologists believe that Orda al-Muazzam is a town that was once located near the settlement of Komsomolsky in the Artrakhan Region (the Komsomolsky or Aksarayское archaeological site) [Muhamadiev, 1995, p. 167; Grechkina, Shnaidshtein, 2001, p. 1; Pavlenko, 2001, p. 75; Pigarev, 1998, pp. 45–46]. The site and its monetary circulation have not been sufficiently studied yet. Coins were minted in Orda al-Muazzam both in the late 14th and in the early 15th century.

The existence of a town such as Ak-Sarai in the 15th century cannot be ruled out. For example, it is known that it was mentioned in the list of Franciscan monasteries located on the territory of the Golden Horde (Aquilonian Vicariate) among the localities of the custody — the Sarai Episcopate, where the members of the order were present in 1400 [Pachkalov, 2007, p. 139].

As far as the city of Hajji-Tarkhan during the post-Golden Horde period is concerned, it underwent a period of recovery and certain growth. For the most part, in the 15th century copper and silver coins were minted there. Moreover, rare silver coins minted in Hajji-Tarkhan al-Jadid are known of [Pachkalov, 2008, p. 64]. It is still unclear what kind of minting facility it was and how it is related to Hajji-Tarkhan. Possibly this is the root cause of the dispute about the locations and number

of Tatar Astrakhans in the 15–early 16th centuries. The predominant opinion is that the city was located at the Shareny Bugor archaeological site until 1556 (i.e., until it was moved to the left bank by the Russians) [Malinovsky, 1892, p. 8; Vasilyev, 2012, p. 230].

The popular opinion among the Astrakhan regional ethnographers is that As Tarkhan and Hajji-Tarkhan are the names of two different towns—that is, the old and the new town (it is likelier that As Tarkhan and Hajji-Tarkhan are different pronunciations of the name of the same town) [Ibid., p. 232]. Allegedly, As Tarkhan was located on the right bank on the Shareny Bugor, and the second town Hajji Tarkhan appeared on the left bank after Temür's invasion. According to this version of events, the troops of Ivan the Terrible seized the latter town. The supporters of the latter version R. Dzhumanov and C. Nizametdinova wrote that after 1395 the town was rebuilt on the left bank, namely on the Shaban-tyube and in its vicinity—to be more precise, where the Astrakhan Kremlin is currently located [Fortress, 2009, p. 20]. Right there in the place of the old Tatar town, allegedly the Russian Astrakhan was later founded.

Another one of the precursors of the present-day Astrakhan is the oldest settlement on the left bank, near the village of Moshaiik. P. Nebolsin and before him Samuel George Gmelin mentioned the existence of the small town Chungur near the village of Moshaiik, 7 miles from Astrakhan, beyond the Kazachy Bugor [Nebolsin, 1952, p. 59].

The regional Astrakhan ethnographer M. Kononenko attempted to place the third Astrakhan somewhere on the left bank of the Volga, to the north of Astrakhan, beyond the Krivaya Bolda channel [Vasilyev, 2012, p. 233]. Yu. Makarenko has also mentioned that the town of Hajji-Tarkhan had a different location to that of As Tarkhan. It was moved by the Tatars to the left bank in the 14th century, and both towns co-existed for a time [Fortress, 2009, p. 20].

These versions were developed a while ago. V. Bartold also believed that the town, damaged during Temür's campaign, was rebuilt not in its old location (the Shareny Bugor) but in

the place of the modern-day Astrakhan (on the left bank of the Volga) [Bartold, 1963, p. 740]. M. SafargAliyeva was of the same opinion [SafargAliyeva, 1952, pp. 29, 32]. He believed that Temür Kutlug Khan was the founder of New Astrakhan. In the 19th century A. Arkhipov and S. Lane-Pool were supporters of the version of the abandonment of the Shareny Bugor area after Temür's campaign [Arkhipov, 1866, p. 2; Lane-Pool, 1881]. One of the reasons for this opinion was the silver coins of Shadibek Khan minted in 805 A.H. (1402–1403) in Hajji-Tarkhan al-Jadid [Markov, 1896, p. 594].

According to I. V. Zaitsev, in 1554–1555 two adobe-and-reed fortresses were probably functioning at the same time: Dervish Ali Khan occupied one of them, and the Moscow regent Leonty Mansurov the other; the two of them clashed after the departure of the majority of the Muscovite forces after the first Astrakhan campaign. Both fortresses were located on the right bank, one in the area of the modern-day Streletskoye Village, and the other one, near Karantinnoye Village [Zaitsev, 2004, pp. 166–168]. However, there is no direct historical evidence to support this hypothesis. P. Nebolsin offers information on a small town on the right bank of the Volga, 'at the 7th mile mark upstream of the settlement Solyanki'; this town was known as Kuyuk-Kala, the Burnt-Out Town [Nebolsin, 1852, p. 58]. This could have been the residence of Yamgurchey. (However, the popular name of one of the districts of the modern-day city—Yamgurchev—is a sign of the location of the headquarters of Yamgurchey Khan on the low left bank.)

The Astrakhan ethnographer A. I. Bogatyrev has expressed an interesting opinion regarding the name 'Kuyuk-Kala,' or 'Burnt-Out Town' (this is where the Russian place name of Zhareny Bugor—Fried Knoll—comes from) [Fortress, 2009, p. 20]. He believes that they are the remnants of a destroyed Tatar town on the Shareny Bugor or Cossack fortifications burnt down by the Tatars. Members of the Peter's Society of Researchers of the Astrakhan Region have on numerous occasions remarked upon the strata of a raging fire discovered in the ravine of the Shareny Bugor. It does not seem possible to reliably link this fire with either the

period of the Russian conquest or the period of Tamerlane's invasion when the town was indeed set on fire.

P. Nebolsin retells the Astrakhan legends of the Turkic origin, according to which a Nogai fortress as well as mazarkas—that is, burials, were located at some point on the territory of the Astrakhan Kremlin. The mazarkas have also been found in the historical part of the White City—the Astrakhan trading quarter; on Rozhdestvenskaya Square the unpaved ground was eroded by wind, and ancient burials were revealed [Nebolsin, 1852, p. 60].

All of the above versions indicate the presence of some additional settlements in the area of the Tatar Hajji-Tarkhan during the pre-Russian conquest period. Possibly the settlements on the left-bank in fact existed since the town on the right bank was open to attacks from the west, from the Crimean Khanate. The left bank was safer since it was protected by the river. It is highly likely that a settlement on the Kutum, a branch of the Volga, existed in the area of the modern-day city district of Yamgurchev (unfortunately, no archaeological studies have been conducted there yet). It has been proven beyond doubt that the settlement of Moshik appeared during the pre-Mongol period and existed during the Golden Horde times; it is supported by materials from excavations conducted at this monument at different times [Shnaidshtein, 1978; Shnaidshtein, 1992, p. 3; Ryabichkin, 1999; Pantelenev, 2010, pp. 92–106; Vasilyev, 2001, p. 48].

Still, was there actually a Tatar settlement on the knoll selected as the location of the Russian Astrakhan in 1556? Archaeological studies on the territory of the Astrakhan Kremlin and the White City shed light on this. The first serious excavations were performed in the Astrakhan Kremlin in 1959–1974, when preparing for and undertaking its fundamental restoration. The next large-scale excavations on the territory of the Kremlin were conducted in 2006–2013 when preparing for the reconstruction of the Kremlin territory to celebrate the 450th anniversary of Astrakhan. The results of these studies have not yet been fully published; however, even now we can state that deep (some of them over 5 m) trenches

and excavations on the territory of the Kremlin have failed to disclose any significant cultural deposits from the pre-Russian period on the Kremlin hill. Items that clearly belonged to the Golden Horde and Khanate periods were of course discovered during the excavations, such as scattered pottery fragments, a number of bone artefacts, and coins. A large amount of Golden Horde brickwork and glazed tiles in the cultural deposits of the Kremlin indicates that bricks taken from the Golden Horde town ruins were indeed used to build it. In one of the holes, remnants of a structure with a layout reminiscent of the heating system in a Golden Horde house were found; it comprised a tandoor oven and kans—smoke extracting ducts. Researches tentatively dated the structure back to the Astrakhan Khanate period [Vasilyev, 2012, pp. 233, 234]. A small amount of intact and ruined Muslim burials were discovered; they can be attributed to both the Golden Horde epoch and the Khanate period.

Furthermore, the excavations in the historical centre of Astrakhan, outside of the Kremlin territory, led to the discovery of scattered fragments of pottery, glazed tiles, and coins from the Golden Horde era. Therefore, it is clear that the Dolgy (Zayachy, Shaban) Bugor had been partially settled even before 1556–1558—that is, before the establishment of Russian power in the Lower Volga Region and the transfer of Astrakhan to the left bank.

However, if one compares the quality and quantity of archaeological materials found there and, say, at the Sharenny Bugor archaeological site, it is clear that there are no grounds for declaring the existence of a Tatar town on the Shaban Bugor after 1395. No cultural stratum characteristic of a town has been found there.

The principal difficulty faced when determining the quantity and location of the antecedent settlements of present-day Astrakhan is the low level of exploration of the Sharenny Bugor archaeological site (its territory is in the built up area of the modern day city of Astrakhan). In 1893 A. Spitsyn found traces of a Golden Horde town on the Sharenny Bugor that stretched along the banks of the Volga 'as a strip up to 70 fathoms wide' and discovered

items and coins characteristic of the Golden Horde [Report, 1895, pp. 76–97].

In 1966, before the construction of the Astrakhan Cellulose and Paper Combine, the first serious large-scale archaeological excavation supervised by A. Mandelshtam was conducted. A whole block of residences (mud huts), production facilities (pottery kilns), and a cemetery were found at the border of the Golden Horde town [Guzeyrov, 2004, p. 14]. In 1984, 3 km east of the central part of archaeological site, the Astrakhan archaeologist V. V. Plakhov dug out a manor complex comprising a central multiroom house and four mud huts that existed in the 14–15th centuries. Archaeological explorations that were performed for preservation purposes in the 1990s revealed a large number of satellite settlements of Hajji-Tarkhan, country manors, and village settlements located within its immediate area [Ibid., pp. 14, 15]. Despite the fact that the vicinity of Hajji-Tarkhan and its territory have been studied relatively well, archaeological data on the later strata of the town is minimal.

According to contemporary testimonies, in the 15–16th centuries the town was partially in ruins. For example, this is what A. Contarini wrote after visiting Astrakhan in 1476: 'The town is small, located on the bank of the Volga; the dwellings are few in number and made of clay, but the town is protected by a low stone wall; it is evident that until very recently it had decent buildings' [Barbaro and Contarini, 1971, p. 220]. The Venetian Giosafat Barbaro purposely mentions that the importance of Astrakhan waned after Temür's campaign [Ibid., p. 157]. However, the town remained an important centre on the route from Khwarezm to Tana and Crimea. Barbaro noted the general decay, the decline in trade but, nevertheless, remarked that 'the people from Moscow sail to Astrakhan for salt every year' [Ibid.]. Frequently even the Khan authorities attempted to make a profit not from ensuring the safety of trade but from robbing the trading caravans and taking slaves. In the 15th century Astrakhan still remained an important slave trade centre. For example, there is a story by a Mount Athos monk by the name of Gerasim, who was captured by the Tatars and sold in Astrakhan

in the late 15th century [Acts, 1841, p. 146]. The Venetian Ambrogio Contarini was nearly enslaved in Hajji-Tarkhan in the late 15th century [Pachkalov, 2008, p. 65]. In 1466 the boat caravan that the Tver merchant Afanasy Nikitin had joined to travel to Persia was drawn into an ambush and robbed by the people of the Astrakhan ruler [The Journey, 1948, p. 53].

It should be noted that in the 15th century due to the fall of Sarai the religious importance of Hajji-Tarkhan also increased. In his book 'Data Collated on the History of Kazan and Bulgar,' Sh. Marjani provided information on the outstanding Muslim theologians and scientists who lived in Hajji-Tarkhan in the 15th century [Pachkalov, 2008, p. 65]. The town was probably the place where the Catholic Franciscan mission, the centre of the Sarmat Eparchy, was located [Malyshev, 2000, p. 214].

The decline of the economic importance of Astrakhan was expressed by its transformation into a seasonal settlement. According to Ambrogio Contarini, the three brothers, the rulers of the town, only spent a few winter months in the town and in the remainder of the year acted 'as the other Tatars did' [Barbaro and Contarini, 1971, p. 220]. At the same time, it is known that Contarini was able to buy flavoured croutons from good-quality wheat in the town to take with him on his journey [Barbaro and Contarini, 1971, p. 241], which led A. Pachkalov to suggesting that part of the population around Astrakhan could have been involved in agriculture [Pachkalov, 2008, p. 66].

A number of other 15–16th century settlements in the Lower Volga Region are known of. They are mentioned in historical sources but have not yet been located. For example, Afanasy Nikitin mentions Uslan, Sarai, Berekazany [The Journey, 1948, pp. 8–9]. While Sarai represents the remnants of the Golden Horde capital in the place of the Selitrennoye archaeological site, there are doubts regarding the other settlements, in particular, if they were in fact towns [Pachkalov, 2008, p. 67]. The data of Fra Mauro's map regarding settlements of the Lower Volga Region in the 15th century are equally inaccurate since the map drawn in 1459 reflects earlier information. In one of the map's legends Fra Mauro says: 'Let it be noted that Cumania

was once a very large province and covered a vast space within its borders. But these days the lands are deserted and of little interest. Their population is smaller than that of Hungary' [Fomenko, 2007, p. 143].

Nevertheless, apart from Hajji-Tarkhan, there were a few smaller settlements in the lower reaches of the Volga since the people of the Khanate were involved not only in nomadic cattle raising. A significant number of the people were engaged in agriculture and fishing. This idea is supported by the fact that, after the Khanate joined Russia, the Astrakhan voivodes 'distributed islands and pastures as in the days of old and ordered that taxes should be paid as in the days of old as they had done to the former tsars, and the Princes requested that they should not be surrendered to Crimea and the Nogais and not be made servants by the Tsar' [Tatishchev, 2003, p. 204]. The word 'pasture' is important—it is a sign of the agricultural activities before the arrival of Russian settlers. It demonstrates the existence of a settled lifestyle among the Astrakhan Tatars, a tradition found in the Volga delta since the Khazar times [Shnidshtein, 1998, pp. 17–22].

After the Russian voivodes moved the city to the left bank due to its vulnerability to possible attacks from Crimea, Tatar settlements continued to exist in the vicinity, and some of those had been there since the Khanate period (at present it is difficult to judge before any archaeological studies have been completed). For example, the layout of Astrakhan attributed to Adam Olearius shows a Tatar town to the south west of the city—an adobe walled fortification with square towers, with portable dwellings built inside. Currently, Tatar Bazar, a historic district of Astrakhan, is located there. Astrakhan ethnographer G. Gibshman suggested that this layout was created by a Dutch engineer in Moscow at the request of the authorities and issued to the Astrakhan voivodes during the rule of Fyodor I Ivanovich of Russia [Gibshman, 2011, pp. 467–470]. The ban on Tatars from settling in the Russian city had become irrelevant by 1636, since the Tatars, one of the major population groups of the territory, by then needed protection from the Kalmyks who arrived to the lower reaches of the Volga

several years prior. Moreover, Olearius himself writes of the Tatars freely selling their produce in Astrakhan [Ibid., p. 469].

Nevertheless, the fact of the existence of a Tatar settlement near Astrakhan must be acknowledged. The so-called Plan of Olearius is not the only reference to it. Here is how a merchant called Fedot Kotov, who visited the town on his way to Persia in 1623, describes the immediate vicinity of Astrakhan: '...And below the city and near the city there are Tatar yurts, and all the Tatars live in dugouts surrounded by a wicker fence covered with clay. And the Nogais travel in the steppes around the city, but they subject themselves to the Tsar. And they trade in the city after dinner, and before dinner the Tatars and the Nogais trade outside, and there are no residential or military households outside of the city, only a monastery on the hill above it. And below it gardens stretch towards Kutumovka' [The Journey, 1958, p. 31]. Here we see the same description of a Tatar town some distance downstream from Astrakhan, in the place of the modern-day Tatar Bazar. The separation of trade is mentioned here: within the city before dinner, and after dinner the trade outside of the city walls, with the Tatars and Nogais. And almost the entire Russian population, with the exception of the monks, is also isolated—it is concentrated within the city walls. Next F. Kotov says: '...And there are vegetables in the gardens, apples, melons, watermelons, pumpkins, cucumbers, grapes, wild peppers, cabbages. ...And then there are yurts and gardens. On the side of the pasture, where Astrokhan stands, three miles downstream from Astrokhan, is the Tsar's Channel—it leaves the Volga and flows to the sea. And the Tatar yurts are on both sides of the channel, like our Russian villages. On the same side of the Tsar's Channel the Astrokhan monks fish for kakarauzik, known in Russian as tonya, and called ilym in Astrokhan, for four miles along the channel' [Ibid.]. In this testimony, the mention of the Tatar villages—yurts—along River Tsarev is of interest to us, as well as the descriptions of the affairs of the suburban Astrakhan Tatars: vegetable growing, fishing, not to mention the Turkic names of the fishing terms of the Lower Volga Region.

Unfortunately, the archaeological remains of the non-urban settlements of the 15–17th centuries in the lower reaches of the Volga have not been studied or even identified. The territory of Astrakhan itself Astrakhan. Further development of archaeological studies in these areas might bring about interesting results with regard to the material culture of the population of the Astrakhan Khanate and the delta of the Volga in the early Russian period.

V. Trepavlov offers the most detailed description of the history of the town of Saray-Jük, the capital of the Nogai Horde [Trepavlov, 2002, pp. 583–598]. The town was located on the right bank of River Yaik, 48 km from the modern-day town of Atyrau (Guryev), close to the village of Saray-Jük. The town was one of the most significant regional centres that maintained the crossing over River Yaik on the route from Urgench to Sarai [Utemish-Haji, 1992]. Quite possibly the town was not destroyed by Temür's army during his march against the Golden Horde since it belonged to Temür's ally—Emir Edigu [Yegorov, 1985, p. 124]. The coins of Dervish Khan supported by Edigu were minted there [SafargAliyeva, 1960, p. 231; Fedorov-Davydov, 1973, p. 192]. Also, in 1419, in the vicinity of Saray-Jük, Edigu suffered his final defeat. Despite its virtual subordination to the Nogais, the Kazakh Khans later attempted to exert their influence over the town. The camp of the khans Jani Beg, Burunduk, and Kasimov were also located there [Trepavlov, 2002, p. 585].

The vicinity of Saray-Jük was included in the personal domain of the ruler of the Horde, his personal yurt. Historians generally believe that Saray-Jük used to house the winter headquarters of the Nogai bey. Urban life was characterised by a low level of organisation and

Astrakhan. Print from 'Description of my travel to Muscovy...' by A. Olearius, 1630–1640.

came down to the provision of minimal trade volumes, the functioning of administrative establishments, a prison, and a huge cemetery [Zhirmunsky, 1974, p. 415; Margulan, 1950, p. 86; Peretyatkovich, 1877, pp. 137–139]. G. Fedorov-Davydov and M. SafargAliyeva believed that Saray-Jük was destroyed by Temür and lay in ruins [Fedorov-Davydov, 1973, p. 167; SafargAliyeva, 1960, p. 231]. In the opinion of V. Trepavlov, Saray-Jük might have been not so much the winter but the summer camp of the Nogai beys, while the bey himself could have visited it if and when necessary. Ismail Bey, for example, at the end of his days spent the whole year in Saray-Jük, having moved there on a permanent basis [Trepavlov, 2002, pp. 586–587]. In Saray-Jük administrative bodies functioned—the garrison commander resided there, so did the daruga (town administrator and regent of the entire area). Also, the spiritual leaders of the Nogai Horde lived there.

There is little data about the internal buildings. It is known that Ismail Bey intended to erect Khan's palace in the town; also there was a prison in Saray-Jük. Furthermore, the results

of archaeological studies indicate that Saray-Jük had fortifications. The remnants of the outer walls could be seen until 1860s. In 1824 the main entrance to the fortress with two triangular ramparts was still visible. All in all, the archaeological site had an almost regular rectangular shape, with the exception of the curved side neighboring the bank of River Sarachinka [Ibid., p. 594; Levshin, 1824, p. 188; Margulan, 1950, p. 87]. The territory of archaeological site was covered with brick rubble, a sign of the importance of brick buildings, pieces of marble, glazed tiles, and isinglass. In the central part of the fortress, towards the west, there were remains of the citadel hill (the 'ark,' typical of Central Asian towns) [Trepavlov, 2002, p. 594]. Muslim cemeteries and mausoleums, believed to be holy ('aulie') by the local residents, were present both within the fortress and throughout the town [On the Ruins, 1867, pp. 3–6].

The permanently settled population of Saray-Jük involved in trade, crafts, and agriculture was sparse [Margulan, 1950, p. 88]. These people were the bey's *yasak* payers and this was their function and designation in the Nogai Horde. It is not wholly clear how the settled population formed. It is likely that some of them had been permanent residents of the town since the Golden Horde times, while the others came from impoverished nomads. However, the presence of a permanent population ensured the continuity of trade. Even during periods of unrest, guests from Saray-Jük visited Astrakhan and traded there with the merchants from Shamakhi, Derbent, and Urgench [Trepavlov, 2002, p. 588].

The town was gradually deteriorating, losing its importance due to the crisis in the Nogai Horde. The 1570s was a critical period for the capital of the Manghit Yurt. On several occasions the town was laid to waste by the Cossacks. And it was completely destroyed in 1581 [Ibid., p. 589; Margulan, 1950, pp. 86, 87].

Saray-Jük's most important function was memorial—it maintained the dynastic burials. Gradually, the town turned into a giant necropolis. It is known that khan burial vaults had been placed in the town since the Golden Horde times. If Abu al-Ghazi is to be believed,

the Golden Horde Khans Tokhta and Jani Beg were buried there. In the early 16th century, the burial vaults of the Kazakh Khans Jani Beg and Kasimov were erected there [The History of Kazakhstan, 1993, p. 164]. It is possible that the marks denoting vaults and burials on the maps of the Pizzigani brothers, on the 1375 Catalan atlas and the 1459 map of Fra Mauro, where the right bank of River Yaik is decorated with the images of mausoleums and the words 'Sepulchura Imperial,' (Imperial tomb) are related to the Saraychiq necropolis [Trepavlov, 2002, p. 589; Bagrov, 1912, fig. 16; Varvarovsky, Evstigneev, 1998, p. 175; Chekalin, 1890, p. 249].

V. Trepavlov believes that Saray-Jük and its vicinity used to be the *kuruk*—that is, the khan's family cemetery of the Jochids; hence the name, Saray-Jük, meaning the Small Palace, is reminiscent of a palatial structure over the ruler's grave. The sacral importance of the city was immense. This is where Jani Beg, Berdi Beg, and possibly Uzbek ascended the throne. The town maintained its importance as a traditional burial ground during the Nogai period. The Nogai worshiped the Khan's mausoleums [Osmanov, 1883, p. 47]. There are numerous testimonies of the use of Saray-Jük's cemeteries to bury members of the Nogai aristocracy [Trepavlov, 2002, p. 590].

Were there any other towns in the Nogai Horde? The conclusive answer of the experts is no. V. Trepavlov points to the references in dastans—oral histories—of the towns of Kumli Kala and Syrli Kala, where the heroes of the Nogai epoch operated, and compares them with the towns of Kumkent (in the Shymkent District in Kazakhstan) and Syrli Tam (close to Kzyl-Orda), respectively [Ibid., pp. 595–596]. At present it does not seem possible to correlate the archaeological remains of several towns and settlements in the vicinity of Saray-Jük and along the Yaik (for example, the unfortified settlement on River Solyanka, the Temirovo archaeological site, the settlement near Lake Karabau, the Tendyk archaeological site, Kyryk Arba) with the post-Golden Horde period without their systematic study and excavation [Ibid., p. 596; On the Ruins, 1867, p. 6].

§ 3. The Cities and Small Towns of the Siberian Khanate

Alexey Matveev, Sergey Tataurov

The various twists and turns of history have left us without even a single surviving description of a city or town in the Siberian Khanate. As V. N. Pignatti once said, 'not one of the Siberian Chronicles, even when studied with the utmost care, has yielded a description of Isker in the time of Kuchum Khan, or an account of what became of it after his downfall; was it merely a military fortress inhabited by soldiers, or was it a regular town—a human settlement? The chronicles do not contain even an external description of the settlement, to say nothing of its internal contents, its residents, or their way of life' [Pignatti, 2010, p. 186]. Perhaps archaeological investigation alone might somewhat compensate us for the lack of such data, but—as will be seen below—fate would have it that even archeology is frequently powerless to resurrect for us a picture of the cities and towns of Siberia.

Nevertheless, various details in chronicles, travel diaries, memoirs, and other written sources by medieval and early modern authors as well as modern scientific studies do provide us with some indications about the urban settlements of the Siberian Khanate [Plano Carpini, 1957; Remezov, 1989; Castrén, 1999, etc.].

V. Sobolev observed that the authors of Siberian Chronicles made a rigid division of the fortified settlement complexes into *grady*/*goroda* and *gorodki*—that is, 'cities' and 'towns.' For example, Yesipov's Chronicle states that Yermak's cossacks 'captured the town of Nazimnoy' on the Ob or '...captured the small town of Ata murza'; while the Rumyantsev Chronicle says '... (he) came to the city (*grad*) and took a little of its treasures and ran off with them. And left the city of Sibir empty' [Sobolev, 2008, p. 232]. It is interesting to note that in the chronicles Siberian 'cities' and 'towns' (*grady* and *goroda*) named in this way are thus put on an equal footing with the 'Tsar's city (*grad*) of Moscow.' Yet the authors of the chronicles could hardly have wished to compare some insignificant settlement to the capital of the Muscovite state [Ibid.].

At different times the following three cities performed the role of capital of the Turkic-Tatar state formations in the Western Siberia: Ki-

zyl Tura, Chimgi Tura (Tyumen), Sibir (Qashliq, Isker).

The city of Kizyl Tura was located close to the source of the river Ishim and had a varying status at different stages of its history. According to Remezov's Chronicle, Kizyl Tura was Siberia's first capital and was ruled in antiquity by Tsar Irtyshak. G. L. Fayzrahmanov regards Kizyl Tura as the capital of the legendary Ishim Khanate [Fayzrahmanov, 2002, pp. 117–120]. G. F. Miller describes the history of the foundation of Kizyl Tura along the Middle Irtysh as follows: 'On Som Khan was first to rule on the Ishim; his residence was near the river's mouth, where it joins the Irtysh, on a steep red bank (*kizyl yar*, in the Tatar language), in a fortified town surrounded by three earthwork ramparts. The town took the name of Kizyl Tura from that place. The name of the successor of On Som was Irtyshak, from whom the river Irtysh takes its name. Chinggis, the Khan of Tyumen, attacked Irtyshak and defeated him. The next ruler on the Ishim was Sargachik, and some Ishim Tatars call themselves Sargachiks in his honour' [Miller, 1999, p. 186].

R. G. Skrynnikov believed that in the 1420s Kizyl Turamay have been the site of the headquarters of the Shaybanid ruler, Muhammed [Skrynnikov, 1986, p. 82]. V. I. Sobolev remarked that according to Abu al-Ghazi in the middle of the 15th century the Uzbeks of Abu'l-Khayr Khan invaded the lands of the Western Siberian Tatars and seized Kizyl Tura, making it their headquarters for a time [Sobolev, 2008, p. 227]. The Taibuga dynasty of Tyumen was subordinate to the Shaybanids, and *yasak* was regularly sent from Chimgi Tura (Tyumen) to Kizyl Tura. In 1480 the Shaybanid Khan Ibrahim suddenly arrived in Tyumen with his troops and killed Mar Taibugin, his vassal and son-in-law. After uniting the two thrones, he moved his headquarters from Kizyl Tura to Tyumen. L. R. Kyzlasov wrote that in the late 14–15th centuries, in the Shaybanid state centred on the city of Chimgi Tura, Kizyl Tura was a town of regional significance and one of the military administrative centres of the Siberian Yurt [Kyzlasov,

1992, p. 47].

The story of the final fate of the city of Kizyl Tura remains a mystery. This large-scale military administrative centre is likely to have lost its significance during the internecine wars between the Shaybanids and the Taibuga dynasty, even before Yermak's troops set foot in Siberia. In the account of Yermak's last raid up the Irtysh, there are no direct references to Kizyl Tura among the Tatar towns mentioned (Tashetkan, Tebendya, Kullary), though it is stated that 'at the mouth of the Ishim the cossacks once again faced strong opposition' [Miller, 1999, p. 255].

I. Falk visited the ruins of the Kizyl Tura fortress in the second half of the 18th century, observing a destroyed mosque tower and the remnants of a stone building. By that time the territory of the former settlement had been abandoned.

Kizyl Tura is the only capital to have been depicted in the earlier pictorial sources, being drawn in the late 17th century by S. Remezov to accompany his chronicle. The picture shows three rows of fortifications with a complex system of passages, above-ground dwellings, and possibly the house of the ruler or a mosque (Fig. 1).

Today the ruins of Kizyl Tura have been identified with the archaeological monument known as Krasnoyarka II site discovered in 1961 by V. A. Mogilnikov in the Ust-Ishim District of Omsk Region (Fig. 2). The former settlement is fortified by three rows of earthworks and ditches and covers an area of about 1500 m². The height of the embankments measured from the bottom of the ditches reaches 2 m, and 0.75 m from the inside. In 1966 V. A. Mogilnikov examined the site excavating a 100 m² section, after which he was convinced that Kizyl Tura had probably been located at another site—that of Novonikolskoye I (Golaya Sopka or 'Bald Peak'), whose layout is reminiscent of Isker [Mogilnikov, 2001, pp. 258–261].

Since the second half of the 1990s the Krasnoyarsk site has been excavated by the archaeological team of Omsk State Pedagogic University under the supervision of Ye. M. Danchenko who believes that it can confidently be identified as Kizyl Tura. One of the arguments in favour of this version is the drawing made by S. Remezov

where 'the city of Tsar Irtyshak' is placed on the right bank of the Irtysh, above the mouth of the Ishim, between the place denoted as Krasny Yar—the 'Red Bank'—and the confluence of a small stream. The above geography corresponds to the position of the Krasnoyarsk site located below the modern village of Krasnoyarka and above the mouth of the river Utuskun flowing at the bottom of the cape. The coincidence between the toponyms Kizyl Tura and Krasny Yar ('Red Bank'), in the opinion of Ye. M. Danchenko, can hardly be accidental [Danchenko, Grachev, 2003, pp. 277–278]. In the numerous cultural strata of the Krasnoyarsk archaeological site attributed to various periods, Ye. M. Danchenko and his colleagues have managed to reveal a complex of objects belonging to the period of the Siberian Khanate. The collection of medieval finds comprises clay and metal tableware, iron knives and arrow tips, imported bronze rings, glass beads, bronze buckles and hoops, bronze figurines, spindle whorls, and goods made of bone. All these materials persuaded the author to insist that 'therefore, the location of Kizyl Tura can be quite reliably established based on various historical sources, which, nevertheless, still leaves other questions raised by the study of the monument unanswered' [Danchenko, 2008, pp. 221–224].

Sibir/Isker/Qashliq (Fig. 3). In the 'Collection of Chronicles' by Rashid al-Din, a town 'Ibir-Sibir' is mentioned, which was allegedly granted to Jochi, the elder son of Chinggis Khan [Rashid-ad-Din, 1952, pp. 73, 150]. In 1405–1406 the Bavarian Johann Schiltberger, serving with the troops of Edigu, found his way to Siberia, where he happened to stay in a town of the same name (Sibir) [SafargAliyeva, 1960, p. 218]. In the Russian texts describing a 1483 raid of Moscow troops 'against the Vogulich and Ugra,' D. Iskhakov regards Sibir as a separate city from Tyumen (Chimgi Tura) [Iskhakov, 2010a, p. 18]. On a map made in 1542 by the Lithuanian boyar Antonius Wied, based on the information provided by the Russian emigré I. Lyatsky and published in 1555, the following major cities are shown: Sibir (Sybir), Ierom the Great (Wilky Ierom), and Tyumen the Great (Tumen Wilky). The Rumyantsev Chronicle has this to say about the city of Sibir: '[Kuchum]...

Fig. 1 Kizyl Tura in a drawing by S. Remezov

Fig. 3. Isker

Fig. 2. Kizyl Tura.
The fort of Krasnoyarsk II

came to the city and took a little of its treasures, and ran off with them. And left the city of Sibir empty' [Sobolev, 2008, p. 232].

The city of Sibir simultaneously had two other names: 'Isker' and 'Qashliq.' Kh. Alishina believes that the name 'Sibir' was introduced by the Russians. Isker, another name of the city, is found in Tatar archival documents written in the Arabic script and translated into Russian. In the researcher's opinion, this toponym comes from the ethnonym 'eskel,' which is of Bulgar-Tatar origin. Its other name, 'Qashliq,' is of Turkic origin and associated with the Uzbek words kishlak (a settlement), 'kyshlak (winter quarters), and 'Qash-

liq' (uplands) [Alishina, 2010, pp. 159–166]. According to a number of sources, the city of Isker (in the Tatar language 'Isker' comes from Iske + or, meaning 'old fortress') was founded in 1480–1490 by a Siberian khan Makhmet (Makhmut, Mamet) Taibugid, who wanted to move his headquarters northwards, away from the Shaybanid territories [Sobolev, 2008, p. 232; Iskhakov, Izmaylov, 2007, p. 227]. In 1563 Isker became the capital of Kuchum's Siberian Khanate and later, in the early 1580s, the centre of Ataman Yermak's cossack domain. After the foundation of the Russian city Tobolsk in 1587 near the mouth of the river Tobol, Isker was abandoned.

Fig. 4. A drawing of 'Kuchumovo archaeological site' by S. Remezov (cit. ex. [Belich, 2009, p. 93])

In terms of intensive archaeological studies Isker has been more 'favoured' than other Turkic-Tatar state capitals. Well-known scholars, travelers, and local history specialists have repeatedly explored and described it, making archaeological excavations, including N. Spafariy, G. Miller, I. Falk, P. Slovtsov, M. Znamensky, I. Butakov, S. Mameev, V. Pignatti, A. Palashenkov, B. Ovchinnikova, I. Belich, A. Adamov, A. Zykov, and others. But no summary of these results has been made so far due to the dispersion of scientific collections and materials, and we are hardly likely to see such a publication in the near future.

The first drawing of the capital of the Siberian Khanate, titled 'site of ancient Kuchum town and Old Sibir,' was made by S. Remezov in 1703 [Belich, 2010, pp. 122–158] (Fig. 4). Of all published descriptions of the site [Belich, 2010, pp. 72–93] one most worthy of quoting here is that of G. Miller, who had examined a number of Tatar and Ostyak towns and was thus in a good position to compare them. 'The ruins of this former capital city, if one can describe such a place as this was in those terms, can still be observed. The high eastern bank of the river Irtysh is even higher there than elsewhere. As so often usually happens in places where a flowing river undermines the bank, so it is the case here: part of the slope has collapsed, and

the bank appears almost vertical from the river side. On the top of the hill, if one looks downstream, there is a ravine with a small river, which is called the Sibirka in Russian, after the city. Due to the steepness, an ascent from this side is quite impossible. On the third side of the hill, facing the steppe, there is a valley which descends along the ravine to the Sibirka; from here one could perhaps reach the site where the city was located, but as it is also quite steep here the ascent requires considerable effort.

Only the fourth side has a gentle incline down to the riverbank, and it is from here that there must have been access to the city. It takes the form of a small round hill, fortified along the terraces with a triple embankment interspersed with ditches, each bank being higher than the next. These ramparts surround the city only on the valley side and that which affords access. The other sides, along the Irtysh and the gully of the Sibirka, required no fortifications. In some places the ramparts and ditches have become so overgrown that they can scarcely be seen. The internal area is about 50 sazhen (one sazhen or fathom measures 2.13 metres) in diameter. From this we can conclude that apart from the khan, his family, and his servants, only a few noble Tatars could have lived there, unless we assume that the place was much more extensive at that time. It is said that some area on the side of the river—no one knows how large it was—was undercut by the water and collapsed. There are no remains of houses or permanent dwellings there, except for a certain surface unevenness in various spots, from which it may be concluded that dwellings once stood there' [Miller, 1999, pp. 227–228].

G. Spassky, who visited the site of Isker much later, described its fortifications in more detail. 'Isker was located on the bank of the river Irtysh at its confluence with the small river Sibirka... The steep bank of Irtysh does not per-

mit of any ascent, nor even the slightest human foothold... There is a rampart of 15 fathoms in length, with a ditch behind it not wider than 2 arshins; from these, the rampart, and the ditch to the highest point of Isker it measures up to 5 fathoms. Remains of ditches are visible in the ravine, and towards the Sibirka and along the ravine almost to the water's edge there seems to have been a ramp down to a well, still traceable as a pathway. The site in general is not level here, but pitted: three very deep holes seem to have been cellars and, according to Tatar legends, were used as dungeons for the condemned' [Spassky, 1818, pp. 28–30].

Once more we note with regret that a summarising work, which would bring together all the materials accumulated over one and a half centuries of archaeological studies at Isker, remains unwritten. Nevertheless, even the partial publication by the Tobolsk researchers A. Adamov and I. Balyunov of items found in the course of various explorations made at the site of the Siberian Khanate capital, demonstrates that Isker could and should be a base archaeological complex for the study of Siberian state entities. The determining factor here is that of the Isker site's single-layer occupation. Research carried out by A. Zykov in 1988 and 1993 provided valuable observations of the cultural layer stratigraphy¹, which the author connected with well-known historical events [Zykov, 2010, pp. 112–122]. An important result of the work is the conclusion that Isker was built at the end of the 15th century, before which there had been no other forts on the site [Zykov, 1998, pp. 22–24].

At last, in 2010 a collection of works titled 'Isker, the capital of the Siberian Khanate' was published [Isker, 2010], in which D. Iskhakov and Z. Tychinskikh gathered together the works of almost all contemporary researchers who had concerned themselves in one way or another with the history of this city. The book presented the historical, archaeological, linguistic, and ethnographic data on Isker, producing a publication that has made a great contribution to our knowledge of the Siberian capital.

Tyumen/Chingi Tura (Fig. 5). The appearance of Chingi Tura on the lower reaches of

the river Tura, later to become the capital of the Tyumen Khanate, was connected by G. Miller with semi-legendary events. Thus, according to Russian chronicles, Taibuga (the founder of the Taibugid princely dynasty) received the Tobol Region as a gift from Khan Chingi (Chinggis Khan) [Miller, 1999, pp. 186–189]. 'And Prince Taibuga came with all his household to the Tura river, and built a city there, and named it Chingiden, and now the city of Tyumen stands there,' states the Yesipov's Chronicle [The Complete Collection of Russian Chronicles, 36, 1987, pp. 46, 236]. G. Fayzrahmanov believes that these events took place in the 1220s [Fayzrahmanov, 2002, pp. 64–69].

We are credibly informed that Chingi Tura was first depicted on a map in 1367 by the Italian merchants Francesco and Dominico Pizzigano [Kyzlasov, 1992, pp. 130–131]. According to other sources the city first appeared on the map in a Catalan atlas of 1375 as 'Singui,' the centre of Tyumen vilayet. It is referred to in the Ustyug Chronicles as the place where in 1406 Khan Tokhtamysh is supposed to have been killed [Sobolev, 2008, p. 232; Iskhakov, Izmaylov, 2007, p. 227]. In 1428–1429 the Shaybanid Abu'l Khayr Khan, the founder of the nomadic Uzbeks' state, captured Chingi Tura, killed the Taibugid Haji Muhammed, and made the city his base of operations. Simultaneously the city was the centre of an eponymous vilayet in the

Fig. 5. Chingi Tura fortifications layout from the Tyumen town plan of 1766 (cit. ex. [Matveeva et al., 1994, p. 168])

¹ Below we provide a detailed description of A. Zykov's research.

large state of the nomadic Uzbeks [Ibid., p. 220]. Chinggi Tura remained the capital until 1446, when the khan moved his headquarters far to the south, to the city of Sygnak. According to 'Tarikh-i guzide, Nusrat-Name' (circa 1505) the inhabitants of Zhangji Tura (i.e., Chinggi Tura) and Bulgar paid the yasak tribute to the khan's treasury throughout this period [Iskhakov, 2010a, p. 20]. In 1481–1495 (with intervals) the city was the capital of the Great Horde, under the reign of the Shaybanid khan Ibak. It was to Tyumen that, according to the 'Arkhangelogorodsky chronicle,' he brought the Orda bazar from the Great Horde [The Complete Collection of Russian Chronicles, 37, 1982, p. 95; Iskhakov, 2010a, p. 21]. In 1489–1491 a group of Kazan noblemen, who had fled from the pro-Moscow khan Muhammed-Amin, found shelter in Tyumen. In 1493 (or 1495) Ibak was killed by Muhamed, a representative of the Taibugid dynasty, who moved the capital of the khanate to his headquarters in Qashliq (Isker). Notwithstanding the version given in the 'Siberian Chronicles,' whereby Prince Muhamed Taibugud destroyed Chingiden (Chinggi Tura), the city apparently survived. Under the name of Tyumen the Great (Tumen Wilky) it was featured on a map created by Antonius Wied in 1542 [Rybakov, 1974, p. 11, maps No. 2, 3]. It is thought that Chinggi Tura was ransacked and burned in the early 1580s by Yermak's host. On its site the Russian town of Tyumen was built in 1586.

Contemporary Tyumen and Tobolsk researchers—I. Belich, T. Izmer, A. Matveev, N. Matveeva, Ye. Molyavina—based on map materials of the 17–20th centuries and descriptions of remains of legendary Chinggi Tura published by I. Lepekhin, G. Miller, N. Abramov and other researchers of the 18–19th centuries, write about the considerable size of Chinggi Tura [Belich, 2009, pp. 142–164; Izmer, Molyavina, 2005, pp. 152–154; Matveeva et al., 1994]. In their opinion, the most fortified part of the city was Chinggi Tura's citadel, located in the historical part of present-day Tyumen, on the wedge-shaped promontory bounded by the Engels Street and Communa Street. This spur of land is surrounded on three sides by ravines (the Vishnyovy Ravine, the river Tyumenka, and one of its tributaries), and on the landward side, according

to Lepekhin, it was '...encircled with a double earthwork, which has decayed due to its age and is now almost level with the ground' [Lepekhin, 1814, p. 2]. G. Miller wrote: '...Between the ravines, but not on the Tura bank, stood the old Tatar small town, which can still be traced by the bank and ditch stretching from ravine to ravine...' [Miller, 1750, p. 213]. On the Tyumen map of the 17–18th centuries included by P. Golovachov in the book 'Tyumen in the 17th century,' only the ditch is shown in this place [Tyumen, 1903]. Unfortunately, the dimensions of the earthwork are unknown to us. According to the key to a 1766 plan, the ditch was 'three fathoms deep and fifteen fathoms wide.' Such considerable measurements were most likely the result of soil erosion.

N. Abramov also described the remains of the former capital. 'The city's fortifications... consisted of banks and ditches... The first ditch, up to one fathom deep, with an earthen rampart, starts from the Lyamin Lake... (Lyamin-Kul) near Spasskaya Street, and stretches to the bank of the Tura, about 600 fathoms in length. The second ditch, opposite the wooden so-called 'big site of ancient town,' is up to 2.5 arshins deep with a rampart over 2 arshins high, for a space of 760 fathoms. Apart from this, the city was surrounded by ravines on almost all sides: the first almost reaching right down to the river Tura is called the Tyumenka and was formerly filled with water; the second, lying parallel to the first, is called Vishnyovy by the Russians... the third is named the Delilov. Their depth reaches down to the level of the water surface in the Tura, whose bed lies over three fathoms below the bank. Between the Tyumenka and Vishnyovy ravines is located the city of Chinggi Tura, and this spot is called the Tsarev site of ancient town' [Abramov, 1998, p. 576]. I. Belich wrote that N. Abramov had made a mistake when describing the external fortification line. The extent of the external line of defences could not be 600 fathoms as this does not correspond with the geographic realities. Locating the internal defensive lines is difficult. To judge from its length, 70 fathoms, this could only have been the fortifications of the Tsarev site of ancient town (the Chinggi Tura citadel). Other measurements, specifically the ditch depth of 2.5 arshins and the bank height

of 'over 2 arshins,' contradict the data in the key to the Tyumen plan of 1766 [Belich, 2009, pp. 142–164].

To the west and south-west of the Tsarev site of ancient town was the Big site, and further to the south, on the next promontory, the Small site. According to the 1766 plan the fortifications of the Big site of ancient town consisted of three defensive lines. The first two bank-and-ditch lines, each around 270 metres long and separated by a passageway in the middle, consisted of ramparts about 1.5 metres wide ('two arshins') and ditches up to 2 metres ('one fathom') wide and up to 2.5 metres (1.5 fathoms) deep. The last bank-and-ditch line completely defended the Big site of ancient town. The bank width was 3.5 metres ('2 fathoms'), its height was 1.5 metres ('2 arshins'), the moat width was 2.5 metres ('1.5 fathoms'), and the depth was 1 metre ('1.5 arshins'). According to the plan, the Small site of ancient town was not fortified, though the possibility cannot be excluded that its defences may have been destroyed by the time the map of the city was compiled [Rafikov, 2011, p. 12].

Archaeological investigation of Chingi Tura started in 2005, when A. Matveev performed the zoning of the territory of the earliest development of Tyumen's historical core with the purpose of assessing the degree of preservation, historical and cultural value of its cultural layers. The research resulted in the redefinition of the Tsarev archaeological site as a zone of special attention and the elaboration of guidelines for the constant archaeological supervision the site required and for systematic examination of areas free of buildings [Matveev, 2005]. Recovery operations were began in 2006 by T. Izmer, and investigation was continued in 2007–2009 by T. Rafikova [Rafikova, 2010, pp. 95–99; Rafikova, 2011, pp. 11–15]. In the course of the study she ascertained that archaeological site of Siberian Tatars had been preceded on the cape by a developed medieval settlement or site of ancient town (of the Bakalskaya archaeological culture). Serious disturbance of the upper layers of the monument prevents the stratigraphical division of these periods. Moreover, the buildings are dated to within rather broad parameters. Thus, dwelling 1a was in use during the 13–16th centuries A.D., while building 3 was occupied between

the 14th to 17th centuries A.D. Building 24 in the central part of the monument has been reliably dated by the coal from an adjacent midden (COAH-7981) to the 16th to 17th centuries with a probability of 68.2% and has been associated with the Siberian Tatar development phase.

The Tatar dwellings discovered by T. Rafikova are above-ground or slightly sunken (up to 10–15 cm) frame-pillared rectangular buildings. The floor in two of the buildings was strewn with white sand. The finds from the monument include bone arrow points and numerous working implements (piercing tools, knives, spindle whorls, etc.) and cannot aid in refining the date of the structures. The sole iron arrowhead, flat with a rest, dates from the later Middle Ages. Radiocarbon dating of the monument has provided a series of 14 dates testifying to its constant functioning from the 9th to 17th centuries A.D. [Rafikova, 2010, pp. 95–96]. According to A. Matveev and S. Tataurova, the ceramic complexes found by T. Rafikova in the uppermost cultural layers of Chingi Tura have clear analogues on sites of the Middle Irtysh, Baraba, and Tom Regions.

Apart from the three 'capitals,' there were many other settlements in Kuchum's Siberian Khanate. Thus, in two districts alone—those of Tobolsk and Beryozov—G. Miller counted more than 100 *gorodki* or 'small towns' inhabited by an Ugro-Samoyed and Turkic population of the 14th to 16th centuries [Miller, 1937, p. 335].

In describing the epic of Ataman Yermak, R. Skrytnikov mentions the following Tatar and Khanty small towns (*gorodki*): Qashliq, a strong Tatar small town on the River Aremzyanka, Narymsky small town, Kolpukhov small town, the fortified settlement of Prince Samar, twelve Koda towns, the Karachino archaeological site on the River Tobol, Chandyr archaeological site on the River Tavda, archaeological sites of Begishevo and Tebendya, and the fortress of Kulary [Skrytnikov, 1982, pp. 160–199].

Khadi Atlasi and Z. Tychinskikh listed the following small towns for the Siberian Khanate:

- on the river Tura: the small town of Yapanchin, Chinki Tura (Chimgi Tura), and Kinyr in the upper reaches of the Tura;
- on the river Tobol: Tarkhan Kala, Yaulu Tura (Yavlu Tura), and Karachin;

- on the river Tavda: Tabura and Atyk Murzy;

- on the river Nitsa: the ancient city of Chubar Tura;

- on the river Irtysh: the small town on Cape Chuash (Chuvash), Isker, Kyzym Tura, Bichek Tura (Bitsik Tura), Susgan (Suzgun Tura), Yabalak (Abalak), Bayesh (Bikesh), Tibende, Kollar, Kizyl Tura, Tash Atkan, Yalym, Kara Atau, Kechkene, the 'strong Tatar small town' at the mouth of the Arimzyanka, small town of Turtas, the Ostyak small towns of Rachu and Narym, and two towns of Prince Samar;

- on the shores of Lake Kunda: several towns;

- on the river Tayda: the Mansi towns of Loboto;

- on the river Tara: the small town of Tunus;

- and in Baraba: Liuba and Mirzagali [Atlasi, 2005, pp. 40–87].

In addition, according to the data of Z. Tychinskikh, the following towns were located in the Siberian Khanate: Zubar Tura, the small town of Yesaul Alyshai, the town of murza Changula, Tsytyrly, Aktsybar Kala, the small towns of murza Attik, Aty murza, 'the prince's town,' 'the frontier town on Yatman Hill,' the small town of Makhmetkulov, Ilensky, Chernoyarsky, Katargulov, Maly town, and the small town of Obukhov [Tychinskikh, 2010a, p. 54]. This list should be completed with the small town of Chyorny on the river Irtysh, and Ton Turu in Baraba where Buyan Bey, Kuchum's viceroy, once dwelt. G. Miller wrote that 'in the Tom County there were fortified sites inhabited by Tatars, or so-called small towns, whose function was to provide for defence against the Kalmyks... not far from the town of Tomsk, on the island in the Tom river, there was the small town of Toyanov' [Miller, 2000, p. 106].

So, the territory of the Siberian Khanate in the 1580s held over fifty towns, large and small. Z. Tychinskikh believes that the majority of these smaller townships were residences of local ulus nobility. Located along the strategically important boundaries of the Khanate, they were provided with strong defensive fortifications [Tychinskikh, 2010a, p. 55].

In the long list of large and small towns we can distinguish those which are referred to in

Russian as towns (*gorody*) in the sources, and those which have the Turkic word *tura* ('town') in their names: Tarkhan Kala, Yaulu Tura (Yavlu Tura), Tabura town, the ancient town of Chubar Tura, Kyzym Tura, Bichek Tura (Bitsik-Tura), Susgan (Suzgun Tura), the two towns of Prince Samar, Zubar Tura, the town of murza Changula, 'the frontier town on Yatman hill,' and Maly town. Thus, in addition to the three capitals, there were about 13 major towns in the Siberian Khanate.

At the present date science is still lacking in summaries of the research materials on the results of archaeological investigation of the capitals of Siberian Turkic-Tatar state entities. The situation is little better with regard to the publication of archaeological studies of other large and small towns of Siberian states of the 15–16th centuries known from chronicle sources.

The town of **Yavlu Turawas** first described in 1861 by N. Abramov in the Bulletin of the Imperial Russian Geographic Society: 'The area of the city was 70 fathoms long and 50 fathoms wide. It was surrounded by water on two sides, on the third there was Lake Chat, and on the fourth, two ditches three fathoms deep with an earthen rampart in between extending to the river Tobol. To enter this fortification there was only one way—through the ditches and the rampart, and by water along the moat from the Tobol' [Abramov, 1861, p. 222]. At the end of the 19th century the monument was visited and described by V. Florinsky [Florinsky, 1894, p. 234]. This is all we know about this complex. The monograph 'Archaeological Heritage of the Tyumen Region' states that the degree of preservation of the Yavlu Tura fortification and of its cultural layer is unknown [Archaeological Heritage, 1995, p. 58].

The remains of **Ton Tura** town in the Baraba wooded steppe were described in the second half of the 18th century by I. Falk. Ton Tura was located on a cape and had three lines of fortifications consisting of banks and ditches, which defended a dwelling area measuring 150 fathoms in length [Falk, 1824, p. 336]. In 1925 Ye. Clodt and A. Zhikharev made a preliminary survey of the Voznesensk archaeological site, and systematic excavation began in

1926, yielding materials from the later Middle Ages. The investigations were carried out by P. Dmitriev and V. Levasheva. Several dwellings and general service structures were studied at the archaeological site (Fig. 6, 7) [Levasheva, 1928, pp. 87–97]. Throughout 1974–1976 the remains of this Tatar town were studied by the Vengerovsky group of the Novosibirsk State Pedagogical Institute's archaeological team headed by V. Sobolev. These made a detailed description of the site. At the time the research was conducted, the surviving part of the monument was 500 metres in length. The fort was divided into four parts by three lines of ditches and banks. Between the first and the second sections there was a strong fortification system consisting of two banks up to 1.5 m high and up to 3 m wide, and a ditch up to 4 m deep and up to 19 m wide. Along the western slope of the first section, the entrance to the fort could

be discerned. The length of this section reached 145 m. Between the second and the third sections was a second fortification line, consisting of a 0.77 m high bank and a 0.5 m deep ditch. The third fortification system was at a distance of 110 m from the second; it consisted of a 0.4 m deep ditch and a 0.3 m high bank. The fourth section was 138 m long and had several depressions [Sobolev, 2008, p. 234]. The finds from the digs at the Voskresensk archaeological site formed the basis for a collective monograph by the Novosibirsk researchers titled 'Baraba in the Period of the Later Middle Ages' [Molodin et al., 1990]. At the present time Voskresensk archaeological site is the best-studied and described settlement in the Siberian Khanate, for which much credit must go to V. Sobolev.

The excavation of the small **town of Toyan-ov** has been underway intermittently since 1887, carried out by such researchers as S. Kuznetsov,

F. Martin [Yakovlev, 2009], J. de Baye, S. Chugunov, and M. Gryaznov. The finds from the dig of M. Gryaznov were partially published in 1976 by L. Pletnyova [Pletnyova, 1976, pp. 65–89], but it should be noted that in this publication 'small town of Toyanov' does not refer to a fortification but to a burial mound near the children's sanatorium in the village of Timiryazovo. A. Dulson believed that the small town of Toyanov dated back to the 17th century and had been left by the Chulyim-Tom' Turks. He also found analogues for the artefacts discovered in the small town's cultural layer among the materials from other archaeological monuments of the West Siberian wooded steppe [Dulson, 1953, p. 162]. Thorough consideration of the materials from all small town of Toyanov excavations would help to determine the place of Chulyim-Tomsk Turks on the political map of the Siberian Khanate. It is worth mentioning that file No. 26 of M. Gryaznov's archive, kept at Fund III of Omsk State University's Archaeology and Ethnography Museum, contains a selection of materials on the excavations of the small town of Toyanov, Basandayka, Arkhiyereyskaya Zaimka, and other monuments of the Tom and Ob basins in the context of their parallels with materials from the Middle Irtysh Region monuments of the later Middle Ages. M. Gryaznov himself never managed to summarise the collected materials.

In 2010 an expedition of the Arkhaika research and development centre headed by O. Zaitsev collected materials at the supposed location of the small town of Toyanov. The materials obtained indicate that, despite considerable construction activity, the cultural layer of this monument has been preserved and merits investigation.

As such, the capitals and administrative centres of Siberian Turkic-Tatar state entities have been studied by archaeologists to varying degrees. In spite of the great number of archaeological studies conducted on them, the materials on Isker and the small town of Toyanov have never been collated or adequately interpreted. Ton Tura (Voskresensk archaeological site) has received the most impressive publication of materials found in the excavations carried out by V. Levasheva and V. Sobolev.

Kizyl Tura has been thoroughly examined by the expeditions of Omsk State Pedagogical University headed by Ye. Danchenko and will be presented to the research community in a monograph in the nearest future. Chimgi Tura and Yavlu Tura have so far evaded archaeological study.

All the above-mentioned 'capitals' and towns of the Siberian Khanate correlate well with the late 16th century distribution of Siberian Tatar ethnic groups as proposed by N. Tomilov [Tomilov, 1981]. In line with this it appears that the towns occupied central locations in the settlement areas of the known ethnic groups. As such, Isker was the administrative centre of those Siberian Tatar groups later referred to by scholars as 'Tobol Tatars'; Chimgi Tura was the main city of the Tyumen-Tura Tatars; the small town of Toyanov, of the Tom Tatars; Ton Tura, of the Baraba Tatars; and Kizyl Tura, of the Kurdak-Sargat Tatars. The question about the administrative centre of the Tara Tatars' ancestors remains open. No large archaeological sites comparable with Kizyl Tura or Ton Tura, filled with 16th century artefacts, have so far been discovered here.

Interpretation of other 16th century Siberian Tatar military and administrative centres is complicated by two circumstances. On the one hand, we cannot determine their exact number and location judging from the texts of Russian chronicles alone. This is why many of them have not yet been discovered by archaeologists (e.g., the small town of Chyorny, the last settlement founded by Khan Kuchum in the Omsk Irtysh Region). Only a few of the small towns mentioned in the chronicles have been studied by archaeologists, such as the small town of Tunus—the Nadezhdinka VII archaeological site in the Muromtsevo District of the Omsk Region, excavated by S. Tataurov (Fig. 8). On the other hand, for many of the later-medieval fortified sites studied by archaeologists there are insufficient written or ethnographic materials to enable identification with the legendary great and small towns of the Siberian Khanate. By way of example, Kipo-Kulary (Kip IV) archaeological site (Fig. 9) in the Tevriz District of the Omsk Region (excavated by B. Konikov) cannot yet be directly identified with the

famous military township of Kullary, which Yermak never succeeded in capturing. The Bolshoy Log archaeological site (Fig. 10) on the river Om (excavated by V. Chernetsov, V. Gening, and B. Konikov), Kuchumovo archaeological site (Fig. 11) on the river Ishim (excavated by R. Goldina), the archaeological sites of Koshkul IV (Fig. 12), Krapivka II archaeological site on the river Uy (Fig. 13), and Yekaterinskoye V (Fig. 14) on the river Tara (excavated by A. Matveev) cannot yet be identified with the Siberian Khanate settlements known from the chronicles [Matveev, Tataurov 2008, pp. 149–152]. Alongside this, even tentative localisation of the legendary towns and their mapping out in combination with the 14–16th century Siberian Tatar archaeological monuments known to the scholars would help to make possible the reconstruct of the settlement structure and administrative arrangement of Kuchum's state [Matveev, Tataurov, 2012].

Based on results of archaeological studies, a number of works on the fortifications of this period have been published; graphic reconstructions have been made for some of them [Zykov, 2010, p. 113; Troitskaya, Sobolev, 1996, p. 121]; and some efforts towards typological classification of sites have been made, of which the

classification system elaborated by V. Sobolev seems the most relevant [Sobolev, 2008, p. 226]. He chose as criteria the location and planigraphy of sites—that is, peculiarities of terrain permitting the defence of the population, availability of water resources, convenience of agricultural lands, etc. Based on this, he distinguished three types of the site of ancient towns: headland sites (82.5%) built on a spur formed by natural river banks and ravines; plain sites (12.5%) built in level areas or on a ridge without dominating over the surroundings; and island sites (5%) concentrated on the islands in Lake Chanovskoye.

V. Sobolev's classification and statistical data make possible a consideration of the engineering and fortification models used at the sites of the Siberian Khanate's ancient towns. In addition to this, we propose to analyse the fortified sites of the Siberian Khanate in a broader historical context, taking into account the location of each monument within the borders of a certain territory and population, as well as its military, political, and social roles. In this manner, the diversity of fortified settlements can be divided into four categories:

1. Cities: the centres of the 'provinces' making up the Siberian Khanate ('capitals'): Isker, Chingi Tura, Kizyl Tura, and Ton Tura.

2. Military and administrative centres and ordinary fortified settlements in the 'provinces' (centres of clan subdivisions). For example, in the Middle Irtysh Region: Bolshaya Pristan I (Fig. 15), Krapivka II, Yekaterininskoye V (Ananinskoye), Aytkulovo XI, Bezymyannoye II, and others.

3. Small frontier towns. In the taiga of the Middle Irtysh Region: Nadezhdinka VII, Bergamak XV, Koshkul IV, Yamsysa XIV. In the Baraba steppe: Malkovo, Novorozino I, Tyumenka, Chinyaikha, Bolshoy Chulankul I.

4. Fortified military camps, such as the small town of Chyorny from the chronicles.

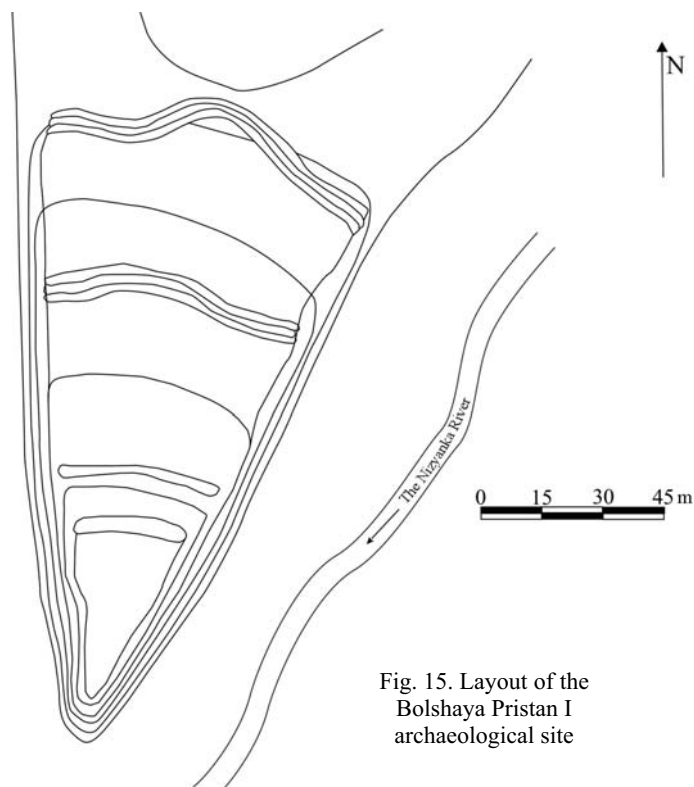

Fig. 15. Layout of the Bolshaya Pristan I archaeological site

We consider this approach the most relevant as in the 15th to 16th centuries period under consideration the location of a particular fortified complex and the degree of its fortification were primarily determined by certain political circumstances.

The capital and the 'provincial centres' — Isker, Chingi Tura, Kizyl Tura, and Ton Tura (Voznesensk archaeological site)—were essentially different from the other fortified settlements of the khanate. They were all of considerable size and had four areas divided by three powerful defensive lines. One of the ditches of the Voznesensk archaeological site, for instance, was about 19 m wide and more than 6 m deep [Sobolev, 2008, p. 77]. According to the investigation by Zykov, the ditch at the bottom of the eastern ravine of Isker reached its maximum dimensions after 1563: up to 12–13 m wide and up to 2.5 m deep.

Military and administrative centres and ordinary fortified settlements in the 'provinces' (centres of clan subdivisions) of the Siberian Khanate had smaller dimensions. Most often their defences were limited to a single line

consisting of a ditch and a bank with a stake palisade. Such less effective defences had to be enhanced by building additional fortification complexes which could consist of free-standing towers (Bezimyannoye I) or bastions standing in front of the ramparts (Bergamak V, Aytkulovo XI, Yekaterinskoye V). The number of bastions depended on the length of the defensive line; there could be two flank ramparts, as at Bergamak V, or four front ramparts, as at Aytkulovo XI. The only bastion in the northern part of the ditch and bank line of the Yekaterinskoye V (Ananinskoye) archaeological site protected access down to the water.

The frontier towns in the south of the Siberian Khanate were usually located on small eminences and in open country. In terms of shape they are distinguished by strict geometry: all are rectangular in plan occasionally divided into two parts (Chernoozerye XII, Aleksandrovka VI, Chinyaikha, Tyumenka, and Tentis II). One part housed horses intended for war and for food or was given over to economic activities, while the other served as accommodation for the garrison. All forts had a standard defence system consisting of a ditch of about 5 m width and about 2.5 m deep, with a bank about 5 m wide and about 2.5 m high. Unfortunately, many of these sites have not been studied by archaeologists, so we cannot say if there were palisades or other wooden constructions on the banks. In size the southern sites range from 7 to 10 thousand m², but there are some larger ones with areas of up to 30 thousand m², as at Tyumenka, which is explained by the strategic importance of this complex.

The northern frontier towns of the Siberian Khanate also had specific features. They were rarely built on the site of earlier military fortifications. At the small towns of Koshkul IV and Nadezhdinka VII a small number of dwellings was revealed, six and four, respectively. The garrisons of such small towns amounted to 30–40 people. The ground level of some small towns (e.g., Koshkul IV) has been deliberately raised by 1–1.5 m over that of the surrounding area, enhancing their security. Up to 80–90% of the perimeter of the northern frontier small towns was made up of terrace slopes, which were escarped and almost impossible to climb.

The most vivid example is the small town of Tunus (Nadezhdinka VII), which was positioned on a residual hill by the river Nizhnyaya Tunuska, the slopes of which were escarped along almost the entirety of the perimeter.

Temporary fortified military camps. This type of Siberian Khanate fortification was distinguished in his work by L. Kyzlasov. Based on G. Miller's description of the small town of Chyorny, built by Alei, a son of Kuchum, in the Irtysh Region in 1594, he spoke of the existence of circular wooden fortresses, whose defensive lines consisted of several dozen log-built houses built close to one other. According to Kyzlasov, 4–5 soldiers lived in every such 'izba' [Kyzlasov, 1999, p. 122].

During the construction of defensive lines in Siberian Khanate ancient towns, special attention was paid to their entrance points, typically the most vulnerable spot of the defensive complex. At smaller forts, especially the narrow headland ones, there often were no such entrances at all because there was no need to bring large quantities of goods into the enclosed territory. In the Middle Irtysh Region a great number of ancient towns have no visual signs of gaps in the defensive line: Aleksandrovka VII, Ashevany III (Listvenny Uval), Aytkulovo XI, Aytkulovo XIV, Bolshaya Pristan I, and others. The ditch was most likely crossed with the help of a hanging bridge or light pile bridge.

However, a passage was vital for larger fortified settlements, for deliveries of food supplies, for people and livestock. And for Tatar towns this would have had to be a driveway.

The defensive system for the entrance ways at Bezimyannoye I is particularly interesting. Here, opposite the passages in the first line, were bastions in the second line, so that having taken the gateway by storm the enemy would then find itself under cross-fire of archers. At the Nadezhdinka VII (Tunus) archaeological site, a small redoubt was positioned by a roadway ascending the residual hill. At present the height of its walls reaches 2 m, and their internal surface is covered with sun-dried earthen bricks.

Gateways in the steppe frontier towns were not fortified at all. These were probably frontier posts in the truest sense of the word—that

is, fortified camps for cavalry units. The garrisons of the small towns were not intended for passive defence purposes either, consisting of mounted hosts that would emerge to fight in the open. The complex of Bolshoy Chulankul I is an exception, whose entrance was provided with a kind of rampart structure.

The art of fortification in the Siberian Khanate rested on 'three pillars.' First, the Siberian rulers adopted certain fortification skills from the peoples who had preceded them in this territory. This especially concerned the siting of fortification complexes and using the specifics of terrain in the construction of fortifications. Second, the builders employed fortification-building skills brought from Central Asia. The frontier small towns in Baraba were clearly built on this basis. Finally, one further addition to the art of fortification in the Siberian Khanate was knowledge obtained through commerce with the fortified towns and small towns of the Kazan Khanate. These 'pillars' are most vividly exemplified in the defensive system of Isker reconstructed by Zykov, who distinguished six construction horizons corresponding to the six periods of the fortress's existence from the end of the 15th century to 1586. The fortification systems of other large towns—Kizyl Tura and Ton Tura (Voznesensk archaeological site)—are likely to have been very similar to that of the second horizon at Isker.

At present it is hard to assess the effectiveness of the Siberian Khanate's fortification constructions. However, the fact that Yermak faced serious difficulties attacking even very small towns, failing to take some at all, such as Kullary, demonstrates that the level of the fortification art in 16th century Siberia was rather high. At the same time, analysing the fortifications

of Siberian Khanate hill forts and small towns alongside descriptions of military clashes between Russian and Tatar forces and the weapons complex of a Khanate soldier, we come to the conclusion that fortifications played a secondary role in this state. By its tactics and strategy the army of Khan Kuchum most resembled that of nomadic state formations, where almost 100% of military operations were performed by cavalry. In this respect, the frontier small towns are exemplary, serving more as a base for the deployment of small cavalry detachments than fortified strongholds.

A considerable part of fortified settlements was meant to protect from sudden attacks so that the occupants might hold out until aid came from the military and administrative centres. Except for the larger towns and four or five major centres of provinces (uluses), no fortified settlements were capable of withstanding a long siege. Due to their location, some sites of ancient towns were actually hiding-places, where people could take refuge in case of military threat. On the whole, the study of fortified complexes in the Siberian Khanate allows us to conclude that this state's fortification practices developed in the general context of the development of the military art in Northern Eurasia. Despite all the classifications of Siberian sites of ancient towns available to science, a number of challenging issues have yet to be settled. The absence of an absolute chronology for these complexes makes it impossible to solve the problem of the cultural and/or ethnic attribution of the sites' inhabitants and thus build a general scheme of fortified settlement development for this historical period and the area in question [Tataurov, 2010, pp. 30–31].

CHAPTER 2

The Economy in the Tatar States

Rafael Valeev

The economic history of the Tatar states in the 15–18th centuries has not yet been sufficiently studied. This is due to a whole array of factors, of which we believe the following to be most significant.

1. The intensely political nature of interactions between the Muscovite state and the Kazan Khanate as well as other Tatar state formations and the ideological basis prepared during the reign of Ivan IV for the 'Taking of Kazan' and subsequent conquest of other Tatar territories. This also concerns the official historiography based on the Russian chronicles, the 'History of the Kazan Tsardom' and the accounts of these events by contemporaries [Alishev, 1995, pp. 3–6].

2. The varied natural and geographic conditions in this part of Eurasia, from the Crimea and the Lower Volga region to Siberia and the Caspian Sea region, as well as the mountain systems that stretch across the continent: The Ural Mountains, the offshoots of the Southern Urals, the western ranges of the Tien Shan, and the Altai. The steppe zone between the Black and the Caspian seas is cut off from the south by the Caucasus Mountains. This lent specific traits to the way of life of the population and dictated the various different styles of subsistence and economic development models of the Tatar states.

3. The lack of documents relating to the peculiarities and general patterns of economic development in the Tatar states. 'The written sources in oriental languages concerning the history of the Kazan Khanate were almost totally destroyed during the Siege of Kazan in 1552,' wrote S. Schmidt, a leading Russian source-study expert, in the mid 20th century [Schmidt, 1954, p. 189]. Since then the situation has little changed. The documents dealing with the history of the Kazan Khanate number barely a dozen. There are slightly more written sources on the Crimean Khanate associated

with the fact of its continued existence until the 18th century.

Research into the economy of the Tatar states requires more than a general analysis of the sources, involving the study of specific economic and legal documents, edicts and instructions issued by the Khanate authorities (only preserved in a handful of *yarliqs*), city books, and other materials that can help us to elucidate the relationship between such various branches of production as farming and cattle breeding, the arts and craft industries of the cities and rural communities, fishing and hunting, and the presence of their respective goods on the market; and to find out the relations between economic types (natural, mixed, or commodity economies) and different types of economic activity (peasant or trade) of the thirteen categories of officials listed in the *yarliq* of the Kazan Khan Sahib-Giray and, of course, their personal households, as well as the different market subjects—professional merchants, craftsmen, peasants and other urban, rural, or nomadic groups belonging to the tribute-paying population.

Unfortunately, the lack of historical sources, above all of written documents, does not make it possible to answer the questions that need to be asked to gain a fuller understanding of the economic history of the Tatar states and thus shed additional light on other issues of the period under study.

In solving such problems as the description of crafts or listing goods for domestic and foreign trade, archaeological research takes on great significance; numismatics and metrological materials are priceless for the description of trade relations, means of exchange and trading techniques, domestic, inter-regional, and interstate trade routes, and fairs and markets both in the cities and beyond.

However, it should be noted that archaeological research of the monuments of the Ta-

tar states requires large-scale excavations and analysis of materials. Unfortunately, only the Kazan Kremlin, the former settlement of Rusky Urmat, Arsk, and a small number of other sites have been excavated.

4. The combination of quality and quantity analyses is an important factor that makes the economic research even more complicated. It is well known that the aim of replenishing the Khanate treasury caused the authorities to cover the whole country with a network of tax-gathering institutions that were in charge of collecting revenues in a given place, region, or daruga. Scribes, charter-holders, tax collectors, customs officers, weighmen, and other officials put great efforts into collecting and recording taxes. The country was filled with customs houses and tollgates, with river crossings attended by officials collecting dues for transporting the goods over water. Customs officers collected duties from merchants transporting their goods along turnpikes. Both public and private lives were strictly regulated, and business relationships between individuals were framed in the form of contracts and agreements sealed with tamgas and stamps or even, in particularly important cases, with sworn oaths [Khudyakov, 1990, pp. 206–207]. However, there are no materials on such matters, especially on customs duties. Such sources could have revealed the volume, range, and dynamics of the economy, particularly for trade in the Tatar cities. There is no statistical data on the relations between commercial and natural production for individual estates, households, industries, market turnover, the situation and development of prices, the interplay of supply and demand, or the scale of merchants' profits. Materials on these subjects cannot be subjected to quantitative analysis because they date to the 18th and 19th centuries and are characteristic of the modern era. We can only therefore make a comparative historical analysis.

The economy of the Tatar states in the 15–18th centuries largely inherited the levels achieved in the first half of the second millennium AD by the sovereign states and formations then existing—Volga Bulgaria, Desht-i Kipchak, and Crimea—and due to the suc-

cesses of the various different peoples inhabiting this part of the Eurasian landmass. The symbiosis of the settled agrarian and nomadic components of the Golden Horde was a powerful factor in its economic development and determined the economic welfare of the Jochid Ulus [Yegorov, 1974, p. 37].

But even in the period when a single centralised state was in existence, the economic development of the Jochid Ulus was determined by the peculiarities of the geographic regions forming it, the dominance of either farming or cattle breeding, of settled urban, nomadic, or other types of population, by the differentiation of the internal structures, means of economic management, and the way in which social and cultural traditions and relations were organised [Valeev, 2012, pp. 68–80]. The disintegration of the Golden Horde and the emerging new khanates, notwithstanding their varying degrees of sovereignty, emphasised the economic peculiarities of each of these states all the more, as well as the general pattern of economic development characteristic of the Eurasian area of the Jochid Ulus.

The economy of the Tatar states was diversified and included farming, cattle breeding, handicraft industries such as metallurgical production, pottery, jewellery production, tanning, bone carving, and building, as well as commerce and trade. There was a public division of labour that led to the active development of commodity output, existing parallel to natural production.

The following factors contributed to the economic development of the Tatar states:

1. Their territory was rich in natural resources. The natural environment of the Middle Volga and Ural regions, for instance, boasted great timber resources in the north and forest-steppe zone, while the steppes in the south had vast meadows and chernozem soils and a multitude of rivers and lakes. The wide floodplains were rich in fodder, game, and other natural resources. The territories of the Astrakhan Khanate, the Great and the Nogai Hordes, and parts of the Crimean and Siberian Khanates had access to the Black and Caspian seas and were based in a steppe zone rich in grazing and pastures, lakes, rivers, game, and wildfowl.

2. A high capacity of handicraft industries and technologies, especially in urban areas, had been achieved in the 10–15th centuries in Volga Bulgaria, Khwarezm, the Crimea, and the Golden Horde, distinct from the production of other medieval states. There was active development of handicraft industries, particularly in the working of precious metals, cast ironwork, jewellery, glazed ceramics production, construction in brick, stone carving and glass making, which were strictly urban crafts. Such crafts as blacksmithing, pottery, tanning, and stone carving were also developed in the cities, though they could also be found in rural settlements.

3. The favourable geographic location of the Tatar states at the junction of the international and inter-regional trade routes of Eurasia, connecting West and East, North and South. This resulted in domestic and interstate trade combining with international movement of goods. The Volga, Kama, Vyatka, Irtysh, and other major riverine routes, as well as caravan paths determined the significance of these medieval states in the history of Eurasia. A prototype of a common economic space began to form, even as early as under the Golden Horde. In the 13–15th centuries international trade began to fulfill new functions, such as inter-regional goods exchange, based more on territorial economic differentiation than on natural and geographic differences between regions. Common market mechanisms existed across such broad expanses as between Italy and Constantinople, the Crimea, Syria, North Africa, and Spain [Karpov, 1990, pp. 4–5]. As exchange spheres expanded, a rel-

atively unified commercial system began to form, and the interrelations emerged between the trade centres of the southern and northern (Baltic and North Sea) zones [Svanidze, 1987, pp. 29–51].

The Khans of the Golden Horde ensured the safety of the trade routes from Western Europe to China, thus contributing to the economic welfare of the state. When Temür sacked the Volga cities of the Golden Horde, the trade routes leading to the East shifted. Spices and silk were then transported to the Mediterranean by the southern route through the countries of the Middle and Near East [Fyodorov-Davydov, 2001, pp. 213–220], as described by Giosafat Barbaro: 'Before it was destroyed by Tamerlane, the spices and silk were transported to Astrakhan, and from there to Tana (now they are transported to Syria). Six to seven large galleys were sent from Venice alone to collect the spices and silk from Tana. And in those times, neither Venetians nor any other foreigners traded in Syria' [Barbaro and Contarini, 1971, p. 157].

In the 15–18th centuries the political conditions that had secured the safety of the international trade routes were no longer present. But the favourable geographic factors still remained in force, if dissipated somewhat in the vast expanse of Eurasia. Indeed, the decline of the strong centralised power of the Golden Horde khans and the subsequent decline of the cities were conditioned by this shifting of the main routes of the Silk Road to the South and the old routes passing through Central Asia, Iran, and the Levant [Fyodorov-Davydov, 2001, p. 224].

§ 1. Farming, Stock Raising, Handicrafts, and Trades

In a number of Tatar states, like Kazan, Crimean, Kasimov, and, to some extent, Astrakhan, farming had a solid foundation and long traditions going back to the beginning of the 1st millennium A.D. But farming existed even in such states as the Great and Nogai Hordes and the Crimean Khanate, whose territories are in the steppes and whose economy was based on nomadic stock raising. But it was insignificant and undeveloped. For instance, Giosafat Barbaro notes that the nomads of the Azov Sea region had grain stores, and that the khans supported the population in order to get a good yield of wheat and millet [Barbaro and Contarini, 1971, p. 150]. A message of the Crimean khan Mengli Giray is also known regarding the fact that in 1501 a large number of Tatars of the Great Horde, due to the crisis situation, 'had to leave their previous camping grounds without having prepared any grain' [Malinovsky, reserve 36, p. 93]. Farming in the Nogai Horde was practiced in the area of Saraychiq, and later in the Northern Caucasus [Trepavlov, 2002, pp. 507–544].

The most developed farming was in the Kazan, Crimean, and other Tatar states. Even before the Bulgars came to the Middle Volga and Kama regions, the local population, first and foremost the Imenkovo tribes, in the 3rd–7th centuries was agrarian. They plowed using draft animals and animal-driven plows. Bulgarian farming was partly based on their traditions obtained during the time when they were part of Great Bulgaria, the Khazar Empire, and the more ancient Turkic states [Valeev, 2007, pp. 12–17].

Within the Golden Horde, farming was of great significance in Khwarezm, the Bulgar region, the Northern Caucasus, and the Crimea [Yakubovsky, 1931, p. 11]. On the basis of a comparison of different sources, B. Grekov and A. Yakubovsky note that Bulgaria and its environs were the most important agricultural region in the Golden Horde [Grekov & Yakubovsky, 1950, p. 104]. Ibn Rustah, Ibn Fadlan, the Russian chronicles, and other authors mention various crops—

wheat, barley, millet, and all kinds of grain [Khvolson, 1870, p. 224; Kovalevsky, p. 136; Valeev, 2012, pp. 49–50].

Agriculture, above all farming, played a major part in the history of the Kazan Khanate, as attested to by both written sources and archaeological materials. The author of 'The History of the Kazan Tsardom,' who is known to have lived in Kazan for a long time, noted that the territory of the Kazan state 'is rich in cattle, and bees, and all sorts of seeds, and vegetables, and animals, and fish, and all kinds of land' [The Complete Collection of Russian Chronicles, 19, 2000, p. 20]. Prince A. Kurbsky, who played an active part in the conquest of Kazan and saw many regions of the Khanate while he was there, especially the lands around Arça, wrote: 'In that land are great fields, very fertile and abundant with all kinds of fruit;...and the settlements are dense, and there is a multitude of all kinds of grain...as well as countless herds of various livestock.' One of the ideologists of the conquest of Kazan, I. Peresvetov, called Kazan 'a land close to paradise' [Works, 1956, p. 182].

The information contained in written sources regarding the development of farming in the Kazan Khanate is confirmed by archaeological materials. Tillage and harvesting tools, crop processing tools, and paleobotanic remnants of the seeds of cultivated plants and weeds found there allow us to see into the farming system and the crops used back then.

The main types of plow were the sokha and the saban. They belonged to the same types throughout the territory of the Tatar states. Iron shares from double-pointed sokhas with a lever shovel are found quite frequently. The sokha was used to plow relatively light, previously cultivated soils or recently deforested land. The sokha is thought to have appeared as a special type of plow among the East Slavs not earlier than the 1st millennium AD, and the Volga Bulgars began using it only in the 12th century. However, ethnographer N. Khalikov, an expert on Bulgar and Tatar farming, does not rule out

the possibility that this implement was developed independently by the Bulgars from their local ard [Khalikov, 1981, p. 50].

However, the Tatars' main implement for tilling sod was a single-shared saban with a colter device to adjust the plowing depth. As N. Khalikov justly noted, 'the nearly complete similarity of the metal parts of the Bulgar plow and the later Tatar saban points to their kinship' [Ibid., p. 59]. The iron plowshare of a saban looks like a massive plate with an oval open tube with a triangular symmetrical or asymmetrical blade. It should be noted that the improvement of the shape of the share from a symmetrical isosceles triangle to an asymmetrical scalene triangle testifies to the plow's development. Asymmetrical shares appeared during the Golden Horde period and were more advanced and better suited for working with a one-sided moldboard [Krasnov, 1987, pp. 207–211]. Colters attached to the shaft on the left side right before the plowshare were an indispensable part of a saban; they were used to cut the upper layer of the soil—the sod. Such sabans, driven by a pair of horses or oxen, were usually used to plow virgin lands and were able to cultivate the heavy, thickly matted soils of the steppes and forest steppes.

Sickles (*urak*) and a scythe (*chalgy*) were used to harvest crops. They were used by the Bulgars back then, and their Tatar names are common to all groups of Tatars in an enormous territory, as well as to the Turkic-speaking peoples of the Central Asia. Judging by their form, proportions, and size, they come from the North Caucasian and Central Asian traditions, and they have remained almost unchanged to this day [Khalikov, 2006, p. 238].

Such plowing and harvesting tools were typical of the population of the Kasimov, Siberian, and Crimean Khanates and the Nogai Horde and had a wider territorial distribution. However, farming productivity depends not only on agricultural tools but on the natural fertility of the soil as well. That is why crop rotation was one of the most important agricultural methods for restoring soil fertility. Methods differed depending on the ro-

tation of crops and the periods of rest and cultivation.

Tatars used fallow farming based on a three-field system (winter crops—spring crops—fallow), but depending on the climate and the geographic location they could also use shifting cultivation and slash-and-burn farming, or a combination thereof. In the shifting cultivation system, land, which had been used for several years and had become barren, was abandoned and several years later was brought back into use for farming. The slash-and-burn system was used for forested regions in the Kazan and Kasimov Khanates, and especially in the Siberian Khanate. Traces of slash-and-burn farming could be found up to the early 20th century near Tobolsk, among both the Tatars and the Russian peasants in the same area [Tatars, 2001, p. 165]. Even in the early 17th century cleared land and forest fallow were widely used in the Kazan region [Scribe's Book, 1978].

Paleobotanic findings and carpological analysis show what crops were farmed by the Tatars. The seed materials include about 20 different crop species. The Tatars used to sow rye, wheat, barley, millet, oats, peas, and other crops. Many rye seeds were found during excavations on the territory of the Kazan Kremlin in the stratum of the Kazan Khanate. The low impurity of the seed material is an indicator of the dominance of rye; this is due to the fact that rye is better able to inhibit weed growth than other crops and to the specifics of sowing it after a complete fallow. Seeds of southern Turan wheat were found in one of the samples.

The sources mention mills when describing Kazan, and during some excavations a large quantity of charred grain was found in many buildings, which suggests developed commercial grain production and the existence of artisans in the cities who milled grain and baked bread.

In the Siberian Khanate plow farming was widespread in Tobol, Pyshma, Tura, Tomi, Vagay and Ishim, and on the Irtysh and the Ob. The Baraba Tatars practiced hoe farming. Each 'peasant family, each feudal household, and even Kuchum himself had

their own cropland where they grew grain' [Faizrakhmanov, 2002, p. 155]. In 1598 Tara voivode A. Voyeykov sent a message to Moscow that 'Kuchum has left the black waters to go to the Ob with his children and servants to where his grain is planted... Kuchum has plantings of grain between the Irtysh and the Upper Ob' [Response, 1842]. The Remezov's Chronicle mentions the grain stores of the Tatars during Yermak's campaign. There is mention of the arable land in possession of Tatar mirza Epanchi [Shunkov, 1956, p. 13; The Siberian Chronicles, 1907, pp. 321–333].

Iron sickles, remnants of hand-held millstones, and a Tatar iron plow were found during the archaeological excavations in the settlement of Isker near Tobolsk [Valeev, 1993, pp. 64–65].

Liman farming was practiced in the As-trakhan Khanate: grain was grown on the embanked and drained territories of *ilmens*, which are shallow, marshy lakes at the mouths of rivers. In the warm climate cropland fertilised with silt produced abundant crops, mainly millet, but preparation and maintenance took much effort. That is why farming was not as important there [Tatars, 2001, p. 166].

On the territory of the Crimean Khanate farming traditions were crucial in the South Crimea and in the Kerch Region [Syroechkovskiy, 1940, pp. 10–11]. However, Tatars in the other regions of the peninsula and beyond Perekop, where for a long time nomadic stock raising dominated, were reported to have grain fields on the territories of the traditional winter trails [Iskhakov, 2009v, p. 65; Syroechkovskiy, 1940, p. 12].

Giosafat Barbaro, who lived in Tana from 1436 to 1452 and visited many lands, left an interesting report on how the nomadic Tatars sowed their grain: 'Anyone who wants to sow should prepare everything necessary because the sowing will take place at the new moon in March in such-and-such a place, and everyone will set out on such-and-such a day. Afterwards those who plan to sow... load their carts with seeds, take the animals they need, and together with their wives and chil-

dren set out for the appointed place, which is, as a rule, a two days' journey from where the Horde was camped at the moment the call to sow went out. There they plow, sow, and live until they have done everything they planned to... The Khan tours the fields...so it continues until the crops are ripe... only those who sowed and those who want to buy wheat go there. They move together with their carts, oxen, camels, and their belongings, just as if they were moving to their lands' [Barbaro and Contarini, 1971, p. 150]. This description of the process of sowing and harvesting grain and farming in the steppes applies not only to the Great and the Nogai Hordes but also to the Crimean and Siberian Khanates.

In the mid-16th century the Crimean Khan Sahib Giray made the nomads settle down. In the 1570s, M. Bronevsky, a contemporary, writes, 'The part of the peninsula where the Khan and his Tatars live, from Perekop towards the lake and up to Krym, are cultivated, flat, and fertile,' and in Krym 'sedentary people' predominate [Iskhakov, 2009v, p. 65; Syroechkovskiy, 1940, p. 12]. They sowed wheat, barley, emmer, and flax. Gardening was widespread, but nomadic communities remained, especially beyond Perekop. After the Tatars of the Nogai and the Great Horde had been subordinated by the Crimean Khanate, such communities became even stronger [Iskhakov, 2009v, p. 65; Syroechkovskiy, 1940, pp. 13–14].

The results of the farming are interesting. G. Barbaro writes about the southern geographic region: 'The lands there are fertile and produce a fiftyfold yield of wheat, which is as high as Paduan wheat, and a hundred-fold yield of millet. Sometimes the harvest is so abundant that it is left in the steppes' [Barbaro and Contarini, 1971, p. 150]. G. Barbaro's evidence is confirmed by E. Çelebi (17th century), who wrote about the population of the Lower Volga Region and the steppes of the North Caucasus: 'They also practice farming—that is, they are sowers and country-folk. They mostly sow millet because one kile of millet yields a hundred or a hundred and ten kiles in those lands' [Evliya Çelebi, 2007].

Some researchers think that the yield of grain crops in the northern forests or forest steppes was 1:3 to 1:5 in the middle of the 15th century, which is comparable to the average figures in Europe [Nefedov, 2007]. Obviously, the yield in the Kasimov and Kazan Khanates could only have been something applicable to this zone, not 1:50 or 1:100.

Stock raising was the other important branch of agriculture in the Tatar states. It provided people with a stable supply of meat and dairy products. In the 14th century mutually beneficial cooperation took shape between nomadic stock raisers and farmers, including, as we read in G. Barbaro's notes, 'nomadic farmers.' Turkic-Tatar nomads who lived in the steppes of the Trans-Volga Region, the South Urals and Siberia in the 15–17th century kept roaming seasonally. They used the Bugulma Plateau and the South Urals as their summer pastures, and for winter they roamed with their flocks in the lower reaches of the Syrdarya and the Volga and in the Aral Sea region. This type of migration was used by the stock raising population of the Trans-Volga and South Ural steppes up to the 18th century [History of the Tatars, 2009, p. 264]. But the traditional system of migration was changed after a part of the Nogai Horde came to the right bank of the Volga, as a result of which new migration routes arose [Iskhakov, 2009v, p. 78].

The economy of the Great and Nogai Hordes and the Crimean, Astrakhan, and Siberian Khanates was based on nomadic stock raising, although—as we saw earlier—they also practiced farming and other economic activities. The prevalence of stock raising was connected with the landscape of the steppe zone they inhabited. They raised sheep, horses, camels, cows, asses, and other livestock. G. Barbaro was surprised at the huge number of animals he saw: 'What shall I say about the enormous, even countless multitude of animals in that Horde? Will anyone believe me?' The author reports in detail on trading: 'There are horse traders among those people; they take horses from the Horde and drive them to various places... I used to meet merchants on the road who were driving so

many horses that they covered the entire steppes... The second type of animal that this people has is marvelous big bulls, and so many of them as to be sufficient even for Italian slaughterhouses. They are driven to Poland, and some of them are driven through Wallachia to Transylvania or Germany, and from there to Italy... The third type of animals this people keeps is tall, shaggy, two-humped camels. They are driven to Persia and sold there for 25 ducats each' [Barbaro and Contarini, 1971, p. 149]. There is also a report of 3,200 merchants from the Astrakhan Khanate who drove 40,000 horses to Moscow [Nazarov, 1983, p. 33]. Among goods delivered from Desht to Syngak, Fazlallakh ibn Ruzbikhan mentioned in the early 16th century 'fat sheep, horses, and camels' [Fazlallakh ibn Ruzbikhan Isfakhani, 1976, p. 11]. Rams and horses from the Astrakhan Khanate were also named in Osman documents from Azak [Zaitsev, 2006, p. 208]. Significant numbers of cattle, sheep, and goats were delivered to the Middle Volga Region [Petrenko, 1988, pp. 258, 260, 271] and to Russia [Tsalkin, 1967, p. 120].

To a great extent, an economic crisis due to the insufficiency of pastures and drought led to the disintegration of the Great Horde. In the early 16th century ambassadors of the Muscovite state and the Crimean Khanate noted that people of the Great Horde were 'in a very bad state, and on foot, and unclothed or without horses... and they are in a bad state and roaming on their own' [Zaitsev, 2006, p. 109].

Transhumant stock raising was practiced in the Kasimov, Kazan, and Siberian Khanates. A. Kurbsky mentions 'countless herds of various livestock' in the Kazan Khanate. The taiga forests and swamps in the Siberian Khanate hampered the development of nomadic stock raising on a broad scale. But the steppes along the middle reaches of the Tobol and Irtysh and on the left bank of the Ob and Baraba were suitable for rearing livestock. Baraba Tatars reared horses and sheep. The Irtysh and Tobol Tatars practiced sedentary and semi-sedentary stock raising and reared horses, cattle, and in smaller numbers

sheep. Horse breeding was one of the main activities of the Siberian Tatars. Horses were used for riding, in harness, and—with the development of farming—as working animals. Horse breeding was a source of meat and mare's milk for kumis [Fayzrahmanov, 2002, pp. 153–154]. In the south-east steppes of the Kazan Khanate and the southern edge of the Kasimov Khanate, where the Nogai communities lived, nomadic stock raising could also be practiced [Iskhakov, 2009v, pp. 57, 63].

In Tatar states, especially those with a settled population, people reared domestic fowl—chickens, ducks, and geese. Among osteologic materials from many settlements were found large quantities of their bones and eggshells.

Hunting, fishing, and honey hunting were also an important part of the economy of the Tatar states but not a major one. Hunting and fishing were most widespread in the Siberian Khanate. Hunting in the forest and taiga, especially among the Yaskolba Tatars and in the northern part of Baraba, was one of the main economic activities and a source of sustenance along with fishing. Hunting for big game and fowl provided families with meat. Hunting for fur-bearing animals provided people with clothes and could be exchanged or sold. The Tura, Tumen, and Tobolsk Tatars hunted big game in groups, or occasionally alone. They hunted on foot or on skis in winter. They also hunted with gyrfalcons. They used snares to catch hares, ducks, partridges, and black grouse. They set traps to catch ermine [Fayzrahmanov, 2002, p. 156].

The population of the forested parts of the Kazan, Crimean, and Kasimov Khanates and the Transurals practiced hunting too. During excavations in the strata of this period, the bones of wild animals—foxes, wolves, bears, hares, etc.—and birds—geese, grouse, European partridges, etc.—were found. The reports of travelers and eastern and western sources of the 9–15th century are filled with accounts of supplies of pelts. The territories of the Tatar states during the period under study were active suppliers of fur. They hunted martens, beavers, sables, squirrels,

ermine, foxes, hares, and their fur was actively exported. Hunting was a favourite amusement of the Khan and his circle. For instance, during excavations on the territory of the Kazan Kremlin, a large number of hunted species—moose, roe deer, boar, bear, hare—were found near the Khan's palace.

Fishing, like honey hunting, played a subordinate role in the economy of the Tatars. At the same time, it was important for the population living near the banks of Volga, Kama, Vyatka, Irtysh, Tobol, and other large and small rivers as well as for the Tatars of the Crimean Khanate on the Black Sea coast. Fishing was especially widespread in the Astrakhan Khanate, where khan and the Tatar nobility owned some of the fishing areas. They caught sturgeon, beluga, and sevruga. Caviar was an important item in local and foreign trade. In 1554, after Russians conquered the Khanate, they imposed a tribute in the amount of 30,000 (3,000 in other sources) belugas and sturgeon [Iskhakov, 2009v, p. 71; Zaitsev, 2006, p. 224].

During excavations of settlements on riverbanks, sturgeon and sterlet scales and bones, harpoons (for catfish, pike perch, carp, and other fish), iron fishhooks, spoon baits for catching big fish, and stone and clay weights for nets and seines are found in great numbers. Fish consumption noticeably affected the diet of the population of these settlements, as evidenced by the large share of fish bones found during the excavations of a number of sites.

Describing the Volga and the Caspian sea, G. Barbaro writes that 'there are countless fish both in the river and in the sea.' Dried fish and caviar were exported in large quantities by Italian merchants [Barbaro and Contarini, 1971, pp. 50–52; 57–58, 157]. Fishing on the Volga was practiced not only by locals but also by foreign, namely Russian, fishermen. The famous edict of the Russian government of 1523 caused a leap in prices and a shortage of primarily of good fish, including beluga, which is caught in the Volga on both sides of Kazan. The dependence of the Russian market on the Volga fishing industry was all the more noticeable

because in those days the Russians assiduously observed fasts [Khudyakov, 1990, p. 220]. The compiler of 'The Kazan Chronicle' says the following about Russian fishermen: 'The fishermen caught fish in the Volga at the foot of the hill and all along to the Serpent's stone and Uvek, 1000 versts from Kazan. They went there and spent the whole summer there fishing, and in autumn they went back to Russia, having caught many fish and got rich' [The Complete Collection of Russian Chronicles, 19, 2000, p. 33]. He estimates that 10,000 Russian fishermen were fishing in the Kazan Khanate in 1521 [Khudyakov, 1990, p. 223].

The Tatars' special interest in beekeeping and honey hunting should also be noted. Honey is still part of the wedding ritual 'balmay.' N. Bazhenov noted: 'the Tatars practice beekeeping more than others' [Bazhenov, 1847, p. 11]. Initially beekeeping was practiced as collecting honey from wild bees, but later on in the period under discussion the Tatars started making hives in tree hollows. Only in the 19th century did bee-farming emerge [Works, 1956, p. 178]. Honey and wax were not only used as food but were also an important trade item.

Crafts played an important part in the economy of the Tatar states. The level and technologies of production achieved in Volga Bulgaria, Crimea, Khwarezm, and the Golden Horde laid the foundation for developing and improving crafts and setting up various kinds of production in the 15–18th centuries. Artefacts of production facilities (metallurgic and pottery kilns, smithies, jeweller's workshops, bone carving workshops, tanning workshops, etc.), craftsmen's tools, various types of finished and unfinished products, and production waste give us an idea of the state of the main crafts, and for the Crimean Khanate of the 17–18th centuries, of developing industries.

The state and development of many economic sectors and social relations, such as farming, stock raising, various trades and crafts, armament, military arts, and defence capacity, depended on the level of ferrous and non-ferrous metallurgy and forging. Iron

working in Volga Bulgaria and the Golden Horde was highly developed. Metallurgic work with iron and alloy consisted of a number of independent steps:

- Finding and extracting ore
- Preparing fuel, chopping and charring wood for charcoal
- Making a metallurgical furnace, drying and firing it
- Lighting and heating the furnace, loading it with coal and ore
- Throttling the flotation of air and watching the bloomery process
- Taking out the bloom and hammering it to consolidate the iron and drive out the slag [Semykin, 2006, p. 249].

Production of cast iron started in the 14th century in the Golden Horde, one of the first countries in Europe, and laid the foundation for its further development in the Tatar states. For instance, during excavations of the Kazan Kremlin, about 50 pieces of cast iron boilers were found in the strata from the 15–18th centuries.

Metallurgical furnaces and other facilities used for working iron and alloys were known not only in cities but in country settlements as well. There were specialised workshops in the cities consisting of several metallurgic furnaces and a forge. Those multipurpose workshops had all the necessary equipment and tools. They used various technological processes that enabled them to make iron from bloom, raw and whole steel, and packet martensite; cementation, hardening and brazing; and other methods.

Forging became significantly more important; the range of products expanded, promoting the development of the economy of the Tatar states and providing the population with necessary items made of ferrous metals. The range was wide and consisted of shares, plows, hoes, sickles, scythes, axes, knives, branding irons, bar bits, stirrups, arrowheads, pikes, sabers, etc. They cast kettles, bowls, and other products from cast iron.

Forging existed independently of metallurgic production. It was practiced among master blacksmiths as a narrow specialisation, which was to a great extent related to market demand

for a given type of product, and by all-purpose blacksmiths in villages.

Improved techniques for working with non-ferrous metals made it possible to produce all kinds of products from copper, bronze, alloys, silver, and gold: weapon components, everyday items and cult objects, cookware, reed pens (sticks used for writing), locks, keys, and various kinds of adornments—earrings, rings, beads, etc. Non-ferrous metalwork was very important in the economic life of the Tatar states. Artefacts of metallurgic production from the period of the Kazan Khanate were found during the excavations of the Kazan Kremlin near its North-East Tower. These were wooden buildings with brick ovens and a kiln. A large quantity of brick fragments, copper slag, and copper bars were found in the contents of the kiln, showing that it used to be a copper-smelting workshop.

When making items of non-ferrous metals, craftsmen used such methods as embossing, stamping, and drawing, which made it possible to create products of various quantity and quality. One area was the production of metal vessels—pitchers, basins, cups, lamps, and all types of containers. A copper pitcher, which is now in the collection of the National Museum of the Republic of Tatarstan, is of great interest. It is a highly artistic piece. Art experts describe it as follows: 'The delicacy of its form—with a high and narrow neck separated from its body with a relief stopper ring, a smoothly arched handle, a drop-shaped silhouette that becomes wider towards the bottom of the body, and a round base—is complemented by a generous and masterly ornament made by stamping, inlaying, and engraving a floral and calligraphic inscription that fills an elongated drop-shaped border with a flowing drawing of Arabic symbols on both sides of a slightly flattened border' [Chervonnaya, 1987, p. 1954]. This example demonstrates the technological capacities of the Tatar jewellers.

Non-ferrous metalwork is closely related to the jeweller's craft, which—on the foundation of the achievements of the pre-Mongo-

lian and the Golden Horde periods—attained a high degree of sophistication. Jewellery workshops were usually located in the centre of the cities, closer to their customers and potential purchasers. No dedicated workshops have been found during excavations yet, but there are many signs of production, like crucibles and molds, craftsmen's tools, and marvelous examples of end products. Metal matrices can often be found which were used to make embossed, pressed, and stamped jewellery. These were large cast plates with ornaments. They placed a thin copper, silver, or gold sheet on them and hit them carefully with a wooden hammer, thus creating a clear relief impression on the metal. Jewellers worked with stamping hammers, anvils, files, puncheons, pincers, small punches, and chisels.

Tatar jewellers knew all the techniques for artistic work with precious metals and stones. Gold and silver items created using the techniques of granulation and various kinds of filigree were marked by their virtuosity. Jewellers lovingly encrusted their works with amethysts, blue turquoise, green malachite, carnelian, pearls, jasper, and other stones and faceted coloured glass, giving Tatar jewellery an exceptional beauty based on rich colours and festive brilliance. Jewellers also mastered the technique of niello on silver, which previously had not been developed in Bulgarian jewellery but became very popular in later folk art [Ibid., p. 152]. Jewellers used engraving, deep and flat stamping, pressing, inlaying with precious metals, engraving on gems and faceting stones, casting, etc. [Valeeva-Suleymanova, Shageeva, 1990, p. 77].

Consequently, Tatar jewellers made items of various quality. There were craftsmen of different professional qualification, and the articles produced were meant for different customers. Highly professional jewellers knew the most complex techniques for working with precious metals. The advanced level of the jewellers' art is confirmed by the 'Kazan Cap' (part of the collection of the State Armoury Chamber), Ivan the Terrible's crown made of stamped gold with gems and

fur trim; massive gold clasps for decorating a belt encrusted with precious and semiprecious stones (part of the collection of the State Anthropology Museum); and ornamental silver buttons made using filigree and stamping techniques [Chervonnaya, 1987, p. 153; Valeeva-Suleymanova, Shageeva, 1990, p. 77]. That is why the area of working precious and semi-precious stones is close to jewellery, not in techniques but in the function of the end products.

Pottery was one of the main industries in the Tatar states with a settled population and advanced urbanism. This became evident during excavations when kilns used to harden crockery, whole vessels, and pieces of them were found—the most frequent findings in the cities and settlements.

Tatar craftsmen carry on the traditions of the Bulgarian, Khwarezm, Crimean, and the Golden Horde phases of the craft's development. Their products were notable for their variety, practicality of form, delicacy of ornament, good firing, and pleasing appearance. The wide range of ceramic ware and their standard forms show that craftsmen made both custom products and products for the market. Jugs, pots, bowls, dishes, plates, and other ceramics are just a few of the goods which were sold both on the territory of the khanate and beyond it.

The materials of the excavations of the Kazan Kremlin, which took place in the 1990s and the beginning of the 21st century, give the best description of the ceramics of the Khanate period of the 15–16th centuries. They are systematised in the reports and works of N. Kalinin, A. Khalikov, T. Khlebnikova, L. Shavokhin and in the doctoral dissertation of A. Sidtikov.

T. Khlebnikova distinguishes six historic and cultural groups of ceramics out of over 200,000 fragments of unglazed ceramics and 2,000 graphic reconstructions of them. Over 20% of Bulgar ceramics were found in the stratum of the Kazan Khanate era. Ceramics produced in accordance with Bulgar traditions, which account for the most finds, make up from 6.1% to 34% of the the ceramics found in that stratum.

Kazan ceramics are of particular interest. They are sandy in colour with a rough surface, produced using oxidation firing, thoroughly fired, and with no polishing. The forms of jugs and mug-shaped vessels, pots, bowl-like vessels and cups, caps, and a water pipe have been reconstructed. Technologically, they can be compared to late Bulgar ceramics, but the production techniques are closer to those of Golden Horde artefacts of the Lower Volga Region. They appear in the stratum of the Golden Horde period, while in the stratum of the Khanate period this group of ceramics makes up over half of the total ceramics.

Ceramics related to the Russian population of the city was found in the Kazan Kremlin. They are represented by imported white clay ceramics (80%) and ceramics from clay tempered with sand and crushed stone (20%): pots, fragments of large jars, jugs, dishes, and lids. This group makes up 10% to 41% of all the ceramics in the stratum of the Khanate period and the turn of the 16–17th centuries.

In the 15–16th centuries production of 'Tatar-Russian' ceramics began. They make up 10.8% to 42% in the stratum of the Khanate period and gradually increased in number after the conquest of Kazan in the strata of the second half of the 16–18th centuries. These ceramics were made of the local ferruginous clay tempered with fine sand. Five groups may be distinguished in the development of forms of white clay and sand-tempered Russian ceramics by firing and working methods, with consideration for shape: from gray polished and unpolished ceramics (60%), black (2.8–9.6%), red (15–16%), brown-grey or brown, and to red clay with glazing. Local pottery traditions introduced by Russians and developed in close interaction with them can often be found in this group. These ceramics were widespread both among the Tatar and Russian populations.

Workshops also produced glazed ceramics, which achieved a high point in the period of the Jochid Ulus; these products are the most typical of the Golden Horde civilisation and their urban culture. Glazed ceram-

ics were regarded as an elite but at the same time widespread artistic product. They were quite richly ornamented. Two types of glazed ceramics were found during the excavations of the Kazan Kremlin. The first of them is redware with white underglaze engobe and monochromatic glaze, and the second is a decorated monochromatic semi-maiolica with green and brown glaze and cut-in ornament on the white clay or red clay base with engobe. It was made in accordance with a Central Asian or possibly Crimean recipe. Most glazed crockery in the Kremlin was found near the Khan's palace, and this suggests that it was mostly used by the khan's officials. It should be noted that at the Kamaevsk and Arsk archaeological sites glazed ceramics make up 10.5% to 11% of all the ceramics, which means it was widely used there. Similar ceramics were found in the strata of Moscow and Tver from the same period as the Kazan Kremlin.

Leatherwork—preparing leather and making all kinds of items out of it—was also a traditional Tatar industry, typical for both the nomadic and settled populations. As compared to other economic activities and crafts of the Tatar states, which have been studied relatively little, tanning and shoemaking, as a craft typical of former nomads, has been fairly well researched. Starting with the works of A. Smirnov [Smirnov, 1951, pp. 129–130], O. Khovanskaya [Khovanskaya, 1958, pp. 123–126], and T. Khlebnikova [Khlebnikova, 1988, pp. 244–253], containing parts dealing with leatherwork in Volga Bulgaria and the Golden Horde, as well as the doctoral dissertation of R. VALiyeva [VALiyeva, 2010], who studied the development level of leatherwork and shoemaking among the population of the Kazan Khanate in the second half of the 15th century and the first half of the 16th century, it has become possible to study the continuity of this craft over the course of 800 years among the pre-Mongol Bulgars, the Golden Horde, and the Kazan Tatars.

Many eastern and western countries highly valued the fine leather (yuft) called 'bulgari.' Premium leather was exported not only

in the 10–14th centuries but in the period under discussion, as well as much later in the 18–20th century. Technologies for leather preparation and shoemaking were borrowed by neighbours.

The Tatar states made a wide range of leather products: shoes for children and adults of various shapes and sizes, hats, clothes, jackets, sheepskin coats, belts, bags, purses, horse trappings, armament accessories, quivers, saadaks, etc. During the excavations of the Kazan Khanate a lot of leather waste, such scraps, shoe parts and forms, armaments, and tools (lasts, knives, scrapers, etc.), were found in the 'wet' cultural stratum, where organic artefacts are preserved fairly well. In the north-east part of the Kremlin, near a channel of the river Kazanka, tanning and shoemaking workshops were excavated. At the excavation site, besides leather and a large quantity of oak bark and other types of bark and acorns, shoemaking tools, lasts, and hammers were found, which confirms the existence of workshops for tanning making leather products. In 1988 A. Khalikov found two workshops at the intersection of Bauman and Kremlin Streets.

Craftsmen used the skins of cattle, sheep, goats, as well as horses. Soft and elastic yuft leather was made from the skins of young cattle. Sheepskin was used to make winter clothes—sheepskin coats and hats. The pelts of fur-bearing animals—martens, sables, squirrels, etc.—were also used to make clothes. There were a number of traditional methods of leather preparation—tanning, colouring, fat-liquoring, etc. Composite shoes were divided into five types according to an analysis of archaeological leather: boots with rigid structure (itek), non-rigid boots (ichetygs), ankle boots (chebots), low shoes or galoshes (clogs), and specialised high boots (overshoes). Household goods—purses, bags, covers, boxes, and cases for combs; armament accessories—knife cases, sheaths, quivers, and saadaks; and other articles—horse trappings, ties, and bindings; as well as scraps and waste, point to the specialisation of the leather-working craft. Articles of metal, felt, and other materials, which are the

constituents of the above products—heelp-lates, nails, insoles, onlays, etc.,—were also found there [Ibid., pp. 12–22].

Consequently, tanning and shoemaking as an independent industry reached high levels of development, and their products were important articles for export.

Construction and urban planning were an essential part of the economy of some Tatar states, such as the Kazan and the Crimean Khanates, in the cities and places where urbanisation was highly developed. They included a number of industries—making construction bricks, stone working and carving, carpentry and woodwork, and decorated ceramic tiles, which added an eastern touch to cities and impressed travelers. The architectural and archaeological artefacts of fortresses, brick and stone buildings, mausoleums (*durbes*), mosques, log houses and household buildings, and construction tools found in excavations speak of the advanced level of construction in Tatar cities. Their architecture was a result of advanced urbanism and of cultural traditions and their continuity.

Through contacts with Central Asia, the Near East, and the Ottoman and Muscovite states, the architecture borrowed progressive features of monumental architecture of the 15–18th centuries typical of those regions. This laid a foundation for the specific architectural style of the Kazan, Kasimov, Crimean, Astrakhan, and Siberian Khanates. The juxtaposition of log buildings, brick and stone residential buildings, and Ottoman-style mosques in the cities with nomadic yurts in the steppes of the Nogai and Great Hordes and the Crimean Khanate; the use of domes and tiers, sloped and multi-sloped roofs, and the preservation of a specific type of minaret show that the Tatars adjusted cutting edge creative concepts to the traditions of their regional schools. Some historic records mention the possible participation of Italian architects in the erection of the Khan's palace in the Kazan Kremlin and its fortifications in the late 15th century [Khali-tov, 2001, p. 379].

The advanced level of city planning is demonstrated by the centralised water supply

and drainage system, which created water reserves. The drainage system carried the water away from the buildings that consumed a large amount of water (e.g., from the ham-mam-type public baths).

The work of builders is reflected not only in large monuments but also in carved decorations for buildings, gravestones, ornaments, plaster decorations, and interiors styled with ornamental and Arabic scripts and floral and geometric ornaments. For instance, the decoration of the sarcophagus of one Kazan khan found during the excavations of the Kremlin can be regarded a work of art. The wooden coffin was covered with leather using silver plates and nails with raised floral ornaments.

Besides large and medium-sized cities, many trade centres were formed in villages. Pottery, iron, leather, and other needed products were made on the spot. The population's wealth showed itself in their ability to commission the expensive services of stonecutters, who made gravestones for commemoration of the dead. Those stones are shining examples not only of the epigraphy but also of the literature of that time. Among archaeological findings are a lot of everyday stone items—spindle weights, grindstones, etc.

Bone carving was developed as well. Craftsmen made a wide range of products necessary in everyday life. These included armaments and hunting supplies (pikes, whip handles, quiver loops, etc.), everyday items and decorations (knife handles, piercers, needles, combs, buttons, clasps, etc.), toys, chess pieces, and other articles made of the bones of domestic and wild animals.

The economy of the Great and Nogai Hordes and the nomadic groups of the Astrakhan, Crimean, and Siberian Khanates was characterised by household industries that were an essential part of the natural economy. Indispensable products that could be easily made were manufactured by people on their own. G. Barbaro reports that nomads practiced the following handicrafts—fulling, forging, and gunsmithing. Craftsmen were engaged to work for the Khan's court and spent all their time at court [Barbaro and Contarini, 1971, p. 471].

Thus, the economy of the Tatar states was diversified and combined various components depending on the territorial location and geographical factors. The main industries were farming, stock raising, and various kinds of crafts and trades. While the primary industry in the economy of the Great and Nogai Hordes and the Crimean and Astrakhan Khanates was nomadic stock raising,

farming was what defined the high level of the economy in the Kasimov and Kazan Khanates, as well as in the Crimean, Astrakhan, and Siberian Khanates once the population started settling down. Notwithstanding the fact that many of the handicraft industries discussed here were developed in the cities and were urban by nature, some of them also developed in villages and in the steppes.

§ 2. Trade in the Tatar States

Trade and the monetary and weight system were an integral part of the economy and social relations of Tatar states that exerted an active influence over social and political life. Trade united the post-Golden Horde formations, which were politically fragmented but existed within a single state in the 13–early 15th centuries. Foreign trade to a large extent contributed to the preservation—albeit with significant problems and shortcomings—of the single economic space that had existed before. The historiography of the 9–16th centuries emphasises the importance of trade and the role of Volga Bulgaria and the Golden Horde [Valeev, 1995, p. 21, pp. 289–334; Valeev, 2007; *Istoriya Tatar*, 2009, pp. 277–309; Valeev, 2012]. During the period of the existence of the Tatar states and later, in the 18–20th centuries, the Tatars were known in Eurasia as a 'trading' people. It is common knowledge that in the second half of the 18–beginning of the 20th centuries a large number of Tatar merchants and entrepreneurs contributed to the establishment of trade relations between the Russian Empire and the countries of Central Asia, Iran, China, and Caucasus, and, considering the large number of extant sources, this matter has been examined fairly thoroughly in the historical literature. But unfortunately, we have no monographic works on the history of trade even in the Kazan Khanate, to say nothing of the other Tatar states. But the origins of such an important economic and socio-cultural phenomena as the appearance of a large number of Tatar merchants and the vast scale of trade in the 18–19th

centuries were to a large extent related to the period of the Middle Ages.

The history of trade as an integral part of the economy and social structure, its ups and downs in various periods, and the orientation of the trade relations reflect both the internal needs of society and the historical situation in which the given society functioned and developed. This was most pronounced during times of change in the socio-economic and political order of the society—that is, during the transition period from the early-Bulgar stage to the pre-Mongolian stage, then to the Golden Horde stage, during the time of conquests and raids, and later to the post-Golden Horde Tatar states. Not only does each of them have its own specific characteristics; there are also significant peculiarities in the character, orientations, and trends in the development of trade, the monetary and weight system, and monetary circulation.

The rise of crafts and cities in the 10th century in the Bulgar state, Crimea, and seaside regions, which had been urban centres from the time of antiquity, led to the rise of simple commodity production, which was an integral part of feudal relationships in the Middle Ages. The tenet of economic theory on the integration of a predominant natural economy and a non-predominant commodity economy rules out the absolutisation of the natural economy and the automatic opposition of such an economy to commodity-monetary relationships in the Middle Ages, and, consequently, overestimation of the scale of their development and the role of trade. Looking at the stages of trade development, it can be asserted that exchange was limit-

ed to minor penetration of commodity production in comparison with the subsistence economy. The products of one's household were the main element in earning one's living. Even urban craftsmen who crafted commodities for sale would use part of their products in-house.

But despite the predominance of the subsistence economy, trade and commodity-monetary relationships had significantly developed in Tatar states. Trade, which was the foundation for the development of the Bulgar and Golden Horde civilisations, maintained its position even in the succeeding periods. Adoption of a settled lifestyle, urban development, establishment of a system of settlements and yams (messenger relay stations)—especially along international and domestic trade routes inside and outside the state—creation of large scale trade and commodity exchange systems, involving new ethnic and social groups of people, and a high level of monetary circulation are all characteristic features of the Bulgar and Tatar trade in the Middle Ages. The combination of a period of intense monetary circulation in the 10th century and the second half of the 13–beginning of the 15th centuries with a 'non-monetary' period in the 11–12th centuries, the reduction of Tatar monetary circulation in the second half of the 15th century and the transition to circulation of coins from Russian princedoms in Kazan in the second half of the 15–16th centuries, the continuation of active circulation of Tatar coins and the commencement of circulation of Turkish coins in the Crimea in the 15–18th centuries, use of silver ingots, or *soms*, as a form of payment in wholesale trade and the reduction of the circulation of these ingots in the second half of the 15th century are highly important indicators and components of expanding and sometimes declining trade.

Consistency and changes in the monetary and weight systems and norms, which were used to organise trade, the forms of their development, and the role and policy of states are very important and require analysis and identification of their characteristics with regard to their impact on the economies of

the Tatar states and the development of their productive power.

Despite the obvious shortage of written, and especially narrative, sources reflecting the economic history of the period under discussion, the materials help to identify both the generic features and patterns and the characteristic features of the Tatar states. Available data shows that the trade did not exist independently but rather served to satisfy the society's needs for raw materials, commodities, and manpower. The internal capacity of the states and involvement in the system of international trade routes to a great extent determined the progress of handicraft technologies in the Kazan, Crimean, Astrakhan, and—partially—Siberian Khanates and in the Nogai and Great Hordes and shaped socio-economic relations based on combined agricultural and handicraft production and trade.

Natural and geographical, political, and migration factors had a great impact on trade: the convenient geographical location of the Tatar states in the middle of trade routes, connecting the North and South, West and East; the flourishing of the slave trade in Eurasia in the 15–16th centuries; the migration of various peoples; the khans' policies in support of trade; and a number of others. The main international trade relations that existed in Volga Bulgaria and the Golden Horde continued in the 15–16th centuries as well, but in comparison to the Golden Horde period, when trade was organised within a huge empire and was mainly safe, trade in the Tatar states was on a reduced scale, and the number of customs posts and, thus, trade duties increased. Taking into consideration the dependence of trade development on agricultural and handicraft production, it must be emphasised that it, in turn, contributed to their development.

Both local and foreign merchants contributed considerably to the development of trade. When Kazan was besieged by Russian troops in 1552, merchants from other countries remained in the city: 'The people of Kazan... shut five thousand foreign merchants in with themselves—Bukharians and Shamakhins,

Turks and Armenians, and others' [Complete Collection of Russian Chronicles, 19, 2000, p. 130]. Indeed, growing domestic trade, established commodity production, and extensive foreign trade, of which left much clear evidence remains—all of these features of the Tatar states' economies were reflected in the social sphere as well and shaped the merchant class as a special social group.

The organisation of the merchant class into merchant associations (*urtachestvos*), preserved from the Golden Horde period, was actively developed in the Tatar states. Despite the scarcity of written sources, they have preserved information in which references to trading activities in the Tatar states as a very common activity is quite telling. This phenomenon was perfectly suited to the relations that were developing at that period of time in the vast territory of Eurasia. Differences in national, cultural, geographical, and economic conditions did not stop the population of Eastern Europe and Eastern countries from integrating into a unique trade and economic association united by international maritime trade interests. The level achieved in one place would spread to neighboring territories, sometimes quite distant ones. In such centres, production of goods in worldwide demand, such as accessories, furs, toilet articles, weapons, and several others, was evolving on a technically advanced level. Merchants, who often combined a soldier, sailor, and master all in one, formed consolidated associations bound by oath, hired oarsmen, and started out on a journey on several ships. They were familiar with the route and, considering the distance of the trip, could pass the winter somewhere along the way [Kirpichnikov, 2001, p. 15]. Obviously, during the trip they would use both cash and exchanges in kind.

The states themselves were interested in the development of trade—not only did it provide essential goods and luxuries, but also brings significant economic benefits to the state treasury. For instance, in the Nogai Horde, trade was performed in accordance with the ruler's *yarliq*, and duties were imposed on merchants: foreign merchants paid

1/3 of 9 parts to the bey, and 1 part to the karachi; the Nogai merchants, who took herds of sheep to Bukhara, paid 500 sheep; and Bukharan merchants who came would pay one thousand 'azyam kaftans' [Trepavlov, 2002, pp. 507–544; Iskhakov, 2009c, pp. 78–79]. The process of trade in the Tatar states was tracked and organised by officials called weighters, *tutkaguls*, and *tamghaches*. Along with trade tax (*kharadzh kharadzhat*) there were several sales taxes [Khudyakov, 1990, pp. 209–212]. The rulers were aware of the importance of trade. For instance, in response to a proposal to start a war against Russians, the Nogai Bey Ismail wrote that: 'If I start a war, I will have to go naked myself, and when people die, there will be no shrouds for them' [Peretyatkovich, 1877, pp. 209–210]. This was to a large extent related to the supply of linen fabrics and cloth from the Muscovite state.

The trade of the Kazan Khanate with the Muscovite state was controlled by government, and export taxes were introduced. Goods were imported to the Muscovite state through two border control points: Nizhny Novgorod on the Volga route and Murom on the 'cross-country' route. Customs posts were set up, and duties were collected. The Muscovite state organised a special fair for the Eastern merchants in Kholopy Gorodok on the estuary of the river Mologa, located near Rybinsk [Khudyakov, 1990, p. 221]. S. Herberstein reports that: 'A fair is arranged here; it is the most visited fair in the entire domain of the Muscovite ruler; not only Swedes, Livonians, and Muscovites gather there, but also Tatars and many people from the Eastern and Northern countries. They engage only in fur trading because these people rarely or almost never use gold and silver. They exchange clothing, needles, knives, pans, axes, etc., for fur, mainly' [Herberstein, 1866, p. 119].

The establishment of Makaryevskaya fair and Vasily III's 1525 ban on Russian merchants visiting the Kazan fair to a great extent was driven by a wish to undermine the economic strength of the Kazan Khanate. But not only the states were interested in

enhancement of trade. Tatar and alien merchants also needed strong states, preferably free of wars and shocks, which would ensure the safety of trade and trade routes and the development of commodity-monetary relations through the provision of certain *tarkhans*. The states directly benefited from the development of trade in the form of sales taxes, and naturally they regulated the organisation of trade and the import and export of silver—which at that time was the main precious metal for the minting of coins—as well as coinage, which was first done in the Kazan and Astrakhan Khanates in the 15th century, and in the Crimean Khanate, during the entire existence of the state. Merchants, who had certain powers, were becoming *Tarkhans*. They were useful to the state for various reasons: they could be partners in trading companies (*urtakhs*), they could be spies, diplomats, etc.

From the perspective of Tatar states' policy, it was important to regulate the time, place, and organisation of trade. This issue is scantily covered in written sources and archaeological materials related to the early 10–beginning of the 15th centuries. A number of factors continued to influence the development of the forms of trade in the Tatar states in the 15–16th centuries: the character of feudal production (dominance of a subsistence economy over simple commodity production and, thus, dominance of trade over industry); some tightness of domestic markets and market outlets; and strict regulation of trade. There were some other factors complicating the development of trade. First, this includes the development level of small commodity production and interstate, intra-state, and trans-regional commodity and staple trade; the rate of involvement of the urban, rural, and nomadic population into commodity-monetary relations; the organisation of the monetary economy; and, of course, political stability in Tatar states and the absence of wars and other interstate conflicts in Eurasia.

One of the most important organisational forms of trade was fairs, an integral part of foreign, interstate, and domestic trades. The most famous fair was the one that in

the 15th century was moved from Aga-Bazar in the city of Bulgar to Gostiny Island on the Volga River near Kazan and gained worldwide recognition. It revealed the continuity of intermediary pre-Mongolian and Golden Horde trade between the North and South, West and East, Europe and Asia. On a yearly basis, the fair would start on the 24th of June and, according to the 'Kazan chronicler,' 'rich merchants from Russian lands and many alien merchants would come to Kazan and trade great expensive goods with Russia. The Russians know no trouble; they live in Kazan without fear, relying on their tsar and not fearing him' [Complete Collection of Russian Chronicles, 19, 2000, p. 23]. S. Herberstein wrote that the fair took place on the Gostiny Island, 'which is called the island of merchants located on the Volga near the Kazan fortress' [Herberstein, 1866, pp. 146, 150]. A colourful description of the fair has been preserved: 'All the townspeople, men with their wives, walking around, drinking in the tsar's inns, buying commodities, and cooling off. Many people come to the fair; Cheremisses come to the festival from distant uluses with their goods and trade with the townspeople, selling, buying, and exchanging' [Complete Collection of Russian Chronicles, 9, 1965, p. 26].

Fairs were held both in the city and nearby. There is a report of the 'Kazan chronicler' about deployment of 'up to one thousand tents and camps of great lords... with royal golden goods... expensive clothing and bedding' in 1508 on the Arsk field during the celebration [Ibid., pp. 27, 30].

Fairs took place in other Tatar states as well. For instance, bread, honey, wax, furs, leather goods, including *yuft*, cloth, soap, salt, etc., were traded in the city of Kasimov [Rakhimzyanov, 2001, p. 60; Iskhakov, 2009c, p. 62]; spices, furs, slaves, silk, brocade, satin, cloth, precious gems and jewels, fish, etc., were traded in Astrakhan [Zaitsev, 2006, pp. 210–226]; grain, leather goods, furs, etc., were traded in Bakhchisaray, Karasu-Bazar, Akmechet, and Gozley [Syroechkovskiy, 1940, pp. 17–18]. Fairs took place in Saraychiq, Isker, Tyumen, Arsk, and oth-

er large and mid-sized cities and centres of princedoms (*darugas*) of Tatar state formations. They differed from each other in size, in representation of merchants from other Tatar states, from the Muscovite state, countries of Central Asia, Iran, and the Caucasus, and in the intensity of the domestic market, which to a great extent depended on proximity to river, sea, and land trade routes, first of all, the Volga, Kama, Irtysh, and Tobol Rivers and the Black and Caspian Seas.

The available information shows that fairs were a very important form of enhancement of domestic and foreign trade; they contributed to the growing intensity of trade operations and were an integral part of existing trade routes. Fairs were a permanent sales area approved by the state and subject to market law—that is, the rules on paying a certain amount of tax, measures of weight, and means of payment. Because of proximity to rivers or seas and big cities, mainly the capitals of the khanates, fairs were visited by Russian, Muslim, Armenian, Indian, and European merchants, who would stay for a long time until the end of the fair or the complete sale of their goods. Moreover, this was convenient for merchants because there was no need to perform any major reloading operations. The network of fairs was continuously growing, and they were gravitating towards the waterways and administrative centres. Fairs for the sale of livestock, fish, and some other high-demand goods were widespread.

Another form of trade in the states that still preserved the traditions of the nomadic lifestyle—in the Great and Nogai Hordes and the Crimean, Astrakhan, and Siberian Khanates—were so called *Ordobazars*, markets in nomadic *uluses* that were centres of trade. There was even a special group of merchants, the *Ordobazartsy*, who served the khan and the nobility (*murzas*, *beys*, etc.) [Iskhakov, 2009c, p. 78]. Everything necessary for living; cattle, sheep, and goats; products of livestock farming; grain; military equipment; fabrics and other goods that came from other Tatar states, the Muscovite state, Bukhara, Urganj, and other centres were sold here.

'Coming back to our subject—that is, the Tatar troops, I would add that they always have merchants by them; they always go by way of the horde to go further to other countries' [Barbaro and Contarini, 1971, p. 148]. There is also the report of John (Iann) Sultaniysky: '...everything necessary is provided to them and bought and sold' [Khukhem, 1995, p. 63], referring to the Horde of Sakhbkeran, one of Temür's emirs, which proves the general consistency in trade organisation typical of nomadic communities.

To a great extent, trade was concentrated in cities in a monetary-commodity form, which is typical of urbanisation and the general consistency of the development of trade. Tatar cities in the Kazan and Crimean Khanates and other state formations were centres of crafts and domestic and foreign trade development. Urban crafts were developing as a small-scale industry and were different from the households of semi-free peasants: they were based on the property of the production worker and were commodity-based. At the same time, trade itself was acting as a catalyst for the arrangement of cities, crafts, communication lines and transport routes, international markets and the development of the Tatar states's economies in general.

In the Great Horde, where cities still existed in the 15th century, the report of Shams ad-Din Muhammad, a merchant from Shiraz, about how he sold his commodities and bought Chinese raw silk, silk damask, satin, European cloth and Russian linen in Saray in 1438 is well known [Zakhoder, 1955, pp. 14–19].

A significant amount of imported ceremonial pottery was found during the archaeological excavations in the Kazan Kremlin. The main bulk came from Iran and Central Asia; *semimaiolika*, from the Black Sea Region; *semifaience*, from Turkey; celadon, from China. G. Barbaro wrote that Kazan is a city of trade, that an enormous amount of furs is exported from Kazan to Moscow, Poland, Persia, and Flanders. Furs come from the north and north-east, from the Chagatai Region and Mordovia [Barbaro and Contarini, 1971].

Furs (sable, squirrel) were sold in Astrakhan and exported to Derbent and Sygnak. Silk, brocade, satin, silk threads, carpets, jewels, paint, chain mail, bows, swords, and walnuts were imported from Iran and Turkey; pearls, turquoise, and leather were imported from Armenia; spices were imported from Arabia; morocco leather, sheepskin, wooden-ware, paper, bridles, saddles, and knives were imported from Russian lands; and woolen, cotton, and silk fabrics were imported from other Tatar Khanates [Zaitsev, 2006, pp. 210–226; Iskhakov, 2009c, p. 72].

We could continue to enumerate Tatar cities, especially capitals, and other big and small towns. The analysis of sources of information about the economic and social structure of Tatar states highlights the leading role of the city in commodity circulation, commodity production, and the level of commodity-monetary relations. This was typical of both medieval Russia and Europe. In his description of the European crisis related to the plague epidemic, which struck literally all countries of Europe, S. Karpov reports that from 30% to 50% of the population of Italy's cities had died. This crisis undermined the traditional trade routes and triggered a trade crisis in Black Sea Region, and trade started to change its orientation. 'Trade started to drop drastically. It even stopped altogether for a while after the crisis. But then it revived as trade in local products, and a change in the very structure of trade took place. While trade had been bringing hundreds of per cent profit, now it was bringing not hundreds, but tens of per cent... But at the same time, companies were establishing permanent commercial offices. Italian entrepreneurial capital was becoming more deeply integrated into the city infrastructure. Trade lost its large scale but became more stable' [Karpov, 2011].

Analysis of the dynamics of city development in Bulgaria, the Golden Horde, and the Tatar Khanates of the 15–16th centuries shows that in the 10th century the Bulgar cities, by becoming involved in the system of Transeurasian trade by waterways, first of all, by the Great Volga, Kama, and other

river and land routes, became a centre of international intermediary trade with the East, Russia, the Northern and Western Europe. In the 13–14th centuries, as the Jochid state was ensuring the safety of trade routes, these areas of foreign trade were significantly extended and achieved imperial scope, but Eurasian international trade re-oriented towards Italian cities on the coast of the Black Sea, founded by Genoa and Venice. Starting from the 11th and up to the 16th centuries cities in Bulgaria, the Golden Horde and Tatar states—which were at the intersection point of intercontinental Eurasian trade routes and remained centres of foreign trade—took on a new character, and local and regional forms of trade were developed more intensely. Trade in the cities transitioned from acting as an intermediary to selling high-demand and consumer goods, and not only luxury items and elite products, while specialisation of commodity production in the Tatar states deepened. The local and regional forms of trade are reflected in exchange between regions with settled and nomadic populations, for instance, between the Nogai Horde and the Kazan Khanate, and after its fall, with the Muscovite state and the Bukhara and Khiva Khanates. Commodity relations expanded between the city and the village, and between the Finno-Ugric people of the Volga, Kama, and Ural Regions and Siberia, and other ethnic groups of the population.

Unfortunately, a lack of sources prevents us from drawing an image of an urban market. But the markets preserved in the cities of the Crimean Khanate allow one to assume that they had a fairly marked oriental image. Craft producers were located near markets because the incomplete separation of trade functions from craft functions was typical of the period under discussion as well—that is, the craftsman would usually sell his own products. Apparently, depending on the specialisation of workshops, they had points of sale both in the city streets and at the markets.

The market combined the product range of foreign and domestic trade. But each of them had its own characteristic features.

There were two forms—local and regional—differing from each other by the range of traded commodities and the length of the roads. For instance, staple consumer goods, like agricultural products and handicraft goods, were more widely represented in local trade. Local trade was developing not only at town markets but also between the town and the village, and it was of everyday domestic importance as handicraft goods—such as tools, jewellery, bread, and other agricultural products—were sold. The exchange between the city and villages also was one of the components of regional trade. It connected distant cities with villages, various ethnic groups and stratas within states, settled regions with the urban population, with nomadic regions, and with neighbors.

One more aspect related to forms of trade organisation in the Great Nogai Horde, the Astrakhan and Siberian Khanates, and partially in the Crimean Khanate is quite interesting. N. Kradin mentioned one more feature of 'urban' life: the Horde as 'city on wheels.' The moving Horde had a structure as stable as the structure of a settled inhabited locality [Kradin, 2006, pp. 430–442]. The following was written by G. Barbaro: 'As soon as the ruler stops, **they immediately set up a bazaar** (our emphasis.—*R. V.*), leaving the broad roads... As soon as the bazaars are set up, they kindle their fires, fry and boil meat, and prepare meals from milk, oil, and cheese. They always have game, especially venison... the troops have craftsmen—weavers, blacksmiths, gunsmiths, and others—and in general they have all the necessary crafts... If you were to ask me: 'Do you mean that they wander like gypsies?' I would give a negative answer because, except that fact that their camps are not surrounded by walls, they seem to be **the biggest and the most beautiful cities** (our emphasis.—*R. V.*).

The barter trade, widely known in sources dating from the 10th century, retained its importance [Valeev, 1995, pp. 38–39; Valeev, 2012, p. 110]. Because of the insufficiency of commodity-monetary relations, it had maintained its positions in the Nogai Horde and the Siberian Khanate. To some extent,

barter trade existed in trade operations in all the Khanates and, as we saw above, in the Muscovite state as well.

Rapid growth was shown by domestic trade in the Tatar states—that is, trade within a city or village, among nomadic groups of the population, and exchange between them and different regions of these states. The development of agriculture, stock raising, and handicraft industries laid the foundation for the rapid growth of domestic trade. In general, it should be noted that domestic trade reflected the economic growth of each of these states, which were united at one time by a single economic space and political order. Social division of labour and specialisation of handicraft production impacted the active growth of domestic trade and led to a significant increase in urban commodity turnover, but significantly less in the village, where staple and, first and foremost, handicraft goods were sold. The market demand for different types of handicraft goods determined the standardisation and cheapening of goods aimed at a fairly wide range of customers and, thus, led to the further development of production technologies, which, in turn, encouraged the growth of the craft and the volume of trade operations.

Cities were becoming an important market for agricultural products—grain, meat, etc.,—because there was high demand for these products among the urban population. For example, Kazan could not satisfy its demand for agricultural products from nearby rural areas and villages; for this reason, trade was serving commodity turnover between the cities of the Kazan Khanate and thus enabled the provision of agricultural products to Kazan—the biggest city in the country [Muhamedyarov, 2012, pp. 178–179].

The Nogai Horde, with a predominantly nomadic livestock-based economy, represents another trend in domestic trade. It vitally needed to obtain products of agriculture and handicrafts from its settled neighbors, the Kazan Khanate, the Muscovite state, and the Central Asian khanates. It procured these products mainly by means of exchange and not military campaigns. Commercial cara-

vans of Nogais would go to all the surrounding countries, and the settlement of uluses along the old caravan routes to a large extent contributed to the enhancement of trade. They were used by the Nogais not only for their own trade but also for collecting taxes from transit merchants. There were regions within the Horde with various economic orientations, and, accordingly, with various ranges of imported and exported commodities [Trepavlov, 2002, pp. 522–523].

The accumulated database of written and archaeological sources, which has been introduced into scientific use, enables us to name the main product range of the domestic market. Besides everyday goods related to agricultural products, pottery—storage vessels and tableware—was actively traded: large jars, jugs, pots, and mugs. Production of urban products required high professional skills and appropriate technical equipment. The following items were found during the excavations in the khanate stratum of the Kazan Kremlin: Bulgar ceramics (from 6.1% to 34% of total amount of ceramics found in the stratum); Kazan ceramics that, technology-wise, are comparable with late Bulgar ceramics but, technique-wise, are closer to the ceramics of the Golden Horde cities of the Lower Volga Region (from 24% to 55% of the total amount of ceramics found in the layer); Russian ceramics represented by imported white clay ceramics or made of imported raw material (up to 10% of ceramics found in the layer), and Finnish ceramics. In terms of vessels, the following were found: jars and pitchers, turkic jars, mug-shaped vessels, pots, large jars, cups, plates, tuvaks, and sphericonical vessels. Glazed vessels were also found—white clay and red clay with green and brown enamel of local production. Similar items, dated from the 15th century, were also found at both the Kama-yevo and Arsk archaeological sites. This type of ceramics makes up 10.5–11% of the entire number of ceramic items found at the Kama-yevo archaeological site. The same kind of ceramics was found in the layers of Moscow and Tver from the same period as the Kazan Kremlin. Discoveries of glazed ceramics in

the city and village show the large production volumes of such vessels and the processes related to the enhancement of commodity-monetary relations in the village.

Minor trade between villages and sales of village potters' products were prospering as well. The pottery produced in one village could be sold in the nearest villages and, through small markets, could serve fairly remote villages.

Iron products for agriculture, stock raising, honey hunting, fishing and hunting; weapons; raw materials; and semi-finished products were becoming an important part of domestic trade. But while the products of the potter's craft were comparable to household production, forging—because of its complexity—became the main occupation and source of income for craftsmen. Exchange of commodities or purchase and sale transactions were likely performed in-kind—that is, a blacksmith would exchange his products for agricultural products such as grain, meat, fish, etc. Blacksmiths lived and manufactured goods both in cities and villages, in the Kazan, Crimean, and Astrakhan Khanates, and at the khan's court or Bey Orda in the Siberian Khanate and the Nogai Horde. The range of products also included boilers, including cast-iron ones, small bronze and copper items, and weaponry. With regard to the latter, the Muscovite state introduced a list of commodities prohibited for export to the Tatar states. These included weapons, armour, metal handicraft goods in general, and substances for making gunpowder [Ibid., p. 534, note 15].

Considering the high level of the leather industry in the domestic market of all the Tatar states, the population was sufficiently provided with leather goods—shoes, sheepskin coats, fur coats, gloves, belts, and hats. These goods were actively exported to other countries. For instance, sheepskin coats were exported to the Turkish city of Azov and the cities on the Syr Darya river bank, and to Moscow [Novoselsky, 1948, p. 214]. Fazlullah Isfahani writes about the 'kish and tip'—that is, sable and squirrel fur coats that were imported to the city of Sygnak 'from the

Desht' in the early 16th century [Fazlullah b. Ruzbihan Isfahani, 1976, pp. 116, 117, 273].

But what was traded most on the market was jewellery. This could be fairly simple, cheap items, or expensive complex pieces. Both items made by Tatar craftsmen and pieces from Iran, Crimea, Turkey, Central Asia, etc., were sold. The movement of commodities, in this case the movement of jewellery and cast products, copper, silver and gold, was typically intense. This means reproduction of commodities, which best describes the economic condition in the Tatar states, the dynamics of commodity production development, and the main trends in the development of trade and commodity-monetary relations not only in these states but in the Eurasian region as well.

Commodities imported as a result of trans-regional and foreign trade from neighbouring and distant countries were becoming an article of domestic trade as well. M. Fekhner names an entire range of commodities that were sent to the Nogai Horde: harness, shoes, wooden boxes, 'chests, Russian and Western European fabrics, paper, saddles, stirrups, washbasins, glass, mercury, paint, hunting birds, walrus ivory and bread products' [Fekhner, 1956, pp. 53–56, 64–66, 83–84, 97].

Domestic trade was connecting large and small city centres, villages and regional settlement agglomerations, ordobazars, and other organisational forms of trade in Tatar states into a single structure, which is confirmed by findings of goods of the same type manufactured in one centre or another, findings of typical vessel forms or parts, and other items. Even though domestic trade is to a large extent dependent on the economic capacity of the society and directly results from foreign trade, they still complement each other.

The foreign trade of the Tatar states covered several territorial zones, differing in the distance of trade routes and communication means, the organisational activities of merchants, *urtachestvos* (unions), and states. The first (small circle) is the immediate contact zone in the area near the border with

neighbouring states which at one time were a part of the Golden Horde and continued its heritage: the Kazan Khanate and the Nogai Horde, the Kazan Khanate and the Astrakhan Khanate, etc. The second (middle circle) zone is made up of the more distant regions of neighbouring states united by the sphere of trading interests, for example, Russian princedoms before creation of a single Muscovite state or 'open trade' territory ('country of Darkness'). The third, transit, zone (distant circle) is made up of remote countries and regions which are not in direct border contact and have great spaces in between: Iran, Central Asia, Northern and Western Europe, India, China, Egypt.

The Tatar states were located at the junction of international trade routes, which had been known since the antiquity, and that had defined the role and the importance of their foreign trade. Considering the fact that these states covered a fairly large part of Eurasia and their proximity to any given trade partner, their foreign trade had its unique features. But one thing is unquestionable—international trade and foreign markets were of great importance for the states and their political and administrative power. Even though international trade had lost its amplitude, power, and splendor—which was typical of the second half of the 13—the first half of the 14th centuries in the heyday of the Golden Horde and was to a great extent related to the safety of trade routes in Eurasia—it continued to exist and was in demand. Various factors contributed to the strengthening of this trade: a far-reaching system of land, river, and sea communications, the commodity-based character of agricultural and especially handicraft production, and the availability in the cities of opportunities and tools for maintaining international trade. However, there were also some adverse circumstances: military competition between the Great Horde and the Crimean Khanate, Kazan, the Crimea and the Siberian Khanate and Moscow; insecurity of caravan routes to Central Asia; tightness of the domestic market, regions located away from the cities, and land, river, and sea

trade routes; and various feudal taxes and customs posts.

International trade was growing in several areas of foreign trade and to a large extent was continuing the same consistent patterns and trends typical of earlier periods. One important area of trade was the exchange of commodities and valuables between the Tatar states themselves, which at one time were a part of the unified Jochid Ulus. There is plenty of information about the close co-operation between the Kazan Khanate, the Nogai Horde, and the Siberian, Astrakhan, and Crimean Khanates.

The second important area was trade with Russian princedoms and the unified Muscovite state, and through it with Central, Western, and Northern Europe.

The third area of foreign trade was contacts with eastern countries—Iran, Central Asia, the Caucasus, China, etc.

An interesting part of the analysis of the trade of the Tatar states is the characteristics of the major items of export and import which allow showing the system of Tatar trade, its commodity turnover structure, the ratio of local and imported commodities, and the evolution of commodity exchange. Analysis of the commodity mix also helps us to understand the nature of trade, its areas, and its social orientation.

The characteristics of goods imported from Eastern Bulgaria to the East were defined by al-Muqaddasi in the 10th century: 'As for merchant wares, from Khwarezm they export sable, squirrel, ermine, marten, fox and beaver furs, goatskin, wax, arrows, large fish, hats, isinglass, fish bones, castoreum, yuft, honey, nuts, leopards (or hounds), swords, chain mail, birch timber, Slavic slaves, sheep and cattle' [Garkavy, 1870, p. 282]. It had changed only slightly in the period under discussion. Like before, the interests of eastern and western merchants trying to get access to 'soft gold' were overlapping in this region. It was furs, just as in the 10–14th centuries, that were the commodity best known to eastern authors. For example, the Nogai Horde, which didn't have much of a forest but was more of a steppe region, was

described by J. Deluc as follows: '...there are many... wild horses, wolves, bears, foxes, deer... and elk. The Nogais hunt them and sell the skin, which is... their most common commodity [Deluc, 1879, p. 487]. For the Siberian Khanate covered mainly by forests, except for the steppe regions, furs were the main commodity. The Kazan Khanate, continuing the traditions of the Bulgar State, became a transportation gateway and managed to organise a large-scale fur trade, making a great profit on it. For this reason, the fur trade to a great extent determined the character of trade contacts.

Continuing the tradition started in the Jochid Ulus, horses, sheep, and cattle were actively exported from the Great Horde, the Crimean Khanate, and the Nogai Horde to the Kazan Khanate, Turkey, and Russia. The scale of the export of horses from the Nogai Horde in the 15–16th centuries was so great that one got the impression that the word 'horse' meant only the Nogai breed of horses [Denisova, 1946, pp. 40; 75; 528]. V. Trepavlov asserted that the cavalry of the nobility was made up mainly of them, and according to western historians it was Nogai horses that were instrumental in transforming Moscow's former feudal army of foot soldiers into a modern army which meets the needs of the firearms age... and without cavalry, Russia would never have been able to conquer the Muslim territories [Trepavlov, 2002, p. 528]. In the 16th century, the prices of horses and cattle increased by 2–2.5 times in the Russian state alone [Ibid., p. 529].

An important item of export was leather goods, especially premium-quality yuft and morocco; they were exported in large quantities to eastern countries, where they were called 'bulgari,' and to Russia.

The slave trade in Eurasia, which took on massive proportions in the 9–11th centuries and gained significant momentum in the 13–14th centuries, was still going on in the period under discussion; slaves were a very profitable export item. In the Nogai Horde in the 16–early 17th centuries ruined nomads used to sell their relatives. 'They sell one another... and at a very low price, at that. When

we were in Astrakhan, because of the famine one could buy a Tatar for 4–5 florins, or even cheaper,' reported Kakash and Tektander. Children were sold as well; the price of a boy was 8 roubles, a girl cost 1.5 roubles, and a young woman cost 3 roubles [*Ibid.*, p. 536, note 19; Kakash & Tektander, 1896, pp. 26–27].

However, more often the objects of the slave trade were captives. Russian chronicles noted that: 'And the men of Kazan went to war against cities and devastated Nizhny Novgorod, Murom, Volodimir, Shuya, Yur'yev, Volsky, Kostroma, Trans-Volga Galich with everything, Vologda, Totma, Ustyug, Perm, and Vyatka. They came many times for many years; for the time being, God has delivered us from them through our sovereign' [*Complete Collection of Russian Chronicles*, 13, 1965, p. 129]. In the Middle Ages military campaigns provided an opportunity to obtain not only material wealth but also a significant number of captives, who were subsequently sold at the markets in Astrakhan, Kazan, Crimea, Turkey, and eastern countries. In 1545 Pavel Iovy wrote that after a campaign of the Crimean khan Muhammad Giray against Moscow in summer 1521 captive Muscovites were sold 'both in Tauria to the Turks, and in Tsitrakh to various inhabitants of the Caspian shores' [Iovy Pavel, 1997, pp. 354–355]. The cities of Azak, Kafa, Istanbul, and Bukhara were major centres of the slave trade. Central Asia also was an important destination for the sale of slaves. It is there that Russian ambassadors, messengers, dragomen, and servicemen who were captured on the way to the Nogai Horde were taken. The number of slaves captured during the raids was especially high in 1608–1612, when Ishteryak Bey started a war against the chaos-torn Muscovite state. It was a lot more difficult for Russians to get from Maverannahr and Karakum to their native land than to get home from the Crimea or Anatolia [Trepavlov, 2002, p. 538; Novoselsky, 1948, pp. 65, 79, 80]. If a raid was successful, the prisoners were sold 'at a cheap price: a man would be sold for ten or fifteen gold pieces, while a strong young man would be sold

for 20 gold pieces.' And if the spoils were too many, then 'for a young man they wanted a cup of millet' [Trepavlov, 2002, pp. 536–537]. There also was a reverse exchange of slaves. In the 1560–1570s the Moscow government sold 'Lithuanian' or 'nemetskie' captives—European warriors captured by voivodes on the battlefronts of the Livonian war—to Ordobazar merchants.

The export of fish, which, as we saw earlier, was caught in abundance, from the Kazan, Astrakhan and Crimean Khanates was of great importance for foreign trade. Beluga, common sturgeon, starry sturgeon, and others were traded in especially large quantities.

A great amount of imported and re-exported goods passed through the Tatar states—silk and cotton fabric, textiles from Central Asia, richly decorated glazed eastern ceramics, jewellery, celadon from China, fruit, raisins, and luxury goods. S. Herberstein wrote the following about eastern goods imported to Moscow: 'The goods are mainly silver ingots, woolen cloth, silk, silk and gold fabric, pearls, jewels, and gold ingots' [Herberstein, 1866, p. 90]. Other goods, which were imported and re-exported, were Yemeni carnelian from Iran, and from more southern countries—mountain crystal from Madagascar, Sogdian crystal and Central Asian turquoise from Maverannahr, mountain crystal from India, and lazurite from Badakhshan (Northern Afghanistan).

The Tatar states imported essential goods, luxury items, and spices. The import trade was to a great extent dependent on the level of economic development and, most of all, on the level of development of handicraft production technologies. V. Trepavlov mentions that it was typical of trade between Russia and the Nogai Horde for the amount of goods exported to the steppe to be greater than the amount imported and, citing A. Bennigsen and J. Veinstein, divides imports into everyday goods, 'objects of civilisation' (handicraft products) and luxury items [Trepavlov, 2002, p. 535]. S. Herberstein reports that: 'Saddles, bridles, garments, leathers, and weapons are imported to Tataria, but weapons and iron are exported to other

north-eastern countries only in secret by special permission from regional officers. But they (the Russians) export woolen and linen garments, knives, axes, needles, mirrors, etc., to the Tatars' [Herberstein, 1866, p. 90].

They imported salt, West European fabrics, and manufactured goods. Salt and fish from the Astrakhan Khanate was exported not only to the other Tatar states but also to Russian princedoms, the Muscovite state, and countries of the Caspian Region. G. Barbaro reports: 'Every year people from Moscow sail on their ships to Astrakhan to get salt' [Barbaro and Contarini, 1971, p. 157]. I. Zaitsev cites other reports about the salt trade at a later time. In 1599 Orudj-beg Bayat noted that merchants from Moscow, Armenia, Persia, and Turkey mainly bought salt in Astrakhan, and then he gives data about the volume of the fish and salt trade. For instance, while in the second half of the 16th century several hundred poods of salt were produced, in the 17th century this figure came to 1–1.5 million poods [Zaitsev, 2006, pp. 216–217].

Considering that the Tatar states were located at the junction of international trade routes, the transit trade played an important role in their economies and was one of main sources of profit and wealth in these states. There is plenty of evidence to support this. In the 16th century. P. Iovy wrote that at the marketplace in Tsitrakh (Astrakhan), 'Indian, Persian, and Armenian merchants organise an excellent fair' [Iovy Pavel, p. 273]. I. Zaitsev cites the report of I. Massa, a man from the Netherlands who lived in the late 16–early 17th centuries, that Astrakhan 'was always a big and populous city of trade, to which numerous merchants would come to trade from Persia, Arabia, India, Shamakhi, and Turkey;

they would bring pearls, turquoise, and expensive leather goods from Armenia; satin, expensive carpets, and various types of silk and jewelry from Shamakhi, Persia, and Turkey; and a lot of spices from Arabia. From the Muscovites, in turn, they would obtain leather, broadcloth, woolen fabric, paper and other similar raw materials, as well as caviar, which was bought in bulk by the Turks and sent to Constantinople; this caviar obtained from sturgeon, which is caught in unbelievably large amounts in the Volga river, is very much liked by the Turks as well as by the Italians these days' [Zaitsev, 2006, pp. 225–226, Isaac Massa, 1937, p. 23]. As we see, not only finished goods were imported but also raw materials, which were not available in one Tatar state or region or another (precious and semi-precious stones, amber, tin, silver, gold, etc.), semi-finished products, and handicraft technologies and techniques—everything that shapes material culture.

Therefore, one might say that foreign and domestic trade in the Tatar states was characterised by significant movement of domestic and foreign goods, items of export and import, and forms for their organisation, and, in general, intensive development of commodity relations was taking place. In line with economic theory and practice, a product was both a benefit—because it was needed by the customer—and a cost—because resources and relevant technologies were required to produce it. But a product not only satisfies human needs but also can enter into relations with other products and can be exchanged for other products. This ability of a product to be exchanged in a defined quantitative proportion is its exchange value [Ekonomicheskaya teoriya, 1997, pp. 68–71].

§ 3. Monetary Circulation and Monetary and Weight System

Rapid growth of economic relations, combined with growth in external and internal trade, required convenient means for making payment settlements. As a historically developed form and practice of monetary circulation organisation, the monetary and weight system was established in the early Middle Ages [Valeev, 1995; Valeev, 2012; Mukhamadiyev, 1990; Muhamadiev, 2005]. It was based on a monetary commodity that was a universal equivalent, its fixed weight being equal to the metal content of the monetary unit. For this reason, monetary circulation is viewed as an exchange process on the market by states, supporting all kinds of payments. Payment tokens, being primarily coins and silver ingots, played an important role in the economies of Tatar states, and especially in such an important field as trade. These were used not only for the internal exchange but also played an intermediary role in international trade. However, at the moment of transition from one economic environment to another, they started acquiring the features of a commodity, and in the new environment they were used either in the role of money (commodity goods) or were used a type of raw material.

Thanks to three centuries of research on Bulgar and Jochid coins by many generations of numismatists, archaeologists, and historians, the money business and monetary circulation in the Jochid Ulus has been studied relatively well. Information exists about four periods of monetary circulation, distribution of silver coins, copper puls and regions of their circulation, monetary reforms, typology of coins, generic and local features of the monetary business, 'numismatic regions,' cities of mintage, metrological data, and other important problems [Fedorov-Davidov, 2003; Muhamadiev, 1983; Valeev, 2012; Singatullina, 2009]. As a result, a serious scientific study of numismatic material was carried out, which became a basis for generating serious ideas about the history of monetary circulation in the Golden Horde, and formed a comprehensive source for reconstruction of the economic history of that state. In recent years the growing attention to the issue

of monetary circulation in the Jochid Ulus has been observed due to new discoveries of hoards of Golden Horde coins on the former territory of that empire. Numismatologists and collectors have started to work in close coordination, private collections are being used for scientific analysis purposes, and opportunities offered by the Internet are used to further the studies. New studies of medieval eastern numismatics are being traced not only on the regional and Russian levels but also on the international level. Researchers from various branches and interdisciplinary approaches in Jochid and Mongolian numismatics are combining their efforts. These are focusing at describing the dynamics of monetary circulation, problems of the economy and solving issues of genealogy, law, historical geography, art history, and other very complex issues in the history of the Jochid Ulus and uluses of the Mongol Empire.

Unfortunately, the history of monetary circulation and money-weight systems in Tatar states has not seen as much monographic studies, as has been done for the Jochid Ulus. The monetary business in the Golden Horde had followed the consistent general laws; nevertheless, every region had its own characteristic features, which were related mainly to its role and place in pre-Mongol Eurasia. The Tatar states to a great extent had inherited the coinage minting traditions of the Golden Horde, but they were not able to organise coinage minting in the volumes it had existed before and, mainly, that was largely due to certain economical and political factors. The coinage minting was, in insignificant amounts, performed in the Golden Horde, Bulgar al-Jadid (Kazan), in the Astrakhan and Siberian Khanates, and to a large extent in the Crimean Khanate in the 15–18th centuries. Coinage minting was not performed in the Nogai Horde because the khans did not rule there.

The issue of coinage minting on behalf of the rulers in these states is rather interesting because coinage minting is a symbol of political and economical sovereignty. Furthermore, as these were Islamic states, and 'in the Muslim world, coinage had two roles because it served not only as a means of monetary circulation

but also a tool of political propaganda' [Yanina, 1962, p. 158].

The Crimean coinage minting continued in the style of the Golden Horde coins. Their characteristic feature is a tamga, originating from the old tamga of Batu dynasty, and it also appears on the Golden Horde coins, struck at the Crimean mints already during Shadibek Khan's rule (1399–1407). Coins of the first Crimean khan Haji Giray and the succeeding khans were of the same style. At the turn of the 16–17th centuries, because of the increasing influence of the Ottoman Empire, the coinage underwent certain changes. The Crimean coins became more and more similar to Turkish coins, and this became particularly obvious in the 18th century [Islamskiye monety, 2006, pp. 146–149].

The coinage minting in Bulgar (Kazan) is associated with the name of Ghiyas ud-Din and Ulugh Muhammad [Muhamadiev, 2005, pp. 185–190]. According to some researchers, coinage minting had stopped soon after these khans died, even though blanks for coinage minting were found during excavation works in the Kazan Kremlin. V. Zaitsev had proposed another explanation, according to which the so called 'mordovkas,' the Volga Region imitation of the Muscovite Rus coins, were coined in Kazan in the 15–16th centuries. This is confirmed by the fact that the 'mordovkas' were regularly found in treasure hoards along with Russian coins and dirhams of the late Jochid Period and by the presence of large number of not punch-marked 'mordovkas'—that is, not prepared for the use in jewellery. It is difficult to date the 'mordovkas' because of the variety of types and various manufacturing technologies: coinage minting was replaced by casting. The quality of metal varied as well—from good quality silver to poor quality bullion, and there were also significant variations in weight [Islamskiye monety, 2006, pp. 144–145].

It seems that the coinage minting was also carried out in the Siberian khanate, but we know only about the coinage minting by the Tyumen khan Sayyid-Ibrahim. Place of coinage minting was called the 'Ordu Bazar,' and this was connected to its conquest of a trade centre of the Great Horde—the 'Ordu Bazar' in 1481 [Nesterov, 2001, p. 276]. There is no information

about other monetary tokens being used in Siberian political entities; however, V. Sobolev wrote about Russian coins and European calculation tokens being found in burial grounds, having been brought to Western Siberia in the 14–17th centuries and being used as jewellery, and he also wrote about the use, as a means of payment, coins from Central Asian countries. However, the main exchange equivalent used here were furs—the currency of that time [Sobolev, 2008, p. 218].

Coins, which were struck in Astrakhan in the first quarter of the 15th century on behalf of continuously changing Golden Horde khans, are well represented in catalogs and research studies. The city kept changing from the hands of one khan to another. The coins of Küchük Muhammad and his son Mahmud contain tamga in the form of a bi-dent with two dots. According to A. Nesterov, in the first half of the 15th century the tamgas on the Jochid coins started to acquire not so much generic as local characters, and 'the fact of ruling over Haji Tarkhan and Ordu Bazar gave the rulers the right to show the bi-dent with two dots on the coins' [Zaitsev, 2006, p. 29; Nesterov, 2001, pp. 275–276]. The analysis of the treasure hoards of Jochid coins allowed G. Fedorov-Davidov to come up with a conclusion that in the second quarter of the 15th century in the lower Volga Region monetary circulation had stopped completely, and Haji Tarkhan was the only place in the region when coinage minting was being carried out. However, the absence of economical conditions for its circulation led to the fact that all coins from the Haji Tarkhan mint mainly ended up in the territory of the Middle Volga Region [Fedorov-Davidov, 1960, p. 119; Zaitsev, 2006, pp. 24–25]. A great amount of Haji Tarkhan coins and in general coins of the southern weight standards were found in treasure hoards of the second half of the 15th century in the territory of the Kazan Khanate. Haji Tarkhan coins comprised about 60–62% of the coins found in the treasure hoards in the village of Bolshoy Shiksha-Oluyaz, no. 189; in Kazan, no. 195; in Imenkovo, no. 202d [Fedorov-Davidov, 1960, p. 122, Table 9; Fedorov-Davidov, 2003, p. 55].

In the 15th century the monetary circulation continued developing in the Kazan Khanate,

where the late Jochid coins were used for trade transactions. If we analyze the number of treasure hoards on the territory of the Middle and Lower Volga Regions dating from the 15th century, we get an interesting picture. Twenty-six treasure hoards were found in the Middle Volga and Kama Regions, but if we consider the Mordovian lands along the rivers Sura, Tsna, and Moksha, this number increases to 34 treasure hoards. Ten treasure hoards, dating back to the 15th century, were found in the Lower Volga Region, 6 of them were found on the territory of Selitrennoye archaeological site (Saray al-Makhrusa). As for the Kazan Khanate, the coins were found in different parts of the khanate [Ibid., pp. 150–151]. As we can see, the volume of monetary circulation clearly prevailed on the territory of the Kazan Khanate, and by formal indications, in comparison to the Lower Volga Region, it was 2.5–3.5 times larger. If we compare these figures with information from the 13–14th centuries, we can see the following dynamics: Thirteen treasure hoards and separate findings of coins, dating back to the 13–beginning of the 14th centuries, were found just on the territory of Volga Bulgaria; and only 4 treasure hoards, dating back to the end of the 13–beginning of the 14th centuries, in the Lower Volga Region; 78 treasure hoards, dating back to the 1310–1380s, were found in the Middle Volga Region together with the Cis-Urals; and 71, in the Lower Volga Region. The ratio of treasures, dating back to 1380–1400, is as follows: 18 treasures in the Middle Volga Region (no treasures found in the Cis-Urals), 12 treasures in the Lower Volga Region [Ibid., pp. 139–149]. These figures indicate active economic and trade activities in the Middle Volga Region during the period under study. While in the second half of the 13th century there was an intensive growth in trade mainly in the Middle Volga Region, the 14th century saw a burst in economic growth in the Lower Volga Region, and in the meantime, the Middle Volga Region did not lose its role. The monetary circulation strengthened once again in the 15th century on the territory of the Kazan Khanate. Of course it is difficult to compare the 14th and 15th centuries in terms of volume of silver coinage. However, circulation of Jochid and other coins on the territory of the

Kazan Khanate was quite intense. It is important to note that treasure hoards of coins are still being discovered, with such coin hoards recently being found in the Tuqayy, Rybno-Slobodskoy, Apastovsky and some other regions of Tatarstan, which allows assuming that the circulation of the Jochid coins in the Kazan Khanate continued in the 15th century as well.

However, in the first quarter of the 15th century, with a commencement of coinage minting in Bulgar (Kazan), the uniform monetary circulation of the Jochid Ulus split in two, resulting in the separation of coinage minting in the Middle Volga Region. In the treasure hoard, dating back to the 15th century, which was discovered in 2003 in the village of Rybnaya Sloboda, can be seen the changes in monetary circulation and main trends in coinage minting in the 15th century. Out of 6,000 coins that were found and available for analysis, more than 4,000 are Bulgar Yarmak coins, dating back to the 15th century, with around 2,000 coins from the end of the 14–beginning of the 15th centuries, being produced in the Golden Horde's southern mints: Hajji-Tarkhan, Saray, Saray al-Jadid, Il Uy Mu Azzam, Khwarezm, Azak, Saray-Jük, Crimea, Kafa, Orda, Orda Mu'azzam, and 61 other coins were minted in Russian lands, mainly in the Suzdalsko-Nizhegorodsky Princedom. Weighing of this treasure hoard of coins and information about other treasure hoards show that weight standards of a coinage minting were reduced from 0.62 to 0.57 grams, which made the weights of the Kazan coins equal to those of Suzdal-Nizhny Novgorod, and this contributed to their penetration into the Kazan Khanate market [Muhamadiev, 2005, pp. 183–187; Trostyansky, pp. 157–158].

A shortage of Jochid coins, including from the Bulgar coinage mints, and a desire to provide coins necessary for trading activities led to increased penetration of coins from the Russian princedoms in the second half of the 15th century, a process which started at the end of 14–the beginning of the 15th centuries. An analysis of treasure hoards with Russian coins shows that initially they appeared in the lands of Mordva and Mari, and subsequently they gradually penetrated the border-zone with the Nizhny Novgorod Princedom, and later inside the Kazan Khanate.

Thus, for instance, a treasure hoard found in the village of Svetino in the Mari El Republic was buried at the beginning of the 15th century. Russian coins minted in the Moscow, Dmitrov, Serpukhov, Mozhaysk, Galich-Zvenigorod, Nizhny Novgorod, Rostov, and Tver Princedoms were found along with Jochid coins. The treasure hoard in the village of Sosnovka, the Kazan district, contained the Jochid (Bulgar mint) and Russian coins (0.3%) minted in the Moscow and Nizhny Novgorod Princedoms. In the treasure hoard with Jochid and Russian (15 items) coins, buried at the beginning of the 15th century and found in Tetyushi, the Russian coins were minted in the Novgorod and Ryazan Princedoms. In the village of Karaulnaya Gora in the Nurlat-Octyabrsky District of Tatarstan, a treasure hoard contained Jochid (mainly Bulgar mint) and Russian (16 items) coins, which were buried in the 1420s. The Russian coins were minted in the Moscow and Nizhny Novgorod Princedoms [Poluboyarinova, 1993, p. 92].

In the second half of the 15th century coins of Russian princedoms and the emerging centralised Muscovite state became the main means of payment. A. Ilyin created a valuable summary of treasure hoards of Russian coins in the so called appanage period, found on the territory of the Kazan District. [Ilyin, 1924, pp. 31–38]. He analysed 12 hoards. Time-wise, the first treasure hoard, described by P. Savelyev, was found in 1854 near the city of Kazan. The treasure hoard included a large number of coins of the Grand Prince Vasily II Vasilyevich the Blind, Ivan III, and some appanage princes and according to Savelyev was buried between 1487 and 1505. On the territory of the city of Kazan three additional treasure hoards were found: 1) in 1861 near a cathedral church, a treasure hoard with coins of Ivan III and some of Vasily II Vasilyevich the Blind; 2) in 1878 on the territory of the Kremlin, a treasure hoard with coins from Nizhny Novgorod, Vasily II Vasilyevich the Blind and Ivan III; 3) in 1909 again on the territory of the Kremlin, a hoard with 284 coins of Ivan III and Ivan IV. Significant Russian treasure hoards of coins were also found in districts of the Kazan Governorate. P. Savelyev described 154 coins from the period of Vasily II Vasilyevich the Blind until Ivan IV, which were found in a hoard

in Laishevsky District, opposite to the village of Krasnovidovo, in the village of Kartashikha.

It is important to note that all Russian coins in treasure hoards, found on the territory of the Kazan Khanate, were minted during the period of the Kazan Khanate. For instance, the treasure hoards from the village of Kibyachi in Laishevsky District (found in 1903, 1700 Russian coins), from the village of Srednaya Kulanga in Sviyazhsk District (found in 1900, 2869 Russian coins from the 15–16th centuries), from the village of Azbaba in Sviyazhsky District (found in 1899, a kubyshka (treasure container) made of birch bark and covered with wax contained about six pounds of Russian silver coins dating back to the 15–the beginning of the 16th centuries). The wide distribution of Russian coins on the territory of the Kazan Khanate was connected with, first, the widespread trading between Russians and Tatars during that period and, second, due to the insufficiency of own coinage minting in the khanate [Muhamedyarov, 2012, pp. 191–192].

An analysis of monetary circulation in Kazan vividly shows 5 treasure hoards unearthed during excavation works in the Kazan Kremlin in the 1990–beginning of the 21st century. Treasure hoard of silver coins No. 1 was found under the north-eastern cornerstone of a building from the Kazan Khanate period. Pieces of a birch bark tussock were found in the immediate proximity of the treasure hoard (some with coins stuck to them). The treasure hoard contained 556 cheshyka coins (coins from Pre-Petrine Russia) in a pretty good condition. Treasure hoard No. 2 was discovered under the north-western corner of the same building and contained 1,449 cheshyka coins. Apparently, the coins were inside a leather bag, of which just a few small pieces were preserved.

The big treasure hoard (No. 2) contained one coin each from the Yaroslavl and Mozhaysk Princedoms, 16 coins that were minted in Ryazan. The cities of Tver and Novgorod were represented by 32 and 42 coins, respectively, Pskov, by 181 coins. The rest of coins were minted in Moscow. According to D. Mukhametshin, the coins of Ivan Dmitrievich, Fedor Vasilyevich, and Aleksandr Fedorovich (before the year 1450) as well as coins of Novgorod and Pskov

from the independence period should be considered as the earliest and oldest coins. About 90% of the coins in the treasure hoard were minted during the reign of the Grand Prince of Moscow Ivan III (1462–1505). The coins of the Grand Prince Vasily III (1505–1533) are considered as being less old.

The small treasure hoard (No. 1), content-wise, is no significantly different from the big hoard. This shows that they were accumulated during the same time period. But the small hoard does not contain signature coins of Vasily III (they are considered as later); however, it contains coins of appanage principalities. This means that the small treasure hoard was formed a bit earlier than the big hoard. It is important to note that neither of the treasure hoards contain coins of Ivan IV or clipped coins of Novgorod and Pskov, which appeared in the beginning of the 16th century. The coins of both hoards are chronologically synchronous, date back to end of the 15–the first third of the 16th centuries, and belong to the Grand Duchy period.

There was a separate treasure hoard in the third layer, which contained hidden in a leather bag, two baptismal crosses, two carnelian beads, and 68 silver cheshyka, the youngest of which dates back to 1505. The treasure hoard contained 2 coins minted in Novgorod. The rest of coins were minted in Moscow. The earliest and oldest 13% of the coins are coins of the Novgorod Republic, dating back to 1420–1456 (2 coins), and of Vasily II Vasilyevich (the Blind), dating back to 1446–1462 (6 coins); 85% of the coins in the treasure hoard were minted between 1462 and 1505, during the reign of the Grand Prince of Moscow Ivan III Vasilyevich, and these coins are considered as younger. Two whole and four fragmented coins could not be identified.

The Novgorod coins are of two types. The face side of the first type of coin has a dressed figure, sitting in an armchair, there is another figure in front of it bending at the knees and extending its arm towards the sitting figure, the Russian letter 'II' is located between the two figures. The second type of coin has a Russian letter 'C' between two figures.

The coins of Vasily II Vasilyevich (the Blind), minted in Moscow, are also of two

types. The first type has a man's head and a vertical line in front of it inside a ring made of dots on the front side and a three-line inscription in a frame on the reverse side; 6 coins from the end of Vasily II the Blind's reign, 1450–1462, with two stars and rosette inside a ring made of dots and a circular inscription on the face side, and a flower with 5 petals and a circular inscription on the reverse side. The coins of Ivan III Vasilyevich, minted in Moscow, are represented by thirteen types dated 1462–1505. The treasure hoard contained two coins minted in Novgorod and two coins minted in Ryazan. The rest of coins were minted in Moscow. The earliest and oldest 16% of the coins are coins of the Novgorod Republic, dating back to 1420–1456, and coins of the Grand Prince of Ryazan during the reign of Prince Vasily Ivanovich after 1456. The Moscow coins—48% of the treasure hoard—were minted during the reign of the Grand Prince of Moscow Ivan III Vasilyevich, dating back to 1462–1505. Four coins are from the reign of Vasily III Ivanovich, dating back to 1505–1533, which are considered as younger coins. Five coins could not be identified.

The next treasure hoard with Russian coins, minted during the Kazan Khanate period, was unearthed on the excavation site No. XXXIV in the year 2000 on the territory of a former Khan's court. The treasure hoard mainly consists of Moscow, Tver, and Novgorod coins from the beginning of the 1540's. 16th century. This is a Novgorod kopeck with the Russian letters 'ΦC' under a javelin, minted after 1542, the Tver coin with the Russian letter 'Д' and a javelin, and Moscow coins with the inscription: 'Grand Prince Ivan.' Three Pskov kopecks with the Russian letter 'A' under a javelin date back to the initial period of reforms, the years 1534–1535. In 1547 Ivan IV received the title of tsar, and as a result, the inscription on the coins was shown in the following way: 'Tsar and the Grand Prince Ivan.' The treasure hoard contains 6 such coins minted in Novgorod and Moscow. The head-dress of the horseman was changed due to new title of tsar, and now it had the shape of a tsar's crown. Moscow started to mint new types of coins in the year 1547, with Russian letters 'ДЕ,' but none of these were

found in the treasure hoard. These are also not present on the coins of the Novgorod and Pskov treasure hoards, going beyond the year 1547. Thus, one can say that these sets of coins were formed in the year 1547, mainly consisting of Moscow coins, and in the same year such coins started penetrating into the Kazan Kremlin.

The Kazan treasure hoard, including the undetermined coins and fragments, makes up a sum of approximately 2 rubles. Taking into consideration that the treasure hoard does not seem to be intentionally hidden, and that broken boxes of different sizes were found on the site, we can assume that, in this case, these are merely the remnants of a large sum of money, being kept in one of the buildings of the Khan's court. During an attempt to remove the accumulated money, a part of money stored in *kubyshkas* was apparently dropped and buried under the burned sections of the building, which fact was discovered during the excavations.

The treasure hoards, which were unearthed during the Kazan archaeological expedition in the years 1994–2006, vividly show the period of formation of the centralised monetary system. At the beginning of the 15th century Pskov, Veliky Novgorod, the Grand Duchies of Tver, Ryazan, Yaroslavl, and Moscow and its appanages (Mozhaysk) were minting their own coins. The number of minting centres was reduced at the end of the 15th century due to the strengthening of Moscow's power, and by the end of the first third of the 16th century coinage minting was permitted only at state mints. The entire coinage minting was concentrated in three mints—in Moscow, Novgorod, and Pskov. All of these coins can be found in the discovered treasure hoards. Based upon the materials about the treasure hoards, we need to add that by the end of the 15th century coins minted in Moscow and its subordinated territories were predominant in the Kazan Khanate [Sitdikov and others, 2010, pp. 309–313].

The economies of the Nogai Horde, steppe regions of the Great Horde, Astrakhan and Siberian Khanates were oriented to non-monetary operations. Medieval travelers explained the absence of monetary circulation in the Nogai Horde mainly by its irrelevance in the nomadic environment, by the needs of steppe people for

making exchanges in kind, and even unwillingness of the Nogais to sell their products and slaves for gold and silver. Evliya Çelebi explained the underdevelopment of the financial system by the absence of silver mines in *Desh-i Kipchak* [Trepavlov, 2002, 539]. However, V. Trepavlov and some other researchers have noted the periodic use of foreign currency by nomads in order to buy commodities in Russian cities for Russian money; they also mention many notations from sources about the interest of ruling echelons in establishing monetary relations with the Muscovite state. Money was required to buy products at the markets in Astrakhan, Kazan, and the Muscovite state during periods of cattle losses and times of turmoil, to remunerate *Maverannahr* builders of mausoleums, builders that were renewing Saray-Jük, and to make mutual payment with travelling merchants. One additional circumstance with monetary equivalent is pretty interesting. The Nogais and other nomadic groups of Tatars did not have any difficulties in converting a price from one system into another, and V. Trepavlov confirms this with concrete examples [Ibid., pp. 539–542].

In Kazan, continuing the Golden Horde traditions, the people in the 15th century used to use the Jochid coins, Genoese-Tatar coins, and coins of Giray dynasty of Crimea of the 15–16th centuries. The first treasure hoard was found in 1837, it contained 400 coins, most of which were an imitation of the Jochid coins. Unfortunately, the entire content of the treasure hoard is not known. Another hoard, dating back to the 15th century, consisted of 595 coins, including mainly Jochid coins of the 15th century, part of which was minted in Bulgar, and the majority, in Haji-Tarkhan and Ordu Bazar on behalf of Davlet-Birdi, Muhammad, Mahmud, Mahmud b. Muhammad, Mustafa, Sayid Ahmad, Ahmad, Muhammad b. Sayid Ahmad [Fyodorov-Davidov, 2003; Pachkalov, 2005]. A. Pachkalov thinks that the treasure hoard was hidden at the turn of the 15–16th centuries [Pachkalov, 2005, p. 39].

The Jochid coins, minted on behalf of Muhammad in Bulgar in 1421–1445, the Tver pul of the 1420s, were present in individual findings during excavations in the Kremlin, the silver

coins of Muhammad Borak, minted in Bulgar in 1420s, were found on the territory of Arkhiyereyskaya dacha [Ibid., pp. 39–40]. As a result of R. Fakhrutdinov's archaeological research of the Kamayev archaeological site and R. Urmat village, found were many coins, dating back to the 15th century, and blanks for silver coinage [Fakhrutdinov, 1975]. As a result of S. Valiullina's excavations on the territory of the Toretsky settlement near Bilyarsk, 400 coins were found, including four treasure hoards and five comprehensive findings of coins, most of which consisted of the Jochid coins, dating back to the end of 14–first third of the 15th centuries, and 6 Russian coins. It is interesting that the treasure hoards contain blanks, and the majority of coins are very worn out. D. Mukhametshin assumes the possibility of coinage minting on behalf of Ulugh-Muhammad and Giyas ad-Din, these coins relating to group VI, and 'specially marked' coins related to the Toretsky settlement [Mukhametshin, 2011, pp. 65–71].

Coin treasure hoards, dating back to the 15th century, were found in 1962 in Izmeriya, in 1957 in the Karaulnaya Gora, in 2003 in Voykino, Burakovo, Rybnaya Sloboda, and in total 12 treasure hoards with Bulgar-minted coins were found. Coins, dating back to the 15th century, clearly show not only a continuous reduction of weight but also reduction in the silver content of the metal used for coins. Silver plated copper coins and copper coins were used in monetary circulation together with silver coins [Ibid., pp. 70–71].

The coinage of Nizhny Novgorod principality of Daniil Borisovich (1423–1429), coins of the Muscovite state of Vasily II the Blind (1425–1446) can be mentioned among the coins of Russian princes that were separated into group VII on the territory of Toretsky settlement. A coin was also found with Arabic writing (as-sultan) on the obverse and with a counter-mark on the reverse—the picture of a four-legged animal [Ibid., p. 69].

Coins minted in 1462–1533 in the reigns of Ivan III and Vasily III, which were found in two treasure hoards during recent excavations in the Kazan Kremlin, represent an interesting group of Russian coins. There are groups of coins, which had the following Arabic inscriptions

on the reverse: 'this coin is a Moscow akcha' (4 versions of impressions), 'Iban' (=Ivan), and in Russian 'Ruler of All Russia' (3 versions of impressions) and written in Arabic script: 'Ruler of All Russia' (3 versions of impressions). D. Mukhametshin assumes that the coins with Arabic inscriptions like 'Moscow coin' and 'Iban' bear evidence of the involvement of Tatar craftsmen in the coinage minting in Moscow and Novgorod after 1487. Many researchers think that Russian coins, which in the second half of the 15th century started to actively penetrate into the Middle and Lower Volga Regions and the use of Arabic inscriptions on these groups of coins, contributed to their recognition among Tatars and facilitated their circulation, promoting trust in them as a currency [Zaitsev, 2006c, Shakirov, 2011, p. 83]. Thus, it is possible to say that due to the absence of own coinage mints in Kazan and Astrakhan at the end of the 15th century the impossibility for the further use of the Jochid coins, because of their deterioration, the inclusion of Tatar states into a centralised economic space and sphere of political interests of the Muscovite state, deficit of silver coins—all these factors became important reasons that determined the spread of Russian coins and their active inclusion into the monetary circulation in Tatar states.

In the first half of the 15th century, there was active coinage minting in the Lower Volga Region, and then in the second half of the century the coinage minting of silver coins continued until the reign of Ahmad, but copper coins were no longer minted [Pachkalov, 2008, p. 59]. In the remaining cities, even though reduced in their territorial extent, the circulation of the Jochid and Russian coins continued in the 15th century. On the results of analysis of monetary treasure hoards and findings on the territory of the Lower Volga Region, A. Pachkalov made up a list of cities and settlements that were mentioned in written sources and where treasure hoards and money sets were found. The most famous among them is Saray al-Makhrusa (not less than 5 pools, 0.3% copper coins, 6.5% silver coins from excavations, 2.17% copper coins, 12.6% silver coins, according to V. Klovov and V. Lebedev, from the findings of the upper layer) [Ibid., pp. 61–63; Klovov, Lebedev, 2002].

A very important and rare settlement on the territory of the Lower Volga Region in the 15th century was the ancient town of Kamenny Bugor located 5 km south-east from the village of Selitrennoye (Saray al-Makhrusa). Four coin treasure hoards, dating back to the 15th century, and a series of separate coins were found here. 407 coins were found in 1998–1999 on the territory of the settlement [Lebedev, Klovov, 2001, pp. 22–52]. It is interesting that only silver coins, dating back to the 15th century, were found on the territory of the settlement, but copper coins are seen as well, and this is explained by the fact that the copper of the 14th century was still circulating in the 15th century. According to the results of findings in the Kamenny Bugor, the copper coins, dating back to the 15th century, account for 15.3%, while the silver coins, dating back to the 15th century, numbered only 150 pieces [Pachkalov, 2008, pp. 63–64]. The Temürid coins, dating back to the 15th century, the Genoese-Tatar and Haji-Giray (1466–1467) coins, and the Russian coins were also found at the Selitrennoye and Kamenny Bugor archaeological sites.

In the 15th century there was intense coinage minting in the Haji Tarkhan, and the copper coins were minted in the first half of the century, while the silver coins were minted in the second half of the 15th century; according to A. Pachkalov's assumption, the latest coins were minted during the reign of Ahmad Khan. There are also some coins that were minted in the Haji Tarkhan al-Jadid. The location of Haji Tarkhan in the 15–the first half of the 16th centuries is a debated question. The majority of researchers assume that the city was located at the Sharenny Bugor archaeological site up to 1556. However, there is a point of view, supported by V. Bartold and M. SafargAliyeva, that as a result of Temür's campaign the city was revived on the place of the contemporary city of Astrakhan (on the left bank of the Volga River). The main difficulty of this issue is that Sharenny Bugor archaeological site, where the coins and a significant treasure hoard, dating back to the 15th century, was found, has been poorly studied [Pachkalov, 2008, pp. 64–66].

Silver coins, dating back to the 15th century, and copper coins, dating back to the 14–

15th, were found during excavations in archaeological monuments of the 15th century near the village of Tinaky located close to Astrakhan [52, p. 66]. Thus, it is possible to say that on the territory of preserved cities of the Great Horde and the Astrakhan Khanate the monetary circulation was still in existence, but the volume and economic conditions for monetary trade had changed.

In the 15th century on the territory of the Crimean Khanate circulated the Jochid coins, dating back to the 15th century, Kaffa silver coins (the Genoese-Tatar), dating back to 1419–1442, including aspers with the name of Haji Giray and copper coins of the Genoese-Tatar Follero, dating back to 1428–1442, and later, coins of the last years of the reign of Ulugh-Muhammad and the first years of the reign of Haji Giray [Khromov, 2005, pp. 6–8]. The coinage of the Crimean coins itself, started by Haji Giray, determined their wide circulation on the territory of the Crimean Khanate, and in small volume, penetration into Astrakhan, Kazan Khanates, and the Nogai Horde. Analysis of the treasure hoards and discoveries of coins of the Crimean Khanate shows that coins circulated in cities, at the intersection points of trade routes, passages, and forts. For instance, a big quantity of the Crimean Khanate coins was found near a fortress, on the place of shopping lanes on Perekop Isthmus or on the Turkish rampart. The most found coins are the coins of Mengli Giray I (1466–1514), Davlet Giray (1550–1577), and Arslan Giray (1748–1756). The coins of other khans are found less often. From the village of Lyubimovka, the Chersonese Region, near the fortress of Arslan Kerman, where the passage over the Dnieper River and a quay were located, grouped discoveries, related to Mengli Giray I, Muhammad Giray (1515–1523), Sahib Giray (1532–1551), were made, some silver plated brass circles, which were apparently the monetary blanks of counterfeit coins, as well as a part of a casting mold for casting the counterfeit coins of Megli Giray I and Arslan Giray, as well as silver Russian coins of Ivan IV and Petr I were found. Located here was a fortress and a quay to convey salt from the left bank to the right one, where trade routes to Russia and Poland passed through.

Crimean and the Russian coins were found in large quantities on the territory of other villages and fortresses. However, on the territories of the majority of settlements and nomad camps Crimean coins were found individually, and these were used there more rarely, while a subsistence economy and commodity exchange satisfied the needs of the rural and nomadic populations of the Crimean Khanate. A developed commodity exchange, when coins were not of particular need, and the poverty of the majority of the population also point to the main trends in economic life back then. Turkish coins also circulated on the territory of the Crimean Khanate [Pivorovich, 2008, p. 5; Piperidi, 2008, pp. 70–72].

Silver ingots-soms were still used in the 15th century as a means of payment in Tatar states: these ingots had a long history of existence starting from the 10–11th centuries, and if we take the brass ingots of the Volga and Kama Regions, then starting from the 5th century AD [Valeev, 2012, pp. 322–330], as we saw above. S. Herberstein mentions the silver ingots on the list of products imported from the Muscovite state from eastern countries. Being big monetary units, ingot-soms circulated slowly and to a large extent were used in large wholesale operations in the 15–16th centuries in Tatar states. They also point to the increasing need of the economy for metal means of payment.

Furs played an important role in the monetary circulation of such Tatar states as the Siberian, Kazan Khanates, the Nogai Horde, on the passage over the Black Sea; they were used not only as an item of trade but as a circulation medium. Furs were used for this purpose by Finno-Ugric and Slavic peoples. The Kazan Khanate was a big terminal for furs exported to the eastern countries. The important role of furs is stressed by Tatar proverbs as well: '*Akcha kun yagi belen kile, ilek yagi belen kite*' (Money comes from the fur side and goes away through the sieve), '*Tien agachtan agachka, tien (akche) kuldán kulgan sikere*' (A squirrel jumps from one tree to another, and money goes from one hand to another) [Isen-

bet, 1967, 157 b.]. As we see, the abundance of furs, including the squirrel furs, as an equivalent to monetary units and small exchange (tien) coins have been preserved in the contemporary Tatar language).

In the steppe regions and, actually, in all Tatar states cattle (*mal*) was still used as a payment medium, the word also had the meaning of 'asset, property, wealth.' Tatar proverbs read as follows: '*Mal bashy—ber akcha*' (Each cattle head costs one coin), '*Akcha sezneke—mal bezneke*' (The money is yours, the cattle is ours), '*Akchaga eylenderep bulgan herbe nerse—mal*' (Everything that can be converted into money is property), '*Akcha alam, malin al*' (Do not take the money, take the cattle) [Ibid., pp. 141–151]. These and a lot of other proverbs underline the role of cattle farming products in the economy and as a payment medium in trade.

In the Nogai Horde the late Jochid period coins circulated in the city of Saray-Jük. For instance, the silver coins, dating aback to the 1420s, and a big group of copper pulis of Orda Bazar coinage were found there. At the turn of the 15–16th centuries the Crimean coins of Haji and Mengli Giray, minted in Crimea and Kyrk-Yere, Turkish copper coins, and Middle Asian coins of the late Temürid and Sheybanid period were circulated in the populated part of the city [Goncharov, 2005, p. 12].

Thus, consistency, dynamics, and evolution of the monetary circulation in Tatar states was reflecting the condition and main trends in Eurasian space, needs of the populations of those states, scale of commodity-monetary relations in each of these countries, wholesale and retail trade, and, in general, new aspects of economic growth. Monetary and non-monetary payment mediums point to the level and volume of trade in Tatar states, dynamics of external, interstate, internal, interregional trade growth, and characteristic features of the monetary circulation in these. Advanced level of trade had a corresponding monetary and weight system, which was an important indicator of economic processes.

CHAPTER 3

Islam in the Post–Horde Space

§ 1. Islamic Institutions in Tatar States

Damir Iskhakov

The Islamic character of ethnopolitical institutions of the Late Golden Horde raises no doubts. [Velidi Togan, 1966, s.179–204; De Veese, 1994; Iskhakov, 1997a; Iskhakov, 2009b]). Islam was the state religion of all Turkic-Tatar states in the 15–18th centuries, and as evident from sources, the political elite of these possessions had its own clear notion about their belonging to the Muslim world. For example, the message of the ruler of the Tyumen Khanate Saiid-Ibrahim sent to Moscow Grand Prince Ivan III in 1489 from the Nogai Horde says: 'I (that is, khan Saiid-Ibrahim- D.I.) am the ruler of Besermyans, you are the ruler of Christians' [Ambassadorial books, 1995, p. 19]. Ruler of the Nogai Horde Prince Yusuf wrote the same things in his message dated back to 1551 and addressed to Ivan IV: '... we are Muslims and you are a Christian' [Continuation of Ancient Russian Vivliofika 1793, p. 302]. Such an authentic source as 'Zafer-nama-i vilayati Kazan' (1550), composed by the high sayyid of the Kazan Khanate Kul-Sharif, contains the phrases that Kazan was 'a Muslim city from ancient times,' which was situated 'far from Muslim provinces siding with the region of Kafirs [Kul-Sharif, 1997, p. 77]. There is a clear notion of religious differences between the Kazan Tatars and the populations of neighboring Russian lands. Crimean khan Mengli-Giray perfectly understood what the integration of his state with the Muslim world meant. In particular, his message to an unknown Turkish dignitary sent in July 1475 (after the conquest of Caffa by the Turks) contains the following phrases: 'Caffa became an Islamic state' (our emphasis.—*D. I.*). We are grateful to God for releasing us from the dungeon [Nekrasov, 1990, p. 43].

Although the state of current sources does not allow us to shed light on the issue of Islam in the Tatar states in the 15–16th centuries to

the full extent—especially when it comes to theological aspects of the religious situation of that time—nevertheless, many institutional aspects of Islam functioning as a state religion in them can be rebuild.

Kazan Khanate. The Kazan Khanate inheriting cultural traditions of the Bulgarian vilayet of the Jochid Ulus was a Muslim state, beginning at the very moment of its foundation. This is also emphasised in Tatar legends reflected in the so-called 'chronicles.' In particular, one of them contains a story about the foundation of Kazan (New Bulgar) and states: 'They stayed at this place under the banner of Islam... They always turned to the rules of Sharia in all their doings and events of life... disputes and legal cases were regulated according to Sharia' [Fragments of Tatar Chronicles, 1937, pp. 122–123]. The mentioned 'chronicles' also characterise the population of the khanate as being Muslims: '...when the dynasty of Muslim khans ceased to exist, and there was no Khan in Kazan, the Muslims took him (Khan Shah-Ali.—D.I.) and made him their khan' [Katanov, Pokrovsky, 1905, p. 318]. The Russian chronicles also emphasise (meaning the Kazan Tatars) in messages referring to the 15th century that they were 'Besermyans,' which means they confessed the Islam religion [Continuation of Ancient Russian Vivliofika, 28, 1963, p. 98]. For example, the Chronicle Svod of 1497 states that the military campaign of the Tatars in Galich took place in the year 1429, and the Russians chased the Tatars... so the Tatars and Besermyans were defeated [Ibid]. Describing the storm of the city of Kazan by the Russian troops in 1469, the chronicles write about 'loads of Besermyans and Tatars' [Continuation of Ancient Russian Vivliofika, 13, 1965, p. 122]. Such a relatively late source as 'History of Kazan' in which it comes to the period

of formation of the Kazan Khanate also indicates that 'Muslims started gathering in Kazan' [History of Kazan, 1954, p. 53]. The author of the composition also called them 'Srachins' because for him Islam was a 'Saracen' or Arabic confession [Ibid., p. 58]. It is also stated in the Patriarch's (Nikon) Chronicle summing up the conquest of the Kazan Khanate: '...God passed him (Ivan IV—*D. I.*) the godless Kazan Tatars and their Muslim belief' [Complete Collection of Russian Chronicles, 13, 1965, p. 251].

It should be emphasised that numerous pagan populations (the Chuvashes, the Maris, the Udmurts, and partly the Mordovians) were an integral part of the state. There is no aim to consider the religious lives of these nations here. However, one group of the populations, which settled in the 15–16th centuries near the Ural Mountains in the basin of Sylva, Iren, and Tulva Rivers and being a part of the Kazan Khanate, cannot be ignored because it later turned into a group of the Perm Tatars (partly the Bashkirs). Meanwhile, according to the preserved sources, this population (being called the Tatars and the Ostyaks) had not been definitively islamised by the middle of the 16th century. [Iskhakov, 1998, pp. 114–140; Iskhakov, 2004a, pp. 223–233.] The late Islamisation of Turkic-Tatar population of the Perm part of the Ural Region can be explained by two factors: first, in there ethnic composition were Turkicised Ugri peoples, whose Islamisation in more western regions took place only in the 14th century; second, in the late 15th century the Islamised population, which was large in number, penetrated into the Middle Ural Region from Western Siberia, where the religious situation was characterised by the relatively late Islamisation in the Siberian Khanate [Iskhakov, 1998, pp. 78–93; Iskhakov, 2004a, pp. 223–233].

In the Khanate there was a multi-branch class of Muslim clergy headed by a Supreme Sayyid. In addition to the Supreme Sayyid and other sayyid of his clan (all of them were considered as sayyid) there were the following groups of clergy in the state: sheikhs, sheikhzades, mullahs, mullah-zades, kazis, mavalis or danishmends, hajis, hafizes, dervishes [Complete Collection of Russian Chronicles, 8, 1859, p.

266; Complete Collection of Russian Chronicles, 13, 1965, pp. 25, 33, 333, 148, 167, 169, 202, 218, 239; Vakhidov, 1925a, p. 33, Vakhidov, 1925, p. 85]. It is plausible that sufis, who were mentioned in 'Zafer-nama-i i vilayati Kazan' along with dervishes can be also added to this list («яшь дәрвишләрне һәм суфыйларны туплап») [Kol Sherif, 1997, 80 b.] This list requires a short comment. The term 'kazi' (in the form of kady) is found only once in Russian chronicles. Nevertheless, this concept is found in the yarliq of Sahib-Giray (1523) in the expression 'kuzate-kazati-Islam' [Boryngy, 1963, 354 b.; Vakhidov, 1925a, p. 33; Vakhidov, 1925, p. 85]. It is evident that the presence of the kazi on the list of clergy of the Khanate bears evidence of the existence of their judicial branch. The word 'danishmends' written as 'dolyshmans' is found in sources only once. S. Vakhidov suggested that the expression 'va mavali-zavil ikhtiram' featuring in the yarliq of Sahib-Giray and looking like 'maly' or 'mamy' in Russian chronicles concerning priesthood meant 'honourable hosts.' Apparently, both these notions—'danishmends' and 'mavalis'—meant the same group—teachers (tutors).

Let us concentrate on the head of the clergy of the Kazan Khanate who was one of the representatives of the sayyid' clan. The person who headed the Muslim clergy of the khanate was described by the sources with special epithets. For example, S. Herberstein, describing the events of the spring of 1524, called the person holding this post of sayyid as the 'high priest of the Tatars' [Herberstein, 1988, p. 176]. In 1552 A. Kurbsky defined the head of the Muslim priesthood of the khanate as the 'great bishop' [Kurbsky, 1914, p. 198]. Apparently, there were Muslim terms that were analogous to the above-mentioned concepts. Indeed, Sh. Marjani characterised the senior sayyid with the help of the epithet '*nākūbel āşraf*' [Märcani, 1989, 200 b.] meaning the 'ruler of the great.' Although the source of Sh. Marjani in this case remains unknown, his information is worth noting. The thing is that the Russian equivalent for the similar concept is well-known due to the Crimean 'deft'er,' dating back to 1524, where the Crimean sayyids are characterised in the following way: 'this is the head of the

great teachers' [Iskhakov, 1997a, p. 45]. Moreover, the charter of Kazan Khan Sahib-Giray, dating back to 1523, contains the concept of '*sudat gyzam*' '*sadatigozam*' meaning the '*great sayyid*' [Ibid., p. 40]. Taking into account this data, the report of Sh. Marjani about the title of the high sayyid of the Kazan Khanate does not look unique, although his sources remain unknown. The terms 'nakib' and 'sherif' originating at least in the epoch of the Jochid Ulus are definitely concealed in this concept [Iskhakov, 2011, pp. 73–77]. When A. Kurbsky talked about the 'great bishop' of the Kazan Khanate, he indicated that, according to Tatar rules and traditions, a person taking up this post is called the 'great anary, or Amir' [Kurbsky, 1914, p. 198]—he definitely meant these epithets. Most likely, 'anary' is a word of Latin origin similar to 'honour' (meaning 'honour,' 'esteem,' 'respect') or 'honourous' (meaning 'honourable,' 'respected'), while Amir means 'headman' and 'ruler' in the Arabic language. These colourful epithets were related to relative ties between the clan of Kazan sayyids and the prophet Muhammed. '*Zafer-mana-i vilayati Kazan*' contains rather valuable evidence on this. Sayyid Kul-Muhammed becoming the high sayyid is represented there in the following way: 'Kutbi-l-aktab's grandson Sayyid Ata from the clan of the Prophet' [Hajitarkhani, 1995, p. 90; Kol Sherif, 1997, 80 b.].

Let us provide the names of Kazan sayyids preserved in sources [Iskhakov, 1997a, pp. 75–77]). The first mentioning of the names of both sayyids (Tevekkel and Kasim) was back in 1487. It is possible that Tevekkel was the high sayyid until 1487. Then the name of sayyid Borash (1491) appears in sources, who definitely was the high sayyid until 1524. Another representatives of the clan of Kazan sayyids—Shausein (Shah-Husain)—mentioned in 1512–1523 most likely was not a high sayyid. After high sayyid Borash, who was executed in 1524 by Khan Safa-Giray because of his pro-Moscow orientation, his place was most likely occupied by Buyurfan-sayyid. True, his name appears in sources only in 1546. After he had fled to the Nogai Horde for political reasons (he was there until 1549, then he moved to Bukhara), Sayyid Mansur's son Kul-Muhammed became the high

sayyid of the khanate. There is information that in 1549 he arrived in Kazan 'from Astrakhan,' where he moved to in the same year with Khan Safa-Giray. Kul-Muhammed-sayyid held this post until 1551, when by all appearance he was executed by Khan Shah-Ali for 'exile to Nogai,' which means he became a member of the Nogai Horde, and for the fact that he was one of those who wanted 'to kill the tsar' (khan—D.I.). After him, the post of the head of the priesthood of the Kazan Khanate was passed to Sayyid Kul-Sharif who was probably the son of Sayyid Mansur mentioned above, which means he was the brother of the killed High Sayyid Kul-Myhammed. As we have already noted, Kul-Sharif was killed during the conquest of Kazan by the Russians in 1552 [Complete Collection of Russian Chronicles, 13, 1965, p. 218; History of Kazan, 1954, p. 160]. A person taking up the title of 'sayyid' was noted on the territory of the Kazan Khanate for the last time in 1554, when after the persistent resistance shown to Russian conquerers for all Arsk country and Coastal area, they came to the voivodes and started to complain asking for support... Usein-sayyid and Taokmysh shikhzade and Sary Bogatyr...' [Complete Collection of Russian Chronicles, 13, 1965, p. 183]. It is not known whether Usein, mentioned in the sources, was a high sayyid or not. This chronicle report only shows that the religious figures who managed to survive after the storm of Kazan took active part in the resistance movement.

Despite expectations, we failed to find out any evidence on the appointment of the high sayyid by election in the Kazan Khanate in the sources, although it is known that in this state there were several personalities simultaneously who originated from the Prophet. So this question remains open.

The Muslim clergy played an important part in state affairs, especially the sayyids. Moreover, the sources do contain more evidence on the activities of the sayyids, especially the ones of nation-wide character. First of all, the sayyids took part in decisions as to the candidates for the khan's throne. It is evident from sources that the sayyids took part in negotiations with Moscow concerning the candidate for the Kazan throne in 1497 (Burash ~ Borash sayyid),

in 1519 (the charter from Kazan regarding that subject begins with the expression 'from the high sayyid'), in 1532 (a sayyid was mentioned during negotiations about the 'dacha' of Sultan Yanaly), in 1546 (the charter about the recurrent invitation for Khan Shah-Ali to occupy the throne begins with the name of Buyurgan-sayyid), in 1551 (negotiations about replacement of the very young Khan Utemish-Giray on the throne were carried out on the basis of a special patent mentioning sayyids) [Iskhakov, 1997a, p. 36]. Sayyids were also present among the Kazan nobility, in those cases when a khan was invited to occupy the throne without consulting Moscow. This happened, for example, in 1521. The Russian chronicles comment on it in the following way: 'That very spring Kazan sayyids, ulans, and princes removed Tsarevich Sap-Giray from the Crimea and made him the Tsar of Kazan' [Complete Collection of Russian Chronicles, 13, 1965, p. 37]. The involvement of sayyids in state affairs is also evident from the fact that there were sayyids among those who interfered when Khan Safa-Giray wanted to kill Russian ambassadors in May 1531 [Ibid., p. 57]. In some cases the active participation of sayyids in affairs related to the throne had rather deplorable consequences for them: at least two high sayyids were executed for supporting one of the candidates for the khan's throne (1524, Borash-sayyid, 1551, Kul-Muhammed-sayyid [Iskhakov, 1997a, p. 30]). Probably one more execution took place in 1546 [Ibid., pp. 27, 33], but this question requires further examination.

The role of sayyids during the procedure of swearing an oath (*shertovanie*) was also significant [Ibid.; Complete Collection of Russian Chronicles, 13, 1965, p. 25]. One more case of diplomatic activities of one of the Kazan sayyids—Kul-Sharif—occurred in 1551. This should be examined separately because it was related to the return of khansha Süyümbike and Utemish-Giray's minor son to the Russians and is not always interpreted correctly in literature. In April 1551 the attack of Russian troops against the Kazan Khanate began, and in June they surrounded Kazan [Complete Collection of Russian Chronicles, 13, 1965, pp. 165, 166–167]. Hard times came, and the Kazan people got fright-

ened: they sent their representatives 'to Shigaley and voivodes to complain asking for support, so that the tsar (Ivan IV.—D.I.) could take compassion upon them, did not order to captivate them, and made tsar Shigaley their tsar and took Utemesh-Giray and his mother tsaritsa Süyümbike.' Mullah Kul-Sharif, originating from the clan of sayyids, and prince Bibars Rastov came to Khan Shah-Ali and Russian voivodes with this offer. But they did not act on their own, they carried out 'the will of Kazan land,' which can be seen from the charter of the Kazan people sent to Ivan IV at that time [Ibid., p. 167]. Moreover, the ambassadors did not accept the conditions of Moscow at once—the chronicle report, dating back to 9 August 1551, says that they hesitated a little during negotiations, which means they disagreed. The chronicler writes about the Tatars: '... in fact they were being cunning.' It was only possible to make Kazan people accept conditions, proposed by the Moscow side, by force. And the conquerors threatened: if the Kazan people disobeyed the will of the tsar, that very autumn the army of the tsar would invade there' [Ibid., p. 168]. Only after these threats the ambassadors accepted the conditions of Moscow, among which, there was a requirement to return Süyümbike and her son. It is evident that Kul-Sharif and Prince Bibars, who accepted the conditions of the opposite side, were not guilty—they carried out the decision of the whole state as its diplomats. This can be seen from the procedure of accepting the conditions of the Russian side by the Kazan people, which took place on 14 August 1551. The chronicles state as follows: '... mullah Kul-Sharif, and Mansyr-sayyid's son Mahmet-sayyid, and all shaykhs, and shaykhzades, and imams, and mullahzades, and azis, and derbyshes, and Kudai-gul-ulan, and all other ulans and Prince Muraley (beklyaribeg Nurgali Prince Shirin.—D. I.), and many other princes and murzas came to the tsar (Khan Shah-Ali.—D. I.), and boyars' [Ibid., p. 169]. According to the source, the entire social elite of the khanate was present there.

Other representatives of Muslim priesthood of the khanate were also involved in diplomatic activities. For example, Abib-azey was mentioned among the Kazan ambassadors in 1519 [Ibid., p. 32]. Kul-derbysh probably belonging to the group of dervishes arrived in

Moscow from Kazan on business in the same year [Complete Collection of Russian Historical Chronicles, 8, 1859, p. 266]. In 1534 Chura-mollazade, a person of Khan Yanaly, appeared in Moscow [Complete Collection of Russian Chronicles, 13, 1965, p. 81]. For example, Andrychey 'afyz' was mentioned among the Kazan ambassadors in 1546 [Ibid., p. 148]. In the same year Agish-molladze, called a bakhshy (that is a scribe), was mentioned among the ambassadors of Khan Shah-Ali. He also features in the group of the Kazan ambassadors and messengers in 1549 (he is called 'mullah' there) [Continuation of Ancient Russian Vivliofika, 1793, p. 144]. At the beginning of August 1551 Kasym-mullah and Prince Bibars were carrying out negotiations with Khan Shah-Ali in Sviyazhsk Fortress [Complete Collection of Russian Chronicles, 13, 1965, p. 167]. Angildey-'afyz' arrived at this fortress on 11 August reporting that Khan Utemish-Giray and his mother were being taken to Sviyazhsk [Ibid., p. 168]. Among those accompanying Süyümbike and her infant son to that fortress was Alimerden-'aziy' [Ibid.].

The Muslim clergy of the khanate took part in military operations. First of all, this meant the sayyids. Particularly in 1491 Sayyid Borash (Burash) was mentioned as a part of the army of the Kazan khan who came to support the Crimean Khan Mengli-Giray during his battle against the Great Horde together with the Russian troops [Complete Collection, 12, 1965, p. 228]. It is plausible that there was a special subdivision in the khanate, which was probably subordinated to the high sayyid. In any case, the Patriarch's (Nikon) Chronicle talks about 'Kul-sharif and his regiment' [Ibid., p. 218], and A. Kurbsky decodes this message in the following way: 'our (that is Russian.—D.I.) people and their abazes, sayyids, and mullahs came to see their great bishop...' [Kurbsky, 1914, p. 198]. It looked the same way in 1549 during the defence of Kazan from the attacking Russians. Sayyid Kul-Muhammed, heading the young dervishes and sufis and 'saddling the horse of the holy war (that is gaza.—D.I.), preparing for the combat and putting on combat armour,' defended one of the city gates [Kul Sharif, 1997, p. 80]. It can be assumed that in other cases this

'regiment' also consisted of dervishes and sufis.

Diplomatic activities and participation in state affairs in general were related to reading and composing of different texts. Naturally that required a rather high level of literacy from the priesthood and a high rank and profound knowledge in many spheres by the diplomats. It is no coincidence that the high sayyid of the Kazan Khanate—Kul-Sharif, who was good at astronomy, history (both Tatar and Russian), military, and state affairs—was also a brilliant writer and poet [Iskhakov, 1999a, pp. 46–47; Kul Sharif, 1997, 90–91 b.]. This education was mainly acquired at local madrasas. For example, Sh. Marjani, basing on Tatar narratives, provides data on the last battle of high sayyid Kul-Sharif inside the madrasa situated in the Kazan Kremlin and on its roof [Marjani, 1989, 200 b.]. This very battle was described in the Patriarch's (Nikon) Chronicle in the following way: '... and Christians approached the mosque and their enemy mullah Kul-Sharif, and suddenly many unfaithful started struggling against him...' [Complete Collection of Russian Chronicles, 13, 1965, p. 218]. Apparently, this madrasa was near the 'Kul-Sharif Mosque' [Ibid.]. It is appropriate to note that by the middle of the 16th century there had been not less than 5 mosques in the Kremlin of Kazan [Kurbsky, 1914, pp. 181, 196, 198]. A. Kurbsky writes about this: '... there is a mountain near Kazan... there a city and tsar palace and mosques on it, there was a special place where dead tsars were buried: unless I am mistaken, there were five of them' [Ibid., p. 181]. Then A. Kurbsky mentions these Kremlin mosques without naming their number [Ibid., pp. 181, 196, 198]. Other madrasas could have been located near these mosques.

The authority of the Muslim priesthood in the khanate was unquestionable. Particularly Sh. Marjani, basing on oral narratives, writes that the High Sayyid Kul-Sharif 'was respected by Islamic khans and inhabitants of the city and granted great honours' [Merzhani, 1989, 200b]. The evidence provided by S. Herberstein allows us to treat this message trustingly. One more interesting piece of information, preserved in historical memory of the Tatars, was provided by Sh. Marjani who noted that they had

sent letters to the Kazan khans from Moscow, and there was a separate letter and presents for sayyid Kul-Sharif mentioned above. This message certainly reflects some historical realities because correspondence between the Crimean sayyids and Moscow grand princes, for example, was partly preserved (See examples of this correspondence: [Iskhakov, 1997a, pp. 75–77]).

Now let us stop at the intricate issue on the belonging of the Muslims of the Kazan Khanate to a certain sufi order (*tariqa*). Although there is little information about this, it still allows us to come to a certain conclusion in this respect. Some details contained in the message dating back to 1550 by Sharif Hajirarkhani, identified by me with Kazan High sayyid Kul-Sharif [Iskhakov, 2008, pp. 129–136] addressed to Turkish Sultan Suleyman Kanuni, allow us to say that this sayyid was related to Yesevi *Tariqa* and originated from the clan of Sayyid-Ata. In particular, in describing the defence of the gates of Kazan from the Russian troops, the author of the message provides the following lines: '... and Kul Muhammed sayyid, the deceased khan's son, Kutbi-l-aktab sayyid Ata's grandson from the clan of the Prophet was standing at the other gate, leading the young dervishes and sufis, saddling the horse of the holy war, encouraging people to wage war, preparing to fight against the Kafirs, observing them... May his grandeur last forever' [Kul Sharif, 1997, p. 803]. The characteristics of Kul-Muhammed as Sayyid Ata's grandson, originating from the clan of the Prophet, is a sign of his belonging to Yesevi *Tariqa*. Famous Turkish historian A.-Z. Valido Togan, publishing the manuscript of the composition 'Zafer-name-i vilayate Kazan,' provides some documents in the comments, confirming that Kul-Muhammed-sayyid (and consequently his brother Kul-Sharif) was related to successors of the famous sufi Ahmed Yesevi from Khwarezm' [Velidi Togan, 1966, s. 196]. Subsequently, M. Ahmetzyanov also shared this point of view [Kul Sharif, 1997, 907 b.]. The mentioning in 'Zafer-name-i vilayate Kazan' of sufis and dervishes in the Kazan Khanate allows us to agree with this opinion. The whole range of sufi trends are remarked by researchers on the basis of works by outstanding Tatar poet Muhammedyar, who lived and created in the Kazan

Khanate in the first half of the 16th century [Esays, 2000, pp. 72–78]. Further, the participation of this sayyid, who used to be the high sayyid of the Kazan Khanate then, in military events of 1549 is also important. This very tradition can be traced back to the sayyids of Yesevi *Tariqa*, since the times of Sayyid-Ata who became a 'nakib' under Khan Uzbek [Iskhakov, 2011, pp. 72–73]. Individual works by the last high sayyid of the Kazan Khanate, Kul-Sharif, who most likely was a relative of sayyid Kul-Muhammed, indicated above, are also noteworthy. Thus, his 'Ky-issai Hubbi Hoja' contains a mention about 'the joy of a thousand sheikhs' of hoja Ahmed Yesevi, his 'deputy' Khakim-Ata Suleyman (that is, Suleyman Bakyrhani), whose children were given birth to by 'Bukhar khan's (or Bugra khan's) daughter,' Askhar, Mahmud (Muhammad), Sultan Hubbi. Then in this work there is talk that before the death of Khakim-Ata Suleyman told his children and wife Gambar-Ana that after his death men would appear, who seemed to be hidden from sight, and there would be a man called 'Zangi' among them, and he will be her next husband. The indicated composition says that after he had married Ganbar-Ana, this person 'Zangi-baba' 'pastured cows' [Kul Sharif, 1997, 43–65 b.] M. Ahmetzyanov has already paid attention to the peculiarities of the presence of representatives of the indicated *tariqa* in top-echelon Muslim figures of the Kazan Khanate (see [Ibid., 90 b.]). Meanwhile according to the traditions of Central Asian sources, Zangi-Ata, the son of Arslan-Ata, was Khakim-Ata's student, and he himself was Ahmad Yesevi's student. As Devin DeWeese indicates, according to Hoja Hasan's poem 'Nitari'—Bukhari 'Mudkhakir-i akhbab' (1566–1567), 'tribes of Sain khan's ulus were 'hereditary followers' (myurids) connected with the line going back from Zangi Ata to Nitari himself' [DeWeese, 1996, p. 179]. According to Devin DeWeese, the lines of Yesevi *Tariqa*, known from sources, are related to several students of Zangi-Ata, with the unclear personality of Kok-Ata, but especially with the most influential figure of Ismahil-Ata from the standpoint of the early history of Yesevi traditions.' The last one goes back to Ahmad Yesevi in the following way: Ismagil-Ata ← Ibrahim-Ata (his father) ← Suksuk-Ata ← Sufi Muhammed Danishmend

← Ahmed Yesevi. According to genealogical data, Ismagil-Ata lived in the late 13–early 14th centuries [Ibid., p. 175]. It should be added here, the excellent knowledge, by the high sayyid of the Kazan Khanate Kul-Sharif, about diplomatic affairs [Iskhakov, 2007, p. 42], which is also similar to the institutions of the nakibs in the Jochid Ulus, the states of Ashtarkhanids and Shibanids in Central Asia.

It should be also taken into account, that I. Zaitsev identifies the author of the composition entitled 'Jiddad al-Ashikin' Maulanu Sharif ad-Din Husein Sharif as Maulyan Sharif, whose collection has been preserved in Central Asia. For his part, he finds it possible that Sharif Khadjitarkhani was known under these names [Zaitsev, 2004, p. 180]. In this case, it is hardly accidental that the talk turns to Khwarezm and Astrakhan as well as sheikh Kutb-ad-Din, who died in 1551, in the composition by Maulyan Sharif 'Jiddad al-Ashikin' [Ibid]. Meaning 'the Astrakhan trace' of Kul-Sharif and special role of the ulems of the capital of the Astrakhan Khanate in Muslim education of the Kazakhs [Fazallah ibn Rusbikhan Isfakhani, 1976, p. 106] most likely, we will one again discover the traces of Yesevi Tariqa.

Not only the mentioning about sufis and dervishes (the toponym 'Derbyshki' (*Därvişlär bistäse*) in the suburbs of Kazan points to these latter ones) in this state provided in Russian sources but first of all the sheikhs (sheikhzades), who were the rulers of tariqas, are evidence of the sufi character of Islam in the Kazan Khanate. Unfortunately, we know very little about the Kazan sheikhs. But the name of one of them, Kasim-sheikh, Ibrahim-hodja's son, has been preserved. According to preserved data, he lived in Kazan until 1552 [Äxmätcanov, 2008]. It is plausible that this is the very 'Kasim-mullah' who took part in negotiations in August 1551 with Russian voivodes and Khan Shah-Ali at the Svyazhsk Fortress [Complete Collection of Russian Chronicles, 13, 1965, p. 167]. Various narratives about Kasim-sheikh, including the ones providing evidence of his miracle-working capabilities, have been preserved [Äxmätcanov, 2008, 14–15, 25 b.]. According to R. Fakhret-dinov, sheikh Kasym ibn Ibrahim al-Kazani

died in Central Asia in the city of Kermin in 1589–1591 [Ibid., 14 b.]. It can be assumed that the 'Central Asian' track of the sheikh is not accidental at all, which can be seen from one of the Tatar chronicles, dating back to the 19th century and containing a sufi genealogy. D. Mukhametshin, discovering this genealogy, noticed that the succession ending with sheikh Kasym went back to Ahmed Yesevi and his student Khakim-Ata through a series of links [Mukhametshin, 2007]. It is also illustrative that the Tatar narratives preserved in a later source 'Risali-ya Bolgaria' note that the relatives of the given sheikh lived at the time of Temür in 'shakhri Bulgar' and in 'Bilyar,' including the legendary 'Rabiga Khazhiya' [Äxmätcanov, 2008, 13, 21 b.]. Other details of the lineage also point to its connection with Yesevi Tariqa [Iskhakov, 2011, p. 101]. Apparently, we are dealing here with a significant figure from the period of the Kazan Khanate as represented by Kasym-sheikh, probably he was the ruler of Yesevi Tariqa in this state.

No doubt, the provided data, which points to an active participation of the Muslim priesthood of the Kazan Khanate in state affairs as well as the existence of Islam institutions in the khanate (institutions of sayyids, Yesevi Tariqa headed by sheikhs, judicial system headed by the kazi), is the confirmation of state nature of Islam in that khanate. The yarliq of khan Sahib-Giray (1523), containing in the introductory part an appeal to 'emirs, khakims, kadis, honourable hosts' (*mavali-zavil ikhtiram*) [Vakhidov, 1925, pp. 82–83], is evidence of the same fact. The observations of the author of the 'History of Kazan,' who provides an order of Khan Ediger-Muhammed when talking about the assault on Kazan by the Russians in 1552, are also great illustration of the above-mentioned: '... and the tsar (that is, khan—*D. I.*) to pray... the new Kazan sayyid (Kul-Sharif.—*D. I.*), and mullahs, and afizes and derbyshes, all the people around Kazan...' [History of Kazan, 1954, pp. 148–149].

The Kasimov Khanate. The small Kasimov Khanate known as the Meshchera yurt was dependent of the Muscovite state and adjoined Russian lands, nevertheless remaining a Muslim state. Its capital was the city of Kasimov

(its initial name was the small town of Meshchera) appeared in the middle of the 15th century, a white-stone mosque was erected near the khan's palace. According to some sources, this mosque, which has survived to our time, was built under Sultan Kasim in 1467 [Sharifullina, 1991, pp. 49–50]. The population of the khanate, despite its polytechnic character, was also called Muslim in sources dating back to the 15–16th centuries: the charter of Crimean khan Mehmed Giray from 1517 talks about Meshcherian Besermians or Besermians from Meshchera [Collection of Russian Historical Society, 1895, p. 378]. And the charter of the ruler of the Kasim Khanate—Sultan Daniyar—dating back to 1483, a Besermian was mentioned among his *yasak* people [Bakhrushin, 1959, p. 121]. Although this term can be interpreted as an indication of an ethnic group [Iskhakov, 1998, pp. 218–219], its connection with the confession of Islam is evident.

The Muslim clergy of the khanate was headed by the sayyid. Apart from him, such branches of the priesthood as the *abyzes* (*khafizes*), *mullahs*, *danishmend*s were mentioned in the state [Iskhakov, 1997a, p. 20]. Although the data on sayyids in the Kasimov Khanate is fragmentary, their genealogy [Äxmätcanov, 1995b] was preserved because the offspring of these sayyids—the Shakulovs—still live in Kasimov as well. The closest forefather of the Shakulovs was Sayyid Shah-Kuli (Shah-Koly), who lived approximately in the last quarter of the 15th century. Then Ak-sayyid, who was the son of Sheref, became known from documents (1552, 1555). True, these two sayyids are absent from the genealogy of the Shakulovs. But Kashka (Kashkey) sayyid, Shah-Kuli's grandson, known between 1521–1587, was mentioned there, and the latter's son Bulyak-sayyid was mentioned in documents from 1600 and 1613 [Iskhakov, 1997a, pp. 14–18; 1998, pp. 192–193]. The early part of the genealogy of the Shakulovs goes back to Prophet Muhammed. It is also noteworthy that the lineage of the Shakulovs, published by M. Ahmetzyanov, contains a postscript about the spreading of Sayyid Shaghkhan's (Shaghkhan) offspring living in the first half of the 15th century and standing in the link of Shah-Kuli's

grandfathers, indicated above in this genealogy, in 'the Crimean vilayet, in the Kuban Region, and Dagestan,' and the offspring of his brother Shakhbay (Shahbay) were in the 'Budgar Vilayet, Khan-Kirmeni, Haji Tarkhan, and the Volga Region.' These materials allow us to talk about the kinship of the dynasties of sayyids in all the khanates of the former western part of the Golden Horde. Indirect data confirms the possibility of contacts between the sayyids of the Kasimov and Crimean khanates [Iskhakov, 1997a, p. 22; 2011, pp. 113–114; Trepavlov, 2010, pp. 35, 68]. The fact that Sayyid-Ahmed-sayyid died in the Crimea in 1681 is evidence of the preservation of certain contacts between the Kasimov sayyids and the Crimean Khanate in the 18th century [Velyaminov-Zernov, 1866, pp. 498–499]. The cases of marital ties between personalities of the clan of sayyids and the khans of Kasimov provide evidence of the high status of the sayyids in the state. For example, the last ruler of the Kasim Khanate—Fatima-bikem, who was the wife of khan Alp-Arslan, who had ruled between 1614–1626—originated from the clan of sayyids [Ibid., p. 192]. Similar marriages between sayyids and the nobility of the khanate are also known. For example, Alikey-atalyk, who most likely originated from the clan of the Shirins, was married to the daughter of a sayyid [Iskhakov, 2011, p. 110].

Rather recent evidence, dating back to the 17th century, on the existence of the right to legal actions belonging to Kasimov sayyids [Iskhakov, 1997a, p. 21] was preserved. This testifies about the former power of the representatives of this group in the Kasimov Khanate. In this respect, the following subscript in the genealogy of the Shakulovs, about the son of Sayyid Sayyid-Ahmed, who died in the Crimea, is noteworthy: '... our forefather Yakub-sayyid was a nobleman in the city of Yelatma. One day, a woman from Stary Posad (Iske yurt, a part of Kasimov.—D.I.) broke into the *tek*ie where the dead Arslan-khan and Fatima-sultan were lying and stole from the tsars of the savanna their shrouds and other items. Yakub-sayyid hung this woman on the same *tek*ie [Velyaminov-Zernov, 1866, p. 497]. Apparently the sayyids, who were considered to

be the so called 'serving people' of the Kasimov khans, at least in the 17th century [Ibid., pp. 64–65, 82, 146] were busy with the distribution of justice when it came to 'Kasimov princes, murzas, and Tatars.' This right was granted to Khan Ali-Arslan by the charter of Mikhail Fedorovich, dating back to 1622 [Ibid., p. 34]. Before that they could get this right from the Kasimov khans.

It is also known that there was special military subdivision called 'The regiment of sayyids' in the late 16–early 17th centuries in the Kasimov Khanate. It was headed by Kasimov sayyids, who took part in military campaigns [Iskhakov, 1997a, pp. 17–18]. For example, during the military campaign of Russian troops in Kazan in 1552 'Ak sayyid Cherevseyev' (according to V. Velyaminov-Zernov, he was a son of sayyid Sheref) and all 'princes, murzas, and Tatars from the settlement' joined them at the Pyana River [Complete Collection of Russian Chronicles, 11–12, 1965, p. 199]. In 1555 'F. Siseyev and Ak-sayyid murza along with princes, murzas, and Cossacks from the settlement' were mentioned [Velyaminov-Zernov, 1863, p. 410]. Despite the title of 'murza,' in this case we are talking about Ak-sayyid once again because one can read one more message that dates back to 1558, which says: 'Gorodets people, the sayyid, princes, and mirzas' [Ibid., p. 421]. A similar working was also used in 1563: '... and Grodets sayyids and ulans, and princes, and mirzas, and Cossacks, and also princes, mirzas, and Cossacks from Kadom and Temnik' [Complete Collection of Russian Chronicles, 13, 1965, p. 364]. The same wording in another version looked like this: '... in the great regiment... prince Semen... Dmitriev Paletsky's son and Gorodets sayyids, and princes, and mirzas, and Cossacks and the court of Tsar Shigaley, and princes of temniks, and mirzas, and Cossacks' [Ibid., p. 349]. It is plausible that Kashkey-sayyid, from the clan of the Shakulovs, also took part in military campaigns because the charter of Tsar Boris, dating back to 1587, contains the following information: '... all the princes, and murzas, and Cossacks, and Gorodets Tatars, serving princes, and murzas, and Cossacks, who took part (in military campaigns.—D.I.)' with Koshkey-sayyid...

And now they are going to serve... instead of us' [Velyaminov-Zernov, 1864, pp. 93–94]. In the connection with the participation of Kasimov sayyids in military campaigns, V. Velyaminov-Zernov supposed that Kashkey-sayyid had had 'his own court and regiment' [Ibid., p. 443]. Indeed, there is information on two subdivisions of the Kasimov Tatars dating back to 1579 'The court of the tsar' and 'The regiment of the sayyid' [Ibid., p. 81; Velyaminov-Zernov, 1866, p. 25]. In the subsequent years (in 1621, 1622, 1628–1629) reports that 'Kasimov princes, and murzas, and Tatars' were divided into 'The court of the tsar' and 'The regiment of the sayyid' appeared again [Ibid., p. 34; Shishkin, 1891, p. 515]. Apparently 'the court' and 'the regiment' of the Kasimov sayyids were a regular military formation, which were probably related to the division of the troops of the khanate into 'wings' (in this case 'The court of the tsar' was the second 'wing'). However, in general, the participation of Kasimov sayyids in military activities is completely analogous to the situation in the Kazan Khanate, which is hardly coincidental as there were ancient dynastic and political ties between these states [Iskhakov, 1988 pp. 45–47, 189–190, 202, 211, 218–219, 223].

The role of the sayyids in the enthronement of the khan in the Kasimov Khanate was discussed in a historical composition by Kadyr-Ali-beg 'Collection of Chronicles' (1602), while he described the procedure of ascending the Sultan Uraz-Muhammed to the khan's throne, which took place in the mosque of Stary Posad in Kasimov: '...The crowd was huge. Mullahs, danishmends, khafizes, begs, in short, all the Muslims gathered in a stone mosque built by Sheikh-Ali khan. A golden fire blanket was brought and spread... From the Old Yurt (Iske yurt—Stary Posad of Kasimov.—D. I.)... Bulyak sayyid started pronouncing his ceremonial khotba (prayer). Then four people (karachi-begs.—D. I.), holding four ends of the golden fire blanket, lifted the khan on it... All the Muslims... filled the the mosque with cheerful yells. After that Karachis, Atalyks, and Imildashes showered the Khan with money, and all those present congratulated the Khan' [Berezin, 1851, p. 551; Velyaminov-Zernov, 1864, pp. 402–404]. This ritu-

al is rather similar to the one described by the traveler I. Schiltberger at the turn of the 14–15th centuries, while observing the enthronement of the khan of 'the Golden Tatarya' [Schiltberger, 1984, p. 44], which confirms the continuation of the given Golden Horde tradition in the Kasimov Khanate.

Data on the spreading of a certain branch of Sufi Tariqa in this khanate was not preserved. However, most likely the information, indicated above, on the kinship between the Kasimov sayyids and sayyids from 'Bulgar vilayet,' 'Hajji-Tarkhan,' 'Crimean vilayet' is evidence of trails of Yesevi Tariqa in this state.

The Great Horde and the Astrakhan Khanate. The Astrakhan Khanate only emerged when the Great Horde had ceased to exist, and a part of its population and territory were transformed into independent possessions. True, they were governed by the khans descending from the clan of the rulers of the Great Horde [Zaitsev, 2004, p. 55]. Initially the capital of the Great Horde was Sarai ('Great Sarai'), but from time to time this function passed to Hajji-Tarkhan, especially after its defeat in 1481, caused by the Shibanid-Nogai coalition [Ibid., pp. 39–40, 52–53]. In this situation, Muslim institutions in the Great Horde and the Astrakhan Khanate were likely to have succession, but sources provide no information about that.

The fact that the Great Horde was a Muslim state is confirmed by the letter of the co-ruler of this state Khan Mahmud, dating back to 10 April 1466 and addressed to Turkish sultan Mehmed Fatikh. This message composed in the 'Great Horde' (*Olug Urda*) contains the following introduction: 'He is inimitable, and he demonstrates miracles of Muhammed, and he certainly relates to the clan of Mahmud, [post-script], may Allah immortalise his reign' [Sultanov, 1978, p. 240]. There are the following phrases in the address of another ruler of the Great Horde khan Ahmat, dating back to 1477, intended for the Turkish sultan, after the complimentary words concerning Mehmed Fatikh as a Muslim ruler: '...may Allah immortalise his reign and his power and elevate him and his palace higher than stars of Ursa Minor!' I thank God..., may the Lord make his life long...' [Ibid., p. 243].

The existence of the institution of sayyids in the Great Horde is beyond doubt, but the information on it is extremely scarce. In this connection, one should pay attention to sayyid Khozyaku 'fleeing' from 'the king' whose case was taken up by the Crimean ruler in front of the Grand Prince of Moscow in 1509 [Collection of the Russian Historical Society, 1895, pp. 68, 72–73]. According to V. Trepavlov, that was the Great Horde sayyid Haji-Ahmed, who found himself together with the people of Khan Sheikh-Ahmad in Lithuanian possessions, after the defeat of the Great Horde (Takht eli) [Trepavlov, 2010, p. 35]. Then he and his family (or a part of it) moved to the Kasimov Khanate, where he died. In 1515 he was no longer alive. In the beginning Crimean Khan Mengli-Giray demanded that the Polish-Lithuanian side send him back home, claiming that 'he and Shahmat (Khan Sheikh-Ahmad.—D.I.) rendered homage to that sayyid' [Ibid.] and then he asked the Grand Prince of Moscow for the same favour [Collection of the Russian Historical Society, 1895, p. 68]. Khan Mengli-Girey's son Sultan Ahmed-Giray married to this sayyid's daughter also asked the Grand Prince of Moscow to send him back the belongings of sayyid Haji-Ahmed left in his possessions, explaining that he was 'the former (ancient.—D. I.) pilgrim of his grandfathers and fathers' [Ibid., p. 511]. Probably in the last case it was meant that Haji-Giray claimed the larger possessions than the Crimean Khanate for a while after the defeat of the Horde by him in 1452. The references of his offspring to ancient ties with the sayyids of the Great Horde can be explained by this fact. However, in fact it is most likely that Haji-Ahmed was the high sayyid of the Great Horde, and being an influential personality, he got on the nerves of the Crimean rulers, who were doing their best not to allow Takht eli to restored again [Trepavlov, 2010, pp. 35, 90–100]. One of the statements of khan of the Great Horde Sheikh-Ahmad, preserved in 'Lithuanian Metrics' and saying that 'there are sayyids and priests among his people held captive in Moscow,' can also be evidence of this fact [Ibid., p. 35]. If, as is most likely, Khozyaku (Haji-Ahmed) was to be considered a 'sayyid,' it can be assumed that Muslim religious figures

were being considered under the name 'priests.' The fact that there were mullahs in the Great Horde becomes evident from the charter of the Russian envoy in the Crimea I. Mamontov, dating back to 1501, reporting that Crimean Khan Mengli-Giray notified about the arrival of ambassador sent by Khan Sheikh-Ahmad to him [Collection of the Russian Historical Society, 1884, p. 351]. V. Trepavlov, pointing to this fact, believes that the given 'mollozade' was 'the commander and supervisor of the Ordobazar' [Trepavlov, 2010, p. 33]. If there were children of mullahs in this state, that means there were mullahs themselves as well. The conclusion of V. Trepavlov, based on the analysis of 'Lithuanian Metrics,' according to which the sayyids and hajis were the ambassadors of the Great Horde, should also be taken into consideration [Ibid., p. 35].

Thus, in general, we can talk about the existence of the institution of sayyids, including the high sayyid heading Muslim clergy consisting of mullahs, mullazades, and hajis in the Great Horde. As for other groups of Muslim priests and the tariqa spreading in the Great Horde, nothing is known. However, the passage found in the lineage of the Kasimov sayyids, according to which their relatives were in 'the Volga Region,' under which apparently the Great Horde was meant, allows us to speak about Yesevi Tariqa being in 'Takht eli.'

The fact that Fazlallah ibn Ruzbikhan Isfakhani in his composition 'Mihman-name-yi Bukhara' (1509) describing ulems and scientists, who come to the Kazakhs from all over the world to teach them the bases of belief, also indicated descendants from 'Haji-Tarkhan,' is evidence of the depth of penetration of Islam in the environment of the population of the Astrakhan Khanate [Fazlallah ibn Ruzbikhan Isfakhani, 1976, p. 106]. The concentration of a significant number of tombs of the saints, whose names contained prefixes 'baba,' 'haji' ('azi'), 'ata,' 'khazrat' in Astrakhan and its suburbs, is not accidental either. The presence of tombs (kashene) near Astrakhan is clear from the sources dating back to the 1570s [Zaitsev, 2004, pp. 193–195]. The geographical location of Astrakhan, near one of the most popular roads among pilgrims of Central Asia heading

to Mecca, should also be taken into account [Ibid., p. 182].

The Tatar narratives testify about the existence of mosques in Astrakhan. Their precise number at the time of the khan is unknown, but in the 1670s there were seven mosques in the city [Ibid., pp. 178–202]. The written monuments preserved from the period of the Astrakhan Khanate (see more in detail: [Zaitsev, 2004]), the mentioning about khafizes in sources, the presence of a bakhshi (that is a clerk) as a part of Astrakhan embassy in Moscow in 1540 are evidence of the existence of a Muslim educational system in the state [Ibid., p. 182].

Taking into consideration the limited information on the institution of sayyids in the Astrakhan Khanate, this issue may be set on the historical basis only to draw the totality of evidence on the clergy of this state. The earliest information of this sort dates from 1554, when Khan Derbysh-Ali defeated Astrakhan Khan Yamgurchey with the help of the Russian troops. The Astrakhan Tatars, who were scattered during an enemy attack, started to return and later 'present petitions.' '... and Yenguvat azey... and many other mullahs, and azeys, and another 3000 people' were among the last ones who came [Complete Collection of Russian Chronicles, 13, 1965, p. 244]. Ötemish Haji knew one more haji called Niyaz, a rich man from 'vilayet Haji-Tarkhan' [Utemish-haji, 1992, pp. 97–98]. Although the first part of his name was not connected with religious belonging (Haji Niyaz), he was an educated man [Zaitsev, 2004, p. 181]. Then in 1558 A. Jenkinson mentioned a Tatar, with whom he departed from Astrakhan, as a man who was considered to be a saint because he had been to Mecca [Ibid.] that means the Hajj is mentioned again.

The chronicle message indicated above gives an idea of the structure of the Muslim priesthood of the khanate. It can also be seen in detail in another chronicle report dating back to 1557. The same year Derbysh-Ali 'changed his oath' given to the Russians and left Astrakhan, but in June 1557 Moscow received a message, according to which a part of the Astrakhan Tatars had returned: 'Inhabitants of Astrakhan, ulan Chalym, and mullahs, and hajis, and shaykhs, and princes, and all the murzas,

and Cossacks, and common people, Astrakhan land... bowed to him and told the truth' [Ibid., pp. 281, 283]. The existence of sheikhs in the khanate is confirmed by the name of 'Mashaikh' settlement (it derives from 'mashaikh,' which is an Arabic plural form of the word 'sheikh'). Later it became an integral part of Astrakhan. [Zaitsev, 2004, p. 185]. One more religious figure was mentioned in the charter of Nogai Prince Ismahil addressed to Ivan IV (1561) concerning the Astrakhan Khanate. He writes: '... eight Astrakhan people are teaching them: in the beginning Dostay Afyz (that is, khafiz.—*D. I.*), and Prince Tinish, and ulan Chalym, and Prince Ivancha, and Devesh, and Devlet Kildyey, and Prince Kuryan, and Kudai Berdi' [Continuation of Ancient Russian Vivliofika, 1795, p. 55]. We can see a rather complete description of the priesthood of the Astrakhan Khanate in the last years of its existence: mullahs, hajis, sheikhs, sheikhzades, khafizes. As we can see, the sayyids were not mentioned among the priesthood of the khanate. In one case, the fleeing Tatars, including 'many mullahs and azeys,' were headed by Yenguvat-haji (azey). In another case, Dostay-khafiz (afyz) was called the headman (at the beginning) of the Astrakhan nobility 'teaching gallantry.'

Probably there were no sayyids in the Astrakhan Khanate at all? It can be assumed that this conclusion would be mistaken because some sources know about the existence of sayyids in the Astrakhan yurt, particularly manuscript history called the 'Conquest of the Astrakhan Khanate' [Iskhakov, 1997a, pp. 66–67] allows pointing to the fact of the existence of the institution of *sayyids* in the khanate. This manuscript provides a rather complete description of the events of 1554, related to Khan Derbysh-Ali's accession to the throne in Astrakhan: 'Kasimov Tsar Derbysh Aley was assigned to the throne, and all the Astrakhan Khanate and the lands of the Tatars, princes, and murzas, and sayyids (our emphasis.—*D. I.*), and mullahs, and ulans, and abyzes, and people from uluses and, common nomads people. All of them had to put their hand on the Quran and swear an oath [Pogodin Collection, p. 92]. The authenticity of the unique message contained in the indicated manuscript can be partly rechecked on the

basis of other sources. For example, the fact of swearing an oath by the inhabitants of Astrakhan headed by Khan Derbysh-Ali in 1554 is supported by Patriarch's (Nikon) Chronicle adding the following note to this year: '... and Tsar Derbysh-Aley and all Astrakhan land united and signed an oath charter addressed to the Great Tsar of Russia Ivan Vasilyevich and his children and sent it to the tsar attaching a seal to it' [Complete Collection of Russian Chronicles, 13, 1965, p. 244]. The division of the population of the khanate into uluses consisting of common people and headed by princes, murzas, mentioned in the manuscript indicated above, can be traced back in Patriarch's (Nikon) Chronicle from the year 1554 [Ibid.]. 'Common people' were called 'the rabble' in the chronicle dating back to 1557 [Ibid., p. 283]. And Nogai cases, dating back to 1561, testify about 'the Astrakhan uluses' [Continuation of Ancient Russian Vivliofika, 1795, p. 160]. Moreover Patriarch's (Nikon) Chronicle uses the notion of 'Astrakhan land' and the equivalent term 'the Astrakhan Khanate' in parallel [Complete Collection of Russian Chronicles, 13, 1965, pp. 242, 244]. As it was shown above, both terms are used in the manuscript history from 'Pogodin Collection.' This data allows us to consider evidence from manuscript history as being quite authentic. Consequently, the given conclusion also spreads on the part of the source under consideration, in which it comes to Muslim priesthood of the Khanate including 'sayyids.' One more report on the Astrakhan sayyids (although it is not quite clear) can be seen in the message of former Astrakhan Khan Derbysh-Ali (he ruled in the Astrakhan Khanate between October 1537 and the summer of 1539) sent in 1551 from the Nogai Horde to Moscow through his agent. It can be assumed that at that time Derbysh-Ali, removed by Khan Yamgurchey from the Astrakhan Khanate, was in the Nogai Horde. The letter of Derbysh-Ali mentions a sayyid who 'came from there and told him a good word.' Most likely it was the sayyid from the Nogai Horde because he reported that "Yusuf bey and Ismail murza (that is, Derbysh-Ali.—*D. I.*) were looking for your (Grand Prince of Moscow.—*D. I.*) yurt.' And the sayyid said: 'Live here,' that means in the

Nogai Horde. Then the khan indicates that 'he was silent for two years,' had no contacts with Moscow, and after the sayyid had come to him he only 'wanted to listen to him and leave.' But in the end he changed his mind. As a result, it turns out that the sultan Yamgurchi 'killed the sayyid and his good son.' It turns out that 'the sayyid came to ask for prince Yusuf's support so that he could wage war against his enemy' [Continuation of Ancient Russian Vivliofika, 1793, pp. 313–314]. It is plausible that the sayyids killed by Khan Yamgurchey were the high sayyid of the Astrakhan Khanate and his son, and the sayyid who turned to Derbysh-Ali was a representative of the sayyid dynasty of the Nogai Horde, who decided to revenge Astrakhan Khan Yamgurchey, having killed the sayyid mentioned above and his son. Probably this was, among other things, related to the existence of kinship between the dynasties of sayyids in the states under consideration.

A thorough analysis of sources allows us to decode the names of some sayyids of the Astrakhan Khanate. For example, there was the following information about Yenguvat-haji (azey) in a chronicle message dating back to 1554: '.. he was an influential personality at that time' [Ibid.] Taking into consideration the fact that in 1554 he was accompanied by many mullahs and hajis, the following question arises: What if he was the headman of the Muslim priesthood of the Khanate? Probably we should not be confused by the circumstance that he was called 'azey' in the chronicles. For example, in the Siberian Khanate as we will be able to see a bit later sayyid Din-Ali was called 'haji' all the time. The same tradition was typical for the state of the Shibanids. So it should be assumed that haji Yenguvat was not the only sayyid in the Astrakhan Khanate, and the manuscript history I referred to uses the term 'sayyid' in plural form as 'sayyids.'

It is more than plausible that Mansur-sayyid, mentioned above, was the headman of the priesthood of the khanate before sayyid Yenguvat-haji. First, the fact the he came to Kazan 'from Astrakhan' in 1545 and went back with Khan Safa-giray in a couple days later confirms this conclusion. Second, the general historical situation in the Crimean and Astrakhan Khan-

ates in the 1520–1530s does not contradict this conclusion. The thing is that after the fierce defeat of the Crimeans, conquering Astrakhan in 1523, thanks to betrayal of Nogai nobility, khan Mehmed Giray was killed [Syroechkovskiy, 1940, pp. 57–58]. During the long struggle for the Crimean throne one of the candidates for it, Sultan Islam-Giray (after another defeat in 1531) and Islam-Giray, found themselves in Astrakhan, where the former, 'according to rumors,' was 'seated on the throne.' He did not go there alone—about 100 people belonging to the Crimean elite were with him. At the same time sayyid called Mansur was mentioned in the Crimea in 1524 for the last time [Malinovsky, pp. 259, 412]. So it can be assumed that in 1531 sayyid Mansur found himself in Astrakhan (I should remind that exactly in 1531 Kurtka-sayyid figures in the role of the high sayyid in the Crimean Khanate). Although Islam-Giray was in Astrakhan for a short time (about a year or even less), sayyid Mansur could have remained in Astrakhan even after 1531. His arrival in Kazan in 1545, when in fact he came there to save the representative of the Crimean dynasty, the Khan Safa-Giray, who had found himself in a hopeless situation, is evidence of Crimean origins of sayyid Mansur.

Thus far, there has not been any other evidence on Astrakhan sayyids. Nevertheless, there is information on the existence in the early 19th century among Yurt Tatars of a division, of direct successors of the population of the Astrakhan Khanate, into three groups, one of which consisted of 'akhuns and kazys' [Economic, 1809, p. 171]. Apparently, this data goes back to the work by S. Gmelin, who noted such a group, including a kazy, mullahs, and abyzes, among the Yurt Tatars. It should be noted that about the kazy he wrote that he was 'unique...' and that he was kazy 'by genealogical right' [Gmelin, 1777, p. 180]. It is plausible that this kazy was an offspring of the sayyids going back to the period of the Astrakhan Khanate. In this connection, it should be taken into consideration that I. Zaitsev provides the report of Evlya Chelebi about lawyers—kadis belonging to kheshdeks [Zaitsev, 2004, p. 183]. Probably this is evidence of the presence of representatives of this group in the Astrakhan Khanate.

Now let us talk about Sufi Tariqa that was widespread in the Astrakhan Khanate. No doubt, the tariqa and tariqas in general existed in the khanate—the mentioning of sheikhs concerning this state is evidence of that. I. Zaitsev claimed that probably the Naqshbandiyya Tariqa (along with Kubraviya brotherhood, but he does not provide any sources about the latter) was probably spread in Haji-Tarkhan [Ibid., p. 185]. Nevertheless, legendary evidence, provided by Evliya Çelebi on the arrival of Mehmed Bukhari Sary Saltyk-sultan in 'Ejderkhan ile' and admission of a part of 'heshdeks' living in the vicinity of Astrakhan to Islam [Ibid., pp. 187–189], testifies about the initial spreading of Yesevi Tariqa in the Astrakhan Khanate because Sary Saltyk was the dervysh of Yesevi Tariqa. The narratives on the building of a mosque by 'khazrat Khamet-ata' in Astrakhan and the presence of honourable burials of people, whose names contain the prefix 'Ata' (Nur-Ata, Ak-Ata, Mansur-Ata, Khyzr-Ata) are evidence of the same circumstance [Ibid., p. 194]. Most likely, in this case one should interpret 'Ata' as representatives of the clan of sayyids. The presence of the tomb of 'sayyid-baba' in the cemetery of the Krasny Yar Village [Ibid.], just as the very name of Sayiitovo Village, most likely is evidence of burials of the line of Astrakhan *sayyids* being made here if these burials are not related to the population of the Nogai Horde from a later period.

Nogai Horde. Although the population of the Nogai Horde is sometimes represented in descriptions of some observers as 'ignorant when it comes to religion' [From the stories of Juan Persian, 1899, p. 8; Description, 1879, p. 485], no doubt, they had confessed Islam since the 14th century. It is not coincidental that Ruy González de Clavijo, in his famous description of a trip to Temür, dating back to the early 15th century, claimed: '... A... Edigu converted and is converting the Tatars to Mohammedanism, not long ago they have not believed in anything, until they accepted the religion of Mohammed' [Ruy González de Clavijo, 1990, p. 144]. Most likely this passage does not refer to Edigu himself and his tribe (the Manghits), who had adopted Islam earlier. Anyway Al-Makrizi and Al-Askalani preserved infor-

mation on the arrival of the Desht ruler Emir Idiku's wife (khatun) in 1416 (1417) who was going to carry out religious pilgrimage from Damascus [Tiesenhausen, 1884, pp. 442, 454]. According to historical narratives of the Karanogais, Nuretdin, one of the sons of ruler of the Nogai Horde Edigu, considered himself a Muslim [Ananyev, 1900, p. 12]. Thus, some other moments of confessional relations under Edigu should be searched for in the statement of Clavijo. First, this could shed light on the real proselytising activities of Edigu, but at the outskirts of the territory of the Golden Horde. For example, it could have taken place in Western Siberia. The campaign of Edigu and sultan Chekre (Chinggis-oglan?) 'in the Country of Siberia' taking place in about 1405–1406 is well known [Shiltberger, 1984, p. 35]. Non-Islamised groups of Turks had been able to stay in this very country by the beginning of the 15th century, which will be mentioned again a bit later. Second, these activities of Edigu may be related to distinct political purposes. On this occasion, it is helpful to turn to the narrative of 'Tokhtamysh-khan' preserved by the Karanogais. It reads as follows: 'After Tokhtamysh had died, Nuradil (Edigus's son Nur-ad-Din.—*D. I.*) came back and started ruling the Horde.' Some years later people became doubtful about his (Nur-ad-Din's.—*D. I.*) descent,...starting to construe that the ancestry of the Tokhtamysh originated... from... Chinggis Khan, and Nuradil was from another tribe.' In this situation Nur-ad-Din had to claim: '... I have believed in God since my birth and acknowledged his existence, he patronised me everywhere, I have read many religious books and the fact that I do not originate from the clan of Chinggis Khan does not demean me in any way because I originate from the clan of the glorious Turkish bogatyr Khochahmat-Baba Tukles' [Ananyev, 1900, p. 12]. As it is evident from the narrative, Nur-ad-Din turned to Muslim saints to legitimise his power in the Nogai Horde because 'Khochahmat-Baba Tukles' was hoja Ahmet Yesevi and Baba Tukles [Zhirmunsky, 1974, pp. 355–356, 383]. And it should be noted, elevating one's clan to this last saint (Baba Tukles ~ Baba Tukty Chashli 'Aziz) and to Prophet Mohammed's son-in-law Abu Bakr

through him was traditional in the genealogy of rulers of the Nogai Horde [Ananyev, 1900, p. 12; Nebolsin, 1852, pp. 224–225]. Although it was evident that the offspring of Edigu were trying to confirm their right of power this way [Zhirmunsky, 1974, pp. 283–284], it should also be emphasised that Edigu himself (or his forefathers), and then his offspring, could get married to religious figures of higher status—the sayyids. Anyway, the tradition of marrying off daughters of Nogai princes murzas and sayyids is well known [Kochekaev, 1988, p. 46]. That means that chances of cross marriages between representatives of civil and religious nobility of the Nogai Horde were rather good. Meanwhile, the genealogy of the rulers of the Nogai Horde acquires certain historicity, their role of the so called 'fighters for the faith' becomes more comprehensive.

In general, by the 16th century the Nogai Horde had turned into a Muslim society. For example, in the early 16th century the Polish traveler Maciej Miechowita wrote about the Nogais that 'they are the followers and fans of Mahommed..., practice circumcision, follow their own rules..., consider themselves ismaelites' [Mekhovsky, 1936, pp. 58–59]. In the late 1550s the English traveler A. Jenkinson indicated during his trip to Central Asia: '...in the country of the Manghits and the Nogais, its inhabitants follow the law of Mohammed' [Jenkinson, 1937, p. 169]. Muslim self-consciousness of prince of the Nogai Horde Yusuf (1551) has already been mentioned. Later the rulers of the Nogai Horde emphasised their belonging to the Islamic world. For example, in 1608 the Nogai prince Ishtiryak gave the following reply to the requirement of the Moscow ambassador to give back two ambassadors from Astrakhan: 'Since the beginning of time... Muslim laws do not allow the giving back of ambassadors' [Acts, 1914, pp. 192–193]. The Russian ambassador also criticised Prince Ishtiryak for the fact of violating his oath because he was swearing it by putting his hand on the Quran of the great emperor [Ibid., p. 193]. The rulers of neighbouring Muslim states also considered the Nogai Horde as a part of the Islamic world. In particular, while in 1549 Ivan IV told Lithuanian ambassadors that 'his troops were

defending the peace of Christianity and there must not be any Besermyans here' [Collection of Russian Historical Society, 1887, p. 271], the envoy of the Turkish sultan sent to murza Ismail, who became a prince later, left the opposite message in 1551: '... we are Muslims. And all of us are against the Muscovite state' [Burdei, 1956, p. 191].

As for Muslim institutions in this state, the existence of the institution of sayyids in the Nogai Horde is doubtless. For example, this is evident from the message of murza Tinaley (Din-Aley) addressed to Ivan IV (1564). The murza writes: '...my sayit-shikh Tinbay originates from my great grandfather' [Continuation of Ancient Russian Vivliofika, 1801, p. 135]. Although this message contains some unclear elements (for example, it is not quite clear what the expression "my sayit-shikh" means), it follows that there were sayyids in the Nogai Horde in the last quarter of the 15th century (this conclusion is based on the calculations of genealogical links of Tin-Aley's forefathers [Collection of Russian Historical Society, 1884, p. 61]). To be honest, in the Nogai Horde sayyids fleeing from the Kazan Khanate were mentioned between 1487 and 1491, as it was stated above. By the way, murza Musa wrote about one of them, Kasim-sayyid, in 1491: 'Kasim sayyid has stayed at us' [Ambassadorial books, 1995, p. 38]. Despite the fact this Kazan sayyid was wanted to get back to his motherland, he is unlikely to have succeeded in that.

Nogais affairs, dating back to 1545, contain more detailed information on the sayyids of this state, describing events related to the death of its ruler the Prince Shikh-Mamai in the Nogai Horde. According to Russian envoys, after he had died, Yusuf became the prince who sent his ambassadors to Moscow to establish friendly relations with the Moscow prince. Ambassador Baishash sent by the sayyid was also a part of them [Ibid., p. 305]. One more unnamed sayyid was marked in the Nogai Horde in 1551, as it was shown above, although the report was quite unclear. [Continuation of Ancient Russian Vivliofika, 1973, p. 314].

As evident from a document, dating back to 1549, which says: '... Yusuf... sent ambas-

sadors... and there was an ambassador of the sayyid from Saray-Jük with him' [Ambassadorial books, 1995, p. 305], the residence of the headman of Muslim priesthood of the Nogai Horde was situated in its capital—the city of Saray-Jük. We know one more sayyid from Nogai affairs, dating back to 1617, 'the high sayyid Ikisat in Saraichik' [Trepavlov, 2001, p. 587]. As it concerns an important foreign policy action in the document dating back to 1549, the participation of the sayyid along with the ruler of the Horde, his brothers, and children is evidence of his high position in the state. According to B. Kochekaev and V. Trepavlov, the tradition of marrying off the daughters of Nogai princes and murzas to sayyids is not coincidental either. This is also an acknowledgment of the special status of sayyids in the Manghit Yurt. We know the names of some of the more outstanding sayyids being in the Nogai Horde. One of them is Uras/Uraz/Urys-sayyid (sayit) who was mentioned in 1507 among prisoners captured by the Russians [Ambassadorial books, 1995, p. 81]. We have already mentioned Tinbay-sayyid. But the last one could hardly be a high sayyid, otherwise he would be next to murza Tin-Aley as his sheikh. Nevertheless, actually the given fact is evidence of simultaneous presence of several people having the title of 'sayyid' in the Nogai Horde. There were other priests having the title of 'sayyids' in addition to him. In connection with the fact that in 1585 the Cossacks attacked 'Khozin uluses on bogomoltsovy—on Kara Khozin, and on Baba Khozin, and on Kara Asman Khozin'—and devastated their uluses, it becomes evident that the wife of one of hodjas mentioned above was Bey Urus's sister; most likely sayyids are meant again in this case. Although it is plausible that Kara-Hadja was a sheikh. Anyway, during the reign of Bey Musa (1491–1502) Bey Malum-sheikh's son-in-law was known. He was also the hoja whose son most likely was Kara-hoja [see Trepavlov, 2001, pp. 573–574]. V. Trepavlov considers Ikisat-sayyid mentioned above and being in Saray-Jük as the high sayyid of the Nogai Horde [Trepavlov, 2010, p. 587], which seems to be reasonable.

The work by V. Trepavlov contains later evidence on sayyids in this state. As the re-

searcher notes, in the early 17th century there were several sayyids at the court of the bey of the Nogai Horde and one of them was 'the high sayyid.' True, the statement of the author, according to which there was also 'the high sayyid of Saraychiq' in addition to the high sayyid, is not quite clear. As for me, I believe that this was the same person. In 1614 Ibrahim (Ibreim ibn Kalevat) was the high sayyid, then he was replaced by Saif ad-Din ibn Kalevat [Ibid., pp. 567, 570]. In 1604 four sayyids took part in the ceremony of reconciliation between Ishterek and Jan-Ali ibn Urus. This enterprise was organised by the Astrakhan authorities, and the sayyids had to say their prayers standing in front of Ishterek and Jan-Ali according to their rules. This would mean that '...sayyids... being Besermyans from the standpoint of their confession and belief, must be eyewitnesses of their thoughts' [Ibid., pp. 571, 573], that means they were the responsible persons for both sides. The reconciliation itself looked this way: 'Prince Ishterek and Yanaraslan ordered the sayyids to say their Muslim prayers and stood holding hands during that time. And as soon as the sayyids finished saying their prayers according to their Muslim laws, then Prince Ishterek and Yanaraslan came up to each other, hugged each other, and kissed each other' [Ibid.].

It was known in the Nogai Horde that sayyids are the messengers of God [Ibid., p. 570]. According to V. Trepavlov, the families of sayyids had a nomadic way of life. He provides the words spoken by the high sayyid of Prince Ishterek as witness for this conclusion. He said that 'fathers and grandfathers were roaming along the Volga River and the Yayiq River from time immemorial. I pray... as my fathers did... living in the same yurts and encampments' [Ibid.]. Official documents referring to the early 17th century and indicating that 'there were sayyids living among the Nogais... according to their Muslim laws' also testify this [Ibid.] Nevertheless, these adverse living conditions in the field were not always typical for the sayyids of the Nogai Horde, judging by messages from the 15th century about the arrival of people connected with the headman of the Muslim priesthood of the state from the

city of Saray-Jük. Yes, even Sayyid Sayf ad-Din indicated above also moved to Astrakhan in about 1615, where there were 12 people descending from the clan of sayyids in the late 1610s. As a result, in 1620 the Nogai sayyid Saif ad-Din started building a new mosque in Astrakhan with permission of local authorities so that 'all people coming here prayed for your (tsar Mikhail Fedorovich.—*D. I.*) health' [Ibid., pp. 569, 573]. What is more, this sayyid was going to perform charity work—that is, 'give food and water to all our people' [Ibid., p. 572].

According to V. Trepavlov, the sayyids of the Nogai Horde had their own encampments and the so called 'ulus people' in the first third of the 17th century. For example, high sayyid Saif ad-Din had ten families 'serving his father, his grandfather.' In the population census of Astrakhan yurts in 1633, these people are enumerated in the following way: house-serfs: 10, zahrebetniks: 1, subsistence ulus people: 18, their brothers: 3, children: 6, zahrebetniks: 1, average earners: 12, their brothers: 2, children: 30, zahrebetnik: 1; 'poor people': 40, their brothers: 6, children: 5 [Ibid., p. 573]. It is illustrative that 4 uluses were subordinated to the headman of the Nogai Horde: Sayit, Khoza, Bazar, and Saray-Jük. The first and the second ones were connected with possessions of sayyids and hodjas (the last ones were called 'hodjas' uluses'). According to V. Trepavlov, they were equivalents for Waqf possessions [Ibid.].

The sayyids headed a rather branched group of the priesthood in the Nogai Horde. Except for the sayyids themselves (one of them was an official and was in the city of Saray-Jük) sheikhs (shikh, shiik), mullahs (molna, molla), hodjas (hozya, kozya), khafizes (afyz, abyz), sufis (sufui, sufa) were also an integral part of priesthood [Ambassadorial books, 1995, pp. 20, 30, 32–36, 72, 76, 79, 131–132, 156, 162–163, 192, 203, 212, 246, 248–250, 295–296, 308, 315–316]. Probably dervishes were also a part of them [Iskhakov, 1997a]. V. Trepavlov also adds sadrs to this list dating back to the late 15th century—the first third of the 17th century. They were 'the offspring of Bukharian dynasty of chief priests or owners of Waqf possessions' in the Nogai Horde. This kind of priests was mentioned in the source only once in 1617:

'pilgrim... Prince Ishterek's sadyr khadzi Jeilev' [Trepavlov, 2010, p. 571]. Referring to data extracted by A.I.-M. Sikaliyev from epic works, V. Trepavlov provides the names of ministers of religion in the Nogai Horde (myfty/mufti, kadi, efendi), featuring in other sources, indicating that these late realities can hardly be referred to an earlier period [Ibid., p. 570]. One should agree with this conclusion, but it should be emphasised that it is impossible to eliminate the possibility of their existence among the Nogais in the 15–18th centuries especially taking into consideration the reinforcement of the influence of the Crimean Khanate in the Nogais in later periods. We should also add that hajis were mentioned in the Nogai Horde along with sayyids as their 'brothers' [Ibid., pp. 570–571]. Finally sheikhs had a rather important status among the Nogais, which follows from the marriage between Sheikh Malum-Hodja's son and Bey Musa's daughter [Ibid., p. 571]. Theoretically, sheikhs were close to sayyids from the standpoint of their status. It is known that the bey of the Nogai Horde Ishterek was married to sayyid Ibrahim ibn Kalevat's daughter [Ibid., p. 570]. In general, the penetration of links relating to Prophet Muhammad into the genealogy of the Nogai elite—that is, Manghits originating from Edigu—is likely to be related to matrimonial relations with female representatives of the sayyid clan. For example, Devin DeWeese provides evidence on Hodja Murtaf married to Magnyt padishah Musa-bey's daughter. Haji Taj-ad-Din, originating from them on his father's side, had grandmother Mikhr-Nigar-khanum on his mother's side, who was the niece of khan Din-Muhammed (Arabshah's line) and was the daughter of Manghit Muhammed-Mansur-murza (Bey Abbas/Gabbas's line). So she was the wife of sayyid Hashim-hadja (1506–1568) [De Weese, 1994, pp. 394–396]. Probably it was a rather old tradition, it is no accident that according to legends Edigu's son Nur-ad-Din was extremely active when it came to Muslim affairs, referring to his kinship with the Prophet [Trepavlov, 1995, p. 86].

The Muslim priesthood of the Nogai Horde had its own hierarchy which still cannot be decoded. It should be emphasised that Mullah

Dervysh-Aley (Ali) was called 'our great person' and 'kind person' in the message of murza Urak dating back to 1537 [Treppavlov, 2001, pp. 192, 203], which means he was marked out among other representatives of priesthood. Probably status differences between them were connected with their participation in state affairs: sheikhs, hajiis, and sufis played the part of ambassadors, some khafizis were mentioned while collecting tributes. Particularly, the expression 'Aslatai Abyz set off to military campaigns every year,' featuring in Nogai cases, can be interpreted as raising tributes with the help of military forces [Continuation of Ancient Russian Vivliofika, 1801, p. 225; Acts, 1914, p. 196]. The clergy were also busy with other state affairs. We have already seen the ambassadors sent to Moscow, ambassador-sayyid. As a rather developed management system took place in the Nogai Horde, priests took up posts of officials rather frequently—the abyzes (khafizes), who were called clerks in Russian sources, and bakshis, who were called the same way (it was noted that mullahs could also be bakshis) [Kochekaev, 1988, pp. 42–43]. Various activities of the priesthood, including state officials, required a certain level of literacy. What is more, while the mullahs acted as bakshis, the sheikhs, hajis, and sufis acted as ambassadors [Ibid., pp. 20, 35, 72, 76, 79, 131–132, 249–250]. In 1490 ambassador of Nogai Tsar Yebelek Yemenekov called Kutluk (Kutlu)-sheikh (shiik, sheik) was also mentioned. Some of the khafizes drew attention to themselves during military campaigns [Ibid., p. 203]. We should also add that the charters of murzas and princes of the Nogai Horde, dating back to the 16–17th centuries, were written in the language which is different from the modern Nogai language. This language was marked as the Tatar language in the period when these papers were received in Moscow [Ibid., p. 22]. It is evident that the presence of literate people in the state meant the organisation of educational process in the Nogai Horde, but unfortunately, no evidence of this sort has been uncovered.

The specific feature of the Nogai Horde was the dispersion of power among several murzas who were the owners of uluses subordinated to

them. Every murza had his own administration that was similar to the prince's one. The clergy were spread in the same way. In addition to evidence on Tinbai-sayyid being next to Tin-Aley murza as his 'sheikh,' there is other data in this respect. For example, Urak murza calls mullah Dervysh-Aley 'his person.' There is a following remark below the charter of Tin-Aley (1550) mentioned above: 'written by Tin-Ali, murza's afyz Tau-Cherkes Afyz.' Ismail (Smail) sufi (*sufui*) was mentioned among 'his people' in the message of murza Musa (1490). In 1508 murza Mamai (Shikh-Mamai)'s person Kurman (Kurmai)—haji (*hoja*) came from him as a messenger. In the charter sent by murza Kasai to Moscow (1549) khafiz (*afyz*) Davlet Yar was called: 'my imeldyash.' Khafiz (*afyz*) Kantugan was defined as 'his person' in the charter of Yusuf-murza sent to the same place a year later [Iskhakov, 1997a].

Apparently, there was a mechanism of interaction between priesthood being in uluses and the central authorities headed by the sayyid. There has been no answer to this question yet.

The presence of sheikhs in the Nogai Horde is evidence of the spreading of a definite Tariqa there—no doubt, this was the Yesevi Tariqa. Of the same nature are constantly emphasised ties between the Manghit nobility and Baba Tukles (Baba Tukty Chashli 'Aziz), who was a legendary figure and most likely was an associate of sayyid-Ata, islamiser of the Jochid Ulus. Sadr-Ata himself was one of the successors of Ahmed Yesevi (through Khakim-Ata, Zangi-Ata) (this complicated problem was covered in the works by [Iskhakov, 2011, pp. 61–66]). Moreover, in the chronicles of Kokand historian of the 19th century Avaz-Muhammed 'Attar Khukandi 'Tarikh-i Jakhani-numai' Baba Tukles (Baba Tukty) exactly features as a 'saint' (*buzurg*) of the Manghit clan while denoting the list of feasts of famous Turk tribes. It may be assumed that Yesevi Tariqa in the Nogai Horde maintained its positions until the second half of the 16th century. Later the situation around the tariqa dominating in the Nogai Horde could change, but this issue requires a further examination.

The Crimean Khanate. The Crimean Ulus of the Golden Horde had been a significant

Muslim centre by the late 14th century, and until the Girays started ruling in the Crimea its capital called Solkhat, abundant in governor-generals of the Sarai khans, was the centre of spreading Islam. There were loads of mosques, dervysh cloisters, and madrasas [Fisher, 1978, p. 3]. According to the yarliqs dating back to the late 14th century, the following leading groups of Muslim priesthood were known in the '*Crimean tumen*': '*kazi-muftis, sheikh-mashaykhs*' are mentioned in the yarliq of khan Tokhtamysh (1381–1392), '*kazi-muftis, mashaykh-sufis*' were mentioned in the edict of Temür-Kutluk (1397–1398) [Iskhakov, 1997a, p. 73]. The same groups of Muslim priests are mentioned in the yarliqs of founder of the Crimean Khanate Haji-Giray. The Crimean nobility realised its connection with Islamic community rather well. Particularly the message of beklyaribeg Eminek-bey Shirin from the Crimea addressed to the Turkish sultan and dating back to 1476 notified him that they had been attacked by the 'unfaithful' (that is Orthodox inhabitants of Moldova), while returning after their military campaign in Moldova [Nekrasov, 1990, p. 46]. It is evident that the definition 'unfaithful' is a result of setting of Christian Moldavians in opposition with the Muslims. The message of the khan of the Great Horde Murtaza, dating back to 1487, contains even a more colourful description of Crimean Khan Nur-Davlet's belonging to the Muslim ummah (he was the ruler of the Kasim Khanate then): '... Gracious lord, you are our support, you always help the Besermyans, you provide the law, you are the direct monarch assigned by God... May your power be great before the Second Coming of Mohammed and his pupils...' Then the khan concludes: '... you live among the unfaithful... Do you really want to live in this land forgotten by God?...' [Collection of the Russian Historical Society, 1884, p. 69].

Rather colourful descriptions of interconnection between Islam and everyday political and domestic life of the Crimean Tatars in the 16th century are given by a historian of the first half of the 16th century. Remmal-hoja who wrote the '*History of Khan Sahib-Giray* (*Tarikh-i Sahib-Giray-khan*)'. That is how he

describes the ceremony of sending the troops of Khan Sahib-Giray from Bakhchisaray against the Cherkeses in 1539: 'The khan left '... his palace wearing ceremonial clothes and holding a sword. He headed in the direction of Mecca, where prayers were said... A crowd of people were singing prayers...' The campaign was estimated as '*gaza*.' Remmal-hoja, who was a participant of this military campaign, says how his people had a rest during this military campaign: 'People set fire everywhere. Some of them were busy with telling stories, the others were singing passages from the Quran, while the rest were saying their prayers'. According to the same source, while preparing for a military campaign against the Muscovite state in 1541, the khan 'was saying prayers in his room all night long... In the morning he said a morning (*sabakh*) prayer (*namaz*)'. When they returned after the Astrakhan military campaign in 1545, there was a big celebration in the Crimea with participation of 'ulems, imams, and khatibs. All of them were saying prayers (examples from [Ostapchuk, 2001]).

In the first half of the 16th century the Crimean Khanate was a developed Muslim state in which Islam penetrated all the aspects of social life. Judging by reserved fragmentary evidence of the population census in 1529 and 1545, there was a large number of mosques, by the way they were divided into small district ones and big ones (*zhamig*). For example, in Caffa in 1529 there were 9 district mosques and 1 big mosque (the same quantity in 1545) in a part of the city called 'Frenk Khisar,' 15 district mosques and 1 big mosque (in 1545, 17 and 2, respectively) in 'Kale-i Birun,' 10 district mosques and 1 big mosque (the same quantity in 1545) in 'Kale-i KHaqq.' It should be emphasised that the population of Muslims in 1545 was about 8,100 people. As for other cities, there was the following situation: there was 1 mosque in the city of Sogdak (in 1529 and in 1545), 2 district mosques and 1 big mosque in the city of Mankup, 1 district mosque (1 district mosque and 1 big mosque in 1545) in the city of Balykly, 1 mosque in the city of Inkirman, 1 big mosque (2 big mosques in 1545) in the city of Kerch, 1 district mosque in the city of Taman [Fisher, 1981–1982]. Un-

fortunately, we do not have any information on madrasa attached to mosques in this period. Nevertheless, the participation of the Muslim priesthood in state affairs, including diplomatic activities related to composing the texts of treaties and agreements, required a rather high level of education. As for the Crimean educational institutions, there is only data referring to the period of the conquest of the Crimean khanate by the Russians in 1783. There were 25 madrasas and 35 maktabas back then. According to I. Aleksandrov, there were 1531 mosques and 21 tekies at that time [Aleksandrov, 1914, p. 212].

There is rather curious information relating to the Kazan Khanate about the Hajj organised by the Crimeans. In 1516 there was a charter of Tsaritsa Azeya among other charters sent to Moscow. She was the mother of Kazan Khan Abdul-Latif, who was in the Muscovite state at that time. She writes: '... And my son Tsarevich Abdyl-Letif...we ask... I want to go to Mecca and our mullahs tell us... I cannot go without my son or husband...'. The same request is contained in the charter of Sultan Bogatyr-Giray [Collection of the Russian Historical Society, 1895, pp. 303, 306]. Although the request itself might have political contents (Kazan Khan Muhammed-Amin was ill at that time), but it goes without saying that the fact of performing the Hajj itself is evidence of the existence of the reality.

Finally, there are the observations of the Dominican monk Deluc, dating back to the first quarter of the 17th century, about the mode of life of the Perekop Tatars [Description, 1879, pp. 473–493]. He reports that they follow the rituals of their religion and say prayers from the Quran, go to mosque 5 times a day... try to force their slaves to adopt Mohammedanism... wrap the deceased in tabu (*tabus*) or put them in a wooden coffin covering their faces with something like a cloth (*kezi*)... The deceased is brought to the cemetery, and a hoja (*mullah*) and his relatives accompany him... [pit] in a hole... saying 'Alla-rakhet-ilya'... throw some handfuls of ground there...put a big stone at the head and at his feet...' When a Tatar gets married to a girl according to the kaben ritual... There must be three witnesses with a hoja...

The hoja puts down the items he promised to give her and writes down the names of the witnesses... Civil suits are regulated with the participation of kadiaskers.' The only non-Muslim element mentioned by Deluc is about the tradition of putting 'branches of trees with colourful ribbons on them and bunches of flowers' in the coffins of dead young girls.

Now let us examine Islamic institutions in the Crimean Khanate. Certainly, first of all, there is the institute of sayyids. Materials about sayyids in this khanate are rather numerous, but they are poorly systematised. First, it is expedient to gain an understanding of the names of sayyids and figure out the sequence of their tenure of office, if possible. However, before that it is necessary to find the answer to the disputable question about the correlation of such notions as 'the high sayyid' and 'the great kadi.' A. Syroechkovskiy believed [Syroechkovskiy, 1940, p. 38] that 'the high sayyid' of the Crimean Khanate was also 'the great kadi' simultaneously. Although sometimes this conclusion suggests itself after the examination of sources, the position of A. Syroechkovskiy cannot be accepted. What is more, his theory according to which the major kadi was called 'the great mullah' or 'dominating over all the mullahs' requires documentary corroboration. Meanwhile, I managed to find only one statement about 'the great kadi' in published sources; moreover, he could hardly be the high sayyid: the charter of Crimean khan Mengli-Giray sent to Moscow (1516) provides the following information concerning giving presents and paying tributes: 'Mullah Aley, my great mullah, dominates over all other mullahs, he is also the great kadi' [Collection of Russian Historical Society, 1895, p. 299]. Although the expression '...dominates over all other mullahs' sounds a bit ambiguous (it is plausible that they mean here his age), it can be assumed that most likely the great kadi and the high sayyid were different posts in the Crimean Khanate, although Sultan-Ali might also originate from the clan of the Crimean sayyids. By the way, the full name of this kadi was Sultan-Ali Abdulgani, and he was considered to be 'the great mullah' [Kolodziejczyk, 2001,

p. 483]. Now let us get back to the issue of the Crimean sayyids.

The charter sent from the Crimea to Moscow on the behalf of Baba-sheikh (shikh) says: '... all the tsareviches, and the sayyid, and the mullah, and all the ulans, and princes, and four Karaches, and all noble men swore an oath' [Ibid., p. 39]. Apparently, the Baba-sheikh mentioned above is a sayyid. To prove this statement, I can provide a fragment of the address of Sultan Mehmed Giray composed in the same year, but a bit earlier than the first document and dedicated to the indicated ceremony of 'giving an oath.' Reporting that the Grand Prince of Moscow ordered to administer the oath, the sultan enumerates the names of a big number of noble men of the Crimean Khanate beginning it with Baubek-sayyid [Ibid., p. 33]. Basically, names '*Baba*' and '*Baubek*' are rather close (Baba is a short form of Babak and Baubek and Baubekh). There are other reasons for considering that Baubek-sayyid and Baba-sheikh are the same person. The name of Ghazi-Muhammed-sheikhzade (shikh-zody) follows the name of Baubek-sayyid in the list of names attached to the address of Sultan Mehmed Giray [Ibid.]. That was exactly the name of Baba-sheikh's son. Moreover, the names of Baba-sheikh and Baubek-sayyid never feature together in documents.

The special position of Sayyid Baubek (he is also Sheikh Baba) in the Crimean Khanate can be traced back in several documents. First, in 1508 Sultan Muhammad-Giray calls him in the following way: 'the pilgrim of my father' [Ibid.]. This construction, which seems to be strange at first glance, should be decoded as 'my father's old pilgrim.' In fact, Khan Mengli-Giray calls him 'Baba my shikh' in 1508 [Malinovsky, p. 132]. Second, diplomatic papers are evidence of the special status of this personality in the Crimea. One of Baba-sheikh's messages addressed to the Grand Prince Basil in Moscow was quoted above. Another charter was sent to Moscow in 1509 on his behalf. It contains the following phrases: '... I am your (Basil's.—*D. I.*) pilgrim... I am helping you with my matchmaker Mahmedsha' [Collection of the Russian Historical Society, 1895, p. 79]. The reply message of the Grand Prince

of Moscow addressed to Baba-sheikh (1509) says: '... and we want to have good relations with you and treat you with distinction' [Ibid., p. 80].

Some sayyids were at the courts of sultans in the early 16th century. The message of Sultan Ahmat-Giray, dating back to 1509, is evidence of this fact. It says: 'There are ulans, and princes, and good sayyids' [Syroechkovskiy, 1940, p. 28]. Naturally, these sayyids were not the major ones.

There is no other data on sayyids in the Crimean khanate until 1516. However, in 1516 in the charter of Mehmed Giray to Moscow, concerning sending of gifts by the Grand Prince of Moscow to the Crimea, the names of Mansur-sayyid and Baba-sheikh's son Naur-llo (he was called more accurately 'Nasyr-Ollog' in another document) were mentioned [Syroechkovskiy, 1940, pp. 28, 161]. Apparently, Sayyid Baubek had not been alive by that time. Nevertheless, it is complicated to answer the following question: from whom did he inherit the superior religious power in the khanate. On the one hand, sources bear witness to the high position of Sayyid Baubek's son Nasyr-Ollokh-Sheikh [Ibid., pp. 161–162; Malinovsky, p. 258]. Particularly, Nasyr-Ollokh-sheikh was called the 'initial sheikh' in the charter of Mehmed Giray about 'pominki' in Moscow (1515), and his name precedes the one of Yabach-sultan on the list of elites [Syroechkovskiy, 1940, pp. 161–162]. Further it is noted in the message of Moscow diplomat in the Crimean Khanate I. Mamonov (1516) that during his reception the Crimean 'Khan Mehmed Giray hosted his son Alp-tsarevich and Sur-Alla (the corrupted variant of Nasyr-Olla—*D. I.*) shikh Baba, and Abdel-Al-shikh, and Azbyak tsarevich, and Mamysh ulan Sarman, and Abdyla ulan, and Azika prince, and Davlet-Bakhty Baryn, and Bakhteyar murza, and Assan murza (Temir's son)' [Collection of Russian Historical Society, 1895, p. 280]. It is evident that Nasyr-Ollokh-Sheikh features among the elite of the Crimea. However, according to Khan Muhammad-Giray, the statuses of sayyid Mansur and sheikh Nasyr-Ollokh were identical: in 1516 he gave them equal wages be-

ing tantamount to 2 'pominkas' [Ibid., p. 299]. That is why it is reasonable to talk about the high status of sayyid Mansur. For example, report of Moscow envoy V. Shchadrin from the Crimea (1518), talking about his audience with Crimean Khan Muhammad-Giray, says: '... the tsar ordered... to the grand prince and there were Agysh prince, Azika prince, Mansyr sayyid, Apak and Khalil prince, Mamyshtulan, Mamysht Checheut, Abdullah ulan, Yapancha prince, Memesh murza were sitting on the other side' [Ibid., p. 500]. The document shows clearly that Sayyid Mansur was among the elite of the khanate. Sources make the situation even more puzzled in 1519. First, 'Defter' attached to the great charter of the tsar (apparently this involved the sending of gifts, that is why the list of names of nobility was attached) begins with the names of 'Gazy sayyid' and 'Bilat (Bilal) sayyid' [Ibid., p. 636, Malinovsky, p. 258]. Apparently, the first one is 'Ghazi-Mahmed' sheikhzade, Sayyid Baubek's son. Thus, there were only several people who could be the headman of the Crimean priesthood. However, only one of them could take up this post.

I think this was the Sayyid Gazy (Ghazi-Muhammed). I will now list some arguments in favour of this point of view. It is illustrative that the name of Gazy-sayyid comes first in the appendix attached to the 'great' charter of Khan Mehmed Giray (1519). The content of the message of Gazy-sayyid, addressed to the Grand Prince Basil (1519), is definitely similar to the one of the analogous message of Sayyid Baubek (1509): '... tsar of the Great Horde Mahmed-Giray passes a bow to his brother the tsar of Russia Basil Ivanovich through Gazy sayyid. We wish well-being to both our tsar and you as his brother, our pilgrims say prayers so that you feel good' [Collection of the Russian Historical Society, 1895, p. 654]. It is worth noting that there is a fragment indicating that Gazy-sayyid took part in the procedure of swearing an oath in the quoted message: '... and swore an oath in front of your servant Ostap and now both rulers maintain good relations' [Ibid.]. It is the absence of similarity between the charter of sayyid Baubek and reference to swearing an oath, in

the simultaneous message of sayyid Mansur, that eliminates the possibility of the fact that Mansur could take up the post of the headman of priesthood in the Crimea [Ibid., p. 655]. Traditionally, the sayyids who headed clergy took part in the oath ceremony, and that is why this moment is especially noteworthy. Finally, as is evident from the charter dating back to 1508, Gazy-Muhammed was the pilgrim of Sultan Mehmed Giray at that moment, while Gazy-Muhammed's father Sayyid Baubek was considered to be Khan Mengli-Giray's pilgrim, who was his father [Ibid., p. 33]. It is quite acceptable that after Khan Mengli-Giray and Sayyid Baubek had died, the pilgrim of the new khan had more chances to take up the post of the headman of the priesthood.

The next mentioning about the sayyids in the Crimea can be found in a rather interesting document called 'The example of defter. And sultans, and sayyids, and shaykhzades, and mullahs, and ulans, and princes and murzas.' A. Malinovsky dated it back to 1524 defining it as 'The list of names of Crimeans tsareviches, princes, murzas, and different officials, who swore an oath to Prince Ivan Vasilyevich and with Prince Saidet-Giray in front of the envoy O. Andreev' [Malinovsky, p. 258]. The document began with the names of the following sayyids: 'And this is the master of the great teachers: Sayyid Saltan-Ali's brother Mansur sayyid, Sayyid Saltan-Ali's son Kurtka sayyid, Baba shaykh's son Nasyr-ollog shaykh, Mullah Abdyl-Rakhman's son Baba-shaykh mullah, Alyadin kady Sayyid Gazy's son, Sayyid murza Farsei Bilyal's son Sayyid Khydyr.' All the enumerated people were sayyids by origin, which is evident from their titles and the epithet 'the master of the great teachers' (most likely Sayyid Khydyr was the son of Bilal (Bilat)-sayyid indicated above (1519), and Abdyl-Rakhman was Azi-Mahmud sheikhzade's son—that is, Gazy-sayyid's son [Collection of Russian Historical Society, 1895, p. 636]. The names of sayyids are followed by the names of sultans, princes, and murzas. Apparently, by 1524 Mansur-sayyid had become the headman of priesthood of the Crimean Khanate because his name was the first on the list. It can be assumed that Gazy-sayyid was not alive at

that time because the defter only contains data about his son Alyadin kady.

Approximately in about 1531–1532 the Crimean Khan Islam-Giray prepared an army for the Grand Prince of Moscow. The list of those who swore an oath to Ivan Vasilyevich begins with Kurtka-sayyid, followed by Musa-sayyid. Ulans and princes are enumerated after them [Shcherbatov, 1786, pp. 501–502]. No doubt Kurtka-sayyid was a personality mentioned on the list dating back to 1524. He was the son of Sayyid Sultan-Aley. It is not quite clear whether he had been the headman of priesthood of the khanate by the early 1530s or not: this period of the history of the khanate is characterised by coups d'etat, which could influence the selection of the high sayyid in this state [Malinovsky, pp. 205–212]. Nevertheless, Kurtka-sayyid could be the major religious official in the Crimea during the reign of Khan Islam-Giray, particularly Sayyid Mansur found himself in the Astrakhan Khanate in about 1531, as it seems to me.

Thus, the names of many sayyids were known in the Crimean Khanate between 1508 and 1531. Some of them were major religious figures in the state (Baubek-sayyid, about 1508–1509; Gazy-sayyid, about 1519; Mansur-sayyid, about 1524; Kurtka-sayyid, about 1531).

There is good reason to believe that the institution of sayyids in the Crimean Khanate existed from the very outset of the state. One of the fragments of the message of Sultan Ahmat-Giray (1518) points to this fact. Reporting about affairs relating to Khozyaka-sayyid, the sultan writes: '... the deceased Khozyak sayyid was the pilgrim of our grandfathers and fathers' [Collection of the Russian Historical Society, 1895, p. 511]. As Ahmat-Giray was Khan Haji-Giray's grandson, the fact of the presence of sayyids in the Crimea in the first half of the 15th century (even if Khozyak (Haji-Ahmed -sayyid was the high sayyid of the Great Horde, is based on historical grounds. Other data confirms this conclusion. In my opinion, the presence of the institution of sayyids in the Crimea in the middle of the 15th century is also inferred to in the Tarkhan yarliq of Haji-Giray, dating back to 1453, which con-

tains the following lines: 'To his great and noble men. To his scientists and major priesthood (muftis).' In this case I used the translation by S. Malov [Malov, 1953, pp. 187–189]. Even if we deal with the list of the yarliq hidden in this text, we can still read there without obstacles the following things: '*...sadat ülviläriñä [unclear word.—D. I.], möfti mödärisläreñä [,] kadi-möxtäsibläreñä [,] möş aix-sufilarıñä...*' A. Kurat is absolutely right translating the term 'sadat' into the Turkish language as 'sayyid' [Kurat, 1940, p. 69]. I think that the initial part of the yarliq contains the same turn of speech as the ones used to denote sayyids on the list dating back to 1524 ('and this is the master of the great teachers'). However, the yarliq of Haji-Giray, dating back to 1459, contains the most detailed information on the Crimean sayyids. It reads as follows: '*...säyid-es-sadatlarıñä, möfti vä mödärisläreñä, kazıy [möxtäsibläreñä], mäşaix-sufilarıñä...*' (this fragment was borrowed from M. Usmanov, who kindly provided me with an extraction of the yarliq kept in the Institute of Oriental Studies of the Russian Academy of Sciences (in detail see [Usmanov, 1979, p. 212]).

At the same time, there is no address to sayyids in some yarliqs of the Crimean khan dating back to the 15th century. For example, the yarliq of Mengli-Gire says: 'mufti-mudarises, kazi-mukhtasibs, mashaikh-sufis' (in the original language: '*möfti mödäricläreñä, kazi-möxtäsibläreñä, mäşäix sufilarıñä*') [Berezin, 1872, pp. 1, 4] The close expression, 'Kazi-muftis, mashaikh-sufis' (in the original language: '*kazi möftiläreñä mäşäex sufilarıñä*') is contained in the yarliq of the same khan dating back to 1468 [Ibid., pp. 10–11]. And in the early 16th century one of Khan Mehmed Giray's yarliqs (1517) contains the same turn of speech: 'kazi-muftis, mashaikh-sufis' [Ibid., p. 17]. Nevertheless, there were still sayyids in the khanate at that time. They were mentioned in the yarliqs from time to time until the early 17th century not accidentally. Particularly the yarliq of Khan Salamat-Giray (1608) contains an address to 'sadats (that is, sayyids—D. I.), muftis, mudarises, kazi-mukhtasibs, mashaiks-sufis' [Firkovich, 1890, p. 57]. The author of this work is absolutely right

translating the term 'sadatlar' as 'sayyids.' This fragment looks in the following way in the source language: '*vä sadatlarıña vä möfti vä mödärrislärenä vä kazi möxtäsibläreñä vä mäşäex sufılarıña.*'

There is data (although it is rather poor) about marital ties of the Crimean sayyids. This data throws light upon the position of the sayyids among the Crimean elite. In 1507 Babaka (Baubek)-sayyid was called Mengli-Giray's son-in-law [Kolodziejczyk, 2011, p. 483]. Apparently, his son-in-law was married to Prince Magmedsha's daughter. He calls him the father of his son-in-law in a document dating back to 1509 [Collection of Russian Historical Society, 1895, p. 79]. The prince mentioned above belonged to the Kipchak clan [Syroechkovskiy, 1940, p. 27; Collection of Russian Historical Society, 1895, p. 80]—that is, one of four clans of Karacha-beys in the Crimea—and was an ambassador of Khan Mengli-Giray (1508) [Malinovsky, p. 397]. Apparently, the mentioned kinship ties between the Crimean sayyids were traditional because Prince Magmedsha's son Prince Salimsha wrote in 1515 that he was going to marry off his daughter to the daughter of Baba-sheikh (Baubek-sayyid) [Collection of Russian Historical Society, 1895, p. 72]. The Crimean sayyids of the khanate became related not only with certain clans of karacha-bays but also with the ruling Giray dynasty. Particularly, the report about the wedding of sultan Ahmad-Giray and Sayyid Khozyak's daughter (that is Hadji-Ahmed, the high sayyid of the Great Horde) refers to 1518 [Ibid., p. 511]. The provided materials confirm the high status of the sayyids in the state. It is not surprising, in this situation, that all Muslim clergy was considered to be an integrated part of the ruling elite.

Finally, the issue of substituting the term 'sayyid' in the Crimea for the notion 'mufti' is noteworthy. Judging by available documents, the inhabitants of the Crimean Khanate preferred to use the traditional notion 'sayid' until the 1530s. True, the yarliq of Khan Saadet-Giray, dating back to 1522–1523, containing the address to 'mufti-mudarises and kadi-mukhtasibs' [Grigoriev, Yartsov, 1844, p. 340], seems to be at variance with this conclusion. Nev-

ertheless, first, the authenticity of this yarliq is under question, second, 'the oath charter' of the same khan, dating back to 1525, contains the expression 'the leading sayyid' [Malinovsky, p. 417], being evidence of the major role of this notation in state life. It is evident from the work by V. Smirnov that in the late 16th century–early 17th centuries the term 'mufti' became more frequent in the Crimea, although in some cases indirect forms of the old notion 'sayyid' were still applied (for example, the expression 'sadatlaryna' in the yarliq of Salamat-Giray, dating back to 1608) [Firkovich, 1890, p. 57]. V. Smirnov, enumerating the names of some people belonging to 'the dynasty of sheikhs' in the Crimea, notes one of them—Afif-Eddin-efendi (he lived after Sheikh Ibrahim, who died in 1593) whose son was a mufti in the city of Caffa, but after that 'he indulged in religion in his own cenobitic monastery in Sayyid-ile village near Caffa' [Smirnov, 1913, p. 153]. The fact that the former mufti lived in a village with such a specific name is evidence of the fact that the Crimean muftis used to be called sayyids. Consequently, the switch to a new term took place between the second half of the 16–early 17th centuries and was related to reinforcement of the influence of the Ottoman empire and the subsequent Turkification of the Crimean Khanate. Indeed, after Mehmed Giray II (1577–1584) had been removed from the khan's throne, and new Khan Islam Giray II (1584–1588), spending several years in Turkey in the dervysh cloister, had been assigned by the Turkish sultan, the status of the ruler of the Ottoman Empire in the Crimea was officially recorded for the first time: the name of the Turkish sultan was pronounced in khutba before the one of the Crimean khan [Nekrasov, 1999, p. 55; Kolodziejczyk, 2011, p. 106].

Sayyids in the Crimea took part in state affairs just like in the Kazan Khanate, which is evident from the so called 'oath' charters. The earliest one mentioning their participation in the oath ceremony of sayyids refers to 1508. The project of the charter, arriving from Moscow but composed on behalf of Khan Mengli-Giray, says: '... tsareviches Yamgurcha, Mahmet-Giray, Ahmet Giray, and all the sayy-

ids, and mullahs, and Baba-sheikh, and Prince Sakal, ulan Mamysh, and ulans, and princes, Prince Manghit Tevekkel, Prince Zizivut Mamysh, Prince Kourat Suleyman, Prince Yugona, and voivodes, Prince Shirin, Prince Agish, Prince Baryn Devlet, Prince Arghyn Mardan, Prince Kipchak Mahmud, and all the princes, and voivodes, and murzas... put their hand on the Quran and swore an oath' [Malinovsky, p. 185]. Another charter project, dating back to the same year but prepared on behalf of Sultan Mehmed Giray, says: '... ordered to administrate the oath... the first Baubek sayyid, Gazy-Mahmed shikh-zoda, Dovlet ulan, Shimak ulan, Murtoza ulan, Baku ulan, Devlet-Yar prince, Tyuvikkel murza, Kudoyar prince, Udyum murza, Soltan Mahmed murza, Ahmed murza, Beryu murza, Kuchelek murza, Mahmutek atalyk, Chibelek prince, Shigalak prince, Beryuchey prince, Temesh prince, Chura atalyk, Begich atalyk, Baubek duvon, Beg-Balak bakshi, Mami prince, Yamgurchey atalyk, Kobech ulan, Tokuz ulan, Tishkuvat ulan, Asan ulan, Abdylah prince, Churash murza, Cherik bogatyr, Uluk-Berdi murza, Oysul murza, Mamysh bogatyr, Yan-kara, Ak-Derbysh, Kabak printer, Buruntai, Kudai-berdy murza, Kudai-bakty bogatyr, Bakty bogatyr, Duulat-sufi bogatyr, Baba atalyk, Adna atalyk, Smerdiyar prince, Kokaz bogatyr, It-Bakmas bogatyr' [Collection of the Russian Historical Society, 1895, p. 33]. The fact of swearing an oath in 1508 was confirmed in the message of Baba-sheikh (sayyid Baubek) addressed to the Grand Prince Basil: '... Mahmed-Giray, and all the tsareviches, and we (italicised by us.—*D. I.*), and the sayyid, and the mullah, and all the ulans, and princes, and four Karaches, and all the noble men were swearing an oath' [Ibid., p. 39]. In 1513 (most likely 1515, as the initial dating contains mistakes) Khan Mehmed Giray was granting an oath in front of Russian envoy in the Crimea O. Andreev. The oath contains the following lines: '... no force, no attack, no robbery, no mean tricks can be caused by me, your brother, and my brotherhood, my children, my tsareviches, my sayyids, and ulans, and princes, and all our people...' [Malinovsky, p. 406]. The process of preparing this document unveils the membership of future partic-

ipants of the oath ceremony. On 10–24 June 1516 the project of the document addressed to 'Mahmed-Giray, Khan of the Great Horde' was sent from Moscow to the Crimea. The text said: '... you wrote to us (to Moscow.—*D. I.*)... you ordered to compose an oath charter, and we found you and your brotherhood, and your children, and sayyids, and ulans, and all the princes so that you could impose us (the Grand Prince of Moscow.—*D. I.*) your orders' [Collection of the Russian Historical Society, 1895, p. 317]. It can be assumed that the same oath is discussed in 'Memory,' dating back to the period between 1 November 1515 and 26 January 1516, given to Russian envoy I. Mamonov in Moscow. It comes to the fact that I. Mamonov had to give the following message to Khan Mehmed Giray: '... and in that oath charter in front of our boyar... Ivan told us the truth with his brothers, and his children, and all the sayyids, and ulans, and princes...' [Ibid., p. 194]. The envoy was told that actually it was said at the end of those ('oath.'—*D. I.*) charters that the tsar himself, and his brothers, and his children, and Shyryn, and Baryn, and Arghyn, and Kipchak, and sayyids, and ulans, and all the princes were at the head' [Ibid., p. 211]. In connection with the fact that the project of the oath was not approved in Moscow and was not signed, a 'parcel' for Khan Mehmed Giray was sent from Moscow to the Crimea (31 August–16 September 1518), which raises the issue of the charter again: '... ordered to compose an oath charter... and ordered to attach his scarlet tamgas to that charter... and he, and his brother Tsarevich Ahmet, and his children, and Tsarevich Bagatyr, and Tsarevich Alp, and other brothers, and his children, and sayyids, and ulans, and princes were at the head' [Ibid., p. 532]. The final form of the charter requiring so many efforts said: '... And there will not be any kinds of duties; no force, no attack, no robbery, no mean tricks can be caused by me, your brother, and my brotherhood, my children, my tsareviches, my sayyids, and ulans, and princes, and all our people' [Collection of works, 1894, p. 81]. As we can see, the sayyids feature in treaties and agreements in all cases.

In some cases the conclusion of such treaties was dated to Muslim celebrations: 9 De-

cember 1519, sultans, ulans, and princes had to gather on the occasion of the Kurman holiday [Syroechkovskiy, 1940, p. 40].

It is evident from these documents that permanent participation of sayyids in affairs related to signing oath charters can be traced back rather clearly. It is also obvious from the oath charter brought by Russian envoy O. Andreev from the Crimea in 1524. The list of people taking part in the oath procedure has already been quoted by me. It began with the sayyids [Malinovsky, p. 241]. The common formula applied to documents during this procedure remained unchangeable. The sayyids are certainly mentioned among the participants of the oath ceremony in the front lines. Let us provide some examples in this respect. After Khan Saadet-Giray had been removed from the throne by Islam-Giray in 1524 and restored again in a year, he had to grant a new oath to Russian ambassador I. Koluchev in 1525. The charter composed on this occasion contained the old formula: '... no force, no attack, no robbery, no mean tricks can be caused by me, your brother, and my kalga sultan, and my brotherhood, my children, and other sultans, and sayyids, and ulans, and princes, and all our people...' [Ibid., p. 417]. When Islam-Giray was restored in the throne for a while in 1531 or 1532 [Shcherbatov, 1786, p. 521], a new oath of the khan and Crimean elite appeared in Moscow. It said: 'They created a company: Kurtka sayyid, Musa sayyidm Bashi ulan, Murtoza ulan, Azikalil ulan, Keldish ulan, Yanchura ulan, great Karach our Bagyrgan prince, Baryn Yan-Ali prince, Arghyn Mahmud prince, Baryn Yan-Osman prince, Mahmed ulan, Ahmadulla prince, Abdyl-Islam prince, Yanbulat prince, Altych prince, Aldyyar prince, Dana afyz our bakshi, Temesh prince, Nekhosh prince, Kholon pash afyz, Yainysh duvan, all the ulans and princes... were swearing an oath...' [Ibid., pp. 501–502]. 22 November 1531 Khan Saadet-Giray swore an analog oath to Moscow. The charter prepared on this occasion indicates: 'And your ambassador will come to see me, and he will attend me personally. And there will not be any kinds of duties; no force, no attack, no robbery, no mean tricks can be caused by me, your brother, and my brother-

hood, my children, my tsareviches, my sayyids, and ulans, and princes, and all our people.' Then the following information featured in the document again: '... I, Saadet-Giray and my Kalga Sultan Devlet-Giray and other sultans, my brothers, and my children, and our sayyids, and ulans, and princes were swearing the oath' [Malinovsky, pp. 259, 419].

It is not coincidental that Crimean Khans Mengli-Giray and his successor Mehmed Giray were trying to restore their influence on the sayyid of the Great Horde (most likely he was the high sayyid) Hadji-Ahmed. Certainly he was an important element of the statehood of the Great Horde, destroyed by the Crimean Khanate. The high sayyid of the Crimean Khanate relied on the priesthood, which was rather variegated and integrated with state machinery. Sheikhs headed by 'the major sheikh,' sheikhzades (shikhzodes, shaykh-zodas), kazis (kadis), mullahs, khafizes (afyzes), hajis (azeys), sufis were an integral part of priesthood headed by the sayyid [Malinovsky, pp. 185, 397, 419; Collection of Russian Historical Society, 1895, pp. 33, 39, 79, 161–162, 172, 280, 300, 412–415, 500, 511, 654, 655; Shcherbatov, 1786, pp. 501–502; Complete Collection of Russian Chronicles, 13, 1965, p. 10; Grigoriev, Yartsov, 1844, pp. 337–346; Berezin, 1851]. It is hard to say whether the term 'kadi' (kady) is used in singular or plural form. The yarliqs of Khans Hadji-Giray and Mengli-Giray contain the mentioning of muftis, mudarises, and mukhtasibs (1453, 1459, 1467, and 1468) [Berezin, 1872, pp. 1, 11; Kurat, 1940, p. 69]. Muftis also feature in the yarliqs of Khans Mehmed Giray (approximately 1517) and Saadet-Giray (1522–1523) [Berezin, 1872, pp. 17; Grigoriev, Yartsov, 1844, p. 341; Berezin, 1851, p. 21]. Mudarises and mukhtasibs are mentioned in the last document [Grigoriev, Yartsov, 1844, p. 341; Berezin, 1851, p. 21]. It should be emphasised that the yarliq of Saadet-Giray can be a later copy. However, the given yarliq looks like the tarkhan yarliq of Hadji-Giray dating back to 1453. As for the groups typical for other khanates, only the data on dervishes was not discovered in the Crimea. It should be especially emphasised that the list of representatives of

the priesthood, contained on the work by I. Aleksandrov, most likely reflects the situation of the 18th century, and not an earlier period.

Some branches of Muslim priesthood existed in the khanate since its foundation. This concerns not only kadis, mudarises, and mukhtasibs but also sheikhs and sufis, for example. As I have already shown, sheikhs were mentioned along with sufis in the khan's *yarliqs* dating back to 1453, 1459, 1567, and 1468. Other groups of the priesthood (*muf-tis*, *mudarises*, *kazis*, *mukhtasibs*, *maulyans*, *khafizes*) had definitely existed in the Crimea by the 15th century. Particularly, Mullah Bairamshah and Khafiz Ahmad composed the *yarliq* of Mengli-Giray dating back to 1467 [Usmanov, 1979, pp. 32–33].

A whole range of religious figures took up state posts in the khanate. For example, sheikh Abdyl-Gair's son Abdel-Avel-sheikhzade (afterwards sheikh) was a 'tet' in the beginning (1508–1509) and then he turned into 'the major ambassador of the tsar' at the court of Khan Saadet-Giray (1531) [Complete Collection of Russian Chronicles, 13, 1965, p. 10; Malinovsky, pp. 397, 419]. Dana-khafiz was a *bakshi* in the 1530s [Shcherbatov, 1786, pp. 501–502]. Imer-khafiz was a 'mamich' of Sultan Ahmad-Giray (1518) [Collection of Russian Historical Society, 1895, p. 511].

O. Aqçoqraqlı provides data on two sheikhs who arrived in the Crimea 'from Bukhara' and were buried near the chapel named after Saint Ghazi-Mansur [Aqçoqraqlı, 1928, pp. 170–172]. As for the latter, it is plausible that Edigu's son Mansur, whose offspring played an important part in the Crimean Khanate, is meant here [Syrpoyechkovsky, 1940, pp. 32–34]. Other data testifies that there was a dynasty of sheikhs based on 'the natives of the Kipchak steppe.' Its founder lived in the middle of the 16th century [Smirnov, 1913, p. 153]. Since in the above we are talking about sheikhs and sayyids coming from Bukhara, it is plausible that representatives of Yesevi Tariqa should be meant under them. As for the initial domination of Yesevi Tariqa in the Crimean Khanate, Ottoman historian Abd al-Gaffar Kyrimi has interesting data in this respect. Discussing the role of Edigu's offspring in the Crimean khan-

ate, he provides the name of Baba Tukles as the forefather of the Manghit bey in the sixth generation in his work called 'Umdet al-akhbar,' dating back to the 18th century. Then when he gives an account of events related to Khan Uzbek's going over to Islam and calls Sheikh Maj ad-Din, 'the greatest one,' who was the grandfather/ancestor of 'the famous scientist, Saint Sayyid Yakhi,' who belonged to Ali's clan, as well as Baba Tukles who was the ancestor of sheikh Najib ad-Din, sheikh Ahmad, offspring of Muhammed-i Khanafiya-i Alaviya, and Sheikh Khasan Kurlani (Gurkani), among four saints who led the khan to the Islamic throne [DeWeese, 1994, pp. 358–359]. Analysing this list, Devin DeWeese mentioned that the appearance of the name of Sayyid Yakhi Shirvani (who died in 1463 or 1465) among the saints who was an important link—the founder of Sufi Tariqa Khalvatiya taking place in the 17th century in Ottoman Turkey, is evidence of the appearance of this tariqa in the Crimean Khanate [Ibid., pp. 361–362]. As this composition contains distinct traces of Yesevi Tariqa (Baba Tukles, sheikh, sayyid Ahmed—that is, Sayyid-Ata), this is evidence of the change of the leading tariqa in the Crimean Khanate taking place at the turn of the 16–17th centuries. It is still unclear if this process affected the Nogais, who had become an integral part of the khanate by the 17th century.

One more Muslim institution functioning in the Crimean Khanate was represented by *kadylyks*—judicial districts headed by kadis who were subordinated to the *kadiasker*, appointed by the Ottoman sultan [Fisher, 1978, p. 21]. The origins of this institution are not quite clear, but V. Syroechkovskiy expressed his opinion in his time, according to which the high sayyid of the Crimean khanate was the great *kadi* simultaneously [Syroechkovskiy, 1940, p. 38]. Basically that is possible, but *kadiasker* and *mufti* (this is the transformed high sayyid of the khanate) were different posts in later periods, particularly in the 18th century [Fisher, 1978, pp. 77, 96–97]. Probably their discrepancy appeared in the Crimean khanate after 1475, after the Ottoman protectorate had been established there. Nevertheless, it is also plausible that *kadiaskers*

were selected from among representatives of the sayyid clan, otherwise a religious figure who used to be a kadiasker could hardly be assigned to the corresponding post after the death of the Crimean mufti in 1791 [Ibid., p. 96]. As for this institution, there is information dating back to 1783 about the division of the Crimean Khanate into kadylyks, united in larger districts called kaimakanstvos (apparently due to the Turkish influence). It is obvious from them that there were 6 kadylyks in Bakhchisaray kaymakanstvo, 9 kadylyks in Akchemet kaymakanstvo, 9 kadylyks in Karasubazar kaymakanstvo, 5 kadylyks in Gezlev kaymakanstvo, 7 kadylyks in Caffa kaymakanstvo, 5 kadylyks in Perekop kaymakanstvo [Bushakov, 2000, pp. 33–64; Lashkov, 1886; Kameral, 1889, pp. 25–45]. It is clear from them that every kadylyk included a certain number of villages, which varied everywhere. As kaimakans were divided into kadylyks, the names of which coincided with the names of kaimakans (for example, Bakhchisaray kadylyk in Bakhchisaray kaimakan, Karasubazar kadylyk in Karasubazar kaimakan, etc.), we have good grounds for thinking that initially such settlements as Bakhchisaray, Akmechet, Karasubazar, Gezlev, Perekop/Or, and Caffa were centres of kadylyks. It is plausible that these divisions were based on the old divisions into beyliks (princdoms) because if we exclude the city of Caffa belonging to the Ottomans from the list of the cities, there are 5 city centres left (4 old beyliks and later Manghit Yurt). It is not coincidental that A. Fisher, paying attention to theoretical subordination of kadis to kadiasker, noted that 'in reality they were stipulated by requirements and were subordinated to the khan's authorities and clan chiefs of the territories.' Thus, although candidates for the post of kadis were approved by a kadiasker, they were assigned by the khan and clan chiefs [Fisher, 1978, p. 21]. However, in general, this institution served as the reinforcement of the influence of the Ottoman sultans in the Crimean Khanate. It is curious that the transformed post of kadiasker in the Crimean-Tatar society existed up to the late 19th century [Ibid., p. 98].

Tyumen and Siberian Khanates. Some historians believe that there were semi-independent possessions headed by separate branches of the Shibanids Dynasty within Shibanid state (it was also called 'The State of Nomadic Uzbeks') existing between 1428/29–1468/69. One of these branches was represented by the offspring of Siberian Khan Haji-Muhammed, whose possession had a political centre in Chimgi-Turu (Tyumen) after 1446. It used to be the capital of the Shibanid state. The Shibanid state, collapsing after the death of Khan Abu'l-Khayr in 1468–1469, was restored as the conglomeration of the Shaybanid possessions, functioning as the head, the chief ruler selected from amongst the 'Uzbek sultans' belonging to the Shiban clan. Capital centres of these enormous dispersed possessions could be at different places (in Balkh, Bukhara, Samarkand) depending on which of the Shibanids was elected to become a new superior ruler of the Uzbeks. The centre of power in these possessions gradually moved to Bukhara—the capital of Bukharian vilayet, especially under Iskander (1561–1583) and his son Abdullah (1570–1598).

It should be emphasised that 'Uzbeks,' headed by the Shibanids, had a nomadic way of life even in the early 16th century, going away to the steppes of Desht-i Qipchaq, occupying the territory of the region of the Urals and Western Siberia, and they seem to have left only in 1505–1506, probably even in 1511 [Klyashtorny, Sultanov, 2000, pp. 210–211]. This specific feature of political life of the Shibanids must be recalled because their Siberian branch was also noted in the historical realities mentioned above. That is why the issue of Muslim institutions in the Shibanid Siberian possessions must be considered in the common historical-cultural context of the functioning of analog institutions in the Shibanid state of Khan Abu'l-Khayr and the Shibanids' possessions in Central Asia, appearing after its collapse, first of all, in Bukharian and Khwarezm 'vilayets.'

The Shibanid state was a Muslim state from the very beginning, and the major ruler of nomadic 'Uzbeks' Khan Abu'l-Khayr was a real Muslim: 'Sharaf-nama-yi shakhi' (*Book of*

Shah's glory'), by Hafiz-I Tanysh, dating back to 1570/71–1588/89, reported that he was a real believer, meaning he confessed Islam and he treated with deep sincerity... ulems, muftis, hermits and pious men [Khafiz-i Tanysh, 1983, p. 77]. A great number of proofs of the existence of the sayyid institution in these possessions in the 16–17th centuries can be found in historical composition called the 'Sharaf-name-yi shakhi' and other sources [Iskhakov, 2011].

Sayyids were 'listed' in the general structure of religious figures of the Shibanids' possessions. True, many specific features of the hierarchy of Muslim religious figures in the Shaybanids' possessions in Central Asia remain unfamiliar to us. Only one thing is known for certain: the sayyids had a high position there, even being 'nakibs.' In most cases, they originated from the clan of Sayyid-Ata, as it was shown. The main groups of religious figures in the possessions of Khan Abdullah can be seen in the following example: when Khan Abdullah decided to have his son circumcised, he invited the following people to the festivities on this occasion: Muhammed Islam's son (the son of 'the hodja of the world') from amongst the hodjas, Kalan-hoja makhdum-zade, who became 'the major one in the Hojagan line,' 'noble sheikh ul-islam Khan-hoja' from amongst the sheikhs' [Hafiz-i Tanysh, 1989, p. 186]. Most likely, the last one referred to the sayyids [Iskhakov, 2011, p. 155].

Apparently, the analogue situation could be seen in the Khanate of Khiva in the 17th century. For example, according to 'Firdaus-ul-ikbal' by Munis, dating back to the 19th century, under Bukharian Khan Abdul-Aziz (1645–1680), Arabshakhid Abul-Ghazi-khan (1643–1663), conquering Khiva, assigned 360 'Uzbeks' to different posts, 36 of them were close to him, including: 2 sheikh ul-islams, 2 kazis, 1 reis (the high sayyid?), 'being an offspring of saint Sayyid-ata,' 1 nakib, 1 mutavelli [Materials, 1938, p. 327]. This example shows that 'sheikhs ul-islam,' 'kazis,' and 'reis,' and 'nakib' were different posts in the Khiva Khanate. Although the 'Uzbeks' could have copied the Bukharian Khanate, while establishing religious institutions, we cannot say

this for sure. Nevertheless, the 'Genealogical tree of the Turks' (Şacäräi törek), composed by Abul-Ghazi-khan in 1664–1665, contains a story about 'Nazyr Hodja from the clan of Sayyid Ata,' being in the 'Bakyrangan district.' He was a sayyid, and his daughter was married to the current ruler of Khiva, Ilbars-sultan [ÄbelGhazi, 2007, 203–204 b.].

However, in the Bukharian Khanate, kazis and high sayyids had been different posts for a long time, unlike the state of the nomadic Uzbeks during the reign of Khan Abdul-Khayr. Most likely, the nakibs played an independent role there as well, but they were sayyids by birth. By all appearance, the term 'sheikh ul-islam' was used in the Bukharian Khanate to mean the ruler of the Tariqa. However, sometimes this could be a sayyid by birth, as in the case of Khan-hodja. In particular, in the first half of the 18th century Mir Muhammed Amin-i Bukhari, talking about the beginning of the reign of Bukharian Ubaydulla Khan in 'Ubaidulla-name,' noted that the khan 'delegated great affairs related to the function of nakib' to Ja'far hoja, who was 'an outstanding person among hojas' (he had already taken up this post) [Mir Muhammed Amin-i Bukhari, 1957, p. 43]. However, 'the most important and sacred function of domination in Islamic religion' (that is the position of sheikh ul-islam.—*D. I.*) was entrusted to Muhammed-hoja Juibari, and the post of the judge [of the capital] (the major judge—that is, kazi.—*D. I.*) was entrusted to Emir Shikhabuddin, who had sayyid origins (his father also took up this post, and the source calls him the imam of the major mosque of the capital and 'the prince of the offspring of the Prophet') [Ibid., pp. 44, 293]. A whole range of supplementary posts were mentioned, for example, an a'lim—the major mufti; a military mufti, mudarises, a rais or '*muhim-i rayasat va ikhtisab*'—something like a censor), which are evidence of the presence of branched specialisation among Muslim religious figures in the Bukharian Khanate in the early 18th century. However, the post of nakib, related to the dynasty of Sayyid-Ata, was preserved in the khanate until the early 18th century. The offspring of Sayyid-Ata in the Bukharian Khanate also

took up other posts (for example, in the 18th century Yadgar-hoja belonging to sayyids, offspring of Sayyid-Ata, was 'a prefect of the palace' [Ibid., p. 179]).

Thus, Sufi Islam was spread in the possessions of the Shibanids. The offspring of Sayyid-Ata played a significant part in this. This points to the former significance of Yesevi Tariqa, which started being substituted for Naqshbandiyya Tariqa in the 16th century, to be more precise, for its predecessor Hojagan. Apparently, the existing union of Jakhriya, continuing the traditions of Yesevi Tariqa, gradually started melting into the group of Hojagan. The presence of domination of the Shibanids in the whole range of districts of Kubraviya Tariqa is also not doubted. Apparently, the peculiarities of Central Asian Islam, observed by researchers long ago, must be connected with that [Bartold, 1963b, pp. 302–304; Sukhareva, 1960, pp. 25–27; Gordlevsky, 1960, p. 270; Snesarev, 1969, pp. 52–66].

Although Islam was an official religion in the Shibanid state and its successors and had its Muslim institutions, as we could see, on some remote territories, particularly, in the Ural Region or in Western Siberia, the situation remained more complicated, which can be seen from separate historical narratives, preserved among the Siberian Tatars and the Bashkirs.

One of them, written in two manuscripts in the Tatar language, was discovered and published by N. Katanov [Katanov, 1904, pp. 3–28]. Later A. Bustanov re-edited this text on the basis of the original [Bustanov, 2009, pp. 214–219]. Although this legend has some chronological discrepancies, most likely the main events refer to the time of Khan Shayban, under whom Muhammed Shaybani-khan, the ruler of nomadic Uzbeks is meant. He is represented as the khan of the 'Middle Horde,' whose name can reflect the denomination of the 'Grey Horde' mentioned above by Ötemish Haji. The main chronological outline looks in the following way.

Three 'peoples' had their encampments in the basin of the Irtysh River: the Khotans (the Khanty people's ethnonym of the Siberian Tatars, apparently, from "Khitan"), the Nogais,

and the Kara-Kipchaks. Actually there were five peoples initially—there were also the Ichtyaks and rebels of Tarkhan-khan, but they avoided Islamisation, hiding in either the forest or 'Khyty,' and did not become the 'Tatars.' One of the 'ishans' was the founder of the Naqshbandiyya Order, Bagautdin-hoja (Bakha-ul-khak ua-d-din-shah Naqshbandi. He lived between 1318 and 1389. Hoja Muhammed ibn al-Bukhari (as it is his full name) ordered 366 'horse' sheikhs to come and see the indicated Tatars, who 'did not have the true faith and sincere notions' because they 'worshipped puppets,' offering them 'to confess to Islam.' Then there is talk about the 'ishan,' who ordered the sheikhs to accept the invitations, otherwise 'he would wage a great religious war against them.' When the indicated sheikhs came to the steppes of the Middle Horde to see Khan Shayban, he supported them and 'armed his 1700 heroes and headed... to the Irtysh River with them to wage religious war there.' By that time 'some representatives of the Khotans, Nogais, and Kara-Kipchaks confessed Islam.' All the rest became frightened and adopted Islam as well, under the pressure of the warriors. During the combat the majority of sheikhs and warriors of 'khan Shayban' were defeated, the khan himself went back to 'the people of the Middle Horde,' a small number of sheikhs stayed and they started teaching the bases of religion to those of the peoples of the Nogais, Khotans, and Kara-Kipchaks who confessed Islam.' Further there was talk about the leaving of the surviving sheikhs for 'Holy Bukhara,' and a whole range of data concerning Muslim saints in Western Siberia is provided. This plot has an interesting parallel to the story about the military campaign of Muhammed Shaybani-khan against the Kazakhs in the winter of 1508–1509. On the eve of the campaign the Kazakhs, who had already confessed Islam, were charged with paganism. According to Fazlallah ibn Ruzbikhan, the author of 'Mikhman-name-yi Bukhara', one of its manifestations was 'keeping the image of the idol whom they (that is, Kazakhs—*D. I.*) bow down to the ground' [Fazlallah ibn Ruzbikhan Isfakhani, 1976, pp. 105–106].

No doubt the source under consideration is multilayer. Moreover, the fact that 'honourable Sherpyati,' who was the little brother of two other sheikhs, was mentioned at the end of the story about sayyids among five sheikhs who stayed to teach religion, is also evidence of that [Katanov, 1904, p. 23]. Meanwhile, it is stated that Sherbeti-sheikh lived in the Siberian Khanate under Khan Kuchum (the first mentioning about the sheikh refers to approximately 1572) [Iskhakov, 1997a, p. 1572 ff.].

Nevertheless, there is one more source that allows rechecking of the materials of historical narratives of the Siberian Tatars indicated above. These are the Bashkir narratives related to the tribe of Tabyns, written down by famous Bashkir scientist M. Umetbayev in the 19th century. He reports that the beys of this tribe—Asadi and Shikarali, living in the basin of the Irtysh and Ishim Rivers—fled to the West of the Urals when two khans were battling—that is, *'Ibak'* and *'Shibak'* [Kuzeyev, 1974, p. 282]. The ruler of the Tyumen Khanate Khan Sayyid-Ibrahim (he died in the late 15th century) can be recognised as the first one. As for the second one, most likely, this was Muhammad-khan Shaybani. The veracity of the provided message is increasing due to the fact that the names of Asadi (Asät)-bey and Shikarali-bey were really mentioned in the genealogy of the Tabyn Tribe [Ibid., p. 271]. Moreover, the genealogy of the clan of the Kara-Tabyns contains evidence of the removal of their ancestors from the Irtysh River to the Miass River, and then to the Chulman River—that is the Kama River [Nezergolov, 1985a, pp. 77–87; Nezergolov, 1985b, pp. 119–124]. This event, as it was already stated by me, dates back to the last quarter of the 15th century [Iskhakov, 1998a, p. 89]. The most interesting fact is that G. Chokry, being himself from the clan of the Tabyns and writing down the history of this group and going back to its past, surprisingly notices that 'one can hardly see religion (in this case Islam.—*D. I.*) among them.' He writes: *'Asyl babam Tobol, Irtysh, / Kinarinda bulub irmesh. / Асылда эрми йә чирмеш, / Белемәй диннәре сарпай'*). It turns out that the narratives published by N. Katanov have a grain of truth in them. By the

time of Khan Muhammad Shaybani's military campaign against the Tyumen Khanate, its Turk part had not been completely Islamised. Nevertheless, it should be emphasised that by the late 15th century a part of the population of the Tyumen Khanate had already confessed Islam. '...Some Khotans, Nogais, and Kara Kipchaks confessed Islam'). One more historical narrative, preserved by the Siberian Tatars, can also testify about this fact. This is the folklore composition 'Origins of aul Sala,' which talks about the founder of the village that his name was Sala, and his father was Suleyman-bey/baba (probably 'bey') who came to these lands from Bukhara with Shah-Murad's son Taibug-Bey. 500 people came with Taibuga to the lands of the future Iskir, a mufti and mudarris were among them... The newcomers founded the town of Iskir [Usmanov, Shaykhiev, 1979, p. 91]. In fact, this composition is a part of another large text called the 'Genealogy of saints from Mavara'nnakhr (Ash-shajarat al-awiya min bilad Mavara'nnakhr),' which has been introduced into scientific vocabulary recently by A. Bustanov [Bustanov, 2009, pp. 197–207] and relating to detailed genealogy of the guardians of the Bigach-Ata's tomb near the village of Ulugh Buran (Tyurmetyaki), which will be discussed a bit later. Since the city of Isker existed until 1483, probably the described event refers to the last quarter of the 15th century. Although probably the text of the original, from which a fragment of the history of aul Sala was borrowed, said that 'Taibuga Bey... was the first one who organised a khanate in the Isker Yurt' [Bustanov, 2009, p. 201]. Most likely, this was not the founder of the clan of the Siberian princes Taibugids—Taibug—from the clan of the Burkuts living in the 13th century but another Taibugid living much later (for more information on Taibug, former Temnik under Shiban, see [Iskhakov, 2009b, pp. 66–80]). In this case the narrative also talks about the continuing Islamisation of the Turk population of the Isker Yurt until the late 15th century. Finally, the ruler of the Tyumen Khanate Khan Sayyid-Ibrahim (Ibrahim/Ivak) defines himself as a Muslim in his message addressed to the Grand Prince of Moscow Ivan III (1489).

He claims: 'I am the ruler of the Besermyans' [Ambassadorial books, 1995, p. 19]. It is natural that Shibanid Sayyid-Ibrahim could not help belonging to the Muslim world in the period of his reign, taking into consideration the common situation related to the domination of Islam in the main possessions of the Shaybanids situated in the Central Asia.

The next stage of Islamisation of the population of the Isker Yurt/the Siberian Khanate is related to the period of Khan Kuchum's reign (since 1563) and reflected in Siberian-Tatar historical legends. That is where the first data on the sayyids in this northern possession of the Shibanids appeared. We are planning to examine them now.

Examining the institution of the sayyids in the Siberian Khanate, one should mainly base on historical legends of the Siberian Tatars. Two of them containing important data on the priesthood of the khanate in the 16th century are especially noteworthy. In one of them, which V. Radlov called 'On what Ilyas mullah heard from his father,' talks about the sheikh ul-islam of the Isker Yurt (*Isker Yortınıñ şäex-ul-islamı*) [Patterns, 1872, p. 212; Katanov, 1896, p. 51]. Another legend called the 'Genealogy of a sayyid' (*Säetneñ şäcäräse*) talks about the restoration of genealogical data on sayyids living in Siberia, which were lost during the military campaign of Yermak [Patterns, 1872, p. 217; Katanov, 1896, p. 56; Atlasi, 1997, 75b]. It should be emphasised that 3 more copies of 'Genealogy of a sayyid'/'Shajara Risalasi' were put into circulation by A. Bustanov [Bustanov, 2009v]. These legends are interrelated: if '*Shirbet sheikh*' is the main character of the first legend, the second story is narrated by him (he is called 'Sherbeti sheikh' here). The last legend exactly refers to the time after the death of Yermak (1584), when many participants of described events were alive. At the same time, the story of mullah Ilyas was written down much later—in the 19th century [Patterns, 1872, pp. 217–220; Katanov, 1896, pp. 54–55; Atlasi, 1997, 75–78b]. Hence, there are several alternative versions of the two sources. Nevertheless, in general, events stated in the legends coincide.

The story of Mullah Ilyas has the following plot. When Ahmet-Giray was the khan of the Isker Yurt, the sheikh ul-islam of the yurt died. The khan asked the khan of Bukhara to send a new sheikh ul-islam. The Bukharian khan wrote a letter addressed to the khan of Urgench in response to this request, ordering to send sheikh ul-islam to the Isker Yurt. He sent Sheikh Shirbeti, who had to become a sheikh in the Isker Yurt, accompanied by Mullah Yakup, son of his high vizier (*olı vä-zir*) called Mullah Musa, akhuns, murzas, and servants—500 people in total. All the group stopped over in 'Holy Bukhara' where they were hosted by Bukharian khan with royal honours. Then the last one gave them more people and a troop numbering 1000 people, and they set off for the Isker Yurt. When they came, Khan Ahmet-Giray met them 'granting royal honours to sheikh ul-islam, mullah Yakup, and other mullahs and providing each of them with a post.' In a year Ahmet-Giray khan died, Kuchum became the new khan [Patterns, 1872, pp. 212–213; Katanov, 1896, pp. 51–52].

The second legend known as the 'Genealogy of a sayyid' (*Säetneñ şäcäräse*) says that genealogy of sayyids, lost under Yermak, was restored as heard from 'Sherbeti sheikh and old men.' They said that 'the khan sayyid had come to Isker Khan Kuchum from Urgench to teach the Siberian people about Islam.' Din-Ali hoja has a leading place in the story told by Sherbeti sheikh. It has been noted that therewere imams of the great people in Bukhara (and) Urgench from his clan [Patterns, 1872, p. 217; Katanov, 1896, p. 56, Atlasi, 1997, 76 b.]. As Sherbeti-sheikh claimed Bukharian Khan Abdullah sent him and Din-Ali-Hodja to Siberia accompanied by Kuchum khan's elder brother sultan Ahmet-Giray [Patterns, 1872, pp. 217–218]. N. Katanov made a mistake while translating this fragment: he writes that Abdullah-khan sent them to Ahmet-Giray [Katanov, 1896, p. 67]. In general, this event, taking place in 1572, looked this way.

First, the ambassadors of Kuchum Khan arrived to Bukhara with a request to send 'one more sheikh.' When Khan Abdullah made a decision to send a letter regarding this issue

to 'Urgench hakim,' there was a Bokharan 'hakim' called Mullah Yakub beside him, whom he consulted. Then the letter was prepared for Urgench 'hakim' Khan-Sayyid-Khoja (Khan-Sayyid) with the order to send 'Seyid-zodeh Yarim Sayyid and Sheykhzodeh Sherbeti-Sheikh' to Kuchum. The ambassadors of Kuchum Khan took this letter to Urgench and handed it over to 'hakim' Khan-Sayyid. The letter read as follows: '...According to the decree of muftis and (based) on Sharia..., pass to the ambassador of Kuchum Khan of Siberia... Yarim Sayyid and Sherbeti-Sheikh..., with honour and (providing) travelling expenses, adding 10 good, middle-aged fellow travelers, send them.' When this group reached the city of Isker, the ambassador reported the arrival of the clergy to Kuchum Khan. The latter crossed the Irtysh River with his assistants Irtysh to greet the guests. After that everyone crossed the river to the city of Isker.

Kuchum Khan appointed Yarim Sayyid 'to administer justice and to take decisions' (*hökem kılğalı*). And Sherbeti-sheikh, according to his own words, was engaged into 'making the Tobol saints' pedestals famous.' This phrase can be found only in the version used by Kh. Atlasy. In Tatar it reads as follows: '*Bez, Şärbätü şäex, Tubılda yar Ghazizläär yatkan busagaların bäyan ittek*' [Atlasy, 1997, 77 b.] This fact was confirmed by G. Miller, who stated the following: '...an old sheikh... came from Bukhara to Siberia in the times of Kuchum..., to have the memorials of them (saints.—*D. I.*) written annually. He went about all the cemeteries and mazarets, and in different places showed those 7 saints, mentioning them by their names' [Miller, 1999, p. 13]. Two years later Yarim-Sayyid died, and Sherbeti-sheikh left for Urgench. Nevertheless, a new ambassador arrived from Kuchum Khan with a message from khan that 'there's no man for Sharia teaching and administration of justice, send one seyidzodeh and sheikh again.' History repeated itself: Abdullah Khan considered the matter and gave the order, and 'hakim' of Urgench prepared for dispatch Din-Ali-Khodja, who was the nephew of the Yarim Sayyid, deceased (Din-Ali-Khodja was a son of his younger brother), and of the already fa-

miliar to us Sherbeti-sheikh. First, these two set off for Bukhara and asked Abdulla Khan to send the uncle of Kuchum Khan Ahmet-Kirey (Giray) with them, explaining that 'it was a dangerous road.' The Khan satisfied their request and gave them 100 more attendants. When they arrived in Isker, Kuchum Khan gave his throne to Sultan Ahmet-Giray, who then reigned there for four years, but then was killed 'by his father-in-law Khan Shygay of the Vhol-Kazakhs.' Kuchum became the Khan again and gave his daughter Leila (*Lägil*) in marriage to Din-Ali-Khodja. They all lived in the city of Isker for some time, then the 'yurt was ruined' (*bozıldı*), Kuchum passed away [Obraztsy, 1872, pp. 217–220; Katanov, 1896, pp. 55–61; Atlasy, 1997, 75–78 b.]. Din-Ali-Khodja and his wife Leila had sons Sultan-Muhammad, Sayyid-Muhammad, and Aksayyid, who all lived in the city of Tara, and Sayyid-Muhammad had a son Mirgali Sayyid (this information is available only from Kh. Atlasy) [Atlasy, 1997, 78 b.].

All in all, the initial part of the genealogy of Siberian sayyids was as follows: Tobytsak (*Topeçak*)-sayyid—his son Alau-Din (*Galävetdin*)-sayyid—his sons Yarim-sayyid (elder) and Myrally (*Mirgali*)-hoja—son of the latter Din-Ali (Din-Gali)-hoja [Obraztsy, 1872, p. 217; Katanov, 1896, p. 55; Atlasy, 1997, 75 b.]. Kh. Atlasy has the following addition to this genealogy: Tobytsak-sayyid was a 'son' of 'Sayyid-Ata' (Säet atanıñ ulı Töpeçak säet) [Atlasy, 1997, 75 b.]. In fact, one of the copies of the 'Genealogy of Sayyids'/'Shajara Risalasy' (*Xadjalarnıx şäcäräse*) contained the name of Sayyid-Ata, which can be seen from the new publication of A. Bustanov [Bustanov, 2009, pp. 35, 45].

It is important to sequence the course of events mentioned in the legends when analysing the presented material and, to the extent possible, 'fit' them into the historical context. The tale of first arrival of Din-Ali-Khodja and Sheikh Sherbeti to the Siberian Khanate contains one date—it happened at the time of Kuchum Khan's reign in 1572. As its known, Kuchum Khan started his reign in the Isker Yurt in 1563 (e.g., see [Skrynnikov, 1982, p. 109; Valeev, 1993, p. 19]), and 1565, accord-

ing to the sources related to the Nogai affairs, is indicated as the year when *'Tsarevich Aliy,'* son of 'the Siberian Kyuchum Tsar,' married the daughter of 'the Nogai Prince Tin-Ahmet,' which confirms the fact that Kuchum Khan had actually been reigning by that time in the Siberian Khanate [Continuation of Ancient Russian Vivliofika, 1801, p. 195]. The middle son of Murtaza Khan Ahmet-Giray-Sultan happened to be in Siberia almost at the same time, along with the Kuchum Khan: the ambassadors from Ahmet-Giray-Sultan, as from 'Tsarevich,' arrived from Siberia to Moscow in about 1563. [Continuation of Ancient Russian Vivliofika, 1795, p. 322]. According to G. Miller, Ahmet-Giray was sent by his father Khan Murtaza with 'a troop' to help Kuchum, and together with him 'akhun arrived as well, a few mullahs, and abyzes to carry out this cause to the end...with more persistence and success' [Miller, 1999, p. 199]. Despite the fact that in the present documents Ahmet-Giray is mentioned only as 'Tsarevitch'—that is, Sultan, it is possible that he could be the Khan of Isker Yurt for some time: based on the legends, his reign could have taken place in 1574–1578. Therefore, the chronological outline of events, mentioned in the legends, appears as quite truthful.

The information about close links between the Siberian Khanate and Bukhara Khan Abdullah is also historical facts. R. Skrynnikov even suggested that Kuchum Khan was a vassal of Khan Abdullah, the ruler of Shibanid state [Skrynnikov, 1982, p. 109] (for information concerning some details about the political situation of that time, see [Atlasi, 1997, 78–79 b.; Ziyayev, 1983, pp. 19–20]). The latter was the real ruler of Bukharan vilayet of Shibanids' possessions (with its centre in Bukhara), even during the reign of his father Iskander (1561–1583), yet remaining the Sultan [Abduraimov, 1966, pp. 57–59; Istoriya Uzbekskoy SSR, 1967, pp. 51–519; Istoriya Bukhary, 1976, p. 111]. Sometimes it comes as a surprise that Khan Abdullah could be in charge of the business of 'Urgench'—that is, Khwarezm vilayet, where the independent dynasty of Shibanids ruled, indeed, quite often having other suzerains—Temürids or Safavids. However, this
