was not always the case. For instance, even Abu'l-Khayr Khan conquered Urgench twice (in 1433, 1435) [Akhmedov, 1965, p. 124], then Khwarezm vilayet had been a subject of invasion for Shibanids time in the 15th century, and starting from 1505 it had been finally occupied by them, and, except for a short reign (1510–1512) of Safavid here, this domain stayed under the power of the 'Uzbeks' Shibanids [Akhmedov, 1965, p. 147]. As it is known, Sultan Abdullah conquered Bukhara already in 1557, And later on Bukharan vilayet was his personal appanage. Though in 1561 he set his father Iskander on a khan's throne in Bukhara, Sultan Abdullah himself stayed as the real ruler of 'Uzbek Sultans' [Hafiz-i Tanysh, 1983, p. 244; Hafiz-i Tanysh, 1989, pp. 213–214, 230, 241]. It was even suggested in the literature that Abdullah became the supreme ruler of the 'nomadic Uzbeks' in 1570, when his father was still alive [Hafiz-i Tanysh, 1989, p. 7]. Even if it is not so, Khwarezm vilayet definitely obeyed the Bukhara ruler at the time when the group of clergy arrived in the Siberian Khanate 'from Urgench' and 'Bukhara' at the direction of Khan Abdullah: according to Hafiz-i Tanysh Bukhari, the warriors from 'Khwarezm' came to his aid in the course of Khan Abdullah's campaign against Balkh vilayet in 980 A.H./1573. These arrivals were 'from the Sultans of Khwarezm, the Sultan Suyunch-Muhammad, son of Haji-Khan, the ruler of Khwarezm and the subject lands' [Ibid., pp. 8, 147]. Therefore, there are no real contradictions between the historical material and the content of the legends. The chronicles suggest the same idea. Thus, 'Tara Yurt Tatar Sayyid Taneley Bereleev' [Bakhrushin, 1955, p. 165], mentioned in the end of the 16th century in the Russian sources, is no one but Sayyid Din-Ali, the son of Khodja Miraly/Mirgaliy ('Bereleev'—corrupted form of 'Miraly'). Information about him also appears in the translation of a letter sent by Abdulla Khan to Kuchum-Khan, dated from the middle of the 1590s by V. Trepavlov. It reads as follows: '...we sent Ali (that is, Din-Ali.—D.I) Khodja, he is a son-in-law of yours (of Kuchum Khan.—D. I.) and my clergyman, and if you could trust him and show your care...'

[Ziyaev, 1983, p. 22]. One more archive document, dating back to 1596 and presented by Kh. Ziyaev, also contains information about Sayyid Din-Ali-Khodja and Sheikh Sherbeti, to my mind—it is about a message to Moscow from the 'Siberians'—that is, Siberian Tatars—where they ask for permission to keep trade relations with 'Bukhara' and 'Nogai.' In the end of this document there is an appeal to Moscow to free 'sheikh, mullah... and Babuazey' and 'to send them to Bukhara' [Ibid., p. 23]. One can think that the anonymous sheikh mentioned here is Shirbety, and 'Baba-hoja'—that is, 'old and respected hoja'—is probably Din-Ali-Sayyid.

'Bukhara seits on Tara' Miraly Seitov and Akseit Seitov [Bakhrushin, 1959, p. 208], mentioned by S. Bakhrushin based on the documents dating back to 1672, were: the first one, grandson of Din-Ali-Khodji (Sayyid Mukhammed was the father of Mirali), the second one, Mirali's uncle (see above the genealogy of sayyids).

The content of the story by Mullah Ilyas, dating back to the 19th century, makes it also possible to trace the connection between 16th century events and the real personalities of the 19th century. In particular, Mullah Ilyas mentioned Mullah Musa and his son mullah Yakup (16th century) in the 19th century amongst his ancestors, presenting to V. Radlov his continuous genealogy that went back to them. [Obraztsy, 1872, p. 215; Katanov, 1896, pp. 54–55]. 'The Seits' copy'—found by A. Bustanov in the Archives of orientlists in the Institute of Oriental Manuscripts of the Russian Academy of Sciences, which contained besides 'Shajara Risalasy' the detailed genealogy of Siberian Tatars' family of Imamyanovy from Seitovo Village (Hoja aul) of Tarsky district in the Omsk Region, this genealogy continuing until the 19th century and starting with Din-Ali-Khodja [Bustanov, Korusenko, 2010, p. 104]—confirms the fact of the arrival of the 'clergyman' Abdulla-khan Shaybanid Sayyid Din-Ali in the Siberian Yurt during the rule of Kuchum Khan. As well as the genealogy of the Tara Bokharans Aytikins, which comes up to Khaydar (Aytuky) Yarymov (1752–1808) but goes back to Din-Ali-Khodja and indicates his

ancestors sayyids (Galyaletdin → Tupuchak → Sayyid-Ata) [Valeev, 1993, pp. 102–103]. There is also information available on a sheikh who came amongst the people of Din-Ali-Khodja to the Siberian Khanate during the reign of Kuchum Khan. We are talking here about the genealogy consisting of 17 generations from the Turmetyaky Village (Ulugh-Buran, Turmatak) in the Omsk Region, rewritten by an imam—the representative of the dynasty of sheikhs—Abd-al-Gany, the son of Mu'min (born in 1857), as it is said in the text, 'also of sheikh descent.' This genealogy starts from Abdal-sheikh who is mentioned in the tale (riyayat) presented in the text of the source: '... having arrived from the city (or 'vilayet') of Turkestan, Abdal-sheikh became a superintendent (mudzhavir) of the Turtamak Yurt' [Bustanov, 2009, pp. 207–209]. This very personality is mentioned in the 'Shajara Risalasy,' as it was noted by A. Bustanov, among the religious activists, sent by Abdullah Khan to the Siberian Khanate at the request of Kuchum Khan. The source reads as follows: '... Then Shirbety Sheikh, together with [him] arrived Baba Abdal, and old people [told] that this Din-'Ali-hoja came from Urgench and Abdulla-Khan sent [them]...' [Bustanov, 2009, p. 43].

Because of some people who took part in religious activists' expedition to Isker Yurt, following the order of Abdullah Khan, a question arises whether they really stayed in Central Asian 'vilayets,' which were under control of the Shibanids. In particular, the name of 'khakim' of Urgench Khodja Khan-Sayyid draws particular attention. First, as it is seen from 'Genealogy of sayyids,' he was a relative of both Yarim Sayyid and 'khakim' of Bukhara Khodja Yakup [Ibid., p. 44], which means that all these three men are from Central Asia Sayyids' branch. Second, to my mind, the name of Khodja Khan-sayyid is mentioned in the work of Hafiz-i Tanysh Bukhari 'Sharafnama-yi shakhi,' where among the guests of the feast of the circumcision of Khan Abdullah's son 'the noble sheikh ul-islam' Khan-hoja [Hafiz-i Tanysh, 1989, p. 186] is mentioned who, as it has been said, most likely, was of sayyid origin. Though Bukharan 'khakim' Yakup has not been identified with a real his-

torical figure, the above discussed fact means that events described in the analysed document did take place. These all prove that the information contained in the reviewed legends is both historical and trustworthy.

I think that the names of at least two supreme sayyids of the Siberian Khanate (Isker Yurt), who were the spiritual leaders of the state, are known to us—that is, Din-Ali (Gali)-sayyid (starting from approximately 1574–1575 and up to the conquest of Khanate by Russian) and before him his uncle Yarim-sayyid (1572–1574). It is still possible that the ancestors of Yarim-sayyid, especially his father and grandfather, were the high sayyids in the Isker Yurt.

Now I will dwell on a subject of the peculiarities of the sayyids' investiture in the Siberian Khanate. As it was mentioned before, the candidate for the Head of Khanate Muslim clergy was chosen in Bukhara, at least that was the situation during the reign of Kuchum Khan—that is, since 1563. Such an unusual procedure was, most likely, bound to the eventual displacement of the political centre of the Shibanids (nomadic Uzbeks) state to Central Asia starting at the beginning of the 16th century. This very state, as it was mentioned before, was closely related with the Siberian (formerly Tyumen) Khanate—one of the Shibanids' possessions. The discrete role of Bukhara, which was the capital of Shibanids state many a time since the beginning of the 16th century and became the state for good since the reign of Iskander and Abdulla Khans, can be clearly traced in several historical sources. For example, there is a report in the Yesipov's Chronicle stating that at the time when Kuchum 'with many warriors reached the city of Siberia (that is, Isker.—*D. I.*) and conquered the city,' he 'killed the princes Yetiger and Bekbulat' [Complete Russian Chronicles, 36, 1987, p. 48]. The killed, known as 'the Siberian princes,' reigned in the Isker Yurt before the arrival of Kuchum. According to the Yesipov's Chronicle, the son of prince Bekbulat Seydyak 'had the mercy of Kuchum Khan and was sent to Bukhar land.' Basing on the oral tradition of the Siberian Tatars, G. Miller admitted this himself [Miller, 1999, p.

196] and gives a more detailed characteristics of this event. He writes: '...Ediger... left his pregnant wife behind. Noble Tatars did not want to wait for a princess to give birth as they could not reach agreement as to who should reign in Siberia. They sent the ambassadors to Khan Murtaza of Great Bukhara, asking him to send one of his sons to make him a prince. Murtaza sent to Siberia his middle son Kuchum, together with a numerous following. Upon arrival, he was acknowledged by all as the khan.' It is interesting that Kuchum's father Murtaza Khan is referred to here as the ruler of 'Great Bukhara.' According to N. Potanin, the term 'Great Bukhara' meant West Turkestan, including the cities of Tashkent, Turkestan, and Inak. As for the 'Minor Bukharia,' these are the territories subordinate to Dzungaria (Turfan, Yarkend, Kashgar, etc.) [Potanin, 1868, pp. 24–25, 32].

Meanwhile, the pregnant widow of Ediger 'escaped to the Great Bukhara' [Miller, 1999, p. 196] (for more detailed discussion upon this issue, see the work of A. Frank: [Frank, 1994, pp. 14–15]). There is similar information in the Yesipov's Chronicle. It is said that after the conquests of Yermak, 'Prince Seydyak Bekbulatov from the Bukharan lands' came 'with a large army' against Kuchum [Complete Collection of Russian Chronicles, 36, 1983, p. 59]. The already quoted tale about the history of Sala Village goes that the founders of the city of Isker came headed by 'Taibuga Bey'—that is, the representer of Burkuts clan—'The Siberian princes,' 'from Bukhara.' Despite the fact that it is unlikely that Kuchum Khan's father Murtaza was a khan of Bukhara, I would not completely dismiss the information presented by G. Miller about Khan Murtaza as of the ruler of 'Great Bukhara.' The matter is that in the 1550s there were dynastic strifes in Bukhara for the right to have the city and vilayet, which have not been sufficiently studied yet (see [Istorya Bukhary, 1976, p. 111]). Murtaza, being a Shibanid, could have taken part in these events. Based on the considered data, it becomes clear that in the middle of the 16th century there were not so clear yet political relations between the Siberian Khanate and the Shibanid state, specifically Bukharan

Khanate, thus representing the fact that the supreme suzerain of the Siberian Shibanids were Central Asian Shibanids.

The fact that Kuchum Khan appealed to the supreme ruler of the 'nomadic Uzbeks' Abdullah-Khan with a request to send spiritual leaders indicates that. The appeal of 'noble Tatars' to the 'Khan of Great Bukhara' Murtaza with a request to send one of his sons should also be considered in the same way. Next, when Abdullah Khan sent the clergymen to Isker Yurt for the second time (about 1574–1575), now together with Sultan Ahmet-Giray with 100 following and this resulting in Kuchum Khan's giving his throne to his uncle, this all reminds of the carrying out of the orders of suzerain by a vassal. A fragment from 'Genealogy of a sayyid' paints the same picture: the letter, which Abdulla Khan sends to the 'khakim' of Urgench, says that sayyid and sheikh are sent to Isker Yurt 'by the decree of muftis and [based] on Sharia' (*'möftilärneñ fatvāse menān, şār'i-şārif boerunča'*). Meanwhile, specifically in Bukhara, there were 14 muftis who were engaged in drawing up the solutions based on Sharia. These solutions were passed then to the supreme judge (*kazi al-kuzat—that is, kazıy*), who would pass the ultimate judgment on the case in point [Abduraimov, 1966, p. 89]. One more element documented in the legends of the Siberian Tatars calls our attention: there appears a hoja (or mullah) Yakup, 'Bukharan khakim,' who gives advices to Abdullah Khan about whom to send from Urgench to Isker Yurt. Then he writes a letter that contains the above mentioned lines about muftis' order. It seems that this was the official related to spiritual affairs. And he was the one who had the right to appoint the clergymen, who then could head the clergy of Isker Yurt. I suggest that the indicated hoja (mullah) Yakup was related to the hojas of Djuybary, who had a great power in Bukhara; the head of clergy (sheikh ul-islam) and a'lams came out of them. It is interesting that their power, according to some sources, was extended even to the Siberian Khanate: according to the information from M. Abduraimov '... sultans of Tura (that is, the Siberian Khanate.—D. I.) and Deshti-Qipchaq implicitly obeyed' [Ibid.,

p. 97] the Djuybary khodjes. Thus, the last fact once again confirms the thesis that the Isker Yurt/the Siberian Khanate and nomadic Uzbeks' State, especially Bukharan vilayet, had special relations.

So it is safe to say that the head of the Siberian Khanate Muslim clergy was of the sayyids dynasty and, most likely, bore the same title as the head of the Shaybanid state clergy—'sheikh ul-islam'—acting for the head qadi, as it was at the times of Abu'l-Khayr Khan. However, the fact that in the tale of Mullah Ilyas this title is ascribed to Sheikh Sherbeti is quite disconcerting. Nevertheless, this is the late version of the 1570s events, so we have to consider it cautiously. However, Sayyid Yarim himself ran the justice, which was the function of sheikh ul-islam, as F. Yakhin mentioned it. At the same time, from the earlier legend—'Genealogy of a sayyid'—it can be clearly seen that out of the two who arrived in 1572, Yarim Sayyid was a more important figure—Kuchum Khan kept him as an official. This fact is confirmed by the suggestion of Bukhara 'khakim' Yakup to send from Urgench to Isker Yurt, first, sayyid Yarim, and only after that, the sheikh [Bustanov, 2009, p. 44]. From 'Genealogy of a sayyid' it is seen that after the second arrival of the clergy from Bukhara, Din-Ali-hoja, being a Sayyid, had been placed above again—he married the daughter of Kuchum Khan (it is supposed that there was some confusion in the legend of the 19th century, but this case should be explored further).

It is quite possible that before arrival to Isker Yurt, the candidate for head of clergy was considered just a sayyidzade and not sayyid. In any case, in the Tatar version of 'Genealogy of a sayyid' there is a fragment where Yarim-sayyid, who then was in Urgench, is called 'sayyidzade' [Obraztsov, 1872, p. 218]. But the future sayyid was necessarily accompanied by a sheikh, who apparently was also called sheikhzade and not sheikh, before arrival to the Isker Yurt [Ibid].

The functions of this sheikh are not quite clear. If the sayyid was the head of clergy and ran justice (*hökem kılgaı*)—Kh. Atlasy gives this fragment more detail: '*şärigat xökemen*

yörtergä vä xökem äylärgä [Atlasy, 1997, 77 b.]—then sheikh was some kind of 'codifier' of the sacred graves. It is also possible that he and his confidants could teach the fundamentals of Islam, as it can be seen from the legend Mullah Yakup, arriving amongst the suite of Sherbeti Sheikh, taught children 'reading and writing, and the folk, religion' [Obraztsov, 1872, p. 213; Katanov, 1896, p. 52]. The fact that sheikhs taught 'religion' can also be proven by means of work called 'Of Wars of Religion of the Followers of Sheikh Bagautdin against Foreigners of West Siberia' [Katanov, 1904, pp. 19–22], which is based on two Tatar chronicles and was published by N. Katanov. The content of this work shows that the 'sheikhs' were acting among the Siberian Tatars, and the main events, most likely, are related to the times of reign of Muhammad-Khan Shaybany (died in 1510), called 'Khan Shayban' in the source. As it was mentioned before, the work is about 366 'equestrian sheikhs,' as three of them remained behind 'in steppe of the Middle Horde' and 'started teaching the fundamentals of religion' [Ibid.]. It is revealing that in Isker Yurt there were sheikhs before Sherbeti-sheikh according to the Nogai written affairs that contain information about Mamin-sheikh (shikh) 'from Siberia,' who was in Moscow in 1564 [CCRC, 1801, p. 103]. It turns out that sheikhs conducted state affairs as well. However, I partially agree with the objections of a group of authors to my previous wording concerning the role of sheikhs in the Siberian Khanate as the 'codifiers' of the sacred graves—indeed, one can agree with A. Seleznev and I. Belich that the sheikhs 'were not of a less significance in the system of folk Islam than 'official' representatives of the Islam 'clergy' [Seleznev et al., 2009, p. 139, note 338]. Nevertheless, this great thought obviously needs more insight, not least because sheikhs arriving to the Siberian Yurt from the Central Asian lands of Shibanids were in fact 'fitted' into the 'official' clergy group. What is more important is that the mentioned sheikhs obviously arriving to Isker Yurt in few waves took part directly in 'reformatting' of that Turkic-Tatar community, which existed within the North land of

Shibanids into the Islam community. As these fundamental changes occurred through the mechanisms of Sufi Tariqas (Yesevi, Naqshbandiyya), it is necessary to give some explanations.

In a common methodological way, the conclusions made by Devin DeWeese relating the role of Baba Tukles in formation of the Nogai ethnic identity are quite helpful for understanding of these processes. This researcher points out that Baba Tukles, often interpreted as Sufi, as the Islamisor, 'is first identified (and venerated) as the founder of a religious community then equated with the founder/ancestor of 'a tribe' or 'people' [De Weese, 1994, p. 492]. He finally turned into 'the central figure in the common origin legends' [Ibid., p. 510]. And this was related to the fact that for the groups adopting Islam 'conversion' occurred and almost all the time was understood 'in social context, with the whole common group, imagined as appropriating a new religion, as a group under the authority of a heroic figure turning into the figure of the ancestor...'. Finally, as the author puts it, 'nativisation of the bearer of Islam demonstrates not only the indigenous 'joining' Islam but accepting Islam as a foundation stone of 'the sacred history' of the particular community and, thus, the defining element in the central social and common structures.. of the community' (steppe community is meant here.—D. I.) [Ibid., pp. 516, 531]. This is what it was like in light of sheikhs' activities in the Siberian Khanate.

When as a result of the activities of the Muslim missionaries, mostly from the Central Asia, the institute of astana was formed in the end of the 15–16th centuries on the territory of the Siberian Khanate (for more information see [Seleznev et al., 2009, pp. 126–152]), and sheikhs were the first superintendents there [Ibid., p. 138], this peculiar spiritual management structure, with its core consisting of worshiping of the saints' graves (sometimes fake) from Sufi Tariqas Yesevi and Naqshbandiyya, started expanding rather quickly. For instance, according to 'Ash-shajarat al-awliya' min bilad Mavera'annahr' Shirbeti sheikh managed to 'discover' 12 'saints' [Bustanov, 2009, p.

201] graves during his lifetime (last-quarter of the 16th century–beginning of the 17th century) (as it is presented in the text of the source, 'in Tobol Yurt... Dja'far-ishan found twenty-two saints [graves].' Lifetime of the ishan is unknown), and later, apparently in the 17th century, this number reached 22 [Ibid], then in the 18th century it increased up to 49 [Bustanov, 2001a, pp. 63–64], and it increased even more by the end of the 19–beginning of the 20th centuries (according to R. Rakhimov, there are more than 80 astana known for now).

The institute of astana, thus worshipping of the Sufi figures from Yesevi Tariqa and then from Naqshbandiyya Tariqa, became a part of the cultural and religious life of the Siberian Tatars. We can say, based on the example of Varvarian astana, I. Belich and A. Bustanov noted that astana in the name of the buried there *awliya* started serving as the arbiter in the sphere of the conventional norm regulated by *adat*: informers from the Siberian Tatars reported to these researchers that in the case when there was a horse stolen, and the victim brought charges against the specific person, sending sadaqah to astana, it was thought that if the charge was true, the thief would get sick, or the God would punish him, and if it was a wrongful charge, then the accusatory would get sick himself [Belych, Bustanov, 2010, p. 55]. To honour the saints, the funeral rites, particularly, khatym (*khatym khutsa*, *khatym-i khvadjagan*) [Bustanov, 2009a] came to be performed in a series of the local centres with astana. However, not the local saints were honoured but their great teachers as the representatives of the key parts of Sufi Tariqa Yesevi and Naqshbandiyya. So, during such performance of the rite in Bolshye Turaly Village of Tarsky District in the Omsk Region one of the arrangers reported that 'before this rite was performed by Bakha ad-din, and then, by his followers (mashaykhlar)' [Seleznyov et al., 2009, p. 175]. Simultaneously, around the places where sheikhs settled, the centres of Islam learning and local branches of the Sufi Tariqas, headed by their own ishans, appeared (I. Belych and A. Bustanov tell about one of them, see [Belych, Bustanov, 2010,

pp. 44–50]). Thus, in fact not only the new 'sacral topography' embracing the dozens of astana were formed, but the fusion of old Turkic-Tatar culture with the new Islamic culture took place. Here is a good example of it. According to the tale of a superintendent of the Varvarian astana, '... there was a peygambar Suleyman, he was a giant man and he fought for Islam. When he came to our lands, he sat and shook the earth out of his boots, and two hills appeared. That was the place where astana was set up, where wali Azys Daud-shaikh was buried then, who came here with the other sheikhs, there were 360 of them, from Bukhara and Tashkent, to spread the Muslim religion' [Ibid., p. 54].

As a result, the previous Turkic-Tatar ethnopolitical community of the Siberian Tatars was completely 'remade,' and it became the Islamic community based on the local Islamic centres and tracing its history on a domestic level to the arrival of the Muslim preachers. Such course of events is fixed by many preserved by Siberian Tatars authentic manuscripts that have been mentioned before ('Shajara Risalasy,' 'Ash-shajarat al-awliya' min bilad Maveran-nahr,' 'The origin of Sal aul'). The characteristic feature of all these 'stories' is that the ancestors of the Siberian Tatars become 'fitted' into the Islamic world as a result of sheikhs' activities (*awliya*, *yakhshilar*) and in the particular part of the Islamic world—'Sacred Bukhara'—which appears to be a virtual Sufi net, dating back to the Naqshbandiyyah and Yesevi Tariqas. As it was demonstrated before, probably because of the lack of specific data, the same was observed on the territories of the other late Golden Horde Turkic-Tatar states.

There were the other groups of clergy besides sayyid (sayyids) and sheikh (sheikhs) in the Siberian Khanate. Primarily, these were the mullahs. They appear in the legend told by Mullah Ilyas. We are talking here about Mullah Yakup, who accompanied sheikh ul-islam, and about 'many mullahs,' who set out with them to Isker Yurt. Upon their arrival to the Khanate, Ahmet-Giray-Khan gave every mullah 'a place.' 'Akhuns' mentioned in that legend could have been the branches of these mullahs. However, this term is not so

clear as it bears the impress of the 19th century (akhuns were well-known then by Tatars). It is not clear what clergy group of the 16th century stands for this 19th century term. To some extent, the answer can be found upon studying the already examined manuscript 'The Origin of Sal Aul,' where 'mufti and mudaris' are mentioned among the arrived 500 people [Usmanov, Shaykhiev, 1979, p. 91]. Though mentioned terms 'mufti' and 'mudaris' could have been the latest substitution of the earlier terms, they might have been mentioned in a manuscript as a designation for the real—existing in the Khanate—clergy groups. The point is that, as it was mentioned before, there was a position of a clergyman, called 'mufti' in Bukhara, which had links with Isker Yurt. There might have been hafizes (abyzes) also in the Siberian Khanate clergy: G. Miller points out (his information is aligned with a story of Mullah Ilyas) that together with Ahmet-Giray 'akhun few mullahs and abyzes' arrived at the Siberian Khanate. Moreover, the yarliq of Abdulla Khan, dating back to 1595/96 to the Kuchum Khan, talks about sending Shemerdey-abyz on behalf of the former as an ambassador to the Siberian Khanate (according to the source, this was not his first visit to Siberia) [Ziyaev, 1983, p. 22]. In this case, it is important that in the end of the 18th century there was 'Abyzovy' settlement near 'Seitovy' Village in Eskolbian volost [Tomilov, 1981, p. 99]. At last, the fact that besides sayyid and sheikh to Isker Yurt in 1572 came other representatives of the clergy is shown in 'Genealogy of a sayyid,' which tells about 10 persons accompanying the sayyid and sheikh. In Tatar they are called 'yakhshilar,' which at the Siberian Tatars means 'saints' and is applied mostly to the clergy. All in all, the following groups of clergy can be identified in Isker Yurt: sayyid (most likely, same for sheikh ul-islam), sheikhs, mullahs, abyzes, and there could be also muftis and mudarises. The presence of akhuns in the Khanate is more hypothetical.

What is interesting is that some of the sayyids in the Khanate had a title of 'hoja.' Apparently, one can agree here with F. Yakhin that the term 'hoja' was a synonym of the

term 'sayyid' [Yakhin, 2005, pp. 195–197]. One should also keep in mind the appeal of Ahmet-Giray to Bukhara with a request to send 'the senior' (*ölkän*) sheikh ul-islam [Obraztsy, 1872, p. 213]. N. Katanov translated this fragment as '*the grand*' [Katanov, 1896, p. 51]. Here the term 'ölkän' had some message in it, and it is not improbable that N. Katanov is correct as there were 'grand sayyids' in the Bukharan Khanate. It is not mere coincidence that in 'Genealogy of a sayyid,' speaking about noble rank of the Din-Ali sayyidzade, the narrator underlines the fact that 'in Bukhara (and) Urgench' 'imams of the great' (*olılarnıñ imamnarı*) were of his ancestry [Obraztsy, 1872, p. 217]. The version of Kh. Atlasy looks somewhat different, he writes about '*oluglar*' [Atlasy, 1997, 76 b.]. Thus, it is quite possible that the terms '*ölkän şäex ul-islam*,' '*olılarnıñ imamnarı*' are the synonyms of familiar to us epithets 'majesty of grand teachers' or 'grand sayyids.'

The rank of sayyid in the Siberian Khanate is supported by several facts. Let us say, Kuchum Khan (in the tale of Mullah Ilyas it is Ahmet-Giray Khan who gave 'sheikh ul-islam... great honour'), as it is said in the 'Genealogy of sayyids,' personally crossed the river Irtysh to greet the guests. The exceptional position of sayyid in the Khanate is issued from the fact that Din-Ali sayyid married the daughter of Kuchum-khan. It is possible that such sort of matrimonial relations existed before the beginning of Shibanid Kuchum-khan reign, between the dynasty of 'Siberian princes' Taibugids and the spiritual leaders of Isker Yurt. No wonder there is a Tatar legend preserved by G. Miller, which have been mentioned before: a pregnant widow of prince Ediger, runaway to 'Great Bukhara,' found there '*a lot of sympathy*' from a 'sayyid' who accepted her into his house and became a step-father for her son (he was named 'Seydyak'—that is, 'little sayyid' after him) [Miller, 1999, p. 196].

Although some sources tell about the arrival of Muslim clergy to Siberia from Central Asia (Bukhara, Urgench, Turkestan are mentioned), one should not disregard the other places in Isker Yurt, where the clergy appeared as well. So, with reference to 'Remezov's Chronicle,' G.

Miller informed that Kuchum 'brought many clergymen from Kazan' [Ibid., p. 199]. In spite of some anachronisms—the Kazan Khanate did not exist anymore during the reign of Kuchum Khan in the Siberian Khanate—this message can reflect some real events because the migration of the Tatar nobility, and sayyids

from the Kazan Khanate to the Khanate of Tyumen in the 1480s, was mentioned before. These cases could happen later as well [Ibid., p. 194]. However, this does change anything essentially as the same Yesevi Tariqa reigned in the Volga Region in the 15–16th centuries, and sayyids were the same descendants of Sayyid-Ata.

§ 2. Features of Islam among the Siberian Tatars

Igor Belich

Before we begin this chapter, it is important to note one essential aspect: in spite of the prevalence of spiritual unity, local Islam integrated and preserved many regional cultural features. When discussing regional variations in Islam, it is important keep in mind its essential character, free from any weighting on a national basis or focus on a specific time period. [Tatary, 2001, p. 423]. Cultural distinctions between the post-Golden Horde Turkic-Tatar communities are conditioned by their ethnic history, ethnic and cultural traditions, and the influence of neighbouring nations. However, the common Turkic-Islamic cultural base going back to the era of the Golden Horde became the unifying basis of their culture. It is important to take into account the time and degree of Islamisation. The Kazan Khanate inherited Islamic cultural tradition from Volga Bulgaria, and the spread of Islam was neither immediate nor consistent. For the Nogais and Siberian Tatars, whom Islam reached relatively late, the religious situation was more complex. While the Islamisation of the Nogai Horde and the Astrakhan Khanate was similar to that in the Middle Volga Region, Islam came later to Siberia and developed in different circumstances [Islam, 2001, pp. 65–74; Islam, 2006, pp. 89–122; Iskhakov, 2004b, p. 82; Iskhakov, 2006, pp. 84, 153–160; Izmaylov, Usmanov, 2009, pp. 616–617].

Islam in the form of Hanafi Madh'hab Sunnism spread in Siberia during the 15th and 16th centuries. Under Kuchum Khan (died 1598) it became the official religion of the Siberian Khanate, the cultural base of the Siberian-Tatar identity, whose representative groups each underwent Islamisation throughout the 17th and 18th centuries [Belich, 1988, pp. 100–106; Belich, 1997, pp. 93–98; Tomilov, 1992, pp. 141–

143; Valeev, 1993, pp. 170–171; Islam, 2001, pp. 67–74; Iskhakov, 2004b, pp. 82–84; Iskhakov, 2006, pp. 90–93, 115–122; Iskhakov, 2011, pp. 159–162; Seleznyov, Seleznyova, 2004, pp. 12–17; Sobolev, 2008, pp. 287–291]. Sufism (Tasawwuf) was important in promoting Islam among the wider Tatar populations of the region. The way the Sufi spread Islam allowed for the adaptation of various non-Islamic religious faiths and ceremonies, which resulted in a specific ideological view of local Islam as a regional variant of the religious syncretism. [Seleznev, Seleznyova, 2004, pp. 11–49]. However, local features of Islam should not be equated with 'national' features for the given people or region as 'the most different variants of Islam have always lived side by side in any culture' [Abashin, Bobrovnikov, 2003, p. 15].

Popular Islam finds expression to different degrees in mythology, domestic and calendar ritualism, folk medicine and superstitions. Mostly it is expressed in a cult of Saints, which provided seamless inclusion, preservation, and efficiency of different local and added in a process of Islamisation non-Islamic elements in religious views of the Siberian Tatars. That is why we can still talk about Islamisation in the region to this day. Sacred places are an indication of this. Compared with the 1970–1980s many of the sites' significance have been undergoing a radical reassessment until a complete Islamization, such as the holy places association with the graves of saints (astana), which previously had had a different meaning. The ethnicisation of astana as a part of Siberian-Tatar identity; their use as the principal symbol of regional religious identity and the 'discovery' of new places of worship with the 'forgotten' graves of saints. [Belich, 1987, pp. 40–41; Belich, 2013, pp. 14–

22; Bustanov, 2011, pp. 147–149; Bustanov et al., 2011, pp. 120–124]. Thus, when discussing the specifics of Islam among Siberian Tatars, an apt starting point is the analysis of the cult of the saints and *astana*.

Many works have been dedicated to the historical and ethnographic study of Siberian Islam [Belich, 1998a, pp. 31–39; Belich, 2004, pp. 63–96; Belich, 2006, pp. 14–23; Belich, 2010a, pp. 32–34; Belich, Sladkova, 2006, pp. 23–25; Islam, 2007, pp. 113–146, 248–251; Rakhimov, 2006, pp. 4–62; Seleznev, Selezneva, 2005, pp. 85–108; Seleznev, Selezneva, 2006, pp. 100–107; Seleznev, Selezneva, 2009, pp. 338–359; Seleznev, Selezneva, 2012, pp. 216–229; Seleznev et al., 2009, pp. 17–155; Seleznev, 2013, pp. 111–119]. Archeographic investigations of recent years have made new and fascinating findings, which have allowed for a re-examination and eventual re-interpretation of the written sources covering this topic [Belich, Bustanov, 2010, pp. 39–58; Bustanov, 2009b, pp. 156–192; Bustanov, 2009, pp. 195–230; Bustanov, 2011a, pp. 33–78; 2013b; Bustanov, Belich, 2010, pp. 211–216; Bustanov, Belich, 2013, pp. 14–22; Rakhimov, 2009, pp. 291–297]. This is where we shall begin.

The corpus of written sources containing information about the start of Islam and the cult of the saints—awliya in the Siberian/Isker Yurt—include several genealogy texts—that is, shajaras. These narratives exist in two versions. The first, recounted in Shajarat al-awliya min bilād Māwarāʾan-Nahr ('Genealogy of saints from Transoxiana'), Tāʾrīkh ('History'), The charter of the guardian of Yurum astana and Nasab-nāma, and more fully represented in the first manuscript, was created in the first half of the 17th century in the village of Tyurmetyak/Ollī-Bürān (in the north of the Omsk Region) by the custodians of Bigach Ata astana. The second version included in the Qarāghāy Manuscript, its copy in the collection of A. Aliyeva, and the copy of Saʿd Waqqas in the Tobolsk manuscript were put together towards the middle of the 18th century by Ibn Yabin hoja of Tara and the qadi (judge) of Tobolsk ʿAbd al-Karim. The first version was created by adherents of the Sufi Tariqa (order) Yesevi, while the second edition, by Naqshbandiyya Sufis. These two orders were

in competition in the 16–17th centuries [Belich, 1998a, pp. 31–39; Bustanov, 2009b, pp. 156–188; Bustanov, 2009, pp. 212–222; Bustanov, 2009g, pp. 45–61; Bustanov, 2011a, pp. 33–78; Bustanov, 2013, pp. 88–182; Belich, Bustanov, 2010, pp. 44–50].

Externally, a manuscript is a scroll wrapped around a wooden rod and placed in a leather or cloth case. A sacred object, shajaras, were passed down as an attribute in the family of the custodian of the astana (*ṣīq, astana qarawçe*) and were used in the rituals for the recitation of awliya names. The text is divided into an introduction, a body describing religious war, a hagiography, and conclusion. Here we shall point out and discuss several points of note in the text. First, the dates differ: in Shajarat al-awliya we see 1130 AH (1718 AD), in Taʾrih we have 950/1523, and in the later edition of the shajara it is given as 797/1394. Dating of sacred texts is relative and determined by the principle that the later the date the text is copied, the lower the chronological boundary. This date must not be linked to historical figures, events, or to the astana themselves—the 'real' world must be kept separate from the world of ideas [Bustanov, 2009, p. 203; Bustanov, 2011a, p. 44; Belich, 2010a, p. 33; Belich, Bustanov, 2010, pp. 50–55].

The question of which sources the authors used in compiling the shajara may find its answer in a reference made in the second edition to the record (nakil) 'of great men and saints past' [Bustanov, 2009, p. 215]. N. Katanov translated nakil as legend [Katanov, 1904, p. 18]. This is in any case an important argument not only for the late dating of the second edition [Bustanov, 2011a, p. 65] but also for understanding the nature of its source. The first version, 'Genealogy of saints from Transoxiana' was based on the copy 'To Sechira... Mulla Bobasha in the village of Epanchin Yurts' with a narrative about Ishāq Bāb dated 970/1562, brought from Central Asia by the first wave migrants [Bustanov, 2013a, pp. 471–480]. How reliable are shajaras? Experts believe that, as a subjective result of collective efforts, they contain both accurate information and distortions. It would in fact be odd if there were 'an absence of fantasy, such as the substitution of facts and events or contamination of

different events' [Kuzeyev, 1960, pp. 18–21; Usmanov, Shaykhiev, 1979, p. 103]. However, one should take into account the origin of the information presented in *shajaras*: they are not a line of descent but a genealogy of saints.

The number of *awliya*, where the initial number is 366 of Central Asian Yesevi and Naqshbandiyya devotees of Islam; however, it should be noted that the story of their 'canonisation' is based on the Sufi doctrine of sanctity (*welayah*) and the hierarchies of saints (*ri-jal al-ghayb*, 'men of the Unseen'), where the number of saints reaches 500 [Belich, 2005, pp. 33–36]. This is connected with the story of the two 'ways' of acquiring spiritual knowledge in Sufism—*sulūk* and *jazbah*. It is recounted more clearly in the *Shajarat*: 'There are two kinds of saints: First are those who follow the path (*saluk*) and then are those who are attracted by the divine (*majzub*). *Saluk* are saints who, having sought the help of prophets and received it, have found their way to the Lord... *Majzub* are saints who through their work spreading the faith (*da'wah*) found themselves close to God... ' The later edition extends this with a call for 'secret remembrance'—that is, a silent *dhikr*, as practiced by the main Naqshbandiyya groups, as opposed to the spoken one as practiced by the Yesevi [Bustanov, 2009, pp. 200, 220–221]. According to Bustanov [2011a, p. 45], this story contains the main message and concept for the whole text: 'Its primary focus is directed towards the presentation and continuation of the spiritual connection (*an-nisba ar-rukhiya*) of the deceased men of faith with the serving sheikhs and, through them, with the neophytes.' The significance of *shajaras* lay in their support of the local Sufi tradition and their connection with the rest of the Islamic world.

Another point must be noted that is key to understanding the main bulk of the text, which recounts a religious war. Its significance can be understood from the way it is described. The earlier edition talks of a regular 'war' (*djang*) led by 'majzub saints' in order to 'reveal the key of faith.' In the later edition this is modified to 'the great war'—*olyg djang*—started by the sheikhs and warriors on horseback, and in the *Qarāghāy* Manuscript, it becomes the 'Great Holy War' [Seleznov et al., 2009, p. 203]. Moreover, it was

not so much a 'war for faith' but a thinly-veiled military political expansion. The emergence of secular rulers and their people, with their names and quantity varying between the two editions, would be difficult to explain without this interpretation of the events. This means that the events described took place in different periods of time, which can be seen from the main body of text, and which we will move on to now.

The earlier *shajara* reads: 'In sacred Bukhara... was the holy *hoja Baha' al-Din*. The saints were assembled from different cities... once found, they were led [to him]... Saints manifest and invisible... sent 366 saints to the yurt of the *Ichtyak* to reveal the key of faith. They came down the river *Ishim*... and started a war (*djang*). A lot of men fell in *Ichtyak* land... and became *shahīds*. 66 returned... Those who remained in *Ichtyak* yurt erected a fence around the graves of the saints... and became *diwana* (God's fools, thought to be saints/Sufis.—*I. B.*). Others walked around the *Irtys* river mourning and became the *Hotan-Hytay*. The rest left their homes and fled for Upper *Irtys*. There they took some land and settled. Later they created *Hytay-hat Hotan*. The [*Ichtyak*] Yurt was deserted' for 9, or 90, or 100 years. 'Then, under *Murat Khan*, came his son *Taibuga Bey*. [He was] the first to found a khanate in *Isker Yurt*. And along with 500 men arrived the *Shah's akhūn* (that is, of *Bukhara Khan*?—*I. B.*), a *murza*, *sultan*, and *imam*. All of them remained in *Isker Yurt*.' Then 20 holy graves are listed with the names of the saints and the discoverer of the *astana 'Jalal ad-Din-awliya'* of *Bukhara*. The story concludes with a section on *Aftal Shaykh*, the discoverer of the *astana* of 'Hazrat *Bigach-Ata* in *Turma-dak Yurt*' and its first custodian (*mudzhavir*), and their family trees [Bustanov, 2009, pp. 200–201; Bustanov, 2011a, pp. 41–42; Dmitrieva, Muratov, 1975, pp. 40–41].

The text is quite clearly talking about two waves of Islamisation, or comings of the saints: the first taking place in *Ichtyak Yurt*, and the second, in *Isker Yurt*. There are two visible layers of narrative: sacral and factual. The former can be described thus: 'saints manifest and invisible (*al-gayib*)' 'from *Transoxiana*' send forth the 'majzub saints.' By 'spreading the faith' through *djang*, they become saints (20 of them are men-

tioned in the list of saints). Guided by their spirit and exposing the graves of the awliya, their followers take the Sufi initiation, becoming diwana Sufis and mudzhavirs. The factual narrative is as follows: the arrival of a ruler of strong faith embodying the ancestor and founder of the Khanate and man of Islam Taibuga and the creation of a new state and probably Islamic institutions. There is no reason to identify him with the founder of the Taibugid Dynasty; however, this possibility cannot be excluded [Bustanov, 2009, p. 206; Bustanov, 2011a, p. 48]. There is also an ethnological component: we see Hotan-Hytay, a double ethnonym—that is, the Khitai or Khitan, who founded the Hytay-hat Hotan 'home or yurt of the Hotan-Hytay' (from Persian *kat* 'home') in 'the upper Irtysh,' as well as the Ichtak people, who had their lands in the Ishym delta and the lower Irtysh.

The later shajara reads: '...by resolution and decree... hoja Baha'ad-Dīn Naqshbandī... 366 mushaikhhs gathered... and became his disciples (*murīd*). He 'saw 'Ali, the Commander of the Faithful, discover Islam in Chin-Machin... But some people of Hytay... ran to the banks of the river... Irtysh.' There roamed the 'Hotan... Nugai and Kara-Kipchak. [The fugitives]... stayed among them. They were Tatars who worshiped dolls.' An order was given to 'spread Islam among them... start a great war (*olyg djang*), 366... sheikhs came to the Middle Yuz of the steppe of Diyar, to Shibān Khan and were accepted as his guests. Having learned of the circumstances and given consent, he armed 1700 bahadurs, whom he sent on horseback..., came down to the lower reaches (of Irtysh), and started a great war.' There 'were... Hotan people, Nugai people, Kara-Kipchak..., escaped rebels of Tarkhan Khan [and] Ichtak people... all of one faith. The sheikhs, having joined forces with Shibān..., fought and exterminated countless non-believers and Tatars. But the 300 mushaikhhs who fell..., became shahids. The fugitives of Tarkhan Khan returned to Hytay. The Ichtak people escaped to the forest. Some of Hotan, Nugai, and Kara-Kipchak people professed faith..., and some became diwana. The Ichtaks remained resistant to faith... 1,448 bahadurs of Shibān Khan fell and became shahids, 222 left... to join the nation of Middle Zhuz. Shibān

became known as Wali Khan, having waged war... with the saints. 300 of the mushaikhhs became shahids. Out of the 66 remaining... three left to teach the pillars of faith to the Nugai, Hotan, and Kara-Kipchak people... In Tobol, Tara, Tyumen, Tomsk there were... Khwājas and sheikhs of their kin. 63 returned...' Then follows a list of 30 astana, with the names of their discoverers: 'Ishan hoja Dawlet Shah ibn Shah 'Abd al-Wahhab al-Ispichafi' from Bukhara and those who 'gathered them into one genealogy,' 'Ibn-Yamin-hoja and 'Abd al-Karim qadi, akhūn of Tobol and Tomsk.' At the end there is a silsila of astana custodians '*Kefesh-'Ali-Sheikh in the village of Kömshele*' [Bustanov, 2009, pp. 215–219; Bustanov, 2011a, pp. 61–65; Katanov, 1904, pp. 18–28].

We will now analyse this text and compare it to the previous one. The two narratives have almost completely merged as their source—the nakil of great men and saints past—is sacral. The standpoint has changed: instead of 'the manifest and invisible saints,' hoja Baha'ad-Dīn initiates 'the great war,' which points to a change in spiritual leader. By mentioning Caliph Ali and his sword, 'who discovered Islam in Chin-Machin region [what Muslim peoples called China in the Middle Ages],' sanctions the war's continuation. There was only one war, but the motive of visiting Middle Yuz indicates that the war and the sheikhs reined for a long time. The site of the war was the lower reaches of the Irtysh; its rank was *olyg djang*; the initiators were sheikhs on horseback and armed warriors. The result was the extirpation of many 'non-believers and Tatars,' with just 'some of them' converting to Islam; the death of 300 sheikhs, who then became shahids (30 of them are on the list of awliya), and 1,448 warrior shahids (not listed). We will set the piece on Tarkhan/Turgan Khan aside for now.

The appearance of the secular ruler: Shibān Khan legitimated the actions of the Sufis, thus receiving the name of Wali Khan. He cannot be identified with the historical leader known as Shibān Khan or Shaybani Khan but merely be seen as a representation of the Shibānids' khan's ancestor [Bustanov, 2009b, p. 188; Bustanov, 2009, p. 220; Bustanov, 2011a, p. 66; Nestorov, 2002, p. 206]. Nevertheless, the toponym

'Middle Zhuz,' used by Eastern authors in the 16–17th centuries to refer to a part of the Kazakh Union [Materialy, 1969, p. 551; Yudin, 1992; Uskenbay, 2012, pp. 183–187], narrows it down to Shaybani Khan [Belich, 1988, pp. 104–106; Iskhakov, 2011, p. 159]. The number of ethnic groups is doubled and corresponds to the nomadic tribes of Uzbeks and Kazakhs of the mid–15–early 16th century [Sultanov, 1982, pp. 8–51]. The factual narrative notes the existence of a 'holy family' in the towns of Siberia in the early 17th century, going back to the three 'Khwājas and sheikhs' who stayed there. One of them, Sharbatī Sheikh, is listed as a saint in both editions of the *shajaras*.

So, regardless of the allusions to certain historical figures and facts, the analysis of these texts shows that their content has little to do with the real course of Islamisation and the formation of the cult of the saints, where astana, attesting to this process, served as the markers of Islamic regional identity with its borders matching the core of the former single national identity. We are presented not with the factual history but with a way of thinking or vision of the 'revelation of Islam' in the region by the Central Asian ulemas who came to Siberia and their descendants. Such sources with a theological or sacral origin must be considered from this perspective [Belich, 1987, p. 41; Bustanov, 2009g; Bustanov, 2010, pp. 33–35; Bustanov, 2011, pp. 147–149; Bustanov, 2013, pp. 73–74; Bustanov et al., 2011, pp. 122–123].

The growth of the cult and of its sacral geography is notable in the manuscripts: while in the first version of the legend we find a 'catalogue' of 20 graves of saints, the second version presents 30 graves, with most of them corresponding with those of the earlier version [Bustanov, 2011a, p. 67]. Moreover, while in 17 episodes the information given in the *shajaras* is confirmed by the field data from the 1970–1980s, when there were about 50–60 astana recorded [Belich, 1997, pp. 94–95; Belich, 1998a, p. 32], the dramatic revival of the cult at the turn of the 21st century saw their quantity in the region—mostly in southern Tyumen and the North of the Omsk Region—reach 80 [Islam, 2004, pp. 47–50; Otchyot, 2004, p. 6] and their number still increases today. Any correspondence between

the names of the holy men with the list of saints and/or their graves appearing in the *shajaras* in the two editions is out of the question. This is why we shall restrict our discussion of the saints to the analysis of some of the Siberian *astana* best known according to verified data.

Islamic figures from Central Asia introduced into the Siberian spiritual chain of the *awliya* through the Sufi hagiography: Hızır İlyas, Zangi Ata, Sayyid Ata, Hākīm Ata, Ambar Ana and Hūbbī hoja. Local Tatar legend tells of Hākīm Ata leading 366 sheikhs, and his depiction is similar to that of the 12th century Sufi sheikh Suleyman al-Bakrygani. The locally renowned mausoleum of Hākīm Ata, apparently first appeared in the 16th century, is in Baish/Bakrygani aul's cemetery (Vagaysky District, Tyumen Region). It is a six sided log construction (reconstructed 1990) 1.2 m high (walls 6 m in length). According to the legend, his wife Ambar/*Kāmbār-Ona*, his son Hubbi-Huca, and 7 more *awliya* are laid to rest at this cemetery, and the necropolis is considered to be an *ollī astana*/'great astana.' Baish astana was mentioned by G. Miller in 1734 [Siberia, 1996, p. 80]. The *Shajarat al-awliya* points to its high status: 'The custodians (*mudzhavir*) in Mecca say making a pilgrimage (*ṭawāf*) to [the grave of Hākīm khazrat, is [an equivalent to] making a pilgrimage to Mecca.' One who visited the Hākīm Ata astana 7 times was thenceforth considered to have fulfilled *ḥajj*. The idea of Baish astana as a 'second Mecca' may be connected with the suspension of *ḥajj* among Siberian Muslims after the fall of the Siberian Khanate. The Remezov's Chronicle (p. 112), describing how Yermak's body was 'buried [by Tatars] according to their law at the Baishevo cemetery,' after a funeral feast 'according to custom,' should be noted as an exceptional example that confounds the final resting place of the famous character with the cult of astana [Belich, 1997a, pp. 53–73; Belich, 2002a, pp. 405–412; Belich, 2004, pp. 77–88; Bustanov, 2011a, pp. 41–42, 58].

The list of saints in *Shajarat al-awliya* gives the ancient settlement Isker as the resting place for 'Shaykh Pīrī, Shaykh Nazar, [their] younger brother Shirbatī Shaykh... Three sons to one father, a descendant of Sangī-Bābā.' A fourth is mentioned in the copy of Sa'd Waqqas: 'In

Isker lies Aykani-Shaikh-'Aziz... of Zangī-Ata progeny (*owlad*). Here and there, Shirbati Sheikh, having opened 12 graves, 'lay at the feet of his brothers.' According to the 'Shajara Risalasy' ('Treatise on Genealogy'), written by the Tobolsk ākhūn hoja Shūkūr b. Yusuf in the second-third halves of the 17th century and Nasab-nāma, it could have happened in the late 16th or early 17th century [Belich, 1998a, pp. 36–39; Bustanov, 2009, pp. 209–212; 2009v; Iskhakov, 2011, pp. 159–179]. It is worth noting a curious fact. Zangī Ata is part of the Yasavīya spiritual line (*silsila*), being a student (*murīd*) of Suleyman Bakyrqani, who was the first *murīd* and the third or fourth representative of Caliph Aḥmad al-Yesevi [Abashin, 2001, pp. 40–41; Devin DeWeese, 2003, pp. 8–12].

This Turkestan sheikh is mentioned in both editions: 'In Kobyak lies Kasim Shaykh, descendant of Imam Ahmad.' According to the local Tatar legend, Kasim Shaykh was the younger brother of Ḥakīm Ata, who was considered to be a brother of Bighāch Ata [Belich, 2004, p. 80]. Thus, we know of several brothers for Ḥakīm Ata: 2 siblings and 4 spiritual of the lineage Zangī Ata ← Ḥakīm Ata ← al-Yesevi. Their graves mark the path the first sheikhs took along the Irtysh River from the mouth of the Ishim to the mouth of the Tobol. This is visible from the Shajarat: 'Having crossed the Ishim River, [they] turned away, so there are no saints' [graves] from the mouth of the Ishim to the upper Irtysh. There are some in the lower reaches of the Irtysh' [Bustanov, 2009, p. 201]. The first astana mark the area of the initial efforts of Yesevi sheikhs to Islamise the region and the creation of the cult of saints. The situation is inconsistent with the cult of the so-called 'seven holy brothers' (*etti-ogayni*), widespread in different versions in Central Asia, where the system of 2, 3, 4, 5, and 7 saints, whose mazars are located on a certain territory, performs the same function 'to unite the land by sacral means' [Abashin, 2003, p. 28].

While Ḥakīm Ata astana is located in the middle of the route of the first missionaries, the astana near Isker seems almost to stop them in their tracks. Iskerastana, taking the form of a renovated 'ancient wooden tower,' as noted by eyewitnesses from the end of the 17th to the

19th centuries (N. Sprafariy, I. Falk, V. Dmitriev, P. Slovtsov, M. Znamensky], had apparently attracted pilgrims and citizens of neighbouring villages from the 16th century until it burned down along with the necropolis on 29th May 1881. After this the tradition was lost [Belich, 1997, pp. 96–97; Belich, 2006, pp. 20–22]. Judging by these accounts, each of which notes one instance of worshiping the necropolis, collective rituals were performed here at different times of the year: 'May and September' and 'midsummer' are connected to various but interrelated events in the cult of saints. Local Tatars traditionally performed the ritual of remembrance for their ancestors (*tsim*) in May. Uraza Ait (*Eid*) was celebrated in September to coincide with the end of the month of Ramadan. Midsummer in the calendar of the Faithful corresponds to the date of hijra, and therefore ḥajj. Local Tatars would make a 'small pilgrimage' to the mausoleums of the saints, such as to Ḥakīm Ata astana. The remembrance of lost relatives and awliya on these dates essentially entailed visiting ancestors' graves (*tugum*) and astana, reading the appropriate prayers at them and, in the 18–19th centuries, the sacrifice of a calf. This is what we can assume about the cult in Isker astana. After a while the cemetery itself became an object of veneration, which is typical of the beliefs of the Siberian Tatars, and became a place for 'remembrance of Küchüm.' The Tobolsk Yurt Tatars or Shibanets, the ancestors of military and servile nobility of the Siberian Khanate, gathered here once 'every 3 or 4 years.' Their families still remembered in the 19th century that 'their kin could be traced back to Küchüm' [Belich, 2002, pp. 180–184; Belich, 2006, pp. 19–50].

At the mouth of the river Ishim, where Islamic devotees started their route to 'the lower reaches of Irtysh,' we find Bighāch Ata *astana*. Shajarat al-awliya reads: 'Bighāch Ata Shaykh, descendant of master (*mawla*) Jalāl ad-Dīn'. The silsila of the astana custodians introduces this figure: 'By sacred permission (*rukhsat*) of my brother Mullah Jalāl ad-Dīn Shaykh from Sacred Bukhara I came to the lands of Siberia (*vilayet*)... In the said settlement of Tūrmatak I, Aftal Shaykh, first lit a torch (*chirog*) to the reposed Hazrat Bighāch Ata.' Jalal ad-Din Sheikh lived in Bukhara and

was a follower of the Yesevi Tariqa [Bustanov, 2009, pp. 202, 212]. The list by Sa'd Waqqas gives Bighāch Ata three 'companions' but refers them all to the 'line of mawlawi Jami,' whom Katanov identified with the Naqshbandiyya poet and mystic 'Abd ar-Raḥmān Jāmī (died 1492) [Katanov, 1904, p. 24]. According to Bustanov, the change 'in name of the master Bigach-Ata' in the later version indicates 'the Naqshbandiyya took over dominance from the Yesevi [Bustanov, 2009, p. 220; Bustanov, 2011a, p. 67]. However, it is still unclear whether Jalal ad-Din sent Aftal/Abdal-sheikh to Siberia, or whether Bigach-Ata was a murīd of sheikh Jalal ad-Din, which would give a different time frame. Still we must not forget that we are dealing here with a sacred history.

If we follow the Sayyid copy of the 'Shajara Risalasy,' Abdal sheikh/Bābā Abdāl came to Siberia from Bukhara in 1572 together with Sharbatī Sheikh and Dīn 'Ali Khwāja. The fact that Sayyid Dīn 'Ali came from Urgench to Isker is confirmed by the letter from 'Abdullah Khān to Kuchum Khan, dating back to the 1590s [Bustanov, 2009g]. In the Nasab-nāma we read that 'our ancestors lived in Turmatak and Tautamak since the times of Kuchum,' the first being 'Abdal Shaykh.' Yet it also reads: 'coming from the city of Turkestan, Abdal Shaykh became the guardian of Turtamak yurt' [Bustanov, 2009, pp. 207, 209]. The probable proto-graph of the Shajarat, silsila in 'The charter of the guardian of Yurum astāna' clarifies: 'in the village of Ulugh Buran, Eftal from the sacred Bukhara lit a torch for the the venerable Bigach Ata from Turkestan' [Rakhimov, 2006, p. 19]. It seems that Abdal Sheikh could indeed have come to the Siberian *vilayet* in the time of Kuchum. In the spiritual chain he has no master, but underwent Sufi initiation through a dream, thus becoming an Uwaisī [DeWeese, 1993, pp. 1–34]—that is, he was guided by the spirit of wali Bigach Ata, whose *murshīd* was apparently ascribed as Jamal ad-din by Abdal Sheikh's descendants (Sheikh Zade) through a rukhshat. In Ḥakīm Ata's hagiography ('Ḥakīm Ata kitābī') the latter discovered his grave, becoming its first mudzhavir and receiving a *rukhshat* from Ḥakīm Ata himself. According to the local tradition, his grave is located in *Baish astana*. Bigach Ata is therefore thought of as a 'sibling' of Ḥakīm Ata

[Belich, 2004, pp. 79–87; Bustanov, 2009, pp. 221–214; Bustanov, 2011a, p. 54].

The analysis of 'Nasab-nāma,' including the *mudzhavir silsila*, showed that the genealogy dates back to the 16th century, and the *astana* near Tyurmetyaki village was created in the late 16th century' [Bustanov, 2009, pp. 209, 212]. The above material allows us to set the date at the last quarter of the 16th century. As an *astana*, this mausoleum is marked as between 'the cemetery of On Tsar' and the kurgans on a chart of the Ishim River in S. Remezov's Chorographic Drawing Book, compiled in the late 17th century. It is well established that the legendary 'Tsardom of On Tsar' had its centre in the mouth of the river, where a settlement is also marked [Chorographic, 2011, l. 107]. The mausoleum was on the bank of an oxbow on the river Ishim (*Astana Būrān*) among a line of kurgans at the edge of an ancient necropolis. Today it takes the form of a picket fence surrounding a 2.5 metre columnar grave, but it was originally apparently a hexagonal log construction. These kinds of constructions were built above awliya graves in these places as far back as the late 19th century, and their height was such that behind their walls 'one could see only the crowns of birches' [Belich, 2004a, p. 485; Seleznev et al., 2009, pp. 109–113, 118–121]. Columns (ormas), with their tops decorated according to gender, was typical of gravestones of the Kurdak-Sargat Tatars [Belich, 1998, pp. 55–57].

Apparently there was some kind of certain cycle or system of pilgrimages to these *astana*; however, the details are unknown. But their arrangement in the 'catalogues' of saints and appended information suggests that Bigach Ata *astana* was first to be visited, then Ḥakīm Ata *astana*, and finally Isker *astana*. P. Slovtsov's information that 'remembrances to Kuchum' were held 'every 3 or 4 years' at Isker, putting cult personification aside, would suggest that if there were a cycle, it went over a several years, or at least three. To date there is no data to confirm or disprove this thesis. However, we may suppose that such a system could have existed for believers of past centuries. As, for instance, in Central Asia, where this tradition has survived up to the present day in some areas [Abashin, 2008, pp. 5–23].

The earlier edition of the *shajara* refers to the lower reaches of Ishym in the Irtysh region as the '*land (yurt) of Ichtak*.' This was where the '366 saints from Transoxiana' 'came down the Ishym River' to and 'started a war.' Here in 9 or 90 years' time, 'during the reign of Murat Khan... his son Taibuga Bey... founded a Khanate in Isker Yurt.' In the later version here 'to the river, known by Turkic peoples as Irtysh, and in Tajik as Abi-Jarus, flowing to the west' but not 'a left tributary of the Ob,' as assumed by Katanov [Katanov, 1904, p. 20], but a left tributary of the Irtysh, the river Ishim, came first of all the sheikhs and bahadurs of Shibān Khan. Word for word it reads: '...to the banks of a river flowing near Kun-Batysh (of the west) and known by the Turks as Irtysh-Suy but in Tajik as... Ab-i Jarus' [Bustanov, 2009, p. 216]. And then, 'coming down to the lower reach of Ab-i Jarus/Irtysh,' they wage 'the great holy war,' reaching Tobol.

This area was inhabited by the ancestral communities of *Kurdak* and *Sargat*. The Kurdaks, living for a long time side by side with the Kazakhs (*Arghyns*) of Middle Zhuz, were descended from the same family. Arghyns lived nomadically in the 14–16th centuries from Syrdarya to the mouth of Ishym and further downstream on the Irtysh. Some of the Kurdaks, having joined the Lokay tribe of Uzbeks, particularly the Esanhoja group, went to Transoxiana later than the other Uzbek tribes—that is, under Shaybani Khan [Karmysheva, 1976, pp. 231–236]. Apparently, *Kara-Kipchaks* inhabited this area, whose generic name was preserved in the village name B. Qarāghāy; as well as *Hotans* (*Khitans*, *Khatais*), an ethnonym that was preserved in the village name Katanguy and the Katayskiye Elany tract of the Osha River; and Nogais who left their name in the Nugai tract of lake B. Uvat. Apart from their ethnonym in the name *Istyatsk* Yurt, the presence of Ichtak was preserved in the genealogical legends of the Sargat Tatars [Tomilov, 1981, pp. 119–134; Alishina, Niyazova, 2004, pp. 27, 31, 32]. Therefore, the ethnological history of this regional subgroup of Siberian Tatars to some extent confirms the facts reflected in the two versions of the legend of the regions Islamisation given in the *shajaras*. This is more or less all that can be ascertained from the factual history.

But the question remains to what extent the aspects of the cult of the saints, and the *astana* in particular, can be viewed as authentic. There can be little doubt in terms of the sacred narrative as they are its symbolic expression, naturally embodying the spiritual connection with the object of veneration—the 'pillars' of faith for the Siberian Tatars. As for the historical reality, one can hardly expect a clear and positive answer to this question. The analysis of the three above mentioned *astana* showed that it's a figment [Belich, 2010a, pp. 32–34; Belich, Bustanov, 2010, pp. 50–55]. But the believers do not care whether the mausoleum of saint Ḥakīm Ata is near Baish aul in Siberia or near Muinak in Uzbekistan. The main thing is that both here and there they may find his protection and patronage on the road and course of life.

In conclusion, we may note that the question of the chronology and creation of *astana* among the Siberian Tatars is still yet to be studied sufficiently. The development of the *awliya* cult followed the region's Islamisation and increased in the second half of the 16th century, where its appearance is reflected by *astana*. This process started under Kuchum with the arrival of Muslim theologists from Central Asia. Particularly, Dīn-ʿAlī Sheikh as a sayyid under the khan and *Sheikh ul-Islam* of the Siberian Khanate, Sharbatī Sheikh as a cataloguer of saints graves and apparently the first populariser of the legend of Siberian Islamisation and Abdāl Sheikh as a custodian of one of the region's earliest mausoleums. In the 17–18th centuries new *astana* appeared, devoted not only the names of the 366 legendary *awliya*, but also to local men of faith. However, studied have shown that even the first and more significant *astana* were the result of Muslimisation of previously holy sites and reflect the sacral history of Siberia, which is centred around the idea of a 'first ancestor'—the founder of the state and devotee of Islam, connected with the legends of the noble clans of the local Sayyids, Khwājas, and Sheikhs (as detailed in [Bustanov, 2013a, pp. 471–533]). The main peculiarity of Islam in the cult of the Saints among the Siberian Tatars is perhaps that Islamisation is still ongoing there.

CHAPTER 4

Political and Legal Culture

§ 1. Culture of Public Life

Damir Iskhakov

The tradition of statehood that formed a very specific culture of public life was one of the important aspects of the Turkic-Tatar civilisation in the 15–16th centuries onward. This included the culture of diplomacy, court rituals, and the system of state symbols (thrones, crowns, state seals, banners, and other symbols of power). Despite the fact that there is not much information on this subject, and it varies from one state to another, separate data can yield certain conclusions about this peculiar cultural aspect in the life of the medieval Turkic-Tatar communities of the period discussed. Studying the given cultural stratum raises the question of its origins: it can generally be traced back to the Golden Horde Civilisation.

Despite the fact that the issue of the culture of public life in the Turkic-Tatar societies still remains sparsely researched, some of its aspects were studied as early as in the 19th century [Berezin, 1851 pp. 543–554; Velyaminov-Zernov, 1864, p. 403; Smirnov, 1887, pp. 329–331]. The subject was further researched in the 1920s [Vakhidov, 1925, p. 63]. Over the past decades, interest in this issue has grown significantly (see [Yuzefovich, 1988; Usmanov, 1979; Iskhakov, 1997a; Iskhakov, 2006a; Iskhakov, 2007; Iskhakov, 2009v; Trepavlov, 2001; Zaitsev, 2004; Kolodziejczyk, 2011]).

Culture of Diplomacy. Many aspects of the Kazan Khanate's diplomacy can be studied on the basis of the sources that illustrate its relations with the Muscovite state. Known examples include the negotiations of 1497 'declaring' Sultan Abdul Latif the Kazan ruler, and the negotiations with Moscow 'for peace, brotherhood, and friendship' of 1507 [Iskhakov, 1997a, pp. 24–25]. A more detailed portrayal of the negotiation process, dating back to 1516, describes how ambassador Shah

Hussain-Sayyid came from Kazan to Moscow asking to 'make Abdul Latif, the ailing brother of Khan Muhammet Amin, the new 'tsar.' The ambassador had the authority to act on behalf of Khan Muhammed Amin and 'the entire Kazan state' and swore to the Grand Prince of Moscow that 'they would not declare anyone tsar or tsarevich without the Grand Prince's consent.' He brought a draft treaty from Kazan. The document was first signed by Khan Muhammet Amin in the presence of Moscow envoy Ivan Chelyadinov, before the latter left for Moscow along with Kazan ambassador Shah Hussain Sayyid. It appears the ambassador had to get the treaty signed by the Grand Prince Vasily Ivanovich. While in Moscow, the Kazan ambassador 'wrote in his own hand a document, on which the Kazan tsar and the entire Kazan state would swear an oath to the Tsar.' After that Shah Hussain Sayyid left for Kazan together with Russian ambassadors, where Khan Muhammed Amin and 'all the entire Kazan state' 'swore to the tsar' in accordance with the agreement. The Russian ambassadors then went back to Moscow together with Shah Hussain Sayyid, who had to speak on behalf of Muhammet Amin 'to beg' for Vasily Ivanovich's 'consent' to declare Abdul Latif, the Khan's brother, the new tsar [Complete Collection of Russian Chronicles, 13, 1965, pp. 15, 25]. Ambassadors were responsible for the actions of the rulers and nations they represented and on whose behalf they negotiated and made promises. Thus Shah Hussain Sayyid, who had signed the documents confirming that after Khan Muhammet Amin's death Shah-Gali would be made the next king, fell from grace with the Moscow authorities after Kazan broke this promise. According to the charter given to Russian envoy O. Andreev in 1523 in Moscow to be delivered to

the Crimean Khan, Russia demanded 'to hand over Shah Hussain Sayyid, the Kazan ambassador, who was known to reside in the Crimea at that time and who had sworn to the Grand Prince on behalf of all the Kazan people and broken his oath to declare Shig-Ali tsar after the death of Mahmet Amin.' [Malinovsky, l. 239]. However, the Crimean authorities did not hand the disgraced Sayyid over, who by 1523 had already got married in the Crimea. However, according to T. Gubin, the Russian envoy in the Crimean Khanate (1524), Shah Hussain Sayyid 'would not be allowed to return to Kazan' [Iskhakov, 1997a, p. 26]—as a result of the violation of his oath a diplomat would find himself in an extremely difficult situation.

In 1546 Russian ambassadors returned to Moscow from Kazan together with Gammet Sheikh, the Kazan ambassador, who was to deliver a charter written by three Kazan noblemen—Buyurgan (Abeyurgan) Sayyid, Prince Kadysh, and Chura Narykov (the latter was also prince karacha beg and belonged to the Agryn clan). The charter stated the following: '... Sayyids, Ulans, Princes, Mirzas, Sheikhs, Shehzads, Dolyshmans, and Cossacks, and the entire Kazan state pay obeisance to the Tsar to fulfil their request... to appoint Shigalei the Kazan tsar, and to send an associate boyar to Kazan to make the Sayyid, Ulans, and Princes, and the entire Kazan land swear an oath to the tsar.' The Sayyid, on whose behalf this letter was written, was Buyurgan, who was to be made to swear the oath with the rest of the country's nobility. The Chronicles state the following: '...the Grand Prince sent Ostafy Andreev to Buyurgan Sayyid, Kadysh, and Chura... to inform them of his will and make them swear the oath.' 'The Sayyid, Ulans, Princes, Mirzas, and the entire Kazan state' swore an oath to the Russian ambassador 'never to betray the Grand Prince and Tsar Shigalei as long as they live.' 15 March 1546 Kazan ambassadors Prince Urazly and Hafiz (Afyz) Andrychey came to Moscow together with the Russian ambassador, who had accepted the oath of allegiance from Kazan. The ambassadors were instructed to 'pay obeisance' to the Tsar on behalf of 'the Sayyid, Ulans, Princes,

and the entire Kazan state' and to ask him to 'send Tsar Shigalei to Kazan without delay' [Complete Collection of Russian Chronicles, 13, 1965, p. 148].

It is significant that the Sayyids always participated in choosing a Kazan Khan, which was often a matter of foreign policy [Iskhakov, 1997a, p. 36]. The Sayyids' prominent role in foreign-policy matters is a legacy of the Golden Horde epoch from the period after it was Islamised (see [Iskhakov, 2011, pp. 72–73]). The Sayyids' role was also significant in the procedure of swearing oaths, (Russian *shertovaniye*, from *şartname*). An oath of allegiance to the pretender to the throne sent from Moscow or other capital was the most important oath in the Kazan Khanate. During the inauguration of Shah-Gali in Kazan in 1519 all the noblemen and all the 'public representatives' were therefore put under oath. The list of noblemen put under oath begins with Sayyid. In 1546, before Shah-Gali was sent back to Kazan from Moscow, 'the Sayyid, Ulans, Princes, murzas, and the entire Kazan state swore an oath to the Russian ambassadors' (see above). Only then was the pretender to the throne sent to Kazan, but, apparently, the procedure of 'administering oaths' did not take place in this case (due to the Khan's short stay in Kazan). In August 1551, when Khan Shah-Gali was enthroned in Kazan once again, the procedure of 'taking oaths' was duly carried out. At first, the oath was taken by the Kazan noblemen (the list begins with Mullah Kul Sharif and Sayyid (Kul) Muhammet), and 'the Tsar (that is, Khan Shah-Gali—*D. I.*)...stamped the oath papers with his seals, and the best people of Kazan swore on them.' Only then did 'the Kazan people over three days swear in their hundreds an oath to the Tsar... and they swore the same oaths as their rulers did.'

Contracts regarding the relationship between the Kazan Khanate and the Muscovite state were a different type of 'oath.' Sayyids again participated in their formulation. They were of two types: a) contracts for 'peace, brotherhood, and friendship'; b) a contract 'not to enthrone' in Kazan a 'tsar or tsarevich' without the Grand Prince of Moscow's consent. Some of the features of the first contract

(the version recognising a vassalage) can be learned from an charter by Khan Kuchum dated back to 1570, when the ruler of the Siberian Khanate sent a message to Moscow requesting for Ivan IV to recognise him 'as an elder brother.' The above document contains the outline of the relationship between the parties as seen by the Khan: 'If a man was one's father's enemy, so will he become one's son's enemy also; if a man was one's father's friend, so will he become one's son's friend as well; if one's father becomes friends with a man, can one's son be his enemy?' [Collection, 1819, p. 123]. [Collection, 1819, p. 123]. As was already mentioned, in 1507 Burash Sayyid arrived in Moscow on behalf of Khan Muhammet Amin 'to pay obeisance to the Grand Prince Ivan Vasilyevich of all Russia and ask him to establish peace, brotherhood, and friendship between their nations.' Negotiations on this issue had already previously been held, so Burash Sayyid's visit to Moscow as the Khan's ambassador should be regarded as the climax for the negotiations. Indeed, as a result of Burash Sayyid's efforts, 8 September 1508 Vasily Ivanovich 'established peace, brotherhood, and friendship with Tsar Muhammad Amin' and sent back his envoy, Sayyid, to Kazan accompanied by the Moscow ambassador. The fact that the latter returned to Moscow in January 1509, 'carrying the oath papers from Tsar Muhammad Amin, and the Tsar took an oath to establish peace and brotherhood as it had been before... with Ivan Vasilyevich' means that Burash Sayyid went to Moscow to prepare a draft contract.

The events of 1512 clearly prove that Kazan and Moscow drafted and agreed on contracts prior to their actual conclusion. That winter Shah Hussain Sayyid, the ambassador of Khan Muhammad Amin, came to Moscow with an offer 'to establish peace and friendship,' as mentioned above. As a result of his negotiations with the Grand Prince's boyars on 'the peace between Tsar Muhammad Amin and the Grand Prince,' the Sayyid wrote an 'oath paper' and 'swore an oath to the boyars that he would swear to Tsar Muhammad Amin in Kazan in the presence of the Grand Prince's ambassador that, according to the contract, the

tsar would serve the Grand Prince for his entire life.' As is evident, we are again talking about a draft contract. After agreeing on the content of the contract in Moscow, the Kazan ambassador left for Kazan together with the Russian ambassador, where Khan Muhammad Amin 'took an oath on the contract in the presence of the Grand Prince's ambassadors and sealed it with his *myashen*' [seal—*D. I.*].'

The second type of contract was signed in 1516, when Khan Muhammad Amin was gravely ill. Kazan ambassadors visited Moscow headed again by Shah Hussain Sayyid to inform the Grand Prince of the Khan's illness and ask, as mentioned above, 'to declare' Abdul Latif Khan promising that 'Tsar Muhammad Amin and the entire Kazan state would take any oath the Grand Prince desired and that they would not select a tsar or a tsarevich without the Grand Prince's consent.' As the Khan's ambassador, Shah Hussain Sayyid 'wrote with his own hand that the Tsar and the entire Kazan state would swear to the Grand Prince.' This was a draft contract because the Grand Prince of Muscovy sent his ambassadors together with the Sayyid to deliver the above 'document' in Kazan, and 'Tsar Muhammad Amin and the entire Kazan state swore allegiance to the Grand Prince on these documents' in the presence of the ambassadors [Iskhakov, 1997a, pp. 36–38].

The practice of drawing up draft contracts applies to other Tatar States of the same period. This is evident from the description of 'swearing an oath' to Moscow by the Siberian Prince Edigur Taibugid in 1555–1558 [Complete Collection of Russian Chronicles, 29, 1965, pp. 233, 251, 258; Complete Collection of Russian Chronicles, 13, 1965, pp. 248, 276, 286] and Khan Kuchum in 1571 [Collection, 1819, pp. 63–65; Acts, 1841, p. 340], from the process of preparing the Astrakhan-Lithuanian agreement in 1540 [Zaitsev, 2004, p. 131], and from the information on Moscow-Crimea agreements of 1508, 1515–1518 [Collection of the Russian Historical Society, 1895, pp. 194, 317, 532; Malinovsky, p. 132 reverse], in which case Ivan III suggested that the Crimean Khan 'seal the draft contract with his nishans (seal ring with the khan's name) and scarlet

tamgas (red square seals) (our emphasis.—*D. I.*). The Crimean Khan also was required to 'swear an oath' on the above contract 'to rule together with his brother Tsarevich Ahmat, and his children Tsarevich Bagatyr, Tsarevich Alp, and with other his brothers and children, as well as Sayyids, Ulans, and Princes.' As follows from the procedure of preparing the contract in 1508, they 'took an oath' ('rota and pravda') on the Quran. Likewise, in 1670 after negotiations for peace in Moscow the Crimean envoys Safar Aga and Shahtemir Atalyk on the last page of the document recording the negotiations wrote their oath, which ended with the following words 'We swore on the Quran' (*Kuran üstünde şartqılduq*) [Kolodziejczyk, 2011, p. 304]. It is also notable that the word 'rota' (oath) is sometimes used here in such collocations as 'to drink rota' or 'to drink shert,' which dates back to the custom of drinking each other's blood after taking an oath [Ibid., p. 481]. The above description of 'taking oaths' by the Kazan people in 1551 shows that Sayyids somehow blessed the procedure by being the first to take the oath. It is possible that in the Kazan Khanate the oath of allegiance was also taken on the Quran, although there is no direct indication of that in the available sources. In the Crimean Khanate there was a special 'Shertnaya Kniga' (Oath Book)—the Quran that was kissed by the Crimean Khan after taking a diplomatic oath [Ibid., p. 482]. The duration of the process of concluding a contract ('shert') between the Nogai Horde and the Muscovite state in 1557 [Trepavlov, 2001, pp. 611–614] also leads us to assume that a draft contract was drawn up. A similar situation can be seen in the process of preparing a contract between the Siberian Yurt and the Muscovite state in 1571. The draft contract brought to Moscow from the Siberian Khanate states the following: '...to approve this document, I, Tsar Kuchum, have stamped it with my seal, and the best Siberian people (possibly Karachibeks—*D. I.*) signed it.' Upon the completion of the negotiations in Moscow, Khan Kuchum's ambassador and his envoy made a promise: when Ivan IV's envoy 'comes to Tsar Kuchum's land,' 'Tsar Kuchum and his best people would swear and seal this oath and

the Tsar's and the Grand Princes' yarliqs, and Tsar Kuchum would rule... in accordance with the conditions of this oath.' Apparently, Khan Kuchum's representatives at first ratified the contract, which was then to be confirmed by the Tsar in the presence of a Russian envoy.

Naturally, the diplomatic correspondence and agreements of the Turkic-Tatar states were not limited to the relationship with the Muscovite state. For example, the oral tradition of the Siberian Tatars contains interesting information on the features of the investiture of the Supreme Sayyid in the Siberian Khanate—how the head of the Muslim clergy was selected in Bukhara during the reign of Khan Kuchum [Iskhakov, 1997a, pp. 53–61]. The letter of Kazan Khan Sahib Giray to Sigismund I, the King of Poland and Lithuania, which dates back to 1538–1545 (the exact date is unknown), and which was a matter of foreign policy, not only reflects the specific aspects of cooperation between the two states, but also the fact that Kazan's representatives were well aware of the diplomatic subtleties (the indication of Sigismund I's titles, recognition of the King's superiority over the Khan, etc.) [Mustafina, 1997, pp. 26–38]. Regular diplomatic contacts between the Great Horde's Khans, especially those of the Crimean Khanate with the Ottoman Empire are well known [Zaitsev, 2004, p. 76]. The Astrakhan Khanate also had direct contacts with the Ottoman Empire [Ibid. pp. 115–117]. In 1549–1551 there were similar connections between the Ottoman Empire and the Nogai Horde [Trepavlov, 2001, pp. 246–247]. Naturally, all this required a certain level of diplomatic culture.

The above data (needless to say that we have discussed here only some of the available sources) demonstrates that the Turkic-Tatar states of the Late Golden Horde period had a developed diplomatic culture. The words of Kul-Sharif (Hajitarhani), the last Supreme Sayyid of the Kazan Khanate, who had practical and theoretical knowledge of diplomacy, confirm this conclusion. He said the following of the diplomacy of his time: 'In accordance with the needs of the epoch, for the purpose of ensuring the wealth and well-being of the country, the peace, and security among the

people as well as ensuring peace in the world, the rulers of the beautiful city of Kazan feigned friendship and exchanged ambassadors and government officials.' Here he turns to a saying popular in mid 16th century Kazan: 'Do not associate with the bad.' Then he ends his observations with the following verse:

The tranquility of the world is based on the understanding of these two ideas:

To be loyal to your friends and feign indifference to your enemies [Sherifi, 1995, p. 87].

Seals. The official (state) seals, mentioned in the sources in almost all the states of the Late Golden Horde period, were another element of the public culture of the time. For example, when Khan Shah-Gali was enthroned in Kazan in 1551, 'oath charters' were drawn up and were 'stamped with the Khan's seals' [Complete Collection of Russian Chronicles, 13, 1965, p. 169]. Apparently, what is meant here is state seals, one of which is preserved in an image on a *yarliq*, dated 1523 and which belonged to the Kazan Khan Sahib Giray—it is scarlet in colour [Vakhidov, 1925, p. 63], and another seal, a blue one, is preserved on a *yarliq* of the Kazan Khan Ibrahim dated 1479 [Usmanov, 1979, p. 34]. Both of them are square. Some Russian Chronicles mention a 'shert' (written oath) from the Siberian Prince Yadiger Taibugid that was made in 1558 and stamped with 'the Khan's seal' [Complete Collection of Russian Chronicles, 13, 1965, p. 258; Complete Collection of Russian Chronicles, 29, 1965, p. 258]. Another 'shert document' from Khan Kuchum (1571) contains the following entry: '... and to approve this document... I, Tsar Kuchum, have stamped it with my seal...' [Collection, 1819, p. 64]. A study by M. Usmanov confirms that in the Crimean Khanate there were similar seals of two shapes: seal rings (almond-shaped) and square-shaped ones, and the Khans' seals bore the Girays' coat of arms [Usmanov, 1979, pp. 140–166]. They are also mentioned in relation to the Moscow-Crimea negotiations dated 1515–1518 (cf. the phrase 'to seal with nishans and scarlet tamgas'). In the Crimea the square seals were called 'tamgas'. Since the 14th century, they also had another name—'nishans' (from the Persian *nishan* 'sign'). Apparently,

the word 'tamga' is connected to presence of the 'Tarak tamga,' the Giray family emblem, in the centre of the square seal since the reign of the Crimean Khan Haji Giray [Kolodziejczyk, 2011, pp. 321–323]. A similar square tamga (seal) belonged to Mahmut, the Khan of the Great Horde, who lived in the city of Astrakhan (1466) [Usmanov, 1979, pp. 144, 147]. In the Astrakhan Khanate, there were seals as well: when the Astrakhan Khan Abd ar-Rahman sent his 'great ambassador' to Moscow in 1540 to negotiate for 'friendship and brotherhood,' Ivan IV 'ordered the Tsar's calligrapher to draw up a charter of friendship,' and then after the Khan's ambassadors 'swore on this charter,' the Khan was to 'swear on the charter and seal it with his seals (our emphasis.—D. I.)' [Zaitsev, 2004, p. 131]. According to D. Kolodziejczyk, the square seals in the Crimea were 'gold' (*altun*), 'blue' (*kyk*), and 'scarlet' (*al*) in colour. The first two of the above seals were more prestigious, so in 1563 Ivan IV forbade his ambassadors to accept documents sealed with a 'scarlet nishan' [Kolodziejczyk, 2011, p. 326]. Signature seals (seal rings) were probably more personal. However, they can sometimes be found in official letters. For example, a letter from the Crimean Khan Saadet Giray to Krakow dated 1523 mentions a 'perstennyi nisan' (ring seal) [Ibid., p. 327]. The Crimean-Polish agreement dated 1667 bears the seal of *qalğa* and two seals of Giray Sultans [Ibid., p. 311]. Another type of seal mentioned in the documents of the Crimean Khanate from the 17th century were hanging seals or 'baysa' (from the Mongolian *paitsza*). They appear in documents sent to Moscow and take the form of a gold-plated silver seal attached to the document with a silver cord. For example, a Crimean document dated 1624 was certified in the following way: '*altun baysalu mühürümüzni salduq*' [Ibid., pp. 337, 341]. A legacy of the Jochid tradition, these seals were an element of the state power in terms of their content (titles, the owner's name, coat of arms) and were used for the state certification of official documents [Usmanov, 1979, pp. 152–182]. Since the Crimean Khanate outlived other Turkic-Tatar states, it was subject to certain innovations. For example, clearly influenced

by the Ottoman tradition, at the turn of the 17th century Crimean Khans started sealing their documents with a sultanic tugra. This mark replaced the initial phrase 'sozüm' (my word) in yarliqs, which had existed since the epoch of the Golden Horde. Indeed, the phrase 'sozüm' can still be observed in the Crimean yarliqs (both original and translated) of the first half of the 16th century: 'The word of Mendli Giray, the Great Tsar of the Great Horde' (1507), 'Ulu Ordanung ulu Hanı Deştı Qıpcaq barça Mogul padişahı Muhamad Kerey han sözüm' [Kolodziejczyk, 2011, pp. 343, 345].

Attributes of the state power. According to Russian diplomatic documents, while receiving Jerome Bowes, the British ambassador (1583–1584), Ivan IV, the Tsar of Muscovite state was sitting 'with three crowns at his side: the crowns of Moscow, Kazan, and Astrakhan' [Readings, 1885, p. 98]. I. Zaitsev suggests that the latter was 'taken as a trophy during the conquest of Astrakhan or made by Russian jewellers in connection to the annexation of the city' [Zaitsev, 2004, p. 182]. The first suggestion seems to be more likely. The fact is that the Kazan chronicle contains some interesting information about 'the crown of Kazan' regarding the time when after the conquest of the city the Khan's treasures were divided among the conquerors. Here is the full description: '[Ivan IV]... ordered to be taken to his chambers... his chosen arms... and the Tsar's belongings... And the Tsar's treasures that were captured in Kazan, the *Tsar's crown* (our emphasis.—*D. I.*), and his warder, and the Kazan Tsars' banner, as well as other Tsar's equipment were handed to our righteous Tsar from God' [Complete Collection of Russian Chronicles, 19, 1903, p. 467]. As seen from the Chronicle, the Russians not only came into possession of the Khan's crown but also other state symbols (the warder, the banner, and some other attributes of the Khan's power—'other tsar instruments'). It cannot be excluded that 'the Siberian Crown' possessed by Russian Tsars also used to belong to the Siberian Khanate. The fact that the crowns of Kazan and Astrakhan are connected to the titles of Muscovy monarchs, 'the Tsar of Kazan' and 'the Tsar of Ansrakhan,' also indirectly evidences this. Meanwhile, Boris Go-

dunov's title 'the Tsar of Siberia' [Uspensky, 2000, pp. 49–50, 96] or 'the Sovereign of the Whole Siberian Land and the Northern State' [Collection, 1819, p. 132] is the direct equivalent of those titles. Further study reveals that Ivan IV had already had the last part of the above title (this can be seen from a charter sent to Vilno (modern Vilnius) on 22 July 1555, see [Iskhakov, 2009v, p. 86]), which clearly came into existence after the Siberian Prince Yadiger Taibugid established vassal relations with Moscow. Meanwhile, the concept of 'the Tsar of Siberia,' as well as other similar terms, first appeared in Boris Godunov's title in connection with the final conquest of the Siberian Khanate in the 16th century. The 'Siberian Crown' could have been captured by the Russian troops at that very time (see [Faiz-rakhmanov, 2002, p. 145]).

This leads us to the conclusion that the Tatar states of the Late Golden Horde period had certain state symbols, and this is conformed by Crimean sources. According to Smirnov, the Crimean archive contains a document called the Genealogy of al-Genghis—the Descendants of Giray Khans and Sultans, Who Reigned in the Kipchak Steppes of the Crimean Khanate that includes comments on the power attributes ascribed to Chinggis Khan, but that are in this case rather characteristic of Girays: Chinggis Khan was wearing 'a Moghul khan crown with a green top, decorated with a white shawl with gold and pearls; the crown also had its front decorated with a spoonbill feather, precious stones, and pearl pendants'; then it goes on to describe the 'throne, covered with a luxury multicolour oriental carpet, with banners, timbals, drums, tambourines, bows and arrows, zischagges, and brigandines lying to the left of the throne'; and finally, that 'on the right side of the throne, on blue cushions, lay the law, and on the left side, Tarak (that is, Giray tamga.—*D. I.*), which was a part of the symbolic tamga or coat of arms' [Smirnov, 1887, pp. 329–331]. Some of these items were related to the Ottoman protectorate: in accordance with the Tarikhi of Muhammed Giray, during the inauguration of Crimean Khan Mengli Giray the Ottoman Sultan presented him with 'a banner, a drum, and a kettle drum'

[Ibid., p. 297]. Apparently, they were the symbols of power.

As to the throne mentioned in the Genealogy, they probably existed in other Tatar Khanates as well. Qadir Ali Bek, the author of the *Compendium of Chronicles*, implies there was one in the Kasimov Khanate. In his story about 'Uraz Muhammet being lifted by four karacha begs on a 'golden koshma' (kind of rug) in 1600, he provides an image of a 'throne' (*tähet*) in the shape of a rectangle [Velyaminov-Zernov, 1864, p. 403]. However, the koshma itself could be called 'throne' here, but the very presence of the term '*tähet*' (throne) is still very significant. And the Kazan Chronicler mentions that when Kazan was captured by the Russians, Khan Edigur Muhammet was sitting 'on the ground, on a carpet' rather than on the common 'tsar's golden place' [Complete Collection of Russian Chronicles, 19, 1903, p. 163]—it seems that a throne or a throne seat is meant in the latter case.

Court ceremonies and etiquette. There is a description of the ceremony of the inauguration of Sultan Uraz Muhammet, which took place in the city of Kasimov in 1600 in the presence of four princes from the clans of Arghyn, Kipchak, Jalair, and Manghit in Kasimov as well. It was described by Qadir Ali, one of the karacha begs, in his '*Compendium of Chronicles*' that contains the following note: 'previously Kipchaks and Arghyns would sit to the Khan's right, and representatives of Shirin and Baryn tribes, to the left' [Iskhakov, 1998, pp. 193, 195]. 200 common people—apparently, ordinary Cossacks—attended the ceremony alongside the 'Kerman begs and murzas.' The description of the ceremony states the following: '...they brought and spread out a golden koshma ...Bulyak Sayyid began to read a khotba (a prayer for the love and health of the Khan). Then four people (karacha begs.—*D. I.*), holding the four ends of the golden koshma, lifted the Khan on it... all the Muslims...filled the Mosque with joyful cheering. After that Karachis, Atalyks, and Imildashes showered the Khan with money, and all the guests congratulated the Khan' [Berezin, 1851, pp. 543–554; Velyaminov-Zernov, 1864 pp. 402–405]. As is evident,

the reading of khotba was a part of this ceremony. Apparently, this was a common practice; for example, a solemn prayer was read in honour of a newly elected Bey in the Nogai Horde [Trepavlov, 2001, p. 566]. The fact that Sayyids Kul Muhammet and Kar Said were also present at the ceremony alongside Sultans and Oglans—that is, tribe rulers—who in 1429 proclaimed Shibanid Abul Khayr a khan, also suggests that there was a similar prayer in honour of the Khan. Another type of khotba appeared in the Crimean Khanate in the late 16th century: Khan Islam II Giray introduced a custom according to which the Friday khotba was preceded with the name of the Turkish Sultan [Kolodziejczyk, 2011, p. 106].

Swearing an oath on the Quran (*shert*) while signing contracts was another characteristic trait of the Turkic-Tatar societies of the 15–16th centuries. Apart from the Crimean Khanate, a similar ceremony existed in the Nogai Horde, where the Nogai murzas 'would sing prayers in a tent' when taking a *shert* [Trepavlov, 2001, p. 566]. We can assume that the same was true for the relationship between the Siberian Yurt under the reign of Khan Kuchum and the Muscovite state, which is evidenced by the draft contract concluded between the Khan and Ivan IV in 1571. From this document it is clear that Khan Kuchum sent an ambassador and an envoy to Moscow, who 'took a binding oath (*rota* and *shert*) on the... document' to Ivan IV. It is also indicated that the Khan's ambassador and envoy first 'took an oath (*shert*) for their sovereign and Tsar Kuchum, and all his best people, and the entire Siberian state...' [Collection, 1819, pp. 64–65]. This (binding) '*rota*' is an oath that was probably sworn on the Quran.

The special treatment of Sayyids in Tatar states noted in the sources is also indicative of the etiquette and ceremonies of the time. In particular, when describing the welcoming ceremony in 1524 for Sultan Safa Giray by Kazan noblemen near the city of Kazan, S. Herberstein says that the event was arranged with 'pomp and honour because this suite (of Kazan princes.—*D. I.*) included the Sayyid, the Tatar High Priest. The author goes on to say that a Sayyid 'enjoys so much power and

respect that even tsars go out to meet him as he approaches and, standing, offer their hand to him. He sits on his horse, and they bow their heads and touch [his hand]: this is only permitted for tsars, whereas dukes do not touch his hand but his knees, noblemen, his feet, and common people, only his dress or horses' [Herberstein, 1988, p. 176]. That this is authentic information as opposed to a European invention is confirmed by the data associated with the Siberian Khanate. A text dating back to the end of the 16th century tells of real events recorded from the mouths of the Ambassadors of Bukhara, who describe a meeting of Khan Kuchum with a group headed by Yarim Sayyid that had come at his invitation to the Isker Yurt from the Bukhara Khanate [Iskhakov, 1997a, p. 55]. It is noted that when Khan Kuchum was informed about arrival of priests, he and his *nökürs* (personal bodyguards) crossed the River Irtysh to greet the guests.

The particular treatment to Sayyids in the Tatar states of the Late Golden Horde is evident from their titles, preserved in sources from various khanates: '*näküybel äshraf*' or '*sudat gızam*,' '*sadati gozam*' ('the Great Ruler,' 'his Majesty the Great Teacher') which have in Russian and European sources been rendered as 'the Great Bishop,' 'the Great Anar, Abo Amir,' 'the High-Priest,' and 'the Arch Priest' [Ibid].

Noblemen would sit in a particular arrangement at receptions in the courts of the rulers of the Turkic-Tatar States. The Russian ambassador V. Shadrin, who attended a reception of the Crimean Khan in 1518, said: '... here beside him [the Khan—*D. I.*] sat Agysh Prince, Azika Prince, Mansyr Sayyid, and Apak; and on the other side (our emphasis. —*D. I.*) sat Khalil Prince, Mamysh Ulan, Mamysh Checheut, Abu-la Ulan, Yapancha Prince, and Memeshev murza' [Collection of the Russian Historical Society, 1895, p. 500]. If we bear in mind that the list of noblemen included *karcha* begs (Agysh of the Shirin clan, Azika of the Manghits, Mamysh of the Saldzhiguts, and Khalil probably of the Kipchak clan), their location on opposite sides of the Khan should be regarded as a traditional element of the court ceremonies. We have already provided data on

the Kasimov Khanate, where the representatives of the Kipchak and Arghyn clans were located 'on the right hand' of the Khan, and those from the Shirin and Baryn clans, 'on the left hand.' The court ceremonies in the State of Shibanids during the reign of Shaibani Khan is described in '*Mihman—Name-yi Bukhara*' (1509). Regarding an 'August meeting' in the countryside of Kang-i Hil near the city of Samarkand, Fazlallah b. Ruzbikhan, it is told that while arranging the seats in the *iwan* of the Kanigilsky court, 'Ulems sat on the right side, and Sultans were sat on the left side... The great Emirs and the respected noble *murzas* in the August circle *took their seats according to their ranks and titles*' (our emphasis.—*D. I.*) [Fazlallah ibn Ruzbikhan Isfahani, 1976, p. 153].

Some elements of the welcoming ceremony for ambassadors in the Nogai Horde have been preserved in Nogai written affairs. In particular, Russian ambassadors complained that they 'were asked to pay a duty to tax collectors of the three Hordes and to the doorkeepers' [Continuation of Ancient Russian Vivliofika, 1791, p. 238]. Sometimes the ambassadors considered this as a 'will' given by the Nogai Prince to the 'Karachi... to rob by tax duties' [Ibid., p. 239]. However, we are dealing here with what is in fact an ancient tradition, according to which '12 Princes in the Horde (Nogai Horde.—*D. I.*)' were required to 'charge any ambassador the sum of a fur coat and an *odnoryadka* (cloak)' [Continuation of Ancient Russian Vivliofika, 1793, pp. 264–265]. The tradition of giving gifts to the 12 ruling Aqs and leading Beys and Mirzas was then established in the first quarter of the 17th century in the Crimean Khanate [Kolodziejczyk, 2011, p. 136]. However, it is possible that it had existed there before. V. Trepavlov notes that the ambassadors were instructed by the Ambassadorial Order in Moscow not to succumb to 'dishonest' customs, including payment of the 'staff duties': the guards at the entrance to the Bey's tent in the Nogai Horde would sometimes throw a '*batog*' (staff), and one had to pay a tax in order to step over it [Trepavlov, 2001, p. 605]. In fact, the above examples are connected with this custom, which

actually was a part of the greeting ceremony for ambassadors in the Nogai Horde. Similar customs apparently existed in parallel Tatar states. In any case, some Moscow-Crimean agreements dated 1513, 1525, and 1531 attest that when the Moscow ambassador arrived in the Crimea he would go directly to the Khan where 'there shall be no daragas, nor daraga duty collectors, nor the other collectors, and no force, attacks, looting, or deceit' [Notes, 1863, pp. 406, 417, 419]. This old formula has been known from Crimean documents since 1474: '...the ambassador shall go directly to me (the Khan.—*D. I.*), there shall be no daraga duty collectors or other collectors' [Collection, 1894, p. 1]. We can assume that we

are dealing here with the transformation of elements of the court welcoming ceremony for ambassadors, including for representatives of the vassal territories that had been preserved since the period of the Golden Horde. For example, ambassadors in the Crimean Khanate gave presents to noblemen at their reception, who saw them as a tribute from the vassals. On the other hand, the Khan gifted honourable clothes to the ambassadors that actually emphasised the Khan's sovereignty over the rulers of these envoys [Kolodziejczyk, 2011, p. 481]. Of course, in the period under review all these elements were already a part of the state culture in Turkic-Tatar societies of the 15–16th centuries.

§ 2. Legal Culture of the Turkic-Tatar States in the 15–18th Centuries

Roman Pochekaev

Legal culture refers to the general state of the 'legal milieu' in a society—its laws, court and judicial system, law enforcement bodies, the legal awareness of the country's population as a whole, the level of legal values and their implementation in practice [Alekseev, 1999, p. 51]. Special attention is paid here to texts that reflect the legal reality, as well as their creation, storage, and translation [Polyakov, 2004, p. 469]. When classifying legal cultures, the researchers have good reason to speak about an oriental version of legal culture, distinguishing between the Muslim, Indian, Far Eastern (Chinese and Japanese), and African varieties [David, Joffre-Spinosi, 2003, p. 308].

The lack of a legal culture among Turkic and Mongol nomadic peoples in the main historical and legal classifications is apparently due to insufficient knowledge. However, studies that focus on the legal system of Eurasian nomadic peoples indicate that they had a remarkable and at the same time highly developed legal culture. The most developed judicial cultures were those of the powerful 'steppe empires'—the empire of Chinggis Khan and his successors, the Yuan Empire in China, Ilkhanate in Iran, and also the Golden Horde. The Chinggisids compensated for

the lack of principles and norms regulating certain types of legal relations not inherent to nomadic societies by incorporating the norms of the settled states into its imperial law, primarily those of China and the Islamic world.

Thus, the legal practice (and respectively, the legal culture) of the Mongol Empire and its successor states that were of the Empire type was a unique combination of a number of judicial sources within a single legal system: 1) the norms of imperial law (as a result of the laws enacted by the rulers); 2) common law of nomadic tribes and settled peoples (including adats of Muslim subject Chinggisids); 3) religious law (Sharia law in the Islamic world and Buddhist canons in China, Mongolia, Tibet); 4) the law of foreign peoples and states with which the Mongol Empire and its successors were constantly interacting. Such a complex but balanced combination of seemingly different sources of law formed the legal basis for the existence of the Golden Horde, which was characterised by the highest developed legal culture of that time.

However, as a result of the collapse of the 'steppe empires,' including the Golden Horde, the material component maintaining

the level of the legal culture fell, and the single state with a complex but balanced legal system was replaced by a number of states—actually Turkic-Tatar states—with laws and legal cultures at wholly different levels of development. This is most evidenced by the fact that what had been elements of a unified legal system were now independent legal systems in the various Turkic-Tatar states—states that had previously coexisted within a single governing entity. Therefore, when describing the legal culture of Turkic-Tatar states of the 15–18th centuries, one should take into account the parallel co-existence within these independent legal systems (and cultures) of the imperial legal heritage of the State of Chinggis Khan and the Golden Horde, the common law of nomadic and settled peoples inhabiting these countries, and religious law (Sharia). In the Golden Horde the competition of such different legal systems was controlled by a strong central power that was primarily interested in protecting its own interests with the help of any potential legal principle and norms coming from a variety of sources. However, this mishmash of origins, without the controlling hand of the central power (which was weakened as a result of the collapse of the Golden Horde), was made manifest in the Turkic-Tatar states that replaced the Golden Horde. One of the peculiarities of the legal development of the descendants of the Golden Horde was the fact that they chose different paths. Some of the entities that developed in regions, which had already adhered to Muslim traditions for a long time (even before the Mongol conquest), became states in which Sharia law predominated. These were the Kazan, Crimean, and Astrakhan khanates. Others, which mostly represented nomadic state formations, began to base their legal system upon the rules of traditional law. The state of the Shibanids, the Nogai Horde, and the Siberian Khanate belonged to this group [Pochekayev, 2009b, p. 43]¹. However, whatever system of law

dominated in each of these states, all three major legal systems (the imperial, the customary/unofficial, and Sharia) were to some extent practiced in each of them. Besides, if in some cases the norms of one system substituted or supplanted the norms of the other, in others they were complementary or interchangeable.

The coexistence of the above legal systems in the Turkic-Tatar states of the 15–18th centuries allows us to regard them as the rightful heirs of the national identity and laws of the Mongol Empire and the Golden Horde and relate them to the same unique manifestation of Turkic-Mongol nomadic legal culture.

The historiography and sources of the legal culture of the Turkic-Tatar states of the 15–18th centuries. Researchers have repeatedly addressed aspects of the history of government and law in the Turkic-Tatar khanates. Moreover, the majority of scholars have focused on the history of a particular state (which is quite logical), while only rare works have suggested a synthesis and comparative analysis of the political and legal aspects of the history of Turkic-Tatar states (see, for example, [Zaitsev, 2004a; Iskhakov, Izmaylov, 2007; Iskhakov, 2009c]). We should also note the fundamental research of M. Usmanov on the diplomacy of the Turkic-Tatar states of the 14–16th centuries [Usmanov, 1979] and the original research by D. Iskhakov on the role of the supreme Muslim clergy (first of all, of the sayyids) in the post-Horde states [Iskhakov, 1997a]. A short article by T. Beysembiyev on the political and legal ideology of post-imperial Chinggisid states and its perception in neighbouring countries is also of particular interest [Beysembiyev, 1991].

Among the most important researches focusing on the politico-legal development of the Crimean khanate, we note the works of V. Smirnov [Smirnov, 2005; Smirnov, 2005a], A. Khoroshkevich [Khoroshkevich, 2001], O. Gayvoronovsky [Gayvoronovsky, 2007; Gayvoronovsky, 2009], as well as a series

¹ In the present work we do not examine the law culture of the so-called Great Horde, as we share the opinion of authors (U. Shamiloglu, for instance) who consider this state to be the late Golden Horde. There-

fore, its law culture shares the same aspects as the Golden Horde's one.

of works by the French scholars Ch. Lemerrier-Quelquejey and A. Bennigsen; T. Gök-bilgin, G. Weinstein, etc. [Eastern Europe, 2009]. This research is primarily dedicated to the political history of the Crimean khanate; however, their authors often devote special attention to a range of legal issues and thoroughly analyse the written sources of the law (see below). Further on, certain legal issues are addressed in research on the history of Crimean-Moscow relations [Sanin, 1987; Novoselsky, 1994, et al.], Crimean-Turkish relations (see for instance [Oreshkova, 1990] and in works on the history of the development of Islam in the Crimean khanate [Boytsova, 2004]). The following examples of research are dedicated solely to the legal aspects of the history of the Crimean khanate: F. Lashkov's research on tenure in the Crimea [Lashkov, 1894–1896], F. Ametka describes the development of state, law, and justice in the Crimean khanate [Ametka, 2003; Ametka, 2004]; the interrelation of Sharia and customary law in the Crimean khanate in the second half of the 17th century is briefly addressed in the article by R. Pochekeyev [Pochekeyev, 2009c]. Moreover, there is a range of works on source studies which describe and analyse the Crimean written sources on the law or documents of legal significance. Those include the research of M. Berezhkov, F. Lashkov, O. Aqçoqraqlı, I. Zaitsev (see, for instance, [Berezhkov, 1894; Berezhkov, 1894a; Lashkov, 1889; Lashkov, 1890–1891; Aqçoqraqlı, 1931; Zaitsev, 2009a]).

The politico-legal aspects of the history of the Kazan khanate are covered in the monographs of M. Khudyakov, Sh. Muhamedyarov, D. Iskhakov, A. Bakhtin [Khudyakov, 1996; 1996 Muhamedyarov, 1950; Iskhakov, Izmaylov, 2005, Bakhtin, 2008]. A number of legal issues are touched on in the works of Sh. Muhamedyarov (land relations), D. Iskhakov (the role of the Muslim clergy in the politico-legal life of society), V. Trepavlov (the establishment of legal relations with other post-Horde states) [Muhamedyarov, 1958; Iskhakov, 1997a; Trepavlov, 2007].

The history of the Nogai Horde is explicitly covered in the fundamental research of V. Trepavlov, who pays considerable attention to the political life and legal relations in this state [Trepavlov, 2001]. Besides V. Trepavlov, who is also the author of multiple works on the Nogai Horde history, separate aspects of the politico-legal history of the Nogai Horde were also addressed by other authors. Thus, the works of Ye. Ponozenko cover issues of the administrative structure, justice, and lawsuits among Nogais [Ponozenko, 1976; Ponozenko, 1977]. The research of B. Viktorin observes the role of customary law in the life of the Nogais as well as peculiarities of the administrative structure in the Nogai Horde [Viktorin, 1985; Viktorin, 1991; Viktorin, 1999].

As far as we know, there is no research dedicated to the politico-legal structure in the Kasimov Khanate. Certain aspects of governmental structure and legal development are described in general works on the history of the Kasimov Khanate by V. Velyaminov-Zernov, A. Bakhtin, S. Acar, B. Rakhimzyanov [Velyaminov-Zernov, 1863–1868; Bakhtin, 2008; Acar, 2008; Rakhimzyanov, 2009]. The role of the Muslim clergy in legislative activity and political decision making in the Kasimov khanate is addressed by D. Iskhakov [Iskhakov, 1997a, pp. 12–14].

The politico-legal history of the Siberian Khanate is represented in the works of a number of contemporary researchers. General questions on the politico-legal structure are reflected in the work of D. Iskhakov [Iskhakov, 2006]. An analysis of legal documents (the letters of Tyumen and Siberian rulers) is provided by A. Nesterov and A. Bustanov [Nesterov, 2004; Bustanov, 2007]. D. Maslyuzhenko investigates issues of the monarchic status and co-regency in the Tyumen Yurt/Siberian Khanate [Maslyuzhenko, 2007; Maslyuzhenko, 2009]. The works of D. Iskhakov and Z. Tychinskikh address the problems of the administrative, political and territorial structures of the Siberian Khanate in the 16–17th centuries as well as the status of its beklyaribeks [Iskhakov, 2008; Tychinskikh, 2009; Tychinskikh, 2009a].

The politico-legal aspects of the Shibaniids' state (also known in history as 'the state of nomadic Uzbeks') are discussed only in general works related to the history of this state [Akhmedov, 1965, pp. 71–108; Iskhakov, Izmaylov, 2007, pp. 259–262; Maslyuzhenko, 2008, pp. 72–90; Iskhakov, 2009c, pp. 74–77]. To our knowledge, there is no research on the problems of state and law in the Shibaniid yurt.

As for the Astrakhan Khanate, historiography hardly covers the governmental and legal aspects of its history. Some issues are described in the seminal study by I. Zaitsev [Zaitsev, 2004]. The influence of the Muslim clergy on the politico-legal life of the khanate is examined by D. Iskhakov [Iskhakov, 1997a, pp. 64–68].

Undoubtedly, these significant differences in the number, volume, level, and focus of the studies of various Turkic-Tatar states are explained by the condition of the extant written monuments on law of each of the states.

The majority of sources are on the topics of state and law (and, consequently, legal culture) of the Crimean khanate. Moreover, many of them are published and even translated into Russian. One of the most highly-valued sources on the history of the formation of the state and legal system in the Crimean Khanate is undoubtedly that of the *yarliqs* of the Crimean khans. The most significant publications and detailed research on their *yarliqs* were carried out by V. Grigoriev and Ya. Yartsov [Grigoriev, Yartsov, 1844; Yartsov, 1848], I. Berezin [Berezin, 1872], Z. Firkovich [Firkovich, 1890], F. Lashkov [Lashkov, 1895b], V. Smirnov [Smirnov, 1913; Smirnov, 1917], S. Malov [Malov, 1953], A. Bennigsen [Bennigsen, 1978]. Another equally important source is that of documents on diplomatic relations between the Polish-Lithuanian state, Russia and the Crimean Khanate: ambassadorial books, state reports of ambassadors, and the letters of the Crimean khans. Among the most important publications are the works of N. Obolensky [Obolensky, 1838], N. Murzakevich [State report, 1850], V. Velyaminov-Zernov [Velyaminov-Zernov, 2010], V. Smirnov [Smirnov,

1881], G. Karpov [Monuments, 1884; Monuments, 1895], F. Lashkov [Lashkov, 1891; Lashkov, 1892], A. Markevich [Markevich, 1895–1896], A. Sergeev [Sergeev, 1913], B. Florya [Florya, 2001], S. Faizov [Faizov, 2003], I. Mustakimov [Documents, 2008]. Kazasker books (*sakki*) can be seen as specific but still extremely important sources on the history of legal culture in the Crimean Khanate. The most significant publications in this field are those of M. Biyarlanov [Biyarlanov, 1889–1890] and F. Lashkov [Lashkov, 1896a].

There are far fewer legal monuments that survived on the Kazan Khanate. These include, first of all, a small number of *khan yarliqs* and messages, which were published and accompanied by studies done at various times by S. Vakhidov [Vakhidov, 1925a], M. Usmanov, Sh. Muhamedyarov and R. Stepanov [Gosmanov, 1965; Muhamedyarov, 1967], I. Vášáry [Vášáry, Muhamedyarov, 1987], D. Mustafina [Mustafina, 1997], S. Alishev [Alishev, 2001]. Moreover, references to the acts of the Kazan khanate are found in a number of later documents (at the end of the 16–18th centuries)—affirmative certificates of Russian rulers which were already issued when the Kazan khanate constituted a part of Russia (see, for example, [Velyaminov-Zernov, 1864a]).

A considerable variety of documents survived on the Nogai Horde owing to the extant ambassadorial books that shed light on the relations between it and the Muscovite state. They contain a weighty number of official acts (messages) written by Nogai beys and *murzas* as well as letters addressed to them and the '*yarliqs*' of Moscow rulers. The history of the publication of these sources begins at the end of the 18th century. The most significant publications of ambassadorial books about Russia-Nogai Horde relations were carried out by N. Novikov [Novikov, 1791–1801], G. Karpov [Monuments, 1884], M. Lukichev, N. Rogozhing, B. Keldasov, Ye. Lykova [Ambassadorial book, 1984; Ambassadorial book, 1984; Ambassadorial books, 1995], V. Trepavlov, and D. Mustafina [Ambassadorial book, 2003; Ambassadorial books, 2006].

A special situation occurred with the legal monuments of the Kasimov Khanate. Neither legal nor any other official documents have survived to the present day. However, there is a series of contractual letters of Moscow rulers touching upon the question of the legal status of the Kasimov Khanate, as well as other acts of the Muscovite state. These were published by V. Velyaminov-Zernov, 1863–1868], L. Cherepnin [Spiritual, 1950], A. Antonov [Antonov, 2001], et al. Important politico-legal data is found in 'The Collection of Chronicles' by Qadir Ali-bey Jalairi, which was compiled at the court of Kasimov khan Uraz Muhammad [Library, 1854].

The Tyumen and Siberian Khanates left behind only a few written monuments. Only a few diplomatic documents were preserved to the present day. Among them are charters of the Tyumen/Siberian khans of the 15–16th centuries, which were erroneously named yarliqs, as well as letters from Moscow rulers to Siberian monarchs. These sources were repeatedly published and quoted in different theme-based collections of works and studies (see, for instance, [Collection, 1819; Nebolsin, 1849; Ambassadorial book, 1984; Ambassadorial books, 1995; Atlasi, 2005; Iskhakov, 2006]. Additional information on the politico-legal aspects of the Siberian Khanate is found in charters of the Moscow tsars of the 16–17th centuries, which are published as the appendix to the seminal work of G. Miller [Miller, 1999; Miller, 1941; Miller, 2005], as well as in documents on the history of Russian-Mongolian relations in the middle of the 17th century [Russian-Mongolian, 1996].

Legal acts of the state of Shibanids are almost non-existent or have yet to be discovered. We can only make general conclusions regarding the politico-legal development of the state if we consider narrative sources (see [Ahmedov, 1965, pp. 71–108; Iskhakov, Izmaylov, 2007, pp. 259–262; Iskhakov, 2009c, pp. 74–77]).

A similar situation is observed in respect of the Astrakhan Khanate: thus far only one official document of this state has been found—the message of the Astrakhan khan

(whose name was also restored based on this act!) to the Turkish sultan [Documents, 2008, pp. 65–68]. Meanwhile, researchers have drawn general conclusions about the politico-legal structure either based on narrative sources or indirect acts (see [Zaitsev, 2004]).

As a result, most research on the legal culture of the Turkic-Tatar states analyses fundamental sources on the history of the state and law (legal monuments) and reconstructs the administrative structure of these states based on these sources. Thus, attention primarily is paid to political and state components rather than to legal issues. The legal aspect is touched on to a lesser extent. In addition, researchers understandably describe the Muslim (sharia) aspect of Turkic-Tatar legal culture in a detailed way. They also note the peculiarities of 'national Islam' in each of the states under consideration as well as certain aspects of customary law.

However, the evolution of the principles and norms of imperial ('Chinggisid') law in Turkic-Tatar khanates of the 15–18th centuries has yet to be the focus of deep research, although the existence of this very system allows us to regard these states as the direct and immediate descendants of the Golden Horde and its legal traditions. Correspondingly, in Turkic-Tatar states the co-existence of several legal systems within one single government formation, which we have outlined as the main characteristic and peculiarity of their legal culture, has also yet to be sufficiently investigated¹.

The imperial legal heritage of the Turkic-Tatar khanates. The very fact that the Turkic-Tatar states were political heirs of the Golden Horde as well as the fact that most of them (except for the Nogai Horde) were ruled by the descendants of Chinggis Khan and the Golden Horde stipulated the use of

¹ The only research that in a fairly detailed way describes the influence of the Golden Horde's legal traditions on legislation in the Crimean Khanate belongs to F. Lashkov [Lashkov, 1894; 1895; 1895a; 1896], but the author limited himself mostly to questions of land/legal relations. In addition, today many of his conclusions require revision based on the latest research and newly discovered sources.

sources, principles, and concrete norms of the imperial law in these states.

First, this is due to the retention of the very institution of khan power. Besides, Chinggis Khan's descendants preserved the monopoly on this title in all Turkic-Tatar states throughout the period under consideration (see [Beysembiyev, 1991, p. 27]). However, the rulers of the Nogai Horde—Edigu's heirs—and the Siberian Taibugids were the exception. But they would also enthrone puppet kings during different periods of time. It is not a mere coincidence that Russian chronicles repeatedly refer to the title 'Nogai khan' (see, for example, [Sabitov, 2009]). Monarchs of the post-Horde states would emphasise their succession from Chinggis Khan in official acts. One of the brightest examples of how the 'charisma' of the Chinggisid dynasty continued to be the source of supreme power is the fact that khan yarliqs in the 16–17th centuries would appeal to Tengri—the ancient Turkic deity which, according to the official imperial ideology, bestowed power upon Chinggis Khan and his heirs. It is noteworthy that the Crimean khans of the middle of the 17th century, Muhammad Giray I and Islam Giray III (who were Muslims and, according to some data, even claimed the title of khalif—the ruler of all the righteous), appealed to both Tengri and Allah in their messages [Faizov, 2003, pp. 80, 87, 115, 123, 135, 142, see also Boytsova, 2004, pp. 87–88]¹.

Having inherited the charisma of Chinggis Khan from their direct predecessors—Jochid khans of the Golden Horde—the monarchs of the Turkic-Tatar states also inherited their prerogatives in various spheres. First, this pertained to their legislative activity, which was reflected in the issuing of orders—that is, khan yarliqs.

Some kinds of yarliqs disappeared as they were simply not required any longer. For instance, the functions of yarliq orders, which had existed in the Golden Horde and other Chinggisid states in the 13–15th centuries, were gradually subsumed by sharia legislation in the Crimean Khanate. Thus, the basis of law in the Crimea constituted sharia norms, judicial decisions were made by kadis and were recorded in special books—the *Kazasker sakki* [Biyarslanov, 1889–1890].

Moreover, khans in Turkic-Tatar states lost their monopoly regarding the issuing of yarliqs. Thus, a Turkish author of the 17th century, Hussein Hezarfenn, notes that not only the Crimean khans but also their heirs and coregents—Kalga-sultan and Nuraddin-sultan—had the right to issue and grant yarliqs [Oreshkova, 1990, p. 266]. Indeed, a number of yarliqs issued by both khans and persons who bore the sultan title have been preserved, for instance, orders by Muhammad Giray-sultan, Adil Giray-sultan, Fatih Giray-sultan, and even one khan daughter—Mehri-sultan-hanyke. Such orders were called tarkhan yarliqs or soyurgal yarliqs—that is, deeds of gift [Usmanov, 1979, pp. 21, 36, 43–45, 53, 55]. V. Smirnov informs us of a curious document from the legal perspective—a charter (yarliq?) of Baht Giray-sultan sealed by the stamp of his father, Bahadur Giray Khan [Smirnov, 2005, p. 380]! Moreover, Russian archives contain sources indicating that even Nogai beys who were not Chinggisids also issued 'ierlyks' (see [Trepavlov, 2001, p. 523]). In 1549, after the death of Safa Giray, a quriltai was held in Kazan. At that quriltai the participants (beklyaribek prince Mamai, ulans, mullahs, khafizes, princes, centurions and decurions) adopted and signed a document that was sent to the Crimean khan Sahib Giray. This document was called a yarliq which, in our opinion, is evidence that the quriltai of 1549 took upon himself the functions of the supreme government with the right to issue proper acts before the new khan ascended to the throne (this very document contains a request to send the new monarch to Kazan) (see [Iskhakov, 2010, p. 140]).

¹ This tradition also takes root in the Golden Horde, where many khans continued to address Tengri in many of their yarliqs and tablets even after the adoption of Islam (see, for example: [Banzarov, 1850, pp. 8, 17]), which did not evidence the fact that they were 'bad Muslims', although it is indicative that apart from the Islamic factors that helped to justify their power, they also continued to use imperial factors of legitimization which had existed since pre-Islamic times.

Granted charters could be granted both to individuals and to entire settlements, as was the case during the days of the Golden Horde [Vásáry, 1982]. They could also be granted to persons belonging to certain confessions, for instance, we know that Crimean khans issued *yarliqs* to the Karaites [Firkovich, 1890, pp. 55–105]. However, in the course of time, the Crimean khans started the practice of issuing *yarliqs* without granting the addressee the status of a *tarkhan* (which was not viable from the economic perspective) but allowing addressees to receive a certain monetary reward from the state treasury (see [Usmanov, 1979, p. 246]). And *tarkhan yarliqs* issued by the first Crimean khans were subsequently confirmed by their successors. Some of those *yarliqs* remained in force and effect until the last years of the existence of the Crimean Khanate, and even after it became part of the Russian Empire (see, for instance, [Smirnov, 1913, pp. 28–39]). A similar situation also existed in the Kazan Khanate: *tarkhan* privileges of *yarliq* holders were preserved not only during the existence of this state but even later, after the khanate was annexed to Russia [Khudyakov, 1996, p. 683; Vásáry, Muhamedyarov, 1987, pp. 190–206].

We can thoroughly trace the fate of *yarliqs* in the Crimean Khanate and to a lesser extent in the Kazan and Siberian khanates, while there is absolutely no data on *yarliqs* in the Astrakhan Khanate. Based on the available sources, we can suggest that in these khanates *yarliqs* were preserved and actively used in legal practice. However, if in the Golden Horde *yarliqs* played the role of enactments with compulsory universal action, in the descendant states they mostly represented subsidiary legislation or, possibly, a tradition and evidence that the local rulers were the successors of the Mongol Empire and the Golden Horde.

The Crimean Khanate left behind the biggest quantity of *yarliqs*, and it is the Crimean documents that allow us to trace the evolution of this institution in the post-Horde khanates. As the analysis of the extant documents show, the majority of *khan yarliqs* represented either deeds of gift or letters to for-

eign rulers whom Crimean khans (who dared to call themselves the main successors of the Golden Horde) considered inferior in comparison with them (see, for instance, [Firkovich, 1890]). Collections of *tarkhan yarliqs* are of special value. For a long time, Crimean khans granted them to representatives of the same clan [Smirnov, 1913]. This is evidence that the Golden Horde (and the Mongol Imperial) tradition was retained. According to this tradition, each *khan*, when ascending to the throne, had to either confirm or cancel the *yarliqs* issued by his predecessors. However, in the 17th century Crimean khans started using another means of confirming the will of their predecessors: the *yarliqs* issued by former khans were sealed by present khans. This way, the latter prolonged the validity of these documents. Thus, the *yarliq* describing *khan Devlet Giray I*'s decision on a certain land dispute also contains the seals of khans Selim Giray I, Salamat Giray II, and Mengli Giray II—that is, that *yarliq* was in effect from the 1570s till the 1740s. In a similar way, the validity of Selim Giray II's *yarliq* on granting land ownership was confirmed by his successors Arslan Giray and Khalim Giray [Lashkov, 1895b, pp. 89, 92].

The entire range of extant official acts of the Kazan khanate contains only two *yarliqs* and both of them are *tarkhan* ones. One was issued by *khan Ibrahim* and the other by *Sahib Giray* [Muhamedyarov, 1967; Usmanov, 1979, pp. 34–37; Äxmätcanov, 2009]. Despite the fact that a significant number of acts of the Kazan *khan secretariat* were missing, there are reasons to think that it is the Kazan Khanate where the *yarliqs* that are most characteristic of the Golden Horde could be preserved. This is related to the fact that, in comparison with the Crimean Khanate, during a rather short period of its existence (1437/1445–1552) the Kazan Khanate neither lost the traditions of the Horde nor fell under foreign influence. Meanwhile, the Crimean Khanate fell under the strong influence of the Ottoman state-legal tradition already in the middle of the 16th century.

Although the administrative apparatus of the Kazan Khanate was built on the ba-

sis of the Muslim bureaucratic hierarchy, it preserved some administrative institutes of the Horde (i.e., de facto Turkic-Mongol institutes). For example, the administrative units 'darugas'/'dorogas,' which are mentioned in the sources, may be compared to the regions in the Golden Horde which were ruled by khan governors—darugas. This parallel becomes even more vivid if we take into consideration that these 'darugas,' in turn, were divided into hundreds and tens, which corresponds to the administrative system of the Golden Horde [Iskhakov, 2009c, p. 60]. Keeping this in mind, it is logical to suppose that the appointment of the rulers of these 'darugas' was also made in accordance with the order accepted long ago in the Golden Horde—that is, via issuing certain khan yarliqs. The extant messages of Kazan khan Safa Giray to Polish king Sigismund I and his son and co-regent Sigismund II August dated to the turn of the 1530–1530s [Mustafina, 1997] are not yarliqs.

A similarly small quantity of official acts have survived from the Tyumen yurt, which was subsequently transformed into the Siberian Khanate. Its history has not been adequately investigated due to the almost complete absence of authentic Siberian sources (see, for instance, [Zaitsev, 2009a, pp. 5–6]). Nevertheless, there are no doubts over the very fact of the existence of the institution of khan yarliqs in this khanate. Thus, we see the following phrase in the letter dated to 1489 of Tyumen khan Sayyid Ibrahim (Ibak) addressed to Moscow Grand Prince Ivan III: 'When after seeing the yarliq the Chumgur prince reaches it, this will be the sign of your brotherhood' [Ambassadorial book, 1984, p. 18]. The message itself is not a yarliq as it is addressed to a ruler of equal status [Bustanov, 2007, p. 93]; however, the above mentioned yarliq is a kind of a 'credential charter' given to the khan messenger as the proof of his diplomatic authority [Pochekeyev, 2009b, p. 186]. The status of one more document is less clear. It is khan Kichum's letter to Moscow dated to 1570, called a charter in the Russian translation [Iskhakov, 2006, pp. 179–180], although some researchers

translate the word 'charter' as 'yarliq' (see, for instance, [Atlasi, 2005, pp. 48–49]). We suggest that this document should not be seen as a yarliq (such as the above-mentioned Kazan messages to Polish kings and nobility) because, first, there are no indications that Kichum placed himself above the Moscow tsar; second, the text of the charter is finished by a 'bow,' which is not characteristic of yarliqs because if the khan granted a yarliq, he saw his position as higher than that of his addressee.

As we finish our survey of the evolution of the yarliq institution in the post-Horde Turkic-Tatar states, we should say a few words about another interesting tendency related to the process. We should mention the fact that foreign monarchs would grant yarliqs to khans Chinggisids and other rulers of the post-Horde states (yurts), although foreigners were not descendants of Chinggis Khan and, therefore, did not have the right to issue yarliqs. Nevertheless, we are acquainted with at least six such documents: the yarliq of Turkish khan Mehmed II to Crimean khan Mengli Giray of 1473 [Guzev, 1972], the yarliq of Ivan the Terrible to Siberian khan Edigur of 1556 and three yarliqs issued again by Ivan the Terrible to Nogai murzas in 1557–1561 [Ambassadorial books, 2006, pp. 242–243, 334], as well as the yarliq of Boris Godunov that appointed Kazakh sultan Uraz Muhammad to the position of ruler of the Kasimov Khanate (let us note that the texts of the two yarliqs—those of Ivan the Terrible of 1556 and Boris Godunov of 1600—were not preserved, but the fact of their existence is mentioned in the sources) [Trepavlov, 2008]. Let us note the fact that yarliqs were adopted neither in the record keeping practices of the Ottoman Empire nor in the Muscovite state. Undoubtedly, the issuing of yarliqs bore an extraordinary character that reflected the special relations of the Moscow State and the Ottoman Empire with the post-Horde Chinggisid states. And according to M. Dovnar-Zapolsky, the Lithuanian Metrics dated to the beginning of the 16th century also make mention of the 'yarliqs' of the Polish king to the Crimean

khan Mengli Giray [Dovnar-Zapolsky, 1897, p. 18]. However, in this case, we believe that either the source contains a mistake, or the researcher is wrong: we know that Crimean khans sent yarliqs to Polish-Lithuanian monarchs who were considered Crimean vassals in terms of the southern Russian lands (see [Pochekeyev, 2006]), and we are not aware of any other evidence that Polish kings sent yarliqs to Crimean khans, except for that provided by M. Dovnara-Zapolsky in his work.

Quite interesting information on the international legal status of Turkic-Tatar rulers of the post-Horde epoch is contained in their diplomatic acts and letters to foreign monarchs. Because their form (records) and content mostly corresponded to the legal tradition of the Golden Horde, we see these writings as possible examples of the Jochids' imperial heritage. Thus, the Crimean khans who were considered the most legitimate successors of the Golden Horde monarchs adopted the following title in their letters (including the messages which bore the status of a yarliq—they were addressed to inferior monarchs): 'I am the great khan of the Great Horde and the Great tsardom, of Desht-i Qipchaq, and the throne of Crimea, and of all the Tatars and many Nogais, and of the Tats and the Tavgachs, and of the Circassians living in the mountains, I am the great padishah, I am great khan Muhammad Giray' [Faizov, 2003, p. 115; see also Lashkov, 1895b, p. 90]. The inclusion of such elements as 'the Great Horde' and 'Desht-i Qipchaq' into the title of khan represents the evidence that Crimean khans laid claim to the status of the rightful heirs of the Golden Horde khans. Meanwhile, only the first Crimean khans Mengli Giray I and Muhammad Giray I could truly lay claim to succession. They attempted to restore the unity of the former Golden Horde, uniting the Crimea with the khanates of the Volga Region. However, as we see, the titulary itself is preserved even until the middle of the 17th century, even after Crimean khans lost their aspirations toward great power.

But what is more curious is that the Western monarchs treated them as such! In particular, Lithuanian grand dukes and Polish kings

kept recognising their vassal dependence on Crimean khans in terms of the Southern Russian lands, kept receiving yarliqs from them and kept paying them tribute, despite the fact that Moscow rulers had regained those territories at the turn of the 15–16th centuries and had no intent to cede them either to Crimean khans or to Polish-Lithuanian monarchs (see in more detail [Pochekeyev, 2006, pp. 226–228; Pochekeyev, 2008, pp. 33–34]). The Lithuanian Metrics calls Mengli Giray I 'grand Tatar tsar'—that is, Lithuania's rulers considered him the legal successor of the Golden Horde [Dovnar-Zapolsky, 1897, p. 13]. A Polish historian of the beginning of the 16th century Maciej Miechowita calls the Crimean khan Muhammad Giray 'the Perekop ruler' and 'the Crimean emperor'; another Polish-Lithuanian of the middle of the 16th century Michalon Lituanus also refers to the Crimean khan as a caesar (again, emperor) [Miechowita, 1936, p. 90; Lituanus, 1994, pp. 64–65].

What status, in the eyes of European monarchs, did other khanates hold after the disintegration of the Golden Horde? Such states as the Astrakhan and Siberian Khanates seem to have had no contacts with the European monarchs at all. Thus, it is hard to define the way Europeans looked at these khanates. Anyhow, based on the extant letter of the Siberian khan Kichum to tsar Ivan IV of Moscow, we can conclude that the ambitions of the Siberian Shibaniid were not at all large-scale: he calls himself 'a chainless (free) person' (see, for instance, [Atlasi, 2005, pp. 48–49])—that is, he merely notes that he is not subordinate to anyone. The fact that he bears no title which would connect him to the lineage of the Golden Horde is a sign that his claims to the former Tyumen yurt of the Jochid Ulus were really weak. Moreover, studies have expressed reasonable opinions that Siberian khans were either Kazan's vassals [Trepavlov, 2007, pp. 101–102] or the vassals of Bukhara rulers [Iskhakov, 2006, pp. 149–152]. The latter may be evidenced by the extant yarliq of Bukhara khan Abdullah II to Siberian khan Kichum, who is therefore represented as Bukhara's vassal

[Materials, 1932, p. 296]. What is also interesting is that one revision of the Yesipov's Chronicle refers to the Siberian khanate of the Kichum epoch as the Golden Horde [History of Kazakhstan, 2005a, p. 209].

There is more information on the status of Kazan khans. Thus, the above-mentioned letters of Safa Giray to the Polish king Sigismund and his son do not contain any lavish titles (in comparison with the messages from his relatives) that suggest he is laying claims to vast possessions of the Jochid Ulus. Moreover, the khan and successor of the Golden Horde refers to the Polish king as not even 'brother' but as 'father'—that is, he recognises the latter's higher rank [Mustafina, 1997]. Let us note that in their correspondence the Crimean khan called the Polish king his 'brother'—he addressed him as a peer [History of Kazakhstan, 2005, p. 33]. Because the Kazan khan was the Crimean khan's nephew, there is nothing surprising in this difference. Therefore, the former recognised himself as subject to the latter despite the fact that both monarchs bore the title of khan and issued yarliqs, thus were *de facto* independent rulers! Sahib Giray emphasises this himself, as in the yarliq dated 1537 and directed to Ivan IV, where he writes: 'The Kazan land is my yurt, and Safa Giray tsar is my brother' [Florya, 2001, p. 237]. As we know, Kazan's Safa Giray was the nephew of Crimean Sahib Giray in family terms and his vassal in political terms. Nevertheless, in the letter to the foreign ruler he calls him his 'brother'—that is, an equal. Apparently, representatives of the Jochid clan (all the more such close relatives as the members of the Giray family) tried to keep the impression of unity in front of foreign sovereigns and guard not only their own prestige but also the reputation of their relatives. They supposed quite rightly that raising the prestige of the whole clan implied an elevation in their own status in the international arena. By referring to the Kazan ruler—his vassal—as a khan and his 'brother,' the Crimean khan hinted at his own power: what a great monarch he should be if rulers bearing an equal title were subordinate to him!

However, yarliqs and ambitious (but mostly declarative and not reflecting the real situation) letters to foreign monarchs constituted the foundation of the 'Chinggisid' legal system in the form it which it existed in the post-Horde Turkic-Tatar states. Other sources of the law, and first of all Chinggis Khan's Yasa, ceased to exist as due to their replacement by sharia norms and principles. However, the lack of demand for many imperial legal sources in the Turkic-Tatar khanates was in many ways connected to the fact that their rulers did not claim to the imperial legal heritage and, as a result, did not need laws regulating legal relations on an international level (which was resolved by the Yasa; for more details see [Pochekayev, 2009b, pp. 35–37]).

That is why other elements of Chinggisid law (besides yarliqs and the status of tarkhan) appeared occasionally in the Turkic-Tatar states and were of short duration. An example of this is the attempt to reintroduce the 'tamga tax' in the Crimean Khanate in the mid-17th century.

As we know, the tamga (the trade tax) in the Mongol Empire and the Golden Horde was one of the most 'beneficial' state tributes and was actively used. However, as the various tenets of Muslim law became more entrenched, it was actively discouraged because for unknown reasons it was considered the most egregious expression of the 'Chinggisid' legal heritage, which was hostile to sharia. Thus, the distinguished Central Asian poet Jami praised his contemporary Hodja Ahrar—a no less famous religious and political representative of the Temürid epoch—because 'the efforts of his proper opinion washed away the stigma of the tamga and the dirt of yargu from the hem of faith' (quote according to [Boldyrev, 1985, p. 55]). Apparently, a similar attitude towards the tamga developed in Muslim society of the Crimean khanate: if it is still mentioned in the yarliqs from the 16th century to the beginning of the 17th century (see, for instance, [Smirnov, 1913, pp. 31–32]), then it is totally absent by the middle of the 17th century. The 'tamga tax' was re-established by Bahadur Giray

I at the beginning of his reign (1637–1641) [Smirnov, 2005, p. 380], which caused huge discontent both among his subjects and of the Turkish suzerain. There is a likelihood that although the khan sought the replenishment of his treasury when introducing this tax, the Ottoman administration perceived it as an attempt to express independence and return to 'Chinggisid' imperial aspirations, besides Bahadur Giray I's other actions signaled the same thing (for more details see [Gayvoronsky, 2009, pp. 242–248]). As a result, the introduction of this tax triggered both pressure from the Ottomans and unrest in the Crimean population. Thus, after nearly twenty years Islam Giray III, one of the closest successors of Bahadur Giray, had to rescind the tamga tax [Smirnov, 2005, p. 386].

The khanate, which never fell under strong foreign influence, mostly retained the traditional tax system which had existed since the time of the Golden Horde. Thus, in the Kazan Khanate, there existed traditional Horde taxes, in particular, the 'yasak.' A similar situation prevailed in the Tyumen yurt and the Siberian Khanate, where the fiscal system was patterned after the Golden Horde [Iskhakov, 2009c, pp. 76, 85]. In the Nogai Horde not only supreme rulers had the right to collect the tamga, so did beys and individual murzas [Ambassadorial book, 2003, p. 55].

The imperial legal regulation of land relations also underwent significant changes. The forms of land tenure, which had been in effect in Chinggisid states in the imperial era, almost completely fell out of use. These included iqta, indju, soyurgal, and more. The abolishment was the result of several factors. On the one hand, imperial legal relations with respect to land of a Turkic-Mongolian origin were replaced by sharia norms whereby the institutions governing land ownership were clearly regulated. As a result, even Turkic-Mongolian terminology was replaced by terms of Arabic origin: in particular, such notions as 'mülk,' 'mevkufe' and others came into use in the Crimean Khanate. [Lashkov, 1895, pp. 56–58]. On the other hand, the role of the tribal

nobility significantly increased in the post-Horde states. Its representatives had initially possessed lands on indju and soyurgal bases, which meant conditional ownership. The owners could dispose of the land only if they were in service to the khan. Eventually, such 'owners' went further and turned the conditional ownership into their respective family hereditary appanage (de jure in some cases). As a result, previous forms of land tenure in the post-Horde states were turned into hereditary beyliks [Lashkov, 1895a, pp. 79–89; Khudyakov, 1996, pp. 682–683; Rakhimzyanov, 2009, pp. 83–84] or into grants to murzas who retained the status of serving land owners up till the fall of the Crimean Khanate. The same happened in other Turkic-Tatar states, for example in the Kasimov Khanate [Lashkov, 1895a, pp. 91–99; Lashkov, 1896, pp. 48–49; Rakhimzyanov, 2009, pp. 79–82]. However, sometimes khans remembered the Chinggisid legal ideology according to which they were the supreme land owners in their states and could deprive tribal aristocracy even of possessions which they considered hereditary. Thus, according to the Voskresenskaya Chronicle, Kazan khan Safa Giray in 1541 'collected yasak from many princes and gave it to the Crimea' [Complete Collection of Russian Chronicles, 8, 2001, p. 295, see also Khudyakov, 1996, p. 683].

However, only powerful and mighty monarchs allowed themselves to take such decisive actions. Those who never possessed real power risked provoking the ire of the nobility, losing their throne and perhaps even their life. No wonder many rulers in the Turkic-Tatar states preferred not to spoil relations with their influential subjects and opted to forget imperial legal norms and principles, instead making peace with the sharia and the customary legal norms.

Customary law in the Turkic-Tatar states and details of its development. In comparison with the imperial law, which somehow found its reflection in official acts or collateral sources, the principles and norms of the customary law, which were applied in the Turkic-Tatar states in

the 15–18th centuries, were not recorded in any manner that could be deemed codified or precise. This is understandable: if they had been recorded, it would hardly be possible to classify them as legal customs, which had passed from one generation to another orally. As a result, sometimes it is quite hard to distinguish what is the unofficial customary law of the Turkic-Mongol nomadic societies from everyday customs or institutionalised customary law—law recorded in written legal acts. Thus, for instance, a Bukharian author of the beginning of the 16th century Ibn Ruzbikhan gives us an example of a trial over who was the heir of a deceased man—his second son or his grandson from his deceased elder son. According to sharia, the priority was given to the son, but the decision based on sharia did not satisfy Muhammad Shaybani-khan, and he 'ordered action according to the law of Chinggis Khan,' 'according to Chinggis Khan's Yasa,' which dictated that the priority belonged to the grandson—the son of the first-born who had died before the legal heir [Fazlullah ibn Ruzbihan al-Isfahani, 1976, pp. 59–60]¹. Today it is hard to investigate if this particular condition was initially recorded in the Yassa of Chinggis Khan, or if it was codified legal practice because family law and inheritance relations were usually settled on the basis of ancient customs.

Nevertheless, there is some information at our disposal regarding the customary law in the Turkic-Tatar states, and it allows us to draw certain conclusions on the evolution of legal customs and their role in Turkic-Tatar societies in the period under consideration.

¹ Despite the fact that the event described refers to the history of the Khanate of Bukhara, we must not forget that Muhammad Shaybani khan was a direct descendant of the Golden Horde khans, and thus was a bearer of Jochid's political and legal values. Even the empire in Central Asia he had created was built upon the principles of the Jochid and not Chagatai nationhood (read more: [Pochekaev, 2010]). We therefore believe that there are reasons to examine the political and legal aspects of Muhammad Shaybani's activities in the context of Jochid legal culture, unlike the activities of his successors, who were already influenced by Central Asian nationhood and law.

It also provides a picture of the degree of its influence on the formation of Turkic-Tatar legal culture.

In Chinggisid states, the authorities usually never interfered in private legal matters, and khans were the first to demonstrate such forbearance. Thus, Rashid al-Din described the decision of khan Ögedei, the son and heir of Chinggis Khan, which apparently evolved into a precedent for all similar cases which came after it: 'At first, they passed the law forbidding the cutting of the throats of sheep and other edible and food-producing cattle. Instead, according to custom, the method employed was to cut [their] breast and shoulder blade. One Muslim man bought a sheep at the bazaar and brought [it] home. After closing his door, he slaughtered it, saying 'basmalah.' A certain Kipchak had seen him at the market. After waiting a while, he followed him and climbed onto his roof. When [the Muslim] thrust a dagger into a sheep's throat, he jumped down from above, tied up the Muslim, and dragged him to the palace of the kaan, [the kaan] ordered the naibs to investigate the matter. When they reported on the circumstances of the case and the incident, [the kaan] said: 'This poor man complied with our law, and that Turkic man denied it, as he climbed onto his roof.' The Muslim man was came to no harm, while the kipchak was executed' [Rashid ad-Din, 1960, pp. 49–50]. Thus, although Ögedei khan formally violated the rules of the Great Yasa of Chinggis Khan, he demonstrated state non-interference into the private lives of his citizens. Undoubtedly, such a wise decision prevented conflicts between the state, imperial law (which was represented by the Great Yasa and yarliqs), and private law based on the ancient traditions of multiple nations which constituted the Mongol Empire and its descendants. It is no wonder that subsequent rulers, both of the Mongol Empire and the Golden Horde, did not attempt to regulate the private relations of their subjects. These relations were based upon ancient legal customs called 'yosun/yusun' in the Turkic-Mongolian societies and 'adat' in Muslim regions.

Correspondingly, there existed the courts of customary law, which settled disputes within separate kins and tribes in all Chingisid states (and particularly, in the Golden Horde). These courts worked along with the Sharia kadi courts, which subsequently acquired the status of official state courts. The government neither encouraged the activity of such courts nor interfered in their functioning as they had their own scope of activity and their own competence, and these never overlapped with the competence of jargu and kadi courts (see [Pochekeyev, 2009c, p. 176]).

Thus, the government did not interfere with the system of customary law. However, eventually, the reverse of this came to be—that is, unofficial law penetrated imperial state law. This process emerged in the later stages of the Golden Horde. As the khan's power weakened and the central administrative office disintegrated due to civil wars and the raids of Amir Temür (1391, 1395), the number of official courts significantly decreased, and judicial powers were gradually concentrated in the hands of judges who based their decisions on customary law. Thus, the Italian diplomat G. Barbaro, who in the 1430s visited the residence of khan Kichum Muhammad (reigned in 1428–1459) not far away from Hajji-Tarkhan (modern Astrakhan), notes: 'The justice practiced throughout their camp is very sudden. It functions as follows: When someone has a problem with someone else, then they both—if there are more, than all involved—get up and go wherever they think is best, and they say to the first person they meet if he is a man of status: 'Master, render us a judgement, for we are engaged in a controversy!' Whereupon he stops and hears what both parties have to say: determining right then what he thinks is best without further recording of it, and whatsoever he determines, this is accepted without any opposition. In such situations, a crowd of people gather, and he that renders the judgment says: 'You shall all be witnesses!' Such judgments are regular occurrences in the camp. And if any like differences happen by the way, they observe the very

same order.' [Barbaro and Contarini, 1971, pp. 145–146]. Let us emphasise that the discussion thus far has been on the khan's main camp, and so such 'unofficial' justice was therefore widespread even in the territories controlled by the khans of the Golden Horde! Undoubtedly, a similar situation was observed in the Turkic-Tatar states—the Golden Horde's descendants. However, we should keep in mind that the role of sharia court was significantly increased there, which is why this unofficial customary justice could be in effect in the capitals and even in the regions which were divided into kadilyks—judicial districts within the jurisdiction of the sharia court (see [Boytsova, 2004, p. 44]). Rather, these courts operated in separate nomadic tribes that operated far from the capital or the khan's main camp (see [Trepavlov, 2004, p. 282]).

The status of those judges who made decisions based on customary law is not recorded by sources. However, we know very well their status in the Kazakh Khanate, in which they were called beys and were held in great respect and where they also had influence not only within their tribes but also on the governmental level. It is likely that the status of beys emerged in the epoch of the late Golden Horde. This conclusion can be made on the basis of a note made by G. Barbaro who mentioned that the judicial decision could be made by 'any stranger of eminence.' It is possible that the Venetian, when saying that 'any stranger' could become the judge, was exaggerating a little bit to emphasise what he saw as the 'barbarian character' of the Horde courts. Undoubtedly, that 'stranger' had to be highly respected by his compatriots and also had to be a person of impeccable honesty and honour, and well-versed in ancient customs. This is exactly how beys were characterised in Kazakh society. They were individuals who did not occupy official posts but were highly respected by their tribesmen for their personal merits and knowledge of customary law and had the reputation of law-abiding, fair people.

However, in the Turkic-Tatar states such customary judgments were delivered by

judges who had not been democratically elected compared to Kazakh beys. Let us not forget that in the pre-Imperial era of Turkic-Mongolian society judicial activity remained within the competence of the persons referred to as 'begs'—tribal elders and leaders. They retained their right to deliver judgments in the tribes under their control during the era of the Mongol Empire and the Golden Horde. Therefore, we are not referring to elected judges, rather we mean hereditary tribal leaders who possessed the title (post) of beg in accordance with the position they occupied. Thus, for example, researchers relate the emergence of the Kazakh court of beys to the activities of someone named Manky-bey (who according to legend lived in 1105–1225)—the contemporary and comrade-in-arms of Chinggis Khan. Manky-bey is considered the creator of the fundamental principles of the court of beys and presumably governed the Ulus when Chinggis Khan was away (see [Zimanov, 2008, pp. 67–68; Kazaktyn, 2004, pp. 167–208]). The official chronicles and essays compiled at the courts of the Chinggisids do not mention the name of Manky-bey, and therefore we have every reason to consider him a legendary character. However, in the Tatar historical essay of the 17th century 'Daftar-Genghis-name' (i.e., the source of which was absolutely not connected to Kazakh national legends) we come across a reference to Manky-bey which proves his existence. Let us note that in this essay he is not presented as a judge of the people's choice but as a government official—that is, a beg and the leader of the tribe of the Uishins (Hushins), who acted on the same basis as other tribal leaders and stood at Chinggis Khan's right hand [Daftar, 2000, 16–19 b, see also Iskhakov, Izmaylov, 2007, pp. 157–159]. Recall that the tribe of the Uishins consequently played a significant role in the history of the Golden Horde, which fact may serve as indirect evidence that Manky-bey was an official representative of authority. Legends of the Siberian Tatars and Bashkir shejeres also refer to him as a founder of a number of clans [Iskha-

kov, 2006, pp. 39, 110–111]. The status of bey was occupied by another famous Golden Horde figure—Edigu (1352–1419), the founding father of the Nogai Horde's rulers. Kazakh legends also describe him as a bey-judge [Kazaktyn, 2004a, pp. 140–164]. Note that Edigu is also presented as a fair judge in the Tatar folk epic 'Edigü' [Edigü, 1990, pp. 26–27, 29].

All this, in our view, allows us to suggest that in the Turkic-Tatar states customary judgments were the prerogatives of the tribal nobility, which also reflected an increase in the role of the nobles in the state and legal life of these countries. However, we should also keep in mind that the scope of activities of customary courts remained the same: family and inheritance cases, property disputes, crimes committed within the same clan or tribe were settled there. Inter-tribal conflicts as well as other types of disputes (land, political, etc.) were settled by either kadi judges, or khans, or a council of karachi begs.

Nevertheless, sometimes it is hard to draw a line between the competence of secular courts and the purview of official judicial institutions—khan courts and kadi courts. The same was applicable to the system of customary law itself, within which specific processes took place in the Turkic-Tatar states of the 15–18th centuries. As a result of those processes legal norms and principles established by the public authority were transformed into institutions of customary law. At the same time, this unofficial law was associated with the reigns of individual rulers. The first signs of this process were made evident in the Mongol Empire in the epoch of Chinggis Khan's closest successors and the first rulers of the Golden Horde. Thus, for instance, the Pope's ambassadors John of Plano Carpini and Benedict the Pole, who visited the possessions of khan Güyük and the lands belonging to the Golden Horde ruler Batu, failed to relate some norms of the officially accepted legislation and of the customary law and, therefore, characterised them as the 'law and custom.' Meanwhile, Chinggis Khan is presented in their interpretation as 'the founder of the religious law'

in the Mongol Empire [Plano Carpini, 1997, p. 42; History, 2002, pp. 116, 117; for more details see Pochekayev, 2007, pp. 143–144, 147]. In a similar vein the essay of Muin al-Din Natanzi, also known as 'Iskender Anonymous,' refers to Batu's tura as his legislative code [Materials, 1973, p. 128]. Persian sources contain the term 'tora-chingizkhan'ia' [Doerfer, 1963, s. 264, 265, 555]—that is, the foundation of the customary law in the Turkic lands (which was subsequently inherited by the Mongols)—tore—is attributed to the founder of the Mongol Empire. The famous statesman Babur, who was also the founder of the Great Mogul Empire, shared the same view. In his notes he mentions the constitution of Chinggis Khan ('tore-i-Chingiz') distinguishing it from his Yasa ('ya-sa-i-Chingiz') [Baber, 1826, p. 202].

In the 16–17th centuries such a political-legal transformation was to a great extent a way in which the Turkic-Tatar rulers shaped international policies in their favour. Thus, for instance, the Nogai rulers of the 16th century called Ivan the Terrible a Chinggisid. By that time he had already annexed the Kazan and Astrakhan khanates. The Nogai rulers suggested that he, the Moscow tsar, acted in accordance with the ideological heritage of the Jochid empire which they called 'adat-i chingiziye.' This ideological reconstruction allowed the Nogai rulers to justify their cooperation with the Christian Muscovite state rather than with other Muslim centres of power—that is, the Ottoman Empire and its subject, the Crimean Khanate. Those states, in the opinion of the Nogais, did not share this 'Chinggisid' ideology [Bennigsen, Weinstein, 2009, p. 363; Trepavlov, 2004, p. 283]. Already at the end of the 18th century Russian scholars noted that the Astrakhan Tatars adhered to 'the law of Mohammed,' while 'other Nogais are steeped in ignorance as they mix their faith with many pagan superstitions' [Georgi, 1776, pp. 43–44]. This allows us to suppose that customary law prevailed in their lands, even in those late times, when sharia law seems to have totally driven out 'pagan' traditions.

Therefore, customary law was retained in the Turkic-Tatar states and was even devel-

oped, as we can see. It constituted a great part of the system (and legal culture) of those states, sometimes replacing Imperial law. The authorities of the post-Horde states did not hamper its development as they saw no rivalry in it to other legal systems. However, when attempts were made to broaden the scope of customary law, thereby pressuring the status of Imperial law or sharia, those attempts were met with stiff resistance. An example of such a conflict is the 'judicial reform' which the Crimean khan Murad Giray (1678–1683) tried to introduce.

Soon after ascending to the throne, he ordered that cases should be settled on the basis of 'the Chinggis's tore' instead of sharia. He even abolished the position of the Kazasker, or supreme judge, replacing it with the Tore-bashi. However, that reform was not further developed: soon Murad Giray arrived at the Ottoman camp to participate in military actions together with the Turkish people, and there someone named Vani Efendi managed to convince the khan to restore sharia law, which the khan did [Smirnov, 2005, p. 248]. Later, when historians tried to explain his actions, they speculated that the khan had attempted to demonstrate his independence from Istanbul; however, an analysis of the sources allows us to suggest that in fact the 'judicial reform' was a kind of populist action whereby Murad Giray managed to achieve popularity among his subjects and even outshine the renowned Selim Giray, his predecessor. And after achieving the desired result, the khan was quick to discontinue the reforms (which seem to have been solely declarative) and restore the dominance of sharia in the legal system of the Crimean Khanate [Pochekayev, 2009c, pp. 323–324]. At any rate, we are not interested in the reasons, but we need to know the attitude of different societal groups towards the khan's initiative. Thus, the Ottoman authorities did not condemn Murad Giray in any way, since, on the one hand, they had no reasons to suspect him of disloyalty; on the other hand, the customary law was widely used in the Ottoman Empire itself as it did not contradict the written legislature and sharia. The Crime-

an citizens, as we have already noted, were completely devoted to their khan, whom they were ready to support even militarily, when they heard he was ousted from power [Smirnov, 2005, p. 430]. Thus, the only ones who opposed the reform were representatives of the Muslim clergy, whose position as adjudicators of sharia legal values as the leading judicial system Murad Giray had attempted to weaken. The outcome of this opposition shows that Islam and Islamic law played a far more significant role in the Turkic-Tatar states than in the history of the Golden Horde.

Islamic law in the Turkic-Tatar states: its role and peculiarities. As noted above, Islam had existed in a number of areas occupied by the Golden Horde and then became the core of the Turkic-Tatar states in the 15–18th centuries, long before khan Uzbek adopted it as the official state religion, and even long before the Mongol invasion. Thus, Islamic law was not a mere novelty for the Turkic-Tatar states of the 15–18th centuries. Instead, it represented a natural part of their legal culture.

Among the peculiarities of Islamic law (the Sharia) in the post-Horde states, we should first of all mention that it occupied a greater role in comparison with other sources of law, including within the Golden Horde itself. As noted earlier, the strengthening of sharia was related to the decay of both central power and the system of Imperial law, which could only be maintained by the powerful khans of the Golden Horde of the 14–beginning of the 15th centuries. In the meantime, the role of the clergy gradually increased, and since khan Uzbek's reign it was integrated into the administrative structure of the Jochid Empire, where it grew in strength as the Imperial power-state institutions weakened.

Finally, another reason for the consolidation of law was the need for Turkic-Tatar rulers to find new ways of legitimising their power. The truth is that by the end of the 14th and beginning of the 15th centuries, as a result of the disintegration of the Chinggisid imperial entities (the Yuan Empire in China,

the Ilkhanate in Iran, the Ulus of Chaghatai, the Golden Horde), it was no longer enough for those aspiring to supreme power in the Turkic-Mongol states to lay claim to direct descendancy from Chinggis Khan. As a result, not only did the Chinggisids start to lay claim to the thrones of different states on the territory of the former Mongol Empire but representatives of other, less eminent clans (compared with the descendants of Chinggis Khan) also acted in like manner. Thus, already during the dark times of the Golden Horde in the 1360–1370s ('The Great Troubles,' as this period is referred to in the Russian chronicles), several regional rulers tried to declare themselves independent sovereigns of their possessions. Later on independent status was acquired by the Nogai beys—the descendants of Edigu ('Edigü'), by the Siberian Taibugids, by the Temürids in the ulus of Chaghatai, as well as by a number of less eminent dynasties, like the Duglat family in Kashgar, etc.

The Chinggisids continued to be regarded as legal claimants to power due to their origin (V. Trepavlov describes this phenomenon as 'inertia,' see [Trepavlov, 2009]); however, now they were only 'the eldest inter pares' among the claimants to power and the throne. The charisma of Chinggis Khan's kin was now challenged by other bases providing grounds for assuming power, the main one being religious factors, as Islam continued spreading throughout the Chinggisid states. In the altered circumstances, these reasons seemed even more compelling than claiming lineage to Chinggis Khan, which is why it is no surprise that the Chinggisids themselves started appealing to a religious justification as the basis for their rights to power and also to the motivation for political decisions and activity. At this time, the address to religious values and authorities was vivid throughout the entire reign of every Turkic-Tatar ruler upon ascension to the throne.

As a result, we see a shift from the previous justification of Chinggisid sultans for their claims to the throne and supreme power in one state or another (for more details see [Sultanov, 2001, pp. 57–65; Kügelgen, 2004,

pp. 54–56]) was replaced by one that was more weighty—the will of Allah—which was reflected in a certain verse of the Quran: 'You will grant power to anyone you want, and you will take power from anyone you want' [Quran, 1991, p. 39: sura 3, verse 25/26]¹. Some Turkic-Tatar monarchs went so far as to proclaim themselves the khalifs—that is, rulers of all Muslim people throughout the world! For example, Muhammad Shaybani-khan decided to adopt this title when he came up with the original concept on several khalifs coexisting in different countries as long as they did not harm each other [Kügelgen, 2004, pp. 288–290]. In the same vein, according to some sources, in the middle of the 17th century the Crimean khans Muhammad Giray IV and Islam Giray III also adopted this title, although they were supposed to *de jure* recognise their suzerain—the Turkish sultan—as the khalif (see [Zaitsev, 2009a, pp. 154–155]).

That is why it is no accident that at the ceremony of the khan's enthronement, which took the form of a *quriltai*, members of the khan's clan, his supreme commanders, and representatives of the Muslim clergy all participated. In addition to taking the traditional vow of the steppe, the monarch, who ascended to the throne, swore on the Quran and also had to be approved by the head of the clergy. This practice was applied in Kazan, Kasimov, and the other Turkic-Tatar khanates (see, for instance, [Khudyakov, 1996, p. 676; Iskhakov, 1997a, pp. 20, 27]).

In future khans and rulers would always consult Sayyids and other influential representatives of the clergy who would often use their authority to seal the decisions of sovereigns, thus ensuring the effectiveness of their delivery. In the last years of the existence of the khanate Kazan Sayyids were often the first advisers to khans—they occupied chief ministerial positions. We do not know how widespread this practice was of

the use fatwas issued by theologians as a vehicle for the delivery of khan orders. At the very least, it was common practice in the Turkic-Mongol states of Central Asia. Even such a powerful ruler as Muhammad Shaybani-khan preferred to deliver his imperative decisions not by issuing *yarliqs* but through the adoption of fatwas by his court ulemas. Strong Muslim traditions in the post-Horde khanates—Kazan, Crimean, and Kasimov—as well as the significant influence wielded by the clergy on political matters in these khanates lend weight to the assumption that their monarchs adhered to the same line.

The role of Sayyids was so strong in the Kazan and Kasimov Khanates that they were not only the spiritual leaders of the Muslim population there but could serve as commanders. Contemporary scholars even suggest that the Kasimov Sayyid also performed the functions of a *beklyaribek* [Rakhimzyanov, 2009, pp. 71, 74–75]. In the Crimean Khanate Sayyids played the role of the main *kadis*—that is, supreme judges acting in accordance with Sharia norms. In fact, in khan charters and letters their names were often written before the names of sultans from the Giray family [Iskhakov, 1997a, pp. 10, 43–44, 50]. We also are aware of judicial functions performed by the Sayyids in the Siberian khanate during the reign of Kichum [Iskhakov, 2006, p. 164; Iskhakov, 2009c, p. 77].

Moreover, the post-Horde states entered into international agreements in accordance with the tenets of Islam and the support of the Muslim clergy. Thus, for instance, Nogai beys and murzas of the 16–17th centuries often invoked their Islamic faith in negotiations with Moscow rulers (true, they likened it to Christianity rather than contrasting it with that faith). Moreover, agreements with Moscow were sealed by an oath on the Quran [Trepavlov, 2001, p. 565; Ambassadorial book, 2003, p. 36]. At the end of the 15th century to the middle of the 16th century Kazan Sayyids personally participated in negotiations with Moscow authorities and contributed working out the conditions of international agreements [Iskhakov, 1997a,

¹ It is curious that Islamic court historiographers of the first Mongol khans (not Muslims) quoted this Quranic verse, as the latter sought to justify the legitimacy of their rule in Islamic countries (see, for instance: [Juvaini, 1997, p. 562]).

p. 36]. In the Crimean Khanate the role of the clergy was also significant in developing policies with the outside world of the: for example, in 1659 khan Muhammad Giray IV notified tsar Aleksey Mikhaylovich that he had conferred with his scholars, and they had said that an agreement had been breached by the Muscovites (quote according to [Sen, 2009, p. 26]).

However, from time to time, the rulers of the Turkic-Tatar khanates tried to limit the influence of the clergy and entered into conflicts with their Muslim advisers. The very fact of such conflicts suggests that the Muslim clergy possessed significant influence as the clerics felt they could engage in confrontations with the monarchs. The outcome of such confrontations varied. For example, during his reign Kazan khan Safa Giray went so far as to execute two Sayyids and a successor, Shah Ali [Iskhakov, 1997a, pp. 30–33]. In contrast, the Crimean khan Murad Giray, who attempted to introduce judicial reform and replace the Sharia court of kadis with the customary Turkic-Mongolian *töre*, was forced to yield to Vani-effendi, a prominent representative of the clergy, and accept it that his efforts were fruitless [Smirnov, 2005, p. 248; Pochekeyev, 2009c].

By constructing their image as protectors and disseminators of the Islamic faith, the Turkic-Tatar rulers were able to patronise religious figures, build charitable institutions and finance them, and also wage holy wars (*gazavat*). Moreover, a 'holy' war could also be initiated against other Islamic states, provided the court theologians approved that the enemies were apostates and thus were even more dangerous than 'kuf-far'—that is, unbelievers. This is exactly how Muhammad Shaybani khan justified his campaigns against other Muslims—the Kazakhs or the Siberian Shibaniids [Fazlullah ibn Ruzbihan Isfahani, 1976, pp. 105–106; Katanov, 1904, pp. 18–28; Iskhakov, 2002, p. 178]. Similarly, khan Kichum's struggle with the dynasty of the Siberian Taibugids (which *de facto* represented the restoration of the legal dynasty on the throne of the former Tyumen yurt) was presented as a move

aimed at the spread of Islam in that pagan region—after it was approved and actively supported by the Muslim clergy of Bukhara and Khwarezm (see [Katanov, 1897, pp. 51–60; Bustanov, 2009d]). This was also how the Crimean khans and sultans justified their attempts to restore the former borders of the Jochid Ulus. After regaining the Kazan and Astrakhan Khanates from the Muscovite state, they portrayed their actions as a battle against the enemies of their faith. The same justification was used as grounds for the campaigns against the Persian Kyzylbashs. In respect of the Ottoman sultans, the vassalry were also khalifs, and invoking their will was enough grounds for portraying any war against the enemies of the Turks as a holy war—a *gazavat* (see [Documents, 2008, pp. 88, 104, 108]).

Naturally, such an approach to policy was neither the invention of Chinggis Khan's descendants nor was it created by their rivals—rulers of the Turkic-Tatar states and other dynasties; it had been used since the very first centuries of the Islamic era. The fact of its adoption by the Chinggisids is indication of their understanding that the *zeitgeist* had changed, and the Turkic-Tatar states had been totally absorbed by the Islamic world.

A special role in the legal culture of the Turkic-Tatar states was played by judicial activity that grew to be mainly a prerogative of Islamic men of law. Of course, Sharia courts had operated in the Golden Horde along with the Imperial *jargu* courts as an official judicial authority since 1320—that is, after Khan Uzbek made Islam the official religion of his dominion. From that moment on the *jargu* courts were abolished, and the importance of the qadi courts grew; it should also be mentioned that in the post-Horde states the qadi courts not only coexisted with the official Khan's courts, they superseded them becoming the dominating judiciary.

Thus, for example, almost all of the judicial activities in the Kazan Khanate were performed by Muslim theologians (see [Usmanov, 1985, pp. 182, 185; Khudyakov, 1996, p. 689]). Some indirect evidence suggests that Sayyids also had some judicial prerogatives

in the Kasimov Khanate [Iskhakov, 1997a, p. 211].

A wealth of data has survived on the Sharia courts of the Crimean Khanate, including both narrative sources (chronicles and historic works by Crimean and Ottoman authors), and official acts (the Khan's *yarliqs* and the *saqqs* (the Kazasker books)). All these sources allow us to conclude that the Islamic judges all enjoyed a rather vast jurisdiction.

According to the Kazasker *saqqs* of the 17th century, Sharia judges settled cases that related to land disputes, family matters (marriages and divorces), inheritance disputes, matters related to the purchase and liberation of slaves (slave title deeds), as well as custody/guardianship and donations of *waqfs* [Biyarslanov, 1889, pp. 48, 50; Biyarslanov, 1890a, pp. 74, 75–76]. We know that as early as the 16th century they started to include the wording of the Khan's *yarliqs* in the Kazasker *saqqs* [Lashkov, 1895b, pp. 111–112; Usmanov, 1979, p. 270], although this was not the only impact of the increasingly important qadi courts upon the Khan's court and other authoritative decrees. In the early 17th century Khan Salamat Giray I could afford to issue *yarliqs* that contained recommendations to the qadis (including the Kazasker) [Biyarslanov, 1890, pp. 68–69], although there is evidence that at the same time, and especially later, the tables turned—when rendering decisions, the khans relied on the opinion of judges who acted on the basis of Islamic law. To give an example, when Salamat Giray made up his mind to liberate a slave, this decision was subject to official registration with the Kazaskersaqq; in the same vein, the previous decisions taken by the Khan in relation to matters being within the scope of the Sharia were deemed effective only once confirmed and documented by the Kazaskers [Biyarslanov, 1890a, pp. 74–75, 77; Lashkov, 1896a, p. 77].

Curiously, in some cases, decisions taken by the khans and the qadis in line with both Imperial and Sharia law were similar. In a case noted above, Shaybani Khan decided an inheritance dispute, ruling that the matter should be resolved according to an order established by Chinggis Khan. However, he was

not fully satisfied with the ruling and ordered that justification for this solution should be found within Sharia law. The men of law did not fail their Khan. One of them 'submitted to the Khan an excerpt allegedly approved by qadi Shurayh... His majesty, representing the most merciful... expressed his satisfaction with the fact that his majesty and Qazi Shurayh shared their opinions with the following words: "It behooves us to act following the words of Qazi Shurayh, and we shall do so from henceforward.'" [Fazlallakh ibn Ruzbikhani Isfakhani, 1976, p. 60]. In our view, this episode is rather illustrative. Even as powerful a monarch as Shaybani Khan realised that in the new social and political environment decisions based only on Imperial (the 'Chinggisid') law will not be deemed binding to his Muslim subjects, so he made efforts to demonstrate that his governance was in line with Sharia law.

It should also be noted that in the Turkic-Tatar states (specifically in the Crimean Khanate), the judges of the Sharia courts were apparently remunerated by the state. This prevented them from abusing their power by charging whatever fee they liked. Thus, during the reign of Janibeg Giray, Kazasker Mustafa set fixed prices for the services of qadis and hakims [Boytsova, 2004, pp. 44, 54]. Thus, in the Turkic-Tatar states the Sharia justice was of a more orderly nature than, for example, in the Central Asian khanates of the same period where the qadis did not receive any salary and earned by extortions from the suitors setting all sorts of penalties, special fees etc. (ref.: [Lunev, 2004, p. 102]).

Compared to the Golden Horde, in the Turkic-Tatar states land and legal relations underwent significant changes. As mentioned above, in the post-Horde states, traditional Islamic land law doctrines replaced different forms of land ownership that prevailed in the Turkic-Mongol Empire-type states. Thus, in Crimea there existed the Khan's domains, the privately owned *mülks*, communal lands, as well as specific types of land ownership, like *hojalyks*—that is, lands owned by the *hojas* [Lashkov, 1895, p. 56; Boytsova, 2004, p. 48]. And finally, in all of

the Turkic-Tatar states an important place in the relations under laws relating to the ownership of land was held by the waqf property [Lashkov, 1895, p. 55; Khudyakov, 1996, p. 681; Rakhimzyanov, 2009, p. 76].

Changes to the tax law of the Turkic-Tatar states were also significant. In the Islamic states conquered by the Mongols by the middle of the 13th century not only was the executive power infrastructure destroyed so was the tax system as well—Islamic fiscal institutions were forced out and replaced by institutions adopted by the Mongolian rulers from the Uighur and Chinese legal heritage (see, for instance, [Tusi, 1986, p. 92]). However, as Islam regained its dominant position, Turkic-Tatar monarchs managed to reach a certain compromise by keeping existing taxes and renaming them to match the Islamic tax system. Thus, for example, the yasak (qalan) tax charged in the Golden Horde matched the kharadzh tax charged under Sharia, whereas ushr (the tithe) replaced a similar Mongol tax, taghar (see [Kerimov, 2007, pp. 235–236; Lunev, 2004, pp. 90–95]). Of course, not every tax could be so easily substituted. For example, the zakah tax charged under the Sharia has no parallel in Turkic-Mongol Imperial law. Likewise, as we have seen, collecting the tamga tax was illegal under Sharia law. Considering the above, the tax system of the Turkic-Tatar states was another example of how Islamic law became the prevailing legal system, gradually replacing both the institutes of the Chinggisid Imperial law and the common law of the Turkic-Mongolian tribes.

Foreign influence upon the formation of legal culture in the Turkic-Tatar states (general overview). Despite close contacts with the foreign states (and in some of the cases outright dependency upon such states) from the 15th into the 18th century, it would be an exaggeration to say that the legal system of every Turkic-Tatar state during that period was significantly impacted by foreign law¹.

Thus, for example, the Kazan and the Astrakhan Khanates existed for too short a time to fall under any form of foreign rule that could have a serious impact upon their legal culture. This is why the official acts extant of these Khanates testify that the document flow traditions dominating there were those inherited from the Golden Horde. These traditions prescribed for the documents to be brief (like the Uighur official acts) which was far from typical for the Persian, Turkish, and Central Asian acts that are known for their abundant verbosity (see [Abzalov, 2009, pp. 109–110]).

Moscow ambassadorial books that contain a number of official acts by the Nogai beys and murzas are evidence that it was also from the Golden Horde that the Nogai Horde inherited its traditions of lawmaking and records management. Though the Nogai Horde existed for a much longer period than did the Turkic-Tatar khanates in the Volga Region, it was too powerful to be deeply influenced by any state. Besides, their nomadic lifestyle involving mobility of both those who ruled and their population, who could quickly migrate from Kazakhstan to Bessarabia, made establishing a foreign sovereignty over the Nogai Horde next to impossible.

One should also be cautious when considering the notion of foreign influence upon the Kasimov Khanate. As noted above, we do not have recourse to any extant official acts executed in that state. And yet, we have reason to believe that at the early stage of its existence it adhered to the legal and bureaucratic traditions of the Golden Horde, as its first rulers came from Kazan and the Crimea, areas that were not under any significant Ottoman influence at that time. At later stages of its existence, the Kasimov Khanate was likely influenced by the law of the Muscovite state. However, if there was some influence, the transformation of the Kasimov Khanate's legal system was hardly artificial and painful. During the 16–17th centuries the legal and bureaucratic traditions of Moscow were also based on traditions inherited from the

¹ The question of the Kazan Khanate's possible vassal dependence on the Ottoman Empire in the 1520s was studied by I. Zaitsev who admits, however, that it is not possible to make a final conclusion

about vassal dependency based on the extant sources [Zaitsev, 2004a, pp. 121–130].

Golden Horde and thus had a great deal in common with the culture of the late Golden Horde period (see [Mazhidenova, 2008, pp. 26–27; Pohekayev, 2009b, pp. 204–210]).

Considering the form and wording of letters by Sayyid-Ibrahim Khan and Abulek Khan written in the late 15th century, the Tyumen yurt apparently also adhered to the traditions of the Golden Horde's legal culture and bureaucratic order [Ambassadorial Book, 1984, pp. 16, 33; Ambassadorial Books, 1995, pp. 19, 32–33]. However, if we consider its successor, the Siberian Khanate, the situation turns out to be more complicated. As noted above, in the second half of the 16th century it was officially a vassal territory of the Bukhara Khanate. However, the official correspondence between Khan Kuchum (his relatives) and Moscow indicates that during that period the Siberian Khanate still adhered to legal and diplomatic traditions originating from the Golden Horde as such correspondence contains no traces of any influence from Central Asian legal culture. It is likely that the protocol for official acts as well as the fact that Kuchum was very actively positioning himself as a 'self-ruled man' were supposed to underscore his independence in the eyes of Moscow. The situation was slightly different if we consider internal legal policy. In this area Bukhara obviously exerted considerable legal influence, though not through its authorities but through its clergy. As is known, a considerable number of Muslim clerics (mostly adherents of the Naqsh-bandiyya and the Yesevi orders) followed Kuchum and his family to Siberia, whereas later both Kuchum Khan and his brother Akhmad Giray sent messages to Bukhara requesting that new Muslim clerics should be sent to them [Iskhakov, 2006, pp. 164–169]. It is only natural that with the destruction of administrative and legal systems as well as with the lack of qualified administrators and men of law, the most competent members of the Khan's circle—the well-educated Muslim clerics—tended to carry out administrative, judicial, and law-making functions. Some of them became judges, while others

governed towns and cities. Consequently, they introduced into the legal culture of the Siberian Khanate some traditions of Central Asian Islam.

The legal culture of the Crimean Khanate, which for several centuries was officially under the rule of the Ottoman Empire, experienced the most significant influence of a foreign power. Although we have access to quite a number of narrative sources and acts, the degree of such influence has still not been adequately explored, and scholars have not yet reached consensus on this matter. Thus, V. Smirnov once wrote that the Crimean rulers and men of law accepted the Ottoman state, legal, and bureaucratic traditions to a considerable extent. M. Usmanov, in his turn, states that this influence was not significant, and that it did not even affect the fundamental principles of the Crimean legal system [Usmanov, 1979, pp. 82–83].

First, it should be noted that, although Ottoman political and legal ideology was foreign as regards the Crimean Khanate, it was not totally alien. On the contrary, its influence upon Crimean legal culture is seen as quite organic. This is because the Ottoman Empire, like the Turkic-Tatar states, largely inherited ancient Turkic traditions of state and law. This is why in Turkey (like in the post-Horde states), apart from the Sharia law, for a long time an important role was played by both monarchical law and common law. As a result, the Ottoman sultans generally saw nothing negative in Crimean law and did not see any need for a complete reorganisation, or 'Ottomanisation,' of the khanate's legal culture.

Nevertheless, unlike the Siberian Khanate, which was influenced by Central Asian legal tradition through Muslim clerics, the Crimean khans focused not on the Islamic aspects of Ottoman law but on monarchical and imperial aspects of the law. This was largely reflected by the transformation of the legal and bureaucratic traditions in Crimea where Ottoman features gradually replaced the legal legacy of the Golden Horde.

When did this process start? Most researchers link the 'Ottomanisation' of the

state and law in the Crimean Khanate with the activities of khans Saadat Giray I and Islam Giray II, who were educated and appointed by the sultan's court (see, for instance, [Halim Giray Sultan, 2004, p. 42; Zaitsev, 2009a, p. 150]). However, we believe that the first steps that brought the Ottoman tradition closer were taken soon after Mengli Giray officially acknowledged the Ottoman protectorate. Thus, his letter of 1486 addressed to Sultan Bayezid II is a good example of the official style of Ottoman. Addressing their suzerains, the khans had to use a style that was generally accepted at the courts of such suzerains (see, for example, [Grigoriyev, 1987, pp. 128–129]. This style gradually became so popular that the Crimean khans started to use it in their internal documents and diplomatic correspondence with other foreign sovereigns. Thus, V. Smirnov notes that the exquisite wording of letters that Islam Giray III sent to Moscow is an obvious sign of Ottoman influence [Smirnov, 2005, p. 387]. However, it should be noted that Islam Giray III was prone to pursue a policy of his own without reference to the Istanbul authorities... In the 17–18th centuries the khans' *yarliqs* were also often named *firman*s (the same word was used for similar types of edicts issued by the Ottoman sultans) (see, for instance, [Lashkov, 1895b, pp. 113–114]).

Bear in mind that in the Crimean Khanate the Turkish Sultan was treated as the principal spiritual authority, though only after 1584 when khan Islam Giray II (an appointee of Istanbul who was educated under Turkish traditions) ordered that *Khutbah*s should be given in the name of the Ottoman sultan [Halim Giray Sultan, 2004, p. 42; Zaitsev, 2009a, p. 150]. Remarkable enough, even after the Crimean Khanate attained independence as a result of the Treaty of Küçük Kaynarca (1774), the khans kept referring to the will of Sultan as caliph—the spiritual leader of Muslims. In fact, this was a religious and ideological figment employed by the last Crimean khans to veil the fact that they aligned their policies with Istanbul and even refused to join Russia in its war against

Turkey (see [Smirnov, 2005, pp. 184–185; Zaitsev, 2009a, pp. 155–156]). Nevertheless, such relations between the Turkish sultans and the Crimean khans indicate that the Ottoman influence on the formation of the legal system in the Crimean Khanate was also supported by the spiritual authority of the sultan, who was also a caliph.

The Crimean clerics who received their education in Turkey also contributed significantly to the promotion of Ottoman legal traditions within the Crimean Khanate. No wonder that, being appointed to positions of influence as administrators or judges or to the Khan's court (up to the positions of *Sheikhsul-Islam* and *Kazaskers*), they brought with them the influence of Islamic theology and jurisprudence to the legal culture of Crimea (see [Boytsova, 2004, p. 49]).

And finally, one more area of the influence of the Ottoman legal tradition upon Crimean law includes the direct interference of the Turkish authorities in the legal relationships in the Crimean Khanate. Thus, for example, the Ottoman sultans repeatedly issued edicts affecting Crimean noblemen who were subjects of the Girays. At the same time, it should be noted that according to some of these edicts (*firman*s), they were issued following the khans' advice [Lashkov, 1985c, pp. 118–120]. However, we believe that the mere existence of such legal acts indicated that the Crimean noblemen grew more influential and independent of the khan's will to the extent that they were capable of initiating direct contact with the sultan's court in Istanbul. Indeed, it seems that the reference to the khans in the above edicts is a token of the sultans' courtesy towards them and their status. Another such case (found in the chronicles of the Crimean Karaites) is that of a Turkish Pasha who served as the sultan's ambassador during the reign of Murad Giray (there are numerous references to him) and who, upon arriving in Crimea, tried to impose a new annual tax upon the local population [Smirnov, 2005, p. 425]. Although the Pasha failed in the face of the opposition of both the khan and his subjects, the fact of such an attempt by the sultan's am-

bassador implies that the Ottomans felt that Crimea was under their jurisdiction. Another important example of the Ottoman authorities' interference into the political and legal practices of the Crimean Khanate is that of the Kaffa (i.e., the Ottoman) mufti Mevlana Abd ar-Rezzaq, who issued a fatwa resolving a dispute related to the throne between Ghazi Giray II and his brother, Fath Giray I. His ruling was in favour of the former [Boytsova, 2004, p. 49].

In conclusion, we would like to emphasise that the Ottoman legal traditions could hardly influence the legal culture of the Crimean Khanate if the two nations were not so close in the following two areas. First, as noted above, they shared a great deal due to their common Turkic origin in terms of the system of governance and the law. Second, the dominance of the Sharia system in both states came to be a powerful driver for the integration of the legal systems of Turkey and the Crimean Tatar state.

Jurisprudence in Turkic-Tatar states throughout the 15–18th centuries Summarising the above, we will give an overall picture of the legal systems of the Turkic-Tatar states, including the role played by legal relations in the society, the legal views (awareness) of the population, and the status of lawmakers and men of law. A review of the above suggests that in the post-Horde states, legal systems were quite well-developed. One can even say these states had their own jurisprudence (bearing in mind that this modern term can only be conditionally applied to the specifics of law in the late Middle Ages).

As contemporary scholarship on legal issues is rather Eurocentric, it is generally accepted that the oriental ('traditional') type of legal culture, where the principles of law, religion, and ethics are often inseparable, is rather imperfect. However, a close study of the development of a legal culture in the Turkic-Tatar states in the 15–18th centuries demonstrates that this stereotype is wrong. The fact that the principles and rules of religion, law, and ethics are so closely interlinked does not demonstrate the underde-

velopment of legal culture in these states; it only expresses the specifics of the national mindset and sense of law.

Even in ancient times Turkic tribes had a distinct notion of the law (tore) and its features, as well as of legal behaviour, what is legal, crime, and punishment (see [Arsal, 2002, pp. 232–235; Pochekeyev, 2009]). As the Turkic states evolved, the early 'steppe empires' were replaced first by the state of Chinggis Khan and then by its successors (including the Golden Horde) and the post-Horde Turkic-Tatar states, and the Turkic legal culture grew became increasingly elaborate. However, this culture kept intact its main principles, which is evidenced by the written sources of the 15–18th centuries, which reflect the legal views of the ancient Turkic tribes and Turkic-Tatar nations.

Thus, the ancient Turkic epitaphs, the book 'Kutadgu Bilig' by Yusuf of Balasagun, and the Turkic epic tales 'Oguz-name' and 'Book of Dede Korkut' associate law and rights with specific persons, mostly the rulers and their advisers, whereas those who break the law act not only to the contrary of the ruler's will but also commit crimes against the Heavens and the divine order. A perfect monarch (or a ruler of lower rank) is a person who observes the laws established by himself, who arbitrates his subjects in the way of justice, and who does not impose a heavy tax burden (for more details, see [Pochekeyev, 2009, pp. 299–302]). A similar view is incorporated in the works of the Turkic-Tatar states during the post-Horde period. To give an example, let us turn to the poems of Muhammedyar, a Tatar author of the 16th century, who wrote about justice and observing the law, as well as about the perfect monarch, etc. [Muhammedyar, 2007, pp. 104, 137, 170; see also Amirkhanov, 2001, p. 155 ff.]. The principal character of 'Edigu,' a Tatar epic tale created in the late Middle Ages, is also an upright judge ensuring the rule of law set by the khan. He himself is a law-abiding subject who does not dare aspire to the throne because he does not belong to the khan's family [Edigu, 1990, pp. 24–27, 29, 208]. Note that the adoption of Islam as

the official religion of the Turkic-Tatar khanates in the late Middle Ages did not affect the perception of these basic principles of the Turkic law as, just like the Turkic *töre*, Sharia also treats legitimacy, orderliness, and justice as values. Consequently, Islamic political and legal ideology also viewed rulers as lawmakers endowed with power by Allah [Boytsova, 2004, p. 43]. Just as under the Turkic law, crimes under the Sharia were treated as a breach of heavenly rules as infringing a law also entailed an infringement of the rules prescribed by the Quran and Sunna [Boytsova, 2004, p. 45; Kerimov, 2007, p. 189].

The Islamic science of law evolved considerably in the Golden Horde. Throughout the history of this state, men of law shared their 'scientific experience' with their colleagues from neighbouring states. Thus, in the Golden Horde there were many *ulamas* from Iran [Muminov, 2004], whereas the legal scholars originating from Bulgar, Crimean, or Syr Darya regions (i.e., from the Golden Horde) taught law and worked as judges not only in the Jochid state but also in Iran, Central Asia, and Egypt (see, for instance, [Usmanov, 2000, p. 144]). No wonder that the Arab historians were very well aware of the legal scholars of the Golden Horde and their academic work; some Arab historians even wrote biographies of such men of law. (see [History of Kazakhstan, 2006]).

Unfortunately, we do not have detailed information on the legal science and scholars of the post-Horde states. Nevertheless, there is no evidence of decay in Jochid jurisprudence after the collapse of the Jochid state. Of course, the clerics, who played such an important role in the legal policy pursued by the Turkic-Tatar states, continued to act in line with the traditions established by the legal scholars of the Golden Horde. There is no sign of any significant works on the theory of Islamic law created during that period, although they continued to reproduce and comment on the works created in the Golden Horde. Today we refer to reproductions of Arab works on *fiqh* made in Crimea during the 16–18th centuries; the

chroniclers devoted a great deal of attention to the law [Zaitsev, 2009a, pp. 33, 34, 43–45, 55]. Thus, the Kazan khans of the 16th century accessed a voluminous library that included copies of works on Islamic law [Zaitsev, 2000; see also Trepavlov, 1999]. We also know about the work of Islamic legal scholars (*sheikhs*) who taught *fiqh* in the Kasimov Khanate [Rakhimzyanov, 2009, p. 76]. A special status in the legal culture of the Turkic-Tatar states (especially that of the Crimean Khanate) was held by works of Ottoman legal scholars who worked intensively on codifying and systematising Islamic law in the 15–16th centuries (especially during the reigns of Mehmed II Fatih and Suleyman I Kanuni) (see [Aydin, 2006, pp. 353–355]).

Thus, in the post-Horde states the science of the law was predominantly of a practical nature—that is, the men of law did not create any new works but studied, reproduced, and applied the classical works on Sharia and *fiqh*. This fact, however, does not mean that the level of legal knowledge in the post-Horde period declined; rather, the focus moved towards law-enforcement. This is why the works of legal scientists of the earlier periods remained popular and topical throughout the 15–18th centuries.

The practical application of Islamic legal theory was developed by *kazaskers*, *muftis*, and *ulamas*. During the reviewed period the main works on applied legal thought were the above-mentioned *kazasker saqqqs*, as well as the numerous *fatwas* and *risales* (letters, treatises) that clarified the application of legal principles to specific actions taken by the rulers (see, for instance, [Smirnov, 2005a, p. 117]).

The historic sources (both narrative and acts) mention many names of Islamic legal scholars who focused on practical law-enforcement. Thus, it is from the *kazasker* records that we know the names of the Crimean supreme judges, namely Mustafa (under Janibeg Giray), Ibrahim (under Selim Giray I and Devlet Giray II), Abdul Latif b. Omar (under Saadat Giray II), and Feyzullah Efendi (under Sahib Giray II) [Lashkov, 1896a,

pp. 72, 125, 133, 134]. Crimean sources also tell of opposition of two groups in the Crimean legal science at the beginning of the 18th century. These were Kazasker Abu-s-Samad and Mufti Abu-s-Suud [Smirnov, 1913, pp. 15–17], which means that it was not without contradictions and disputes that legal science in the Turkic-Tatar states developed. We have access to much less information about legal scholars in other Turkic-Tatar khanates. These include the sayyids that we know about from historic sources. Many of these sayyids acted as supreme judges in the Kazan and Kasimov Khanates, and also as the khan's advisers on policy and law (for more details see [Iskhakov, 1997a]).

In the Turkic-Tatar states legal knowledge was preserved, applied, and developed not only within the context of Sharia law. There were also experts in the principles and standards of imperial and common law, although today we can only make reasonable assumptions about them.

No doubt the monarchs themselves and other members of the Jochid family were well-versed in the principles and standards of imperial 'Chinggisid' law. Claiming to be successors of the empire of Chinggis Khan and the Golden Horde, the monarchs espoused their political and legal ideology. Recall that when rendering judgment on an inheritance dispute, Shaybani Khan ordered action according to the 'order established by Chinggis Khan'—that is, it was implied that the laws of the Mongol Empire's founder were well-known. The Crimean and Kazan khans as well as the Nogai beys also referred to the order established by Chinggis Khan (see, for instance, [Smirnov, 2005, p. 248; Bennigsen, Weinstein, 2009, p. 363]).

Incredible as it may seem, the officers of the khan's secretariat also shared imperial political and legal values. We say it was incredible because these were mostly Muslims, and we might assume they ought to protect and implement Sharia standards and principles. Nevertheless, they contributed much to the preservation in Turkic-Tatar states of the main forms and wordings of the khan's *yarliqs* and other official acts as they existed

during the Mongol Empire and the Golden Horde (these issues were studied in detail; see [Özyetgin, 1996; Abzalov, 2009]).

The tribal chiefs and the elders who handed down legal knowledge from generation to generation within their families adhered to the values of common law of the Turkic-Tatar tribes. Unfortunately, we do not have access to any sources containing details of experts on the Turkic-Tatar common law. This is in contrast, for example, to the Kazakh beys who are mentioned in numerous legends and messages (see [Kazaktyn, 2004a]). Apparently, the lack of information on experts in common law in the Turkic-Tatar states is due to the fact that their role in the legal culture was much less important than that of the Kazakh beys as Sharia standards dominated in those states. Nevertheless, indirect details in the sources imply that such experts existed. Thus, for example, the Nogai beys and the Turkish and Persian historians of the 15–17th centuries refer to traditional common law (*tore* and *adat*), so there must have been people who possessed knowledge on this ancient Turkic law. When trying to reform the court system in the Crimean Khanate and to limit the role of Sharia courts, Khan Murad Giray appointed a *tore Bashi*, which means that by the end of the 17th century in Crimea there were also experts in Turkic common law. Recall that the common law in Crimea was not prosecuted by the Ottoman suzerains of the Crimean Khanate as in the Ottoman Empire itself common law ('*orfi*') played an important role that was integrated with the lawmaking activities of the Sultans ('*Qanun*') and Sharia [Aydin, 2006, pp. 323–335; see also Oreshkova, 1990].

Thus, we can conclude that the legal culture of the Turkic-Tatar states in the 15–18th centuries was a complicated, multilevel, and sometimes contradictory system. However, it might be less developed than the legal culture of the Golden Horde, which situation would obviously stem from the weaker central power of the khan and the fact that it was not possible to ensure the most efficient implementation of Imperial ('Chinggisid') law, which would be a kind of driver for the integration

of the different legal systems within the context of the legal system of the Golden Horde. Nevertheless, the Turkic-Tatar states had a rather well-developed and unique legal culture which was no less and in some aspects even better developed than the legal culture of some countries in Europe and the Orient.

Thus, it would not be an exaggeration to say that the legal culture of the Turkic-Tatar states in the 15–18th centuries was an important stage in the development of Turkic-Mongol legal culture (on the one hand) and an important integral element of Turkic-Tatar civilisation.

§ 3. Structure of Power in the Late Golden Horde States

IskanderIzmaylov

Structure of the State System. The Khans.

The state system of Tatar Khanates was based on Golden Horde political traditions. The supreme power belonged to the Chinggisid khans. From a legal standpoint, all the khans (descendants of Chinggis Khan's son Jochi (Jochi), the founder of state—that is, Ulus Jochi or Ulugh Ulus) were deemed to collectively own all the Ulus, though de facto the real power belonged only to those khans who managed to gain loyalty and support of their kin and the most influential noblemen, and who were approved by the meeting of the most noble aristocrats (the Kurultai). This situation was due to a complicated system of succession to the throne. After the 14th century one had to be a Muslim to become Khan [Izmajlov, Isxakov, 2009, pp. 310–320]. This was a strict rule even for the Kasimov Khanate, where any sultan who converted to orthodoxy lost his rights to the throne. During the turmoil of 1359–1360 all of the Ak Horde Jochids were killed, and power was transferred to the khans of the Kok Horde (the line of the Tuqay-Temürids). As during the 15–18th centuries the throne in Ulus and the Tatar Khanates could be held only by the descendants of Jochi, even the most influential of the Ulugh karachi begs (beklyaribeks) always ruled the country on behalf of the khans, who were rulers in name only. All the Jochids of the Ak Horde used Old Tatar as their official language (the Volga turki), which was the only language to be used in official documents. Up to the 18th century this language was officially used by Russian officials for the purposes of diplomatic communication with the eastern countries. After

the collapse of the Jochid Ulus, the power in the new Khanates was taken by separate lines (clans) of the Jochid descendants: in Kazan power was seized by the descendants of Ulugh Muhammad; in the Crimea, by the Girays; and in the Siberian and Uzbek Khanates, by the Shaybanids.

It seems that as early as the 15th century after collapse of the Jochid Ulus, there arose a tendency to treat the khanates that sprung up as the inherited 'yurts' of the different Jochid dynasties. A record of this trend was preserved in one of the documents of the 'Ambassadorial Book for Nogai Affairs' for the year 1576. Among the other lands that previously paid fee to the Nogai beys and that joined the Moscow state (and thus, their obligations to regularly pay the fee to the Nogais were also transferred to the Russian state) the document lists 'the Tsar's Temir Qutlugh's yurt of Astrakhan as well as Alibey's yurt, and Altybey's [yur]t, and the Bulgarian Tsar's yurt, and Ardabey's yurt along with thirty Tumens...' [Ambassadorial Book, 2003, p. 47]. V. Trepavlov reasonably believes that the above refers to the territory of the Astrakhan Khanate (Temir Qutlugh's yurt), Kok Horde (the yurt of Orda Ichen), and the Kazan Khanate [the Alibey and the Altynbey Bulgarian Tsar's yurt] [Ibid., pp. 81–84]. This obviously was not just a folklore tradition, but it was of an official diplomatic and historiographic nature [Izmajlov, 2006, pp. 99–128]. No doubt that the rights of the Crimean Girays to their possessions were also secured in the Crimean historiography [Zajcev, 2009a, pp. 63–134].

Before 1518 the Kazan Khanate had only khans descended from Ulugh Mu-

hammad (except only that in 1496 the state had a Shibaniid as khan), and later it had only khans descended from Temur Qutlugh (1518–1552 with intervals) and the Girays (1521–1511 with intervals), whereas Yadigar Muhammad, the last Kazan khan who was a member of the Great Horde khan s' dynasty who ruled in the Astrakhan Khanate and whose genealogy goes back to Temur Qutlugh Khan. Another khan who was appointed by the implacable enemies of the Muscovite state headed by Mamich Berdey also seemed to be a descendant of Temur Qutlugh Khan (see [Khudyakov, 1991, pp. 174–188; Iskharov, Izmaylov, 2005, pp. 55–63]).

The ruling dynasty of the Crimean Khanate was a part of the Gireys (Girays) family (1443–1783) and descended from Khan Hacı Giray. Some historians [Usmanov, 1972] believe that this dynasty was named after the name of the Giray (Kiray) family or tribe who were quite widely known among the Mongols and Turkic-speaking nations of the Central Asia. From the late 15th century, when in 1478 Sultan Mehmed II enthroned in Crimea Mengli Giray, the son of Hacı Giray, the Girays became vassals to the Sultan of Turkey. Officially, such vassal relations were formalised during the reign of Islam Giray (1584–1588) when in the khutbahs the name of the Sultan began to be pronounced before the name of the Khan. To make the Girays more dependent on the Sultan, some members of this family lived in Istanbul (and later on the island of Rhodes); whenever a Crimean ruler fell out of the Sultan's favour, such a ruler was replaced by one of these Girays. The Girays took part in the war between Turkey and Poland, Moldavia, Russian State, and Iran and raided Russian, Polish–Lithuanian and other lands. The Girays were also members of the Divan, a high governmental body of the Crimean Khanate. After the Crimean Khanate was annexed to Russia (in 1783), Shahin Giray, the last Khan of Crimea waived his rights to the throne. Some of the Girays started to serve the Russian state, others moved to Turkey (see [Bakhrushin, 1936, pp. 29–61; Fisher, 1978, pp. 17–69; Vinogradov, 1999, pp. 58–69]).

The descendants of the Jochids (Tuqay-Temür and Shibani) had founded a number of khanates in the lands of the Kok Horde. However, there was one exception, when from 1495 to 1563 the state was ruled by local Taibug noblemen (Taibugids) [Frank, 1994].

In official terms, the khans were autocrats, their names were mentioned in the daily prayers (the khutbahs), and they affixed their seals to all the laws and acted otherwise in their representative capacity. In some of the cases they commanded the army though it is not quite clear whether they had any real influence upon the course of combat. However, it seems like some of the Kazan, Siberian, and Crimean khans were an exception. It is quite possible that a khan received a considerable part of the spoils of war as the organiser and commander. It is quite possible that some of the khans were so keen on warfare because they aspired to gain more war trophies. Wishing to strengthen their power within their countries, they had no other means to attract military and service class nobility aside from sharing the spoils of war with them, whereas inside the country the khan's powers were quite limited.

Every khanate had its own pattern of distributing power between the khan and the aristocracy. As a rule, the tarkhan and soyurghal yarliqs, which granted a certain family or person privileges for their service, were issued or confirmed on behalf of the khans. Apart from confirming the traditions of using the land, the khans obviously could also reallocate certain lands. Thus, for example, in the Crimean Khanate from 1530 the khans had the power to grant the lands they controlled (including the ploughed fields, hayfields, gardens, etc.) to the new owners, thus enabling such new owners to 'own the said land, to sow, and to cultivate it unhampered' (see [Bulletin of the Tauric Academic Archive Commission, 1895, pp. 85–87, 91]).

According to the sources, like in the other Tatar Khanates, the right of certain persons to own the granted land upon expiry of the prescribed period was subject to confirmation by the khans, who were the supreme owners

of the land. As a rule, the khans granted their confirmation. Thus, for example, according to the *yarliq*, Muhammad Giray, khan of the Crimean Khanate, granted his confirmation and after being 'offered a horse' issued a *yarliq* with a scarlet tamga and blue seal ordering that 'the above named emirs... and their families should own the granted lands free and unhampered' (Ibid., p. 88).

However, this does not mean that the khan held absolute power. On the contrary, all we know about the Tatar rulers is that only a few of them truly tried to rule in a sovereign and autocratic manner. As a rule, such attempts resulted in military takeovers by the Tatar nobles. The most dramatic examples come from the history of the Kazan Khanate, where the territory was divided into *darugas* that were in fact ruled by the *karachi* begs. In other words, though owning unoccupied lands was one of the key privileges of medieval lords, the khans possessed none in reality. Moreover, the noblemen of the Kazan Khanate took care as not to allow the khans to freely allocate the lands or grant the right to collect taxes and duties. Sources say that any attempts made by the khans to strengthen their power in terms of disposing of land or money were fiercely opposed by the aristocratic clans. We should recall that misappropriation of *soyurgals* and land was the main accusation levelled against many khans, from Muhammed Amin to Sheikh Ali. Thus, in a letter dated 1541 and addressed to the Grand Prince of Moscow by Ulugh *karachi* beg Bulat 'and all the Kazan land' the noble Tatars listed the offences committed against them by Khan Safa Giray, namely: 'the people of Kazan suffer of much pressure exerted by the sovereign who has withdrawn the *yarliqs* from many of the princes and has given these *yarliqs* to the people of Crimea' [Complete Collection of Russian Chronicles, 13, 2000, p. 99]. One of the diplomatic charters also refers to these accusations against Khan Safa Giray: 'if a person's father died, he (that is, the khan—I. I.) deprived him of his father's income; if a person's elder brother died, he also did not allow the younger brother to get the income of his elder one'

[Complete Collection of Russian Chronicles, 1793, pp. 269–274]. Most likely, in this case (which was neither the first nor the last in the host of conflicts between the khans and the nobles) the conflict was about the khan's right to approve the *tarkhan* and *soyurgal* *yarliqs*. Having misappropriated this right, Safa Giray khan granted the right to collect taxes and duties to his henchmen, thereby trying to gain wider social support. However, as a result, he lost all support of the Tatar clans and was overthrown. Nevertheless, he was able to recover his lost throne with the help of the Nogai, to whom he gave the position of one of the *karachi* begs (the Prince of the Nogais) as well as money and land obviously taken from the clan noblemen. However, this did not put an end to the opposition between the Kazan noblemen and the khan. The khan has died in his own palace under mysterious circumstances, and his successors failed to retain the throne for longer than a year. Sheikh Ali, his successor, wise in experience of his predecessors, pursued the same policy. As a result, the khanate lost all of its stability and strength. Thus, it may be concluded that issuing the *tarkhan* and *soyurgal* *yarliqs* (which was obviously his right and privilege), the khan could not take these away from any person at his own discretion and grant these to his supporters (the privilege of disposing of the land, taxes, and duties belonged to the Tatar clans and the rural communities). No khan had the power to destroy this system without running the risk of being buried in its ruins, as happened in the case of the Kazan Khanate. It appears that *ulus* re-distribution in the Kazan Khanate and in the Jochid *Ulus* was of an extraordinary nature, the usual granting practice being limited to confirming owners' rules, like 'since the reign of the late Khan Uzbek and until today...', 'in *yarliqs* issued by Chinggis Khan and the succeeding khans,' 'we bestowed a grant according to the old custom,' etc. In other words, it is not only the reference to the granting tradition (which seems to constitute the reasoning for the granting) that is notable, but also the *yarliqs* being confirmative rather than recording a grant. An

elaborate system of inheriting any land and income must have existed preventing everybody, including the khan, from obtaining any property or rights to it in an arbitrary manner. That is, again, unless the khan wanted to turn the nobility entirely against him. There seem to have been opportunities that khans, for example, Safa Giray, occasionally took to avoid 'granting' a *yarliq* for a vacant property or *soyugal* to its inheritors, or to confiscate the property of disloyal aristocrats. Nevertheless, it was generally clear that the khan's efforts were illegal and could not become an 'ancient custom.'

In this respect, it appears that the historians who studied the structure of land-related relations and khans' rights limited themselves to West European analogies and the common idea of 'autocratic' khans possessing absolute power. The following passage by historian Sh. Muhamedyarov, who is generally very careful and scrupulous, is representative of this: 'The khan who enjoyed a combination of political authority over the population of the Kazan Khanate and control over land would issue *soyugal* charters to his vassals. Sahib Giray's charter establishes a number of privileges for him without distinguishing between political rights and those related to property only' [Muhamedyarov, 1958, p. 16]. S. Alishev wrote similar things, believing that earnings from national land and income raised with it in the form of *yasak* would 'be added to the khan's treasury' and applied to the maintenance of the army and officials [Alishev, 1990, p. 40]. However, the problem seems to reside in another aspect. It is unlikely that the khan managed the khanate treasury. Most probably, he raised certain funds with his *tarkhan* rights, just like other feudal lords did, while the *divan* managed the khanate treasury. In this respect, the property rights of Kazan feudal lords were inextricably linked with their class (or political) status, which is characteristic of medieval societies.

The khan himself would own land, an *ulus* of his own. Fragmentary evidence dating back to a later period suggests that such a khan's 'domain' did exist. For instance, the

Scribe's Book of 1565 reads as follows: '...in the village of Nurdulatov... there was vacant land that used to belong to Tsar Mohammad Amin [Copy, 1910, p. 104]. Historians estimate the number of such estates in the Volga Region and in Trans-Kazan to have been about 20 [Istoriya Tatarskoj ASSR, 1951, p. 137]. That is, the khan had at least land of his own, though his plots appear to have been detached and small. It would be very reasonable to suppose that the khan received the land upon his enthronement. It is unclear whether khans owned such lands from the time of Ulugh Muhammad or it is what remained of the land initially allocated to the khan. The khan's *ulus* could also include towns. The fortress of Iski Kazan (Kamayev archaeological site), where Khan Jan-Ali was imprisoned following his subversion, might have been one. Some archaeological discoveries indicate a probability that Russian captives were kept there. In any case, khans depended on the Tatar clan nobility in terms of law and (property) relations, for it was the aristocracy who gave them khan's land to control during their reign (a kind of *soyugal* for the period of their khanate).

The structure of the khan's power required consolidation. That is why the khan of the Crimean Khanate, beginning in the late 15th century, wanted to appoint a successor in advance, whom he could entrust to command the army and attend diplomatic negotiations (see [Smirnov, 2011, pp. 265–273]).

Karacha begs, headed by the Shirins (Ulugh karachi begs), apparently played a major role in enthroning khans in their state as well as in the general implementation of state policy. This applies at the very least to the Crimean Khanate and the Kazan Khanate. In a way, Shirin karachi beg Agysh was right to boast, 'Has not the cart got two axes? The right axis is my ruler khan; the left one is me, my brothers, and my children' [Collection of the Russian Historical Society, 1895, pp. 39–40]. Official sources present a very vivid description of the official status of each clan. In a manner of speaking, karachi begs established the khan's authority, while he affirmed their powers. Direct evidence is

available of their taking oaths to ratify agreements with foreign powers and other internal rulers—the khan's brothers and sons, religious authorities, and the khan's chancellors [Ibid., pp. 20, 211]. In the Kazan Khanate *karacha* begs participated in all negotiations held on behalf of 'the entire land of Kazan' to invite khans to take the throne, to which fact the following phrase refers: '...from sayyids, Ulans, Princes, Karachis, and the entire Kazan state' [Complete Collection of Russian Chronicles, 11–12, 2000, pp. 31–32, 56–57, 68, 81, 167]. However, no information on the ceremony of enthroning the khan in the Kazan Khanate has come down to us. It was probably similar to that of the Kasimov and Crimean Khanates.

No data is available regarding the existence of an officially proclaimed successor to the throne having a special title, as it was in some other late Golden Horde states. The throne was passed from father to son, though cases of brother succeeding to brother's power took place from the late 15th century and even earlier. In the event that the ruling dynasty was extinct, the Tatar aristocrats would invite a Chinggisid from among the closest Jochid relatives to take the throne. For instance, Sheikh Ali and khans of the Giray clan were enthroned under the pressure of the Grand Prince of Moscow.

A special set of court officials served directly to the khan, of which Russian chronicles mention a butler and an equerry. Beg Shakh Abbas, son of Shaam, and Beg Batike are known to have occupied the positions, respectively, in 1551 during the reign of Sheikh Ali.

Court officials also included an *atalyk*, who taught the khans' children, and an *imildash* (for more details on the term, see: [Vásáry, 1983])—that is, milk brothers of the khans and their children; Russian documents refer to the terms as 'dyadka' and 'mamich.' Though seemingly archaic, the roles were essential to the social structure of Turkic-Tatar states. In fact, they acted as mediators between the Chinggisid khans and the local nobility. Both parties benefited from the relations: they enabled Tatar aristocrats to get

closer the throne, ensuring a support among the nobility or the khans, who enjoyed devoted service and high reliability. *Atalyks* were not merely teachers and instructors but principal advisors to the khans-to-be, the ones who actually formed the policy of their pupils without occupying any high office. Needless to say, personal qualities and credibility of the *atalyk* and his clan largely determined whether his pupil would be elected khan. Similarly, the choice of *imildashes* formed a mutual commitment between the sultan as well as the khan-to-be and the clans of their 'milk brothers.' As well as marriage, choosing 'imildashes' and the 'atalyk' was a crucial task and an important way of enhancing the khan's power. It is no wonder that many *atalyks* were previously otherwise distinguished. For instance, the *atalyk* of Khan Safa Giray, Talysh, was a military commander, fought on the Ityakovo field in 1524, and fell in the war of 1530, while the tutor to Safa Giray's children *atalyk* Ali Shakhul is mentioned in Russian sources as a high official; one of the city gates of Kazan were called the *Atalyk Gate*. The Tatars held milk brothers in respect treating them as close relatives. For example, in the time of the conquest of Kazan, Khan Yadygar's two *imildashes* were taken prisoner along with the khan as members of his family. The famous initiator of the struggle against the Russian conquerors Mamich Berdy could have been an *imildash* of one of Kazan khans, which would make him one of the most noble representatives of the remaining Kazan aristocracy.

A class delegate body known as the *quriltai*, which addressed all key national issues (including formal khan elections and dethronement, declarations of war, etc.), was a way in which the military and service class nobility and the clergy could influence the national affairs [Khudyakov, 1991, p. 194]. Russian sources mostly refer to it as 'the entire land of Kazan.' As calculated by M. Khudyakov, Russian sources mention 'the entire land of Kazan' 14 times [Ibid., pp. 191–195], though it is obvious that the *quriltai* had more gatherings, at least 15: to dethrone the khan (Mamuk in 1496, Safa Giray in 1541

and 1546, and Jan-Ali in 1535), to enthrone the khan (Sheikh Ali in 1519 and 1551, Safa Giray in 1535 and 146), and to sign peace and shert (sworn) agreements with Muscovite Rus (1516, 1518, 1524, 1530, 1531, 1546, 1551). Chronicles suggest that declaring a khan was a long process. The negotiations were mainly aimed at agreeing on the shart-name to establish the parties' rights and responsibilities. After the parties agreed on every item, the ceremony of signing—sealing the charter—took place during a congress. The following is a description of the event by a chronicler dated 1551: 'And tsar Shigalei and the entire land of Kazan took an oath to the king... And the tsar ensealed the sworn charters with his seals, and the best men of Kazan set their hands to it' [Complete Collection of Russian Chronicles, 29, 1965, p. 65].

It is beyond any reasonable doubt that the qurultai gathered much more often; but written sources do not reflect some of the meetings. The information available on other Tatar khanates is also fragmentary and requires some special research. In fact, the quriltai has a long Turkic-Tatar history [Khudyakov, 1991, pp. 191–192; Fyodorov-Davydov, 1973, pp. 168–169; Pelenski, 1978] and changed in form significantly over the centuries—from a public assembly to the council of the high aristocracy. Contrary to the opinion expressed by G. Fyodorov-Davydov, it was not an archaic institution but a form of class representation for the high clan aristocracy during the period of the Jochid Ulus. It was a way to institutionalise its power and secure its privileges. In the Kazan Khanate, which borrowed the institution from the Jochid Ulus, it developed into an efficient instrument of preserving and entrenching the status-based power of the high Tatar aristocracy. The closest historical equivalents of the quriltai of the Kazan Khanate are sejm of the szlachta in the Polish-Lithuanian Commonwealth, which were the only body to elect the king, the veche of Novgorod, which elected the prince, and the aristocrat congress in the Holy Roman Empire, which also elected the emperor. That is, the analogy

enables us to call the governmental system of the Kazan Khanate an aristocratic republic. Thus, it appears very natural that Russian historians applauding the 'democratism' of the Novgorod veche tended to ignore the fact that the Tatars had a very democratic institute of power with roots in an ancient tradition and that exercised real influence on national affairs; to admit it would mean to give up the essential mythologem of the Tatars having enhanced the autocratic trend or to accept the fact that the Tatars of Kazan did not constitute a permanent military threat to Rus since the khan did not possess the military power we would require, while the Kazan aristocracy had no motive to wage wars at Russia—any success would be dubious, it would be impossible to keep whatever they could conquer, and, to crown it all, any victory would enhance the khan's credibility and authority.

It was the divan (state council) composed of representatives of the Tatar high nobility (sayyids, karachi begs, oglans) what held the real power in the Kazan Khanate between quriltais. [Khudyakov, 1991, p. 191]. In a manner of speaking, it was an operational control body. Most probably, the divan controlled the state apparatus of the executive power. There must have been some separation of duties within the divan (for instance, the sayyid would clearly play a major role in international affairs), but this requires extensive research and comparison.

The Ulugh karachi beg (kaymakan or shirin bey according to the Crimean terminology) of the Shirin clan also executed the supreme administrative and military power in the Crimean Khanate (the most famous officials include Emenek of the late 15th century and Jan-Temür-murza of the first half of the 18th century). They had their residence in Solkhat (Eski Qırım). Other key positions included the or-beg, responsible for maintaining the international security of the state, who had his residence in Perekop. The khan agasy (vizier) and a number of different officials, known as kazandarbashi, aktachibashi, defterdarbashi, killarjibashi, etc., were responsible for finance and tax-

es. The positions were usually divided up between the ruling clans. When Crimea became independent of the Turkish Empire, the sultan's representative began to play an important role in its life.

Different khanates had different state apparatuses depending on local customs and foreign influence. The Kazan structure of authority appears to have preserved more features characteristic of the Golden Horde. Its administrative and fiscal apparatus included a number of categories of officials—apart from emirs and the sayyid, the yarliq of Khan Sahib Giray mentions such positions as hakim, kazi, mawali zaawel-ikhtiram, wakil, makaaman, ichi, baqchachi, kshti-baanan, guzar-baanan, tutnagul, and tamgachi [Khuudyakov, 1991, pp. 206–210; Usmanov, 1979, pp. 222–227]. In addition, the following types of officials are known: 'keeper of the tsar of Kazan'—that is, the head treasurer, khan's butler, equerry, weapon keeper, bakshi (scribes, secretaries) [Alishev, 1990, pp. 51–52]. A series of such categories has been known since the period of the Jochid Ulus. Clergymen were also engaged in the national affairs, especially in diplomatic missions [Iskhakov, Izmaylov, 2005, pp. 81–84].

The governmental system of the Crimean Khanate was largely determined by Ottoman influence but still preserved certain traditional elements and structures. The divan (state council) constituted a way in which the aristocracy could influence national affairs. The divan included the qalga, the nuraddin, the shirin bey, the mufti, representatives of the Tatar high nobility headed by karachi begs of the four ruling clans, who could at the same time occupy governmental positions, other senior managers, and the serakesirs (rulers) of the three nomadic hordes (Bucak, Yesidan, Nogai). The divan was responsible for all national affairs; it would approve and decide complicated cases beyond the jurisdiction of social class and local courts, in particular the allocation of the national expenditures, including the cost of maintaining the khan and his court [Smirnov, 2011; Syroechkovskiy, 1940; Fisher, 1978].

Information on the government and state structure of the Khanates of Astrakhan and Kasimov as well as those of the Great Horde is far less extensive; but they also observed the earlier governmental tradition of the Jochid Ulus to which they added a few particular features [Zajtsev, 2004, pp. 203–226; Rakhimzyanov, 2009, pp. 65–77; Trepavlov, 2010, pp. 28–38].

Military and Service Class Nobility. Tatar Ruling Clans. In fact, power over Tatar khanates belonged to the military and service class nobility, or 'service class Tatars' according to Russian terminology. The ruling highest ranks of society were represented by the khan, members of his family, and four more classes: Muslim priesthood, princes and murzas, and the Cossacks living at the court (ichki) and beyond it. It is plausible that ichki had a higher status and were begs themselves [Iskhakov, 1998, pp. 61–80].

The social organization of the nobility in the Kazan Khanate had a hierarchic system connected with the rights to own land (or levy a certain kind of taxes) as a conditional (soyurgal) right, for which a nobleman had to serve his suzerain, and conditional-unconditional one (tarkhan), that is relief of duty (partial or complete) in favor of the khan. The highest representatives of nobility were represented by oglans, karaches and emirs, then came murzas, and the layer of knights, represented by bagaturs and Cossacks. Waging war was the main activity of the service class. It is no coincidence that one can often read in epitaphs referring to the 16th century that so-and-so 'was martyred by a disbeliever' [Rakhim, 1930, pp. 164, 169].

The term 'chura' which was preserved in authentic written sources and Tatar narratives is especially noteworthy. As we have already mentioned above, this term has nothing in common with the denomination 'kol,' it denoted military servants which can be clearly seen from epic literature 'Chura-Batyr' or 'History of Kazan' describing the escape of Chura Narykov. Basically the term 'chura' could be combined with such well-known oriental military terms as 'gulyam' or 'mamluk.' Gulyams and mamluks were slaves,

young boys often bought in slave markets, they were trained at special military camps, turning them into professional heavily armed warriors who were able to fight against European knights. As for their social status, they often obtained quick promotion becoming the rulers of the whole states (for example, the state of Mamluks in Egypt or India). Nevertheless most likely the term "chura" means the general name of the class of military servants—the knights. The indications of historians (for example, the one according to which Edigu was the 'chura' of khan Tokhtamysh [Usmanov, 1972, p. 94], Tatar narratives about military servants and earlier Turkic tradition going back to the epoch of Turkic khaganates are evidence of that. He was known in the Volga Region where he was registered at least since the latter half of the 12th century and broadly used in the set of titles between the 13th and the 15th centuries denoting the representatives of military class, knights (see [Khakimzyanov, 1978, pp. 80–82]. Later after the Russian conquest this term, was displaced from social practice by another name of military class—the "serving Tatars." Contrary to the opinion of certain researchers [Khudyakov, 1991, pp. 199–206], most likely not the representatives of nobility possessing patrimonial estates but the Cossacks (rank and file, decurions, centurions) got lands for their service. Probably up to one the fourth land estates of the state belonged to them. This conclusion is evidenced by the fact that, during the first decades after the Russian conquest, the so called "serving Tatars" were rewritten as groups dispersed in many villages as landed classes (see: [Scribe's Book, 1978]).

The social organisation of the nobility in the Crimean Khanate also had an hierarchic system connected with rights to own land (or impose a certain kind of taxes), for which the owners were to serve to their suzerain. The high nobility was represented by descendants of the Girays—the qalga, the nuraddin, and other sultans, murzas and begs, and small service nobility known as emeldyashi and sirdashi.

The structure of the aristocracy in Tatar khanates relied on land relations. The mil-

itary feudal system was presented by two major types of hereditary ownership—conditional (soyurgal, suyurgal) and conditional unconditional (tarkhan). The owner was obliged to serve his suzerain (generally it was a khan but it can be assumed that the power was mediated by the headmen of Tatar clans), and he received hereditary possession in return, a certain tax and administrative-judicial immunity. So military service was the major and the most important duty of the owner of soyurgal although its order and duration dictated by the custom are unclear. A fragment of the "History of Kazan" may serve as an illustration for such an assembly: "And Kazan Tsar Sapkirey, listening to the great voivodes of Moscow, decided to send princes and murzas to all Kazan uluses ordering them to gather in Kazan, get ready for the siege, and wait for the enormous Russian forces" [Complete Collection of Russian Chronicles, 19, 2000, p. 252].

All serving class aristocracy and, largely, the clergy in the Kazan Khanate were representatives of Tatar clans and tribes. A more accurate way to express the idea is to say that there was no military service class in Kazan, except for the Tatar one, as well as in the Jochid Ulus that means nobody could become a part of nobility unless he belonged to a Tatar clan, and correspondingly, all representatives of this class belonged to one or another clan in view of relative and family ties. Among all the clans of the Tatar khanates (and their registries, for example, in the state of Shibanids, numbered up to one hundred titles) four clans were especially outstanding from the standpoint of noble rank and might—the Shirins, the Arghyns, the Kipchaks, and the Baryns. These were four ruling clans, and the tradition of their distinguishing (the names of certain clans vary from khanate to khanate) goes back to the state structure of the Jochid Ulus and further to the times of the Ancient Turks (see [Shamil'oglu, 1993, pp. 44–60]).

In spite of the large number of sources available and even contrary to them, some historians tend to deny the very possibility that the system might have existed either due

to the lack of direct mentions in sources or in terms of general considerations. However, various sources from Russian chronicles to Tatar literary works provide direct evidence that the four clans did exist and play an important role in the history of Tatar khanates, especially the Khanates of Kazan and Kasimov and the Crimean Khanate (see [Iskhakov, 1995; Iskhakov, 1998; Iskhakov, Izmaylov, 2005]). It seems reasonable to quote the following lines of an agreement between Moscow and Kazan: 'Also we will receive from you no Tatars, and you shall not receive none of my people but from the kin of the Shirin, and Baryn, and Arghyn, and Kipchak' [Collection, 1819, no. 27, p. 33].

Four clans of the Crimea were especially outstanding from the standpoint of gentleness and might—the Shirins, the Arghyns, the Baryns, and the Kipchaks (Yashlavs) [Manz, 1978; Inalchik, 1995]. The Nogai Manghit (Mansur) and Sidjeut clans joined them later. A constant rotation of clans, that of the Manghits replacing the Arghyns, the Kipchaks, or the Baryns in power structures, could take place during the 16–18th centuries. Later in the 18th century the Manghits were able to force even the Shirins off the political stage but failed to neutralise their influence completely. Members of the clans, especially Shirins, were influential both as messengers and hostages. For instance, the Grand Duchy of Lithuania usually demanded Shirin hostages, once even along with some of the Baryn clan [Collection of the Russian Historical Society, 1895, p. 613]. The Kipchaks and the Arghyns were less influential within the system, which is attributable to their specialisation in the 'Russian' policy. The ruling clans enjoyed the privilege of marrying Girays—'the khan only marries his daughters off to those begs and their sons' [Inalchik, 1995, p. 76], the Shirins and the Manghits again being the most influential ones [Collection of the Russian Historical Society, 1895, pp. 40, 401].

The reason why the ruling clans played such a major role in Tatar khanates' policy is that they constituted a vast majority of the army. Sources dated the first thirty years

of the 16th century claim the Shirins alone to have been able to provide up to 20,000 horsemen; during the anti-Circassian campaign of 1543 the Shirins provided 5,000; the Arghyns and the Kipchaks, 3,000 each, and the Manghits, 2,000 warriors [Inalchik, 1995, p. 76]. The clans were too powerful for the khans to confront them. Characteristically, when the ruling clans were jointly opposed to Sahib Giray, who wanted to build his power according to the model of Turkish sultans and found a regular army, in 1551 the latter was dethroned and replaced by Devlet Giray.

Thus, the ruling clans did not merely exist as ethnic and social communities in Kazan, Kasimov, and the Crimea—they were the regional leaders and interacted intensely sheltering their relatives in exile. The materials constitute a reliable evidence of the four ruling clans being a real power in East European Tatar khanates.

Karachi begs of the four ruling clans, the Shirins, the Arghyns, the Baryns, and the Kipchaks, from among which the Ulugh karachi beg (the great karachi beg), usually a Shirin, was appointed—in fact, the head of the government and the commander-in-chief. As in the Crimea, it was usually a representative of the Shirin clan. Two prominent statesmen of the Kazan Khanate, Bulat Shirin and his son Nur-Ali Shirin, who were in control of the national policy for several decades, also originated from that clan.

The community of Tatar clans in the Siberian Khanate was headed by other clans, which seems attributable to the ethnosocial structure of the khanate. The prominent clans of the Kok Horde were the Manghits, the Jalairs, the Qongirats, the Saljiuts, the Naymans, etc. (see [Iskhakov, 2011, pp. 94–114]).

Taxable Population. Most of the population was taxable (*kara halik*)—peasants, who apparently paid taxes and duties to the government, were called personally free 'people' *keshelär*, while 'slaves' dependent on the feudal lords were referred to as *kollar*. More recent sources (Russian scribes' books and official documents, which most probably can

be extrapolated to the earlier period in the history of the Kazan Khanate) suggest that a vast majority of the Muslim population was national subjects, the Tatar nobility owing only a small part of it. Prisoners captured during military campaigns could be among the latter.

The terms to denote the category of personally dependent peasants, 'kullar,' have been disputed in historical literature. As early as the 1920s G. Gubaydullin accepted the untested interpretation of the word 'chura' presented in K. Nasyri's notes, who recorded a folk legend about a murza who had many 'chura kol' [Nasyri, 1977, p. 50], which led to him perceiving the two terms as an integral notion; he even coined the term 'chura holders,' which he applied to feudal lords of the period of the Kazan Khanate [Gubaydullin, 1925, pp. 12, 47, 78]. In more recent historical works the term was either used as synonymous to 'slave' in the context of 'kol' or ignored without providing any serious account of why the mistake had been made. Finally, M. Usmanov analysed the term in detail in his work of Tatar historical sources, noting that the fact that authentic sources use it to denote persons of a definitely noble origin did not substantiate an interpretation of it as synonymous to the term 'kol' [Usmanov, 1972, pp. 93–95]. Even though the issue seems very clear, S. Alishev revived the term 'kol-chura' or 'kul-chulara' in a number of recent works as 'a person fully dependent on their master and legally deprived of rights.' He then explained that the 'kol-chury' would work in the field or in their feudal lords' estates but could also have a household of their own [Alishev, 1990, p. 43]. In fact, the latter statement does not rely on any material, even the legend recorded by K. Nasyri, for it described armed horsemen, 'servants and dzhigits,' who gathered at the call of their murza. Does it mean that slaves in the Kazan Khanate also had horses and weapons? As the term is clearly beyond the concept of slave accepted by the historical community, it obviously refers not to slaves shedding sweat onto the ground but military servants spilling their blood and that of the others on the battlefield.

Yasak (yasak-kalan) was the main type of taxes in Tatar khanates; other types of land and income taxes and duties (salyg mussama, tamga-tartnak, kharaj, and more) also existed, as well as such duties as that to supply victuals to the army and the authorities (anbar-maly, ulufa-susun, etc.), provide transfer (ilchi-kunak), etc. Moreover, there existed a number of Muslim taxes (goshur and zakat) payable to the clergy as well as those imposed on subordinated non-Muslim peoples (jizya). The total number of taxes and duties was up to 16; over 10 categories of officials were responsible for collecting them. The population of subordinated areas also paid taxes (yasak) and charges to the government as well as to individual feudal lords and had to fulfil duties to the government and the nobility.

Most of the population of the Crimean Khanate were also tributaries who were to pay taxes to the government or to their feudal lords. The key taxes included the yasak and other taxes, charges, and duties, such as to supply victuals to the army and the authorities (anbar-maly, ulufa-susun, etc.), provide transfer (ilchi-kunak), etc., all traditional for Tatar states. Moreover, there existed a number of Muslim taxes (goshur and zakat) payable to the clergy. Grants from Turkey, in particular, remuneration for the participation of Tatar military contingents in the sultans' campaigns, monetary contributions paid by the neighbouring Poland and Russia to prevent invasion to their territory, and plunder ensured a large inflow to the treasury of the Kazan Khanate. The amount of Russia's monetary payments to the Crimean Khanate ('pominki' in Russian) was up to 12 roubles (in the mid–17th century) (see [Bakhrushin, 1936]).

Therefore, a class and clan power system originating in the well-established tradition of the Turkic people in Eurasia functioned in Tatar khanates. Khans belonging to various tribes of the Jochid clan had the power. However, the khans would be unable to rule their countries efficiently without the support of Tatar clans. They all had a hierarchic system generally confined to four ruling

clans (the earliest of them being the Shirins, the Baryns, the Arghyns, and the Kipchaks). Further rotation caused changes to the set of clans and their importance in the administration of the state. The administrative apparatus was quite traditional, also originating in the Golden Horde. The internal and external conditions determined regular transformations. For instance, the adminis-

trative apparatus of the Crimean Khanate in the 16–17th century largely took the Turkish pattern, though some special features were also present. In general, the material referred to in this work suggests that the Jochid Ulus was a class representative feudal monarchy with the ulus and beg administration system, headed by the Tatar ruling elite consisting of four clans.

CHAPTER 5

Spiritual Culture

§ 1. Spiritual Culture of the Kazan Khanate

Gamirzan Davletshin

The Kazan Khanate did not exist for long. And yet, the time allocated to it in the course of the history was mostly wasted either on internal conflicts or on fighting with foreign invaders. Nevertheless, even in such a short historical period, Kazan became a cultural centre for the regions of Volga, Kama, Ural, and Siberia, and the Kazan Khanate could rise up to the level of the advanced countries of the East and Eastern Europe. The Kazan Khanate became a worthy successor to the rich cultural heritage of the Bulgar, the Golden Horde.

Islam and Muslim Theology. Islam evolves, gets more firmly established in Kazan. Unlike Bulgar and Golden Horde societies, the Bulgar-Tatar population of the Kazan Khanate no longer have any problem with adopting and spreading Islam. Islam has already become a centuries-old tradition in the Kazan Khanate. The people mostly lived in accordance with the Sharia. Islam was indeed an established state religion. The throne could be taken only by a Muslim.

The official character of Islam is also reflected in state documents, mainly in charters (*yarliqs*), where the khans justified their words and political actions by mentioning the names of Allah and the Prophet Muhammad. It is clearly seen in the *yarliq* of Khan Sahib Giray (1523) [Vakhidov, 1925a], where 'great sayyids, qadis' are mentioned right after the emirs and hakims (local authorities). As it is seen from the text, sayyid was not just one. Yet in some sources he is presented as the highest religious figure ('High Priest') of the country having immense authority.

The nature of Islam as a state religion is reflected in the fact that Muslim religious leaders took part in state affairs. The sayyids usually were the heads of embassies and per-

formed important assignments of the khans. Russian rulers, who were well aware of the authority and high rank of the sayyids in the Kazan Khanate, strove to use them to their advantage. Sh. Marjani wrote: 'When sending letters to the Kazan khans through ambassadors, Russian princes attached a separate letter and gifts personally for Mullah Şarifkol (Kul-Sharif.—G.D.) [Märcani, 1989, p. 200]. The person we are talking about is a renowned religious and social figure, the last Supreme Sayyid of the Kazan Khanate Kul-Sharif. A special work by D. Iskhakov [Iskhakov, 2011] is dedicated to the sayyids in the Tatar Khanates.

The development of Muslim theology ('ilm') continues in the Kazan Khanate as well. The Quran remains the Great Book of Muslim enlightenment and pedagogy for the Muslims in this period as well. Nazip-Nak-kash-Ismagil studies these issues more thoroughly [Näkkäş, 1997].

The enlightened people of Kazan wrote comments to this Holy Book. One of them, 'Quran Tafsir,' written in 1508, has survived up to the modern times. And 'The Collection of Hadiths'—that is, the deeds and sayings of the Prophet Muhammad—was composed in 1552. Like in the earlier times, the scholars, poets, and enlightened people in general would confirm their thoughts by *ayahs* from the Quran, by Hadiths. Those who knew the Quran by heart were called the hafiz. This term can be seen also in the epitaphs of the Kazan Khanate [Yusupov, 1960, text 8].

A qadi, like in the Jochid Ulus, was one of the reverent in the religious hierarchy. In the *yarliq* of Sahib-Ghirey of 1523 they were mentioned right after 'great sayyids.' The qadis composed the Fatwa [Möxämmät Ämin, 2004, p. 269]. In 'The History of Ka-

zan' 'molns (mullahs), and sayyids, and shiis (sheikhs), and shihizgadehs (sheikhzadeh), and molzhadihs (mullahzadeh), imams, taze-his (hajis?), and afazis (hazifs)... are mentioned among the religious figures. [The History of Kazan, 1954].

And in this period fiction remains the most efficient means of promoting the religious and any other sciences in general. The introductory parts of Muhammedyar's poems are a kind of a brief history of Islam. The poems are short stories about the Prophets, the first righteous caliphs and famous people in the Islamic world as well as information about astronomy, geography, and medicine. And the poem by Muhammad Amin 'Mogjizname' is entirely dedicated to the Prophet Muhammad, to his fictional character to be more precise.

The works of Muhammedyar, and especially those of Kul-Sharif, are full of Sufi ideas. For example, the characters of 'Kyissai Hubbi Hoja' are historical figures: Ahmed Yesevi, Khakim Suleiman, and their close ones, different extraordinary events from their lives are described. [Kul-Sharif, 1997, pp. 43–65]. One of the Sufi centres in the Kazan Khanate was Chelnin fiefdom (ulus?) [Garif, 2006, p. 82b]. Probably such Sufi orders existed also in other regions of the country.

The capital of the Kazan Khanate was one of the main centres for spreading Islam among the peoples of the Volga and Ural Regions. Here numerous missionaries of Islam were prepared, big cathedral mosques, mausoleums of saints, khans, and their confidants were built. The presence of 'Tarsifs' (the Quran interpretation in the Tatar language) speaks of the wide spread of Muslim propaganda and missionary work.

Thus, Kazan as well as Bulgar carried on the tradition of the 'northernmost outpost' of Islam. Religious tolerance, the characteristic of the whole Turkic-Tatar history, was preserved.

Islamic devotees were amazed at the presence of such a strong Islamic centre in far north, away from other centres of the Muslim world. Visiting these northern Islamic places by the inhabitants of Islamic centres, providing assistance in religious matters to their dis-

tant brothers in faith were a deed pleasing to God, a bravery of its kind.

The tradition to bury the country rulers, the khans, in the most prestigious mosques or in the yards of these mosques was kept during the period of the Kazan Khanate [Ancient Kazan, 1996, p. 122]. The remains of two mausoleums had been examined in the last years under the supervision of F. Huzin, and an idea was suggested that Khans Mahmud and Muhammad Amin might have been buried there [Mausoleums, 1997, pp. 15, 18, 28].

As a tradition in the times of the Kazan Khanate, a special service was initiated for meeting the guests, aiming to show them historically holy places, to tell about prominent people of their land, and—having given them to eat and drink—to see them off. The executors of these holy responsibilities were themselves identified with the saints and were called mudzhavirs. In the times of the Kazan Khanate, the town of Bulgar, already in ruins, became a religious and cultural centre, a place of worship and pilgrimage for the Muslims of the Kazan Khanate. Especially there were many visitors around the tombs at the Minor minaret. The great poet of the Kazan Khanate Muhammedyar also performed a similar honourable service. He was the keeper of the tomb of Khan Muhammad Amin [Möxämmädär, 1997, p. 175b].

Despite the official character of Islam in the Kazan Khanate, other religions also coexisted in the society. The Finno-Ugric peoples and partly the Bashkirs generally continued to practice former pagan beliefs. Islam spread peacefully among separate groups of the settled Finno-Ugric and nomadic Turkic-speaking population in the south-east of the country.

Thus, the Turkic-Mongolian tradition of tolerance to other religions carried on.

Education and Upbringing. During the period of the Kazan Khanate pedagogical activity was also assigned to the clergymen. There was not a Muslim village without a mosque. Each mosque had a mektebe or medrese. All the people, so to say, were drawn to literacy. The institution of 'teacher—student' continued to exist in this period. The teaching,

mentoring, was often inherited. For example, on the tombstone found in the village of Timmerche of the Vysokogorny region is written: 'Teacher Şagimardan, the son of teacher Mirgali,' died in 1534 [Yusupov, 1960].

Studying outside the state in the scientific and cultural centres of the East was considered as the highest level of education. Bukhara was especially popular, first, as one of the cultural centres during the reign of the Temürids, then starting from the 1530s becoming the centre of the Uzbek Shaybanids' state. The Khan of the Shaybanids state Muhammad (1451–1510) presented the Kazan Khan Muhammad Amin musicians, singers, poets, artists among whom was also the famous singer Ghulam Shadi Ghudi.

Usually the educated people of the Kazan Khanate spoke several languages. The Arab and the Persian languages were especially widely used. It is interesting that the Russian sources list the languages, instead of listing the peoples of the Kazan Khanate '... except for the Tatar language, there are five different languages in that tsardom: Mordovian, Cheremis, Voitetsky, Abo Arsky, and the fifth is Bashkirian...' writes A. Kurbsky [Ancient Kazan, 1996, p. 136]. But the Tatar language was the official and colloquial, literary and partly international language of the state. The Tatar language was also used in diplomatic affairs. There was a body of Tatar translators who permanently stayed in the Russian service in Moscow [Usmanov, 1979, pp. 125–129]. Apparently, it was since that period that the well-known expression has come: 'The Tatars do not need an interpreter.'

Even foreigners note the cultural and educational level of the Kazan Khanate inhabitants. The ambassador of Austria and traveler Sigismund Herberstein, who visited Kazan at the time, wrote in his traveling notes: 'These Tatars are more educated than others as they cultivate the fields and live in the houses and are engaged in various trades' [Herberstein, 1988, pp. 145, 157].

In the Kazan Khanate as well as in other late Golden Horde Tatar states the children of khans and high rank officials were brought up by sage, experienced aged men. They were

titled as 'milk fathers (*söt atalars*), atalyks.' This phenomenon was called atalychestvo. One of the gates of the Kazan Kremlin was even called Atalyk. The term 'atalyk,' as a tutor for the khan children, is more thoroughly developed by I. Izmaylov [Iskhakov, Izmaylov, 2005, p. 60]. However, it is necessary to remember that the term 'ata,' 'atalyk' in those times was widely utilised as a Sufi term, indicating the leaders, murids, and mentors in the Sufi orders, especially in such ones as Yesevi and Naqshbandiyya, which were popular in the Kazan Khanate.

The sayyids also performed such a role. Quite often the terms 'sayyid' and 'ata' are used together. This is how the following lines from 'Zafer name-i Vilayet-i Kazan' by X. Şerifi are perceived: 'And on the other gates of the fortress, the grandson of Kutbi-l-aktab Sayyid Ata from the Prophet's line, the son of the late Sayyid, Kul Muhammad Sayyid, may his virtue continue, took the lead of the dervish-like youths and gathered his Sufi subordinates' [Şerifi, 1995, p. 90].

In the Kazan Khanate the literary works continue to play an educational and pedagogic role.

The issues of morality, spirituality, and destiny associated with Islam are brought up in Muhammedyar's works. These eternal issues were essential to the society of the Kazan Khanate of that time.

Muhammedyar structured his poem 'Nury Sodur' ('The Light of the Hearts') entirely in accordance with the matters of important human qualities, morality, pedagogy [Muhammedyar, 1997, 11, p. 247].

The first chapter is dedicated to justice; the second, to mercy; the third, to generosity; the fourth, to modesty; the fifth, to gazavat; the sixth, to patience; the seventh, to the ability to keep the word; the eighth, to devotion; the ninth, to the ability to hold one's tongue; and the tenth, to forgiveness. Yet in the forefront are justice, righteousness, and truth. For the sake of it anything can be endured. The second is mercy. It is the combination of justice (justice, however, can be cruel) and mercy is the main thing in the policy of the an ideal ruler.

To make it more understandable and effective for the reader, these major higher human qualities in Muhammedyar's poems are personified in the widely-known to the Muslim world historical characters of Hatim al-Tai, Harun al-Rashid. Justice is realised in the character of Khosrow the I Anushirwan (Anushirwan the Just, 531–579). Generosity is in the character of Hatim Tai. Heroism is in the character of Rustem. Justice is personified by Harun al-Rashid. These outstanding persons, worthy to be historical examples to look up to, were widespread in Turkic literature of the Golden Horde period as literary characters. Historical works were written about them, they were passed by word of mouth, became steady images of the folklore. They were subject to didactic literature, became only moral symbols. Therefore, it should not be stated that only through them people knew the entire consecutive history. In such a form they enter the spiritual world of the Kazan Khanate.

In the poem 'Tuhfai Mardan' ('The gift of men') human qualities are personified generally in such fictional characters as Çinbil (justice, devotion, truth achievement), Toygusun (guile, greed, the rebel), Gulruiy (a symbol of outer beauty), Xuşxun, Xuşnave (a symbol of inner beauty), Bezbaz (a symbol of brutality, self-glorification). Or Biblical and Quranic characters: Karun (a symbol of infinite wealth, greed) and others. An important quality is modesty. It is closely related to faith (iman). In the 4th chapter of the poem 'Nury Sodor' ('The Light of Souls,' 1542), devoted to shame (modesty), he directly translates a Hadith of the Prophet Muhammad into the Tatar language in the form of poetic lines [Ibid., 258 b.]. That is, only a person who has faith in God is modest. If Allah has given a person the gift of faith, this person will stay modest in life.

Sh. Marjani also notes the active intellectual life in the Kazan Khanate: '*Galimnär, şul isäptän gabbasi izgelär vä galävi säedlär küp ide*' ('The learned men, among them holy ones—abbasids, great sayyids were numerous') [Märcani, 1989, p. 2]. The Tatar legendary also tells about a multitude of educated,

enlightened men and scientists in the Kazan khanate: '*Golämalari vä mödärrisläre vä häm kötepxanäläre küp ide vä talibläre küp ide*' (Scientists and teachers, libraries and students were numerous) [Rivayatlär häm legendalar, 1987, p. 55b].

Written Culture. The written monuments, which had been created and read in the Kazan Khanate and survived up to the present days, are extremely various in nature. Among them we can come across texts in the Turkic, Arab, Persian languages, literary works, religious, and scientific books, granted charters (yarliqs), epitaphs, translated and original creations. Muhammedyar's works on their own are outstanding monuments of the Kazan Khanate written culture. The phenomena and subjects, connected with the written culture, are described in the works of Muhammedyar. His poems present us a society with a highly developed written culture. Literacy, the ability to read and write were greatly respected by the people.

Well-functioning records management was characteristic of the country. The khan, for example, had a whole chancery with staff, including secretaries, scribes, seal keepers, as well as the officials responsible for the financial activities of the court. Records management and chancery were highly advanced and carried on the traditions of the Jochid Ulus. Bakhshi was the head of the Khan's chancery. In the social hierarchy they all occupied the highest level, and along with high-born begs and sayyids, were a part of the staff of the embassies.

The khans gave their subordinates tax release yarliqs together with lands; some of them, for example, yarliqs of the Khans Ibrahim and Sahib Giray, survived up to our times. These were long rolls designed by professional calligraphers, and their legitimacy was authenticated by multicoloured seals. Around 60 copies and originals of such documents survived—the yarliqs that had been made in the Tatar khanates.

The custom of decorating refined kitchenware with the Arabic writings of pleasing contents continues to exist in the period of the Kazan Khanate.

Among such findings, a brass pitcher, executed at the level of the world works of art, is of interest. Coppersmith Nasyri, who worked at the court of Khan Muhammad-Amin, left beautiful lines of poetry, delicately engraved on the brass pitcher dating back to the end of the 15th and beginning of the 16th century. [Xäyri, 1994]. The court coppersmith Nasyri made an inscription on the elegant pitcher, praising his favourite commander of Khan Muhammad Amin Kubik. He even wrote lines of poetry in the Turkic language and kind wishes addressed to the Khan in the Persian language, which allows us to make conclusions about the high level of literacy and education among the upper class of the craftsmen.

The culture of inscriptions on tombstones from the Jochid Ulus times moved on to the Kazan Khanate. In that period their contents and decoration were even more refined. Some inscriptions had lines of poetry by the Arab poet Abu-l-'Atahiya: 'Death is a door, and all people will enter it.' The stone monuments indeed resemble the doors of magnificent eastern buildings with pointed tops. The Tatars quite often refer to the ancient cemeteries as 'The Main Home.' It is interesting that some monuments or tombstones even have a layout of this 'eternal home,' decorated with an image of a flower. These patterns are harmonious with what the Quran says: the people who make deeds pleasing to God during their lifetime shall live after death in the Paradise garden among flowers.

These inscriptions celebrate Allah and men. They urge to do good and kind deeds in this world. They are full of deep respect, reverence for their ancestors and history. On some tombstones the bitterness about the death of a loved one is expressed by lines of poetry. These tombstones and monuments with inscriptions were carefully protected as shrines. It is remarkable that in order to be more effective, the obituary is written on behalf of the dead, like in the ancient Turkic epitaphs.

In the work by Muhammad Amin 'The Book of Miracles' there are a lot of reflections, stories about death [Möxämmät Ämin, 2004,

p. 209], where death is perceived as a bird (soul) that has left its cage, this frail world. After reading them one involuntarily recalls the well-known lines by G. Tuqay: '*Oçti dönya çitlegennän tarsinip küñelem koşi...*' And on a tombstone dated 1522 the following words are written: 'Left just like a falcon that flew away...' Not only can these expressions be seen on the Bulgar-Tatar tombstones, but also the human soul is depicted in a form of a bird with open wings [Yusupov, 1960, tab. 6].

These sad lines of the aforementioned epitaph remind of the ancient Turkic ritual song of lamentation and Süyümbike's mourning song over the grave of her husband Safa Giray, rendered by the author of 'The History of Kazan.' The words there '... my darling tsar, hear my bitter mourning song, and open your dark tomb, and take me, alive, with you. And may your tomb be one for us, for you and me, our royal bedroom and chamber!...' [The History of Kazan, 1954] are in accord with the words in the aforementioned epitaph 'take my soul away.'

Establishing interstate relations in a form of an oath and wise sayings goes back to the Hunnish times. The old Russian miniatures that survived up to today have scenes depicting Tatar ambassadors giving oath in Moscow [Artsikhovsky, 1944]. Three attributes are clearly visible on them: two or three sabers, cups with some drink, and a turfy piece of earth. Perhaps, such obligatory attributes of an oath are common for all Tatars because same attributes are also seen on the miniatures representing ambassadors from the Crimea. The expression 'cir käse' (turfy earth) still remains in the Tatar beliefs and proverbial signs [Äxmätcanov, 1992]. Swearing by earth they say: '*cir yotsin*' (may the earth swallow me), '*cir upsın*' (may the ground open under me). While going for a long journey, they take a handful of the earth from their homeland in order to return safe and sound. The turfy earth on the ancient Russian miniatures is probably also brought from the homeland. Therefore, this is a very serious oath—an oath sworn by the most sacred: the homeland earth, independence of the homeland, which constitutes the basis of this oath. Two or three sabers, per-

haps, designate the number of the agreeing parties. Veneration of weaponry, swearing by weapons, is a widespread phenomenon since ancient times. This specifically concerns sabers. A saying is preserved in the old Turkic sources: 'May it enter in blue and come out in red (colour).' This was said when swearing an oath by sabers to prevent its violation [Koşgari, 1960, vol.1, p. 342].

The Turko-Tatars also sealed important negotiations by drinking a beverage from expensive ware. Here it should be mentioned about the numerous sculptures of the Kipchaks that carefully hold something sacred in their hands on belt level, some bowl with an oath drink ('*ant äçü*,' literally: 'to drink an oath'). This expression, recorded in the Codex Comanicus Dictionary and in the Golden Horde works, still exists in the Tatar language for a reason. The dastan 'Edigü' also tells about drinking an oath drink of 'white milk with a drop of blood.' The Russian sources use it in the form of a loan translation from Tatar 'drank shert' (see [Iskhakov, 1997a, page 48]).

Scientific knowledge. The development of scientific knowledge in the Kazan Khanate followed the trends characteristic of the entire Muslim East. The educated residents of the Khanate were familiar with the works of such well-known Eastern scholars as Abu Ali ibn Sina, Ibn Khaldun, Omar Khayyam, Al-Ghazali, Al-Biruni, etc.

Mathematics. A large (243 folios) handwritten 'Collected Rules of the Science of Arithmetics' (*Mäcmägıl kavagıyd gıylme xisab*) by Muhiyiddin Muhammad ibn al-Hajji Atmaji, compiled in 1542, has survived [Berkutov, 1968]. The collection of works, comprising three parts, explains whole numbers and fractions, offering practical examples ('Collection of customs duties,' 'Counting eggs in a basket,' 'On hiring,' 'Dividing inherited property or income from it,' etc.). It comprises three sections. It was once used as a textbook in the Kazan medreses of the time. This collection of rules demonstrates the advanced development of mathematical education in the Kazan Khanate. Even later mathematical works, which were widespread

Old Russian miniature [Artsikhovsky, 1944]

among the Tatars, had not changed fundamentally.

The annex to the textbook contained methods for solving twenty arithmetic puzzles, 'most of which are rarely encountered in old books' ('Determining age,' 'Guessing a number or the amount of money in a purse,' 'Counting chess squares quickly,' 'Guessing a ring,' etc.) [Ibid.]. The game of chess was also mentioned here.

Literary works of the Kazan Khanate contain metrological terms used at the time (the distance of the flight of an arrow, the length of a 'tree') [Mäxämmät Ämin, 2004, 146, p. 157].

The study of gravestones of the period allows drawing several conclusions regarding the metrology and mathematical knowledge of the time. When produced, such gravestones were measured by both cubits and spans. The arshin entered the Russian measurement system from the Volga Tatars in the 15–16th centuries [Shansky, et al., 1971, p. 29].

Geography. Geographical knowledge is considered the product of the so-called Eastern or Muslim Renaissance. It was dominated by the so-called 'theory of climates (aklim).' At the same time, the Bulgar-Tatars made

their own contribution to the development of the geographical knowledge of the time. For example, they possessed superior knowledge of the territory in their location—the 'seventh climate' area—and everything to the north, west, and east of it. Data contained in medieval Muslim geographic literature on the various peoples and lands of the North, to a certain extent Rus, the Urals, and Western Siberia, is largely Bulgar-Tatar information.

Traditionally, 'the entire world' was represented by two principal reference points: 'East—West' (*'mäşrik—mäğrib'*) and 'seven climates' (*'cide iklim'*) [Möhämmädyar, 1997, 126, p. 172]. These is the data on the geographic position of the Bulgar vilayet in the seventh climate in accordance with the Muslim geographic tradition.

A unanimous sentiment prevailed among Muslims of the entire world and the centres of Islam at the time which is clearly reflected in a work by Şerifi. Since the patron of Kazan was considered to be the Moon, a celestial body that by that time had already become a symbol of Islam, in the Islamic world Kazan was perceived almost as a holy city. Kazan Muslims were treated with particular reverence in the Islamic world because 'Kazan..., located far away from the Islamic vilayets, borders on the states of the infidels.' 'It cannot expect assistance or support from anyone but the Almighty and the help of his angels' [Şerifi, 1995, p. 87].

Interestingly enough, matters of defining the geographic regions (climates) at the time were attributed to the sphere of mathematics (riaziyyat) [Ibid., pp. 87, 400].

During the Kazan Khanate period interest in Muslim historical and geographical essays did not wane. During the same period the book by Arabian Persian scientist Zakariya al-Qazwini, 'Gacäibel mäxlukat vä garaibel mäücadag' ('Marvels of Creatures and Strange Things Existing'), was being read in the libraries of Kazan. In 1549 the Kazan begs sent ambassadors to Sultan Süleyman I with a request to send Sultan Devlet Giray to the Kazan throne, and at the same time sent a book in Persian as a gift to the Ottoman sultan [Trepavlov, 2001, p. 576]; researchers

believe that this was the work by Zakariya al-Qazwini (see [Iskhakov, 2009v, p. 96]. In a message from the Crimean Khan Saadat Giray addressed to the Grand Prince of Moscow (1526) there was a request to 'let Usein Sayyid visit Safa Giray in Kazan to take some books there.' These messages present Kazan as one of the important centres of book repositories in Eastern Europe. As a matter of fact, the well-stocked library of Kazan is even mentioned in legends [Rivayatlär häm legendalar, 1987, p. 55].

Astronomy. Traditional cosmogonic ideas indicate that the Turkic Tatars knew the vault of the heaven, the celestial bodies present on it, and their locations very well. S. Gerbershtein particularly mentions that the Tatars navigate well using the stars [Gerbershtein, 1988]. The Turkic Tatars had possessed a well-developed system of terms related to stars and constellations since ancient times, which was largely the same in all Turkic languages. [The Tatars, p. 315; Sevortyan, 1974, p. 631].

The names of celestial bodies and their symbols were perceived as forces of magical influence; they were present in divination rituals, and were also reflected in folk superstitions and scryings that also included knowledge obtained using astronomic devices.

Astronomic themes were also found in works of fiction. Knowledge of the sky was not the domain of specialists only but was widespread among the common people (belief in the 'star of happiness' or the 'star of destiny') [Möhämmädyar, 1997, 132, p. 133].

One of the questions that had remained unanswered since the times of Ahmad ibn Fadlān was related to the shortness of the night in the summer and of the daylight time in the winter and, as a result, the difficulty of practicing the five namaz prayers prescribed by the Shariat. In particular, this concerned the reading of the fifth namaz—yastu. Despite the fact that it is for the most part a non-issue, the dispute was still going strong in the Kazan Khanate [Şerifi, 1995, p. 87]. They would try to resolve these questions based on authoritative Muslim publications. Astrologers (*'yoldızçı'*) made wide use of tools like the quadrant and the sextant.

Medicine. As in Bulgar and the Golden Horde, in the Kazan Khanate a medicine was called '*ut*,' and a healer was called an '*utçı*' (literally, 'herbalist') [Möhämmädyar, 1997, p. 71].

Thus, medicinal herbs were the most important means of medical treatment in the Kazan Khanate, just as in Bulgaria and the Jochid Ulus.

The healing of a royal family from a deadly disease and their later conversion to Islam along with their people and the marriage of the healer to the ruler's daughter is an ancient folklore motif in Turkic-Tatar lore [Däülätšin, 1999, pp. 151–152]. A similar plot is present in a poem by Möhämmädyar. It tells the story of a man called Zagid who is imprisoned and is waiting for his execution. But he heals the son of the beg, whom no healer could cure, with a herb brought to him by a snake, and so he avoids execution. Moreover, in this story the snake is represented as an expert on medicines, a symbol of healing. This is the Tatar version of the snake-like Asclepius, a character from Ancient Greek mythology.

Books entitled '*Şifa*' ('Healing') were popular in the Kazan Khanate. Muhammad-Amin al-Bolgari wrote a commentary to one of them. He first copied the ancient book '*Şifa*,' written in 1146, in Bulgar in 1468, and then in Iraq in 1473.

Legends and tales about the great medical man of the Muslim East ibn Sīnā (Avicenna) were popular with the people. Indeed, ibn Sīnā's work '*Al-Qanun fi't-Tibb*' (The Canon of Medicine) was copied and published by the Tatars on numerous occasions. It is also known as 'The Collection of Folk Medicine' [Khayrullin, 1980, p. 77].

History. Genealogical and ethnological legends continued to exist during the subsequent period. Talmudical, biblical, and quranic characters came to the fore.

Later the tale of the sons of Japheth (the son of Noah) was supplemented by new stories: those of Alp and his sons Bulgar and Burtas, who allegedly were the forefathers of the Bulgar and Burtas peoples and built cities of the same name. Different versions of this legend are known from 12th and 15th century

sources. Some of them have survived to the present day through the Jochid Ulus and the Kazan Khanate.

Eastern literature of the Kazan khanate, including works of fiction, was an effective tool for spreading the knowledge of history. Literary works often referred to antiquity, to the East, and especially to historic personages. This information, crossing over from one work to another, covered the activities of the same historic characters and the historic events related to them. The typical characters of these tales were Iskandar (Alexander the Great—356–323 B.C.); Afletun (Plato), the Ancient Greek idealist philosopher, 428–348 B.C., a symbol of wisdom; Dionysius I the Elder, the tyrant of Syracuse, 432–367 B.C., a symbol of evil and cruelty; Anushirwan, a symbol of just rule; and Harun al-Rashid, a Caliph of the Abbasid dynasty (766–809 A.D.). For Möhämmädyar, their main feature is just rule [Möhämmädyar, 1997].

Through the history books that were widespread in the Muslim world, the Turko-Tatars were also familiar with the history of other peoples and countries. Just as in the Muslim East, the founding and building of large cities and structures and individual events were connected with the name of Alexander of Macedon the Builder, or Iskandar—Dhul-Qarnayn. This emphasised their antiquity. This tradition was continued in the Jochid Ulus and in the post-Golden Horde state. M. Ahmetzyanov writes that the rulers of the Ulus had a noticeable tendency to connect their state with antique civilisation. The Tatar Genealogies (*shejeres*) contain the names of the sage men (*khakims*) Socrates and Iskandar—Dhul-Qarnayn [Äxmätcanov, 1995, pp. 15, 24]. Plots about Dhul-Qarnayn continue in the literary fiction of the Kazan Khanate.

The poetic work '*Gıykab*' ('Punishment') by Muhammad-Amin has survived to the present day; it condemns the ruler of Samarkand, Temür, the conqueror of Golden Horde cities. The poet and khan took the catastrophe his country went through in the past hard. He demands that the Almighty visit a grim judgment ('*gıykab*' on the culprit of this tragedy).

In his works Möhämmädyar expresses high opinion of scientists. He remarks upon their intrinsic modesty, eloquence, and high moral qualities [Möhämmädyar, 1997, p. 114].

As can be seen from 'Zafer name-i Vilayet-i Kazan,' a high degree of wisdom and learning indicated the cleverness and wisdom of such representatives of antiquity as Aristotle and Plato [Şerifi, 1995, p. 91].

Furthermore, in the Kazan Khanate scientists, poets, writers, singers, musicians, skilled artisans, etc., could live and create only under the patronage of the Khan or another member of the elite. In the history of the Kazan State one Khan who was a patron of the sciences and arts was Muhammad-Amin. He himself was a poet. He invited the best men of science and art to his palace.

Thus, in the Kazan Khanate there was no opposition between science and knowledge on the one hand and religion on the other hand. Theology and science were an organic whole.

Traditional folk culture. Despite the unfaltering position of Islam in the Kazan Khanate, traditional folk culture—beliefs, notions, and oral folk tradition—continued to exist. This phenomenon, which was characteristic of all groups of Tatars, is treated as a national peculiarity by researchers [Usmanov, 1985, pp. 177–185; Iskhakov, 2008, p. 94]. The preservation of traditional pagan beliefs can also be felt in the account of the anonymous Russian author of the 'Kazan History,' who lived in captivity in Kazan for 20 years and knew numerous local historic sources. He writes that since the old Bulgarian times there has been a pagan prayer site at the Chertovo site of ancient town near Yelabuga. It performed the same function in the Kazan Khanate. Even the Khan would send the sayyid himself there to find out the future destiny of the country. According to the Christian author, an evil spirit lives there. The local population makes sacrifices to it, worships it, asks for its assistance during difficult times, and prays for peace, well-being, and happiness. Prior to the Russian conquest, the spirit declared that the country soon would be conquered by enemies, that it could not protect the people, and left the country in the form of

a winged snake [Kazan History, 1954, pp. 91, 92]. It is clear that this extract conforms to the ideology of the Russian church.

Legends describing battles against dragons and terrifying snakes living in places where the construction of capital cities or large towns has been started are also attributed to the Kazan Khanate period.

These legends are based on the idea that cities that play an important part in the history of the people cannot have been built by usual means. These cities have been sacred from the very beginning; their future site was cleansed of evil forces by fire. In other words, the fate of a city is predetermined at the time of its founding.

The same thing happened during the search for a building site for Kazan [Rivayatlär häm legendalar, 1987, pp. 48–55]. The story represents the fight with chaos (the dragon) and the conquest and reclamation of space; this is why sacrifices were made.

The ancient meaning of these rituals is the fight with chaos (the dragon or snake), seizing the sacred, habitable space from it, the development of that space, and making a sacrifice to ensure the well-being of the future city.

Ever since ancient Turkic times, for the Turkic, Khazar, and Azov Bulgar people, fire was a tool of purification and not an object of worship as it was for Iranian-speaking tribes (see [Däülätšin, 1999, pp. 81–82]). The belief in the purifying power of fire as a tool of purification from evil spirits continued during the period of the Kazan Khanate. The site of the future city of Kazan was cleansed of evil powers and winged snakes by fire. The winged snakes resided in caves; this last detail is a hint at their antiquity.

No state can exist without holidays. The author of the Kazan History describes one of them. 'But the Tsar of Kazan and his noblemen brought a stallion and a fat young (bull) and sacrificed them. The commoners and poor people brought sheep and chickens to sacrifice. And they rejoiced and celebrated, formed choirs, sang songs, clapped their hands, jumped, danced, and played their harps, and struck their fiddles (kubız?)...' [Kazan History, 1954, p. 149].

This celebration with a mass sacrifice of animals could also be connected with the Muslim Kurban Bayrami festival. However, based on the description it is mostly a general merrymaking with dancing and singing. Likely, it is similar to Sabantuy.

Many works of Bulgar folklore were inherited by the population of the Kazan Khanate and have survived to the present day. And at that time legends and ideas about the Northern people and Iskandar Dhul-Qarnayn were widespread among the people. Legendary tales about Edigu began circulating when he was still alive. The collections of historical works 'Daftar-i Chingiz-name,' 'Compendium of Chronicles' by Qadir Ali Beg, etc., contain numerous legends and tales that were already in existence during the Kazan Khanate period.

In his poems Möhämmädyar makes skillful use of folkloric and mythological themes. These are stories, bywords, and aphorisms ('Ransom your neck from evil,' 'When treating the master, throw a bone to his dog,' 'Don't feed a pup—its nature will make itself known anyway,' 'He dug a well and fell into it himself,' 'A hare does not live in a wolf's den,' 'If you kill a serpent, don't touch its offspring,' 'For one good deed will come ten rewards,' etc.), words 'remaining from antiquity' (*borıngıdan kalgan*), and fragments of old tales [Möhämmädyar, 1997, pp. 118, 120, 125b].

'If it is an old fable (*mäsäl*), listen to it.' Such lines can be seen fairly frequently. In them Möhämmädyar is indeed speaking of fables. However, in his poems he offers only their result, their cautionary advice, or their essence. This conclusion itself has already become a byword, a proverb. Proverbs and bywords can be encountered in his works especially frequently [Ibid., pp. 118, 120, 121, 122, 125]. The author frequently stresses the antiquity of the tales [Ibid., pp. 122, 145]. This is his way of highlighting their importance. It is similar to our fairy tales starting with the words: 'Once upon a time...'

When praising Khan Sahib I Giray, the poet declares that 'his sword could destroy even a dragon.' The Book of Miracles by Muhammad Amin also includes the theme of fighting a dragon. We see a *batır* from Tatar

tales, beheading many-headed dragons one-by-one.

Thus, this motif was present during the Kazan Khanate period as well.

Almost all legends about the founding of Kazan mention the destruction of the city of Bulgar, of the resettlement of its population in a new place, and the construction of New Bulgar (*Bolğar äl-Cädid*) there. The succession between Bulgar and Kazan is highlighted in other legends and fables. One of them is the story of the 'Incombustible Maid,' the Bulgar princess Süyümbike.

The book also mentions rituals dating back at least to Bulgar times. 'Häryañgadan östä kıyldılar nısyar'—that is, each new one was showered with coins [Möxämmäd Ämin, 2004, p. 45].

This ritual of the ancestors of the Tatar people has been known since the Bulgar times. Let us recall the meeting of the Baghdad envoys by the Bulgarians. The ambassadors were met at a distance of two farsakhs (10–12 km) and showered with dirhams. This represents not only a well-established ritual for meeting distinguished guests but also an older world view whose meaning had possibly been forgotten. Going out to meet guests at a distance from the city was considered a sign of hospitality, and initially it was an effort to safeguard people coming from a faraway strange country even before they arrived in the city. The same idea was used in the Tatar ceremonies of meeting the bride during her first visit to the groom's dwelling.

The Book of Miracles also contains such plots as fighting a dragon. They are to a large extent in accord with the fighting of dragons as the most terrifying forces in Tatar folk tales [Ibid., p. 67].

Many dastans, legends and fables, beyits, historical songs, tales, bywords, and proverbs that have survived to this day appeared during this period. They comprise numerous legends and fables about Bulgar and Kazan, tales about Amat, Cikmargän, Chura batır, and Edigü that tell of such eternal and great problems as love for the motherland, its protection, and reverence towards history.

Clay animal-shaped toys
[Sitdikov, 2006, fig. 119–5, 79–7])

Archaeological materials of the Kazan Kremlin from the Khanate period frequently include clay children's toys in the shape of animals and riders. They reflect the dreams of children and their parents.

The last thing I would like to mention in this article is this. After the dissolution of the

Clay horsemen-shaped toys
[Sitdikov, 2006, fig. 79–10]

Golden Horde, not only the Kazan Khanate but also other Tatar states rose from its ruins. Unfortunately, the latter have not been studied very well. But even a cursory glance shows that the state structures, the political and economic lives, etc., of the Tatar Khanates were similar. This also applies to spiritual life. This is why the comparative genetic method of studying the culture of the Kazan Khanate is so important.

§ 2. Language

Enze Kadirova

The era of the Golden Horde qualitatively changed the vector of ethnic and social processes in the region, which gained powerful inertia of development and were continued in the subsequent period. In the first half of the 15th century the Golden Horde ceased to exist as a whole and broke up into separate Khanates that established their own dynasties. As the ethnic and political successor of the Golden Horde, the Kazan Khanate became the next foundation for the development of social and ethnic processes.

During the period of the Kazan Khanate, many peoples of the region were experiencing a process of ethnic formation, in particular, in that period the ethnic (or sub-ethnic) group of the Kazan Tatars was formed [Iskhakov 2004b, p. 130; Khamidullin 2002, p. 134]. Such 'tectonic' changes, of course, led to a new stage in the development of the Tatar colloquial and literary language.

According to the generally accepted classification of medieval Turkic literary languages,

starting in approximately the 15–16th centuries the period of existence of regional Turkic literary languages begins; such languages include Old Uzbek, Old Azerbaijani, Old Tatar, and others [Borovkov, 1963, p. 21; Tatar Grammar, 1993, p. 34; Khisamova, 1990, p. 60; Khakov, 2003, p. 71]. The medieval Tatars for a long time considered themselves to be a single whole and continued to use the literary traditions established in the 13–14th centuries. However, political disunity, vast geographic distances, and a number of other factors caused some linguistic changes between the Khanates. For example, the Crimean Tatar language developed for centuries (1475–1774) under the strong influence of Anatolian Turkish. It is known that the ruler and poet Ğazı II Giray Khan wrote his poems in two variants—in the Kipchak language and in language that had undergone Oghuz-Ottoman influence [Useinov, 1999, p. 38].

Resolving a number of issues related to the problem of studying the literary language

of the period of the Kazan Khanate is an important area in the research of M. Zakiyev, V. Khakov, F. Faseev, F. Khisamova, et al. When characterising this period of the Old Tatar language, scholars indicate that the variant of the regional literary language dates from the essentially Kipchak literary language of the Golden Horde period and gradually absorbed elements of the common colloquial Tatar language, in which the traditional part is predominantly represented by the Uighur-Qarakhanid tradition and, to a lesser degree, by the Oghuz tradition [Zakiyev, 1975, p. 10; Khakov, 1989, p. 14; Khisamova 1990, p. 21].

Not many written monuments of the Kazan Khanate period have been preserved to this day: works of fiction, yarliqs, epigraphs, scientific works, and dictionaries of the 15–16th centuries. The linguistic features of these monuments have been investigated in the monographs and certain articles of V. Khakov, F. Khisamova, F. Faseev, A. Nurieva, N. Burganova, E. Khadirova, et al.

The idea of a systematic and comprehensive analysis of the written monuments of the Golden Horde period developed by F. Nurieva [Nurieva, 2004] is promising with regard to the analysis of the linguistic situation of the Kazan Khanate period. Distinguishing basic and peripheral linguistic characteristics makes it possible to determine the correlation between the standard language and its variations at this stage. In our opinion, variability, as a reflection of the processes taking place in the language under the influence of various factors, is also very important for clarifying the functional and stylistic situation in the Old Tatar literary language of the Kazan Khanate period. The analysis of linguistic sources of the period under examination shows that variability of language elements is inherent to the majority of them.

The graphic correspondence between *alif* and *alif yay*. According to the encyclopedia 'The Russian language,' language variations are a historical category, and 'some grammatical variants are age-old, whereas for a number of phonemic variants a brief existence, preserved in writing variants, is typical' [The

Russian language, 1997, p. 62]. For the language of written monuments of the Golden Horde period, 'variable spelling, in which the historical [*ä] and the high unrounded front vowel [i] are used in parallel, is typical' [Nurieva 2004, p. 316]. In the narrative poems of Muhammedyar, the works of Kul-Sharif and Mohammed Amin, yarliqs, and epigraphs of that period, a single-variant spelling of words in initial position with (alif yay) is present: *ايكي* [Zafer name, p. 63a; Yusupov, 1951, p. 80] *ايلجي* [Zafer name, p. 60a] *ايشك* [Nur-i sodur, p. 62b] *ايكاس* [Nur-i sodur, p. 62b]. In the middle of a word, variable spelling—that is, with 'yay' *ى* or without it—is typical, although the second variant is more common: *سنگا تىكانلىرى نجه*. For example, the 2nd person singular pronoun '*sän*' ('you') is the most frequent pronoun in the narrative poems of Muhammedyar. It was recorded 249 times. In the narrative poem 'Nur-i sodur,' the form '*sin*' ('you') is encountered only once: *Gäffar wä ğofran irursän sän ğäfür Mağfirät camyny mäna sin ecur* [Nur-i sodur, p. 626] (You who are all-forgiving, you forgive all; And let me drink from the cup of absolution). It is an interesting fact that in most cases in the narrative poems of Muhammedyar, in the 'Zafärnamäi vilayate Qazan,' and in the yarliq of Sahib Giray Khan, the verb *kil-*, *kil-tur-* [Nur-i sodur, p. 49a; Nur-i sodur, p. 48b; Zafer name, p. 61b] is written with an '*i*': *كىل*.

In the language of written monuments, labial harmony no longer forms a single strict system. The narrative poems of Muhammedyar maintain labial harmony (*kuñul*, *ukuš*, *oluğ*, *jörüş* 'motion'), and also doublet forms of spelling: *kunilik* (2 times), *kunuluk* (1 time), *moñlu* (3 times), *moñly* (4 times), *urun* (1 time), *urn* (2 times). For instance, the word '*jöz*' ('face'): +e (2); +emne (1); +emgä (1); +en (2); +ene (2); +eneñ (1); +endä (1); +enä (1); +üm (1); +ümne (2); +ün (1); +üngä (1); +ündä (2); +üñ (4); +üñdin (1) [Kadirova, 2001, p. 161]. As we see, the poet uses a labial variant in the 1st and 2nd person possessive affixes in the singular and plural forms. That phenomenon is also typical of other written monuments of that period. In the formation of the genitive, the labial vari-

ant in the written monuments of that period is rare—*kukneŋ*, *kuŋulneŋ* (1 time), *kuŋulun* (1 time). A labial variant of the predicate affix *'-dur'* is typical of the narrative poems of Muhamedyar [Tuhfa-i mardan], while in the works of Kul-Sharif and in the *yarliq* of Sahib Giray, it has the form *'-dyr'* [Kyissai, 1899, p. 6; Zafer name, p. 3; Mustakimov, 2003].

The correspondence between 'z' and 'j' is typical of the works of Muhammedyar: *iza* [Tuhfa-i mardan, p. 53b] ~ *ija* [Tuhfa-i mardan, p. 49a]; *ajaq* ('leg') [Nur-i sodur, p. 55b] ~ *azaq* ('leg') [Nur-i sodur, p. 58b]; *qojuğ* ('well') [Tuhfa-i mardan, p. 55b] ~ *qozuğ* ('well') [Tuhfa-i mardan, p. 55b]; *qajğur* ('to grieve') [Tuhfa-i mardan, p. 55b] ~ *qazğur* ('to grieve') [Tuhfa-i mardan, p. 57a]. It should be emphasised that the standard form is the words with *'-j-*'. In other written monuments *z-* variants have been not recorded (*ija* [Faseev, 1982, p. 148], *ajrylmaq* ('to separate') [Zafer name, p. 61b]; we find the word *suzla-* only in the works of Kul-Sharif [Kyissai 1899, p. 3].

The written monuments are characterised by 'j' in initial position: *jib* ('thread'), *jitmiş* ('seventy'), *jig-* ('collect'), *jir* ('ground'), *jin* ('sleeve'), *jit-* ('to reach'), etc. In the written monument 'Zafärnamäi vilayate Qazan' variable spelling of the borrowed word *jadra/cadra* 'core' is observed: *Tublarynyŋ harber utluğ cadrase* [Zafer name, p. 62a]. This is the only example of the use of *c* at the beginning of a word.

With regard to 'd/t' in initial position, the narrative poems of Muhammedyar, the works of Kul-Sharif and Mohammed Amin, and *yarliqs*—that is, all the main sources of the Kazan Khanate period—do not form a significant range of variation and belong to the *t*-group of Turkic languages. However, the works of Umami Kamal, the Arab-Turkish-Tatar dictionary, the work 'Madjmag al-kavagıyd', and also the Quranic tefsir (16th century) constantly maintain the feature *d-*.

The written monuments of the 15–16th centuries are characterised by vocalisation of voiceless consonants in the intervocalic position (*ajağyny* [Zafer name, p. 61a],

oluğlyğyny [Zafer name, p. 62b]); at the same time, there are plenty of examples with *-q,-k* (*sakez* ('eight'), *tuquz* ('nine'), *cyqar* 'to exit,' etc.). The narrative poem 'Tuhfa-i mardan' has the variation *q/ğ* in the word: *saqyn-* [Tuhfa-i mardan, p. 50a]/*sağyn-* [Tuhfa-i mardan, p. 49b] 'to miss'; in the poems of Kul-Sharif it is used in the forms *sağyn-* [Bakyrġan, p. 29].

All the written monuments of the Kazan Khanate period preserved the Old Turkic combination *-lt-* and *-rt-*: *kaltur-* 'kiter-' 'carry,' *ultur-* 'uter-' 'kill,' *tultur-* 'tutyr-' 'fill,' *qortul-* 'qotyl-' 'to escape,' *ultur-* 'utyr-' 'sit down.' In the works of Muhammedyar the verb *qortul-* 'to escape' is recorded four times. Only in one case is it recorded in the form *qartul-*, while in others it has the form *qotul-*. Thus, one narrative poem mixes different variants that coincide semantically.

The preservation of *q/k* and *ğ/g* at the end of adjectives. The works of Muhammedyar and Kul-Sharif give preference to the forms listed above with *q/k* and *ğ/g* (*oluğ* 'elder, great,' *kecik* 'younger,' *tuluğ* 'full,' *kurukluk* 'beautiful,' *qotluğ* 'happy,' *qoruğ* 'strict,' *burcluğ* 'obliged, indebted,' *qatyğ* 'solid,' *jaslig* 'lacrimal'), but the works of Muhammedyar also have the Kipchak variant—*ly-*: *valcyqly* 'dirty,' *tatly* 'delicious,' and its labial variant *-lu-*: *torlu* [Tuhfa-i mardan, p. 59a] 'different.' We do not observe a strict system in their usage. In the works of Umami Kamal adjectives are formed only through the suffix *-lu, -lı*: *olu*, etc. The use of *ğ/g* and *q/k* instead of the bilabial sonant *w* occurs in the works of Muhammedyar and the works of Kul-Sharif not only at the end of adjectives but also in the middle and at the end of nouns: *jağmady* 'it was not raining,' *tağ* 'mountain,' *ağyz* 'mouth,' *qoduq/qojuğ* 'well,' *syğyr* 'cow,' *syğdur-* 'to contain.' When writing the numeral 'fifty,' Muhammedyar uses both forms: *Iset any moğtabar xanlar xany Sakez joz ille bis bait irur sany* [Nur-i sodur, p. 68a] 'Listen, honourable Khan among Khans, the number of beits will be eight hundred and fifty-five,' and also *Birur irsaŋ oc joz illig meŋ jarmaqğa* [Tuhfa-i mardan, p. 63b] 'If you give me money at the rate of three hundred and fifty thousand.'

The morphological structure of the written monuments is also characterised by mixing of grammatical forms.

The core system for the declension of nouns, both nominative and possessive, in the narrative poems of Muhammedyar is Kipchak. The noun in the dative is formed through the affixes -ğa/-gä, -qa/-kä. Sometimes in the works of Muhammadyar and the written monument 'Zafärnamäi vilayate Qazan,' after a voiceless consonant the affix -ğais used: utğa [Tuhfa-i Mardan, p. 54 a] 'to the fire'; jamanluqğa [Tuhfa-i Mardan, p. 55 a] 'for bad'; jaxşuluqğa [Tuhfa-i mardan, p. 55 b] 'for good'; utğa [Zafer Nam, p. 54 a] 'to the fire.'

The usage of affixes of both types is observed in the ablative case. The ablative case in the language of Muhammadyar's narrative poems is formed with the Uighur-type variant -din: ziräklekdin 'away from sensibility' [Tuhfa-i mardan, p. 47 a], išekdin 'away from the door' [Tuhfa-i mardan, p. 47 b], [Tuhfa-i mardan, p. 47 b]. Occasionally the variant -dan appears, which graphically is transmitted in the form: tağ + dan [Nur-i sodur, 63 b] 'from the mountain,' ber-beren + dän [Tuhfa-i mardan, p. 56 a] 'from each other'; köndän kön [Tuhfa-and Mardan, p. 62a] 'day by day,' boruᅡudan [Tuhfa-and Mardan, p. 43a] 'from ancient times.' In the works of Kul-Sharif and in the Muhammad-Amin poem 'Gıyab' the form -din is the only marker of the ablative case. In the poetry of Umami Kamal the ablative case has the varying forms -dan and -din; however, the predominance of -dan over -din is obvious. In the language of a yarliq of Ibraghim Khan the form -din was recorded, and in a yarliq of Sahib Giray Khan -dan was recorded once, and -din was recorded twice.

The 3rd person dative in the language of the written monuments of the Kazan Khanate period is represented by different variants. In order to determine the nature of this phenomenon, all declensional variants were counted. In the narrative poems 'Tuhfa-i mardan' and 'Nur-i sodur' the formative -yna/-enä dominates quantitatively: Kilde qojuᅡ başyna su barmu tib Jörür irde üzen ᅡajät susatyb [Tuh-

fa-i mardan p. 55 b] 'I went to the well to see if there is water because I was dying of thirst'; Zahid jitte biçin baᅡyna tämam Bicin ᅡizzät ilä qyldy säläm [Tuhfa-i mardan, p. 56a] 'The hermit went to the garden of the monkey, and the monkey respectfully greeted him.' One can observe also the form -ynᅡa/-engä: Alyb any üze ewengä ilteb Qyzy juq irde üzengä qyz iteb [Tuhfa-i mardan p. 52b] 'He took her to his home, he had no daughter, and he adopted her.' Along with the above-listed variants, the form -yᅡa/-egä is recorded: Ewegä kilde äjde äj xäbibä Utünüem bar sükmä mäne äj zäᅡifä [Tuhfa-i mardan, p. 62b] 'He came home and said: 'Oh, darling, I have a request, do not scold me, oh, my woman.' According to the above-mentioned examples, one may conclude that the variants -ynᅡa/-engä and -yᅡa/-egä may be used in the same word, namely in the word ew 'home': ew-engä, ew-egä. This form also was recorded once in a Kul-Sharif poem (qujnyᅡa), and it predominates in the work 'Zafärnamäi vilayate Qazan': atyᅡa atlan [Zafer name, p. 62b], ählegä [Zafer name, p. 60b].

The 3rd person accusative endings -n and -ny vary quite widely as well. Muhammedyar used the endings -yn/-en and -yny/-ene in the 3rd person singular possessive declension in approximately the same amount. In poems the accusative word forms -n and -ny may be used in parallel within a beit: Con kitabym atyny aᅡladynyᅡ Šah doᅡasy süzlären tyᅡladynyᅡ [Nur-i sodur, p. 42a] 'And you have understood the title of my book, you have heard the words of the prayer of the Shah.' It is also possible to use the same lexemes with the formatives -ny and -n: Totub anyᅡ süzene šah cihan ᅡadl qylu bašlady Nawuširwan [Nur-i sodur, p. 44b] 'Listening to him, oh tsar of the Universe, Naushirvan began acting justly.' Such a variation is observed in the Kul-Sharif poems -en (once) and -ene (twice), in 'Kysisai Hubbi-Hoja'—26/10, but -yn/-en are not so frequent in 'Zafärnamäi vilayate Qazan' (jiren [Zafer name, p. 61b], jortyn [Zafer name, p. 61b]); active usage of -yny/-ene are observed: jasaqyny [Zafer name, p. 61b], širbätene [Zafer name, p. 61b]. In the works of M.-Amin: Zolymyny izhar qyldy här jirä.

In the declension of nouns with 1st person possessive affixes in the accusative, the parallel use of different variants is observed. While the affixes -ymny/-emne and -ynny/-enne clearly predominate, in the language of narrative poems the form -y/-e can also be found (5 times): Anda äjdimsä süzümi almaduñ Hic fikr iteb qolaquña salmaduñ [Tuhfa-i mardan, p. 57a] 'Then I said, you did not take my words seriously, did not reflect, did not listen.' Looking at how this variant functions in this case, it can be seen that the accusative -y/-i is used to change the proportion of open and closed syllables: sü-zü-me but: sü-züm-ne.

Based on available research, let us consider the functioning of verb forms in the written monuments of the 15–16th centuries.

The past tense is different from other tenses in that it has a variety of forms. The past categorical tense with the ending -dy/-de, -ty/-te is the most frequent in the language of sources from this period. This is a common Turkic form and 'expresses an entire, obvious, single action in the past' [Tatar Grammar 1993, p. 106]. A lack of consistency is observed in the spelling of the form—that is, after a stem with a voiceless consonant in some cases a voiced pair appears. For example, in the later manuscript copy of the narrative poem 'Nur-i sodur,' in a dozen or so cases after a voiceless sound the affix begins with a voiceless sound; while in copy V we see qajt-dy, in copy D we see qajt-ty; tutdy—tutty (in two places); jatdy—jatty; isetde—isette, isetdelar—isettelar; es itdelar—es ittellar. In the spelling of the 1st and 2nd person singular and plural endings in the written monuments, a different spelling is noted: jör- 'to go, walk' jör+dem (2); jökür- 'to run' jökür+düñ (1); kür- 'to see, watch' kür+dem (5); +dük (1); +düñ (2); +düñez (1); tot- 'to keep, hold, clamp' tot + + duñ (1); + dy (4); +ty (6); + tuñyz (1) [Kadirova, 2001]; tidük, sojurğaduq [Fa-seev, 1982, p. 148].

The present simple with the ending -mys is not frequently used in the studied written monuments; it is represented mainly in the 3rd person form. There is only one example

in the works of Muhammadyar in which it is used in the 2nd person singular form.

In the Muhammadyar texts the past simple tense with the ending -yb/-eb is represented only in the 2nd and the 3rd person singular, but in the Kul-Sharif texts it is represented also in the 1st person plural.

The written monuments of the Kazan Khanate period testify to the usage of the form -ğan/-gän: Nadanlyqdin üz başyna jikänlär [Tuhfa-i mardan, p. 60b] 'Because of ignorance you destroyed yourself.'

In the linguistic sources of the 15–16th centuries the forms of the present and future tenses of the verb are not used as actively as the forms of the past tense. In the language of the written monuments the form of the present-future tense -yr/-er, -ur/-ür is represented: belürmän, belürsän, belür, belürsez. In the literary language of the turn of the 15–16th centuries the consolidation of new morphological forms was taking place. Along with the present-future tense affix -yr/-er, -ur/-ür, one may also encounter the affix -a/-ä. However, it has limited usage in the written monuments: Altun kömüş cyqa qandin / 'Where the gold and silver come from'; *Täqsiren ütenämen sän bergä räxim äjläb bağyşlağyl män zäğifä* [Tuhfa-i mardan, p. 57a] 'Please, show mercy, and devote his sins to me.' The usage of the form -adyr with the personal endings of all three persons has been recorded: qyladyrmyn [Tuhfa-i mardan, p. 54b], quladyrsän [Tuhfa-i mardan, p. 54a]; Forjad qylub jyğlajdyr [Kyissai, 1899, p. 6] 'he/she is crying very loudly.'

In the studied texts, the forms of the future tense are quite numerous, but the affix -ğaj/-gäj is used frequently: *Bu utny izeb ecergäjsen* [Tuhfa-i mardan, p. 57b] 'You will give the infusion of this herb to drink.'

The impersonal verb forms in the texts under study are the richest in composition.

Action nouns in the written monuments of the Kazan Khanate period are represented in the Oghuz form with the affix -maq/-māk, while the form -u,-ü has limited usage.

In the written monuments of the Kazan Khanate period the infinitive is represented by two forms. When rendering the infinitive,

the works of Muhammedyar demonstrate stability of the form with -mağa/-mägä, while the form -yrğa/-ergä is recorded in just three examples. The works of Kul-Sharif have the second variant just once: kürürgä [Kyissai, 1899, p. 8]. These forms are not reflected in the language of the yarliq of Ibrahim Khan and Sahib Giray Khan either.

In the sources of the 15–16th centuries three forms of participle are used, usually correlated with the past tense: -ğan, -myš, -dyq. The actual correspondence of participle forms within the system in the sources is not uniform. They differ in various frequency of usage. While in the Muhammedyar narrative poems, in the yarliqs of Ibrahim Khan and Sahib Giray Khan, in the work 'Zafar-nama-i vilayet-i Kazan,' and in the the works of Kul-Sharif, the form of the predicative function with -myš predominated, in the participial meaning, the form with -ğan/-gän predominates. The first type is not found in the yarliqs; only the participle form with -ğan is used. In all the written monuments, in cases of substantive use, the form with -ğan acquires indicators of possessiveness, case, and plurality. The participle with -r/-yr is widespread and multi-functional; it is used in attributive, predicative, and substantive functions and has the ability to take affixes of possession and case and to combine with postpositions. Let us note a peculiar phrase where a participle of this form is combined with a postposition. In the written monument 'Zafar-nama-i vilayet-i Qazan' the affix of the future participle with -mas and the postposition *borun* 'before (that)' express the tense for completion of a process that is defined by the dominant verb: *Äj Šäräfi, mustäğidd bulmaq kārāk ülmäs borun* [Zafer name, p. 61b] 'Hey, Sherifi, we should be preparing until the moment of death.' According to L. Budagov, this form is peculiar to the Kazan and Kyrgyz languages [Budagov, 1869, p. 278]. In other sources of the Kazan Khanate period, which we have discussed, it does not occur. In the earliest written monuments in the works of the Golden Horde period, *-mas-din borun* is used in this meaning [Borovkov 1963, p. 111; Fazylov 1966, p. 279].

In the monuments of the Kazan Khanate period the adverbial participle is represented by the forms -yb/-eb, -ubän/-übän, -a/-ä, -u/-ju, -ğac/-gäc, -ğaly/-gäle, -ğanca/-gäncä, -maj/-maiyn. The adverbial participle with -yb/-eb is quite frequent, but other forms are used rarely, paying tribute to traditions.

In the written monuments of the Kazan Khanate period compound verbs occur frequently, rendered by a special modal construction 'noun (or adjective) + auxiliary verb bul-: xasil bul- 'to appear' [Tuhfa-i mardan, p. 47a], azad bul- 'to get rid of' [Tuhfa-i mardan, p. 60a], xajran bul- 'to be amazed' [Tuhfa-i mardan, p. 47b], fida bul- 'to sacrifice oneself' [Tuhfa-i mardan, p. 52b], alcaq bul- 'to be friendly' [Nur-i sodur, p. 45]. Along with bul-, the form ul- also is used in these conditions. It is important to emphasise that the Oghuz variant of the axillary ul- is not very typical of the written monuments of this period. Looking at the functioning of this variant, it can be seen that in Muhammedyar's narrative poems, ul- is found only six times, in combination with loan stems, and only in only one example with the Turkic word *iksük*.

The postposition *belän* 'with' is observed in various phonetic variants in all the written monuments of the period. Calculation of their textual distribution enables us to speak of the predominant usage of the variant *berlä* in the Muhammedyar narrative poems; at the same time, *belä* and *ilä* also occur: the form *belä* occurs more than 30 times, and *ilä*, 16 times. In this regard, the works of Kul-Sharif differ from one another—that is, in the poems the form *berlän* was recorded, in 'Zafar-name,' *berlä* (13 times), in the work 'Kyissai Hubbi-Hoja,' *berän* (8 times), and just once the variant *menän* was recorded. In general, in Ummi Kamal's poems the variant *ilä* is dominant, although the form *berläis* also not alien to his poetry; in the works of Mohammed Amin only the variant *ilä* is recorded. In the Kazan yarliq of Sahib Giray Khan the form *belä* is recorded. According to the opinion of a several scholars, this is 'a result of Central Asian Turkic influence' [Mustakimov, 2013, p. 33].

Most of these changes in the morphological structure indicate the penetration of colloquial forms into the literary language of the 15–16th centuries.

The volume of lexical material of the various written monuments of the Kazan Khanate period is not identical. In them is recorded rich Turkic-Tatar lexical material with synonym sets and idiomatic constructions reflecting the most various aspects of the socio-economic structure and lifestyle of that time, stock raising and agriculture, flora and fauna, human and animal anatomy, crafts and the activities of people.

A comparison of the Turkic-Tatar vocabulary in written monuments of the 15–16th centuries with data on the modern Tatar language showed complete similarity between the majority of their lexical material and the modern Tatar language. The material of the sources demonstrates that they consist of Turkic words that to some extent are typical of Old and Middle Turkic written monuments and were also characteristic of the written monuments of Central Asia. These words were widely used in Old Tatar works and dictionaries of the 17–19th centuries. In the monuments of the Kazan Khanate period Arabic and Persian words and phrases also occupy a significant place. Arabic-Persian stems often form the nominal part of compound verbs: qabul qyl- [Nur-i sodur, p. 67a] 'to accept,' bajan qyl- [Nur-i sodur, p. 46b] 'to narrate,' mobarak bul- [Nur-i sodur, p. 67b] 'to bless,' andisa qyl- [Tuhfa-i mardan, p. 46b] 'to worry,' sarex it- [Nur-i sodur, p. 60a] 'to explain,' etc. New words are often formed on the basis of Arabic-Persian borrowings using Turkic affixes. The affix -lyq is quite productive in this regard: ğajarlyq [Tuhfa-i mardan, p. 46a] (ğajar 'sly' + -lyq) 'trick,' nadanlyq [Tuhfa-i mardan, p. 60b] (Persian nadan 'ignorant' + -lyq) 'illiteracy, unenlightenment,' ğafillyq [Tuhfa-i mardan, p. 65a] (Arabic ğafil 'inattentive, sloppy' + -lyq) 'ignorance.'

From the modern viewpoint, the Old Tatar literary language of the 15–16th centuries had the following functional styles: artistic, educational, and formal. Among the most

outstanding examples of the artistic style is the poetry of Muhammedyar. The main content of the narrative poems is to call leaders to the right path and to noble deeds for sake of the nation and all the people through words and instructions. The poet knows well the power of words on the way of edification. Therefore, Muhammedyar always acts having thought through and chosen each word, each expression and puts a fundamental meaning into each of them. Addresses with sän 'thou' and sez 'you' are very interesting. Muhammedyar addresses Allah and his prophet Muhammad as sän 'thou.' This is observed in Mohammed Amin's works as well. In communication among themselves, a porter, a fisherman and a woodcutter, an old man and a young man, a husband and wife, and a boy and girl address each other in Muhammedyar's narrative poems as sän 'thou.' Of special interest is the case of the use of sän 'thou' by an ordinary Arab to address the Shah. It is interesting because in Muhammedyar's narrative poems, when addressing another person, sez 'you' is used. Such an address is peculiar to persons of a higher social position.

The researchers of poetry of the 15–16th centuries S. Abilov and V. Khakov noted the magnificent skills of the poets Muhammedyar and Kul-Sharif in the use of phraseological material. The imagery of words in their works is combined with the active usage of phraseological units. Preliminary observations show that the main body of phraseological units used in the language of the poets is preserved in the active lexicon of the modern Tatar language to this day. They occur more often in the untransformed form—a general linguistic phraseological unit is used by the author without any structural or semantic changes. For example, in the language of Muhammedyar's narrative poems there are many phraseological units of the most frequent lexeme suz 'word' (138 times): suzga keru 'to start a talk' [Tuhfa-i mardan, p. 45a]; suzne kacuru 'to pronounce a word' [Tuhfa-i mardan, p. 49a]; suz tiju 'to touch upon' [Tuhfa-i mardan, p. 49b]; suzne qua kilu 'to thicken words' [Tuhfa-i mardan, p. 50b];

suzga baqmau 'to not attach importance to' [Tuhfa-i mardan, p. 56a]; suzne alu 'to obey' [Tuhfa-i mardan, p. 57a]; suzga qolaq totu, suzne qolaqqa salu 'to attach importance to' [Tuhfa-i mardan, pp. 60a, 67b]; suzdan cy-qmau 'to keep one's word.' For instance, suzene kasu 'to interrupt a talk': Kasmaz irde sahy berla suzene [Nur-i sodur, p. 53b] 'He did not interrupt his talk with the Shah.'

Phraseological units that include the lexemes *kuz* 'eye,' *bas* 'head,' *tel* 'tongue': *kuz acyb jomğancy* 'very quickly,' and *kuz tosu* 'to notice' in their structure are frequently used: *Tutsa irde telene saxrada qaz Tutmaz irde ul dam ecra any baz* [Nur-i sodur p. 60a] 'If the goose holds its tongue in the steppe, the hawk will not catch it at that time,' etc.

The lexemes *zorak* 'heart,' and *kunel* 'soul' have been widely used in phraseological units from olden times and are used by contemporary writers and poets for describing and depicting emotional states: *kuñel bağlau* [Tuhfa-i mardan, p. 59a] 'to put one's soul into,' *kuñel ozu* [Nur-i sodur, p. 60a] 'to be disappointed,' *kuñelen alu* [Tuhfa-i mardan, p. 60b] 'to banish from one's soul,' and so on.

In the modern Tatar language the equivalent of the phraseological unit *sofrasy qajnau* 'to be nauseous' is *saury kaynau*: *Bu garza suzlaren Xusxun isette, sofrasy qajnau jozidin ranğe kitte* [Tuhfa-i mardan p. 48a] 'Khusshkhun heard the words of the request, he became nauseous and turned pale'.

Such somatisms as *joz*, *inj* 'face,' *qulaq* 'ears,' *qul* 'hand,' *ajaq* 'leg,' and *qojryq* 'tail' are less common in the composition of phraseological units: *Sana kilsa inlare sarğaryb San ajgyl man irorman asri tabib* [Tuhfa-i mardan, p. 57b] 'If someone comes to you worried, tell them that you are a healer'; *Kem qulundin kilganca qyl jaxsylyq* [Tuhfa-i mardan p. 55a] 'Do good to the best of your ability.'

The phraseological combination *qolaq sal-* 'to listen' is substituted by the author in some cases for a synonymous phraseological unit *qolaq tot-* 'to attach importance to': *Ber nasixat ajtajem qolaq sal Ijasen syjlasan ete-na sojak sal* [Tuhfa-i mardan p. 49a] 'I will give you advice, listen, give a bone to a dog when entertaining its owner'; *Bulmacy suzga qolaq totmaq karakmas* [Tuhfa-i mardan p. 60a] 'Do not attach importance to an unnecessary word.' These phraseological units do not differ much in their structural and semantic relations.

Having described the sources in general, it should be noted that their language has a written tradition. However, compared with the Golden Horde period, forms typical of the Volga Tatar language are used more and more frequently. The research results indicate that the Old Tatar language of the Kazan Khanate period was a Kipchak language which was absorbing elements of the colloquial language and had been influenced by the Qarakhanid-Uighur literary tradition with minor Oghuz inclusions.

§ 3. Literature in the Crimean Khanate

Nariman Abdulvapov

When speaking about literature in the Crimean Khanate, as well as Crimean Tatar literature in its entirety, it is important to note that it is probably the least well researched aspect of Turkology as a whole, and especially Turkic language literature. The literature of the Crimean Khanate must be acknowledged as the literature that contains the most 'discoveries' out of all the modern literatures on Turkic languages in terms of the number

of authors and records, and the undeniable stylistic quality of those records. It is safe to say that with every month spent studying the history of Crimean literature in the analysed period, new names emerge that had been undeservedly forgotten and were wallowing in obscurity because of their ethnicity. As a result, more than a hundred names of Crimean poets, historians, literary figures, and theologians have been discovered over the last

two decades, and the list is constantly growing. As for the literature itself, it includes reasonably imaginative, deep, comprehensive, diverse written monuments of different genres (poetry, historical chronicles, engaging and Sufi prose, treatises on various fields of the so-called Islamic sciences etc.). All of them display numerous examples of strong ideological messages, a deep understanding of philosophy and aesthetics, high quality writing, as well as a large variety of literary and historical accounts of different aspects of the political, social, cultural, and daily life of Crimean society (and not only Crimean) at that time. They include written monuments whose importance transcends the scope of Crimean literature.

While getting acquainted with medieval Crimean Tatar literature, the following should be kept in mind. First of all, a large number of written monuments are considered lost due to the many social and political cataclysms that have occurred throughout the history of Crimea and the Crimean Tatars. We know about these monuments and their authors from their contemporary historical and literary sources and the accounts of later authors.

Secondly, a large number of the remaining written monuments remain largely unstudied and often not even correctly attributed. Hundreds of such manuscripts are kept in multiple literary collections in the countries of the former Soviet Union, as well as Turkey, Germany, Austria, England, France, Holland, and other states. With this in mind, it should be noted that the extensive body of works of the authors who left Crimea for various reasons, or who lived outside of the country for a long time, has been preserved far better than the body of works of the authors who lived and worked in Crimea only.

Thirdly, aside from literature in Turkic languages, medieval Crimean authors created an impressive number of religious and academic texts, as well as fictional and historical works in the Arabic and Persian languages. It follows that such works are obviously an integral part of the cultural heritage of the Crimean Tatars and deserve careful consideration.

Finally, it should be mentioned that in the process of getting acquainted with medieval Crimean Tatar literature, the global reach of the Crimean authors and their work beyond their country of birth becomes apparent. Major religious, cultural and academic centres of the Muslim world can be counted among the cities and settlements where they lived, served and created their scientific and literary works: Cairo, Damascus, Mecca, Medina, Jerusalem, Istanbul, Bursa, Edirne, Sinop, Konya, Kastamonu, etc. Taking into account the fact that all of those centres are located in what was the Ottoman region, of which Crimea belonged to, and the specifics of the literary process of that time in general, there is no reasonable basis to discard them as representatives of Crimean literature, even if it is, strictly speaking, an arbitrary distinction.

In view of this it is important to note that with it having close contact with the literature of the whole Ottoman region (besides the aforementioned facts, it is especially prominent in numerous examples of Ottoman authors, even famous ones, residing in Crimea), most of the classical canon of the Ottoman Empire was in circulation in Crimea, which was never viewed as an extraneous part of the literary process. This can also be said about Turkic language literature in general. The literary field was uniform and the classics were integrated into it, both in Persian language (Nizami, Attar, Rumi, Saadi, Hafiz), and in Turkic languages: from the Golden Horde period (Qutb, Bagirgani, Husam Katib, Seyf Sarayi, Mahmud Bulgari, Khorezmi etc.), Central Asian (Esevi, Djamī, Navā'ī, Haali, Lutfi), Azerbaijan (Nesimi, Fuzuli), Seljuk-Ottoman period (Yunus Emre and his followers, Süleyman Çelebi, Yazıcıoğlu Mehmed, Baki, Nefi, Nabi etc.). Of course, with time Crimean literature itself began producing exemplary authors who gained importance both in their national group and beyond (Aşık Omer).

Therefore it is difficult to give a comprehensive description of medieval Crimean Tatar literature with regards to its timeline and continuity or adequately judge its ideo-

logical or aesthetic potential, place it within the context of Ottoman or Turkic literature, or define its place and importance in global literature as a whole. The only indisputable fact is that this literature should be considered an inherent and natural part of medieval Turkic literature that absorbed the traditions of the previous historical periods such as of the Turkic (6th to 8th century) and Uyghur (8th to 9th century) khaganates, as well as the Karakhanid state (9th to early 13th century), and participated in the literary processes of the following epochs—the Golden Horde (13th to 15th century), Chagataid (15th to 16th century), Seljukide, of Azerbaijan and the Ottoman Empire (13th to 19th century). And this points to medieval Crimean Tatar literature as one of the founding literatures of the Muslim East, and an impressive one at that. It has long been known for its magnificence, represented by not only Turkic, but also Persian and Arab literatures.

Crimean literature in the Golden Horde period. Crimean Tatar literature entered the Crimean khanate period with over two hundred years of development behind it. Despite the scarcity of the remaining sources, there is information about at least three great written monuments created in Crimea in this period. These are arguably some of the greatest works not only of Crimean or Ottoman literature, but of Turkic literature as a whole.

These works are two poems based on the Quranic narrative of Yusuf and Zulaikha, by Crimean poets Mahmud Kirimli (late 12th to early 13th century [?]) and Abdulmejid Qirimli (late 14th to early 15th century), as well as an 800-page poem written in Farsi 'Kalendername' by Ebu-Bekr Kalender (late 13th to first half of the 14th century). The first written monument can be found in two translations of it (it is unknown what happened to the original), the second one has not been discovered yet, and the third one has only just started circulating in the wider academic community.

Mahmud Kirimli's poem deserves special mention. While the original text of this incredibly important written monument is deemed lost (although opinions vary, see:

[ODKE, 2000, pp. 19–20]), two translations of the written monument have been preserved. The translator is assumed to be a younger poet, a contemporary of Mahmud Kirimli, Halil-oğlu Ali [Konurat, 1996] who translated the poem from the 'Crimean' ('Deshti') language to 'Turkic'. A number of Turkish and Crimean Tatar researchers have expressed their belief that there is some kind of link between Halil-oğlu Ali and the renowned poet Kul Gali, and that Mahmud Kirimli's poem was written much earlier than previously thought, in the early 13th century [Ibid.].

Unfortunately, this issue has not become the subject of a wider academic discussion yet. However, it may happen relatively soon. One thing is clear: Mahmud Kirimli's poem has every chance of being accepted as Turkic literature's earliest poetic adaptation of a famous Quranic narrative. Actually, this idea is not new [Ertaylan, 1960]. After Mahmud Kirimli, well-known poets would often draw upon the story of Yusuf and Zulaikha. Over 80 poems based on this narrative would go on to be written, one of them by another Crimean author, Abdulmedjid el-Qirimi (latter half of the 14th to early 15th century). The title of his work is 'Munisü'l-Uşşak' ('A friend of lovers'). Ibn Arabshah wrote about him [as-Sahavi, dj.5, pp. 77–78].

While on the subject of Abdulmedjid let us note that besides the aforementioned poem, sources have brought us one of his ghazals preserved in a hand-written volume of a famous Turkic translation of Saadi's *Gülistan* which was completed in Egypt in 1392 by the distinguished Golden Horde poet Seyf Sarayi (the manuscript is currently in the possession of the Leiden University Library) [Gülstan, 1989, p. 183].

As for *Kalendarnâme*, it still has not been discovered by researchers worldwide. This probably has to do with the location in which this written monument was created. By the author's admission he wrote it in Crimea between the 1320s and 1340s. Although by the time of its discovery in 1966 in Namangan his manuscript was described as 'priceless' and 'unique' by the faculty of the Abu Ray-

han Beruni AN UzSSR University of Asiatic Studies Manuscript Foundation (Tashkent) [Munirov, Zhuvonmardiev, 1966]. This written monument is currently being prepared for publication. Preliminary research shows that Ebu-Bekr Kalender was likely of Anatolian descent and was born in Aksaray in the suburbs of Konya, but spent most of his life and possibly died in Crimea. Arguably this can be inferred from the lack of references to him in any known bio-bibliographical reference book. According to the author himself the work was written as a reply to 'Mesnevi-i manavi', a famous work by Jamal ad-din-sheik Rumi (Mevlana, 1207–1273), a spiritual leader and brilliant poet. The author also mentions that he was acquainted with Rumi's son, another Sufi teacher and poet Sultan Veled [Kalandarnâme, manuscript, p. 201].

On the topic of Crimean literature in the Golden Horde period, there are accounts of at least twenty other religious leaders and scholars—Crimeans famous both in their native country and in various centres of the Muslim world such as Cairo, Damascus, Jerusalem (Kudus), Bursa, Edirne and others. Emir b. Osman Sufi (died 1329/30, Sham), Ziyaeddin b. Sadullah el-Qirimi (died 1378/79, Cairo), Mevlana Rukneddin Ahmed b. Muhammed (died 1382, Cairo), Mevlana Redjeb b. Ibrahim (died 1392/93, Bursa), a famous Sufi teacher Muhammed el-Qirimi (latter half of the 14th century, Kudus). These are but a few names found in Arab and Ottoman sources [Bursali; as-Sahavi]. It should be noted that some of these scholars are identified as authors of religious texts including Sufi texts, and also as poets [Şerafeddin, 1994, p. 13].

When speaking about Crimean scholars, the reasonably high level of education in Crimea and generally in the Golden Horde must be mentioned. In what used to be the capital of the Crimean Khanate, the town of Qrim (also known as Solkhat, nowadays Sary Krym), large ruins of a madrasah of 1333 founded by Indji Beg Khatun (died 1371) still stand preserved. According to some sources she was the mother of a famous Crimean ulus-bey Qutlugh-Temür [Kramarovsky, 1997, p. 36], which can be taken as

evidence that the social status of a learned Muslim woman in Crimean society in the first half of the 14th century was reasonably high. It should also be noted that it was exactly in these years that Ebu-Bekr Kalender wrote his work in Qrim (see above). One can assume that the Sufi poet was invited to Qrim by the founder of the madrasah herself.

Speaking of which, in the same 1333 Ibn Battuta visits Qrim, finding a cohort of local religious leaders in the capital of the ulus: the sheikhs Muzaffereddin, Muzhireddin and Horasanizade, kadis Serefeddin Saili and Hsir, faqihs Şefereddin Musa and Alaeddin, Khatib Ebu-Bekr, imam of tulus-bey Telek Temur Sadeddin and others [Ibn Battuta, 1986, pp. 69–71].

Some time later, in the middle of the century, a famous scholar and faqih Ahmed Hodjenji (died 1400, Medina) spends several years in Qrim and Kaffa. The sources note his close association with a famous, as can be inferred from the tone of those references, spiritual leader Ebu-l-Vefa Osman el-Magribi as-Şazeli. There is evidence of another famous scholar Alaeddin Ahmed Seirami (died 1388) staying in Qrim at the same time. [Tiesenhausen, 1884, p. 463]. Even later, in the early 15th century, Qrim would attract probably the most famous scholar in this list, faqih Hafizuddin Muhammed Bezzazi (died 1424), who, according to sources, would find in Qrim an environment that was sufficiently competent in Islamic sciences, and would go on to educate a number of famous students [IA, Özel (a)]. Finally, in 1412 the famous scholar, historian and poet Ibn Arabshah (died 1450) would visit Qrim. Later, in one of his biographic works he records his meetings with local scholars and poets Ahmed Buyruk, Mevlana Şerefeddin, Mevlana Mahmud el-Bulgari and poet Abdulmedjid [as-Sahavi, dj.2, p. 127]. All of this further attests to the fact that Qrim, even when located on the fringes of the Muslim civilisation, was never by any means an unimportant, provincial region when it came to culture.

Returning to the subject of literature, it should be added that in regards to the development of fine arts and poetry in Crimea,

some information can be gleaned from Crimean epigraphy data, namely samples of poetic epitaphs on tombstones dated 13–15th century, preserved to the present day in Sary Krym [Aqçoqraqlı, 1927, p. 3; Aqçoqraqlı, 1929, p. 7]. These poetic fragments are written in the local, or, using Halil-oglu Ali's terminology (see above), Crimean or 'Deshti' language.

It should be noted that at that time Crimea was experiencing an amalgamation of a number of literary movements. On the one hand, Crimea was an arena of great importance in the literature of the Golden Horde. On the other hand, Central Asian literature continues to maintain its influence that had spread into Crimea in the age of the authors of poems about Yusuf and Zuleikha, or, as they are assumed to be, followers of Ahmed Yasavi [Ayan, 2005]. It developed greatly during the time of Islam's expansion into Crimea in the latter half of the 13th century [Abdulvapov, 2006, p. 145]. Finally, Anatolian (Seljuk-Ottoman) literature spreads into Crimea [Abdulvapov, 2006, p. 145].

Other than literature in Turkic languages, literature circulates in Farsi, which had long been known as the literary language of the Turkic peoples, and in Arabic. For example, Ibn Battuta writes about the practice of the declamation of religious and poetic texts in Arabic and Farsi in Azak, very close to Crimea [Ibn Battuta, 1986, p. 76]. In the latter half of the 13th century Y. Kemal and A. Krinsky writes about the possibility of writing a Sufi text in Arabic in Crimea [Kemal, 1930].

Literature of the Crimean Khanate: timeline, main trends, representatives. The early history of the Crimean Khanate from the late 1420s to the end of the 15th century is characterised by the difficulties of establishing a young nation and a dramatic battle for the legacy of the Golden Horde. 1475 marks an event that would define the development of Crimea thereafter. Ottoman Turks take control of all Christian colonies on the peninsula: The Principality of Theodoro with its centre in Mangup, colonies of Genoa in Kaffa, Sudak, Balaklava, and others. Thus

begins the Ottoman history of Crimea, namely the history of the Kaffa ayalet—an administrative body under Istanbul's direct supervision, and a province stretching along the Black Sea coast from Chersonese to Kerch, including large territories of south-western Crimea. After a significant political and cultural shift in which Crimea begins to emulate Istanbul, the latter's influence over events in Crimea grows exponentially.

These events create a dangerous socio-political situation in Crimea. It is characterised by dramatic relationships with both its previous overlord (the Golden Horde) and its future one (the Ottoman empire). This resulted in the very modest number of known works of Crimean literature and science of the time being preserved. Furthermore, only two of them, a Crimean khan Mengli Giray I [died 1515] and a famous scholar-müderri Seyyid Ahmed b. Abdullah Qirimi (died 1474) have literary works (poems) that have been preserved to the present day in fragments [Emiri, 1995]. On the one hand, the crisis was not conducive to the active development of literary arts and research, and on the other hand, it meant that the existing written monuments were extremely vulnerable.

Consequently, after two centuries of intense cultural progress, Crimea sees a decline in creative activity. The decline was also noted outside the peninsula. With regards to this a dialogue between the Ottoman Sultan Mehmed II Fatih (1451–1481) and the aforementioned Seyyid Ahmed of Crimea is notable and depicted in a number of Ottoman sources. A student of a famous faqih Hafizuddin Bezzazi, Seyyid Ahmed b. Abdullah (Mevlana Qirimi, died 1474, Istanbul) was a famous Crimean theologian, philologist, legal scholar and poet. He came to Istanbul when Mehmed Fatih was Sultan and, having received the Sultan's favour, was given the honour of tutoring his children and teaching in the most prestigious Ottoman madrasahs. In one of the conversations between Mehmed Fatih and the Crimean scholar, who also performed some diplomatic duties, Seyyid Ahmed replied to the Sultan's question about events happening in 'the country of Crimea,

famous for its intellectual life and abundance of scholars, a birthplace of 600 religious leaders (mufti) and 300 men of letters (musannif). He said that a certain vizier had appeared in his country and was so bold as to 'treat local scholars rudely'. Consequently 'the people began to leave their homes, and because scholars are the heart and soul of the national entity and problems with their moral and intellectual health affect all parts of this entity, in the wake of their exodus the whole framework of the Crimean government has been dealt irreparable harm' [Mecdi, 1989, pp. 101–102].

This dialogue is notable for the fact that it not only references the crisis that had engulfed the Golden Horde at the time—the country of Crimea' likely meant not only Crimea but the Golden Horde as a whole, but it also attests to the scope of the influence of Islamic culture in the region, to the significant presence of representatives of Islamic sciences, education and literature, as well as the perceived significance of expanding Islamic learning through the Golden Horde and the special status of its representatives.

It is telling that despite the crisis scholars continued to create new works. Sources note that Seyyid Ahmed alone wrote a number of texts on different fields of Islamic sciences, logic, philology and mysticism [Bursali, 1990, p. 14]. Out of them two Sufi texts deserve a special mention: 'Şerh-i Gulşen-i raz' is a commentary on a famous poem by the distinguished Sufi sheikh Mahmud Şebustari (died 1320) 'Gulşen-i Raz' ('The rose garden of mysteries') written in Farsi (according to Bursala's account, one copy of this commentary was kept in the library of Aya-Sofia [Ibid.]), and 'Şerh-i Miftah-ul-Gayb' is another commentary on a famous work by the pupil and adopted son of the distinguished theosophist Ibn Arabi, a contemporary and follower of Djelalleddin Rumi, the sheikh Sadreddin Konevi (died 1274). It is interesting that both works were especially popular with the members of the Sufi order mevlevi, which gives the accounts about the authors of the commentaries being a member of this Sufi order further weight [Soysal, 1961b, p. 21].

Seyyid Ahmed bin Abdullah was by far not the only Crimean scholar and poet about whom information has been preserved. Crimeans continue to live in Cairo and other centres of the Islamic world. Abdulla bin Muhammed el-Qirimi, Ali bin Muhammed el-Qirimi, Mahmud bin Omer el-Qirimi, Yusuf bin Huseyin el-Qirimi, Serefeddin bin Kemal el-Qirimi (died 1443), Nedjmeddin Iskhak bin Ismail el-Qirimi (died 1475/76, Cairo), Burhaneddin Ibrahim el-Qirimi (died 1483/84, Cairo)—these are but a few names of famous Crimean theologists, spiritual leaders and scholars [Bursali; Sahavi].

Going back to the latter half of the 15th century, it is important to mention the significant change in status of the city Kefe (previously Kaffa), which became the second cultural capital of Crimea. In light of this it would be prudent to also mention another widely discussed problem in modern Crimean literary studies.

Besides being a political and trading centre, Kaffa became an important cultural and, specifically, literary centre. Presently available accounts name over 80 poets, scholars, theologists, and historians who came to prominence under the nisba 'Kefevi', and about the same number of their colleagues who worked and lived here without being Kefevi (they include a number of famous people, see below). While the second category does not raise any questions, the ethnicity of the people in the first category often remains unclear,—that is, it is entirely possible that among the large number of people we now know as 'Kefevi', there may be some who are ethnically not Crimean Tatars (even if at the time it had some kind of fundamental importance). Admittedly, there is little doubt that many 'guests', while not being ethnic Crimean Tatars, stayed in Kaffa and assimilated into the local community, gradually losing their previously held ethnic characteristics.

Literature of the 16th century. The 16th century, usually hailed as the Golden Age of the Ottoman Turkic culture, saw most of modern Crimea cities develop as cultural, political and trading centres: Bakhchys-

array, which sprung up around the new palace build by a Crimean khan Sahib-Giray I (1532–1551); Kefe, later designated Little Istanbul ("Küçük İstanbul") due to its active socio-political and cultural life; Akmesdjid (now Simferopol), designated a city of residence for the khan's governor, the kalgi-sultan, Kezleva (now Yevpatoria), the city that in the later half of the century was a contestant for the title of the khanate's new capital; and Karasu-Bazar (now Belogorsk), the largest trading centre of the peninsula. During this period Crimea established a good system of socio-economic relationships, and an extensive infrastructure of culture and education. Regarding the latter, Crimea's famous educational establishment, the Zindjirli Madrasa, was opened in 1501. For many centuries it was considered a bastion of Crimean Tatar scholars and came to special prominence during I. Gasprinsky's educational reforms.

Sources confirm that this period saw active development of Crimean urban planning, architecture, sciences (first and foremost amongst these the religious or so-called Islamic sciences, although there is also evidence of development in mathematics and the natural and applied sciences, astronomy, logic, ethics and others), literature, and arts (calligraphy, miniatures, music). The spiritual and creative atmosphere in society was largely shaped by the Sufi faith, an Islamic religious movement advocating an all-encompassing love of God, sincere religious worship, absolute purity of intentions and conduct, the renunciation of materialism, attention to neighbours, spiritual self-improvement, and so on.

Compared to the previous period, the 16th century gave Crimean Tatar literature a much larger number of names that are also of interest to the general reading public. Amongst people who left an impression are members of the ruling family, religious leaders, scholars, Sufi sheiks, representatives of the lower academic classes of the khanate, and people from lower social circles. Unfortunately, for the bulk of them only partial fragments of their literary works have been preserved until the present day. Nevertheless, several of the

authors of the 16th century are undoubtedly brilliant.

All these authors represent two different movements of the Crimean literature of that period: of the Divan and of religious Sufi texts. The following is some relevant information about the major literary movements of Crimea in the period of the khanate.

Three movements of medieval Crimean Tatar literature are usually emphasised due to their content and poetic characteristics. The first one is the so-called *Divan literature* (*divan edebiyati*, from the Arabic '*divan*' meaning 'the collection of poetry by an author'), which constitutes the classic literature of the period. Currently there are at least three definitions of the concept of the Divan literature: a wider one, a traditional one and a narrow one. As a wide term Divan literature is understood as meaning all written literature of the Muslim period: poetry (using the aruz system of metrics), both religious and not; and prose—historical, recreational, Sufi, epistolary, academic and so on. The traditional definition includes poetry (using metrics) and prose (fiction), but only that that is secular. Finally, the narrowest definition of the term reduces it to strictly secular metrical poetry. It is the secular poetry that is usually called classic, due to the fact that during its formative period it largely emulated 'classic' Persian poetry.

Divan literature can be characterised as covering the widest range of genres, a strict framework of poetic etiquette and an exceptionally diverse and sophisticated use of language. Most medieval Crimean Tatar authors represent Divan literature.

The second movement is the so-called *Sufi literature* (*tekke edebiyati*), largely represented by the poetic creations of numerous religious leaders and lay members of the Sufi orders—the tarikats. The artistic language, symbols and imagery of this literature, its fairly difficult and sophisticated etiquette, not only greatly influenced the formation and development of religious literature itself, but in large part defined the principles and evolution of many literary genres of secular literature (and most of all, Divan poetry).

Lastly, the third movement *ışık poetry* (*aşık edebiyatı*, from Arabic '*aşık*' meaning lover or poet). It is characterised by the works of folk poets—*aşıks* (*ozans*, *kedays* etc.). Together with folk written monuments it composes the bulk of folk literature (*halk edebiyatı*). Representatives of this literary movement accompanied their performances by playing a string musical instrument called the *saza*, which gave rise to an alternative name for this type of poetry: *saza poetry*. *Aşıks* were very popular among the people for combining the talents of a poet, composer, singer, and musician in one. *Saza poetry* is characterised as folk poetry, although in the process of its development it incorporated various elements of classic *Divan* poetry. *Aşık poetry* gave Crimea and Turkic literature as a whole the famous author by the name of *Aşık Omer* (died 1708).

Let us go back to the 16th century. Evidence suggests that Crimea in that time was influenced by the increasingly lively literary processes that were spreading across significant territories of vast regions such as the Volga territory, the Caucasus, Western Asia, Anatolia, the Middle East, North Africa, etc. Moreover, Crimea acted as a kind of bridge between literary traditions across a vast geographical region, as well as actively participating in defining the boundaries and qualities of the literature that would become central to the literary processes of the whole Turkic Muslim world: Ottoman literature.

Without a doubt these years saw an expansion of the Golden Horde's literary legacy. It is a well known fact that the Crimean Khanate was effectively a successor state of the Jochid ulus. It is through Crimea that the Ottomans familiarised themselves with the Golden Horde's written monuments. There are accounts of large amounts of translation taking place in the court of the Crimean khan Sahib Giray I (1532–1551), previously the khan of Kazan from 1521–1524. In particular, one of the results of this work was the Ottoman translation of a famous written monument of the Golden Horde literature, '*Hikyaet-i Djumdjume Sultan*' by Hyusam

Kâtip [Köprülü, 1981, p. 176; Minnegulov, 1993, p. 72]. Evidence of this is provided by one of the direct participants of these events, the khan's astrologist, apothecary, historian, poet and translator Kaysuni-zade Nidai Remmal Hoja. In a famous historical account of Sahib Giray I's rule he notes that he himself was given the task by the khan of translating ten books to Ottoman Turkish [Târih-i Sâhib, 1973, p. 109].

The same can be said about Chagataid literature. It was once thought that the interest in the works of Navā'ī and followers in the Ottoman court of the early 16th century was cultivated in a large part thanks to Crimeans, specifically the future rulers of Crimea, those educated in the Sultan's Enderun Royal Academy, the poets Saadet I and Sahib I Giray [Geraybay, 1995, p. 16]. Due to this, the presence in the vast (according to Halim Giray, 'uncountable') library collection of the Crimean Khan Saadet Giray I (1524–1532) of the '*Hamsa*', by Alişer Navā'ī, with the Khan's personal signature and stamp, can be seen as symbolic.

On the other hand the reverse process also took place; Ottoman (Anatolian) literature was swiftly incorporated into Crimean literary life. In particular, this is believed to be the period when the literature of the so-called '*mevlid*' canon gained widespread popularity throughout the Khanate. Examples of this literature include the famous poems on the Prophet Muhammad's life: '*Mevlid*' by Süleyman Çelebi (died 1422), '*Muhammade*' by Yazidjioglu Mehmed (died 1451), and others, as well as numerous religious poems (*destans*) of a didactic nature such as '*Kesik baş*' ('The tale of the severed head'), '*Gogerdjin*' ('Dove'), '*Geyik*' ('Doe') and others, and the religious hymns, the *ilyahi*, of the legendary Anatolian poet Yunus Emre (died 1321 [?]) and his followers. Later this literature would truly become the folk literature of Crimea, known in every household and being an accompaniment for the majority of a Crimean Muslims' life [Çoban-zade, 2003, pp. 13–14, 72–73].

It should be noted that the most well-known authors of Crimean 16th century lit-

erature today were members of the ruling family, the Girays. The four most famous Crimean rulers of this century: Saadet I (died 1540), Sahib I (died 1551), Devlet I (died 1577), Ghazi II (died 1608), not counting Mengli I (died 1514), mentioned elsewhere. Historical sources paint them as people who were not averse to the cult of the written word and the virtues of sophisticated linguistic arts [Geraybay, 1995, pp. 10–16]. And if the first three cannot be called important poets by any stretch of the imagination (not to mention that most of their works are lost), the last one became the jewel not only of Crimean poetry but of all Ottoman literature.

Ghazi Giray II (Bora) was the son of the Crimean Khan Devlet Giray I (died 1577) and made history as a great ruler, talented politician and brilliant commander. He had a decisive character and was a very independent thinker. He was a person of massive intellect and knowledge in various fields of religious and secular sciences (including the hard sciences), famous as a talented poet, a skilful calligrapher, and a brilliant musician (he played the *tanbur*, a popular fretted instrument) and composer. The last of those deserves a special mention: Ghazi Giray is recognised as the most brilliant composer not only of Crimean music but of Turkic classical music as a whole. Over 60 of his musical pieces have been preserved, and some of them have been published [Krymskotatarskaya, 2007].

Another well-known fact is that Ghazi Giray was a philanthropist. His support of scholars and artists was instrumental in the development of the country's academic and creative works.

As for his literary legacy, not all of his poetry has lasted to our time. His 'Divan', mentioned in several documents, remains undiscovered [Ertaylan, 1958, p. 31]. Researchers have at their disposal only a lesser *divan* (*divançe*) and fragments of poems in various hand-written collections of works currently in the libraries of Turkey, Russia, Great Britain and other countries. All in all of Gazaiy's known work there are some 50 of Gazaiy's ghazals, two of his poems, or *mesnevi* as they

were also called ('Dolab' ['Mill wheel'] and 'The rose and the nightingale' ['Gul ve Bulbul'] and another, 'Coffee and Wine' ['Kahve ve bade'], which remains undiscovered), as well as a number of letters in both verse and fictional prose [Ibid.].

Gazaiy's body of work spans various genres. Together with the more familiar love poems and poetry covering the philosophy of love and military themes, the unusual satire—*hidjvie*—deserves a mention. They are especially interesting for dealing with unsavoury socio-political relationships within the poet's contemporary society, mocking numerous flaws of the Sultan's court and the Ottoman ruling class for wallowing in scheming, hypocrisy and corruption [Ibid., pp. 40–46]. In addition to the Ottoman elite, Gazaiy takes aim at people of other social statuses, and at the religious and educational institutions of the period. Among the vices the poet castigates are ignorance, conceit, stupidity, greed, corruption, spiritual emptiness, false devoutness, fraud and others. The author himself appears in his works as someone calling the ruling elite to account for their vices before God, the country, and its people. Gazaiy's satire is undoubtedly a highlight not only of his personal work and the Crimean poetry of the time, but of Ottoman literature as a whole.

Gazaiy's military verses are as great as his satire. They praise moral strength, courage and fearlessness, the greatness of dedication to the country of one's birth, descriptions of scenes of preparation for battle, and of the battles themselves [Ibid., pp. 36–40]. The latest fragments of his work show a fair degree of humour (*mizah*) regarding some aspects of daily life in the Crimean-Tatar Ottoman army.

Gazaiy also wrote religious poetry, with motifs of philosophical musings on man's higher destiny and the relationship between God and man, as well as various manuals of an Islamic nature. Those works include some ghazals and a poem (*mesnevi*), 'Dolap' ('Mill wheel'), on the theme of the Islamic concept 'kader' ('predestination') [Ibid., pp. 46–50]. The latter is written according to Shariah

motifs, unlike, for example, the famous Sufi masterpiece by Yunus Emre.

Gazaiy also explores some Sufi themes. For example, I. Ertaylan mentions this while noting Gazaiy's Sufi symbolism and enthusiastic mysticism, which bring to mind the names of the most distinguished Sufi devotees: Mansura Halladja and Imadeddin Nesimi (a renowned mystic poet of Azerbaijan descent) [Ibid., p. 34]. Sufi themes can be found in a number of Gazaiy's ghazals. In one of them he presents himself as a person who 'knows the meaning of all names' and who 'conquered the Universe by slaying a sly "enemy", his own ego' [Ibid.]. It should be noted that in one of his ghazals Gazaiy mentions the Mevlevi order [Ibid., p. 81]. Another significant motif in Gazaiy's ghazals are epicurean themes (rintlik) [Ibid., pp. 35–36].

In addition to ghazals, his mesnevi poem 'The Rose and the nightingale' ('Gil ve bulbul') was created under the direct influence of Sufi ideas, in particular of aesthetic categories such as beauty and love. The poem is an allegory of love and beauty (worldly and divine) and it is likely that it is influenced by the works of the famous Persian Sufi poet Fariduddin Attar [Ibid., pp. 50–53].

Speaking of Gazaiy, it is important to understand his poetic culture, the literary movements that informed his poetic world and writing style. The poet was well-educated in both the literary classics and in the modern poets. These are chiefly the Çağatay poets with Alişer Navā'ī at the helm: Djami, Lyutfi, Hayali and others. In some of his verses Gazaiy appeals to these distinguished poets as if to associate himself with the established classics [Ibid., p. 32].

The next layer is Ottoman literature. Researchers note Gazaiy's numerous themes that are similar to those of the most famous representatives of this genre of literature: Zati, Baki, Hayali and even Hafi, who lived a little later [Ibid., pp. 32–33].

Finally, one of the most important of the poet's influences was the works of Fuzuli. Ghazi's close attention to him can be inferred from Gazaiy's clear efforts at imitation, such as the mesnevi poem 'The Rose

and the Nightingale' ('Gul ve bulbul') which bears resemblance to Fuzuli's 'Nik u bed', or from numerous poetic turns of phrase in the Crimean author's ghazals which are stylistically similar to those of Azerbaijan's famous poet. I. Ertaylan notes that some of Gazaiy's poems are inspired by Fuzuli to such an extent that were those poems signed with the latter's name no one would doubt they came from the great 'Baghdadian's' pen [Ibid., p. 33].

All the aforementioned influences are also expressed through Gazaiy's use of language that successfully uses the linguistic armoury of all the mentioned languages as well as of the Crimean dialect of Turkic.

Gazaiy is undoubtedly a brilliant poet and has pride of place in the Crimean literature of the period of the khanate. When talking of Gazaiy, the atmosphere of the Khan's palace in the time of his reign also has to be mentioned. The son and grandson of a poet, Gazaiy instilled a love for both poetry and verse into at least two of his sons, and one of his daughters (see below). The sources describe him as a frequent philanthropist, who supported many Crimean and Ottoman poets, writers, musicians, calligraphers, and miniaturists. Among his proteges we can see, in particular, the Ottoman poets and musicians Abduddelel Zihni (died 1591 or 1614) and Asafi Dal Mehmed Çelebi (died 1598?). Together with Gazaiy the latter participated in one of the military campaigns against the Persians in 1581–1582, which ended with a long imprisonment and months-long confinement in an Iranian zindan. This was later described by Asafi in his poem 'Shedghaat-name' ('Tale of bravery') [Ibid., pp. 11–20].

Gazaiy also exchanged letters, including letters in verse in both the Ottoman and Arabic languages, with famous representatives of Ottoman culture: sheikh al-islam, the muderris and the historian Hodzha Saaddedin (died in 1599), the scholar, poet and calligrapher Gani-zade Mehmed Nadiri (died in 1627), and the Kefe's scholar and poet Husejin Kefevi (died in 1601) [Ibid., pp. 41–45, 57–61].

The latter author, who also dedicated, incidentally, one of his most famous prose

works to Gazaiy (see below) and was likely to have been close to him, is in his turn one of the most distinguished Kefin authors of the century. Hussejin Kefevi was a famous poet, writer and scholar, called 'the Sultan of authors' ('sultan-ul-muellifin') by his contemporaries [Bursali, 1990, p. 15]. Among his numerous academic and literary works (spanning theology, fiction and others) there are a number of works to be mentioned in particular: two texts on the works of Hafyz, including a commentary to his 'Divan' ('Sherkh-i Divan-y Hafyz') as well as a commentary in Turkic to Saadi's 'Gulistan' [IA, Akpinar, pp. 186–187]. Contemporaries describe Hussejin Kefevi as a master poet, proficient in Ottoman, Farsi and Arabic, who paid special attention to the sophistication and precision of language. He was a renowned master of poetic imitation *nazire* [Ibid., p. 186]. Fragments of Hussejin's poetic works have been preserved and are currently the subjects of research [IA, Akpinar].

In addition to his literary and academic fame, Hussejin Kefevi is renowned as a famous musician and composer, which has brought him even closer to Gazaiy. There is also information indicating that as a city *mulah* Hussejin Kefevi taught music to the most talented Kefin children, using music and songs of his own composition [Ibid., p. 186].

The poet Talibi (died between 1512–1520) was another Kefe's author: in Latifi's anthology he is noted as being able to write 'highly' sophisticated poems despite having little education [Latifi, 1990, pp. 457–458].

Speaking of Kefe's authors, another name should be mentioned: the talented poet Enveri Çelebi (died 1547, Istanbul). He spent most of his life in Istanbul as an owner of a small textile shop, and became renowned as a talented pyrotechnic [YYOA, Çakım]. As a writer of a 'Divan', Enveri, despite not being educated, wrote 'amazingly beautiful and masterful verses' according to his contemporaries, and often did this *impromptu* [Ibid., p. 412]. Enveri deserves a special mention: he adhered to the so-called 'simplified turki' ('turki-i basit')—the trend in poetry that called for the simplification of the language

and furthermore, for its turkification, as opposed to the ornate Ottoman preferred in *divan* poetry of the time. This is evident from both Enveri's poetry and prose (see below), that was riddled with elements of the Turkic folk language, wise proverbs, sayings and set phrases [Ibid., p. 413].

Almost all of the authors mentioned above, who were formally *divan* poets, incorporated, as we saw, religious *sufi* themes. As for the 'tekke literature' authors, there are Mustafa Myudami (died in 1540), an author of a 'Divan' in *Sufi* motifs, that along with numerous short-form poems, contains a reasonably long hagiographic text (781 *beits*)—the 'Tales of Bukharian Emir' ('Menakyb-y Emir Buhari') about the life of the legendary sheikh St. Emir Sultan of Buchara (died in 1429, Bursa). Mustafa Myudami was born in Qrim, lived in Kafa for some time, and then later lived, by all evidence, in Anatolia (possibly in Bursa) where he completed the course in *Sufi* sciences under the guidance of famous spiritual leaders. His later life and place of death are unknown. The manuscripts of both works are kept in Istanbul's hand-written collections, and several fragments of poetry were published [ODKE, 2000, pp. 32–37]. Among them are fine examples of the poetic prayer *munajat*, as well as eulogies honouring the poet's spiritual mentor (Sheikh Suleiman), the order's *pir* (Sheikh Sinan) and Saint Emir Sultan.

Bakai (Abdulkaki Kefevi, died in 1591/92) was another representative of the religious *Sufi* poetry of that period. As a son of Kefe's *qadi* he visited almost all important centres of the Ottoman Empire. In Cairo he met and studied *Sufi* religion under the poet Ibrahim Gulsheni, a famous sheikh and the founder of the Gulsheniyya Order (a branch of the Halvetiyya Order). Later Bakai served as a *mesnevi*han (reciter or 'Mesnevi') in one of the *mevlevi* houses of Damascus [Bursali, 1990, p. 31]. One of his poems is currently available for researchers—a eulogy-medhie, or *museddes*, in honour of Jalal ad-Din Rumi [Crimean Literature of the Ottoman Period, 2000, pp. 38–40].

Speaking of the religious Sufi poetry of the 16th century the aforementioned poet Enveri should also be mentioned. Sources pay special attention to his treatise (prose-poetry) on hurufism—one of the mystical movements in Islam, based on the so-called symbolism of letters (from where the movement's name takes its origins), that has certain points of correlation with Sufism (we are reminded of a brilliant poet from Azerbaijan, Imadeddin Nesimi). Arguably many of Enveri's 'Divan' poems are also written in Sufi motifs.

Unfortunately the poems of a number of Crimean Sufi sheikhs and scholars of the 16th century are still undiscovered. Namely, 'Tatar sheikh' by Ibrahim bin Ak-Mehmed (died 1592/93, Istanbul)—a famous sheikh of the Halvetiyya Order, who was an advisor of the Crimean Khan Devlet I and of his son Ghazi II. After moving to Istanbul, Ibrahim-efendi took a place as the sheikh in the Küçük-Aja-sofia mosque, came into prominence as a commentator of the Quran, the author of several texts on Sufism and as a poet (he wrote in the Arabic and Turkic languages) [Bursali, 1990, pp. 9–10]. As well as Mahmud bin Suleiman (died in 1582)—a famous scholar (see below), a Myurid of the famous Kefe's sheikh Takiyuddin Ebu-Bekr (died in 1562), miderris and cadi, who also, according to sources, wrote in Turkic and Arabic languages [Bursali, 1990, p. 34]. The latter, namely bilingual and trilingual authors, were something of a norm among the academic and literary elite in medieval Crimea.

To sum up the discussion of poetry of the 16th century, one more name should be added to the aforementioned authors: Fendi (his chronogram, dated 956/1549, has been documented by Evliya Çelebi in one of the sources in the Sudak [Evliya Çelebi, 2008, p. 158]). All authors largely represent two of the main schools: divan poetry and religious Sufi poetry. As for ashyk poetry, no information is available about this before the 16th century, although undoubtedly this school was also widespread in Crimea at the time.

Not only poetry remained intact in the literature of the 16th century. Currently, examples of fictional prose are also known and

represented in particular by the letters of Ghazi Giray and Husejin Kefevi—great examples of the epistolary genre of the time. A number of collections of short stories of Husejin Kefevi in the genre 'fal-name' can be viewed as examples of Turkic fiction. First and foremost is the collection 'Raz-name' ('The book of mysteries') that collected short stories (192 pieces) about the practice of literary fortune-telling in the intellectual sphere of the time—in this case, on the basis of the most frequently used, for relevant purposes, texts; the holy Quran, 'Mesnevi' by Rumi, 'Divan' by Hafiz and Dzhami [IA, Akpinar, p. 187]. The massive popularity of the collection can be assumed from numerous copies currently held in collections of manuscripts in Turkey, Russia, England and elsewhere [Ibid.]. Another known fact is that the first version of the book was titled 'Sevanihu't-tefe'ul' and contained 139 short stories. It was finished in 1577 and gifted to the Crimean khan and poet Ghazi Giray II by the author himself [Ibid., p. 186].

The earliest preserved Crimean historical prose is also dated from the 16th century. Kajsuni-zade Nidai, known in Crimea as Remmal Hoja, was a court advisor, astrologist, apothecary, historian and poet during Sahib Giray's I rule (1532–1551). His 'the Story of the khan Sahib Giray', written after the khan's death by the commission of his daughter, Nur-Sultan Hani, contains valuable information about the political and cultural life in the khanate of that period. The chronicle was preserved in a number of copies and was published in 1973 in Ankara by O.Gök-bilgin in Latin graphics, with a translation in French [Tarih-i Sahib, 1973]. This work is one of the most prominent examples of Crimean historiography [Sejityagya, 2003; Zaitsev, 2005].

Academic literature on various fields of Islamic sciences—exegetics, hadith studies, Islamic law (fiqh), ethics and sufism, is represented by the works of the 'Tatar sheikh' Ibrahim bin Ak-Mehmed (died in 1592/92), Kefe's qadis Mahmud bin Sulejman (died in 1582) and Husejin Kefevi (died in 1601), Kefe's mufti Baba Kushi Abdurrahman (died

in 1575/76) and others. Among those people sheikh Ibrahim bin Ak-Mehmed deserves a special mention. M. Bursaly provides a list of five of his texts; at least two of them are of Sufi composition [Bursaly, 1990, pp. 9–10]. Mahmud bin Suleiman should also be mentioned, with his fundamental autobiographical work 'Ketaibu a'lyami'l-ahjar', something of an encyclopedia, with information about the life and work of over 809 famous Islamic jurists (mostly faqis of the Hanefi's Mazhab) as well as Sufi leaders and Muslim saints [IA, Özel (a)]. Preserved in many copies in the collections of manuscripts of Uzbekistan and Turkey, currently this work is popular and actively used in academic circles. Its chief characteristic is its style, that unified the precision of academic writing with elements of the Muslim hagiography *menakymname*—due to various legends and myths about the biographies of one person or another being included within the text [Ibid., p. 185].

Works on ethics (*adab*) can be found among academic works. In particular, a notable text among the theological works of a famous Ottoman scholar-lexicographer Mustafa Akhteri (died 1560) is his commentary on the subject of a corresponding text of a certain Kefen author of the first half of the century [IA, Koç].

Translated literature. Out of the translated literary legacy that has been discovered, one deserves attention—the Turkic translation (with commentary) of the famous 'Gulistan' by Saadi, translated by Husejin Kefevi. This work, that contains critical notes on the earlier Ottoman commentary of 'Gulistan', by the poets Syururi and Shem'i and by the well-known Ottoman bio-bibliographer Kâtip Çelebi (Hajji Halfa), whose commentary was critically lauded at the time of its publication [Zaitsev, 2005, p. 51]. This work was completed in Mecca in the same year the author died (1601) and was preserved until our time in several copies [IA, Akpinar, pp. 186–187].

Additionally there is no reason to reject the possibility that Tatar Ali was a poet of Crimean descent (or that Sherif Amidi [died 1514], shortened to 'Sherif', was either). He

was the author of the most complete (55,000 beits) Turkic translation of the 'Shehname' by Ferdowsi, in 1511 gifted to the Egyptian Sultan Kansukh Gavri (1501–1516). The translation was accomplished in the Mamlyuk-Kipchak language. Its copies are currently held in collections of manuscripts in Istanbul, St. Petersburg, Kazan, Dushanbe and elsewhere [Minnegulov, 2003, pp. 216–217]. Gibb writes about working with the British copies [Gibb, 1999, c.1, pp. 548–549]. This translation was partially published in 1965 in Warsaw by A. Zayonchkovsky [Zayonchkovsky, 1965]. It is worth noting that the question of the author's ethnicity still stands. Given the substantial population of Crimeans in Egypt in those years, the suggestion that the poet might have been of Crimean descent has every right to exist.

Speaking of the Crimean literature of the 16th century it is important to mention a number of Ottoman authors who participated in literary processes in Crimea over the discussed period. One of them is the aforementioned court historian and poet of Sahib I, Remmal Nidai. Later in the court of Ghazi Giray II another name can be added—Zihni (Abduddelil, Nedzhefzade, Zihni-i Kadim, died in 1591 or in 1614, Baghdad), a poet who wrote in three languages: Turkic, Arabic and Farsi. He was a musician like Ghazi, and a master calligrapher, a member of the Mevlevi order, which calls to mind the melevi themes in Gazai's own works [TDEA, p. 8, pp. 656–657]. There is information in one of the Crimean chronicles that Zihni was given a sable fur coat of Gazai's own shoulder for a recital of a beits of the famous Baki [Sejityakhya, 2004, no. 4, p. 76]. One of Zihni's works was preserved. It is an imitation (*nazire*) of Gazai's well-known ghazal 'Raete' [Emiri, 1995, p. 13].

In Kefe the presence of Ottoman authors is especially noticeable. This is understandable since the city is the capital of an Ottoman *eyalet*, it keeps an Ottoman garrison, Ottoman officers are appointed to its head and to key administrative positions, and trading and cultural contacts with Istanbul and Anatolia as a whole don't pause even

for a minute. Poets can be found among the rulers of the eyalet (beylerbeys): Shakhzade Suleyman, the son of Sultan Selim Yavuz—later the famous Suleyman 'the Lawyer' ('Kanuni') (1495–1566, pseudonym 'Muhibbi', wrote a 'Divan'), Zeinel Pasha (around 1527/28, pseudonym 'Zeyni'), 'Asafi' Dal Mekhmed Pasha (around 1598), and among the Kefe's muftis: 'Medkhi' Mahmud (Kara, died 1597/98, owner of a 'Divan'), as well as among the Kefe's qadis: Shemseddin Çelebi (died in 1520), Dervish Mekhmed Çelebi (died in 1531, wrote in Turkic and Farsi), Seliki Şha'ban (died in the last years of Suleyman I Kanuni's rule, 1520–1566), 'Neyli' Mekhmed (Küçük Lutfizade, died in 1592), and among the lesser clerks: Shevki Yusuf Çelebi (died in 1500s), Zihni Çelebi (died in 1510s, also a master of prose, stylist *munshi*), 'Garibi' (16th century, also a master calligrapher) [SO; TDEA; IA]. In addition to poets there are scholars, for example, from 1558 to 1565. Among Kefe's muftis was a well-known Ottoman scholar, theologian and expert in Arabic studies and philology Kemaleddin Ibrahim bin Bakhshi (Dede Dzhongi, died in 1567) and so on [IA, Akgündüz].

As evidenced by this, the 16th century in Crimea is characterised by a rich literary atmosphere encompassing almost every stratum of modern society. An abundance of authors, lively literary meetings, various literary traditions, schools, languages... As a consequence: a rising level of the mastery of poetry by Crimean authors as well as acceptance of societal themes, and critical reactions to current issues of that period, despite the prevailing popularity of romantic and philosophical lyrics and mysticism.

Literature of the 17th century. The materials on the literature of the 17th century are much more extensive. During this century Crimean Tatar literature acquires a number of brilliant names in practically every literary school. A heavy torrent of *ashyk* poetry is a supplement to *divan* poetry and religious Sufi poetry. Historical prose, as well as Sufi, and academic and religious prose, are also showcased more extensively.

As earlier, the most impressive list belongs to *divan* poetry—at least 35 representatives have been discovered so far. Most prominent are again the members of the Khan's family: nine poets, four of whom are khans themselves. Not all of their works have been preserved. Although the known legacy is enough to judge the high skills of the authors.

As for the lost written sources, the one deserving of a special mention is Jani Beg Giray's poetry—a Crimean khan in 1610–1623, 1624, 1628–1635, mentioned particularly by Halim Giray [Gülbün, 1990, p. 77]. The collection of manuscripts and early printed books in Bakhchysaray housed a manuscript of poems of a certain Jani Beg Giray Sultan until World War II [Inventory book I, no. 370]. There's a possibility they are the same person. Unfortunately the collection currently does not house the manuscript. It could have vanished during the occupation or in the post-deportation period.

Other scarcely preserved works belong to the pens of Ghazi Giray II's heirs—his sons Saadet and Husam Girays (pseudonyms 'Arifi' and 'Seyfi', both killed in 1636) [Öztuna, 1989, p. 530] and his daughter, known as Knan-zade-hanym [Seven Planets, 1832, pp. 150–151].

The latter was married to another poet from a ruling family—Rezmi Bahadır I, a Crimean khan between 1637 and 1641. His poetry has been preserved and some of his *ghazals* have been published [Crimean Literature of the Ottoman Period, pp. 78–84].

Another poetess with ties to the ruling dynasty was the 'inimitable poetess' Khan-zade Etime, Ghazi's granddaughter, and the daughter of his son-in-law, Shirin Mustafa [Sejityahya, 2004, no. 4, p. 79].

Rezmi's younger brother Mehmed IV, who ascended to the throne after Rezmi (1641–1644, 1654–1666, died in 1674 [?]) was also a talented and prolific poet. Unfortunately, his 'Divan', mentioned by Evliya Çelebi, has not yet been discovered [Nalbandova, 2000, p. 19]. According to Çelebi, this 'Divan', signed with the pseudonym 'Khani', is especially interesting for the fact that un-

like Mehmed's preserved poetry, and indeed most aforementioned authors except Gazai, it was written not in the Ottoman language, but—again, according to Evliya Çelebi—in the Chagatai language. It might have encompassed not only Chagatai itself, but the local Crimean dialect, that gravitated towards the language of the most famous Chagatai poet—‘Alī Shīr Navā’ī. Consequently, Çelebi's words can be indicative of the fact that despite the strong influence of the Ottoman literary language, Crimea continued to develop earlier poetic traditions.

Out of the later authors the one deserving of a special mention is the Crimean khan Hacı Selim Giray I (1671–1678, 1684–1691, 1692–1699, 1702–1704)—one of the most vibrant characters not only of Crimean history but also of Ottoman history as a whole [Abdulvaap, 1996]. An incredibly gifted ruler and a brilliant commander, Selim is an iconic figure in Crimean cultural history. Hajji, hafiz and member of the Mevlevi order, poet, musician, and composer (some of his poetry and musical works have been preserved), he came to prominence as a frequent philanthropist as well. He is mentioned together with dozens of names of his contemporary Crimean and Ottoman cultural figures, writers and artists [Sejtyakhya, 2004, no. 4, p. 83]. Interestingly, while not being a prominent poet, Selim inspired such a number of literary works they could be made into an anthology. Nazym Yahya (died in 1727), Shahin Giray (died in 1717), Mustafa Gevkerhi (died in the first half of the 18th century), and many other Crimean and Ottoman authors dedicated their works to him. The most well-known of those is a poem of a distinguished Ottoman poet Alaeddin Sabit (died in 1712), 'The Tale of Victory' ('Zafername') [Zafername, 1311].

The end of the century heralded the rise of another very talented poet—Shahin Giray Sultan, the son of Tokhtamysh Giray Khan (also a poet), who in 1691/92 was a nured-din of the Khan Safa Giray [Abdulvaap, 2007a]. Today Shahin Giray is probably the most well-known author of Crimean divan poetry in the Western world. He rose into prominence with a brilliantly written ghazal,

an example of visual poetry (a cyclic ode in the form of a flower) with elements of a palindrome. This specific form is called 'kalb' in Eastern poetry, from the Arabic 'centre', 'heart'. Since the beginning of the 18th century the ghazal was a favorite form to imitate among the Ottoman authors; one example of this is Sakiba Dede's takhmis (died in 1735). The poem was translated to German and subsequently published in 1856 in a well-known work about the history of the Crimean Khanate by Hammer-Purgstall [Hammer-Purgstall, 1856, pp. 255–258]. Finally, the ghazal was translated into English and published in 1861, with commentary, in the *Journal of the Royal Asiatic Society in London* [Redhouse, 1861]. A modern American literary historian, Dick Higgenson, placed the ghazal's picture on the cover of a monograph published by him on the history of visual poetry from ancient times to the 18th century, as an example of the most exquisite technique, and visually stunning execution, of a poem [Okrushina, 2003, p. 7].

Research into the works of Shahin Giray brought out other examples of his masterful poetry, particularly a poem in the mulemma genre (in this case in three languages: Turkic, Arabic and Farsi), a brilliant chronogram (tarikh) on the death of the Ottoman poet and calligrapher Dervish Fasikh (died in 1699) and others [Abdulvaap, 2007a]. We also know that one of the poet's qasida is in honour of the aforementioned Hacı Selim Giray [Seven Planets, 1832, pp. 205–207]. The author of 'Seven Planets' notes that Shahin was a great lover of flowers. He turned a settlement where he resided into a sort of Garden of Eden, and even his orders on flowers planting were written in verse [Ibid., p. 208].

When it comes to poets not from a khan's family, almost no information is available. The most glaring example of this are the poets mentioned by Evliya Çelebi. In his 'Book of Travels' he notes the large presence of court poets in the Khan's court in Bakhchysaray: Abdulummin of Kastamon (calligrapher and miniaturist), Fazli Çelebi, Feyzi Çelebi, Nedzhati Çelebi (astrologist), Nedim, Lemyi, Erani, Emir Medkhi Çelebi, and

Khasan Kadi Efendi [Evliya Çelebi, 2008, pp. 111, 117–118]. Unfortunately there is no information about them or their works.

A number of poets also appear in different written accounts; including Evliya Çelebi in relation to chronograms (tarikhi) on various Crimean buildings (mosques, madrasah, fountains, bridges etc.), or in relation to, for example, epitaphs at the Khan's cemetery in Bakhchysaray. Bakhti, Dyurri, Selyami, Kesbi, Feyzi, Zihni, Fasli, Kadri, Fetkhi, Naim, Rizai, and others: names from a sort of stone anthology of medieval Crimean poetry that has brought us short fragments of the works of poets who were possibly very prolific in their time [Bakhchysaray, 1848; Nalbandova, 2000]. To be fair, it should be mentioned that there might be 'Ottoman guests' among these authors.

However some information about a number of authors is available. Among them a large number of Kefe's poets. Talibi-i Kefe'vi is known as the author of the history of the Ottoman Empire in verse, 'Tarikh-i Al-i Osman' [Ertaylan 1958, p. 20]. Deb'i Huseyin Çelebi Kefe'vi (died 1639) was a janissary, poet and novelist [Crimean Literature of the Ottoman Period, 2000, p. 11]. Sayyid Musa Kelimi (died in 1644) was a Kefe's mufti known as a theologian, poet, literary scholar and historian. According to historical sources he received his pseudonym 'Kelimi' from Baki himself, who noted a poetic talent in the young author [Soysal, 1961a]. Modern Theodosia remains home to an architecturally astounding mosque, which was built in 1623, while Sayyid Musa was the mufti of Kefe [Brun, 1877]. His discovered poems deal mostly with religious themes [Crimean Literature of the Ottoman Period, 2000, pp. 83–84]. A lesser known poet in our time is Kefe'vi Sayyid Abdulkerim Sherifi, one of the contenders for the status of the tutor of poetry of the legendary Ashyk Omer [Ergun, 1936, p. 7].

Among these names one author is especially prominent. He would go on to become one of the Crimean divan authors most famous today: Jan-Muhammad. He wrote a written source, well-known in academic cir-

cles, of Crimean Tatar poetry in the Khan period—a poem known as 'Togaj-bek' about the events of the Cossack-Crimean war against the Polish szlachta, that in Ukrainian historiography is called the Cossack National Liberation Uprising under the command of Hetman B. Khmelnytsky against the Polish Szlachta [Aqçoqraqlı, 1930]. A number of important battles of that war (particularly the battles of the Yellow Waters (Sary-Su) and Korsun, famously ended with the alliance's victory, precisely thanks to the assistance of the renowned Crimean cavalry.

The poem, which is 17 chapters long, with 946 couplets, was discovered by the renowned Crimean Tatar historian and literary scholar O. Aqçoqraqlı in one of the coastal settlements in Eastern Crimea during the historical-ethnographic expedition of the Bakhchysaray Khan Palace in 1925. The manuscript aroused great interest both in the Crimea and in the Ukraine's academic circles. O. Aqçoqraqlı was invited to Kharkov to read lectures about his findings (at the time it was the capital of the Ukrainian SSR) and to Kiev, including to the USSR's Academy of Sciences [Shemyi-zade, 1974, p. 102]. In 1930 with the cooperation of a member of the Academy A. Krinsky he published a detailed article in a collection titled 'Studii z Krimu' ['Studies in the Crimea'].

In the pre-war period, in addition to O. Aqçoqraqlı, a number of young academics worked on the poem. Plans were made to publish an edition of the poem. However, with the start of the Great Patriotic War, all copies containing the poem were lost, and the deportation of the Crimean Tatars did not permit an immediate search for them. Today, researchers only have around 50 couplets published in an article by A. Fetislyamov in one of the pre-war Crimean Tatar literary journals [Fetislyamov, 1939].

Going by the fragments and descriptions of scholars who studied the poem, it is an example of a mesnevi poetic work in an especially popular genre at that time, *gaza-vatname* (from Arabic 'gaza'—'the war for faith') which can be translated as 'Tale of the military campaigns.' The poem describes

events from Crimean-Ukrainian-Polish history in 1647–1651, preparations to a number of well-known battles, and their progression, namely the battles of Zholty Vody (Sary-Su), Korsun, Lviv, etc. The poem's protagonists are the brilliant Crimean Tatar commander Togay Beg, Hetman of the Cossacks Bogdan Khmelnytsky, the Crimean Khan Islam Giray III (1644–1654), his kalga Krym Giray, and others. The poem ends with the death of the chief protagonist, who was also the author's relative.

A detailed description of the poem is essentially not possible due to the absence of the full text. However, this is undeniably an incredibly prominent historic-literary written monument of the Khanate period. In addition, the events that inspired the subject matter of the poem also motivated a number of Crimean Tatar literary and folk written monuments, both in verse and in prose [Aqçoqraqlı, 1930, p. 170].

Two of the poets, both of which rose to prominence in Istanbul, are worth a special mention, natives of Bakhchysaray—Hasan Vedzhikhi (died in 1661) and Lutfullakh Lutfi (died in 1703). After completing his education in Istanbul, the former went on to become Secretary of the National Council (Divan-i Humayun). He wrote 'Divan' and a valuable historical chronicle [ODKE, 2000, pp. 85–91]. As for Lutfullah (Abdullatif) Lutfi (also known as 'Tatar Lutfi'), he was a mudderi and a *cadi*, referred to as a talented poet in anthologies. Unfortunately, he did not have long to live [ODKE, 2000, pp. 127–132]. Both authors' works are published in fragments [Ibid.].

Additionally, a number of Ottoman anthologies contain brief information and examples of works by another Crimean poet popular in his time—Alidzhan (also known as Ali Qirimi, died in 1703). Several of his romantic and philosophical poems have been published [ODKE, 2000, pp. 120–126].

First and foremost in discussions of religious Sufi verses of the century, mention must be made of the works of a number of Sufi sheikh-poets. In the early 17th century, sheikh Feyzi of Kefe (died in 1645 [?]),

an historian and poet, wrote two poems in a somewhat unusual genre for this literature, 'the forty hadiths' ('kyrk hadis'): the first one in forty quatrains (*kyts*), and the second one—a *mesnevi* titled 'Ravzatu'l-ibad' [IA, Karahan, p. 471]. Works of two other sheikh-poets, father and son Afifi and Izzi, were preserved by the author of the chronicle 'Seven Planets'. Afifeddin Abdullah (pseudonym 'Afifi', died in 1640 [?]) was a famous religious leader and scholar of his time. As the son of a renowned Crimean sheikh and poet, 'Tatar sheikh' Ibrahim, the son of Ak-Mekhmmed, he perfected his education in Istanbul, and for a short time he was a professor in the leading Ottoman *madrassahs*. After returning to Crimea he served as a *cadi* in Sudak, Mangup and Kefe. Later, he was designated to the position of mufti of Kefe. In retirement, he settled in the village of Seyyid Eli in the outskirts of Kefe where he founded a Sufi order and headed it until his death [Seven Planets, 1832, pp. 152–157]. Fragments of his poems, a few Sufi *ghazals*, were written down by the author of 'Seven Planets', and in recent times have been frequently published, including translations into Russian and Ukrainian [ODKE, 2000; Gryozy; Okruzhina, 2003].

The son of sheikh Afifeddin, Abdulaziz (pseudonym 'Izzi', 1611–1694/95 [?]) was a famous Sufi sheikh and poet in his own right. According to legend, he decided to complete a course in mysticism by studying with famous Sufi teachers. He set out for Istanbul, but fate brought him to Sinop, where he studied Sufi sciences (*tarikats*) under the local sheikh Ahmed Sinopsky. After his initiation, he served as a mentor in Sinop for a time, and later returned to Crimea where he was the head of his father's *tekke*. Sheikh Abdulaziz had a good reputation among his contemporaries. This can be inferred, for example, from his designation to the post of the Crimean *cadiasker* by the Crimean khan Haji Giray (1683–1684). Nevertheless, the sheikh did not show an interest in holding such an office and soon left it. Late in life, feeling that his death was close, the sheikh went on a *hajj* to Mecca surrounded by relatives,

friends and pupils. He died there in Hijaz [Ibid., pp. 215–218].

Izzi was known for his extreme piety and complete indifference to material goods. According to legend, his only possession was a sheepskin on which he prayed and meditated, and in his spare time, composed poems. Some of his poems, Sufi *tevkheids* on the subject of divine love and spiritual self-improvement, as well as poems in the *nutuk* genre (from Arabic 'word', 'speech') are lectures from a sheikh (*murshid*) to a pupil on the Path (*salik*). These poems were written down by the author of the 'Seven Planets' collection and, similar to his father sheikh Afifeddin's work, have been frequently published in recent times, including translations into Russian and Ukrainian [ODKE, 2000; Grydzi; Okrushina, 2003].

Another creator of religious Sufi poetry of that time was the aforementioned Crimean khan Mehmed Giray IV (died in 1674). His known works are specifically religious, unlike his private poems that were collected in his 'Divan' [ODKE, 200, pp. 97–115]. However, it could be that the 'Divan' itself was not compiled in strict accordance with the rules of composing such collections, and mainly consisted of religious works.

According to sources, Mekhmed IV was a very religious person, a member of the Sufi order Mevlevi. Due to the latter he was given the name 'Sofu' ('Sufi'). It has been suggested that the preserved poems were written in the later period of his life, when the dethroned khan lived as an ordinary dervish in Dagestan. The poems convey the tragedy experienced by the poet, and which he continues to experience, his deep loneliness, unending melancholy and weariness. They are permeated with laments about the cruelty of fate, the imperfection of human nature, its depravity. The motifs of the poems are sincere repentance and prayerfulness, an emotional address to God as the only real source of mercy and compassion. The poems are not deprived of didactic themes, appeals against trusting this world and for awakening from the 'mindless dream', emerging from 'Nothingness'. Direct Sufi themes that are also present

are thanks to God for initiation into the spiritual science *marifet*, next to which 'all the Ottoman riches' mean nothing, for the discovery of the great truth *hakikat* in the depths of his own existence, etc [Tansel, 1967]. These poems are not written under the pseudonym 'Hani', which was likely previously used by the author for *divan*-style poetry, but under the pseudonym 'Kyamil' ('Perfect'), which is in line with the names usually used by Sufi poets.

Aside from them, two more authors are representative of religious Sufi poetry. However they are more famous outside of Crimea. The first of them, Seyyid Dervish Mekhmed (-Dede) Kefevi (died in 1671/62, Konya, pseudonym 'Shefi') was a dervish of the Sufi order Mevlevi. After leaving his birthplace he spent many years in Konya, in Rumi's monastery, where he died. Templates of his work, including fragments of the 'Spring' *qasida*, were published [ODKE, 2000, pp. 92–96].

The second, Abdullah bin Ali Kefevi (or the Dervish Abdi, died in 1695, Bursa), literary pseudonym 'Muti', was a dervish of another Sufi order—Gulsheniyya (a branch of the order of Halvetiyya). He spent many years in Bursa. Aside from his poetic talent, he was a prominent *zikirbasy*—a reciter at Sufi celebrations, and a composer of religious music. His poems in a popular genre of *ilyakhi* can be seen in different manuscript collections. A 'Divan' has yet to be discovered [IA, Özcan].

Ashyk poetry holds a special place in the history of the Crimean literature of the 17th century. First and foremost, it is the work of the legendary poet Ashyk Omer—the most distinguished author of not only Crimean Tatar *saza* poetry, but of Turkic *ashyk* poetry as a whole.

We must note a somewhat artificially introduced discussion among Turkish and Russian researchers that occurred over many years. The subject of the discussion was the author's birthplace: in a number of sources he was said to have been, namely, a native of the settlement Gyozeve in the outskirts of Konya [Turetskaya, 1983, p. 189]. Now,

after the seminal publications of the Crimean Tatar poet and literary scholar E. Shemi-zade [Shemi-zade, 1974], the discussion has reached a conclusion. Indirect evidence of this is the latest publications about the poet in Turkey [YYOA, Güngör].

Ashyk Omer was born and died in the city of Kezlev (Gyozleve, now Yevpatoria) in Crimea, but he spent most of his life outside of his birthplace, in constant travel across the vast Ottoman Empire. In his poems, he names dozens of places and cities from the territories of the current Ukraine, Turkey, Poland, Bulgaria, Romania, Bosnia, Greece, countries of the Middle East and North Africa.

Out of hundreds of ashyk poets, Ashyk Omer's name is usually among the first, most proficient and beloved authors. M.Köprülü calls him the most renowned *saza* poet in the history of this literature [Köprülü, 1962, p. 260], Sh. Elchin proposes, that popularity of Ashyk Omer is comparable only to the legendary Yunus Emre [Elchin, 1987, p. 15]. Many scholars of the poet's work are unanimous in the opinion that Ashyk Omer's influence over his contemporaries, as well as over ashyk poets of the following generations cannot be overstated [Ergun, 1936, p. 81].

He went down in the history of ashyk poetry as one of its most prolific authors: currently over 2000 poems and verses are attributed to him. Ashyk Omer was a poet of great talent who was a master of the craft. He was equally versatile in the vast variety of forms and artistic devices of both folk poetry and strictly classical *divan* poetry. The thematic diversity of his work is astounding. Together with romantic themes, his work encompasses social, philosophical, militaristic, religious (Sufi) and mystic motifs. His so-called 'foreign verses', full of indescribable melancholy and sadness, were especially popular.

As for genres, Ashyk Omer's work can fill an entire anthology of most of the primary genres (*tyur*) of the three main literary movements of the time. Among his poems are wonderful examples of romantic verse, the so-called 'foreign verses', descriptions of nature

(*bakharie*, *nevruzie*), eulogies (*medkhie*), epitaphs (*mersie*), examples of militaristic poems (*gazavatname*), descriptions of cities (*shehrensiz*—Istanbul, Bursa, Varna, Sinop and others), numerous examples of didactic poems (*nasikhatname*, *ibretname* etc), critics of social mores and individual human flaws (*hidzhvie*), examples of religious Sufi verses (*tevkhid*, *munadzhat*, *nat*, *ilyakhi*, *ramazanie*, *slyat-name*, *vudzhud-name*, *devrie*, *aetname*) etc. Omer's oeuvre also includes poems of the so-called 'technical' genres, namely poetic riddles *muamma* and *lyugaz*, including acrostic poems. Works in the *tekerleme* genre and political debate, *munazara*, command the most attention among the folk *dastan* poems. One of the poet's most influential works is, coincidentally, the earliest example of the genre in ashyk poetry. It is his 'Tale of Poets' ('*Shairname*'), something of an anthology of poetry with names and short descriptions of the work of some 170 poets of the past and present. It attests to the wide breadth of the author's literary knowledge [Ergun, 1936, pp. 431–434].

The same diversity can be seen in Ashyk Omer's use of different poetic forms, both traditional Turkic folk poetry (*koshma*, *semai*, *destan*, etc.) and *divan* poetry of the court (*ghazal*, *murabba*, *muhammes*, *museddes*, *mustezad*, etc.) [Ergun, 1936].

Ashyk Omer is without a doubt a great poet, who celebrated love and human dignity, social morals and fairness, sincere piety and spiritual self-improvement in his work. He was hailed as a master (*ustad*) in his lifetime, and his poetic craft was imitated for centuries [Ibid., pp. 79–95]. Taking into consideration the astonishing range of genres and thematic diversity of his oeuvre, his poetic universality, which encompasses features of all of the major literary movements of the time, the accessibility and simplicity of his language, which, at the same time is unwaveringly lyrical, Omer can easily be called the leading national poet—a man whose works were created for all, regardless of status or class.

Indeed, Ashyk Omer is still one of the most frequently published poets. His po-

ems have been translated into Russian and Ukrainian. His artistic output has been the focus of studies by the foremost Crimean Tatar, Turkish, Azerbaijani and other literary scholars. And yet, his name is legendary, and much fundamental research remains to be done.

Another ashyk of the 17th century who is often mentioned in regards to Crimea was Mustafa Dzhevheri (Gevkheri, who died in the first half of the 17th century)—a legendary poet who is usually associated with Ashyk Omer. According to long-standing ashyk tradition, he is considered to be a native Crimean, although a number of Turkish scholars allege that the poet is of Anatolian descent [Elçin, 1984, pp. 12–13].

As regards the prose of the 17th century, the most representative texts are historiographical. At present, scholars have delineated at least eight chronicles. The son of an Ottoman governor in Kefe, Abdullah Ridvan-pashazade, (writing under the pseudonym 'Abdi', died in the 1640s [?]) in his 'Chronicles of the Kipchak Steppe' ('Tawarikh-i Desht-i Kipchak') describes events in Crimea from Mengli I (1475) to the time of Sultan Murad IV's rule (1623–1640) [Zajonchkowski, 1969]. The text is an important chronicle, particularly as regards the circumstances of the Crimean revolt of the early 17th century. It was published in Warsaw in 1966 by A. Zayonchkovsky [Zayonchkovsky, 1966].

The aforementioned mufti of Kefe Seyyid Musa wrote a text on the history of Islamic countries titled "The Beacon of History" ('Shemsu't-Tevarikh') [Bursali, 190. p. 32]. The manuscript has been preserved in at least two lists, but its significance in relation to the subject of Crimean history has never been studied [Öztürk, 1989, p. 39].

"The History of Khan Islam Giray III" of the stylist (munshi) of the Crimean divan and poet Mehmed Senai describes events of the middle of the 17th century—Crimean military campaigns along with the Zaporozhian Cossacks under the command of Hetman B. Khmel'nitsky against Poland in 1648–1650. The work was commissioned by the prominent Crimean vizier Sefer-Ghazi Aga. In

the foreword, the author explains his intention to put the name of Islam III into 'The Book of Tsars'—'Shahname of the Chinggis Khan's House' [Senai, 1998, p. 4]. The chronicle was published in Warsaw in 1971 by Z. Abrahamowicz [Senai, 1971]. Later it was translated into Russian and Ukrainian [Senai, 1998; Turanli, 2000]. Crimean literary scholars have suggested that the aforementioned poet Dzhan-Mukhammed, the author of the poem 'Tugai-Bek', could be its author [Senai, 1998, p. 3].

"The history of Muhammad Giray" by the Dervish Mukhammed, the son of Mubarek Giray, describes events of Crimean history between 1683–1703. The only preserved copy is kept in Vienna, and has yet to be published [Sejityagya, 2003, p. 15].

Some of the chronicles that were not preserved deserve special mention—a work by Hairi-zade titled 'Takvim', and two anthologies: 'Medzhmua', by Abdul'veli Efendi, employed by the author of 'Seven Planets', and 'The Collection of Events' ('Vakiat med-jmuasi') by Mesuda Efendi who, according to Smirnov's account, was a mushavir (advisor) of Prince Shekhabaz Giray-Sultan, and who perished at the hands of the Circassians in 1111 (1669/1700) [Ibid., p. 14].

In addition to the chronicles written in Crimea and dedicated to the history of the Khanate, another chronicle produced outside of Crimea also contains fairly important information in this context. This chronicle's author is the aforementioned Bakhchysaray poet Vedzhikhi Hasan Çelebi (died in 1661, Istanbul), and it is known by different titles—'History of Baghdad's Subjugation'. 'The history of Vedzhikhi', and others. 14 years after the author's death, the work was translated into Italian, although it was never published. The copies are kept in collections in Istanbul, Leiden and Vienna [TDEA, c.8, p. 522].

While on the subject of Crimean historiography of the 17th century, mention must be made of the work described by Evliya Çelebi and known as "The history of Tokhta-bey" ('Tevarikh-i Tokhta-bey') [Evliya Çelebi, 2008, pp. 230–237]. Thanks to a

traveller, we know the summary of this lost chronicle, which Evliya Çelebi describes as having been kept in the family of the author's descendant, the Khan's children's tutor, atalyk Imram Kodzhi. According to the summary, it was written in the Chagatai language, and encompassed events of the 13–14th centuries; it was written "gracefully, distinctly and eloquently", and it was read in a declamatory fashion—*tilyavet* [Sejityag'ya, 2003, p. 14].

In addition to historical prose, there are examples of Sufi prose as well. Namely, the aforementioned sheikh Haydar-zade Muhammad Feyzi' (died in 1645/46 [?]) wrote a number of such texts. These have not yet been the focus of scholarly research [Bursali, 1990, p. 11].

Newly-discovered academic works are few and far between. They are mostly represented by texts on various fields of Islamic sciences by Crimean theologists of that time—Ebu-l-Bek, Mukhibuddin Ejjub Kefevi (died in 1684, Istanbul), Abdunnafi bin Abdulveli (died in 1704, possibly the son of the aforementioned historian Abdulveli Efendi) [Bursali, 1990, p. 20], Huseyin Kefevi ('Tatar Imam' (?–?)) and others. Out of them all, Ebulbeg Mukhibiddin—the son of a Kefe's mufti, historian and poet Seyyid Musa-Efendi and later a Kefe's mufti in his own right, would go on to become one of the most well-known scholars of the whole Ottoman science. The is primarily due to a fundamental work titled 'Kulliyat'—sort of an encyclopedia of terms used in religious (Islamic) sciences, philosophy, logic, philology, etc. Recognised as the most accomplished reference book of its time, even in our days this text remains popular: since 1837 it has been published numerous times in Istanbul, Bulak (Egypt), Beirut, Tehran, Damascus [IA, Kılıç].

As we approach the end of this survey, we should mention the Ottoman authors of Crimea. The father of the distinguished satirist poet Omer Nefi (died in 1635), Mekhmed Beg, was a presence in the Khan's court at the turn of the century. Later, Crimean motifs could be found in Nefi's work: in the form

of quite unflattering words for his parent in one of his satirical pieces, and in the form of two odes to people who, on the contrary, played a positive role in the poet's life: Girays khan Jani Beg and Nureddin Husam, son of Ghazi II [Karahana, 1992, pp. 3, 10–11]. During Rezmi Bahadyr's rule, the khan's nedim was an Ankar poet-dervish and traveller Lutfullakh Abdi Çelebi (Bejzade, died in 1646) [TDEA, c. 6, p. 106]. When Islam III prevailed in Crimea, it was home to the poet-mevlevi and calligrapher Ibrahim Dzhevry (died in 1654): in Gyozev Evliya Çelebi would record two of his chronograms—at the inn and on the fountain, dated 1062 (1651/52) and 1061 (1650/51) [Evliya Çelebi, 2008, pp. 54, 56]. During the rule of Mehmed IV, namely in 1662/63–1664/65, a famous Istanbul Sufi sheikh, writer of a Divan and poet-mevlevi Hajji Ahmed Dede resided in Crimea (around 1711) [SO, 1996, c.4, p. 1219]. It is notable that Mekhmed IV, also a member of the Mevlevi order, would be opening a monastery in a historical outer region of Bakhchysaray—Aziz—during this very period [Gülbün, 1990, p. 97]. This suggests that perhaps sheikh Hajji Ahmed Dede's presence in Crimea was connected to that event.

The historian Hasanbejzade Akhmed Pasha was one of the poets living in Kefe (died 1636/37) [TDEA, c.4, pp. 129–130]. In the early 1690s, Alaeddin Ali Sabit (died 1712), a famous Ottoman divan poet, would spend two years as a city *cadi* in Kefe [YYOA, Şentürk]. This period corresponds to the period of the famous Selim Giray's rule, and it is to him that Sabit had dedicated a poem 'Zafername' earlier (also known as 'Selimnâme' and 'Gaza-name', 426 beyts, published in Istanbul in 1882 and 1893) about Selim I and his victories in the battle against the Russian army under Perekop in 1687 and the Austrian army in 1690 [Zafername, 1311]. The post of a *cadi* in Kefe was possibly a reward provided to Sabit for his literary works.

Another poet who resided in Crimea for long periods of time during his lengthy travels was the dervish Mekhmed Kirimi (died in 1708) [ODKE, pp. 168–170].

While on the subject of the Ottoman authors of the 17th century who left their mark on Crimea's literary history, another name must be mentioned. Evliya Çelebi travelled to Crimea numerous times and recorded in his "Book of Travels" valuable insights into various aspects of socio-political, cultural, religious and educational life in the Khanate of that period. Evliya Çelebi is especially appreciated for recording dozens of names of poets and writers—members of Crimea's literary life of the time, for providing valuable information about their life and examples of their work (see above). In addition to poetry, it is due to Çelebi's effort that the so-called 'History of Tokhtabay', recorded by a traveller in Bakhchysaray, was preserved (see above).

The literature of the 18th century Already, from the end of the 17th century, starting with the famous campaigns of the count Golitsyn (1687, 1689) and the Azov campaigns of Peter the Great (1695–1696), the Crimea faced the most serious threat to the state's very existence. This was sharply demonstrated by the Crimean campaigns of Münnich and Lacy in 1736 and 1737—fifty years before the annexation of the Crimea almost all the cities of the peninsula were struck by the tragedy of devastation, and by cultural and political shock. Alas, even cultural records, including the most vulnerable carriers of spiritual culture—manuscripts—and official documents were burnt. Written records testify that the richest collection of the khan's palace library in Bakhchysaray [Inalcık, 1992, p. 425] wasn't spared this tragic fate.

Nevertheless, despite this disheartening picture, interest in Crimean literature was not lost. It is clearly traced in the dozens of names of poets, historians, theologians, and those of their manuscripts which survived, as well as in the various data about the works which were lost. A peculiar feature of the artistic and literary work of that period is the significant increase in motifs concerning the social and everyday life of the Crimean society of that time.

The poetry of the divan is still the most extensive. At the top of the century's lists of

poets are representatives of the khan's family. At the beginning of the century the Shahin Giray sultan is still creating his works (see above). At the same time the future Crimean khan Mengli Giray II (1724–1730, 1737–1739), famous for his special inclination to historical and literary work [Sejtyagayev, 2003b] and also to Sufism [Abdulvaap, 2008], appears onto the poetic stage. Some samples of his creative work have been preserved and repeatedly published [Literature of the Ottoman Empire, 2000, pp. 193–194].

Fate has favoured more the poetic heritage of Said Giray, the son of the Crimean khan Saadet III, who was Edisan's serasker (died after 1767/68). The manuscript of his 'Divan' was preserved in Turkey and was published there in 2001 in Roman letters, having become the object of study in recent years [Karaköse, 2001]. O. Tavukçu, who worked with 'Divan', points out the outstanding talent of the author, a representative of the so-called 'Indian style' school, 'Sebk-i Hindi'. According to the researcher, 'Divan' embraced more than 200 works of the poet including a number of examples of prominent genres in the form of mesnevi: a tawhid (glorification of the Creator, 68 beits), a naat (an ode to the Prophet Muhammad, 29 beits), an ode to four 'just' caliphs (26 beits), 'Miradzhiye' (a poem about the ascension of the Prophet, 69 beits), another naat in the ramazaniye genre (60 beits), and also a poem containing the author's reflections on the art of poetry (89 beits), amongst others. The researcher also pays attention to the motifs of the numerous deprivations suffered by Said Giray and of the boundless homesickness which is felt in his ghazals [Tavukçu, 2009].

There is also some information about the poetic attempts of the last Crimean khan—Shahin Giray (died 1787) [Muallim, 1986, p. 323].

Apart from representatives of the khan's family, history has provided us with a fairly long list of other poets. At the beginning of the century a poet and scientist from Karasu-Bazaar, Khilmi-effendi, gained much popularity [Seyityakhya, 2004, no. 4, p. 84]. Now researchers possess his qasida in

honour of the Crimean khan Devlet Giray II (1699–1702, 1709–1713), which was written in the wake of the well-known Russo-Turkish stand-off on the river Prut in 1711, which nearly ended with the disgraceful capture of one of the main characters of these events: Peter I [Ibid., no. 5, pp. 88–89]. It is interesting that the author wrote some kind of appendix to the ode: a poetic miniature in twelve (!) different languages, containing unfriendly wishes addressed to 'The White Tsar'.

Another poet of Karasu-Bazaar was the famous historian and theologian, Gafuri Abdulgaffar bin Hassan Qirimi (died after 1744) [Seyityakhya, 2004, no. 4, p. 86]. The historian Said Giray mentioned particularly among his poetic works, 'the History of the Crimea' in verse. Unfortunately this hasn't been found yet [Ibid.]. Now the poetic heritage of Gafuri is considered lost, and only a small religious poem with the radif 'Ya Rabb' ('Oh Lord!') is at our disposal [Index, 2007, p. 113].

Like Gafuri and Said Giray, many other Crimean historiographers of the century were poets as well. Hurremi Çelebi, better known as the author of the so-called 'Brief history' [Smirnov], is the author of two poetic 'Divans'. And if one of them, which is kept in the manuscript collection of the Khan's palace in Bakhchysaray, is written in a traditional manner with the prevalence of love poems and philosophical poems [Inventory book II, no. 783], the second one (from the Berlin State Library's collection, broke fresh ground in the history of Crimean classical poetry [Kellner-Heinkele, 1982]. 'Divan' abounds with the descriptions of everyday Crimean life, in particular, that of the cities of Bakhchysaray, Karasu, Akmesdzhit, etc. A number of poems are devoted to various influential Crimean people of that time, especially to the representatives of the heads of noble families among the Crimean steppe-dwellers—the Nogais. Those poems with sharp criticism of social morals, seen particularly in the poem 'Edisan-name', for example, are especially captivating. Folklore motifs, which are skilfully woven into the text's fabric—for example, the names of the well-known na-

tional dastans ('Dede Corcoud', 'Adil Sultan' and others), traditional tools, various ethnographic details, and so on—can be seen in a number of ghazals [Seyityakhya, 2004, no. 5, pp. 90–94].

The poetic heritage of Rizai (Sayyid Muhammed Riza, the author of the widely-known chronicle 'Seven Planets' [see below]) is less known today. Nowadays, in the absence of 'Divan', it is limited to separate poetic fragments, including those in Farsi, which decorate his famous work on the history of the Crimea.

The heritage of the poets Edib, Derdy, Mudzhemi, Hyfzi, and Piri, famous for the single burial epitaphs on the territory of the Khan's cemetery in Bakhchysaray [Bakhchysaraysky, 1848], remains almost unexplored. Nothing is known about the poet Sheikhi—the author of a skilful poetic chronogram on the well-known 'Fountain of tears' in the Khan's palace in Bakhchysaray [Abdulvaap, 2007v].

In addition, the chronicle of Said Giray provided us with the names of poets, now forgotten: Ismail Mirza (known also as a calligrapher—a hattat), Mukhammedzhan-effendi (according to Said Giray, 'the best poet of the Crimea'), Khamid-effendi (with the pseudonym 'Khamdi', a calligrapher), Pir-Mekhmed (with the pseudonyms 'Piri' and 'Kufri'—possibly the author of one of the epitaphs; see above), Osman-effendi (who came from the small mountain village Kok-Koz', a preacher and a mudarris), and also two scientists and poets from Budjak—Dagy'stani Mekhmed and Abdurrezak-effendi [Seyityakhya, 2004, no. 4, pp. 85–86]. Besides, a certain Medadi – the secretary (Kâtip) at the court of Saadet Giray IV and Mengli II – is mentioned by O. Aqçoqraqlı [Aqçoqraqlı, 1930, p. 165].

The works of the Crimean poets who, by a twist of fate, found themselves in the capital of the Ottoman Empire—Istanbul—are better known. Rakhmetullakh Sheriffe (died after 1720) received his education in Istanbul, and was a qadi [Crimean Literature of the Ottoman Period, 2000, pp. 330–332]. Hafyz Mekhmed Lyayikh (died 1748, Istanbul)

reached the high position of being the Anatolian *kazasker*, and made a name for himself as a skilful calligrapher [Ibid., p. 14]. Rakhmi Mustapha from Bakhchysaray (Qirimi or 'Tatar', died 1751, Istanbul) became an official historiographer (*vakanyuvis*) at the Ottoman court. His 'Divan' was preserved in a number of copies in various of Turkey's manuscript collections [Ibid., pp. 195–196]. As a poet he joined the ranks of the recognised Ottoman poets of the century, and his philosophical poems became especially popular. He was also a recognised master of the poetic chronogram the *tarik*, his 'Divan' contains 117 examples of this genre [Horata, 2006, pp. 505–506]. The poetic works of Rakhmi became the object of study, and some poems from his 'Divan' were published (one of them presents an ode devoted to Jalal ad-Din Rumi) [Crimean Literature of the Ottoman Period, 2000, pp. 196–212]. Omer Besim (died 1781) was an official; in one of the manuscript collections of the Istanbul Süleymaniye Library there is a selection of his works consisting of 34 ghazals, 18 *kyts* and five chronograms. Two ghazals were published [Ibid., pp. 277–279]. Furugyi Çelebi was known as a skilful poet who wrote in three languages [Ibid., p. 15].

The religious Sufi literature of the century is represented, first of all, by the works of a number of Sufi sheikhs. Mekhmed Fakri, son of Sayyid Hamid of the Crimea (died in 1766 [?], Karasu-Bazaar), was a famous sheikh of the brotherhood of Sezai (Halveti-Gulsheniyya's branch). Now, about three dozen of his poems, mainly in the *İlahigenre*, are well-known: some on the topics of divine love, others glorifications dedicated to the Prophet Muhammad, as well as various edifications in the best traditions of Yunus Emre and his followers [Abdulvapov, 2008].

The works of the sheikh Shuayb Çelebi, the son of the sheikh Abdu-s-Samed (died 1766 [?], Istanbul), the tutor from the well-known Crimean Sufi monastery in the settlement Koledzh, near Kefe (the Naqshbandiyya brotherhood), and the father of the famous sheikh-poet Ismeti (see below), haven't been found yet. O. Murasov mentions him as the

author of numerous poetic works, in particular *ilahi*-hymns [Abdülvahap, 1999, p. 10].

The heritage of the Crimean Sufi authors who, by a twist of fate, found themselves outside the Crimea is, once again, better known. Selim Baba Qirimi (or Selim Divane, died 1756/57, Köprülü) was a very famous sheikh of the Qadiriyya order who taught in the Balkans and spent his last years in the monastery in the town Köprülü, on the territory of present-day Bulgaria, where he died [Divane, 2004, pp. 11–20]. He has become famous for his sincere religiousness and frequent ecstatic states, which brought him the alias 'Divane'. He is the author of a number of Sufi treatises and a 'Divan'. Two of his treatises have been repeatedly published in Turkey in recent years; their topics cover various aspects of the theory and practice of Sufism [Crimean Literature of the Ottoman Period, 2000, pp. 214–268]. As for 'Divan', it has not been found yet; other separate famous poems, including the ones from the above-mentioned treatises, have been published. They represent samples of Sufi *tevhid* and *ilahi*-hymns with motifs of sincere love for God, longing for Him, of passionate languor, readiness to sacrifice oneself for the sake of reuniting with God; written in the best traditions of romantic Sufi poetry [Ibid., pp. 268–276].

Many more Crimean sheikhs became famous in Istanbul. Dervish effendi (died in 1735) was the sheikh of the Khalwatiyya brotherhood, and taught in one of the Istanbul cloisters; he was also a preacher in the well-known Süleymaniye Mosque. Written sources mention him as the author of very popular *ilahis* [SO, 1996, vol. 2, p. 411]. 'Tatar' Ahmed (died 1743/44, Istanbul) was the sheikh of the Naqshbandiyya order, and taught in the famous Istanbul monastery of Emir Bukhari. He wrote the commentary on Sadreddin Konevi's work '*Miftakhu'l-gayb*', but its fate is still unknown [Bursalı, 1990, pp. 11–12]. Hamid Bi-Neva (died in 1771/72), from the sheikhs of the Khalwatiyya order, is the author of the treatise in Turkish '*Risale-i Tewkhid*'—about the theory of the 'unity (integrity) of existence' ('*wakh-*

det i-wudzhut'), which was later published [Bursalı, 1990, p. 11]. Besides the treatise, 1000 ilahi are of his authorship, according to written records [Encyclopedia of the Turkic Literary Language, vol. 4, p. 86].

The historiography of the century is sufficiently representative and consists of a number of very significant examples of the genre. At the beginning of the century, under the Crimean khan Fetkh Giray II (1736–1737), the secretary of the divan, Ibrahim bin Ali Kefeve, wrote the treatise called 'Tevarikh-i Tatar Khan ve Dagystan ve Moskov ve Desht-i Kipchak ulkelerindir' which recounts the history of the western Tatars, the Nogais, the Kuban Tatars, the Cossacks of the Ukraine, the Moscow and Russian states, Dagestan, and also of Chinggis Khan, Jochi, and his successors [Seyityagjya, 2003, p. 15]. The work mentioned in the copy of 1789 (1213) was published in Pazarchik (Romania) in 1933 [Tevârih-i Tatar Han, 1933].

Abdulgaffar Qirimi, who was mentioned above, Hasan's son, the qadi and the secretary of the divan, wrote a very detailed story called 'Umdet-ut-tevarikh ve-l'-akhbar', recounting the history of Islam, the Golden Horde, and the Crimean Khanate—from the creation of the world to Selyamet Giray II [Seyityagjya, 2003, p. 15]. It was published in Istanbul in 1924/5 [Umdetü't-Tevârih, 1343]. As has been stated above, the 'History of the Crimea' in verse, still undiscovered, was also written by the same author.

Seyyid Muhammed Riza (died in 1756 [?]), from the famous family of sheikhs of the Crimea, is the author of possibly the best-known work in the sphere of Crimean historiography [Seytyagjyaev, 2003]. His book 'Seven Planets in the News about Tatar Kings', containing the most detailed data on the socio-political, religious and cultural life of the Khanate since its foundation (and before) until the rule of Mengli Giray II (1724–1730, 1737–1740), became the reference book on Crimean history for almost all domestic and foreign researchers. The chronicle, which was preserved in a number of copies, was published in Kazan in 1832

under the editing of M. Kazembek [Seven Planets, 1832]. The particular interest in this chronicle is elicited by its information on literary life in the Crimea. The book includes examples of writings by a number of Crimean poets (Gazai, Rezmi, Kyamil, Afifi, Izzi, Shahin, etc.), some of which were preserved only thanks to Riza.

One more Crimean chronicle—the 'History of the Crimea', by the historian and poet Hurremi Çelebi Akaj, has been long considered an adaptation of 'Seven Planets' [Inventory book II, no. 150]. More serious researches have revealed a considerable extent of the original materials there [Smirnov, 1887, pp. 14–15]. This work was one of V. Smirnov's main sources and was referred to as the 'Brief History'. The copies in St. Petersburg, Kiev, Egypt and Bakhchysaray are also well known.

The chronicle of Said Giray, the son of the Crimean khan Saadet III, named 'Said-Girey tarikhy', has been introduced into active scientific circulation quite recently, following the research of the famous German turcologist, Barbara Kellner-Heinkele [Kellner-Heinkele, 1975]. It contains the richest material concerning the Khanate's life as observed by the author—the serasker of Edisan. The details of the khan's family life and of the life of the Nogai hordes outside the peninsula are of special interest. The chronicle contains short characterisations of more than a hundred well-known representatives of the Crimean noble families and ulema scientists, including poets. Two copies of the work known today are preserved in the State Library in Berlin [Tarih-i Said, director] and Paris.

Among the historians who were known in Istanbul we will note Mustafa Rakhmi (also known as Tatar Rakhmi, died 1751), who, as has been stated above, became the official court historiographer (vakanüvis). His historical works provide a description of the Ottoman diplomatic mission to Iran in 1747 called 'Sefaretnâme-i İran' [Krachkovsky, 1957, p. 641] There is evidence that he wrote a work on the history of the Crimea, but its fate remains unknown [Ibid.].

Speaking of chronicles, one should recognise the considerable literary and artistic value of these works [Seytyagjyaev, 2005]. It should be also noted that, as a rule, they contain much precious information concerning the literature of the corresponding period. In this respect one cannot but mention the work by Sayyid Muhammed Riza: from the poetic fragments (see above) which he included in his historical narration, the whole anthology may be compiled. In the same respect the chronicles of Abdulgaffar Qirimi and Said Giray are also quite interesting.

Among the authors of scientific treatises (on theology, law, philology etc.) we know today are: Hilmi (died in the first quarter of the 18th century), Abdunafi b. Salim Qirimi (died after 1719), Abdulgaffar b. Hasan Qirimi (died after 1744), Mustafa Rakhmi (died 1751), Omer b. Salih (died around 1746/47), Muhammed Kefevi (died 1772/73 [?], Kudus), Akkirmani Mekhmed b. Hadzhi Hamid Mustafa Kefevi (died 1760). The last two authors were especially prolific, records note that they wrote, respectively, nine and eighteen treatises, some of which were published [Bursalı, 1990, p. 19; Encyclopedia of Islam, Yıldız].

From the translated literature it is possible to point out a Turkic translation, from the Arab language, of the famous Sufi treatise of the Central Asian spiritual mentor and poet Abdullah Ansari al-Kharavi (died 1089): 'Menazili's-sairin' ('Stops on the Way'), accomplished by the sheikh-poet Mekhmed Fakri and kept in the Istanbul collections [Bursalı, 1990, p. 10].

In the 18th century, as well as in the previous period, Ottoman authors were present in the Crimea. Among the poets of the divan we will note Osman Kyunkhi (died 1716), who was an official in Kefe [Encyclopedia of the Turkic Literary Language, vol.6, p. 42]. Here the Sufi-poet, the writer of 'Divan', Abdullah Sydki spent three years as the sheikh (died 1747) [Encyclopedia of the Turkic Literary Language, vol. 8, p. 1]. The author of the anthology, also a poet, Abdulfettakh Shefkhat (about 1826/27), born in Baghdad, was the secretary at the court of the last Crimean khans. His 'Tezkire-i shuara' contains information

about 117 poets of the period 1730–1814 [Encyclopedia of the Turkic Literary Language, vol.8, pp. 114–115]. Another court secretary in Bakhchysaray was the poet Etimi (died 1753), the writer of 'Divan' [Encyclopedia of the Turkic Literary Language, vol. 8, p. 592].

Alongside the poets we observe the presence of Ottoman historians in the Crimea. So, in the period of the second rule of Mengli Giray II (1737–1740) in Kefe, Numan Ebu Sekhl Salikhzade (died after 1755) holds the position of a military judge (hordu kadysy). Later he will describe his Crimean impressions in the historical work 'Tedbirat-y Pendside' [Krachkovsky, 1957, pp. 641–642]. In the period of the first rule of Selim Giray III (1765–1767) the historian Suleiman Shamdanizade (Fyndyklyly) (died 1779), the author of the work 'Myuriu't-Tevarikh' is present in the Crimea [Encyclopedia of the Turkic Literary Language, vol.8, p. 64].

The details of all these authors' stays in the Crimea, as well as the reflection of their impressions of Crimea in their writings, certainly provoke interest. The latter has not yet been studied systematically.

'The Black Century' (Kara Asyr). At the end of the Khan's time in the sky of Crimean classical literature flashed the star of another bright author: the historian and poet Khalim Giray sultan (1772–1823), the writer of a 'Divan' and the author of a well-known work on the history of the khan's ruling dynasty—'The Rose Bush of the Crimean Khans' ('Gülbün-i Khanan') [Divan-ı Halim, 1991; Gülbün, 1990]. Alas, Halim would spend the most part of the life outside of the Crimea, like his son, the poet Shakhbaz Giray (died 1836) [Bursalı, 1990, pp. 320–321].

Both of them would join the ranks of the Crimean diaspora, which formed very fast as a result of the large-scale emigration which took place in the territory of the Ottoman Empire. From the emigrants' milieu came a considerable number of outstanding personalities—famous statesmen, scientists, educators, artists, religious authorities, Sufi sheikhs, etc. who would be the pride of the Ottoman political and cultural elite of the end of the 18–19th centuries [Abdulvaap, 2004]

Among them there is a whole outstanding constellation of poets, men of letters, prose writers, and authors of treatises on various branches of religious sciences and mysticism: the poets Abdullah Ramis Pasha (died 1813, author of 'Divançe', publ. in 1846/47), Ferrukh Ismail (died 1841) and his son Ziver (died 1829), Mekhmed Said Pertev Pasha (died 1837, author of 'Divan', published 1840), Ebubekir Rifat (died in 1830, author of 'Divan'), Fazyl Mekhmed Pasha (died 1882, author of 'Divan'), Salih Nesim (died 1842), Mekhmed Nuzet (died 1887), Refakhi Hacı Giray (1815–?), Zekeriya Nig'yakh (died 1819), Mikhrabi (died 1920, from Gerayev) and the authors of religious and Sufi treatises Hidzhabi Abdalbaki (died 1822/23), Qirimizade Reshid Ahmed (died 1863), Abdusettar-effendi (died 1887), etc.

All these authors should be considered in the context of the divan literature of the Khan's period. In the Crimea this literature would practically cease to exist: the condi-

tions contributing to its coming into being and its development would disappear. Today not a single (!) name from the literature of the Crimean divan of the 19th century is known. The same fate, however, awaited the representatives of religious and Sufi literature too. The national poetry today is actually represented by only two or three names. After the splendour of the previous centuries this emptiness is especially striking. The Crimean Tatar literature, as well as all the culture of the Crimean Tatars in general, was plunged into the shock and crisis that lasted for many decades in its historical homeland.

It ended exactly 100 years after the annexation of the Crimea—with the actions of the outstanding Crimean Tatar educator, public figure, editor, writer, and publicist, I. Gasprinsky (1851–1914). His activity and the newspaper 'Tardzhe-man' in particular opened a new page in the history of Crimean Tatar literature.

§ 4. The Medieval Tatar Costume

Mikhail Gorelik

Before we start exploring our topic, we should determine its temporal and ethnic borders. Since in the previous volumes of 'Tatar history' the history of the costume wasn't addressed in detail (the costume was presented only as a number of reconstructions by the author of these lines), it seems to be necessary to start nearly from the ancient times. But as this volume sums up the results of the development of the Tatar ethnic groups of the Middle Ages, it seems appropriate to study the costume of the main ethnic groups which served as the base for modern Tatar ethnic groups such as the Kazan, Astrakhan, Siberian and Crimean Tatars, and also the Nogai and 'Lithuanian' Tatars (Lipki).

Quite a small number of books deals with the Tatar costume: most of them were published in the 90s of the 20th century. They are exceptionally rich in ethnographic material: clothing and photos from museums. Illustrated sources were referred to less—only of the 18–19th centuries. And the illustrat-

ed monuments of the 16–17th centuries are quite sparse. The absence of earlier records in these editions is understandable: according to the Soviet tradition, the Golden Horde period was almost completely ignored; the pre-Mongol period from the 12th till the beginning of the 13th century for some reason was not studied, most likely because of the complexity of the problem. And only the ancient Bulgar costume, owing to the extreme expressiveness and richness of the archaeological funeral complexes of the 9–10th centuries, was favoured with being described and even reconstructed. But this credit belongs to archaeologists rather than to historians of the Tatar costume.

It appears necessary to consider the data—archaeological, visual, and written—on the early Bulgarians and Hungarians of the 8–9th centuries, on Volga Bulgaria of the 11–13th centuries, the Polovtsians of the 12–13th centuries, the Central Asian Tatars and Mongols of the 10–12th centuries, the

Chinggisid states of the 13th century till the beginning of the 15th century, and European realistic images of Tatars, ethnographic descriptions and other documents, as well as the original objects of the 16th century up until the first half of the 18th century.

The costume of the ancient Bulgars

Archaeological materials on the ancient Bulgars are usually confined to dress made of metal. For men these are waistband fittings, for women, waistband fittings, the metal furnishings of dresses and headdresses, and jewellery. The mens' costume of the early Bulgars was reflected in illustrated sources. On the Byzantine miniature of Vasily II's manuscript 'Menologion', created in 1017 and stored in the Marciana Library in Venice, we see detailed images of Bulgarians/Bulgars, slashing the Christians with their swords. They are wearing caps with a cone-shaped fur cap-band, round at the top, and trousers with narrow trouser-legs worn untucked. Kaftans of a length stretching over the knees are especially interesting: this is obviously a whole-cut robe with narrow fitted top, long narrow sleeves and with a sharply cut hem/skirt, a little lower than the waist. The skirt is slightly flared and for easier riding in the saddle, cuts are made to each side. The top part has a V-shaped collar and a straight cut down the vertical axial on the chest until the cut line. The hems of the cut are connected with hinged buttons, and by loops with buttonholes sewn on them. The collar is trimmed with fur and its ends are loose, not joined under the throat. Fur lining is seen at the bottom of the hem too. The kaftans of the Danube Bulgars cut in such a fashion find a bright illustration in the Bulgar toreutics of the Volga region in the 9–12th centuries. Moreover, on the mid-calf kaftans on the engraved and stamped male figures, such details as the folded hem/skirt are emphasised. This detail was popular in the costume of the nomads of Central Asia, at first in the women's skirts of Sakae of the 4th to 3rd centuries BC, and later, in the 2nd century BC to the 5th century AD, already in the men's wrapover kaftans of the Hunnic

and early Turkic tribes. At the end of the 5th century the Bulgars brought a short, whole-cut, men's dress, with a cut skirt which could have folds, all around or only on the sides, to Eastern Europe. The Bulgars/Bulgarians spread this style among the peoples of the North Caucasus and Transcaucasus, especially in Georgia, and also further, to the west of Europe. Upon its arrival the Bulgarian kaftan became the most popular garment of the highest levels of the society until the 15th century. It was equally popular with the Polovtsians of the 11–14th centuries: both among the nomads of the southern Russian steppes, and among the dwellers of the Hungarian, Transylvanian and Bulgarian nomadic camps. Only the Byzantines long 'disdained' to wear the 'barbaric' attire of their enemies, the Bulgarians (in Byzantine it was worn only by people of the lowest professions: circus performers, dancers and musicians). But shortly before the fall of the empire of the Romans they adopted it... from the Hungarian and Bulgarian Polovtsians / Cumans / Kuns. The boots on the Bulgar toreutics are depicted with high and narrow boot tops, with side seams. But one written source reveals narrow trouser-legs, like in the Byzantine miniature, with a wide side edging. This is one of the peculiar features that is similar to the costume of the Turks of Altai, reflected in the rock carvings of this region. In the illustrated records Bulgar/Bulgarian male haircuts of two different types are shown. It is either long locks hanging down on one side of a shaved head (Danube Bulgaria and partially of Volga Bulgaria), or a short haircut (Volga Bulgaria). Now it is difficult to say whether this difference was connected to tribal distinctions or social status. It should be noted that the Bulgarian haircut radically differs from the haircut of the ancient Turks. Their hair was always very long and reached the waist—it was worn loose, and was tied up with a ribbon around the forehead by the most high-ranking man at a particular place and time, whilst all others wore it in several braids.

As we see, the men's costume of the early Bulgars defined in many respects the ear-

ly medieval fashion of Europe. At the same time it didn't fully correspond to the men's costume of the ancient Turks.

The ancient Turkic costume is most well-known thanks to the images of the 8th to 4th centuries: the Central Asian stone sculptures and rock carvings, the Sogdian painting and illustration, and to Chinese fine arts. In recent years as a result of the archaeological excavation in the north of the People's Republic of China scientists discovered a number of original samples of textile clothing in a good condition. Judging by these and by the discoveries of separate fabric samples, Turkic people widely used expensive patterned fabrics, mostly from silk of Chinese, Sogdian, and occasionally Iranian origin. But the metalwork of belts and thongs which tied together the tops of the boots are found in many places, including the living places of the ancient Bulgars. Generally speaking, boots were a kind of 'brand' of the Bulgar's. It is demonstrated by a fabulous annalistic entry in the 'Tale of Bygone Years' that the Kiev prince Vladimir Svyatoslavovich, inspecting the bodies of killed Bulgar soldiers on the battlefield, remarked that it was difficult to defeat completely these people in boots and it was better to be friends and trade with them.

The costume of the Hungarians (Magyar, Madzhar, Mishar-Meshchera) in the 9–10th centuries also belonged, most likely, to a Turkic complex. This could be determined by the old and close connection of their ancestors in the southern Urals with the Bulgarians' and the Khazars' ancestors, the Oghuz and Oghurs. It is not by chance that the ancestors of the Hungarians have appropriated the 'Oghurs' (Old Russian 'Ougri') ethnikon. It is confirmed by the Old Hungarian images of the Hungarians that are engraved on the silver bowls and dishes found in the Urals. There we can see the riders in rather long kaftans, covering their knees, with a leather belt and in boots with quite high boot tops, becoming broader towards the top. The boot tops had a side seam and the joints were cut in the form of braces.

The main difference between the Old Hungarian costume and the Old Bulgarian

one consisted in the character of the metalwork. The fact is that the old Hungarian costume was decorated with magnificent silverwork which was much richer than the costume of their contemporaries from the steppe. This may have been connected to the Ugrian peoples' attitude to silver, which they held as sacred. This was vividly demonstrated by the abundance of silverware that had been stored and is stored today in the Ural taiga in the form of different treasures devoted to their gods. Silver bead plates not only covered the belts and shoe thongs: they covered the top of boot saddles and trimmed the edge of tops, they were sewed along the flaps and the hem of kaftans, and edged the lapels. The headdresses, which were like caps, could be furnished with a conical silver pommel, and the swept back brims were also decorated with silver plaques at the edges. The cap-bands of women's caps were also bordered with shaped silver plates. It should be noted that the decoration of clothes with metal plates was used, as a rule, in women's costumes, whereas in men's ones the headdresses were decorated with a pommel. A similar pommel found in the Swedish Vikings' town Birka brings us to such a conclusion. And although this pommel is made in the Scandinavian style and is decorated with beading, unlike the Hungarian one, engraved in a purely Hungarian style, we can safely assert that the Hungarians made the Vikings-Ruses acquainted with this head-dress decoration: on the Volga or Dnieper rivers, where the trade routes of the Ruses intersected with the old Hungarian route toward the 'attainment of the homeland' beyond the Carpathian mountains. The haircut was influenced by the ancient Hungarians too. Their men shaved their beards, leaving the moustache and two long locks of hair on the crown of their head, which they braided. This is seen perfectly in the Old Hungarian images. But just the same hairdress was also attributed to the Russian prince Svyatoslav Igorevich by the Byzantine chronicler Lev Diakon, which is explained by his close ties to and military alliance with the Hungarian elite. The similar haircut of the Danube Bul-

garians, depicted in the numerous graffiti of the 9–10th century buildings in the capital city Preslav, can be explained by the close although very often hostile connections of these neighbours. Old Hungarian jewellery should be addressed separately. This includes bronze objects in the Volga-Ural Finnish tradition (the ridge and A-shaped rattling pendants), the Khazar three-beaded earrings, a necklace from silver coins, and the massive Hungarian temple rings made from silver tracery. An important detail of these rings is the fact that they were joined under the chin. The Dnieper Ruses and the Volga Bulgars adopted this feature from the Hungarians.

The men's costume of the 12–13th centuries of Volga and Kama Bulgaria can be 'deduced' from the Volga Bulgarian costume if we take into account the previous tradition and the ethno-cultural situation in the region in this period. One can assume that in the course of becoming sedentary and urbanised, the Bulgars enriched their textile repertoire, having added flax and probably nettle fabrics to their traditional woollen fabrics, felts, furs, and imported silk and cotton fabrics. The proximity and close connections with the local Finnish population must have resulted in both technical and ornamental borrowings in weaving. At the same time there was the high functionality, convenience and beauty of Turkic-style ornamentation, which was so well-cut and rich in silhouette, that it could not be influenced greatly by borrowings from their neighbours. The influence of the southern Muslim cultures had to become much stronger—due to the adoption of Islam at the end of the 10th century and the total Islamisation of Bulgar society in the 11–12th centuries, which affected the urban population, which was closely connected by trade with the Muslim world, to a greater extent. This happened because at this particular time in both close and distant Muslim state formations military and political power belonged to an elite of Turkic origin. Therefore in Bulgaria the Seljuk costume, which was formed by the interpenetration of elements of the Oghuz and Iranian costume set, was conceived of as the Islamic men's costume.

From the pure Muslim Arab costume only the turban was borrowed, and it was intended only for religious figures who also wore a *tajlasan*—a long and wide scarf-shawl. Governors could also put on a turban—but only during the Friday service when they played the role of the imam. The influences of the Rus's costume set can't be excluded either—it was determined not only by close commercial relations, but also by very similar natural conditions and, consequently, economic and cultural types. In this period Bulgaria was famous for its boots, made from the well-known Bulgar leather which became popular across the wide territories of Eurasia. The most popular and expensive version of this was goat skin (*morocco*) with the surface embossed in grainy and coloured turquoise-green using copper oxide. The most peculiar feature of the Bulgar men's costume of the 11–12th centuries are the belts with metal ornamentation. Moreover, the Bulgar metalworkers of the 11th until the first half of the 13th century in Eastern Europe and Western Siberia almost monopolised this sector. In any case, samples of Bulgar silver belt-work are found across the vast expanses from east Scandinavia to Western Siberia. It is possible that in order to meet the need for a belt set for the poor social masses that could not afford the silver production of the Bulgar masters, the Bulgar merchants started to buy the cheap iron and bronze (brass) items of belt-work made by the Kyrgyz craftsmen. It is impossible to imagine that the Bulgars, either their craftsmen or merchants, could have let into their markets, that they had monopolised long before, merchants or especially craftsmen from far away in Southern Siberia. Therefore in the recent years the popular arguments about the direct and continuous presence of the Kyrgyz—craftsmen, merchants and, even more, soldiers, on the territory of Bulgaria—are ungrounded.

As for the costume of the Bulgar women of the 11th until the beginning of the 13th century, no graphic materials or archaeological textile that could give a hint about their clothing is yet available. Only the richest jewellery, made from precious metals, some-

times with inserts of gemstones and amber, provides the evidence of such a richness of a costume.

The costume of the Central Asian Tatars

For the first time the ethnonym Tatars (in the word combination 'Otuz Tatar'—that is, the nine {tribes of} Tatars) appears in a phrase of an Old Turkic runic inscription in honour of Kul-Tegin, 732 AD [Klyashtorny, Sultanov, 2004, pp. 140–141]. Their initial whereabouts are connected with the areas to the north-east of the Old Turkic territory, near Western Manchuria. At that very place, around the lake Buir-nur, the main, and most populous, ulus among the six Tatar uluses was located. It is interesting that the first data about the probable Tatar costume dates precisely back to the 8th century. It is a Chinese mural picturing the ambassadors: foreigners in a tomb of the Tang crown prince of Zhanghuai (Li Xian), 706 AD. The ambassador of 'the northern barbarians'—the Tatars (or Khitans)—is dressed in a long wrap-over robe with a round collar and a shallow wrap from left to right. On the axis of the robe there is a vertical seam—an intersection of narrow pieces of cloth. A big piece of apparently thick fabric, similar to an Indian blanket, covers the shoulders. On the head there is a cap with a quadrangular crown, a flat top, a narrow fur peak and wide fur earpieces. Similar caps were also popular in the 13th century among the Khitans [Gorelik, 2010, Table I, 4, 10–12 26, 27] so that the character may represent a Khitan envoy, but at the beginning of the 8th century such caps could also have been used by the Tatars. In any case, the blanket-like cape isn't found among the other inhabitants of the steppe and taiga zone. The footwear of the described character is unique—the boots with leather saddles and fur tops with the fur on the outside are explicit evidence of the habitat of its carrier—the northern taiga and steppe.

Already in the first half of the 9th century the Tatars had settled down at the most westerly border of their habitat—in the area of the present-day Chinese provinces Xinjiang, Gansu and Qinghai [Klyashtorny, Sultanov,

2004, pp. 141–144]. Here they became so famous that a 'but-i tatori'—'the Tatar woman, as beautiful as a Buddhist statue' became a character of one of the best poems of the great Persian-Tajik poet of the 10th century, Rudaki. At this particular time—in the 10–12th centuries—the Tatars, for the West and the South, became a symbol of the power and riches of nomadic Central Asia. And the unique archaeological sets of the Tatar costume which were quite recently discovered by scientists refer precisely to the 11–12th centuries.

The culture of the Central Asian Tatars of the 10th until the beginning of the 13th century still represents an absolute blind-spot. This has resulted from the fact that almost no archaeological diggings were made on the territories of the Tatar uluses—a huge area from Western Manchuria to eastern Xinjiang, adjoining in some places the Great wall—consequently, there was no material with which to distinguish the elements of the Tatar culture. And that happened in spite of the fact that 'Since the ancient times their name has been known to the world. ... The places of their camping grounds, halts and yurts ... are near the borders of China. ... despite all the hostility and discords which reigned among them—already in the ancient world for most of the time they had been the conquerors and lords of the majority of tribes and areas, standing out (from others) by their greatness, power and prominence' [Rashid ad-Din, 1952, p. 101]. The great historian and courtier of the Mongol monarchs of Iran also notes: 'There are six Tatar tribes which are famous and glorious and each one has an army and [a] sovereign [Ibid., p. 103]. The main, richest, and most populous yurt of the Tatars was located in the far east, in Southern Manchuria, near the Buir-Nur lake [Ibid., p. 101]. And as early as the 10th century the western one, composed of six Tatar tribal yurts-uluses, turned out to be in the same region of the present-day intersection of provinces of the People's Republic of China such as Qinghai, the West of the Inner Mongolia and Xinjiang—as S. Klyashtorny has demonstrated based in various written

sources [Klyashtorny, Sultanov, 2004, pp. 139–144].

I studied the issue of the Tatar tribes' territorial location in such detail because in recent years, precisely from the territory of the Qinghai and Xinjiang provinces, came elements of the costumes of different eras and different tribes, in a perfect condition, which we are going to discuss below.

However even before the main finds, in the 1980s, among the Chinese images of nomads, I have distinguished characters who can be defined as Tatars [Gorelik, 2010, pp. 37–40, tab. X; tab. 8]. The costume of these characters, consisting of a kaftan-robe higher up with long narrow sleeves, a round collar, and a wrap from left to right is shown in the Chinese pictures of the 11–13th centuries. The sleeveless kaftans with axial cuts can be put on over it. On the waist and hips there is a warmth-retaining piece of cloth, sometimes on straps. On the heads there are felt hats with a low, roundish or round, and conical, crown, with brims or with a peak and a neck flap. The hats are often fur-trimmed and above the forehead the edging is narrowed. Once the leader was depicted in a 'compound' hat: a high narrow crown framed with the pheasant feathers sewed together. Soft boots with the boot tops widening towards the top serve as footwear. White trousers with wide trouser-legs are presented there too. The knees are insulated with round knee-pads with laces.

Therefore, what was found by the Chinese archaeologists in the Ganshi burial site by the settlement Aral, in the province Qinghai (People's Republic of China) [Qi, Wang, p. 42–43], were defined by me as the Tatar garments of the 11–12th centuries, taking into account their resemblance with illustrated sources [Gorelik, 2010, tab. 9].

In the 1960s in the province of Qinghai the mummy of a fully-dressed man, in a good condition, was found and published as a black-and-white photo on a leaflet of the agency of Xinhua [Ibid., tab. 10]. He wore a sable fur coat, edged with tiger and ermine fur, a cap with a fur margin similar to the one found in Alar, and soft suede boots with

fur inside. I was especially interested by the cuffs of a fur coat, made of cloth, and the waist warmer, embroidered here and there with the richest pattern of stylised plants' and animals' silhouettes, which was strongly reminiscent of the motifs of the animal style of the late Karasuk and Saks period of Central Asia.

That's why when in the antique markets appeared well-preserved objects embroidered with patterns completely analogous to those of an old Qinghai find, I assumed the existence of the 'Tatar-Mongolian animal and plant style' [Gorelik, 2012a], described by Rubruk with delight [Journeys, 1957, pp. 91–92]. The main motifs of the embroidery on parts of the costume from the Suleiman Collection are birds with open wings, with one or two heads, and ungulates and predators standing 'on tiptoe', lying or 'turned inside-out'. They are complemented with motifs of 'the Chinese coin' or 'the pearl'—a square with the concave sides fitted into a circle, popular among the Chinese (and later appearing in the Chinggisid decor). The shapes of animals and birds are outlined boldly and all the details are filled in: feathers, heads, legs. The area of the torso is divided by lines of 'ribs' into sections stitched up with multi-coloured threads. Stylistically the majority of these images date back to the records of the late Karasuk (the first quarter of the 1st century BC) and Saka (the 8th till the 3rd centuries BC) cultures: 'Deer stones', rock carvings on rocks and stones, on 'fossil' records from precious metals and organic materials, on the tattoos of mummies. A number of the artistic and technical aspects of embroidery are also connected with the 'fossil' textiles of the Hunnish period (3rd century BC until the beginning of AD). This appeal to 'archeology' is reasonable. When in the 9th century the Tatars and the Mongols from the taiga of the Amur river region came to the Central Asian steppe, a place completely new for them, they started to settle, to assimilate to this unexplored area, where from all the rocks and stones, from the ancient steles, they were watched by the spirits of these places, embodied in birds and animals who

Costume of a noble Bulgarian after the 10th century's Byzantine miniature. 'Bulgarians battling Christians' in the manuscript of 'Menologion' composed for the emperor Basil II, the Bulgar Slayer. 10th century. Reconstruction and drawing by M. Gorelik. 2011.

Costume attire of a noble Tatar, 11th century, excavated in Qinghai province, PRC. Marjani Foundation, Moscow, and Museum of Islamic Art, Doha, Qatar. Reconstruction and drawing by M. Gorelik. 2011.

Costume set of a noble Tatar, 11th century burial site near Aral village, Eastern Turkestan. National Museum of Chinese History PRC, Beijing. Reconstruction and drawing by M. Gorelik. 2011.

Winter costume attire of a noble Tatar, 11–12th centuries, found on a mummy, excavated in Qinghai province, PRC. Reconstruction and drawing by M. Gorelik. 2011.

were at the same time the objects of the hunt. They didn't adopt the human guise—these were spirits of the dead, former masters of the steppes. To make their spell weaker, the new inhabitants of the steppe destroyed and plundered the burials of their lords where the decorated gold, wooden and fabric objects, and the tattooed corpses were kept. The local ancient art served a fine illustration of a rather original and sophisticated 'Tatar-Mongolian animal and plant style'.

The waist warmer, the belt trimmed with fur on the bottom edge, the tobacco pouch, the waistband pendant and the suede soft boots are presented in the Suleiman Collection. The threads of golden, red, blue and light-blue shades on the fawn-coloured unbleached silk and suede were used for the covering embroidery. The Chinese silk, intricately carved pieces of which were used for the applique work on the boots, is of the same colour. The blue and sandy colour of the embroidery and the Chinese fabrics suggests that the items of clothing from the Suleiman Collection are part of the clothing ensemble purchased by the Museum of Islamic art in Doha, Qatar, together with the robe, the cap and 'the altar wimple'. The form and cut of the items of clothing from Doha don't give any rise to doubts as to their Tatar origin. The silk Chinese fabric they are made of is very similar to the Lyaos fabric of the Khitan kaftan from the collection of Mu Wentang (Hong Kong), dated to the 11th century. So all the clothing items from the Suleiman Collections and the museum in Doha can be dated to the 11th century. And the mummy from Qinghai can be possibly dated to a later period: the end of the 11–12th centuries.

Thus, now we have an idea of a costume of the Central Asian Tatars and it gives us an insight into the very high level, wealth, refinement and a technical perfection of the early Tatar applied art.

The Chinggisid Empire costume

The Mongol costume is a cultural highlight of the Chinggisid Empire whose influence and power extended in the 13–14th centuries over vast territories in Eurasia, from

the Danube to Korea and from Siberia to India. Its significance for the world history of dress is also determined by the fact that it produced a powerful and in some cases decisive effect on the national costume of a large number of Asian and European people in the 15–18th centuries—that is, after the collapse of the united cultural space of the Chinggisid Empire. The meaning of a beautiful and prestigious costume for a distinguished Mongol is revealed in the following words of Chinggis Khan and those belonging to the circle of his closest people: 'Chinggis Khan once reached a highland named Altai, looked over [his] hordes, servants, and surrounding people, and spoke his word: "My efforts and intentions in regard to shooters and guards as black as a thick forest, wives and daughters by birth or marriage, glowing red like fire, have the following aim: to delight their lips with the sugary sweetness of [my] goodwill **and adorn them from head to toe with gold-embroidered garments...**" [Rashid ad-Din, 1952, A98b, p. 251]; "Chinggis Khan once asked Boorchinoyon, Chief Emir, what he saw as the greatest pleasure and joy for a man. Boorchinoyon then said, 'That a man takes his grey falcon..., saddles up his fair horse..., and goes hunting grey-headed birds amidst the green freshness of spring, and that **hewears good clothes**' [Ibid., A99a, p. 252]. As we can see, beautiful and prestigious clothes were the second most precious thing among the life values, goals and pleasures of Mongols in the 13th century. These men were as hard as iron, and still valued beautiful clothes. Obviously, the same applies to Mongol women, especially noble-born ones, whose status in society was, in fact, virtually as high as that of men.

One cannot say that the question of the Mongol costume of the 13–14th centuries did not evoke any interest amongst researchers. However, it was addressed only occasionally, sporadically, and was normally regarded as a 'preamble' to the ethnographic Mongol costume within the ethnographic framework. This can be explained by the fact that very few items representing the Mongol costume of the 13–14th centuries were known until

recently. These items were retrieved from excavations and, as a rule, only archaeologists were familiar with them. Illustrated records, in turn, attracted little attention, while written ones provided too little information, as there was no clear understanding, first of all, among translators, as to what exactly the texts described. In late 1970s the author, using the Tabriz miniatures, managed to single out the male Mongol costume and determined its principal elements [Gorelik, 1982]. In the 1980s, the author of this work conducted a large-scale analysis of costumes using records of art (Chinese paintings and graphic art, Persian miniatures and Mongol stone carvings) in a single context with written records (Chinese communiques of envoys and notes of travellers, European texts of the same genres, Arab and Persian historical collections, the precious evidence of the "Secret History of the Mongols") and rare archaeological finds from the territory of the USSR and PRC. The results of this research were described in two substantial articles, the first of which contained a detailed review and typology of the costume of the Khitan people, who spoke a Mongolian language, in the 10–12th centuries, the Tatars from Central Asia in the 10–12th centuries, and the Mongols in the 10–14th centuries. This question was addressed within the framework of the Central Asian costume in general—that is, in comparison with the Uyghur, Tangut, and Jurchen costumes, its discussion being supported by a substantial number of charts and tables [Gorelik, 2010]. The other article considered the Mongol costume of the 13–15th centuries as a phenomenon characteristic of the imperial culture that formed in the middle to the second half of the 13th century, the culture of the Chinggisid Empire in its entirety, and its influence on the costumes of other peoples [Gorelik, 2009b]. Unfortunately, due to various circumstances the articles have been published just recently. The period since 1980s, when the articles were written, until the end of the first decade of the 21st century, witnessed sensational archaeological findings of genuine Chinggisid costumes and their remains, a major part of which have

appeared on the antique market and caused significant interest among collectors, including the most prestigious collections of Oriental art. It is noteworthy that the Suleiman Collection has the most extensive and impressive collection of Chinggisid costume of any private collection. It boasts virtually every type of shoulder clothing for women, girls, and men, men's and women's headwear, precious belts for men and jewellery pieces for women. Some of the items of clothing used to belong to the famous A. Leeper's collection. All the items belonging to the Suleiman Collection are considered to be amongst the best specimens that represent the prestigious culture of the Chinggisid Empire, and are works of high noble art. Some museums of the PRC, Mongolia and Russia (National History Museum, Saratov Regional Museum of Local Lore, Volgograd Museum of Local History) also have spectacular undamaged individual pieces of costume, or even complete clothing ensembles. The Chinggisid costume items have become exhibits in shows, demonstrating the art and culture of the Empire of Chinggis Khan and his predecessors and heirs, that are permanently popular with quite different audiences. Their beauty and richness revealed to the world anew have resulted in new research on the Mongol costume of the 13–14th centuries (as well as on the Khitan costume, related to the spectacular findings of the luxurious garments of Khitan noblemen) [Vlaskin et al., 2006, p. 184; Dondoy Bayar, 2000; Lantratova et al., 2002; Orfinskaya et al., 2006, pp. 169–171; Tishkin et al., 2002; Shelkovy'j Put' (The Silk Road), 2007; Erdenebat, 2006; Erdenebat, Khurelsukh, 2007; A Journey, 1997, pp. 65–142; Allsen, 1997; Watt, Wardwell, 1998; Shang Gang, 1999; Zhao Feng, 2004, pp. 327–386; Chinggis Khan, 2004; Style from the Steppes, 2004; Gold/ Silk, 2005; Jia Xizeng, 2005 and others]. Over these 25 years, the author of these lines has kept studying the Mongol costume—as well as the costume contemporary with the Chinggisid Empire in general—and the costume of individual uluses [Gorelik, 2006, pp. 125–126; 2009, pp. 164–167; 2009a; 2010a], which were re-

flected in the graphical reconstructions and corresponding chapters of such monumental works as "Atlas Tartarica" [Tartarica, 2005, pp. 256–257, 270–271, 284–285, 292], "The Unabridged Atlas of the History and Culture of Kazakhstan" [Atlas, 2008, pp. 210–211, 213, 216–218, 232–235, 252, 254–255, 267, 287–291], as well as in the author's book "The Mongol-Tatar Armies" [Gorelik, 2002, pp. 14, 17].

Currently, using the results of a 40-year-long work on the question, and considering the dramatic increase in the available data, especially those represented by items of clothing, as well as illustrated ones, we can obtain a relatively complete picture of the genesis and development of the Mongol and, in particular, the Chinggisid costume.

As to the Mongol costume per se, one could say that—judging from the horizontally-scrolling picture 'Nomad caravan, *Fan-Yi*' which according to the colophon goes back to the 5th dynasty, the 10th Empire (early 10th century) and is kept at the Gugong National Museum in Taipei—the principal elements of the costume emerged simultaneously with the Mongols' appearance on the historical stage, formed as instantaneously as Athena, who came out of Zeus's head. Unfortunately, the Chinese depictions of the Mongols became known to us only since the 13th century. However, the period of the 11–13th centuries provided us with wonderful Chinese paintings that depict nomads who are different in their costumes, hair and weaponry from the Khitan people, Jurchens, Tanguts, or Uyghurs, as well as from the Mongols, although the Mongols are the closest related people for them. Judging from the frequency of such pictures and their closeness to the Mongols, I came to the conclusion that they depict nomads speaking a Mongolian language who resided closer than others to the Great Wall and along its whole length. They were the Tatars, the most well-known nomadic people of Central Asia in the 10–12th centuries. They were so well-known that the Mongols were called Tatars both in Europe and China, although the Mongols did not approve of this. Thus, by the 13th century

the costume worn by Mongol men, as is evidenced by the above-mentioned information, included a kaftan smock with an oblique wrap from left to right, sometimes with a cut-off lower hem, in other cases with a straight, flaring silhouette, sometimes close-fitting, which was achieved by using the technique of incision. The lower hem of such a kaftan reached the knee-level or went a little lower. On top of other items, people wore a fur coat in the same fashion with the fur on the outside: a *dokha* that was significantly longer, had long turned-down sleeves with cutouts in their upper section and high vents to the sides from the hem up. The shoulders were protected from cold by a round-shaped wrap-over fur cape, or a pelerine made of fur or fabric with the shape of a four-bladed rosette that had an opening for the head; the blades were decorated with ribbons made of pieces of cloth sewn together that hung down from the blades. Hats were low, round-shaped, with narrow peaks and wider neck-flaps. Above the temples, at the point where laces were attached, there were short ribbons. High boots with tops that grew wider upwards and had seams on the sides. The hair was plaited into two braids folded into rings behind the ears. The women's costume is represented by an ankle-length loose smock with wide sleeves and an oblique wrap from left to right. Headwear is represented by the *bokhtog* (discussed further below). Since the episode presented in the picture is taking place in a windy winter, the *bokhtog* has a felt hood with a peak. For the same reason the smock has a belt fastened around it. The Tatar men's costume has elements similar to Mongol ones, namely low, round-shaped hats with narrow peaks and wider neck-flaps (but without ribbons at the temples), smock kaftans with an oblique wrap from left to right, high boots with seams on the top sides, and four-bladed rosette-shaped pelerines. The differences consist in the predominance of smocks with a round-shaped collar and a straight cut on the right side of the chest, trimming of the round hats and pointed caps with tails of fur-bearing animals, coming together in their narrowest sections above the forehead, and high

boots with extremely wide tops and central seams. The warmth-retaining jacket for the lower back enjoying great popularity with the nomads of Central Asia, and in the Tatar costume it could have the form of not only a one to one-and-a-half cubit-long piece of thick fabric, but also a wide (from the upper thighs up to the solar plexus) piece of cloth with laces along the axis and shoulder straps. Unique items are round-shaped quilted knee pads and four-bladed hats resembling the modern hats of the Batyrs. A very typical feature is the adornment of headwear with plumes or individual feathers, both long and short ones. Hair was plaited into two braids behind the ears; there is only one occurrence of it being folded into rings. Women's costume is shown as identical to that of men.

By the middle of the 13th century the Mongol costume was formed completely, having assimilated costume elements characteristic of the people related to the Mongols through their previous conquest and absorption. This concerns, first of all, the Tatars, as well as European nomads speaking Turkic languages: the Cumans, Kuns and Sary Kipchaks (the Polovtsians). The Tatars' contributions to the Mongol costume were feather adornments for headwear, fur trimming for the hats described above, and their own type of warmth-retaining jacket for the lower back. The contributions of the Cumans, Kuns, and Polovtsians was that the Mongols who defeated and killed the Polovtsian khans took possession of their ceremonial garments and saw their new subjects dressed in unprecedentedly luxurious ceremonial clothes that are now familiar to us due to the findings at Chingul Kurgan, a burial mound of one of the khans (clothes made of scarlet and purple Byzantine silk, adorned with gold-embroidered ribbons, delicate carved and patterned gilded leather and silver-gilded plaques, and plates decorated with multicoloured gems, embroidered with spun gold, wire-ribbons, and pearls). They assimilated not the trimming, but rather the silhouette and fitting details and were very accurate in their recognition of these features as characteristic of the costume worn by the most privileged social groups in Europe,

reaching from the Russia and the Caucasus to the very western areas of the continent. One of such features was, first of all, the cut-off hem, which was significantly wider than the top and was attached in tucks. This technique was applied to different elements of the costume, including the lower hem, by nomads in Central Asia during the final centuries BC, and was brought by the Huns to the Northern Caucasus and to Central and Western Europe. Clothes that had a cut-off hem attached in tucks were an extreme rarity in Central Asia before the second third of the 13th century, but in the West (except Byzantium) this fashion of ceremonial clothes enjoyed the highest popularity among privileged social groups by the beginning of the 2nd millennium AD—and this is true of both men's and women's clothes. The second element was horizontal bands across the stomach. European clothes were of a non-wrapover type. The 'excess' length of the top fabric, hanging down on the hips, where the top was attached to the tucked lower hem, and the attachment line was quite tight, formed numerous horizontal creases on the stomach. In the Polovtsian wrap-over kaftans the creases were sometimes represented as gold-embroidered ribbons and trimmings attached to the seam line and above it, which can be also seen in one of the Chingul kaftans. The Mongols created these lines by attaching trimmings and strings, plucking threads, and weaving. This was exactly how by the early 1230s the most prestigious imperial clothing for men was formed. A considerable contribution was also made by the Jurchens, who brought into the costume their ornamental motifs and their arrangement.

The Mongol conquests in Central Asia, China and Persia allowed them to make the dream—cherished by Chinggis Khan, the Mongol noblemen in general, and many simple warriors—come true, and dress their women and themselves in luxurious gold-embroidered garments. The obsession of the Mongols with gold-embroidered fabrics, and most of all silks, was extensively described in the written records of the East and West that tirelessly dwelled on the luxurious gold-embroidered garments that used to be prepared

by thousands, stored and granted several times per year as festival presents and rewards for service to hundreds of princes and khatuns, thousands of noyons and begs, to tens of thousands of guardsmen, to ambassadors as ambassadorial gifts, and to scholars, etc. This phenomenon was best described by Rashid al-Din, a great historian and a great nobleman contemporary with the Hulaguids, a dynasty of Mongol rulers of the Near and Middle East, when he discussed the shortage of gold in his country: 'It was widely known that Mongols wore too many embroidered, gold-woven clothes and the like, that gold was wasted on them and was also sold to Hindustan, so [it] was taken away, [for these reasons] there was not enough gold anymore! [Rashid al-Din, 1952, p. 646]. As we can see, the Mongols' love of shiny gold-embroidered garments was condemned as the major cause of shortage of gold in the country, while its being exported to India was only second in its importance. Incidentally, this very passage shows that gold-embroidered fabrics for Mongol clothes were woven in the Hulaguid state. In the recent years, as a result of new findings of genuine Mongol costumes contemporary with the Chinggisids, fabric accessories and individual textile specimens, as well as new definitions of textile specimens retrieved from old European and American collections in Russia, Ukraine, Europe, and America, there have emerged a large number of interesting publications dealing specifically with Chinggisid textiles.

Now let us take a look at the development of the Mongol costume during the Chinggisid Empire. First of all, we can observe the establishment of the Mongol Imperial culture that focused on the representational, status-based aspect of culture. We refer to it as the Mongol culture because it was precisely the Mongol ethnic culture and, in particular, its external manifestations—dwellings, costume, weaponry, the harnesses for horses—that served as the basis for the imperial culture. Every element that it had borrowed from the conquered people—the Kyrgyz, Tangut, Khitan, Jurchen, Chinese, inhabitants of Eastern Turkistan, Khwarezm, Transoxiana and Persia, the

Kipchaks and Polovtsians, Bulgars and Russians, Yases and Circassians—was initiated, approved and selected by the Mongol elite. The costume appeared as the main constituent in the process, as its elements—the dress, footwear, headwear, accessories, hair—communicated immediately the person's position in the Chinggisid society.

In terms of costume types, there was a clear distinction between men's and women's Mongol costumes in the 13–14th centuries. The costume worn by girls was identical to that worn by men, something which was highlighted by foreign eyewitnesses. It was not until recently that we managed to identify this costume for girls and find any differences between the male and female versions that had been lost upon foreigners but was caught immediately by the Mongol eye. The principal piece of clothing for men's shoulders was a *degel*, a smock with an oblique wrap from left to right, but it was sometimes inverted as well, which means that the wrapping direction cannot be viewed as a strict determinant of ethnicity. Men's (and girls') *degels* were close-fitting, and the waistline was created, first of all, by using the incision technique, with subsequent widening of the lower hem with extension pieces. The garment body was made from two vertical cloth pieces sewn together on the front along the vertical axis. The neck and the upper wrap flap were sewn up to a considerably wide—to a width of three fingers—semi-closed collar. The sleeves were long and tapered, their cuffs a little wider than the collar itself. The collar and the cuffs were stitched with parallel seam lines. Sometimes the sleeves were of a turned-down type, that is, there were openings for arms near the armpit sections of the garment. This element of the Mongol fashion grew extremely popular in the 15–19th centuries across the vast Eurasian territories, but it was the Mongols' idea to button them up to the back using buttons and loops in the lower sections of the sleeves. The sleeves of men's and (girls') *degels* were not necessarily long, reaching the wrist, they could also reach the elbow or even hardly cover the shoulders. Men's *degels* had vents on the sides going from the hem up to the waist.

A courtier in Mongol imperial costume. After Iranian miniatures of the first third of the 14th century. Reconstruction and drawing by M. Gorelik. 2011.

A Golden Horde official in Mongol costume, consisting of a whole-cut robe with foldaway sleeves and a cape. After the finds in the Golden Horde burial, 14th century, near Tormosin village in Volgograd Region. Reconstruction and drawing by M. Gorelik. 2011.

As to their length, they covered the knees or reached the middle of the shin. Girls' degels were longer, sometimes reaching their feet, and had no vents on the sides. Besides, the cuffs and collars of girls' degels were edged with fabrics whose colouring contrasted with the basic tone of the smock, while in the male version these elements had the same colour of the rest of the smock. Impressed by the luxurious garments of the European Cumans, the Mongols introduced the tucked cut-off lower hem, an element found in the dresses of Europe's most prestigious social groups, into the most festive version of the degel. This element made it more loose-fitting around the hips and extremely comfortable to wear while riding a horse. In the West they also borrowed

such a detail of the gala smock as the horizontal bands across the stomach and the lower back that were typically found in garments, (with a cut-off tucked lower hem) forming small horizontal creases in the waist section. The bands were woven, hem-stitched, or made using strings and ribbons sewn to the fabric. The flaps of the degel were fastened at the top of the vertical hem with several pairs of ties or ribbons. A less common option is a knot-button fastening with loops for button-holes. Another fastening point was located on the chest side opposite the wrap, where a pair of laces were attached to the garment. Smock fabrics for the Imperial noblemen were developed on the basis of Chinese and Persian, Transoxiana and Anatolian ornaments in the

workshops of Eastern Turkestan, and depicted popular Mongol motifs of ungulates in the forests (borrowed from the Jurchens), birds (borrowed from both Muslim and Jurchen textiles), dragons, phoenixes, kylins, Chindamani stones, coins, peonies and carnations (adopted from the decor of Chinese textiles). Fabrics for ceremonial garments were woven by Uyghur, Chinese, and Muslim weavers in Kuche, Dadu, and Tabriz as a garment piece, each smock individually. It was common practice to weave a patterned band along the sleeve and shoulder lines with epigraphical or pseudo-epigraphical patterns in 'flowering Kufic script', or, in other cases, with animal caravans and floral and geometrical patterns. This decorative element was, most probably, brought into the Mongol culture by the Jurchens who, in turn, had borrowed it from the Muslims, imitating their 'Tiraz' fabrics which bore woven inscriptions of a ruler's name, and Muslim wishes of well-being. Such fabrics were granted to subjects by khalifs, as well as by other Muslim rulers. Another decorative element of the smock was an ornately carved four-leaved rosette that rested on the shoulders, upper chest and back. It represented a luxuriously decorated pelerine of the same shape, which was a traditional element of Mongol and Tatar clothes. Loaded with various ornamental motifs, the rosette was a combination of weaving, embroidery, and applique. The same technique was used for a patterned horizontal band on the lower hem above the knee-level. This element was also a Jurchen borrowing. Purely Mongol elements were squares on the chest and the back that were filled with images of birds and animals in the woods, or flowers (later on in China, under the Ming and especially under the Qing rule they became symbols of rank—buzi badges), circles on the shoulders representing the sun and the moon, and trapeziums filled with patterns, also placed on the shoulders and sometimes below the circles.

The second most common garment worn by men and women was the terleg, a kaftan somewhat shorter than the degel. Chinese authors described it as a 'square-flapped' kaftan. It had a rectangular neckline and opened at the

neck level with a cut going down to the solar plexus, then turning at a right angle or obtuse angle to the right and under the arm, and going further down to the edge of the lower hem or to the waistline. In the latter case, the cut turned to the centre and then went down to the edge of the lower hem. Festive or ceremonialterlegs, likedegels, had a cut-off, tucked, lower hem. Kaftans for girls, like smocks, were different from those for men in that they were significantly longer and always had collars and cuffs edged with fabric of a contrasting colour that was usually darker in tone than the rest of the garment. Girls' terlegs are demonstrated in the Yuan frescoes from Dunhuang that show Noblewomen, depicted in the Dunhuang wall painting for their religious donations. Our exposition demonstrates such a ceremonial female terleg from the Suleiman Collection. It is made of golden silk with tiny floral patterning, has a left to right wrap, and the right flap goes downward immediately at the left side; the lower hem is of a cut-off type and is attached in tucks; the flaps are fastened with three pairs of ribbon laces. The right—lower—flap has an 'attached' rectangle on the chest, that is, the vertical side of the rectangle turns right near the waistline, reaching the body's axis and then going vertically down to the edge of the hem. The flaps were tied together using ribbons attached to the right flap and the interior side of the left flap, which helped avoid the left lower hem dropping down. Both male and female terlegshave vents going from the waistline down to the lower hem edge. The female terleghas edgings encircling the neck and going along the sides of the vertical cut on the chest, while its cuffs have silk edgings contrasting in colour and tone with the rest of the garment.

A third kind of overclothes for the shoulders worn by both men and women was a kaftan with a right-angled neckline, a straight axial cut from the neck to the lower hem. It had wide and short 'wing' sleeves. Its length reached the knee-level. It was a tight-fitting garment, made using the incision technique, which had a flaring lower hem. The lower hem sides had insets of tucked fabric instead of vents. The kaftan was fastened using hook-

on buttons, metal balls or knot buttons—with buttonhole loops from neck to waistline. Fastening points were marked with lines of buttonholes, stitched or made of trimming cord on each flap.

A fourth type of overclothes for the shoulders worn by men (and women) was an extremely rare non-wrap-over piece of clothing with a wide, rectangular, V-shaped, or horizontal neckline. Its festive or ceremonial version had a tucked cut-off lower hem, similarly to other overclothes for the shoulders worn in the times of the Chinggisid Empire. This dress was, most probably, borrowed by the Mongols from European nomads: the Polovtsians, Cumans, and Kuns. It has a direct relation to European, namely Russian, clothes.

In winter, all these types of overclothes for the shoulders were worn, heat-insulated with felt and fur, trimmed with fur, and also having fur collars attached to them. Among them, the warmest and the most prestigious of all was a piece of clothing that had the same outline as the *degel*, but was coated with fur on the outside and had a fur lining on the inside. It was called a *dokha*, *doga*. *Dokhas* were extremely valuable, especially those coated with sable fur. Temüjin received a sable fur *dokha* from Borte's father Dai-Sechen. By presenting it to the khan of the Keraites, Tooril, the one who was to become known as Chinggis Khan garnered the support of the powerful Tooril—Wang Khan, which he enjoyed for many years.

Short, waist-long wrapover shirts with long narrow sleeves were worn under the overclothes. Trousers had long legs that were not wide, and slightly narrowed towards the bottom, sometimes also with stirrups. Belt loops could be arranged around the waist in order to run a woven belt through them. Though relatively modest fabrics were generally used for trousers, one can come across items of luxurious patterned silk. In winter, two pairs of trousers made of skins were worn, one with the fur inside, under one with the fur outside.

A waist-warming piece was characteristic of Mongolian men's clothing. All medieval nomads across Central Asia are known to have

used this type of clothes. The Uyghurs, the Khitan people, the Tangut, and the early Mongols used a long, rectangular or oval piece to wrap around the waist without its ends meeting at the front; a belt was used to hold it in place. Sometimes blade-shaped pieces covering the hips extended downward from its ends at the front, while a wider and shorter blade was used to keep the sacrum warm at the back. The ends of such blade-shaped pieces were often carved to a leaf or a trefoil shape. To keep warm, Tatars used a long and wide rectangular cloth, fully wrapped around the torso, and fastened either at the front or with one and a half wraps. It was not only the belt which held it on the body but also side laces and sometimes thin shoulder straps. The imperial Mongol clothing included all types of waist-warmers, in particular the Tatar one. This insulating clothing was an important and significant part of men's clothing and was therefore covered and trimmed with costly fabric and fur over the felt or woollen base piece, and decorated with intricate embroidery.

The special kind of overclothes for the shoulders that the Mongol girls wore was a short wrap-over jacket with short or long sleeves, sometimes even sleeveless. Such a jacket could have both a vertical axial cut and an oblique one—with a left or right wrap. It is clearly a Jurchen borrowing. Jurchen wives of the Mongol elite portrayed during the reign of the Yuan dynasty are wearing such jackets. Ceremonial jackets were made of golden silk brocade, and decorated with weaving and embroidery in the same manner as men's ceremonial *degels*.

The belt was an essential indicator of each man's status. Graphic and textual sources suggest that belts were not a ubiquitous accessory. Mongols did not wear belts in private and, most importantly, during rites, to establish a mystical connection to deities. They would take off their belt in a demonstrative way and hang it across their shoulder or neck. Being always a kind of a baldric to hang bags with necessities on, belts might be omitted where weapons were not required within reach; bags were attached to the laces on the side of the trousers and were available due

to the side cuts in long-skirted overclothes. Status indicating belts were mostly buckled (in the west of the Empire, patterned silk bands, woven with plates and stronger than leather belts, could be used instead) with a set of metal, bone, or stone. The bladed belt set for swords was the most popular. It included a frame buckle with a needle, an end plate, three carrier-bead plates, each with a bottom loop—two to attach a sheath, one to attach a knife and a belt bag, one to two scabbard lockets to run the belt end through, multiple crescent-shaped plaques covering the belt around the waste, or, more often, the loose end of the belt, as well as plaques of various shapes—round, square, heart-shaped, rosette, etc.—arranged in rows. Soviet excavations in Primorye showed this type of set to have been formed within the Jurchen craft tradition and borrowed in full by the Mongols. The dressiest belt type across the principal yurt of the empire, which included Mongolia with its adjacent regions and China, was that with a central buckle shaped as an intricately carved oval, flanked with two crescent-shaped plaques. The fasteners used were either locks or hook-and-loop types—fastening details were present in the central plate and one of the flanking plates. The ceremonial belt depicted around the waists of Yuan noblemen in marble sculptures, tomb murals, and other Yuan graphic works was not a baldric—on these metal plates were used to attach peaceful objects, such as food knives, and two purses, one on each side: a small one for a fire striker and coins, and a large one (a 'portfolio') for documents and paper money. After the mid-14th century, a new type of belt set appeared in the west of the Golden Horde, influenced by Anatolian metal work, where the carrying badges with loops were replaced by rings. The belt bags and purses known by their Turkic names—*kalta*, *kaptargak*—were essential accessories for every Mongol. Two purses were often worn, one on each side. Small textile bag-shaped purses and boxes with their lids sliding up and down on ribbons were used to keep money and women's pincers, needles, thimbles, and cosmetics. Leather envelopes with patterns stamped on them

and covered with metal overlays or expensive fabrics were used to store fire-making accessories, small knives, money, and even food. Mongol envelope purses were so popular that copies of them were produced in the Rus'. An especially large number of them have been found in Novgorod.

Mongol men's headgear was quite diverse. They can be classified into hats with brims or fur lining: *orbelges*; and bashlik-like hats: *malgais*. *Orbelges* were made of felt, leather, paper. It was common to cover them with expensive or cheap fabrics and border the hatbands and brim flaps with more valuable or less valuable fur. The basic type of the orbelge was a low roundish hat with a narrow peak and a broad neck flap. The place on the inside where broad ribbons were attached for fastening was marked on the outside with short cuts of such ribbons running down to the joint between the peak and the neck flap. Both men and girls wore such hats. Ceremonial variants were decorated with top pieces of metal or gilded fabric, and wood, gemstones, and pearls. Nests for feathers were arranged on such top pieces. Though the principle of the feather decoration of headgear was borrowed from the Tatars, the imperial Mongol feather decoration was quite authentic: one to four white heron feathers were arranged in the centre of the crown, with tufts of eagle-owl feathers at the sides of the crown. The latter was a tribute to the mythical eagle-owl saviour, of which Mongols have always been eager to tell strangers impressed by the detail. Several more types of hat had a dome-shaped crown and brims of varying width, either solid or cut. A conical cap of white or coloured felt was borrowed from the Kipchaks and the Polovtsians. Cuman noblemen of the 14th century Hungarian court decorated them with a heron feather on the crown, as the Mongols did, while Mongols began to use a tuft of eagle-owl feathers in the late 14th century. The most luxurious headgear, that of the emperor, was a white felt hat with a low helmet-shaped crown and hand-wide horizontal brims. Such hats often had a large trapezoidal neck flap. The Chinggisids and other high elite had especially rich pom-

mels of gold and nephrite, with insets of gemstones and pearls, pendants with pearl trusses, and balls of gold, and gemstones. Even the chin lace was decorated with pearls and gemstone beads. In the hot climate of China, the hat could have a woven base of thin bamboo ribs covered with silk. A variant of that hat type was one with broad horizontal brims and a very low flat-bottomed crown, widening slightly towards the top. Such hats were made of very thick felt. Much later, secular and Buddhist Tibetan officials began to make hats of copper and brass, which they still do. Mongolian felt caps were made of four sections: each section was cut as two trapezoids, a low one narrowing greatly towards the top (for the brims) and a tall one with the narrowing not so pronounced (for the crown), and a triangle (for the pommel). When sewn together, the pieces resembled ancient Egyptian pyramids. The top was sometimes flat with an even top section instead of a triangular one; a square bottom was sewn to the top. Mongolian caps were also a kind of ceremonial headgear for lower level officials in the Yuan Empire, and for those up to the highest rank and even those of the highest level in the Uluses of Hulagu and Jochi. Ceremonial caps were covered with expensive fabrics: Chinese silk and velvet, embroidery. It was not only costly pommels that decorated dressy orbelges and caps—their crowns and brim flaps were also decorated with plaques and plates of precious metals, sometimes with inserts of gemstones (and glass) and pearl. The malgai, unlike the orbelge, does not seem to have been a mark of status. It was a bashlik of soft fabric, thin and arranged in one layer in summer, and thick, with lining and layering, during the winter season. The Mongol Chinggisid malgai is related to the bashliks of the Khitan people and the Tatars, but is fully authentic. Its specifically Mongol features include, first of all, a low round crown and ribbon laces attached not to the inside, as with the orbelge, but on the outside, over the temples, though not by the upper ends but a little lower—to let the upper ends of the ribbons hang down as in the orbelge. The Suleiman Collection in Moscow boasts a wonderful malgai in a perfect

condition of classical 13–14th century Mongolian design. It has a wide neck flap narrowing towards the bottom, attached to the low round crown, with earpieces attached to it to cover the ears and the sides of the neck. The earpieces have a round cut over the forehead, and a blade-shaped peak is attached. Long and wide ribbon laces are attached to the seam between the crown and the neck flap. The hat is crowned with a sophisticated textile pommel: a four-leafed rosette, in the centre of which is a bulky ball with a tail on top. The malgai has a cotton lining and is covered with pieces of several luxury Chinese silk-stripes. The earpieces could be folded back, and the neck flap could be folded up. They were fixed in that position using a loop on their folded tip, which could be hooked around a knot-button sewed to the back of the head. Mongol headgear changed over time. In the last three decades of the 14th century, the classical orbelge hats began to fall into disuse. Hats with a bell-shaped crown, often vertically quilted, with cut-type brims of medium and small width were coming into use. They were decorated with metal pommels, sometimes made of precious metals, with insets of gemstones and pearls and plumes of feathers and horse hair. Both headgear pommels, and massive brass templates for jewellers to beat out pommels from precious metals have been found in Bulgarian towns of the Golden Horde epoch. Young noblewomen wore especially luxurious headgear. The dome-shaped crowns of their hats, apart from the pommel, carried inlaid figured plates of gold and silver. The luxury hats of young women could be decorated with costly plates of silver attached in multiple layers, outlined to resembled a lotus flower or an intricately shaped drop, consisting of a solid base on pins of a wire filigree openwork with granulation and holders for gemstones and pearls. Such plates are present in the Simferopol hoard and in the collection of the Marjani Foundation, Moscow. Attachable plates that appear a little easier to produce but look just as elegant are often found during the excavation of Golden Horde towns in the Volga Region, the Crimea, Khwarezm, and other regions of the Jochid ulus. Another

piece of the headgear of young women, the frontlet, was also decorated with precious plates, pearl embroidery, and beads.

A conical sheepskin hat (*papakha*) with a rounded top, not very tall, was popular in the Jochid ulus. In any case, all the men depicted in the Iranian miniature pictures that represent characters from the Jochid ulus or events taking place in its territory are wearing such *papakhas*. However, this type of headgear was also worn in the Chagataid ulus—Spanish Ambassador Ruy González de Clavijo describes a lambskin *papakha* decorated with a ruby, as worn by Temür (Tamerlane) during a very formal reception.

As important evidence of the fact that the Islamization of the population of the empire's western uluses was represented in people's clothing, a small *taqiyah*, hat, always white, was worn underneath headgear.

Mongol men's and women's hairstyles, which foreigners found very peculiar, are noteworthy. Men shaved the tops of their heads, letting their hair grow down to the eyebrows at the front and down to the bottom of the shoulder blades at the back. They also shaved their temples in front of their ears, so that in front was left a lock approximately the width of two fingers, which was sometimes divided in two at the bottom like a swallowtail. The Mongol name for the lock was *khekhel*, *khokhol*. At the back long hair was braided into two braids and arranged in rings behind the ears. The nobility wore two to three pairs of ring braids. Sometimes, when in private, Mongols could wear one braid hanging down between the shoulder blades. It is noteworthy that the Slavs of the lower Dnieper Region, who later became Ukrainians, borrowed the hair style from the Circassians forced to move there by the Mongol khans: a shaved head with a long lock hanging forwards and to the left side from the top. Ukrainians called it *osledets*, and Muscovites *khokhol*, calling the Slavs from the Dnieper Region *Cherkasy*—that is, Circassians. The word *khokhol* turned into a Russian ethnic nickname for Ukrainian people. The only difference between the hairstyle of young women and that of men was the fact that the former did not shave the top of

their heads and their temples, merely parting their hair. Sometimes a curl was formed from a large lock on the top of the head. When a girl wore headgear, the difference between her hairstyle and that of a man was hardly noticeable.

The footwear of Mongol men and women were leather boots. Their design for men and women was generally similar, though men's boots had higher tops, often covering the knees, and could have very thick and hard leather at the front, which strengthened such boots, likely made specially for military purposes, and allowed them to function as greaves. The basic design featured vertical seams along the boot tops. The toe, the heel, and the sole were attached as separate pieces. Leather of a different colour with coloured edges was sometimes attached to the bottom of the foot to get a kind of an overshoe image. Soles could be both soft and made of thick, hard leather. The upper part of the boot top was cut to form a round projection, higher or lower, at the front. The only way in which the second style differed from the first was in the boot top having only one cut at the front, arranged along the vertical axis. A vertical piece of leather of a different colour, widening to the bottom, often with scalloped edges and merging into the toe, was inserted into the cut. The tops of such boots, also with a rounded knee projection, were tightened with narrow textile or leather ribbons under the knees. The design is still present in Tibet and in regions where the Tibetan culture is represented. The authentic, purely Mongolian edging of the upper part of the boot top copied its shape with a projection on the knee. Their luxurious archaeological items are often covered with the Chinese tapestry silk fabric named *kesy*, and have an embossed and embroidered fringe. A similar edging technique is still present in the Oirat clothing and that of ethnic groups culturally related to them. They are found in archaeological complexes both as shoe (or stocking) edging and as individual objects. This has led certain researchers to think that they were a kind of gaiters attached to the trousers, tied to cover the joint between the trousers and the upper part of the boot top, or even, for some

reason, to cover cases (the latter version is absurd). In illustrated records, such edging pieces are presented as boot edging or stocking edging, protruding over the boot top, as in ethnographic Mongolian footwear.

Now, let us focus on the clothing of the Mongol matron. The upper shoulder part, also known as *degel*, had a design very different from that found on a man's attire. Instead of an accentuated waist, it was very wide, flaring outward toward the bottom. The women's *degel* hit the foot in front, and even touched the ground in the back. Ceremonial *degels* of noble Mongol women had a proper train; the more noble the lady, the longer the train. Foreign eye-witnesses tell of several ladies-in-waiting to carry the train. The *degel* generally had a deep, oblique wrap from left to right, which could also be inverted.

Under the armpit, three ribbons were usually used to tie the side flaps together. The sleeves were very wide near the shoulders, long, and rounded, tightening towards the wrist, though the wrist openings could be rather wide. The cuffs and the collar with the upper oblique part of the flare were always edged with fabric of a colour and hue in contrast to the primary fabric of the robe. Ceremonial imperial women's robes had the standard edging of three fabric stripes (arranged in an inverted order as compared to girls' clothing)—the outermost was broad with golden flowers against a dark colour, then a narrow stripe with golden flowers on blue, and the innermost, a narrow stripe with golden flowers on red. This is the way it is depicted in famous portraits of Yuan empresses, but archaeological clothing is quite consistent with the tradi-

tion, even though in reality it must have been more diverse, depending on the status of the robe owner and where and when she lived. The Mongols borrowed from the Chinese the use of multirow edging, as well as the technique of using edging to accentuate fabrics. The fabrics and decorations of ceremonial women's robes were similar to that of men's attire. Imperial women's ceremonial degels were also made of lengths of silk brocade with a stripe of pseudo-kufic along the shoulders and the sleeves, which were woven by craftsmen of various origins in Beijing, East Turkestan, and Tabriz (?), combining Chinese patterns with those of the Middle East. The Suleiman Collection presents an imperial ladies' ceremonial degel of lengths of brocade with authentic Yuan patterns—figures of a kylin lying among clouds in a leaf-shaped festooned cartouche; images of the 'Chinese coin',—that is, a circle with a square with concave sides inside it (a decorative element extremely popular among the Mongols) fill the background. The 'Islamic' pseudo-kufic ornament along the shoulders and sleeves is replaced with a local geometrical pattern with a line of animals parallel to it—the motif is of Seljuk origin, but the animal figures are absolutely Chinese tigers, not following each other one by one, but arranged in pairs; Chinese lotus flowers are interspersed between each pair. The flares, hem, and cuffs of the degel is edged with sable fur. This costly fur on a costume of gold brocade, equally valuable, indicated the high status of the owner, and the extensive collection in the treasury is evidence of the vast wealth of the Mongol state [Rashid al-Din, 1971, p. 237]. Chinese red-and-gold silks were also used for ceremonial Mongolian ladies' robes, while costly kesi were used for edging and applied to the forearm of the sleeves. Four-leafed rosettes (the 'cloud pattern' according to Chinese terminology), circles and trapezoids on the shoulders, squares in the centre of the chest and the back were woven and embroidered on both women's and men's robes. In bad weather, Mongol matrons wore a dress of a style similar to the ceremonial degel, but made of leather and, probably, fur, or in any case, with fur trimming, over the

degel. Leather degels were decorated with applique work and embroidery. What made the ladies' silhouette very different from that of men and young women is that ladies' degels were hardly ever girded, except on rare occasions in extreme weather. Only Circassian women of the Golden Horde girded their attire, originating from Mongol girls' clothing, with sachets comprising of metallic patterns on a silk band.

The most important symbol of a Mongolian matron was her headgear—the bokhtog, boktag (Chinese gǔ gǔ, gǔ gǔ guàn, European bocca). The bokhtog had an essential representative function. It was an indicator of a Mongol lady, her ethnic, family, and tribal status, as well as her social status and that of her husband, visible even at a distance. A bokhtog was a present from the woman's relatives and that of her husband, given right after the wedding. It was the bokhtog that made a woman a Mongolian. When the Naiman prince Kuchluk married the daughter of Kara-Khitan gürkhan, the Khitan princess refused to wear the bokhtog [Rashid al-Din, 1952, A 70b, p. 197]—a direct descendant of the highest nobility of the renowned, ancient Liao dynasty, which at one time ruled over North China and Mongolia, she found it shameful to step forward as a representative of a Mongolian tribe, even a large one,—that is, to appear before others as a Mongolian. Even nowadays, especially in Russia, though the headgear in question is well-known from texts and graphic sources, numerous finds by archaeologists, often in good condition, lead to disputes on the ethnic affiliation of women buried with a bokhtog. What feeds such debates is that the ritual headdress placed in such tombs varies in terms of specifications; moreover, archaeologists, as a rule, are often poorly informed about the structure of such headdresses, and therefore might mistake remnants for other types of headdress, or even other objects altogether. However diverse the details, the 'classical' bokhtog consists of two structural elements—a small round cap with a neck flap and a round aperture on the top, and a round tube placed on the aperture and crowned with a flat-bottomed conical piece on

top. There are numerous variants of the upper part of the bokhtog,—that is, the cone, both in terms of shape and size. Evidence from witnesses and numerous graphic sources suggest that the bokhtog was sometimes topped with a rod wrapped in textile and beads; a tuft of feathers attached to the upper part, from eagle-owl to peacocks and even kingfisher feathers; relatively short ends of the cloth covering the upper part of the headgear hung down at one or both sides of the base, with a pearl strand on the left. Archaeologists have found bokhtog topper structured such that the base consisted of a wooden or bone brace or two braces fixed to form a cross; a wooden or bone bush, usually cut to resemble a flower, would be inserted in the middle of the brace or in the centre of the cross, in which a rod of wood, bone, or, according to sources, metal, sometimes precious, was also inserted. Broad black ribbons were attached to the base of the cap, attached to the birchbark frame of the upper part by the temple pieces and the neck flap to hold the bokhtog on the head. Pictures and archaeological findings suggest that the ribbons were covered with gold rhombic plaques with pearl inserts, or cloth pieces of the same shape with a lattice of pearls. A small bashlik with ear pieces and a neck flap of the most expensive fabric affordable was worn over the lower base cap. It was of a solid vertical cut, with lace or buttons with buttonhole loops at the back. Broad ribbons were attached to the ear pieces to be tied under the chin or on the back of the head. A long (about 1 m) veil was attached to the bottom edge of the column, or to the cone. Ceremonial imperial bokhtogs were structured in a standard jewelled pattern. Apart from the ribbon rhombic plaques, the full design included a large brooch at the joint between the tube and the cone, a cylindrical amulet holder under it (sometimes two small cylinders), a small brooch or a row of triangles at the joint between the column and the cap and, finally, drop-shaped temple dangles with pearl pendants. The tube could be decorated with a vertical patterned stripe of multicolour beads and pearls. Luxury elements were made of fine gold, and generously inlaid with pearls, sometimes also gemstones.

A cylindrical amulet holder was affixed under the brooch. According to U. Erdenebat [Erdenebat, 2006, p. 118, Zurag 82], bashliks worn directly on the head, without a base with the upper part, formed women's mourning headdress. They might also be referred to as a bokhtog.

Women's clothing in the Chinggisid Empire was always complete with jewellery and decorative pieces. Bracelets were the most popular accessory, their ends decorated with symbolical tiger heads, with the 'lucky knot' with dragon tails in the centre. Amulet holders/tumars,—that is, containers for charms, were very common. These were small cylinders with more or less generous decorations, worn on the neck or attached to the top of the bokhtog tube under the cone. Purses shaped as boxes, rectangular or with the bottom edge intricately carved in a sophisticated festoon were also part of a woman's gear. Luxury gold tumars of gold filigree were also widely used. Their prototypes were leather purses. In the tomb of a noble Mongol woman of the early Golden Horde period located in the town of Novopavlovsk (Stavropol Region), a series of purses filled with wool, chalk, herbs, etc. were found. Attached to a ribbon, they could be worn across the shoulder, thus serving as the ancestor of the traditional women's adornment of the Kazan Tatars—the *khasite*. Neck adornments were also common; the most characteristic of these were small or large settings with flat interiors in which gemstones and pearls were set.

The costume worn by dwellers of the former Jochid ulus in the 15th century.

Information on the clothing of Turkic-Mongol dwellers of the empire of Jochid ulus at the time of its decline and dissolution into several political units is much poorer than that of imperial clothing. This is largely attributable to the general Islamization of the population, since the new religion dictated the burial of the dead in winding sheets only. However, the materials and burial sites of the Volga Region, especially those of the highest Mongol nobility of Central Asia—amir/beklyaribek Temür Barlas and his grandson Ulugh Beg in the

Gūr-i Amīr mausoleum in Samarkand, suggest that the dead were buried in clothes in certain burials of Central Asian Muslim leaders of the 16th to 17th century. Unfortunately, the burial clothing of Temūr and Ulugh Beg was never properly studied, and no detail was published in spite of the utter importance of such material. Therefore, our principal source is limited to numerous miniature pictures, mainly from Herat, Tabriz, Shiraz, and Baghdad, made in kitabkhane (art book studios) at the courts of Mongols-Temūrids and rulers of Turkmen states—Kara Koyunlu and its successor Ak Koyunlu. The details of everyday life, especially clothing, are presented with meticulous accuracy and in great detail. The data obtained from such miniature paintings are consistent with rare items of belt mountings and textile from the territory of the Golden Horde. Relatively numerous sketches depicting robe and caftan embroidery preserved in the 'art galleries' of the rulers of Ak Koyunlu Turkmens—albums known as muraqqahs, captured by the Ottoman Sultan Mehmed II Fatikh, are a wonderful and absolutely authentic source of information on the clothing of this period. It is safe to suggest that, while the men's clothing of the Mongol successors of the Ulus of Chagatai (the Mongol-Turkic inhabitants referred to themselves as Chagatai, calling their Turkic language Chagatai) and the Mongol, Turkmen, and Persian successors of the Ulus of Hulagu borrowed heavily from Mongol traditions, the Mongol-Turkic (Tatar) clothing of the Golden Horde, ruled by the Mongol Chinggisids, where very nearly all ethnonyms were the names of Mongol tribes, should have preserved the tradition to an even greater extent. Moreover, both local and international Islamic clothing traditions had far less influence there than in the Near and Middle East. Miniature pictures suggest that noble men's clothing fully preserved Mongol features. The basic shoulder attire for men was a long robe known as the degel with an oblique left to right wrap, and long narrow sleeves, or very short wide wing sleeves. A rather shorter caftan with short sleeves only covering the middle of the forearm, or wings, was worn over the degel. A whole-cut dress with a round or

v-necked collar and a vertical axial cut to the bottom of the chest was more common. Either buttonhole loops and buttons or lace were used to fasten the aperture. Long robes had a slit on the side from the hem to the knees. Of note is that Iranian miniature pictures of the 15th century rarely depict foldaway sleeves. They must have been popular in the Golden Horde, at least in the Black Sea Region. These territories had direct connections to the Balkans, Asia Minor, and Italy, where garments with foldaway sleeves were extremely popular due to the Mongol influence. In the 15th century, the practice of tucking long outer clothing inside trousers, mostly while hunting or at war, later also during more common activities, began to spread. To this end, the design for clothing worn on the hip had to change. The old type of trousers, rather thin, evolved into underpants, while the upper pair in which the robe/caftan was tucked in was made of thick colourful fabrics and had a wider, lower crotch to accommodate the lower part of the robe. As this attire was warmer around pelvis, the demand for traditional undergarments used as insulation to shrink, although they continued to be used by shepherds in cold and foul weather. The hems of trouser legs were loosely tucked into boot tops, which were now somewhat shorter, and must wider in the leg. The boots, which still had side seams on their tops, now had small heels.

The 15th century 'Mongol-Tatar' men's clothing remained fully Mongolian. We can see the same 'protobuffons' cut in a square or, less frequently, round shape on the chest and the back, the patterned horizontal stripe under the knees, and the four-leaved rosette around the collar. The 'lunar' and 'solar' circles on the shoulders remain, though the trapezoid shapes under them known to be characteristic of the Mongol tradition are not depicted in miniature pictures; at the same time, there are sketches in which actually clothing is depicted adorned with embroidery. The sketches suggest a passion for Chinese motifs and elements of style among elite clothing stylists, who applied the Ming Chinese motifs to their creations with greater or lesser degrees of accuracy and freedom of interpretation. Drag-

ons, phoenixes, cranes, flowers, landscapes of mountains, swamps, and forests, even 'Chinese' warriors engaged in battle are all represented in the pictures. Sketches representing Iranian Islamic tradition, based on what had been developed in the Mongol imperial culture with great influence from the Chinese (in particular, Jurchen and Tangut) legacy, are fewer. A luxurious four-leaved caftan neck-piece, all embroidered with gold, with an axial cut and collar and joint between the top of the robe and the detachable skirt hem edged, now kept in the Armoury Chamber of the Kremlin, Moscow, is an outstanding example of the decorative style. Its surface is covered with finely crafted flowers and winged angels. The neck-piece is kept in the Armoury Chamber as an example of 16th century art of Iran, while American art historians date it to the Temürid epoch. The author of the present book is inclined to believe it was manufactured in the last three decades or at the end of the 14th century in the domain of Temür, and the caftan it adorned was a kingly present to the (temporary) favorites—khan Tokhtamish and beklyaribek Edigu. It was later presented to the Grand Prince of Moscow, again as a royal gift. When the fabric of the caftan became worn, the intact gold details were removed to be kept individually in the field treasury of Moscow rulers (now the Armoury Chamber).

As in earlier periods, the belt was an important element of male clothing, indicating the owner's status. Miniature pictures depict a wide variety of sashes of wrung cuts of multihued patterned textile. However, the secular elite still preferred fancy belts with an accessory precious metal detailing. Characteristically, belts and sashes of the ceremonial Mongolian type are neither depicted in miniature paintings nor found in excavations, thus belonging solely to the Ming Empire. Old and new dynasties of the former Ulus of Jochi, Chagatai and Hulagu, as well as their noble subjects only wore the baldric type of belts—sword knots and saadak belts. According to the miniature pictures, the set now consisted of a frame buckle with a needle, an end plate, two to three round beads with loops at the bottom, narrow scabbard locketts, and

one or more very large round plaques, which were the main adornment on the belt, fastened on the side. Belts of this style were found near the village of Litva near Minsk and in the Mangup Fortress located in the Crimean Mountains. The belt from Belarus dates back to the first half of the 15th century, while the Mangup set dates back to the turn of the 14th to 15th century.

As for women's clothing of the period, there is little information on the Tatars of the Ulus of Jochi. Wonderful examples of clothing were found in the Belorechye Kurgans. However, while the local cultural tradition of the Golden Horde of the 14th century is well-represented, that of the local Adygs of the 15th century is not—the Adygs became politically independent of the dwindling Golden Horde and developed a culture of their own, which, (only to a limited extent) having its origins in the imperial culture of the previous period, was nevertheless distinct. However, if only for the sake of comparison, we should study the materials from Western Ciscaucasia. The situation with women's clothing is the same in 15th century Iranian miniature paintings. While the clothing of the male population of the secular elite clearly carries on the Mongol tradition, it does not seem to apply to that of married women. However, noble unmarried women depicted in Herat and Baghdad miniature paintings and sketches dating to the very late 14th century to the first half of the 15th century have Mongol hairstyles and clothing. The matrons' clothing is clearly representative of the local Iranian social order as it developed in the local environment under the Turkic-Mongol influence. Theoretically, by comparing the two indirect sources, we could single out typologically common elements, representing a legacy common to both regions of the Chinggisid imperial culture. Such common elements can be delineated. First of all, we see the upper caftan, wrapover type, with a vertical axial cut, buttons with loops and buttonholes holding the flaps together. The length of the caftan varied from mid-thigh to mid-shin. It was mostly fitted at the waist, and could have short (mid-forearm) or long and narrow sleeves. The Belorechye caftan is de-

tachable, and has a tucked hem and a high collar. The Iranian miniature paintings suggest that ceremonial caftans were made of costly colourfully patterned fabrics and embroidered like men's ceremonial outer clothing. Yet, the square and round fields on the chest and the back, known as 'proto-buffans', which functioned as Mongol status marks, are not represented in women's caftan embroidery. This is quite understandable—the Muslim woman would no longer be present at quriltai and feasts wearing a garment consistent with her husband's status, as was the tradition with Mongol women. The caftan seems to have originated directly from Mongol young women's clothing, which was virtually the same as that of men. Foldaway sleeves with long cuts fastened with buttons with loops and buttonholes, just as the flaps that became common in women's wrapover clothing that originated from men's clothing. Belts and straps with metal detailing were also adopted from men's clothing. Based on finds from Belorechye and early Kabardian kurgans, women's (sometimes also men's) belts and straps were made of a thick silk band woven on plates. Some women's straps had no buckle, and were tied in a knot. Besides belts with a set, textile sashes were used. During the cold season, a foot-long wrapover warm robe with long narrow sleeves covering the hands could be worn with or instead of a caftan. Such robes had fur details such as lining, collars, edging, etc. Quilting was definitely used to make the item warmer. As we can see, the design of long-skirted outer clothing has nothing in common with that of the Mongol clothing. However, decorative techniques were generally the legacy of the Mongol imperial tradition. Beginning in the 15th century, a foot-long dress with narrow sleeves, wrist-long or covering the hands, was worn under a caftan. The dress had a round or V collar and could be both high and wrapover, with a vertical axial cut. As for headdresses, Iranian miniature paintings always depict a shawl characteristic of the Near and Middle East, arranged in different ways, but never covering the face. The upper edges were usually wrapped around the forehead to form either loose ends protruding

to the sides or to the back, or a protruding folded comb. The rest of the fabric dropped down over the waist as a veil. Circassian burials contain remnants of tall conical headgear with applique decorations and headdresses of precious or non-ferrous metals shaped as spiked cones with a crescent on top of with its horns pointing upward, and sometimes small pendants on chains. Unfortunately, no information is available on pre-Mongol Adygean women's headdresses; however, they do not look like those of the Polovstians and, even if they were derived from the bokhtog, the connection is very distant. It might be possible to attribute the crescent topper to the Chinggisid tradition—a crescent with its horns turned upwards is reliably known to have been included in the Mongol imperial heraldic symbols.

Thus, we can assume that in the 15th century Tatar-Mongol peoples could have developed female attire consisting of a long dress, and a caftan of a variable length with short or long sleeves, which could be girded with a sash or a plate belt, and a warm robe with a long hem and sleeves. Fragmented sources on the 15th century, along with more recent sources suggest the popularity of head coverings consisting of shawls and tall conical hats decorated with metal. It would be reasonable to assume that, during everyday activities, the shawl was generally associated with women, while girls wore conical hats. Beginning with the wedding ceremony, the both shawl and cone could be worn together on special occasions. A set of adornments would be added to women's attire reflecting the wealth and status of the owner, including earrings, rings, bracelets, necklaces, and braid jewellery.

Tatar Clothing of the 16–17th centuries.

Sources on Tatar clothing dating back to the 16–17th centuries are far more extensive than those of the previous century. However, most of these are graphic, with very few real elements of clothing preserved. It should be noted that images of Tatars dating back to the 16th and 17th centuries were rendered by European artists in the realistic style of the Renaissance, sometimes representing ethnographic features with astounding accuracy.

The graphic sources mostly belong to travel reports, and drawings on maps to mark certain ethnic groups inhabiting this or that territory. Paintings and even portraits are also available. Naturally, graphic sources require they be approached in the framework of expert art analysis—some of the images are rather arbitrary; the authors had never seen Tatars, and either depicted them from anecdotal sources, or relied on tradition and their own conceptions, which were sometimes absolutely fantastic. Moreover, the chain of how the Tatar man and the Tatar woman might be artistically represented has to be followed in its entirety, as the initial portrait from life would be inevitably reproduced by other artists over the course of years, accumulating changes, omissions, and fanciful fictitious details. An example can be found even in the latter half of the 18th century. The beautiful 1768 aquatint by the rocaille French *Le Prince* was reproduced after four years in a rather fettered wood engraving by Georgi, based on which even more awkward copies were made. The clothing, traits, and posture would remain the same, while details faded, and a fantastic 'oriental' sabre appears... Another example is a series of variants of a family portrait, which certain researchers from Kazan unabashedly refer to as a portrait of the khan's wife Süyümbike with Prince Utyamysh and their henchmen, claiming the original dates back to the 16–17th centuries. In fact, this cannot be the case, since the portrait, being purely European in its theme and composition, though slightly archaic and influenced by the *parsuna* artistic trend, could not possibly have been created in Kazan in the 17th or, even less probably, 16th century. The painted portrait-like archaic features are characteristic of Russian (except for Saint Petersburg) portrait painting of the first half of the 18th century. Therefore, it is a provincial Russian portrait of a wealthy Tatar family, or even an attempt on an historical portrait of Süyümbike within the ethnographic reality of the 18th century. Of interest is that some elements of reality may have their origin in earlier times, but to date this has yet to be the subject of research. Similar phantoms have been occurring in recent years. They are

mostly related to matters which are important and essential, and which determine the level of artistic developments in the Khanate of Kazan. The tragedy of the people, as well as culture studies is that the art of the Khanates of Kazan, Astrakhan, and Siberia has undergone extensive eradication. All of the jewelry, weapons, cutlery, utensils, and clothing, all the costly plunder of the conquered regions of Kazan and Astrakhan, seems to have been stolen, scattered, and remade into something else over the long tumultuous period in with all figures in the lengthy historical drama played a role, especially, in all likelihood, the Cossacks. Everyday objects simply wore out and were thrown away. The inhabitants of Kazan, who put up a fierce resistance when under siege, were largely annihilated, including the most prominent craftsmen and artists, as well as their more modest counterparts. Only provincial craftsmen carried on the tradition, though for a different customer—for a long time it was new Russian landowners, while those of the old clients who survived had become 'orphans of Kazan' without sufficient means of support. The opportunities of the large stratum of 'service' Tatars were far from those possessed by the khan's courts and oglans, officials, wealthiest merchants, who were numerous, and the clergy of the Khanate of Kazan (and Astrakhan). The tiny Kasimov Khanate was too weak as a customer; besides, its grand architecture suggests Russian craftsmen played a large role.

Thus, the artistic situation in the Tatar khanates of the Volga Region was rather dismal. This makes any evidence of great accomplishments by the craftsmen of the Khanate-period Kazan even more welcome. So a 'version' emerges, claiming the filigree belt clasps from the Armoury Chamber of the Kremlin, Moscow originated from Kazan, 16–17th century. In fact, these are the so called 'pafti' buckles dating back to the 19th century, very typical for the west of the Ottoman Empire, especially the Balkans. The most serious of the phantoms is the Kazan Hat of Ivan IV, the crown created to celebrate the tsar's acquisition of the throne of Kazan, which enabled him to call himself a tsar and made the title legitimate for the Grand

Prince of Moscow. A 'version' both persistent and popular with the scientific and would-be scientific community of Kazan defines the Kazan Hat as follows: 1—a work of Kazan jewellers, 2—simply the crown of the last khan of Kazan Yadigar. However, this 'version' is an absolute myth based on a lack of awareness and understanding of the special features of that bejewelled artistic creation. None of the advocates of these 'versions' seem to have noticed the fact of the hat being, if you remove the 17th century fur band, a bell-shaped tiara with two tiers of sophisticated openwork toothed rings. No ruler, whether of the Muslim East or of the Christian West, has ever had such a crown. However, such a tiara—two-tiered, and later three-tiered—has crowned the head of the Pope. The only Muslim ruler to wear it was the Ottoman sultan Suleiman Kanuni/the Magnificent. The sultan is depicted with it in his 1532 shoulder-length portrait in profile engraved in Venice, and its inverse copy made by the artist Agostino Veneziano in 1535. The engraving shows the headdress, which presents the barbut helmet popular in Italy in its ceremonial variant referred to as *barbuta alla veneziana*, on which a sugar cone shaped tiara is placed with four toothed rings decorated in a most luxurious manner in the Italian Renaissance tradition. Circa 1532, the scrupulously engraved headdress of gold and adorned with gemstones and pearls was designed and ordered by the sultan and produced by the craftsman Luigi Caorlini in Venice. The craftsman received an enormous remuneration of over 100,000 ducats from the Ottoman treasury. It was the great vizier Ibrahim Pasha who made the payment and brought the crown helmet to Istanbul. The sultan only wore the crown once, to receive the embassy of the Habsburgs—the emperors of the Holy Roman Empire. Indeed, this was the occasion for which it was ordered. This was because the Ottoman sultan was the ruler of Rum (the Oriental term for Asia Minor and partly the Balkan Peninsula), where the Eastern Roman Empire/Byzantine lay. However, the sultan wanted, and believed himself entitled, to rule over the entire Roman Empire, including its western part, its sacred centre being Rome, ruled by the Pope, and its secular centre being the em-

peror's Vienna. It was Catholics to whom the symbolism of the structure was absolutely clear (Orthodox Christians, except for the Russians, were already subjects to the sultan)—the sultan was both a sultan (khan, padishah), as a secular ruler, and a caliph—the spiritual leader of Muslims, ruling in the name of the Prophet. The helmet symbolised the former, while the papal tiara symbolised the latter. The tiara had four tiers rather than the Pope's tiara, which had three. The four tiers symbolised power over the four corners of the earth. Grand Prince of Moscow Ivan IV is known to have greatly admired Suleiman since childhood. The reason why he introduced his reforms was to bring various institutes of Muscovy—financial, legal, military—in line with the principles of Suleiman Kanuni. It is reliably known that Ivan ordered a portrait of his hero from Italians travelling between Muscovy and Italy, who supplied it with ease. Thus, it is understandable why the tsar ordered a work of art resembling the sultan's crown to celebrate his highest triumph after conquering the Chinggisid throne of Kazan. This was more modest and had only two tiers. It could be Kazan jewellers who crafted it, but this is not necessarily so. The artistic aspect (without being limited to it) of the culture of the 16th century Moscow was largely orientalist, or, to be more specific, Tatarised. The reason why the Kazan Hat cannot belong to the Khanate of Kazan is the fact that the population of Kazan was hardly aware of the Catholic headgear that Europeans had designed for Europeans, as well as the fact that the khan of the Khanate of Kazan would not dare wear a crown symbolising his equality to the Ottoman sultan—his imam, caliph,—that is, spiritual leader and, though indirect, suzerain.

Now that we have studied the phantoms, we should turn to real evidence. All European sources mention elements of men's clothing popular with most of the Tatar peoples of Eastern Europe.

The most realistic and earliest depiction of Tatars is a painting by an unknown German (?) painter titled 'The Battle of Orsha', kept in the National Museum of Warsaw. The painting depicts the troops of the Polish–Lithuanian Commonwealth defeating the army of

the Grand Principality of Moscow in 1514, and was obviously painted straightaway after the event. The reality and faces, some painted like portraits, are depicted with astounding accuracy and in great detail. What is interesting to us here is the manner in which a squadron of Lithuanian Tatars, also known as lipkas, is depicted. Common soldiers are wearing long-skirted quilted robes with thickly quilted knee-length caftans with very short wide sleeves and stand-up ear-high collars, with a straight axial cut. The caftans could provide relatively reliable protection against arrows, as well as even sabres. On their feet, they are wearing boots with toes turned-up; on their heads are very tall white felt hats resembling a sugar lump in colour and shape, with brims cut to a small depth and turned down. A steel flat cover could be found under the hat. They have the old hairstyles originating from the ancient Tatar styles—the tops of their heads and foreheads are shaved, and the remaining hair is arranged in two braid hanging down from the temples. The chief of the Lipkas is wearing a massive turban wrapped around a vertically quilted hat. Unlike common soldiers, he is wearing a quilted armour caftan covered with luxuriously patterned velvet. It is noteworthy that the Lipkas look nearly the same as the Muscovite cavalry, wearing the same hats (only they have fur-trimmed brims turned up), quilted robes, and caftans. However, all Muscovites have caftans covered with patterned fabric, with hems trimmed with fur, and functioning not as soft armour, but as under armour to wear with steel armour known as *beherets*. The painting clearly shows the extent to which Tatar clothing influenced that of the Muscovites. In 17th century paintings, Lipkas are wearing dark robes and fur-trimmed *malakhai* hats with neck flaps. European contemporaries sometimes depicted Lipkas wearing long caftans covering their knees, with an axial cut on the chest and a tall hat with a neck flap. The battle *zhupan* of Hetman Żółkiewski, dating back to the 17th century, kept in the Czartoryski Museum, Kraków, is probably related to the Lipkas. It is a long-skirted and long-sleeved silk cotton quilted robe — *a terleg* (Russian —

terlik), though the protruding overlapping upper section of the flap is not rectangular in the Mongol tradition but triangle—the way the Muscovites adapted it. A 1660 drawing by T. Kortson shows a calvary captain of the Lipkan army, wearing a short thigh-length caftan and a waist-length waistcoat with fur-trimmed collar, hem, and armholes. His wide trousers are tucked in short boots; he is wearing a hat with a pumpkin-shaped crown and a fur band. A truss is hanging from the top of the hat; on one side of the edging is a feather. The full ensemble generally seems to resemble that of the Cossacks, which was very close to Nogai attire.

As far as the Crimean Tatars are concerned, relatively extensive information is available on the clothing of the elite, including images—Turkish and Persian miniature paintings dating back to the 16th century, West European engravings, and very few unique examples of real clothing. The clothing of the male Crimean elite can be classified into steppe, 'Tatar', and Ottoman categories. Ottoman features can be found in the khan's attire—the outer shoulder attire in the form of a ceremonial long-skirted Turkish caftan with long foldaway sleeves and a large collar, mostly of fur. Jewelled oop buttons are used to fasten the caftan. Clasps were numerous in Turkish fashion; they were arranged with small spacings and numerous buttonhole loops. Girding was not common. 16–17th century Turkish caftans were made of multi-colour patterned Bursa velvet and thick dense *kemkha* silk; buttonholes were made of seaming lace or patterned ribbons. In the early 18th century, ceremonial caftans of sultans and, accordingly, khans, were made of red broadcloth, as was the Turkish fashion; buttons and buttonholes were less numerous, but larger and generously decorated with diamonds. The large turndown collar, flaps, and sleeve cuts were edged with costly sable or otter fur. The 'steppe' variant was a set of an undercaftan with long narrow sleeves and an overcaftan with wide midforearm-length sleeves. The overcaftan with the oblique Mongol left to right wrap or an axial cut on the chest had a low collar, which could stand-up or be turned down. According

A Crimean Tatar (or Nogai).
Engraving, 1703.

to written records, common Crimean nomads wore a short caftan of shipskeen, mostly with the fur outside, both in winter and in summer. All Turkish and Persian images dating back to the 16th to 17th centuries depict the Crimean elite, including khans, wearing very special hats with a dome-shaped crown of plain or patterned fabric that is not very tall, and a fur band with upturned triangle wedge pieces at the front and at the back. Hats with such a band are examples of an ancient Oghuz legacy that was very popular in the Seljuk East of the 12th to 13th centuries. Still used during the Mongol epoch, as we can see, it was preserved in Crimea until the 17th century. In the early 18th century, it was the headgear what made a Crimean khan's ceremonial attire different from that of the sultan—in contrast to the enormous Ottoman turban, the Crimean khan wore a fur papakha hat, though also enormous, decorated with brilliant aigrettes with peacock feathers, just like the sultan's turban. As for the late 17th century, a beautiful engraving by artist Christoph Weigel from Nuremberg pub-

lished in 1703 depicts a Crimean Tatar (and, most probably, a West Nogai) wearing a long-sleeve undercaftan with an oblique right to left buttoned wrap (Turkish style) tucked in wide trousers with legs untucked. The style originated with the 'hunting' fashion of the 15th century and preceded the 'dzhigit' clothing tradition of Central Asia and Kazakhstan. The fur-trimmed overcaftan is worn as a raincoat, over the shoulders, held by a strip of cloth attached on the left of the collar and fastened to a button on the right of the collar. The hat has a large round crown and a relatively narrow fur band. A 16th century's Persian portrait of a khan depicts in detail an undercap of yellow patterned fabric edged with white ribbon. It seems that hats with pumpkin-shaped quilted crowns with a horizontally stitched or fur band were popular with Crimean Tatars of the 16th century. All Crimean Tatars are depicted wearing boots. Yet, it is safe to assume that soft ichig underboots with high tops and kavushi boots with hard soles and heels were often combined. It was only the elite who still had buckled or silk band baldric belts with costly, particularly massive metal plates. Textile sashes became more popular as an everyday accessory with the common people. Baldrics acquired a modest structure of thin straps with small metal fittings.

A costume of the Nogais could be very close to what was worn in Crimea. The latter, presumably, was more varied and more typical, since not only were the Nogais a large body in the Nogai Horde, they also were broadly affiliated with ethno-political structures of the inhabitants of Kazan, Astrakhan, Crimea, the Kazakhs and the Bashkirs. Their costume integrated various traditions based on the main 'template' referred to below.

Taking a close look at a 16th century Persian portrait of a noble Crimean (see tinted insert), it is impossible not to notice its similarity to a large series of portraits of the Turkic nobility on Tabriz miniatures of the 16th century and their later copies. This 'genre' in Iran is linked to the victories of the Sefevid shahs over the Uzbeks and Turkmens, which were immortalised on miniatures and murals in the images of the battles, as well as in the

portraits of the captive steppe rulers. An attribute of captivity—Y-shaped stocks holding the head and the left hand of the captive, is shown on these miniatures not without reason. At the same time they are depicted in combat garments, sometimes even in kuyak armours, and with a full set of armament—a sabre, a saadak, a knife on a belt, a dagger behind the belt, a ring for shooting on the thumb of the right hand, and a flail with a large ball. All are dressed in long caftans: the inner, with long narrow sleeves, and the outer caftan, usually wrapped left over right, with short wide sleeves reaching the mid-forearm. A buttoned top caftan with an axial cut is seen much less often. On their heads—hubcaps with cut brims, either wide or narrow. The crown is quite often quilted in vertical segments. The hubcaps are made either of white felt or covered with tinted and patterned fabrics. Small elegant astrakhan hats/papakhas are less often shown, even more rarely—rather large turbans. The hubcaps and astrakhan hats are decorated with small feathers in precious aigrettes, attached to the crown by a golden cord or a golden chain. On their feet—boots or ichigs with kavushs. It is probable that here we see the typical costume of a representative of the Turkic elite of nomadic roots, which was current for the territory from Central Asia to the Black Sea region, and, accordingly, for the multi-tribal Tatar nobility. A Kazan (and, probably, Kasimov) Tatar representative of the military estate (rather an oqlan than a cossack, judging by the image context) is shown on a well-known engraving of the mid-16th century illustrating the work on Muscovite Rus by the imperial envoy Herberstein. The Tatar, depicted among members of the Russian nobility, is with a quiver, a knife on the belt and a mace tucked in his belt. He is dressed in a flared mid-calf length caftan, narrow at the top, with a straight axial cut with buttons and button-holes almost to the bottom, and long narrow sleeves and a wide fur flat collar. The cap with a crown—a high hood, round at the top, has a cap-band trimmed with a wide strip of lynx

fur. The cap has wide ties. The trousers have wide trouser-legs worn untucked and made of horizontally striped fabric. On his waist there is a cloth belt, and tight soft boots on the feet. A similar, but more generalised costume is shown on the European maps of Tataria. As we see, the 'Tatar template' in a man's costume took shape in the 16th century and continued to exist up to the beginning of the 18th century.

Female Tatar attire is incomparably less known, since there are no Eastern images of Tatar women, and European images are extremely rare, as well as lacking in detail. However the 'Tatar template' for a woman's costume of the 16–beginning of the 18th century can be described. The Tatar woman's attire consists of a long under-gown with a round collar and a cut to the solar plexus or navel, a tunic-type loose, often flared dress with long sleeves, narrow or wide, even flared at the bottom. The outerwear has a fitted, shorter or longer caftan with short sleeves, usually with a straight axial continuous cut featuring buttons. It was the finest part of the garments, the rich had it decorated with brocade and imported coloured and patterned fabrics. The headdress is almost always shown in a form of a high hefty sugar-loaf, sometimes with a neck-flap. Sometimes it was worn over a shawl covering the head and shoulders, sometimes—directly on the head. Possibly, the first option was intended for married women, the second one—for girls. On their feet were shoes and ichigs with kavushs. The abundant use of gems consisted of sewed-on elements, mainly coin-like, on the headdress, necklaces worn under the chin or on the neck, maiden splints, bracelets, earrings and rings. A sash-hasite was a whole collection of amulets of various forms. The described 'Tatar template' of a women's costume was formed in the 16th century and was used in women's garments of many, not only Tatar, peoples from the Caucasus to the steppes of Central Asia. It appeared to be most vividly expressed in Nogai, Astrakhan, Kazakh and North Caucasian—Western and Central—costumes.

CHAPTER 6 Architecture and Art

§ 1. Architecture of the Kazan Khanate

Niyaz Khalitov

The architecture of the Kazan khanate, which left behind neither land constructions, nor authentic descriptions or any visual art, is one of the most poorly studied phenomena in the history of Tatar culture. Medieval Kazan, the image of which may be drawn today mainly on the basis of historical sources and indirect information, so far cannot be considered a full-fledged subject of architectonic analysis on all its levels. Nevertheless, according to the sources known to us, it appears to be a complex and ambiguous phenomenon resulting from advanced centuries-old traditions. By the time the Kazan state came into being, its architecture had already passed through the Azov Great Bulgarian (the 6–7th centuries) period, which preceded the Kama Early Bulgarian (8–9th centuries) and the Kama Great Bulgarian (10–13th centuries) periods, as well as the Golden Horde (13–first half of the 15th century) period. During that time a variety of Turkic and Khazarian, Caucasian and Central Asian, Arab and Persian traits were noticeable, along with those from Asia Minor and traits from developed Eastern civilizations, which were introduced to the Volga region by the Bulgars and by their role as mediators.

The ascendancy of the Chinggisid khans' dynasty from the Lower Volga and Black Sea Coast centres on the Kazan throne in the middle of the 15th century undoubtedly introduced new features to the architecture of the capital. The Golden Horde nobility who had been brought up in the cultural traditions of the capital of one of the greatest empires in the world and followed the familiar traditions of Desht-i Kipchaq (Sarai, Krym), were certainly looking up to the modern centres of the Islamic world, and first and foremost to the Ottoman Empire, for their cultural poli-

cy. Therefore, the development of Kazan city and especially the capital's architecture has to be considered in its general connection to the world culture of Islam. Folk culture was less dependent on the political environment and was more resistant to innovations. Kazan was in a period of rapid construction, where new fortifications and city walls, palaces and mosques, trade canals and a river port were being built. Numerous remains of log constructions, white stone and brick bases of the mausoleums and mosques of that time (dilapidated and reconstructed, some of them existed up to the second third of the 19th century) have been studied by archaeologists, and characteristic tiles and plaster sheeting details have been found. The drawings of medieval artists, both Russian and Western, provide information on the unique architecture of Kazan. Many spired tower-minarets, the white-stone fortified palace of the Khan, and multi-dome stone baths, etc. can be seen in them (see: [Khalit, 1996]).

On the border of the forest-steppe zone and the Steppe and to the south where the towns of pre-Mongol Central Bulgarian and Golden Horde cities once stood, architectural traditions by the 15th century had been developed on the basis of their own traditions and the imperial school of the Golden Horde. One might note certain principles of urban planning expressed in both the spatial composition of the capital cities and in the corresponding size of the buildings, as well as the scope of construction. Culturally, the khanate became the direct successor of the traditions of Volga Bulgaria, which is confirmed, in particular, by archaeological [Smirnov, 1951], ethnographic [Vorobyev, 1953] and anthropological data. Kazan people adopted new creative concepts and widely used heavy

domes, tiered formations, and inclined and multi-inclined coverings characteristic of the Bulgar architecture. They also preserved a unique type of minarets [Khalit, 1995]. Fortresses and castles, palaces and baths, caravanserais, mosques, madrasahs, houses and tombs were all built here, which was all inherent to the architecture of the Muslim East since the very start.

Stone and brick constructions left more traces and therefore there is more information about them than about wooden or earth ones, not to mention nomadic mobile structures. The masonwork, numerous samples of which can be found in the Kazan Kremlin, was extremely varied: from skilfully laid flagstone to smoothly polished blocks. Fortifications, baths, palace chambers, mosques and tombs were all built of stone. This architecture in its essence was close to the unified planning and construction approaches of the medieval architectural schools of Transcaucasia, the Crimea and Turkey. The plinthis bricks widely used in Bulgar and the Golden Horde in the 14th century are rarely found in Kazan, while the remains of brick constructions leave no doubts about the extensive spread of bar bricks, which although not very noteworthy from a modern point of view, are always commonly perceived as 'Russian'.

The cities were mostly built up with wooden log houses and other domestic constructions. Different natural and geographical conditions than those in the Trans-Kama region, the abundance of wood, the proximity of peoples living in forested areas and who possessed evolved technologies for processing timber, all left a mark on the region's architecture. Timber came to play the leading role here, and outright dominated stone even when it came to constructing monuments. Wooden designs allowed for the creation of beautiful elements built atop structures that were rich in silhouettes (towers, superstructures, tents, spires), and also picturesque bends and facade partitioning. Such figurative means of stone architecture as domes, arches, external portals and cylindrical towers were easily replaced with tented roofs, canopies and multifaceted forms. Certain

types of mobile architecture also remained, including tents, yurts and kibitkas.

The development and character of the Volga and Kama culture at each stage of its historical course can be correctly estimated only by considering its interrelations with the closest centres of Islamic culture: Transcaucasia, the Black Sea Coast, Khwarezm, as well as other more remote ones, including Iran, Asia Minor and the Middle East. Each of these centres was an outstanding example of the regional style in art and architecture based on its own pre-Islamic traditions. The cultural line of 'Egypt—Turkey—Caucasus—Volga region' is clearly visible when comparing architectural monuments of that era. Despite their geographical remoteness, the people of the Islamic world were related in faith and blood and closely connected with each other, and the Kazan Khanate was a similar centre that occupied the northernmost point of the vast Islamic world. Kazan actively cooperated in political and cultural relations with many of them, even down to being directly involved in the recruitment of construction teams from one region to another. Certain historical information testifies to the possible participation of Italian architects during the construction of the Khan's court and its fortifications at the end of the 15th century, as the name of the Crimean architect Yakup is mentioned in the documents [Usmanov, 1991].

The formation and apogee period of development of the medieval Kazan school of monumental architecture (15–16th centuries) chronologically coincided with similar development stages of one of the greatest schools of the Islamic world: the Ottoman school. Its influence is obvious in the architecture of stone monuments of all post-Golden Horde states of that time. The surviving examples of medieval decorative art of the Volga region and their echoes in later works of the Kazan Tatars (and not only) provide all the foundation necessary to consider the Ottoman style as one of the historical styles of the Tatar artistic culture in all its manifestations: decorative, applied, monumental, and architectural as well. The medieval art

of Turkic peoples of the Volga, Urals and Siberia, which included architectural and decorative art, also relied on the local Turkic–Finno–Ugric tradition, giving birth to unique forms and manifestations of artistic culture [Valeev, 1975].

Settlements and Dwellings.

Tatars had various dwelling types depending on the place of residence and the construction materials used, as their design principles were subject to Sharia law and regional traditions, combined with the vestiges of nomadic dwellings to some extent. The type of the house depended on the financial state of the owner, and ranged from a mud hut, a semi-mud hut, an adobe hut, a one-to-three-story log house with a more or less developed structure, stone 'chambers' or various combinations of log, brick or stone constructions (the Khan's palace, Nur Ali's estate, the house of Kul-Sharif in Kazan). Stone and wooden one-to-three story buildings with a high ground floor used for household purposes, under a two or four-sloped roof, in general probably resembled later traditional houses described by the ethnographers of the 18th century. Outside the estate was fenced with a timber wall or paling. More wealthy two-story houses might have exterior balconies or galleries.

One particularly characteristic detail was mentioned in ethnographic literature: people with a nomadic past, including the Tatars, had a summer dwelling along with a winter one, which was sometimes just an ordinary yurt in the yard or outside the settlement. It is known, for example, that Chinggisid khans sometimes preferred to rule the state from the nomadic camp, not from the capital of the empire, and in decoration of the Khan's palaces (for example, in Bakhchysaray) elements of the nomadic style can clearly be seen. Up to the present moment no attention has been paid to the nomadic component and its influence on the development of national traditions in Tatar architecture despite direct indications on behalf of contemporaries as to the existence of the 'Kazakh type' yurts in Tatar life well into the end of the 19th century. [Vorobyev, 1953, p. 158]. The fact that until

the beginning of the 20th century the Kazan Tatars often had two houses standing nearby might be considered an echo of this tradition: they had a winter and a summer house connected by a canopied passage or a gallery on the second floor. Obviously the complexes mentioned above served as prototypes to such constructions [Khalitov, 1989, p. 75]. The 'Mongol' type of dwelling in the form of a centrally planned square structure spread throughout the Lower Volga region during the era of the Golden Horde and had an influence on the architecture of Tatar mosques [Khalit, 2012]. The architectures of the Bulgar and Golden Horde appeared in medieval states where the nomadic component played an essential role in the economy and culture of the people inhabiting it. Therefore, they inevitably developed as a result of the synthesis of nomadic and settled cultural traditions. This was reflected at all levels, including city planning, spatial and compositional aspects, design, artistic and figurative, symbolic and decorative elements. Its role in this process cannot be underestimated. On the contrary, taking into account that the nomadic tradition had been shaping the mentality of the Volga region inhabitants for millennia and at the time of transition to a settled life it was the main lifestyle, it is necessary to consider its characteristics and see its traces in the architectural tradition of the subsequent eras.

The analysis of medieval Muslim miniatures permits us to speak about five types of nomadic structures: yurt, bigger and smaller tents, kibitkas and canopies. There is no doubt that all these types in either form existed in the early architecture of Kazan as the legacy of medieval Turkic city culture, which combined elements of both the nomadic and settled style.

Ensembles and Complexes.

Palace Construction. Consistent pattern, traced in the layouts of the Khan's palaces in Kazan and Bakhchysaray (and, perhaps in Khan-Kerman as well) where similarities to the Sultan's Topkapi palace in Istanbul can be seen, point to a general planning principle: a longitudinal-axial composition of the complex around an extended maidan, where

the inhabited, representative, cult, memorial and household zones were grouped. A high cylindrical tower adjoining the Khan's living quarters was another characteristic element of palaces. All of these constructions are united by one fact: they were built by Chinggisid khans, natives of Sarai, the capital of the Golden Horde, at the time new independent Tatar states were being established. Perhaps they all had a single prototype—the palace of the Khan of the Golden Horde, the Chinggisid patrimonial residence in Sarai [Khalit, 2009a]. Meanwhile the palace in Istanbul became an example of the style of the period as well as an example for imitation.

The Ensemble of the Ark of Kazan. The Ark (fortified court of the Kazan khans), was a universal complex of inhabited, administrative, cult and household buildings surrounded by a ring of defensive constructions. The complex closest to the Ark of Kazan in style, construction manner and cultural affiliation is the Palace of Shirvanshahs in Baku (Azerbaijan), which was completed for the most part in the 15th century. Its buildings, along with those of the Crimean Tatars, are probably the closest analogies to the Kazan structures, which allows historians to speak about uniform principles of architecture dominating in those days in the Volga-Kama, Southern Caucasian and Black Sea regions. Other close examples of a similar complex might be the palace of Iskhak-Pasha (a citadel in Dogubayezit) in Turkey, and the Khan-Sarai in Bakhchysaray. The size, principles of spatial organisation and stylistic features of the constructions they consist of can serve as examples for restoring the image of the Ark of Kazan in the 15–16th centuries. After examining a number of documents of the 16–17th centuries, the conclusion can be drawn that it was a stone citadel in the form of an irregular quadrangle of embattled walls and towers, roughly aligned with the cardinal directions and crossed from within by additional fortifications according to the lay of the land.

The main entrance to the Khan's residence was protected by two-towered gates resembling the main gates of the Topkapi Palace in Istanbul. Some medieval images of these

gates remained. The Ark's next line of defence was an additional wall with multi-tower gates to the inner courtyard reminiscent of the Gates of Pleasure in the Topkapi Palace. The architecture of this Palace likely served as the basic image for the reconstruction of the Ark.

The Ark of Kazan, as well as any residence of important feudal lords, had a number of features, but the main ones had to be convenience, safety of living, multi-functionality of the grounds (housing, representative, administrative, defensive functions) and the possibility of evacuation in case of military threats. The positioning of the buildings had to contribute to the defensive functions of the citadel,—that is, they were possibly connected or arranged at various levels. The courtyard also had to be divided into a number of closed sections with blockable entrances and exits, and perhaps with additional internal walls to create 'death corridors' for the invaders.

The main three-part three-story building was the centre of the Khan's courtyard composition; brick (stone) and wooden buildings either adjoined it from different sides or stood apart at a small distance. The surrounding buildings (to judge by the medieval drawings) had rich, ample moulding of the facades and an elaborate outline, as if encouraging the idea of an intricate high-rise silhouette dominating the general composition of the palace.

The following are the functional groups of buildings and rooms that were part of the palace complex at the administrative centre of the state, the Khan's family residence and defensive structures:

1. The administrative block: buildings or rooms of the State Council (Diwan); the court (qadiyat); the ceremonial square in front of the palace; prison (zindan); treasury; library, archive; barracks of the Khan's guard.

2. Residential block: The Khan's palace; buildings for the servants and guards; guest house; garden.

3. Service and household block: kitchens; bath; stables; storerooms; court handicraftsmen workshops (copper foundry, shoemaker, sewing rooms, blacksmith/jeweller/gunsmith's shops, etc);

Functional diagram of the Ark of Kazan. 11th century

4. Cult block: mosque; tomb of khans; perhaps the tomb of a saint.

The assumed area of the Khan's courtyard is obviously too small to accommodate all of these functions and the bureaucratic administrative structures of a very extensive state that by then measured the size of modern France. It is therefore entirely possible that the Khan's courtyard in Kazan had the limited functions of a purely administrative centre (or one of them) that was more fortified in case of a critical situation, such as the one in 1552. An-

other one of such centres, according to many sources, was most likely the Khan's country residence on Lake Kaban (Kabansky ancient settlement), or perhaps other (military camps) in case the capital was occupied by the enemy.

As concerns other palace structures, there are mentions of the Nur-Ali Shirin Palace in the north-west part of Kerman Yugara (for more details about the justification of this term, see: [Khalit, 1999, pp. 49, 50]) and also mentions of the palaces of Arsk '*princes and their noblemen*', which '*are very beautiful and truly worthy of awe*' [Original, 1902, p. 129].

The Architecture of Religious Structures

The mosque, madrasah and türbe (tombs) can be included in this group of structures.

According to the most preliminary calculations, there might have been about 1500 mosques on the territory of the khanate in the middle of the 16th century, however there remains little information about them at all. Part of these structures were located in the city centres and played the role of kabir and jami, but the majority were mahallah mosques. There were probably also public city musalla near large settlements.

To summarise all the known data, it is possible to define **four various groups of mosques** in the medieval architecture of the Volga-Kama region, each fulfilling its own function and intended for quite definite purposes or a certain social group of inhabitants. These buildings differed both in size and in

Arch of Kazan.
Reconstruction
by N.Kh.
Khalitov

the artistic style of their architecture: mahallah mosques; jami (some of them carried out a memorial and perhaps commemorative role); kabire; musalla. There were also **specialised mosques**: madrasah mosques, market, military, cemetery, memorial mosques, etc.

Five layout types of mosques were formed in the medieval architecture of the Volga–Kama region: courtyard; columned; central-domed; multi-hall (multi-domed); and single-hall (mahallah mosque and yurt).

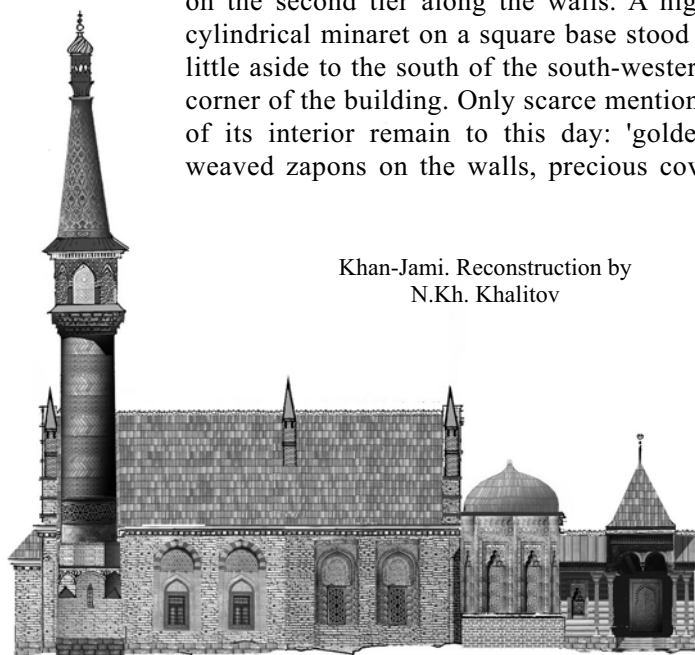

As for their dimensions, the mosques had several variations that in general corresponded to the mentioned types: multi-tower (courtyard and columned); with one-two adjoining (built-in) minarets (dome, multi-dome, multi-hall); with a minaret on the roof (single-hall); and without minarets (yurt, etc.).

There is more or less authentic data about several mosques from the actual constructions of that time: Khan-Jami, al-Kabir, Kul-Sharif, Nur-Ali and two more, so far anonymous and located on the territory of Kerman near the Tyumen gates and opposite Khan-Sarai. In addition, a description of a medieval wooden mosque in the Tatar settlement before its demolition in 1742 has been saved to this day.

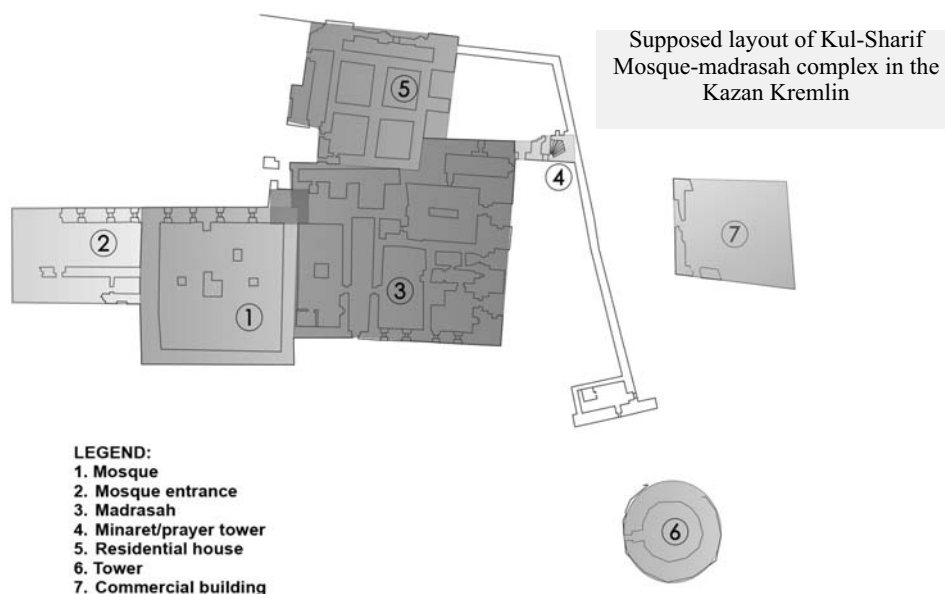

Al-Kabir. As any large Muslim city, the capital of the Kazan state had a main capital mosque named al-Kabir. The reference to an eight-tower mosque in Kazan in one of the historical works by Sh. Marjani and M. Khudyakov's hypothesis about the use of its image in the architecture of the Cathedral of Vasily the Blessed (Pokrovsky Cathedral) in Moscow, commemorating the capture of Kazan, are widely known. This idea gained particular popularity in Soviet and Post-Soviet historical literature and artwork. If the architecture of Pokrovskaya and other memorial churches connected with the Kazan campaign of Ivan the Terrible is analysed in detail, it is possible to find many traces of the Tatar architecture in their im-

ages and forms, including the main layout of a mosque-prototype that featured a complex with a central dome (and possibly a tented roof), surrounded by four minarets,—that is, a mosque of the Ottoman type. Small turrets towered around the basis of the dome to support its base, minarets and other finishing elements of the building might have had onion domes of various design. Mosque minarets, unlike Ottoman ones, might have had more hefty 'Bulgar' proportions, indicative of which is the form of the 'pillars' of Vasily the Blessed that are close to Bulgar towers in their proportions but belong to the Mamluk type of minarets.

Khan-Jami. It is known that in the Ark of Kazan there was the '*Tsar's*' (*Khan's*) mosque, that served as a pantheon of the Kazan khans (a memorial mosque) [Tale, 1959, p. 179]. The word 'mosque' referred not only to the building, but to the entire cult complex, including the necropolis with tombs and the courtyard protected by a stone wall, as it is mentioned that about a thousand women, clergymen and the Khan's confidants took cover there when Kazan was attacked by the Russians. Judging by the annalistic and other images, it was a one-to-two story stone building, and its domed hall with two tiers of windows might have had gallery balconies on the second tier along the walls. A high cylindrical minaret on a square base stood a little aside to the south of the south-western corner of the building. Only scarce mentions of its interior remain to this day: 'golden weaved zapons on the walls, precious cov-

Khan-Jami. Reconstruction by
N.Kh. Khalitov

erings on the Tsars' tombs embellished with pearls and precious stones' [Ibid.], meaning there were probably sarcophagi of the Khans covered with fabrics over the graves. These were found during archaeological research performed at the bottom of Süyümbike Tower in 1978 and 1998–2001 [Mausoleums, 1997]. There were also the remains of plaster facing covered with fine convex floral design, along with pieces of tombstones.

Kul-Sharif Mosque-Madrasah. Near the Ark and behind the square, the religious and educational centre of Sayyid Kul-Sharif could be found, which was partially studied by archaeologists in 1997–1998. After Kazan had been captured by the Russians, it was given to the Kazan bishop's parish and remained like this up to its demolition after the fire of 1829. The archival plans that were saved permit us to picture this large complex of stone and wooden buildings. In the medieval part of it that remained, three functional groups can be identified: a mosque, a madrasah and a residential house (of Kul-Sharif). The mosque is defined as a jami with a central dome of the Ottoman type from the end of the 15th century: a square stone construction at its base topped by a dome. The mosque is adjoined by two structures that can be defined as a lobby and a staircase with an exit to the western facade. The two-storied lobby space was sym-

metrically divided into two chambers, which were probably topped by domes with a minaret between them. From the western side it was adjoined by a stone staircase. Assuming that the mosque had appeared earlier, it can be reconstructed as a typical jami with symmetrical composition along the 'East to West' axis. The exterior forms and stylistic features of the mosque, judging from the general style of the period of Sahib Giray and Safa Giray's rule, can be reconstructed in the Crimean-Ottoman style of the first third of the 16th century. It is necessary, of course, to take into account the more severe climate, which demanded the presence of entrances and galleries closed from the cold, more massive walls and intensive heating, and external coverings that protected against an aggressive environment. There might have also been purely Kazan motifs on the facades of the building not to be found anywhere else.

During the second stage of the layout and architectural development of this mosque, after the madrasah had been connected to it from the western side, the eastern entrance might have been constructed, which at the same time expanded the mosque's facade along the maidan perimeter for mass prayers in the fresh air.

Nur-Ali Mosque. The mosque constituted a part of the central group of stone mosques

near the Khan's Palace in Kazan and stood near the 'Muraleev tower' of the Kazan Kerman. This was a centrally planned construction of the 'octagon-on-tetragon' composition topped with a spired dome or a curvilinear tented roof. The external appearance of this rather typical example of Ottoman style from the 15–16th centuries may also be pictured quite easily. This was possibly a simple stone building with a tile or wooden covering not too amply decorated with carved details.

Mosque near the Tyumen Gates. This mosque was located on the place of the later church of Cyprian and Justina and was a centrally planned Golden Horde mosque-burama with a minaret in the centre of the roof.

Tombs. There were presumably at least two types of mausoleums, some parts of which survived up to modern times in the form of land structures.

1. **Türbe.** This type of tombs is found in the ancient settlement of Bulgar and is a classic example of the 'Seljuk style' (octagon on a tetragon with triangular bevels, topped by a dome and an exterior pyramidal tented roof made from local limestone). In related cultures (the Crimea, Transcaucasia and Turkey) there were also other versions of türbe: oc-

tagonal, many-sided and cylindrical with or without a square base, with an exterior dome or tented roof, etc. Theoretically speaking, any of them might have been in Kazan as well. Indeed, on the miniatures of Russian annals from the 16th century many-sided constructions with pyramidal roofs, resembling those of the traditional Bulgar türbe, can be seen.

2. **Tent.** The image of the Safa Giray tomb on a miniature in one of the illustrated copies of 'The Kazan Chronicle' [RSL, reserve 178, no. 98] gives some grounds to assume its complete similarity to Kasimov tombs. One example of such tombs are several monuments remaining from Khan-Kerman (Kasimov, Ryazan Oblast) built atop the graves of the local nobility [Velyaminov-Zernov, 1863]. Tekiye of Khan Shah-Ali in Kasimov, according to typological classification by D. Vasilyev [Vasilyev, 2003], belongs to the B1–1 group of the Golden Horde mausoleums (two-chamber rectangular without portal) or B2–1 (two-chamber rectangular without portal with rooms along the main facade).

3. **Chardughan.** One cannot exclude the existence of a chardughan in Kazan, which was a way of accentuating and fencing in noble burials using a many-sided arcade pavilion open from the top that was popular in the Crimea and Turkey and also noted to exist in the Golden Horde.

Architectural Forms and Details

Signs of the Ottoman style in the Tatar national tradition in the Volga region are generally seen in applied and decorative art objects and in stone carvings. Its echoes are also frequent in the Tatar architecture of Kazan and its surroundings from the 18–19th centuries. Distinct features of Ottoman influence can be observed in the architecture of the Russian 'uzorochye' of the 17th century; most logically they are born from traditions of the Kazan style adopted by the Russians in the course of colonisation of the Tatar lands and the assimilation of the Tatar diaspora.

The main characteristics of this style are low-relief wall plasticity, precise divisions, wonderful proportions, fine floral ornaments made using various techniques and incorporated into simple facades, and a rich polychromy of interiors. The apertures are bounded by arches of different configurations and can sometimes be very intricate, framed with niches, carvings or other decor, plat-bands and tympana with sumptuous comb-like lintels in the shape of floral ornaments. Walls are also enriched with various decorative niches, at times in fancy shapes and adorned with carved or painted panels, as a rule with floral ornaments. Apertures and niches are embellished by graceful decorative columns of unique forms at the sides, and muqarnas are also widely used.

This unique set of ornamental motifs partly carries on the traditions of the Seljuk style, but they are in large part introduced by the Ottomans for the first time, which significantly adds to the stylistic image. Ottoman ornamentation has none of the rigid regularity of the Arab and Seljuk eras, which has less stylised elements that are close to forms of the natural world. Ottomans returned to the Turkic nomadic vision of the world in its artistic culture by creating a poetical image of the decorative style: multi-coloured, infinitely various and variable. All this and much more are its stylistic norms, and they accompany Ottoman-type structures wherever they are, including in Tatar architecture.

The scientific study of medieval Tatar architectural structures is far from complete,

yet a short and far from complete list can nonetheless be introduced.

In Tatar medieval architecture the **composition of building featuring angular towers** with buttressing or decorative purposes became fixed. Here it acquired a special meaning and defined the image of a capital mosque for all time, even now [Khalit, 2008]. Small turrets over the corners of minaret quadrangles also became a variation on the same composition.

The multi-tower composition of the building developed in the domed form surrounded by pinnacle turrets. These forms are seen frequently in the miniatures representing Kazan from the 15–16th centuries. Traces of this form can be observed in the decorations of memorial temples of the Muscovite state associated with the capture of Kazan: St. Boris and Gleb Cathedral in Staritsa, St. John the Baptist Church in Kolomna, Basil the Blessed Cathedral in Moscow, and others. There are enough reasons to assume that there are borrowings from Kazan architecture.

The forms of arches were varied. Among them were simple ones (semicircular, onion, vaulted using different configurations and keeled), as well as sagging ones imitating the curtains of nomadic tents, which is reminiscent of the Seljuk nomadic style. This element also became traditional in the architecture of the Volga Tatars present in urban and folk architecture up to the beginning of the 20th century.

Ceramic Facing. Single inclusions of glazed porcelain tiles in brick and stone masonry were widespread during the Seljuk period. Glazed porcelain square tiles of blue and light blue colour obviously intended for narrow strips and borders, along with scattered glazed bricks obviously not intended to completely cover walls, testify to the presence of such decorative techniques in the architecture of the Kazan Khanate.

Framing apertures with tympanum. This is a widespread feature characteristic of the Ottoman architectural style. The presence of a tympanum over a window or a doorway could have the most varied of forms, starting

from simple rectangular, semicircular and vault outlines to rich elaborate compositions amply covered with ornaments both inside a cartouche and on its exterior edge. It is clear that stone carving motifs for tombstones were not specifically designed; they merely repeated the techniques and forms of architectural decor. It can be assumed that the architectural concepts of Tatar tomb steles that were mainly stylised after mihrabs (reproducing both their general image as well as the precise details), preserved elements of the decoration essential to the Tatar entrances into the monumental buildings of mosques, madrasahs and palaces. If one considers such cartouches as imaginary 'Heaven's doors' (especially considering the religious content of the inscriptions inside them), such a concept seems quite logical. Then there are tympana with a pitched sagging top that reproduce the traditional forms of nomadic architecture. Similar tympana can be seen in Russian architecture of the 17–beginning of the 18th century in Kazan as well. For example, on the facades of the Palace Church in the Kremlin sagging triangular tympana are combined with keeled ones remarkably similar to the Ottoman ones in configuration. This points directly to their likely borrowing from medieval Tatar architecture.

Door panels, plenty of which remain from the Ottoman period, appear to be true masterpieces of decorative and applied art from the perspective of their carving, mosaic, painting, forging, embossing, engraving and casting. They could be smooth surfaces covered with uniform drawings, or complex compositions on panelled bases that combine all types of ornamentation and implementation techniques. Similar doors taken from medieval Kazan were recently found in a Russian museum, which permits us to draw an opinion about the style and high quality of architecture in the Volga region [Khalit, Khalitova, 2011].

One can get an idea about **the Tatar capitals** by their traces in Russian architecture from the 16–beginning of the 18th century, which are connected in one way or another with Tatar culture. Among them is Basil the

Blessed Cathedral in Moscow, where we can see the typical Seljuk and Ottoman style of adjacent columns at the entrances reminiscent of the Tuscan order. More difficult versions of the same adjacent columns can be seen on the facades of the Süyümbike Tower and the Palace Church in the Kazan Kremlin. The facades of the Governor's Palace in the Kremlin built in 1846 on the site of the Ober-commandant's House (which was rebuilt from the Khan-saray) had characteristic Ottoman capitals with angular 'droplets', albeit in their own special way. It is clear that the architect (F. Petondi) copied them from the facades of the old Khan-Sarai, and in doing so linked history to a specific artistic image: the succession of the Tatar and Russian palaces and centres of government.

Porebrik. This is a typical feature of the Ottoman style, but unlike the brick facade pattern we know so well, the Turks also carved in marble, both on their facades and in interiors. The porebrik pattern is widespread in the brick decor of the Kazan Russian buildings, and special attention should be paid to the decorations on the Spasskaya and Süyümbike towers of the Kazan Kremlin where elements of Tatar architecture were conceptually reflected [Khalit, 2005, p. 9]. There is a wealth of evidence to assume that this pattern existed in Tatar medieval architecture as well.

The *brick muqarnas* form a special group, and the Russian 'gorodki' can be considered a variation on them. They can be seen as laid out with simple or specially ground bricks, and they seldom follow any classical design. The facades of Spasskaya Tower in the Kazan Kremlin are decorated with one of the characteristic kinds of this Ottoman muqarna [Khalit, 2005, p. 9]. Their presence on this structure points directly to the existence of Tatar prototypes that were probably still there at that time in Kazan or on other Tatar settlements.

The decoration of corners in the Tatar architectural style in general inherited techniques from the Seljuk style.

The included concealing angular seams using an adjacent column buried in the

ground to a quarter of their height. This technique is usually used in many-sided (8 and more) structures and is common in the architecture of the Crimea. Traces of such concepts remained in the Russian Kazan architecture with a rather precise reproduction of a Seljuk or Ottoman rotunda-türbe with all the patterns inherent to these styles. The corresponding prototypes probably existed in Kazan architecture.

The vertical angle of an aperture or niche were decorated by a column inserted into a special cut, and as a rule did not reach the bottom and top of the aperture. We can see an example of this type in the remains of a Bulgar Kabir portal (14th century) and in the Kazan Kremlin (archaeological research at Süyümbike Tower, 2001).

A cut or the rounding of a corner up to a certain height where the walls join to form a right angle. This transition can have the shape of a slanting triangular console, either smooth or completed with the honeycomb structure of a muqarna or palmette. This mode was widespread throughout the entire Muslim world and was very familiar to the Tatars as well, who often applied it in the architecture of residential houses. The earliest examples of such concepts are recorded in the Kremlin (Sujumbike Tower) and in the Old Tatar settlement of Kazan of the 19th century. We can assume this originated in the Volga region in medieval times.

Ornamental motifs

The style of Tatar ornaments as we know them now was formed, to a large extent, under the influence of Ottoman culture, which clearly indicates the common cultural orientation of the populations. The Ottoman motifs can be traced throughout all areas of artistic culture starting as early as the 15–16th centuries, and their mark can be seen even in the architecture of the 18–early 20th centuries. This allows us to conclude that the Ottoman style became national during the Kazan state and was perceived as such by the subsequent generations of Kazan people who reproduced its motifs as elements of their traditional culture.

We know quite a bit about the Tatar architectural ornaments of that time. First

and foremost, this includes the carvings on tombstones preserved in a variety of examples. There are many parallels and literal identical matches with Turkish motifs, but there are also some original examples that develop the indigenous ornamental traditions in line with the Ottoman style. Of course, no one invented any special ornaments for tombstones, as these were simply the same architectural elements, just adapted to the corresponding size. By comparing them with real examples found on the walls of preserved buildings (unfortunately, not here), it is easy to imagine their architectural prototypes in carving, painting or tiled mosaics. There is no doubt that these same patterns covered the surface of walls, architectural details and interior items. Only a single example of stone carvings out of many techniques has lasted to our day, but it still allows us to make our judgements on its originality and on the stylistic properties of architectural ornaments in the Volga region. They could have been geometric (wave, zigzag, twisted strands, ropes, meanders, rosettes, girih, etc.), in the form of plants, epigraphic and also zoomorphic. The techniques used to create them could be sculptural (carving, moulding, ornamental masonry) or planar (tiles, murals, mosaics), monochrome or multicolour. Therefore, the ornamental motif or story imprinted in tombstone carvings could be used with this style in medieval buildings through the application of a variety of techniques and in various elements of facades or interior decor, some good examples of which can be found outside Tatarstan. By comparing the ornamental motif with examples from Ottoman architecture, we have an excellent opportunity to legitimately reconstruct the medieval architectural elements of Volga region Tatars.

Several geometric ornaments

Twisted strands and ropes. This is a common ornamental motifs throughout history, including in the Ottoman style. In Tatar culture it can be found on tombstone carvings and wood carvings used to decorate the borders of gates, platbands, etc. [Khalitov, 1976, pp. 123–125].

Ornamental motifs

Zigzag. This ancient motif that originated at the very least in the nomadic past of the Turkic population and widely mastered within the Seljuk style, became widespread in the Ottoman period both among the Tatars and Turks. The patterns could be flat or textured.

Wave. This is an ancient ornamental motif that organically fits into the culture of Turkic people. In the Ottoman style, the wave acquired the image of plant sprouts and is rarely found in its pure form, although isolated examples do exist.

Meander. This is a cultural motif that can be found virtually all over the world, and it also takes a solid hold in the Ottoman style and Tatar culture. Most often we see an oblique meander that resembles a traditional nomadic wave and an endless geometrised plant vine.

Rosettes. In Tatar art, we can find both the traditional variety of rosettes and those that are typically considered Ottoman. However, they represent a relatively small percentage compared to the rosettes of ancient nomadic and Seljuk origin.

Stars. A common motif in Tatar art and architecture is a six-pointed star in the form of two intersecting triangles. This can be found in the design of portals and tympanums, and in the patterns of grills and stained-glass windows.

Girih existed in Islamic architecture as one of the principal decorative means for over a thousand years without ever changing its shape, and can be found, virtually unchanged, in the Bulgarian, Golden Horde, and later Tatar architecture using a variety of materials and techniques. These could be made using such techniques as carving, mosaics, tapping (embossing), casting and painting mainly for the decoration of flat surfaces (fences and window grills, door leaves, decorative panels, etc.), although sometimes it was also used on curved surfaces (such as domes, arches, column rods, muqarnas, etc.) The comparison of girih-designed architectural elements in the rare finds discovered in Tatarstan and Kazan with similar elements found throughout the entire Seljuk region reveals their identity and allows us to postulate that any of its varieties might have also been included in medieval Kazan architecture. The remnants of stamped and carved girih ornaments (wall panels) were found amid the vestiges of an unknown building near the porch of the Annunciation Cathedral in 1861.

A couple plant ornaments

Tatar medieval plant ornaments that have been preserved well enough to make some generalisations, clearly indicate that they

belong, on the one hand, to the Ottoman style for many art forms (embroidery, jewellery art, tombstone carving), and on the other hand reveal a significant conservatism of certain motifs. For example, the stylised plant sprouts in the carvings on Tatar tombstones are similar to the border stripped ornaments of Ottoman Turks, but their Tatar interpretation is more abstract and conventional. Such a solution is justified in terms of designs for a tombstone carved from a limestone slab.

The Ottoman style developed several types of crowning heraldic ornaments, one of which is consistently used for the carvings on Tatar post-Golden Horde tombstones and can be found in a sufficiently large variety of interpretations. In this case, the plant motifs are identical to the Turkish ones and prompt us to imagine other possible uses of these patterns in wood carving, painting on wood and plaster, etc., which did not survive

to the present day following the disappearance of the Tatar medieval architectural heritage. Another interesting typical feature of these ornaments is an additional contour that outlines the entire composition on its upper perimeter. In its simplest form it looks like a tulip, but often it is much more complex and forms an ornate silhouette that sometimes can be compared to a bouquet of flowers. This fits well with a wide variety of ornamental patterns.

Vase with flowers. These type of ornaments (in very elegant designs, at that) are preserved on medieval Tatar tombstones. The elaborate pattern and excellent technical execution suggests that the old masters were familiar with certain architectural prototypes. It would be logical to assume that these motifs existed on some monumental buildings, or perhaps their remnants were around somewhere, which caused them to reappear on tombstone carvings.

§ 2. The Culture of Urban Development in the Kazan and Kasimov Khanates

Khanifa Nadyrova

1. Towns of the Kazan Khanate

The Kazan Khanate had one major city: its capital, Kazan. The main types of settlements there were walled cities, such as darugha centres, military fortresses, fortified manorial estates and villages. They were built using wooden materials. As a result, their architectural and planning structure can only be restored by archaeological excavations, which have already been conducted in Kazan and some darugha centres. However, the popular folk tales of the north-western part of the Khanate describe huge estates, lath fenced yards with 'twenty gates', a large house and many buildings [Valeev, 1967, p. 61].

Darugha centres were towns with a fortress and open trading quarters. The most famous towns in the Kazan Khanate were Iske Kazan (Old Kazan), Archa (Arsk), Alat, Chally (Chalynsky Gorodok) and Zyuri. They were all significantly smaller than Kazan (Fig. 1). Virtually all of them had a sector type spatial organisation caused by their position on the cusp in the

landscape [Gubaydullin, 2002, p. 190, 192]. This was not specific to the region, but rather a common phenomenon in Eastern Europe.

Unlike the cities of the Golden Horde period, the towns of the Kazan Khanate had their own fortifications [Burkhanov, Izmaylov, 1999, pp. 135–138]. The medieval town of Iske Kazan is associated with the Kamaevo (Iske Kazan) ancient urban settlement and the Russko-Urmatskoe ancient rural settlement located 40 km north from the mouth of the Kazanka river, near the modern village of Kamaevo in the Vysokogorsky District of Tatarstan.

The Kamaevo ancient urban settlement of the 13–16th centuries is made of remnants of a fortress with an area of 7.2 hectares, and the Russko-Urmatskoe ancient rural settlement is made up of remnants of its main trading and handicraft quarter with an area of 124 hectares. The Kamaevo cemetery was for the town's population, while the Russko-Urmatskoe cemetery was for people from the trading quarter of Iske Kazan. The archaeological material

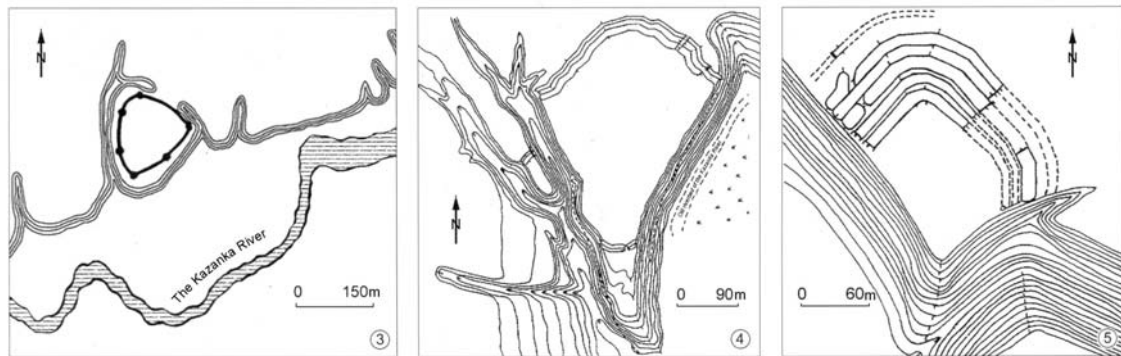

Fig. 1 Layouts of fortified centres of cities of the Kazan Khanate of the first half of the 16th century.
3—Archa, 4—Iske-Kazan, 5—Chally

discovered by A. Burkhanov limits the establishment and existence of the Kamaevo settlement to the first thirty years of the 15–mid 16th century, which means it existed in the period of the Kazan Khanate [Burkhanov, 2002].

The organisation of the Iske Kazan land had its own unique features. The fortress was set on a rocky cusp with steep slopes spatially isolated from the trading quarter and located in the floodplain of Kazanka. However, this location helped the fortress control approaches to the town and protect its trading quarter. This technique was known since the Bulgar times when major trade and craft settlements were protected by separate fortresses located in the mouths of rivers. The planning structure of Iske Kazan has not been identified. The buildings were mostly wooden, although the foundations of several smaller stone buildings were also discovered during the excavations.

The Chally ancient urban settlement represents the remains of Chally, a small walled town founded as early as during the Bulgars and walled off by three rows of ramparts. The city was located on a flat area with one side adjacent to the Myosha river. Regional traditions can be seen in the design of the triple defence system for the fortress that was adjoined on the north and north-east by vast open trading quarters.

In the Russian chronicles and other historical sources describing the events related to the capture of Kazan in 1552, the town of Archa was known as the 'town of Arsk' [Kurbsky,

2004, p. 262]. This town was founded in the Bulgarian period and was built on a cusp with a sectoral structure. A wooden fortress stood on a high cape between the Kazanka river and a deep ravine; from the field side it was immediately next to the trading quarter. Later, the Tatar fortress was replaced by a Russian wooden fortress of triangular shape with a square tower at its corners. Perhaps this type of fortress, which was the most appropriate for that landscape, also existed in the Khanate period.

The structure of Zyuri, a walled town, is also entirely unknown. During the Khanate period, the towns of Kashan and Kirmenchug gradually lost their importance as princely centres.

But in this same period Bulgar retained its importance as a Muslim religious centre, where Tatars visited the ruins of mosques and the remaining mausoleums of nobles and saintly ancestors. A small cultural layer dated from the Kazan Khanate period was discovered in the centre of the Bulgar ancient urban settlement, which indicates that some population continued to live on in the half-ruined city.

The small towns and villages of the Kazan Khanate had their own specific features, which were described with admiration by A. Kurbsky, who participated in the capture of Kazan: '... The estates of their princes and nobles are very beautiful and truly amazing, and the villages are numerous...' [Kurbsky, 2000, p. 262]. Unfortunately, he never mentioned what exactly made them so beautiful and amazing.

2. Urban Development in Kazan, the Capital of the Kazan Khanate

a) The urban development landscape.

The landscape Kazan developed on is defined by the valleys of the Volga and Kazanka rivers with water meadows towered over by a high ridge cut across from west to east by several deep ravines that divide it into separate hills (mountains). Kazanka wound through the flat valley from the north-east to the west and served as a natural water barrier on the outskirts of the city from the north. Swamps and forests extended from the opposite side, the northern shore of the Kazanka river. The Bulak, a silty river channel, connected Kazanka with Nizhny Kaban lake, which is 2 km south-west of the Kremlin. The abundance of lakes, flood plains with small streams that dried up in the summers, and marshy lowlands determined the development of the city between the Kazanka river and the Bulak channel on the hills in the south and south-east.

b) The city structure and architecture of Kazan.

Archaeological excavations from the last decade, years of historical and graphic studies conducted by architectural historians and the use of various analytical methods has allowed the author to outline the spacial structure of the Kremlin during the Khanate-period Kazan (Fig. 2).

By the beginning of the Mongol invasion, Kazan was a small, fortified stronghold with an area of about 7 acres. Initially, the trading quarter was located on the north-eastern side, but later it began to expand to the south.

In the latter half of the 12–the first third of the 13th century, stone walls 1.8–2.0 m wide were built of raw limestone to replace the old wooden and earthen fortifications of ancient Kazan. The remnants of stone gates and a stone-paved passage about 6 metres wide have been discovered on the southern part of the defence system [Sitdikov, 2000, p. 23]. These fortifications were destroyed during the Mongol invasion in 1236, but then restored in the latter half of the 14th century and, after a series of renovations, continued to function in the first half of the 15th century. The stone walls were built on an earthen rampart that

was 0.5–0.7 metres high and 12 metres wide at the base. After the walls had been built, the rampart was then elevated by additional 1 metre. The soil to make the rampart was taken from the adjacent Tezitsky ravine, which was turned into a moat. The remnants of small wooden hut-like structures that supported the mound of the rampart to prevent landslides have been discovered on the northern edge of the rampart [Ibid]. On this side, the rampart had an almost vertical slope. Following the development of the city and the southward expansion of its territory, the wall was left standing within the city to protect the Kremlin citadel and existed until 1552.

In the first half of the 16th century, brick and stone walls and a tower along the Tezitsky moat were reconstructed taking into account the latest achievements in European fortification architecture [Aydarov, 1990].

By the mid-16th century, white stone and wooden walls surrounded the Kremlin with an area of about 22,5 hectares and in the shape of an irregular quadrangle elongated from north to south. On the eastern side, the walls almost reached the base of the hill to the Elbugin (Water) gate tower that led to the Kazanka river crossing.

In the latter half of the 14th century, certain towers in the Kazan Kremlin dating from Khanate times continued to be used, and new gate towers were built to replace the destroyed ones. For example, the Nikolsky (Taynitsky) gate is the Tatar Nur-Ali (Muraleev) gate, the Voskresensky gate is the Elbugin (Water) gate, the Preobrazhensky (Sergiev) gate is the Tyumen gate, and the Dmitrievskiy gate is the Sboiliv gate of the Khanate period. The Northern Tower of the Kazan Kremlin was erected in the latter half of the 16–early 17th century on the site of the square-shaped stone tower of the Khanate period that was 4 metres high and 2.5–2.8 metres thick and made of large limestone blocks have been preserved [Gubaydullin, 2001, p. 25]. The Eastern Tower was erected shortly after the capture of Kazan. No tower dating back to Tatar Kazan was ever found in its place [Starostin, 2001, p. 29].

The fortifications in the southern part of the Khan's Kremlin most likely included three

Fig. 2. Structural layout of the Khanate Kazan's Kremlin. Reconstruction based on the data of archaeological dig and historical-graphical materials: I—Khan's courtyard, II—citadel fortified with the second defense line along Tezitsky ditch; III—Middle part between the first and the second internal defense lines; IV—southern part of the Kremlin; Towers: 1—Nur-ALi, 2—Northern khan's tower, 3—Yelbugin's tower, 4—Sboylovaya tower, 5—Khan's tower, 6—Tyumen tower, 7—Tezitskaya tower; 8—Great Through tower, 9—first internal defense wall and a ditch, 10—stone through tower, 11—second internal defense wall and Tezitsky ditch, 12—Kul-Sharif's mosque and madrasah, 13—defense wall of the Khan's courtyard and through tower, 14—Khan's palace, 15—Khan's mosque, 16—Khan's mausoleums, 17—Nur-Ali mosque, 18—ditch around the Kremlin, 19—Tagir's (Dair's) bath, 20—streets of the Tatar Kremlin with wooden build-ups and embankments, 21—road along Tezitsky ditch, 22—Great road, 23—bridge across the Kazanka River, 24—Tainichny spring

moats and triple rows of walls reinforced by high towers and dividing its territory into three parts. It is clear that the Kremlin of the Russian period was an almost exact replica of the Tatar fortress, the only difference being that its walls have straightened corners on its southern edge [Khalitov, 1999a, pp. 52–53].

The Khan's Kremlin had a citadel that was separated from the rest of the area by the Tezitsky moat and rampart, over which the white-stone wall with the gate tower described above towered. The north-eastern part of the citadel included the Khan's courtyard surrounded by a stone wall. Four rows of two-metre oak piles were driven into the ground under the eastern part of the wall. This technique originated from the Bulgar-Khazar traditions of strengthening weak soils and was used in the region during the Bulgar and Golden Horde periods. A stone plinth more than 3 metres wide was constructed on top of the piles. The wall might have had a height of 6–8 metres because its excavations uncovered the remnants of a 0.8x1.5 metre buttress used in the structure [Muhamadiev, 2001, p. 72]. The structure of the defensive wall in ancient Kazan had two walls made of limestone blocks with space in between filled with mortar and small stones.

The Khan's mosque, mausoleums and palace were located in the Khan's courtyard around the square. According to some sources, the dominant feature of this complex was a watchtower at the entrance to the courtyard from the western side. One of the first monumental buildings in the Khan's citadel of the Kazan Kremlin in the mid-15th century during the reign of Khan Mahmud was the Khan's Mosque [Sitdikov, 2006, p. 175]. This was a 14x14 metre square-shaped white-stone building pointed on its longitudinal axis towards the south-west, in the direction of Mecca. In the first half of the 16th century, the Khan's mosque was expanded with a new brick structure (9x9 metres) built along the longitudinal axis. The total length of the structure was 23 metres. It is possible that the brick and stone building was adjoined by wooden extensions and outdoor staircases.

The Khan's mausoleum, where in the early 1460s Khan Mahmud was buried, was built to the north of the Khan's mosque. Its second part was most likely added in the early 16th

century, and this is where in 1518 Khan Mohammad Emin was buried. It was a 6x18 metre white-stone two-chamber building. Along with single-chamber mausoleums, multi-chamber mausoleums were also widespread in the cities of the Golden Horde. The longitudinal walls of the Khan's mosque and mausoleums run parallel. This arrangement of mausoleums suggests that their interiors might have been used for funeral prayers [Mausoleums, 1997].

The white-stone Khan's palace (18x24 metres) was erected in the centre of the courtyard. The interior space in the palace is divided by internal walls into 6 unequal premises that are up to 2-metre thick. It can be assumed that the eastern part of the second floor included the great hall for state ceremonies [Khalit, 2009, pp. 305–307].

According to Tatar legends, the Kul-Sharif Mosque had eight minarets and was built in the citadel to the south of the Khan's courtyard at the turn of the 15–16th centuries [Sitdikov, 2006, p. 184]. The Kul-Sharif Mosque complex adjoined the white-stone wall of the citadel from the South with a gate tower and a bridge over the Tezitsky moat.

Since the remnants of all mosques were discovered only at the level of their foundations, it is difficult to estimate their layout. It is difficult to tell whether they had any multi-column halls like in Bilyar or Bulgar. The possibility remains that they had a domed ceiling system without columns that was similar to the religious architecture of the Ottoman Empire that the Khanate maintained close ties with thanks to the Crimea. The architecture of buildings in the Khan's citadel probably reflected regional and Golden Horde traditions, along with the influence of the Ottoman architecture of that time [Khalit, 2009a, p. 305–309].

A road linking the Nur-Ali and Khan's gate towers crossed the Kazan Kremlin from the north to the south. This main street of the Kremlin had white-stone paving [Sitdikov, 2006, p. 118]. A palace complex belonging to Nur-Ali bey, one of the greatest nobles at the Khan's court, could presumably be seen on a slope towards the Nur-Ali tower when moving along that street from the south to the north. It is a known fact that this complex included

the Nur-Ali mosque. This northern part of the fortress therefore had a higher density of monumental buildings.

The residential section of the Kremlin citadel was made of wood. At the base of the slope, in the North Eastern section of the Kremlin close to the Yelabuginskaya Tower, excavations uncovered a street 6 m wide with wooden pavements that led from the North-west to the South-east. Small homesteads with wooden residences and outbuildings were densely packed on both sides of the street. The homesteads were stockade-fenced.

In the North-eastern part of the Kremlin Hill, behind the 19th century Governor's Palace, several structures dating back to the Khanate period have been discovered, among which the remnants of three buildings with fragments of walls, floors, staircases, stove structures and traces of refurbishments are of particular note. It is likely that people who serviced the Khan's Palace lived there.

To the North of the Annunciation Cathedral (1560), along the Southern hedge of the modern-day President's Garden, architects discovered a Khanate-period alley pointed towards Mecca following the regional azimuth (205–210°) where there used to be wooden structures on both sides [Sitdikov, 2001, p. 10]. The direction of this 2.0–2.5 m wide alley with wooden pavement is obviously related to the mosque mentioned in the Scribe's Book of 1565–1568 opposite the Northern chapel of the Annunciation Cathedral.

On the territory of the former Khan's Palace close to the Eastern facade of the Annunciation Cathedral, the archaeologists discovered a street along the Eastern stone wall that used to lead to the Yelbuginy Gate at a distance of 20 m from the edge of the hill slope [Sitdikov, 2002, pp. 177–178]. On both sides the street was densely built up with homesteads containing wooden dwellings and outbuildings. Archaeologists also discovered wooden pavements in other locations of the fortress. The width of streets in the Khan's fortress on average amounted to 3.5–4 m.

To the South of the first stone defence wall and the Tezitsky moat no remnants of stone structures have ever been excavated. This is

where the 3.5–4 m wide streets paved with timber blocks were discovered with wooden houses and outbuildings on both sides.

The study of the Outer City (trading quarters) was of particular importance for establishing the structural layout of the city. The description of the trading quarters in the 1565–1568 Scribe's Book of Kazan reflects its condition 15 years after the city's conquest by the troops of Ivan the Terrible [From 'Scribe's Books of the City of Kazan for 1565–1568', 1996]. The analysis of historiographic [Egerev, 1956; Kalinin, 1929] and archaeological materials has allowed researchers to reconstruct the structural layout of Khanate-period Kazan (Fig. 3).

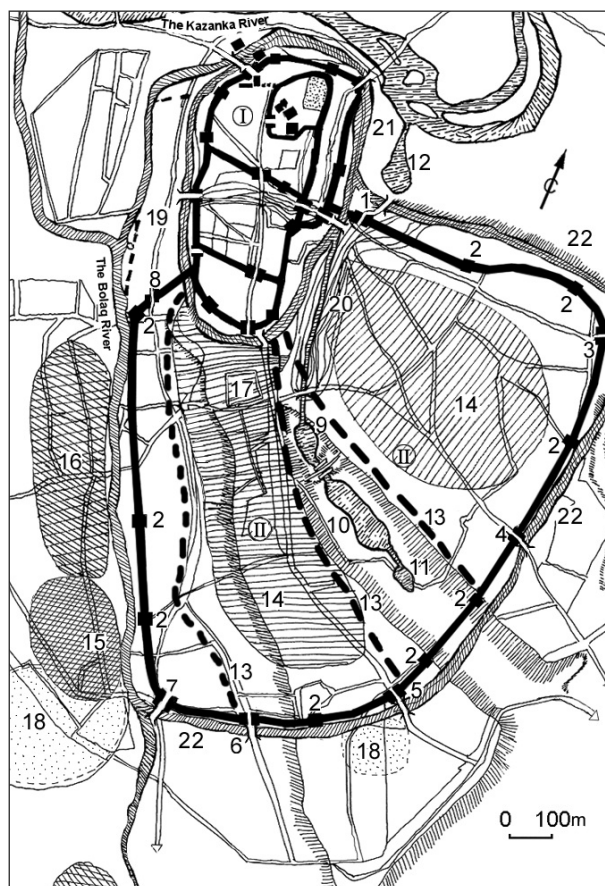

In the latter half of the 16th century, the Russian administration restored the city mostly within its former limits. They made minor extensions in the trading quarters to the West and South by including the middle portion of the left bank of the Bulak into the city, where during the Khanate period a nameless suburban trading quarter had been located. This was most likely due to the strategic aspects of the city's defence in hostile surroundings and not because of its overpopulation.

The wooden defensive walls, dwellings and mosques of the trading quarter had all been destroyed during the city's assault in 1552. The stone buildings

might have been used for various purposes, including churches after they had been consecrated. The option for this type of use has been confirmed by the stone structures of the Khanate-period Kremlin that were used as warehouses or churches during the Russian period.

The Khan's caravanserai from that time was located on the square in front of the Kremlin gate where the Gostiniy Dvor of the Russian period was later built. The stone Tagirova (Dairova) Bathhouse used by the Russian troops to dig into and blow up the wall to create a secret pathway to the Taynichnyi Spring to the North of the Kremlin remained on the bank of the Kazanka until the 17th century. The three stone bathhouses on the Bulak and a bathhouse on Poganoye Lake (a later Russian name) close to the Yelbuginy Gate that was mentioned in the Scribe's Book, as well as bathhouses on the banks of lakes in the Chernoozerskaya Hollow, were situated next to traditional water sources. Public bathhouses, a must-have for Muslim cities, were built from stone and brick and be-

Fig. 3. Structural layout of the Kazan Khanate in the mid-16th century (based on the plan by A. Satsyperov in the early 18th century) Explications: I—the Kremlin fortified with white stone walls and towers and a ditch full of water: II—External city (posad) surrounded by wooden walls and towers: 1—Proyezdnyaya Tower, 2—nameless non-through towers, 3—Kaybat tower, 4—Arsk tower, 5—Tsar tower, 6—Upper Nogai Tower, 7—Lower Nogai Towers (Kuraish or Crimean ones), 8—Atalyk tower; Lakes: 9—Bannoye (Upper Poganoye), 10—Black, 11—White, 12—Lower Poganoye; 13—Probable location of northern-western part of the walls of trading quarters, 14—initial trading quarters, 15—Kuraish sloboda, 16—nameless slobodas, 17—khan's caravan serai, 18—Muslim cemetery of the city, 19—seasonal fair "Tash-ayak", 20—canal connecting the lakes with the ditch and the Kazanka River, 21—ditch around the Kremlin, 22—ditch around the External city (posad).

longed to the Eastern hammam type of bathhouses. These bathhouses found in stone and brick structures had become widespread in the region's cities since the 10th century and were built with multi-domed tops.

There was no obvious need to change the main road arteries of the city connecting the Kremlin, Gostiniy Dvor and other important nodes of the city with the entrance towers of the trading quarter leading to the state roads, including the Nogai, Crimean, Arsk, Alat, Galitsk and others. The presumable area of the trading quarter of Khanate-period Kazan amounted to about 80 hectares. There are two possible variations of the trading quarter during the Khanate period. According to the first, the walls of Kazan's trading quarter enclosed the Chernoozerskaya Hollow with a system of lakes, which is where the Monastery of the Blessed Virgin was later built (the Old site of ancient town) and the area near the Bulak. Its length in the South-eastern direction was about 800 m and led towards modern-day Astronomicheskaya Street. The structural layout of the Kazan trading quarter had a radial fan-shaped base. On the Western side, the trading quarter was bordered by the Bulak Channel.

According to the second version, the city might have had several trading quarters. One of them adjoined the fortress from the South and was located along a chain of hills that now makes up a whole (when the redevelopment plan for Kazan was put into practice in the 18th century, the ravines separating the hills were filled) along the Bulak Channel. The walls of this trading quarter were located on the Western slope of the hill a little above Bauman Street on the Eastern slope of the hill at its base, along the Chernoozerskaya Hollow where the remnants of fortress walls were found. In the South, the trading quarter was bordered by a wooden wall and a moat along modern-day Astronomicheskaya Street, where their archaeological remains were also discovered. This moat used to be filled with water from the Bulak and was connected by a channel to the chain of lakes in the Chernoozerskaya Hollow [Mingazova, Kotov, 1989, p. 12].

The second trading quarter might have been located along River Kazanka, in what was

known as Old site of ancient town. In this case, the walls went from the fortress along the edge of the high left bank of the Kazanka, skirted the territory of the trading quarter near the Northern side of modern-day Svoboda Square, and continued on to the other side of the Chernoozerskaya Hollow to the Kremlin. Consequently, the Chernoozerskaya Hollow remained outside the walls of the trading quarter and acted as an additional outside obstacle for attackers due to the marshiness of the swampy banks and the system of lakes including Lakes Bannoye, Chernoye, Beloye, etc. Around the Northern portion of the Chernoozerskaya Hollow, the walls of the two trading quarters might have been connected. In the opposite case, they were set up against the Kremlin walls.

The defensive system of the Kazan trading quarter comprised a moat and a rampart that had a wall on top made of gorodens—wooden blocks filled with earth and stones. On top of the wall there was a platform for soldiers. In their most important and danger-prone defensive positions the walls had towers, some of which included gate towers. There was most likely eight of these gate towers. From East to West along its circumference, the trading quarter wall had the following towers with gate towers: the Proezdnyaya Tower (the Tatar name is unknown), the Kaybatskiye and Arskkiye Gates (leading to Arsk Road), the Khan's Gate (or Tsar's Gate, located on the hill slope near the Physics Department of Kazan Federal University), the Upper Nogai Gate (leading to Nogai Road around Bauman and Astronomicheskaya Streets), the Lower Nogai Gate (Kuraisheva, or Crimean Gate, leading to the Bulak and Kuraisheva Sloboda), the Atalykovy Gate (leading to the Gniloy Bulak Channel and Tashayak Market). The number of towers without passages is unclear.

According to information from the Russian chronicles, during the Kazan Khanate period the walls and towers of the trading quarter had been rebuilt on numerous occasions and renovated in 1505, 1530, 1546, 1551. The trading quarter moat was dug using the preexisting ravines and connected to the Bulak Channel and the Kazanka. An analysis of the natural landscape conditions and the materials of archae-

ological interest from the historical portion of Kazan tell us that the Chernoozersky Ravine (Hollow) was of vital importance to the city and was a part of its structural layout. The hollow was essentially the principal water source for the city. Springs ran along the slopes and bottom of this deep ravine to feed the lakes created using an artificial floodgate system. The channel flowing along the bottom of one of the ravine's branches connected this lake system to the Kremlin moat, Kazanka river and Poganoeye lake located at the bottom of the Northern side of Kremlin Hill.

The main axes of the structural layout of the Khanate-period trading quarter were the three main thoroughfares that joined up at their Northern ends in front of the Khan's Tower in the Kremlin. Their joint beginning was located on the trading square in front of the Southern wall of the Kremlin and separated from it by a deep moat. The central one of these three roads stretched along the ridge of the hill system towards the Khan's Gate of the trading quarter (the direction of modern-day Kremlevskaya Street).

The second thoroughfare stretched along the base of the Western slope of the Kremlin Hill. It supposedly started to the North-west of the Alatykov Gate in the trading quarter and, after passing through the Lower Nogai Gate (the Crimean, or Kuraishev Gate) of the trading quarter, continued on to the South, to the Nogai Horde and then to Crimea. The question of whether there was a trading quarter along the Western slope of the hill close to the divided estuary of the Bulak still does not have a sufficient answer. The Lower Bazar and the seasonal fair Tash Ayak (or Stone Leg; the name is related to the stone bowl used to collect trade taxes) were held there, operating mostly in spring when the flooding of the Volga and the Kazanka brought in large vessels with goods that were able to enter the Bulak Channel directly.

The third thoroughfare started at the Sboyliviy Gate of the Kremlin and led to the Arskiye Gate of the trading quarter that led beyond Kazan to the town of Archa. Streets and alleys led down from the trading square where the Khan's caravanserai was located to the east

and west along the slopes of the hill and mostly along the lateral ravines towards the thoroughfares that united the main streets of the trading quarter into a singular structural layout.

The trading quarter's development was arranged in the form of mahallas (parishes) located around mosques. Residential development of medieval Muslim towns was traditionally based on the clan and kindred principle, where separate portions or quarters of towns were populated by families of the same clan or tribal group. It must also be mentioned that the importance of this principle determined the social hierarchy within portions and quarters of the town. The clan and kindred principle of settlements in Kazan and other towns of the Khanate is indirectly confirmed by the fact that in the Tatar settlements of the 17–18th centuries (as well as during a much earlier period), large homesteads were still present that were built up with dwellings and outbuildings of several generations of relatives not separated by any fences.

A contemporary author of the early 19th century explained this phenomenon as follows: '...It often happened that the yard of a Tatar and his entire house was not on any street, but instead surrounded on all sides with similar yards of other owners, and to reach it one needed to pass through several other yards. Only families related to each other are grouped together in this manner, and they are separated from strangers by alleys and streets. This happens because when someone in these households get married, they do not move to the outskirts of the village. Quite the opposite: a half of the parent's yard is enclosed, and the newlyweds keep a separate house and household there' [Ethnographic Description, 1841, pp. 406–407]. In this case, the 'enclosure' mentioned here is a later phenomenon caused by tax reforms from the 18th century.

These homestead houses formed groups around narrow, semipublic alleys. Neighbourhoods (clusters) were then formed by the groups of groups; the groups of neighbourhoods formed quarters, and the groups of quarters formed the residential development [Petrucchioli Attilio, 2007, fig. 123]. This process of accumulating structures made ethnic quarters or neighbourhoods the basis for the

'free concentration' of a related population, unlike the social and economic division of urban population in the West [Abu-Lughod, 1993, p. 23]. The quarters of Kazan, much like the towns of the Muslim East, were in many ways similar to the tribal villages under the custody of the local elite [Bianca Stefano, 2000, p. 146]. This can be traced very easily in the organisational forms of the Tatar settlements of the late feudal period and Khanate times. The formation of such clusters in Muslim towns of the East resembles the establishment process of homesteads in Tatar settlements. To strangers, the streets and alleys of a town with a Muslim population seemed to be a labyrinth of corridors with blank walls. However, in reality they comprised an encoded and complex visual system of thresholds, transit areas and buffer zones that when combined acted as filters impeding a stranger's progress inwards.

The arrangement of the residential structures of the trading quarter of Khanate-period Kazan, as well as other towns and settlements of the Khanate, was influenced by the Sharia. According to ethnographic data, the existence of principles and methods for the arrangement of structures in the region's towns and settlements determined by the Sharia was witnessed in the Tatar slobodas and settlements even in the late 19th century. For example, no window in a house neighbouring another homestead could be placed on its side. Yards were enclosed with a high, tightly constructed fence so strangers would not be able to see the women and private life of the household happening there. The centuries-old placement of houses and outbuildings during these homestead years and the absence of windows or doors on houses or other structures facing the street if they were located on the borders of the homestead, indicate that the ancient principles of the 'closedness' of dwellings was a requirement of the Sharia for Tatar towns and settlements in the New Time.

Dwellings and outbuildings were grouped on the land plot seemingly without order, even though some internal logic was undoubtedly present. Above-ground dwellings had one, two or three chambers. To the right or left of the wall, there was an adobe oven on a frame with a cemented-in cauldron equipped with a chim-

ney; opposite the door there were narrow beds made of wood planks. Suf beds were characteristic of Golden Horde residences. However, the beds in houses of the Kazan Khanate period date back to traditional Bulgarian dwellings heated by massive stoves that did not have a heating section underneath like the Golden Horde sufs. If a dwelling had two-chambers, a wooden mudroom was added to the house or it had five walls. Three-chamber residences were comprised of two dwellings connected by a anteroom along the axis. The residences of commoners were identical both in town and in the country. Houses of rich townspeople were lit by a red shade, and those of their social inferiors had only felt windows. The regional varieties of populations in the country and in towns of the Khanate period date back to the traditions of the Golden Horde and Bulgar periods.

Kazan, or rather its suburbs, must have had a large musalla mosque designated for use by the entire city to pray during major Muslim festivals. However, its location has not yet been discovered. It was presumably located in the Arskoye or Khanskoye fields. Out of these two probable locations for the musalla mosque, the Arskoye Field is likelier because it was never submerged during the spring flooding.

Beyond the Bulak and close to Kaban Lake the country Kuraisheva Sloboda containing the Otucheva Mosque can be found. There was also a settlement with an unknown name on the left bank of the middle portion of the Bulak to the North-west of the Kuraisheva Sloboda where there was a rise that remained dry during the floods.

The part of the population belonging to other ethnicities and denominations had special residency conditions in Tatar cities, residential quarters, ceremonial structures, cemeteries and rules of behaviour. When Kazan was in its Khanate period the Armenian Sloboda was located to the South of the city outside of its walls and near the pre-Revolutionary Sukonnaya Sloboda. Just like in Bulgar, it had its own church and cemetery, but according to Muslim tradition, urban cemeteries had to be placed outside of city walls. The city's cemeteries were located outside of the Southern wall and moat of the trading quarter and beyond the

Bulak in the area of latter-day Sennaya Square, close to the Kuraisheva Sloboda.

Only in the Khan's citadel of the Kremlin along with the Khan's Mosque were there mausoleums for members of the Khan's family and top nobility [Mausoleums of the Kazan Kremlin, 1997]. The cemetery for the lower nobility was located in the South-eastern corner of the Kremlin between two defensive walls.

Khanate-period Kazan therefore had every characteristic of a Muslim city as well as the respective categories of ceremonial and public buildings.

3. Towns of the Kasimov Khanate

Unlike the Kazan Khanate, the Kasimov Khanate had a significantly smaller territory. The capital city of the Khanate was Khan-Kermen (Kasimov), which was founded somewhat upstream the Oka instead of the former Meshcherskiy Town destroyed by the Mongols in 1376 and comprising a part of the Narovchat Ulus of the Golden Horde. The Mishar beyliks (princdoms), while preserving a certain amount of independence, were formally a part of the Kasimov Khanate. The centres of these beyliks were the towns of Kadom, Temnikov, Shatsk, Yenkey and several others with medieval structural layouts that are unknown to this day.

4. Urban planning development of Khan-Kermen (Kasimov), the capital of Kasimov Khanate

a) The urban development landscape.

Khan-Kermen was located on the high left bank of the Oka and was divided by ravines into a number of hilly peaks. The deep ravines with neither springs nor creeks instead contained roads connecting the upper portion of the city with the river on the narrow riverside where random outbuildings were built few and far in between.

b) The city structure and architecture of Khan-Kermen.

The structural layout of medieval Khan-Kermen was determined by its specific geographical conditions. The core of the city was the Khan's Kremlin surrounded by wooden walls and located on the peak between the ravines currently known as Uspensky and Polezhayev. The city eventually grew in size, and the residential development of the trading quarter spread from one hill to another. In the 17th century, trading quarters united by the road leading to Kazan (Fig. 4) were located around the Kremlin along the bank of the Oka. The roads to Moscow, Vladimir and Murom stretched out from the main gate in the North-western section of the Kremlin, which had walls built as log frames or tarasas. The historical panoramic views of Kasimov in the 17th century show only that the walls of the Khan's court resembled a stockade with structures that at the time still remained on top. Here we can recognise the prayer tower of the Khan's Mosque and the tall observation tower (possibly the prayer tower of the Sobornaya Mosque) without its upper levels (Fig. 5). To the left of the citadel a tall wooden fortress tower and a portion of the wall can be seen. These are possibly the remnants of the defensive walls of the Khan-Kermen Kremlin.

The structure of the Khan-Kermen citadel closely resemble the structures of the Khan's

Fig. 4. Layout of Khan-Kermen's development

Fig. 5. Kasimov's panoramic engraving from the book: Cornelis de Bruin. *Reizen over Moskovie, door Perzië en Indië*. Amsterdam, 1714 (Cornelius de Bruin. "Journeys to Muscovite Rus, Persia and India". Amsterdam, 1714). <http://www.etoretro.ru/pic42181.search.htm>

Fig. 6 Khan mosque in Kasimov. Minaret, 1467.

Fig. 7 Mausoleum of Khan Shah Ali (Photo by E. Stroyeva)

Yard of the Kazan Kremlin. Kazan had the same group of structures around the inner square of the Yard. The Khan's Palace was positioned along the square paved in white stone [Khalitov, 2009; Khalit, 2009a, p. 314]. In 1467, the Khan's Mosque was built of white stone opposite the Khan's Palace, but now only the minaret remains. The destroyed building was restored in the early 19th century (Fig. 6).

Close to the Khan's Mosque the mausoleum of Khan Shah Ali was built in 1555–1556 (Fig. 7). This was a two-chamber structure made of white stone (13.5x8, 5x5.0 m) that at the time did not have an outer coating or an entrance on the Southern side. The largest chamber contained the shrine itself, was lit with four small arched windows and had an underground crypt one could enter using a narrow stone staircase located inside to the right of the entrance to the mausoleum. The door on the Western wall leads to the second chamber (ziarat-kha-

na) devoted to the reading of the Quran, which was lit with one window and had an earth floor. Each chamber was covered by a cloistered brick vault hidden behind a tall parapet on the facades. The type of initial coating has not been established. The vaults were covered with earth, and rainwater was removed from the roof using stone water spouts made in the parapet. The facades were built from finely dressed rectangular limestone blocks. The low arched door aperture was left unframed. Above the entrance to the tomb there was a sculpted niche with the following text written using Arabic Suls-style characters: 'The builder and owner of this building is Shah Ali, the son of Sheih Auliyar Sultan, on the twenty first day of the month of Ramadan, nine hundred and sixty second year' (9 August 1555 according to the Gregorian calendar). Inverted sculpted cornices extend beyond the niche. The tomb contained the burial places of Khan Shah Ali and eight members of his family [Ahmetzyanov, 2006].

The manors of the nobility with their wooden structures were probably located in the Kremlin outside of the Khan's Yard as they were in Kazan.

The city planning culture of the Kazan and Kasimov Khanates was therefore rather highly developed and reached back to Golden Horde traditions. The Muslim typology and architecture of public and ceremonial buildings (mosques, madrasahs, mausoleums, caravanserais, hammam bathhouses) were preserved in the Kazan and Kasimov Khanate towns. However, the city planning culture of the Volga–Kama Region as regards the Kazan Khanate underwent a noticeable transformation when compared to the Golden Horde period. The towns built in an elongated linear fashion typical of Golden Horde times disappeared. The version of cities built on cusps in the landscape and organised according to a sector-based structure with wooden and earthen defensive structures was restored in the Kazan Khanate in a new capacity. The domed buildings of mosques, hammam bathhouses and mausoleums, contrasted by tall minarets dominated the relief of towns in both Khanates. Towns were built based on the varieties of homesteads and dwellings consisting of the wooden structures traditional for the region.

§ 3. Art of the Tatar Khanates

Guzel Valeeva-Suleimanova

The period after the dissolution of the Golden Horde is an entirely new stage of development in Tatar culture and art. It is one of the most important stages in history, yet due to the widespread destruction of cultural monuments it has been studied the least. The significance of this stage lies in the fact that it was the stage of development where independent Tatar feudal culture was brought to its peak,—that is, the culture of the ruling classes related to the most outstanding works of art and creative crafts. After the fall of the Tatar states, the high forms of art that formerly prospered under the patronage of the Khan, military leaders and nobility, disappeared, and many urban crafts and artistic traditions related to them followed suit. Only several hundred years later they were restored in the forms of folk decorative arts and crafts forced to develop in rural conditions and only partly

retaining the accomplishments of the urban craftsmen ousted to the periphery.

The period of existence of Tatar states is also remarkable due to the fact that it saw the rise of Muslim culture that later became a major factor in the preservation of the ethnic identity of the Tatar people in the Volga and Urals Regions, as well as the Crimea and Western Siberia. The general artistic trend conformed to the aesthetic canons of Islam that were officially established during the Golden Horde epoch in some states, particularly in the Kazan Khanate, and developed in stride starting from the pre-Mongol era in the culture of Volgan Bulgaria. The two hundred years spent as a part of the Golden Horde undoubtedly left its mark on the lifestyle and cultural image of the Tatar khanate population. Even though each of them had completed their own process of historic development, they were united by the

inherited high traditions of the Golden Horde's Muslim culture.

The art of the Tatar khanates has never been the subject of a systematic study as a result of the following factors. Firstly, the biased attitude of official Russian science towards the history of the Golden Horde and Tatar khanates had placed this subject beyond the limits of serious scientific interests. Secondly, the existing negative stereotypes influenced the ideological attitude of the scientists who ignored and even denied the role of Tatar states in the development of Russian culture. This negative image of Tatar khanates promoted the premeditated obliteration and destruction of their monuments of art and architecture, most of which were lost to further study. Due to the inferior nature of the available research materials, which include a just few material monuments and documented sources, one must admit that the art and general artistic culture of Kazan and the Crimean Khanates has received the most attention.

The architecture and art of the Kazan Khanate first became a subject of systematic study by art historian F. Valeev, who determined the new stylistic direction that developed under the influence of the Muslim or Eastern Baroque style and was unrelated to the Golden Horde [Valeev, 1967]. This style is characterised by its increased ornamentality, the dominance of floral motifs in ornaments, and the universal use of patterns. A reorientation was also made towards secular culture unencumbered by religious canons; high, elitist forms of palace art reached their height and influenced the development of mass urban artistic crafts.

The art of the Kazan Khanate comprised an original combination of general imperial features from the Golden Horde culture with the ethnic regional particularities that had been taking root since the times of pre-Mongol Volgan Bulgaria. Unlike Astrakhan, the Siberian Khanates and the Nogai and Great Hordes (the states of nomadic and semi-nomadic Turkic-Tatar tribes), the Kazan Khanate was an agricultural and mercantile state with highly developed traditions regarding monumental architecture, decorative arts and

widely popular urban and rural artistic crafts. In the more than one hundred years of this state's progressive development there was a significant upswing in culture that situated it among the leading countries of the East, along with Eastern and Western Europe.

In the decorative art of the Kazan Khanate and other Tatar Khanates, the imperial features of the Golden Horde culture had long since transformed into the high culture of the Khan's court, whose needs were satisfied by skilled local and invited craftsmen: 'And the Tsar ordered expensive crowns, and silver and golden vessels and plates, and had luxurious royal robes made for him' [Kazan History, 1954, p. 59]. Monuments of decorative art in the Kazan Khanate expose their commonality with contemporary works from the workshops of rulers of the entire Islamic world, which proves the close relations of the khanate with a number of countries in the Middle and Near East, in particular Osman Turkey (mostly through the Crimean Khanate).

The high level of development of decorative art in the Kazan Khanate represented in the monumental decorative works and arts and crafts is proven by the archaeological digs conducted in the Kazan Kremlin and in Iske (Old) Kazan ancient town (N. Kalinin, A. Khalikov, R. Fakhрутdinov, A. Sitdikov, F. Khuzin, etc.) and the discovery of architectural fragments, household items, article of clothing and the remains of their manufacture, including craft workshops (pottery, leather work, metal processing, etc.), tools and product blanks. The fragments of decorative clothing include carved alabaster slabs decorated with arabesque ornaments, majolica tiles with glazed floral motifs and architectural details made of carved stone. Works of decorative ornamental art and artistic crafts are represented by archaeological finds of pottery and glazed ceramics (amphora-shaped khums, korchagas, carafes, bowls, plates, inkwells, etc.) decorated with carved ornaments and painted underglazes. The ceramic kumgans with moulded zoomorphic details (heads of roosters, rams, horses) as well as the discovery of leather footwear decorated with ornamental patches, nails and fluting, fragments of the leather cov-

Fragments of patterned stone (4–6) and gypsum (1–3) architectural details from the excavations of the Kazan Kremlin

er of the Khan's coffin with silver onlay and a quiver decorated with ornamental stitching, etc. can all be attributed to the same group.

Museum collections (the Armoury Chamber of the Moscow Kremlin, the State Historical Museum in Moscow, the National Museum of the Republic of Tatarstan, the Russian Ethnographic Museum in Saint Petersburg, the Museum of the 1,000th Anniversary of Kazan, etc.) display unique samples of toreutics (a wine jug, cup, military armour), jewellery (belt buckles, Quran cover, decorative buttons), goldwork (a sample of a bed cover) and unique, luxurious everyday items of the Tatar nobility that arrived to us from the Russian Tsar's treasury as well as in part from private purchases or accidental finds.

The existing museum items should be supplemented by annalistic and other documentary sources, including the drawings of S. Herberstein made in 1556 [Herberstein, 1908] that demonstrate the wealth and power of the Kazan Khanate. Russian chronicles tell the story of the removal from Kazan 'of 12 fully loaded great carts filled with gold and silver, and gold and silver vessels, and ornamented beds, and various royal apparel, and various vessels'. 'They took innumerable pieces of gold and silver, and pearls, and precious stones, and fair gold-worked fabrics, and beautiful expensive cloths, and silver and gold vessels, and many other things beyond count' [Kazan History, 1954, p. 156, p. 98]. Chronicles also mention the seizure of state regalia, weapons and military trophies. Among other items, the exposition of the Armoury Chamber includes such masterpieces of jewellery as the Kazan Hat and

the Khan's throne (the throne that belonged to Ivan the Terrible, and later to Mikhail Fedorovich Romanov).

The art of the Kazan Khanate was the object of scientific academic studies in the chapter of the monograph devoted to the medieval culture of the Tatars of the same name [Valeev, 1987; Valeev, 2002]. The theoretic aspects of the attribution of works and methods of study related to the art of the Kazan Khanate were covered by the author of this work in the article entitled 'The Art of the Kazan Khanate: Rarities and Methods of Their Study' [Valeeva-Suleymanova, 2002]. This article covers several new, previously unstudied monuments that were introduced to the scientific community.

First of all, one needs to go back to the works of art that were particularly important from the perspective of spiritual culture development. These include handwritten works expounding upon the art of calligraphy. This art form comprises an integral part of Muslim culture and has been developing steadily since the Volgan Bulgaria people converted to Islam [Valeeva-Suleymanova, 2008]. Despite the scarcity of remaining examples, one can safely assume that calligraphy existed as a kind of religious (there is a 1508 copy (tafsir) of the Quran) and secular court art (the Khan's yarliqs). The rise of calligraphy was related to the development of poetry and other forms of literary art that flourished in medieval Kazan. A Kazan poet of the period named Muhammedyar mentions numerous calligraphers in his famous poems 'Tuhva-i mardan' ('Gift of Men') and 'Nur-i Sodur' ('Light of Hearts'). One might also add to this list the legendary information on the libraries of the Kul-Sharif Mosque and Tsarina Süyümbike in Kazan Kremlin, as well as the generally deep traditions of the bookish culture of the Tatars.

The most prominent examples of the art of calligraphy and printed miniature painting were the yarliqs of the Kazan and Crimean khans. We have information on two yarliqs of Kazan khans. The first one is the yarliq of khan Sahib Giray (1523), which was made as a scroll and reveals the artistic canons of handwriting and the architectonics of its spatial and colour composition. Its text is written

in black ink in the 'Riqah' script (which was widespread among Kazan hattats/calligraphers) with elements of Diwani (used mostly by Crimean scribes) [Vakhidov, 1925a, p. 37]. A red square stamp (Nishant) is imprinted on the yarliq. The text on this stamp is written in the Kufic script, which is evidence that the art of print engraving existed in the Kazan khanate [Chervonnaya, 1987, pp. 159–160]. A trident—the emblem of the Crimean khans Girays—is portrayed in the central part of the stamp. Another yarliq from Kazan khan Ibrahim [Usmanov, 1979, p. 144] which has a blue stamped Nishant and less bombastic inscription, also contains the name of the scribe: 'hafiz Hajji Kurban'. The artistic features of the writing found on the yarliqs, as well as the comparative materials related to the textual and paleographic specifics, speak in favour of a local Kazan-Tatar school of manuscript art.

Calligraphy in the form of epigraphic inscriptions and the art of stone carving are represented in the samples of stone tombstones. The extant stone epitaphs of the 15–16th centuries that can be found in the cemeteries of ancient Tatar auls, are evidence of the fact that flat-relief stone carving was developed not only in Kazan and large settlements in Kazan's suburbs, but also in the city of Kasimov, large settlements of the Astrakhan region and in the Crimea itself.

The obverse and often reverse sides of the stones are covered by an exquisite floral design and lush inscriptions that were made by professional carvers-calligraphers. The craftsmen who decorated the epitaphs praised the piety and nobility of those to whom the epitaphs were devoted. The content of the inscriptions was usually lyrical and imbued with sadness, while the ornaments expressed an admiration of beauty and love for nature ('The grave is one of the gardens of the paradise...', 'From the world of eternity he laid down in the world of eternity', etc.). Two types of headstones can be distinguished according to the form and character of the ornamental decoration: 1) transitional ones from the Golden Horde and Bulgar headstones to the ones belonging to the period of the Kazan khanate (the latter half of the 15—the beginning of the 16th century);

2) headstones from the first half of the 16th century [Valeev, 1975, pp. 156–160].

The skilfulness of stone carvers from the first half of the 16th century significantly outshines the works of stone carvers from the epoch of the Golden Horde. The headstones have a considerably larger size (up to 2,5 metres high) and their carved patterns are opulent.

Ornaments are placed not only on the front, but also on the back and sides of the stones. New ornament compositions portrayed on medallions were also popular, and they feature bunches of flowers growing from flowerpots. F. Valeev examined the gravestones as works of art [Valeev, 1969, pp. 11–16, table 6; Valeev, 2002, pp. 10–14, table 7, appendix

12–24] and systematised them according to their form, decorations and development of the ornamental style. He also laid the foundations for the typology of the Golden Horde and the Kazan khanate epitaphs [Valeev, 1987, pp. 121–124; Valeev, Valeeva-Suleimanova, 2002, pp. 84–87]. The ornaments of the gravestones of the 15–16th centuries revealed the influence of Turkey, Central Asia, the Caucasus and Iran.

The carved stone tombs from the period of the Tatar khanates connected to a certain territory and local centres of production on the one hand show the inheritance of the art of stone carving beginning with the Golden Horde, but on the other hand they allow us to identify the specifics of lapidary art in the artistic centres. The largest art centres included the Kazan, Crimean and Kasimov khanates, where gravestone decoration reached a high artistic level and enjoyed wide-spread popularity. Despite having similar decorative motifs, the gravestones were different when it came to elements of form, composition and ornamental structure, inscription style, materials and some other features that allow us to distinguish regional centres or schools of art of stone carving [Valeeva-Suleimanova, 2008, pp. 95–100].

For instance, carved stone tombs are one of the unique artefacts that give us an idea about art in the Kasimov Khanate. Here we

mean the nine famous epitaphs located in the Khan mausoleum of the city of Kasimov. Above the entrance to the mausoleum there is an Arab inscription on a stone slab: 'The builder and owner of this building is Khan Shah Ali, the son of Sheikh Auliyar Sultan...'. This construction is dated 9 August 1555. This is a family mausoleum, and all the tomb steles in it are dated from the latter half of the 16th century. At the time, the inscriptions on these epitaphs were read by Kh. Faizhanov and V. Velyaminov-Zernov. The gravestones are decorated with a floral ornament and made using a sophisticated carving via a flat-relief technique that adorns the front and back sides of the headstones. Their reproductions were made in 1960 and 1966 by V. Valeev, who also created their graphic reconstructions.

Headstones in Kasimov possess certain similarities with gravestones of the Kazan Tatars as regards the technique of carving inscriptions and ornaments, as well as ornamental decorations. However, there are also several essential differences. All Kasimov steles have a special compositional pattern for their decoration in the form of an eight-ray web that forms a rosette in the centre of a flower. A smaller size of ornaments is more characteristic for them, which creates a certain 'milledness' and granularity in the motifs, as well as in the ornaments they form. Their compositions

Gravestones of the Kasimov Tatars. 16th century. Reconstruction by F.Kh. Valeev based on the materials of an expedition to Kasimov in the 1960s.

are enhanced by images of small circles that fill in the free space between the floral motifs. The upper part of the tombstones is decorated more lavishly and impressively, with more constrained, abstract imagery. The same repertoire of floral and plant motifs (shamrocks, tulips, lotuses, multi-petal rosettes, semi-palmettes, etc.) may vary artistically depending on the patterned composition, which allows us to conclude that they had their own tradition different from the Kazan-Tatar style.

In general, the design of the Kasimov tombstones of the first half of the 16th century, de-

spite some heterogeneity of style, is characterised by the vibrancy and ornamental richness of their decor. The stylistic interpretation of these ornaments differs from more monumental compositions found in the epitaphs of the Crimean Tatars and from larger ornaments on the epitaphs of the Astrakhan Tatars, which were discovered and copied by F. Valeev in the 1960–1970s during his trips to the Crimea (the cities of Solkhat, Bakhchysaray, YEvpatoria) and the Astrakhan region. In the city of Kasimov, the researcher discovered the genealogical tree—shejere—of Sayyids Shakulovs dated from the 18th century [Ahmetzyanov, Sharifulina, 2010, p. 16].

To date, no masterpieces have been discovered in other forms of decorative art from the Kasimov Khanate except for one unique exhibit displayed in the Local history museum of Kasimov (in the mosque) featuring the armour of a Tatar warrior dating back to the 16th century according to the museum archives. The equipment consists of a helmet, a shield, chainmail, one bracer and a wand topped with the moulded head of a bull. Judging by the wealth and exquisiteness of its decoration, the

armour belonged to a member of the Kasimov nobility.

The shield was cast by forging a single metal sheet and has a conical shape topped with a tall spire in the form of a large wild goose head with a long neck. On the front side there is an image of the sun engraved in the form of a face. An Arabic Kufic inscription is engraved on the lower edge of the helmet, and its surface is decorated with an arabesque-style ornament featuring floral motifs. The ornamental corpus of the helmet is gilded and silver-plated, and there is chainmail mesh is attached to the lower edge of the helmet. In the centre of the shield, as well as on all four of its sides, there is a clear-cut picture of the sun. The ornament on the iron plate of the chainmail is gilded in gold, while the silver plates are engraved with niello. Judging by their style and decoration, the helmet and shield were created by the same craftsman. In general, this exquisite exhibit requires thorough examination and attribution.

Some large museum collections keep unique gold and silver items which used to belong to the Kazan nobility. In the National Museum of Tatarstan, there is a unique sample of everyday life in the khan palace: a brass jug, absolutely exquisite in its form (see tinted insert). The jug was discovered at the beginning of the 1970s while dismantling a wall in a brick house in Kazan. It was published for the first time by A. Khayrullin [Khayri, 1994]. Its form and size show that it is a drinking jug, not a 'kumgan (metal vessel) for Muslim ritual ablutions' [Chervonnaya, 1987, p. 154]. The name of its creator is engraved on its corpus: 'the son of coppersmith Emin khan, foreman Nasyir', who worked at the court of Kazan khan Muhammad Emin [Valeeva-Suleimanova, Shageeva, 1990, p. 26]. This item has an exquisite form and is decorated with a floral pattern featuring sprouts (a grape-vine) and the calligraphic inscriptions of poetic miniatures in Tatar, Arabic and Persian. These love poems are considered to belong to Tsarina Süyümbike. The text of these inscriptions contain a dedication to the legendary khan warrior Kubik (Kebek) karachi-beg, who died during the Kazan conquest: 'From master Nasyir, living in the Kazan palace, to the commander of the troops, famous

and brave beyond any doubt, whose name was Kubik'. The inscriptions are engraved, while the brightly executed ornament is chiseled in [Tatar encyclopaedia, 2008, p. 370].

The jewellery art of the Kazan khanate features world-class masterpieces. The extant unique examples of jewellery created at the court of the Tatar khans are stored in the Armoury Chamber of the Moscow Kremlin. Among them there are khan regalia that became the insignia of tsar Ivan the Terrible, including the former crown of Tatar khans 'Kazan Cap' and the khan throne (see tinted insert) that was inherited from the last Kazan khan to be ousted, Edigur. They are among the most outstanding examples of Tatar palace art of the 15–16th centuries, studied first by F. Valeev. Both the throne and the cap are made of gold, richly inlaid with precious stones and decorated with a lush floral pattern in the Muslim Baroque style.

The later changes in those regalia evidence that they were borrowed and adapted to the ceremonies held at the Russian tsar's court. For example, another topping to the crown was added. At first, it was capped by a red Chinese spinel (a kind of tourmaline), which in 1627 was removed in order to be placed on the diamond crown of tsar Ivan Alekseevich and decorated with a large yellow topaz mounted between two pearls [Ancient state regalia, 1979]. The low throne of the Eastern type was redesigned for Tsar Mikhail Romanov in 1613. Its height was increased by lengthening its legs and back, and its shape was transformed into an armchair with the spine topped by a picture of the two-headed eagle [Shakhieva, 2005, p. 127]. A recreated copy of the khan throne, together with a copy of the 'Kazan cap' are displayed in the Museum of Kazan Millennium Anniversary in the Kazan National Cultural centre.

F. Valeev was the first to attribute the khan crown as a jewellery masterpiece of the Kazan khanate [Valeev, 1969, p. 91]. A comparative analysis of its shape, elements of its decor and the system of gem-inlays helped the researcher date it to the turn of the 15–16th centuries [Valeev, 1987, pp. 145–146]. The theory that the 'Kazan cap' was created in Moscow workshops by captured Tatar jewellers [Grabar, 1959, p. 564] has never been substantiated.

Badge with a picture of Azhdaha.
Pictorial reconstruction by F.Kh. Valeev

ed, and the khan crown, just like the Golden Horde 'Monomakh's cap', was entered into the register of outstanding works of Tatar jewellery art [Tatar encyclopaedia, 2006, p. 65; Valeeva-Suleimanova, 2008, p. 229].

In the collections of the Armour Chamber, the author of these lines managed to find belt buckles of an outfit belonging to a Tatar nobleman, as well as a unique Quran holder (see tinted insert) which were attributed to Khanate times [Valeeva-Suleimanova, Shageeva, 1990, pp. 84–87]. Similar buckles created by Tatar and Turkish jewellers were discovered even earlier, in the end of the 1960s, by F. Valeev in the collections of the Russian Ethnographic Museum [Valeev, 1969, p. 90]. They were subsequently examined in a thorough manner, and the results of the examinations were published [Valeeva, 1987, pp. 143–145; Valeeva-Suleimanova, 1995, pp. 83–86]. Discoveries of similar buckles and clasps in different museum collections attributed to the khan epoch are proof that this kind of jewel was both wide-spread and a prestigious element in the ceremonial attire of the Tatar nobility. Apparently, Turkey was the trend-setter when it came to these articles. For instance, the miniature of 1588 portraying Suleiman the Magnificent (Kanuni) during a hunt clearly shows that his Ottoman sultan attire contained a belt buckle of a similar form and size [Turkish arts, 1999, p. 202]. Such buckles were popular even later in 17–18th century attire in Turkey and the Balkans (Macedonia, Bulgaria), in the Crimea and the Northern Caucasus.

This comparative analysis of Tatar clasps allowed scientists to investigate a range of peculiar features of the jewellery art related to the epoch of the Kazan khanate. First of all, this relates to the filigree technology inherited from the Golden Horde. Filigree was widely spread among the latter, especially in the ornamentation of jewels on articles of attire (linings, belt buckles, Quran holders). Secondly, new techniques appear in the jewellery art of the Kazan khanate. These techniques were not found in the Golden Horde filigree, but rather discovered in the works of Turkish jewellers of Ottoman times. In particular, pieces of Tatar and Turkish jewellery art are related in style, technology and ornamental motifs that were characteristic of the 15–16th centuries [Valeeva-Suleimanova, 2010].

As concerns clasps, one important element is the shape of the plates that compose the clasps. The external contour is characterised by a complex curvilinear ornament created by deep carvings in the form of semi-circles that make the outlines more dynamic. Rosettes with scalloped edges, heart-shaped and leaf-shaped motifs also belong to this type of ornament. The shape of these plates is also characteristic of the decor of the 'Kazan cap's' crown, Tatar gravestone frames from the 16–17th centuries, plated bronze plates dated from the 13–15th centuries, in particular those containing the picture of the Azhdaha-dragon. The same types of curvilinear fillets also dominate the decoration of the ceremonial jar (matar) of the Turkish court and the sultan helmet belonging to the Topkapi Palace collection in Istanbul, which dates from the latter half of the 16th century [Turkish arts, 1999, p. 20]. It is also important to pay attention to a similar system of precious stone and gem inlays inherent to the insignia created at the court of Turkish (mataras, helmet) and Tatar (crown and throne) rulers (see tinted insert).

The key element involved in the attribution of Tatar clasps is the original method of how they are affixed to fabric. This is done by soldering miniature square-cut bars forming four or five parallelepipeds to ensure the clasp's construction is sound. This type of method for the ornamentation of large filigree pieces was

Belt buckles. Gold, filigree, granulation. The first half of the 16th century. Russian Ethnographic Museum

also used to create said Turkish buckles from the collection of the Russian ethnographic museum.

The Armour Chamber collection also contains a unique sample of a Quran holder (see tinted insert), which was discovered and attributed from the start by the author as a piece of art from the Kazan khanate times. The Quran holder is made of silver, while its cover is decorated with a filigree overlay

containing patches of large granulated spots that form floral motifs. It is ornamented with gems placed in ten deep nests. Only light-blue turquoise, dark-red garnet, green emerald and blue sapphire were preserved [Valeeva-Suleimanova, Shageeva, 1990, p. 85; Valeeva-Suleimanova, 1995, p. 87].

One particularly unique discovery should also be attributed to pieces of palace art, or at least to their characteristic style: a cast copper bowl discovered at the bottom of Kaban Lake in 2001 [Mingazova, Khaliullina, 2002, pp. 100–103]. It is kept at the Museum of Kazan Millennium Anniversary and was examined (including via chemical analysis) by an interdisciplinary group of scientists who attributed it as the work of Tatar toreutics of the 15th century. The surface of the bowl is ornamented with an engraved decor, and on its rim there is an Arabic inscription including verses in Persian, the author of which is supposedly a famous poet of the 13th century, Saadi.

The permanent exhibition of this museum also includes a reconstruction of a leath-

er quiver (see tinted insert) discovered by N. Nabiullin during the excavation of the Kazan Kremlin [Nabiullin, 2002]. The quiver was decorated with elaborately intertwined nodal motifs executed attached via silver sewing. The composition of the ornament is topped by a semi-circle (half-moon) with a highly stylised miniature of Zilant in its centre. This mythical, polymorphic creature known as the Azhdaha-dragon was also depicted in the assumed

Emblem of the Kazan Princedom taken from the Tsar Title Register, 1672.

national emblem of the Kazan khanate [Valeev, 1987, pp. 150–153; Valeev, 2002, pp. 91–93; Tatar encyclopaedia, 2005, pp. 476–477]. In the upper right corner there is an embroidered ornament reminiscent of an A-type tamga that is also present in pieces of Golden Horde art (ceremonial hatches, bracelets) and on grave-stones of the Kazan khanate from the first half of the 16th century [Valeev, 2002, pic. 28, 38–1, 50–7]. The artist N. Kumysnikova created a reconstruction of this sewing.

An ornament in the arabesque style on the quiver is a continuation of the Golden Horde Bulgaria artistic style where a similar decor of ceremonial hatches, bracelets and mirrors can also be found. At the same time, in comparison with earlier pieces the ornaments on the quiver are characterised by a more geometric stylisation and abstraction of motifs, which was intrinsic to the developmental tendencies in Muslim art of the 15–16th centuries. This is evidenced by the unique belt buckle of the male ceremonial dress present in the exhibition of the same museum.

Pieces of decorative art in the Kazan and other Tatar khanates reveal the formation of ethnic-regional artistic traditions that continued to develop in the culture of the Kazan, Siberian, Astrakhan, Kasimov and Crimean Tatars. In the era of the Tatar khanates, a general canon of traditions was formed that reconciled them with the culture of the Islamic world, especially Ottoman Turkey, Crimea, Iran, Central Asia and Azerbaijan.

In addition, art in the Tatar khanates (especially in the Kazan khanate) served as an inspirational model for Russian craftsmen. This is evidenced by the motifs and ornamental compositions characteristic of Tatar art from the 15–16th centuries: lotus, tulip, palmettes, floral bouquets, rose knots/rosettes and flowerpots. It is also evidenced by the popular decoration of fabrics, jewellery and so-called Russian ewers in Russian architecture that copied Tatar samples, as well as household items from the Royal court, the fashion and names of boyar clothes, hats and shoes (kazakyn/man's knee-length coat, beshmet/undertunic, yapancha/jacket; nauruz, tafia, bashlyk; ichetygs, chobots, clogs) [Kostomarov,

1860]. The fact that Tatar khan craftsmen, in particular architects, were invited by Russian princes, is evidenced by the fascinating information contained in a letter from Crimean khan Mengli Giray to grand prince Vasily III, dated September 1509. In this letter, the Tatar khan asks to send Jakub, his 'skilful bricklayer' back to him, as he had previously worked in Kazan and was currently detained in Moscow. A fragment of this letter extracted by M. Usmanov from the book 'Monuments of diplomatic relations of Ancient Russia with foreign powers' [Collection of the Russian Historical Society, 1895] is presented in his preface to the reprint of Karl Fuchs' 'Kazan Tatars' (1991). It is possible that Jakub is the same famous architect Yakov (nicknamed Barma) that according to the Russian Chronicles was the mind behind famous buildings in Kazan and Moscow. The Crimean khan asks in his letter: 'Jakub is my bondman, a useful skilled bricklayer for me, and you should... dress Jakub... and provide him with a horse... and send him to me, your brother, but do not leave Jakub with that man of ours, Yusuf...'. In this context, the cognomen of Barma can be connected to the Tatar verb 'barma' (stressed on the last syllable),—that is, if present in the name, such a nickname might mean 'not gone'.

Pieces of decorative and industrial art created at court workshops in Kazan are distinguished by the splendour and exquisiteness of their form and magnificence of decor, which allows us to generalise on specific features of the Kazan–Tatar artistic style. Many of them are considered masterpieces of decorative art and by right occupy a worthy place in the annals of world culture.

After Kazan was conquered, the high forms of Tatar decorative art developed in both urban craft workshops and court workshops were destroyed. Professional art such as architecture and its decoration, calligraphy, ceramics, hot metal processing, pile weaving, and gold and silver stitching were gone forever. The fine-art traditions from the Kazan khanate were inherited by and further developed in the large villages of the Trans–Kazan area where the foci of the Tatar Muslim civilisation still remained.

§ 4. The Development of Kazan–Tatar Fortifications from the 15th Century to the First Half of the 16th Century

Almaz Khabibullin

The architecture of defensive structures in the Kazan Yurt absorbed a range of advanced techniques from the Iranians, Bulgar, Chinese, Arab, Caucasian, Khazar, Seljuk, the Golden Horde, Central Asian and others cultures. It was based on the early field or 'nomadic' fortifications which had emerged in the 8th to 10th centuries and whose development continued until the 18th century. Three main types of nomadic (field) camps (temporary settlements) should be distinguished among the Tatars: the kuren or camp-ground type, the kishlak (winter encampment) or semi-nomadic type and, finally, the semi-settled type [Khabibullin, 2011, pp. 182–185].

The subsequent genesis of more durable Tatar fortification building built upon certain principles taken from this nomadic architecture [Gubaydullin, 2002a, p. 28]. The 'krym' (perekop), or a ditch and rampart system, is regarded as one of the first stationary types of Tatar fortification. A considerable variety of types of moats and ramparts had existed since Bulgar times¹. The slopes of the hills on which fortresses were built were often escarped. Moreover, tunnels were dug in the ramparts through which brief diversionary sallies were often carried out². The approach routes to the

gateways were also made more sophisticated, with the arrangement of so-called 'traps'³. In order to reinforce the banks, they were occasionally reinforced with wood or masonry⁴. Hydrological works were also widely used to hinder the enemy's movement towards fortified points (waterlogging, artificial channels, etc.).

During the floruit of the post-Golden Horde Yurts, the Tatars developed the following defensive constructions: defensive (sentry) lines and strong points (kirmyans or fortresses) and temporary fortified camps (kishlaks, yasak kishlaks, kurens, nomadic camps, etc.), kirmyanchiks (small fortresses), caravanserais and detached patrol points (signal towers). Strongpoints and Tatar defensive lines formed systemic parts of the state military concept.

Towns in the Kazan Yurt usually had a three-part functional structure: the ark (citadel), the kirmyan (kremlin) and the rabat (krym or trading quarter). The ark of a kirmyan was usually protected by wooden or stone walls, towers and gates⁵. So called shelter-fortresses (Kazan, Iske Kzan)⁶ were

earth in front of these tarasy in the Kazan fortress so that the Tatars could make short diversionary raids. The same holes could be used to put out fires on the wooden walls.

³ Access to gates was often arranged on the right side so that an adversary, when approaching the fortress, exposed the side left unprotected by shields.

⁴ This can be seen, for example, in the ancient town of Uternyanskoe.

⁵ Sometimes khans (caravanserais) located in the city played the role of arcs. City kirmans had mostly the krim system, which included a ditch and a rampart, defensive walls, towers and fortified gates. City rebates were sometimes fenced off by wooden walls and had a krim and a lattice fence. Handicraft slobodas adjacent to the city (osta bistälari) had no fortifications, and during act of war people hid in kirmans, which also functioned as shelters.

⁶ The Tatars often had two settlements located in close proximity to each other. One was fortified and the other had no defensive equipment. When an enemy attacked, the population went into combat mode and hid in the fortress. Chufut-Kale, Kazan, Kamaevskoe ancient town, Ferrah-Kerman are examples of such fortresses.

¹ Slopes of ramparts were sometimes fortified with a clay daub, sometimes together with straw, wooden facing, a grating made from wooden skids, stone ballasts or stone facing. The centres of ramparts were sometimes fortified by log-house constructions. Ditches were both of triangular and trapezoidal shapes. There are also examples of rectangular ditches. Sometimes spired logs were dug into a ditch's bottom or into the slopes in order to prevent an active storm. Beginning in the 13th century, ditches became wider and deeper to anticipate the rolling of siege equipment. Additional rows of ditches and ramparts are often found at the entrances to fortresses. These constructions also continued to function in the 15–16th centuries.

² Here is what the Russian chronicle says about the additional fortification of gates of the Kazan fortress: '... they (the Tatars) had huge tarasy [rolling blocks made for sieging] filled with earth placed in front of every gate; every night Kazanians crawled out of these tarases, like snakes, and fought our people'. Based on this description, we can say that holes were dug in the

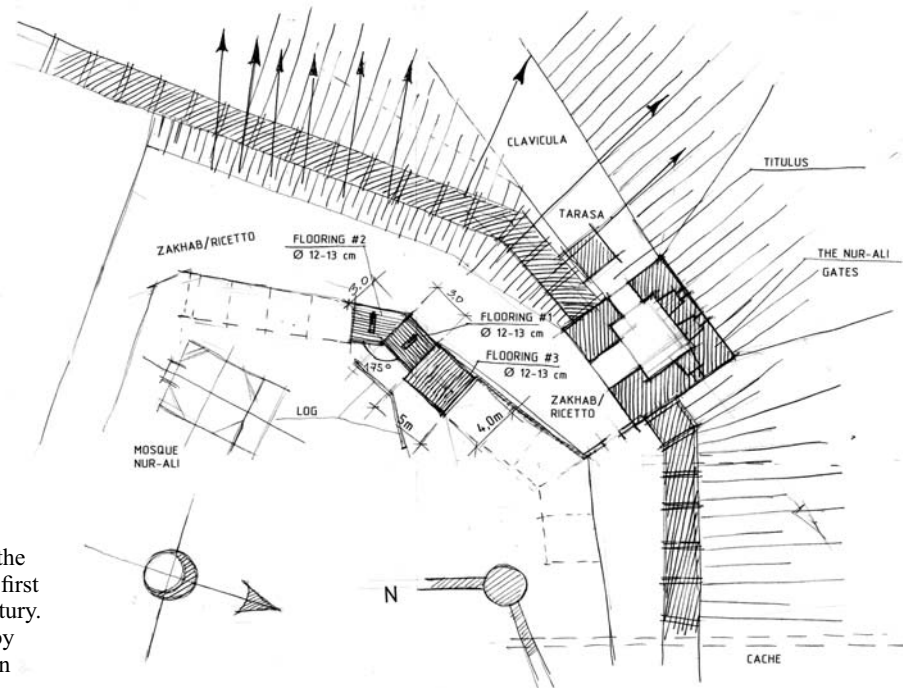

Kazan fortress dated back to the first half of the 16th century.

widely employed in Tatar fortification practices. Sometimes there was a reserve territory inside fortified strongholds which was prepared for the emergency accommodation of people from nearby villages.

Due to the fact that the existence of the post-Golden Horde states coincided with the beginning and development of the so-called 'gunpowder revolution' at the turn of the 14th to 16th centuries, some Tatar fortresses started to use firearms artillery together with innovations in fortress defence (extension of towers and walls, entrenchments, etc.).

Tatar fortresses were both regular and polygonal in configuration, often depending on local landscape features and the existing hydrography. On the plains, fortresses tended to be of regular form, following traditions with roots in Bulgar and Khazar fortification techniques. Regular layouts also appeared in the architecture of fortified Tatar caravanserais. On headland sites complex fortresses were built whose form was dependent on existing geographical conditions.

Tatar fortification exhibits the following typology, according to settlement function: the capital city, residences of begs and murzas (stationary and nomadic) and caravanserais. Fortress on the peripheries of the state formed a network of frontier fortresses, which were combined into the structure of a circular defence of the capital. Border fortresses also functioned as beacons for neighbouring fortified settlements. By function, towns serving as customs points provided with naval forces should also be noted. Another type—fortified castles of feudal lords—had also enjoyed a wide distribution in the Tatar khanates since the pre-Mongol period.

The most widely spread type, according to the materials used in construction, was that of wooden strongholds¹. Framed wattle and daub, earth-filled timber and stone types of defensive constructions should also be dis-

tinguished. In the Volga–Kama region, rich in forest cover, the Tatars usually constructed earth-filled timber fortresses with wooden walls. Sometimes the buildings were of a combined or mixed wooden-stone type. The Kazan fortress of the first half of the 16th century was in a stage of transition from a wooden fortress to one of stone. There are also accounts of emergency teams of builders in the Kazan Yurt who repaired breaches caused by bombardment or explosions, as well as being able to construct rapidly erected fortifications made up of preprepared elements. We should also note the snow and ice fortlets of the Tatars².

In the early and mid-Medieval period, linear defences protecting against the raids of neighbouring nomadic tribes acquired wide application. Abatis, consisting of felled trees, ice and snow, were used on these defensive lines, as well as in rivers and traps.

In the 14th to 15th centuries there emerged the so-called 'stone sacks' or gate-traps³. This technique was characteristic of the fortifications of the Bulgars and Khazars, who had likewise applied in earth-filled timber fortresses [Gubaydullin, 2002a, p. 43]. Urban planning solutions presupposed that gates would be constructed on major highways. The main gates of fortresses, residences, caravanserais and civilian suburbs often had symbolic significance⁴. They were often decorated with ornaments, and bore clan symbols or the names of their builders⁵. Rulers would often erect bunchuks (horsetails), gonfalons and banners on the loopholes, thus emphasising

² Ice fortifications near town of Belyov built by Ulugh Muhammad in the 15th century (1438) proved the existence of an art form involving snow and ice structures. When describing Hajji Tarkhan of the 14th century, Sharaf ad-Din Ali Yazdi stated that inhabitants built walls of blocks of ice, poured water over them and put up gates between the walls. These facts probably prove the existence of snow/ice settlements among the Turkic-Tatars.

³ This method received the name of Clavicula (Latin), and had different variations.

⁴ As an example, we should mention the Gates of Cairo or those of Konya, which also had a symbolic meaning.

⁵ They could have been of a greater size compared to other gates.

¹ The fortress of Archa Kirmyane (Arsk or Arsk townlet) is considered as a well-known Tatar stockaded town of the Kazan Yurt. In 1552 it served as the Tatars' strategic fortress. Its walls were made up of gorodni or earth-wooden structures which, according to Tatar traditions, were filled with stones and mud. A spired paling was installed above gorodni.

the status of a fortress [Evliya Çelebi, 1996, p. 71]. In form the gates and towers were usually square, right-angled¹, circular or octangular in plan. Sometimes the gates were not given a separate tower, but were installed directly into the thickness of a wall. The Tatars also had double-tower gatehouses which were widely used in the Islamic world and Western Europe. Bridges and gates with hoist mechanisms were usually constructed at the approach to a gate. Tatar fortification was also characterised by tarases built in front of gates, protecting them from perpendicular attacks [Bogdanovsky, 1898, p. 8]. Several gates and portcullises were often installed in the arches through which the entrance ways passed.

Thin wooden walls constructed of a single row of logs were often used, and had been since the Bulgar era². Alongside primitive wooden walls, improved wall types of a more sophisticated structure were also employed. Mention should be made of the wooden tarases (mobile shields) and gorodni (constructions of wood and earth) which the Tatars also used widely. The spaces within these would often be filled with earth, clay and animal bones. Stone walled fortresses were commonly used for the fortified residences of the khans and for caravanserais.

The pavilions topping the towers, known from iconographic sources, were double-pitched, quadruple-pitched, hipped and tent-roofed. Sometimes there were sentinel towers set up on the roofs of gatehouses. Ceramic tiles and wooden planks served as the material for roofing towers and gates [Evliya Çelebi, 1996, p. 56].

Tatar citadels often had large signal towers. These towers served for signal transmission during the approach of an enemy, or to communicate with mobile cavalry units located near the fortress³.

Based on the above assertions, we can make the following conclusions: Over the course of its existence, the Kazan Yurt's fortifications reached quite an advanced level of development. With the development of artillery, the fortresses were modified and improved. It is also noteworthy that the typology of Tatar defence constructions varied both in functions and in construction materials. Besides their general features, Tatar fortifications also included elements specific exclusively to the Tatars (tunnels and tarases in front of gates). Fortification building in the Tatar states not only absorbed ideas of advanced technology, but also made its own great contribution to the development of the architecture of defensive structures.

¹ For example, towers of the Or Kapu fortress were square.

² In particular, we see a pillar construction on the engraving depicting the citadel of Khan-Kirman. According to the descriptions provided by Blaise de Vigenère, the castle in Kirk-Yer (Chufut-Kale) was built of wood and earth on top of the rock. The height of such walls usually reached 3–4 meters.

³ In A. Khalikov's opinion, in the 13–14th centuries, there was a stone watch-tower on the spot of present-day Syuyumbike (Söyembikä) tower, dating back to the 17th century. That watch-tower also had a passageway on the bottom level and could have been a signal tower as well. Signal towers were characteristic of Tatar fortresses. In case of their absence, signs could be given from the high minarets of mosques. A picture of a possible tall tower is present in the engraving made by A. Olearius, which depicts Khan-Kirman of the 17th century. Signs, or yasak, were given with the help of different banners. It is also possible that at night they were made through a system of bonfires or lights.

§ 5. Architecture and Art of the Crimean Khanate

Architecture of the Crimean Khanate

Vladimir Kirilko

The main obstacle for thorough examination of the Crimean khanate's architecture is an extremely poor condition of monuments and their insufficient study. To date, many buildings have been either irretrievably lost, or destroyed to such extent that we could only describe them based on brief documentary mentions and narrative messages in sources. At best, there could be found some photographs and iconographic materials. The majority of the extant constructions, due to multiple repair works, almost completely changed their original look and it is almost impossible to reconstruct their authentic exterior. Almost nothing is known about craftsmen and architects. There are very few monuments which were archeologically examined, and even fewer objects which were properly measured. However, it is still possible to obtain a general idea on the local architecture, as well as to outline its characteristics and stylistic features.

An invaluable source on the history of construction and, first of all, its initial stage, as well as the time of formation of the Crimean khanate is 'Book of Travels' written by Turkish author Evliya Çelebi who visited the peninsula in 1666–1667 and described its main settlement in quite a detailed way, devoting special attention to their architecture [Book of Travels, 1999].

Evliya Çelebi outlined a whole range of objects which he described as constructions of 'ancient form'. He also attributed several mosques to their list, as their architectonics undoubtedly reflects the earliest construction traditions of the Crimean Tatar state.

Evliya Çelebi saw one of them, erected by Sahib Giray-khan (1532–1551), on the territory of fortress Or: 'It is 150 ayaks [legs] long, and 100 passes wide. <...> On the left side of the mosque, there is a prayer-tower: a beautiful low minaret constructed of white stone. The very mosque is a low place of worship, of an ancient form, covered with turf' [Ibid., p. 12].

When describing fortress Taman, Evliya Çelebi also mentions a monumental building with a phreatic roof, which was constructed by Hajji Giray-khan (1441–1466), according to the *tarik*h: 'There is a cathedral mosque Kasym-pasha, a beautiful chapel full of light, built in an ancient form, roofed by soil which is as pure, as ambergris' [Ibid., p. 106].

The architectural legacy of the Crimean Tatars has at least one more construction of the kind—the so called mosque of Uzbek, located in the former capital of the *ulus*. Evliya Çelebi also saw it, though he discovered it already after an overhaul. The Turkish traveller informs us, as he describes sights and inscriptions on city constructions of Eski Kirim fortress: 'The best of them is a *tarih* [story] above the door of Ulu-Jami, written in neat handwriting: 'Thank God, God bless Mohammed, and the Creation, and Khalifs! The building of this blessed mosque was erected in the reigning days of great khan Muhammad Uzbek Giray-khan'. There is another *tarih* above the minbar of this mosque: 'Honorable descendant of sultans, Mengli Giray-khan, son of Hajji Giray-khan, ordered to construct this minbar. God, make his reign eternal, year 918'. There are 4 columns within this honourable mosque; it has a painted ceiling and it is roofed with tile; it also has a central [kyblovaya] door. The distance from the central door to the mihrab is 200 ayaks long and 150 ayaks wide. The minbar of its ancient form is adorned in such a beautiful way, that it is a pure magic' [Ibid., p. 83].

The mosque in Stary Krym is a representative example of how Tatar architectural traditions in the region developed at an early stage. Judging from archaeological research materials, it was constructed at the turn of the 15th to 16th centuries. [Kramarovsky, 2005, p. 114]. An idea of its original appearance and changes made during repairs

has been generated by in-situ research on the building carried out during restoration works [Kirilko, 2009a].

The mosque was added onto the northern side of the madrasah building in 1332/1333 AD (733 AH), and is located on the axis of its lateral iwans (picture 1). In the plan, it is rectangular and longitudinally oriented. Its dimensions are as follows: the width is 13.37–13.64 m (diminishing to the south), and the length is 17,90 m. The wall thickness is 0,82 m. The northeastern corner of the building is taken up by the massive foundations of the minaret. There is one entrance to the mosque—from the north. The mihrab is opposite the secondary door. The windows are only partially preserved, on the south and the north of the building. In pairs, they framed the mihrab and the entrance, with a single pane. The lateral facades have almost totally been lost, the rest were significantly changed during the later repair works. The reconstructed height of the building was about 6,50 m.

The mosque was built up against the closed madrasah. During its construction, at the section where the buildings joined together, the northern wall of the madrasah was almost totally dismantled and replaced with new work, constituting the southern wall of the mosque (fig. 2). This is 0.15 m thicker than the primary construction and about 1 m in section. This thickening was caused by the addition of the 14th century carved mihrab, taken from another building, into the wall. Secondary use of architectural details is also seen in the doorway jambs and lintels and partially in the minaret.

On the photos taken at the turn of the 19th to 20th centuries (figs. 3, 4), the minaret appears relatively synchronous to the mosque. However, it is difficult to conclude definitively at present whether it was this way from the very beginning as, at the foot of the upper part of the cultural layer (construction waste accumulations) archaeological excavations and restoration works in the 1980s revealed numerous details of another sherefe—the remnants of a stalactite cornice and a carved parapet. The style features of

the minaret and portal pieces discovered are matching, and thus it is quite possible that they had all previously belonged to the Uzbek Mosque (1314). It is still unclear whether the minaret remnants were used in a new place while constructing the building or were left lying by its walls as unused construction supplies.

The external surface of the minaret base is made of carefully worked limestone blocks. The back part of the masonry is made up of rough masonry with external wooden booms. At 6,80 m above the modern ground level, the base ended in a pyramidal body protruding slightly beyond the wall surface. Its truncated peak was crowned by a minaret of circular section. The entrance is positioned in the inclined part of the base, from the building interior, at a height of 6,45 m above the floor.

The minaret's shaft is cylindrical, with a spiral staircase inside (fig. 5). Its upper and lower parts are girded with decorative roll moulding. The shaft is constructed of carefully worked limestone blocks and slabs laid in rows 0.2–0.4 m in height. The wall thickness is 0,13 m. Some stones are horizontally joined to each other by iron clamps with lead-filled sockets. The landing, the turret and the sherefe parapet are round in plan, at 14,25 m above ground level. The cornice supporting the small balcony is massive, with a curved profile and smooth surface. It was completed with a flat rim, flush with which there was a barrier. The opening leading out of the turret is rectangular with an arched top, facing southwards. The main diameters of the structure are as follows: the shaft—1.56 m, the sherefe—2.75 m, and the turret—1.43 m. The total reconstructed height of the minaret was around 23 m.

It is quite possible that the roof of the building was thatched with turves, with a surface incline of 6° (fig. 6). The thickness of the ground coating was about 0,35 m. Descending evenly to the side walls, it adjoined the minaret practically on the level of the entrance, thus providing a relatively acceptable access to the minaret from the roof.

Since the repair works at the beginning of

the 16th century, the results of which were seen by Evliya Çelebi, the external outline of the mosque has remained the same, while the building interior has changed significantly (figs. 2, 6, 7).

All the walls of the building have been subject to complete reconstruction. The side walls have been thoroughly renovated, and the front and back walls have been given more height and topped with pincer-shaped finishings. The height of the facades was thus increased to 6.8 m (the level of the cornice on the minaret's base) and 9.9 m (the level of the ridge). The thickness of the masonry work has not greatly changed but the quality has been improved significantly, mainly, on account of the mortar, which formerly had been crumbly with a high level of loam, and which now is solid, composed of sand-lime with a vegetable-based mixture.

Two identical stone arcades with four lancet chords were added inside the mosque, dividing the building into three axial nave (fig. 2). The intermediate columns were reused octahedral pillars (three in each arcade) with cube-shaped capitals and bases

of different forms, decorated with stalactites. At the point where the imposts of the utmost columns join with the wall they were supported with brackets. The surfaces of the capitals and the tops of the columns were additionally decorated with plant ornament, executed in black pigment (fig. 8). Remains of painting were also noted here and there on the mihrab, meaning a possible shared date.

In the crowns of some arches, there are still iron rings for hanging lamps. One of the lamps—of Syrian origin, in glass, decorated with colourful enamels, mainly blue—was found inside the building during the excavations [Kramarovsky, 2005, p. 113].

The mosque reconstruction coincided with major repair works in the madrasah, possibly due to its adaption for use as a tekke. In particular, the back abutting ends of the side walls of its northern iwan, destroyed during the first construction period, were completely restored (fig. 2). As a consequence, the original windows of the mosque's southern facade were bricked up. Instead, next to them (closer to the mihrab,

directly under the arch brackets), new windows were made, opening into the iwan.

Most probably, the lateral facades of the mosque had windows opposite to each of the arcade chords (picture 7). One of these has been preserved almost intact. It is sited 3,40 m above floor level. Its positioning was determined by functional expediency and, perhaps, architectural fashion. First of all, it provides the most efficient lighting for the corresponding internal part of the mosque. Having such an aperture, so high above the floor, also helped in saturating the most remote places on the opposite side of the building with overhead light. Secondly, the window is located on practically the same level as the wooden features connecting the arcade columns with the wall masonry, and so no other location would have been possible. Thirdly, the architectonics of the facade includes stylistic features of Ottoman architecture with the symmetry of the volumes and regular positioning of the apertures, peculiar to that period.

The northern facade of the mosque also went through some changes. A monumental portal, richly decorated with carving, was added to the current entrance (fig. 9). The portal was taken from the Uzbek Mosque. By this time some elements of the stalactite decoration are likely to already have been irretrievably lost. As a consequence, the craftsman who rebuilt it in its new site had to demonstrate considerable skill and tact in his work.

The construction and repair works on the building took place at the beginning of Muslim Crimean architecture's Ottoman period. Despite some typical features of the Seljuk style, determined, in particular, by the layout and dimensions of the primary construction, as well as the use of architectural details (the mihrab, portal and arcade columns) taken from earlier Golden Horde city construction, the mosque in general and in some details (the portal arch and minaret) already demonstrates the influence of new architectural tendencies, although presented in a somewhat adapted manner.

The closest analogy for the building, virtually having lost its original appearance

entirely following the repair works, is the mosque at Chufut-Kale (figs. 10, 11). According to Evliya Çelebi, the building was 'a cathedral mosque of ancient architecture'. The *tarik* above the entrance states that it was built by Ghazi el-Haji Giray-Khan in 859 AH (1454/55) [Book of Travels, 1999, p. 37]. It differs from the Uzbek Mosque in the position of the minaret (the north-west corner), in the entrance (on the side), in the number of columns (two rows), and in its generally smaller dimensions (external—13.8×10.65 m, internal—12×8.85 m, wall thickness—0.65 m). In the opinion of O. Aqçoqraqlı, the mosque was rebuilt several times. Taking into account the fragment of an inscription on reused masonry materials dated to 746 AH (1346), it may have been constructed during the reign of the Golden Horde Khan Jani Beg (1341–1357). In many aspects, it repeats the story of the Stary Krym building [Aqçoqraqlı, 1928, p. 168]. On the northern wall, there are still brackets and heel stones of the arches with mortises for wooden links. A.L. Bertier de la Garde also noted the two rows of columns inside the building, which had stalactite capitals [Bertier de la Garde, 1920, p. 112]. U. Bodaninsky and B. Zasyrkin suggest that, later, as alternate poles, lost Byzantine marble columns with turned impost capitals were used, and the building itself might, in the end, have a cupola [Bodaninsky, Zasyrkin, 1929, pp. 172–176]. In any case, the building by type and style is the closest and relatively synchronous analogy of the 'Uzbek Mosque'. The most similar are their architectonics and the active use of spolia.

A typical feature of external architectural decor in the Chufut-Kale Mosque is, certainly, it was not invented by the researcher during the reconstruction of the plan (figure 10), is a three-quarter column in the south-western corner. This decorative technique is also featured in the *durbe* of Hacı Giray in Salachik, 1501/02 (907 AH). Later, it was widely adopted in other monumental buildings of Bakhchysaray.

Both of the buildings are examples of the Basilica style for mosques. There are

Fig. 8. Painting of column caps and heads in the so-called Uzbek Mosque in Eski-Kyrym (today Stary Krym) [Kirilko, 2008b, fig. 34]

also similar constructions of later times. The most famous is Şor-Jami in Karasu-Bazaar (picture 12). According to B. Zasyppkin, this was a rectangular building consisting of two parts: a vestibule and a three-nave hall. Wooden overhead covers were supported by six (three in each row) cyma recta arches supported by octahedral stone columns with 'geometrically highlighted' capitals and bases. Between these arches are windows reminiscent of Ottoman architecture. A carved mihrab is in the middle of the southern wall, the surface of which (like the secondarily used mihrab of the so-called Uzbek Mosque in Sary Krym) was painted and gilded. The choir balconies were located partially above the middle and lateral naves and had a complicated design. The mosque had a wooden ceiling and was covered with a four-slope tiled roof.

The building featured two entrances: from the north on the long axis and from the west next to the minaret extending to the wall from outside. The location of the windows is two-layered. The apertures of the lateral facades are correlated with the chords of the arcades. The framing on the lower windows was in the form of a flat rectangular stone above which was a lancet tympanum with iron bars with lobes. The shape of the external corners in the building is unusual. They all are sloped at 45° in the lower part, but at the level of human height they again acquire the

right angle due to a stalactite crossing. The architectural design often centered on erecting the edifice in tight spaces. In this case, however, there is also an ornamental function to the plan, in contrast to the designs of other monuments of the region [Zasyppkin, 1927, pp. 147–148, table V].

The idea of Şor-Jami and the architecture of the Crimean Khanate at that time can be expanded by one more city construction. This is Tekiye-Khan-Jami, which has also been thoroughly studied by B. Zasyppkin. According to U. Bodaninsky, it was constructed in 1140 AH (1727) by the Sheikhs of Konya, who founded a Sufi monastery in Karasu-Bazaar [Ibid., pp. 149–150].

The appearance of the main complex (picture 13) is well-known. The building in the plan was long and rectangular, and consisted of two main parts: a vestibule and a chamber. Its walls are constructed of quarystone on clay with adobe, and plastered both outside and inside. The roof is tiled. There is one entrance, located on the long axis of the building from the northern side. A double porch with a yard covered by a one-slope roof on four wooden columns led to the vestibule. To the left of the door was a service room. To the right, a corridor led to the minaret foundation, extending to the building from outside, and to the fireplace room, which was likely a kitchen. The entrance to the main part of the mosque, the dimensions of which were 8.10×14.50m,

is located on the main axis of the building. Inside the building, along its lateral walls are hudjras (eight from each side). Above them, the second floor comprised galleries which had windows with kaf-

Fig. 13. Layout of the Tekiye-Khan-Jami mosque in Karasu-Bazaar [Zasyppkin, 1927, fig. 12]

esas that opened onto the hall. The cells lead out of the mosque through small doors and have natural lighting from the street thanks to the ports in small windows, which were could be closed with sash shutters from inside. The internal structures, overlays, ceiling as well as a painted mihrab and a kursu were wooden [Ibid., p. 150].

In the middle of the southern wall of the mosque, there was a carved ganch mihrab in the shape of a heptahedral niche, ending in an apsis comprising seven main rows of various relief arabesques. The base of the construction was tiled in high-quality majolica tiles with flower ornamentation. According to B. Zasytkin, with the exception of this decorative detail, the rest of the Tekiye-Khan-Jami mihrab is almost an exact replica of the Şor-Jami mihrab. The niche corners are decorated with thin, twisted, three-quarter columns with simple canonical capitals. The niche has a rectangular frame. The tympan has five flat rosaces, two of which are in relief. A peculiar feature of the mihrab is that its separate parts are no longer correlated in terms of the original architectural plan, and its decorative effect is highlighted mainly by colouration and rich gilding. The painting technique and gypsuming makes this construction closer to the monuments of Central Asia and Persia in the 16–17th centuries. The obvious resemblance of the interior in both of the mosques led B. Zasytkin to the suggestion that the masters of the Tekiye-Khan-Jami mihrab and paintings also worked in Şor-Jami, and, thus, the buildings could be from the same period [Ibid., p. 151].

The later date of these buildings is partially indicated by the fact that they were not mentioned by Evliya Çelebi. He described the sights of Karasu-Bazaar and, probably, was not impressed. That's why he simply mentions the number of mosques and limits himself to a few quick surveys [Book of Travels, 1999, p. 72]. Mihrabs that are unusual for the region, as well as the unique minaret Tekiye-Khan-Jami, the only such structure in Islmaic peninsular architecture with a double sherefe [Zasytkin, 1927, p.

155, table V] would doubtlessly have caught his eye.

Besides a Basilican type of mosque, temples in the Crimean Khanate are also famous for their domed buildings. Such architectonics are related to Ottoman architecture. Gezlev is a vivid example. It is the location of one of these buildings. The city itself played an important role in the region, as it was the only Tatar seaport for ships arriving from Asia Minor and Constantinople. It was accorded special status for many years, beginning from the reign of Ghazi Giray II (1588–1607/08). First, it was a residence of the Crimean khans and their courts, and it was also a centre of silver coin-minting. There were plans to turn it into the capital. It was the place where the Tatar khans arrived from Istanbul after the Sultan granted them their hereditary rights. Their enthronement would be announced in the Juma-Jami Mosque [Jakobson, 1964, p. 139; Kutaisov, Kutaisova, 2007, pp. 42, 44, 57].

After visiting Gezlev, Evliya Çelebi gave praise to this main landmark of the city, one of the finest domed constructions in the Crimean Khanate. 'And the most beautiful, highest and amazing is the cathedral mosque of Behadyr Giray Khan. In length and width, from the quibla doors to the mihrab, there are 150 steps. From the left side of the mosque, there is a place for the khans to perform namaz. There are also two high minarets. One of them was destroyed by earthquake. I, unworthy, climbed up the remaining minaret from the right side. I looked five times at all of the city buildings, their appearance and construction. Descending from the minaret, I counted 105 steps. This is really a high, well-built minaret. This is because it is the construction of Khoja Mimar Sinan-aga ibn Abd al-Mannan, who built the Mosque of Sultan Suleyman in Istanbul. Indeed, this construction is attractive and gladdens the soul. But the [external] haram of the mosque is small, because it is located in a crowded city place, in the middle of the bazaar. <... > In this city, there is no other mosque of this type, pure lead covered, bright, decorated and well-designed. You can see everywhere

sparkling lead from its cupolas' [Book of Travels, 1999, p. 21].

The masterpiece of the renowned Turkish architect, which is included in the list of his works as number 77 and titled 'the Mosque of Tatar-khan in Gezlev' has been preserved to this day, and it is still one of the main sights of the town. The construction can be dated to 1552–1562 [Zasytkin, 1927, pp. 140–143; Chepurina, 1927; Ponomareva, 1996a, pp. 198–204; Kutaisov, Kutaisova, 2007, pp. 61–91].

The mosque is a quadratic monumental building with a three-nave hall and an open gallery at the entrance (picture 14). The width of the construction is 26.86 m, and its length is 26.11 m. The wall thickness is 1.20 m. The apertures of the main construction is long, separated by two-layer arcades with massive poles in the octahedral section, with one pair flanking each side. The middle nave is higher and two times wider than the lateral ones. The central part, quadratic in the plan, is clearly delineated in the mosque. It is the highest and features a spheric cupola on the pendentives that is supported by massive arch walls. The diameter of the construction is 11.65 m. The height of the inner space is 22.40 m. The southern part of the middle nave, occupying a third of the aperture, is lower and has a semi-cupola. Lateral two-layer naves with the choir balconies on the second floor are slightly shorter. Opposite each of the arcade apertures, they formed quadratic cells, which are separated by responds with arch walls and ended up with small cupolas on the pendentives. The intermediate ceilings are wooden. In the middle of the long lateral walls from both of the sides, next to the minarets extending from outside, there are lateral entrances to the mosque. Inside the masonry in one of the them, the eastern, there is a staircase with a little balcony on the landing. This led to the choirs and was used by the khan.

The mihrab is located on the main axis of the construction on the southern wall. It has a view of a five-pointed niche with columns in the corners and a conic semi-cupola comprising eight rows of carved stalactites.

It is placed in a rectangular, graded plastered frame, and decorated with geometric and ornamental floral painting. On the right from the mihrab is a stone minbar with a wooden turret.

At the very bottom of the construction is the northern gallery, which opens from outside, and occupies a quarter of the area. Unlike the other rooms of the mosque, it is divided into five cells, each of which features a little cupola. In front, the cover was supported by a lancet arcade with poles in the shape of round marble columns, provided with stalactite capitals and a cube-shaped base with corner cuts. The northern entrance to the mosque is the main one, located strictly on the axis of the building. On both sides from it, there are external mihrabs in the wall, decorated with plaiting and stalactites. These are done in a style that is typical of the Seljuk constructions, but have extremely simplified forms and decorations. The door is two-shuttered, with a carved geometric ornament.

The internal structure of the construction is completely reflected in its external form, shaped in a clear pyramidal composition of the design. The central cube-shaped part of the construction is dominant. Its dimensions in the plan are 13.00×13.90 m. Outside, the pendentives are correlated with a double stepped corner cut, make possible the passage from the quadrangle to the octagon foundation of the cupola and its sixteen-pointed drum in shape of a frustum, forming the lower and external constructions, as well as half of the spheric construction inside. The building has a spherical construction, which echoes the inner surface of the vault. The ribs of the drum are in the form of flat responds with projections on the edges. Between them are arched windows on the borders. The arched walls of the main cupola on the facades are framed with the niches, and slightly embedded in the surface of the wall. The southern hollow is totally closed by the apsis. The other niches are cut by windows: three large ones with the arches on top, above them—two small ones in the same shape and three round ones.

Thus, from above, the mosque is exposed to light through forty apertures. This provides an unusual airiness to the entire edifice and is reminiscent of the cupolas of the Constantinople cathedrals, especially the unrivalled Hagia Sofia. The facades of the lateral niches are smooth and indiscrete. The rear wall of the construction is opposite the arcades, and the mihrab has flat responds. Their windows are placed in two layers: the lower is for rectangular windows with a flat tympan in a lancet form, the upper is for arched windows. The mihrab is also framed with two round apertures. The drums of the smaller cupolas, crowning the lateral naves and the gallery, are low and dumb, with eight and six borders. The reconstructed height of the minarets is 38 m. They are located practically on the same axis with the main cupola of the mosque. This feature highlights the main vectors of the composition.

The design features of the building are quite important. The depth of the foundation is only 0,90 m. It projects outside from

the wall at approximately the same distance. Thus, the width of its sole was at least 2.10 m, and it could reach 3 m if the substructures were expanded inside the building. The foundation had a stepped configuration constructed of three rows of tightly fitted limestone blocks. Relatively weak soils were designed to strengthen the foundation thanks to massive supporting walls (1.40 m by thickness) located relatively close to the construction. The building itself, as a system of mutually balanced vaults, allowed not only the efficient use of the mosque's interior, but also the rational distribution of the loads from the cupola cover of the central building part to the constructions of its external perimeter.

The Juma-Jami in Gezlev is a hallmark of the Constantinople architectural school and, like its famous predecessor, it is unique in the architecture of the Crimean Khanate. In terms of the rest of the peninsula, it was less unique, as the Mosque of Sultan Selim in the Ottoman Kefe had much in common with it. B. Zasytkin also associates it with the works of great Hodji Sinan. He believes that these two constructions influenced the subsequent development of the cupola mosques, and the main territories of their expansion in the region [Zasytkin, 1927, pp. 140–143].

The most vivid example of the adaptation of the classical compositions and forms of Ottoman temple architecture in the early architecture of the Crimean Khanate are two types of mosques. Koleh and Karagöz villages have what are currently the best preserved examples of these [Ibid., pp. 144–146, table IV, V].

Evliya Çelebi saw one of them but he noted it in passing, in a number of other constructions, although he probably had time to thoroughly investigate it, as he made a stop-over in Koleh-Salasy. He was extremely laconic in his impressions of the architecture of the settlement: 'In the town, there are 200 Tatar houses, the cathedral mosque with a high cupola and a stone minaret, a bath-house, and lead-covered buildings' [Book of Travels, 1999, p. 105].

The mosque in Koleh is a massive, cube-shaped building with a vaulted lean-to and,

possibly, a gallery at the entrance (picture 15). The inner space of the main chamber of the building is covered with a cupola on the pendentives, which is almost hidden with a high, dumb eight-border drum from outside. The external forms of the construction are heavy with disproportionately small apertures. The windows are in pairs and in two layers. The lower ones are rectangular with a lancet tympan, while the upper are arched, with one round window between them. The minaret is constructed from outside at the north-western corner of the building. It had a twelve-border section and was well-proportioned. Its sherefe was supported with a three-layer stalactite cornice.

The aperture of the door of the mosque has a lintel of the Seljuk type, which is placed in the niche with a cellular semi-cupola. The tympan and the rectangular frame at the entrance are covered in floral ornamentations. The mihrab is a double niche. Its interior is arched, while outside it is covered with a five-layer stalactite apsis. There are no three-quarter columns, which are traditional in constructions of this type. The mihrab framing is richly decorated with various geometric and floral ornaments, close to the arts of Central Asia, Persia, Bursa and Alhambra. Taking into account the saturation of the construction with typical architectural and decorative details, correlating with the Seljuk cultural traditions [Zasytkin 1927, pp. 144–146, table IV], the mosque likely belongs to a number of early Ottoman cupola constructions in the region.

In terms of its general forms and plan, the Mosque of Karagöz village is pretty close to the building in Koleh. The main difference is the drum, the facade borders of which are located on the same plane with the surface of the walls of the main body. The minaret is low and made of stone with a wooden staircase inside. It adjoins the north-western corner of the building from outside. The mihrab is a smooth semi-circular niche, crowned with a conic semi-cupola. There is no information about the interior decoration [Ibid., p. 146, table V].

A typical feature of both mosques, which is especially vivid in comparison with sim-

ilar samples of the classical compositions in Kaffa, is the absence of the windows in the drums, which is a sign (if it is possible to make a conclusion by unique examples), typical of the monumental cupola constructions of the Crimean Khanate. In this regard, there are two more significant, well preserved constructions built later. They visually demonstrate the peculiarities of the expansion as regards the traditions of Ottoman architecture in the region (in the other part of the peninsula: central and western) and its interpretation in the provinces.

One of them is the Mosque of Eski-Saray. According the sources from archaeological excavations, it was constructed as late as the beginning of the 18th century. It is located in the neighbourhood of Ak-Mosque, on the lands of the kalga-sultan. It is a monumental construction with complicated architectonics.

The building consists of two quadratic volumes of different sizes with in separate entrances and a common wall (picture 16). Its dimensions are: 17.52 m by width, 12.71 m by length. The thickness of the foundation is about 1,30 m. The main body is cube-shaped, the smaller is distinguish by slightly upwardly arching proportions. The height of their walls is, respectively, 9.55 m and 7.38 m. Both parts of the construction featured cupolas on the pendentives, and had low eight-border drums from outside. The entrances to the mosque are from the north. The minaret was added to the north-western angle of the construction from the external side, partially adjoining the lateral wall. It had a massive rectangular foot with a basement and a cornice. The foundation dimensions are 2.85 m in width, 2.75 m in length, and 6.50 m in general height. The entrance to the minaret is from the east, from outside. The building dimensions are 10.20×10.15 m and 3.83×3.75 m., their heights are, respectively, about 15.30 m and 7.80 m. The window apertures of the main body are located on three layers: the lower are rectangular with tympan in cyma recta shapes; the middle windows are arched, and the upper are circular. The

lighting of the side-altar was two-layered. The building had three mihrabs: one from outside, at the north-eastern corner of the main facade, and two inside each of the rooms on the entrance axis.

The construction of a lateral side-altar in the mosque was at first not planned. The architectural plan was altered at the moment that the walls of the main construction were erected at the level of the cover of the first-layer windows. In the plan, the lean-to was pretty well correlated with the main body of the building. Its entrance side coincides with the diametric axis of the mosque, and the backside walls are leveled along one line and form a united facade surface. Diagonally, the volumetric composition of the entire building was effectively well-balanced by the minaret.

The main mihrab of the mosque is a five-border niche with a multi-layer cellular completion (figure 17). The surface of the apsis is covered with a notched geometric decoration of triangles and diamonds. Decorative carvings are also featured in the upper part and on the lateral borders of the niche. Its dimensions are 1.20 m in width, 0.55 m in depth, 3.42 m in height.

The transformation of the section of the mihrab's cellular completion from prominent decagon in the lower part into asterial dodecagon in the upper part is made possible by seven projections. A typical feature of the architectonics is the absence of any lintel, excluding the contour frame of the apsis and the upper part of the extreme borders in a narrow, slightly sunken wall surface with a flat bandelet. A geometric decoration, totally covering the cellular completion of the niche, is created by the rhythmic interspersions of horizontal ornamental belts, formed by notched triangles and diamonds. The deeper parts of the decoration had a structured beginning, providing an organic combination of various volumes and projections. The prominent ones were designed to cover the background and decorate the surface. Although the carvings divide and somehow dematerialise the stalactite cascade of the vault, similar ornamental elements and a cer-

Fig. 16. Layout of the mosque in Eski-Saray based on the 1991 excavation results. Drawing by V.P. Kirilko

tain repetition of some combinations from these details provide the composition with a rare integrity and uniqueness.

The multi-graded surface of the completion of the mihrab niche is also unique, and is not to be found in other Muslim monuments of the region. However, the Seljuk roots in the main forms of the apsis are obvious. The decorative application of notched triangles and diamonds is, to a certain extent, correlated with the Golden Horde's tradition of bone carving, which in its turn is quite similar to carved ornaments of Russian woodwork. Parallels can also be seen in the architectural decorations of the buildings and applied arts of the peoples of the Caucasus.

The clear architectonics of the building, measured proportions and carved decorations of the mihrab demonstrate the highly developed skills of the builders of the Eski-Saray Mosque, which is one of the best examples of Ottoman architecture of the classical period. A totally different architectural image was crafted by the creators of the tekke in Gezlev. No doubt they were inspired by a local masterpiece created by great Hodji Sinan.

Fig. 17. Mihrab of the mosque in Eski-Saray, 2008.

The building of the dervish cloister is located outside the Gezlev fortress walls, immediately behind the gates of Odun-Bazaar Kapusi. It was constructed during the reign of the last Crimean Khan Shagin Giray (1746–1787) next to the renewed Shukurla-efendi Mosque, and is dated to the turn of the 18th century. Tekke is comprised of a double co-axial square with skewed external corners. Along the perimeter, there are 19 vaulted hudjras (totally 26 rooms) that completely frame the cupola hall (picture 18). There is only one entrance to the building, located on the western side. The cells are all connected to a central room with low arched apertures and outside light entering through small slit-like windows. The hall itself had two windows in each wall. These were located above the even-numbered entrances to the hudjras and were of the same form. The building's dimensions: general—17.50×17.26 m, main volume—11.85×11.80 m, main room—9.29×9.33 m, common cells—1.10×2.20 m, roof diameter—9.08 m, height of under-cupola space and hudjras—9.50 and 1.70–2.00 m respectively. Wall thickness: central part—1.20–1.26 m, external perimeter—0.60–0.65 m. The outward appearance of the building is formed by two volumes: a heightened middle—the hall, and lower external section—the hudjras, forming a pyramidal composition. From the external side, the pendentives correlate with a double stepped cut of the corners, similar to the one used in Juma-Jami. An eight-sided cylinder is high and deaf, its facade borders are in the same flat area with the wall surface. It ended up with a low tent-shaped roof with shallow pitches and, in fact, there is no evidence of the presence of the cupola outside. Clear geometric forms of some construction volumes are ascetic. They are brightened a little bit only by window apertures and the red pan tiles of the hudjra roof, all the projections and the cupola [Kutaisov, Kutaisova, 2007, pp. 92–106].

Taking into account the descriptions of Evliya Çelebi, the architecture of the Crimean Khanate at that time is variously presented by practically all the main types of the con-

structions, also known in other regions of the Muslim world. The exceptions are, probably, only covered markets for selling and storing high-value goods,—that is, bezistans (bedestans), one of the most typical constructions in Turkish trading and usually the most important component of the city core. It looks like the traveler only once came across this type of the construction on the peninsula, in Bakhchysaray, and it had only one cupola. He is constantly pointing at the absence of covered markets in settlements, at least, four times (while visiting the external suburb of the fortress Or, Gezlev, Karasu-Bazaar and even Ottoman Kefe): "However, here there are no cobblestoned bezistan with cupolas" [Book of Travels, 1999, pp. 13, 24, 50, 74, 93]. At the same time, Evliya Çelebi informs about numerous small shops, tells about their advantages and underlines the unusualness of some of them: in Ak-Mosque there are "special shops with doors from both sides, like a bezistan" [Ibid., p. 69].

A special place among the constructions, noted by Evliya Çelebi, is taken by different hotels and inns (hans). Being a traveler, he evaluated them fairly thoroughly. The example of Karasu-Bazaar is quite bright, as there were eight constructions of this type there. Pointing out a general number of hanas, Evliya Çelebi gives them the following description:

"The best of them is the Khan of Grand Vizier Sefer Ghazi-aga, located on the market in the city centre. It looks like the fortress of the city of Karasu. As there is no fortress in this city. By perimeter, this construction is around 400 steps. This is a beautiful fortress, made of stone, massive in Shaddad manner and very solid. There are two iron gates. Inside, there is a water source. There are 120 external and internal rooms on two floors. From all the four sides, there are gun ports, and on the four corners there are big towers, like guard-towers. In case of siege, this huge khan can turn out stronger than a fortress. However, around it, there is no moat as it was built up in a narrow city, in the middle of the market. <... > In this khan, there is built a two-floor cloister without a minaret.

<... > And above new iron gates, the following tarih is written: "Wise, as Asaf, Sefer Ghazi-aga / built up this han by the laws of geometry, / having seen the completion of the construction of this khan, / Fetkhi said: let it be the tarih "Built by Aga". / 1065".

Not far from this khan, in the rows of shoe-makers, there is a khan of Shirin-bey, which seemed to be built up according to the sketch of Sefer Ghazi-aga, but it is small. Besides these two, here are no other khans with iron gates, like fortresses. However, other khans are also well-arranged" [Ibid., p. 73]

At the moment, there are only ruins of the building of Sefer Ghazi-aga. They can only slightly add to the description of Evliya Çelebi. The gates are located from the western side. Above the entrance arch, at the level of the second floor, there is a rectangular window with an iron bar. From above and sides, its plat-band is decorated with carved rosettes. Between openings, in the middle, there is a slab with dedicatory writing. The rooms are vaulted. The lower part of the wall had no exit, the upper one had gun ports. The laying thickness at the level of the second floor is 1,50 m [Zasytkin, 1929, p. 159].

The second khan of Shirin-bey, which looked like the first one by Evliya Çelebi, was built up by Sefer Ghazi-aga, is preserved better and is being restored more thoroughly. The building in the plan is rectangular. The gates are located at the northern side. The entrance aperture ended with a cyma recta arch. Above it, there was a tarih (lost later). And a little bit above, at the level of the second floor, there was a square window with an iron bar. The rest of the upper rooms were exposed to light through gun ports: six were in the northern and eastern walls, and eight were on the western facade. The exceptions are the corner parts of the building, where the ruins of the towers can be seen. Each of the two layers had one barred window with dimensions 0.80×0.80 m. The rooms of the khan were vaulted. They are located on two floors, framing a spacious court along the perimeter. The lower ones were for animals and storing of goods, the upper ones were

for living and had fireplaces. They were connected with a covered terrace on wooden pillars. The roof of the construction was tiled [Ibid., pp. 159–160, table VII].

Unlike the constructions of Karasu-Bazaar, the khans of other settlements in the Crimean Khanate did not survive. Nowadays, they can be visualized only by the descriptions of Evliya Çelebi. It is noteworthy that the names of Sefer Ghazi-aga, vizier of the Crimean khans Islam-Giray III (1644–1654) and Muhammad Giray IV (1654–1666) and his relatives are referred by the traveler to some other best hotels, built in different places of the peninsula: in Bakhchysaray, Ak-Mosque, and even the Ottoman Kefe [Book of travels, 1999, pp. 49, 69, 93]. It is supposed to be not only a tribute to the hospitality of their kindly owner, but an obviously true fact. The status and fortune of the leading person in the government allowed him to employ the best specialists of that time to construct his caravan serais. The content of the tarih in the Karasu-Bazaar construction and Evliya Çelebi's impressions prove that they had mastered the secrets of geometry and draftsmanship.

Whenever possible in his book, the Turkish traveler tried to show the entire identity of settlements of the Crimean Khanate, relatively comprehensive descriptions of which allows us to get some idea about their planning pattern, landscaping and architectural aspects.

According to description by Evliya Çelebi of the northern steppe districts of the peninsula, where he had started his journey from, at that time they looked somehow wasted and did not have any structure refinements. For instance, after his visit to the Or Fortress and its suburbs "with no bridges", he tells about "mainly single-story turf houses" and even mentions a "decorated reed palace". Speaking about the Tuzla settlement, the traveler mentioned buildings with dirt roofs and "walls made of planks and bull's manure". Other steppe villages (Kishkara, Kenekes, Jelyairly, Kodzhamak) he had seen were not significantly more attractive either—"without trees, gardens and

Fig. 18. Layout of the Shukurla-effendi mosque and tekke in Gezlev [Kutaisov, Kutaisova, 2007, p. 96]

Fig. 19. Fountains of Gezlev. Drawing by lieutenant Zhukov, the late 18th century [Pridnev, 2004, fig. 9]

vineyards" but with the following buildings: "Walls of their buildings are made of mud bricks and wide bricks made of manure. And they are decorated with dirty straw". Just a bit further to the south, in villages settled by the standard bearers of the khan (Besh-Evli, Elkesen, Kodzhalak, Butash), he mentions vivid changes in their appearance—"One can see here turf houses, but their walls are made of stone", and later, during his stop in Buzyayshi, he provides a convincing explanation for his observation: "Their houses are made of stone, because the village is close to a rock site" [Ibid., pp. 12, 13, 18, 19].

After his long journey across the steppe, the Gezlev was considered by Evliya Celebi as a real city—with a fortress, port, several markets and many beautiful mosques, buildings of khans, bath houses, madrasah, tekke, schools for youths, shops, buza-hane and bawdy houses. The traveler tried to associate the toponym with some architectural features of the first houses, which like a caravan had only hole for light on the top—as if they were "with eyes" [Ibid., p. 19].

However, most of all, Evliya Çelebi was surprised by one building in the outskirts—"there are windmills on the top of ten stone towers, they look different, they remind of watermills", he did not see similar buildings in any other country visited before [Ibid., p. 21].

A well-thought out drinking water supply system of Gezlev provoked just as much interest. He mentioned seven well-organized springs in the city in total, out of which, in his opinion, the best one was a "big spring under a dome" located on the central market, built by Islam Girey in 1061 AH (1650/51). Evliya Çelebi writes that: "The spring water is pulled by horses from the wells, located in a four-hour-walk from the At-kapu gates. Great masters provided the city with water, and [water] goes from the springs to the khans, mosques, bath houses <... >. These wonderful and strange wells with water wheels are a very interesting sight. Due to significant donations, all city springs are under watchful control and there is no risk of their damage and harm" [Ibid., p. 23]. However, the city water supply system reliability was based on not only the continuous maintenance, but on the design features of the main units of the system, and, first of all, on the use of special underground galleries, similar to Iranian kahrezes. The peculiarity of Gezlev tunnels was that there was a ceramic water pipeline under the floor, in stone floored rectangular canals. Springs, mentioned by the traveler, were mainly representing an ordinary cheshme of different shape, decorated with arched niches and different cornices (Fig. 19) [Pridnev, pp. 56–88].

The second, equally important, city of the Crimean Khanate was Karasu-Bazaar, which was also later visited by Evliya Çelebi, it had significant differences from Gezlev, first of all, in infrastructure development and architectural environment, which are pretty eloquently reflected in descriptions given by the traveler: "The Karasu River flows through the city, buildings are located on both banks of the river. <... > House yards have wooden fences. <... > Springs flow

through the entire city. <... > There are no lead-painted houses in the city. All houses have ruby red-tiled roofs and are well constructed. <... > There is a small number of paved streets in the city. In the winter, when hundreds of thousands of Tatars come to city riding horses, as a result of their traffic, the city dust turns into sea, where people drown. But markets with wooden roofs have pavement. In order to keep the horse-riding Tatars from entering the market, poles are driven in from corner to corner. <... > A house without a garden is a rare view in this city. <... > There are many graceful and tall poplars" [Book of Travels, 1999, pp. 72–75].

Evliya Çelebi also mentions great numbers of water mills on the river, about stone bridges, that were leveled with the ground as a result of the Karasu overflow and about wooden structures that replaced them, about a great many mosques, out of which the cathedral mosques were made of stone, had a tiled roof and stone minarets". The traveler also mentions madrasah, tekke, khans, inns for single men, schools for boys, shops, bath houses, coffee houses and meyhanas. It is likely that the identity of architectural environment of Karasu-Bazaar was determined by the cultural traditions of the main part of population of the city—strong Armenian diaspora and refugees from "Tokat, Sivas and Amasya running from the Anatolian oppression" [Ibid., pp. 72, 74].

In comparison with other steppe districts of the peninsula, there is a difference even in the residential development of the city, which, according to Evliya Çelebi, consists of mainly "two-story tiled roof houses with gardens and vineyards" and only "sometimes one may come across turf houses", however, "many hundreds of houses do not have stone walls, they are made of wood" [Ibid., p. 72]. The ethnographic material shows a wide expansion of so-called "tur-luchny" type buildings in this part of the district, and a specific roof construction, slug ridges which are supported by thick wooden poles with a fork on the top or rafters in the form of a trestle ("makas") rest-

ing upon horizontal beams of the wall [Kuf-tin, 1925, pp. 28–31, table VI].

The most landscaped, well-groomed and green settlement in the Crimean Khanate was the capital city of Bakhchysaray. Evliya Çelebi keeps on admiring the almost paradisaical view of the city, which is fully consistent with its name. He starts his story with a description of Aşlama Garden: "All khans, their sons and sultans, their wives and daughters recreate themselves in this garden. It is a very beautiful garden, where, just like in the Garden of Eden—Gulistan, a murmuring water flows from one end to another, stops alongside palaces, located at the corners of the garden. <... > All highly-respected khans in different parts of the garden have built various gold-plated decorated wonderful palaces, pavilions, summerhouses, as if they are made of Chinese porcelain. There are different swimming pools, fountains and palaces-khavernaks, they are so beautiful, that if a person, who knows something about architecture, looks at them, will put his finger to his lips, and his mind will be amazed.

There are different fruit trees, which do not grow in any other place, neither in Crimea, nor in any other country. <... > There are thousands of flower types with wonderful scents, that were sent as gifts to the khans, fill the breath with fragrance. Especially wonderful are the bulbs of Anatolian bakiraza, similar to Rum musk, and grafts of Trabzon pink, Istanbul golden tulip "Monla Celebi", tulip "Chili Haji", tulip "Kagithane", different red peonies, Istantkoy hyacinth, and many hundreds of thousands of flowering types of bulbs, sent as gifts, are represented in this garden. Those, entering the garden, think that they appeared in eternal Paradise. All trees blossom in the summer, plum, apple, pear, cherry, sour cherry, and other trees blossom, other flowers bloom. <... > Brooks and springs-selsibili murmur in-between lawns and flower gardens in the shade of different tall trees, pure water is pumped to leaves and fruits from hundreds of water jets, water from fountains flows to trees as a Blessed rain.

Great specialists from many countries and many thousands of captives—specialists in Jamshid arts—constructed in this garden buildings in various architectural styles. Indeed, just as the city of miracles, Constantinople—that is, Istanbul, has the same buildings as the Ashlama Garden [Book of Travels, 1999, pp. 40–41].

It is entirely possible that right here—in the Ashlama Garden of Eden, the sophisticated portal "Demir-hapu" was located at one time, too, but later was moved to the khan's palace in Bakhchysaray. This was a unique building, that was built in the spirit of the Italian Renaissance with eastern motifs, designed by a famous master of Lombard-Venice School Aleviz Noviy in 909 AH (1505) [Ernst, 1928, pp. 39–54].

"The garden of desires" Ashlama was located in a wide gorge in the eastern suburbs of Bakhchysaray, alongside the Eski-Salajik—predecessor of the capital, the city was given an appropriate prefix, indicating its age, by Evliya Çelebi (Fig. 20). This settlement, surrounded at one time by a fortress, was identified by the traveler as an ancient city with many houses, "red tiled, with high pipes" and with "many rooms in caves under the rocks". He tells that: "All buildings are made of stone, with stone walls, wonderful and decorated, in an old architectural style". He had mentioned five districts in total, each of them had a mosque with an "old style minaret". According to Evliya Çelebi, just occasional reminders of onetime grandeur of Eski-Salajik are left in the city—"the big madrasah of Mengli Giray Khan", "a wonderful bright bath house", "the old palace of Jochi Giray Khan", which is used as an armory of "the great palace of justice", "the madrasah of Sahib Giray Khan and türbe of preceding khans, full of light, where the padishahs graves are located under the peaked domes" [Book of Travels, 1999, pp. 38–40].

Evliya Çelebi describes only one building—the palace of Jochi Giray Khan: "Now this palace represents a stone building, a small fortress. It is 200 steps around the perimeter. There are 4 towers, iron gates look to the west. There is a mosque with two short

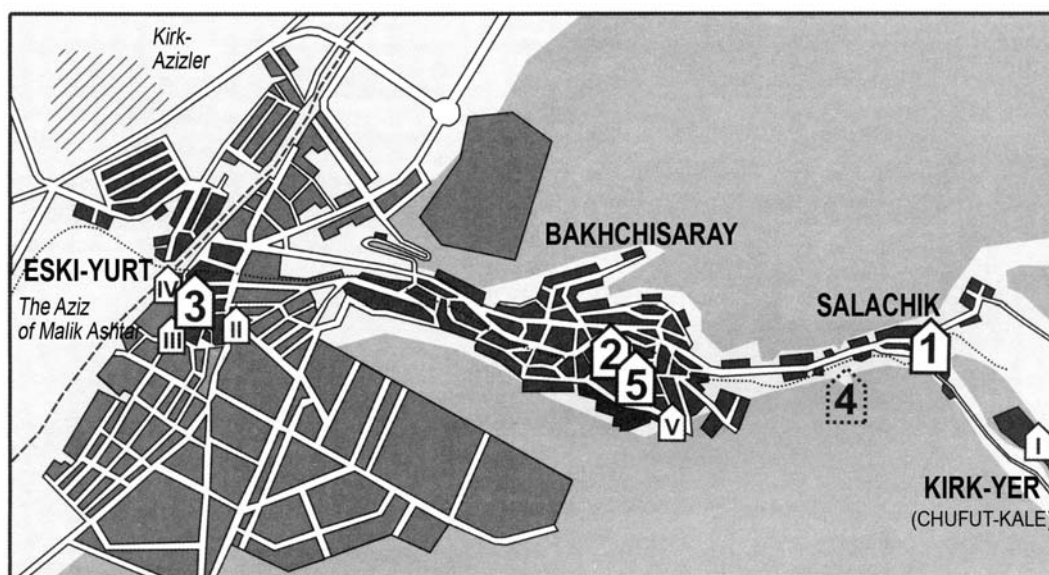

Fig. 20. Muslim mausoleums in Bakhchisaray's historical districts. Layout plan.

The khans' mausoleums: 1—Haci Giray's (latter half of the 15–early 16th centuries), 2—Devlet Giray's (northern) burial-vault in the khan's palace (16th century), 3—Mehmed II Giray's burial-vault (latter half of the 16–first third of the 17th centuries), 4—probable location of Selyamet I Giray's burial-vault (early 17th century), 5—Islyam Giray's (southern) burial-vault in the khan's palace (middle of the 17th century) Other mausoleums: I—Janyke-khanym's burial-vault (first half of the 15th century), II—Bey-Yude-Sultan's burial-vault (early 15th century*), III—Ahmed-Bey's burial-vault (14–15th centuries*), IV—Mehmed bey's burial vault (16th century*), V—Dilyara-bikech's burial-vault (latter half of the 18th century).

*—dates are presumed [Gayvoronsky, 2006, p. 47]

minarets. The minarets are so small that a person cannot get inside, and it is impossible to read Ezan" [Ibid., p. 39]. According to the description, appearance-wise, the palace was the same as one of an ordinary khan, and small minarets, likely, were decorative architectural forms in the shape of pinnacles, that were later widespread in architecture of the Crimean Khanate.

"The Big madrasah of Mengli Giray Khan", that was mentioned by Evliya Çelebi, was built in 906 AH (1500). It represents a square building with a rectangular courtyard, surrounded by an open gallery (Fig. 21). On three side, along the side walls and back wall, there are cells and classrooms. The entrance was on the south side. The madrasah had an arched door, with an iron chain suspended outside from the ends and in the middle, which made every person entering the madrasah to incline his head in a respectful manner. The gallery is covered with a dome set upon pendentives with wall

arches of vaulted form, resting on square piers of the courtyard and wall frame. Cells and classrooms ended with arches [Zasypkin, 1927, p. 158, table VI; Yakobson, 1964, p. 141, fig. 46, table XXXVI; Ibrahimova, 2005a, pp. 145–151].

The tomb of the first ruler of the Crimean Khanate Hacı Giray, which was also built by his son Mengli Giray, was located close to the madrasah. It is dated by the sign on the entrance, 907 AH (1501/02). The mausoleum was octagon-shaped inside and with Seljuk type monumental portal from outside. The building was covered with a dome set upon pendentives and had an octagonal cylinder. The entrance to the building above ground level was from the south, entrance to the chapel was from the north-east. Unlike completely ascetic exterior of the adjacent madrasah, the tomb had a richly decorated exterior. The top and bottom parts of the main walls are supported by cornices, whose corners are decorated with three-quarter col-

Fig. 21. The Mengli Giray Khan madrasah ("Zindjirly-madrasah") in Eski Salachik [Jakobson, 1964, fig. 46]

umns with cuts. There are two types of window apertures: rectangular—one each at the side walls and arched—three of them, at the back walls. All of them had corrugated window casings. The most decorated part of the building is the entrance. The exterior perimeter of the main facade of the portal is sur-

rounded by a relief of the "Seljuk chain". Its aperture had a keel arch at the end. The interior space of the building is covered with a dome set upon stalactite cloistered vault of a complex shape. There are five-sided niches of pylons with a cellular conch. The door is installed into a relief frame made of wicker bands. All background surfaces and some parts are covered with solid incised ornaments. According to B.N. Zasytkin, this tomb, having some common features with Seljuk-style buildings, generally is already under the influence of Ottoman art and Renaissance tendencies, which were reflected in over-decorated designs with partial loss of sense of proportion through derogation of architectural forms and proportions [Zasytkin, 1927, pp. 126–127, table III; Gavriyuk, Ibrahimova, 2010, pp. 29–65; Kirilko, 2012, pp. 214–217].

In his description of planning patterns of Bakhchysaray, Evliya Çelebi, objectively, twice had mentioned one major disadvantage of the location of the capital: "Since the water of the river Ashlama, flowing through the city, and flowing from the city of Salajik, is full of waste, its name is Churuk-Su. It is used to turn many mills and it carries lots

Fig. 22. General view of Bakhchysaray from the South. Drawing by P. Tumansky, 1933. Presumably, an engraving copy at the turn of the 16–17th centuries (BHCP, Bakhchysaray)

of waste, flows west and, going through the gunpowder factory and lots of water mills, through the fenced gardens, flows to Eski-Yurt. <... > It is water with a great deal of waste. It is not appropriate for human consumption. <... > There are 43 stone and wooden bridges in the city over this Churuk-Su River. There are two-story ruby-red tiled houses on the left and on the right hand side. Houses with gardens and vineyards go up to the foot of the hill and rocks" [Book of Travels, 1999, pp. 39, 42–43].

The aboveground level part of a traditional Bakhchysaray house usually was made of rubble with clay mortar and strengthened with wooden belts, and the street facing wall was very thick and protruded higher. The second floor was made of clay covered by wicker fencing or kalyb. In the most simple occasion, each level consisted of one room, with small halls and pantries. It is not infrequent that the upper story differs from the lower by size and shape, overhanging on one side or at the corner. The overhanging part of the building is supported by wooden bent supports, abutting against the wall. The gallery was arranged from the courtyard. Many houses had incised wooden ceiling, decorated with solid geometric ornaments, with a relief rosette in the centre. The impact of the Ottoman artistic style is especially clearly seen in the bright-colored ceiling lamps, decorative painting of walls and wooden structures, windows with window panes, arch doors, and the same style fireplace [Kuftin, 1925, pp. 7–12, table I–III, XI–XIII, XV; Zasytkin, 1927, pp. 163–166].

According to the book of the Turkish traveler, other buildings of Bakhchysaray were represented by many mosques, madrasah, schools for boys, tekke, khans, palaces of nobility, bath houses, bezestan, shops, coffee houses, buzahane, craftsmen dormitories, buildings for feeding beggar travelers and even by a hospital with "several rooms". By the way, the Greek and Armenian churches were mentioned as well. Evliya Çelebi mentions lots of "lonely cages", located on both sides of the city and used by travelers as a kind of hotel: "It is a wonderful

and strange caravanserai" [Book of Travels, 1999, pp. 48–53].

The main building of the city was the kyeryunush—the palace and meeting place of the Divan, it was located on the southern bank of the Churuk-Su River, right next to it. According to Evliya Çelebi, it was built by Sahib Giray Khan (1532–1551) in seven years, and, as far as it was surrounded by the "Gardens of Eden", it was called Bakhchysaray. The traveler says that: "From four sides this palace looks like a fortress and is surrounded by stone walls, similar to the buildings of Shaddad. However, the palace does not have battlements and towers. Its perimeter is 560 steps around, there are four strong and firm iron gates. The north gate is called as Zarb-khane-kapu. There is a key-kavus kitchen, basement and chashnegir and kyergy rooms on that side. The other gate, on the southern side, is called as Bakhche-kapu gate. One more gate, that opens in the direction of qibla, is called Eski-kyeryunush-kapu gate. And one more gate, Eni-kyeryunush-kapu gate, is an entrance to a harem. Black aghas stand there and [protect] the big Harem gate. There are 360 wonderful rooms behind this gate, they are located one above another, with niches, and big palaces with innumerable various paintings, similar to a chameleon. Each building is built by one of the padishahs [Ibid., p. 43].

During the entire period of its existence, the palace was continuously renovated and repeatedly rebuilt. In 1737, it was burnt down by troops of field marshal Münnich, later was completely reconstructed and modified, but in general, despite significant losses, preserved the initial structure and some early buildings (Fig. 23). The composite core of the palace is a big longitudinally extended courtyard, stretching from the north to the south. From the front and from the sides it is surrounded by groups of buildings, some of them are fenced by walls and form independent ensembles with in-house courtyards. The territory of the palace was divided into designated zones—there were ceremonial, administrative, residential and several utility zones [Markevich, 1895, pp.

Fig. 23. Layout of the khan's palace in Bakhchysarai, created by V. Hastie in 1798: I—big courtyard; II—internal courtyard (ambassadorial); III—kitchen courtyard; IV—backyard; V—bakers' yard; VI—old palace; VII—stables. A—mosque of 1740; B—khans' cemetery; C—burial-vault of khans' cemetery; D—building of the suite; E—guest rooms; F—the main building. 1—gate; 2—"iron gate", 1503 r.; 3—fountain narrow courtyard; 4—"fountain of tears", 1763; 5—"Golden fountain", 1733; 6—Divan (Hall of Council and Court); 7—Golden or Fruit room, 1764; 7a—flower garden with a fountain and a pool; 8—mosque of 1741; 9—harem; 10—bath [Jacobson, 1964, fig. 47]

130–176; Gengross, 1912, pp. 3–32; Yakobson, 1964, pp. 142–146, fig. 47, table XXXVIII–XLI; Ponomaryova, 1996b, pp. 48–58; Ibrahimova, 2005, pp. 140–143.].

At the north gate, on the east side, Sahib Giray Khan (1532–1551) at the time built the cathedral mosque. About how it looked in the 1660s Evliya Çelebi tells: "Its walls are made of firm stone. This old construction is the house of God, it has a dome, it is a lath house [lath sticks out as needles] hedgehog. <... > This ancient mosque is 110 steps long from qibla doors to mihrab, and it measures 70 steps across. <... > Inside the mosque, there is a ceiling beam, rested upon 20 oak piers, on top of the beam—there is an old style ceiling. On the right, there is a worship place for families of fame-worthy khans. Various silver candle-holders and pendants are hanging above this high place. This mosque does not have the [external] harem, because the Churuk-Su River flows in front of the qibla doors. The mosque consists of qibla doors, khans doors, there is a low, old architectural style, minaret, there are windows on the left, on the right and on the qibla side—looking to the Tomb Garden" [Book of Travels, 1999, p. 48].

In 1740, the mosque was completely reconstructed by Selyamet Giray Khan, after the reconstruction, it took the form of a building rectangular in plan with a three-aisled hall and a porch under the hipped tiled roof with big eaves. Along the side walls of the building, located outside are open galleries with arcades on octagonal columns. The mosque has three entrances: the northern—from the river side, from the street, the western—from the main courtyard, the eastern—from the garden. On each side of the building, opposite to the southern part of porch, there is a symmetrical dodecahedral minaret of symmetrical proportions with exquisitely decorated incised sherf. There is a khan's box consisting of two rooms with a separate entrance from the outside in the south-western corner of the building at the level of the chorus (Fig. 24).

A small cemetery—"the Tomb Garden", surrounded by stone wall with two gates, ad-

joins the southern wall of the mosque. There are three buildings in the cemetery: two tombs—one of Devlet Giray (1512–1577) and the second one of Islam Giray (1604–1654), and a rotunda with a grave of Mengli II Giray (1678–1739) [Ibid., p. 48; Gayvovronsky, 2006, pp. 14–19]. Both mausoleums are of the same dimensional composition and size, but have some specific details. They are of octagonal shape inside and the domed structures outside with an octagonal cylinder, located at 45° from the axis. There were two-level windows: the lower—rectangular in shape with lattice, the upper—arched. Entrance to the tomb of Devlet Giray from both sides is ornamented with five-canted niches with cellular conches. The corners of the main part of the second mausoleum are decorated with round pilasters. There is an octagonal rotunda with features of traditional sufi commemorative architecture.

There is a Sari Guzel bath-house to the east of the mosque, it was also built by Sahib Giray Khan in 939 AH (1532/33) [Book of Travels, 1999, p. 51]. It stands a little

Fig. 24. Entrance to the khan's lodge in the Great Palace mosque of Bakhchysaray. View from the North-West, 2006. Photo by O.I. Sergeeva

apart—outside the palace complex, in nearest proximity to it although, as if being connected to it. The building has an asymmetric layout and consists of three domed halls for taking baths, several auxiliary rooms, and gallery at the entrance. The only words that Evliya Çelebi said about the building itself was that it is "a place for relaxation of the soul" and mentioned the words of the written statement "above the high door". In a similar way, using the appropriate epithets, he also usually describes the other bath-houses of the Crimean Khanate: the Or Fortress—"a small light bath-house with pleasant air and water", Gezlev—"their buildings, air and water are very pleasant, these are light baths pleasing to the heart", Karasu-Bazaar—"its air and building are charming", "wonderful bath house, well decorated, like a chameleon", Salajik—"wonderful light bath-house with excellent water, air and building", Bakhchysaray—"an old dark bath-house covered with low dome" [Ibid., pp. 12, 22, 39, 51, 74].

The only exception is a building, dated back to 1070 AH (1659/60)—"a big bath-house of Muhammad Giray Khan" in Bakhchysaray, the traveler gave a relatively detailed description of the architecture: "This is a wonderful domed ruby-red tiled bath-house. There is no similar, built on a beautiful place, wonderful bath-house in Crimea. Water, air, building and layout are incomparable. <... > The floor is covered with various unpolished marble. In six bathrooms, over the baths made of polished gold-plated [marble] of onyx and rust color, there are taps, faced with gold, and the same style basins, as if they are covered with pure gold. There is a small and octagonal podium at the centre. Fountains at the centre of the podium, splash [the water] up to the dome, covered with crystal clean glass. This podium is decorated like a chameleon, and a fountain has a wonderful bowl" [Ibid., p. 50].

Bath houses were an integral part of residents' lives, thus, of the architecture of the Crimean Khanate. According to examples, they preserve traditions of the Ottoman architecture and were built based on Constantinople patterns [Zasyrkin, 1927, pp. 160–163;

Pridnev, 1997, pp. 129–136].

One more mosque of the complex stands out from the other buildings of the Bakhchysaray palace, which were built during its major reconstruction, with its unusual architectonics. It is located in the administrative area, opposite to the building of Divan, with which it is connected via a courtyard. The structure is the only one among the well-known in the region, the Muslim place of worship located across from the ritual hall. Its central part was covered by a dome on pendentives with clipped arches, and had an octagonal cylinder. The painting of the internal surface of walls imitates a facing with marble plates. The only entrance is from the north. The mosque portal was decorated with relief ornaments and rosettes.

The courtyard in front of the mosque is decorated with two asynchronous springs—"The golden fountain", dated 1733, and "The fountain of tears", dated 1733—the sophisticated architectural structures with ornamental cuts in the spirit of Italian Renaissance and French Baroque.

The building of Divan, built in 1736, was a rectangular-plan double-height hall with chorus. The windows had colored glazing and open-work lattice. The internal surface of walls at one time was covered with tiles. There is a white marble fountain in the centre of the building, and sofas with bright coverings were set along the perimeter. Next to it, on the second floor, there was a hall for ceremonial receptions—luxurious and richly decorated room with two big niches, which were designed, accordingly, for the khan and court musicians.

On the east side of the courtyard, between the Divan and mosque, there is the "Golden room" of Krym Giray Khan, built in 1764—again double-height hall with 24 windows. Fine threads of wooden glue-laminated ceiling on the red background, crimson velvet with golden patterns of furniture cover and blue tones of wall painting, gave a particular smartness to the room, that was flooded with light from three sides.

Constructions of the palace complex, that were formed at the final stage of its existence,

display the changes, that occurred in the architecture of the Crimean Khanate, and, first of all, changes in the architecture of the capital, which was under the influence of Constantinople architectural trends more than any other city—at that time, it was representing the sophisticated combination of eastern and western European cultural traditions.

The ornamental finishing of internal space of the premises, filled with colorful pictures of bowls with flowers and simple bunches of flowers, trees with birds and various fruits, landscapes, in combination with marble fountains between the halls was turning them into some kind of continuation of a luxurious gardens, which everywhere surrounded the palace. Interior decoration was organically completed by floral designs and calligraphic patterns of the facades. According to lithography of Carlo Bossoli, even walls of the khan's tomb were painted in exotic colors from the outside.

Architectural decoration works of the palace, its main mosque (Fig. 25) and some houses are mainly associated with the works of a talented painter, architect and calligrapher Omer. At the order of Krym Giray Khan's wife, he built in Bakhchysaray in 1178 AH (1764) one of the main sophisticated and show-piece constructions of that time—Yemişli-Jami. This was a green tiled octagonal building with hipped roof. Walls were decorated outside with pilasters and ended with cornices. The entrance to the mosque was from the west side. The windows are double-height with alabaster stained-glass panels, edged with architraves and iron lattices. The minaret is built into the eastern wall. The perimeter of the middle part of the room is surrounded by a wooden colonnade, on the northern side at the level of upper windows a mehil is attached to it, it was added later. The Mihrab looks like a pentagonal vaulted stalactite niche. Paintings, demonstrating the style of a sensitive painter and first-class specialist, add a particular sophistication to the construction. The walls were stuccoed and painted in pleasant green color, which only occasionally was interrupted by picturesque raised panels and calligraphic inserts. Bells

and details of arches were made of alabaster and later painted. Flowers on the surface of arcades are painted in soft pink-straw color, legends on the walls, on the contrary, are painted to contrast perfectly with black paint on the white surface. An image of some mosque is painted with ornament script on both sides of the mihrab. A chandelier was hanging from a small decorated dome in the middle of the room [Zasyrkin, 1927, pp. 152–154, table VI].

Allegedly, Omer in 1763/64 built one of the most graceful mausoleums of the palace—the tomb of Dilyara-Bikech, which memorialized the most beautiful Rose from the khan's garden (Fig. 26:3). Octagonal building with octagonal oblique cylinder, located at 45° from the axis. The internal area is covered by a dome on pendentives. The volumetric composition of the building is typical of memorial structures of the palace, but differs from them significantly by the plastics of the facades. Walls had a clearly standing out cornices, high base and ended in the form of an attic. Corners of both parts were decorated to the full height with flat channeled pilasters with plaster side of horizontal profiles. Surfaces of walls and cylinder were decorated with arches of different shapes, the lower and middle of which are combined with lining of windows and the entrance.

Mausoleums of Eski Yurt, the western province of the city, composed a separate group of memorial buildings of Bakhchysaray. One of the most esteemed Muslim objects of worship in Crimea was the ziyaret of Malik-Ashter at the place called Aziz [Ibid., pp. 116–120]. Evliya Çelebi reports about three burial-vaults with "domes covered with lead" [Book of Travels, 1999, p. 60]. They are placed rather compactly, surrounded by numerous burial places (Fig. 27). The Mausoleum of Mehmed II Giray (1532–1584) dated back to the late 16—the first third of the 17th centuries is the most monumental of them [Gayvoronsky, 2006, pp. 8–9]. A burial-vault is an octagonal building with a sixteen-edged cylinder (Fig. 26:2). The internal space of the building is covered with a dome supported by pendentives. External corners are decorated

Fig. 25. Painting on the tympanum in the western facade of the Bakhchysaray's Great Palace mosque, 2008. Photo by V.P. Kirilko

with round pilasters and pilaster side at the cornice. Each of its sides was decorated with a rectangle profile frame, in which there were window embrasures at two levels: they were rectangle ones at the bottom with iron bars and arch ones with arched frames at the top. The entrance was from the North-East.

Two other mausoleums mentioned by Evliya Çelebi are smaller and less impres-

sive. One of them also has a polyhedral layout with a dome kind of covering, but without a cylinder (Fig. 26:4). Its corner pilasters are round, the surface of the walls is absolutely even, only embrasures of three windows and entrance diversify the view. The second burial-vault is cuboid and is covered with a dome on pendentives (Fig. 26:5). Its cylinder is formed by angle projections. The walls ended with cornices. The precise dates of both buildings are unknown.

There is mausoleum erected by a Muhammed-Shah-bey for his mother Bey-Yude-sultan, according to the inscription over the entrance. This is a cuboid building with oblique angles forming octahedral basis of the dome (Figs. 28–30). Compressed pendentives matched them inside. The entrance of the burial-vault was from the south and ornamented with a seljuk type portal with a plinth and niches decorated with stalactite, bold frames and carved rosettes. The building was highlighted by rectangular windows on each side. The vault of the mausoleum had a domical covering and a separate exit situated in the central part of the eastern wall. Numismatic materials suggest us to date this burial-vault to the last quarter of the 18th century (about 1778) [Kirilko, 2009].

Fig. 26. Layouts of the Muslim mausoleums in Bakhchysaray: 1—Islyam Giray's burial-vault (middle of the 17th century); 2—Mehmed II Giray's burial-vault (latter half of the 16th century—the first third of the 17th century); 3—Dilyara-bikech's burial-vault (latter half of the 18th century); 4—"Small octahedron" burial-vault (16th century), 5—Ahmed-Bey's burial-vault (14–15th centuries) [Zasyupkin, 1927, Figs. 2–4, 6, 7].

The mausoleum of Muhammed-Shah-Bey, being one of the latest monumental buildings of the Crimean Khanate, is especially interesting from the standpoint of its archaic forms and decor. As a matter of fact they were the return to the beginnings—Asia Minor architecture, which was supplemented with Ottoman building traditions and enriched with cultural heritage of peoples dwelling on the peninsula. Throughout the history of the existence of this state, it determined the character of its architectural environment.

Art of the Crimean Khanate*

Nuriya Akchurina-Muftieva

The 15th century was marked by the appearance of the Crimean Khanate in the Crimea and Black Sea Region. The Crimea became a special state, where changes in culture, art, architecture were occurring: new cultural centres, items of cultural and civil architecture were appearing. The founder of the Giray dynasty—Tash Temür's grandson, Gias-ad-Din's son Haji Giray became the ruler of the independent feudal state. He was related to the clan of Tokhtamysh on his father's side.

Art entered the times of splendid maturity and brilliant flourishing, became quite comparable with the European Renaissance and was often called the "Muslim Renaissance" by analogy with it. It is hard to fit it into the short period of independence of the Crimean

Khanate. The year of the Turkish conquest of the Crimea (1475) did not mark any turning point in the general history and development of Crimean Tatar culture. On the contrary, it revealed new horizons of common Muslim development that it had been striving towards since the early 13th century.

Solkhat (Staryi Krym) as the administrative and cultural centre of the Golden Horde Crimea was gradually losing its significance, Chufut-Kale became the new residence where the fortification of Kyrk-Yer tower was reinforced and the khan's palace Ashlama-Saray was being built in the village (or Salachik palace—its denotation derives from the name of Salachik village).

Time, wars and fires left nothing from former magnificence of the khan's summer residence. Apparently the palace complex consisted of wooden pavilions grouped in four pillars and situated separately in the

*See illustrations for the article on the colored inserts.

middle of a park, which was perfectly arranged and well-attended. Sharing his impressions after visiting the khan's garden and Ashlama-Saray palace, Turkish traveler Evliya Çelebi reports that there were houses decorated with gilding in the garden as well as small palaces, numerous summerhouses and pavilions looking like palaces of the Chinese emperor. The remains of pools full of water, fountains, wells and palaces erected by different khans, remind of the Khavernak castle (in Iran).

Three components (Arabic, Persian and Turkish) are considered to be the main ones in the creation of Islamic culture, although the last one is questioned by researchers. Nevertheless, in the epoch of the Golden Horde, already in the early 13th century this component had left a significant trace in the stone architecture of preserved buildings. The special features of architectural decoration include relief stone carvings, distinguished by rigor and clarity of their composition. Unlike the architecture of the Near and Middle East dated back to the 13–14th centuries, which was characterized by a broad use of polychromy and carving in the decor of buildings (for example, architectural complexes of Samarkand completely tiled with majolica and mosaics, carved portals of mosques in Konya), the laconic brevity of layout and carved ornamental patterns on the major constructive parts (portals and mihrabs) were the main elements of religious buildings of the Crimean Tatars.

New features in the art of the Crimean Khanate period appear under the influence of trends dominating in Islamic art, their development in a more civil direction. Bakhchysaray became a centre of Muslim culture in the Crimea, which was going through a period of its peak flourishing during the 17–18th centuries. Written sources report on the flourishing of religious, spiritual and cultural life of the state, development of civil education, elevated Sufi poetry, monumental architecture.

The formation of large cities (Bakhchysaray, Karasubazar, Gezlev) in the 17th century, led to the development of urban handi-

crafts related to the production of felt, leather tanning, morocco, saddles, metalworking, jewelery making and others. "Without doubt, all this guild organization was formed on the basis of local pre-Tatar handicraft traditions of the Crimean cities. Probably the organisation of handicraft in Asia Minor as well as workshop system in Istanbul, which was extremely developed there in the 17–18th centuries, had significant influence in this respect" [Jakobson, 1973, p. 136].

The images of this period are characterized by generality, abundance of patterns, subordination to composition rhyme, conditional character of structures; abstract motifs start appearing in ornamental patterns of this period. Some of them, for example, a rosette, a trefoil and a semi-palmette become the most general and abstract expression of plant forms.

Abstracting as a form of artistic generalization in Muslim art supposed the plurality of contents of ornamental images, which was reflected in Crimean Tatar art. The former concrete sense meaning of motifs of ornamental patterns was substituted by new contents—elements of abstract floral patterns expressing the common comprehensive notion of the universe.

It is notable that the art of Muslim peoples of Central Asia, abstracting is typical for the 13–14th centuries, whereas it appeared in Crimean Tatar art only in the 15–16th centuries, because folklore bases, having no connection with religious ideology, were pronounced in it. At the same time, the originality of the stylistic features of art and ornament of the Golden Horde persist during the period of the Crimean Khanate.

After the conquest of the Crimea in 1475, the Genoese domination on the peninsula ended, the Principality of Theodoro went out of existence, all large centres passed to the Ottoman Empire. The recently formed Crimean Tatar state also became a vassal of the Turks. The patronage of Turkey led to the penetration of traditions of Ottoman art, to which priority was given in the Crimea. While the first seljuk sultans preferred a modest way of life, in the course of time,

spectacular gains achieved during military campaigns, formed another kind of consciousness. An inclination to surround themselves with richness became typical for the Turkish nobility. Luxury goods penetrated into mode of life, fostering the formation of fine aesthetic tastes.

Striving for luxury—imitating the Turkish nobility—became typical for the mode of life of the rulers of the Crimea. A new capital of the khanate was being formed—Bakhchysaray. The images of live creatures disappear from art for a long time, but geometric and floral ornamental patterns become very frequent. The khans ordered painters and architects from Istanbul, and not only for Bakhchysaray. Popular Turkish architect and engineer Khoja Mimar Sinan worked in the Crimea in the 16th century. He built many imposing mosques in the Turkish capital. In 1552, he built a mosque in Gezlev on the Crimean peninsula which, by the way, has been preserved to present day. It looks like small-scale monumental mosques in Istanbul.

The features of Muslim culture were undergoing significant changes in the Crimea. Rare books and manuscripts, fabrics, jewels and dishes were brought from Turkey and Persia. The Arabic inscriptions and quotations from the Quran on articles of Crimean Tatar decorative applied art become popular. They were applied as independent elements of the decor on household items and jewelry. The contents of Arabic inscriptions had religious and magical meaning and items with inscriptions were used as talismans, driving away "evil" forces, so they had the feature of talismans.

New artistic motifs arrived in Crimea and started spreading rather quickly. Ornamental compositions with realistic and stylized depictions of flowers, leaves, bunches in vases and even trees appeared. In some cases they were included in the decor along with "Seljuk" motifs. These ornamental patterns were used in the decor of architectural details (capitals, columns, bases, slabs covered with ornamental patterns, fonts) of headstones and Armenian khachkars, as well as embroi-

dery and wood carving. A new artistic style, characterized by the use of floral ornamental patterns, started spreading throughout the entire territory of the empire. The idea of a leaf or a flower, which was either simplified or rather intricate was broadly worked out in the Ottoman art, apparently, under the influence of Western European applied art, especially fabrics and Italian majolica.

The new style conquered many arts, its motifs were equally used by Muslim and Christian populations. This popularity can be explained not only by artistic advantages (delicacy and elegance of patterns, variety, compatibility with the best motifs of the old style), but also the absence of ideal-religious coloration, universality and general availability. At the same time, this style allowed creating expressive, luxurious, festive compositions, which matched the aesthetic tastes of the 16–18th centuries.

Items of applied art, particularly highly glazed pottery from Iznik, which started being imported to the Crimea in large numbers, contributed to the spread of the new style [Miller, 1972, pp. 132–136]. Turkish highly glazed pottery was both a household item and a work of art. The new decorative style was developed in the Crimea in woodcarving (a wooden door from the Armenian monastery Surb-Khach) [Dombrovsky, Sidorenko, 1978, p. 104].

A desire to imitate the tastes of Istanbul appeared in the khans' Bakhchysaray. As well as in the Turkish capital, they started erecting two-story buildings with protruding upper floors on wooden supports, set against the wall. Tiled roofs with hanging roundish sheds called "*sachak*", cornices decorated with geometric ornamental patterns made of thin wooden planks, prismatic high tubes, doors with metal massive rings attached to carved bronze plate become fashionable [Nikolsky, 1924, p. 15]. The layout of rooms, furniture and the use of apartments were applied in Constantinople style.

Distinct types of dwellings of the Crimean Tatars, reflecting traditions of the ethnos living on the peninsula since ancient times had already been formed in different dis-

tricts of the Crimea by the mentioned time. It can be seen from Ottoman terminology containing Iranian terms such as "*duvar*" (wall), "*takhta*" (board), "*dam*" (ceiling) and Greek ones such as "*kiramet*" (tiled covering), "*kamere*" (accessory building in the form of a niche), "*tereme*" (extension of the upper floor) and Roman ones such as "*furun*" (dome-like oven with a hole on one side) as well as many others. The influence of the Goths can be seen in the origins of some parts of dwellings of the southern Tatars and their verbal denotation, for example, a keller (an attic in the veranda), a soba (a covered room oven). The dome-like oven brought into the culture of the Crimea by the Greeks, and usually placed outside the house, was the Roman heritage.

A traditional steppe dwelling (Karasu-Bazaar) district had elements of ancient plain dwelling of the Black Sea steppes in the construction of its roof. The archaic patterns of the wicker dwelling of southern Tatars showed initial connections with the Caucasus and Asia Minor. The type of Tatar dwelling in Bakhchysaray district characterized by timbered walls and a roof with two sloping surfaces was formed as a result of Gothic influence. The alpine type of buildings influenced the spreading of bicameral houses with fireplaces.

The Byzantine heritage can be seen in the second floor going beyond in comparison with the first one, hanging balconies, tiled roofs with two sloping surfaces [Kuftin, 1925, p. 45], dominating in private residential quarters of the "house-court" type. This type of dwelling looked like a cobbled yard, surrounded with a high fence, transforming to the floor of the kitchen on the ground floor which often did not have even a threshold. The kitchen and the yard were a whole, because the summer oven and the well were inside the yard. The ground floor was made of stones, the first one could be made of either wood or air-dried bricks. Its windows and doors overlooked a long broad gallery with a roof and exterior staircase. An almost flat two-ramped roof with a high tube was covered with Byzantine tiling called "Tatar-

ka" (Tatar pattern) in the Crimea [Vozgrin, 1996, p. 34].

In spite of the variance of types of dwellings of the Crimean Tatars, the contents of rooms and their use were the same. Space fit to live in, consisted of two-three rooms in both one- and two-story houses. The outer entrance hall and the kitchen were the most important. The third space was a living room, and this was not heated as a rule. One or two doors placed in the centre of outer entrance hall led to either the kitchen or the sitting room. There was a loom in the outer entrance hall. The kitchen was the main living quarters. It had a hearth looking like a fireplace with a tube and a funnel, at a height of one meter over the floor. A cauldron would hang on a chain inside the fireplace. The hearth had tripods and jugs or a huge copper jug to boil water. There was a stone trestle-bed in old buildings near the opposite wall. Household pots and pans stood there. There was a big oval basket for grain near the trestle-bed. In later buildings, the trestle bed was replaced by a wooden bench. Since the middle of the 18th century, pottery and copper dishes were exhibited on wooden shelves, placed along the perimeter of the room under the ceiling.

Deep-rooted way of life of the people developed into fixed types of items, which were obligatorily used in any type of dwelling. The layout system of the average Crimean Tatar house, distribution and placement of items and utensils were based on traditions and ideas of the Muslim part of the population, formed under the influence of nomadic Turks. All the items were in full view and were mainly placed along the perimeter leaving the middle of the room empty. One could have lunch there with one's family, setting a small table in the daytime, and sleep at night, after spreading out the beds.

The interior of Crimean Tatar dwelling is characterized by a dwelling with a special niche inside the wall called "*kamere*". There was a trunk full of piles of blankets and pillows there. Mattresses and pillows to sit on were spread on the floor along the other walls on low clay elevations called "*set*".

There was a small closet for washing in one of corners of the room.

There was no fireplace in the living room. The floor was covered with colorful black mats and carpets made of sheep wool. Festive clothes and embroidered towels would be hanging on crossbars and beams which were in sight, due to the absence of a suspended ceiling. Living quarters were decorated with embroideries.

The walls of Bakhchysaray houses were densely covered with clay and whitened inside. There was a hearth in the form of a fireplace near the wall. The fire was lit right on the floor. The hearth was carefully decorated, often painted, reminiscent of fireplaces in Turkish houses of Istanbul. There were wooden cupboards to store dishes on either side of the hearth.

There was a short wooden dais at the opposite wall, intended to store blankets and pillows for a day. There were niches in stone walls serving as small cupboards. There was a clay dais with mattresses on its top, along the perimeter of the walls. The middle of the room was covered with felt and carpets or kilims on its top.

There were embroidered towels, calligraphic inscriptions with the statements from the Quran and names of Mohammed and khalifs Fatima, Ali, Asan and Husein hanging on the walls. There were wooden shelves called "raf" along the walls over windows on which one could find various copper dishes. The furnishings of a room included a bench, mirrors, a short quadrangular table with the Arabic name "sofra" (or a "kursyu" derived from Turkish). A tray with food would be placed on it for the meal. The rest of the time it was standing somewhere along the wall.

The windows were small, square and protected with iron or wooden vertical rods. They had double-wing shutters and usually overlooked the yard. Moreover there was a small square window in the back wall to observe what was happening outside.

The Ottoman influence in the area of homes conquered not only the Tatar population, but also all other peoples of the penin-

sula. This could be seen from the complete substitution of the central hearth with a fireplace at the wall, high furniture with low furnishings, the emergence of abundantly figured carpets, screens, trunks, sofas, fountains inside the quarters. There were small shaped windows made made of colored glass in wealthier houses, over the larger windows near the ceiling for decorative purposes. They were set in frames made of plaster like the ones widespread in the East—in Persia and Middle Asia. This type of window was preserved in several apartments of the Bakhchysaray Palace and in several mosques. These windows as well as small doors under semicircular arches and similar decoration of the fireplace are evidence of city style mixture, where the influence of the Ottoman artistic style is especially noticeable.

This testifies to the significance of the influence of Istanbul on the developing Crimean Tatar civil culture, which one way or another filtered through into the most remote corners of the Crimea, determining the appearance of material culture of the Crimean Tatars.

The Crimea, which was located where the east and west met, was under the direct influence of European culture.

Italian craftsmen, representatives of the Italian Renaissance, worked at the court of the Crimean khans. During the reign of Mengli Giray Fryazin Aleviz Noviy worked for him. It should be assumed that Fryazin had time to create many interesting things within a year of his work in Ashlama Saray, but only the Iron door (Demir-Kapu) built in 1503 has been preserved. It was removed to Bakhchysaray Palace and now it is called the Portal of Aleviz [Ernst, 1928, pp. 15–16]. Working in the traditions of early Renaissance of Lombardy–Venetian school, the master realized that his work of art must belong to the Muslim East. In this connection, he used carved and gilded inscriptions with picturesque and literature stylistics in the spirit of the Muslim Renaissance in the decor of the portal.

The fortress of Perekop was built in the early 16th century with the help of Italian

architects. According to a preserved picture dated back to 1637, one can judge that there was a palazzo with portals [Chervonnaya, 1995, p. 130] which was rather similar in character to the "Iron door". The craftsmen of the Italian Renaissance completely suited the tastes of the Crimean khans. This was not due to accidental circumstances, but logical development and rapprochement between Oriental and European cultures for which the Crimea was a peculiar contact area.

The influence of Byzantium on the Crimean Muslim architecture continued. There are many examples—beginning with cathedrals in Kaffa and ending with mosques and tombs in Bakhchysaray. For example, the Small Mosque of Bakhchysaray Palace from the 16th century was built according to Byzantine traditions. The rectangle building with a dome based on an octagonal cylinder had an untypical orientation for a mosque: its longitudinal axis looks at the east-west. Nevertheless, the mihrab was organized according to the rules of Islam at the southern wall and the entrance was from the northern wall. Graffiti, discovered during the restoration of ancient plaster, also go back to Byzantine traditions—scratched images of horsemen, horses and boats with sails. Apparently striped wall-painting also partly imitated Byzantine masonry, made in rows of stone plinths using cement-type mixtures.

Meanwhile Crimean feudal nobility were getting more and more involved in the sphere of economic interests of western European states, particularly France, in the 17th century and especially in the 18th century. In the course of time, its impact on the mode of life of the Crimean khans' court was becoming more and more perceptible: they ordered mirrors, expensive patterned fabrics from Italy and France, and imposed Western European decorative art in their motherland in every way possible. In this latest period (18th century) the dual and eclectic character of Crimean Tatar art, consisting of Turkish and western European elements, was only an external reflection of political instability and dependence of the Crimean khans.

The mixture of various influences did not mean the complete dependence of the Crimean Tatar national culture on them. One of the first researchers of Crimean Tatar art M.Ya Ginzburg, noting the mixture of the most different influences and impacts in it, wrote the following: "Istanbul, of which the Tatar khanate became a tributary since the time of Mengli Giray's capture, was the main source of these various influences. Nevertheless, explaining such perfect patterns of Tatar art as the khan's mosque in Yevpatoria and graveside structures of Bakhchisaray, only from the standpoint of Istanbul influence would mean not only underestimating, but radically missing their essence. Connected with all centres of world culture through its ports and having the heritage of artistic deposits of the whole range of ethnoses and artistic epochs, the Tatar artist could choose whatever he wanted from the artistic tool-set of the past, and it is evident that least of all, he accepted the ready formula from Istanbul. Naturally many things came from Istanbul, but first of all because this was necessary for the Tatar artist, matched his artistic demands and could be easily implemented in new and valuable works of art" [Ginzburg, 1992, p. 210].

Not all traditional values collected over the centuries remained whole under the conditions of urbanization under the Ottoman Empire. The system of figurative images, aesthetics of forms from the early Middle Ages was changing. As far as the flow of orders concerning pieces of furniture, jewellery, clothes and other categories of goods were increasing, eclecticism became inescapable. Nevertheless, this was not fruitless eclecticism of barbarians collecting all the treasures without distinction. The layer of own Crimean culture going back to the great past, uninterrupted in medieval ages, was too powerful for that. So their own traditional aesthetic principles were expressed in the free choice of a new style, particular central themes and figurative system" [Vozgrin, 1996, p. 33].

The main contents of decorative art of this period was determined by the important monuments of the Crimean Tatar artistic hand-

icrafts—embroidered articles, headstones, separate preserved metal pieces of art.

Probably embroidered articles took the most significant place in the domestic ensemble of a Crimean Tatar dwelling. The old examples of them are remarkable for their rich ornamental patterns, flawless technique, and they bear evidence of craftsmanship and excellent artistic taste of Tatar embroidery masters.

The Crimean Tatars mainly decorated household equipment with embroidery. The main part of these items was related to a particular decor of the interior. The typical minimum of furniture was compensated at the expense of a great deal of textile articles in the living quarters. Embroidery played a significant part in the bright decoration of the home, its placement had its traditions. Shelves for dishes, the central part of walls and piers between windows were decorated with towels. Cradle covers, piled bed-clothes, pillows for sofas as well as different kinds of tablecloths and towels for dishes were decorated with embroidery. The most valuable of them were stored at the bottom of the trunk for many years, waiting for a special occasion. The home became especially bright during wedding festivities, because everything was covered with embroidered and textile articles made by the bride. Embroidered articles were often given at weddings as presents, and they were given during funerals as a token of gratitude to those who put the deceased person in the grave.

Embroidery was a privilege of women's clothing for the Crimean Tatars. It could be seen on dresses, jackets, aprons, oversleeves, decorations on various types of head-dresses, shoes. Embroidery was rarely used for men's clothing. Fezes, sock garters and sometimes wedding belts were decorated with patterns.

Two-sided embroidery (for example, satin-stitch) when the right and the wrong side of an article were decorated and one-sided embroidery (golden embroidery, appliqué work, pearl and crystal embroidery, beading) decorating only the right side of embroidered surface were equally popular.

Chain-stitch embroidery which was wide spread in the Far, Middle and Near East, especially among Turkish-Mongol ethnoses definitely yielded to two-sided satin stitch for the Crimean Tatars.

The Crimean Tatar women reached perfection in embroidering in the two-sided satin-stitch—"tatr ishleme" made with silk lisle cotton thread as well as golden and silver thread on a thin piece of cloth, and including about 60 different types of stitches. The motifs were formed from parallel horizontal, vertical and diagonal stitches. Broken zigzags consisting of parallel lines crossing each other in different directions created reticulate square, rhombic and hexahedral patterns. As a rule, almost every element of ornamental pattern had a stitching structure, which was different from the others. All the combinations of stitches were growing more and more complicated at the expense of internal variety, creating difficult rhyme and more profound effect, even when it came to monotonous embroidery. The picture had to be visible from both sides. The effect was also emphasized by the contrast of texture of the basis (which was lusterless paper or flax cloth) and shining silk or metal threads. These complicated features were particular to Crimean embroidery. It is impossible to see "Tatar ishleme" type of stitches in Turkish embroidery.

In the era of the Crimean Khanate, golden embroidery was used for horse saddle-clothes, khan's tents, clothing of the khan and court nobility, wall carpets containing statement from the Quran, large pillows for sofas in the khan's palace. Making embroideries on such huge articles requiring forces and staying power was entrusted to men working in special workshops.

The embroidery of the period of the Crimean Khanate is characterized by high quality of fabrics and threads. The cloth was thin and even, silk thread was lisle and thick, which did not fade during washing, golden and silver thread had silk basis, golden and silver plates were made thoroughly and did not lose their brilliance in the course of time. The technique and design were so perfect

that it was impossible to distinguish the right side from the wrong side.

Metal working and production of jewelry were the most wide spread, after embroidery, among Crimean Tatars. In the 15th century, almost all methods of metal working were used in the Crimea while producing copper and silver articles—coinage, engraving, delicate carving, etc.

As for metal articles they were made among the Crimean Tatars by both handicraftsmen and individual specialists in workshops. There were smiths, armorers [Barbaro and Contarini, 1971, p. 57] producing bows, sabers and highly appreciating chain mails, in the Tatar army of the 15th century [Deluc Jean, 1879, p. 489].

The arms produced by Crimean Tatar masters were appreciated especially highly beyond the Crimea, among metal articles in the 16–17th centuries. Different arms (sabers, daggers, rifles, axes, etc.) produced in Karasu-Bazaar and Bakhchysaray, the largest centres of this craft were one of the important export articles. Masters producing expensive sabers with refined blades [Pallas, 1999, p. 178], rifles inlaid with bone, knives made of strong steel [Muraviev-Apostol, 1823], excellent copper dishes, worked here, in workshops of armorers, plumbers, braziers and tinsmiths [Nikolsky, 1927, p. 39].

Bakhchysaray knife manufacturers, producing in the 18th century about 400 knives annually, which were exported to Circassia, Russia, Poland, Moldavia, Wallachia and Turkey, enjoying great demand and popularity. The guns, which were highly appreciated beyond the Crimea, were also produced in large quantities.

Pots and pans made from metal were characterized by a variety of forms and denominations. Dishes were decorated in the following ways: with floral, geometric and epigraphic ornamental patterns in different techniques (engraving, stamping, niello, etc.) and with inlaid patterns combined with "chilter" delicate carving. More noble people of the Tatar society preferred silver articles imported from Turkey, Iran, or produced by local masters. Through carving,

which looked especially splendid in the shaft of light, was broadly used in the decor of illuminating equipment. Ornate pots and pans were an embellishment of interior, being an indicator of wealth of its owner.

The formation of jewelry art in the Crimean Khanate occurred on the basis of active development, creative adoption and processing of the best achievements of jewelers of other ethnoses, enriching the jewelry art of the Crimean Tatars in general, and meeting the artistic and domestic needs of that time. This art was connected with the creation of various sets of traditional jewels, which was reflected not only in continuity of various artistic and technical skills, but in fixed preservation of the most typical forms, motifs and patterns.

The workshops of jewellers, engravers and casters appeared in the era of the Crimean Khanate. The workshops satisfied the requirements of the Crimean Tatars in the domestic market, and only one the fourth of their production was exported beyond the Crimea [Bodaninsky, 1930]. Nevertheless, there were many independent jewelers, who also created articles for the domestic market. Jewellery workshops were widespread in Bakhchysaray and in Karasu-Bazaar; and were located on streets of the city centre.

Jewels were an integral part of festive men's and women's clothing and were evidence of the social belonging of their owners. Expensive jewels made of precious and semi-precious stones and pearls, testified about the fact that they were intended for wealthy people. Nevertheless, even poor people gave their daughters silver belts and other jewels when marrying them off.

The contact of the Crimean Tatar jewelers with different imported jewels from Turkey, the Caucasus and other places led to partial imitation. Some forms, motifs and patterns, liked by the Tatar masters, were transformed in their art according to their ideas and local artistic traditions. The profound influence of the Ottomans was felt in jewelry production from the middle of the 15th century until the late 18th century. However, there were features of national identity and peculiarity si-

multaneously preserved in these articles and forms for many centuries.

The Crimean Tatar jewelers mastered many ways of production and figuration of various jewels: artistic castings, coinage, stamping, engraving, granulation, different kinds of filigree, darkening, enameling, inlaying with semi-precious stones, gold, silver, mother-of-pearl. These different techniques, used since ancient times, made the artistic works more diverse and enriched.

Crimean Tatar masters achieved perfection at producing filigree jewelery. The earliest filigree articles are known due to articles from the Golden Horde period found on the territory of the Crimea. This technique combined with enameling was applied in the 15th century, and into the first half of the 17th century. Ajoure filigree appeared in the latter half of the 17th century.

It is known from written sources referring to the 15–16th centuries [Biyarslanov, 1890a] that earrings imitating the moon were considered to be deeply traditional, as well as the ones in the form of coins and flat ones with pendants decorated with precious stones. Similar earrings were widespread among the Kazan Tatars in the period of the Kazan Khanate.

Jewels were made not only for people. Sets consisting of cover straps and pendants decorated harnesses since the times of the Golden Horde. As a rule, they were made from gilded silver with engraved ornamental patterns. The relics of totemic cults of the Turk tribes formerly dwelling on the peninsula formerly were reflected in their ornamental patterns.

Epigraphic inscriptions were made on almost in all kinds of jewelery made of metal and stone impressed by the perfection of the Arabic script. The contents of inscriptions varied beginning with initials of the master, place of production (which is an extremely valuable source) and ending with wishing health, good luck, poems and traditional verses from the Quran. Medallions of different shapes and heraldic signs were included in the common composition of the pattern.

Probably stone plastic arts of the Crimea, referring to the 15–18th centuries (head-

stones, fountains, architectural structures) are the most interesting and unique in their peculiarity. They help to trace back the main milestones in the development of the Crimean Tatar embellishment of the indicated period.

By the early 15th century, curbstones and flat rocks with a tropeic or lancet top called "tekil-tash" or "mezartash" had been the most widespread types of headstones. They were set at the head-side of the grave and had a faceted (hecta-, octahedral) form. They usually had even or ribbed hemispheres at the top [Aqçoqraqılı, 1927]. Vertical men's headstones were usually set right on the ground between large stones, but they were also often set on special plates with carved holes. Women's monuments, looking like round faceted ornamented pedestals, were set on horizontal stabs or plinths with U-shaped profiles.

Pedestals, looking like long narrow boxes with high arched tops with two sloping surfaces covered with bold inscriptions, were transformed into a new type of monuments—a sarcophagus—by the beginning of the 15th century. It was reminiscent of a small monolithic rectangle burial-vault with the top looking like a roof with two sloping surfaces having ledges in the form of thickened flat slabs with inscriptions or small columns reminiscent of the architectural shape of a burial-vault. In the 16th century, sarcophagi became much larger in every respect, reminiscent of temporary wooden "sandyk" type headstones, which were widespread in mausoleums of Turkey in the 16–17th centuries [Akchurina-Muftieva, 2008].

Headstones of the 17–first half of the 18th centuries, preserving their form and size, were made from chopped limestone (marble was not used that frequently) or four slabs with two inserted steles, for which there were special nests there. Since the middle of the 18th century, rectangular butt slabs of sarcophagi became taller, transforming into a pole for men's monuments and a slab of curvilinear configuration for women's monuments. A pole ending with a head-dress in the form of a turban or women's hat is reminiscent of the silhouette of a person's figure.

In the 18th century, fezes and turbans situated over headstones became especially various. In spite of changes in shapes, ornamental patterns occurred rather slowly, all types of headstones coexisted for a long time.

The transition from geometrical rosettes (15–16th centuries) to "floral style" occurred in the decor (17–18th centuries). Almost all the headstones have epitaphs, which are becoming more and more expressive, contain passages from the Quran, information on the deceased, often touch with their poetry and eloquence. Arabian script—a sacred symbol of Islam—became an important artistic means. The meaning of the word can be seen in a union of architectural forms and carved decors. Apparently the carvers themselves were the authors of the engraved texts. The meaning of these texts and their outline played a major part in the general image-bearing expressiveness of monuments.

The headstones in the 17th century were often decorated: they had rosettes, separate floral motifs, items, ornamental patterns on blocks, and at the edges separating inscriptions, tiny floral patterns on steles, the background of the inscriptions. They mainly used crimson and golden colors, blue and green colors were not as frequent. The use of supplementary color in the Crimean Tatar headstones makes this art closer to the Northern Caucasian Muslim monuments of a later period, where we can see very bright coloration of items: arms on men's headstones and jewels and pots and pans on women's monuments [Chervonnaya, 1997a, p. 18]. Similar examples of painting marble headstones may be found in Ottoman monuments, particularly, in the mosque of Suleyman pashah (1528) [Badr, 1996, fig. 34].

Gravestone of Muhammed Qirimi,
1409.

Gravestone of Devlet Giray Sultan, 1631.

The general trend in the development of headstones and other monumental buildings of the 18th century follows the line of increasing baroque splendor. In the late 17th century and especially in the 18th century, Crimean khans maintained economic ties with Western European countries, especially France, imposing Western European decorative-applied art in their motherland in every way possible. The combination of Turkish and Western European elements, led to the fact that the shapes of monuments became more complicated, intricate and overburdened with ornamental and calligraphic decor.

In the 18th century, the number of monuments made from marble increased. They were decorated with magnificent carving imitating floral ornamental patterns. Depictions of a bush, bunch of flowers or transformed depictions of a palm tree in a vase, a rosette consisting of flowers with finely curved petals, cypresses and ornamental wicker-work could be seen on them. Apart from floral rosettes, one can also see images of weapons and palm tree branches.

The composition placement of ornamental patterns was also changing. Floral and geometric rosettes become the main motif on the side surfaces of sarcophagi. There were usually luxurious vases with flowers in vertical elongate medallions between them. The same medallions with a rosette were situated at the ends of a sarcophagus. Analogue depictions of vases can be seen in Turkey on the walls of springs and side surfaces of minbars and mosques [Barişta, 1993, fig. 141; Barişta 1998, Figs. 226, 227]. One can see intricate ornamental wicker-work on the surface of plates along the upper perimeter of the monument [Akchurina-Muftieva, 2008].

Crimean Tatar masters, when creating headstones, relied on the words of the Prophet: "Death is a cup, which everyone must drain" (inscription on the tomb of Khasin-Khatun (1397) as well as on the headstone of Selim II Giray khan (1748)). Thus, there was a peculiar cup carved in the upper part of the tomb, which was filled with rain

water. The combination of greenery grown over the tomb and water made it similar to the decoration of stone fountains which were widespread in the Crimea.

There were wall-attached or separate fountains arranged, depending on the location. Natural springs "cheshme" relate to traditional and the most widespread water springs. They were frequently the centre of social life in Crimean villages, and they were established not only in the interior of the peninsula, but also on the southern shore—along the roads at intervals measuring several versts. Such sources were decorated in extremely modest ways. Usually they consisted of a 1.5–2-meter-high stele with an arched niche and a gabled end. There was a small reservoir in front of it to store the water. There was often a stone slab over the niche with the engraved name of the creator of the spring. The front wall of the stone reservoir was sometimes decorated with carvings, imitating rosettes with geometric or floral ornamental patterns, similar to ornamental patterns of headstones of corresponding epochs. Two fountains with drinking water having tropeic arches-niches decorated with carving from the 17–18th centuries were set in Ambassadorial courtyard in Bakhchysaray Palace. There is a carved tree imitating a palm in the centre of the niche. Water ran down from its base. The ground which was the front side of the stone reservoir, revived and became covered with flowers and greenery. The fountain illustrates the words from the Quran according to which Allah gave people water, revived the earth and grew figs (palms) [Sacred Quran, 2004, p. 3].

Palace fountains of Bakhchysaray are similar to the ones established by the Turkish nobility (fountain of Uskunder III dated back to the 18th century In Ahmet's square in Istanbul) [Barişta, 1993, Figs. 14, 73]. Nevertheless, their more restrained decor and smaller scale, expresses the sense of the spring as the symbol giving life to everything, not a pompous construction praising its creator.

Another widespread type of fountains appeared in the Crimea along with the first ex-

amples of Muslim religious buildings. These fountains were intended for ritual washings called "abdest". They were built near mosques and sacred places. In general, they were built separately and had octahedral or hexahedral-shaped basins. A similar fountain situated on the left side of the mosque of Khan-Jami in Bakhchysaray can serve as an example. A small pool, which was about three meters in diameter, was covered with a dome and placed in a cobbled narrow courtyard. Its lower part was tiled with slabs made of white marble, containing metal tubes through which pure water came to a round marble trough.

Fountain yards and pavilions became widespread among the wealthy inside their buildings and houses. M. Ginzburg wrote that they "create special shade atmosphere around these life-giving drops, protecting this small oasis from rays of the sun and noise. Finding oneself in a fountain courtyard after the turmoil of city streets... at first you can hardly notice anything in this semi-darkness. You will not immediately get the full sensation of the place upon entering. Gradually you start noticing one detail after another. Everything is created here to affect our perception not only with images, but also with melodiousness of the movement of the drop, the charm of coolness, picturesque character of unclear gloom" [Ginzburg, 1992, p. 216].

All fountains were made from marble with carved ornamental patterns including borders with floral motifs. In the early 18th century, the central part of fountains were made in the form of a cypress, blooming bush, etc.

By the 18th century, a new type of fountains had appeared. It was called the "sabil". In the architecture of Arabic countries, the "sabil" is a public spring, a fountain with drinking water in the form of a separate or parietal construction with several niches and cups from which water falls into the sink-pool.

In Arabic that word means "a well" (source) intended for public use. It derives from the verb meaning "sacrifice for charitable purposes". As a rule, such fountains,

known in the Muslim world since the 14th century, were decorated with ornamental carvings, marble incrustation and ceramic mosaics, calligraphic inscriptions appealing to say prayers for the founder, including quotes from the Quran, statements and poetic couplets [Malinovskaya, 1993, pp. 175–176].

A typical example of a cascading fountains of the "sabil" type can be seen in the fountain in the pool courtyard of Bakhchisarai Palace, composed of a marble slab mounted in the south wall and having 12 trays carved into it. The fountain consists of vertical and horizontal planes. The circulation of water in them symbolizes birth, a stormy but short life consisting of bifurcations and generalizations, in contrast with eternal peace of the mirror-like surface of the pool, to which the water flows along a long canal, decorated with ornamental patterns in the form of cypresses—symbolizing life after death. There is also a snail here. This is the sign of eternity and doubts. The association appears of live and dead water. In the end the world is designed like this. The main module of the whole works is the flow of water proportionate to a person. The famous "Fountain of Tears" in Bakhchysaray Palace is also an example of a "sabil" type of fountain. The Crimea is a peninsula which is surrounded by sea water, but with small reserves of drinking water. Therefore wells and fountains were perceived as spiritual luminaries.

The epigraphy contains information of two levels—a fountain as a source of life and purification, whose sacred character goes back to the depth of archaic, lower layers of cultural traditions of Islam, and a fountain-book understandable for a narrow group of people. Its appearance is perceived as a page of the Quran with "unvan" crowned with "alem". The Quran script on fountains not only emphasizes the integral part of the book, but contains on itself the same inscriptions on buildings, armaments and household items. Inscriptions on fountains end with the word "salsabil", which has several meanings. It means the denotation of

the main source in paradise in Muslim mythology (Quran, 76:18). As for the architecture of Egypt, Syria, Palestine and Andalusia since the 13–14th centuries, this is the system of cooling interiors with water based on the principle of thin layer of water running down a marble slab inserted into an inclined wall (15–30 degrees). Water falls down in decorative grooves, evaporates there and thus cools the room. "Salsabil" means a paradise drink, nectar in the figurative sense of the word.

Combining sacred basis of the Quran philosophy, poetic epitaph made of marble and covered with carved ornamental patterns, "sabil" type Crimea fountains played the role of a memorial reminding people of the fleeting joy of life, inescapable parting, paradisaical bliss of the afterlife for the righteous people. So they are similar to headstone monuments.

Stone carving also decorated separate objects of monumental architecture of the 17th century, not only headstones and fountains, although rather rarely. Here we mean the epigraphic inscriptions and figuration of entrance portals of mosques and mihrab niches, the structure of stalactites. Carved round rosettes with geometric and stylized floral ornamental patterns one could often see on headstones, were used as decorations of entrance portals and mihrabs. Three rosettes were usually placed on each side and in the centre above the keel arch of the portal. And all of them had different patterns. There were two types of round rosettes—ones protruding from the main volume of the wall, and the ones lying in the same plane with the wall. One can also see ornamental patterns in the form of five-pointed and six-pointed stars, moon, vases, concentric circles, etc.

The texts inscribed on graveside monuments became more complicated, in comparison with epitaphs of the Golden Horde period. The art of "khattats"—masters who were stone carvers and scribes simultaneously—is reflected in the decor in the form of masterly performed calligraphic inscriptions made with Golden Horde and classical "sulyus".

The art of creating headstones and fountains in the Crimea had its common sacred basis, leaning against fundamental layers of Islamic philosophy, and the common concept of synthesis of works of art and environment. First of all, it was reflected in the religious perception of the sacred tombs of ancestors and water as the source of life. It is expressed especially clearly in artistic and emotional form of the fountain of tears, which is the syncretic combination of a headstone and a fountain.

Thus, a Crimean Tatar artist was simultaneously an architect, a landscape designer, a decorator, a painter, a poet and an author of architectural-plastic headstones and structures over springs, applying the similar system of processing marble, carving decor, poetic epitaphs full of religious and mystical lyrics. That is typical to all historical periods of the development of culture of the Crimean Khanate until the late 18th century, inclusive.

Ornamental compositions in stone-cutting were characterized by lesser density and rather free interpretation, they had more contrast forms and they were less stylized, dependent on graphic canons and archaic trends, in comparison with the decor of the Near East and Central Asia. They almost lack abstract geometric elements, but one can often find motifs imitating natural forms of vegetation, flowers.

This ornamental system was typical for such types of decorative-applied art as artistic metal and embroidery. The artistic style of works referring to the 17–first half of the 18th centuries tended to be spectacular, rich in color and ornamental patterns. It was based on aesthetic criteria of Muslim art, which was characterized with the development of artistic language, beginning with principles of depiction, peculiar to Crimean art, of pre-Mongolian and early Golden Horde period, and ending with ornamental principles of decoration in the art of later epochs. The motifs of pagan culture and stylizations of real and fantastic animals (in jewelery, embroidery) start disappearing starting in the 14–early 15th centuries, yielding to floral and geometric ornamental patterns.

The significance of this period of the Tatar art is explained by the fact that it was the final one in the development of the Crimean Tatar feudal culture—the culture of dominant class, leaving us the most outstanding masterpieces. The achievements of culture of the Crimean Khanate were based on the

heritage of local cultures and new forms in art and architecture of the Golden Horde period. At the same time, a significant leap, connected with the flourishing of civil culture, the development of a new style in art, had taken place.

CHAPTER 7

Warfare and Military Culture

§ 1. Tatar Military Art

Iskander Izmaylov

Common trends of the development of warfare of Tatar khanates in the 15–17th centuries.

The period of later Middle Ages and early Modern History in Northern Eurasia was the time of radical changes in world economics, geopolitics, armament and warfare. From the military-political standpoint, it can be characterized as the final collapse of the Jochid Ulus, and emergence of new states on its ruins, which formed different coalitions striving for the elimination of the last remains of the Jochid Empire—Ulugh Ulus (the Great Horde), then they started struggling for hegemony. While the Tatar khanates were fighting amongst themselves, the Nogai Horde was gradually becoming dominant. It was the Nogais who were the most powerful military force of the Siberian, Astrakhan and later (in the 17th century) the Crimean khanates, affecting the destiny of the Kazan Khanate and the Great Horde. As soon as the Nogai Horde reached the peak of its power, ecological catastrophe and the attack of Dzungars put it at the edge of extinction and division into separate clans integrated with other Tatar khanates.

Serious alterations changing military-political situation in the radical way became apparent in the geopolitics of Eurasia. The formation of absolutist states took place in Europe. In Eastern Europe, this trend was expressed in the emergence of centralized powers related to the Jochi Ulus, according to their origins—Russia and Lithuania. New empires appeared at the southern borders of the Tatar world—Ottoman Turkey and Safavid Iran, and they began to exert their military influence. That led to the vassalage

of the Crimea to the Turkish sultans (1475) and the fall of the Uzbek (Shaybanid) Khanate in Transoxiana (1505). A bit later, the movement of Dzungars on the eastern borders of the Turko-Tatar world began, who sequentially destroyed khanates of the Kok Horde and the Nogai Horde. They almost approached the borders of the Crimea and Russia. Only the emergence of Manchurian Qing dynasty in China and its aggression in Eastern Turkestan hindered a new Mongol invasion of Europe. It should be emphasized that Dzungars had numerous armored cavalry and detachments armed with firearms, which were considered to be modern at that time.

Another factor bringing about radical changes in armament and soldiering of Tatar khanates were changes in economical state of the region. The great geographical discoveries redirected the trade interests of Europe from the Mediterranean to the Indian and the Atlantic Oceans. Transeurasian trade roads were in the state of neglect, because of political instability in Central Asia and discovering oceanic ways leading to India and China around Africa. Profits from the trade routes of the Great Silk Road going through the territory of the Jochid Ulus stopped supplementing the treasury of Tatar khans. The fact that trading fur and fur-skins, which were considered to be traditional goods of the Volga Region, bringing about 300% profit, became unavailable and less profitable after the conquest by Russia of Northern Kama Region as well as of Cis- and Trans-Ural Regions.

The decrease of demand on qualitative protective gear led to the displacement of

handicraft industry and movement of masters to large centres of arms production—to the Kremlin Armory (Moscow) and Topkapı (Istanbul). The Circassian and Dagestan workshops specialized in producing weapons for Turkic-Tatar states. Arms and armament were produced there even by special request of the state. In other centres—Kazan, Solkhat—they produced less qualitative and complicated armaments. Apparently firearms and powder were produced in Kazan by their own craftsmen.

All these military-political and geopolitical factors had an influence on military opportunities of Tatar khanates. The collapse of the Jochid Ulus led to abrupt reduction in the number of troops of each khanate. If in the 1470s, Khan of the Great Horde Ahmad proudly promised to field 200,000 horsemen against Turkey in the case of signing of a treaty during the negotiations with the Venetian Republic, then a hundred years later, no more than 20,000 warriors took part in the military campaign of Crimean Khan Devlet Giray against Moscow. It goes without saying that the relativeness of indications on the number of Tatar troops should be taken into consideration, but these data clearly demonstrate the reduction in the number of troops regarding each khanate. The growth in the number of troops could take place at the expense of the conscription of all adult cattle-breeders, but to the detriment of the quality of training and armament. According to European sources referring to the 17–18th centuries, sometimes the Crimean army assembled this way, looking like irregulars consisting of unarmed horsemen.

Meanwhile, the neighbors of Tatar khanates, especially Russia, increased the quantity of their troops, often using serving Tatars as supplementary professional warriors, as was the case in Muscovite Rus and Lithuania. In the Polish-Lithuanian Commonwealth, serving Tatars (Lipkas) fielded five detachments of well-armed cavalry, which later became the basis of the ulans' regiments.

The decentralization of the Jochid Empire led to the fact that not only the number of troops was reduced, but also the number

of nobility, which was the basis of military organization, did the same. The number of separate clan irregulars (that is professional warriors—peculiar Tatar knights) was small and apparently varied from 500 to 5,000 horsemen. It could vary depending on different local conditions, but apparently irregulars of four ruling clans in Tatar khanates seldom exceeded 20 cavalrymen.

It should be noted that a relatively small number of armored cavalry in Tatar khanates was not a sign of its decline and lack of development. Actually the knight cavalry was about 5–10% of the total number of troops in medieval societies. For example, in the Lithuanian army, numbering 18–20 thousand warriors, armored cavalry could number 2–2.5 thousand horsemen, but it played the main role in victorious attack and defeat of Russian troops, which were larger in number, but traditionally did not have heavy armament. So it goes without saying that a small number of heavily armed cavalry was not a sign of the lack of development.

The reduction of its number and an abrupt decrease of their income led to qualitative changes in the structure of military class and military organisation. As the nobility was the very basis of the armored cavalry, the decrease in their number inevitably led to the decline of military power of Tatar khanates. In the course of time, other factors became influential. The reduction of incomes of relatively small elite of khanates could not keep the level of income required to keep armored cavalry up to date. Thus, by the late 16th century, the quality and the number of the army had abruptly decreased, and the main part of the troops consisted not of heavily armed professionals, but of irregulars from clans.

firearms and artillery also demanded significant state subsidies, cannon courts and professional masters. In Russia, this production was organized by Italian and German armorers. It is not surprising that these arsenals could only exist in rich and large Tatar cities, for example, in Kazan.

The armament and soldiering of Tatar states in the middle of the 15–17th centuries

continued the traditions of the Jochid Ulus, but in the 18th century, new traditions in warfare related to the use of regulars, armed with firearms, started developing in the Crimean Khanate.

Personal guards of the khans were the core of the troops of the Tatar Khanates in the 15–16th centuries. The Tatars from personal possessions of the khan or representatives of one of the clans were guardsmen in different khanates. Another major part of the army was irregulars of darugs (provinces) headed by oglans and Karachi-begs. They consisted of the "Tatars" as service class of different ranks, beginning with karachi-begs and ending with bakhadurs and Cossacks. All of them had their own plots of land (suyurgal) as a rule and were obliged to perform military service. The rulers of darugs also commanded the detachments of settlers, which were called out according to a special quota in every military-administrative unit of population, fielding dozens, hundreds and thousands of warriors. The indications on "hundreds" and "thousands" in preserved sources are evidence of this fact.

It can be claimed that the major military power of Tatar khanates was concentrated in the hands of clan chiefs, to a certain extent. It is especially illustrative for the Kazan, the Crimean and the Kasimov Khanates.

Judging by historical, figurative and archaeological data, the armament of warriors varied depending social classes. Nobility and professional warriors had more qualitative expensive and specialized arms and equipment (steel armors, chain coats of mail and armors, helmets, sabers, lances, daggers, flanged maces, etc.) and common military men usually mastered universal arms (axes, spears, pole-axes, bows, leather and quilted cotton armors). Sometimes khans and nobility armed common warriors and military servants using their own arsenals. There were no detachments armed in a similar way in the Kazan Khanate.

Tatar troops of the 15–16th centuries had cavalry as the main combat arm, and there was also infantry and navy playing episodic role in the Kazan Khanate. Armed caval-

ry was brought up to strength from among the aristocracy—professional Tatar warriors, mounted archers c from among serving nobility and military servants. The flotilla mainly consisted of unmounted irregulars, but it was often reinforced at the expense of serving nobility. The specific feature of this period, was the gradual reduction of number of heavily armed warriors and the increase in the number of lightly-armed warriors. These changes were definitely connected with the fact that Tatar horsemen could only struggle against troops armed with firearms, only through of speed and maneuverability.

The period between the 15th and 16th centuries was the time of changes, in the connection with the mastering and active use of firearms. These changes partly affected Tatar khanates. The formation of a new combat arms was taking place—to artillery and unmounted riflemen. They did not play the leading role in the system of warfare in field combats, but they were irreplaceable during the siege of fortresses and the defense of cities. The rate of fire of cannons and hand-cannons was insufficient, and the accuracy yielded to a bow, but the shooting range and destructive power exceeded them. The consequences of their application had an extremely destructive character. As soon as these kinds of arms were improved, this very circumstance radically changed, not only the character of armaments, but that of warfare in general. The firearms developed in the direction of specialization and division into city (siege) and field types. The data on the active use of artillery by the Kazan people and Crimeans were preserved in both Russian and Western European sources.

It should be mentioned that in this period, bows were also used and they were the main combat arm for distance combat. They used bows of two types in Turkic-Tatar states—common (wooden) ones and qualitative ones made in a complicated manner from different kinds of wood and sometimes having bone elements. The complicated bows were called "adirn" (edirne) according to the Volga-Turkic tradition. They had superior shooting range and power.

Apparently hand-cannons were a prerogative of professional warriors. Their number and how they were used is a point of contention. There are good reasons to believe that not the nobility, but military servants—the Cossacks—were armed with them. So their use depended on concrete circumstances, but in most cases firearms were used in the first part of the combat and mounted hand-cannons were used later as peculiar dragoons. After a whole range of volleys, these units were used as a common cavalry.

Firearms were much more significant during the siege and defense of cities. It is not coincidental that the Duke of Burgundy Charles the Brave called "artillery"—"The key to cities"—meaning its crucial role for storming and defense of fortifications. It is not surprising that the Nogais had almost never been able to conquer fortresses and the Crimeans required the Kazan fleet, artillery or Turkish janissaries and artillery to take part in a military campaign against Astrakhan. Artillery played an important part in the defense of Tatar cities which can be seen especially well when it comes to the defense of Kazan.

The Tatar tactics of field battle and operative military art were quite perfected for their time. That was mentioned by Russian and European contemporaries many times. The basis of battle tactic was about successive application of distant combat arms, then the use of spears and all types of close combat arms in the end. Each of these stages had its peculiarities, depending on the time and circumstances.

As a rule, the first phase of field battle included maneuvers of lightly armed cavalry, which passed adversaries at a gallop demonstrating a peculiar encirclement (S. Herberstein called it a "round dance"), shooting at them without interruption. When the enemy itself started attacking, the shooters retreated quickly, trying to exhaust him and disorder his rows and put then under the blow of armored companions, armed with spears. In the 12–14th centuries they used spears for ramming, which could be used only once but since the 14th century, they start being applied many

times, and specialized spears were replaced by wedge-shaped and foliate ones. If armored companions were successful in their actions, a new phase of the battle began. The third stage of the battle usually included all the set of military means and was divided into several transient combats.

The Tatar troops carried out rather successful offensives. These were usually impetuous invasions by significant forces of the cavalry organized into tumens, thousands and hundreds. The tumens usually headed off to military campaigns forming separate columns and the detachments of watchmen and scouts—yertouls—were at the front or at the flanks. As a rule, the aim of operations was to defeat adversaries in a field battle, with the use of flanking movements and tactical maneuvers, and devastating local provinces and inflicting damage to adversaries. The Tatar troops did not usually organize sieges and long attacks, and cities were conquered only via impetuous raids, which made it impossible for adversaries to organize resistance, for example, as was the case during the conquest of Moscow by the Crimeans in 1571.

Successful military operations of the Crimean Khanate against the Polish-Lithuanian Commonwealth and Russian in the 17th century were made possible mainly by the contribution of Turkish troops, especially the janissaries, and artillery. In general, one can say that the warfare of the Tatars was developing in the direction of adoption of the newly spreading firearms. The significance of lightly armed cavalry increased. At the same time, handguns and cannons were widespread and actively used only in the Kazan Khanate. The Turkish janissaries armed with guns and cannons played the role of infantry in the Crimean Khanate. The reduction in the number of heavily armed cavalry in the eastern part of the former Jochid Ulus led to severe defeats of the Tyumen, Uzbek and Kazakh Khanates, caused by Dzungars broadly using their armored cavalry. It should be noted that the Dzungars, facing the mass use of firearms, started adopting them quickly and implementing them in their de-

tachments, arming their warriors with muskets and artillery.

Meanwhile the warfare of the Tatar khanates had a significant impact on the development of Russian military art. Western contemporaries often indicated that armament and tactics of the battle typical for Russian troops are similar to those of the Tatars. The Russian vocabulary contains a great deal of Tatar words connected with warfare, for example, *khorigv*—a flag, *yertoul* and *karaul*—patrol and protective detachments, *yesaul*—a military rank, kinds of armor—*misyrka*, *yushman*, *tegilyay*, *baidana*, *tyufyak*—a light-weight cannon, etc. Under the influence of Tatar military tactics, the *ulans*—regiments of horsemen armed with spears—started appearing at first in Poland

and Russia, and then in whole Europe in the late 17–18th centuries.

Thus one can come to the conclusion that in the 15–16th centuries, the Tatars had a rather developed set of armaments and munitions. It should be emphasized that firearms, which were considered to be the most prospective at that time, were used rather actively by the Kazan people. Nevertheless gradual weakening of the economic power of Tatar khanates, the reduction in the number of handicraft centres, led to the stagnation warfare development, which especially became evident in the 17–18th centuries. All that predetermined the military defeats of Tatars in wars against the Dzungars in the East and the Russians in the West, gradual conquest of Tatar khanates and the establishment of foreign protectorates over them.

§ 2. Armaments and Military art of the Kazan Khanate

Iskander Izmaylov

The armament and military art of the Tatars of the Kazan Khanate inherited the military traditions of the Jochid Ulus (the Golden Horde). By the time of the Russian conquest, the Tatars had all kinds of cold steel, protective gear, their own military fleet, artillery and great fortresses. After the defeat of the Tatars and the conquest of Kazan the authentic Tatar military culture was destroyed. The military traditions of Turkic-Tatar peoples living in the lands of the former Golden Horde started stagnating and soon they became degraded. They were only the shadow of their great forefathers. As a result the European military science formed an opinion about the inferiority and 'primitiveness' of the armament and tactics of the Tatar army. Even such a serious and thoughtful historian as M. Khudyakov wrote: 'In the epoch of the Kazan Khanate the military art of the Tatars was in major decline' [Khudyakov, 1923, p. 228]. The myths, according to which the Tatars were unable to use fire-arms, did not have their own river fleet and protective gear, are rather widespread. [Bakhtin, 2008, pp. 201–208]. This opinion was replicated and developed in works by later historians.

In order to make correct judgements about the Tatar weaponry, it is necessary to collect and analyse a set of armours. The first such works, attempting to describe the items of the Tatars armament based on the collection of the Kremlin Armoury, began to appear still in the 1920s [Uspensky, 1927, pp. 1–14]. Nowadays, along with the collections of Moscow and Kazan museums, there are materials from archaeological digs of monuments of the Kazan Khanate epoch (Kazan, Kamaev, Arsk, Chaplyn ancient towns, Balynguz ancient settlement, etc.) available to us, which allows us to get a clearer picture of armament and military affairs development in the Kazan Khanate, based on a wider variety of materials.

Now a significant historical-archaeological material is available, allowing us to get a better idea of the character of armament and the battle tactics of the warriors of the Kazan Khanate. First of all, these are new archaeological finds and analysis of written materials, which, along with studying the military culture of Turkic peoples of Europe and Asia, make us revise the former deteriorative ideas about the character of Tatar armament and military art. [Izmaylov, 1995, pp. 135–139; Izmaylov,

1997, pp. 105–108; Izmaylov, 2003, p. 71–74; Izmaylov, 2005, pp. 67–79].

Close combat armours of the Kazan warriors included a diverse set of warfare of the late Middle Ages: sabres, spears, battle axes, maces and knives. Sabres were a traditional kind of arms among the Turk-Tatars and became spread in the Volga Region since the 8th century. Since then they were modified and improved several times. At least two whole sabres and one fragment are known from the archaeological digs and museum collections represented on the territory of the Kazan Khanate. Judging by this finds, in the 15–16th centuries the sabre blades were usually 0.9–1-metre-long, they had an oval hollow called a *dol*, and the blade ended with an enlargement called *yelman*.

The handle of these sabres was cross-shaped with extensions at its ends. Similar finds were known due to the archaeological digs in the Kazan Kremlin and some other monuments of the period of the Kazan Khanate. The blade of some sabres of the 13–14th centuries had an iron plate near the handle to avoid the bite of scabbards. The blades of sabres of the 15–16th centuries were broader and more curved, than those of the earlier ones. They allowed to give a powerful chop and thrust. Sabres were usually worn in a leather scabbard with metal bindings along the edges. Rich warriors could afford a scabbard with silver or golden straps decorated with precious stones. Actually, sabres were traditionally the arms of nobility, a sign of knight dignity of a *batyr*. Their wearing and use had a special meaning. For example, in the event of a quarrel, a *batyr* should not have drawn more than one-third of the blade, as after that, he could put it back only after he had 'washed it off' in the blood of the offend-

A Tatar warrior of the late 15th century, the first half of the 16th century.
Illus. by A. Krasnikov

er. Losing one's sabre or giving it away meant losing one's face. They were usually handed down and kept at home arsenals. That is why they were so rarely found among archaeological collections.

Universal battle knives were essential in a campaign and they were often the last hope of a warrior. The chroniclers of the Middle Ages usually wrote that it came to knives to show the fierceness of a battle. It is characteristic that the Tatars are portrayed in many pictures holding knives. Judging by an engraving from the edition by S. Herberstein, the Tatars were armed with narrow long knives in leather scabbards, which were worn on the belt on the right.

Spears had different shapes and areas of applications although Kazan spears yielded to sets of the preceding period when it comes to the number of types. In this period a change in the spear set takes place. Narrow, elongated, often quadrangular arrowheads impaled on long (up to 3–4 metres) shafts—lances, with the help of which detachments of horsemen

could run into the rows of enemies, trying to penetrate their armours, dislodge them and, if possible, put to flight, are nearly disappearing. They were replaced by elongated foliaceous and wedge-shaped spears. Apparently in this period spars were used along with battling rams in a variety of techniques. Consequently, Kazan horsemen fought repeatedly with multiple use of spears at different stages of the battle—beginning with a battering-ram and ending with fencing technique. The use of missile spears—jerids (or sulitses in Russian) by the Kazan people is also plausible. They are known only due to later written sources but not archaeological materials.

Infantrymen had other spears. They had a wide blade and were attached to a two or even three-metre-long staff. They were irreplaceable under field conditions against cavalry and infantry, as well as during the defence of fortifications.

Despite the opinion of several historians, the use of spears by the Tatars was confirmed not only by numerous archaeological finds, but also by the data of written sources. It is noteworthy, that 'The History of Kazan' mentions of 'a spear battle', taking place among the Tatars. Apparently, warriors used spears regularly.

Different kinds of battle axes were used by the Tatars. Two groups of chopping instruments were clearly distinguished. A part of them is axes having long axe-handles and wide blades. No doubt these are the tools of infantry. Axes having an extensional head—coinages—belonged to the second group. The blades of majority of them exhibited in museums of Kazan (National Museum of Tatarstan Republic) and Moscow (State Historical Museum) are covered with intricate floral ornamental patterns. Most likely that was an armament of a noble warrior.

Maces-shestopyors (golden or silver tops with six military blades) and military teeth with a narrow wedge-shaped blade were supplementary arms of a knight. The tops of maces became much heavier in comparison with those in the 13–14th centuries (up to 0.6–0.8 kilos). They were irreplaceable during close combats and impetuous horse skirmishes,

when it was necessary to strike a hard and unexpected blow able to make a hole in armours and deafen the adversaries. In this period maces decorated with gold, silver and precious stones were signs of military power. The examples of similar maces of the 16–17th centuries are represented in army museum collections of Russia (the Kremlin Armoury) and Turkey (Istanbul) [Astvatsaturyan, 2002, pp. 185–187]. It is plausible that similar tops were also used by the Kazan military leaders.

A bow and arrows were the most widespread kind of arms of distant battle in the 16th century. Judging by the fact that there were no bone details of bows detected in monuments of the period of the Kazan Khanate, one can assume that the Tatar archers had complicated bows without bone details. Such bows were used by Central Asian nomads during a long historical period, since Xiongu-Xianbei times. Similar bows became widespread in the nomadic world of Central Asia in the epoch of the developed Middle Ages [Khudyakov, 1991, pp. 99–100, Khudyakov, 1997, p. 62]. Bows having similar construction and a great number of shoulder frontal strips were used by the Kyshtyms in Southern Siberia in the epoch of later Middle Ages [Nechiporenko, etc., 2004, p. 133]. The warriors of the Khanate of Siberia were also armed with them. Remains of complicated bows, the main part of which was made of wooden details without using bone strips, were found in a burial site called Abramovo-10 (Western Siberia). Judging by the preserved wooden parts, the main part of the bow had two layers, a wooden frontal strip and wooden ends. It was covered with an elm [Molodin et al., 1990, pp. 44–47]. They were preserved in the arsenal of the Siberian Tatars up to ethnographic contemporaneity. One such bow published by R. Karutz [Karutz, 1925, p. 70] was completely made of wood, it was arched and its middle was thickened and ends were declinate.

In the epoch of the late Middle Ages complicated bows remained common, convenient and rather efficient kind of arms in the hands of trained archers and that certainly referred to Siberian Tatar warriors. Sources have no exact data on how long-range the bows of the war-

riors of the Kazan Khanate were. A long range shooting record was registered in Turkey, where there are recorded notes in Okmeydani square (literally 'arrow field'), indicating that some archer shots were 850–870–metre-long [Markevich, 1937, pp. 18–19] but the common bowshots of Eurasian archers were 200–300–metre-long. It is considered that the distance of aiming shooting of Siberian archers was about 50 metres [Khudyakov, 2000, p. 73].

Apparently the destructive power and rate of fire of bows of that time was very high: a good archer could throw about 10 arrows a minute. Each of them at a distance of 50–100 m could kill a horse or impale the breast of a warrior protected by a chain armour, so that the tip could come out from the back. The sources of the 15–17th centuries contain evidence on the destructive power of their bows. It was noted in the message of Mengli Giray addressed to Ivan III, dated back to 1493, that one of Ahmad's children had been killed with an arrow during a struggle against serving Meshchera Tatars [Collection of the Russian Historical Society, 1884, pp. 175–176]. Another case was registered in 1616 when a serving man from Tula called Ostafy Kryukov gave a petition to get money to treat his wounds inflicted by the Tatars near Dedilovo. He wrote that his breast had been wounded 'on both sides' by an arrow. The commission investigated this petition and came to the conclusion that 'he was really wounded by an arrow in the chest, and the arrow stuck out of his back; the wound healed up by itself' [Acts, 1890, p. 138]. These petitions of the first third of the 17th century rather often indicate on the fact, that the war horses of serving people were killed by arrows. '... the horse I was riding was killed by an arrow' [Ibid., pp. 509, 511]. In 1634, Bolkhovian voivode prince Yuri Meshchersky claimed, that Timofey Dichkov 'had really been fighting against the Tatars... and Timofey was wounded by an arrow during that battle and his horse was killed outright' [Ibid., p. 634]. After examination the commission indicated that 'the wound hurts and it does not heal'.

The use of bows by great manoeuvre masses of horsemen literally pouring adversaries with a rain of arrows was especially ef-

ficient. They were successfully applied during the siege and defence of cities and during river battles.

The bow was a universal weapon of both common and noble warriors. The differences were about the quality and perfection of the construction of a bow and the decoration of a set including a quiver and a saadak. Made of morocco, stitched with golden and silver threads, decorated with precious stones, they were a sign of nobility and wealth. A saadak like this was discovered during the archaeological digs of the Kazan Kremlin. It was made from curried leather with ornamental patterns. Its exterior part was decorated with an image of a dragon in a circle. Several similar parade saadaks referring to the 16–17th centuries are a part of the collection of the Kremlin Armoury [Uspensky, 1927, pp. 7–8].

The protective gear was also rather diverse. The use of steel protective plates and chain-armour network in different combinations was typical for the 16th century. Armourers tried to make their armours impenetrable and light under conditions of short mobile combat of large cavalry masses, impetuous raids and skirmishes, which were getting more and more frequent in the combating practice. [Denisova, 1953, pp. 59–70; Kirpichnikov, 1976, pp. 33–43; see also: Uspensky, 1927, pp. 1–6].

The most widespread (as it used to be) were tegilyas—the light-weight fustian robes with mail armour nets or steel plates and mail armours (kyobe) in their lining, consisting of dozens of thousands of steel rings (new types of network and form of rings, high stand-up collar quilted with leather belts, significant wrap over of the collar and heavy weight (more than 10 kilos) were typical for the 16th century). Baidana was one of the kinds of armour looking like a big long robe with a cut at the front made of wide washers. It was discovered due to archaeological finds. It was usually put on common mail armours or quilted robes and, due to its wide wrapover on the chest, it was a very light and reliable protective means. The remains of these armours were discovered due to the archaeological digs in Kazan and the Kamaev archaeological site. The collections of the National Museum of the Republic

A Tatar warrior of the late 15th century, the first half of the 16th century.

Illus. by A. Krasnikov

Tatarstan also include whole chain armours referring to the 15–17th centuries.

Armours made of steel plates (yarak) were fundamentally changed in the 16th century. In this very period yushmans—the mail armours with big interlaced plates, kolontars—the combined sleeveless armours, made of large horizontal plates, connected with rings and bekhterts (deriving from Persian 'bekhter'—'mail armour') that consisted of narrow short steel strips, making up vertical rows on the chest and back, appeared along with traditional kuyaks (sleeveless armours, made of large steel plates attached to leather basis, which often had shoulder-straps, a visor and split lap). All these kinds of armour were often covered with fine floral ornamental patterns. They also used steel vambraces to protect a warrior's arms and greaves (buturluk), covering his shanks.

The Kazan people also had several sorts of helmets. Most warriors protected their head with a quilted paper or leather hat, doubled with a mesh made of steel rings or stripes.

Steel helmets were also used. The most popular were misyrkas (from Misr,—that is, Egypt)—the steel spherical hats with iron ear straps and a long mesh made of steel rings, protecting the face and the throat of a warrior and yerikhonkas—the tall conical nasal helmets with ear straps, neck-flaps and visors.

Most likely the body of a Kazan warrior was protected by a small (about 50 cm in diameter) prominent round shield made of leather or cane, with an iron plate in the centre. Unfortunately their details were not preserved and their construction can only be judged with the help of illustrations and analogues—the armament represented in Moscow collections of the Kremlin armoury and museums of Istanbul.

It goes without saying that only noble warriors could afford a complete set of protective gear, especially metal armours. Judging by reports of Russian chronicles 'chain mails and body armour', 'chain mails and helmets' were always considered as common armament of Tatar aristocracy. As a rule the set of a noble man included a sabre, a mace, an axe-coinage, a spear, a bow and arrows kept in an expensive saadak and a complete set of protective gear, including a metal helmet, one type of chain mail, a shield and forearm guards. Judging by Russian and Crimean materials, the horses of aristocracy had luxurious horse attires of high saddles—archaks, precious bridle and chepraks, and sometimes, apparently, a chaldar—an armour made of metal plates protecting breast and sides of a war horse.

The horsemen armed with heavy armament were the skeleton of the army of Kazan khans. They were formed from among Tatar aristocracy (oglans, emirs, murzas), petty serving nobility (Cossacks, Batyrs) and military servants. In total there were several thousands of them but their crucial role in military actions is beyond doubt. A certain number of armoured cavalry and horsed archers were integrated with Kazan troops due to alliances between the Nogai Horde and the Crimean Khanate.

Members of people's volunteer militia taking part in military campaigns in exceptional cases had universal and relatively affordable armours: wide spears, axes with broad blades, bows and arrows, as well as leather and fus-

tian armours. Their role was rather significant when it came to the siege of fortifications, as for field combat they almost did not have significant meaning. The infantry of the Kazan people were formed from militias of administrative-feudal districts (darugs) and 'allies'—the Cheremis (the Maris and the Chuvashes).

Firearms were used extensively by the troops of the Kazan Khanate. The opinion, according to which the Kazan people could not use them and Russian artillerymen stuck to cannons were shooting off the walls of Kazan, is false and dates back to Orthodox legends of a later period. Modern finds let us say that powder weapons have been known in the Volga Region since the 1370s. Only one hand-cannon referring to the 16th century was discovered due to archaeological digs in Kazan. Cannon-balls made of stone can be often found in Kazan. Russian and European sources preserved evidence on hand-cannons and cannons shooting off the city walls; the Kazan people used cannons and hand-cannons and bows [Complete Collection of Russian Chronicles, 29, 1965, p. 99] which were typically at their disposal during military actions: during attack of a small Tatar fortification near Bulak in 1530 the Russian troops 'took their cannons and hand-cannons' [Complete Collection of Russian Chronicles, 8, 2001, p. 273]. The use of cannons and hand-cannons in field battles was registered for the first time in 1551, when a big detachment of rebellious murzas from Taw yağı came up to the walls of Kazan. Then 'all the Kazan people, the Crimeans and inhabitants of Kazan went out and started fighting and there were many victims among them. The Kazan people took out all the cannons and hand-cannons and started shooting at them. And mountain people, the Chuvashes and the Cheremis, got scared and ran away...' [Complete Collection of Russian Chronicles, 29, 1965, p. 62]. Apparently, they used a diverse set of fire-arms in Kazan—beginning with light hand rifles and heavy machine-guns and ending up with light-weight cannons (tufenk) loaded with case-shots and heavy-weight field and tower cannons. They were effectively used during field battles and the siege of cities, where they applied heavy battering instruments like mortars, waging a

plunging fire. Apparently, most of those cannons were cast by the Kazan people themselves, a part of them was taken from the Russians during unsuccessful military campaigns (1506, 1524, 1530).

There is an evidence that there was a special zeughaus in Kazan citadel, where they stored gun powder and gun-park. There were skilled gunsmiths and experienced artillerymen affiliated to the arsenal. Experienced artillerymen were extremely precious military masters and their role in military actions was essential (the artillery and artillerymen of the latter half of the 16th century are represented in [Nemirovsky, 1982]). It is proved by the fact that, for instance, after the defeat of the Russian army near Kazan in 1506, the Grand Prince Ivan III was firstly indignant not about lost cannons, but because he had nearly been captivated by one of the experienced artillerymen. He said: '... I am not concerned with arms but with people who can cast and use them' [Herberstein, 1988, p. 172]. S. Herberstein told about good organisation of firing during the defence of Kazan in 1524, although there was only 'one artilleryman' there and the besieged defended themselves very bravely [Ibid., p. 178]. The death of prince Dmitry Mikulinsky, one of the rulers of the Kazan assault in 1552, killed by a cannon-ball, confirms the fact, that they were skilled and experienced shooters.

Discussing the inferiority of armament of the Kazan Khanate, Russian science often refers to the absence of regular army, such as infantry regiments armed with spears and guns. Nevertheless, it should be noted, that in Russia this type of shooter troops was created only after 1550 and they met their first combat challenge during the siege of Kazan [Rasin, 1957, pp. 330–338]. The permanent infantry troops of the same type were created at the same time in France, Sweden, Poland and Ottoman Turkey [Vvedensky, 2003; Nicolle, 1983]. We can say, that Kazan was at the edge of these military reforms and only the Russian conquest interrupted this logical process.

The river fleet was a special means of military actions [Izmaylov, 1994a, pp. 97–100]. The traditions of trading and military navigation in the Volga region date back to ancient

times. The particular parity between the Russian and the Bulgar ulus of the Golden Horde existed for centuries. The slackening of the central power in the Golden Horde led to the expansion of river piracy and raids of Moscow fleets in the Volga cities. The emerging Kazan Khanate needed its own river fleet. The trading ships sailing from Tver to Hajji-Tarkhan (Astrakhan) and southern shores of the Caspian sea were the basis of its establishment. Merchant navy provided the main part of captains, sailors and pilots. They transported troops and could serve as military vessels after some modifications.

The fleet of the Kazan people contained vessels of different types. There were undecked vessels like boats among them. They were of different sizes—beginning with small boats and ending up with large vessels, called 'ushkuy' in Russian. They had large sails and oars, which made them speedy, manoeuvring and convenient to land. Average boats could accommodate 30–50 people and some war horses. They were usually used as additional vessels used for military actions in shallow waters. Ushkuys were larger sailing oared vessels and they could transport heavy loads and landing troops of 100–200 warriors. The Kazan people might have seldom used sailing oared vessels called nasads, as military ships on the Volga. The constructive features of these largest Volga vessels plying the waters of the river till the 17th century, were the high 'impaled' boards and decks. Apparently, some of them looked like galleys of their Turkish opponents like kadyrga or bashtarda. Even light cannons and large crew or landing troops could be accommodated there. Their common carrying capacity was about 2 thousand tons. Military vessels, unlike trading ones, usually had special superstructures over on the deck, at the stern and at the head part. Archers and light-weight cannons (tyufenk) were housed there.

All the Kazan vessels were produced in local dockyards. The most famous one was situated in Bishbalta village (currently Admiralteyskaya Sloboda) [Sultanov, 2004, pp. 164–166]. Its inhabitants not only built vessels, they also made all the necessary stuff—

resin, ring ropes and sails. Navigators, sailors and pilots lived here as well. It is no wonder that by those ancient traditions, the slipways of Kazan Admiralty were laid there by the order of Peter I. In the 18th century it produced more than 100 vessels for the Russian fleet. The Kazan fleet numbering up to 200 galleys and boats in different years, was based here at the mouth of the Kazanka River.

The tactics of river battles were about shooting at adversaries in order to defeat them and even burn down their vessels and destroy their crews. A river battle in 1469 can be an example of these manoeuvres, when the Kazan fleet attacked Russian boats, after a brief exchange of fire retreated and then attacked them again, 'beating and shooting' as stated in the Russian chronicle. All these manoeuvres usually ended with the approach of vessels and attempts to involve in a hand-to-hand combat on the deck of the adversaries' ship and board it. Besides the crew, landing forces were placed on board for this purpose. In the very 1469 a Russian chronicler mentioned 'the best princes and people' on the board of Kazan vessels [Complete Collection of Russian Chronicles, 25, 1949, pp. 282–283].

One of the brightest episodes of the river war between Moscow and Kazan fleets took place in 1469, when the flotilla of vessels of Prince Ukhtomsky from Ustyug, were heading down the Vyatka and the Kama Rivers in order to unite the Russian fleet, was attacked by the Tatar fleet near Kazan. The battle was conducted according to standard rules of engagement. At first, the adversaries would shoot at each other, and then they started hand-to-hand combat. Prince Ukhtomsky was completely defeated in this fierce battle. According to the chronicles, "the Tatars were fighting against the inhabitants of Ustyug and captured the noblemen; Nikita Yaroslavsky was killed then, and voivode Yuri Pleshcheev and his comrades were captured." In total, about 500 Russian warriors were killed and nearly all the fleet was destroyed in that battle. Prince Ukhtomsky managed to break through with only several vessels [Ioasafov Chronicle, 1957, p. 60; Complete Collection of Russian Chronicles, 30, 2009, p. 136; Complete Collection of

Russian Chronicles, 37, 1982, p. 92].

The main goals of the Kazan flotilla was to support the offensive and defensive actions of the main troop formations, and defend the of river approaches to Kazan. For example, the flotilla was rather successful in blockading the Russian army besieging Kazan in 1524. They defeated not only the ground forces, but also the flotilla of Prince Paletsky, who had no reinforcements, provisions or siege artillery. As a result, the Russian troops not only lost more than ninety vessels and all their cannons, but were completely encircled, which predetermined their complete defeat [Herberstein, 1988, pp. 177–179].

Certainly, the actions of the Kazan fleet were not successful all the time. There were cases when it suffered defeats and misfortunes, but it had always demonstrated great fighting skills and training, fighting on equal terms against Russian flotillas. Unfortunately history did not preserve the names of Kazan naval commanders, such as Beg Tulyazy, but it is doubtless that there were many of them and their military skills were comparable to those of Russian navigators. The decline of the Tatar military fleet started in the 1540s, when the main part of the vessels was destroyed or passed to Moscow.

The military organization of the Tatars was related to the preceding traditions of the Golden Horde. It included militias from different regions and cities, individual detachments of nobility, as well as the troops of allies—the Cheremis and the Nogais.

The ruling highest ranks of society were represented by the khan, members of his family and four additional classes: Muslim clergy, princes and murzas and the Cossacks living at the court (*ichki*) and beyond it. It is plausible that *ichki* had a higher status and were themselves the begs [Iskhakov, 1998, pp. 61–80].

The social organization of the nobility in the Kazan Khanate had a hierarchic system connected with the rights to own land (or levy a certain kind of taxes) as a conditional (*soyugal*) right, for which a nobleman had to serve his suzerain, and conditional-unconditional one (*tarkhan*), that is relief of duty (partial or

complete) in favor of the khan. The highest representatives of nobility were represented by *oglan*s, *karaches* and *emirs*, then came *murzas*, and the layer of knights, represented by *bagaturs* and Cossacks. Waging war was the main activity of the service class. It is not a coincidence that one can often read in epitaphs referring to the 16th century that *imyarek* "was martyred by an infidel" (see: [Rakhim, 1930, pp. 164, 169].

The term "*chura*" which was preserved in authentic written sources and Tatar narratives is especially noteworthy. As we have already mentioned above, this term has nothing in common with the denomination "*kol*", it denoted military servants which can be clearly seen from epic literature "*Chura-Batyr*" or "*History of Kazan*" describing the escape of Chura Narykov. Basically the term "*chura*" could be combined with such well-known oriental military terms as "*gulyam*" or "*mamluk*." *Gulyams* and *mamluks* were slaves, young boys often bought in slave markets, they were trained at special military camps, turning them into professional heavily armed warriors who were able to fight against European knights. As for their social status, they often obtained quick promotion becoming the rulers of the whole states (for example, the state of *Mamluks* in Egypt or India). Nevertheless most likely the term "*chura*" means the general name of the class of military servants—the knights. The indications of historians (for example, the one according to which Edigu was the "*chura*" of Khan Tokhtamysh [Usmanov, 1972, p. 94], and Tatar narratives about military servants—*churas*—and also the earlier Turkic khaganates going back to the epoch of Turkic khaganates are evidence of that. It was known in the Volga Region where it was registered at least since the latter half of the 12th century and broadly used in the set of titles between the 13th and the 15th centuries, denoting the representatives of the military class, the knights [Izmaylov, 1997a, p. 145]. In the Volga Region it was used in its dialectal form *yori/churi* [Khakimzyanov, 1978, pp. 80–82]. Later after the Russian conquest this term, was displaced from social practice by another name of military class—the "*serving Tatars*."

In spite of the opinion of separate researchers [Khudyakov, 1990, pp. 201–203] in the khanate the landlords, receiving land for service, most likely these were not the representatives of the nobility—these owned estates—but the lower classes, i.e., the Cossacks (common soldiers, *desyatskie* and *sotskiye*). Probably up to one the fourth of the land estates of the state belonged to them [Ibid.]. This conclusion is evidenced by the fact that, during the first decades after the Russian conquest, the so called "serving Tatars" were rewritten as groups dispersed in many villages as landed classes (see: [Scribe's Book, 1978]).

The structure of land legal relations in the Kazan Khanate and the structure of military and service class nobility based on it, was described in detail in works by Sh.F. Muhamedyarov and R.N. Stepanov (see: [Muhamedyarov, 2012, pp. 93–142; Muhamedyarov, 1958; Stepanov, 1966, pp. 94–110]). The examination of sources allows us to make a conclusion that the typical form of land relations in the Kazan Khanate was a military-retainer system in the form of hereditary possessions (*soyural* or *tarkhan*). The owner of such a possession was usually obliged to serve his suzerain (generally this was the khan, but it can be assumed that his power was mediated by the headmen of Tatar clans) and in return he obtained hereditary support (possession), a certain tax and administrative-judicial immunity. Thus, military service was the major and the most important duty of the owner of a *soyural*, although its order and duration, dictated obviously by the custom, are not clear in the details. A fragment of the "History of Kazan" may serve as an illustration for such an assembly: "And Kazan Tsar Sapkirey, listening to the great voivodes of Moscow, decided to send princes and murzas to all Kazan uluses ordering them to gather in Kazan, get ready for the siege, and wait for the enormous Russian forces" [Complete Collection of Russian Chronicles, 19, 2000, p. 252].

All serving class aristocracy and clergy, to a large extent, in the Kazan Khanate were representatives of Tatar clans and tribes. This thought can be formulated more precisely: there was no military service class in Kazan

except for the Tatars, just as in the Jochid Ulus, that means nobody could become a part of nobility unless he belonged to a Tatar clan, and accordingly all representatives of this class belonged to one or another clan in view of their blood-kinship and family ties. Four clans (and their rosters, for example, in the state of Shibaniids, numbered up to one hundred titles) of the Kazan Khanate were especially outstanding from the standpoint of nobility and power—the Shirins, the Arghyns, the Kypchaks and the Baryns. These were the same four ruling clans, whose traditions (exactly four, while the names of certain clans varies from khanate to khanate) went back to the state structure of the Jochid Ulus and further to the times of the Ancient Turks (See: [Schamiloglu, 1993, pp. 44–60]).

Judging by the total population size, the total number of warriors in the Kazan Khanate could reach 50 people, but it could hardly exceed 20–30 thousand people during serious military actions, which correlates with the notes of S. Herberstein that "the tsar of this land (that is, Kazan land.—I.I.) can post an army numbering thirty thousand people, mainly consisting of infantrymen among whom one can find the Cheremis and the Chuvashes. They are rather skillful archers". Nevertheless the number of armed cavalry in the whole khanate (including the detachments of the Nogais and Crimeans) hardly exceeded 5–10 thousand people, and most likely there were fewer of them, because the number of feudals was smaller than 10% of the population. It is therefore clear that during the wars and turmoils of 1546–1552, the best representatives of the Tatar nobility were killed, which became the reason for the defeat of the khanate.

The Kazan people were rather skilled warriors. The very belonging to the Tatar clan aristocracy itself dictated specific requirements of its representatives, such as honor, courage and bravery. These features of the Tatar warriors were noted even by their enemies. Italian traveler Giosafat Barbaro, who was in the Azov and Volga Regions in the early 15th century, gave the following description of Tatar troops: The warriors are extremely valiant

and brave, so much so that some of them, for their excellence are called "Ghazi bagater", which means "an insane brave man". Wherefore there are many of them that in fights of arms esteem not their lives, fear no peril, but push forward to demolish the enemy without thought, so that the weak can take courage in them and also become valiant themselves [Barbaro and Contarini, 1971, p. 146]. Russian chroniclers mainly perceived the Tatar warrior as extremely fierce and rude when it comes to fighting, showing no mercy to both his own and his rival's life. For example, the author of the Russian novel "History of Kazan" respectfully wrote about a Tatar who struggled against fifty Russian warriors [History of Kazan, 1954, p. 70].

The Tatars used flags and banners to manage troops and help them orientate themselves. The main flag of the khan (tug, elem) was a symbol of dignity of the khanate, and usually looked like a rectangle attached to a flagstaff. In the 15–16th centuries, these flags were blue, green or red (or the combination of these colors) with embroidered inscriptions from the Quran or arabesque patterns (apparently sometimes the tamga of the Jochids was portrayed on them). Several noblemen and their troops had big triangle or rectangle flags (khorunga, elenge) and some warriors had small flags on their helmets and the staffs of their spears. The poles with ponytails attached to them were often used as a flag of military leaders. Their number bore evidence of the rank of the commander.

The tactics of field battle and operative military art of the Kazan people were rather complicated. This was mentioned by Russian and European contemporaries many times. The battle combat included maneuvers of the light cavalry, which rushed passed the rows of adversaries at a gallop, making a peculiar circle (according to S. Herberstein, it looked like a round dance [Herberstein, 1988, p. 168]) shooting at them continuously. When the defenders started to retreat, the heavy cavalry armed with pikes joined the battle. If the adversaries attacked themselves, the archers retreated very fast, trying to wear down and disorder their ranks, and then place them in a

position where the cavalry could charge. Usually such an encounter attack was divided into several transient combats and maneuvers of the cavalry.

In the context of multi-stage military operations, the Tatars used a variety of theaters, including rivers, using tactical and operational maneuvers and movements.. The tactics used in the defense of Kazan is the most illustrative in this respect. Having no forces to resist Russian troops, exceeding them in number, the Kazan people allowed them to come up to the city walls, intending to encircle them and deprive of fortifications and provisions. Such tactics of active fighting basing on powerful fortress defended by artillery, allowed wearing down of the adversaries in local struggles, depleting them of vitality and defeating them completely. The wars of 1467–1469, 1506–1507, 1524 and 1530, 1549 were the most successful military operations of this sort.

The Russian army which was extremely large in number (according to chronicles, sometimes it numbered about 100 warriors) was usually divided into two parts as it headed towards Kazan. The first part disembarking from ships near Kazan started to besiege the city and the other one later disembarked on the right bank of the Volga River, consisting the main part of the army and the cavalry. Sometimes the cavalry had to engage in battle against the Tatar cavalry, and this was not always successful. Meanwhile, near Kazan, battles started for field fortifications, which were built beyond the city walls by the Kazan people. These were designed to force the Russians to do battle in open fields, where they would be subject to bombardment from the side of walls and towers of the city. Simultaneously, the cavalry and infantry started to concentrate in the rear of the besiegers. They would attack the Russian encampment together with defenders of the city, and separate the troops in a coordinated way, and sometimes they would completely strip their adversaries of provisions and ammunition, as it occurred in 1524. In case of a direct storming of the city's fortifications the Kazan people organized counter-attacks and the cavalry pressed hard on the rear areas of their adversaries. For example,

during the siege of 1487, the detachments of karachi-beg of Ali-Ghazi acted this way, as well as the detachments of murza Yepancha in 1552. Most frequently this double blow led to defeat and flight of the besieging troops. Such tactics that were used repeatedly, is evidence of the high level of training and steadfastness of the Tatars.

The Kazan people also succeeded in offensive operations—usually they sailed to Nizhny Novgorod via the Volga River (1505, 1523, 1536) and once even to Moscow—in 1521 (being an ally of the Crimean Khanate). Operations like these were usually a reply to hostile actions from the side of Muscovite Rus, and had as their aim to make it conclude a peace treaty.

Thus, the Kazan Tatars had rather well-developed and varied armaments and equipment, in no way inferior to those of its neighbors. It is rather important that even artillery—the most prospective weapons of that time—was actively used by the Kazan people. An analysis of the armaments and military art of the Tatars allows us to reject the imperial myth about "the primitive tactics of raids" and the absence of the ability to struggle against Russia. It shows that since 1487, Kazan resisted Russia successfully for seven decades, and defeated its troops several times. This success was only possible in the presence of weapons of war and combat tactics.

§ 3. Military Art of the Crimean Khanate in the Late 15–Early 17th Centuries

Vitaly Penskoy

The collapse of the Golden Horde led to radical changes in the political situation and distribution of forces in Eastern and South-Eastern Europe. The Grand Duchy of Lithuania and the Muscovite state plunged themselves into a struggle for domination in Eastern Europe, but they were not alone in this struggle. The rulers of the Crimean Khanate, formed in the latter half of the 15th century, also made a claim on the heritage of the Golden Horde. Their claims were based not only on the fact that the clan of the Crimean khans descended from Chinggis Khan himself, but also on a mighty army, this "ultima ratio regis" which was used by the Girays without hesitation, to solve foreign policy problems after diplomacy had turned out to be powerless.

It cannot be said that the issue of studying the peculiarities of the formation and development of the armed forces of the Crimean Khanate was not in the realm of interest of domestic and foreign researchers (see, for example, [Dmitriev, 2003; Ishchenko, 1989; Ostapchuk, 2001; Collins, 1975; Inalchik, 1979–1980, etc.]). Nevertheless, the research of this issue, as well as the history of the khanate in general, after a long time of being consigned to oblivion, is only beginning. As a result, unfortunately, we do not have a clear notion about

what the Crimean army of the late 15–17th centuries looked like. The opinion represented in popular literature, according to which they were an enormous army of poorly armed horsemen, who were only able to rob, kill, and capture defenseless Ukrainian and Russian settlers is definitely contrary to the important role the khanate played in the history of Eastern and South-Eastern Europe on the late Middle Ages—the early period of Modern history. This controversy is especially notable, if we take into consideration the fact that at that time, the real political weight of the state in the system of political relations directly depended on the number and the degree of perfection of the war machine. It would be logical to assume that the Crimean Girays—carrying out an aggressive foreign policy (its final aim being at least to unite the Tatar yurts emerging on the ruins of the Golden Horde under their aegis)—were dangerous adversaries of the Moscow Rurikids and the Polish-Lithuanian Jagellons. Consequently they had a rather efficient and powerful instrument for continuing political relations by other means" [Clausewitz, 2002, p. 47]. Three khans can be called the creators of this instrument—Mengli Giray I, under whom the basis of the Crimean statehood (including armed forces) were laid; his son Sahib Giray I, under

whom the Crimea army went through large-scale reforms inspired by the Ottoman empire; and Mengli Giray's grandson Devlet Giray I, under whom the Crimean army and military affairs had reached the zenith of its development.

So what was the army of the Crimean Khanate like, and which were the main features of the military affairs of the khanate under these rulers? Let us try to answer this question basing on scanty evidence of contemporaries and few documents which are available to us.

American researcher S. Huntington, characterizing the military power of any state, wrote that it has four dimensions: a qualitative one—the number of people, arms, technical equipment and resources; a technological one—the efficiency and the degree of perfection of armament and technical support; an organizational one—coherence, discipline, training and morale of the troops, as well as the efficiency of command and management; and a social one—an ability and desire of the society to apply military forces efficiently [Huntington, 2003, p. 126].

We will begin with an approach to define the quantification of military potential of the Crimean Khanate. The attributing of the ability to field an army equaling 100 thousand or even 200 thousand horsemen, if necessary, to the Crimean khans literally became common place in many historical compositions (especially in popular literature) (see, for example: [Boplan, 2004, p. 227; Horsey, 1990, p. 56; Madaryaga, 2007, p. 364; 172; Fletcher, 1991, p. 90; Yavornitsky, 1991, p. 320]). Nevertheless, in our opinion, it is necessary to distinguish such notions as "mobilization potential" (that is human resources which could be used by the Girays provided that everybody who is able to hold arms would mount a horse) and a "field army", which was raised for some particular military campaign.

As for the mobilization potential of nomadic communities, the majority of modern specialists believe that, in the case of total mobilization, the ratio between the number of fielded warriors and the general number of the population was 1:5 (see, for example: [Kradin, 2002, pp. 71–72; Pletneva, 1990, pp. 9, 114 etc.]). Modern assessments of the total population of

the Crimean Khanate vary greatly—they range from 250–300 thousand to 600 people (see, for example: [Iskhakov, 2004b, pp. 34–36; Roslavl'tseva, 2008, p. 32, etc.] taking into consideration that, according to A. Khoroshkevich, "the absolute figures of the population of the Crimean Khanate are hard to calculate accurately" [Khoroshkevich, 2001, p. 92]. Thus, the number featuring in many sources (about 100 horsemen or even more), who were alleged to be raised by the Crimean "tsar" against his enemies can only be considered as an approximate (sic!) and very optimistic estimation of the mobilization potential of the Crimean Khanate at its best times. There is no doubting the fact that such a population size under the Girays was achieved only many decades after the khanate had been established, as well as the impossibility of assembling troops that would be so large in number, from the technical point of view, taking into consideration the level of infrastructure and development of the management machinery, as well as providing such an army with all necessary supplies.

"Countless" Crimean armies found it convenient to frighten intractable adversaries during negotiations in Moscow and Vilnius, based on wishful thinking (as Sahib Giray did, for example, in 1538 when talking to teenage Ivan IV and the boyars surrounding him: "I will collect more than one hundred thousand of my army and head off to your lands and cause much damage to your lands and my treasury will become fuller. It would be much better if you sent gifts willingly, and then there will not be any war". And I will only conquer your land and your state so that my people could be satisfied [Florya, 2001, pp. 238–239]. In real life, the khans could only rely on forces which were far smaller in number. For example, the Venetian traveler, entrepreneur and diplomat G. Barbaro, who had been to Northern Black Sea region at the dawn of Crimean statehood, wrote that the Tatars dwelling on the island of Kaffa (sic!) can field 3–4 thousand horsemen [Barbaro and Contarini, 1971, p. 155]. In the summer of 1501, the Russian ambassador in the Crimea I. Mamonov reported to Ivan III that the number of the armies of the tsar had increased to 1501 warriors (V.P.) [Written mon-

uments, 1884, p. 368]. This sudden change can be also explained by the fact that after Mengli Giray had defeated the khan of the Great Horde Sheykh Ahmed, the majority of regions, which used to be subordinated to the adversary, passed to the victor (see, for example: [Zaitsev, 2004a, pp. 100–105; Khoroshkevich, 2001, pp. 92–93, 153–158, 162–163]).

The Nogai massacre of 1523 had a negative influence on the military potential of the Crimean Khanate. According to Moscow ambassador in the Crimea I. Kolychev, after the Nogais had left the Crimea, there were hardly 15 battle-worthy men, and only one the third had horses, and all the rest could only rely on mares and colts [Syroechkovskiy, 1940, p. 58]. The consequences of this catastrophe were felt even two decades later. In the early 1540s, according to Lithuanian publicist Ventseslav Mikolaevich, better known as Michalon Lituanus, the khan could only rely on 30 horsemen, provided that every person who is able to sit in the saddle should set off on a military campaign, including shepherds who could not wield arms [Lituanus, 1994, pp. 65–66].

The Crimea had managed to restore and even overcome its former might only by the middle of the 16th century, in the declining years of Sahib Giray I's reign and under his successor Devlet Giray I. In these years setting off on military campaigns, the khans headed troops numbering 40–50 thousand people, including infantry and detachments of vassals. Anyways, in 1555, Devlet Giray attacked Moscow heading an army numbering approximately 30–40 thousand warriors and in 1571, according to Ivan the Terrible, the khan arrived in Russia at the head of 40,000 horsemen. It should be emphasized that it was not profitable for him to reduce their number after his troops had been defeated and the capital had been burnt down. According to Ottoman chronicler Ibrahim Pechevi, Ghazi Giray II brought approximately the same number of warriors to the Ottoman encampment in 1594. However, those were large-scale military campaigns, real invasions which were described by Frenchman G.-L. de Beauplan and Turk Evliya Çelebi so impressively [Beauplan, 2004, p. 231; Evliya Çelebi, 2008, pp. 43–44]. The Crimean army

was usually smaller in number. For instance, in 1543, Sahib Giray sent his warriors, numbering 15,000 horsemen in total, to support the Turkish sultan in his expedition in Hungary. The Russian ambassador in the Crimea, Ivan Sudakov, reported that in February 1588, the khan and his troop numbering 18,000 horsemen and 500 Turkish janissaries from Kaffa set off for Ukraine [Lituanus, 1994, pp. 65–66; Smirnov, 2005, p. 333; Stateyny, 1891, p. 68; Tolstoy, 1848, p. 298].

Now let us consider the technological aspects of the military power of the Crimean Khanate. The cavalry was a powerful force of the Crimean army, so let us begin with it. Imperial diplomatist and memoir writer S. Herberstein gave a classical description of an average Crimean horseman in the early 16th century. "Their arms (belonging to the Tatars—V.P.) are a bow and arrows, a spear is a rare thing among them", he wrote in the early 16th century, emphasizing that the Tatars avoided close combats, because they had neither shields, nor spears and helmets to resist the adversaries [Herberstein, 2008, pp. 400–401, 403]. Similar statements can be found in other sources referring to a later period (see, for example: [Boplan, 2004, pp. 219–221; Lituanus, 1994, p. 66; Fletcher, 1991, p. 91]).

Thus, all contemporaries emphasized the extremely light-weight armament of an ordinary Tatar warrior, and the striving of the noble and rich Crimean warriors to follow the Turkish tradition of using armor. Englishman J. Fletcher wrote: "murzas and noblemen imitate the clothes and the armament of the Turks"). Apparently by the 16th century, the Crimean Tatars had almost refused to follow the military tradition of the late Horde directly, and in the first quarter of the 16th century, their defensive and offensive armory set was absolutely similar to the common Western Asian one (according to L.A. Bobrov, it was Russian-Muslim one). The characteristics of this set can be found in, for instance: [Bobrov, 2004; Bobrov, 2003; Pink, 2004, etc.]. The only difference was that the Crimean Tatars did not have armored cavalry, which would be large in number and the army was based on mounted archery. Everything seems to indicate that, at that time, the stan-

dard armory set of an ordinary Tatar horseman consisted of a saidak (a bow and a quiver full of arrows), a saber and a knife as offensive armaments. As for defense, most likely they used soft quilted armor like the Russian tegulyais and analogue head gears (Michalon Lituanus wrote about them: "... their (the Tatars"—V.P.) white pointed felt hats are made not for appearance; their height and shine are intended make the Tatars look more numerous and so terrify their adversaries..."? [Lituanus, 1994, p. 75]. The nobility and selected warriors from its suite (the latter were described by [Bronevsky, 1867, pp. 362, 367]) were armed like the Turkish Sipahis, as it was mentioned above, which means they used the most varied types of ring and plate armor, metal helmets produced in Turkey and Iran, vambraces (forearm guards), knee-caps, buturlyks and greaves. In general, they had more significant offensive armament than ordinary warriors (on the armory set of rich Tatar warriors, see, for example: [Ibid., p. 366]). Probably in some cases, noble and rich Crimean warriors could also use horse armor.

Apparently light-weight armament of the Tatar warriors did not appear by accident (in comparison with the Turks, not to mention the Middle and Central Asia warriors). In the beginning, when the Crimean-Tatar state was being formed, the khans and nobility had to face the grand problem of providing the majority of ordinary warriors with qualitative and cheap armor and arms. The crushing defeat of the Golden Horde by Temür and the degradation of urban culture following this, resulted in significant reduction of the arms and armor production in the Horde itself (A. Contarini had noted this indirectly, in characterizing the armaments of the Horde warriors in the late 15th century [Barbaro and Contarini, 1971, p. 224]). The importation of weapons from abroad remained limited. The last stage of the formation of the Crimean Khanate and the establishment of urban culture inside it, characterized by developed handicrafts, literally coincided with the impetuous development of firearms and the decline in the use of armor. That led to its becoming lighter and eventual complete disappearance. Counting on the so called "small wars" and mobility, the Crimean

A Tatar warrior of the late 15th century, the first half of the 16th century. Fig. by A. Krasnikov

armies achieved, through all available means, the best kind of defense from the growing fire power of the main adversaries of the Tatars: the Russians, the Polish and the Lithuanians.

The physical qualities of the Tatar horses also played their role in the refusal to use armor. Contemporaries unanimously praised the Tatar horses for their endurance, unpretentiousness and adaptation to local conditions (see, for example: [Herberstein, 2008, p. 401; Lituanus, 1994, p. 75]). However, the advantages of the Tatar horses were the reverse side of their shortcomings. They differed from the European ones in their lower height (on average -131.9 cm at the shoulder, see: [Kozhevnikov, Gurevich, 1990, pp. 14–15]), and due to this fact. were not able to bear an armed rider, wearing solid armor. The Tatars had very few good, powerful horses. Thus, in 1555, the Russian warriors captured a Khan's train-"kosh", 60,000 quick-moving horses and only 200 Argamak horses [Complete Collection of Russian Chronicles, 13, 2000, p. 257]. The Argamak

horses were three-four times more expensive than ordinary horses, according to the testaments of Russian military men from the first half of the 16th century (see, for example: [Acts, 1975, pp. 8, 174–175, 198, 253–254]).

Firearms were not widely spread among the Tatars in the period under consideration. Of course, supposing, like J. Horsey [Horsey, 1990, pp. 70–71], that the Tatars were not familiar with them at all, would be a mistake. Fighting with the Russians and Lithuanians and having close contact with the Turks, the Crimeans were perfectly aware what guns, arquebuses and muskets were, and how they can be useful. Apparently, the first attempts to obtain their own artillery and infantry armed with firearms were made during the rule of Mengli Giray I. Back in the winter of 1490–1491, the Khan borrowed from Sultan Bayazid II one thousand janissaries [Written Monuments, 1884, p. 105]. It is obvious that the infantry was among those Khan's "people" who "guarded" "founded" "on Tovan" the "Isl'am town" and for whose maintenance Mengli Giray demanded from Sigismund I 4,5 gold pieces per year [Lietuvos, 2011, p. 92]. The Khan's artillery is mentioned, for example, in 1502. Back then, according to the Russian ambassador I. Mamonov, when Mengli Giray equipped his campaign against the Khan of the Great Horde, he took cannons, along with everything else [Written Monuments, 1884, pp. 378, 379, 417].

The Nogai pogrom of 1523 accelerated the re-organization of the structure of the Khan's troops. Learning about the huge loss "in people and horses" in the Crimea, Sultan Suleiman I sent to the Crimean throne his protegee Saadet Giray with an escort of not only horsemen, but also 500 "musketeers/pishchalniks" to "protect the new Tsar until he gains ground" [Dunaev, 1916, p. 57]. And, probably, together with the "pishchalniks", the Sultan also gave Saadet Giray cannoneers with cannons. "Pishchalniks" and cannoneers "with their equipment" of the Sultan (in 1532 the Khan had at least 8 guns shooting with "great sacks") became the striking force of the Khan, which he used against his enemies, both domestic and foreign, without long hesitation, as it happened, for example, in 1531 or 1532 [Gayvoronsky, 2007, pp.

178–179; Malinovsky, 1863, p. 258; Ostrozhs-ky, 1951, p. 239; Syroechkovskiy, 1940, p. 59; Cherkas, 2000, p. 109; Bielski, 1856, p. 1059; Inalchik, 1979–1980, p. 454].

The experience of utilizing firearms and communicating with the Turks, gained in those years, was fully considered by Sahib Giray I, who re-organized the Crimean army. Backed by the Sultan's escort, consisting of the cavalry and one thousand janissaries, the new Khan took strong hold of the Crimean throne and managed to stop, at last, the conflicts storming in the Crimea after the murder of his father Muhammad Giray I by the Nogais. He set up an analogue to the Sultan's kapykulu by having formed a permanent hired infantry corps at his court (it is curious that Evliya Çelebi calls it khan-kulu [Evliya Çelebi, 2008, p. 101]). The court chronicler of Sahib Giray, Remmal Hoja, reported that this corps totaled up to at least one thousand people and consisted of three components—Ottoman janissaries, tat-tufenkji (recruited among the settled non-Muslim population of the southern coast of the Crimea—first of all Greeks and Goths) and tufenkji-kullar (the warrior slaves recruited from the Abkhazians, the Georgian and mountain dwellers of the Caucasus) [Ganina, 2011, p. 95; Inalchik, 1979–1980, p. 459]. In addition, according to the Ottoman example, in those years appeared a custom of a short-term set recruitment of hired ulyufeli-tufenkji from the "infidel dhimmi" of the southern coast of the Crimea (with the Sultan's permission) [Documents, 2008, p. 124; Inalchik, 1979–1980, p. 460].

From that time on, the infantry armed with firearms and artillery became an indispensable component of the Crimean army, without which the Khans never set off any big campaign (see, for example: [Bronevsky, 1867, pp. 365, 367; Complete Collection of Russian Chronicles, 13, 2000, pp. 139, 257, 258; Ostapchuk, 2001, pp. 402–403; Smirnov, 2005, pp. 307, 313]). One of the Circassian princes said an interesting phrase in 1551, when he learned about the preparation of Sahib Giray's campaign: "The Khan, as they say, is coming to plunder us ... *His strength is in his guns* (emphasis added. — *V.P.*), while my guns and hand cannons are steep mountains and fast horses

..." (quote after: [Nekrasov, 1990, p. 110]). However, what else could the Circassians do, not having firearms at their disposal? Possessing firearms gave remarkable advantages to the Crimean Khans over those without them. Thus, the same Sahib Giray, using his tufenkji and artillery, defeated the people of Astrakhan and captured the city in 1546, and then crushed the Nogais in the winter of 1548. Devlet Giray used artillery and infantry in his campaigns against Russians on a regular basis—for example, in 1552, 1555, 1565, 1569 and 1572. He sent his tufenkji and cannons to the aid of the Astrakhan Khans Yamgurchi and Dervish-Ali, when they tried to defend their independence from Moscow [Zaitsev, 2006, p. 140; Nekrasov, 1990, p. 107; Complete Collection of Russian Chronicles, 13, 2000, p. 399; Ostapchuk, 2001, p. 406; Ambassadorial books, 2006, p. 109].

However, firearms were not widely used by the Crimeans in the 16th and in the most part of the 17th century. The Tatars did not favor it, moreover, as Evliya Çelebi wrote, "the Tatar people cannot shoot from the guns. They are scared of the guns. If there are guns somewhere, they say: "Mylytk kop", and do not go there..." [Evliya Çelebi, 2008, p. 31]. Guns and muskets were considered, probably, as a "mean" weapon, unworthy of a real Tatar, unlike the traditional bow, in the wielding of which they had no rivals. Guillaume Le Vasseur de Beauplan, mentioning the skillfulness of the Tatar shooters, wrote that they "... shoot so accurately from the bow, that they do not miss the target from at distance of 60–100 steps", and in plunging volley shooting they send the arrows to a distance, twice as long as the reach of the Cossack muzzle-loaders [Beauplan, 2004, pp. 245, 251].

Having analyzed the technical aspect of the Tatar military science, we cannot but give attention to its organizational component. Eventually, however perfect a weapon it might be, it is the people who fight, and if they are not ready or not willing to do battle, if their commanders act incompetently, then even the most perfect weaponry will not rescue the most externally brilliant army from a crushing defeat.

The structure of the Crimean army, apparently, remained quite traditional. Based on the available data, the army of the Crimean Khanate included several components. First of all, the Khan's "court" and his personal guard, *khan-kulu*; then the "courts" of the "sultans", "uhlans", "princes" and *murzas*; the irregulars, recruited in case of a big campaign from ordinary male Tatars aged from 15 to 70 years. It is possible to estimate the number of the latter by the surviving data, according to which the strongest Crimean clan, the Shirins, could put 20,000 horsemen on the battlefield, and in 1543 a crack cavalry of four major clans, the Shirins, the Arghyns, the Kypchaks and the Manghits, consisted of 10,000 warriors. The proper Tatar army was joined by the troops of the Khan's vassals, mercenaries, soldiers of fortune, who volunteered for a campaign hoping to gain some profit, and also auxiliary Turkish contingents [Bronevsky, 1867, pp. 365, 367; Complete Collection of Russian Chronicles, 13, 2000, p. 138; Ostapchuk, 2001, p. 402; Smirnov, 2005, pp. 307, 313, 345; Inalchik, 1979–1980, p. 448]. The organization of the army was apparently based on the decimal principle, at the same time, the Russian sources mention the division of the Crimean army into "regiments" during a campaign and in battle (see, for example: [Beauplan, 2004, p. 223; Complete Collection of Russian Chronicles, 13, 2000, p. 257]).

What were the tactics of the Crimean Tatars? The analysis of the available sources shows that they were more complicated, than it is commonly believed, and to a certain extent moved away from the former model of the Horde of the 14–beginning of the 15th centuries. Therefore S.A. Ishchenko's phrase that the Crimean Khans preserved the Horde's traditions, connected with the specifics of military operations, almost unchanged [Ishchenko, 1989, p. 138], appears to be not entirely correct. The changes existed, and they were quite substantial at times. And they primarily concerned the battle plan. The traditional plan of actions of a nomadic cavalry in the battlefield, that had been honed by centuries and included three main phases—archery attack, shock assault of heavy and middle-weight cavalry "with spear" and finishing off the enemy, overthrown

and running in disorder, by cold steel (see, for example: [Bobrov, 2002, p. 96; Gorelik, 1995, p. 381]), did not work any more, since the composition of offensive and defensive arms of the Crimean Tatars had changed. At best, from the three phases remained only two—the first and the last. And the Tatar cavalry itself, most likely, acted in the battlefield in mixed battle orders—the first battle line was occupied by the better armed and protected soldiers, and other Tatars formed behind them (compare the description of the battle orders of the cavalry of the East Asian nomads during the late Middle Ages and early Modern times: [Bobrov, 2007, pp. 77–79]).

At the same time, under the influence of the Turks, the Crimean Tatars in the second quarter of the 16th century took advantage of the classical Ottoman "Destur-i-Rumi"—a battle order, having in its core a *wagenburg*-*tabor* of wagons—"zarbuzan arabalary" equipped with light artillery (*falconets* "zarbuzan"), inside of which there were gunners-*tufenkji* [Ostapchuk, 2001, pp. 402–403, 405–406]. The following quote from I. Mamonov's charter gives an idea about the size of the Crimean wagon-train in big campaigns, it says that preparing for the campaign against the Great Horde, Mengli Giray "... ordered all his people to be ready,... to feed the horses, and five people would have a cart, and three horses for a man, and besides other forage, five men would have two oxen..." [Written Monuments, 1884, p. 378].

These changes led to the fact that the tactics of the Crimean Tatars had changed, in comparison with the classical Horde model, and they also varied depending on the enemy to be dealt with and on the campaign's purpose. "Destur-i-Rumi" in the 1540s was successfully utilized by Sahib Giray against the Nogais and the Circassians. However, in campaigns against Russians, Lithuanians and Poles, Tatars seldom used infantry and artillery, and if they did appear on the battlefield, they usually failed, as in 1541 and 1552 [Complete Collection of Russian Chronicles, 13, 2000, pp. 138–139; 189–190]. In the same campaign of 1552, according to the Russian documents, the Khan took with himself 18 artillery pieces, which were lost during an unsuccessful attempt to capture

Tula [Acts, 2008, pp. 222–223]. Technical and numerical superiority of the Tatar enemies, relying on much more developed industry, made it pointless for the Tatars to compete with the Russians, Poles and Lithuanians in these types of military forces, which were new to them. Besides this, the Ottomans, engaging the Tatars to take part in their campaigns from the latter half of the 16th century, assigned them a role of light-armed riders-*akyndzhi*, whose tasks included first of all reconnaissance and plunder of the enemy territories. "Destur-i-Rumi" and a big wagon train were not necessary for this purpose. Probably, it was not without reason that at the end of the 16th century, the stakes were placed on speed, maneuverer, exhaustion of the enemy, and simultaneous evasion of hand-to-hand combat until the enemy ran in retreat.

Having the plunder of enemy goods and lands and the capture of *yasyr* as their main goals, and evading direct combat with the enemy, the Tatars paid much attention to reconnaissance—both preceding the campaign and in the course of it (see, for example: [Bronevsky, 1867, pp. 361–362, 363; Blaise de Vigenère, 1890, pp. 81–82]). Many testimonies of contemporaries remain about the organization and carrying out a typical Tatar campaign for *yasyr* to the "North", to Ukraine or to Russia. It was described by M. Bronevsky and Guillaume Le Vasseur de Beauplan (the description of the Tatar campaign by the latter became classical) [Bronevsky, 1867, pp. 362–363; Beauplan, 2004, pp. 227–235].

However, if the Crimean commanders felt that they had an advantage, the terrain favored the actions of their light cavalry and there were high chances of a victory (or the enemy compelled the Tatars to engage in battle), they would choose to fight. Nevertheless, they sought to use their trump cards with the greatest efficiency—speed, maneuverer and massed firing from their bows. "They begin the battle with the enemy from a distance and very bravely. though do not stand it for long, and make a feigned flight. When the enemy begins pursuing them, [at the first opportunity] the Tatars start firing back at them with arrows; then, having suddenly turned the horses, again attack the disordered lines of the enemy. When they have

to fight on open flatland, and the enemy is at an arrow's flight distance, then they enter the battle not in line, but bend the army and race around in a circle, so as to shoot at the enemy more accurately and conveniently" [Herberstein, 2008, p. 401].

In this fragment the main and most characteristic tactical moves of the Tatars are perfectly described. And if we analyze the testimonies of the contemporaries, about the organization of campaigns and the actions of the Tatar troops on the battlefield, no trace will be left from the commonly assumed opinion about disorganization and disorder of the Tatar army. Indeed, exceptional training and discipline not only of common warriors, but also of the commanders, starting from decurions, are required to maneuver on the battlefield in the way described above, to attack at the proper time, and then to retreat, re-organize and attack again, and to do so several times in a row. The discipline of the Tatars and their readiness to obey the orders of their commanders were emphasized by many contemporaries [Bronevsky, 1867, pp. 366–367; Blaise de Vigenère, 1890, p. 82].

However, not only the cast-iron discipline turned the Tatars into dangerous enemies. They all, except, maybe, for the tufenkji, did not know the regular military training and drills, that were being gradually implemented in the European armies in those times. However, the lack of the latter was well compensated for by vast experience of regular raids and "involvement" of both common Tatar warriors and command corps in battles. Guillaume Le Vasseur de Beauplan wrote about it vividly and figuratively, for example, emphasizing the

A Tatar warrior of the late 15th century, the first half of the 16th century. Illus. by A. Krasnikov

coordination of actions by even the smallest groups of the Tatar warriors [Beauplan, 2004, pp. 245, 249, 251]. This "involvement", "habit" to wage war, reducing the risks of damaging the fighting capacity of the army by avoiding "general battle", the Prussian military theorist C. von Clausewitz saw as uncoordinated work of the military machine and its single elements [Clausewitz, 2002, pp. 116–117].

The habit to wage war and discipline, extensive experience, readiness to suffer all hardships of war, excellent skills in managing their main weapon, the bow, outstanding skills in horseback and trick riding, made of the Tatars extremely dangerous enemies. It is also worth adding that the Tatars lived in a natural fortress. Hundreds of kilometers of waterless and deserted steppe were much better protection for the Crimeans against the Russians, Poles and Lithuanians, than fortress walls and ramparts. For a long time it was the Tatars, and not their enemies, who chose time and a place for the attack, the Tatars, and not their enemies, had

the initiative and imposed their will and battle plan on the enemy. And if the Crimeans made no mistakes in the beginning of, and during their military actions, it was extremely hard to fight against them. As Guillaume Le Vasseur de Beauplan smartly noticed, the war against the Tatars could be won by the most cunning, not the strongest, and to compete with the Tatars in guile and ability to wage small war was very difficult [Beauplan, 2004, p. 249].

And now about the last, about the ability and willingness of the Tatar society to effectively use military force. The belligerence of the Tatars, their desire and readiness to be at war was emphasized by all contemporaries. Thus, Blaise de Vigenère wrote that "... they (i.e., the Tatars.—P. V.) do not recognize any other occupation except war, i.e., sudden raids accompanied by murders and plunder..." [Blaise de Vigenère, 1890, p. 81]. Founded by the saber, the Crimean Khanate supported its existence by the saber as well. However, was the warlike character of the Crimean Tatars their inherited quality, or a necessary condition for the existence of their society and state? Interesting observations, allowing us to answer this question, were made by N.N. Kradin. He wrote that "ecological and economic adaptation of nomadism was far from being complete. On the one hand, climatic stress, extensiveness of cattle breeding, impossibility to introduce technological innovations and other causes ... made the received surplus product unstable in many ways. On the other hand, having adopted nomadic cattle breeding, the nomads nevertheless did not lose the need to consume vegetable agricultural foods..." Besides this, the historian noted, though "the nomadic cattle breeding in itself is a rather independent and balanced type of adaptation in arid zones", still, "... such adaptation compels one to do without many things. The way of life of "pure" nomads is always poorer, than of the nomads using additional means of subsistence..." Transition to other ways of living, first of all to crafts and agriculture, was a serious problem for the nomads, because "... the refusal of a pastoral way of life was considered by the nomads as an extremely undesirable alternative ..." [Kradin, 2002, pp. 95–96].

Dependence of the nomads on farmers was also emphasized by some other experts, for ex-

ample, T.J. Barfield, A. Khazanov, T.D. Hall [Barfield, 2006, p. 429; Khazanov, 2006, pp. 470–472; Hall, 2006, p. 451]. Meanwhile, agricultural societies, differing from the nomadic as more autarchic and self-sufficient, had very little desire to engage in economic and other contacts with the world of the nomads. The latter, needing farmers, considered their attempts to be fenced off from the nomadic world as an intention to encroach on their independence, ethnic and cultural authenticity. Considering the militarized character of nomadic societies and a specific "barbarous" ethos, inherent to it, as to, however, many other peoples on a similar "barbarous" development stage, (as Tacitus wrote, characterizing the relation of the Germanic peoples to labor, "... it is much more difficult to convince them to plough a field and to wait for a whole year for a crop, than to incline them to fight an enemy and suffer the wounds; moreover, according to their ideas, getting later that which can be acquired by blood, is laziness and cowardice"), it is easy to foresee the behavior of the Tatars towards their neighbors. Attacks on the latter, especially on the northern ones, provided them with what they lacked, satisfied their appetite for "predation", and ensured the survival of the Tatars in case of economic crisis. In this regard, it can be noted that, apparently, after Sahib Giray forced the Tatars living in the Crimea to switch to semi-settled and settled ways of life (see, for example: [Smirnov, 2005, p. 312]), their battle efficiency began to decrease, and the first place was overtaken by the Nogais, who roamed in considerable quantity over the steppes of Taurida in the beginning of the 16th century. They preserved the former way of life and the glory of the most furious Tatar warriors [Fletcher, 1991, p. 97]. It is no coincidence that Devlet Giray's son, Muhammed Giray II, having learned about the death of his vassal, Bey of the Lesser Nogais Ghazi, was extremely grieved as Ghazi "was a stone wall to the Crimean yurt and to Azov", and "kazyev" warriors—"in any war are the first men" (quote after: [Trepavlov, 2005, pp. 286–287]).

Concerning the ideological component of the wars, waged by the Crimean Khanate, we will note that the opposition of the Crimea

against Russia, Lithuania and Poland also had a religious character. All of this contributed to an especially cruel hostility in relations between the Crimea and its northern neighbors. As a prominent Russian military theorist and historian N.P. Mikhnevich noted, "the wars of the peoples of one culture are always more or less indecisive; the wars of those from different ones—always fatal ..." [Mikhnevich, 1911, p. 38].

This is how we see the main and most characteristic features of the development of the art of war in the Crimean Khanate in the end of the Middle Ages—beginning of the Modern times. Characterizing, in general, the development level of the military arts in the Crimean Khanate in the 16th and partly in the 17th centuries, we cannot but agree with the opinion of V. Ostapchuk, who highly appreciated the level of development of the art of war in the Crimean Khanate during the considered period [Ostapchuk, 2001, p. 392]. And though the image

of a Tatar warrior and army of the end of the 15—beginning of the 17th centuries differs from the commonly accepted one, nevertheless, in our opinion, it corresponds to historical reality more accurately and allows us to more or less satisfactorily answer the question: "Why were the Crimean Tatars a serious enemy for their adversaries, possessing larger human, technical and production resources, for so long?". The Crimean Tatars as a society were "organized for war" (after the apt expression of the Russian historian M.V. Nechitaylov used in relation to Medieval Spain), succeeded in creating an effective military machine, which posed a serious threat to its neighbors up to the beginning of the 18th century. And only after the countries of Europe, as a result of military revolution, had acquired mass regular armies, well equipped with modernized firearms and excellently trained, the military power of the Crimean Khanate was overcome, and the Khanate itself lost its independence.

§ 4. Warfare of the Astrakhan Khanate

Ilya Zaitsev

From the scanty information available today, the Astrakhan khans had little armed forces at their disposal (and sometimes, none at all). We always see the Nogais as the army core in all important military campaigns of the Astrakhan khans. On the one hand, the Astrakhan Chinggisids by themselves actively took part in the Nogai infighting. On the other hand, they were employed as allies by competing rivals. For example, when the Astrakhan throne in 1514 was taken by Jani Beg b. Mahmud, he, according to a certain Kiyat Kara-Chura, said to the Moscovite diplomat B. Korobov: "... sent... a person with a missive letter to Chagir-murza¹ to Shiydyak, and to Mamai, and to Kelmamai, to ask them to fight with him against Shigim-murza. And Chagir with his brothers came to him to Astrakhan. And Tsar Zanebek, and Tsarevich Mustofar with his children, and Sultan Hozyak², without waiting

for them, that summer defeated Shigim-murza and took from him an ulus with ten thousand people, but he ran away [Collection of Russian Historical Community, 1884, p. 144]. According to Kara-Chura, the insulted murza Chagir "with his brothers" besieged Astrakhan and demanded from Jani Beg to take the spoils of war from Mustofar, and to send "his children" and "Sultan Hozyak, away from him" [Ibid.]. Jani Beg did not agree with Chagir murza's demand—he did not share the spoils nor did he chase Mustofar and Hazyak out of the city. Chagir "with his brothers" headed for the Yaik, where he was joined by Shigim, defeated by Jani Beg. Shigim tried to make peace with Chagir, but the latter enchained and arrested him in Saray-Jük. By the words of Kara-Chura, murza Mamay, who had 50 people with him, found out about those events and rescued Shigim and set him free. At that time, Hozyak and two sons of Mustofar "from Tsar (Jani Beg. –I.Z.) retreated" and left Astrakhan, "by taking with them only those 10,000 people that had been taken from Shigim, and they went to the field to wan-

¹ Nogai mirza Alchagir

² Chinggisid, brother of Shaikh-Akhmed, son of Ahmed.

der" [Ibid., pp. 144–145]. Soon Shigim himself joined them. Hozyak, Shigim and Mustofar's sons headed for Tyumen (Dagestan), where Murtaza (Ahmed's son) and "Tyumen Sultans" put Hozyak on the throne, and Shigim became his emir. Murtaza allegedly relinquished the throne by his own will, referring to his old age. Probably, in Tyumen, a split had occurred between Mustafa's children, Shigim and Hozyak. Hozyak and Shigim "robbed one of Mustofar's sons and sent him off, and Mustofar's other son Sultan Muselem was captured by Prince Shigim" [Ibid., p. 145].

Under those conditions, Jani Beg decided to attack the coalition of Hozyak, Shigim and the "Tyumen sultans". Again he decided to negotiate with murza Chagir. At the end of the winter in 1515, Chagir "with his brothers, came to Astrakhan on blue ice (i.e., possibly before the ice started flowing.—I.Z.), and said to the Tsar: "I come to you again for my brother, and you armor me, to rob Sultan Mustofar with his children and send them off." But Jani Beg did not listen; and Murza Chagir with his brothers quarreled with the Tsar, came up to the town, stayed there for one day, got into a fight, and then went away to their places in Yaik". Siege of Astrakhan by Chagir failed: Jani Beg made a sally and captured about 300 people of retreating Chagir. Later, according to Kara-Chura, "the Volga flowed away" [Ibid.],—that is, the ice started flowing.

From this message, it is clear that the siege of Astrakhan without any support from the river (without the "ship host") was possible for the Nogais (and not only for them) only in the winter, and it was not always successful (the besieged in the fortress could make successful sallies).

That was why the rivaling Nogai aristocrats often chose winter in their plans to conquer the town, when the river was frozen. For example, the Nogai bey Seyyid Akhmed planned his attack against the town, where his enemies, the sons of murzas Agish and Alchagir, settled down in the late autumn of 1536, when "the Volga stops" [Ambassadorial Books, 1995, p. 153].

Volga served as a natural line of defense for the city also from the Crimea. Upon a Crimean threat, the Astrakhan troops could rapidly

move to the left bank of the river. For example, in the summer of 1515 (probably, in June—July), Muhammad Giray arranged a huge campaign against the Nogais and Astrakhan. In letter dated August 3, he wrote to Vasily III: "... this year we went against our enemy in Astrakhan... when we reached the Don, we were met by people who were chasing the horses. They told us that after getting to know about us, the Astrakhan Tsar and murza Shirim crossed the Volga. And we, with the uhlans and the princes discussed it, and the uhlans and the princes said: though they crossed the Volga now, but in winter they will be on this side when our horses are fat and we would have rested" [Collection of Russian Historical Community, 1895, p. 150]. Mehmed Giray decided to postpone his campaign until the end of autumn. On August 30, Moscow received new letters from the Crimea. The Khan's ambassador informed that after the campaign, the Nogais crossed the Volga (to the left bank). However, the delivered letter from Appak, a person close to Muhammad Giray, stated that "Shigim crossed the river, and the Astrakhan troops crossed the river, too..." [Ibid., pp. 151, 169].

Meanwhile, the Astrakhan khans not only successfully resisted the aggression from outside, but also made significant attacks against their rivals. The Astrakhan tactics to oppose the Crimea was to wait when the Crimeans went to Rus, and then to attack. Three months of absence of the host troops was enough time to plunder the Crimean uluses and go away calmly. According to the Crimean "grand tsaritsa", "our Astrakhan enemies are just waiting", for the Crimeans to start a campaign and leave Perekop, "and they say: we know that the Crimeans go to Rus and it takes them three months to go there and back, but this is enough time for us to do what we want. This summer the Astrakhan troops came to us, and murza Asan¹ was defeated and robbed, but at least he managed to escape" [Ibid., pp. 364–365, 361]. The same thing happened in 1521, when the Astrakhan troops needed only 580 men to plunder the peninsula during the absence of the main troops of Mehmed Giray, who was engaged in

¹ Son of Temür, brother-in-law of Muhammad Giray.

a campaign against Rus. They took the Crimean cattle and captured many people. Escaping from the invasion, the Crimeans ran to Kaffa to seek Ottoman protection. On October 8, 1521, Moscow received missive letters from Azov, including the letter from the Moscow diplomat Gubin. His informer Turk Mustafa arrived from Kaffa in Azov on the eve of the Obzhynki Day (the harvest festival) and informed Gubin about the Astrakhan campaign and the death of the Astrakhan khan¹. "And that Turk tells about how the Crimean Tsar, with warriors and children, and all the people left the Crimea a month before the Obzhynki Day. And in the Crimea he left Prince Halil and Murza Nogai Kushmerden. And after that, many Astrakhan people came to the Crimean uluses and plundered them and took many prisoners. And many other people have come running from the uluses to Kaffa" [Russian State Archive of Ancient Acts, f. 89, inv. 1, file 1, sheet 191]. Some better detailed news was provided by the Azov Borhan: "And, Sire, when the Crimean Tsar went to Rus, three Astrakhan battalions (stanitsas) invaded the Crimea: the first had three hundred men, the second—two hundred men, and the third—eighty men. And, Sire, from the Crimean uluses those Astrakhan took many prisoners² and camels and other animals" [Russian State Archive of Ancient Acts, f. 89, inv. 1, file 1, sheet 192].

After coming back from Rus, Mehmed Giray decided to take revenge upon Astrakhan for the damage done. However, to conquer the Astrakhan fortress, without the artillery arm and a river fleet was obviously difficult. Yet, in 1517, Mehmed Giray developed a wide coalition plan (the Crimea—Moscow—Kazan) against Astrakhan, which included conquering the town simultaneously from the river with a ship army. "Murza Avleyar with the army of the Grand Prince from Moscow and with the cannons and muskets on ships went to Astrakhan. Prince Beryuchek went from Moscow to Kazan

to the Tsar in order that the Kazan Tsar send his ship army to Astrakhan, and Beryuchek had to go with that Kazan army to Astrakhan" [Collection of Russian Historical Community, 1895, p. 372]. Also in 1518, Mehmed Giray continued directly connecting the success of the Astrakhan campaign with the participation of Moscow in it. Ilya Chelischev, in his letter from the Crimea (which arrived in the capital in March 1519), informed: "Sire, and Tsar told us: my brother Grand Prince give me help in the Astrakhan campaign, and there will be nowhere for the Astrakhans to hide from us" [Ibid., p. 631].

Mehmed Giray's efforts ended in success. As a result of the campaign in 1523, he conquered Astrakhan. However, soon he was killed there together with his son by Hajji-Tarkhan's Mangits. Obviously, the Nogais were the main power that was chasing the Crimean troops from the city. The situation in the year 1521, when the peninsula was deprived of protection, was subject to Nogai Astrakhan ravages on a much larger scale. While drawing back from Astrakhan, the Crimeans sustained huge losses. Moscow Cossacks, in the latter half of June in 1523, going from Azov to Moscow, according to I.S. Morozov, witnessed the consequences of the Crimean defeat and the unprecedented retreat of the troops from Astrakhan. The Cossacks saw "the Crimean Tatars running away from the Astrakhan Nogai murzas and crossing the Don" and "drowning in the Don" [Russian State Archive of Ancient Acts, f. 89, inv. 1, file 1, sheet 194 reverse; Dunaev, 1916, p. 56; Syroechkovskiy, 1940, p. 57]. Probably, they witnessed that escape already in spring. The Moscow Ambassador in Turkey, I.S. Morozov arrived in Azov on May 19, 1523 and informed: "And, Sire, we saw the crossings when going to Azov for five, and six, and ten days³, the places where the Crimeans had crossed the Don. And, Sire, there are many drowned horses and camels on the bank and in the field, and many scattered wagons. And, Sire, a lot of the Crimean Tatars drowned during the crossings" [Russian State Archive of Ancient Acts, f. 89, inv. 1, file 1, sheet 257 reverse—258; Dunaev, 1916, p. 56; Syroechkovskiy, 1940, p. 57].

¹ Ospozhin' (Sir's) Day—15 August or the Dormition of the Mother of God. Since Gubin's informer, Mustafa arrived in Azov a day before, the Astrakhan campaign and Janibek's death should be dated to a time before 15 August.

² i.e. the captured: "yasyr" is captivity.

³ i.e. on 10–14 May [Syroechkovskiy, 1940, p. 57].

The "Postnikov Chronicler" informed about the figures of Mehmed Giray's losses: the Crimeans lost 130,000, "and by 130 Nogais, the condemned proud tormentor was defeated" [Complete Collection of Russian Chronicles, 34, 1978, p. 14].

Some of the Crimean troops managed to get to Perekop. According to the information of I. Kolychev from the Crimea (his letter arrived in Novgorod Seversky in March 1524), as soon as the Nogais crossed the Don, "those Perekop Tatars started running away from the Nogais from Peter's... days before Christmas to Perekop, some of them were going on foot" [Russian State Archive of Ancient Acts, f. 123, inv. 1, file 6, sheet 48],—that is, the escape of the Crimeans lasted until the end of 1523. Pursuing the sons of Mehmed Giray, the Nogais and Sheikh Haydar (the son of Sheikh Ahmad) moved towards the Crimea. On "Thursday... during Easter Week", Sheikh Haydar with the Nogais came up to Perekop and, probably, not facing any resistance, moved into the depth of the peninsula [Russian State Archive of Ancient Acts, f. 123, inv. 1, file 6, sheet 3]. Azov's Muhammed Beg informed about a three-day battle of Kazy (Ghazi) Giray and Bibey Giray against the Nogais at Perekop and the victory of the Nogais [Russian State Archive of Ancient Acts, f. 89, inv. 1, file 1, sheet 260]. The Nogai–Astrakhan troops were divided into two parts: one besieged Kyrkor (Chufut-Kale, the old khan's residence on the plateau near Bakhchysaray), and the other one besieged Shirin's citadel—the city of Krym (Solkhata). According to Ivan Kolychev, the Moscow Ambassador in the Crimea, the Nogais "stood around Crimea and Kyrkor and took all the horses and other animals" [Russian State Archive of Ancient Acts, f. 123, inv. 1, file 6, sheet 3–3 reverse].

A week later, after Easter of 1523 ("the second Saturday after the Great Day"), from Astrakhan to Perekop came "Memesh, Devlet Bahty¹ and Mamysh Zezevudy and other

princes, murzas², the Tsar court with around twelve thousand", i.e. the rest of the Crimean troops defeated near Astrakhan. On the way to the Crimea, they defeated Murza Kumush³ and Murza Udem⁴ (the first ran away, and the second was beheaded). At Perekop, there was a battle between Sheikh Haydar who came back from Krym, and the Crimean princes. The Crimeans were defeated [Russian State Archive of Ancient Acts, reserve f. 123, inv. 1, file 6, sheet 3 reverse]. Sheikh Haydar with the Nogais were 10 versts away from the town for two weeks, capturing people and taking the cattle. The Nogais managed to capture four Crimean princes: Islam (the son of Mehmed Giray), Shakh Giray and Shakh Islam ("Magmet's children"⁵) and Meret Giray, "the son of Bete-Kiray"⁶. Shakh Giray and Shakh Islam were killed, Meret Giray was set free in Perekop, and Islam was taken hostage [Russian State Archive of Ancient Acts, f. 123, inv. 1, file 6, sheet 4]. Sheikh Haydar "with the Mangits and the Nogais moved to the Don".

However, not only the Crimea, but also Astrakhan itself was under the Nogai threat. The Astrakhan fortress was, probably solid enough to resist the Nogais, who did not have artillery. In March 1524, the Moscow Cossacks informed, from the statement made by the Crimean Tatar, who went to Astrakhan together with Tsarevich Choban and came back five days before their arrival, that Murza Mamai was besieging the town for seven days, "and he was accompanied by Murza Yusup with an oprichnina regiment." And Murza Koshum with Mamai did not go to Astrakhan, as they were not in agreement. And the Crimean Tsarevich Choban came out of Astrakhan and defeated the troops of Murza Yusup and killed even Yusup himself. And Murza Mamai went away from Astrakhan, and is wandering... along that bank of the Volga" [Russian State Archive of Ancient Acts, f. 89, inv. 1, file 1, sheet 270 reverse]. In March 1524, the couriers with the letters from I. Kolychev arrived

² I.e. "ichki"—the domestic servants.

³ I.e. Koshum (Hajji Muhammed), an ordinary prince from a land beyond the Volga.

⁴ According to the Lithuanian birth records, he was a son of Temür ibn Mansur ibn Edigu.

⁵ It is most likely that they were also sons of Muhammad Giray.

⁶ I believe it was Fetkh Giray's son.

¹ Prince Memesh and Devlet Bahty are two different people, not the same as it may appear in the text. See, for example, the letter from Abd ar-Rahman to Vasily III [Russian State Archive of Ancient Acts, reserve 123, list 1, file 6, p. 13]. Memesh is Shirin and Devlet-Bahty is Baryn.

from the Crimea in Moscow. The Russian ambassador informed that five days before Christmas, Saadet Giray at Perekop hosted "the Nogai Murza Tinish, and said to the tsar: The Nogais were besieging Astrakhan for seventeen days, but did not conquer it, and went away over the Volga" [Russian State Archive of Ancient Acts, f. 123, inv. 1, file 6, sheet 49 reverse]. Although these two pieces of news differ in the number of siege days (17 and 7, respectively), this was likely the same event. The siege of Astrakhan by Mamai and Yusuf took place in the autumn of 1523. The crucial factor in the Nogai failures to conquer the Astrakhan fortress was the absence of artillery. Exactly, the need of artillery to conquer the town explained the numerous requests from the Crimean khans to send them cannons and muskets in order to fight against the Astrakhan troops. For example, in the mid 1530s, in the "memoir" to the ambassador Prince Vasily Semenovich Mezetski, sent to Islam Giray, we read: "And the Tsar asked Grand Prince to help with Astrakhan and give me cannons and arquebuses. And said to Prince Vasily: "what the Sire tells me for my Tsar, I will tell him"" [Russian State Archive of Ancient Acts, f. 123, inv. 1, file 8, sheet 131 reverse].

The Astrakhan khans could most probably manage some part of the troops by themselves (mostly, the Nogais) and even gave some military assistance to their neighbors, to whom they were bound with obligations. The letter of the Kazan Khan Safa Giray to the Polish King and Lithuanian Grand Duke Sigismund I the Old, written between 1539 and 1544, mentions some military assistance, provided by Abd ar-Rahman to the Kazan Khan Safa Giray. "I will tell you, Sire, that Murza's son Mamai came to us with 10,000 men with an intention to help me against your enemy, Your Majesty. The Ochtarkhan Tsar Avragman sent me a 1,000 men for support; and they are here now... and it would be nice, from the permission of Your Majesty, to have all the Nogai and Osharfian army at our disposal, and you have to know it" [Mustafin, 1997a, pp. 33–34]. However, taking into account, that Safa was exiled from Kazan at the very beginning of 1546, it is possible to claim that the Astrakhan Khan, who helped him, was Akkubeg. In 1551, this was re-

membered by the sons of the Nogai Murza Yusuf, Yunus and Ali: the Kazan troops kicked the Crimeans out of the town, "but left Safa Giray with a few people. At that time, Mansir Sayyid came from Astrakhan. Some days later, Safa Giray with Mansir Sayyid ran to Astrakhan, took the forces from the Astrakhan Tsar and Prince and besieged Kazan". After an unsuccessful siege, Safa Giray was forced to run to Yusuf [Russian State Archive of Ancient Acts, f. 127, inv. 1, file 4, sheets 43–43 reverse].

In those cases, when in the 1540s—the early 1550s, the Astrakhan fortress was conquered by enemy troops, most of the time this was a result of prepared and well-organized campaigns (the Crimean and Moscow ones). For example, in 1546, Astrakhan was conquered by Sahib Giray. According to Remmal Hoja, the Crimean troops during the campaign numbered from 200 to 1000 tufenkji (fighters armed following the Ottoman model with guns—tufenk), the khan's forces reached 10,000 men (including beys' divisions), and the tribal levy supposedly reached 250,000. After Crimean troops crossed the Don River during an entire day, the city's fate was sealed. Astrakhan was captured thanks to field artillery and tufenkji forces. Yamgurchi escaped, but a part of his escort and entourage were captured and brought to the Crimea with a promise that no harm would be done to them [Tarih-i Sahib, 1973, pp. 97–105; Ostapchuk, 2001, pp. 399–405].

However, it happened so, that the city could have been conquered also as a result of a sudden rapid attack. Probably, this happened at the end of 1549 or at the beginning of 1550, when the town was taken by Moscow Cossacks and occupied for some time [Zaitsev, 2006]. About the Astrakhan garrison, in the late 1540s—early 1550s, we have almost no information. From the charter of the Nogai Murza Ismail, which was delivered to Moscow at the of May in 1552, it is clear that there could have several hundred men. In the missive letter, Ismail asked to have Yusuf's daughter Syuyun-Bike released from Moscow, and among other things wrote: "And the people left Astrakhan and joined Kazi-Murza. And there were about four hundred people. And we do not know if they will go to you, or we will meet them. Guard the Volga up to

Perevoloka, and we—down the river" [Russian State Archive of Ancient Acts, reserve 127, list 1, file 4, pp. 103–103 reverse].

Some additional data about the defense of the fortress could be found in the events of the early 1550s. In April 1554, Dervish-Ali was sent to Astrakhan from Moscow. He was accompanied by voivode Prince Yury Ivanovich Pronsky-Shemyakin "with comrades." The campaign was organised traditionally: three regiments were moving towards the town. A large regiment was led by Pronsky himself and Mikhail Petrov, Golovin's son¹, a front one—by the chamberlain Ignaty Mikhailovich Veshniakov and Shiriay Vasiliev, Kobiakov's son, a guard regiment—by Stefan (Stepan) Grigoriev, Sidorov's son, and Prince Andrey Bulgak Grigoriev, Bariatinsky's son. Yu.I. Pronski was also accompanied by the Vyatke people with Prince Aleksandr Ivanovich Vyazemsky [Complete Collection of Russian Chronicles, 13, 1904, p. 236; Razryadnaya kniga, 1966, p. 144].

The Moscow troops numbered 30,000 warriors. Yu.I. Pronsky was the first who left for Nizhny Novgorod, where all the forces were supposed to assemble. From there, the voivode, "awaiting... all the people", became the head of the united troops at the Apostles' Fast, i.e., before June 29, Peter's Day. On 29 June, the troops on the ships came up to Perevoloka, the presumable border of the khanate. Prince A.I. Vyazemsky and "Danila Chulkov" with the Cossack atamans were sent forward (as the Cossacks were likely to have joined the army on the way). They had to "look for Astrakhan people and catch prisoners for interrogation" [Complete Collection of Russian Chronicles, 13, 1904, p. 241]. The meeting of A.I. Vyazemsky and the first Astrakhan squad took place upstream of the Black Island (near modern Volgograd): the Astrakhan people rowed the boats (or ushkirs) to find out about the army of the tsar and grand prince". The squad was headed by Sakmak (sometimes written as Sakman, or Sakaman)².

¹ In the List of Noble Families, or Razryadnaya Kniga of 1550–1636 his surname is written incorrectly as "Polovin" [Razryadnaya Kniga, 1975, p. 35].

² His name is included as 'Salman' in the manuscript of the Russian State Archive of Ancient Acts, which is most likely the correct variant [Russian State

The Astrakhan squad was defeated, and its leader was captured. The captured informants said that Yamgurchi was downstream of the town five versts away, and all the people "were on the islands with their ulus". The voivodes left behind large ships and went down on smaller ones. Meanwhile, this information was confirmed by statements from new prisoners (on the Black Island). Moving forward, the troops reached "Bolshie Sarai, the location of the Great Horde"; the informants said the same [Ibid.]. Then they decided to split their forces. A.I. Viazmesky's squad was enlarged with elected leaders: Prince David Gundorov, Prince Timofey Kropotkin, Grigory Zhelobov, Danila Chulkov, and some nobility, residents and their children. That squad was headed directly to the camp of Yamgurchi, the "Tsar's camp".

The rest of the troops moved towards the city. Hajji-Tarkhan was captured without a fight on June 2. "There were not many people there at that time". When the voivodes reached the bank upstream, disembarked and left for the town, the residents ran out of it [Ibid., p. 242]. A.I. Vyazemsky, probably setting off little bit earlier than the main troops, arrived at the "Tsar's camp" the same day, June 2. However, he did not find Yamgurchi there. Having found out about the conquest of the town, the khan ran away on horse, and sent his wives and children by boat to the sea. Escaping, the Astrakhan people were running away from the Moscow army by ship and on foot.

Meanwhile, Yamgurchi did not become resigned to the loss of the city. On April 13, 1555, Dervish-Ali's son Yantimer (i.e., Dzhan-Temür, who was probably the khan's kalga at first) sent a letter to Moscow through his messenger Tinbulat (Din-Bulat). The letter informed that Yamgurchi came up to the town with Murza Yusuf's sons Yunus, Aley and Ak Murza. "All those murzas, sent off from the Nagai, Murza Kazy and Crimean Tsar sent together with them, Shigay Bagatyr Aytuvov, the Crimeans and the Yanychans, as well as Tsar Derbysh and all the Astrakhan people. They prepared the squad on the mountains and the Cossacks of the tsar and grand prince with muskets. They fought against

Archive of Ancient Acts, reserve 187, list 2, file 124, p. 6 v.].

them and defeated many of them with cannons and muskets and drive them away". Dervish sent Dzhan-Temür to chase the running enemy. He sent his man to Moscow from the "pursuit" [Complete Collection of Russian Chronicles, 20, 1914, p. 551; Complete Collection of Russian Chronicles, 30, 1965, p. 45]. Despite the fact that there were janissaries in the detachment of Yamgurchi (i.e., the regular Ottoman troops), he failed to reconquer the fortress. The reason was, probably, the absence of artillery. On the contrary, Dervish-Ali made use of artillery very skilfully ("the squad on the mountain").

In May 1555, P. Turgenev informed from Astrakhan about a new attack by Yamgurchi and Yusuf's sons against the city. Dervish-Ali started negotiations with Yusuf's sons, and succeeded in talking them into taking his side. They defeated Yamgurchi ("together with the brothers, Tsarevich Nagaila and his brother Krym Giray, they defeated the Tsarevich")¹, and Dervish brought them onto the left bank of the Volga [Complete Collection of Russian Chronicles, 20, 1914, p. 560; Complete Collection of Russian Chronicles, 30, 1965, p. 255]. The khan had water vehicles and controlled the Volga crossings. On the left bank, Yusuf's sons attacked Ismail. For a short time, the brothers managed to conquer Saray-Jük, and together with it, power in the Nogai Horde.

In the summer of 1555, by Ismail's request, Grigory Kaftyrev, the head of Streltsy, with the Streltsy squad, and Fyodor Pavlov, the Cossack ataman, were sent to the Volga. Their tasks included control of the Volga crossings, and guarding them from Yusuf's sons. Kaftyrev was to contact Dervish and to assist him in case of necessity [Complete Collection of Russian Chronicles, 20, 1914, p. 560]. In August 1555, Moscow received new information from Astrakhan: a messenger arrived from G. Kaftyrev, who was his sotnik captain Stepan Kobelev. The Head with P. Turgenev and F. Pavlov came to the city, but it was empty again. The residents

and the khan ran away, "because they were told a lie that the tsar and grand prince sent the army to kill them all, and they ran out with fear". The Crimean Khan sent three tsareviches and Prince Chegilek "with cannons and muskets" to Dervish, probably, for defending the city.

On May 24, 1555, the Moscow ambassador Leontiy Mansurov was sent to Dervish-Ali. A very interesting piece of information, from the *Razrjadnaja kniga* of 1550–1636, refers to the period of his staying in the lower Volga. According to this source, the Moscow squads faced not one town fortification, but two: "When the tsar's voivodes... came to Astrakhan, there were two towns fenced with reed and covered with ground in Astrakhan". These fortifications were not damaged during war actions. When the main Moscow forces went away, the region acquired the so-called ethno-political division: Dervish-Ali with his followers started living in one town, and the Moscow representative Leontiy Mansurov—in the other one ("Tsarevich Derbysh with Tartars settled down in one town, and in the other town—Levontei Mansurov with the tsar's people" [Book of Noble Families, 1975, p. 36]).

This evidence helps clarify a set of problems: first of all, the complicated question of searching for the pre-Russian city—Hajji-Tarkhan of the 15–16th centuries. Now it is clear that the fortifications of this type (reed fences, covered with soil) simply could not remain preserved until our days. To ruin such a steppe fortress with artillery and fire was very easy. It is clear, why the Astrakhan "conquests" were easily achieved by the well-prepared Crimean troops (of Muhammed Giray, Islam Giray, Sahib Giray) and by the Cossack and Moscow regular troops. Often, there was no siege at all: the residents ran away, and the invaders took the loot and acquired a beneficial strategic position at the delta of the Great River Volga.

Astrakhan, at least, in the first half of the 16th century, could be not just one city, surrounded by stone walls and moats, but a quite primitive annually restored (not necessarily on in the same place all the time) little fortress, which was the khan's residence in winter and a market in other seasons. The Russian stone fortress, the Astrakhan Kremlin, did not have predecessors of

¹ It is undoubtedly Krym Giray (son of OzTemür, grandson of Murtaza and nephew of Akkubeg) who wanted to depart from Astrakhan in 1552 together with Moscow ambassador Sevast'yan to serve the grand prince. We have found out from a chronicle tiding that his brother's name was Nogayli and that neither sultans left Yamgurchi.

the same scale in the delta before. That is why it is relevant to mention the message of P. Nebolsin about the existence of some ancient fortifications around the modern town. He wrote the following about the town on the right bank of the Volga, "On the seventh mile above the settlement of Solianka, exactly there, where now there is a place called Streletskaya Vataga... The Tatar name of this place is Kuyuk-Kala, which means Burnt Townlet¹. They say that Yamgur-chi had his summer residence here" [Nebolsin, 1852, p. 58]. It is quite tempting to identify this town with the place L. Mansurov lived.

An actual diarchy (Mansurov-Dervish) in the lower Volga, expressed so vividly in the presence of two residences, two Astrakhan settlements, the khan's and the Moscow governor's, could not but result in open confrontation. The governor, in his letter to Moscow, delivered on March 5, called his little fortress "Little Town on the Volga". Does it mean that Dervish's residence, the "Great City", was not at the Volga? According to the *Razrjadnaja kniga*, the first fights between the supporters of Dervish and the Moscow "Tsar people" took place again in that same year of 1554, immediately when the main Moscow forces went away. However, this is most likely a mistake, and the events should be shifted one year forward. In autumn, Dervish-Ali "talked to the Nogais in order to proceed with them to the tsar people, to Levonty Mansurov. And the Tatar Nogais came to Astrakhan and besieged the mountains. When the wind started blowing towards the city, the Tatars brought oil to the town and burnt the mountain. And all the tsar people ran out of the town from smoke to the ships, but the ships were damaged. And Levonty with seven people went to the Upper Burg" [*Razrjadnaja kniga*, 1975, p. 36]. The Nogai tactics were quite intelligent and, the most important, traditional. Later, in 1587, asking the Sultan to arrange the campaign against Astrakhan, the ambassador of the Nogai Prince Urus in the Ottoman Empire said: "...and we, all the Nogai Horde will start coming to Astrakhan and bring wood and reed". Did that fortification not received the name

"Gorely Gorodok" ("Burnt Townlet") exactly after besieging L. Mansurov in it?

Besides that town, S. Gmelin and P. Nebolsin mention one more town, called Chungur, located half a verst away from the settlement of Mashaik, seven versts from Astrakhan, behind the Cossack Knoll. The silver and golden "Tatar" coins, decorations, etc. were found also in that place [Nebolsin, 1852, p. 59]. It is easy to imagine the size of the little fortress of L. Mansurov, if it was possible to simply smoke people out of there. Interesting is also the mentioning of one more fortification within the conquered khanate—"the upper burg". Probably, it is an intermediate foothold, made by Pronsky, for example, in Perevoloka.

Thus, the military history of Astrakhan (as well as political) is tightly connected with the Nogai military history and military science. Not once the Astrakhan and Nogai troops reached the Crimean peninsula and plundered it by capturing people and the cattle.

In general, some scanty data of the sources give us some grounds to say that the pre-Russian Astrakhan fortress could resist short Nogai sieges (for example, the one of Murza Chagir in winter of 1515 or the one of Mamai and Yusuf in autumn of 1523), arranged by the Nogais in winter months, when the Volga was frozen and the town could be totally blocked. However, the fortress was not able to resist regular troops with artillery. Astrakhan was especially vulnerable when the rival made use of a river fleet. That was why the Crimean khans were often eager to get the support of Moscow and Kazan ship armies during their campaigns against Astrakhan. At the same time, as a rule, the Crimean expeditions were also successful, in which ships were unlikely to be actively involved. Moscow campaigns against the town in 1554 and 1556, when the residents simply ran out of the fortress, prove that the town could not resist well-organized sieges. The garrison of the Astrakhan fortress could be approximately estimated at several hundreds of people. It is also possible to surely claim that: besides some scanty troops on the ground, the Astrakhan khans had some kind of river fleet, consisting of galley boats, similar to Russian ushkuis.

¹ Kōek [Koek] indeed means "burnt" in the Tatar language, which when paired with the word "kala"—"fortress", means "a burnt townlet".

§ 5. Warfare and Military Art of the Nogai Horde

Vadim Trepavlov

The Nogai neighbors were interested in them first and foremost as trade partners, possessing political influence, and military power with a mighty cavalry. It would hardly be an exaggeration to speak of the mounted Nogai warriors as being a standard of typical nomadic warriors for their settled neighbors. In the Muscovite state in the latter half of the 16th century G. Fletcher heard the opinion the Nogais "were best warriors of all the Tatars, but only more savage and ruthless than the others". A century and a half later, the same opinion was expressed by Russian field marshal B.K. Münnich [Fletcher, 1905, p. 83; Thunmann, 1991, p. 47].

Extensive raids of the Nogai cavalry were far from being chaotic movements of pillaging gangs (thus might be characterized only minor attacks of nomadic desperadoes on the outskirts). Major campaigns were preceded by corresponding preparations. Equipping forces against Russia in September 1553, Yusuf bey tried to find out from captive Muscovite messenger S. Tulusupov whether 'he, the bey, could cross the Oka, and subsist near Moscow'. Tulusupov, wanting to dissuade the Nogai potentate, responded to the latter that it could not be done, since in the autumn "the crops would be brought to the towns, and hay would be burned" upon approach of the enemy troops. Then, Yusuf ordered his warriors 'that each of them had various provisions, including 3 old sheep and dry cheese as much as they could carry' [Russian State Archive of Ancient Acts, f. 127, inv. 1, file 4, sheet 190 reverse].

During a march, the whole modest way of life of the nomads was defined by military goals. Even spending the night in the steppe, the Nogais thrust the spears in the ground and hitched their horses to them sleeping with their heads resting upon these spears to be able—according to Jean Deluc—to jump promptly on the horses in case of an attack [Jean Deluc, 1879, p. 486]. As a rule, each warrior participating in a campaign had a spare horse with him. Should military actions be in a winter season, each warrior had to bring two to three camels with themselves to the point of assem-

bly (poor ones could have only one camel for two) "so that they would tread the path before the horses, and could easily bear hunger" [Russian State Archive of Ancient Acts, f. 127, inv. 1, file 4, sheet 190 reverse].

The people of the Nogai Horde did not have ship-navigating skills, and this absence of ships at their disposal was often used as a pretext by murzas to decline joint participation with the Russians. However, with time, there had appeared some navigational means of ferriage, and Evliya Çelebi in the description of the Dniester's crossing by the Budjaks in 1657 testified that they had been sailing "using ships, rafts, inflated wineskins with lightning-like promptness" (the wineskins also contained weapons and ammunition) [Evliya Çelebi, 1961, p. 52]. Although, in general, the nomads tried to do without ships, especially during surprise attacks.

A detachment usually consisted of members of one el. If, however, murzas at their meetings resolved to defend the borders by forces of the entire Horde, some of them were assigned at the head of their els in a guarding troop—*karaul*—and in case of expected enemy attacks, a vanguard troop was also formed—*chardaul* (*yartaul*).

Military detachments were subdivided into centuries (centurions were mentioned in the documents), and, probably, the tens headed by proper ten's commanders, the Yurt Tatars near Astrakhan were further subdivided into the fives—*tabuns* (from the Mongolian *taban* 'five').

A banner denoted participation in a campaign. In 1632, Russian military leaders sent to wage war with the Poles reported to the tsar that murzas in a regiment formation had joined their vanguard regiment with their proper banners [Russian State Archive of Ancient Acts, 1632, file 1, p. 197]. The banners were carried by specially assigned banner-bears (*bairakchi*? *tugchi*?). Judging from the epic, the Nogais had a banner consisting of white and yellow colors [Sikaliev, 1994, p. 125]. In the 18th century, the Crimean Nogais had on their banners a sign of the Horde's predominant family [Felitsyn, 1886, p. 13], i.e., probably, a senior murza's

family tamga. As an act of particular benevolence, the Ottoman sultans sometimes sent over the Volga their imperial banner, sandzhak.

The Nogai armament set was not particularly original compared to other medieval nomads. Travelers noted an ordinary armament set describing them bearing swords, quivers, whips, riding horses with a sword and a quiver attached to a belt, and armed with swords, spears, and bows with arrows [English travelers, 1937, p. 250; Evliya Çelebi, 1979, p. 54]. S.Sh. Gadzhieva noting the scarce and recent (late 19–early 20th centuries) nature of existing ethnographic data in this respect, wrote that the same quiver, arrows and a big cedar bow had been mentioned in the folklore [Gadzhieva, 1976, p. 162]. The main source in this case was represented by laconic descriptions in missive letters and notes.

Apart from that, an exhaustive and generalizing description of the armament used by the Nogai warriors was accomplished by A.I.-M. Sikaliyev. According to his information, the warriors wielded wide bows (*ken ai*) in special sheaths (*sadak*) and damask arrows (*bonlat ok*) in quivers (*kalshan*, *kandavyr*, *karamsak*). Each type of arrows required a specific bow [Sikaliyev, 1994, pp. 123, 124]. According to the Nogai written affairs, the Nogais used Crimean and a Yadrin bows (the Crimean bow was finished with gold, having in *saadak* the Yadrin bow and 30 arrows, and the Yadrin bow was made of black buffalo bone, and a golden quiver had thirty arrows) [Russian State Archive of Ancient Acts, f. 127, inv. 1, 1616, file 2, sheet 4, 1628, file 3, sheet 68, 1641, file 4, sheet 121].

An interesting source has been provided by inventories of the property confiscated in 1628 from the Moscow tower-rooms of princes Vasily Araslanovich Urmametev and Petr Kanmurzich Urusov accused of intending to leave for the Crimea. Amid other objects, there were mentioned a broadsword finished with silver and with removed rim, a common saber, a rimmed saber with a damascus strip, and 27 arrows [Russian State Archive of Ancient Acts, f. 127, inv. 1, 1628, file 3, sheets 68, 75, 76].

Epic cold steel arms included a curved sabre (*kaiky kylysh*), a sharp sword (*otkir aldaspan*), a sharp knife (*otkir pyshak*), a dagger (*kynzhal*)

and a *baldak*—a certain type of a cold steel arm, and all these weapons were kept in sheaths (*kyn*). Besides, there were included a steel lance (*bolat syungi*), a cloud-reaching spear (*bulytka etken naiza*), and a pole with a hook for dragging enemy horsemen off saddles (*sapaldas*); all these weapons were provided with safety caps put on the tips. For close-combat fighting, other arms were used, including hammers, hooks and hatchets. Legends mention a crescent-shaped axe with a golden handle (*altyn saply ai balta*) and a mace (*soiyl*). The Nogai old men recall the wide use of a curved swords and a moon-shaped axes in the ancient times.

Protective armour of the legendary batyrs included helmets (*tuylga*), various types of chain-mails with metal sleeves (*temir kon, kyube, aimavyt, beren, savyt*) and without sleeves (*ensiz*), scapulars (*kuyavke*), shields, (*kalkan*), felt shirts worn under chain-mail (*tegelei, tegelei kebenek*). Metal armor was fabricated of steel, rarely of iron.

This list may be completed by cuirasses which, of course, only very rich murzas could afford. Among the armor confiscated from Urmametov and Urusov, there were Circassian cuirasses, worn armor, and two cone helmets. Uraz Muhammad bey owned and demised a cuirass called *iyubat*, and his nephew, Karagöz Mamai, in his promises during negotiations with Kazaevs mentioned a very expensive cuirass [Russian State Archive of Ancient Acts, f. 127, inv. 1, 168, file 1, sheet 90; 1630, file 3, sheet 7]. Aristocrats possessed also other attributes that differentiated them from the common people. Thus, a "damascus shield" of murza Aka b. Baiterek was lined with silk and black velvet [Russian State Archive of Ancient Acts, f. 127, inv. 1, 1641, file 4, sheet 121].

Objects of everyday use in a nomadic life applied in warfare included a six-girth hair noose (*alty kulash kyl arkan*), leather ropes for binding of captives (*esirs*), and a whip (*kamshi*).

Armor and weaponry on a par with a war-horse were regarded by the epic warriors as their dearest property, which had been sometimes inherited from the father. The price of good weapons was very high—a good bow was equal in worth to a horse, and a quiver of good arrows—to a foal. The warriors practically nev-

er made their ammunition by themselves preferring to purchase it from the specialists, in particular, from bow- (yaishi) and arrow-makers (okshi).

The Nogais knew very little about firearms. In the 16th century, beys and murzas several times asked from the Ottoman sultans and Moscow tsars for cannons and muskets together with gunners. It is hardly unlikely that only the Russian state inducted the Nogais into the art of firearm fighting, as it is claimed by some authors. Even before the active help given by Moscow to Ismail, the latter commanded several musket gunners [Russian State Archive of Ancient Acts, f. 127, inv. 1, file 5, sheet 20 reverse] coming, apparently, from such Muslim countries as Turkey, and Transoxania or Iran. In the Altyoul uluses in the 1620s, there were tens of people armed with muskets, which can be explained by active relations of the Altyuls with the Uzbek Khanates. Although, of course, most of the warriors practiced archery. The same insignificant use of firearms among Nogais continued also in the 18th century.

It is obvious, that with such armament set, the Nogai army triumphed in steppe battles, but was powerless before fortified walls. This was gloatingly mentioned by the Kazan chronicler describing Sahib Giray's campaign to Kazan accompanied by the allied Nogai troops in 1546: "Having fought and taken captives in many lands, we have no battering rams at all. Who can conquer this place solely with arrows without guns, if not with the help of God?!" [Complete collection of Russian Chronicles, 19, 1903, p. 50]. Nogais of course understood this, and in 1551, in reply to a proposal made by Ivan IV to take part in the wars with Astrakhan,

A Tatar warrior of the late 15th century, the first half of the 16th century. Illus. by A. Krasnikov

Ismail frankly stated: They could not take it, since they had neither guns, nor muskets, nor ships. [Russian State Archive of Ancient Acts, f. 127, inv. 1, file 4, sheet 37 reverse].

The population of the Nogai Horde totally lacked urban development skills. Saray-Jük, as well as almost all known towns of the Golden Horde, was built in the traditions of the Central Asian Muslim architecture. These traditions were lost to the Nogais. Foreigners—hirelings—constructing palaces and mausoleums for them adhered to the construction canons of Khwarezm and Transoxiana. Whereas, when the murzas decided to build towns by themselves, they hired not stonemasons from Urgench, but Russian carpenters and wood construction masters, preferring construction of stockades to the erection of cob walls, and building of log towers instead of marble palaces. Waiting for the supplies, they tried to make fortifications as they saw it fit—with wattles and delimitation mounds [Russian State Archive of Ancient Acts, f. 127, inv. 1, file 2, sheet 223; file 5, sheets 4, 84 re-

verse]. Ismail openly declared to the tsar that the Nogai people were unskilled in urban construction [Russian State Archive of Ancient Acts, f. 127, inv. 1, file 5, sheet 48].

Nevertheless, when a need presented itself to siege and assault fortifications, the strategic thinking of the steppe warriors succeeded in finding solutions. In 1554, the Nogais came to Astrakhan, gathered large amounts of wood, and then, when the wind blew towards the town, the Tatars brought oil and set fire to the town. The people fled from the town "because of the smoke" [Razrjadnaja kniga, 1975, p. 6]. Thus certain siege practices were used in Desht-i Qipchaq, but, apparently no special siege mechanisms, let alone significant artillery, existed. Certain fortification stratagems were also used in purely nomadic wars, when one of the sides of the conflict, with a view of overwhelming enemy forces, surrounded their own positions with a wagon ring putting the covered wagons/kibitkas edge to edge together (this is what the Altyoul murzas did in 1628, when they had learned about the approaching Kalmyk cavalry).

The information regarding military actions with participation of Nogais is very scarce. One of the surviving records concerns a quite detailed description of their conflict with the Yaik Cossacks. Its direct cause was a Cossack raid in 1586 on the nomads near the ruins of the Nogai capital Saraychyq on the Yaik (Ural) River with mass killings of people and plundering of cattle. During the attack, two hierarchs-sayyids (high priests) were killed, and Urus bey's sister was taken captive. The bey called out the irregular nogai troops to attack the enemy with maximum force ("together we shall show the Cossacks what we are worth!"). Nuradin (governor of the Volga Region) Sayyid Akhmed instantly obeyed and went with the troops of the right wing from the West. The plan was for the army of the Urus to approach from the other side. Both of the Nogai leaders detained the Russian ambassadors until the end of the campaign. The campaign was aimed not only to defeat the Cossacks, but also to destroy their Goluboy Gorodok. The nuradin came to Yaik River significantly earlier than the Urus. For eight days together with the sons of bey Khan and Dzhan Arslan he skirmished with the

Cossacks, but failing to wait until the arrival of the forces of the left wing, he retreated. After a while, the bey himself with a large army came to Goluboy Gorodok. The insular township had been blockaded, but its inhabitants were not about surrender ('they were surrounded by water and ships, and had horses and cattle, so they were not afraid of hunger'). The Cossacks fought successfully, firing from wooden, hastily made guns, using in them stones, bones and other weights as ammunition. The Cossack legends add that at night, the Nogais tried in vain to get to the enemy by boats. When he realized that it was not possible to starve the fortress into surrender, Urus ordered firewood be brought in, to set the wooden walls on fire. But a heavy rain foiled this plan. The rain was such that both parties were reluctant to fight. The Nogais "became wet and started to dry themselves". At this moment, the Cossacks, divided into six groups, attacked the bey's troops, defeated them, and drove away his herds to the steppe. Admitting defeat, Urus retreated [Russian State Archive of Ancient Acts, f. 127, inv. 1, 1585, unnumbered file, sheet 3, 1586, file 1, sheets 21, 22, 32; file 5, sheets 2, 3]

Despite comparative drawbacks and objective limitations in their weapons and armor, the outlook of the Nogais in the 15–16th centuries in the world perspective of military development was quite deserving. Their mobile cavalry, consisting of matchless archers, spear and saber warriors, presented itself as a serious force for all nearby rulers to consider and exploit. The striking example of this constituted in persistent persuasion of the Nogais, on the part of the Russian government, to take part in wars against the Poles and Germans.

Most often, the troops from the Nogai Horde went to the Muscovite state in an organized manner based on the decision of a bey, senior murzas, or nobility meetings. Initiative of non-noble Nogais willing to fight together with Russians was a rare thing, and usually came from the Nogai ambassadors. The ambassadors performed their diplomatic duties (entrusted charters, attended the audiences and held negotiations) and then, presented themselves to go to war accompanied by a retinue of tens of horsemen. The Russian side could

not find any reasons for objection, although this practice, consisting in the disappearance and later appearance of the ambassador delegations, caused irritation at the bey court.

Apparently, the first mass participation of the Nogai cavalry in the military actions of the czarist troops was in January 1563, when in an extensive campaign on Polotsk (in the course of the Livonian war) Ismail-bey's ambassadors and four murzas, grandchildren of kekovat Uraz-Ali took part¹. Before that, military collaboration between Russians and Nogais consisted mostly in coordination of actions in fighting against third countries—above all, the Crimean and Astrakhan Khanates. The periods of most intensive use of warriors from the trans-Volga steppes by Moscow dated back to the 1560–1570s during its tense confrontation with the Polish-Lithuanian Commonwealth. Following enthronement of Urus-bey in 1578, relations between Russian and Nogais suddenly deteriorated, and the latter practically ceased to send their people to the tsar. In the first third of the 17th century, i.e., during a period of the Horde's vassal dependence on Russia, the bey's cavalry was sometimes asked to help in settlement of local political tasks, mainly in the North Caucasus.

In the process of active military collaboration during the most dramatic phase of the Livonian War, a certain format was developed regarding engagement by the Russian government of military aid from the Nogai Horde. The demand stated the number of militants needed, date of their arrival to Moscow, and involved scene of military activity ('Germans', 'Lithuanian king's land', 'Swedish king's land') with a standard formula in the conclusion—"As soon as they get back from the war, we reward them and send them to you" [Russian State Archive of Ancient Acts, f. 127, inv. 1, file 8, sheet 93, 93 reverse, 116–117, 293–294 etc.] The worse the situation was at the Lithuanian front, the more persistent became the demands for sending in new troops. Using increasing infighting in the Horde of the Great Nogais, the Ambassadorial Order

addressed the most influential murzas individually. More often than not, these inquiries were accompanied by dissident and clearly instigator caveats: ('Even if the prince (i.e. the bey) refuses to send troops, you might still send your people without the prince') [Russian State Archive of Ancient Acts, f. 127, inv. 1, file 9, sheets 242, 252, etc.]. The same motifs were behind frequent exemption from all the trade duties on the goods brought in by the Nogai merchants.

The Russians usually asked Nogais to send two to three thousand horsemen, but Nogai authorities never sent to Russia more than two thousand men simultaneously. The highest number found by me in the archive documents is 1957 men, including murzas, Cossacks, and other military men [Complete Collection of Russian Chronicles, 14, 1910, p. 391].

However, it can be assumed that insignificant (compared to enormous number of state mobilization) Nogai detachments were rather a moral than military factor on the western fronts. Regardless the number of sent militants, it was desirable that the men were brave and with their horses, so that 'both you and tsar's enemies could see this clearly' [Russian State Archive of Ancient Acts, f. 127, inv. 1, file 8, sheet 257 reverse]. The very fact of nomads' participation in the Muscovite army, as well as rumors in this respect, created psychological discomfort and brought confusion in the enemy ranks. The Russian side intensified the effect of Nogai's involvement, exaggerating tenfold their number during negotiations with their western partners. In May 1566, the clerks were told to announce to the arrived Lithuanian ambassadors that murzas served the tsar on a permanent basis in a number of twenty to thirty thousand, and even more, in whatever number was necessary. In three years, the ambassador going to the Polish-Lithuanian King Sigismund-August was instructed to mention the same phrase but already with clarification: "The number of forty to fifty thousand", and the same was repeated in 1571 [Monuments, 1892, pp. 344, 470, 782].

European observers paid much attention to the Turkic component in the Muscovite army. Western visitors had been the first to notice the fundamental difference consisting in that the trans-Volga warriors largely served

¹ However, the first case of the Nogais' participation in a war was apparently a result of Ivan IV's satisfaction of the request from Ishterek, Ismail's ambassador, who asked to take part in the campaign against Lithuania in October 1562.

in Lithuania, Poland, Livonia and on the Sweden's borders, since Russian authorities used Tatars against Poles and Swedes, considering it irrational to use them on the opposite border (i.e., on the border with the Tatar yurtas, with Crimea, above all) [Fletcher, 1906, p. 64; Staden, 1925, pp. 61, 62, 116]. These precautions were caused by mass migration from the Nogai Horde to the Crimea Khanate. By the end of the 16th century, the Crimean cavalry consisted mostly of Nogais. Bringing Nogai troops into Russian service against their fellow countrymen from the enemy camp on one battlefield seemed to the government and voivodes as too risky.

All the abovementioned political factors, tactical reasons, as well as foreignness of murzas, with respect to the Russian nobility, determined their place in the military hierarchy. In most cases, murzas with their troops were included in the acting army outside the regiments' list. There are only solitary mentions of Nogais' participation in battles, and campaigns with vanguard or yertoul regiments. Due to a strict parochial system of assigning commanding duties, no place was found for the Nogai noblemen. Only baptized Nogais possessing a title of a prince (by the time of the Livonian War, these included Kanbarovy and Sheidyakovy Princes¹) could be in charge of

large tsarist troops.

The Nogais' interest in the military actions pursued by voivodes lay in the right of free-looting, and a possibility of gaining trophies and captives accorded by the Russian administration. Mercantile sentiment increased proportionate to the sharpened crisis in the Nogai Horde with shrinking of nomad territories and number of cattle resulting in empty trade ways. More and more murzas were getting poorer, becoming unable to exist in habitual conditions of the cattle-raising economy. Mounted raids in Polish-Lithuanian lands under a formal guidance of tsarist commanders gave the murzas a chance to get rich, and hence attract more subordinate ulus people. In the period of political collaboration between the Russians and Nogais, beys did not object to these aspirations of murzas and sent them to Russia without any reservations, sometimes mentioning to the tsar the real reason of their participation in the war—"the Ahmed murza is very poor, and he asked me to send him to your war" [Russian State Archive of Ancient Acts, f. 127, inv. 1, file 6, sheets 219–219 reverse].

Tutayevich Shiydyakov of the Nogai' [Karamzin, 1989, p. 112]. In that campaign Sheydyakov led the advance regiment. He occupied this same voivode position during the Baltic expeditions of the 1570s. During the conquest of the city of Cēsis in 1577 the prince's colleague-in-arms in command over the regiment was Nikita Romanovich Yuryev, who was also a voivode and the forefather of future monarchs. In 1576, after returning from the Livonian campaign, tsar Ivan appointed P. Sheydyakov as governor of Pskov. His career ended approximately at the beginning of the 1580s: the *Razrjadnaja kniga* contains recorded information from 1580 about disputes between Sheydyakov and prince M. Katyrev about voivodeship in the regiment of the right-hand.

Another notable character of this epoch is Afanasy Sheydyakov. Similar to Pyotr Tutayevich, his Nogai name is not known. He is mentioned for the first time in the *Razrjadnaja kniga* in a recording from 1574 as N. Yuryev's partner in voivodeship in the large regiment during the Livonian campaign. He took part in the Baltic campaigns, and in 1577–1580 he was governor of Yuriev-Livonian. In 1585 he was the commander of the left-hand regiment of the army of grand prince Simeon Bekbulatovich, which was sent to fight Bathory. The last mention of him is dated 1598 when B. Godunov was sent to Serpukhov to repel the Crimean khan's raid, he remained 'in the tsar's camp, near fires' as a commander [Razrjadnaja kniga, 1974, p. 134; Razrjadnaja kniga, 1994, p. 34].

¹ In fact, only one member of the Kanbakharovs is known—Ivan IV's fellow soldier during the Livonian War, who was especially active in the latter half of the 1550–the beginning of the 1570s. His Nogai name was Uraz-Ali, and in Russian he went by Ivan. The first-ever case of a parochial dispute between the purely Russian aristocracy and the Nogai migrants is actually related to him. In 1565/66 Ivan IV deployed his army at Velikiye Luki and Toropets in preparation for the campaign against Lithuania. Princess I. Shuysky, G. Kolychev-Loshakov, and 'Ivan Okhmetovich Kanbarov' were appointed to a large regiment. The voivode of the right-hand regiment of A. Shein refused to obey Kanbarov, 'did not accept his orders,' and did not come to the meeting he had organised as he did not consider Kanbarov noble enough. So the latter had to come to Shein himself and ask him to deploy his troops in Toropets, according to the approved disposition [O sluzhbakh (About services), 1826, p. 412].

The earliest mention of prince Pyotr Tutayevich Sheydyakov is found in the description of Ivan IV's campaign against Novgorod in December of 1571, during which the campaign Duma of the tsar consisted of boyars and princes, 'the most noble among them being Pyotr

§ 6. Warfare and Military Culture of the Siberian Khanate

Yuli Khudyakov

Warfare of Siberian Tatar Khanate warriors in the late Middle Ages.

In the late Middle Ages, the Siberian Tatar Khanate played a crucial role in the military and political history of Western Siberia. After the Golden Horde's collapse, the Siberian Yurt became the largest Tatar state in terms of territory, and covered the steppe and forest-steppe areas of Western Siberia from the Urals to the Altai mountains. The Siberian Khanate controlled the vassal states of Ob-Ugrians and Selkups in the northern taiga of Priobye and Pritomye. Major trade routes from Eastern Europe and Central Asia passed through the territory of Siberian Khanate. By the time the Siberian Khanate was formed, the Siberian Tatars were divided into their main ethnic groups. The settlements and cities located on the territory of the Siberian Khanate became both trade and craft centres. Siberian Tatars followed one of the major world religions, Islam, and adopted the Arabic script. The leaders of the Siberian Khanate were in close contact with the ruling elite of the Kazan Khanate in the Volga region, the rulers of the Nogai Horde in the steppes of Cis-Ural region and Kazakhstan, and the related dynasty of the Khanate of Bukhara in Central Asia. They pursued an active foreign policy on the western borders of their state. During a certain historical period the Siberian Khanate rulers of the Taibugid dynasty were in vassalage to the Moscow Tsar and agreed to pay tribute in fur. However, when Khan Kuchum from the Shaybanid dynasty returned to the throne he stopped paying tribute, and the Siberian Tatar military troops began conducting raids throughout the Ural mountains on the border-lands of the Muscovite state. Due to impassable roads across the Ural mountain range, these raids did not result in any major military conflicts [Khudyakov, 2007, p. 238–239]. According to existing sources, in the late Middle Ages the Siberian Khanate had certain opportunities for progressive growth,

as well as noteworthy human and economical resources and a strong military presence [Bobrov and others, 2010, p. 30–31].

One of the main factors that kept the Siberian Khanate in existence was its comparatively well-developed warfare for the late Middle Ages. Information about how the Siberian Khanate's warriors fought is mostly compiled in Russian written historical records and graphic sources, as well as in materials from the excavations of Siberian Tatar monuments [Miller, 1999, p. 335–353; fig. 8, 11–13; Dergacheva-Skop, Alekseev, 2006, p. 99, 124, 152, 157; Siberian chronicles, 2008, p. 469, 471–474, 479, 492–505; Pignatti, 2010, p. 212; Molodin and others, 1990, p. 43–78; Konikov, Khudyakov, 1981, p. 184–188; Khudyakov, 2001, p. 252–263].

Previous knowledge gleaned from the analysis and classification of the weapons excavated from archaeological monuments demonstrates that the most important Siberian Tatar weapon was ranged, i.e. the bow and arrow [Ibid., p. 252–273]. Tatar warriors were armed with composite bows of various types. These included bows with a single frontal oar-shaped backing common to the Mongols (Fig. 1, 1, 10). They also used bows with shoulder and middle frontal backing that were known to be used by the nomads of Southern Siberia. Along with composite bows, the Siberian Tatar warriors also used all-wood bows made of several parts glued together and without any bone or horn backing [Khudyakov, 2007, p. 240]. Tatar archers used metal or bone-tipped arrows to hit the target in combat. Siberian Tatars preferred using flat asymmetric rhombic arrowheads with an obtuse tip, as well as sharp-tipped warhead arrows with separate penetrating warhead and extended neck (Fig. 1, 17–20). These types of arrows were widely used by the entire nomadic world of the Eurasian Steppe belt in the High and Late Middle Ages [Khudyakov, 2001, pp. 256–257]. Arrows with other shapes of flat

Fig. 1 Weapons of Siberian Tatar warriors:

- 1, 10—bow grips; 2, 11, 12, 14,
17–20—arrowheads; 3, 4—pallashes;
5—sabre; 6–8, 13—spearheads;
9, 16—daggers; 15—axe; 21—helmet

metal tips, such as extended-rhombic with an obtuse tip, long rectangular with an obtuse tip and parallel sides, section arrowheads with a rounded tip, double-tipped fork-heads and tomars with a blunt tip, were less common. These arrowheads were designed to inflict deep bleeding lacerated wounds that would quickly disable the enemy (Fig. 1, 12). In order to pierce special metal shields, armour and ring mail, Tatar archers used small piercing arrowheads with a rhombic cross-section (Fig. 1, 11, 14). These featured either a long pentagonal feather, separate warhead, or extended neck. These arrowheads were designed to pierce armour and ring mail. Arrows with various arrowheads, lens-shaped in their cross-section, were multipurpose and could be used against enemies protected by metal or light armour [Khudyakov, 2007, pp. 242–244]. There were quite a lot of bone arrowheads found among the archaeolog-

ical monuments of Siberian Tatars, and they are generally considered to be hunting weapons. However, the discover of these arrows in human skeletal remains from different historical eras prove the fact that they could be used in war as well as for hunting [Molodin and others, 1990, p. 62]. The Siberian Tatar supply of metal arrowheads was much more versatile than those of other nomadic people at war in the late Middle Ages and was surpassed only by the Mongol one [Khudyakov, 2007, p. 242]. The main supply of the Siberian Tatar armaments consisted of smaller-sized flat arrowheads. They were common for the Tatar archers and quite an effective weapon against lightly armed enemies. However, these arrows were not effective enough to defeat a well-trained and heavily armoured enemy armed with firearms on the battlefield. In the Russian sources, Siberian Tatar arrows were called 'tmochislennyi', which means countless [Skrynnikov, 1982, p. 22]. As one of the first historians to study these sources, G. Miller believed bows and arrows to be a 'common Tatar weapon' along with spears and sabres [Miller, 1999, p. 225].

The Siberian Tatar warriors stored and carried their arrows in leather cases called saadak or canted quivers. Bow cases and quivers were made of leather. The surface of these cases was decorated with ornaments and metal hardware. The bows could fit into these cases entirely with the string still attached. Arrows were stored in quivers with their arrowheads inside and their feathers hanging out. They wore these saadaks or quivers on their belts or over the shoulder with a shoulder belt.

The Siberian Tatar melee weaponry consisted of spears, sabres, battle axes and daggers. The spears had four-sided and rhombic iron spearheads with a long sharp tip, long pentagonal feathers and an open-ended bushing (Fig. 1, 6, 8). The miniature pictures of the Remezov Chronicles portray many Tatar warriors holding spears. Some of the spears had Colours with one or two swallowtails attached to the shafts [Ibid., fig. 8, 13]. Large solid spearheads were used

as striking spears, and smaller spears could be used as throwing weapons (Fig. 1, 7, 13). In hand to hand combat Tatar horsemen used edged weapons, such as backswords and sabres (Fig. 1, 3–5). Backswords had a long, straight single-edged blade and a straight hilt with a curled crossguard featuring bent spikes and a faceted lining, or with no crossguard at all. Sabres had a long, slightly curved blade with a sharp tip and double-edged elman without a crossguard, and a hilt that bent towards the blade [Khudyakov, 2007, pp. 244–245]. The miniature pictures of the Remezov Chronicles portray some Tatar warriors with sabres in their hands. Some of the warriors are also shown with sabres hanging from their belts in sheaths [Miller, 1999, fig. 8, 11, 13]. Based upon the findings of edged weapons, Siberian Tatar warriors could face enemies in close and hand to hand combat while being either horse-mounted or dismounted.

As a cutting weapon they used socketed battle-axes with a low poll and an eye that widened towards the blade (Fig. 1, 15). Siberian Tatars most likely adopted these axes from Russians during the reclamation of Siberia, as they were common among the Russian people. The excavation of archaeological monuments of Siberian Tatars in the Baraba forest-steppe unearthed iron tanged daggers with double and single-edged blades (Fig. 1, 9, 16). Generally, the close ranged melee weapons of the Siberian Tatar warriors were quite diverse and were no worse than the weaponry of other Turkic and Mongol people [Bobrov and others, 2010, p. 43].

The Siberian Tatar warriors had their own means of individual armoured protection. Rectangular ironclad plates found in Siberian Tatar monuments were typical for lamellar armour [Molodin and others, 1990, p. 77]. A fragment of ring mail was also found in the Isker archaeological site [Bobrov and others, 2010, p. 43]. Tatar warriors protected their bodies with ring mail crafted in Bukhara with a wide collar and short front cut along with short sleeves and a short hem. In order to protect their heads,

Tatar warriors wore spherical helmets with an aventail, ear guards and a neckguard (Fig. 1, 21) [Bobrov, 2009, p. 251–254]. Some of the warriors used shields to protect themselves, as shown in some of the Remezov Chronicle's miniatures [Miller, 1999, fig. 8]. Certain illustrations picture Tatar warriors holding oval weapons with two belts and a circular shell resembling a slingshot [Ibid., fig. 8, 13; Dergacheva-Skop, Alekseev, 2006, ill.182].

Aside from cold weapons traditionally used by nomads, the army of the Siberian Khan Kuchum also had two cast iron cannons firing 40 pood cannonballs that Kuchum purchased previously from Kazan. However, as the battle of Chuvash Cape demonstrated, Siberian Tatar warriors were not good artillerymen. The Tatars could not fire a single cannonball, so Khan Kuchum had to dump his cannons in the Irtysh River so they would not fall into Cossack hands [Miller, 1999, p. 225]. Perhaps murza Begish had cannons as well, but the reliability of this information is doubtful [Ibid., p. 254]. Based on these sources, Tatar military leaders and warriors were familiar with firearms and artillery, yet they were unable to use the weapons they had.

The army of the Siberian Tatar Khanate consisted of detachments led by military leaders and the Tatar murzas,—that is, the rulers of different appanages. Apart from Tatar detachments, the Siberian Khanate army also included militias from dependent vassal Ugor and Selkup principalities. It is possible the Siberian Khanate used the Asian decimal system to divide its armies, as the sources mention troops of 10 thousand warriors [Skrynnikov, 1982, p. 159]. The most battle-worthy part of Khan Kuchum's Tatar army was the Nogai troops, which helped him return to the throne of his ancestors [Bobrov and others, 2010, p. 45].

Based on the weaponry and description of the military showdowns, the Siberian Tatar warriors might have used specific loose line formation techniques. Lightly armed horsemen would spread across the front line and try to get around the enemy's forma-

tion and take it from the opposite direction. They would open brisk fire upon enemy troops from their bows once they reached an appropriate distance.

Such tactics, which were common among many nomadic peoples, allowed the Siberian Tatar troops to remain victorious during military showdowns with the Turkic nomads and Ugor and Selkup tribes inhabiting the taiga area of Western Siberia. However, they were not efficient enough in combat with the heavily armoured troops of Russian Cossacks armed with firearms and the German and Lithuanian soldiers fighting along with them. Tatar archers had a relatively small supply of armour-piercing arrows to hit heavily armoured enemies from an arrow's distance away. As their means of protection were not as advanced, the Siberian Tatar soldiers rarely got in close combat with Cossacks. During this type of combat, the opposing sides would 'fight hard' hand to hand. They hit their enemies with their spears, backswords, sabres and battle axes. In hand to hand combat Tatar warriors yielded to the better armed, armoured and more experienced Russian Cossacks. Siberian Tatar warriors were skilled in fighting in dismounted formations. Miniatures from the Remezov Chronicle display battles where Russian and Tatar warriors are fighting not on horseback. Tatar warriors fire at the enemy from bows and attack them with spears and sabres [Miller, 1999, fig. 11, 13]. The decisive factor that led Russian soldiers to success was their military technological superiority and the use of firearms.

Given these circumstances, the warfare of Siberian Tatars largely relied on disinformation tactics and unexpected attacks. They used their knowledge of the land and ambushed Cossack troops with unexpected attacks in the middle of the night. The military success of Tatar troops in the war with Cossacks was achieved thanks to such sudden attacks. They often used disinformation to lead the enemy to the wrong path or draw them into an ambush. As a result of disinformation, a band of Cossacks led by Yermak was lured into a trap, where he was killed [Ibid., pp. 257–258].

The Siberian Tatar warriors knew how to use their knowledge of the land for militaristic purposes. They blocked roads with fallen trees to create obstacles for the enemy. The Siberian Khanate warriors were skilled in holding down their own fortresses. Their fortifications, fortified settlements and cities were all located on naturally fortified sites, highlands and steep capes along the river bank. They were always fortified along the perimeter or the field side with ditches, ramparts and wooden fences. The defensive potential of these forts relied mostly on the terrain of the land they were built on. The Kullary fortress on the Irtysh riverbank turned out to be unassailable for the Cossacks. Yermak's forces assaulted the fortress for five days, but ultimately failed to capture it. At the same time Khan Kuchum fled from the capital of Khanate Qashliq, or Isker, after his defeat at Chuvash Cape, and the city was taken without any bloodshed [Ibid., pp. 226–227].

The military efficiency of the Siberian Tatar troops and their ability to successfully fight against Russian Cossacks were weakened by the fragile central authorities and internal conflicts and feuds among the Tatar nobles of the Siberian Khanate. Khan Kuchum overthrew the Taibugid dynasty and seized power with help from the rulers of the Bukhara Khanate and the Nogai Horde. He was supported by faithful Tatar nobles, along with his relatives and attendants. Many Tatar murzas and Ugor princes did not approve of his regiment. After losing a few battles and Kyshlyk, they switched sides and deserted to Yermak. As a result of the Tatar murza Senbakht-tagin's betrayal, Cossacks managed to attack the army led by the best commander of the Siberian Khanate, prince Makhmet-kul, destroy his warriors and capture him. The watchmen of Makhmet-kul's detachment did him a disservice, but perhaps he was unaware that Yermak would find out his location. During the war, some Siberian Tatars served the Cossack troops as guides and interpreters and were later accepted into Russian military service. Sayyid Khan from the previous

ruling dynasty of Taibugids and murza Karacha acted openly against Kuchum[Ibid., p. 236].

Regardless of the advantages of having more troops, knowledge of the land where the battles took place and significant human resources, the Tatar commanders were unable to properly use them in the war with Yermak's Cossack troops. They could not match the Cossack abilities to cross rivers on high-sided boats or shoot accurately out of firearms and artillery. They also failed to protect themselves from the enemy's bullets with their ironclad and ring mail armour.

Cossack superiority in the use of firearms combined with effective protection and river transportation played a crucial role in their military success. Cossacks were more experienced in combat and successfully withstood the military tactics of the Siberian Tatar army. Stroganov merchants supplied Yermak's army with 'three hundred Germans and Lithuanians' captured during the Livonian War. At that time Western-European military specialists were highly regarded in Russia and all throughout the next century they were invited to serve in Siberia [Borisenko, Khudyakov, 2011, pp. 293–298].

The Siberian Tatar warriors and commanders had some experience conducting warfare with Russians as well. Some of the Tatar commanders captured by Yermak and sent to Moscow, for instance Makhmet-kul, continued their military career in the Muscovite state and served the Moscow tsars. Military forces composed of Siberian Tatars and Voguls-Mansi conducted numerous military campaigns across the Urals in the lands of the Stroganov merchant family, which was the whole reason behind sending Yermak's forces to Siberia. During that time, the Tatar army led by Kuchum's son Ali was in a similar campaign in the Urals. However, their only goal was to acquire the spoils of war. The Tatar commanders tried to avoid military confrontations, so there were no massive battles. Instead, they preferred robbing rural unfortified settlements of Russian peasants. Khan Kuchum and his

commanders failed to learn from their defeats during the first years of warfare and withstand the successful military tactics of the Cossacks. All of their defeats only made them question their own power and weakened their will to fight.

Even after Yermak's death when he was ambushed with a small group of soldiers and the following departure of his army across the Urals, the situation did not improve. During the last decade of the 16th century Khan Kuchum's army faced two major defeats by the Russian voivodes. Despite the poor conditions he found himself in, he refused to surrender till the day he died. Throughout the same period his rivals from the Siberian Tatar side, Sayyid Khan and murza Karacha, were captured.

Although the battle for the Siberian Khanate continued up to the latter half of the 17th century, the fact that some of the Siberian Tatar nobles had pledged their allegiance to Russia determined the outcome. Siberian Tatars were enrolled in Russian service, accepted into Cossack class, kept guard on the borders and contributed to the acquisition of new lands. This was the deciding factor that the Siberian Tatar regions would join Russia.

The level of warfare in the Siberian Khanate corresponded with the warfare of other nomadic peoples of the late Middle Ages. The weapons for ranged and close range combat and the protection of Siberian Tatars was almost as advanced as among the nomads from the cross-border regions of Southern Siberia and Central Asia. However, the lack of means to pierce metal armour and hand to hand combat with a heavily armed enemy limited the Siberian Tatars' choices of tactics. At the time, Siberian Tatars were only starting to assimilate firing weapons. Their military efficiency was also influenced by the lack of military experience of the warriors and commanders, who were unprepared to battle in unfamiliar conditions against an enemy heavily armed with firearms and utilizing new combat tactics.

The warfare of Siberian Tatars during the attempted reclamation of the Siberian Khanate (during the third quarter of the 17th century)

Khan Kuchum's descendants and followers fought to reclaim the Siberian Khanate for many decades in the 17th century. The warfare of the Siberian Tatar warriors and the history of military events in Western Siberia during the century when Russian Cossacks and servicemen were confronted by the forces of Khan Kuchum's descendants and the Turkic and Mongol nomads deserve special attention and interest.

The death of Kuchum in 1601 did not end the opposition [Skrynnikov, 1982, pp. 216–220]. The oldest son of Kuchum, Ali, was pronounced the new Khan, but the Russian authorities did not acknowledge him as the true ruler,—that is, 'tsar'. His nomadic camp was initially located on the banks of Ishim and was later moved to the Tobol river. The new Khan had about 300 Tatar warriors and a number of Bashkirs at his command. The Russian authorities in Siberia tried to convince Ali to become a vassal to Russia, but all of their attempts eventually fell flat [Trepavlov, 2011v, pp. 96–98]. After being pronounced Khan, Ali tried to make an agreement with the Russian authorities himself and sent his ambassadors to Tobolsk. But they ultimately failed to see eye to eye. Khan Ali's brothers, Ishim and Kubei Murat, who arrived for negotiations, were then sent to Moscow. Perhaps, this was perceived as imprisonment. In 1603, Khan Ali's camp was joined by the Nogai troops led by Urus Murza and later by the Tatars and Bashkirs, which significantly increased his military forces. During that time the Siberian Tatars were cooperating with the Nogais and Bashkirs and planning to resume the hostilities. However, these plans never came to fruition.

By that time Russia had expanded its territory to include Middle Priobye. In 1604, Russia granted citizenship to Eushtin Tatars and built the Tomskiy ostrog on their land. However, after being assaulted and robbed by Tomsk voivodes, the local people of the

'Ostyaks and Tatars' started to rebel [Miller, 1999, p. 309]. This presumably came to the knowledge of Kuchum's descendants. In 1607, Tatars led by Kuchum's sons Ishim, Azim and Kanuchvar were joined by the Dzungars and started a military campaign in the Tyumen district. They quickly took over the town of Kinyr, which was occupied by Tatar servicemen. In order to rescue them, Tyumen sent a troop of servicemen led by Kazaryi Izyetdinov that destroyed Ali's camp, freed Kinyr Tatars and captured the mother, wives and children of the Khan's brothers. All of the captives were then sent to Moscow [Faizrakhmanov, 2002, p. 209]. Judging by these events, the Russian authorities both enlisted groups of Siberian Tatars for military service, and also entrusted them with firearms and Tatar commanders to lead campaigns against their own kinsmen and fellow believers. His military campaigns and the defeat of his camp on the Ishim riverbank prevented Ali from continuing the battle for the Siberian Khanate. After his defeat, he fled to the Nogais. In 1608, Khan Ali was presumably captured and sent to the European part of Russia [Trepavlov, 2011v, p. 99]. This happened at the height of troubled times in Russia, when the Russian authorities in Siberia were at their weakest. Nevertheless, they managed to maintain and even expand the Russian lands, as Khan Kuchum's followers failed to take advantage of the situation. In the early 17th century the Prince of Teleuts, Abak, agreed to become a vassal to the Russian authorities, but without paying the Yasak. Some of the Dzungar taishi counted on gaining support from Russia as well [Miller, 1999, p. 310]. These events left Kuchum's descendants with significantly smaller chances of getting help from the Teleuts and Dzungars.

According to some sources, when Ali was captured, one of Kuchum's son, Ishim, was pronounced the new Khan [Miller, 2000, p. 42]. In 1618, Khan Ishim's camp was confronted by the Russian military troop led by A. Velyaminov. The Dzungars were unable to lend him the necessary support, and as a result Ishim's army suffered heavy losses

[Faizrakhmanov, 2002, p. 210]. That same year a troop of Russian servicemen led by O. Kharlamov and the "Tatar Head" O. Kokorév started a military campaign in the upper reaches of Tom and founded the Kuznetsk Ostrog [Miller, 1999, p. 315]. The territory populated by people who might support the reclamation of the Siberian Khanate was progressively decreasing in size. In the following decade Kuchum's descendants made no attempts to attack the Russian lands in Western Siberia.

However, the situation changed radically at the end of the second decade of the 17th century. Increasing oppression and abuse of power by the Siberian voivodes created an active opposition among the Siberian Tatar population, which rekindled the will of Khan Kuchum's descendants to fight.

In 1628, Baraba Tatars started a rebellion as a result of their outrage over tyranny and the numerous instances of illegal extortion. The rebels destroyed the Cossack troop that was sent to stop them, killed the Yasak collectors, burned one of the forts down, robbed the Yurt Tatars who kept their allegiance to Russia, and migrated to the Teleut lands in Upper Priobye [Umansky, 1995, p. 20]. Following the Baraba Tatars, in 1629 Tara Tatars started a rebellion as well. They ravaged a few Russian villages, held some people captive, stole livestock and migrated to the Baraba forest-steppe. After realizing the danger a united front of rebels could cause, in 1629, the Russian authorities sent out a troop of servicemen and Yurt Tatars that managed to defeat the Tara Tatars near lake Chany [Miller, 2000, pp. 417–418]. The remnants of the dissipated rebel army, about 150 people, fled to 'Baraba prince Kogutaik' [Ibid., p. 418]. These rebellious outbreaks occurred spontaneously, but Kuchum's descendants led by tsarevich Ablaykerim, son of Ishim and grandson of Kuchum, tried to take advantage of the situation. In 1629, the Russian authorities "received information, that Kuchum tsareviches and Kalmyks have also joined the fight" [Ibid., p. 114]. Ablaykerim managed to enlist the Dzungar taishis by promising

them the right to collect yasak from the Baraba, Yurt and volost Tatars [Ibid., p. 418]. Later on, the leaders of the reclamation supporter group were joined by tsarevich Davlet Giray, or Kiray, son of Chuvak and cousin of Ablaykerim. The rebellions of different groups of Siberian Tatars occurred at the same time when the Dzungars came in as reinforcements, a part of which migrated to the Tobol river near the borders of the Russian territory. The Russian military troop that was sent against them 'drove them away from the Russian borders' [Ibid., p. 115]. In 1629, tsarevich Ablaykerim and an army of the 'Kolmak people' marched out into the Baraba forest-steppe. He asked the local princes there for people and managed to enlist the rebelling Baraba and Tara Tatars [Umansky, 1995, pp. 14, 22]. After that, he moved on to the lands of the Teleuts. According to the information sent to Tobolsk by the native Tatar Kudaishugurk Senitkulov, Ablaykerim was planning to seek additional support from the Teleuts and Kourchaks to make way 'to Tara city and the volost to start a war' [Miller, 2000, p. 418]. It is likely that his plans included uniting as many Western Siberian Turkic ethnic groups as possible against the Russian authorities. In August 1629, tsarevich Ablaykerim led his united army, composed of Baraba, Tara, and Terenin Tatars, Dzungars and Kourchaks to Middle Priobye, the lands of the Chat Tatars. From Chat townlet he planned on 'unleashing war' in the 'city of Tomsk' [Ibid., p. 116, 419]. By managing to get the Chat murza Tarlav on his side, Ablaykerim increased the number of his allies. Murza Tarlav hosted not only Kuchum's grandson, but also the Eushtin Tatars who rebelled against the Russian authorities [Umansky, 1995, p. 29]. Yet Tarlav was cautious to stand up against the Russians and join the united Tatar army on their way to Tomsk, so Ablaykerim and his army returned to the Baraba forest-steppe [Miller, 2000, p. 420]. Voivode P. Pronsky sent a troop of servicemen and Yurt Tatars from Tomsk that eventually destroyed the Tatar army on the Shegarka riverbank and captured many of the

insurgents [Ibid., pp. 420–421]. According to other sources, Ablaykerim's army, which included Baraba, Tara and Chat Tatars, made a detour to the lands of the Ostyaks up to the mouth of the Tom river, where he set up his camp [Umansky, 1995, p. 30]. From that camp site they managed to take over the townlets of Murzin and Nandrin, and 'thrash' the Yurt Tatars and Ostyaks, who kept their allegiance to the Russian authorities. Afterwards, they made their way to Tara [Miller, 2000, p. 425]. As a result of these military campaigns, Ablaykerim's army significantly increased in size, and he now had more than two thousand warriors. The main purpose of these campaigns was arguably Ablaykerim's aspiration to get the Tatar groups that pledged allegiance to the Russians back under his authority. The previous events had an impact on Tatars from the Tyumen and Turin counties and their attitude towards Russian authorities. Rumours that Russians would soon 'disappear' and their place would be taken by Dzungars spread across the land. One of the sources mentions a Tatar man with a 'wide arrow' and no bow, riding across the Turin county [Ibid., p. 126]. Perhaps he was using that arrow to agitate local Tatars to join the fight for the Siberian Khanate's restoration. Some of the Tatars would openly threaten Russian people. In 1630, Chat Tatars led by murza Tarlav migrated to the south through the Ob river valley and to the lands of Teleuts in fear of repression on the part of Tomsk voivodes. There on the Chingizka riverbank they founded a "small town" fortified with barrows, which became their new residence [Umansky, 1995, p. 32]. Tomsk voivodes tried to persuade the fleeing Yasak Tatars to return to their places of residence, yet they failed to reach an agreement. In April 1630, the army of Teleuts and Chat Tatars led by prince Abak and murza Tarlav made its way down the Ob river to the town of Toyanov, which was located nearby the Tomsky Ostrog. Tomsk voivodes that were notified of this sent over a troop of servicemen that occupied the Toyanov townlet before the arrival of Teleuts and Chat Tatars. Abak and

Tarlav did not take their chances in a showdown fight, instead opting to turn to the lands of the Chat Tatars that stayed loyal to Russian authorities. There they took over and burned down the townlet of Burlak and their crops, 'thrashed' the local Tatars and 'made war' in the Shegar yasak volost [Miller, 2000, p. 430]. Tomsk voivodes learned about the plans of prince Abak and Chat murza Tarlav to unite with tsarevich Ablaykerim, rebel Baraba Tatars and 'mountain Kalmaks',—that is, Telengits, and then march against the Tomsk and Kuznetsk Ostrogs. This was arguably the most critical point for the Russian authorities in Western Siberia throughout the entire period of rebellions among the Tatar people and actions taken by tsarevich Ablaykerim to reclaim the Siberian Khanate. Tomsk voivode P. Pronsky decided to attack the rebels outside his territories, and sent G. Chernitsin and his troop composed of Russian servicemen and Chat Tatars led by murza Burlak, who remained faithful to Russian authorities. The G. Chernitsin troop caught up with the rebels while they were crossing the Ob river, and destroyed them. The combat killed off the leaders of the rebellion Chat murza Kazgul and 'the best man of Tuliman, Murat' as well as many 'Tarlav Tatars' [Ibid., p. 431]. Meanwhile, Ablaykerim attempted to reach an agreement with the Russian authorities. In May 1630, the son of Tunus prince Ya. Mamet arrived to Tara to deliver Ablaykerim's message suggesting that they send ambassadors to negotiate. At the time, Ablaykerim's camp was located on Yazymyk lake in Prioby. He currently had around 300 warriors with him. Separate from him, the army of the Teleuts, Chat and Baraba Tatars, numbering up to 700, set up their camp on lake Sargul. The attempt made by Ablaykerim to negotiate proves that he presumably tried to make an agreement with the Russian authorities after realizing his lack of military forces to reclaim the Siberian Khanate with its initial borders. After his failed attempt, he once again tried to organise a campaign to Tara, but that was never actually fated to take place, as none of the

other rebels supported the idea. The Russian authorities set out to send back the groups of Tatars to their own lands. In 1631, Tomsk sent Ya. Tukhechensky's troop of 1631 Cossacks and a hundred Chat and Tomsk Tatars led by murza Burlak to the townlet of Chinggisov to fight against Chat murza Tarlav. The troop, armed with guns and field cannons, travelled on skis and sledges at a high speed, in order to catch the enemy off guard. Although they kept it a secret, Chat murza Tarlav managed to find out about the troops coming for him and he sought help from the Teleuts, Kourchaks and tsarevich Ablaykerim. However, the help did not make it there in time. The Russian-Tatar detachment laid siege to the townlet of Chinggisov and later stormed it. Ya. Tukhachevsky managed to take the townlet and establish defences against Kuchum's supporters, who suffered great losses. As a final result, murza Tarlav was killed [Umansky, 1995, p. 35]. This battle showcased the superior arsenal and military skills of the Russian military in comparison to their enemies. The defeat of the Chat Tatars and the united army of insurgents and their allies proved to other Tatar ethnic groups fleeing from the Russian authorities, that neither Kuchum's descendants, nor the Teleuts, nor the Dzungars could truly protect them. Eventually, the Teleuts had no choice but to turn the Chat refugees in, as they had accepted Russian authority and agreed to pay yasak [Ibid., p. 6]. The opposition of different ethnic groups of Tatars was significantly weakened and the number of insurgents drastically decreased. After their final de-

Reconstruction of Siberian Tatar warriors by L. Bobrov

feat, the followers of Kuchum were left to merely rob the Tatar settlements in the Russian lands. In 1631, a detachment of 70 warriors led by Ablaykerim and Davlet Giray set off to Tatar settlements based in the Kourdaks and Tebendin volosts within the Russian borders of Priyrtyshe. The settlements were plundered, some of the residents were drawn away and some of them fled and sought help from the Russian authorities. Kuchum's descendant were chased by E. Zabolotsky's troop composed of 'military people from Lithuania', Cossacks and Yurt Tatars [Miller, 2000, p. 446, 448]. The Russian army acted as defenders of the Tatar population from the Kuchum's descendants. The rebels were disaffected with Ab-

laykerim, as he collected large tributes from them in favour of the Dzungar taishis. The Tatar people started to return to their Russian residences, which weakened Kuchum's descendants even more. The number of insurgent military detachments significantly decreased: when in 1633 Davlet Giray raided the Yasak Tatars on the Iset riverbank, he had only 60 warriors [Ibid., p. 474]. In the meantime, Kuchum descendants were confronted by Cossacks, which further complicated matters for insurgents. Despite all of his failures, Ablaykerim stubbornly continued his fight to reclaim the Siberian Khanate. In 1635, he led a detachment of 40 warriors to attack the yasak Tatars on the Iset river [Ibid., p. 493]. The decreased number of warriors in these military campaigns proves that the Kuchum's descendants were becoming weaker as time went on. That same year, Tara and Tyumen Tatars along 'with the children of Ishim' attacked and burned down the Chubarov suburb and settlement on the Artabanov Cape [Ibid., p. 499]. In 1636, tsarevich Ablaykerim was captured, and in a few years died in prison [Faizrakhmanov, 2002, p. 211]. Davlet Giray took leadership over the Kuchum's descendants and, together with the Dzungars, attempted to organise a military campaign against Siberian towns [Miller, 2000, pp. 510–511]. However, conflicts that Dzungars were having among themselves turned into internecine feuds that weakened the pressure on Russian lands. In 1637, Davlet Giray sent his envoy B. Bugonakov to Tara with a message that stated his willingness to accept the Russian regime [Ibid., p. 518]. Nevertheless, they did not manage to reach an agreement, as the Russian authorities were incredulous at his suggestion. A number of Tatars departed to the Russian lands, as they refused to take part in the Dzungar–Khalkha war. According to some Tatar refugees, in 1641 Davlet Giray and Dzungar taishis planned to set out for the 'Siberian towns' again [Ibid., pp. 555, 559–560, 563]. However, his intentions were never put into effect. A few years later, 'Kuchum's grandson' asked the Dzungar Mergen-taishi for

military support in his crusade in the Siberian cities [Ibid., pp. 571–572]. The reports of these plans refer to 1644 and 1645. Apparently, these threats were taken seriously, and in 1645 the Russian authorities sent their troops to the steppe against Davlet Giray, Tara and the Tyumen Tatars and Dzungars. The detachment of boyar children, Streltsy, Cossacks and Yurt Tatar servicemen led by Tyumen Tatar Head I. Baksheev defeated the Dzungars and Tatar insurgents [Ibid., pp. 578–579]. Later on, Davlet Giray and his nephews Bugai and Kūchūk made another attempt at negotiating [Ibid., pp. 591–592]. But as this attempt also fell flat, Bugai and Kūchūk made an effort to continue their fight with support from the Dzungars [Ibid., pp. 601–602, 613]. The possibility of new attacks were a constant threat to the authorities up to the 1660s, which could be the reason they invited foreign military specialists to organise troops of a new formation. According to the sources, the new Tatar tsarevich, whose name is still a mystery, 'is still calling himself their enemy and refusing to obey the Russian tsar'. The Tatar tsarevich 'has a small number of people', relies on the support of Bashkirs and 'every year' during harvest time raids the Russian lands in Siberia and 'takes away a lot of people and cattle' [Alekseev, 1941, pp. 347–348].

The specifics of the weaponry and warfare of the Siberian Tatar warriors during the period of the Kuchum's descendants' fight for the reclamation of the Siberian Khanate are little-known. Russian written sources say that the battle between the Russian military detachment composed of Russian servicemen and Yurt Tatars, and the Siberian Tatar detachment led by tsarevich Ablaykerim on the Shegarka river in 1629, took the lives of many Tatar warriors 'in kuyaks and brigantines' [Miller, 2000, pp. 420–421]. The description of the battle for Chinggisov townlet mentions arrows as the main defence weapon of the Tara Tatars against the Russians [Umansky, 1995, p. 23]. According to this information, there was a significant number of heavily armed

and armoured warriors protected with brigantines and ring mail among the Siberian Tatar followers of Kuchum. The miniatures of the Remezov chronicle created in the late 17th century portray Tatar warriors in everyday outerwear with different types of weapon in their hands or hanging from their belts, as supporters of the Siberian Khanate reclamation were no longer a threat. They are shown shooting from composite bows with their arrows either on load or flying towards a target. Tatar arrows feature heavy arrowheads with an elongated triangle-shaped studded feather. Some of the flying arrows or the ones lying on the ground are shown with double-eyed shafts and pentagonal or oval-shaped feathers. In one of the illustrations, a warrior, shooting from a bow has a quiver on his belt with arrow shafts sticking out from it. One of the rarest projectile weapons of Tatar warriors pictured in the miniatures is a slingshot. The majority of Tatars are shown holding spears in their hands that have elongated rhombic spearheads and long shafts. Separate miniatures show Tatar banners on a rectangular cloth with double swallowtails tied to long shafts with large heads. Some Tatar warriors are pictured with sabres in their hands or in sheaths hanging from their belts. The pictures also show Tatar warriors attacking the enemy in horse-mounted and dismounted formations [Miller, 1999, fig. 11, 13; Dergacheva-Skop, Alekseev, 2006, fig. 216]. Judging by the available data, Siberian Tatar warriors of the 17th century were equipped with the usual types of cold weapons for both distant and close combat. They were capable of attacking enemies in a dispersed formation, shooting arrows from a distance, or engaging in close combat with spears or sabres [Khudyakov, 2007, p. 247; Bobrov, et al., 2010, p. 45]. There is no evidence that they ever used any firing weapons, although the Russian authorities indeed trusted service Tatars with them. The superiority of Russian troops in the use of firing weapons compared to Siberian Tatar troops seems to have increased in that period, which can be observed in the results of

the clashes [Zinner, 1968, p. 47; Slovtsov, 1995, pp. 88–89].

The military strategy for the restoration of the Siberian Khanate was identical to the one Kuchum Khan employed after he lost Isker, the capital of the Siberian Khanate. Kuchum's descendants tried to establish their headquarters in the open steppe a certain distance away from the Russian borders in Siberia. In some places they established small towns and set up fortified points. However, they could not save themselves from the unexpected attacks of Russian troops for the entire duration of confrontations in the 17th century. It is probable that they simply could not manage to keep watch to alert troops about the coming enemy. At the same time, they conducted reconnaissance missions during the rebellion and agitated Tatars to join them. As can be determined from the sources, the main goal of Kuchum's descendants and successors was to gain control over the yasak Tatar people who became Russian subjects by moving them into the steppe and away from Russian borders.

However, those intentions of Kuchum's descendants went awry because of their shortsighted policy in relation to former subjects. It was mainly the Tatar people living in Russian lands who were subject to periodic assaults, destruction and pressure put on by Kuchum's descendants and their allies for tribute. During this entire period of military activity, adherents to the restoration of the Siberian Khanate never made any true attempts at laying siege to any Russian burghs; there was nothing more than 'hostile intentions'. Restoration of the statehood only became possible during the course of the rebellion of several Tatar ethnic groups in 1628–1631 caused by the arbitrary behaviour of Russian authorities. This allowed Kuchum's descendants to form a wide coalition of Turkic and Mongol nomad tribes that might have resulted in the success of the rebellion. However, the policy of robbing and capturing Tatar peoples and moving them into the steppe outside Russian borders, as well as the in-

crease in tribute pressure to the benefit of the Dzungars, clearly resulted in a level of dissatisfaction that persuaded the rebels to return to Russia. As Russian authorities had no significant military forces, they tried to return escaped people by means of negotiations. It was only when this approach failed that they turned to military measures. It was remarkable that all such military campaigns

involved service Tatars, sometimes even as commanders employed directly by the Russian authorities. The allegiance of some Tatars and their rulers to Russian authorities and the changes in the political and military situation in the steppe of Western Siberia decided the outcome of the fight for the restoration of the Siberian Khanate in Russia's favour.

Section IV

The Formation of Turkic-Tatar Ethnic Groups

CHAPTER 1

Ethnopolitical and Demographic Processes in the 15–18th Centuries

Damir Iskhakov

Interaction of Tatar ethnopolitical communities in the 15–16th centuries.

By the middle of the 15th century, the break up of the Ulus of Jochi (the Golden Horde) into independent political units was almost complete, which was reflected precisely in the Turkic-Tatar epic 'Edegu':

Idel-yortni dau aldi,
Yau östenä yau kilde,
Idegäy äytkän kön kilde,

.....

Kirim, Kazan, Acdarxan
Başli-başli il buldi,

Altın Urda taraldi [Idegäy, 1988, 244 b].

However, gradual crystallisation of new Turkic-Tatar yurts in the political space of the late Golden Horde did not automatically imply the disappearance of the medieval Tatar ethnic community that had formed during the previous stage in the history and which still existed as local ethnosocial organisms ('narodnost'), despite the existence in each of them their own ethnic features associated with differences in clan composition of the political elite, as well as in ethnic substrata having much in common.

This was explained by the fact that Turkic-Tatar states and their population continued to keep numerous ethnocultural and political contacts among themselves, including those based on certain institutional arrangements [Iskhakov, 1995; 1998]. In the 15–16th centuries, the Golden Horde successor states were characterised by a complex system of relationships (see, for example: [Bazilevich, 1952]). Even the gradually growing Grand Principality of Moscow was no exception. Among the Tatar states vying for the heritage of the Golden Horde, it looked an equal party not least due to the existence of the Tatar yurt (the Kasimov Khanate) within its ranks. The Tatar ethnopolitical communities, formed after the collapse

of the Golden Horde, interacted based on institutional arrangements, the most important of which were: the rule of representatives of the house of the Chinggisids in the Turkic-Tatar yurts; the community of dominant feudal clans in such yurts; family ties between supreme Muslim officials (the Sayyids), and the Tarikats' unity being common in these states. The most intensive contacts during the 15–16th centuries were held between three khanates: Crimean, Kazan and Kasimov, which is explained by the identity of their governing clan structures. However, the Nogai Horde was integrated into this system as well, both through Manghit yurts existing in almost all of the Tatar khanates, and through own clan formations (Kipchak, Baryn, and, perhaps, Arghyn) that made it possible to interfere with all khanates' affairs.

The general thesis about the Chinggisids' role in the Tatar ethnopolitical unions needs clarification. First of all, three khanates (Crimean, Kasimov and Kazan) were governed by very close relatives: Hajji Giray, founder of the Giray dynasty in Crimea, and Ulugh Muhammad and his children were cousins [Iskhakov, 2002a]. After the suppression of the Ulugh Muhammad's dynasty in the Kasimov and Kazan Khanates, they were also ruled by the Girays. The last ruler of the Kazan Khanate, Edigur (Yadegar)-Mohammad, was Sultan of Astrakhan. The Shibaniids who ruled the Tyumen Khanate were the rulers of the Kazan Khanate for some time as well, while holding certain rights to the throne due to earlier events. Matrimonial ties between the ruling houses of different khanates are fairly eloquently evidenced by the author of 'History of Kazan', revealing information on the wives of Safa Giray of Kazan: the oldest of them was the daughter of the Siberian Khan, the second—daughter of Khan of Astrakhan, the third—Crimean Shirinsky Princess, the four—daughter of a Russian prince, and the fifth was Nogai

Princess Süyümbike [The History of Kazan, 1954, p. 83]. Wives of the Kazan khans Halil and Ibrahim, as well as Muhammad Amin, were Nogai princesses (Nursultan who subsequently married the Crimean Khan Mengli Giray).

Representatives of the ruling feudal clans had the right to free movement between the separate khanates. This concerned Mishar Yurt as well. In particular, the treaties letters of Grand Princes of Moscow and Ryazan, dated 1434 and 1447, contain the following record: '...And if the Mishar princes are not submitted to me (Grand Prince of Moscow.—*D.I.*), and you don't have either to accept them, or to keep them in your patrimony...' [Dukhovnye, 1950, pp. 86–114]. The same formula was repeated in the contractual letter of the Grand Princes of the same principalities, dated 1483: '...and as for our Mishar princes who live in Meshchera and under our hand, you are not to welcome them in your homeland; and should they manage to escape us, you are to be fair to take them for us and to return them to us' [Ibid., p. 127]. The latter document shows that even in the 1480s, the Moscow Grand Princes were forced to struggle against the Tatar nobility's right to leave the Kasimov Khanate to other Turkic-Tatar states, i.e. actually against a custom of replacing a suzerain. However, with preservation of the independent Tatar states, such right was impossible to completely liquidate. For example, in 1474 Ivan III spoke of the Khan of Kasim as follows: '...he has many uhlans, princes, and cossacks: many people come to serve him, and many of them leave him'. Thus, Prince Mardan, who resided in Mishar Yurt, then departed to Crimea and his right to depart raised no doubt in Mengli Giray, the Khan of Crimea—he wrote to Ivan III in his message: 'Shall Mardan want to go to you, and thus shall we let him go' (quoted from [Syroechkovskiy, 1940, p. 48]) Likewise, in 1481 Ivan III in his message to Mengli Giray, while addressing via him to Dovletek murza, son of Prince Imenek Shirin, wrote: '...and when you come to me... from us shalt thou go whence thou wilt, and once you saw our hospitality shalt thou go on thine accord, and no one of us shall keep you from it' [Collection of the Russian Historical Society, 1895, p. 28]. In his 'shert' before the Grand Prince of Moscow, Vasily Ioannovich (1508),

Abdyl Latif Khan also described the following situation: 'And you (i.e. the Grand Prince of Moscow.—*D.I.*) Tsarevich Yanay in Meshchera town and Tsarevich Sheikh Avliyar in Suri-ozhik... is with you in your lands... Also we will receive from you no Tatars, and you shall not receive none of my people but from the kin of the Shirin, and Baryn, and Arghyn, and Kipchak' [Ibid., p. 251]. In another 'shert' from the same Khan concerning his being granted the Town of Yuriev (1508), he assumed the following pledge: '...And if you accept Tsarevich Yanay in Meshchera town, and Tsarevich Sheikh Avliyar in Suri-ozhik, or if any other tsar or tsarevich arrive, ...I shall not receive their uhlans, nor their princes, nor their cossacks, although some of those uhlans, and princes and cossacks might fall from them, and go to the Horde, or to Kazan, or elsewhere, but shall these want to go to me, I...shall not accept them, and they shall not receive any of my people. ...And you shall not receive any of my people but from the kin of Shirin, and Baryn, and Arghyn, and Kipchak, and I shall not send my people to Kazan and the places of Kazan without letting you know of it...' [Malinovsky, p. 247]. Such transitions among the Tatar nobility together with their squads (the tributary people who pay 'yasak' had no right to do so) were of an institutional nature—the representatives of specific clans moved to the yurts of their kinsmen—and can be clearly seen from the epic Chora Batyr. According to this epic, spread among Kipchak-speaking nations, the protagonist called Chora (Chura) Batyr and his relatives from the Arghyn clan, moved 'from Kazan' to 'Crimea' and back again, and found themselves either in 'Khadzhi-Tarkhan' 'in the borough of Atil', or in 'Ak Kala region' near Syr Darya, or 'among the Bashkirs and Kazakhs' [Iskhakov, 19976, pp. 24–29]. In some versions of the dastan, 'on his way to Kazan', Chora Batyr met 'Kulunchak Batyr' with whom he moved further [Obraztsy, 1896, p. 183] Meanwhile, the princes of Kulunchak were known in the late 16–early 17th century within the territory of Mishar Yurt [The Tatars, 2001, p. 4] which is yet further proof of the Kasimov Khanate having been included into the system of institutional transitions of the representatives of the ruling clans, together with their men

(squads). A number of eloquent items of evidence in this respect can be found in historic sources, for instance, in Tatar dastans and historic lore that were recorded in Turkic-Tatar written sources. Thus, in the 'Chura Batyr' dastan, the protagonist Chura beg, an undoubtedly real person (murdered in the Kazan Khanate in 1546), while being a karachi beg from the Arghyn clan, arrived in Kazan from Crimea, or to Crimea from Kazan, and then returned, and stayed in the Dagestan Yurt on his way (it is likely a definition used in dastan for a part of the Nogai Horde) and in Khadzhi-Tarkhan, while he had also a relation to the lands of the Kazakhs, in which lands the nomadic groups of Arghyns still remained [Iskhakov, 1998, p. 71; 2002]. The Tatar chronicle *Fi Beyani Tarihi*, which included the historical oral tradition, preserved a plot about the sons of Abdullah, the ruler of Bulgar, Altun Bik and Ali Beg, known also from other sources, with a notice that 'the representatives of the kin of Altun Beg [and] Ali Bik are in Crimea... [and] When a khan in Kazan was needed, the Khan was summoned from Crimea' [Mustakimov, 2008, p. 157]. As the named persons actually belonged most likely to a noble Horde lineage of Kiyat [Iskhakov, 2009], then, in this case, we are dealing again with the institutional ties between the separate parts of a once-unified ethnosocial organism of Medieval Tatars that had broken up. Actually, what really remained uniform for the Turkic-Tatar states was the ethnic superstratum of the state-forming unities represented by the 'Tatars', despite the specific regional differences between the clans, while the system of karachi begs that had been established within the Ulus Jochi, still prevailed. This system allowed the nobles and their squads, formed quite often by their own clansmen, to move from one Tatar yurt to another, especially if a principality formerly led by a representative of one clan or another existed there. For examples please refer to: ([Iskhakov, 1995, pp. 105–107; Iskhakov, 1998]). Among other things, several Tatar chronicles on the aforementioned Altun Beg and Alim Bik who undoubtedly were historical figures, are mentioned in the pretext that once the former 'with the rest of his kinsmen kept his yurt in the city of Kazan', the latter 'loathed Kazan and came to Tobol-Tura. As he came there, he kept

(there) his yurt. The old Tobol-Tura was built by him' [Iskhakov, 2002, p. 14]. This legend, firstly, coincides with a mention in other sources of the Kiyats' departure from the Volga region [Utemish Hajji, 1992, p. 108] which obviously began during a trail of defeats of Mamay Beg who originated from that clan, and, secondly, it corresponds with the data concerning the presence of Shibanids in Bulgar wilayah [Iskhakov, 2009, p. 128] in the first third of the 15th century, the principal domain of which was in Western Siberia, and partially in Cisurals [Akhmedov, 1965]. It is evident that the claims of Shibanids for the territory of the Kazan Khanate in the second half of the 15th century, which resulted, as it is known, in a temporary enthronisation in Kazan in 1496 of Mamuq, the Shibanid Khan, date back not only to the times of Hajji Muhammad, the founder of the Tyumen Khanate (1420/21—1428/29(30)), and the ruler of nomadic Uzbeks Abu'l-Khayr Khan (1428/29–1468/69) who, as it is known from historic sources, held the Bulgar wilayahin their subordination [Iskhakov, 2002, p. 13], but to still earlier times, when the originator of the Shibanids—Shiban—among the Mongol troops participated in the conquest of Volga Bulgaria and, obviously, was granted some rights for this territory [Iskhakov, 2009, p. 69]. It should be particularly emphasized here that the territory of Ulus Jochi, and the territories of the late Golden Horde states were viewed by the Chinggisids as the collective property of the entire 'Golden Family' (Altyn uruk) of Chinggis Khan's descendants and, thus, the representatives of all branches of this kin could claim the rule in any late Golden Horde yurts. Thus it is not coincidental that we come across multiple cases of rule by the descendants of a specific branch of Chinggisids, first in one khanate, then in another. In fact, this was yet another institutional mechanism of maintaining the ethnic unity of the 'Tatars' in the late Golden-Horde political space, for the coming of the ruler from one yurt into another always entailed the transition of persons from a feudal class of Tatars. We may say that the Girays were followed from Crimea to Kasimov and Kazan Khanates by the Tatars [Iskhakov, 1998], and such movements are well known. Likewise, the departure of an entire group of Tatar nobles to the Tyumen Khanate

after 1487 [Iskhakov, 2002, pp. 37–38] is known. The reverse migration from the Tyumen Khanate to the Kazan Khanate was observed at approximately the same time [Ibid., pp. 47–51].

Finally, the unity of the Tatar world in the late Golden-Horde political space was also maintained by the common institution of sayyids that existed in all Turkic-Tatar states and was closely related to Yesevi tariqa since the times of Islamisation of the Ulus Jochi under Uzbek Khan [Iskhakov, 2011]. Although an issue of affinity between the supreme sayyids of the Khanate has still not been studied sufficiently, the sources revealed to date allow us to assume the existence thereof (for more information refer to: [Iskhakov, 2011]). It is most prominent in one of the published versions of genealogy of the Shakulov kin, the descendants of the Kasimov sayyids. This genealogy, in particular, says: "...the kin of Shakhbay sayyid dwelled in the Bulgar wilayah, in Khan Kirman (i.e. in Kasimov.—*D.I.*), in Khadzhi-Tarkhan and in the Volga Region'; 'the kin of Shahkhan sayyid ... in the Crimean wilayah, near Kuban and in Dagestan'. At the same time, this document contains a reference that these two sayyids were brothers [Ähmätcanov, 1995]. Thus, the Muslim structures in a number of Khanates were controlled by the descendants of one family line, dating back to the Prophet Mohammed. In their turn, these Muslim institutions were connected with specific tariqas.

Now, let us turn to a more detailed consideration of the contacts between the Tatar ethnic and political communities in the 15–16th centuries. It must be stipulated in advance that despite this problem being further analysed as per separate Khanates, as these were extremely closely related to each other, the material presented here partially extends beyond the limits of these Khanates, thus reflecting the supranational nature of ethnic and political cooperation between the said formations.

Kazan Khanate. In 1494, the Grand Prince of Moscow Ivan III received a message from the Crimean Khan Mengli Giray in which a possibility of enthronement of Sultan Abdyl Latif was discussed. With this, the khan wrote: '... You should appoint Mamysh Baryn to assist Abdyl Latif, he would teach him good tradi-

tions and help him gather the taxes' [Collection of the Russian Historical Society, 1884, p. 211]. The document referred to the transition of Mamysh murza of the Baryn clan from the Crimean Khanate to Kazan Khanate. Soon Abdyl Latif was enthroned in Kazan, having thus possibly accomplished the above mentioned item of the message from Crimea. In any event, several pieces of data for 1516–1517 witness in favor of such assumptions. Thus, in 1516 the Crimean Khan addressed Vasily Ivanovich in Moscow with a request to let 'the Tsar Abdyl Latif go visit his brother again in Kazan, who was afflicted by a grave ailment, so that the dwellers of Kazan could not adopt someone of the tsareviches of Astrakhan as a ruler upon his death' [Malinovsky, p. 158]. The next message of the Crimean Khan to Moscow (dd. 1517) regarding the same request contained several certain ideas in relation to the conveyance of the Khan Abdyl Latif to Kazan: "...the only one will be accepted in Kazan (be the Khan—*D.I.*), is Baryn or Kipchak. Apak spoke of Memesh murza, and of Osan murza, and of Avleyar murza' [Collection of the Russian Historical Society, 1895, p. 500]. Considering the fact that Prince Apak (Appak) of Crimea belonged to the Kipchak clan [The Tatars, 2001, p. 126], it should be easy to understand that this document revealed a mechanism of institutional location within the yurts—the principalities of the Kazan Khanate (Memesh murza here is clearly the Mamysh of the Baryn clan who was mentioned before).

Crimea attentively monitored the destinies of individual members of clans that ruled the Khanate, even after their departure to other states. For instance, as Shirin Begish and his son Utesh were outside the Kazan Khanate in 1487 (this will be described afterwards), Ivan III, at the request of Muhammad Amin, his protégé, lured the former two into his lands [Collection of the Russian Historical Society, 1884, p. 131]. But even years and years after that, the Khan Mengli Giray, in his message to Moscow (1509), still mentioned: '...Utesh, the son of Shirin Begish, is my, your brother tsar's, karach and serf, ... you ordered to capture him; ...and you should honor him, but he should not be with you, but here, among us, even if he shall take no big post here while he must

not, but still, he will be honored here, with his ulus and people; my son Bakhtyyar Mirza (Shirin—*D.I.*) as a head, and other mirzas interceding for him' [Ibid., p. 131; Collection of the Russian Historical Society, 1895, p. 73].

Together with the Crimean princes who took the Kazan throne after the suppression of Ulugh Muhammad's dynasty, a significant number of Tatar nobility moved from Crimea. In 1521, the Moscow observers in Azov informed: '...past us went the Kazan Tatars to the Tsar (i.e. the Crimean Khan—*D.I.*), to ask for a prince to rule in Kazan, and the Tsar gave them a prince for Kazan (it was Sahib Giray—*D.I.*)..., and with them, 300 people moved, and Meretyak murza likewise' [Ibid., p. 678]. The History of Kazan also refers to the coming of Sahib Giray and 'many Crimean uhlans, princes, and murzas' [The History of Kazan, 1954, p. 65] to Kazan. These 'Crimeans' later became a sustainable factor in the Kazan Khanate. As early as in 1531, when the Kazan Khan Safa Giray of the Giray dynasty was 'expelled from Kazan', together with him 'the tsar's councilors, Crimeans and Nogais' were partially 'expelled' and partially 'slain' [Complete Collection of Russian Chronicles, 13, 1965, p. 57; Malinovsky, p. 206]. But even after that the 'Crimeans' still were present in the Khanate, and their position was especially solid in the years of the consequent rule of Safa Giray (1536–1546, 1546–1549). Describing the situation in the Kazan Khanate after 1536, Nogai nobles reported to Moscow: '...and at that time the Tsar Safa Giray came, with a few men, and the following year he brought many men, hungry and naked, from Crimea' [Ancient Russian Vivliofike. Continuation, 1793, pp. 269–274]. This information is confirmed by the Patriarch's (Nikon) chronicle, which states, under the date of 1541: '...the people of Kazan suffer badly from the Tsar (Safa Giray—*D.I.*)..., he took away the yasaks of many princes, and gave those to the Crimeans; for the common people is a great loss: he collects the exchequer, and sends it to Crimea' [Complete Collection of Russian Chronicles, 13, 1965, p. 134]. The same chronicle states later (1546): '...the Kazan people expelled Safa Giray from Kazan, and many Crimean men were slain' [Ibid., p. 447]. The same year, khan Safa Giray reclaimed the throne

of Kazan, and the 'Crimeans' appeared in the khanate in considerable numbers: this was the time when an indication of the khan's 'slaying' of many representatives of the nobility and having become 'the Lord of Kazan, and the Crimean princes with him' [Ibid., p. 149] appeared in the Russian chronicles. In 1549, Robey, son of the prince Bulat, beklaribek of Shirin, as well as several other princes of the Kazan Khanate, stated: '...we have united with the Crimeans, and are not free to fall away from them' [Ancient Russian Vivliofike. Continuation, 1793, p. 216]. This attitude of part of the Kazan nobility was due to the fact that they originated from the clans of Shirin and Manghit, i.e. of the clans which at that time were also the strongest in the Crimean Khanate. After the death of Khan Safa Giray (1549), 'the kingdom of Kazan' was given to an underage Utemesh Giray Khan, again by the 'Kazan people and the Crimeans' [Complete Collection of Russian Chronicles, 13, 1965, p. 459]. As the author of The History of Kazan wrote, the 'Crimeans and the Nagais' joined the Crimean Sultan, who was a favorite of the Tsarina Süyümbike, regent of the underage Khan [The History of Kazan, 1954, p. 91]. In 1551, a 'discord' sprang up between the 'Crimeans' and the 'Kazan people', and 'the Chuvashes of Arsk fought against the Crimeans'. Although the Crimeans won that battle, they decided to leave Kazan: '...the Crimeans ... 300 men, the uhlans, and the princes, and azeys, and the murzas, and the fine cossacks, without their wives and children...have fled' [Complete Collection of Russian Chronicles, 13, 1965, p. 166]. As it can be seen from this record, the number of the Crimeans greatly exceeded 300 persons. Their total number, which included their 'men', can be found in The History of Kazan, which tells the story of the Crimeans' escape in more detail: Koschak Ulhan was released 'fairly' by the Kazan people, and when he 'joined with the Crimean barbarians', they amounted to 5000 men. When Russian troops overtook the fugitives on the portage between the Volga and the Don they 'beat' the fugitives, and captured 300 'good' people (including Koschak, 7 princes and 12 murzas) [The History of Kazan, 1954, pp. 93–94].

Generally speaking, the contacts between

the Kazan and the Crimean Khanate were very multifaceted. The sources preserved unique information on this subject. In particular, the Crimean Khan Mengli Giray in 1508 wrote to Moscow, indicating that the Kazan Khan Muhammad Amin sent to him 'his man Abdyla, to ask for a leopard, he lived with us for a year, and at that time... the leopard was not found... now he was again sent to the Tsar of Kazan... together with our man' [Collection of the Russian Historical Society, 1895, p. 30]. In another message from the Crimean Khan Saadat Giray (1526), there was a request addressed to the Grand Prince of Moscow to 'let Usein Sayyid visit Safa Giray in Kazan and to take some books out there' [Malinovsky, p. 196]. The sayyid mentioned here was obviously the same Shausein Sayyid referred to in the message of the Russian envoy from Crimea, dated 1524. This message stated that Shausein Sayyid who broke his vow before Moscow was forced to flee to Crimea and 'allegedly married in Crimea' [Dunayev, 1916, p. 62; Iskhakov, 1997, pp. 26–27]. Natives of the Kazan Khanate in Crimea were noticed in the second half of the 16th century: during the 'duma' of the nobility of the Crimean Khanate held in 1564, two 'Kazan people' took part in it—Yamgurchi Azi and Ahmet Uhlan [Novoselsky, 1948, p. 20].

Similarly, the group of nobles and their people moved between the Kazan and Kasimov Khanates. As early as during the first reign of the Kasimov Prince Shah Ali in the Kazan Khanate (1519–1521), many Tatars came with him from the Mishar Yurt, since during his expulsion in 1521 from Kazan, according to The History of Kazan, 300 'barbarians, his servants', could leave with him, and 5000 were killed [The History of Kazan, 1954, p. 65]. Even if we assume that the last figure may be overstatement, we should believe that the total number of people of Shah Ali, who came with him to the Kazan Khanate, was still quite significant. The consequent short-lived sitting of the Khan Shah Ali on the Kazan throne in 1546 was accompanied by the arrival of 100 of his princes and murzas with him [Ibid., pp. 64–65]. Shortly before his last reign in the Kazan Khanate (1551–1552), before the Khan's entering Kazan, the people of Shah Ali were sent there: a Shabas butler

Prince Shamov and a equerry Prince Bitekey 'along with all his koshma (camp)' [Complete Collection of Russian Chronicles, 13, 1965, pp. 168, 171]. This finding is confirmed by the further reference to the presence of the 'yesaul of Gorodets Muraley Mirza' among the envoys of the Khan Shah Ali in Moscow (1552) [Ibid.], which together with the expression 'kosh' indicates a military detachment of cossacks. And in a message about the departure of the Khan Shah Ali from the city of Kazan that happened that same year, many 'princes and mirzas, of Kazan and Gorodets' are mentioned [Ibid., p. 174]. The following year, in Kazan, another 'Prince of Gorodets', Kutlubulat, was mentioned [Ancient Russian Vivliofike. Continuation, 1793, p. 143].

The reverse migration from Kazan to Mishar Yurt also took place. As a typical example of this kind should be seen in the attempt in 1546 to leave to Shah Ali—to the Kasimov Khanate—of Prince Chura Narykov from the clan of Arghyn (a historical prototype of Chura Batyr) with 1000 people, 500 of whom were his 'serving slaves' [The History of Kazan, 1954, pp. 80–82]. When many noble Tatars fled from Khan Safa Giray, the departure to the territories controlled by Moscow was very characteristic for a period of internal strife in the Kazan Khanate in the 1540s: in this period, Ivan IV held 300 'uhlands, and princes, and the murzas, and cossacks' from Kazan [Complete Collection of Russian Chronicles, 13, 1965, pp. 149, 172, 174, 450, 472, 474; Ancient Russian Vivliofike. Continuation, 1793 pp. 144–146, 162–164, 210, 214–215]. Many fugitives could find refuge in the Kasimov Khanate—no wonder that the separate documents concerning the lands of the Mishar Yurt in this period mention the representatives of the Kazan nobility [for example, 'the Kazan Prince Malish's son', who owned one of the Mordovian 'beliak' (i.e. beylik—the district) [Safargaliev, 1963, p. 75].

There is no doubt that the relationship between the Kazan Khanate and the Nogai Horde was built upon an institutional basis—the presence of the representatives of the Manghit clan which controlled the Manghit Yurt in the Khanate [Iskhakov, 1998, pp. 16–31]. As early as in 1490, Prince Kanymet, the brother of Ityak,

mentioned in 1496 among the 'Kazan princes', appeared in the warrior host of the Kazan Khan Muhammad Amin which sent in alliance with Moscow to fight against the Great Horde [Collection of the Russian Historical Society, 1894, p. 116; Complete Collection of Russian Chronicles, 11–12, 1965, p. 248; Complete Collection of Russian Chronicles, 28, 1963, p. 328]. According to some sources, the Prince Kanymet (Kalimet' Qulahmet) and his brother Ityak (Idyak) were the children of the Prince of the Nogai Horde Musa, who died between 1502 and 1507 [Iskhakov, 1998, pp. 27–28]. In 1503, the name of 'Mustafar Mangit', 'his own prince' of the Khan Muhammad Amin appears in the chronicles [Collection of the Russian Historical Society, 1884, p. 504]. Nursultan who was successively a wife of the Kazan khans Khalil (died in 1467), his brother Ibrahim (died in 1479) and the Crimean Khan Mengli Giray, was the daughter of Prince Temir from the clan of Manghit, who was a beklaribek in the Great Horde [Ibid., p. 54; Malinovsky, p. 53; Khudyakov, 1990, p. 35]. Her brother, Prince Usein, resided in Crimea until 1515, then moved to the Kazan Khanate; in any case, in 1538 the Prince Usein was known there, he was called 'his own man' of the Khan Safa Giray [Collection of the Russian Historical Society, 1895, p. 50; Complete Collection of Russian Chronicles, 13, 1965, p. 122]. In 1553, some Russian chronicles mention the son of this prince, Kamai murza [Ibid.; Iskhakov, 1998, p. 28]. A chronicle entry about the 'Badraks who live in Kazan' dates back to 1549 [Ancient Russian Vivliofike. Continuation, 1793, p. 146]. Meanwhile, in the Crimean Tatar version of the epic 'Edigu', this term is used to refer to the descendants of Edigu, i.e. Manghit nobility [Krymtatar, 1991, p. 43; Iskhakov, 1998, p. 28]. It is not by accident that the ruler of the Nogai Horde Prince Yusuf stated in 1549: 'And now in Kazan, there is my daughter there, and my tribe is there' [Ancient Russian Vivliofike. Continuation, 1793, p. 205]. In 1552, together with the khan Edigur-Muhammed, "Zeinesh, the Nogai prince" was in the Kazan Khanate, and the latter with "all Nagais", whose numbers reached 3000 [Khudyakov, 1990, p. 150], participated in the defense of the city of Kazan [Complete Collection of Russian Chronicles, 13, 1965, pp. 202,

212, 498; Iskhakov, 1998, p. 21]. It is most likely that the last wave of arrival of the Nogais to the Kazan Khanate shortly before its fall initiated the numerous requests from Nogai nobility to Ivan IV in the 1550s and 1560s concerning the return of their own men to the Nogai Horde who still remained in the conquered territories of the Khanate [Ibid., p. 28]. All these data suggest the presence of a significant group of the Manghit nobles and their men within the Kazan Khanate.

The Kasimov Khanate. In the 15th century, the earliest mention of the arrival of a Turkic group from outside to Meshchera refers to a report on the resettlement of Sultan Kasim with his princes and people (there could have been up to 500 people—[Library, 1836, p. 106]). Apparently, it was a part of the Horde of Khan Ulugh Muhammad, a core group of which was consolidated in the Kazan Khanate. Later, during the reign of the Girays (1486–1512), the Kasimov Khanate was in intensive contact with the Crimean Khanate (see above). In addition to the above data, there are also other materials on this subject. Thus, in 1483 Kara Khoja Prince died in the Kasimov Khanate [Velyaminov-Zernov, 1863, p. 89]. This name matches the name of the head of the clan of Arghyns in the Crimean Khanate [Iskhakov, 1998, p. 50]. One of the ancestors of Chura Batyr bore the same name. Due to the fact that the epic Chura (Chora) Batyr had relatives in the Mishar Yurt, and given the coincidence of names and lifetimes of Chora's ancestor and the historical Kara Khoja, the latter should be regarded as the prince of the Arghyn clan who bore a certain relation to the Crimean Khanate. From the time of the rule of the Girays in the Kasimov Khanate, it was perceived by the nobility of the Crimean Khanate as their own yurt. When, for example, in about 1512 or a little earlier, the Kasimov throne was given to a native of the Great Horde, Sultan Sheikh Avliyar by the will of the Great Prince of Moscow, the Crimean nobility voiced its disagreement with this act. The letter of Shirin Bakhtiyar murza to Moscow (1515–1516) stated: '...you know yourself (Great Prince Vasily—*D.I.*)..., the Mishar Yurt, which belongs to my Lord Tsar... was given (by Vasily) to the tsarevich from Namogan Yurt (within the Great Horde—*D.I.*)... do you think it will be acceptable?' [Collection of the

Russian Historical Society, 1895, p. 251]. The same is referred to by the Crimean Khan Muhammad Giray (1516): '...to our foe, the prince Sheikh Avliyar, the Mishar Yurt was given' [Ibid., p. 296]. The same year, in his message to Moscow, he justified his dissatisfaction in considerably more detail: '...the princes, and particularly those of Shirin (the Shirins were also the beklaribeks in the Kasimov Khanate—*D.I.*) and the murzas do not agree to vow before the Great Prince, while Shah Ali, the kinsman of the kings of the Horde, was made a ruler of Meshchera town, which formerly belonged to Crimea [Malinovsky, p. 158]. Two years later (in 1518), the Crimean Khan once again wrote to Moscow: '...the royal family is gravely offended by the presence of Shah Ali, the son of Shah Avliyar in Russia, who owns the appanage and the people formerly owned by the Tsar Nurdovlat' [Ibid., p. 164]. The relocations of the population between the Crimean and the Kasimov Khanates during the reign of the Girays in Mishar Yurt are expressly stated in the message of Muhammad Giray (1517): '...once that our kin was in Meshchera, ...the people of Meshchera came to our service, and from us people went to Meshchera' [Collection of the Russian Historical Society, 1895, pp. 377–378]. There would have been more than enough grounds to make such an assertion, as has already been mentioned. Nevertheless, more information on this subject should be demonstrated. Ivan III wrote to Crimea: '... This year, the Prince Azika (of the Manghit clan—*D.I.*) sent to me his relative, Kambar, son of Mamalay' [Collection of the Russian Historical Society, 1884, p. 385]. In 1506, this murza was already with the 'Gorodets Tatars' [Velyaminov-Zernov, 1863, p. 201]. In 1504, the Crimean Khan Mengli Giray wrote to Moscow that 'the dead Nurdovlat Tsar's... elder wife Kouratya, the daughter of Madyk... should be sent' [Collection of the Russian Historical Society, 1884, p. 544]. This evidently referred to the daughter of Yemadyk, the prince of the clan Khongirad, because it is known from another source that his wife and children dwelled 'in Meshchera' [Ibid., p. 529]. In 1502, the Crimean Khan informed Ivan III, that 'Manghit Udem Mirza's son went to the town (Meshchera—*D.I.*), and now thinks to come here... and Udem... lives with me' [Ibid.,

p. 421]. In 1509, a message to the Grand Prince of Moscow from Crimea requested that he released a certain Kazi Mansyr '...to the tsarevich in town' [Collection of the Russian Historical Society, 1895, p. 68]. The cemetery of Kasimov town is where Djikhansha murza Suleshev, who left Crimea in 1590 'for Russia', was buried in 1600. On another tombstone the name of Habit murza Suleshev could be read. These Suleshevs originated from the Yabak Bey Kudalak, who 'migrated to Crimea under the order from Nogai' [Iskhakov, 1998, p. 217]. The documents show that even in the early 17th century, the Crimean ambassadors could petition for individual representatives of the Shirin clan who were in Meshchera [Ibid., p. 196]. Therefore, contacts with Crimea still remained.

Natives of the Nogai Horde penetrated the Kasimov Khanate as well. For example, the message of the prince of the Nogai Horde Sheydyak to Ivan III (not later than 1505) contained a letter of Uraza Berdiy to his son Esen Berdiy, who lived in the lands of Prince Munmysh in Meshchera [Scherbatov, 1786, p. 488]. Half a century later another Nogai prince, Ismail (1553), refers to Ivan IV concerning 'Elair Kaybullin, the younger brother of Prince Koshkaydar' (i.e. the members of the clan Djalair—*D.I.*), who dwelled on the territory of Dervish Khan [Ancient Russian Vivliofike. Continuation, 1793a, pp. 113, 281, 287]. In 1556, the Nogai prince again addressed Ivan IV with a request to let two Nogai murzas from the clan of Cathay (China)—Semen (Sain) and Chomash, son of Kochman murza, visit him. The former of these was definitely in Meshchera [Complete Collection of Russian Chronicles, 13, 1965, p. 289]. The same year, Arslan murza of the Nogai Horde, asked Ivan IV to send him 'the old Bahteyar's wife, Devlet Soltan is her name', who lived in the settlement of Azevevo (vicinity of the town of Kasimov—*D.I.*), 'and also, in the tsar's town, there is a daughter of Ustabegishev Abyz Yanguvat, her name is Karakiz' [Ancient Russian Vivliofike. Continuation, 1793a, p. 295]. Evidently, the requested women were Nogai women. In 1559, Ivan IV wrote to five Nogai murzas and proposed them to serve him by promising to give them 'lands on the edge, in Meshchera' in return' [Ancient Russian Vivliofike. Continuation, 1795, p. 49]. In

1562, the Nogai Prince Ismail wrote to Ivan IV: '...Tsarevich Bekbulat (in the Kasimov Khanate.—*D.I.*) keeps my lad Karakiz, the son of Khozyagul'. Then he tells the addressee that Saltan Gazi, the son of Koshum murza, visited him and asked to send them both to the Nogai Horde [Ibid., pp. 262, 268]. In 1560, he again asked Ivan IV to release 'the wife of Asanak Mirza', that was held by Khan Shah Ali [Ibid., p. 131]. In 1564, the prince asked again Ivan IV to let 'the son of Khuday Bateshev, Aziy Utemish, held by Shah Ali Tsar' go to the Nogai Horde [Ancient Russian Vivliofike. Continuation, 1801, p. 181]. There is a record on Arzamas uyezd, dated 1595, about Aydes murza Saltaganov, whose father was Saltagan Mustafin, likely one of those five murzas invited by Ivan IV [Ancient Russian Vivliofike. Continuation, 1795, p. 99, 111, 156; Arzamasskye, 1915, no. 442]. Generally, in the second half of the 16th century there was considerably more information about Nogai murzas serving the Moscow ruler. They had come back to the Nogai Horde and got back to service several times staying, likely, with Khan Shah Ali, in Mishar Yurt [Ibid., pp. 45–46, 49, 110, 113, 156, 166, 177, 224, 227, 243, 255; Ancient Russian Vivliofike. Continuation, 1801, p. 101, 145; Iskhakov, 1998, p. 217]. For this reason, it is no wonder that even in the first quarter of the 17th century the Kasimov Tatars had relatives in Astrakhan and its uyezd. For instance, in 1622 a Russian voivode (military commander) saw a suspicious Tatar, dressed in 'Nogai dress', in a palace of the Kasimov Khan Araslan. It was discovered that he was living in Kasimov at the court of Yan Magmet Dzhanyayev, whose uncle the Nogai murza Abdul Tenikeyev was also living in Kasimov as well. The Tatar, whose mother was also living in Kasimov, was sent by Yan Magmet murza to go with his uncle to Astrakhan, 'to the tsar's aunt', who lived in 'Astrakhan Yurts beyond murza' [Shishkin, 1891, p. 62]. This fact fits well into the generic range of information, showing that many owners of the Mishar Yurt were married to Nogai princesses [Ancient Russian Vivliofike. Continuation, 1793a, p. 166; Ancient Russian Vivliofike. Continuation, 1795, pp. 93, 279]. For this reason, nationals of the Nogai Horde were concentrated in the courts of khans and sultans of the Mis-

har Yurt. For instance, in his charter to Ivan IV (1555), Kasay murza of the Nogai Horde asked the Moscow ruler to release 'the wife Syuyumbike, Bozum Princess, wife of Akmagmet uhlan, tsar's servant Sultangul,...our servant Yavgacht, the son of Karaduvanov' and let them go to the Horde [Ancient Russian Vivliofike. Continuation, 1793a, p. 172].

It is also worth noting a charter, dated 1539, which contains information about 'Tatars from Tarkhans and Bashkirs' within the territory of Meshchera. The Turkic congeneric groups, controlled by the Manghit nobility, likely should be seen by this. For instance, traces of the Tabyns, (Irektins) who had come from Western Siberia and will be reviewed below, are observed between them [The Tatars, 2001, p. 131]. In the last quarter of the 16th century, noble Tatars from the Siberian Khanate found themselves in the Kasimov Khanate: in 1582 a close relative of Kuchum Khan—Sultan Mametkul—was captured by Russians and as a result found himself in the Kasimov Khanate in 1586. Sultan Mametkul, known as the 'Siberian Tsarevich', died in 1618 in Kasimov [Velyaminov-Zernov, 1866, pp. 3, 47]. In 1588, together with the 'Tsarevich of the Cossack Horde' Sultan Uraz Muhammad, 'Karacha Dumnoy' Qadir Ali Bek was captured by the Russians in the Siberian Khanate. He was from the Djalair tribe. The 'Siberian Prince' Seydyak was captured together with them. They were all sent to Moscow. The fact that in 1600 Uraz Muhammad was enthroned as khan in Kasimov, including the involvement of Qadir Ali Bek, shows that they had settled in the Mishar Yurt [Complete Collection of Russian Chronicles, 36, 1987, pp. 35, 59, 64; Velyaminov-Zernov, 1864, p. 100]. In 1598, Khan Kuchum's grandson Sultan Arslan and members of Kuchum's family were captured by the Russians and also sent to Kasimov, where in 1614 Arslan became the ruler of the town of Meshchera [Velyaminov-Zernov, 1866, pp. 2–3, 14–16].

The Astrakhan Khanate. The territory of the future Astrakhan Khanate was not completely separated from the Great Horde until 1466 [Safargaliyev, 1960, pp. 264–265]. For this reason, the earliest records of relations of the Kazan Khanate with the Tatar population of the Lower Volga region, dated to the 1440s, should be ap-

plied to the entire community which was within the Great Horde, even though there is a separate reference to Astrakhan and its surroundings. In this case, it is folkloric data that is referred to, according to which the third son of Khan Ulugh Muhammad, Yakub, after his father's death, 'together with his Horde' left 'Kazan and went down the Volga', where he joined 'the Astrakhan Khan' and settled in 'Astrakhan and its surroundings'. According to the legend, the group which had gone together with Yakub, was later named 'Kara Nogai' [Bulatov, 1974, p. 189]. As the matter in question is Yurt Tatars, their other name is 'Karile Nugailars',—the mentioned folkloric data do deserve attention. First of all, because, despite information inconsistency about Sultan Yakub (see, for example: [The History of Kazan, 1954, p. 53]), when he arrived in Meshchera in 1446 together with Sultan Kasim, he came up 'from Cherkas' [Complete Collection of Russian Chronicles, 13, 1965, p. 72], i.e. from a location in the immediate vicinity of the Lower Volga region. Besides, Yakub is not mentioned later in the Kasimov Khanate, and that leaves room to conclude that he might have returned to the southern regions. One must also consider that a part of Ulugh Muhammad Khan's Horde, headed by one of his sons in 1444, was still living in the steppe regions. While a son of this khan—Murtaza, well-known in 1472, came to Russian service from somewhere in the south, perhaps, from the Astrakhan Khanate or the Great Horde. Incidentally, the group of 'Alatsky Nogais' that at some point was ruled by Sultan Mustafa, was also known in the Kazan Khanate [The Tatars, 2001, p. 132]. For this reason, the statement of the author of The History of Kazan about the rallying of nationals from different 'countries', among which he mentions 'Astorokhan' as well, around Ulugh Muhammad khan is hardly accidental [The History of Kazan, 1954, p. 53].

In 1502, after the rout of the Great Horde, one khan of the Horde, Sheikh Avliyar, began serving for the Russian military. But he came 'from Astrakhan'. His sons (Shah Ali and Yan Ali) later ruled both the Kasimov and Kazan Khanates [Velyaminov-Zernov, 1863, p. 26]. The ruling houses of the Kazan and Astrakhan Khanates were also bound by matrimonial ties—one wife of the Kazan Khan Safa Giray, as mentioned be-

fore, was an Astrakhan princess [The History of Kazan, 1954, p. 83]. The contacts between two states are also mentioned in a message about Seyyid Mansur, dated 1545: '...from Astrakhan arrived (to Kazan.—*D.I.*) Mansir Seyyid. And several days after that Safagiray Tsar with... seyyid fled to Astrakhan. They got troops from the Astrakhan Tsar and the Tsarevich, and occupied Kazan' [Ancient Russian Vivliofike. Continuation, 1793, pp. 271–272].

In 1552, as mentioned before, the Astrakhan Tsarevich, Yadiger Muhammad, was invited to the Kazan throne. It appears that there were earlier attempts to enthrone Astrakhan sultans in Kazan (see message of the Crimean Khan Muhammad Giray, dated 1516). Sultan Yadiger Muhammad, on the day before his arrival in Kazan, was in the Nogai Horde [Khudyakov, 1990, p. 112]. He arrived in the Kazan Khanate with a group of between 200 to 500 people [Ancient Russian Vivliofike. Continuation, 1793a, p. 33; Complete Collection of Russian Chronicles, 13, 1965, p. 179]. However, the History of Kazan, likely with exaggeration, stated that then 'from the Nogai land... 10,000 barbarian nomads came to Kazan' [The History of Kazan, 1954, p. 112]. However, as mentioned before, there is a grain of truth in the message—a reasonably large number of Nogais had moved to the Kazan Khanate with Sultan Yagider Muhammad; there might have been up to 3,000 people [Iskhakov, 1998, pp. 21–22, 26].

The Tyumen (Siberian) Khanate. Ethnopolitical contacts between the predecessor of the Kazan Khanate, Bulgar wilayah, and the predecessor of the Tyumen Khanate, 'Chimgi-Tura wilayah' already existed in the earlier decades of the 15th century. Based upon the work of 16th century historian Ötemish Hajii, they were described by A.-Z. Validi Togan. He believed that the founder of the Tyumen Khanate Hajii Muhammad (ruled from 1420/21 to 1428/29 or 1430) together with other territories had also ruled 'Alatyr, Moksha and the town of Bulgar with surroundings' [Väliidi, 1994, pp. 24–26]. This information is suddenly backed up by other sources, from which it appears that at the beginning of his rule, Abu'l-Khayr Khan, the ruler of the State of nomadic Uzbeks, that had also conquered the Chimgi-Tura wilayah, was

ruling the lands 'on the right bank of the river Volga, including up till Bulgar and Derbent'. For this reason, the 'Nusrat-name' states that: '...residents of Zhanga (Chinga~Chimga)—Tura and Bulgar... were paying tributes to the Khan's treasury' [Akhmedov, 1965, pp. 71, 94].

The contacts of the same period are also mentioned in a half-legendary form in so-called 'chronicles', preserved among Tatars of the Volga-Ural region. One of their copies tells that 'Mir Timur (i.e. Amir Timur.—*D.I.*) came and, had conquered the city of Bulgar, ravaged (it)'. At that time, one of the sons of the ruler of Bulgar, Abdullah (Gabdulah) Khan—Altun Bik, 'with the rest of his people kept a yurt in the city of Kazan'. While his brother—Alim Beg, 'didn't like Kazan and moved to Tobol-Tura. As he came there, he kept (there) his yurt. The Old Tobol-Tura was built by him' [Rahim, p. 70].

In the second half of the 15th century, especially starting from the 1480s, we again can see intensive cooperation picking up between the Tyumen and Kazan Khanates. Trade relations between them are confirmed by notes of Russian chronicles. The Patriarch's (Nikon) Chronicle, dated 1475, states the following: '... the Kazan Tatars beat 40 Ustyug people on the River Kama while going to trade to Tyumen' [Complete Collection of Russian Chronicles, 11–12, 1965, p. 158]. Six years later, an entry appeared in Russian chronicles (dated 1481) about Ustyug people, fighting near Cherdyn: 'they were going to the River Kama and came across guests and Tyumen Tatars', whom they 'plundered' or 'flogged' [Complete Collection of Russian Chronicles, 37, 1982, p. 95]; Documents on the History of Komi, 1958, p. 263]. Apparently, Tatar traders that were going either from the Tyumen to Kazan Khanates or vice versa, are meant here. It is noteworthy, that one of the eastern gates of Kazan during the khanate period was named the 'Tyumen Gate', which also sheds light on the relations of the two ethnopolitical formations.

It would be appropriate to think that legends of Siberian Tatars had certain foundations. Indeed, Shibanid Ibrahim Khan in the 1480s—early 1490s was conducting active military campaigns in the Volga region (in particular, his involvement into the rout of the Golden Horde

in 1481 is known), including campaigns against the Kazan Khanate [Malinovksy, p. 223]. In turn, the intensification of military campaigns of Shibanids in the Volga region was related to the events of 1487, when, supported by Russian troops, Muhammad Amin was enthroned in Kazan, while followers of the former khan, 'Tsar Ilham people', had to flee to the Nogai Horde. From there, part of them left for the Tyumen Khanate as well. Yamgurcha murza from the Nogai Horde wrote the following to Ivan III (1491) about the latter: '... You are asking about Algazi: I did not see Algazi, he had gone to Tyumen together with Ibrahim Tsar,... he lives with Ibrahim Tsar in Tyumen' [Collection of the Russian Historical Society, 1884, p. 94]. Meanwhile, Prince Algazi, who is also mentioned in some Russian chronicles (see: [Complete Collection of Russian Chronicles, 37, 1982, pp. 50, 96]), was a rather significant political figure in the Kazan Khanate. For this reason, the Tyumen Khan Ibrahim, having around himself a group of Kazan nobles, was trying to intervene in Kazan's affairs. For instance, in 1489 he sent a note to Ivan III which stated: '...My brother Alegam Tsar... is in your hands,...let him go to me. If you don't want him to come to me, let him go to his patrimony' [Ambassadorial books, 1995, p. 19]. He sent one more message with the same content to Moscow in 1493 [Ibid., p. 47]. The answer of Ivan III to the first note (1489) proves that the Tyumen Khan had Kazan people with him: '... Alkazi and Tevekkel Seyyid, and Kasim, and Begish with Utesh (the last two were Shirins.—*D.I.*) and other their friends, and those people are kept by Ivak Tsar..., mirzas,... were fighting against Muhammad Amin Tsar's and our land' [Collection of the Russian Historical Society, 1884, p. 84]. It is known that Shibanid Khan Ibrahim had close relations with the Nogai Horde and after a rash of joint attacks on the Kazan Khanate (in 1490 and 1491), in 1493, he found himself in 'his father's yurt, on the river Volga'. From there he sent a missive to Ivan III with a request to release the former Kazan Khan Ilham (Aleham) [Ambassadorial books, 1995, p. 46].

Finally, with the support of Nogais in 1496, Shibanid Mamuq—brother of Tyumen Khan Ibrahim—was enthroned in Kazan [Complete

Collection of Russian Chronicles, 13, 1965, pp. 242–243]. After a short stay, Mamuq Khan had to leave the Kazan Khanate and apparently died on the way. He did not leave alone, but with a group of Kazan nobles, which is proved by the note of Kazan Khan Abdyl Latif (1499). He wrote that 'Agalak Tsarevich, brother of Mamuq, and Urak Prince of Kazan princes were starting a military campaign against him' [Complete Collection of Russian Chronicles, 11–12, 1965, p. 250]. The latter, being a beklaribek, was mentioned in the Kazan Khanate in 1489 and 1496 [Ibid., p. 243; Complete Collection of Russian Chronicles, 37, 1982, pp. 50, 96]. Apparently, the Nogais were also involved in the 1499 campaign, as a year later the Russian chronicles tell that 'near the city of Kazan... the Nogai Tatars... with many people' came [Complete Collection of Russian Chronicles, 11–12, 1965, p. 253]. Several years later—in 1505 or 1506 'the Tyumen' troops of Kuluk Sultan, son of Mamuq Khan, were fighting near Cherdyn, coming up to the River Sylva [Complete Collection of Russian Chronicles, 37, 1982, p. 99; Documents on the History of Komi, 1958, p. 264]. Meanwhile, the area around the River Sylva was already a part of the Kazan Khanate.

However, the last quarter of the 15th century was marked also by a reverse movement from the Tyumen to Kazan Khanate. On the basis of well-documented information, it was already shown that at that time a large group of representatives of the Tabyn tribe, who, after the migration were called Irektins, had migrated to the North-western Cisurals and from there to the central regions of the Kazan Khanate. This group, that prior to migration was living in the Tobol and Irtysh river basin, later became a part of the Kazan Tatars and Bashkirs [The Tatars, 2001, p. 134].

From the work of G. Miller, a story related to Kuchum Khan is worth noting. He, referring to the 'Remezov Chronicle', writes that Kuchum Khan 'two years after his arrival (to Siberia.—*D.I.*) went to Kazan, married the daughter of Murat Khan and together with her took a large number of Russian and Chuvash prisoners of war'. Later, referring to the same chronicle, he says that Kuchum 'took to Siberia many cler-

gy from Kazan' [Miller, 1999, pp. 197, 199]. G. Miller, meaning that Kuchum completely consolidated his power in the Siberian Khanate only in 1563, even though he started his military campaign against Taybugid Prince Yadegar ('Siberian prince') back in 1556–1557, pointed at the anachronism of the note: by 1563 there were no khans left in Kazan for sure. For this reason, the author made an assumption that Murat could have been just one of a number of candidates for the Kazan throne [Ibid., p. 197]. Thinking over this point from the 'Remezov Chronicle', we should note that Kuchum could have married even before the fall of the Kazan Khanate, when he was a sultan. This might be possible for one further reason: the elder wife of the Kazan Khan Safa Giray was a daughter of the Siberian Khan [The History of Kazan, 1954, p. 83]. Hence, the conclusion: it is indeed possible that people from the Kazan Khanate, including Muslim clergy, could have settled in the Siberian Khanate at the time of Kuchum's rule. Especially since one of the handwritten Tatar 'chronicles' contains information about the migration of Kazan Tatars after 1552 toward Kazakhstan: 'to escape from Russians, fled in different directions... Many people migrated to the rivers Dzhim and Guan. Integrated with Kyrgyz people' [The History of Tatarstan, 1937, p. 123]. In this case, the term 'Kyrgyz people' probably means Kazakhs. This migration direction of Tatars was also indirectly mentioned in the note of Ivan IV to Ismail, the Prince of the Nogai Horde (1556): '...Some Kazan fugitives will come to you or they will tell you something... and you should say they be beaten and not allow to live' [Ancient Russian Vivliofike. Continuation, 1793a, p. 217]. Since Kuchum had arrived in the Siberian Khanate 'from the Cossack Horde' [Complete Collection of Russian Chronicles, 36, 1987, p. 48], some fugitives from the Kazan Khanate might have joined Kuchum long before his arrival in Siberia. At any rate, information about Kuchum Khan's 'Chuvash prisoners of war' is also confirmed by data about the defence of Kuchum Khan at a place called 'Chuvash-tura' [Ibid., p. 52–53]. Meanwhile, in Russian sources of the second half of the 16th century, the term 'Chuvashes' was used to name part of the Kazan Tatars.

The Siberian Khanate had enhanced its ac-

tivities in Cisurals after the fall of the Kazan Khanate. The 'Vichegodsko-Vimskaya chronicle', dated 1573, tells that 'Mametkul, the son of the Siberian Tsar, had gone with his army to the Great Perm' [Documents on the History of Komi, 1958, p. 266]. According to some other data, the sultan, who was fighting near 'Chusovsky townlets', found himself on the former territory of the Kazan Khanate—in the interfluvium of the Sylva and Iren rivers [Siberian Chronicles, 1821, p. 11]. Such campaigns had happened before. For instance, the Stroganovs, trying to justify the need to build Chusovsky, Sylvinsky and Yayvinsky townlets, as early as the 1568–1570s, mentioned that it was needed for defence from 'Siberian and Nogai people' [Ibid., pp. 6–7]. In fact, in 1581 'the Siberian Tsar (i.e. Kuchum Khan.—*D.I.*) together with Vogulichi and Yugortsy went to the Great Perm, Sylvinsky and Chusovsky townlets, plundered Stroganov's patrimonies' [Documents on the History of Komi, 1958, p. 267]. Indeed, Russian authorities, trying to prove to the Nogais the need to build the city of Ufa in 1586, put forward the following argument: '...Kuchum Tsar, a fugitive from Siberia, arrived to state patrimony, the Kazan uyezd, to Bashkirs (i.e. this is about the former territory of the Kazan Khanate.—*D.I.*), taught them to lead a nomadic life and collect yasak...' [Pekarsky, 1872, p. 20]. It is hardly possible that campaigns of the Siberian Khanate troops passed off without consequence—components, common with Siberian Tatars, were found in the ethnic composition of the Turkic population at the sites of their campaigns [The Tatars, 2001, p. 135].

They pretty clearly realised the community of multi-divisional feudal strata of 'Tatars', politically prevailing in Turkic-Tatar yurts. For instance, the Nogai Horde Prince Ismail, in his charter to Ivan IV, dated 1555, wrote the following: '...Astrakhan can not be without tsar and Tatars, and you (Ivan IV.—*D.I.*) should appoint Kaybullu Tsarevitch as a tsar and let him go. But if you would like Tatars, we will find other Tatars. Tatars are generated from us' [Ancient Russian Vivliofike. Continuation, 1793a, p. 209]. In this case, it seems, the ruler of the Nogai Horde by the term 'Tatars' meant military-service groups from his state [The Tatars, 2001, p. 103].

It should be also remembered that the Tatars, divided into clans, being ethnic descendants of the Golden Horde Tatars, for a long time, almost up to the beginning of the 16th century, continued their 'maternal' union—the Great Horde (Olug Urda), known as 'Tähet yorti', acting as a kind of ethnic and political 'core' of all Tatar communities. This is proved by, for instance, the words of the Russian author of The History of Kazan (1564–1565), who lived for a long time in the Kazan Khanate and well understood the facts of that time. In his description of events, related to the great stand on the Ugra River of 1480, when allied troops of the Kasimov Khanate, together with Russians, laid waste to the defenceless 'Horde' of Akhmat Khan, i.e. the Great Horde in particular, and the author of this writing quotes the following somewhat telling statement of one of the uhlans of the Kasimov Khan Nurdavlet from the Girays: '... What are you doing, to the tsar, it is a nonsense to lay waste to such a great tsardom—you are descended from it, and we as well. And our land is your native land' [The History of Kazan, 1954, p. 56]. Even though in this case we are dealing with Russian late reminiscences of events that actually happened in 1480, the extract obviously contains the reflection of self-consciousness of Tatars, who were aware of their common ethnic identity. Attempts to revive the Ulus Jochi in the 16th century by bringing all disintegrated parts back should be interpreted in the same way. For instance, when in 1502 the Crimean Khan Mengli Giray defeated the Great Horde and annexed the main part of ulus-es of the state to the Crimean Khanate, he tried to declare himself 'The Great Tsar of the Great Horde' (Ulug Ordu/niñ/ ulug xan/ i/~ xakan/i/ [Usmanov, 1979, p. 62]. Evidently, the khan, being the head of a state that was quickly intensifying its military presence, was claiming the central 'common-Tatar' position of the Crimean Khanate among other Turkic-Tatar ethnopolitical formations of that time. It is seen even more clearly in the yarliqs of himself and of his son and successor, the Crimean Khan Muhammad Giray. For instance, in the Mengli Giray Khan's yarliq of 1514, preserved in the Ruthenian, we read: '...tsar Mendly Kirey, by the grace of God, is the Great Khan of the Great Horde, of all the Kipchaks, Turkmens, and Tatars'. His son—Mu-

hammad Giray, in his *yarliq* dated 1520 was called 'Ulu ordanung ulu hani Deştü Qıpçaq barşa Mogul padişahı' (in Tatar) or 'By the grace of God... Tsar of Desht-i Qipchaq, the ruler of all Tatar lands' [Kolodziejczyk, 2011, pp. 345, 350, 360]. It is no coincidence that during negotiations with the Polish ambassador in the Crimean Khanate in 1654, he was shown a note from the Kazan and Astrakhan Tatars, asking the Crimean Khan 'to free them from the tsar (i.e. Russian.—*D.I.*) governance' [Kolodziejczyk, 2011, p. 164]. Certainly, this shows that the Tatars were still recognizing their common ethnic identity. The same was seen during the time of strengthening in the 16th century of the Nogai Horde which had human resources (at the best of times—up to 200 thousand soldiers) allowing it to receive payments from the Kazan and Astrakhan Khanates and intervene in the affairs of almost all the late Golden Horde Turkic-Tatar states, using, as mentioned before, the so-called 'Manghit Yurts' that existed there, i.e. the Nogai principalities [The Tatars, 2001, p. 102]. In addition, the population of the Nogai Horde, therefore, as well as of the Manghit Yurt-Principalities existed in other Turkic-Tatar states, were viewed exactly as the Tatar ones. For instance, in addition to the already mentioned statement of the Nogai ruler Ismail about the ethnic marking of Nogais as the 'Tatars', the missive of another Nogai prince, Urus, to Moscow (1586) can be cited: '...It is said among us, the Tatars' [Pekarsky, 1872, p. 9].

This all shows that despite the statements of some Russian researchers about the lack of a single 'ethnic base' of Tatars, about their allegedly complete dissolution as a result of deconsolidation of the Ulus Jochi (see: [Gumilyov, 1992, p. 372]), indeed, the Tatar ethnic identity, even though it had become a 'constellation' of estranged local ethnosocial and ethnopolitical unions, was still existing in the 15–16th centuries, as well as in the form of some super-ethnic formation which was self-conscious about its affiliation with 'Tatars' in particular, expressed in the ethnonym 'Tatars', famous all over the world then and later. Not all the historical successors of the Golden Horde's ethnopolitical identity, however, preserved the Tatar vector of ethnic self-consciousness: in the eastern part

of the former Ulus Jochi, on the lands of Kok Horde, starting from the 15th century, Kazakh, Uzbek and, partially, Nogai ethnic formations were evolving, which over time lost the Tatar component of their ethnic self-consciousness.

In the end, the Tatar super-ethnic identity, consisting of a range of sub-ethnic groups (nations), finally jelled mainly in the western half of the former Ulus Jochi—mainly in the territory of Ak Horde. The matter of why such a split happened in a once-single ethnic formation is a matter for further research.

Overall, the late Golden Horde period of Tatar history is viewed as ethnogenetic only to the extent that it helped to establish local Tatar ethnic communities (nations) after the collapse of the early Golden Horde ethnopolitical entity. However, this historic period can be also determined as a continuation of the ethnic history of the Golden Horde Tatar community, formed earlier and in relation to which, as a kind of super-ethnic formation, the local ethnosocial formations, evolved in Turkic-Tatar states, acted as sub-ethnic groups. For this reason, this super-ethnic unity had preserved its tribal name of 'Tatars' everywhere. When, in order to identify the location of its local divisions, this community was subdivided into sub-ethnic groups, it was marked by the geographical nomenclature ascending to the names of the capitals of Turkic-Tatar yurts—Crimean, Kazan, Meshchera, Kasimov, Astrakhan, Siberian Tatars or directly by indication of the regions of residence (the Lithuanian/Lipka Tatars, the Buzhak Tatars).

Demographic development

The study of the demographic development of the population of the Turkic-Tatar states, of its Tatar part in particular, is based on indirect data which is mainly related to the military capacity of the yurts, because no demographic data whatsoever was found related to any of them. The only exception is the Crimean Khanate, whose population and ethnic composition is known, but only at the time it was integrated (1783) into the Russian Empire.

Despite limited sources, in one form or another, the population reconstructions, including that of the Tatar population, were performed almost in all of the late Golden Horde Tur-

tic-Tatar states (see: [Safargaliyev, 1960; Khalikov, 1978; Tomilov, 1981; Kochekaev, 1982; Sultanov, 1982; Alekseev, 1989; Ishchenko, 1989; Vozgrin, 1992; Iskhakov, 1983; 1992; 1993; 2002; 2004; 2009; Yalbulganov, 1998; Nesterov, 1999; Klyashtorny, Sultanov, 2000; Turkic Population of Crimea, 2003; Dmitriyev, 2003; Isin, 2004; Zaitsev, 2004; 2006; Iskhakov, Izmaylov, 2007; Syzranov, 2009; Tychinskih, 2010; Pensko, 2010; Matveev, Tataurov, 2012]).

However, these reconstructions need to be cross-checked, as well as based on sources that have not been considered before, and by using new methods for counting the Tatar population of certain late Golden Horde states. Later, that sort of analysis will be performed on some of the Turkic-Tatar yurts.

Kazan Khanate. For now, it is impossible to reconstruct the population of the Kazan Tatars in the 15th century. Nevertheless, we can say that the role of the Golden Horde-Tatar ethnic component of this community was clearly previously underestimated [Iskhakov, 1998]. According to information from some later sources, when the Kazan Khanate was being established in the place of the Bulgar wilayah, the Bulgars, to be specific, the groups ethnically ascending to them were relatively small in number, which is also evidenced in the statement of the author of *The History of Kazan* saying that 'lean Bulgars' were happy to see Ulugh Muhammad Khan [The History of Kazan, 1954, p. 53]. Apparently, the word 'lean', used in this source, may mean both 'weak' and have the demographic meaning of 'small in number'. The conquest of the future khanate territory by the khan with the 2,500–3,000 strong army [Complete Collection of Russian Chronicles, 11–12, 1965, pp. 64–65], once there could have been around 10–12 thousand people in his entire Horde, likely highlights the small demographic capacity of the Bulgar wilayah by the 1440s. Having said that, one can not exclude the possibility that for various reasons Ulugh Muhammad simply did not face any resistance there [Iskhakov, 1993, p. 8].

As for the Tatar population of the Kazan Khanate in the middle of the 16th century, literature shows A.Khalikov's point of view, who believed that the 'Turkic' population of the state

was between 0.5 and 1 million (it is possible that the latter figure reflects the population of the entire khanate, but the researcher made no such stipulation in his work) [Khalikov, 1978, p. 122]. A.Khalikov's calculations were based on historian E.Chernyshev's conclusions about the population of localities in the Kazan Khanate closer to the middle of the 16th century, who believed that there were around 700 localities [Chernyshev, 1971]. Furthermore, his calculations were based on the assumption that there were 40–50 houses in an 'average village' and 10 people per each house. Since at that time (even now) there was no research performed into the reviewed indicators, he extrapolated the data about the population of Tatar localities of the 16th century based on the example of the middle of the 19th century, which is unacceptable. Moreover, Khalikov had estimated the urban population of the Khanate in a totally random way—without any validation he came up with the figure of 100 thousand people [Khalikov, 1978, p. 121]. It is obvious that these figures cannot be used and a new evaluation is needed of the population of the Tatars in the time of the Kazan Khanate. We believe this evaluation can be performed in several ways.

First, we can proceed from information about the number of troops in the khanate. We have already gone through sources, enabling us to identify the military-demographic capacity of the Kazan Khanate in the 16th century—these are the works of foreigners (M.Miechowita, A.Campense, S.Herberstein, Fr. Tiepolo) and a few Russian written sources of the 16th century [Iskhakov, 1993; 2002]. A further document, dating from the 17th century, can be added to this list; it was introduced by Turkish historian A.Kurat [Kurat, 1966], based on which we can imagine the approximate population of tribute-paying people at the turn of the 16–17th centuries, which allows us to use these data to identify the demographic features of the Kazan Tatars. A review of these sources shows that, in general, their information may be useful only when using special methods, which have been already described [Iskhakov, 2002]. Based on these methods, we will further attempt to estimate the number of Kazan Tatars in the mid-16th century.

The analysis of information in the works of foreign authors allows us to make an assumption that all their estimates on the number of troops of the Kazan Khanate most likely originate from data provided by M. Miechowita, who believed that the Khanate had 12 thousand 'fighters' but, in difficult situations, it could field up to 30 thousand warriors [Mekhovsky, 1936, p. 93]. These figures are close to those provided in the 'The History of Kazan'. Its author points out that, in this state, the number of troops from actual 'residents of Kazan' reached 30–40 thousand. [The History of Kazan, 1954, pp. 61–62, 70, 84, 126, 148. This figure is the result of averaging the data from the source]. One might think that this number does not include the cavalry of 20–30 thousand, which consisted mainly of Nogais and Crimeans (see [The History of Kazan, 1954, pp. 60, 67]). In addition, a 40-thousand-strong army was most likely gathered at the expense of all settled population in the khanate, that is, by mobilising the warriors from all peoples living in the state, while the army of 12 thousand described by M. Mekhovsky was 'tribal' and consisted only of service-class Tatars, and had a clan-based division. In extreme cases, the number of the khanate's troops could be significantly increased—according to 'The History of Kazan' and A. Kurbsky, during the siege of Kazan by Russians in 1552, the town was defended by 30–50 thousand warriors, and another 83 thousand, including the cavalry, were positioned outside the city [The History of Kazan, 1954, p. 132; Tales, 1833, p. 24].

Based on this information, we can first determine the total population of the Kazan Khanate. If we assume that, in extreme circumstances, the troops included the entire adult male population, i.e., a quarter of the total population, then the total settled population of the khanate could range from 200 thousand (50 thousand warriors \times 4) to 400 thousand (50 thousand + 83 thousand = 133 thousand—30 thousand cavalry men = \sim 90–100 thousand \times 4). In our opinion, the last figure is accurate, since the number of troops in the Kazan Khanate without cavalry men was about 100 thousand. These calculations can be yet further revised by using other methods.

According to the second version of calculations, we should first determine the number of indigenous peoples of the Middle Volga region at the earliest date available in large-scale demographic sources on this subject. Such data is available for early 18th century, when the number of these peoples stood at 0.7 million. [Bruk, Kabuzan, 1980]. If we consider that, in the 16–late 17th century, Russia doubled its population [Vodarsky 1973], then by accepting the same rate for the peoples of the Volga region in that period, we can estimate their number at 350 thousand. However, in this case, the figure would be a 'crude' estimate that does not take into account the military losses during the conquest of the khanate. According to the author of 'The History of Kazan', the loss of people in Kazan during this period amounted to 190 thousand. [The History of Kazan, 1954, p. 159]. The resulting figure of total settled population in the Kazan Khanate by the mid-16th century is about 540 thousand (350 thousand + 190 thousand). We can probably settle on a figure of 0.5 million people, which is close enough to the number derived above. In general, however, the total population of the Kazan Khanate in the mid-16th century was somewhere around 450 thousand.

Now we will make an attempt to determine the number of the Tatar population proper in the Kazan Khanate. In this case, we may suggest several methods of calculation.

First, it is possible to make calculations based on the share of Tatars in the total number of indigenous people of the Volga region, which was 35% by the early 18th century [Iskhakov, 2002]. If we assume that, in the mid-16th century, this share was roughly the same, then the number of Tatars in the Volga region at that time would be close to 140–170 thousand (median figure \sim 150 thousand). However, these calculations have one drawback, as they do not take into account the possible reduction in the share of Tatars among the indigenous population of the region following their great human losses in the mid 16th century. In addition, this would be the total population of Tatars in the Volga region (i.e., including not only Kazan Tatars, but also Meshchera Tatars). Nevertheless, when we take into account the fact that the proportion of the

Kazan Tatars and Meshchera Tatars by the early 18th century was 3-to-1 [Iskhakov, 1980], we can estimate the number of Kazan Tatars in the mid-16th century as close to 100 thousand (not counting military casualties).

Another variant for retrospectively estimating the size of the Tatar population in the Kazan Khanate can rely on direct demographic figures of the early 18th century, when the Volga-Ural region had 261 thousand Tatars [Ibid.]. Based on the above Russian population dynamics in the 16-17th centuries, we can estimate the possible size of the Tatar population in the Volga region by the mid-16th century at 130 thousand, including about 90 thousand Kazan Tatars.

And if we base our estimates on the number of all local peoples of the Volga region (excluding Tatars) by the early 18th century standing at 440 thousand (data from S.Bruk and V.Kabuzan), then, by the mid-16th century their demographic potential could have been about 220 thousand (440 divided by 2). This figure can be verified in a document originating in first thirty years of the 17th century and mentioned by A.Kurat [Kurat, 1966, p. 058]. This source points to the number of peoples in the former Kazan Khanate as follows: Cheremises—40 thousand, Chuvashes—20 thousand, Ars—15 thousand, Bashkirs (Ishtyaks)—10 thousand 'houses', i.e., 85 thousand 'houses' in total. Since it is not excluded that this information relates to the period of the Kazan Khanate (it was received by the Ottomans through the Crimean Khanate), they can be used to calculate the number of tribute-paying people in that state. In this case, they will number more than 420 thousand (85 thousand 'houses' x 5). In such case, the above figure of indigenous people in the Volga-Ural region by the mid-16th century could be an underestimate, most likely because in these calculations we did not previously take into account the number of Bashkirs [Iskhakov, 1980]. On the other hand, however, this source could have included representatives of the tribute-paying estate among Kazan Tatars in the total number of tribute-paying people, especially the Chuvash. However, overall, the group of tribute-paying people in the Kazan Khanate could be about 300-350 thousand (the median of the

above numbers). As a result, by the mid-16th century, the number of actual Kazan Tatars ranged from 100 to 150 thousand people (450 thousand—300 ~ 350 thousand).

The last variant for a retrospective demographic estimate of the number of Kazan Tatars is as follows. Based on the total number of service-class Tatars estimated at 48 thousand (12 x 4 thousand) and information on the ratio of tribute-paying and service-class Tatars in the Kazan Khanate which, in our opinion, was 4-to-1 (see [Iskhakov, 1993]), we can obtain numbers for the total population of the Kazan Tatars in the mid-16th century. Without military and demographic losses, this figure comes to about 200 thousand people. However, the problem is that the proportion, used as a basis for these calculations, was derived from data originating from the second half of the 16th century, when the service-class Tatar population of the Kazan region had greatly diminished.

To conclude, it should be noted that, in the mid-16th century, the Kazan Khanate could have had a Tatar population ranging from 150 to 200 thousand (the median figure is 170-180 thousand). Following the demographic losses of the 1540-1550s, this number could have diminished to 100-130 thousand [Iskhakov, 2002].

The Kasimov Khanate. Even the comprehensive works on the history of the Kasimov Khanate [Rakhimzyanov, 2009] provide no information on the size of the Turkic Tatar population in this yurt, which is associated with the condition of the corresponding sources. Nevertheless, based on some indirect evidence, we can propose a retrospective estimate on demographic parameters of the Tatar population in the Meshchera Yurt in the 16th century. For the 15th century, all we have is a comment by A.Contarini that, in the 1470s, the Muscovite grand prince 'paid an allowance to a Tatar with 500 cavalry men on the Tatar border to protect the Russian lands from attacks' [Puteshestviye, 1836, p. 100]. Apparently, this refers to the part of the Horde ruled by Ulugh Muhammad Khan who happened to be in Meshchera Yurt. Even if we take this figure as the total number of warriors who arrived with Kasim Sultan to Meshchera yurt, while bearing in mind that, from the second half of the 16th century, the army of the Kasimov Khanate was

very actively involved in defending the borders of the emerging Muscovite state [Rakhimzyanov, 2009; Iskhakov, 1998], such a figure would most likely represent, even by probably including children and women, a rather significantly understated number (about 2 thousand people) of the Turkic-Tatar population in that state. This is especially since we do not know the demographics of the tribute-paying population in Meshchera Yurt, which also had a Turkic component [Iskhakov, 1998, pp. 218–223].

However, for the mid–16th century, based on calculations from 'The History of Kazan', we can try to estimate more accurately the size of the Turkic-Tatar population in the Kasimov Khanate. According to the author of that historical writing, in 1552, Khan Shah Ali, 'out of his confines, from Kasimov', led against the Kazan Khanate 'his barbarian force' of 30 thousand men [The History of Kazan, 1954, p. 123]. As we can see in this work, at least 10 thousand of these men could have been Mordovians [Ibid., p. 124]. Although among the remaining 20 thousand warriors, some were most likely the Nogais participating in the campaign (given the significant role of the latter in the ethnic formation the Meshchera Tatars (including the Kasimov Tatars themselves), we think that this figure could be accepted as the number of the entire adult Tatar population in Meshchera yurt. In this case, the total size of this group in the Kasimov Khanate in the mid–16th century could have reached 80 thousand people (20 thousand X 4). However, we must bear in mind that some Nogai groups that participated in the conquest of the Kazan Khanate among the troops of Shah Ali could have afterwards returned to the Nogai Horde. This suggests that the real number of warriors at the disposal of the Kasimov khans in the mid–16th century was lower. The above figure can be validated with data originating in the early 18th century and estimating the number of Meshchera Tatars in the mid–16th century at no more than 35–40 thousand. As a result, the latter figure appears to be closer to the truth. Therefore, for the mid–16th century, the Tatar population in Meshchera Yurt should be estimated not at 70 thousand, as we suggested earlier [Iskhakov, 2009, p. 39], but at a much smaller figure of about 40 thousand people.

The Great Horde and the Astrakhan Khanate. Given that the final separation of the Astrakhan Yurt from the Great Horde, most likely, occurred only in the early 16th century [Zaitsev, 2004 pp. 39–40, 52–53], separate demographics for these states can be considered only for the period after 1502 [Iskhakov, 2009, pp. 22–23].

For the number of 'Ulus people' of Kichi Muhammad, the Khan of the Great Horde, at about 1438, we know the estimate of G. Barbaro, who believed that this yurt had up to 300 thousand people [Safargaliev, 1960, p. 269]. Somewhat later, in the 1460–1470s, the number of troops at the disposal of Ahmad, the son and successor of that Khan, ranged, according to various estimates, from 100 to 150 thousand people [Alekseev, 1989, p. 73; Trepavlov 2010, p. 89], even though, in 1472, Ahmad mentioned, perhaps in exaggeration, a figure of 200 thousand [Zaitsev, 2004, p. 89]. According to V. Trepavlov, these data on the period of the Great Horde's might in the early 1470s mean we can talk of the population of that state standing at 400–600 thousand [Trepavlov 2010, p. 19]. However, we should bear in mind that the Great Horde also controlled a number of ethnic groups in the North Caucasus. Therefore, the above figure may include the non-Tatar population [Iskhakov, 2009, p. 43]. However, towards the end of the 15th century and, especially, in the early 16th century, the population of this domain ('Takht Eli') had decreased dramatically for environmental reasons—the number of warriors from that state mentioned in the sources ranged from 60 to 100 thousand, while the number of women and children was estimated at 100 thousand. Overall, this provides a figure for the Tatar population of the state in the range of 160–200 thousand people [Trepavlov 2010, pp. 19–20]. Apparently, such a decrease in the population in the Great Horde was associated both with the political decline of the Great Horde accompanied by natural disasters, people moving to the Crimean Yurt, and the separation of the Astrakhan Khanate, which included some Turkic-Tatar groups that were previously a part of 'Takht Eli'.

For the Astrakhan Khanate, there are only some rough estimates of its population during the conquest of that yurt. Its Tatar part could

basically have ranged from 10 to 25 thousand 'families' or 'bows' [Iskhakov, 1992, pp. 22–23]. Overall, this gives at least 40–100 thousand people [Iskhakov, 2009, p. 45], or slightly more. In fact, the latter figure is close to the population of the Great Horde shortly before its fall. However, in reality, after the political collapse of their state between 1502–1504, the population of the Great Horde mostly was included in the Crimean Yurt and Nogai Horde, and not in the Astrakhan Khanate [Trepavlov, 2010]. Therefore, the 100,000 people of the last Khanate should be considered as the demographic potential of that particular yurt. However, this figure could fluctuate as a result of movements, primarily by the Nogai groups that played a major role in this Khanate, right up until its fall [Iskhakov, 1992; 2009, p. 45; Syzranov, 2009]. The problem, however, is that, after the conquest of the Astrakhan Khanate by the Russians towards the end of the 1570s, there were actually only 7 thousand Astrakhan Tatars (they were later known as the 'Yurt Tatars') in that region [English Travelers, 1937, p. 266]. It appears that much of the Turkic-Tatar population in the Astrakhan yurt, still classed as nomads, left the Lower Volga region during its conquest and became a part of the Nogai Horde, Kazakh Khanate, and possibly the Shibanid states in Central Asia. In any case, some clans, known in the Astrakhan Khanate (Alchyn, Kongrat) later emerged among the Nogais, Kazakhs, and Uzbeks.

Nogai Horde. Despite little being known about the demographic potential of the Nogai Horde (Manghit Yurt) during the period of its formation under the reign of Edigu, there is still a famous testimony of Ruy González de Clavijo that it had 'more than two hundred thousand cavalry men' [Ruy González de Clavijo, 1990, p. 144]. Of course, given the position of Edigu, the Manghit Prince, as the head of the entire left wing of the Ulus Jochi [Trepavlov 2001, pp. 78–86], this figure can also be seen as describing the entire population of the Golden Horde's left wing. However, bearing in mind that similar data on the population of the Nogai Horde were also known in the 16th century, we cannot exclude that the above number has some historic justification. Moreover, because

in the late 16–early 17th centuries, the Nogais believed that they numbered 'forty sans' [Trepavlov 2001, pp. 495–496]. Since 'san' means 'tumen', or a 10,000-strong military unit, this refers to 400,000 Nogais, although not in the late 16th century but much earlier. Therefore, we can assume that in the first half of the 15th century, the population of the Nogai Horde ranged from 400 to 800 thousand.

During the reign of Prince Yusuf in the Nogai Horde in the early 1550s, the sources mention the figure of 300 thousand 'registered warriors' at the disposal of this ruler and, in addition, 10 thousand warriors for each of his 8 sons, i.e., 80 thousand in total [Ancient Russian Vivliofike. Continuation, 1793, p. 303]. However, given that Ismail, the next Nogai Prince, had a number of warriors estimated at 200 thousand [Ancient Russian Vivliofike. Continuation, 1793a, pp. 101, 110], it appears that the figure of 200–300 thousand warriors, most likely, was genuine. Therefore, in the mid-16th century, the population of the Nogai Horde was not 300–350 thousand, as thought by B-A.B. Kochekaev [Kochekaev, 1988, p. 34], but significantly larger, ranging from 700 thousand to nearly 1 million (see the calculations of V.Trepavlov [Trepavlov, 2001, p. 497]).

However, later, this figure began to decline sharply following the military and political upheavals and environmental disasters of the 1550s. As a result, by the end of the 16th century, the Nogai Horde was able to field only 80 to 100 thousand warriors, which gives a total population of the state of 240–400 thousand (the median figure is about 300 thousand people [Trepavlov 2001, p. 498]).

By the early 17th century, the demographics of the Nogai Horde had deteriorated further and the number of military men in the Great Nogai Horde fell to 40–60 thousand [Isin, 2004, p. 27], i.e., there were no more than 160–240 thousand people left in this part of the Nogai state (the median figure is about 200 thousand people). Before the final collapse of the Nogai Horde in the 1630–1640s into a number of smaller hordes, the Nogais were able to field no more than 30–40 thousand warriors (see [Yalbulganov, 1998, pp. 29–80]), which means we can estimate the total number of Nogais at

120–160 thousand (the median figure is fewer than 140 thousand people). Other researchers provide even lower figures of 100 or 80–120 thousand people [Trepavlov, 2001, p. 499]. The gradual decrease of the Turkic Tatar population in the Nogai Horde in the second half of the 16–mid-17th century can be explained not only by mass-scale deaths during the fratricidal wars and environmental disasters, but also by the withdrawal to Crimean and Kazakh Khanates, and deep into Central Asia to the domains of the Shibanids (Khanates of Khiva and Bukhara).

Tyumen and Siberian Khanates. To date, documented literature provides only a few estimates for the number of Siberian Tatars, whose ethnopolitical entities were the Siberian yurts, including the Tyumen and the Siberian khanates.

N. Tomilov believed that, at the end of the 16–first decades of the 17th centuries, there may have been from 13 to 17.7 thousand Siberian Tatars. [Tomilov, 1981; Valeev, Tomilov, 1996, pp. 17–18]. We suggested a figure of 10–12 thousand people for the second half of the 16th century [Iskhakov, 2009, p. 52]. In both cases, these calculations did not take into account the demographic losses of the Siberian Tatars during the conquest of the Siberian Khanate. However, such losses could have been significant. For example, a report of Russian diplomatic clerks for 1585 informed that 2000 warriors of Mehmet Kul Sultan, a nephew of Kuchum Khan, had been killed [Skrynnikov, 1982, p. 158; Trepavlov 2012, p. 14]. This was far from being the only loss on the Tatar side. In particular, another report with instructions to the Russian envoy for 1598 mentioned that, during a battle with the forces of Kuchum Khan, the Russians 'killed more than six thousand' [Tychinskikh, 2010, p. 128]. As we can see, these documents show that, in the last quarter of the 16th century, at least 8 thousand Siberian Tatars were killed, most of them evidently military and service-class people. Although some opinions stated these reports to be somewhat exaggerated [Skrynnikov, 1982, pp. 158–159; Trepavlov 2012, p. 14],

Circassians (left) and Nogais (right). Print from 'Description of my travel to Muscovy...' by A.Olearius, 1630–1640.

we have no reason to doubt their authenticity. Therefore, we can agree with A.Matveev and S.Tataurov, when they estimate the number of warriors at the disposal of Kuchum Khan as 10–15 thousand [Matveev, Tataurov, 2012, p. 162]. Moreover, there are direct indications in the sources that Mehmet Kul Sultan, a nephew of Kuchum Khan, commanded a detachment of 10,000 warriors [Trepavlov 2012, p. 14]. Most likely, these were not all the troops of the Siberian Khanate [Matveev, Tataurov, 2012, p. 160]. The question is how many of these 10–15 thousand warriors were Tatars. According to A.Matveev and S.Tataurov, their number could have ranged from 5 to 7 thousand [Ibid., pp. 161–162].

In general, one cannot exclude that, in the 1560s, the total population of the Siberian Khanate could have been up to 50 thousand and, after successful campaigns led by Kuchum Khan, it could have reached up to 100 thousand by the 1580s [Ibid., p. 92]. Some estimates provide an even higher figure of 150–180 thousand people [Nesterov, 1999] based on reports about the size of the tribute-paying population of that state population in the second half of the 16th century at 30–40 thousand people, apparently, all men [Tomilov, 1981, p. 42; Iskhakov, 2009, p. 52]. In these calculations, the reported numbers are multiplied by a factor of 5, introduced by N.Tomilov. However, we should not forget in this instance that these figures also include

the non-Tatar population.

If we use the above estimate of A. Matveev and S. Tataurov, the number of Siberian Tatars, before the demographic losses during the conquest of the Siberian Khanate by Russians, should have been no less than 30 thousand, including about 6,000 service-class Tatars. The actually repeated number of 10 thousand 'Tyumen Tatars' in the 16th century gives a close figure (if this is the number of adult men, it should be multiplied by 4, which gives a figure of 40 thousand people). However, when N. Tomilov mentioned the figure of 2 thousand service-class Tatars at the end of the 16–first half of the 17th centuries for the central areas of the former Siberian Khanate [Tomilov, 1981, p. 42], he described a different demographic reality that had emerged after the mass death of the Tatar population, especially those of the service class, during the conquest of that state by the Russians.

The above figures on the number of Siberian Tatars in the 16–early 17th centuries display a certain correlation with the statement of S. Herberstein, who estimated the population of 'Tyumen Tatars' in the first quarter of the 16th century at 10,000 [Herberstein, 2007, p. 289]. However, it is rather disquieting that this figure matches the reports on the number of warriors in the tribal militia at the disposal of Sheibani Khan in 1503 [Iskhakov, 2006, pp. 136–137]. On the other hand, however, the writings of Herberstein show that he did not confuse 'Tyumen Tatars' with 'Sheibanids'.

For the earlier period (late 15–early 16th centuries), we should bear in mind that the territory of the Tyumen Khanate was actually the area of residence of the Turkic population of the Shibanid state, which left this area for good only in 1510–1511 [Maslyuzhenko, 2008, p. 114]. The number of nomads who then left for Central Asia is estimated at 240–360 thousand [Sultanov, 1982, pp. 19–21]. Therefore, the number of 'Tyumen Tatars' reported by Herberstein should be regarded as the demographics of a population group in the Tyumen Khanate that probably remained in Western Siberia after this large wave of migration by Shibanids subjects to Central Asia. Clearly, the remaining 'Tyumen Tatars' were only those who, in the Tyumen Khanate, occupied the lands of the future core

of the Siberian Khanate as early as at the time of the Tyumen Khan Ibrahim (it was he who in 1481, during a joint campaign with the Nogais against the Great Horde, was described as having one thousand of his own 'cossacks' [The Tatars, 2001, p. 123]).

Therefore, the actual number of the Tatar population in the Siberian Yurt towards the mid–16th century could have been about 30 thousand and, following the military losses of the 1580–1590s and withdrawal of the Tatar population to other regions [Trepavlov, 2012, pp. 23, 53–54], it could have fallen, according to various estimates, to 17–18 thousand or, even lower, to 12–13 thousand.

The Crimean Khanate. Modern recorded literature on the history of the Crimean Khanate is focused primarily on determining the size of the Tatar population in that state at the time of its annexation to the Russian Empire in 1783. The figure of 120 thousand [Turkic Peoples, 2003, p. 154] is usually mentioned, or 55 thousand Tatar men [Lashikov, 1886, p. 103]. However, by this time, many Tatars had already left Crimea for Turkey. Emigration is estimated, in various sources, to range from 80 to 300 thousand [Turkic Peoples, 2003, p. 154]. A more accurate figure of 200 thousand people was provided by a group of researchers in Moscow [Vodarsky et al., 2003, p. 86]. Therefore, before the annexation of the Crimean Khanate to Russia, the population of the Khanate was at least 300–310 thousand Tatars [55 thousand \times 2 = 110 thousand + 200 thousand].

Some authors suggested a figure of 411.5 thousand Crimean Tatars for the 1760–1770s [Ibid., p. 120], which is hardly likely to be accurate. In this regard, we note that the book of J. Thunmann, a German author, on the Crimean Khanate, published in German in 1774, estimates the approximate size of the population in the Crimean Khanate, although without any reference to sources, at 400 thousand [Thunmann, 1991, p. 21], which means we can talk of the demographic parameters of the Tatar population itself (including the Nogais, who had already become its ethnic component) at 350–360 thousand (for the calculation method, see below).

However, since there are no accurate data on the number of Crimean emigrants to Turkey in

the 18th century, the above calculations are approximate. This is the reason why we suggested earlier to estimate the Tatar population of the Crimean Khanate on the eve of its annexation to the Russian Empire at 160–180 thousand and, for the mid-18th century, at 150–160 thousand [Iskhakov, 1983, pp. 55–56]. Other researchers estimated the total population of the Crimean Khanate in the 18th century at 200–300 thousand [Vozgrin, 1992, p. 163] which, given the fact that Tatars represented more than 90% of the total population in that state [Vodarsky et al., 2003, p. 85] allows us to estimate the size of the proper Tatar population in the 18th century at 180–270 thousand (the median figure is about 225 thousand)

It appears that the number of Crimean Tatars in the second half of the 18th century was even higher and reached 300–350 thousand. Most likely, the same approximate number can be obtained using the figure provided by J. Thunmann, who was referring to Kantemir, the ruler of Moldavia, when he wrote about 70 thousand 'kazans', i.e. families or households, in the Crimean Khanate. [Thunmann, 1991, p. 21], who most likely were Tatars. If we assume that each family/household included, on average, 5 persons, we have a population of 350 thousand, which matches the above number. However, when we describe such demographic data, we must remember that this number also includes the Nogais who, as a result of their semi-nomadic way of life, could sometimes leave the sphere of influence of the Crimean Khanate.

As indicated by J. Thunmann, in addition to Tatars, the Crimean Khanate had a population of Armenians, Greeks, Italians, Georgians, Vlachs and Karaites, as well as Gypsies [Ibid., p. 27]. In the 1760–1770s, their number is estimated as follows: Greeks and Italians—18.6 thousand; Armenians—13.6 thousand; Georgians—219 people; Vlachs—161; Karaites—1.6 thousand; Gypsies—1.4 thousand (as at 1795) (see [Vodarsky et al., 2003, pp. 120–121]). Among these peoples, those who professed Christianity (i.e., except the Karaites) had left in 1779, at their own request, for the Russian Empire, even before the fall of the Crimean Khanate and, at that time, their number reached 30–31 thousand [Ibid., pp. 85–86, 195].

A more difficult task is to analyse the demographic data on the Tatar population in the Crimean Yurt of the 15–17th centuries, which is mostly based on the estimates of the military potential of that state.

Our analysis of sources and literature shows that, in the 16th century, the Crimean Khanate had from 15 to 100 thousand warriors and, on average, the number of warriors was 50 thousand. The largest number of the khanate's warriors, recorded by the sources, was 250 thousand. However, the khanate could field such an army only after the annexation of the uluses of the defeated Great Horde in the early 16th century. Given that all men over 15 years old could participate in major campaigns, the number of Crimean Tatars at the beginning of the 16th century can be estimated at 300–350 thousand. After the victory of the khanate over the Great Horde, this figure could temporarily have reached 500–600 thousand, including later with the Nogais who, in the second half of the 16–early 17th centuries, became partly the subjects of the Crimean Khanate [Iskhakov, 2009, pp. 40–41].

Recently, V.Penskoy made an independent analysis for the demographics of the Tatar population of the Crimean Khanate [Penskoy, 2010], which deserves attention because he combined the material on the military forces of that khanate, included in other studies [Ishchenko, 1989; Dmitiriev, 2003]. According to this researcher, in the second half of the 16–mid-17th centuries, the army of the Crimean khans had 40–60 thousand men [Penskoy, 2010, p. 210], which puts the figure of the Tatar population in the Crimean Khanate during this period at 240–250 thousand [Ibid., p. 208]. Therefore, the above estimate of the Crimean Tatar population in the early 16th century (before the annexation of the uluses of the Great Horde) should be regarded as exaggerated. Most likely, the figure of 200 thousand is closer to reality [Penskoy, 2010, p. 209]. For the mid-16–17th centuries, we believe the estimate of the Tatar population in the Crimean Khanate proposed by V.Penskoy is understated. To field a 250-thousand-strong army—this is the number sometimes provided in the sources—the Tatar population of the Crimean Khanate had

to be no less than 500–600 (100–120 thousand of them could have been Nogais) or even more.

For the 15th century, we should proceed from the fact that the core of the Crimean Tatars, who in the initial formation of the Crimean Khanate consisted of 4 clans (Shirin, Baryn, Arghyn, Kipchak), was 1 tumen. With a fully-weighted calculation (10,000 x 4), this figure allows us to estimate the population in the mid-15th century at about 40 thousand [Iskhakov, 2009, p. 41]. However, it is indicative that for the 1430s G. Barbaro was inclined to estimate the group of Tatars associated with the steppes on the 'island of Kaffa' at only 3–4 thousand cavalry men [Barbaro and Contarini, 1971, p. 55], which gives an even smaller total figure of 12–16 thousand people. Nevertheless, this represents roughly the number of people in one tumen. Given that a 'tumen' might not have been always full, the number of Crimean Tatars mentioned above was possible in the mid-15th century. Over time, however, the number of 'native' Crimean Tatars clearly increased. For example, in the early 16th century, the Shirin clan alone already had 20 thousand people in the khanate [Iskhakov, 2009, p. 41].

Non-Tatar groups of the population (by the 18th century, all of them were already Tatar-speaking) lived in the Crimean Khanate from the time of its creation by concentrating in the cities (Gözleve, Karasubazar, Ak-Mechet, Caffa, Bakhchysarai and Chufut-Kale [Fisher, 1978, pp. 30–34]), as well as in a number of rural settlements [Vodarsky et al., 2003, pp. 86–87]. After the successful campaigns of the Crimeans in 1510–1515 against the Circassians (Adyghe), some of them also became a part of the population of the Crimean Khanate [Iskha-

kov, 2009, p. 40]. However, for the 16–17th centuries, the size of these groups still remains unknown.

* * *

The study of demographic data on the post-Golden Horde Turkic-Tatar states suggests that, in the 15–16th centuries, they had a considerable human potential, ranging from 1.5 to 1.8 million people (late 15–mid-16th centuries). Until the late 15th century, the Volga region was dominated by the Great Horde, which had considerable human resources and, in fact, replaced the right wing of the collapsed Golden Horde, while the east was dominated by the Nogai Horde, which had a larger rather than smaller demographic potential that allowed it to take on the role once played by the Turkic-Tatar groups in the left wing of the Ulus Jochi. However, after the victory of the Crimean Khanate over the Great Horde in the early 16th century, the dominant position in the western part of post-Golden Horde political space was taken by the Crimeans, who soon had to face the Nogai Horde. In varying degrees, the alternating dominance of different Turkic-Tatar yurts in this space during the 15–16th centuries was affecting the ethnic composition of the population in other Tatar khanates (Kazan, Kasimov, Tyumen/Siberian, and Astrakhan). However, by the mid-16th century, none of these states individually could match the emerging Muscovite state in demographic terms, but their joint action that would have allowed the combination of their demographic potentials proved to be impossible for a number of reasons, which in the end determined their historical destiny.

CHAPTER 2

Great Horde Tatars and Their Successors

Vadim Trepavlov

It is believed that the common name of the Turkic-speaking population of the Golden Horde was the gentilic 'Tatars'. In the 14th century, the right wing of the state featured a developed urban civilization, thriving interregional ties, and powerful pockets of the old sedentary culture (Volga Bulgaria, Crimea, Moldova). As a result, tribal patriarchal norms of life were gradually withering away. Ethnic consolidation was in evidence, the formation of the Golden Horde Tatar nation. However, this process was interrupted first by the plague in the middle of the century, and later by wars and migration of nomads from the east.

These newcomers brought with them archaic social and cultural norms: as members of the Horde's left wing, they piously observed the tribal norms in their life, as the social order in the steppes east of the Yaik River were much more conservative. Although residents of the eastern regions of the Golden Horde in the 14th and 15th centuries are frequently referred to as the 'nomadic Uzbeks' by historians, there was no single ethnic group.

Nevertheless, the beginnings of a common identity, one which was not Tatar but 'Uzbek', can at times be seen in the 'post-Horde' era. The last Khan of the Great Horde, Sheikh Ahmad, noted similarities between the tribal nomads of Desht-i Qipchaq and migrants from Ulus Jochi in the Grand Duchy of Lithuania at the beginning of the 16th century, speaking about 'our Uzbek people' (*bizniñ özbäg ta'ifisi*) [Ötemish Hajji, 1992, pp. 96, 124, fig. XII]. It should be noted that the ethnic identity of the residents of the Desht in those days was manifested primarily in the awareness of belonging to a certain tribe (*el*) and clan (*urug*). Being a part of broader communities did not entail proximity in terms of kinship and descent. Those communities were nomadic, they pledged their allegiance to one monarch and—later—to the Muslim religion.

Therefore, one should not interpret the Khan's words about the Uzbek people as the evidence of their existence as an ethnic group. The word 'Uzbek' could have a different meaning in this case. In the 18th century, a Djungar Khong Tayiji told the Kazakh Khan Abu l-Khayr: '... in front of this crow (Russian empress—V.T.), we will not stand on our knees, because they (Russians—V.T.) are with horse carts and we are Uzbeks (i.e. nomads—V.T.)' [Kazakh-Russian, 1961, p. 306].

It is not possible to determine the exact composition of the Great Horde based on fragmentary information sources. U. Schamiloglu believes that the basis of population of the Khanate was a confederation of four tribes: Kiyats, Manghits, Saldzhiuts, Kungrats [Schamiloglu, 1986, pp. 196, 203; The History of the Tatars, 2009, p. 690]. In addition, there is information about other tribes.

Manghit. The Manghits ranked first in terms of influence and, probably, number. The leading role of the Magnyt begs was consecrated by the tradition of beklaribeks, initiated by their ancestor Edigu. This tradition was transformed in many ways in the Kazan, Astrakhan, Crimean yurts of the Great Horde. These khanates (with the possible exception of Kazan) included the Manghit aristocratic clans, which in varying degrees affected the policies of local Chinggisids and the management of their domains. It seems that most of Edigu's tribesmen's influence applied exactly to Takht ali. The Manghits lived there from the time of Edigu and tried to settle as far as possible in the camp of every khan who succeeded to the throne. We will return below to the Manghit begs in the Great Horde.

Kiyat. Since the beginning of the 14th century, this tribe played a crucial role in the history of the Golden Horde. The Kiyat begs playing an active role in political events related to the accession and the overthrow of the

khans (especially during the Time of Troubles—'Zamyatnya' in the 1360s and 1370s), were engaged in the government, and occupied the highest administrative posts (see [Trepavlov, 2007a]. Mamay was the most famous of them. The Kiyats were represented in the Great Horde as well but did not hold any significant positions. However, Khan Sheikh Ahmad spoke very highly of them: '... I have no better or more dedicated servants than the Kiyats' [Lietuvos, 1994, p. 180]. In 1515, the Russian delegation met one Karachura near the Seversky Donets River, who was 'said to be of the Kiyats from the (already non-existent—V.T.) Great Horde' [Collection of the Russian Historical Society, 1895, p. 144].

Kipchak. In the aforementioned clash between Mohammed Sheibani with Khan Ahmad's troops, Konush Kipchak (chief of 1,000 warriors) fought on his side [Materials, 1969, p. 20, 101; Sheibaniade, 1849, LVII]. His troop likely consisted of his fellow tribesmen.

Kitai. At various times, Sheikh Ahmad sent 'Kitai Baibosov's son Mahamet murza' and 'Bulgair-Kitai' with ambassadorial assignments; a defector, who fled to Crimea—'Kirey Menglishikov, Kitai's son', also was mentioned in the company of a 'Kitai Kireyev's man' [Collection of the Russian Historical Society, 1882, p. 432; Collection of the Russian Historical Society, 1884, pp. 70, 323; Lietuvos, 1994, p. 181].

Alchin. 'Tokhtamysh Alchin' was in Sheikh Ahmad's inner circle [Collection of the Russian Historical Society, 1882, p. 432].

Ming. Saray-ming It is possible that the tribal name 'Ming' traces back to the name of a Great Horde ambassador to Lithuania 'Min Bulat Bogatyr' [Lietuvos, 1994 p. 181]. The list of people 'who were captured by the Great Horde warriors' in 1487 included 'Ikim Subuev... of the Saray Thousand' [Collection of the Russian Historical Society, 1884, p. 70]. I believe that 'Saray thousand' is the distorted Saray-ming. This division of the Mings existed in the Nogai Horde and included components of independent Saray and Ming tribes [Trepavlov, 2001, p. 502].

Naiman. Uishun. The existence of those tribes in the Great Horde is proven by information about a parochial dispute between a judge's

marshal and a clerk, Ibrahim Temirchiche, in the Grand Duchy of Lithuania. In 1517, Ibrahim humbly asked Sigismund I, King of Poland and Grand Duke of Lithuania, to recognise the nobility of his family, referring to the position occupied by his relatives in Crimea, as well as at the court of Sheikh Ahmad, Khan of the Great Horde (at that time in Lithuanian hands). In addition, Ibrahim's family was 'brothers to the Prince of Tyumen and Uishen' (in the text: bratrya—V.T.). Ibrahim submitted supporting documents based on which Sigismund commanded Ibrahim and his children and brothers 'to keep the status, as confirmed by those documents, signed by Mengli Giray, Ts(a)r of Perekop, and Shig Ahmat, Ts(a)r of convent Trans-Volga lands' [Lietuvos, 2003, p. 369]. Thus it became clear that Ibrahim was of the Tatar Uishun tribe.

In 1522, Ibrahim received a special royal privilege. It referred to a yarliq of Sheikh Ahmad that confirmed, firstly, Ibrahim's right to 'take the place of his ancestors—princes of Yushin'; secondly, 'that place to be higher than the one of princes of Naiman, Petrovich and Alchin'. The King granted Ibrahim and his family the right to 'the position of his ancestors, higher than the Naimans and Alchins, equal to the status of his ancestors in the Yushin lands (in the ancient Great Horde—V.T.)' [Lietuvos, 2001, p. 169].

The Princes of Petrovichev (of Naiman origin) were indignant and wrote to the king that Ibrahim Khan and Sheikh Ahmad had misled him: the Uishuns had never held a higher position than the Naimans. The issue was dealt with by noblemen in the Rada of the Grand Duchy of Lithuania at the Beresti Seim. Sheikh Ahmad admitted that he had unjustly inflated the rank of Ibrahim's relatives (the reasons for such a lie to the King are not mentioned in the sources). In 1525, Sigismund announced that 'we did this due to the lack of our knowledge' and cancelled the privilege [Lietuvos, 2001, p. 383].

In general, the whole story unfolded in Polish-Lithuanian possessions, and the Tatar nobility determined their positions in the local hierarchy, based on the realities of their new home instead of their Tatar yurts. In particular, the discussion of the precedence between the Ui-

shuns and the Naimans was related not to their position regarding each other but regarding the Assanchukovich-Sanchukovich family—the only one representative of the Jochids in Lithuania, the most noble among the Lithuanian Tatars. Their ancestor was one Khasanchuk who settled in Lithuania in the first half of the 15th century. The Assanchukovichs were the only ones who had the right to the title 'Uhlán' from (*oglan*—'Prince'), while the rest of major Tatar princes had to do with 'begs' [Sobczak, 1984, pp. 55, 75].

However, the echoes of the hierarchy of tribes in the Golden Horde, including its successor Takht Eli (referred to at the beginning of the dispute by Ibrahim, citing procedures in the Crimean Khanate and the Great Horde) still remained in place. It is known that the tribes of Naiman and Uishun, participating in the local scandal, were viewed as the tribes of the right wing of the Ulus Jochi (with the Kungrat and Jalair people) [Shajrat, 1838, p. 238]. However, little was known about their mutual ranking. Traces of this phenomenon showed up in Ibrahim's (representative of the Uishuns) unsuccessful attempt to take an inappropriately high place among the Tatar nobility of Lithuania.

The emergence of the Cossacks became an indicative sign of the degradation of the Golden Horde and the gradual extinction of its statehood. In the second half of the 15th century, they started to appear in the sources as a significant element of the social structure and a party to political events. The Cossacks of that period were a marginal group of the steppe people, which could nominally be viewed as subjects to the Great Horde but behaved more and more independently.

The information about their way of life proves that they were nomads, i.e., initially the Cossacks had the Tatar ethnocultural nature. In 1518, Crimean Beg Appaq informed Grand Prince Vasily III that he had received a request from the Belgorod and Azov Cossacks. They asked the Beg to put a good word for them and ask Vasili Ivanovich to 'allow them and their wives **to live near** Putyvl and serve the Prince, helping him to fight against his enemies'. The Muscovite Tsar sent his approval to Appaq. The beg summoned Meretek, Mirza of the

Azov Cossacks, to Crimea and told him that 'he asked the Grand Prince to give them a place to **spend summers and winters** at'¹ and informed him of the Prince's approval of the Cossacks' moving to Putyvl [Collection of the Russian Historical Society, 1895, p. 165, 613]. Consequently, the Azov Cossacks of the Lower Don led a nomadic (not wandering!) way of life and had superiors in the rank of mirzas.

In those days, the Cossack communities were ordinary nomadic groups, migrating in the steppe. Along with cattle breeding (see the data on seasonal migrations), their main occupation was to take part in wars. The Cossacks, obviously, belonged to different tribes but lived in mixed communities. The name 'Azov' indicates that the natives of the Horde uluses kept close to the Turkish fortress of Azak/Azov (from 1471, the former Tana was in the Ottomans' possession). Some of them lived in the town. However, there is no indication that they depended on the Turkish authorities in any way. In 1515, a Muscovite ambassador there tried to find people who would agree to travel with him to Istanbul, he received the following answer: 'Those Cossacks that had lived here, they left to make their living somewhere else; now there is no one in Azov to travel with you' [Ibid., p. 142]. It turned out that the entire Cossack population had left on a raid. I believe that a major part of the Azov Cossacks of that time were the Tatars of the vanished Great Horde, who did not want to obey the victorious Girays.

Former residents of the Great Horde flocked to Azov even during its existence. This peculiar social stratum of free steppe daredevils, mostly independent and difficult to manage, was formed right in the final throes of the Great Horde. Descriptions of raids on the southern Russian frontiers at the end of the 15th century leave no doubt as to the ethnic affiliation of the Cossacks: 'The Tatars came, the Cossacks from the Horde and from Azov'; 'the Tatars came, the Cossacks from the Horde and from Azov'; 'the Tatars from the Horde came along with the Cossacks, their chief was Timish be the name, two hundred people with him and 20 Cossacks, they came to Aleksin',—and after the fight with

¹ The highlights in the quotes here and below were made by us.

Russians 'some Tatars left for the Horde, being wounded, and died on the way there' and so on [Complete Collection of Russian Chronicles, 6, 1853, p. 44; Complete Collection of Russian Chronicles, 12, 2000, p. 251; Complete Collection of Russian Chronicles, 24, 1921, p. 210; Complete Collection of Russian Chronicles, 26, 1959, p. 292]. It seems that participants of such raids acted independently, authorities in the Takht Eli and Azak were not aware of it. However, the defeated Cossacks returned to the Horde, i.e. to their home. It is no accident that the texts of that time contain such expressions as 'Trans-Volga Cossacks' and 'Trans-Volga Tatars', they are often used interchangeably; the Azov and Horde Tatars were robbers on trade routes (a typical Cossack 'line of profession') (see for example: [Collection of the Russian Historical Society, 1884, pp. 321, 322, 324, 349]).

However, they cannot be regarded as members of the Horde due to their semi-independent position. Already at that time they were a formidable force, which local rulers tried to use to their own advantage. In 1496, Khan Sheikh Ahmad wrote to the Grand Duke Alexander Kazimirovich that Mengli Giray, being in hostile relations with the Grand Duchy of Lithuania and the Great Horde, 'sent his people to the Azov Cossacks' and Cossacks staged attacks on Lithuanian and Great Horde ambassadors in the steppe [Lietuvos, 1994, p. 119].

A similar raid of 1469, led by a son of the Trans-Volga Horde Khan, is described by Jan Długosz: '... a lot of Tatars, assembled from **fugitives, robbers and outcasts**, who are called the Cossacks in their own language... invaded the land of the Polish kingdom' [Joannis Długosii, 2005, pp. 243–244 (frequens Tatarorum exercitus ex **fugitivis, predonibus et exulibus**, quos sua lingua Kozakos apellant... terras Regni Polonie... irrupit)]. The Polish chronicler makes it clear that, firstly, the Cossacks were, in his view, anti-social rabble, people outside

of a stable social hierarchy, even as part of the Horde; secondly, they were involved in raiding as subjects to the Great Horde, fighting under the command of a tsarevich; thirdly, the very notion of 'Cossack' was new to Długosii¹, and he confidently ascribed the Tatar origin to it (which was right).

The situation in the 1460–1500s, when the Golden Horde finally collapsed, with the Great Horde steadily progressing in a similar direction, turned out to be favorable for the formation of free Cossack communities in the steppes of Eastern Europe. At that time, they most likely included almost exclusively Tatars, primarily from the Great Horde ('almost' because we cannot exclude other ethnic inclusions—for example, Russians and Circassians). As it is known, later, in the 16th century, people from the Slavic countries began to migrate to those regions. Settling with the Tatar long-term residents, they formed well-known communities of the free Cossacks—the future 'troops' of the Don and the Zaporizhia.

During the weakening of the Great Horde and after its defeat by the Crimean Tatars, the territory was divided between more successful rivals and neighbours. The steppe, adjacent to the Black and Azov Seas, was governed by the Crimean Khanate; the independent Astrakhan Khanate formed in the Lower Volga; Trans-Volga nomad tribes were integrated into the Nogai Horde; former crop lands of the Tatars in Pyatigorye were transferred into the ownership of Kabardian princes; in the North-East Caucasus, there was a little splinter of the Horde in the form of the Tyumen ulus; communities of the free Cossacks settled in secluded areas along the banks of the Don and the Dnieper. Accordingly, the Great Horde Tatars settled within those domains, as well as among the free Cossacks. Obviously, most of the former Great Horde Tatars became part of the Crimean and Astrakhan Tatar communities.

¹ Jan Długosz wrote his chronicle between 1455 and the 1480s.

CHAPTER 3

Polish-Lithuanian (Belarus) / Lipka Tatars in the 14–19th Centuries

Ilya Zaitsev

The first Tatar communities in Lithuania appeared, according to a common belief, at the beginning of the 14th century, when the Grand Duke Gediminas (1305–1341) used the Tatars in the fight with the Teutonic Order and invited Tatar squads into his service. It is possible that some of these Horde members would choose to remain in Lithuania for permanent residence. Mass migration of the Tatars to Lithuania began during the reign of Grand Duke Vytautas (Witold, 1392–1430). It was at that time that the greatest number of Tatar settlements appeared in Lithuania. In Lithuania, the Grand Duke provided the Tatars with tax benefits, as well as land, for the use of which they were obliged to perform military service [Abrahamowicz, Reychman, 1983, p. 765]. Tatar squads as separate military units took part in all the wars led by Vytautas and his successors. Tatar noblemen received family tamgas as coats of arms for their noble origin, they had rights equal to those of Polish and Lithuanian aristocrats [Dziadulewicz, 1929]. Names of military banners for units of the Lipka Tatars lead to the conclusion that they retained their clan affiliation in Lithuania: *Naimans*, *Jalairs*, *Baryns*, *Kungrats*.

The main occupations of the non-noble Tatars were trade (mainly with the East), carting and leather craft. Some of the Lithuanian Tatars served as interpreters and translators [Abrahamowicz, Raychman, 1983, p. 765].

At that time, Lithuania was one of the most tolerant countries in the world in religious terms, and several dozen languages and religions coexisted in the country. The Tatars who settled in the country enjoyed all the rights of the Russian-Lithuanian boyars, guaranteed freedom of religion and respect for their traditions. However, this

was true only for those Tatars who resettled voluntarily: Tatar prisoners were baptised and often found themselves in a dependent position. The situation deteriorated during the reign of Sigismund III but all the privileges of the Tatars were returned in 1662. However, hostility on religious grounds was not unprecedented. The mosque in Troki (Trakai) was destroyed in 1609, and several Tatar women were accused of witchcraft and burned. In 1616, a canon from Vilna, Peter Chizhevsky, published his famous anti-Muslim book that would be republished several times 'True Tatar al-Furqan' ('Alfurkan tatarski prawdziwy: na czterdzieści części podzielony, który zamyka w sobie początki tatarskie y przygnanie ich do Wielkiego Księstwa Litewskiego'), in which he negatively assessed the policy of authorities of the Polish-Lithuanian Commonwealth towards Muslims and called for all their privileges to be revoked and that they convert to Catholicism. However, this written monument of Counter-Reformation thought was probably influenced by personal motives: in retaliation for the slaying of the author's father by a Lithuanian Tatar.

The resettlement of the Tatars in Lithuania continued much later than the reign of Vytautas, particularly in the 15–16th centuries. The bulk of the Nogai Tatars left for Crimea after the Muscovite forces had conquered Astrakhan, a smaller part of them fled to the borders of the Polish-Lithuanian Commonwealth, to Volyn and Podolia [Baranowski, 1950, p. 133; Borawski, 1977, p. 300].

A number of the Horde tsarevichs and even khans also arrived in Lithuania [Dumin, 1989]. This number includes the last Khan of Golden Horde Sheikh Ahmad. In Lithuania the khan was officially considered not a captive, but a 'guest' of the king. This status

did not allow him to receive any grants in the form of land in Lithuania [Zaitsev, 2003; Zaitsev, 2004a].

There is an opinion in the literature that the Polish-Lithuanian Tatars represented the *Lipka* people mentioned in different sources. More than 120 years ago, a Russian Turkologist V. Smirnov wrote about the Lipka Tatars in the preface to his edition of the Turkish historical manuscript about relations between Russia, Turkey and Crimea: '... the issue with this ethnic community has not been resolved yet, probably it would help to carry out studies in the field' [Collected studies, 1881, p. 38].

Sources. Until now, researchers have been guided by only one Tatar historical text of Lithuanian origin, which focuses on the origin and history of the Polish-Lithuanian Tatars—'Risale-i Tatar-i-Lech' ('Treatise on the Polish Tatars')¹. The work is thought to have been written in 1558 by an unknown Tatar during his Hajj for Rustem Pasha—a vizier of Sultan Suleiman²—and Istanbul nobles, who were interested in the position of their fellow Muslims in Poland and Lithuania. The text was introduced as an academic source by A. Mukhlinsky³, Professor of St. Petersburg University, the second dean of the Faculty of Oriental Studies. The original Turkish text has not survived, and we can look at it only in a lithographed edition (a 23-page booklet that was published in an extremely small print run in 1858). The authen-

ticity of this text has not been questioned from the start: no works on the Polish-Lithuanian Tatars have not included quotes in the Polish or Russian translation by Professor A. Mukhlinsky.

V. Smirnov was the only one who urged caution regarding the *Risale*: 'the author of this work... a true Muslim and Tatar patriot, sincerely grieving the loss of purity of the faith and nationality by his fellow tribesmen'. He continued: 'The *Risale* is written in the Ottoman dialect, but through his style of speech the author reveals to be a man, unaccustomed to think and to express his thoughts in a purely Turkish language: the entire work is strongly reminiscent of the European way of thinking, including concise phrases, more typical of European languages' [Smirnov, 2005, p. 147, Note 1]. However, V. Smirnov stopped at that remark: he frequently quoted the *Risale* and, apparently, did not consider it a forgery.

More recently, the authenticity of the work was (also very cautiously) questioned by Stephen Rowell. He did not venture to claim that the *Risale* was an outright fake, however, but gave one of his chapters a provocative title 'Risale-i Tatar-i Lech' or 'Risale-i professor-i Lech'⁴. Rowell's doubts are based on the following factors: The *Risale* is the only non-religious text of the Lipka Tatars; the style of narration is not 'Asian' but European; all information in *Risale* has parallels either in the texts of Lithuanian metrics, or the chronicle of Ibrahim Pechevi; finally, the essay focuses on Poland, although, in reality, we are talking about Lithuania, it is also strange that a person, so patriotically inclined towards Lithuanians and Vytautas, does not use the term 'Lipka'⁵; finally, regarding the ancestors of Lithuanians, the author implicitly points to the Sarmatians, that is unlikely to reflect the knowledge of a Tatar author of the middle of the 16th century. These remarks by S. Rowell can be supplemented by a few more.

¹ See: [Muchliński, 1858]. Several works of the same author written in the Russian language [Mukhlinsky, 1857].

² Rustem Pasha, a Croatian, was born in Bosnia (his last name was Opuković, though there is an opinion that he was Albanian), and is known as the author of a historical work devoted to the Ottoman dynasty. He served as a grand vizier of Suleyman the Magnificent twice: from 951 to 960 AH (1544–1553) and 962–968 (1555–1561). He died on 28 Shawwal 968 AH (11 July 1561). For more information see: [Süreyya, 1996, p. 1402; Babinger, 1927, p. 81 et seq.].

³ About him: [Stanisz, 1935, pp. 302–326]. I transcribe the name of the orientalist as 'Мухлиньский' [Mukhlins'kiy] on purpose, instead of the conventional Russian manner of writing it 'Мухлинский' [Mukhlinskiy], as it corresponds to the Polish pronunciation.

⁴ i.e. "Treatise on Polish Tatars" or "Treatise of a Polish Professor" See: [Rowell, 1998, pp. 123–137].

⁵ Details about him: [Zaitsev, 2006, pp. 70–77].

The circumstances under which the manuscript appeared and disappeared. The manuscript, copied at the beginning of the 18th century (according to the print, the original came from the collection of an Ottoman bibliophile Ragib Pasha, who died in 1763¹) in the handwriting of talik, was seemingly sent to A. Mukhlinsky a few years after his trip to the East (1834) by a bookseller Emin Efendi and immediately disappeared. No collection in the world contains any manuscripts of the Polish-Lithuanian Tatars dating before the 17th century (the oldest manuscript is dated 1631) [Drozd, Dziekan, Majda, 2000; Suter, 2004; Hofmann, 2005 pp. 357–359]². Moreover, all surviving manuscripts have a pronounced religious nature (prayers and the so-called tefsirs—translations of the Quran with commentary). There are no historical texts or chronicles in this tradition.

Language of the work. There is almost nothing to add to the words of V. Smirnov and S. Rowell. Indeed, the language of the work does not resemble the known samples of the Ottoman or Crimean (as well as post-Golden Horde) historical prose of the 16th century. In addition, the author of the *Risale* uses certain toponyms in a very atypical manner. For example, Wilno is called 'kursi-i memleket' ('the throne of the state'), Novahrudak is represented by a Turkic loan translation 'Yeni shehir'.

Text. The resemblance between the text and Ibrahim Pechevi's works deserves special attention. The manuscript of the 'History' by the latter author was kept in Mukhlinsky's library, the professor often quoted

Lithuanian Lipka
Tatar, 1676
[Zaitsev, 2003a]

the text of it [Muchlinsky, 1857, pp. 55–56, 60–61]³.

Ideological orientation. Doubts about the authenticity of the *Risale* also exist because the ideas expressed in this treatise are very close to those of the

professor. The basic idea of the treatise and A. Mukhlinsky's research is as follows: 'The wise foresight of Lithuanian rulers endowed the Tatars with lands, favoured their faith, and, in the latter days, equated them with the native nobility, relieving them of almost all taxes. For that age, it was a matter of great courage and the higher, strong mind'. The Tatars 'for their part, were able to repay such kindness with their goodness and faithfulness to the land, where they were admitted to not as captive slaves but as brothers' [Ibid., pp. 3–5].

A devout Catholic and an ardent Polish patriot, Mukhlinsky was involved in the issues of national minorities in the region and wrote about it: in 1851, 1852 and 1856, he was commissioned by the government to inspect Jewish schools in Minsk, Vilna and Kovno provinces; in 1860 he was a member of the State Commission for the Karaims' Affairs [Stanisz, 1935, p. 315]. He did not believe in the success of the Empire's assimilation policy in relation to the Jews and proposed a project for their religious edu-

¹ Raghib Muhammad-pasha ibn Shawki Muhammad-efendi [1699–1763] is the grand vizier of the Ottoman Empire who served at the court of Mahmud I (1730–1754). In the library, see: [Babinger, 1927, pp. 288–290; Hammer, 1833, p. 171, #22; Bazili, 1836. Part 1, p. 144; Part 2, pp. 221–224; Kaya, 2007, pp. 185–196]. A brief of the collection was printed in the Ottoman Empire in the latter half of the 19th century [Raghib, 1285]. It is clear that this list does not contain the manuscript we are interested in.

² These publications contain references to almost all the literature that touches upon this issue. See also: [Рукапісы, 2003].

³ 18 Arabic manuscripts from Muchliński's collection are currently kept in the library of St. Petersburg State University [Deryagina, Frolova, 1997, pp. 45–51; Deryagina, Frolova, 1998].

cation. In his works devoted to the Tatars, A. Mukhlinsky constantly stressed their commitment to Poland and the loss of their language. The author of the *Risale* also covered the Jewish topic, claiming that Lithuanian Tatars were getting poorer while the Jews got richer. Moreover, the treatise gave excellent material to show Poland and Lithuania as a bastion of tolerance in comparison with the Muscovite state.

Thus, we can judge the history of the Tatars in Poland, Lithuania and Belarus mainly by Polish-Lithuanian and Russian sources. However, the ethnonym 'Lipka' is mentioned in several Eastern works. V. Smirnov believes that it is a mistake to identify the Lithuanian Tatars with the Lipka Tatars. Although the scientist himself quoted the text of a state report by Moscow diplomats, stolnik V. Tyapkin and clerk Nikita Zotov (1681), which leaves no doubt that the Lipka Tatars are the same ethnic group as the Polish-Lithuanian Tatars: 'those Tatars that are called 'Lipka' in Poland' [List, 1850, p. 646].

The etymology of the word '*Lipka*' presents a number of difficulties. The 'l' at the beginning is not typical for Turkic languages (except perhaps Chuvash), and words starting with this letter mainly originate from Persian or Arabic (as well as Greek, Italian, Russian etc.¹). Thus, it is obvious that the word in the Turkic languages must have been borrowed. From Slavic, most likely². It is believed that this word comes from the old Crimean Tatar name of Lithuania [Abrahamowicz, Reychman, 1983, p. 765], however, the spelling of Lithuania in Arabic script in the titles of Polish kings, as it is used, for example, in Crimean or Ottoman letters to Poland, is quite different (لطاوا), in addition, the consonance of the first syllables of the two words does not answer the question. V. Smirnov stated that,

according to the Crimeans themselves, this word means 'tempted', 'enticed' [Smirnov, 2005, p. 149]. The Polish-Lithuanian Tatar authors suggested that the etymology of the Polish '*Lipka*' meant 'a small lemon tree' [Tuhan-Baranowski, 1932, pp. 96–98; Abrahamowicz, Reychman, 1983, p. 765].

However, some texts of eastern origin may still be related to the subject. I distinguish two traditions that in one way or another reflect the existence of the ethnic group of Lipka: Iranian and Central Asian (in Persian and Turkic) and Crimean-Ottoman³.

The first is represented by several texts. 'Muntakhab al-Tawarikh-i Mu'ini' by Mu'in al-Din Natanzi (the so-called 'Anonym of Iskander', written in Persian in Shiraz in 816/1413–1414). According to this work, after the death of Nogai, the Ulus Jochi was divided into two parts: the right wing and 'Kok Horde' got the country of Urus, Circassian, As, Mkhshi, Bular, Majar, Avkek, Bashgyrd, *Libkai* (emphasis mine—I.Z.), Khadzhi-Tarkhan and Ak Saray, and other received the areas of Jend, Barchkend, Sygnak and called itself 'Sol Kol and Ak Horde' (i.e. Left Hand and White Horde). In another place, Natanzi writes that to the right wing, which included Ibir Sibir, Rus, *Libka* (لبقا emphasis mine—I.Z.), Ukek, Majar, Bulgar, Bashgyrd and Sarai Berke, were appointed to the descendants of Toktai. In fact, the term 'Kok Horde' was applied to the camp of Jochi in the upper reaches of the Irtysh River, and later became used to denote possessions of descendants of Jochi's son, Orda Ichen (from the upper Irtysh River to the west, near the rivers of Il and Syr Darya). The Jochids of Kok Horde were the tsarevichs of the left wing. In turn, the

¹ There are a number of other ethnonyms that contain the initial letter 'l'. For example, 'Lezgi' [لزيگي] or the Polish — 'Lekh' [له].

² V. Smirnov once supposed in passing: 'Is there anything common between the word "Lipka" and Polish "Lipsko", the geographical name of several places in Old Poland where Tatar migrants might have been seen for the first time?' [Smirnov, 2005, p. 149, remark 8].

³ A small fragment about the Polish Tatars in "The History of Astrakhan" written by Jahan Shah ibn Abd al-Jabbar al-Nijgaruti al-Hajji-tarkhani may refer to Eastern texts about the Lipkas [Hajji-tarkhani, 1907, pp. 28–31]. In fact, this is an extremely popular interpretation of Poland's geographical position, [پولشه] the history of Muslims (since the time of Witold) and their modern conditions (mainly including a description of their insufficient loyalty to Islam and service as officials). See also: [Frank, 2001, pp. 305–306]. See also J. Validov's opinion about the Polish Tatars [Samoylovich, 1916, p. 73].

term 'Ak Horde' was used to refer to possessions of descendants of another son of Jochi, Shibān (between the possessions of Orda Ichen and a personal domain of the first khans of the Golden Horde in the Lower Volga). The army of the Ak Horde tsarevichs was part of the right wing in the Jochid army¹. 'Libka' is mentioned by the 'Anonym' in a story about the confrontation between Timūr Qutluḡ and Tokhtamysh: the latter fled to this area and then returned with his army [Tiesenhausen 1941, pp. 238, 133]². The 'Anonym' in the part that we are interested in served as a source for the 'List of organiser of the world' by Qazī Ahmad b. Mohammad Ghaffari Qazvīnī, who also mentioned the ethnonym in the form of (لبقا) [Tiesenhausen 1941, pp. 269, 211]. V. Bartold already noted that the 'Anonym's' stories were often epic in nature and seemingly based on a non-Muslim environment that probably indicated a chronicle, composed by Uigur scribes (while he almost literally rewrote the text of Rashid al-Dīn for the early period of the Mongol history).

Apparently this tradition also includes a quite confusing and obscure text of an epic work 'Khan-name' (a manuscript of the late 1650–early 1660s, created during the reign of 'Abd al-Azīz). As it seems to me, it also contains a vague mention of the *Lipka*. Some *Lebna* (لبنه)³ are mentioned in the list of

Turkmen clans, in which you can easily trace the distortion of (لبقه).

The Crimean-Ottoman tradition is richer in detail on this topic. The Collections of documents, published by V. Smirnov, includes an entire chapter on the *Lipka* (لبقه or لببقه). 'Explanation of the name *Lipka*'. Villagers from the Tatar tribes, who had long been dissatisfied with the Khan and his murzas, leaved their place of residence, taking most of their possessions and livestock with them, as well as their families and children, without warning they mounted their horses, moved to Russian territory in the night and took citizenship of Muscovy. The latter allowed the fugitives to live in empty ravaged lands of his; allowed them to build houses, mosques and cathedrals, with the condition to pay one gold coin (of tribute) per year and if they sold anything—cooking butter, livestock, vegetables or other things—sold it for coins circulated in Russian villages. In the same village, he settled several Russians and built a church there, so that children of the Tatar Muslims could mix (with Russian children); their eyes would get used to Russian customs, and they would forget their previous manners. With this trick, in a short time he changed the spirit of them, so that from the Muslimism among them remained only the pretension: children inherited the Muslim religion of their parents, however, they learned Russian customs from their peers and neighbours; in the Russian environment, they were like Russians, in the Islamic one, they were like Muslims. These that are called *Lipka* [Collected studies, 1881, pp. 35–45].

An Ottoman historian, Ibrahim Pechevi (early 17th century), wrote about the Lithuanian Tatars: 'When the terrible Timur came to Kipchak, many of the Tatars were captured and killed; but some Tatar tribes fled to Poland, where they settled, so that today there are sixty Tatar villages'. According to Pechevi, there was a Jami (Friday mosque—I.Z.) in every village, 'khutbah (sermon—I.Z.) in the name of the King is given there. These villages are very crowded and prosperous; but neither of them had several Jami and

¹ See: [Klyashtorny, Sultanov, 1992, p. 195; Tiesenhausen, 1941, pp. 232, 127].

² In this case, both manuscripts of the 'first edition' contain a peculiar misprint (?). لبقا Can it be the initial form of distorted 'Lithuania'? Another possible mention of the ethnonym in both manuscripts of the first edition in the form (لبقه) is also doubtful based on the source's orthography and geographical context [Tiesenhausen, 1941, pp. 240, 136]. It is possible that this text became the origin of the term لبقه in the story about Tokhtamysh written by Munnejim-bashi and Ahmed Nedim. Ahmed Nedim translated the world history 'Jami ad-Duwal', originally written in Arabic (which covers events through the year of 1672) by famous Turkish historian Ahmet bin Lyutfullah (Munnejim-bashi) (died in 1702). Nedim worked on this translation over 10 years, from 1720 to 1730, and titled it 'Sahaif ul'-ahbar' ('Pages of tidings') [Müneccimbaşı Sahaif ul'-ahbar (صحائف الاخبار). Cild II. İstanbul, 1285/1868/69 (Arabic font), p. 694].

³ Once even Lenbe [Gökyay, 1968, pp. 300, 294].

mosques, the unfaithful do not allow them to be built there'. The Tatars, according to Pechevi, 'do not pay taxes to the kingdom but only assign three hundred people among them to serve the Tsar, also necessary correspondence and letters of kings are sent and delivered through them'.

The Ottomans considered themselves natural protectors of the rights of the Tatar Muslims living in Christian lands (not all sources refer to them as the *Lipka*). In mid-October of 1591 (the first ten days of Muharram 100 AH—19–28 October of 1591), Sultan Murad III from Istanbul informed Sigismund III that two Muslim Tatars had arrived to the Ottoman capital together with a royal ambassador. They said that in Poland, near the border with Muscovy, there were 15,000 Tatars—the orthodox Sunnis, who did not have a mosque (*Jami*) and could not celebrate religious festivals and Friday worship. The Tatars asked the Sultan to allow them hold these services. In his letter to the King, the Sultan asked him to build a mosque in a certain place and not to impede the performance of such worship by the Tatars [Katalog, 1959, p. 227; Abrahamowicz, Reychman, 1983, p. 766].

Evliya Çelebi also mentioned the Lipka Tatars. According to this Ottoman traveler, the Lipka Tatars, like many other nations, descended from the Tatars [Evliya Çelebi, 1983, pp. 48, 301]. At the same time, Evliya referred to the authority of Muhyi al-Din Ibn Arabi (1165–1240) in this matter: it was said that the latter named 70 different peoples in 'The Book of Treasures', including the 'Muslim people' of the Lipka Tatars (by the order, it is mentioned between 'Muscovites, Lechs' and 'Magyar people') [Evliya Çelebi, 1999, pp. 7–8]. According to Evliya, the Lipka Tatars spoke a language close to Polish (as well as Bosniaks, Herzegovinians, Bulgarians, Serbs, Voynuks, Slovaks, Rus, Muscovites and other Slavic peoples) [Evliya Çelebi, 1961, p. 73]¹.

A reverse movement also took place: the Lipka Tatars moved to the Ottoman Empire

and probably the Crimea. During the events in the Ukraine in the times of Hetman P. Doroshenko, there was a revolt of the Lithuanian Tatars, who then left to serve the Ottoman sultan [Dumin, Kanapatsky, 1993, p. 83; Grishin, 1995, p. 29]. According to Chapter 1 of the Treaty of Buchach (signed on 25 Jumada II—18 October 1672), the Polish side was forbidden to do any harm or cause losses to families and property of the Lipka Tatars who defected to the Ottoman side and joined the Ottoman army; the Poles were also forbidden from obstructing the movement of those Lipka Tatars who decided to relocate to the lands of Islam, as well as prevent them from taking their families and property with them [Katalog, 1959, p. 358; Uzunçarşılı, 1988, p. 185]². This condition was repeated in the *Akhd-name* sent by Mehmed IV on the 23 of October 1672, and fixed in the Polish-Turkish treaty of Zhuravno on the 17 of October 1676 and later—in *Akhd-name* sent by Mehmed IV in the first half of April 1678 [Kołodziejczyk 2000, p. 497, Fasc. XX, doc. 51; p. 502, Fasc. XXIIb, doc. 52, the first line; pp. 521–522, Fasc. XXII, doc. 54; p. 530, Fasc. XXIIIa, doc. 55]. Curiously, the report on the division of (the *governorate* of Kamenets Podolsky of Ahmad Pasha) of October 1680 referred to mirzas of the Lipka Tatars together with some local Agas (yerlü agaları ve Lipka mirzaları) [Kołodziejczyk, 2000, p. 556, Fasc. XXIVa, doc. 57]. We can get some idea of these agas and other titles of the Lipka Tatars (for example, *odabashi*) from a defter of Kamenets Podolsky (about 1681) [Kołodziejczyk, 2004, p. 204].

Part of the Lipka Tatars returned to the Polish-Lithuanian Commonwealth in 1691 (Tyszkiewicz, 2002, p. 20), but most of them remained in the Ottoman lands. A direct con-

¹ Before the 19th century, the Crimean Tatars called the Tatars inhabiting western Russian guberniyas 'Lupki' [Evliya Çelebi, 1961, p. 254].

² I. Uzunçarşılı incorrectly dated it 20 Jumada I 1083 AH, which is 13 September 1672. As is known, according to his conditions, Podolia was annexed to Turkey, while Right-Bank Ukraine fell into the possession of hetman Doroshenko, who recognized his dependence on the sultan. Rzeczpospolita was obliged to pay a ransom to the Turks so that they stopped the siege of Lviv and had to pay tribute annually. However, the Polish Seim did not accept peace, and in autumn 1673 the war was renewed.

firmation of this lies in a *deft* of the Khotyn neighbourhood (*nahie*) for 1715–1716, recorded shortly after the separation of the suburbs after the war in 1710–1711 from the so-called 'Bogdan' (i.e. Moldavian Principality) and assigned to the Khotyn Fortress. After the conclusion of the Treaty of the Pruth in 1711, several thousand Moldovian and Ukrainian peasants left those lands, having moved to the north with Russian troops. Many villages were left without residents, and the Ottoman government insisted that the Khotyn authorities should persistently return those who had fled (they even provided tax breaks for one year to peasants who decided to come back). At the same time, the resettlement of the Lipka Tatars in those lands was encouraged. The empty villages of Lobatneshna, Molozhina, Sherol, Istakan, Gremeshta, Kopozheshta and Serbichena¹ were 'entrusted to the Lipka Tatars, located near the White Mosque' on 6 Rabi I 1128 AH, i.e. March 30, 1716 [Dimitrov, 1969, p. 148].

Perhaps this process is reflected in the text of the 'Statements of Moldavian History' (1809): '1716. Near the Monastery of St. Archangels Michael and Gabriel—Rakovica, another part of the land near Bessarabia was given to the Tatars to feed their livestock under the written condition to give owners of the villages a tithe of the seeding and 10 pairs from a household. Twelve more villages were conquered and brought into the possession of the Bendery fortress, as well as many other parts, thus dividing the poor principality' [Semyonov, 1998, p. 153]. The source of 1740 mentioned these Lipka people as follows: 'With regard to the Lipkans, 6,000 of them emigrated once from Poland to Khotyn, where they enlisted in military service under the command of their bayrak agas' (banner bearers) [Guboglu, 1964]. This passage incidentally shows that sometimes sources contain the word 'Lipka' in the form of an animated Persian plural—*Lipkan*.

This form is reflected in the toponymy as well. On 29 Jumada II 1237 AH (March 22,

1822), the *divan* signed a *tezkere*, prescribing the commander of the Ottoman army in Moldavia, Beylerbey (*mirimiran*) Osman, to prevent his officers from violating the possessions of a Nikolai and his companion Savva from the village of Libkan [Catalogul, 1965, p. 449, doc. 1584]. According to their names, residents of this village were Christians.

A great many Lipka Tatars moved to the Ottoman Empire after the Turks had left Podolia. However, this resettlement was sometimes opposed by the Ottomans.

The author of a historical work on the history of the Crimean Khanate 'Seven Planets', Sayyid Muhammad Riza, tells about the siege and capture of Kamenets by the Turks and also wrote about the Lipka Tatars: at the beginning of the war between Poland and the Ottomans, they sent a deputation to Selim Giray, asking to allow them to move to Budjak [Bessarabia]: 'The Lipka Tatars, who took citizenship in the land of the unfaithful Poles with the condition to pay taxes, but Muslims in their nature, inasmuch as some of them lived near the Islam lands, sent a letter to the Crimea, containing a request to rescue and release them from the humiliating citizenship and allow to settle near Budjak. The insightful Khan refrained to give them a direct answer and, after consulting with Khalil Pasha, governor of the Silistria governorate, made a presentation and a statement to the Threshold of Happiness [Porte] together with him. But since it was against the will of the above mentioned Pasha, what he secretly confirmed by writing a note, which said that 'the execution of this deed is associated with adversity and difficulties', the higher vizier ruled to postpone the matter. People, who arrived with such [a paper], were greeted with such an unexpected response, they returned back home' [Asseb 1832; Collected Studies, 1881 pp. 38–39].

In the Crimea, it was well known that the Lipka Tatars were Muslims. Selim Giray wrote to Peter and Ivan Romanovs that the Esteks were the same Muslims as the Lipka Tatars, and Muscovy was treating them with violence [Collected Studies, 1881 p. 40; Ma-

¹ The village of Serbichany, Sokiryany District, Chernivtsi Oblast, Ukraine. The rest of the villages are identified approximately.

terials 1864, pp. 719–720].

The accession of the Polish lands in the Russian Empire did not infringe property rights of the Lipka Tatars. Catherine II's decree stated that the Tatars swear their allegiance to the Russian throne, they should 'receive all the rights to their property and benefits'. Many of the Lipka Tatars then faithfully served the Russian state. We can recall the families of Bazarevsky, Sobolevsky, Krichinsky, Khaletsky, Sulkevich, Bugatsky, Koritsky, Belyakov, Tugan-Baranovsky, Yanushevsky, Yuzefovich, Adamovich et al. The baptism of representatives of noble Tatar families and mixed marriages between the Lipka Tatars and local Christians were not uncommon already in the 16th century. Both contributed their cultural assimilation with the Polish-Belarusian majority.

The Tatars in Poland and Lithuania lost their native language and started using the Belarusian and Polish languages relatively quickly. However, they recorded their texts in Arabic script [Antonovich, 1968].

The repertoire of manuscripts by the Lipka Tatars is divided into several varieties¹: handwritten Qurans², tefsirs (in some areas

it is pronounced 'tapsir')³, kitabs⁴ and h-mails⁵, supporting literature (tedjvids, sufras and dictionaries), amulets (the so-called dalawars⁶, hramotkas and nuskas) and all sorts of tables. Special consideration should be given the so-called muhirs (from Arabic 'muhr'—print), quite original pictures with calligraphic sayings from the Quran, the

³ *Tafsirs* (Arab. "exegis, commentary") are books including the Quran's full text with interlinear, broken written translation into the Polish language [the text is the same in all extant copies]. The translation into Polish [almost verbatim, with elements of interpretation] was made from an Arabic original with the use of the Turkish translation at the end of the 16th century—or at the beginning of the 17th century, and was thus one of the oldest translations of the Quran into a European language. The oldest extant copies containing Polish text are dated 1723 and 1725. There is information about a copy of a tafsir from the collection of the Library of the Academy of Sciences of the Bashkortostan Republic in which surahs 1–18 have the Turkish translation and the rest is Polish. This *tafsir* is dated 1658–1659 (1069 AH). The most ancient copy with the Turkish interlinear translation is dated from the end of the 16th century. Similar to handwritten Qurans, tafsirs included prayers and explanations of rituals that opened and finished readings of the Sacred book. They are often books containing 400–500 sheets, with a 35x20 format.

⁴ *Kitabs* (Arab. "book") are the main type of Polish-Tatar writing, a kind of a religious encyclopaedia of manuscripts in the form of a codex of various volumes (from 150 to 300 sheets and even longer, the most common format is 35x20 or 20x17 cm—the so-called half-kitab) and made up of diverse, often chaotic content which mostly depended upon the tastes of the compiler (scribe). As a rule, kitabs included stories about prophets and Islamic saints, stories from Islamic history, Quranic and Biblical tales, apocryphas, eschatological visions, works of an ethnic character, homilies, hadiths, prayers and dedications, commentaries to the Quran's surahs and the fragments of its translation, elements of Islamic law, descriptions of Islamic rituals and customs, fragments of polemical stories, magical texts, Turkish and Arabic dictionaries, etc. *Kitabs* also contained a small number of non-religious texts (certain fables of Eastern or Polish origin). As a type of handwritten book, *kitabs* appeared in the 17th century (which is proven by the oldest known copies).

⁵ *Khamail* (Arab. "what is born close at hand", "private amulet")—despite the etymology, they are prayer books (this definition of a prayer book is found only among the Polish-Lithuanian Tatars). The content of a khamail usually includes the texts of prayers accompanying different stages of a Muslim's life, prayers for any life occasions, etc.

⁶ Distortion of the Turkish 'dualar', that is prayers.

¹ The terminology of the Polish-Tatars' written culture is different both from the accepted scientific and classical Islamic versions. However, it is acceptable to us because it is traditional for the Polish-Lithuanian Tatars and took root in their environment.

² Qurans were the most popular manuscripts (along with khamails) among the Polish-Lithuanian Tatars. Most often, they are scarcely illuminated books of approximately 20x17 cm that typically consisted of 200–300 sheets. The text could be divided into two or several volumes. The text was often accompanied by appendices: popular prayers, explanations of the rules of reading the Quran and its separate surahs, intonations and pronunciation (which most often reflected the Ottoman tradition), as well as related rituals. In addition to local copies, Ottoman hand-written Qurans, Kazan printed editions of the Sacred book of Muslims, as well as 'haf-tiyaks' (the seventh part of the Quran, which would be convenient to read according to the days in the week) also became widely spread in the latter half of the 19th century. The oldest Polish-Tatar copy of the Quran (1682) with commentary in Polish was kept in Pskov library (which came from the library of the Pskov School of Theology and had also belonged to Pskov bishop Simeon Todorsky, who was a professor of Hebrew at the Kyiv-Mohyla Academy) [Krachkovsky, 1924, pp. 165–168].

images of the Kaaba, Mecca and Medina, local Tatar mosques or views of Istanbul, which decorated the interior of houses and mosques—a synthesis of several arts: written culture (calligraphy), painting, and arts and crafts (handicrafts). Unfortunately, no absolutely identical written records of the Lithuanian Tatars (except for a small circle of texts, wandering from manuscript to manuscript) have been identified so far.

The largest collections of manuscripts by the Polish-Lithuanian Tatars are stored in Lithuania (National Museum of Lithuania in Vilnius, Vilnius University Library, Library of the Lithuanian Academy of Sciences); Poland (Museum of History in Białystok, libraries of the Department of Turkic and Iranian Studies, as well as the Department of Arabic and Islamic Studies of the Institute of Oriental Studies of the University of Warsaw, Gdańsk library of Polish Academy of Sciences); Russian Federation (Library of

the Department of Oriental Studies of the St. Petersburg State University—the collection of A. Mukhlinsky; Library of the Kazan University; Pskov State United Historical, Architectural and Fine Arts Museum-Reserve¹); Republic of Belarus (Library of the National Academy of Sciences of the Republic of Belarus; Belarusian State Museum of Religion History in Grodno²); and the United Kingdom (the British Library, Francis Skaryna Belarusian Library in London). Some manuscripts are also stored in Ukraine (State Public Library in Lviv) and Germany (Leipzig University Library).

Currently, such manuscripts are rarely found in Tatar families. Preparations are currently underway for the publication in Vilnius of a joint collection of Tatar manuscripts, stored in the manuscript department of the National Museum of Lithuania, as well as in the libraries of the Vilnius University and the Lithuanian Academy of Sciences.

¹ There are no data about the manuscript kept there before the war.

² So far, we know about three Polish-Tatar manuscripts from this collection. In 2003, new written records supplemented the collection of the Belarus State Museum. Among them was a kitab of 161 pages, three prayer books and a handwritten Quran.

CHAPTER 4

Formation of Siberian Tatar Ethnic Community

Zaytuna Tychinskikh

The ethnopolitical community that was forming in the 16th century as part of the Tyumen and Siberian Khanates was of certain integrity, and the stability of its names attests to this [Tatars, 2001, p. 124]. According to the Russian sources of the 16th to 17th centuries, it was known as 'the Siberian country', 'the Siberian land' or 'the whole Siberian land' ('the Siberian lands'), 'the Siberian realm', 'the Besermyan realm in Siberia', 'Isker yorty'. The root of its name originates from the capital of the realm—'the city of Siberia' (Isker). Most sources call the ethnic group that formed the state and dominated the politics in the Khanate as 'Tatars'. Sometimes the Russian documents refer to it as the Muslims: 'Bosurmans', 'damned Busormans', 'pagans', 'impious Tatars'. Although certain communities of Siberian Tatars only partly adopted the Islamic religion at the time of the Khanate, the above description suggests the Islamic appearance of that community.

The governmental organisation of the Siberian Yurt was fundamentally similar to the political structures of other post-Golden Horde states—the Kazan and the Crimean Khanates, the state of the Shibanids, and the Nogai Horde. The Siberian Khanate was one of the fragments of the Golden Horde, and like other Tatar khanates it inherited the main features of the administrative and political order of the Golden Horde state, which was ruled by a khan who had the supreme power in the country and sovereignty over its territory. The medieval Siberian Tatar community, just like the population of other Tatar states, consisted of two ethno-class strata—yasaks and serving people.

S. Bakhrushin was one of the first to pay attention to the division of the Siberian Khanate population into two strata. The Khanate consisted of a small privileged group of

Tarkhans, feudals, and yasak payers, so called 'black people' [Bakhrushin, 1955, p. 155]. Z. Boyarshinova also mentioned social class division into feudals and yasak people, whereas the relations in the Khanate were referred to as patriarchal and feudalistic [Boyarshinova, 1960]. According to E. Vershinin, the Tatar population of Siberia split into two categories after it had been annexed to the Russian state [Vershinin, 1998, p. 61]. It should also be noted that after the Russian colonisation of Siberia, the natives did not split into two categories, but instead, the existing social class stratification of yasak 'black' population and Tatar feudals was preserved, although in some other capacity. This involved not the social, but rather the ethno-class stratification of the Siberian-Tatar population.

The yasak Tatars of the Siberian Khanate seemed to be the earlier population of Turkic and Turkified Ugric origin ('Ishtyaks', 'Sypys'). As for the serving people, this stratum originated in the Tatar Golden Horde [Iskhakov, 2002a, p. 8]. Notwithstanding certain differences in the structure of the leading feudal clans of the Siberian Khanate from other Tatar states, the governing stratum dated back to the Tatar military feudal class of the Golden Horde. The Tatar elite of the Siberian Khanate consisted of a khan, sultans, beys, murzas, yesauls, Islamic clergymen (sayyids, sheiks, mullahs, abyzes and others), noblemen of the khan's court—vizier, karacha, atalyks, karacha beys, as well as common Cossacks. All of them formed the 'Tatar layer of the Siberian-Tatar ethnopolitical community' [Iskhakov, 2006, p. 66]. A system of karacha beys existed. Among the khanate's ruling clans, the Manghits, Saljiguts, Jalairs, and Burkuts are known [Ibid., pp. 134–135]. The Arghyn clan could also be found.

Karacha beys in the Siberian Yurt remain in the historical memory of Siberian Tatars.

Up to the second half of the 20th century Tobolsk and Vagay Tatars of the Tyumen region carried on the wedding tradition of four groomsmen, nukers, holding a cloth above the bridegroom as he was escorted to his bride. F. Akhmetova-Urmanche, a folklorist, thinks this tradition had been observed since the Siberian Khanate, when 'karachis held a sacred koshma when the new khans were raised on it'. The last time she saw this tradition observed at a wedding in 1959, in Kukranda aul (Cheburga), Tobolsk region. According to F. Akhmetova-Urmanche, when the koshma was lifted, a male choir sang the ritual song 'Kiyau Tipseu' (Bridegroom Farewell Ceremony), that implied escorting the bridegroom accompanied by the medieval cone-shaped 'tip' drums [Akhmetova-Urmanche, 2002, p. 343].

Just like many other Tatar states, the Siberian Khanate had a Tarkhan institution. This term was quite widespread in the Siberian Yurt, and it points to the existence of especially privileged people known as 'Tarkhans'. Tarkhans are also mentioned in the dastan 'Ildan and Goldan': 'Irteshak killed the Tarkhans who crowned Changi Bey, and he then became a Khan in Kyzyl Tore again' [Ildan belän Göldan, 2002, p. 29]. The toponymy of Siberian Tatars still retains such names as Tarkhan-kala, Tarkhany village and others. According to S. Bakhrushin, the Siberian Tatar service class emerged from the feudal Tarkhans [Bakhrushin, 1955, p. 163]. There was even a separate Tarkhan volost. 'Tarkhan Ostyaks say their ancestors descended from Tatars. Their ancestors live in Tobolsk, one of them used to be a Tarkhan there' [Atlasi, 2005, p. 67]. The name of the Khanty Tarkhan volost suggests certain Tarkhan relationships between the Tatar Khan and Ostyak princes, and points to the northern border of the military and political influence of the Siberian Khanate [Miller, 1937, p. 222; Martynova, 1998, p. 94].

So based on factors such as uniformity of the ethnonym referred to Siberian Tatars, the formation of their name according to the samples used in other Tatar khanates, recognizing that community as an Islamic one, we can

determine that in the 16th century the Siberian-Tatar nation already existed, despite the ethnic differences of the two strata and 'their peculiarities' [Iskhakov, 2003, pp. 113–116].

There are no exact data as to the size of the Turkic population of Siberia before the mid-16th century. The approximate size of the population of the Siberian Khanate in the mid-16th century can be extrapolated, however. According to the charter of Edigur to Ivan IV, where he mentions 30,700 (the number of sable skins to be paid to the Moscow state by the Taybugids), this number can be regarded as such. Based on the fact that yasak was imposed by taxable men over 18 years of age, the population of the Siberian Khanate is supposed to be 120,000–150,000 people (including the non-Turkic population).

At the end of the 16th to 17th centuries among the population of Western Siberia, there were serving, yasak-paying and zahrebetnik Tatars. Islamic clergymen formed a small group. This division was determined by social differences that were evident in their state duties. At the same time, the division of the Siberian-Tatar community into social groups was still of an ethno-class character, inherited by the previously existing stratification that transformed into ethno-class groups of yasak-paying and serving Tatars amid the new historical circumstances.

After the Muscovite state had conquered the Siberian Khanate at the end of the 16th century, the major part of the survived Tatar feudals started serving the new government as service class 'yomysheles', just like in other Tatar khanates. While they did not assimilate with the Russian feudals, they did not become part of the native yasak class either. This ethno-class group subsequently retains its unique features for a long time due to both external and internal factors [Tychinskiy, 2010, pp. 44–45]. They acted as military serving elite of the Siberian Khanate before the annexation of Siberia. Notable examples include Prince Enbulat, who served in Tobolsk in the 1590s, his son Prince Kutuk and his grandson Allagur murza, murza Kaydaul Bayseitov, his sons Mamet, Chitey and Aitkul Kaydaulovs, Tara Prince Tynmamet Berde-

ley-Mirzin, his son Küchük Tynmametov and his grandson Talayka Küchükov [Bakhrushin, 1955, pp. 164–165]. Among the Tatar murzas of the early 17th century were Tyumen serving Tatar 'Prince Atkacharko Akhmanaev' [Russkaya, 1875, p. 349], Tyumen 'Yurt serving Tatar best men' Devey Irtyshov, Buydak Emachtaev, Tugoka Kelementeyev, Moyumas Azekhmatov, Kazad Engildeyev, Ustemir Kanchurin [Miller, 1941, p. 159] and others.

The title of serving Tatar becomes hereditary in the 17th century. For instance, in 1622 upon the petition of Tobolsk serving Tatars, the Tsar's edict read as follows 'to grant the Tatars' children and nephews with new estates' [Bakhrushin 1955, p. 165]. In 1629 Tara serving Tatars managed to receive more lands than was normally granted. But due to the fact that there was a fixed number of estates, the young were granted lands as vacant places appeared.

During the 17th century the service class grew in number, sometimes due to the influx of noble foreigners. One Tabyn, one Sart and two Bukharians are mentioned in a Tyumen estate book of 1626–1627. In Tara in the 1760s, there was a 'visiting serving Tatar Cholbar Kochashov, Zaysan's son' (a Kalmyk nobleman), and his son ItKüchük Cholbarov, Zaysanov's son was his successor [Ibid.]. Starting from the mid-17th century, Kasimov murza Semeney Aganin appeared among the Tyumen and Tobolsk serving Tatars. The growing number of serving Tatars also included spiritual elite, including its higher members, as, for example, Tara Yurt Tatar Sayyid Teneley Bereleev, a son of Khoja Miraly Sayyid Din-Ali. Sometimes natives of Central Asia, known as Bukhiarans, were numbered among the serving people. Their number constantly grew in West Siberia due to the protectionist policy of Moscow regarding the Central Asia immigrants.

In the late 16th century, serving Tatars formed squads concentrated in Tobolsk, Tyumen and Tara. Similar divisions later appeared in Tomsk, Kuznetsk and Krasnoyarsk. After winning the Tatar nobility to its side, Moscow now had professional military forces that were inexpensive to train and arm, and that

played an important role in the subsequent colonisation of Siberia. In the 17th century, serving Tatars successfully performed their duties related primarily to the cavalry service. According to S. Bakhrushin, Tatar military nobility 'smoothly exchanged one lord for another, and painlessly shifted to serving the tsar' [Ibid.]. In the late 16th and the early 17th centuries, serving Tatars retained their privileges. They are regarded as 'best men', and they preserve their 'patrimonial lands'. In the 17th century, there were 250 serving Tatars in Tobolsk, 75 in Tyumen, and 36 in Tara [Ibid., p. 163].

Zahrebetnik Tatars. Zahrebetniks or Zahrebetnik Tatars were a specific group of the Siberian population in the late 16th to 17th centuries. Together with serving Tatars, this category was singled out from the Tatar population of Siberia after it became part of the Muscovite state. In the Russian state of the 15th to 17th centuries, zahrebetniks were feudal-dependent people who did not have any households and worked for peasants in their households or posad people. Similar to Russian people dependent on feudals, zahrebetniks were the population previously dependent on the nobility of the Siberian Khanate. According to researchers, zahrebetniks were an ethnic community integrated with the serving Tatars of the uyezd they lived in [Dolgikh, 1960, p. 62].

Like their suzerains, serving Tatars, zahrebetniks did not pay yasak, because serving Tatars managed to get exemption for themselves and zahrebetniks as well under the rule of Boris Godunov. In exchange, zahrebetniks had to fulfill certain duties imposed on serving Tatars. 'When serving Tatars were away for service, they guarded their houses' [Bakhrushin, 1955, pp. 170–171]. Zahrebetniks seemingly worked on the fields of serving Tatars, because the latter did not have much time for it due to their service. Serving Tatars placed their cart duties on zahrebetniks' shoulders that until then were imposed upon themselves.

Some poor relatives of the serving Tatars, who for whatever reason failed to join the service class, became their zahrebetniks. 'Our

fathers and uncles served, sire—said children, brothers and nephews of the Yurt serving Tatars of Tyumen—to Tsar Mikhail, but we are left stranded wandering among yurts and living on unskilled labor'. Furthermore, many foreigners living in the settlements of serving Tatars became zahrebetniks too. F. Valeyev reports that in the 17th century zahrebetniks of Siberian serving Tatars included Volga Tatars, who worked on the fields of their landlords and fulfilled cart duties [Valeyev, 1993, p. 154].

Originally, there were separate volosts of zahrebetniks, because Tatar volosts were linked to traditional native communities. According to B. Dolgikh, 'the Turkic-speaking Tatar population of the Tobolsk uyezd could be divided into two major parts: the serving Tatars of the yurt together with neighbouring southern volosts of their former zahrebetniks, and other Tatars, presumably tatarised Voguls and Ostyaks, who lived in the northern part of the uyezd near the Voguls and Ostyaks' [Dolgikh, 1960, p. 58].

The majority of the population of Tobolsk uyezd belonged to the volosts of the zahrebetniks of the Tobolsk serving Tatars: Ashla (Layma), both Babasansk, Krechatnikov, Inder, Uvat and Supra volosts. In the early 17th century, a yasak was imposed on these zahrebetniks volosts. After annexation to Russia, the murzas' appanage formed some volosts of Tobolsk and other uyezd. These zahrebetnik volosts were governed by Khan Kuchum's vassals. Babasan murza's lands formed Babasan volost. Other volosts in Tobolsk uyezd seemed to be of the same origin. They had been governed by murzas and beys since the 17th century. For example, Supra volost in 1629 was allegedly governed by murza Gultaev Taber, the Tara uyezd of Oyaly volost, Turash, Terenya, Kirpitskaya, Barabinskaya, all being former parts of the Siberian Khanate.

In the late 16th to 17th centuries, serving Tatars and their zahrebetniks lived in Tobolsk, Tyumen, Tara and Tomsk uyezds. N. Tomilov reports on the number of serving and zahrebetnik Tatars in the uyezds in the 17th century. He refers to the following figures in

Tobolsk uyezd in the late 16th and early 17th century—there were 261 serving Tatars and 200 zahrebetniks. In the mid-17th century (1650–1652), there were 250 serving Tatars and 200 zahrebetniks; by the end of the century (1697–1700) there were 263 serving Tatars and 200 zahrebetniks [Tomilov, 1981, pp. 82–83]. According to B. Dolgikh, the Tobolsk serving Tatars were 'direct descendants of the prevailing Tatar core of the Siberian Khanate' that made an ethnographic entity with their zahrebetniks. The total number of serving and zahrebetnik Tatars at the beginning of the 17th century was 460, when their families are included, this rises to 2350. The number of serving Tatars and zahrebetnik Tatars by the end of the 17th century remained the same. Tobolsk Yurt serving Tatars and their zahrebetniks were spread out across the territory where the Tobol meets Irtysh and along the Irtysh to the borders of Tara uyezd [Dolgikh, 1960, p. 61].

Tyumen Tatars were some of the first Turkic inhabitants to inhabit that territory among Tatars of Tobolsk and Irtysh. One of the earliest state formation of Siberian Tatars—Tyumen Khanate—is related to them. They remained more or less isolated within the Siberian Khanate [Tomilov, 1981, p. 17]. In the early 17th century (1627), the number of Tyumen serving Tatars was 117, and zahrebetniks 106. In addition, there were carrying Tatars among the Tyumen Tatars. There were 61 of these Tatars. In the middle of the century (1644), there were 108 serving Tatars and 105 zahrebetniks; at the end of the century (1699), there were 119 serving Tatars, and 105 zahrebetniks [Ibid., p. 44].

N. Tomilov shows that Tara serving Tatars and their zahrebetniks had their own settlements along the Irtysh up and down from Tara. 'While mapping yurts of Ayaly Tatars, there was a gap between them and Sargatsk and Utuzu Tatars in Irtysh region, a place not inhabited by Tatars. This territory was located along the Irtysh up and down Tara. This was the territory inhabited by serving Tatars and their zahrebetniks' [Ibid., p. 139]. In the 18th century, Podgorodnaya volost appeared when many of them became part of yasak Tatars. In

the late 16th century, there were 57 Tara serving Tatars and 60 zahrebetnik Tatars; in the mid-17th century (1645–1646), there were 45 serving Tatars and 45 zahrebetniks; and in the late 17th century (1698), there were 57 serving Tatars and 61 zahrebetnik Tatars [Ibid., p. 147].

In the first half of the 18th century, all zahrebetniks were turned to yasak Tatars. In the subsequent period this group is scarcely mentioned, however a number of documents refer to the categories of old yasak and new yasak Tatars.

Yasak Tatars. In the late 16th to 17th centuries, the majority of the Turkic population of Tobolsk and Irtysh were yasaks, the former 'black' taxable population of the Siberian Khanate. D. Iskhakov suggests they should be regarded as the earlier population of the Turkic and Turkified Ugrian origin [Iskhakov, 2002a, pp. 9–10].

According to the archives (1598), the following volosts existed during the governance of Khan Kuchum: Kurpitskaya (Kirpitskaya), Turashskaya, Lubarskaya, Choyskaya, Kuromskaya (Kuroma), Barabiskaya (Big Boroba), Yalynskaya, Kaurdatskaya, 'Chatskaya' (Chaty) and 'Komakskaya' (Kolmlaki). The previous volosts and uluses of the former Siberian Khanate became part of the new administrative and territorial units—uyezds—in the form of yasak volosts.

The yasak population, as before, was obligated to pay taxes (yasak). In Siberia yasak was collected in the 17th century in the form of furs, sometimes of bread, fish, ironwork, etc. The yasak population swore shert, i.e. they swore an oath not to evade yasak. The system of amanat was used to force the population to pay yasak. The community also had to pay yasak for the dead, fugitives, or crippled.

Yasaks differed between volosts. Yasak was measured in sable furs—from one or two up to 10 furs a year. As a result of sable overhunting, other furs were permitted for yasak. Yasak was imposed on men aged between 18 and 50 in the 17th century. There were two types of yasak—an estate and non-estate. An estate yasak was collected from any yasak

man listed in the yasak book. The non-estate yasak was not standardized, and was imposed on nomads. Gradually, non-estate yasak payers became estate yasak payers. The government carried out censuses to record the yasak population. The lands and estates of yasak Tatars were considered state property that was transferred to foreigners for their use in exchange for yasak payment.

According to B. Dolgikh, there were 872 yasak payers (males) among the natives of Tobolsk uyezd at the beginning of the 17th century. The total number of yasak Tatar population was presumably about 3500. In the late 17th century, the number of yasak Tatars was 1243, whereas the total yasak population numbered 4970 [Dolgikh, 1960, p. 59].

The great numbers of yasak Tatars made the Tara uyezd different from other uyezds in West Siberia. According to researchers, the distinguishing feature of the Tara Tatars was their preservation of cattle breeding, which is why there is every reason to think that the community was partly settled during the Siberian Khanate period. Furthermore, the tribal nomenclature of the Tara community (*Kourdak, Tav, Karagay, Ayaly and others*) shows their connection to the nomads of Desht-i Qipchaq (special ethnic affinity can be found with the Northeast Bashkirs—*Ay* tribe, and others). If among the yasak Tatar population there were groups of other (Ugrian, Samoyed) origin, by the end of the 16th and the beginning of the 17th centuries all of them appeared to have been Turkified. B. Dolgikh cites the following figures: at the beginning of the 17th century, there were 1262 yasak payers in Tara uyezd, and the total yasak population was 5050. By the end of the 17th century, the number of yasak payers was 762, together with their families they totaled 3050. By the end of the century, there were 985 yasak payers. The total yasak population of Sargach, Kourdak, Ayaly, Baraba and 'Kalmyks' volosts was 3940. It should be noted that a drop in the yasak population of Tara uyezd in the middle of the 17th century as compared to the beginning of the century was due to the outflux of Tara Tatars to Kuchumovichs, the results of the rebellion of Tara

Tatars in 1628–1629, the constant military skirmishes with the Kalmyks, and the migration of part of the population due to the yasak imposition [Ibid., p. 49, Tomilov, 1981, pp. 148–149].

According to B. Dolgikh, 293 yasak Tatars lived in the eight volosts of Tyumen uyezd (Kynyrsky townlet, Bachkyskaya, Tersyatskaya, Ilensky townlet, Shikchinskaya, Kaskarinskaya, Pyshminskaya and Isetskaya) at the beginning of the 17th century, whereas the total population was 1170 people. Regarding the population of Tyumen uyezd in the middle and the end of the 17th century, B. Dolgikh reports the following data: the number of yasak payers in nine volosts including the above, as well as Iskinskaya, was 389 people, whereas the total yasak population together with their families was 1550 [Dolgikh, 1960, p. 43].

The semi-nomadic lifestyle of the military stratum of the Siberian Yurt caused the instability of the Yurt's interstate relations. In other Tatar states the social power of the feudals was based on land ownership and military service to the khan, whereas land ownership in the Siberian Yurt meant owning hunting grounds and engaging in raids to impose tributes on neighbouring tribes. That is why Russian colonisation resulted in the feudal nobility of the Siberian Khanate losing their economic basis and becoming the obedient weapon of the Muscovite state. On the other hand, Siberian feudals (unlike feudals of other conquered Tatar khanates) avoided direct economic and religious pressure.

After losing their sovereignty, the feudal class was no longer a unifying political force. The yasak population was now directly subordinated to the Russian state. The Siberian Tatar ethnic community changed from its vertical structure of ethno-class strata to a horizontal one based on territorial ethnocultural divisions. The collapse of the vertical social structure of the Siberian Tatar ethnos laid the foundation for erasing the boundaries between the strata.

Serving Tatars was an integrating force in the formation of the Siberian Tatar ethnic community; centers of the territorial groups

self-designated as 'Tobolyk', 'Tumannek', 'Tarlyk' were forming around the settlement centers of the stratum. Various groups of Siberian Tatars were closely interrelated, and this made their consolidation possible. However, the significant geographical distances between them prevented this process from being completed. Ethnic consolidation was complicated by the active integration at different stages of the Bukhara and Volga Tatar groups into the Tatar community.

The process of converting Siberian begs and murzas from a military to a taxable class in Siberia took longer than in the Volga region, and nominally the outcome was the abolition of the Tobolsk Tatar Cossack regiment in the late 1860s. In fact, although the former Siberian murzas remained in the military class, from the beginning of the 18th century their rights and status were similar to that of Russian Cossacks and yasak Tatars. The only difference was military service instead of yasak payment.

Serving Tatars gradually lost their privileged status, rendering social differences between serving and yasak Tatars irrelevant. This contributed to further interethnic consolidation of the Siberian Tatar community.

Despite the fact that up to the late 19th century the Tatar serving nobility still retained certain traditional cultural traits specific to the Golden Horde elite, the core of the serving Tatars were on the same level as the yasak Tatars, and their economic order and lifestyle became similar. Yasak and serving Tatars both had a common economic order, the prevailing areas of which were determined by natural geographic conditions and not by class origin.

The analysis of marriage ties of Tobolsk and Tyumen Tatars in the 18th century shows that serving and yasak Tatars were not isolated within their classes, and intensive integration processes were happening between serving and yasak Tatars and Bukharians. The classes were closely interrelated. Additionally, while external class boundaries were fixed, internal boundaries were blurred. Due to the small number of serving Tatars, the yasak 'black' population—'kara khalyk' of

the Siberian Yurt—played an important part in the ethnic development of the ethnic community of Siberian Tatars. Later the growth of the yasak population exceeded the growth rate of the service class, which slowed due to external factors: the number of Tatar Cossack squads was fixed.

One of the most important factors in the long preservation of the ethno-class stratum was religion. Since Siberian serving Tatars retained their Islamic faith, they could avoid amalgamation with Russian Cossacks, as happened to newly baptised Tatars, 'Lithuanians' and other serving people. Serving Tatars played a leading role in advocating for the economic, political and spiritual interests of the Siberian Tatars. It was serving

Tatars who spearheaded the fight against forced Christianisation in the 18th century. By the 18th century, Siberian Tatars were generally homogeneous in terms of religion, and their confessional denomination was 'Moselman'.

On the whole, despite certain unique features, the development of the Siberian Tatar ethnic community was similar to the processes of other ethnic communities of post-Golden Horde Turkic states and the ethnic communities of Tatars. Moreover, it is true as much for the Khanate period as for the period of Russian colonisation. The Muscovite state served as something of a catalyst for ethnic processes, shaping, in a certain sense, the Siberian Tatar community as in the Volga region.

CHAPTER 5

The Nogais

Vadim Trepavlov

Researchers previously recognised the ancestors of the Nogais in the ancient Turks, the Oghuz people, the Pechenegs, and the Mongols¹. Today, the prevailing academic point of view is that the Nogais (including the more recent Nogais) were primarily of Kipchak origin. The main, and certainly the most compelling argument for this idea is the fact that the Nogai language, possibly together with the Kazakh language, has preserved the archaic character of the Kipchak language to the highest degree of purity (see: [Baskakov, 1940, pp. 237, 250]). Most modern historians and linguists adhere to the Kipchak version (see, for example: [Kalinovskaya, Markov, 1990, p. 15; Kalmykov and others, 1983, p. 12; Kuzeyev, 1978, p. 196; Trofimova, 1949, p. 50; Usmanov, 1982, p. 59]), sometimes quite specifically: for the most part the eastern Kipchaks formed the population of the Nogai Horde [Viktorin, 1991b, p. 11].

However, it is worth mentioning here the opinion of L. Gumilyov: whether it is the Nogais, the Volga Tatars or Kazakhs, 'none of these ethnic groups is a direct descendant of the Cumans (i.e. Kipchaks.—V.T.), but each of them contains a distinct Cuman substrate' [Gumilyov, 1976, p. 37]. However, L. Gumilyov himself later denied the Kipchak origin of the Nogais, suggesting instead a stronger genetic relationship with the Oghuz people. His only argument was the pre-Mongol occupation of the Yaik steppes by the Oghuz tribes and feuding between the Nogais and the Tatars, the latter being, according to L. Gumilyov's later version, true descendants of the Kipchaks [Gumilyov, 1989, p. 673; Gumilyov, 1992, p. 178].

Indeed, the involvement of the Oghuz people in the emergence of the Nogai ethnic group is quite possible; this can be deduced from both the presence of Oghuz epic traditions in the Nogai dastans (see: [Sikaliyev, 1994, p. 174], and the long nomadic migrations of the Oghuz

people to the north of the Caspian region during the early medieval period. But their political domination of the region came to an end towards the middle of the 11th century [Kriger, 1986, p. 117], and a possibly more accurate version is the one by researchers who consider the Oghuz population of the region in the 12th and later centuries as one of the main components of the Kipchak world [Ahmetzyanov, 1991, p. 82; Ahmetzyanov, 1994, p. 40; The History of Karakalpak ASSR, 1974, pp. 98, 99].

A number of historians have proposed a strong link between the ethnonym 'Manghit' (the ruling el of the Horde, sometimes used as a synonym for all the Nogais) and the Mongols-Manguts, known to exist from the 12th century, suggesting a Mongol component within the Nogai ethnic group. The reasoning behind this is broadly as follows: the Manguts had moved to Desht-i Qipchaq, where they became Turkified (some historians maintain that this happened in the ulus of Chinggisid Nogai in the late 13th century), then gathered all the Kipchak tribes under one banner and together came to be known as the Nogais, creating the Horde of the same name (see, for example: [Bachinsky, Dobrolyubovsky, 1988, p. 87; Gardanov, 1960, p. 77; Kereytov, 1996, p. 14; Essays, 1967, p. 142; Cherenkov, 1989, p. 45]). In fact, none of the sources contains a single reference to Mongols being among the ancestors of the Nogais. It seems clear that a certain number of Manghits received pasture-lands in Eastern Desht-i Qipchaq under Chinggis Khan, or soon after his rule, but this was negligibly small compared to the bulk of indigenous Kipchaks; and the Manghits were the Kipchaks who had moved to the lands allocated to the Manghits, but not the Manghits themselves or their Turkified descendants (see: [Trepavlov, 2001, chapter 1]).

In any case, it appears that the ethnic roots of the Nogai Horde population can be found in the age of the Golden Horde. During the 13–14th centuries, the steppes between the Volga and Emba rivers were used as periodic migration routes by

¹ A collection of opinions on this issue was compiled by B. Kochekaev [Kochekaev, 1988, pp. 23, 24].

the various groups of Kipchaks, including the Manghits (see: [Ivanov, Kriger, 1988, pp. 58, 59; Kuzeyev, 1992, p. 75]); these lands were also the habitual campgrounds of the Eastern Kipchaks, who had been able to preserve their distinctive features even throughout the Golden Horde period. This territory later saw the establishment of the Manghit Yurt which, over time, expanded towards the south-east, to the traditional Oghuz campgrounds (see: [Kostyukov, 1995, pp. 41–43; Fedorov-Davidov, 1973, pp. 61, 62]).

Historians seeking to trace the ethnic history of the Nogais also tend to locate their early origins in the 13th century. The most detailed pattern seems to be the one suggested by E. Alekseeva. Kipchaks and Manghits (who, in her view, are not Kipchaks) consolidated into a nation within the collapsing Golden Horde by the middle of the 15th century: this nation had a common language an ethnic designation, a vague form of shared material and spiritual culture, and the ulus system, meaning it was already feudal, not tribal. E. Alekseeva has defined this stage as the genesis of 'ancient Nogai nation', who actually populated the Nogai Horde [Alekseeva, 1971, p. 20; Essays, 1967, pp. 141–143; Essays, 1986, p. 117].

A. I. M. Sikaliyev, who views the Jochid Nogai as eponym for the Nogais (as do many other historians), considers the presence of 'different tribes' in its ulus, on the west of the Golden Horde, as the initial stage of the formation of the Nogai ethnic group. The subjects of Nogai became, according to this view, Nogais (Nogails) and extended this term to nomads living both to the west and east of Volga. By the end of the 14th century, the first stage of ethnic formation was complete and a second one, involving the name of Edigu, began. In the second half of the 14th century, the 'Eastern Nogais' became stronger and, as part of the next stage of their ethnic history, in 1391 they withdrew from the Golden Horde by establishing their own empire [Sikaliyev, 1994, pp. 30, 33, 34].

None of these theories are backed up by the analysis of medieval documents. Because of the historical gaps researchers (including the author of these lines) have to base their views either upon speculative conclusions or later (19–20th centuries) records of Nogai folklore. The ideas of the Nogais about their own origins and history were, however, fragmentary and vague. According to legend, they moved to Desht from Bukhara (Uz-

beks' land) or from India [Bentkovsky, 1883, p. 3; Kornis, 1836, p. 5, Pashin, 1912, p. 39, Russian State Military Historical Archive, f. 405, op. 6, d. 3076, l. 30]. However, the affinity of the Nogais with the Uzbeks from the Abu-l Khayr Khanate in particular lies in the names of tribal unions (els), while their connection with the Kazakhs is based on Kazakh and Ural Cossack legends (see: [Zhelezov, 1888, p. 261; Shakarim, 1990, p. 109]). However, Turkic folklore contains evidence (direct and indirect) pointing towards a Kipchak origin of the Nogais. The Crimean Nogais spoke about their ancestral mother Tok-Saba [Smirnov, 1887, p. 77], a name connected to the pre-Mongol Kipchak tribe Toksoba; a Bashkir shejere (genealogy) states that long ago 'all the Nogais lived in the country of Kipchak' and were descendants of Yamgurchi Bey (Yamgurchi-Kipchaks) [Bashkir shejeres, 1960, p. 95].

As for the information contained in the records, it is extremely scarce. It is very difficult to find clues as to the fate of subsequent els of the Nogai Horde in the 13th and 14th centuries. For example, Mahmud b. Emir Vali provides tentative evidence that Batu moved the tribes Ming, Tarkhan, Ushun and Oyrat under the control of his brother Tuqayy Timur as a reward for heroism [Klyashtorny, Sultanov, 1992, p. 188]. But these ethnic designations were not exclusive to the Nogais either, as they were spread among various Desht-i Qipchaq ethnic groups, from Siberia to Crimea.

Some authors have gone beyond mere arguments about the ethnic roots of the Nogai Horde's population, attempting a thorough identification of its tribal structure. The comprehensiveness of the lists of els developed by these authors relied on the sources available to researchers. For example, M. Vyatkin put forward the following names: Alach, Alchin, Argin, Kangli, Kipchak, Kitay, Konrat, Manghit, Naiman and Tama (Vyatkin, 1941, p. 43). P. Butkov stated that there were no less than thirty-eight tribes in the Nogai Horde, although of these he mentioned only the Kangli [Butkov, 1824, p. 291], it is therefore unclear what ethnic designations the famous specialist in Caucasian studies used to calculate this number. In the current literature, the most widespread calculation is that of M. Safargaliyev, who mentions eighteen tribes: Alchin, As, Baygur, Borgasm (Borgan? Borlak?—V.T.),

Gublak (?—V.T.), Kangli, Keneges, Kerey, Kipchak, Kitay, Kiyat, Kolgin, Kungrat, Manghit, Naiman, Tayjut, Tanguchin, Turkmen [Safargaliyev, 1938, p. 35; Safargaliyev, 1960, p. 230].

In the 19th century, the Stavropol Nogais would mention the Manghit, Kipchak and Naiman els among the 'many clans' making up their origins, when recounting their legendary 'exodus' from 'Bukhara' [Bentkovsky, 1883, p. 3]. Also, the population of Desht-i Qipchaq recalled the presence of the Kiyat el on this (western.—V.T.) side of Volga, long before the arrival of the 'Chinggis Tsar' [Russian State Library, f. 256, file 349, sheet 280]. The Karanogay dastan 'Edigu' mentions, among the subjects of Tokhtamysh Khan (late 14th century), the Buyrabas, Isun, Kanli, Keneges, Konirat, Kupshak, Manghit, Min, Naiman, Hiryuv, Shirin and Yuz els [Nogaydin, 1991, pp. 24–26]. These episodic and casual fragments of information can hardly be sufficient in outlining a comprehensive picture of the tribal structure of medieval Nogai society.

For a more detailed description we need to study any references to specific els to be found in the correspondence of the Nogais and Astrakhan voivodes with the Ambassadorial order (Posolsky Prikaz) (see: [Trepavlov, 2001, pp. 499–504]). It turns out that sixty-six els are directly mentioned as being part of Nogai Horde and the existence of at least four more (Kulachi, Teleu, Uyghur, Chimbay) can be retraced based on indirect data. There were altogether 139 names in the 16–17th centuries, including their subdivisions. In the 17th century, the Nogais regarded themselves a nation of 140 uluses, i.e. els [Russian State Archive of Ancient Acts, f. 127, 1630, file 3, sheet 3]; speaking about the time before the arrival of the Kalmyks to the Volga region, i.e. around the 16th century, an Ottoman author, Evliya Çelebi, also mentioned 'the one hundred and forty tribes of the Nogai nation' [Evliya Çelebi, 1979, p. 162]. This was most likely the initial number of tribal subdivisions in the Horde, because by the beginning of the 17th century the Great Nogai Bey already maintained control over just fourteen els (the Burlak, Kipchak, Kitay, Kungrat, Ming, Naiman, and Turkmen, the rest seven not being mentioned in the source) [Akti, 1914, p. 179].

During the first third of the 17th century, the most widely ramified Nogai tribal unions were

the Az, Borlak, Kipchak, Ming, Naiman and Uyshun. At that time significant changes were already happening which evidenced a weakening of the until-then orderly el-ulus structure of the Nogai nomad empire. Els began to amalgamate and mix with elements of one el passing to another one, etc. Thus, the later Nogais comprised groups such as the Kangly-Borlak, Alchin-Min, Kangly-Min, Buyrabas-Min, Saray-Min, Yaby-Tama, and Kangly-Yuz.

The earliest evidence of this amalgamation appears the integration of the Kitay and Kipchaks. The first time their co-existence in the same ulus is mentioned in documents dating from the late 16th century, while the Kalmyks had already been treating them as one nation (distinct from the Nogais, it is worth noting) [Batmayev, 1993, p. 34; Russian State Archive of Ancient Acts, f. 127, 1586, file 3, sheet 1; 1627, file 1, sheet 303]. Over time, in the course of their migrations over the southern steppes, the Nogais had blurred the original subdivisions even further. The Naimans began to share the same tamga (official stamp) with a part of the Burkuts, a part of the Kangly with the Manghits, the rest with some clans of the Burkuts, etc. (see: [Yakhtanigov, 1993, pp. 179–185]). Some subdivisions moved from one el to another (see table: [Ibid.]). From the 16–17th centuries until the arrival of modern ethnographic methods, very few of such subdivisions survived: the Kara Kipchak, the Buyrabas as part of the Mings, and possibly the Bagali Uysun.

The monopolisation of control over all the els by the Manghit mirzas, at the beginning of the 1520's, was apparently the last step in the formation of an integrating ethnic self-awareness by the Nogai Horde population, transforming the word 'Nogai' from an ethnically blanket term into a single ethnic designation. Previously, the term 'Nogai' had primarily been a geographical and political notion identifying the Horde. Documentary evidence of such a transformation is, however, non-existent, because our main source—diplomatic correspondence—involved mostly beys and mirzas, who would refer to themselves and their subjects as 'Manghits', in line with the name of their el.

Epic folk heroes from the dastans may represent indirect proof of the ethnic cohesion of the Nogais. The Bogatyrs consider themselves Nogais, while still preserving a certain affilia-

tion to certain Nogai tribes (see, for example: [Sikaliyev, 1980, pp. 15, 16; Sikaliyev, 1994, pp. 34, 91]).

It seems clear that the inhabitants of neighbouring states had considered the nomads from the left bank of Volga river a single nation. The persuasion of Kanay Bey and Nuradin Kara Kel Mukhammad by Astrakhan governors to refrain from the campaign against their Tinmametev enemies speaks for itself: 'The Nuradynovy, their brothers and the children of the ulus people of those murzas (Tinmametevy.—V.T.)—are one and the same people, they are tribesmen to one another (the bey.—V.T.), and ought to be feared' [Russian State Archive of Ancient Acts, f. 127, 1628, file 2, sheet 108]. In the original text, the phrase 'one and the same people' was most likely written as 'bir halk' (one nation). The Urmameteves and Tinmameteves governed different els, while in the eyes of Russians they were one nation, 'they are tribesmen to one another'. Indeed, in relation with their neighbours these els would identify themselves by the generic name of 'Nogai'.

The correlation between the Nogais and Tatars hasn't been fully clarified yet. Authors hold views both contrasting (L. Gumilyov, see above) and linking them (see, for example: [Arslanov, Viktorin, 1995, p. 339; Ähmätcanov, 1993, p. 157; Ahmetzyanov, 1994, p. 32; Ahmetzyanov, 1995, p. 51; Shennikov, 1987, pp. 86, 87]). Such a wide range of views can be explained by the multiple meanings of the term 'Tatars' between the 13th and 17th centuries.

Kazan was far away from the tumultuous events resonating out from the collapse of the 'Throne Empire' (Great Horde), and even from the beginning it did not have very close contacts with the Nogais. There have also been suggestions in the literature of an earlier influence and even presence of Nogais in Kazan, going back almost to the time the khanate was established (see, for example: [Burganova, 1985, p. 16]). Among the strongest arguments on this subject are those put forward by M. Safargaliyev: 'When the Nogais let themselves be known to their Western neighbours, the Khanate of Kazan had already been established. The relations of Ulugh Muhammad (the first khan of the Khanate of Kazan.—V.T.) with Edigu's children could not have been friendlier after the treason of Nowruz. Nowruz, being a com-

mander of Ulugh Muhammad, betrayed him by going over to Kichi Muhammad, and as a result Ulugh Muhammad was exiled from his lands and sent to Kazan. Because of this, the participation of the Nogais in the conquest of Kazan by Ulugh Muhammad was out of the question. During the time of the early khans, the Khanate of Kazan was quite strong and did not need any support from its neighbours' [Safargaliyev, 1938, pp. 126–127].

The extent of the penetration of the Nogais into the Khanate of Kazan is still as of yet undetermined. We have already mentioned the unlikely probability of their initial presence in Yurt during the time of Ulugh Muhammad. However, the presence of Nogai among the population of the state can hardly be brought into question. First of all, this is clearly highlighted by toponymy: The Nogai gates in the capital fortress, the Nogai daruga—one of five provinces of the Yurt, etc. (see, for example: [Garipova, 1980, p. 149; Garipova, 1982, pp. 123–128; Zarinsky, 1884, p. 74; The History of TASSR, 1968, pp. 84, 85]). Secondly, the stream of migrants from the Nogai Horde is mentioned in Bashkir and Tatar shejeres or genealogies (see: [Ahmetzyanov, 1991a, pp. 51, 150; Ahmetzyanov, 1994, p. 39; Sokolov, 1898, p. 51]).

But it is still difficult to say to what extent the Nogais mentioned in folkloric sources match up with the historic Nogais originating from the Nogai Horde. Neither the larger number of Kipchak elements in the language compared to the local population, nor coincidences in the names of clans (els) allow us to identify the foreign Kipchaks with the Nogais. Kipchak migrations continued for hundreds of years, while the Nogais did not consolidate themselves in the Manghit Yurt until the second half of the 15th century and, even though they spoke the Kipchak language, they cannot be seen as representing all the movements of the Kipchak-speaking population in Eastern Europe. It is entirely a different matter that from time to time Nogai troops would come to the lands of the khanate to resolve political issues and, sometimes, stay there for long periods. For instance, it is known that during the second rule of Muhammad Amin (1502–1518), twenty thousand Nogai cavalry settled in his land [Mardzhani, 1884, pp. 49, 57].

There is no doubt that this proximity also contributed to the penetration of Nogai Horde nomads into the lands of the Kazan Yurt. The area

to the south of the Kama River, from the point it flows into Volga until the Belaya estuary, appears in the 'Kazan Chronicler' (Kazansky Letopisets) as a territory of the Khanate of Kazan. 'That was initially the land of the Little Bulgars starting from beyond the Kama river, between the great rivers Volga and Belaya Volozhka, up to the Great Nogai Horde' [Complete Collection of Russian Chronicles, 19, 1903, p. 12]. One must therefore assume that between the camping grounds of the Nogais near Kazan and the Nogai Bashkiria there was an 'protrusion' governed by Kazan and populated by Bashkirs. However, in 1552 Ismail had summer pastures 'on the Ik river five days from the Kama river' [Russian State Archive of Ancient Acts, f. 127, file 4, sheet 137 reverse], i.e. he was travelling to Ik from Kama all the same. Furthermore, Bashkir-Yurmaty folklore contains information about earlier settlements of Nogais on the Zay and Sheshma rivers—in the interfluvium of the Volga and Belaya rivers [Ishakov, 1985, p. 45]. D.Ishakov's view of a joint Nogai-Kazan governance over this land [Ibid.] would appear to entirely explain the inconsistency in the sources.

As a result of the dramatic events of the 16–17th centuries, groups of people from the Nogai Horde settled well beyond the borders of their steppe empire and were involved in active ethnic interactions with local nations. The folk literature of the Karakalpak people, an offshoot of the Nogai Horde, contains a number of recollections about their time as part of the Nogai state; close matches in the names of ethnic subdivisions also highlight the Nogai-Karakalpak ethnohistoric community. The Nogai nation is mentioned in a heroic epos of the Kyrgyz people, the *Manas*, as being friendly to Kyrgyz people, making up one state or ulus with them; the bogatyr *Manas* himself was a descendant of the Nogai people.

As a result of two large waves of migrations in the 16th century, the Nogai element was consolidated within the Kazakh ethnic group as well. Its presence was particularly noticeable on the west of Kazakhstan, where groups of Nogais and Manghitays survived until the early 20th century. The fact that the entire Kazakh Lesser Zhuz settled down on the former territory of the Nogai Horde was also an apparent push for assimilation. Groups of people under the name 'Nogai' were even more common among the Bashkirs, especially the south-eastern Bashkirs.

There is also evidence of a Nogai settlement in the lands of the Sibirsky Yurt¹.

The influx of Nogais brought with it an increase of Mongoloid traits in facial features, together with number of Kipchak elements in language, and nomadic features in local cultures. People bearing the 'Nogai' ethnic designation had thus assimilated into almost all the local nations. It is not a coincidence that their neighbours recognised the Nogais as a polyethnic community, while this designation was used generally to refer to representatives of different ethnic groups. The term Nogai was used to refer to the Northern group of Crimean Tatars who lived in the steppes beyond the Crimean peninsula; for Kazakhs, the Nugay meant Bashkirs and Volga Tatars; for Bashkirs and Kazakhs in the past, the Nogai meant Siberian Tatars; for Kalmyks, the Ishtig Mangad (i.e. Ishtyaks-Manghits) meant Bashkirs, and the notion of 'Uulun Mangad' (Mountain Manghits) meant Balkars and Karachaevs, etc.

¹ See the following works about the Nogai component in the ethnogeny and ethnic history of the *Kazan Tatars*: [Arslanov, 1993; Ahmetzyanov, 1991a, p. 51; Ähmä tçanov, 1993, p. 146, 153, 155; Ahmetzyanov, 1994, p. 39; Burganova, 1985, pp. 15, 16; Gallyamov, 1994, pp. 175, 176; Iskhakov, 1993; Makhmutova, 1978, p. 15; Urazmanova, Sharifullina, 1991]; *the Astrakhan Tatars*—see: [Arslanov, Viktorin, 1988, p. 13; Viktorin, 1991, pp. 48, 49; Viktorin, 1992, p. 182; Izherdeev, 1994, p. 38; Iskhakov, 1992, pp. 6–10, 27, 28; Mukhametshin, 1992, p. 63; Sadur, 1983, p. 11]; *the Siberian Tatars*—see [Valeev, Tomilov, 1996, pp. 25, 30, 31; Katanaev, 1893, p. 31; Kuzeev, Moiseeva, 1987, p. 101; Kuleshova, 1995, p. 43; Seleznev, 1994, pp. 78–80; Tomilov, 1995, pp. 31–34; Frolov, 1995, p. 120]; *the Crimean Tatars*—see: [Georgi, 1799, p. 36; Iziddinova, 1980, p. 246]; *the Kazakh*—see: [Adjigaliev, 1994, pp. 30, 31, 96; Amanzholov, 1959, p. 9; Arginbaev, 1991, pp. 76, 79; Aristov, 1896, p. 376, 380; Valikhanov, 1886, p. 233; Voenno-statisticheskoe obozrenie (Military-Statistical Review), 1848, p. 12; Vostrov, Mukanov, 1968, pp. 98, 107, 108, 238, 246; Vyatkin, 1941, pp. 43, 51, 52; Erofeeva, 1999, p. 215; History of the Kazakh SSR, 1979, p. 250; Kereytov, 1993, p. 23; Logutov, 1929, p. 48; Masanov, 1993, p. 108]; *the Bashkirs*—see: [Bashkir Shejar, 1960, pp. 174, 187; Kuzeev, 1974, pp. 109, 111; Kuzeev, 1978, pp. 180 (map), 196; Kuzeev, 1991; Kuzeev, 1992, p. 130 (map), 1974, pp. 109, 111; Kuzeev, 1992, p. 130 (map); Rakhmatullin, 1988, p. 178; Trepavlov, 1997, pp. 5, 10–12]; *the Kalmyks*—see: [Avlyayev, 1984, p. 381; Tsuryumov, 1991, pp. 34, 35], *the Uzbeks*—see: [Aristov, 1896, p. 422], *the Don and Ural Cossacks*—see: [Avlyayev, 1984, p. 382; Bekmakhanova, 1993, p. 86; Milykh, 1940, p. 35; Chernitsyn, 1995, pp. 51, 52].

CHAPTER 6

Astrakhan Tatars

Ilya Zaitsev

The Astrakhan Tatars is a generic ethnic designation commonly referring to the Tatar population of the Astrakhan Oblast of the Russian Federation (about 7% of the current population)¹. The term is also used to identify the Turkic population of the Astrakhan Khanate (1502–1556). Many researchers (D. Iskhakov and others) consider the Astrakhan Tatars to be descendants of the Golden Horde and even earlier ethnic groups, possibly of Khazar and Kipchak origin. Between the 15th and 17th centuries, they were mainly under the influence of the Nogai Horde, while in some occasions they assimilated directly with groups of Nogai origin (for example, the Karagashes)². It seems that the Astrakhan Tatars did not form a distinct nationality during the Astrakhan Khanate's existence.

A large number of Turkic peoples moved from the Upper Volga to the lower reaches of the river already after the fall of the Astrakhan Khanate. This process gained momentum particularly in the 17–18th centuries, resulting in the amalgamation of Astrakhan Tatars with the Volga-Ural Tatars. In the 19th century, local Tatar migrants in Astrakhan still had a clear memory of the migration: for example, a copy of the poem 'Yusuf and Zulaikha', rewritten in the city in 1823, contains a mark indicating that the book was rewritten in 'Kazan quarter'.

There seem to have been several groups of Nogai origin among the Turkic population of the Astrakhan area, most importantly the so-called Yurt Tatars. There is, however a theory that proposes that the Yurt Tatars are descendants of the Astrakhan Khanate Tatars. The Karagash Tatars (calling themselves the Karagash-Nogailar), who were first mentioned in

the second half of the 18th century as Kundrov Tatars, are also associated with the Nogais. Astrakhan ethnographers currently use the term Kundrov people (as a kind of transition group between the Yurt and Karagash people) to refer to people mainly living in the village of Tuluganovka, Volodarsk district of Astrakhan oblast.

A special group of Astrakhan Muslims (who no longer exist) were the so-called Agrizhan Tatars—half Tatars-half Indians [Ozeretskovskiy, 1804, p. 301; Shperk, 1898, no. 52³; Yuht, 1957, p. 138; Zaitsev, 2008, pp. 164–171]. The name derives from the Tatar dialectic *egrish/egdish* (*egrizh/egdizh*). Having a Persian marker of the plural -an, this word became the source of the ethnic term 'agrizhansky' in the Russian language. The word *Igdish* (*Igdich/Igdidzh*) as a designation of the offspring of a Turkic man and an Indian woman can be found in the dictionary of the Astrakhan born L. Budagov: 'a Turk, whose mother was Indian, born from these two nations, is a cross;... a word used to describe underbred, castrated animals...' [Budagov, 1869, p. 71].

The first documentary mention of the Agrizhans dates from 1661 in an edict record of the Chancery Chamber (Prikaznaya Palata) of Astrakhan (September 7, 1661) describing the daily feeding of a hostage named Alyadink Ayupov. In the text, the hostage is mentioned as an 'Agrizhenian', but the name in the text is an assumed one: the text, according to the publishers' notes, was 'inaccurately corrected'. However, by the middle of the 17th century, there is already undeniable evidence of the existence of this word in the local vocabulary.

The time when an Agrizhanian suburb or estate emerged in Astrakhan (no later than 1710) can be identified based on a note in a Senate case dated 1745 about providing Ar-

¹ The third largest ethnic group of the Astrakhan Oblast. According to the census of 2002—70,590 (7%); 2010 — 60,523 (6.6%).

² See [Viktorin, 2014] for the Nogai issue in Astrakhan and its study today.

³ There is a separate impression as well.

Nogais in Astrakhan. Print from 'Description of my travel to Muscovy...' by A. Olearius, 1630–1640.

menian, Indian and other Eastern merchants in Astrakhan with equal rights and obligations as Russian merchants. This report, by the chief magistrate to the Senate reads: 'Starting from the year 710, besides customs duty and ground rent, every estate is to pay income tax to the Astrakhan customs office: 100 Rubles from Bukharian estate, 14 Rubles from Gilan estate, 20 Rubles from Agrizhan estate, 134 Rubles in total...' Agrizhan estate (as well as Gilan and Bukharian) was located in a Tatar suburb, south of the Russian suburbs in the south-western part of Zemlyanoy Gorod. These were suburbs consisting of separate estates surrounded by fences.

'Russian historical, geographical, political and civilian vocabulary, developed by Lord Privy Councillor and Governor of Astrakhan Vasily Nikitich Tatischev' (SPb, 1793), written in 1744–1746, mentions the existence of Agrizhan suburb in Astrakhan: *'The Agrizhan suburb* and estates in Astrakhan with a prevailing population of Muslim Indians. This name is Tatar for 'young person' or 'runt', with the

Slavic word for 'lad' deriving from it. In 1667, when the rebel Razin conquered Astrakhan, plundered all foreigners and attacked many people, many Indians, trying to save their skin, went under the patronage of Tatars, accepted their religion, married their daughters, and became Russian nationals, but then Persians, becoming Russian nationals, integrated with them and Tatars are now the best merchants in Astrakhan' [Tatischev, 1979, pp. 238–239]. In 1769, Samuil Georg Gmelin, having visited Astrakhan, almost repeated the words of V. Tatischev (even though he was hardly familiar with his thesis): 'Then there are three Tatar suburbs called dvori (estates), the first of which is called Agrizhan. Agrizhan is a Tatar word and in Russian it means 'abomination', i.e. there are some Tatars that descend from Indians, because these Indians had moved to Astrakhan and married Tatar women, had babies and their population grew so much that it formed a separate suburb; that's why because of its mixed origin this new race of Tatars was called Agrizhan, and their houses were called in the same way—Agrizhan

estate' [Samuel George Gmelin, 1936, p. 304]. The suburb was populated by emigrants from other eastern countries, as well as Bukharians.

Based upon the names which circulated at that time, in the first third of the 18th century not all of the Agrizhan people were Muslims. But already towards the middle of the 18th century, the Agrizhan people were Islamised. A census of residents of the Agrizhan estate (1744) proves that most of them were married to Tatar women. Some residents of the yard were deeply in debt to Indian entrepreneurs and merchants, and Agrizhan people formed quite a large and influential class of Astrakhan merchants. In 1743, the governor of Astrakhan V. Tatishev reported to the Trade Board as follows: '... and in Astrakhan excellent goods belong to Indians, Armenians and Tatars, as well as Gilan, Agrizhan people and Bukharians' [Tatishev, 1990, p. 365].

The first indication as to the number of residents of the estate is mentioned in a Senate case dated 1745: 'In line with the edict dated Aug. 31, 1738, of former Cabinet, a census was carried out in Astrakhan which has identified... 49 Agrizhan people'. In 1744, there were 109 men in Agrizhan estate, 53 of which were of 'Indian origin'. Some 'were merchants', the others were 'earning their living by working' [Russian-Indian Relations, 1958, p. 135; Russian-Indian Relations, 1965, pp. 70, 77, 107, 201, 203, 208, 238–239, 249–250]. Several Agrizhan people

lived in Bukharian estate. All residents of the suburb were already Muslims.

A close correlation between inhabitants of three estates was recognised on the official level as well. A certain Tatar Abdul Abdulzhalilov was representing Tatars of Bukharian, Gilan, Agrizhan estates as a Muslim deputy in the Commission of Laws (Ulozhennaya komissiya).

Since 1799 the Tatars of Bukharian, Gilan and Agrizhan estates were given the same rights as Russian merchants, although without a membership of a guild, but according to an edict by the emperor issued on March 1, 1835, the aforementioned Tatars, besides the existing duties, were to pay a special tax on profit to the treasury 'until they are equalised with native Russian people by five rubles per head' and also 'to pay a recruiting duty in kind'.

As a result of ethnic amalgamation, primarily with Yurt Tatars, Agrizhan people blended into these other groups. In the middle of 1850s, probably neither the estate, nor the Agrizhan people existed anymore, but they were still remembered. But the Agrizhan mosque had remained, and in 1830 a madrasa was even established by the mosque, funded by a certain Tatar named Sultanov. There weren't many students: in 1843 there were a total of 175 students across all eight madrasas in Astrakhan (including the one by the Agrizhan mosque).

CHAPTER 7

Crimean Tatars

Ilya Zaitsev

Crimean Tatars are a Turkic-speaking nation who emerged on the territory of Crimean Peninsula as a result of the amalgamation of local Turkic western-Kipchak tribes (the Polovtsians), remnants of other (including Turkic-speaking) nomadic groups, Indo-European population (Alans, Greeks, Goths, etc.), as well as Turkic and Mongol tribes which populated Crimea after the Mongol Conquest of Eastern Europe. The formation of Crimean Tatar ethnic community appears to have started in the 13th century, when most of the peninsula (steppes of Crimea and part of lands in mountains) was included in the Golden Horde possessions. In his narration about the Nogai raid of Crimea at the end of 13th century, the Byzantine historian Pachymeres writes the following about the population of countries conquered by Tatars (i.e. Mongols): 'Over time, by mingling with them [Tatars], nations that were living in those states, by which I mean Alans, Zikhs and Goths, and other nations with them, learned their traditions, adopted their language and clothes and became their allies' (Quotation from: [Herzen, 2005, p. 14]).

The integration of Crimea into the Golden Horde resulted in the repartitioning of peninsula steppes in favor of foreign Mongol and Turkic clans (Shirin, Birin, Arghyn, Sedzhiut, Kipchak, etc.). These clans in particular formed the core of Crimean Tatar nobility.

Key points in the ethnic history of the Crimean Tatars were the establishment of the Crimean Khanate (after 1441), the Ottoman conquest of Southern coast of the peninsula (1475), as well as the declaration of Islam as the official state religion. The establishment of a khanate and islamisation were drivers of the process of ethnic homogenisation, while the existence of an Ottoman administrative unit on the Southern coast (with a prevailing Christian population and Ottoman military

posts in fortresses), on the contrary, had delayed the assimilation of the population until the 18th century.

It is highly likely that until the Ottoman conquest of the Southern coast of Crimea in 1475, Islam in Crimea had been under significant influence of the traditional and new urban centres of Central Asia, as well as the old Islamic cities of Asia Minor and the Middle East. This can be observed, in particular, in the migration of people from these places to the peninsula. In the winter of 1665–1666, Evliye Çelebi saw a mosque near the market in the Old Crimea district which had been built in 1263 by a native of Bukhara. Coin findings clearly show that in the first half of the 14th century there was close correlation between regions of the Golden Horde to the west of Volga and its Central Asian regions. It is difficult to measure the scale of this relationship because of the lack of broad statistics on the various categories of artifacts found but it is indisputable that these contacts were not only trade related, but also migration related. This single area, besides being common state territory, is also united by a Islamic tradition: in particular, by the circulation of common popular religious texts, as well as by migrations of religious authorities (sheikhs) within the borders of a single state (from Central Asia) and from outside (Asia Minor) to Crimea and the Middle Volga region. An excellent example of that is the geographical ancestry of people nisbas buried in the cemeteries of Solkhat and Otuzy: Khaleb, Tokat, Tabriz, Konya, Sivas, Jand, Akhlat, Kastamonu, Barchkend. A tomb dated 760 (1358) with an epigraph (probably a construction related epigraph about the building of a well by a certain Idris b. Hajji Yahya b. Muhammad Iraki), found by O. Aqçoqraqlı in Otuzy proves that in the 14th century emigrants from Islamic regions like Iraq migrated to Crimea. The ledger stone of

Crimean Tatars.
Print. France,
1830s.

Sheikh Yakup Koniysky (El Konevy) dated 729/1328/29, also comes from Otuzy. Among the ledger stones of Eski Yurt we can also see the epitaph dated 793/1390/91 of Mevlan Ahmad ibn Mahmud, who, according to his nisb (Bardzhinlygy), came from the city of Bardjinlyk on the Syr Darya river. These connections were perhaps as a result of established hajj routes: some pilgrims travelled to Mecca from Central Asia and back through Crimea. Thus, at that time Crimea had close contacts with Central Asia.

At the beginning of the 16th century, after the defeat of the Great Horde by Mengli Giray, the Golden Horde people had largely migrated to the peninsula.

At the end of the 16th century, in European literature (Marcin Broniowski's 'Tartariae Descriptio') the epithet 'Crimean' was already being used to refer to the Tatar population of the peninsula (according to the name of the city, Solkhat-Krym). Thus, we can say that the Crimean Tatar ethnic group came into being specifically during the 16th century. This process happened in the steppe region of the peninsula and involved groups of Kipchak-dialect speakers. At the same time, the high culture of the khanate is marked by the use of Arabic and Persian as the languages of religion, science and literature, with a significant influence of the old Ottoman language as

well (in particular in the literary and chancellery languages).

The Crimean historical works and chancellery documents of that time, with regard to the population of the khanate, show a preference for confessional, rather than ethnic definitions (describing the main bulk of the population as Muslims), even though already in the 16th century there are texts where we come across the term 'Tatar' with regard to Crimean troops¹, Saadet Giray calls his Crimean circle 'Tatars' (see: [Zaitsev, 2009a, p. 20])².

At the same time, according to Ottoman censuses, the South coast of Crimea was still mainly populated by Christians (descendants of Greeks, Italians and Armenians united under the common Crimean-Ottoman designation oftat³). No early Islamic artifacts have been found on that territory to date, which probably means that the majority of population were Christians [Herzen, 2005, p. 17]. Ottoman military presence on the South coast (military posts

¹ 'The History of Sahib Giray'. Manuscript of the Eastern Department at St. Petersburg State University (# 488, p. 3).

² We cannot exclude, however, that in both cases we deal not with an internal self-identification, but with a look at the ethnic picture in the Crimea from the outside (an Ottoman perspective on this case).

³ Its origin takes root back in the Old Turkic time: the ethnonym itself is mentioned in the monuments of the Old Turkic runic writing.

in fortresses) had determined the dominance of the Oghuz dialect on this territory as the *lingua franca* of its residents.

The process of ethnic consolidation of the Crimean-Tatar people continued up to the end of the 18th century, when it integrated assimilated groups of people from the South coast (after 1774), who spoke the Oghuz dialect of the *Türki*.

Observations by Turkologists and linguists (V. Radlov, A. Samoylovich, B. Çoban-zade) tell us that from the linguistic point of view Crimea had been divided into three areas: a steppe region (in fact Kipchak), with a southern border along the line of Eupatoria, Buyuk-Onlar (Oktyabrskoye), Feodosia, and Kerch peninsula; a southern region—in fact Oghuz (coast and mountain areas, approximately from Baydar Gate to Feodosia) and a central area marked by the amalgamation of Oghuz and Kipchak features leaning towards

the southern dialect [Sevortyan, 1966]. The middle dialect, because of its middle ground location, became the basis of the Crimean Tatar literary language.

This linguistic data has a firm anthropological basis: the Tatars who lived on the coast and in mountains had prevailing Southern Caucasian component while steppe Tatars had clear Mongoloid features [Khit, Dolinova, 1995].

It seems that the Crimean Tatars reached their peak towards the middle of the 18th century. According to the Official description of Crimea (*Kameralnoye opisaniye Kryma*), by 1784 the number of Muslim men in the peninsula (including a few Jews) was just over 55 thousand. Later waves of migration into Asia Minor and the European provinces of the Ottoman Empire formed the basis of the Crimean Tatar communities in modern Turkey, Romania and Bulgaria.

CHAPTER 8

Kazan Tatars

Damir Iskhakov

Even in researching for a major book 'The Middle Volga and Ural Tatars' (1967), the outstanding Kazan ethnologist N. Vorobyev, in a chapter about the history of formation of Tatar nation, came to the conclusion that the 'Kazan Tatars' had gradually become a 'nation' as a result of the amalgamation of Bulgars with 'Turkic migrants from the Golden Horde', and in his opinion, the 'amalgamation' process of two aforementioned ethnic components carried on within the Khanate of Kazan as well [Tatars, 1967, pp. 9, 11, 13]. But as at that time in Tatarstan the theory of the Bulgar origin of Kazan Tatars prevailed, this point of view didn't find any support from other researchers from Tatarstan.

For instance, in his special work on the ethnic history of the Volga-Ural Tatars, published in 1978, famous Tatar archaeologist A. Khalikov insisted that the 'Bulgar nation' still existed after the fall of the Golden Horde, by forming a 'nation' of Kazan Tatars within the Khanate of Kazan [Khalikov, 1978, pp. 106, 125]. Other researchers from Tatarstan held similar views [Alishev, 1985; 1990, pp. 55–56; 1995, p. 26; Kärimullin, 1991, pp. 36–46 b; Zakiev, 1986, pp. 457–472]. But, in the 1990s, when academics in Tatarstan began to research the history of the Ulus Jochi and its state-building ethnic groups, a subject which had been prohibited in the USSR, a new theory about the content of ethnic processes in this medieval empire began to develop according to which the Tatar ethnopolitical community was formed in this state, but after its collapse became fragmented [Tatars, 2001, pp. 85–180; The History of the Tatars, 2009, pp. 349–365]. The integral part of this vision was a theory about the social stratification of the Medieval Tatar ethnic community, where upper feudal stratum, which had been taken over by the Tatars of the Golden Horde, divided into clans, and the bottom stratum, consisting of other ethnic groups in the Middle

Volga region, according to some researchers, consisted of strongly transformed descendants of the Bulgar population of the Golden Horde Bulgar vilayet who continued to interact with the 'Tatar' part of society within the Khanate of Kazan as well [Ishakov, 1998; Tatars, 2001, pp. 101–135; Ähmätcanov, 2011, pp. 219–221].

There are historical grounds to believe in the existence of two ethnic strata of Kazan Tatars: the 'chern' (kara khalik), identified in Russian sources of the 16th and 17th centuries as 'yasak Chuvashes', and upper social stratum, who were descendants of the Golden Horde Tatars divided into clans, and from the second half of the 16th century began to be known as 'servile Tatars' [Ishakov, 1980; 1988; 1995]. For this reason, the completion of the formation of the Kazan Tatar ethnic community crucially depended on the consolidation level of the two aforementioned ethno-estate groups, even though it is quite difficult to identify the percentage of 'completion' of Kazan Tatar community formation in the Khanate of Kazan because of the scarcity of sources. Even considering the existence of these estates and a lack of marked ethnic boundaries, this picture still is rather typical of the feudal age, and the ethnic situation in the Khanate of Kazan and Kazan Krai between the 15th and 17th centuries is no exception. However, despite the fact that it is hardly possible to speak about an exact evaluation of the level of consolidation of the Kazan Tatar ethnos, surviving sources allow us to identify a wide range of objective indicators based on which it is possible to speak about not only a chronological framework, but also the main results of the formation of a distinct Kazan Tatar ethnic community (nation) in the Khanate of Kazan.

For external observers, the formation of ethnic subject known as 'Kazan Tatars' (people of Kazan) was already evident in the second half of the 15th century: the community known as

the 'Kazan Tatars' (Tatarovia Kazanskiye) are mentioned in Russian chronicles dated 1468, 1469 and 1475 [Complete Collection of Russian Chronicles, 12, 1965, pp. 118, 120, 122, 158; Complete Collection of Russian Chronicles, 27, 1962, p. 128; Complete Collection of Russian Chronicles, 28, 1963, pp. 118, 142; Complete Collection of Russian Chronicles, 1982, pp. 46, 90]. In 1491, the same community was referred to by Crimean Khan Muhammad Giray by the word 'Kazantsi' (Kazan people) [Malinovsky, fol. 61v]. And in the first half of the 16th century, the term 'Kazan Tatars' (Kazan people) was widely used to refer to a state-building ethnic community within the Khanate of Kazan. That appears to be typical in both Russian and European sources. Moreover, the term 'Kazan Tatars' (Kazan people) was a central element in a rather complicated system of ethnic designations. It was based upon the term 'Kazan land' (zemlya Kazanskaya) or 'Entire Kazan land' (Vsya zemlya Kazanskaya) frequently used in Russian chronicles (see, entries of 1519, 1523, 1529, 1534, 1536, 1541 and 1546 [Complete Collection of Russian Chronicles, 13, 1965, pp. 31, 44, 46, 81, 88, 99, 148]). This term was used in the 16th century by some Russian authors as well [The History of Kazan, 1954, p. 68; Iz poslaniya, 1914, pp. 72–73; Sochineniya, 1914, p. 220]. The synonym of this expression in Muscovy was the term 'Kazan Kingdom' (tsarstvo Kazanskoye) [Complete Collection of Russian Chronicles, 13, 1965, p. 226; Iz poslaniya, 1914, pp. 72–73], which was much more rarely used. The latter term, sometimes substituted by the phrase 'Kazan Tatars Horde' (Orda Kazanskiy tatar) or 'Kazan Horde' (Kazanskaya orda) was prevalent among European authors [Mehovsky, 1936, p. 116; Herberstein, 1908, p. 145; Albert Campense 1836, p. 16; Blaise de Vigenère, 1890, p. 83]. The evidence suggests that the Khanate of Kazan was being referred to in all of these occasions.

This is clear, particularly with the term 'Kazan land' (zemlya Kazanskaya) ('Entire Kazan land', 'Vsya zemlya Kazanskaya'). For example, describing a discussion which happened between a Kazan nobleman and Russian boyars about the 1551 annexation of the mountain regions of the khanate, it is said that Tatars

declared the following: '...you can't do anything to them, **but divide the land**' [Complete Collection of Russian Chronicles, 12, 1965, p. 430] (highlighted by me.—*D.I.*). A similar understanding was implied in a message from Ivan IV to the Nogai prince Ismail (1553), in which 'Kazan land' (Kazanskaya zemlya) was identified as a 'yurt' controlled by Moscow [Ancient Russian Vivliofike. Continuation, 1793a, p. 120]. The same meaning was implied by this term even in a 1469 message written by Kazan Khan Ibrahim on mobilisation, stating the following: '...and the Tsar of Kazan Ibrahim gathered with his entire land' [Complete Collection of Russian Chronicles, 13, 1965, p. 71].

In my view, ultimately the term 'Kazan land' (Zemlya Kazanskaya) amounts to the official name of the Khanate of Kazan. At least, two documents from the first half of the 16th century contain data supporting this fact. The first one—*yarlyk* granted by Sahib Giray Khan (1523) contains a phrase '*gomum vilayate Gazan*' [Sähip Gäräy yarligi, 1936, p. 354], i.e. 'the entire vilayet of Kazan'. The source refers to the Khanate of Kazan. Another document, a message from Sahib Giray Khan to the King of Poland Sigismund I (dating from between 1538 and 1545), the only copy of which has been preserved in Polish, speaks about 'Kazan land' (zemlya Kazanskaya) and 'Kazan kingdom' (tsarstvo Kozanskoye) [Mustafina, 1997, p. 32].

The expression 'Kazan Horde' also meant the Khanate of Kazan, as European authors generally used the word 'horde' to refer to the established nation-state [Lituanus, 1890, p. 6; Pavel Ioviy Novokomsky, 1836, p. 24]. And in the aforementioned message from Sahib Giray Khan to the King of Poland, the Khan writes the following: '... our Kozan Horde swore allegiance to me' [Mustafina, 1997, p. 34]. For this reason, the term 'Kazan Horde' (Orda Kazanskaya) may be of Tatar origin as well. Although we cannot exclude the possibility that in this occasion the khan may have used a more understandable 'European' expression, referring to the Khanate of Kazan, in his message to the king.

Apparently, the words 'Kazan land', 'Kazan kingdom', 'Kazan Horde' are centered around

the name of the capital, the city of Kazan. European authors have directly identified it [Mehovsky, 1936, pp. 63, 92; Campense, 1836, pp. 16, 26]. Russian chronicles contain the expression 'city and kingdom of Kazan' as well [Complete Collection of Russian Chronicles, 13, 1965, p. 55], and in some 17th century sources the city of Kazan is identified with the 'kingdom of Kazan' [Kniga Bolshomu Chertezhu, 1950, pp. 137, 182, 184].

The following set of words can be derived from the terms we have reviewed: 'Kazan people' (Kazanskie Lyudi), 'all Kazan people' (Vse Kazanskie Lyudi), 'all Kazan land people' (Vse Kazanskia Zemli Lyudi), 'all the people of the land' (Vse Zemskie lyudi) (see: [Complete Collection of Russian Chronicles, 13, 1965, pp. 31, 32, 44, 48, 55–57, 67–68, 81, 88, 166, 434, 439, 446, 458, 459, 468, 470]. This information relates 1519, 1523, 1529, 1530, 1531, 1532, 1533, 1534, 1541, 1542, 1545, 1548, 1549, 1551). A shortened version of the expression was the term 'Kazan people' (kazantsi) [Ibid., pp. 116, 129, 166, 425, 446, 458, 459, 470, 472, 501, 504; The History of Kazan, 1954, pp. 66, 77, 80–81, 83, 89, 112; Sochineniya, 1914, pp. 180, 226, 250]. This group of terms meant the entire population of state. But in some occasions they were also used to refer to the Tatar part of population of the Khanate of Kazan [Ancient Russian Vivliofike. Continuation, 1793, p. 215; The History of Kazan, 1954, p. 78. Although in the latter case this is less evident]. For this reason the term 'Kazan people' (kazantsi) was an obviously vague or blanket ethnic designation. Its usage as an ethnic designation seems to be associated with the fact that Tatars, as the politically dominant ethnos in the state, were perceived by many Russians and Europeans as the core of the 'Kazan people' (kazantsi), and that fully corresponded to the ethnopolitical situation at the time of the Khanate.

An ethnonym which circulated in this complex system of ethnic designations was the name 'Kazan Tatars' (Kazanskiye Tatarovya, Tatarovya Kazanskiye), which was part of the Russian vocabulary, as it mentioned before, already in the second half of the 15th century [Complete Collection of Russian Chroni-

cles, 13, 1965, pp. 90, 107, 113–114, 427–428, 440, 463, 490; Complete Collection of Russian Chronicles, 28, 1963, p. 142; Sochineniya, 1914, p. 294; Collection of the Russian Historical Society, 1895, p. 678.] Even when using simply the term 'Tatars' (Tatarovya), in this context it meant the Kazan Tatars in particular (see: [Complete Collection of Russian Chronicles, 13, 1965, pp. 501, 404; The History of Kazan, 1954, p. 58; Sochineniya, 1914, pp. 181, 196, 199]). Europeans who were also using this term in the first half or 16th century [Mehovsky, 1936, pp. 116; Herberstein, 1908, p. 137, 157; Blaise de Vigenère, 1890, p. 83], had likely borrowed it from the Russian language. In Muscovy, the term 'Kazan Tatars' fundamentally referred to a specific language, i.e. ethnic group. Let us look at two examples of this. The Regal Book (Tsarstvennaya kniga), dated 1552, mentions the 'pagan language of the Crimean and Kazan Tatars' [Complete Collection of Russian Chronicles, 13, 1965, p. 83]. A. Kurbsky writes the following: '...apart from the Tatar language in that (Kazan.—*D.I.*) kingdom, there are five different languages: Mordvinian, Chuvash, Cheremis, Votyak (Arsk), and Bashkir' [Complete Collection of Russian Chronicles, 13, 1965, p. 83].

It is important to note that Russians also tended to mark the name 'Kazan Tatars' by showing its relation to the Muslim Ummah. For example, the Regal Book (Tsarstvennaya kniga) mentions the 'godless Kazan Tatars' or 'godless Kazan Saracens' (Sratsyns) [Complete Collection of Russian Chronicles, 13, 1965, pp. 162, 463]. A message from Metropolitan Makarius to Ivan IV (1552) speaks about the 'pagan language of the Crimean and Kazan Tatars' [Ibid., p. 490]. In the Patriarchal (Nikon) chronicle, dated 1553, the expression 'pagan Tatars' is used to refer to Kazan Tatars [Ibid., pp. 211, 218–219]. Another message from Ivan IV to A. Kurbsky speaks about the 'godless Kazan language' and 'Besermyan language' [Iz poslaniya, 1914, p. 64].

The aforementioned, fully self-sufficient system of ethnic designations was linked to the political collective of 'Tatars' prevailing in the Khanate of Kazan. However, in Russian, the ethnic stratification of the Kazan Tatar community

admits the possibility of another system of ethnic designations which this time was developed on the basis of terms reflecting the existence of 'black' stratum of Kazan Tatars. Research on this issue has revealed an interesting finding: this system really existed, but it was based not on the term 'yasak Chuvashes', but on the ethnic designation 'Bolgars' or 'Volga Bolgars'. Firstly, in the Nikanor Chronicle, in its copies of the 17th century, specifically in a story 'On the conquest of the city of Kazan and its entire land on the Volga and Kama rivers' the following is said about the population of that 'land': '...the Volga Bolgars appeared'. They are later referred to as 'Volga and Kama Tatars and Bolgars' [Complete Collection of Russian Chronicles, 27, 1962, p. 143]. A later source, 'The story of the fair life of the Tsar and Grand Duke of all Russia Fedor Ivanovich', also describing the conquest of the Khanate of Kazan by the Russians, speaks about the 'wicked Bolgars who live near Russia, on the river Volga'. The author of 'The story...', describing the Kazan campaign of 1552, mentions the following: '... the entire Kazan land was captured and a great many of the wicked Bolgars were killed'. The source later gives an account of the reign of Fedor Ivanovich, when 'the wicked... Bolgars' rose up and by order of Fedor Ivanovich, it was decided to send Boris Fedorovich with 'many... troops... strong, and armed against the Bolgar... Troops...'), which 'arriving in the Bolgar regions... captured...' As a result, 'the entire Bolgar state' was 'reduced to servile obedience' 'and still is now', added the author [Povest, 1910, pp. 3–4].

Of course, these later depictions of the Bulgars in the Khanate of Kazan and Kazan Krai in the second half of the 16–17th centuries could well be attributed to chronicle-writing conventions. For instance, the author of a 16th century source, the History of Kazan, while describing events in the late 14th and early 15th centuries, clearly describes the future Khanate of Kazan as being populated by 'Bolgar princes and barbarians', 'the language of the cruel and pagan Bolgar chern with their princes and elders' [The History of Kazan, 1954, pp. 44, 48]. The same group of people is identified as 'Saracens' [Ibid.]. Finally, the author describes them as 'thin Bolgars, Kazan people' [Ibid., p. 53]. But

when referring to the second half of the 15th and mid-16th centuries, the author of the History of Kazan prefers to refer to them as 'Kazan people', or 'Kazan Tatars'. For this reason, the Russian chronicle book tradition, which maintains the continuity of Bulgar and Kazan Tatars, needs to be taken into consideration. Nevertheless, we should keep in mind the deliberate 'preparation' of Russian chronicles by the Muscovite state ideologists using the 'Bulgar' factor for political purposes [Pelenski, 1974; Izmaylov, 1992, pp. 52–62; Izmaylov, 1997, pp. 33–34].

All the same, we should look beyond the interplay between this tradition of naming conventions and the writing of chronicles. As a whole, in all the data from the 15th and 16th century chronicles and other documents from the 16–17th centuries, the sporadic appearance of the ethnic designation 'Bulgars', and terms such as 'Bolgar oblast', 'country of Bolgars' (strana Bolgarskaya) referring to the population of the Khanate of Kazan, Kazan Krai and to the state (Krai) itself, can be explained by the existence in this area, from the late 15th to the early 17th centuries, of an ethnic community, associated with the Volga Bulgars by origin, and specifically with the Turkic yasak-imposed population of the Bulgar vilayet of the Golden Horde. This can also be confirmed by the independent character of the system of ethnic designations used in Russian documents to indicate this ethnic stratum of Kazan Tatars from the 15th until the early 17th centuries.

The first category of this system recorded the religious identity of the observed representatives of Kazan Tatars—'Besermyans', or 'Bosormans' (15th century), 'barbarians', 'wicked', 'pagan language', 'Saracens' (16th century). The second group paid closer attention to notions of ethnicity: 'Bolgar chern', 'thin Bolgars' (16th century). The third structural element, the 'core' part of the system of ethnic designation, is actually the ethnonym 'Bolgars'. The latter was intimately linked to the terms of the first two categories. On the one hand, the name 'Bolgars' was always used with the adjective 'wicked' or 'pagan', which in a particular context meant Muslims. On the other hand, the use of expressions such as 'Bolgar chern', 'thin Bolgars'

in the History of Kazan implies that 'Bolgars' were taken as 'black', i.e. a yasak-imposed population. Thus, these terms become synonymous with the term 'yasak Chuvashes'.

Still, one should take into consideration that the name 'Bolgars' (Volga Bolgars) is not only an ethnic designation, but also a blanket term like 'Kazantsi' (Kazan people). This is suggested by the expressions 'Bolgarskiya Oblasti' (Bolgars regions), 'vsya strani Bolgarskiya' (all Bolgar countries). Besides the ethnic designation 'Bolgars', these expressions may be based on the name of the city of Bulgar, the center of the Bulgar vilayet at the time of the Golden Horde. The latter circumstance must be taken into consideration for several reasons. First of all, up to the middle of the 15th century, on the coins, which since the beginning of the 15th century were already being minted in the city of Kazan, the coin mint was stated as being located in 'Bulgar', or in some occasions as 'Bulgar al-Jadid'. The latter referred to the city of Kazan [Mukhamadiyev, 1972, p. 117. See especially the comments by this author on the text of 'Daftar-i Chinggis-name' regarding this issue]. Secondly, as mentioned before, some of the people who in the 1360–1370s bore the title of 'Bulgar Princes', in the late 14th and early 15th centuries could live in the city of Kazan (for further detail see: [Iskhakov, 1995, pp. 44–46 b]). Thirdly, some European maps from the 15th, and also the first half of the 16th centuries feature the city of Bulgar and the Bulgar 'lands': 'Borgar Tartarorum' by Albertino de Virgi (1411–1415), 'Borgar' by Fra Mauro (1459), 'Borga' by Martin Waldsmüller (1507), 'Bulgaria Magna' by the same author, different map (1516), John Schooner (1523), Oronce Fine (1531). Moreover, M. Waldsmüller and John Schooner use 'Bulgaria Magna' alongside with the words 'Casana', 'Casan'. Some other maps contain only the latter name: 'Casanum tartarum' (Battista Agnese—1525), 'Casana' (the updated version of the map of Oronce Fine—1534), 'Kassanorda' (Antonius Wied—1542) (examples taken from: [Tardy, 1982, pp. 180, 190, 193–195, 197]). Thus, the terms 'Bolgarskiya Oblasti' (Bolgarskiye oblasti), and 'countries of Bolgars' (strany Bolgarskiya)—are the second name of the Khanate of Kazan. Another

authentic source, the 'Zafärnamä-i vilayete Kazan' (1550) proves that as well. Here, the Khanate of Kazan is called not only as 'Kazan ölkäse' or 'Kazan vilayate', but also as 'Bulgar vilayate' or 'having Kazan as a seat of power of the Bulgar vilayah' ('Bulgar vilayeteneñ paytähete bulgan Kazan') [Zafärnamä-i vilayete Kazan, 1997, p. 77 b]. Likely, the identification of 'the Khanate of Kazan' as 'Bulgar vilayet' had been preserved since the existence of this administrative political unit ruled by 'Bulgar Princes' within the Golden Horde. Similar definitions are also used in the poem 'Nury sodur' (1542) by Kazan poet Mukhammadyar, who wrote that his work was completed in '*Bulgar şähre Kazan dāruazāsēndä*' [Ibid.], which should be understood as '*Bolgarniñ/Bulgar ileneñ Kazan şähäre kapkasında*' [Yahin, 2009, 203 b.], i.e. 'in the gates of Kazan of Bulgar [country]'.

But in general, both systems of ethnic designation and their ethnic 'cores', the notions of 'Kazan Tatars' and 'Bolgars', by the middle of the 16th century were actually used interchangeably to refer to the same ethnic group. The proliferation of descriptions used with the names of both groups speaks for itself: 'godless', 'godless Saracens', 'pagan language', 'godless language', 'Besermyan language' (characteristic of 'Kazan Tatars'); 'barbarians', 'language of pagans', 'Saracens', 'wicked' (characteristic of 'Bolgars'). As for the use of two groups of names to refer to one and the same ethnic group in Russian sources, it is quite explainable. The designation 'Tatars', which had been more commonly used among the feudal lords, was used at times when the attention of Russian sources was mainly focused on this particular estate or state affairs involving the prevailing stratum of 'Tatars'. The second name, more explicitly used as a blanket term, had likely been circulated among the peasantry and used to refer to the masses or the region (Krai). This is supported by the fact that 'Tatars' had the right to move from one Tatar khanate to another by being an extraterritorial group to a certain extent [Iskhakov, 1995, pp. 105–107], while 'black' people (chern) were 'tied' to a specific state-managed 'land'. In the context of the preservation of the ethnic-state strata of the Kazan Tatars,

social confrontation of 'upper stratum' and 'lower stratum' could have had the character of an ethnic/class division. The same conclusion can be reached, for instance, by reading the following extract from the poem 'Töhfäi märdän' (1539–1540) written by Kazan born Muhammadyar [Möhämmädyar, 1997, pp. 119–120 b], where one of literary characters of the poem attempts to humiliate the other:

(translated into modern Tatar language)

Allah-mäzhäben belmäüçe tatar sin,
Bu dö dönyada häm ettän dä naçar sin.
....I şökätsez, di, tatar,
Asrama et balasin—asilina tartar.
Imansız, şomli yazmış bädbäxete sin,
Yözeñ kara, cähännämneñ ete sin.

.....

Äşäkeseñ, yözeñ yämsez—kararga,
Eçeñ-tişñ tulgan gaybät satarga.

(word-for-word translation into English)

You are a Tatar that doesn't know his Allah
and madhhab,

You are worse than a dog in this world.

... O ugly one, he says, you are a Tatar,

Don't bring up a puppy—it will look like
you.

You don't have a faith, you are a creation of
evil fate,

With a black face, you are a dog from hell.

.....

You are dirty. It is sickening to see your
face,

Your insides are filled with gossip.

Even though some researchers have expressed the view that this extract shows a rejection of the designation 'Tatar' by the people of Kazan [Khalikov, 1989, p. 163], it more likely describes the attitude of the peasantry towards the class of feudal lords ruling the Khanate of Kazan. I. Izmaylov notes one more aspect of this 'evil invective' of the Muhammadyar towards the 'Tatars': '...for a righteous educated citizen... the representa-

tives of the military establishment' had 'an image of barbarity and savagery, not because of being 'Tatars', but because they were 'bad Muslims' [Izmaylov, 1997, p. 38. See also: Izmaylov, 1996, p. 76]. Such a treatment is possible, although I wouldn't exaggerate the gap between 'Tatars' and the settled-agrarian 'black' population in terms of their level of Islamisation. For example, a message from Shibanid Khan Ibrahim (Ivak) to Ivan III dating from 1489, i.e. during the time when Ibrahim was ruling the Nogai Horde or was closely related to it, reads: '...I am a Besermyan ruler, and you are a Christian ruler' [Ambassadorial books, 1984, p. 19]. It would appear that Ibrahim Khan felt like a Muslim ruler. And in the Khanate of Kazan, representatives of both estate strata were using the generic confessional designation of 'Muslims'. For the 'black people' ('cherny lyudy') of the khanate this well documented in Russian chronicles, which have recorded, as mentioned before, the term 'Besermyans' as being quite widespread. However, this name clearly circulated even among feudal lords because S. Herberstein, referring to Tatars in general, comes to the following conclusion: 'The name Besermyans (Besermen) makes them (i.e. Tatars.—*D.I.*) happy' [Herberstein, 1908, p. 141]. The 'Zafärnamä-i vilayete Kazan' also mentions an opposition of the Muslim vilayet as a whole to 'kafirs', i.e. Russians [Zäfärnämäi vilayete, 1997, pp. 76–84 b].

Based on available data, we can thus conclude that the formation of the feudal nation of the Kazan Tatars happened within the Khanate of Kazan and was fully completed by the middle of the 16th century. It is hardly possible that the ethnic/class division of the Kazan Tatars ethnic group into 'upper stratum' and 'lower stratum', observed within the whole period of existence of the Khanate, had gone beyond the distinction between 'noble' (*akşöyak*) and 'chern' classes typical of nations of the feudal age (*kara halik*).

CHAPTER 9

Meshchera Tatars

Damir Iskhakov

For a long time, researchers expressed different opinions regarding the formation of the Turkic-Tatar population of the Meshchera Yurt—the Kasimov Khanate. So, in 1968 Sh.Mukhamedyarov presented a summary report at the 8th International Congress of Anthropological and Ethnological Sciences, dealing with questions of the roots and ethnic history of the 'Tatar people', in which he called the Tatar-Mishars 'another major part of the Tatars', indicating that the formation of this ethnic group (community) had taken place under different conditions compared to the Kazan Khanate, with the Kipchak groups playing a critical role in its emergence. However, the author did not raise the question of the specific content of the ethnic processes that had led to its formation [Mukhamedyarov, 1968]. In the 1970s, A.Khalikov, under the view that the 'unified Bulgar nation' persisted in the Golden Horde until the late 14th and early 15th centuries, stated that the process of formation of the Mishar nation began after the collapse of the Bulgar nation and lasted until the 16th century. This researcher believes that the Mishar Tatars were not able to 'fully take shape as a particular nation but developed a number of its features' [Khalikov, 1978, pp. 106, 135–136, 146]. He makes no connections between the Kasimov Tatars, who lived surrounded by the ethnic group of Mishars and had close ties with it. Khalikov is inclined to believe that those were independent ethnic entities (he does not describe them as having any particular status), which developed from the mixing of different ethnic elements, mainly from the Kazan Tatars [Ibid., pp. 106, 135–136, 146]. R. Kuzeyev also tried to determine the distinctive features of the Mishar ethnic community. In his opinion, the Kazan Tatars can be identified as a 'feudal nation' during the Kazan Khanate period, while the Mishar Tatars of that time should be considered as an 'early feudal nation' [Kuzeyev, 1987, pp. 130; 1992, pp.

315–321]. It seems that in this case the author follows the lead of A.Khalikov, who notes, as it has been pointed out, a certain 'immaturity' of the Mishar Tatars as a community. Later historical research has led to a view that the Mishars in the 15th and 16th centuries were, similarly to the Kazan Tatars, just an 'ethnic group' of the Tatar nation, depending on the overall position of researchers on the formation of the Tatar ethnic group, in one case, the 'Bulgar-Tatar nation' [Alishev, 1985, pp. 113–115], in the other case, the 'Golden Horde ethnic group' [Fakhrutdinov, 1985, p. 102; Ähmätcanov, 1993, p. 157; Izmaylov, 1993, pp. 27, 29]. In fact, to solve the rather difficult question of the formation of the ethnic community of the Meshchera Mishar-Tatars, it is necessary to analyse sources of information again and apply different conceptual approaches.

As for the sources, most of the ones relating to the population of the Kasimov Khanate date from the 16–17th centuries. The source base for earlier periods is quite small (see: [Iskhakov, 1998; Rakhimzyanov, 2009]). Therefore, let us begin with the ethnic situation in the Meshchera Yurt in the 16th century.

In the 16th century, Turkic groups living in the Meshchera Yurt were called differently. The ethnic designation 'Tatars' was the most commonly used term, for example, Moscow business documents usually referred to 'Gorodets Tatars', which could be deciphered as follows: tsar (tsareviches), uhlans, princes, murzas and the Cossacks [Velyaminov-Zernov, 1863, pp. 197, 201, 286, 405, 410, 421, 458; part II, 1864, pp. 13, 50, 81, 86, 94; Rozryady (1576, 1578), 1790, pp. 292–324, 351–353]. In some cases, the 'Cossacks' were replaced by: 'and all Meshchera people' [Velyaminov-Zernov, 1864, p. 405]. The general pattern of development for this formula is as follows: up to the mid-XVI century, it was used to refer to all the 'Tatars of Meshchera'; in the second half of the 16th cen-

tury, 'Gorodetsk Tatars' began to imply the service class of the Tatars in the town of Kasimov and the uyezd [Ibid., pp. 50, 81, 94; p. 199]. It must be noted that a group of 'Temnikov Tatars' (worded as follows: 'Prince Yenikei with all Temnikov Tatars and Mordovians') was singled out of the 'Gorodets Tatars' in 1552. Later, other groups received a nomination according to the uyezds which they lived in. This was obviously related to the process of 'splitting' the territory, occupied by the Meshchera Yurt, into individual uyezds. In the 16th century officials from Moscow occasionally used the expression 'Meshchera Tatars' [The Complete Collection of Russian Chronicles, 13, 1965, p. 38].

In the 16th century, the Crimean Tatars and Nogais preferred a number of different names. Some sources suggest that in the early 16th century residents of Meshchera were called 'Meshcherins' (sing.—'Meshcherin'), 'Meshchera people', or 'Besermyanian Meshchera'. The following wordings were also used: 'Besermyanian people in Meshchera', 'Besermyans in Meshchera'. [Collection of the Russian Historical Society, 1895, pp. 11, 209, 378]. The Nogais used a similar form: 'Meshcherians', 'Meshchera people' [Ancient Russian Vivliofike. Continuation, 1793, p. 249; Ancient Russian Vivliofike. Continuation, 1793a, pp. 33–34, 50], although in some cases, they wrote about the 'Cossacks of Meshchera' [Scherbatov, 1786, p. 487], or even the 'Gorodetsk Tatars' [Ancient Russian Vivliofike. Continuation, 1791, p. 240]. A letter dated 1514–1516 which was sent from Azov shows that the 'Azov Tatars' called the Turkic population of Meshchera 'Mordovian Tatars', considering them 'peripheral Tatars', living 'in the Meshchera periphery' [Collection of the Russian Historical Society, 1895, pp. 224, 231, 292]. However, the term 'Mordovian Tatars' is just a form of the name 'Gorodetsk Tatars', because in this case the generic concept is 'Tatars' [Iskhakov, 1998, pp. 190–192].

The terms 'Gorodetsk Tatars' and 'Meshcherins' ~ 'Meshcheryans' are inherently related, since the first term can be decrypted in the form of 'Meshchera Tatars' ('Gorodok' (town) is not only a town of Kasimov but also 'Meshchera Gorodok'). It is nevertheless impossible

to fully equate the terms. Such a conclusion can be drawn from the content of a charter addressed to Prince Yenikei in 1539. The charter reads as follows: '... the Tatars from the Tarkhans, and the Bashkirs and Mozherians who live in Temnikov ought to be judged and managed as in the old days, in the same way as they were judged and managed by Father Tenish' [A copy of the charter..., 1889, p. 31]. It is evident from the charter that the 'Tatars', located in the vicinity of the town of Temnikov in the late 15–early 16th centuries were divided into 'Tarkhans', 'Bashkirs' and 'Mozherians'. 'Mozherians' most likely meant the 'black people' of Meshchera, since a charter, dated 1483, included the following people among the 'black people that pay yasak (tribute) to Prince' Daniyar: 'Besermyan,... Mordovian,... Machyarin' [Dukhovnye, 1909, p. 140]. Apparently a 'Machyarin' (plural 'Machyarens', 'Machyaryans' or 'Mozherians'), as seen in a contractual charter from 1483, was a representative of a social and ethnic group, referred to as 'Mozherians' in 1539. According to the definition of 'Tatars', as it applied to 'Mozherians', they were to be considered Turks by the beginning of the 16th century.

The same social status—payers of yasak (tribute)—allows us to raise the question on the possible shared meaning of 'Burtases—Posop Tatars' in 17th century sources (for more about them see: [Iskhakov, 1998, pp. 213–214]) and 'Tatars from Mozherians' (Meshcheryans) in the documents from the 1480–1530s. However, to reach such a conclusion, it is necessary to deal with the ethnic origin of the 'Tatars from the Tarkhans and Bashkirs', which, in the view of P. Chermensky, were of the same nationality as the Burtases [Chermensky, 1970, p. 90]. In addition, the contractual charter from 1483 also mentions the 'Besermyan' along with representatives of the two distinct ethnic groups—Mordovians and Mozherians (Macheryans). Was that 'Besermyan' just a Muslim or was he mentioned in the charter's text by association with the presence of another ethnic group in Meshchera, residing, as it is well known, in the territory of the Bulgar vilayet of the Golden Horde? This question also needs to be addressed.

The existence of the 'Tarkhans' in Mesh-

Tatar women of Meshchera. Print by N. Thomas from the atlas to a French edition of *Journey to Various Provinces of the Russian State* by P. Pallas. 1794.

chera is confirmed by place-names: according to some 18th century sources, there were the villages of Syup Tarkhan and Tarkhan (the latter inhabited by Tatars) in the Shatsk uyezd (near the Tsna River), and the village of Tarkhany (residents: murzas and Tatars) in Temnikov uyezd [Statement of 1895, pp. 104–117]. In the latter uyezd, the 'Tarkhans' are mentioned in 1683, along with the murzas, in the village of Atanovy, as a social group [DM, 1950, p. 429]. In 1732, Prince Kudashev is mentioned as residing in the village of Tarkhany in Temnikov uyezd [Register, 1893, p. 32]. The Kudashev lineage can be traced back to Bekhan [Materials, 1904, p. 271; Safargaliyev 1963, p. 69], hence, they were relatives of Prince Tenish, known from the charter dated 1539. Other data also confirm the relationship between the place names of 'Tarkhan' in the basin of the Tsna River and Temnikov uyezd. It is known that Prince Tenish's land was located in the basin of the Tsna River in 1529, in the Podlesnaya volost [Register, 1889, pp. 30–32]. Prince Tenish got to Temnikov much later. It is the basin of the Tsna River, including the village of Tarkhan of the Shatsk uyezd, where Nogai linguistic traits are most concentrated.

The issue of the 'Tarkhans' may be clarified after the establishment of a connection of this group with the 'Bashkirs', mentioned in Meshchera beyond the 1539 charter. Late 17th

century sources show that there was a Bashkir Mountain in the Shatsk uyezd [Smirnov, 1892, p. 313]. In addition, one of the villages in 'Mansyrov Stan' of Kadom uyezd, the residents of which were evicted in the second half of the 17th century 'from the parish churchyard of Mansyrov Stan', was called Bashkirtsy [Book, 1897, p. 221]. The name of two 'belyaks', mentioned in the territory of Meshchera,—'Irekhte (Erekhte)' and 'Kereshin' Belyaks—are also worth noting [Heraclitus, 1927, p. 105; Safargaliyev 1963, p. 71]. Prince Akchura's lands were located in the first of them; Prince Tenish's—in the second [Heraclitus, 1927 pp. 105–106]. The names of these Mordovian 'Belyaks' coincide with the names of two Bashkir tribes—Irekhte and Karshin. The connection between 'Tarkhans' and 'Bashkirs' in the 1539 document can be justified by data on the Kazan Khanate as well, from which it follows that the term 'Tarkhans' in this state was closely associated with the concept of 'Bashkirs', in fact, the terms were synonymous [Iskhakov, 1998, pp. 113–114].

The available materials allow us to propose a hypothesis that the 'Tatars' from 'Tarkhans and Bashkirs' should be viewed as Turkic tribal groups, subordinated to the Manghit (Nogai) nobility. Some parts of the Irekte tribes might be included in these groups, i.e. the Taby groups (see about it: [Iskhakov, 1998, pp. 129–

131]), together with the Karshins. The following fact proves the inclusion of the Irekte people into the Turkic groups of Meshchera: it is stated in the census book of Kasimov for 1646 that Urazmamet murza Nurushhev, son of Prince Maksutov [Velyaminov-Zernov, 1866, p. 455], was a resident of the town. At the same time, 'Nurush Bey' appears in the genealogy table, associated with the Mishars and starting from 'Bayki or Maiky Bey' [Ahmetzyanov, 1991, pp. 42–43; Collection of the Russian Historical Society, 1884, p. 81; Geraklitov, 1927, p. 105]. Bayki Bey's shejere (genealogy) mentions that Nurysh Bey had a son, Ramazan (a variant of Sh. Marjani). A certain 'Prince Romodan' is recorded in 1489, not far from the 'Kirda Mordva' and 'Sakons'. The 'Kirda Mordva' and 'Sakons', mentioned in the document, were located near the river of Tyosha, to the south-east of Arzamas. In this case, 'Prince Romodan' lived close enough to Meshchera, if not in Meshchera itself (but most likely in the area of Sarakalych). At the same time, we know that Maiky Bey was considered to be the ancestor of the Irekte (Tabyn) people [Iskhakov, 1998, p. 129].

The appearance of the Nogai nobility with subordinated groups of people in the Meshchera Yurt can probably be dated as the late 15–early 16th centuries [Collection of the Russian Historical Society, 1884, pp. 385, 421; Malinovsky, p. 183; Iskhakov, 1998, pp. 216–217]. But later the Nogai continued to penetrate into Meshchera in various ways, as evidenced by multiple sources given below. The missive from Nogai prince Sheydyak to Ivan III (written no later than 1505) contained a letter from Uraz-Berdi to his son, Esen Berdiy, who lived in the lands of Prince Munmysh in Meshchera [Scherbatov, 1786, p. 488]. Another Nogai prince, Ismagil, wrote to Ivan IV in 1553 regarding 'Elair (Djalair—*D.I.*) Kaybullin, the younger brother of prince Koshkaidar', taken from 'Tsar' (Khan) Dervish; Ismagil raised the question of his return to the Nogai Horde [Ancient Russian Vivliofike. Continuation, 1793a, p. 113]. In 1556, Ismagil appealed to Ivan IV once again to ask him to let go the two Nogai murzas—Kitai (Katai) Semyon (Sain) murza and Chomash murza, son of Kochman mur-

za [Ibid., pp. 281, 287]. The former of these was definitely in Meshchera [Complete Collection of Russian Chronicles, 13, 1965, p. 289]. In the same year, Arslan murza of the Nogai Horde asked Ivan IV to 'grant him an honour' and send 'Bakhtiyar's old wife under the name Devlet Saltan', living in the village of Azeyevo (it was in Meshchera), 'a daughter of Yanguvat Abyz Ustabegishev by the name of Karakiz, in Tsarev Gorodok' [Ibid., p. 295]. It is obvious that these women were Nagais, otherwise he would have sought to buy those women [Ancient Russian Vivliofike. Continuation, 1801, p. 52]. In 1562, the Nogai prince Ismagil informed Ivan IV that 'Tsarevich Bekbulat (i.e. in Meshchera.—*D.I.*) now has my son, Karakiz, the son of Khozyagul'. He went on to inform Ivan IV that Sultan Gazi, son of Koshum murza, had visited him and asked to send them both to the Nogai Horde [Ancient Russian Vivliofike. Continuation, 1795, pp. 262, 268]. In 1560, the same Ismagil writes to Ivan IV and asks him to let 'the wife of Asanak Mirza', who was at Tsar Shah Ali's place, leave for Ismagil's place [Ibid., p. 131]. In 1564, the prince asked Ivan IV again to let 'the son of Aziy Utemish, Khuday Bateshev, kept by Shah Ali Tsar', go to the Nogai Horde [Ancient Russian Vivliofike. Continuation, 1801, p. 181]. It is known that the second half of the 16th century was marked by the arrival of a number of Nogai murzas to serve Moscow ruler. They returned to the Nogai Horde and went back to the service several times [Ancient Russian Vivliofike. Continuation, 1795 pp. 45–46, 110, 113, 156, 166, 177, 224, 227, 243, 255; Ancient Russian Vivliofike. Continuation, 1801, pp. 101, 145]. Obviously, most of them stayed in the Meshchera Yurt at Khan Shah Ali [Complete Collection of Russian Chronicles, 13, 1965, p. 289]. This, for example, is proved by Semyon murza's stay among these murzas in 1562, whilst at the service of Tsar Shah Ali. It is also known that Ivan IV wrote to five Nogai murzas and proposed them to serve him by promising to give them 'lands in periphery, in Meshchera in return' [Ancient Russian Vivliofike. Continuation, 1795, p. 49]. Both folklore and research findings confirm the settling of the Nogais in Meshchera and adjacent areas. So, in popular memory the founding

of Penza and the settlement of Cherkassy were associated with Ivan IV's campaign in Kazan, which allegedly was '... in a deserted place... where Penza is located, he found a station of the Kuban Tatars, with their wives and children, 30 of whom were caught, baptised... and settled here as tributaries' [Khokhryakov 1903, p. 19]. In the late 19th century, the Tatars of the village of Mitryaly in the Temnikov uyezd of Tambov province considered themselves descendants of the three princes—Urusov, Ilishev and Nuraev [Iskhakov, 1993, p. 98]. The first of these was clearly a descendant of the Nogai murza Urus (who lived in 1530–1590) [Velyaminov-Zernov, 1864, p. 469; Ancient Russian Vivliofike. Continuation, 1791, p. 316; Ancient Russian Vivliofike. Continuation, 1801, p. 225]. The Urusovs are still known in some Tatar villages in the basin of the Tsna River [Iskhakov, 1993, p. 148]. In 1595, Aydes murza Saltaganov was mentioned as living in the Arzamas uyezd. His father was Saltagan Mustafin, who founded the village of Saltagan [The Arzamasskiye, 1915, no. 442]. At the same time, in 1559, there was a Saltanga murza among the Nogai murzas, whom Ivan IV called to his service. It is stated in the documents that he was a grandson of Sheydyak, a Nogai prince [Ancient Russian Vivliofike. Continuation, p. 10, 1795, pp. 99, 111, 156].

The Nogai component can be traced quite clearly for the Kasim Tatars as well [Sharifulina, 1994, pp. 71–72, 78–80; Ahmetzyanov, Sharifulina, 2010, pp. 172–211]. Until the start of the 17th century, the Manghit noblemen continued to live in Kasimov as well. For example, there is a grave of a certain Djikhansha murza, son of Sulesh Beg, in a local cemetery. He was buried in 1600, after he had left the Crimea 'for Russia' in 1590. Another tombstone bears the name of Khabit murza Suleshev [Velyaminov-Zernov, 1864 pp. 489–492; Lashko, 1884, p. 73]. These Suleshevs descended from Yabak Bey 'Kudalak', who 'migrated to the Crimea by order of the Nogais' [Ibid.]. Vail murza, son of Yusuf Beg, was also buried at the same cemetery in 1610 [Velyaminov-Zernov, 1864, p. 496; Ancient Russian Vivliofike. Continuation 1801, p. 101], he was obviously a member of the Nogai prince Yusuf's family. In 1622, in

King Arslan's courtyard in Kasimov, a governor came across a suspicious Tatar, dressed in a 'Nogai dress'. It turned out that he lived in the town, on the estate of murza Yan Mamet Dzhanayev. The uncle of the latter, Abdul Tenikeyev, a Nogai murza, lived in Kasimov as well. Yan Mamet murza ordered that Tatar, whose mother was a resident of Kasimov, to leave with his uncle for Astrakhan, 'to the tsar's aunt', who lived in the 'Astrakhan Yurts behind mirza' [Shishkin, 1891, p. 62]. Since many landowners of Meshchera Gorodok were married to Nogai princesses [Ancient Russian Vivliofike. Continuation, 1793a, pp. 166, 172, 193; Ancient Russian Vivliofike. Continuation, 1795, pp. 93, 279; Dukhovnye, 1909, p. 127], this fact was not surprising.

So, one of the components of the Turkic population of the Meshchera Yurt at the end of the 15–17th centuries consisted of natives of the Nogai Horde. In some documents from the first half of the 16th century, they were called 'Tarkhans and Bashkirs', but generally considered 'Tatars'.

Another aspect of the problem of the Turkic population in Meshchera is associated with the 'Besermyans'. Due to the fact that a representative of this group is mentioned only in a contractual charter from 1483, the overall context of this document is important, in particular the social sense in which the term 'Besermyan' was used in the source. In particular, the charter reads: 'And do not accept the tributaries of Tsarevich Danyar or any other Tsarevich who may be in his place, or his Princes, sent to you, Great Prince Ivan, or to your nobles and your people. And those people that left for Ryezan from the Tsarevich and his Princes after the death of your grandfather, Great Prince Ivan Fyodorovich, besermyans or Mordovians or Machyarins, the rabble, who paid tribute to the Tsarevich: and to you... let those people go voluntarily to their places, where they had lived; and also those who refuse to go to those places, unless by force, and let them pay their duties and fees to the Tsarevich' [Dukhovnye, 1909, p. 127]. Two peoples from the list of Daniyar's tribute-paying people—'Mordovian' and 'Machyarin'—were clearly members of ethnic groups. This is proved by writing these con-

cepts with an initial capital letter, the customary way to write names of ethnic groups. However, the term 'besermyan' is written entirely in lower case letters, which sets it apart from the rest. To deal with this name, we should consider the cases where it has been used in various forms in the territory of Meshchera. There is one such case in 1517, when a Crimean Khan by the name of Mehmed Giray, who resisted the transfer of the throne in the Meshchera Yurt to Shah Ali, sent a letter to Moscow, noting that: '... no besermyan people in Meshchera, no one's place to stay... Has it been heard that a besermyan should another besermyan...takes prisoner, because our people caught besermyans in Meshchera but we do not have it here in writing that a besermyan has been sold, while our people sold Meshchera besermyans...' [Collection of the Russian Historical Society, 1895, p. 378]. The extract from the letter indicates that the concept of 'besermyan' or 'Meshchera besermyans' refers to Muslims in general, rather than an ethnic group. Thus, Ivan IV wrote in his charter to the Turkish Sultan Selim in 1570: '... in Kadom uyezd, there are a lot of clerks... of the Muslim law and in those towns of Meshchera Muslim people have... mizgits (mosques) and coshins (cemeteries)' [Dubasov, 1887, p. 95; Soloviyov, 1989, p. 586]. In this case, the Turkic population of Meshchera is directly referred to as Muslims (Muslim people). Therefore, the term 'Besermyan' in the contractual charter from 1483 most likely means a Muslim. However, in this case, it is not clear why this term is opposed (by using the conjunction 'or') to 'Machyarins' (Mordovinans were pagans, so in the relation to them the structure of the phrase is justified). In religious terms, the 'Tatars of Mozherians' as a whole could not be different from other Turkic groups of the 'Meshchera Yurt', since they were Muslims. But at the same time, some of them might have been Christianised simultaneously with Prince Beklemish, because it is stated in the genealogical tree of Bahmet Shirin that Beklemish baptised 'many people', having been Christianised himself [Smirnov, 1904, p. 170]. If Beklemish's people were not assimilated by the end of the 15th century with Russians—which is quite possible, as the 'Desyatnya' of 1590 for Meshchera states that

many 'Meshchera people' with Russian Christian names still had Turkic surnames—it becomes clear why tributaries included not only 'Machyarins' but 'Besermyans' as well: some 'Mozherians', not being Muslims, clearly did not fit in the concept of 'Besermyans'. Nevertheless, we cannot completely rule out another explanation of the presence of 'Besermyans' in the text of the treaty—it could be a representative of an independent ethnic group, most of which was localised in the region of the Bulgar vilayet [Iskhakov, 1993, p. 84; Iskhakov, 1998, pp. 95–96]. Due to family relations between the ruling houses of the Kazan Khanate and the Meshchera Yurt prior to the 1480s, as well as Prince Kasim's participation in the campaign against Kazan in 1468, this assumption does not seem improbable. If we accept any of these two hypotheses, there is no reason to see the Burtases as 'Besermyans'.

As a result, the only ethnic group in the late 15–early 16th centuries which could be identified with the Burtases in Meshchera was the 'Mozherians'. This view has already been outlined in a number of studies [Vasiliyev, 1960; Chermensky, 1970]. But it remains unclear why one and the same ethnic group was called 'Mozherians' in Russian-language sources of the 15–16th centuries and 'Burtases' since the beginning of the 17th century. Different solutions to this problem have been proposed. F. Chekalin believed that members of this 'tribe' called themselves 'Meshchera' or 'Mozhars', while 'Burtases' was the name given to them by their nomadic neighbours—the Khazars [Chekalin, 1892, p. 70; Chekalin, 1897, p. 23]. B. Vasilev proposed a similar hypothesis but developed it further. He believed that the names 'Burtases' and 'Meshchera' were used in Russia in parallel until the 18th century. But the first of these ethnic designations appeared earlier and was of Eastern origin, while the second came a little later, based on the Russian language and following the self-designation of the nation as 'Myashar', 'Mishar' or 'Mozherians' [Vasiliyev, 1960, pp. 205–206, 208]. Therefore, what we have here is an endogenous ethnic designation (Mishar—Mozhar—Meshcher) and an exogenous one (Burtases). P. Chermensky and A. Popov have a different view. Broadly speak-

ing, P. Chermensky stated that the Meshchera people had ceased to exist as an identifiable nationality, by the beginning of 12th century, having been assimilated by the Slavs and having adopted the Russian language [Chermensky 1962, p. 47]. In turn, the Burtases, as well as the Bashkirs, came to Meshchera from 'beyond the Volga' as 'members of Nogai princes' and murzas' families' [Ibid., p. 50]. A. Popov shared this opinion, noting that 'the quite numerous (in Meshchera—*D.I.*) geographical names of Burtas, Burtases, etc. appeared in the 16–17th centuries at the earliest' because of the fact that the Burtases as 'foreigners' stood out from the general mass of the indigenous population (Mordovians and Meshchera people) [Popov, 1973 pp. 118–119].

These last two theories have not been sufficiently proved. First, a group of the population, called 'Meshchera people', known until the end of the 16th century, quite often had Turkic surnames, even combined with Russian Christian names. In addition, it is stated in the sources that the term 'Meshcheryans' (Mozheryans) was applied to a clearly Turkic community (see the formula 'the Tatars of Mozheryan'). Secondly, there is no single source that would prove the arrival of the Burtases to Meshchera along with the Nogai noblemen. Therefore, F. Chekalin and B. Vasiliyev's hypothesis that the word 'Meshchera' is based on a self-defined ethnic community ('tribe'—for F. Chekalin and 'nationality'—for B. Vasiliyev) seems to be more convincing today.

In order to solve this issue the approach I propose is fundamentally different to the views of the researchers mentioned above. I believe that the Mishar ethnic community should be regarded not as a direct continuation of the 'Mozheryans' (Burtases) but instead as a result of the interaction of several ethnic components, among which the 'Mozheryans' were a very important, but not exclusive element. The heterogenous nature of the Turkic population of the Kasimov Khanate can be clearly traced by analysing the traditional culture of the Kasimov Tatars and Mishars, direct descendants of the Turkic groups of the Meshchera Yurt of the 15–16th centuries. Based on an extensive set of data, collected for the publication of the

Historical Atlas of the Tatar People, it emerged that the former Kasimov Khanate included three main ethnocultural areas (districts): Kasimov, northern and southern [Iskhakov, 1993, Chapter 2, § 2, 3; Ethnoterritorial groups, 2002, pp. 110–131]. The first of these is associated with a sub-ethnos of the Kasimov Tatars, the latter two areas reflecting the existence of two genetically distinct ethnic groups within the Mishars: the northern group, or Sergach, and the southern group, or Temnikov. The formation of the Mishar northern group took place with a higher proportion of the 'Mozheryan' (Burtas) population, while the southern group included more Golden Horde and Turkic (Kipchak-Nogai) components. It turns out that the Kasimov Tatars and Mishars were formed from the same components but with different proportions thereof. The Kasimov Tatars displayed both of the above-mentioned components but they had a higher concentration of the Golden Horde and Turkic ('Tatar') elements because of their ethnic formation in the capital 'district'. That is why they formed an ethnocultural community independently from the Mishars.

Since we have established the fact that in the 15–16th centuries the Turkic population of the Meshchera Yurt was referred to by two major names—'Mozheryans' (Meshcheryans) and 'Tatars', the key question to determine the level of consolidation of the Turkic ethnic group in the Kasimov Khanate is whether the first of these two names was an ethnic designation in the 15–16th centuries or whether it had become (or was becoming) a gentilic or blanket term. With regards to this issue, it is useful to recall the short discussion that took place at the beginning of the 20th century between G. Akhmarov and B. Kuftin. G. Akhmarov believed that the ancient name of the town of Kasimov, 'Meshchera', or 'Meshchera Gorodok', was applied to 'the people and the area around it', then the Kazan Tatars 'assumed... that it referred to all the Volga Tatars without distinction, if they spoke the same language (i.e. Mishar—*D.I.*)' [Akhmarov, 1903, p. 73]. G. Akhmarov was therefore inclined to believe that the name 'Mişär' should be considered as a gentilic or blanket term. B. Kuftin, however, objected pointing out that if it was 'geographical' by nature, the

name 'would hardly have obtained any offensive connotations, as was evident in some places' [Kuftin, 1929, p. 138; Iskhakov, 1993, pp. 48–50, 99–103]. Recently G. Akhmarov's view has been supported by I. Vászary, who opines that the Mishar Tatars got their name from the name of the territory—Meshchera [Vászary, 1976 p. 40]. To resolve the dispute and find an answer to this question, we need to refer to the documents.

It has been noted that the earliest form of the name 'Mozheryans' (Meshcheryans) is 'Meshchera'. In terms of the specifics of ancient Russian ethnic designations, this term, as evidenced in Russian sources, may be regarded as a designation relating to a particular group of collective tribe names, formed by the ending a (-a) [Kovalyov, 1982, p. 25]. Some linguists believe that in the Russian chronicle tradition ethnic designations were used only with a preposition at, and the prepositions of, to were used jointly with names of territories (place-names) [Kovalyov, 1982, p. 27]. From this perspective, documents of the 15th century, referring to 'Meshchera', indicate the use of the preposition at [Collection of the Russian Historical Society, 1884, p. 87 (1489)] and to [Dukhovnye, 1950, pp. 162, 330, 346; Dukhovnye, 1909, p. 127 (documents for 1449, 1483, 1494, 1499)]. In the 16th century, the situation remained the same [Collection of the Russian Historical Society, 1895, p. 378; Register, 1889, p. 32; Complete Collection of Russian Chronicles, 13, 1965, pp. 88, 105; Ryazan Memorability, 1889, p. 40; Ancient Russian Vivliofike. Continuation, 1795, p. 49; Granted Charter, 1897, p. 147; Gautier, 1910, pp. 2, 25]. Hence, the conclusion is that in the 14th century, the form 'Meshchera' could still be considered as an ethnic designation [Dukhovnye, 1950, pp. 17, 20, 33; Lyubavsky, 1929, p. 50; Withdrawal Charter, 1854, p. 40], while in the 15th century it became not only the ethnic group, but also gentilic and even a blanket term (until the middle of the 15th century, when it became the name of the Principality, and then the Meshchera Yurt—a khanate).

Another form, appearing from 1483, is 'Machyaryans' (sing.—'Machyaryan'), or 'Mozheryans' (1539). The suffix -yane (-ane

~ yan) generally expressed the plural form of ethnic designations. In this case, however, the use of the singular form—'Machyarin' ~ 'Mozherin' as a root indicates a form, different from 'Meshchera'—obviously an older and relatively more developed ethnic designation with a distinct category of the plural form via the suffix -ans (-yans), i.e. 'Mozheryans'. It is the latter type that can be both a gentilic and a blanket term [Kovalyov, 1982, pp. 27, 40, 66, 69]. Therefore, such a derivative from the root 'Meshcher' (from 'Meshcherya' ~ 'Meshchera') as 'Meshcheryak' (used in the 17th century) with the suffix -yak (-ak), used in the era of the Muscovite Rus to form some ethnonyms (e.g., 'Ostyak " Votyak '~Otyak ') [Ibid., p. 67], may also be considered a gentilic, in fact (known as 'Meshcheryaks' from Mordovians, Turks, and Russians). Consequently, the two other names, used to refer to part of the Turkish population of the Meshchera Yurt—'Mozheryans' (15–16th centuries) and 'Meshcheryaks' (17th century), cannot be considered pure ethnic designations. Although it is recognised that the first of them resembles an ethnonym very much (especially in the phrase 'Tatars from Mozheryans'). Therefore, despite the fact that recently I. Vászary has cast doubt on the possibility of identifying the designations of 'Mozhars' (Mozars) and 'Meshchers' (Mers or Milyers) [Vászary, 1976 p. 38], referring to the existence of such a variant as 'Machyar' (the root of 'Machyarin'), on the one hand, and on the other, the fixation of such spellings as 'Meshchyora' (end of the 16th century), 'Meshchyorka' (late 15–early 16th centuries) [Gauthier 1910, p. 25; Withdrawal Charter, 1854, p. 40] in the secondary sources, I am inclined to think that it is possible to see the result of the development of the older ethnic designation of 'Meshchera' (Meschora) in the form of 'Mozheryans' or 'Machyaryans' based on the Russian language.

The entire body of available sources leads us to the conclusion that the Turkic ethnic group, forming within the boundaries of Meshchera Yurt in the 15th and 16th centuries and up to the early 17th century, consisted of two ethnic class strata: the 'black people' (tributaries or the yasak population) consisted mostly on the 'Mozheryans' or 'Meshcheryans' (Burtases,

Mountain Tatars), and of the upper classes of the 'Tatars' (including the Cossacks), i.e. the Kypchak-Nogai groups with their clan division [Collection of the Russian Historical Society, 1884, pp. 529, 544; Malinovskiy, fol.132, vol. 258]. The tribal nomenclature of the Tatar population of the Meshchera Yurt requires further study (see : [Iskhakov, 1998].

The first one, the Mozheryan-Burtasian layer, dates back to the pre-Mongol period and was clearly ethnically very close to the Bulgars [Alikhova, 1949, p. 48; Polesskikh, 1971; Polesskikh, 1977 Chapter 5; Khalikov, 1978, pp. 74, 78; Khalikov 1989, pp. 104–105; Belorybkin, 1986, pp. 89–97]. Its ethnosocial transformation is identical to the development of the Bulgars in the Golden Horde period: the meaning of the concepts of 'black people' and 'mountain Tatars' (Burtases), applied to 'Mozheryans', is the same as that of the term of 'Chuvash-yasak tributaries'. Political processes in these two regions developed along similar lines. The Kazan Khanate appeared largely on the basis of the Bulgar vilayet of the Golden Horde, while the immediate predecessor of the Kasimov Khanate was, presumably, the Narovchat (Mokshin) ulus [Korotkov, 1928, p. 77; Safargaliyev, 1963, pp. 70, 71; Lebedev, 1958, pp. 8, 15, 35; Yegorov, 1985, p. 107; Mukhamadiyev, 1983, p. 19; Malov, 1885, p. 20; Polesskikh, 1977, p. 76; Iskhakov, 1993, pp. 97–98].

The second component of the Turkic ethnic community, formed in Meshchera, was a superstratum of Golden Horde origin, which retained its independence until the early of the 16th century. An indicator of the incomplete consolidation of these two ethnic classes in the Kasimov Khanate by that time is the use of several ethnic designations in the sources when referring to the

Turkic population, in addition to 'Tatars' (such names as 'Mozheryans', 'Burtases' and 'Bashkirs'), as well as a certain degree of isolation of the Kasimov Tatars—a Turkic population of the capital of the Kasimov Khanate and its immediate neighbourhood, which was preserved until later. Nevertheless, in the 16th and early 17th centuries, all the Turkic groups of Meshchera were increasingly referred to by the name of the most integral designation—'Tatars' [Iskhakov, 1998, p. 212]. This fact is indicative of a qualitatively new level of consolidation of the Turkic components within the territory of the Meshchera Yurt by the end of the 16th and early 17th centuries. It seems that A.Khalikov's view was therefore not entirely accurate, and that the formation of the Mishar ethnic group preserved interethnic stratification; an especially marked isolation was evident in a small group of the 'capital-based' Tatars, living in Kasimov and nearby, taking place at the turn of the 16–17th centuries. Until the mid-17th century, a group of the Kasimov Tatars continued to grow at the expense of members of the Nogai Horde, Kazakh khanates and Siberia, so, a complete integration into the Mishars did not take place.

As a record of real ethnic processes among the Volga-Ural Tatars, the second half of the 16th century was marked by a fairly clear opposition between the 'Tatars' from Kazan and Gorodetsk' [Velyaminov-Zernov, 1863, p. 450]. At the same time, these two ethnic communities were very close to each other. No wonder the author of the History of Kazan (Kazanskaya Istoriya) pointed out, referring to the Shah Ali Khan, that he had 'the same barbaric features, and the same language, and the same faith' as the Kazan Tatars [The History of Kazan, 1954, 66].

CONCLUSION

Ilnur Mirgaleev

Unfortunately, no full-scale academic study of the history of the Tatar states has been carried out yet. This volume, however, is the first to cover the period under review in such detail and in a single edition. It offers its readers a means to study the history of the Tatar khanates at a sufficiently thorough academic level. Researchers will be able to get a clearer idea of what topics are in greatest need of further attention.

Several good works on the Tatar khanates have been published recently, including books by V. Trepavlov, I. Zaitsev, D. Iskhakov, I. Izmaylov, A. Belyakov, B. Rakhimzyanov, A. Matveev, D. Maslyuzhenko and others. However, not all issues have been covered yet, as confirmed by a number of authors in this volume. The challenge of a scant availability of sources and a lack of specialists have prevented us from covering certain topics and stories in sufficient depth. Nevertheless, they are here presented as academic challenges to be addressed.

The Tatar khanates, especially in the 15th century, were engaged in a protracted struggle to pool their resources for the preservation of a unified state, including Ulugh Muhammad, Ahmad Khan, the Shibanids and the Girayids. In fact, the Tatar khanates were ruled by a single dynasty. The idea of a main state, the Takht Eli (Domain of the Throne) continued to exist. Until 1502, that role was asserted by the Great Horde (the Astrakhan Khanate was a direct successor to the Great Horde). Descendants of the last khan of the unified Golden Horde, Ulugh Muhammad, ruled in Kazan and also viewed themselves as successors to the Golden Horde state. The Crimean Khanate later also attempted to perform that role, becoming in turn a satellite of the Ottoman Empire. Therefore, especially in the 16th century, the Tatar khanates also made attempts to emulate Ottoman greatness, firstly in the cities of Kazan and Astrakhan. Even in the face of major external rivals, the Ottoman Empire and the Muscovite state, the period of fragmentation would have

been overcome and the Tatar khanates (or part of them) might have merged into a single state, possibly under the leadership of members of the Girayids. But Muscovy soon began to conquer the Tatar khanates, including the Crimean Khanate.

The second half of the 16th century was marked by the destruction of most of the Tatar khanates: Kazan, Astrakhan and Siberia. Once the main territory of the Siberian Khanate was conquered, a gradual conquest of the remnants of the Siberian Khanate and the Nogais continued up to the 18th century, the 'appropriation of the wild lands', remnants of the Great Horde, including the elimination of the Kasimov Khanate. Finally, the Crimean Khanate itself lost its independence in 1783. All the Tatar states were conquered by Moscow, one of the fragments of the Golden Horde state, which was fated to become a political heir of the Golden Horde and the unifier of its lands. The Tatars turned into active, though coerced aides in the construction of the Russian state, as at the time it already had a completely different ideology, based on the Orthodox Church and Byzantine philosophy, aimed at creating a global empire.

For a number of reasons, Tatar states began to weaken, affected by political fragmentation and dynastic crises, especially in Kazan and Siberia. The emergence of strong external factors, especially the rapid growth of the Muscovite state, also played their role. Of course, the elites of the Tatar states were always looking for ways to strengthen their states. From the 17th century, part of the elites began to rely on an external factor. Siberian rulers began to form alliances with Central Asian ones, and Crimean rulers with the Ottoman Empire. Kazan and Astrakhan tried to follow a neutral course but they were eventually forced to choose. The Ottoman direction was preferable, besides, the elites of those two khanates did a lot to get closer to Crimea and the Ottomans, but this failed to bring the desired result. When representatives of the Girayids came to pow-

er in Kazan, it led to long bloody battles with Moscow. The absence of active support from the Ottoman Empire, coupled with the aggressiveness and proximity of Moscow, resulted in the Kazan elites trying to temper the claims of Moscow. The throne of Kazan was thus occupied by Girayids, as well as representatives of the Kasimov Yurt, who in fact were supported by Moscow. However, it was not possible to negotiate with Moscow, since the latter was seeking to completely destroy the Kazan Khanate. All of this resulted in a terrible catastrophe, the destruction of both the state and a large proportion of the residents of the khanate. Shortly after that, when the Astrakhan Khanate was conquered as well, the role of the Kasimov Khanate changed completely. A long and systematic conquest of the Siberian Khanate and wars with the Crimea began. A lot of the

Tatars, particularly the Chinggisids and representatives of the Tatar elite, got involved in the political system of Moscow from the 16th century. A number of Tatar clans were the founders of well-known Russian noble families. The Tatar factor in Russia's political history had been an integral part of the Muscovite state until the reforms of Peter I. But this is a story for another time, covered in Volume 5 of the History of the Tatars.

This fascinating period of Tatar history is the time of the Tatar khanates, the last fragments of the Golden Horde. Volume 3 of *The History of the Tatars* is devoted to the period of the Golden Horde, while Volume 4 explores the era of the Tatar khanates, with both books presenting a wide-ranging panorama of the entire medieval Tatar world and an outline of its ethnic and political history.

Appendices

Table

Tatar States (15–18th centuries)

Tatar states	Active period	Capital	Ruler, dynasty	Ruling clans	Ulus division	Aristocracy – taxable estate
Ulug Ulus (Great Horde)	1440's–1502	Sarai (modern Volgograd)	Khan, Jochids: Tuka Timurids	Kiyat, Kipchak, Alchin, Nayman + Mangyt	Two wings?	Muslim Tatars
The Siberian (Tyumen) Khanate	1420–1598	Chimgi-Tura, Isker modern Tyumen)	Khan, Jochids: Shibanids	Jalair, Kungrad, Sidjeut, Naiman	Two wings	Tatars — Yasak Tatars
The Kazan Khanate	1437/45–1556	Kazan (modern Kazan)	Khan, Jochids: Tuka-Timurids, Shibanids, Girayids	Shirin, Baryn, Argyn, Kipchak	Four Darugas + "Mangyt place"	Muslim Tatars = Yasak Tatars (and/or Sokha Chuvashes)
The Kasimov Kingdom (Khanate)	1450's – 1681	Tsar's Gorodok, Khan Kermen (modern Kasimov)	Khan (Tsarevich), Jochids	Shirin, Baryn, Argyn, Kipchak	Two wings	Serving-Tatars — Muslims
The Astrakhan Khanate	1459/1502–1556	Hajji Tarkhan (modern Astrakhan)	Khan, Jochids: Tuka Timurids	Khatai, Kungrad, Mangyt, Alchyn	Two wings	Muslim Tatars
The Kazakh Khanate	1469–1718	—	Khan, Jochids: Urus Khanids	Ming, Yuz, Kyrk, Jalair	Three Zhuzes	Cossacks — Sarts
The Uzbek Khanate(the State of Nomadic Uzbeks)	1469–1718	Urgench (modern Konye-Urgench); Bukhara (modern Bukhara)	Khan, Jochids: Shibanids	Ming (Mangyt), Kungrad, Jalair, Alchin, etc.	Two wings (the right and left places from the Khan)	Uzbeks (Tatars) — Sarts, Taziks (Tadjiks)
The Nogai Horde	1480–1613	Saraychyq	Biy, Ediguids	Mangyt	Two wings	Tatars (Nogais) — nomadic Turkic-Tatar tribes
The Crimean Khanate	1441–1783	Bakhchysarai (modern Bakhchysarai)	Khan, Girays	Shirin, Argyn, Baryn, Seljeut (Yashlav); and later Nogais	Two parts — the steppe and the coastalparts, four uluses	Tatars, Karaims — Muslim Tatars, Greeks, etc.

Sources Related to the History of Medieval Tatar States

1. Giosafat Barbaro 'Journey to Tana'

This text has been reproduced from the following publication: Giosofat Barbaro, Ambrogio Contarini. *Travels to Tana and Persia* / Thomas W., Roy E.A., Stanley H.E.J. (trans.). London: Printed for the Hakluyt Society, 1873.

[...] § 4. In 1436, I began my voyage to Tana, where I stayed for sixteen years. I traveled through all those territories, both by sea and by land, and studied them thoroughly and with great curiosity.

§ 5. The Tartary plain¹ has the following borders if one stands in the middle thereof: the river of Ledil² to the East; Poland to the West and Northwest; Russia to the North; the regions of Alania³, Cumania⁴, Gazaria⁵ in the South, with its territory stretching all the way up to the Maggiore sea⁶ and all the latter countries bordering the Tabacche sea⁷. So, this plain lies within said boundaries.

§ 6. In order for you to understand me better, I will tell my story moving along the Maggiore Sea, partially along its coast and partially along inland territories, up to the Elice river⁸, which is located within forty miles from Capha⁹. After crossing the river, it moves towards Moncastro¹⁰. There we can find the Danube¹¹, a river familiar to all. I will not tell anything about the places beyond this point, because they are already well known.

§ 7. The name 'Alania' is derived from the name of the Alani people, referred to as 'As' in their own language. They are Christians that were expelled and devastated by the Tatars. This country lies on hills, rivers and plains; there are many smaller hills made by humans as sepultures. Each of them has a large stone with a hole on top where a cross is located made from another single stone. These little hills are infinite in number, and as we learned, a great treasure was hidden in one of them.

§ 8. At that time, when Mr.¹² Pietro Lando was a Consul in Tana, a man named Gulbedin¹³ came to him from Cairo. He said that when he was staying in Cairo he had heard from a Tatar woman that in one of these little hills known as Contebe¹⁴, the Alani people had hidden a great treasure. And to prove her words, this woman described some features of the hill and surrounding land to him. So, Gulbedin thus started to dig these holes/pits like wells into the hill in various places. He kept on with his pursuit for

¹ This refers to the steppe territories which Persian and Arabic sources call Dasht-i Kipchak.

² That is, the Itil, Edil—the Turkic name of the Volga river.

³ The territory of the Eastern coast of the Azov and Black Seas to the Caucasian mountains. The Crimean Alania was located on the Western side of the peninsula.

⁴ The Northern coast of the Azov Sea.

⁵ That is, the Eastern part of the Crimean peninsula, the title comes from the name of the Khazar people. The power of Tatar khans extended to Alania, Cumania and Gazaria.

⁶ The Italian name of the Black Sea. The Great Sea—the medieval name of the Mediterranean, which the Black Sea was considered to have been a part of.

⁷ That is the Azov Sea. It is possible that the name originates from the Tatar word 'chabak'—'a bream', 'a roach'.

⁸ That is, the Dnieper.

⁹ Kafa (Kaffa, present-day Feodosia), a city on the Southern coast of the Crimean peninsula. From the 1260s to 1475 it was the centre of the Genoese colonies in the Crimea. It paid tribute to Tatar khans.

¹⁰ Moncastro is the Italian name of Akkerman (present-day Bilhorod-Dnistrovskyi), cities on the right bank of the Dniester Liman. A Genoese colony existed in the city from the 13–15th centuries. In a year, a trading route passed from the Caucasian and Asia Minor's coasts to Poland, Germany and Italy. The name 'Akkerman' in Turkic means 'White fortress'.

¹¹ That is, the Danube.

¹² Messer was an appeal to an eminent citizen in medieval Italy. Church hierarchs, knights, judges, doctors of medicine and law were addressed this way.

¹³ The second part of the name 'edin' hints at the Islamic origin of the name (ad-Din).

¹⁴ Perhaps, here the ancient town of Kobryakovo is being referred to here, where one of the Don-side settlements of the ancient epoch was located. It had a non-Greek and Scyth-Sarmat population involved into farming and fishing.

two years, and then died. People decided that he never managed to find the treasure simply because he lacked the required ability¹. [...]

§ 13. The Mohammedan faith became common among the Tatars about one hundred and ten years ago². Indeed, some them were Mohammedans before, but in general every man was free to choose the religion they liked most. So that means there were some people who worshiped wooden or rag idols they carried about with them on their carts. They were forced to accept the Mohammedan faith at the time of Edigu³, a commander of the Tatar Khan known as Sidahameth Khan⁴. This Edigu was the father of Naurus, of whom I will now tell you.

§ 14. In the steppes of Tartarie, in 1438 there reigned an emperor named Ylumahumeth Khan⁵, that is to say, the great Macomett emperor. He had already been in power for a number of years. While he was in the steppes located towards Russia with his orda (that is to say, his people), he had this Naurus as his captain, the son of Hedighi (Edigu), by whose means Tartaria received the faith of Macomett (Mohammed). Between this Naurus and the emperor, a disagreement broke out. Naurus left the emperor with the people who wanted to follow him. They set off towards the river Ledil into Chezimameth⁶, that is to say Little Macomett, one of the blood lines of the Tartar emperor. They came together in their intentions, as well as their forces, and decided to go up against Ylumahumeth.

§ 15. Then they set out on their way past Citerclian (Astrakhan), went around Circassia and headed towards the river Tana (Don) and towards the gulf of the Tabacche (Zabache) seas⁷, which along with the river of Tana, were both frozen. And because their people were great and their beasts innumerable, it therefore behooved them to create a large front so that those who went out in front did not destroy the grass and other such things that served to refresh those who came after. That is why the foremost of these people and cattle were at a place called Palastra⁸, and the hindermost were at a place called Bosagaz (which means 'gray wood'), on the Tana River. The distance between these two places is 120 miles. The foresaid people occupied this land thoroughly, though indeed not all the places were apt for travel.

§ 16. We received news of their [the Tatars'] coming four months before. But a month before the Lord's [Chezimameth's] arrival, there began to come towards the Tana certain sentries⁹: three or four young men on horseback, each of them with a spare horse in hand.

Those that came into Tana were called before the counselor and were well treated. But when they were examined and questioned about where they went and what their business was, they answered that they were young men that were travelling about as a pastime. And more could not be had from them. And they stayed for no more than an hour or two, and then were gone again. And so it continued on this way daily, except for their number, which increased more and more with every visit. But when the Lord was within five or six days away from Tana, they began to come in groups of fifteen to fifty together, well armed and in good orda, and as he drew nearer, they increased by the hundreds.

¹ The description of the excavation of this mound is omitted.

² The Islamisation of the Golden Horde's population occurred gradually. It is necessary to take into consideration that some areas (for example, Khwarezm and the Middle Volga) were inhabited by Muslims before the Mongol invasion. The first of the Golden Horde rulers who adopted Islam was Berke (around 1257–1266). As scientists note, a new impulse of Islamisation came from the rule of the Uzbek khan (1312–1342).

³ Edigu, despite the fact that he was not Jochi's descendant, was de facto sovereign of the Golden Horde between 1395–1419. Technically, at that time the Jochids, Edigu's appointees, reigned: Temür Qutlugh (1395–1399), Shadibek (1399–1407), Bulat (1407–1410), Timur (1410–1412), Chekre (1414–1416), Dervish (1417–1419).

⁴ Sayid-Ahmad khan began his rule only in 1432/33—that is, significantly later after Edigu's death (1419).

⁵ Ulugh Muhammad was the Golden Horde khan (1419–1436 with breaks) and the khan of Kazan (1438–1445).

⁶ Kichi-Muhammad was the Golden Horde khan (1428–1459 with breaks).

⁷ The present-day Taganrog Bay is meant here.

⁸ Palastra is a settlement on the Northern coast of the Azov Sea which was marked on European portolan charts [navigation maps] (for example, on Beninkaz's portolan chart of 1474) near Berdyansk Bay.

⁹ Here the avant garde patrol squad (sentry) is referred to.

§ 17. At last the Lord¹ arrived and was lodged in an ancient mosque, within an arrow's shot of Tana. The consul decided to send him presents immediately, and sent him a Nouena, one more to his mother, and one more to Naurus, the Commander of his army. A Nouena is a present consisting of nine diverse things, including silk, scarlet and other such things for a total of nine. For such was the manner of welcoming the Lords of those areas.

So there was carried to him bread, wine made of honey, ale and other diverse things for a total of nine items: and I was the one chosen to deliver it all. Thus entering the mosque, we found the Lord lying on a carpet, leaning his head on Naurus, he himself being the age of twenty two and Naurus — twenty five.

When I presented the things we had brought, I recommended the town and the people to him and told him that they were all at his commandment. Whereupon he answered with the most gentle words, and after looking towards me started to laugh and to clap his hands together saying: 'Behold, what a town is this where three men have three eyes! What he said was true, as Burin Taia Pietra², our interpreter, had one eye; Zuan Greco, the counselor's servant, also had one eye; and he that carried the wine and honey likewise had one.

And then we took our leave and departed.

§ 18. And because some would scarcely think it is likely that, as I have said earlier, the sentries travel in groups of four, ten, twenty and thirty through those plains, riding ten, sixteen and sometimes twenty days away from their people, you might inquire whereof they might eat. I answer that every one of them who departed from the people carried with him a bottle made of goat's skin, full of meal, of the grain called Miglio, made into a paste with a little honey. And also has several little dishes of wood. So that when he misses to take any wild game (whereof there is a great amount in those steppes which they can kill, especially with their bows), then he takes a little of this meal, and putting a little water into it, he makes a certain potion³ on which he might feed.

For when I have asked some of them what thing they might eat in the steppes, they asked me again: 'Why would a man die of hunger?' As if saying: 'If I may have with me something to sustain life, it suffices me'. And indeed, they pass their lives well enough with herbs and roots and such other that they can gather, the only thing they need is salt. For if they lack salt, their mouths will swell and fester, and some of them will die thereof; in that case they commonly fall into flux⁴.

§ 19. But let us return to where we stopped. When the Lord departed, the people with their cattle followed. First, herds of horses by sixty, one hundred, two hundred and more in a herd. After them followed herds of camels and oxes, and after them came smaller beasts. This went on for six days, so that as far as our eyes could see the steppe, every direction was full of people and beasts following their path. And this was only the first part; it is easy to see how a much greater number of people and beasts was in the middle part with the soldiers.

We stood on the walls⁵ (for we kept the gates shut) and by evening we were weary of looking. For the multitude of these people and beasts was such that the diameter of the plain they occupied seemed to be a Paganea of one hundred twenty miles.

¹ Calling Kiziakhmet a prince—not an emperor as was traditional—Giosafat Barbaro showed his own attitude towards Ulu-Mohameth's rival.

² It is unclear what the words 'Taia Pietra' meant in this case—the sculptor (or simply stonecutter) or a last name. It is most likely that Buran was a stonecutter.

³ Abd al-Razzaq Samarqandi (1413–1482) in his work 'The Rise of the Two Happy Stars and the Junction of the Two Seas' informs that in 1391, before Timur's army was to march out against the Golden Horde, an order was issued 'so that when they march from Tashkent, each warrior would eat 1 man of granary weight of flour and so that no one baked bread or pancakes or cooked noodles, but was content with soup' (Collection of Works Related to the History of the Golden Horde. Vol. 2. p. 192). Giosafat Barbaro in his letter to the bishop of Padua Piero Barocci dated 23 February 1491 wrote that the Tatars who departed on a long journey through desert steppes chose the time when the grass 'baltrakan' grew which could maintain people's power—that is how nutritious it was.

⁴ Chloride ions (penetrating the human body, usually with salt) are needed to produce hydrochloric acid—an important component of gastric juice. Their deficit leads to patches on the tongue and cracked lips. A symptom of low sodium (a component of table salt) in the body especially during times of hunger can be diarrhea.

⁵ These walls of Tana were erected after 1395, when Tamerlan destroyed Azak (Tana).

Paganea is a Greek word that I learned in Morea¹ in a certain gentleman's house that brought 100 plowmen with him²; everyone of them had a staff in his hand. They walked in a particular manner, each one ten steps away from the next, striking the earth with their staffs, and someone was shouting some words to raise the game [from the forest], which the hunters and fowlers, some on horseback and some on foot, with their hawks and dogs, waited in the manner they thought best. And when their time came, they let their hawks fly and their dogs run as was fit for the game.

§ 20. And among the other game that were hunted there, there were partridges and certain other birds that we call hethcockes (turkeys)³ which have short tails like hens and hold up their heads like cocks, being almost as great as peacocks, which they resemble altogether in colour, but not at all in the tail.

And because Tana stands between those little hills and has many ditches for ten miles in its circumference stretching as far as where old Tana was⁴, a great number of these fowl and game animals fled among those little hills and valleys. In a word, around the walls of Tana and within the ditches were so many partridges and liethcockes (bustards) that all those places seemed rich with men's poultries. The boys of the town took some of them and sold two of them for an aspre apiece⁵, which means eight of our baggatims⁶.

There was a frate at that time in Tana named frate Thermo, of Saint Frauncs' order. Using a birding net, he took two hoops to make one great hoop and stuck it out on a crooked poll behind the city wall. Like this, he caught ten to twenty birds at once. Selling them, he got so much money that he bought himself a little boy, Circasso whom he named Pertriche (Partridge), and made him a frate (friar). And all night they of the town would leave their windows open with a certain light in it to allure the fowls to enter.

Sometimes the harts and other wild beasts would run into the houses and in such numbers that it almost cannot be believed. But that did not happen near Tana.

§ 21. From the plain through which this people [the Tatars who had come to Tana] passed, it did well appear that their number was very great. There were so many that [the following happened] at a certain place (called Bozagaz) where I had a fishing spot about forty miles away from Tana. The fishermen told me that they had fished all winter and had salted a great quantity of moroni (morainic matter) and cauiari (caviar), and that when a certain number of these people came there they had taken all their fish, both fresh and salty, and all their cauiari, and all their salt, which was piled as high as that of Sieniza⁷, in such an amount that there was not a grain of salt to be found after they were gone. They also broke the pipes and barrels, and took the barrel staffs with them, perhaps to use them for their carts. And later they broke three little mills there made to grind salt, only for that covetousness little bit of iron that was in the middle of them.

But what was done to me was done to all the others as well. And also to Zuan Da Valle, who had a fishing spot there also. Hearing of the Lord's coming, he dug a great ditch, and put therein about thirty

¹ Giosafat Barbaro came to know Morea when he was a proveditore in Albania and was organising resistance to the Turks in 1465.

² Villeins were in medieval Italy personally freed peasants carrying out labour conscription in exchange for land territories that their landlords had granted them.

³ Literally the word 'galinaccia' (correctly - 'gallinaccia') means a big or old, bad chicken. Giosafat Barbaro either did not know the local name of this steppe fowl, or decided not to transcribe it in the Italian text. A bustard is most likely meant here.

⁴ From the 3–2nd to the 4th centuries BC, ancient Tanais, a city of the Bosphoran Kingdom which was the most northerly, was located on the right bank of the Don river. The Italian colony of Tana was situated on the left bank of the Don. The traces of defensive structures, abandoned and covered with soil, are attributed not to ramparts and ditches of ancient Tanais, but Tana of the 14th century which occupied a wider territory and was completely destroyed by Timur's army in 1395. The new fortifications which arose around Tana after Timur's demolition already covered a smaller territory; the city became narrower and the remnants of former fortifications appeared to be outside of its walls.

⁵ Aspra was a silver coin which circulated in the Italian colonies of the Northern Black Sea region and Trap-ezund. Aspras were minted in Kaffa from the 14th century to 1475.

⁶ Bagattin (in Venice) is the vernacular for a small denarius, a small silver coin.

⁷ Sieniza (Ibiza) is one of the Balearic islands in the Mediterranean, known in the Middle Ages for salt mining.

barrels of cauiari (caviar) and so that it was not revealed, he covered it with earth and burned wood above it. But it availed not, for they [the Tatars] found it and left not a trifle.

§ 22. These people carry with them innumerable carts of two wheels that are higher than ours. They are covered with mats made of reed and draped with felt, and partly with cloth if they belong to men of eminence. Some of these carts carry houses upon them which are made like this: they take a circle of timber with a diameter at a step and a half crossed in the centre with other half circles, and between these they lay their mats of reed, and then it is covered with felty cloth according to the person's means. When they get prepared to set up camp for the night, they take down these houses to sleep in.

§ 23. Two days after this, the Lord departed and certain townsmen of Tana came to me, willing me to go to the walls where one of the Tartares tried to speak with me. I went there and found one that told me that Edelnugh, the Lord's brother-in-law, was not far from here, and desired (if I would be so contented) to enter into the town and be my guest. I asked license of the consul, and after obtaining it I went to the gate and accompanied him in with three of his companions. For the gates were all this while kept shut. I had him to my house and made him good cheer, specially with wine, which pleased him so well that he stayed two days with me. Being disposed to depart, he entreated me to go with him, for he had become my brother, and where he went, I might also go safely. And so he said something similar to the merchants, whereof there was none there that did not wonder at what he said.

So being determined to go with him, I took with me two Tartariens of the town on foot, and I myself rode on horseback. About three hours after noon we set forward, but he was so drunk that blood ran out of his nose; And when I would persuade him not to drink so much, he would make moves like an ape, saying, 'Let me drink; when shall I find any more of this?'

On our way we soon needed to pass a river which was frozen over, and I endeavored myself to go where there was snow on the ice, but he who was overcome with wine went where his horse led him, and fell upon ice where there was no snow. By reason thereof the horse continuously fell and got back up again, and he began to whip it with a lash (because they do not wear spurs), and the horse went on falling and getting back up. He continued in such a manner for the third part of an hour. Finally, having crossed that river, we came to another and passed it, with much ado, as a result of the same reasons. So that being wearied, he rested himself with certain people that were camping there already, and we stayed the whole night with as little comfort as you might imagine.

The next morning, we set foot on the path, though not as lustily as we had done the day before. When we passed another arm of said river, we followed the way that the people traveled (who resembled as many ants). Within two days of the journey, we approached the place where the Lord himself was. And there my conductor [Edelnugh] was much honoured by all men, and flesh, bread and milk, with other things of the like were given him, so that we were never wanting of meat.

§ 24. The next day, coveting to see how this people rode, and what order they observed in their everyday lives, I did see so many wonders that if I would write them all here I should make a great volume.

We went to the Lord's lodging, whom we found under a pavilion with innumerable people about him. Those that desired audience all knelt separately from each other, and left their weapons at the distance of a stone's throw from their Lord. Unto some of them the Lord spoke, and demanding what they desired, he always made a sign to them with his hand that they should arise. Whereupon they would arise, but not approach eight steps [closer to the Lord] till they knelt again and asked what they wanted. And so nearer and nearer till they had his audience. The audience lasted all the way in such a manner.

§ 25. The justice used throughout their camp in any place at all is very sudden. This is how it is conducted: when there is a disagreement between two parties and words are exchanged (not in the manner of our quarters, for these do not use violence), the two or more (if they are more of them) arise and walk towards the way they think good, and to the first man of eminence that they meet they say: 'Master, do us right, for we are here in a controversy'. Whereupon he stops and hears what both parties might say, and determines thereupon what he thinks best without any further writing. What so ever he determines, this is accepted without any contradiction. In these judgments many persons assemble, and he that makes the determination, says: 'You shall all be witnesses!' Such judgments continually occupy the camp. And if any differences occur along the way, they observe the very same order.

§ 26. I did see one day (being in this orda) a wooden dish overturned on the earth, under which I found a little boiled millet: and demanding of a Tartarien that was by me what thing it was, he answered it was put there 'hibuth peres', that is, by the idolaters. 'Why,' asked I, 'are there idolaters amongst this people?' He answered: 'O, oh, oh here there are many, but they hide'¹.

§ 27. To number the people surely, in my judgment, it is impossible. But to speak according to my estimation, I believe, undoubtedly, that in all the orda when they come together, there are no less than three hundred thousand persons. This I say because Ylumahumeth also had part of the orda, as I have said before².

§ 28. The warriors are very valiant and brave, so much so that some of them for their excellence are called 'Tulubagator', which means 'a valiant fool'. Being a name of no less reputation amongst them than the surnames of wisdom or beauty with us, was Peter the Wiseman, or Paule the Goodly Man. These have a certain preeminence that all things they do (though partly this is against reason) are reckoned to be done well, as actions that originate from bravery, it seems to all men that they do as best suits them. Wherefore there are many of them that in fights of arms esteem not their lives, fear no peril, but push forward to demolish the enemy without thought so that the weak can take courage in them and also become valiant themselves. And this surname, to my mind, is very convenient for them because I see none that deserve the name of a valiant man who is not a fool indeed. For, I pray you, is it not a fool that would fight one man against four? Is it not a madness for one with a knife to dispose himself to fight against many that have swords?

§ 29. To this purpose I shall write about a thing that happened once while I was at Tana. Being one day in the street, there came certain Tartariens into the town and said that in a little wood not further than three miles from here, there were about a hundred Circassian horseman hidden, intending to make a raid to the town itself, as they were used to doing. Hearing this, I happened to be in a fletcher's shop, where there was also a Tartarien merchant that came there with *semenzina* (wormseed)³. As soon as he heard this, he rose up and said: 'Why do we not go to take them? How many horses have they?' I answered: 'A hundred.' 'Well,' said he, 'we are five, and how many horses will you make?' I answered: 'Forty'. And he said: 'The Circassian are no men, but women. Let us go take them!' Whereupon I went to seek Mr. Frauncs, and told him what this man had said. And he, always laughing, followed me, asking me whether I had the heart to go. I answered, yes.

So we took our horses and ordered certain men of ours to come by water. And at about noon we assaulted these Circassians. They were in the shadows, and some of them were sleeping, but by mistake a little before our arrival our trumpet had sounded. By reason whereof many of them had time to escape. Nevertheless, we killed and took about forty of them. But the entire beauty of this victory lies in these valiant fools, as the Tartarien who asked us to follow him to take them, having seen no man fond of doing it himself, ran after those that were escaping alone, and we were crying to him: 'Mahe torxa!' ('You will never return, you will never return!') And about an hour after he returned lamenting and complaining much that he could not take a single one of them. Behold for yourself whether this was a madness or not, for if four of them had returned against him, they might have hacked him to pieces. For the which when we reproved him, he laughed at everything as at a joke.

§ 30. The sentries here (the men whom I described above)⁴ that came before the camp into Tana, always moved before the camp in eight directions to find out if there were dangers on the way, staying many days away from him and acting in accordance with his needs.

¹ The fact that pagans existed in Tataria is proven by the announcement of Arabic writer Ibn Arabshah (d. 1450), who visited Astrakhan, Sarai, the Crimea and Central Asia: 'Some of them [the local people] still worship idols' (Collection of Works Related to the History of the Golden Horde, vol. 1. p. 457).

² See § 14.

³ *Santonica* seed, a widely-spread medieval vermicide, was an imported item in all large cities of the Levant and Western Europe from the Black Sea and Azov Sea steppes. *Santonica* seed was extracted not from seeds, but the trusses of wormwood containing *santonica*.

⁴ See § 16.

As soon as the Lord is lodged, they unlade their baggage, leaving large ways between their lodgings. If it is in the winter, the beasts are so many that they turn the earth into mud, and if it is in the summer they spread much dust. Then after they have untrussed their baggage they make their ovens, roast and boil meat, and then dress it with milk, butter and cheese. And most commonly they are not without some venison or wild flesh, especially red deer.

In this army, there are many artisans, such as clothiers, smithies, armourers, and those for all other items and things that they need.

And if it should be asked of me whether they travel 'like the Gypsies or not?' I answer no. For (except for the fact that they are not walled in) they seem [to us to have] very great and beautiful cities. And to this purpose, as I returned one time to Tana, on the gate whereof was a very beautiful tower, there stood a Tartarien merchant that was in my company who earnestly beheld this tower, 'how think you, is this not a thing of beauty?' I asked him. But he, smiling, again answered: 'Ha! He that is afraid, builds towers!' Wherein to me it seems he spoke truly.

§ 31. I have spoken of merchant men, so now I return to my purpose of the army. I said thereby that there are always merchants who carry their wares via diverse ways, though some of them solely pass through the Orda intending to go overseas.

§ 32. Tartariens are good fowlers, have many jerfalcons, and they catch birds on Cammeleons/*this-les*¹ (which is not done with us). They hunt deer and other great beasts also. These hawks they carry on their fists, and in the other hand they have a hock that when they are weary, as these birds are twice as large as eagles, they use to lean their hand upon. Sometimes there flies over the army a flock of geese, at which some of the camp shoot certain crooked unfeathered arrows. In their ascent, the arrows hurl and break all that is in their way: necks, legs and wings: And sometimes there pass so many that it seems the air is full of them: and then the people shout and cry with such extreme noise that the geese, astonished and deafened, fall down.

§ 33. And because I began talking about birds I shall share here one thing that I consider notable. Riding through this horde I found myself on the bank of a little river, and I found a man that seemed to be of reputation. He was talking with his servants, then he called me and made me dismount my horse, demanding whereabouts I went. I answered as the case required and, looking aside, I saw beside him four or five bushes of teasel on which there were several goldfinches. He commanded one of the servants to take one of those goldfinches. He took two threads of horsehair, made a snare, which he put on the teasel, and having caught one bird, brought it to his master. The latter told him: 'Go and roast it.' The servant quickly pulled [the goldfinch], made a skewer of wood, roasted [the bird] and brought it [to the master], who took it in his hands and, beholding me, said: 'I am not now in the place where I may show the honour and courtesy that you merit, but let's make the most of what I have and of what God has sent me'. Then he tore the goldfinch into three parts, gave me one, ate another himself and gave the third one, which was very little, to the one who caught it.

§ 34. What shall I say of the great and innumerable multitude of beasts in that horde?² Shall I be believed? But be that as it may, I have determined to say it.

I will start with the horses. There are horse dealers among this people; they take the horses out of the horde and drive them to different places. In one caravan that had come to Persia even before I departed from there, there were four thousand heads. Don't marvel at this. Actually if you are disposed to buy in the horde one thousand or even two thousand horses on one day at once, you will find them there, for the horses go in herds like sheep. Usually one goes in the herd and says to the owner that a hundred horses is needed. He has a cudgel with a collar on the top end, and he is so good at it that as soon as the customer asks: 'Catch this one or that one', he casts the collar on the horse's head and drives it out of the herd, putting it aside. In such a manner he catches one by one as many horses as the customer needs, and exactly those he had been bade to capture. I have met merchants that were driving such a number of horses that they covered all the steppe.

¹ The plant with its spikes sticking into birds' feather prevent them from flying.

² Proving Giosafat Barbaro's words, Ibn Arabshah writes: 'This area is exclusively Tatar, abundant in various animals and Turkic tribes (Collection of Works Related to the History of the Golden Horde, vol. 1. p. 459).

But here's the real wonder: this country's horses are not very well-bred, as they are little, have large bellies and don't eat oats. When they are driven to Persia, the greatest praise you can give them is that they eat oats, otherwise they will not endure the labour if necessary.

The second kind of beast these people have is a kind of great big oxen, which are so numerous that they can even serve the slaughterhouses of Italy. They are driven to Poland and some go through Valachia into Transilvania; some first to Germany and then from there to Italy. In these places [in the steppes], the oxen carry loads and packs when it is needed.

The third kind of beast this people has are tall, shaggy two-humped camels. They are driven to Persia and sold there for 25 ducats¹ each. The camels from the east have only one hump and they are short; and they are sold for 10 ducats each.

The fourth kind of beast these people breed are enormous sheep with long legs, long fleece and such tails that they may weigh around 12 pounds each. I have seen such sheep that drag a wheel attached to their tail after them. [The Tatars] dress their food with fat from these tails; they use it instead of butter and it does not cool down in the mouth.

§ 35. Only a person who has witnessed it could say what I am going to tell you. For you might have asked: 'What does such a number of people eat if they spend days travelling? Where does the bread they eat come from? Where do they get it?' I, who have seen it all, shall answer you in this way.

Around the new moon in February a call is issued across the horde that anyone who wants to sow should prepare everything necessary, because the sowing will take place at the new moon in March in such-and-such a place, and everyone will set out on such-and-such a day. Afterwards, those who plan to sow themselves or who want to charge somebody with this duty, load their carts with seeds, take the animals they need and, together with their wives and children or with a part of the family, set out for the appointed place, which is as a rule a two-day journey from where the horde was camped at the moment the call to sow made. They plough and sow and live there until they finish what they have come for. Then they return to the horde.

The khan treats his horde as a mother treats her children on a walk: keeping an eye on them. That's why he rides around these sowing places now here, now there, never going [away from his people] farther than a four-day journey. This continues until the corn ripens. When it has ripened, he doesn't go there with his horde, but sends there only those who had sowed and those who are willing to buy the wheat. They go with their carts, oxen and camels and other things they need, as they do in their village.

The earth there is fertile and brings a fiftyfold yield of wheat, which is as high as Paduan wheat, and a hundredfold yield of millet. Sometimes the harvest is so abundant that they leave it in the steppe.

§ 36. To this purpose I will tell you about the following. There was a son of one of Ulu-Mohameth's sons² here; he ruled for several years being afraid that one of his cousins who dwelled on the other side of the Ledil River would take away from him that part of his people³ that usually sowed there and were therefore at a particular risk. He didn't let them sow there for 11 years, and during this period they ate nothing but meat, milk and other like things; at the market they could still buy some flour and millet but they were very costly. When I asked them how they were doing without corn, they just smiled, saying that they had meat. Nevertheless, this prince was driven away by his cousin.

Finally, Ulu-Mohameth (mentioned before)⁴ — after Khezi Mohameth arrived in his lands — finding himself unable to resist, left the horde and fled with his children and others. And Khezi Mohameth announced himself the Khan of that people⁵.

¹ A ducat is a Venetian golden coin.

² The following grandchildren of Ulugh Muhammad are known: Murtaza (earlier than 1444—after 1475, son of Mustafa), Khalil (earlier then 1460–1467, son of Mahmud), Ibrahim (earlier than 1465–1479, son of Mahmud), Daniyar (earlier than 1469–1486, son of Kasim). It is possible that Ulugh Muhammad's son was also mentioned in the Russian chronicles as Aslam Bakhmetyev (that is, Aslan, son of Mahmet).

³ It was important for Tatar leaders not only to defend the territory where they nomadised, but also how many people were subordinate to them.

⁴ See §§ 14, 27, 36.

⁵ The events of 1436 are possibly meant here.

§ 37. He came to the river Don in June and crossed the river for almost two days with all his numerous people, carts, cattle, and belongings. It is a marvelous thing to believe, but even a more marvelous thing to see! For they crossed without any noise, with such confidence as if they were walking on the ground. The way of passage is as follows: the superiors send their people ahead and tell them to make rafts out of the dry wood the river bank abounds in. Then they are told to bind the soft reed and put it under the rafts and under the carts. In such a manner they pass, with the horses swimming and drawing all these rafts and carts after them and with some naked men guiding the horses.

A month after [the crossing], I went up the river to a fishing place and saw such a number of rafts and fascines left behind that we could scarcely pass. On the banks in these places I saw a great number of rafts and fascines too, and was struck by the sight. When we arrived at our fishing place we found out that even greater harm (than the one mentioned before)¹ had been done.

§ 38. And also then (I will tell you this case so as to not forget about my friends) the khan's relative Edelmugh who came back to cross the river (which was described earlier) arrived in Tana. He brought one of his sons to me and, embracing me, said: 'I have brought my son to you and I want him to become yours'. Immediately he took the caftan from his son's back and put it on me. Besides, he gave me eight Russian slaves, saying: 'This is part of the yield that I have taken in Russia.' He stayed at my place for two days and was given the appropriate gifts.

§ 39. Sometimes there are people who, saying goodbye to the others, do not intend to come back to these places; they easily forget about their friendships, thinking that they will never see each other again. And from this fact stems behaviour that is not, surely, appropriate. They certainly do the wrong thing; there is even a saying that the mountains never greet but the men may meet.

It happened so that on my return from Persia together with the ambassador of Assambei I wanted to go through Tartary and through Poland to come to Venice. But in the end I did not go that way. There were many Tatar merchants among us then. I asked them what happened to Edelmugh and they said that he had died and left a son named Ahmet. They described his face to me so that by his name and features I recognized him as the very man his father had once given me as a son. As these Tatars said, his position at the khan's court was high and, if we went that way, we would certainly have fallen into his hands. I am sure that I would have been received in the best way because I have always received him and his father well. But who could think that thirty-five years later², in two countries widely separated, a Tatar would meet a Venetian?

§ 40. I will add another story here (though the event refers to another time), because it concerns the same matter I described above. In 1455, being at a vintener's cellar in Rialto³, as I walked about here and there I noticed two men tied in chains. By their countenance, I thought them to be Tartariens. I asked who they were, and they answered that they had been slaves of the Catelaines (Catalans)⁴, and that they fled away in a little boat, and that then they were taken by this vintener. Whereupon I went immediately to the signori di istotte (heads of the night watch)⁵, and declared this matter. Who poste-haste sent officers there, brought them to the court, and in the vintener's presence delivered them, and sentenced the man.

Thus I had them freed, and had them taken to my house, and asked them who they were and of what country. One of them answered he was of the Tana, and had been servant to Cazadahuch. This man I had known well, for he was the customs inspector of the khan⁶ over all things that came into Tana. So that looking at him more closely, I seemed to remember his face, for he had been many times in my house.

¹ See § 21.

² The first story about Edelmugh's son dates back to 1442.

³ The Rialto is a trading quarter in Venice.

⁴ It is possible that the Tatars were enslaved by Catalanian pirates who contested the control over the Mediterranean Sea against the Genoese in 14th century.

⁵ This refers to the collegium existing since the 13th century and including six members each of whom watched the order in one of six regions of Venice. During the night, public security in the city was guarded, criminals and violators of public order were arrested.

⁶ Kommerkiari or a customs officer. Apparently, tamgaches are referred to here—collectors of purchase tax in the form of an interest from merchant operations.

I asked him what his name was. He answered, Chebechzi, which signifies 'a bolter of meal'. And when I had beheld him well, I said unto him, 'Do you know me?' He answered: 'No'. But, as soon as I mentioned Tana and Jusuph (for so they called me there), he fell to the earth, and would have kissed my feet, saying unto me: 'You have saved my life twice, and this is one of them, for being a slave I reckoned myself dead; and the other was when Tana was on fire; you made a hole in the wall through which so many creatures escaped, amongst whom was I and my master'. And that is true. For when Tana was set on fire, I made a hole in the wall against a certain sandlot where many persons were assembled, through which there exited about forty, and amongst them this fellow and Cazadahuch.

I kept those two Tartariens in my house for about two months, and when the ships departed towards Tana I sent them home.

Wherefore departing one from another with the opinion never to return to those parts again, no man ought to forget his friendship as though they shall never meet again. For there may happen a thousand things whereupon they chance to meet again, and perhaps he that is more able shall have need of whom is less able.

§ 41. Now, to return to Tana, I shall describe it from the west and northwest, coasting the sea of Tabacche, and then going forth turn towards the left; afterwhich I shall go over the Maggiore Sea, even to the province named Mengleria (Mingrelia).

§ 42. Departing then from Tana, from the foresaid coast of the sea, after a three-day journey far from land, I found a region called Cremuch¹. The Lord there was named Biberdi, which means 'given to God'. He was the son of Chertibei, which means 'true Lord'. He has many villages under him which at his need can produce a thousand horses, and there the steppe is vast, and there are many good woods and rivers plenty. The noble men of this region live by robbing on those plains, and they especially rob the caravans that travel from place to place. They are well horsed, valiant and craft men, and their visage is similar to that of our own men. They have plenty of corn, meat and honey, but no wine.

Beyond them are countries of diverse languages, though not much different one from another. These are Elipehe, Tatarcosia, Sobai, Cheuerthei, As, i.e. Alani, of which I have spoken here before². And these run along right up to Mengleria at a distance of a twelve-day journey³. [...]

§ 45. Returning back to the Tana, I pass the river where Alama (Alania) was, as I have said before⁴, and I advance by the sea of Tabacche on the right hand, going forward even to the Isle of Capha (Kaffa)⁵, where there is a straight of land that connects [this] isle with the main land, like the isthmus of Morea called Zuchala⁶. There [near the isthmus towards 'the Isle of Capha'] are very great salt springs that when they dry out, become perfect salt. Along this island, the first place on the Tabacche sea is the country named Cumania, of the Cumani people⁷. After that, there is the edge of the isle where Capha stands in the same place where Gazaria used to be. And yet to this day, the Pico⁸, that is to say the yard where they measure [fabrics] at Tana, and in all those parts it is called 'Pico de Gazaria'.

§ 46. The steppe of this Isle of Capha is under the Tartariens' dominion⁹, who have a Lord named Ulubi¹⁰, son of Azicharei. They have a good number of people able at a moment to make three or four thousand horses. They have two places that are walled, but they do not have a fortress. One whereof is

¹ The Kuban area is possibly referenced here.

² See § 7.

³ The description of Mengrelia follows.

⁴ See §§ 5 and 7.

⁵ This is how the Italians defined the Crimean peninsula; sometimes only its Eastern part, where Kaffa was located, was referred to in this way.

⁶ 'The Island of Kaffa' was linked to the mainland via an isthmus.

⁷ The Cumans (Comans) is the Byzantine and Western European name of the Kipchaks—a Turkic-speaking nation inhabiting in the 11th-15th centuries the territories of Eurasian steppes from the Danube to the Irtysh areas.

⁸ That is, measure of cloth length. Pikes were mostly used to measure woolen clothes, but also linen, some types of silk and even sailcloths in the following cities: Tana, Kaffa, Constantinople and Tabriz. In Tana, apart from 'picco', such measures as 'brazo' or 'braccio' ('elbow') were also used.

⁹ That is, were directly governed by Tatar khans. Genoese colonies paid tribute to them.

¹⁰ This name of the Crimean khan Hacı Giray is not found in other sources.

called Solgathi (Solkhat)¹, which they call Incremin, meaning 'a fortress', and the other is called Cherchiarde², which signifies 'forty places'.

The first at the mouth³ of the Tabacche Sea on this island is a place called Cherz (Kerch), which we refer to as Bosphoro Cimerio. Next to that are Capha (Kaffa), Saldaia⁴, Grasui⁵, Cymbalo⁶, Sarsona⁷, and Calamita⁸, all of which at the present are under the great Turkish sultan. I need say no more, as they are already known well enough.

§ 47. And yet, I consider it necessary to speak on the loss of Capha (Kaffa) as I learned of it from one Antony da Guasco, a Genowaie (Genoese) who was present there and fled by sea into Giorgiana (Georgia), and from there into Persia, the same time that I happened to be there. Now it may be known after what manner this place had fallen into Turkish hands.

At that time there was a Tartarien lord in the steppe named Eminachbi⁹ who collected of the Capha (Kaffa) a certain yearly tribute, as was the custom of the country. Between him and the people of Capha there occurred a disagreement, insomuch that the Consule of Capha (Counselor of Kaffa), being a Genowaie (Genoese), decided to appeal to the Khan¹⁰ to send someone of the blood of this Eminachbi [to reign], by whose favour he thought it possible to expel Eminachbi out of his estate. And having thereupon sent [from Kaffa] a ship into Tana¹¹, this ambassador went into the Orda. There he obtained of the Khan a relative of that Eminachbi named Menglieri, promising to lead him to Capha, and that if the town would not accept this appointment, then to send Menglieri¹² back again. Eminachbi, mistrusting this matter, sent an ambassador to Ottomanno¹³ and promised him that if he sent an army by sea to assault the town, he would assault it by land, and would make it so that Capha belonged to the Turkish, as he had wanted to possess it himself.

Ottomanno, desiring this plan as well, sent his army and in a short span obtained the town in which Menglieri was taken and sent to Ottomanno, who kept him in prison for many years¹⁴.

§ 48. Not long after the Turkish occupied the city, Eminachbi started repenting himself of giving the town to Ottomanno, and thus prohibited the passage of all vitals into the town. By reason thereof they had such a great scarcity of corn and meat that they reckoned themselves in a manner besieged. Whereupon the Turkish were persuaded that if he sent Menglieri to Capha, keeping him within the town in courteous ward, the town should have plenty, for Menglieri was well beloved by the people. And so Ottomanno, considering this advice to be just, did exactly that. As soon as it was known that he arrived [in Kaffa], the town was flooded with all things, for he was also a beloved of the townsmen. This man thus remained in courteous ward, and went where he would like within the town. And one day amongst the people there happened a game of shooting for a prize.

¹ Solkhat (Solkhad) is the Italian name of town of Krym (Eski Krym), the antiquities of which are on the site of present-day city of Sary Krym. During the epoch of the Golden Horde, it was the centre of the Crimean ulus of the Ulus of Jochi. The Tatar name of the city—Krym—is known according to written sources and coins were minted with it.

² Qırq Yer (Chufutkale) is meant here. It was a town near Bakhchysaray, the residence of the first Crimean khans.

³ The estuary of the Sea of Zabak is the Kerch Strait.

⁴ That is, Sudak—a Golden Horde city in the Crimea, on the Black Sea coast. It was an important trading centre. In the 13–15th century there was a Venetian and then a Genoese colony in the town.

⁵ Gurzuf is a city on the Southern coast of the Crimea, where a Genoese colony existed.

⁶ Chembalo was a Genoese fortress in the Crimea, today it is the territory of Balaklava.

⁷ Kherson (Khersones, Kersona, Korsun) is a city in Southwestern Crimea, present-day city of Sevastopol.

⁸ Inkerman is a city in Southwestern Crimea, a port of the Principality of Theodoro.

⁹ Eminachbi (Eminak-bey or beg) was a Crimean karachi-beg from the Shirin clan. He strove to usurp the throne in the Crimean Khanate and entered into an open conflict with Mengli Giray khan.

¹⁰ At that time, the khan of the Great Horde was Ahmad (not long before the fall of Kaffa which occurred on 6 June 1475).

¹¹ Tana, according to its geographical position was the closest city to the Great Horde (the Azov Sea steppes, the Lower Volga region) and therefore the Genoese, when clashing with the Tatars, sent their ships to Tana to be able to penetrate into the khan's headquarters.

¹² Mengli Giray was the Crimean khan (1467–1515 with breaks).

¹³ That is, to Turkish sultan Mehmed II Fatih (the Conqueror) (1444–1446, 1451–1481).

¹⁴ Mengli Giray was held captive for less than three years, till spring 1478.

The game was played as such: on two polls set up like a gallow they hinge a bowl of silver tied only with a fine thread. Competitors shoot at the thread with forked arrows¹ and are on horseback. First they must gallop under the gallow so that riding in the opposite direction and passing a certain distance they turn their body and shoot backwards (while the horse continues to gallop), and he who in such a manner severs the thread, wins the game.

Menglieri, finding upon this occasion a chance to escape, appointed a hundred horsemen (with whom he had conspired with earlier) to hide themselves that same day in a little valley not far from the town. He pretended to gallop as part of the game, flew in all haste and made his way to his company. Whereupon knowing what had happened, the force of the entire island followed suit. With forces as such, he went straight away to Surgathi (Solkhat) — a town six miles away from Capha — and took it². And so having slaid Eminachbi, Menglieri made himself the Lord of all those places.

§ 49. The following year he determined to go to Citerchan (Astrakhan), a place sixteen days journey from Capha and under the dominion of Mordassa-khan³, who at that time was with his orda on the Ledil River. He [Menglieri] fought with him, captured him and took his people from him, a great part whereof he sent into 'the Isle of Capha', and so stayed the winter on that river. At that time, by chance there was another Tartarien lord lodged a few days' journey away, who hearing that he wintered there when the river was frozen, came upon him suddenly, assaulted him and so recovered Mordassa, who had been kept prisoner.

Menglieri, having suffered such a defeat, returned to Capha with his orda.

And Mordassa with his orda came the next spring even to Capha and made certain raids in order to damage the island. But seeing that he could not get the island to yield to him, turned back. Nevertheless, I was informed⁴ that he was making a new army to come again to the island and chase Menglieri away.

§ 50. It was proved after in deed, but hereof emerged a false rumour through the ignorance of those who did not understand whereof the war amongst these lords proceeded, or what the difference was between the great Khan and Mordassa khan. For they, hearing that Mordassa khan made a new army to return to the island, bore gossip that the Great Khan should come by Capha, against Ottomanno by way of Moncastro to enter Valachia and Hungarie, to any place where Ottomanno would also be⁵. All this is false evidence, though it was obtained from letters from Constantinople.

§ 51. And so behind the island of Capha, which sits upon the Maggiore sea, is Gothia, and after that is Alania, which goes by the island towards Moncastro, as I have said before.

The Gothes speak dowche (German)⁶. This I know from a dowchewan (German), my servant, that was with me there; for they understood one another well enough, just as we understand a Furlane or a Florentine⁷. Of this neighbourhood of the Gothes and Alani, I suppose the name of Gotitalani (Gotha-

¹ Giosafat Barbaro's work describes the three types of arrows: 1) arrows for a bow—the most widely-spread weapon among the Tatars (§ 29); 2) arrows with which they killed flying geese (§ 32); these are short and crooked, without feather; they change their direction during the flight; 3) arrows for competitions in archery; they have a metal ferrule in the form of a semi-moon—aimed at cutting the rope on which the silver bowl is hung (§ 48).

² Here Ramusio added the following: 'The amount of people ready to obey him increased, then he marched against Kyrk-Yer (Cherchiarde) and conquered it'.

³ Apparently, it is about Murtaz—the son of Ahmad khan.

⁴ Giosafat Barbaro, already in Venice, did not lose interest in the situation in the Azov Sea Region and the Northern Black Sea Region (in the 1480s) and noted that data which he had recorded, had been retold by someone.

⁵ It is possible that Sheikh Ahmad, son of Ahmad is meant by the great khan. After the death of his father in 1481, Sheikh-Ahmad began a struggle for power in the Great Horde against his brothers.

⁶ The Crimean Goths were a German-speaking nation inhabiting the Crimea up to the end of the 18th century.

⁷ It is understood from Giosafat Barbaro's essay that he visited the Goths' place of residence in the Crimea. Although he did not speak German, Barbaro was a witness to a conversation in this language between his servant—German in origin—and the Goths; Giosafat Barbaro's peremptory declaration that 'the Goths speak German' is based upon his own observation. However, Giosafat Barbaro noticed a difference between the accent of his German servant and the one spoken by the Crimean Goths and at the same time—a familiarity between them. To illustrate it, he compared two different, but mutually understandable Italian dialects: the Florentine regular language and a

lans) to be derived. For the Alani were the first in this place. But then came the Gothes, who conquered these countries and mixed their name with the Alani. And so being mixed together, they called themselves Gotitalani, who in effect followed all the Greek rituals along with the Circassians.

§ 52. And because we have spoken of Taman and Cithercan (Astrakhan)¹, I consider it worthwhile to write down the things there which are worthy of mention. Travelling from Taman east-northeast about a seven-day journey there is the Ledil River, whereon stands Cithercan (Astrakhan). At this point it is but a small town to a certain degree destroyed, albeit in time passed it used to be great and of noteworthy fame. For before it was destroyed by Tamerlano², the spices and silk that pass now through Soria (Syria)³ came to Cithercan. Giosafat Barbaro speaks of the shift in trade. After Timur's crushing campaigns, spices and silk travelled to the Mediterranean through Syria, and not via Tana. Six or seven large galeys would be sent specifically from Venice ⁴to fetch those spices and silks from Tana. So at that time neither the Venetians, nor any other nation on this side of the sea coast used to sell their wares in Soria.

§ 53. The river Ledil is great and large, and falls into the sea of Bachu⁵ about twenty-five miles from Cithercan (Astrakhan). In that river, as in the sea, innumerable fish are taken.

The sea yields much salt and you may sail up that river on a three-day journey almost as far as Musco (Moscow), a town of Rossia⁶. And they of Musco come yearly with their boats to Cithercan for salt⁷.

There are many islands and woods on that river [Ledil], and some of those islands are up to thirty miles in circumference. In those woods there are great trees, which when they are grown and made hollow become perfect for boats made from a single log, and are so big that they can carry eight or ten horses at a time and as many men.

§ 54. Passing this river and travelling east-northeast towards Musco, keeping at the river's side for a fifteen-day journey, there are innumerable Tartarie people⁸. [...]

§ 57. It may be twenty five years ago now that the Rossians have stopped paying tribute to the Khan of Tartarie for sailing on the Volga river⁹, as now they have conquered a town known as Cas-san (Kazan)¹⁰. In our tongue this signifies 'cauldron'. [The town] stands on the Ledil River on the left hand as you move towards the sea of Bachu, and is a five-day journey away from Musco. This is a great trade town out of which comes the majority of furs that are carried to Musco and into Polonia, Prusia, and Flandres. Furs come out of the north and northeast from the regions of Zagatai¹¹ and Moxia (Mordovia).

dialect from Friuli district located to the north of Venice.

¹ Astrakhan and Taman were mentioned in § 15.

² Consequences of Timur's campaign of 1395–1396 are referred to here.

³ Giosafat Barbaro documented a shift in trading routes; after Tamerlan's campaigns the route of spices and silk flowed towards the Mediterranean not through Tana, but Syria.

⁴ Galea is a wind-driven rowing boat with the width reaching 10 meters and the length up to 50 meters.

⁵ That is, the Caspian Sea.

⁶ In the conditions of the 15th century it was almost impossible to reach Moscow (from Astrakhan?) in three days. Compare with the information from § 57 about the distance between Kazan and Moscow.

⁷ Ramusio, a publisher, added here: 'It is an easy road, because the Moscow river debouches into another river called the Oka which flows down into the Erdil river'. Lake Baskunchak is located near Astrakhan. It is the main salt mine in present-day Russia.

⁸ A description of the Russian lands follows.

⁹ It is unclear from what exact date Giosafat Barbaro counted the approximate period of 25 years he indicated. Judging by the fact that immediately after it the Russian conquest of Kazan (in 1487) is described, his memories of a payment for sailing down the Volga referred to Kazan.

¹⁰ Kazan was conquered by Ivan Third's voivodes after the siege which lasted from 18 May to 9 July 1487. Kazan Khan Ilkham (Ali khan) was captured and was replaced by Muhammad Amin. The Kazan Khanate became independent from Moscow. An embassy with the message that Kazan had been conquered which was supposed to visit Rome, Venice and Milan. The Muscovite ambassadors were received by the Venetian Senate on 6 September 1488. They declared the success of the Muscovite State at a ceremonial meeting. Through this embassy, Barbaro could learn of the conquest of Kazan; then he added this last piece of news in his work.

¹¹ The Chagataid region should be understood as the territory of the Great Horde.f

These northern countries were mostly inhabited by the Tartariens¹, who for the most part are idolaters, and so also are the Moxii (Mordvins).

§ 58. And because I have had some experience with the Moxii before, I therefore intend to speak somewhat of their faith and manners as I have learnt.

At a certain time of the year they are known to take a horse, which they buy together, and bind its four feet to four stakes and its head to another one. All these stakes are driven into the earth. As soon as this is done, one person with a bow and arrow comes and, standing at a convenient distance, shoots at the heart until he kills the horse. And when the horse is thus dead, they flay it and make a bag of its hide, performing certain ceremonies with its flesh and then eating it nevertheless. Then they stuff the hide so full of straw that it seems whole again, and in every one of its legs they put a piece of wood and so set it afoot again as if it were alive. Finally, they go to a great tree and cut branches in such a way as they think best and thereof make a scaffold whereon they set the horse standing, and proceed to worship it, offering sables, ermines, gray squirrels, foxes and other furs which they hang on the same tree, similar to how we offer up candles [in the church]. By reason whereof these trees become full of such furs.

This people for the more part live on meat, the greatest part thereof being wild meat and fish they have caught in local rivers. This is all I have to say about the Moxii.

§ 59. I have no more to say of the Tartariens except that they are idolaters and worship images that they carry on their carts. However, there are some that worship the first beast they see daily or that they happen to meet the first time they leave their house. [...]

§ 63. This is all that I can say about my travel to Tana and the surrounding countries, as well as about the things worthy of memory [and seen by me] there'.

2. Maciej Miechowita 'Treatise on the Two Sarmatias'

This text has been reproduced from the following publication: Maciej Miechowita. *Traktat o dwux Sarmatyiach*. Moscow, Leningrad: Publishing House of the USSR Academy of Sciences, 1936.

Book One

Treatise One. On the Asian Sarmatia.

Chapter One. On the fact that there are two Sarmatias

The ancients distinguished between two Sarmatias which were neighboring and adjacent to each other, one in Europe and the other in Asia.

The European one has the following regions: those of the Russes, the Ruthenians², the Lithuanians, the Mosks³ and others adjacent to them between the Vistula river in the west and the Tanais⁴ in the east, whose inhabitants were once called the Getae⁵.

As for the Asian Sarmatia, located within the territory from the Don or Tanais River in the west to the Caspian Sea in the east, many Tatar tribes live there now.

Their system of government, their origin, faith and customs, the vastness of their lands, the rivers and neighboring areas will be discussed below. [...]

Chapter Six. On the Tatars' customs and what is found in their lands

Most Tatars are of average height, broad-shouldered, broad-chested and unattractive.⁶ They have wide faces with flat noses, and their skin is dark in color. They are strong, courageous and easily endure hunger, cold and heat.

¹ That is, located to the north of Tana.

² 'The Ruthenians' is a Latin name for the Russians.

³ The Moscs are inhabitants of Muscovy.

⁴ 'Tanais' is the Greek name of the Don river.

⁵ The Getae were ancient tribes inhabiting BC the territory from the Balkans to the Danube.

⁶ The notion of beauty was different among representatives of different cultures and civilisations. For example,

They are taught horseback riding and archery from an early age. They carry all their belongings with them, and moving from one place to another, they live in the fields with their wives, children and livestock. They have neither towns, nor villages, nor houses.

Mocking Christians, they say to each other: 'Do not sit in one place, so as not to be dirty as a Christian, and not to soil yourself'.

When the winter is coming, to escape from the cold they go to the Caspian Sea, where the sea moderates the temperature, and in the summer they return to their region.

Some of them plough one, two or three strips of land three or four jugera¹ or more in length and sow them with millet. They use millet to prepare meals and bairam, i.e., dough. They have no wheat or vegetables, but have a lot of sheep and cattle, especially horses and mares that serve as means of transportation and food. They cut and wound horses and consume the blood, with millet or separately. They eat the meat of sheep, goats, cattle, and horses half-raw. They readily eat horses that died the day before, even if they died from a disease, only cutting out the infected place. They drink water, milk and beer brewed from millet. The Turks and Tatars call water 'su'; the Tartars sometimes say 'suha', which also means water. Beer made of millet is called 'buza' by the Tatars, and 'braha' by the Russians. They especially appreciate milk called 'komiz'², which means sour milk, because it supposedly strengthens the stomach and acts as a laxative. At feasts or when receiving guests, they drink araka i.e., fermented milk, which is surprisingly and quickly intoxicating.

They do not steal and do not tolerate thieves in their midst, but for them it is the greatest pleasure and virtue to live by looting and ravaging their neighbours. They know neither crafts nor money, and exchange one thing for another. However, aspras³ — silver Turkish obols⁴ — have entered into circulation in the Trans-Volga Horde⁵, and ducats⁶ are accepted in the Perekop Horde⁷. In the Nogai Horde, they exchange things.

The Tatars are sly and perfidious to strangers, but very honest among themselves.

Their clothes are usually made of felt or white wool and are crude and simple. They like oponchi most of all, and when saying this word, they put 'i' in the beginning, saying 'ioponchi' instead of 'oponchi'⁸. This is a thick white one-piece cloak, which is very convenient to wear on a river or when it rains.

Their country is a plain without any mountains or trees, rich only in grass. They have neither roads nor boats, and they count their way by days. For example, the expanse of the territory of the Trans-Volga Tatars, from the Volga River to the Caspian Sea, is approximately a 30 days' fast ride on horseback.

They can ride 20 great German miles⁹ a day, and they never travel or go on foot.

The animals living in their territory include deer, fallow deer, goats, and svak. The svak is an animal the size of a sheep that does not inhabit other countries, has gray hair and two small horns, and runs very fast. Its meat is very tasty¹⁰. When a herd of svaks is seen somewhere in the grass in the field, the Tatar Khan or Emperor rides there with a number of horsemen and they surround the animals hiding in the high grass from all the sides. They start beating tambourines, and the frightened svaks run out from

William of Rubruck noticed that among the Tatars a girl 'who has the smallest nose is considered to be the most beautiful', see: William of Rubruck. *The Journey to the Eastern Parts of the World*. Chapter VIII. About men's shaving and women's clothing. - M., 1997, p. 100.

¹ Yugerum is a Roman unit of square measurement. 1 yugerum was 2518.2 square meters.

² It is about kumys.

³ Aspra was a silver coin which circulated in the Italian colonies of the Northern Black Sea region and Trapezund. Aspras were minted in Kaffa from the 14th century to 1475.

⁴ Obol is an ancient Greek silver coin.

⁵ The Lithuanian name of the Great Horde.

⁶ A ducat is a Venetian golden coin.

⁷ The Lithuanian name of the Crimean Khanate. Comes from Perekop, a defensive ditch on the Crimean isthmus which then gave the name to the city of Or-Kapi or Ferkh Kermen, as the Turks called it.

⁸ Most likely this is about the chapán.

⁹ A German mile amounted to over 7 km.

¹⁰ Apparently, this refers to the saiga antelope.

various directions and rush from one end of the roundup to another until they become completely exhausted. Here the Tatars rush on them screaming and kill them.

Chapter Seven. On the borders of the Trans-Volga Tatars' possessions

The territory of the Khan and the Trans-Volga Tatars is bounded in the east by the Caspian or Hyrcanian Sea, in the north by steppes stretching over huge expanses in all directions; the Tanais and the Volga rivers in the west; and in the south — partially by the Euxine Sea or the Pontus¹, and partially by the highest mountains of Iberia² and Albania³.

The Russians call the Caspian Sea the 'Khvalyn Sea' (Chwalenskie morze). It is formed not by the ocean, but by the rivers flowing into it. Many major rivers flow into the basin of this sea, and as if jumping from the high banks into its centre, leave a pass under them for those traveling along the bank. Therefore, the Persians and Medes⁴ try to escape from the heat there in the summer, and in the winter the climate is more moderate there due to evaporation. According to the Russians, the long-haired Tatars live near this sea and further to the east. Other Tatars call them the 'Kalmuks'⁵ or heathens, because they do not observe the Mohammedan ritual and do not shave their heads as all Tartars do; among the Tatars only youths do not shave their heads completely, leaving two locks of hair falling from the right and the left ears to the shoulder as the sign of a virgin or an unmarried man.

The Tanais and the Volga rivers are located in the west. The Tanais is called the Don by the Tatars. It originates from the Principality of Ryazan (Rzesensko, Rzesensi), ruled by the Prince of Muscovy⁶, and first flows to the north, then turns to the south and flows into the Maeotis Swamp⁷, or rather forms it, with its three mouths. There are trees near the Tanais, there are apples and other fruit; there are also some beehives on oaks and rarely on pines. The Tatars call the Don sacred, because they find ready food there: fruits, honey and fish.

The Volga River, called 'Edel' in Tatar, flows from Muscovy. Its source lies farther northwest than that of the Tanais. At first it flows to the north, skirting the Tanais at a large distance from it, then turns to the east and south, and finally flows into the Euxine Sea with its twenty-five mouths or arms⁸.

The distance between the Tanais and the Volga is equal to a five-week journey, or a three-week journey if one rides fast. The Volga is three times larger than the Don, and its twenty-five arms are big rivers themselves, and even the smallest of them are equal in size to Rome's Tiber or Vistula beyond Krakow. These rivers are very rich in fish, such that the Tatars or other travelers can catch a fish swimming down the river with a sword and pull it out while standing on the bank.

Near these rivers, the Tanais and the Volga, there is a lot of air⁹, i.e., sweet flag, also called 'brostworce'. Rhubarb also grows there, which is called by the Tatars 'czynirewent'¹⁰ (a Persian word) or 'kuczylabuka', or, differently pronounced, 'kylczabuga', which means 'raven's eye'; this is a strong warming substance¹¹.

I will tell about the source of the Don and the Edel Rivers in the Treatise on Muscovy.

¹ That is, the Black Sea.

² That is, Eastern Georgia.

³ That is, Caucasian Albania, the territory of present-day Azerbaijan.

⁴ The Medes (Medians) were Iranian-speaking inhabitants of the Kingdom of Media (670 BC—550 BC) who subdued vast territories from Asia Minor to India's borders to their control and power.

⁵ Apparently, Maciej Miechowita's Kalmuks (Turkic 'the rest') are possibly not the ancestors of present-day Kalmyks who in the 16th century lived between the Altai and Tien Shan and between the Gobi Steppe and Lake Balkhash, but they are steppe inhabitants who preserved a pagan faith and did not adopt Islam.

⁶ The Principality of Ryazan since the mid 15th century was under the control of the Muscovite grand princes. However, it was annexed only in 1521.

⁷ Meothida is the Greek name of the Azov Sea.

⁸ The Euxine Sea is the Greek name of the Black Sea. The Volga falls into the Caspian Sea.

⁹ Air or sweet flag (*acorus calamus*), a fragrant reed; there is an aetherial oil and amarines in its rootstock; it is a medicine for the stomach, but may also be used for other purposes.

¹⁰ Czynirewent consisted of two Persian words: 'Czyni' means 'Chinese' and 'Rewent' is a pieplant or rheum.

¹¹ Kuchilabuga possibly consists of two words: 'Kuchalak' (Chagat.)—a milvus and bug'a, bog'a (Ottoman., Cuman.)—that is, a bull. The meaning 'oculus cornicis'—that is, a raven's eye, remained unclear.

Whenever the Volga Tatars go looting to our countries, they cross these and other rivers without boats: they tie their belongings to their horses, seat their wives and children on the horses' backs, and hold the horses' tails themselves. Thus they cross the river and go to loot and do all kinds of misdeeds.

To the south, towards the Caspian Sea, there lie the mountains of Iberia and Albania which the Russians call by the name of the people living there—the Pyatigorsk Circassians (Pietihorscij czyrkaczy), which means approximately 'the Circassians of five mountains' (Quinquemontani)¹. Among these same mountains live the Gazar tribes who, according to your Moravian legend, accepted the Christian faith from the brothers St. Cyril and Methodius sent by Michael, the Emperor of Constantinople.

The Gazars still follow the Greek faith and rituals. These are bellicose people who have connections throughout Asia and in Egypt; the Trans-Volga Tatars acquire weapons from them. In our time the Greeks call these tribes the 'Abgazars' or 'Abgazels'².

Near them live the tribes of the Circassians (Circassi) and Mingrelians³ (Mengrelli). All of them are Christians of the Greek rite converted by St. Cyril⁴. [...]

A large river called the Terek (Tirk) in the Tatar language originates from the Pyatigorsk Circassian mountains. It has such a fast current that it carries along rocks and a lot of fish. It flows into the Caspian Sea. The Kuban (Coban) river originates from the same mountains; it is smaller than the Terek, and also flows into the Caspian Sea⁵.

Chapter Eight. On the genealogy of the emperors living beyond the Volga

There are four Tatar hordes, and their emperors number the same. These are: the Horde of Trans-Volga Tatars, the Horde of Perekop Tatars, the Horde of Kazan (Cosanensium) Tatars, and the fourth is the Horde of Nogai Tatars. There is a fifth one having no emperor, and it is called the Kazakh (Kazacka) Horde. They will be described below. The Horde means a crowd or a multitude in Tatar. The most important one is the horde of the Chagatais or the Trans-Volga Tatars, who call themselves 'Tak ksi'⁶, that is, the main horde or the leading and free people, partly because it is not dependent on anybody, and partly because other hordes originated from it. For the same reason the Muscovites call the Trans-Volga Horde the 'Great Horde'. That is why their emperor is called 'Ir tli ksi'⁷ in their language, which means a free man. He is also called 'Ulugh Khan' (Vlucham), that is, the great lord or the great emperor; 'Ulugh' means great, and Khan (cham) means a lord or an emperor. Some people, interpreted incorrectly, have called him a 'big dog' (magnum canem), but Ulugh Khan does not mean a big dog; the word 'Khan' with aspiration in Tatar means a lord or an emperor, and Kan (Cam) without aspiration means blood, and never a dog.

According to Tatar legends and tales⁸, a widow became pregnant and gave birth to a son named Chinggis⁹, and when her other sons wanted to kill her as an adulteress, she invented an excuse and told them that she had conceived him not from a man, but from the sun's rays. The sons believed this fiction and released their mother. Her son, Chingos or Chinggis, having been born to a miserable fate, grew into a great and courageous man and was the forefather of all the Chagataid or Trans-Volga emperors. His

¹ The Circassians (the self-name is 'the Adzyh'—'people') were tribes in the 15–16th centuries inhabiting the Kuban Region and ravines of the Northern Caucasus.

² Maciej Miechowita possibly means the Abkhazians here.

³ The Megrelians are a tribe in Western Georgia.

⁴ The Circassians, before adopting Islam in the 16th century, professed Christianity.

⁵ The Kuban river falls in the Black Sea.

⁶ It is possibly a distortion of the Tatar phrase 'Täxet keşese'—that is, 'the man of the throne'. In the 15th century, the rest of the Golden Horde (the Great Horde) bore the Tatar name of Täxet ile.

⁷ It is possibly a distorted Tatar phrase 'irekle keşe'—literally: 'a free man'—that is, 'the ruler'.

⁸ The further telling of the history of Asian Sarmatia before the 16th century, according to Maciej Miechowita himself, is based upon oral Tatar legends. The narrative is abundant in historical inaccuracies.

⁹ Chinggis khan is referred to here.

son was Iokukhan (Iocucham)¹, who was still a heathen. Iokukhan begot Zainkhan (Zaincham), the third Emperor, who throughout the world, but mainly in Poland, Hungary and Russia, is called Batu. He ruined Gothia² and Russia and devastated Poland, Silesia, Moravia, and Hungary, as it was mentioned at the beginning. This Batu was a heathen at first, but later accepted the Mohammedan faith³ together with all the Tatars, and they adhere to it to this day. Batu's son, Temir Kutlug⁴, was the fourth emperor, whose name in translation from the Tatar language means happy iron (Temir means happy, and Kutlug means iron⁵). He was happy and loved war. This is the famous historical Temerlane, who devastated all of Asia and reached Egypt. He first clashed with Bayezid (Pesaitem), the Turkish emperor, took him prisoner and put him into gold chains, but then soon released him. He had an army of one million two hundred thousand men.

At that time, there was another Tatar emperor, Aksak Kutlug, which means lame or lame iron⁶; he was lame, but cruel. He led many successful wars; he seized a large town in the land of the Chagataids, i.e., the Trans-Volga Tatars, called Kumumedtsar, and destroyed it and turned it into a desert. Now the stone houses in this town stand abandoned, and three hundred churches which belonged to the Goths have been turned into Mohammedan mosques empty of residents. The Trans-Volga emperors are buried in the castle of this town.

Temir Kutlug's son, Temir Tsar, was the fifth emperor⁷. As they say, he was called by Vytautas, the Duke of Lithuania, and Władysław, the King of Poland, to help in their struggle against Prussian crusaders, and fighting bravely, he was killed in the battle⁸.

The son of Temir Tsar, Mahmet Tsar, was the sixth emperor⁹. He was the father of Ahmet Tsar¹⁰, the seventh emperor; Ahmet means 'compliant' in the Tatar language¹¹. Ahmet was the father of Shiahmet, the eighth emperor. Shiahmet means approximately 'God-fearing Ahmet', and the Tatars called him Sahmet, that is, 'martyred Ahmet', because he was taken prisoner by the Lithuanians and was held in prison in Kaunas¹².

He was called by Albert¹³, the King of Poland, and Alexander, the Grand Duke of Lithuania¹⁴, to help in their struggle against Mengli Giray, the Emperor of the Perekop Tatars¹⁵, and in 1500, at the beginning of winter, he came with 60, 000 men and more than one hundred thousand women and children. It was a severe and very cold winter. Unable to endure the cold and hunger, and following a secret summons from the Perekop Emperor, his wife fled to Perekop from her husband Shiahmet, along with a great part of the army. This outflow of fighters, severe cold and attacks from Mengli Giray of Perekop resulted in Shiahmet's army being scattered and in his defeat, and he fled to Bayezid, the Turkish emperor, with three hundred horses. When he arrived in Belgorod on the Black Sea, which means White Castle¹⁶, he learned that by order of Emperor Bayazet he was to be taken prisoner. Then he

¹ Here, Maciej of Miechow merged two historical personalities in one name—Chinggis khan's successor Ögei and Batu's father Jochi.

² That is, the Crimean Peninsula. The name originates from the German tribes of Goths inhabiting the Crimea in the Middle Ages.

³ The first among the rulers of the Ulus of Jochi who adopted Islam was Berke (1257–1266).

⁴ In this fragment, the khan of the Golden Horde Temür Qutlugh (1395–1399) and Central Asian ruler Tamerlan (1370–1404) are mixed.

⁵ It should be vice versa: 'temir' means iron, 'qutlugh'—happy.

⁶ Here, as earlier there is the same mistake in the translation of the word 'qutlugh'.

⁷ Timur was the khan of the Golden Horde (1410–1412).

⁸ Tokhtamysh's son Jalal al-Din took part in the war against the crusaders.

⁹ Kichi Muhammad was the khan of the Golden Horde between the 1430s and 1450s.

¹⁰ Ahmad (Ahmat, Ahmed) was the khan of the Great Horde from the 1460s to 1481.

¹¹ Amad (Ahmed, Ahmet, Ahmat) in Arabic means 'the one who constantly thanks God', 'the most worthy of favour'.

¹² It is about the last khan of the Great Horde, Sheikh Ahmad (1481–1502).

¹³ Jan I Olbracht (1492–1501) is being referred to here.

¹⁴ Alexander Jagiellon ruled Lithuania between 1492 and 1506.

¹⁵ This is about Mengli Giray, a Crimean khan (1467, 1469–1475, 1478–1515).

¹⁶ Akkerman (present-day Bilhorod-Dnistrovskyi) is a city on the right bank of the Dniester Liman. There was a Genoese colony in the city between the 13th and 15th centuries. In Tatar this name means 'White fortress'.

quickly fled back with fifty horses and went out to the fields near Kiev. The ruler of Kiev, who had learned about him through his scouts, surrounded him, captured him and sent him to Vilnius to the Lithuanians. He tried to escape from there several times, but every time he was caught, captured and brought back.

When Alexander, the King of Poland and the Grand Duke of Lithuania, headed the General Sejm of the Russians in Brest¹, Shiahmet came there at his suggestion from Vilnius and was officially received by King Alexander, who went out to meet him a mile away from the town. Then the Poles in Radom decided to send him back to Tataria beyond the Volga with several thousand lightly-armed warriors, and to make his return more comfortable and acceptable to his countrymen, they sent Kazak Soltan, Shiahmet's brother, ahead of him². He arrived in the territory beyond the Volga and, together with Tsar Albugerim³, Shiahmet's uncle, started waiting in their native Chagataid land.

Meanwhile, when going to Lithuania to accompany his soldiers, Shiahmet was again captured by the Lithuanians on the order of Mengli Giray, the Perekop Emperor, and was imprisoned in Kaunas, a fortress near the Baltic Sea. Shiahmet is fairly called a martyr by his countrymen.

Chapter Nine. On the fact that the peoples of Scythia are restless and are always inclined to looting

The Tatars cannot live in peace without raiding or attacking their neighbors, capturing loot or taking prisoners and cattle. This has been equally characteristic of all the Tatar hordes, since their very emergence and up to this day.

[...] The Tatars never live without looting and trouble neighboring nations with their attacks. Thus the Perekop Tatars often attack Wallachia, Russia, Lithuania and Muscovy in our day as well. The Nogai and Kazan Tatars invade Muscovy, killing people and looting property.

Treatise Two

Chapter One. On the tribes and the peoples living in Scythia, called Tataria

As the Tartars came and seized the Asian Sarmatia, or Scythia, 306 years ago⁴, the question may arise as to what people inhabited the above-mentioned Asian Sarmatia that is now, as in ancient times, called Scythia. [...]

Treatise Three

On the gradual dissemination of the Tartars by clans

[...]

Chapter Two. About the Uhlans or the Perekop Tatars

The Uhlan Tatars are another offshoot and ancestral branch originating from the Trans-Volga Tatars, who are named so after Uhlan, the conqueror of the Tauric Island⁵.

Uhlan means a girl or a virgin, and he was so named because he was born of a girl out of wedlock. He passed this name on to his descendants in Chersonesos Taurica⁶.

It is not uncommon for a Muhammadan girl to get pregnant and give birth to a child out of wedlock; it happens often and is not prohibited⁷.

¹ From 8 February until 15 March 1505.

² That is, Kujak—Sheikh Ahmad's brother.

³ Abd al-Karim (Abdul Kerim) was a cousin of Ahmad (Ahmet), Sheikh Ahmad's father.

⁴ Therefore, Maciej Miechowita dates the first mention of the Tatars to 1211.

⁵ Maciej Miechowita supposed that the Crimea was an island.

⁶ 'Ulan', 'oghlan' means a child, an infant. In the Golden Horde, potential candidates for the khan's throne were called oghlans.

⁷ This declaration made by Maciej Miechowita does not respond to Islamic ideas of marriage, see, for example: The Quran, 14, 2.

The Tauric Island is located amidst the Maeotis Swamps. It is 24 miles long and 15 miles wide. It has three cities: Solat¹, Kirkel², and Kaffa³, and two castles, Mangup⁴ and Azov⁵. Solat is called Krym by the Tatars, and therefore they call the Perekop ruler the Emperor of Krym.

The houses in this city are wretched, and most of it is abandoned.

Kirkel is another, smaller city. A castle built of logs and clay stands above it on a high cliff.

They say that in this cliff lived a dragon that killed people and cattle, so that the residents of neighboring territories fled and abandoned their houses.

The Greeks and Italians who lived on the island prayed to Holy Mary, the Mother of God, that she would save them from the dragon. And after a time they saw that a candle was burning inside the rock. They cut and carved steps in the cliff to climb, reached the burning candle and saw an image of the Holy Mother of God, a light burning in front of it, and the dragon torn in half below.

They gave thanks for this miraculous deliverance, and having cut the dragon into pieces, threw it down from the cliff.

As the residents, glorifying the Holy Virgin, began to venerate her image, following their example, Atsigeri⁶, the Perekop Tsar, who was fighting against his brothers, began asking the Holy Virgin Mary to help him and vowed to repay the Blessed Virgin.

It must be noted that the Muhammadans honour the Holy Mary, and recognize that she was a virgin who conceived and gave birth to the great and blessed prophet Jesus without a husband⁷.

When Atsigeri defeated his rivals with her help, he sold two of his best horses and bought wax, and made two enormous candles and ordered that they should burn in front of the image year in and year out, which has been observed by all subsequent emperors to this day.

The third city, Theodosia, which is now called Kaffa, was taken by storm from the Genoese by Mehmed II, the Emperor of Turkey⁸.

Having seized Mangup Castle located to the west of Kaffa as well, the above-mentioned Turk Mehmed killed with his sword two princely brothers, the lords of Mangup Castle and the last representatives of the Goths, as they say⁹.

He also fortified Azov Castle near the mouth of the Tanais River, which is controlled by the Turks to this day. The Uhlán Tatars have lived in the meadows of the island since they came there, according to their age-old habit, and outside the island they possess similar meadow territories in European Sarmatia near the Maeotis Swamp and the Pontic Sea up to the White Castle.

They made a passage and opened access to the island from the west, having laid a mile-long earthen embankment in the form of a bridge, but rough and imperfect, so that the sea waves flow over the embankment in some places.

In ancient times the island was called the Tauric Island, and now is called Perekop, which means a ditch, because water surrounds it from all sides and protects it like a moat full of water protects a city.

But enough about that. Let us now look at their genealogy.

¹ Krym (Solkhad, Solkhat, Eski Krym) is meant here. It is an ancient city which was located on the site of modern-day city of Stary Krym. It was the centre of the Crimean Ulus during the era of the Golden Horde. The Tatar name of the city—Krym—is known according to written sources and coins were minted with it. The Genoese called the city Solkhat.

² Qırq Yer (Chufutkale) is meant here. It was a city near Bakhchysaray.

³ Kafa (Kaffa, Feodosia) is a city in Southern Crimea. In the second half of the 13th century the settlement of Kaffa—the centre of Genoese colonies in the Crimea—was founded here. In 1475 it was conquered by the Ottoman Turks.

⁴ Mangup is a city in Southern Crimea, the capital of the Principality of Theodoro. Between 1475 and 1774 it was under the control of the Ottoman sultans.

⁵ Azak is meant here. It is a large city on the Southern branch of the Don delta. In Italian sources it had the name Tana.

⁶ The founder and the first khan of the Crimean Khanate Hacı Giray (1441–1466) is referred to here.

⁷ The Quran, 3, 59; 19, 23–26.

⁸ Ottoman sultan Mehmed II the Conqueror (Fatih) ruled between 1444 and 1446 and between 1451 and 1481.

⁹ The Crimean Goths were a German-speaking nation inhabiting the Crimea up to the end of the 18th century.

Uhlan was succeeded by Tsar (czar) Tokhtamysh on the Tauric Island, who, together with Vytautas, the Prince of Lithuania, fought against his brother, Tsar Temir-Kutlug, the Trans-Volga Emperor, and was defeated¹.

Tokhtamysh's son, Tsar Shidahmet², planned to reign after him, but Tsar Ajikerey expelled him and reigned in his place.

Shidahmet went to Lithuania for help, but was captured by the Lithuanians together with his wife and children and imprisoned in the Kaunas Castle, where he died with his wife and children³ during the reign of Casimir III, the King of Poland and Grand Duke of Lithuania⁴.

When Tsar Ajikerey died, his seven sons remained, and the eldest of them, named Hayder, took power, while Mengli Giray, one of the younger sons, fled to the Turkish Emperor, and having received help and a wife from the Turks, defeated and overthrew Hayder and Yamurtsi with his other brothers. They fled to Ivan Vasilyevich (Vasilowicz), the Prince of Muscovy, who received them and gave them the principality of Kazan⁵.

Tsar Mengli Giray had nine sons: the first was Mahmet Kerey, the second Ahmet Kerey, the third Makhmut Kerey, the fourth Bety Kerey — he drowned carrying loot down a river in Wallachia in 1510; the fifth Burnas Kerey, the sixth Mubarek Kerey, the seventh Sadekh Kerey, and as to the eighth and the ninth, I do not know their names. Tsar Mahmet Kerey is now reigning in place of his father⁶.

Note that although the Perekop Tatars ought to become more cultured and less severe under the influence of the sixth climate in which they live, they have not lost their old rapacity and savage cruelty, more inherent to animals living in the fields and forests rather than to the residents of cities and villages⁷.

Sometimes they attack, devastate and loot Russia, Lithuania, Wallachia, Poland, and from time to time Muscovy.

Chapter Three. On the Kazan Tatars and the Nogai Tatars

The third horde — that of the Kazan Tatars — was so named after Kozan Castle⁸, which stands above the Volga river near the borders of Muscovy, where they live.

They originated from the main Tatar Horde, namely the Chagataid or Trans-Volga Tatars, like all other Tatars.

This Kazan Horde has about 12, 000 warriors, and if necessary they can gather up to 30, 000 warriors if they call other Tatars.

It is not appropriate to write about their tsars, deeds and genealogies, because they are tributaries of the Prince of Muscovy and depend on his will in peace and in war, as well as in the matter of electing a ruler⁹.

Therefore, what will be said about the Tsar of Moscow can be attributed to them as well.

The Okkass or the Nogai Tatars are the fourth horde, which is young and newly established, and which emerged later than all other Hordes as a branch of the Trans-Volga Tartars.

¹ In 1395, khan of the Golden Horde Tokhtamysh, who had been defeated by Central Asian ruler Timur fled to Lithuania. With the help of Grand Duke of Lithuania Vytautas, he attempted to return to power in the Golden Horde, but was defeated by Temür Qutlugh and Edigu in the Battle of the Vorskla river on 12 August 1399.

² Sheikh Ahmad lived significantly later and could not have been Tokhtamysh's son.

³ Sheikh Ahmad died around 1528.

⁴ Casimir III reigned in Poland between 1333 and 1370. It is probable that Casimir IV who ruled Poland-Lithuania in from 1440 (1447) to 1492 is being referred to here.

⁵ The representatives of the Crimean dynasty in Kasimov were Nur Devlet (1486–1490), Satylgan (1490–1506) and Janai (1506–1512).

⁶ Muhammad Giray reigned between 1515 and 1523.

⁷ According to medieval ideas, the seven climates are connected with the seven heavens; each of them owns one of seven planets, while people living in these belts by their character correspond to the characters of planets. The sixth climate of Maciej Miechowita belongs to Hermes; people influenced by him are inclined to have intellectual interests. These people inhabit the shores of the Black and Caspian Seas.

⁸ That is, Kazan.

⁹ From 1487 to 1521 (with breaks), the Kazan Khanate was dependent on Grand Princes of Moscow in the questions of external policy-making and appointment of new khans.

After Okkass, an outstanding servant and warrior of the Great Khan who had 30 sons, was killed, his sons separated from the main Trans-Volga Horde and settled near the castle of Sarai approximately 70 years or a little less before the current year of 1517. Soon afterwards they expanded greatly, such that today they have already become the most numerous and largest Horde.

They are closer to the cold north than all other Tatars and are adjacent to the eastern edge of Muscovy, which is often subject to their attacks and robberies.

It is ruled by Okkass's sons and grandsons. They have neither money, nor coins, but rather sell things for things, that is, for slaves, children, cattle and pack animals.

Book Two

Treatise One. On the description of upper European Sarmatia

[...]

Chapter Two. On Lithuania and Samogitia¹

[...] Having established peace all around, he [Vytautas] penetrated into the east, attacked the Tatar Horde, brought a lot of Tatars to Lithuania and settled them there in a particular territory, where they remain to this day².

After that, having gathered a strong army, he again went to Tataria, crossed the rivers and on 14 August he reached a wide and open plain near the Vorskla river. There he was met by Temir-Kutlug, the Trans-Volga Tatars' Emperor, who is called Tamerlane by writers, with a huge innumerable multitude of Tartars. Both sides began peace negotiations, but the Tatars refused to accept the agreement. Therefore, on the advice of his people, Vytautas moved to the rear with his bodyguards and fled to Lithuania, and his army, defeated by the countless mass of Tatars, was completely destroyed. [...]

Chapter Three. On the vastness of the Grand Duchy of Lithuania and what is found there

[...] In addition, there are Tatars in the Duchy of Lithuania near Vilnius. They have their own villages, and they cultivate fields as we do; they ply trades and sell goods; they go to war on the order of the Grand Duke of Lithuania; they speak Tatar and revere Muhammad, as they belong to the Saracen faith.

[...] When the noble and rich begin to feast, they celebrate from noon to midnight, continuously filling their bellies with food and drink; they leave the table when nature calls to relieve themselves, and then eat again and again to the point of vomiting, until they lose their reason and senses, and they can no longer tell their heads from their backsides.

This pernicious habit exists in Lithuania and Muscovy, and even more shamelessly in Tataria.

There is another custom in those countries — Lithuania, Muscovy and Tataria — of selling people: slaves are sold by their masters like cattle, as well as their children and wives; moreover, poor people born free, having no food, sell their sons and daughters and sometimes even themselves to get some food, however crude, from their owners.

Treatise Two

[...] There are many principalities in Muscovy. [...]

The Principality of Suzdal and many of its neighboring principalities have been devastated and ruined by the Tatars.

There is even a Tatar territory subordinate to the Tsar of Moscow, called the Kazan Horde, which can muster an army of 30 soldiers. It is situated in the steppe near Kozan Castle, which belongs to the Prince of Muscovy and is bathed by the great Volga River. [...]

They [the Russians] adhere to a single faith and religion after the fashion of the Greek faith. [...]

¹ That is, Zhmud (Žemaičiai) is a historical region in the Northwest of modern-day Lithuania. The name originates from the Lithuanian tribe of the Zemaitians.

² The description of the Battle of the Vorskla river follows.

The Kazan Tatars are an exception. While recognizing the Prince of Muscovy, they honour Muhammad along with the Saracens and speak Tatar [...].

3. Sigismund von Herberstein. From 'Notes on Muscovite affairs'

This text has been reproduced from the following publication: Sigmund Herberstein, Freiherr von. Notes upon Russia Being a Translation of the Earliest Account of That Country, Entitled *Rerum Zapiski o Moskovii* (Notes on Muscovite Affairs). London: Printed for the Hakluyt Society, 1851.

[...] [Ivan III] even appointed and deposed the kings of Casan at his own pleasure; sometimes he threw them into prison, but at length, in his old age, received a severe defeat at their hands¹. [...] But although this Grand Duke was so powerful as a prince, he was nevertheless compelled to acknowledge the sway of the Tartars, for when the Tartar ambassadors were approaching, he would go forth from the city to meet them, and make them be seated while he stood to receive their addresses, a circumstance which so annoyed his Greek wife² that she would daily tell him she had married a slave of the Tartars, and to induce her husband to throw off this servile habit would sometimes persuade him to feign sickness on the approach of the Tartars. There was within the citadel of Moscow a house in which the Tartars lodged for the purpose of learning what was going on at Moscow, and as this also gave great offense to his wife, she sent messengers with liberal presents to the queen of the Tartars, begging her to give up that house to her; for that she had been admonished in a dream from heaven to build a temple upon that spot; at the same time she promised to allot another house to the Tartars. The queen granted her request; the house was destroyed and a temple was built on its site, and the Tartars thus driven out of the citadel have never been able to obtain a house from any subsequent Duke³.

[...] At that time also the grand duke attacked the kingdom of Kazan both with a naval and military force, but returned unsuccessful, and with the loss of a large number of his soldiers⁴. [...]

Every second or third year the prince holds a census through the provinces, and conscribes the sons of the boyars, that he may know their number, and how many horses and serfs each one has. Then he appoints each his stipend, as has been said above. Those who have the means to do so, fight without pay. Rest is seldom given them, for either they are waging war against the Lithuanians, or the Livonians, or the Swedes, or the Tartars of Kazan; or if no war is going on, the prince generally appoints twenty thousand men every year in places about the Don⁵ and the Occa, as guards to repress the eruptions and depredations of the Tartars of Perekop⁶. [...]

When the King of Perekop⁷, on his return from investing his nephew⁸ with the sovereignty of Kazan, had pitched his camp at thirteen miles⁹ distance from Moscow, the Prince Vasiley¹⁰ pitched his camp by

² That is, Sophia (Zoe) Palaiologina (d. 5.06.1503), Ivan Third's wife (from 1472). The mother of twelve children, including Vasily, the future Grand Prince of Moscow (1505–1533).

³ In the 17th century, people said that on the site of the Horde courtyard in the Kremlin (where a yard with stables was located) between 1473 and 1477 St. Nicholas of Gostun Cathedral was erected.

⁴ It is possible that the campaign of 1520 is referred to here—when A. Bulgakov's troop moved 'on boats' and I. Ushaty's army marched by land against Kazan.

⁵ Tanais is the ancient Greek name of the Don.

⁶ That is, the Crimean Tatars.

⁷ Obviously, Crimean Sahib Giray khan (1532–1551) is referred to here. Before this, he ruled in Kazan (1521–1524).

⁸ That is, Safa Giray who reigned in Kazan between 1524 and 1531, 1536 and 1546, 1546 and 1549.

⁹ A German mile amounted to over 7 km.

¹⁰ The lapsus linguae which was not corrected during the final editing shows that the text had been written before 1533.

the River Occa, and then for the first time made use of infantry and artillery, perhaps with the view of displaying his strength, or to blot out the disgrace which he had incurred the year before from a most disgraceful flight, in which he was said to have hidden himself some days under a hay stack; or possibly he may have done so with the intention of ridding his territories of a king whom he thought likely to invade his throne¹. [...]

There is a great difference and variety of conduct amongst men in fighting as well as in other things. The Russian, for instance, when he once takes flight, thinks there is no safety beyond what flight may obtain for him; and if he be pursued or taken by the enemy, he neither defends himself nor asks for quarter.

The Tartar, on the contrary, if he be thrown from his horse and stripped of all his weapons, and be even very severely wounded, will generally defend himself with his hands, feet, and teeth, when and how he can, as long as he has any breath in his body.

[...]

On their money

[...] Into Tartary, moreover, are exported saddles, bridles, clothes, and leather; but arms or iron are not exported to other places towards the east or north, except by stealth, or by the express permission of the officers. [...]

Fox skins, and especially black ones, which they usually make into caps, are valued very highly, for sometimes ten of them are sold for fifteen gold pieces. Squirrel skins also are brought from different parts, but the greater number from the province of Siberia; but those of the finest quality from Schwaii, not far from Kazan. These skins are brought also from Permia, Viatka, Ustyug, and Vologda, always bound up in bundles of ten; in each of which bundles there are two best, which they call Litzschna; three, somewhat inferior, which they call Crasna; four, which they call Pocrasna; and the last one, called Moloischna, is the worst of all. These skins are sold for one or two denga a-piece². [The merchants take the best and picked ones into Germany and other parts, and derive great profit therefrom.]

[...]

I shall now undertake the 'chorography' of the principality and lordship of the Grand Duke of Muscovy, taking Moscow, the principal city, as the starting point; and proceeding thence, I shall describe the surrounding and more famous principalities only, for in so great an expanse I have not been able to trace exactly the names of all the provinces. The reader shall, therefore, content himself with the names of the cities, rivers, mountains, and some of the more remarkable places.

[...] Lower Novgorod is a large wood-built city, situated on a rock at the confluence of the Volga and Occa, with a stone fortification, built by the present monarch, Vasiley³. They say that it is forty German miles east from Murom; and if so, Novgorod will be a hundred miles from Moscow. The country equals Vladimir in fertility and abundance. It forms the boundary, in this direction, of the Christian religion; for although the Prince of Muscovy has beyond this Novgorod a fortress named Sura⁴, yet the intermediate people, who are called Czeremissi, do not follow the Christian, but the Mahometan religion⁵. The Czeremissi live northwards beyond the Volga, and to make a distinction from them, those that live above Novgorod are called the Upper or Mountain Czeremissi; not, indeed, from any mountains, for there are none, but rather from the hills which they inhabit.

¹ The joint Crimean-Kazan campaign against Moscow in 1521 is meant here.

² The difference in prices may be explained by the fact that in the 1530s two currencies circulated in the Grand Principality of Moscow: the one of Novgorod (Novgorodka, kopeck, 1/100 of ruble) and the one of Moscow (Moskovka, Sablyanitsa, 1/200 of ruble).

³ The construction of Novgorod's Kremlin made of stone with participation of Italian architect Pietro Francesco (Pyotr Fryazin) was completed in 1515.

⁴ The city, established in 1523 as an outpost in the struggle against the Kazan Khanate consequently received the name of Vasilsursk.

⁵ Many contemporary Tatar localities have a Finnish etymology in their names.

The river Sura divides the dominions of the Prince of Russia and the King of Kazan¹. Coming from the south, it bends its course eastward twenty-eight miles below Novogorod, and flows into the Volga. At the confluence of the two rivers, Prince Vasiley has built, on the further bank, a fortress, which he has named after himself, Vasilovgorod which has subsequently become the hotbed of many misfortunes². Not far hence is the river [Moksha], which also flows from the south, and falls into the Occa above Murom, not far from the town of Cassimovgorod, which the Prince of Moscow has given up as an abode for the Tartars³. The women of the latter people, by a certain art, stain their nails a black colour, for the sake of beauty, and constantly go about with their heads uncovered and their hair dishevelled⁴. Eastward and southward of the river [Moksha] are immense forests inhabited by the Mordwa people, who have a dialect of their own, and are subject to the Prince of Moscow. Some maintain that they are idolaters, while others say that they are Mahometans..⁵ They dwell in villages scattered here and there, and cultivate the ground. Their food is game and honey, and they abound in valuable skins; they are especially hardy men, for they have often bravely repulsed those Tartars who rove about in quest of plunder. They are nearly all foot soldiers, remarkable for their long bows, and very skillful in archery. [...]

The Don flows out of the province of Moscow up to this fortress [Ryazan]⁶ and nearly twenty-four German miles beyond it; it passes near a place called Donco⁷, where the merchants going to Azov⁸, Caffa, and Constantinople, load their ships. This they do generally in autumn in the rainy season, for the Don is not full enough of water at other times of the year to bear laden vessels⁹. [...]

The very famous river Don, which divides Europe from Asia, rises nearly eight miles south and a little by east from Tula [...] the Don in its first course flows due east, and runs between the kingdoms of Kazan and Astrakhan, six or seven German miles from the Volga; It then takes a southward course, and forms the marshes which have received the name of the Palus Moeotis. The nearest city to its source is Tula, but on the shore nearly three miles above its mouth is the city of Azov, which was originally called Tanais¹⁰. Four days' journey above this is the town of Achas¹¹, situated on the same river (called in Latin, Tanais), which the Russians call the Don. This place is so remarkable for its abundance of excellent fish, and also for its pleasantness — each side of the river being laid out and cultivated with considerable industry in the fashion of a garden, with a variety of plants and most delightful roots, and a great number of fruit-bearing trees — that it is impossible to praise it too highly. There is also such an abundance of game there which they kill with their arrows without much trouble, that persons travelling through the country want nothing else to support life, except fire and salt for cooking¹². In these parts they do not reckon by miles, but days' journeys. So far as I could form a con-

¹ Vasily III was called tsar for the first time in the agreement of 1514 with the Holy Roman Emperor Maximilian I. Sigismund von Herberstein was inconsistent with the use of Vasily Third's titulary.

² The Kazan people twice (in 1536 and 1539) attempted to return their lands and conquer the city.

³ It is about the Kasimov Khanate (the Tsardom of Kasim, from 1445 (1452) to 1681) founded by Ulugh Muhammad's son Kasim.

⁴ Apparently, it is about henna body painting which only wealthy Tatar women could afford. From the time of the Golden Horde, Islamic Tatar women did not hide their faces (see: Collection of Works Related to the History of the Golden Horde-I, pp. 290–295).

⁵ The ancestors of the present-day Mishar-Tatars who professed Islam lived in the Mordvin lands.

⁶ To be more exact, in Pereslavl-Ryazansky.

⁷ Here, Dankov is most likely meant, a city on the Don river near the Vyazovka river's fall in it, present-day Lipetsk oblast.

⁸ Meothic swamps—the Azov Sea. Meothida was the name of the Azov Sea among the ancient Greeks and Romans beginning with the 7th BC who attributed it to the name of local tribes—the Meothes.

⁹ According to Russian sources, such sailings were carried out along the spring floods.

¹⁰ From the 3–2nd to the 4th centuries BC, ancient Tanais, a city of the Bosphoran Kingdom which was the most northerly, was located on the right bank of the Don river. The Italian colony of Tana was situated on the left bank of the Don.

¹¹ The location of Akhas city is not exactly known. It was possibly located on the site of present-day village of Starocherkasskaya or near the hamlet of Starozolotovskiy in Rostov Region.

¹² Compare with information provided by Russian sources: N. Baklanova. The description of Russian nature is found in 'The Journey of Metropolitan Pimen to Tsargrad in 1389' and is reflected in miniatures of the Illuminated

jecture, the Don is nearly eighty German miles from its source to its mouth, going in a straight line. Nearly twenty days' sail from Donco, where, as I said, the Don is first navigable, we come to Azov, a city which is tributary to the Turks¹; and, according to them, is five days' journey from Isthmus of Taurica, otherwise called Perekop². Here is a famous emporium of many nations, who come thither from different parts of the world; And as free access is permitted to all people of every country, with abundant liberty of buying and selling, so also on going out of the city are all permitted to do what they please with impunity. As to the altars erected by Alexander and Caesar, or their ruins, which several writers describe as being in these parts, I have not been able to learn anything for certain, either from the natives, or others, who have very frequently travelled in those places. The soldiers also, whom the prince is accustomed to have there in garrison every year to reconnoitre and repress the excursions of the Tartars have told me when I have made inquiries upon the subject, that they have neither seen nor heard anything of the sort³. They confessed, however, that about the mouth of the Lesser Don⁴, four days' journey from Azov, near the site of Velikiprevos⁵, in the holy mountains, they have seen some statues of marble and stone⁶. [...]

Misceveck is a marshy place, in which there was formerly a fort, the remains of which yet exist⁷. There are still some people who dwell in huts near this place, who in times of danger take refuge among those marshes, or flee into the fortress⁸ [...].

Coluga is a town on the river Occa, thirty-six miles from Moscow [...]. The prince is accustomed to place garrisons every year in this spot, against the incursions of the Tartars.

Worotin is a city and a fort, bearing the same name as its principality. It lies three miles above Coluga, not far from the bank of the Occa. The principality was formerly possessed by the Knes Ivan Worotinski, a warlike man, and excelling in various accomplishments, through whose generalship the Prince Vasiley had often won distinguished victories over his enemies. In the year 1521, however, when the King of Taurida crossed the Occa, and, as has been already said, invaded Russia with a large army, the Knes Dimitry Bielski, a young man, was sent with an army by the Prince to check and repel him; but he, neglecting the wise counsels of Worotinski and others, disgracefully took to flight at the first sight of the enemy. After the departure of the Tartars, the Prince made diligent inquiries respecting the authors of the flight, but acquitted Andrew, the prince's own brother⁹ (who really had been the cause of it), and others; while Ivan Worotinski not only fell under the prince's severest displeasure, but was seized and driven out of his principality. He was, it is true, finally discharged from custody, but only on the condition that he should never leave Moscow. I have myself seen him at Moscow among the principal men at the prince's court¹⁰.

Chronicle of 16th century. // Works of the Ancient Russian Literature Department, 1969, vol. 14, pp. 124—125.

¹ The Ottoman Turks established their control over the city in 1471.

² Perekop is a ditch on the Crimean isthmus which then gave name to the city of Or-Kapi or Ferkh Kermen, as the Turks called it.

³ The legends about the altars (stone constructions above which sacrifices were made) of Alexander the Great and Julius Caesar in the Middle Ages were supported by the influence of 'Geographical Guidance' of Claudius Ptolemy (Book 3. Chapter 5. The Location of European Sarmatia. § 26).

⁴ That is, the Siverskiy Donets.

⁵ Veliky Perevoz was located on the Donets river south of the estuary of the Toropets river.

⁶ Apparently, Kipchak stone balbals ('babs') are being referred to here.

⁷ Mtsensk is a city in Northern Orel Region. It was founded as a fortress in the 16th century.

⁸ Evidently, it was a defensive fortress against attacks by the Crimean Tatars.

⁹ During Muhammad Giray's campaign, Andrey Ivanovich Staritsky along with Vasily III, in 1521 escaped to Volokolamsk from Moscow. In 1522 he was in Kolomna.

¹⁰ Ivan Mikhailovich Vorotynsky (Peremyshlsky) was prince of the Vorotynsk Principality and an active participant in military actions in Ruthenia: in 1507 he defended Belev, in 1508 he provided help to Glinsky, in 1512 he supported the campaign against Smolensk, in 1512 and 1514 he defended Tula and Mstislavl, in 1517 he defended Aleksin, in 1521—in Tarusa, but he did not march against the Crimeans during Muhammad Giray's raid. He was arrested on 17 January 1522, in February 1525 he took an oath to Vasily III, in 1531 and 1532 he was rehabilitated as a commander.

Sewera is a great principality, whose citadel, Novogrodek, not long since was the seat of the Sewerian princes, before they were ejected from the principality by Vasiley¹. [...] The people are very warlike, through their constant engagements with the Tartars. Vasiley Ivanovich, however, reduced this principality, like many others, into subjection to himself, in the following manner: Vasiley had two nephews, sons of his brothers, one surnamed Semetzitz, who possessed the fortress of Novogrodek, while the other held the city of Staradub. At the same time, a certain prince named Dimitry possessed Potivlo². Now Vasiley Semetzitz, who was strong in arms and a terror to the Tartars, was so strongly infected with the lust of power that he coveted the whole principality for himself, and could not rest until he had brought Vasiley of Staradub to a most abject condition, and then driving him away, he took possession of his province. After succeeding in this attempt, he attacked Dimitry in a different manner. He traduced him to the Prince as one who was plotting treachery. The Prince, indignant at this, ordered Vasiley to seize Dimitry by any contrivance, and to send him forthwith to him to Moscow. Vasiley accordingly contrived to have Dimitry waylaid while hunting; and stationed horsemen at the gates of his town to seize him if he should endeavour to flee thither. And being thus captured, Dimitry was taken to Moscow and thrown into prison. His only son, Dimitry, took this injury so much to heart that he immediately fled to the Tartars, and with the view of effecting a more speedy and heavy revenge for the wrong done to his father, he abjured the Christian faith, was circumcised and became a Mahometan. During his stay amongst the Tartars, he chanced to fall violently in love with a very beautiful girl, and as he could not gain possession of her by any other means, he privately carried her off without the consent of her parents. The servants who were circumcised with him, made this known to the girl's relations, and they suddenly attacked him one night, and put both him and the girl to death by a discharge of arrows. When Prince Vasiley heard of the flight of Dimitry's own son to the Tartars, he ordered the father to be placed in still closer confinement, and when the old man shortly after heard of the death of his son in Tartary, he died worn out with grief and imprisonment in that same year, 1519. All this was done through the agency of Vasiley Semetzitz, at whose instigation the prince had previously seized his relative, the lord of Corsira, and slain him in prison. But as it often occurs that they who lay snares for others fall into them themselves, so it happened to this Semetzitz. For he also was accused to the Prince of the crime of rebellion, and was summoned on that charge to Moscow, but refused to go thither unless he first received letters of safe conduct, ratified by the oath of the Prince and the metropolitan. Upon his receiving these, which were formally made out and sent to him, he went to Moscow on the 19th of April 1523, and was honourably received by the Prince, who even offered him presents; but a few days after, he was seized and thrown into prison, and was still kept in confinement [at the time that I was there]. They say that the reason of his being imprisoned was that he had sent letters by the governor of Kiev to the king of Poland, expressing a wish to desert to him; and that the governor, when he became acquainted with his base intention towards his prince, resigned his charge of the letters, and sent them immediately to the Prince of Moscow. Others, however, ascribe a more likely reason, viz., that as Semetzitz was the only one in all the empire of the prince of Muscovy who now remained in possession of fortified towns and principalities, the latter, in order the more easily to eject him, and for the greater safety of his own government, invented against him the charge of treason, as a means of removing him. In allusion to this, a certain jester went about carrying brooms in the streets at the time that Semetzitz went into Moscow³. And on being asked what he meant by this, answered, that the prince's dominions were not yet cleansed, but that now the fitting time was come for sweeping all garbage out of the empire. Ivan Vasileivich first added this province to his dominions after he had routed the army of Alexander, the grand-duke of Lithuania, at the river Vedrosch. The princes of Sewera, moreover, derive their race from Dimitry, Grand-duke of Muscovy. Dimitry had

¹ In 1523.

² Up to 1500. Putivl was a part of the Grand Duchy of Lithuania, its governor was prince Bogdan Fyodorovich Belsky. Since 1500 the city was annexed to the Grand Principality of Moscow. The eldest Dmitry was possibly the son of Yuri Putyatich, who was married to the sister of Vasily Ivanovich Shemyachich.

³ Traditionally the image of 'sweeping out' enemies and adversaries from the country arose during the period of the oprichnina.

three sons, Vasiley, Andrew, and George. Of these, Vasiley, as the eldest, succeeded his father in the kingdom; and from the other two, Andrew and George, the princes of Sewera have derived the origin of their race.

[...] In going through the desert of Potivlo into Taurida, one meets with the rivers Ina¹, Samara, and Ariel², the two last of which are rather broad and deep, and travelers are sometimes detained a long time in crossing them, on which occasions it will often happen that they are surrounded and captured by the Tartars. Next come the rivers Koinskawoda and Moloscha³, the passage across which is effected by a novel kind of ferry boat. They bind together bundles of small wood into faggots, and place themselves and their goods upon them, and thus by paddling and availing themselves of the stream, they are carried to the opposite side. Others fasten faggots of this kind to the tails of horses, which, by a plentiful use of the whip, they force to drag them over to the opposite shore. [...]

I now return to the principalities of Moscow

[...] The province of Viatka lies beyond the river Kama, at a distance of nearly a hundred and fifty miles south-east of Moscow [...]. It was formerly under the dominion of the Tartars⁴; and, indeed, up to the present day, the Tartars hold rule over the country on both sides of the Viatka, especially about its mouths, where it falls into the Kama⁵. Journeys in that country are reckoned by czunkhas⁶. The czunkha is equal to five versts. The river Kama empties itself into the Volga twelve miles below Kazan. The province of Siberia is watered by this river.

[...] The province of Siberia borders upon Permia and Viatka; but I have been unable to learn whether it contains any cities or fortresses. In this province rises the river Jaick, which empties itself into the Caspian Sea. They say that this region lies waste on account of the neighbourhood of the Tartars; or, if it is cultivated in any part, it is where the country has been taken possession of by the Tartar Schichmamai⁷. (This country is regularly sacked by the Tartars and others, especially Schichmamai.) The natives use a dialect of their own. They trade principally in squirrel skins, which surpass in size and beauty those of other provinces; but we have not been able to see any great plenty of them in Moscow.

The people of Czeremissi dwell in the woods below Lower Novogorod. They have their own dialect, and follow the tenets of Mahomet. They are now subservient to the King of Kazan, although the greatest part of them were tributaries of the Duke of Muscovy, whence they are still reckoned as Russian subjects. The Prince had several of these people brought to Moscow on suspicion of rebellion, whom I saw when I was there⁸; but as they were afterwards sent back to the borders towards Lithuania, they at length dispersed themselves into various parts. These people, who have no fixed abodes, inhabit a region stretching far and wide, from Viatka and Vologda as far as the river Kama. All of them, both men and women, are exceedingly swift in running, and very skillful archers, never laying down the bow out of their hands; and so great is the delight which they take in this exercise, that they will not give their children food until they hit a mark with their arrows. (The women wear headdresses made of bark looking like diadems such as those with which saints are depicted, tucked into a round hoop, covering them with a veil. When I asked them how they are able to fit between trees and bushes wearing such high headdresses, which they must often do, they answered, 'And how does the deer fit here if his antlers are even higher?').

¹ Possibly, the Sosna, though it flows significantly farther to the East.

² The Orel' river flows through the present-day regions of Kharkov, Poltava and Dnepropetrovsk in Ukraine.

³ The Molochnaya river flows through the present-day Kiev region in Ukraine.

⁴ The Vyatka land was dependent upon the Kazan khans at the end of the 1460s till 1480s.

⁵ The possessions of Kazan khans spread up to the mouth of the Cheptsra river—the largest left tributary of the Vyatka river.

⁶ Chunkas was a measure of length which was preserved in Perm up to the 19th century. Borrowed from the Finno-Ugric language, from the verb 'to stop'.

⁷ Shih-Mamai (Mamai murza) was a Nogai murza; in 1516 he was in the Crimea, and ruled the Nogai Horde for some time.

⁸ That is, in 1526.

Two miles from Lower Novogorod is a settlement of several houses, having the appearance of a municipal town, where salt used to be prepared¹. These houses were burnt some time since by the Tartars, but afterwards restored by order of the prince.

The Mordva are people situated on the southern shore of the Volga below Lower Novogorod; They resemble the Czeremissi in all things, except that they are more frequently found dwelling in houses. And here let us terminate our digression as well as our description of the Muscovite Empire.

I shall now subjoin some details respecting the neighbouring and surrounding nations, observing the order in which they came under my notice in travelling from Moscow eastwards. In this arrangement, the Tartars of Kazan come first; of whom, before I proceed to their peculiar characteristics, it is necessary that I should first make some general observations. .

Of the Tartars

Concerning the Tartars and their origin: besides what is contained in the annals of the Poles, and in the little books upon the two Sarmatias², much has been written by various authors, which it would be more tedious than useful to repeat here. I have, however, thought it right briefly to write down such things as I have learned from the Russian annals, and from the accounts given me by a great number of persons³. They say that the Moabites⁴, who were afterwards called Tartars, and who differed from the rest of mankind in language, manners, and dress, came to the river Calka; but that no one knew whence they came, or what religious doctrine they held. Although they were called by some Taurimeni, by others they were known as Pieczeni⁵, and by others under another name. Methodius⁶, bishop of Patanczki, says that they wandered out of the deserts of leutriskie⁶ lying between the north and east, and gives the following as the reason of their emigration. He says that a certain man of the highest rank amongst them, named Gideon, filled them with terror, by saying that the end of the world was at hand; and that they being led away by his preaching, and anticipating the destruction of the boundless wealth of the globe, made expeditions with an innumerable multitude to plunder the surrounding provinces, and cruelly ransacked the whole territory westward as far as the Euphrates and the Persian Gulf. And thus, after ravaging the provinces which lay in their way, routed at the river Calka, A.M. 6533⁷, the nations of the Polovtzi, who alone, with the assistance of the Russian forces, dared to arrest their progress. On this subject, it is evident that the author of the little book, *De Duabus Sarmatiis*, was in error in speaking of the people of the Polovtzi, when he interpreted their name as meaning hunters; for Polovtzi means men of the plain; poli signifying a plain — lovat, and lovtzi both signifying hunters, the termination tzi and ksi (sic!) not changing the signification, which does not depend upon the last, but upon the first syllables. But as it is a general custom with the Russians to add the generic syllable ski⁸ to this kind of words, the man has been deceived by this circumstance, so that Polovtzi ought to be interpreted 'men of the plain', and not hunters. (there almost all names of lords and possessions derived from cities, castles and lands contain this affix). The Russians maintain that the Polovtzi were Goths, but I do not agree with that opinion. He who attempts to describe the Tartars will have to describe many races; for they derive this name from one sect alone, while they consist of various nations lying wide apart from each other. And now I return to the task I proposed to myself. Bathi, proceeding with a strong force northwards, took

¹ Balakhna is possibly being referred to here. It was burned down in 1521 during the campaign launched by Sahib Giray, a Kazan khan.

² Maciej Miechowita's work 'Treatise on the Two Sarmatias' (1517) is referred to here.

³ A short description of the history of the 13–15th centuries (the Battle of the Kalka river, legendary data about the origin of the Tatars, about Batu and the political history of the Golden Horde) is obviously borrowed from the Ermolin Chronicle.

⁴ The people of Moab were inhabitants of the ancient country of Moab which appeared approximately in the second half of the second millennium BC on the Eastern bank of the Jordan river and the Dead sea coast. According to the Bible, the people of Moab are descendants of Abraham, Lot and the latter's elder daughter.

⁵ Methodius of Patara (of Olympus) (around 260–312) was a Christian ecclesiastic author.

⁶ The Etriv Desert was located to the northeast of Palestine, it is often understood as the Syrian Desert.

⁷ That is, in 1024 according to the Julian calendar. It might be a lapse of the pen, because the Russian chronicles date the Battle of the Kalka river to 1224.

⁸ The suffix '-sk' is characteristic of anthroponyms of Belarus and Poland, not Ruthenia.

possession of Bulgaria, which lies on the Volga below Kazan. In the following year, A.M. 6745¹, following up his victory, he advanced into Muscovy and took the royal city, which surrendered to him after a siege which lasted a considerable time. He afterwards, however, broke his faith with respect to the terms upon which this surrender had been made; and proceeding onwards, carrying slaughter wherever he went, he desolated the neighbouring provinces of Vladimir, Pereaslav, Rostov, and Susdal — comprising many towns and fortresses — with fire, slaughtering the inhabitants or reducing them to servitude. He routed and slew the Grand Duke George², who had come out to meet him with a trained army; he also took Vasiley Constantinovich prisoner, and put him to death³: all which took place in the above-mentioned year 6745. From that time, nearly all the princes of Russia were inaugurated by the Tartars, and paid allegiance to them, until the time of Withold, Grand Duke of Lithuania⁴, who valiantly defended his own provinces and those which he had taken possession of in Russia against the arms of the Tartars, and was a terror to all around him. The Grand Dukes of Vladimir and Muscovy, after they had once yielded allegiance and submission to the Tartar princes, continued therein up to the time of the present Duke Vasiley. The annals say that this Bathi was killed in Hungary by Vlaslav, king of the Hungarians (who on his baptism was named Vladislaus, and was enrolled amongst the number of the saints); For he had carried off the king's sister, whom he had accidentally met with during the spoiling of the kingdom, and the king, moved by love for his sister, and by the indignity of the deed, pursued him; but when he made his attack upon Bathi, his sister took up arms in the cause of the adulterer, against her brother, Which so enraged the king that he slew his sister together with the adulterous Bathi. These things were done A.M. 6745⁵.

Bathi was succeeded in the empire by Asbec, who died A.M. 6834⁶, and was succeeded by his son Zanabeck, who, after slaying his brother in order that he might reign alone without apprehension, died in the year 6865⁷ (6868⁸). He was followed by Berdebeck, who after in like manner killing his twelve brothers, died in 6867⁹. After him came Alculpa, who did not reign more than a month; for immediately after assuming the reins of government he was slain, together with his children, by a certain prince named Naruss. As the latter now became the possessor of the kingdom, all the princes of Russia came together to him, and did not depart till each of them had obtained the power of ruling independently in his own province. Naruss was slain in the year 6868. He was succeeded in the kingdom by Chidir, who was slain by his son Themerhoscha, who, gaining the kingdom by a crime, scarcely enjoyed it for a week; for being driven out by Tenmick Manais, and fleeing beyond the Volga, he was slain by the soldiers who pursued him, in the year 6869. After these, Thachamisch obtained the empire, A.M. 6890¹⁰, and going forth on the 26th of August with an army, he laid waste Muscovy with fire and sword¹¹. Being routed by Themirkutlu, he fled to Withold, Grand Duke of Lithuania. Themirkutlu reigned over the kingdom of Savai, A.M. 6906¹², and died 6909¹³. His son Schatibeck succeeded him in the empire, after whom came Themirassack, who led an immense army into Retzan with a view of depopulating Russia, and inspired such terror into the princes of Muscovy, that, despairing of victory, they threw down their

¹ That is, in 1236 according to the Julian calender.

² Grand Prince of Vladimir, Yury Vsevolodovich, died on 4 March 1238 in a clash with the Tatar-Mongols on the Sit river.

³ Rostov's prince Vasilko Konstantinovich was captured on 4 March 1238 and then executed.

⁴ This refers to Vytautas who ruled between 1392–1430.

⁵ The legend of Batu's assassination was included in the Russian chronicles from the latter half of the 15th century: in the Moscow Chronicle of 1479 under 6755 (1246) and briefly in the Ermolin and similar chronicles under 6754 (1245). Sigismund von Herberstein's inaccurate date possibly emerged as a result of a shift in literal numbers of the date of 6754 in the chronicle of the Ermolin type.

⁶ That is, in 1325. Uzbek died in 1341/42.

⁷ That is, in 1356.

¹³ That is, 1400. Temür Qutlugh died in 1399.

arms and betook themselves to the protection of the saints. They immediately sent to Vladimir for a certain image of the blessed Virgin Mary, which was celebrated for having performed many miracles; and as this image was being brought into Moscow, the Prince went out to meet it with all the multitude, to give it an honourable reception; and first most humbly imploring it to repel the enemy, he brought it into the city with the greatest respect and veneration: and they say that by this act of worship they obtained grace from the Virgin, so that the Tartars did not advance beyond Retzan. And for a perpetual memorial of this event, a temple was erected on the spot where the image was waited for and received; and that day, which is called by the Russians *stretenne*, that is the day of meeting, is solemnly celebrated every year on the 26th of August. These things took place in the year A.M. 6903¹.

The Russians relate that this Themirassack was of obscure birth, and rose to this high degree of dignity by plunder; they say also that he was an extremely clever thief in his youth, and that it was by one of these exploits that he derived his appellation; for having once stolen a sheep, and being caught by the owner, he received a violent blow from a stone which broke his leg, and as he bound it up with a piece of iron, the name he afterwards bore was given to him from the iron and from the lameness, for "Themir" signifies iron, and "Assack", lame. At the time that the people of Constantinople were sorely besieged by the Turks, he sent his son thither with auxiliary forces, who, after routing the Turks and forcing them to raise the siege, returned victoriously to his father in the year 6909².

The Tartars are divided into hordes, amongst which the horde of Savolha stands first in numbers and in fame; for all the other hordes are said to have derived their origin from it³. The word "horde" among them signifies a concourse or multitude⁴. But although each horde has its peculiar name, such as the horde of Savolha, Perekop, Nahaisa, and many others, and all are of the Mahometan religion, yet they are highly offended if they are called Turks, and consider it a reproach⁵. But delight in being called Besermani⁶, a name which the Turks also are pleased to be called by. But as the regions inhabited by the Tartars are scattered far and wide in various directions, so do they differ from each other considerably in manners and mode of life. The men are of middle stature, with a broad, fat face, with eyes turned in and hollow, wearing no hair but the beard, shaving the rest of their hair. The more distinguished persons only wear their hair, which is very black, and curling down to their ears; they are strong in frame and of a daring courage, preposterously depraved in the indulgence of their passions, and feeding contentedly on the flesh of animals in whatever manner they may have been killed⁷, except pork, from which they are obliged to abstain by law. They are so patient under the want of food and sleep, that they will sometimes endure these privations for four days together, without in the least relaxing any needful exertion. Again, when they by chance have lighted upon something to eat, they gorge themselves beyond measure, leaving nothing uneaten; and with this kind of surfeit they make amends for their previous fasting. When thus overcome by food and labour they sleep continuously for three or four days, and while in this state of deep sleep the Lithuanians and Russians, into whose country they are accustomed to make sudden irruptions and carry away much booty, fall upon them, and, defenceless as they are, having no sentinels nor any order amongst them, by degrees overwhelm them. (This is why when they are tired or burdened with trophies after raids in Lithuania and Russia they are pursued, and the pursuers, knowing approximately what place would be convenient for them to stop, do not make fires at their camp so that the Tartars will think they are safe. The latter pitch their tents, slaughter cattle and eat their fill, put their horses out to graze and fall asleep. In such a state, they are

¹ In 1394.

² In 1400.

³ Sigismund von Herberstein uses the Lithuanian name of the Great Horde. The Tatars did not differentiate between the Golden Horde and the Great Horde, its khans considered themselves the supreme rulers of the whole Ulus of Jochi.

⁴ The etymology of the Turkic word 'the Horde' presented is correct; in the Russian language, it originally meant 'a tent', 'the khan's main camp', 'the ulus's centre' and then—the centre of the entire state.

⁵ The reluctance to be called 'Turkish' could be related to ambitions and attempts by the Ottoman sultans to subdue the lands of the Black and Caspian Seas.

⁶ That is, Muslims.

⁷ Muslims are prohibited from eating carrion: The Quran, V. 3.

often attacked and routed.) Moreover, if during a long ride they are troubled with hunger or thirst, it is a practice to lance the veins of the horses on which they sit, and relieve their craving by drawing their blood; and they think that this is an advantage to the animals. (They have no roads or trails for driving cattle). As they nearly all wander on uncertain tracks, they are accustomed to direct their course by the observation of the stars, especially the polar star, called in their language *Selesni koll*, which means an iron nail¹. They are particularly fond of mare's milk, for they think that it makes men fat and strong. They use many herbs for food, especially those which grow near the river Don; very few use salt. Their kings, on occasions when they distribute food to their people, are accustomed to give one cow or one horse amongst forty men; and when these are killed, the chief men take only the intestines and divide them amongst themselves, warming them first at the fire to cleanse them before eating them (they put the paunch, heart, lungs and liver on small spits and hold them over fire until they can remove the manure from them with sticks, and eat them). They not only complacently lick and suck their fingers, greasy with the fat, but also both the knife and its handle which have been used for the cleansing process. They consider horses' heads as great a luxury as we do boars' heads, and they are only served at the tables of men of rank. They have abundance of horses, low in the neck and small, but strong, alike able to endure labour and want of food, and to support themselves on the boughs and bark of trees, or on the roots of herbs, which they scratch out of the earth with their feet (even out of snow if there is no grass). These horses, thus inured to labour, are used with great effect by the Tartars; and the Russians say they are far swifter when ridden by Tartars than by other men (they know this from experience). This breed of horses is called *Pachmat* (they usually have thick tails²). Their saddles and stirrups are of wood, unless they happen to seize or purchase any from the Christian neighbors (in other places). To save their horses' backs from being rubbed, they protect them with grass or the leaves of trees. They swim across rivers; and if they happen to be fleeing from an enemy whose force they greatly dread, they throw away saddles and dresses, and all their baggage, and escape in the greatest confusion. Their arms are bows and arrows; a sword is rarely found amongst them. They enter into a contest with the enemy with the greatest boldness from a distance; they do not, however, continue this mode of warfare long, but pretending flight, take an opportunity while their enemies are pursuing them to discharge their arrows backwards, and then, when the ranks of the enemy are broken, turn their horses suddenly round and attack them. When a battle is to be fought upon their native plains, and they have the enemy within arrows' flight, they do not enter into the engagement in regular battle-array, but draw out their forces into a winding circle, so as to afford themselves a freer and more certain opportunity of discharging their weapons at the enemy. They observe a wonderful degree of order, both in advancing and retreating; for performing which manoeuvres they have leaders, who are very skillful in these matters. But if these should happen to fall under the enemy's weapons, or through fear should make an error in generalship, the confusion of the entire army becomes so great that they cannot again be restored to order, nor be prevailed upon to turn their shafts against the enemy. This kind of contest, they themselves, from the resemblance, call a dance (with a large army, they start a dance, as the Muscovites call it; the commander or military leader approaches the hostile troop with his detachment and, having fired their arrows, they ride off; they are followed by another detachment, and thus one detachment replaces another until the first one returns after the last. If they manage to arrange matters so, they have an advantage, but if the military commanders leading the troops die or get frightened, they get confused rather quickly); but if threatened with an engagement in a narrow defile, this stratagem cannot be used, and in that case they betake themselves to flight (if it comes to close combat or a hand-to-hand engagement, they are defeated rather fast) because they are not armed either with shield, lance, or helmet so as to be able to meet the enemy in an engagement hand to hand). Their style of riding is such that they sit with the feet drawn up towards the saddle, so as to be able to turn round easily to either side; and if anything should happen to fall which they wish to pick up, they can lean upon their stirrups and easily lift it; and they are so skillful in this manoeuvre, that they can perform it while their horses

¹ 'An iron nail' is the calque of Turkic 'timir kazyk'—the usual name of the North Star among the Turkic peoples.

² *Pachmat* is a breed of long-maned hard-hoofed horses.

are galloping. When attacked with spears, they avoid the adversary's blow by suddenly lowering themselves on the opposite side, only holding on to their horses with one hand and foot. When they go out on ravaging expeditions to the neighbouring provinces (they pretend to fall off their horses, but when the spear flies past them, they are in the saddle again; one leg is always on the saddle, and they hold the mane of their horse with their hand), each man takes with him two or three horses as a supply, so that when one is tired out he may use one of the others: they lead the weary horses meanwhile by the hand. Their bridles are very light, and they use whips instead of spurs; they only use geldings in warfare, because they consider them more capable of sustaining fatigue and abstinence. The men use a similar dress to that of the women, except that the latter cover the head with a linen veil, and wear linen breeches like those of sailors. When their queens go into public, they are accustomed to cover their faces. But the rest of the people, who live a roving life in the fields, wear dresses made of sheepskins, which they never change until they are entirely worn out and ragged with long use. They never stay for any length of time in one spot, for they consider it a great calamity to be obliged to remain long in the same place; hence, when they are angry with their children, and wish to utter a heavy imprecation against them, they are accustomed to say, "may you abide in one place continually like a Christian, and inhale your own stink!" So that when they have consumed the pasture which they may find on one spot, they migrate elsewhere, together with their cattle, wives, and children, which they always lead about with them in marshy places. Those, however, who live in towns and cities follow another course of life; (there are other people who live in cities and villages; they are either old men or merchants who do not go with the warriors). When they are engaged in a war at all of a serious character, they place their wives, children, and old men in the safest spots they can find. They have no justice among them¹. When a man stands in need of anything, he can with impunity plunder another of it; and if any one is complained of before a judge for an act of violence, or for having inflicted any injury, the accused does not deny the fact, but simply says that he could not dispense with the article in question; upon which the judge usually gives his judgment [by addressing the plaintiff] in the following manner: "If you in your turn stand in need of anything, seize it from other people." There are some who say that they are not plunderers: I leave it to others to decide whether they are plunderers or not. For a certainty, the men are most rapacious, because very poor, and are always coveting what is not their own, taking away other men's cattle, plundering, and even kidnapping men, whom they sell to the Turks and others; or else surrendering them upon ransom, reserving the maidens only for their own use. They seldom besiege cities and fortified places; but take great pleasure in burning and plundering small towns and villages, thinking that the greater number of provinces they thus desolate, the larger is the dominion that they have gained to themselves. [And although they cannot stand a quiet life] they do not kill each other, unless their kings quarrel among themselves. If in any quarrel among themselves a man be killed, and the perpetrators of the crime be taken, they are simply deprived of their horses, arms, and clothing, and are then set free. Even a murderer, after giving up his horse and his bow, is dismissed by the judge, merely with the charge to go and mind his own business. Gold and silver is scarcely ever used amongst them, except by merchants, and that only in the way of commerce. Therefore, if they [their neighbours] manage to gain some money by selling something, they spend it in Muscovy (or somewhere else) on clothes and other necessary things. They do not have any borders (I mean the steppe Tartars) between each other. Once, when a fat Tartar was taken by the Russians, a Russian asked him: "How, you dog, did you, who have nothing to eat, become so fat?" To which, the Tartar replied: "Why should not I have something to eat who own so vast a territory from east to west? Can I not derive therefrom food enough in all conscience to satisfy me? I should rather think it is you who have not enough to eat, possessing so small a portion of the globe as you do, and having daily to contend for it."

The kingdom of Kazan, with the city and fortress of the same name, is situated on the further bank of the river Volga, nearly seventy miles below Lower Novogorod. This kingdom is bounded by emp-

¹ Apparently, Sigismund von Herberstein was told about the regulations of the part of the Tatar population who were nomadic and hardly touched by Islam and practiced 'barymta' ('baranta')—that is, livestock theft as a revenge for an offence or material damage which was peculiarly expressed in a 'legalised' lynching law in the form of economic revenge.

ty steppes in the east and south along the Volga; it borders with the Tartars called the Shaybans and Kaysats in the northeast¹. The king of this province can raise an army of thirty thousand men, principally foot soldiers, amongst whom the Czeremissi and Czubaschi are the most skillful archers. They say that the Czubaschi excel in the art of navigation. The city of Kazan is sixty German miles distant from the principal fortress of Viatka. The word 'kazan' means in Tartar 'a boiling [copper] pot'². These Tartars are more civilized than the rest, in as much as they cultivate their lands, live in houses, and carry on various branches of merchandize. But Vasiley, Prince of Moscow, has so subjugated them, as to bring their kings entirely under his sway³; which undertaking was the less difficult, not only from the convenient position of the rivers, which flow from Moscow into the Volga, but also from the commercial intercourse, which they could not dispense with. The people of Kazan formerly had a king named Chelealeck⁴, who died, leaving a wife named Nursultan⁵ without children, and she was taken to wife by one Abrahemin⁶, who by this means gained possession of the kingdom. Abrahemin had by her two sons named Machmedemin and Abdelatiw⁷; by a former wife, named Batmassasolta⁸, however, he had had a son named Alegam⁹, who, upon the death of his father, succeeded as the first-born to the throne. But as he was not entirely obedient to the commands of the Prince of Moscow, he was on a certain occasion made drunk at a festival by some of the councillors of the Prince of Moscow, whom he had sent thither to watch the disposition of the king, and who in that state placed him in a carriage, as if with the intention of conveying him home; but on that same night he was driven towards Moscow, and after being confined for a considerable time, was finally sent by the prince to Vologda, where he ended his days. His mother, together with his brothers Abdelatiw and Machmedemin, had been already removed to Bieloiesero¹⁰. One of the brothers of Alega, named Codaiculu, was baptized, and received the name of Peter, and the present Prince Vasiley gave him his sister in marriage¹¹. Another of Alega's brothers, named Meniktair¹², continued in his own creed as long as he lived, but had many sons, all of whom, after their father's death, except one Theodore (who lived at Moscow when I was there), were baptized together with their mother, and died [in the Christian faith]. (the German text : den Tauff angenumen und darin gestorben - is ambiguous in this place and may be understood as they died during the christening ceremony) . (Only Ditrikh was not christened; I met

¹ The Sheyban and Kaisak Tatars were a Turkic-speaking nation in the Western part of Central Asia (in the Shaybanid State) and Kazakh Hordes.

² Sigismund von Herberstein uses the Tatar folk legend as an explanation for the etymology of the word 'Kazan'.

³ The Muscovite proteges in the Kazan Khanate during the reign of Vasily III were: Sheikh (Shah)-Ali (1519–1521) and Cangali (1532–1535).

⁴ Khalil was the Kazan khan (around 1465–1467), the son of Mahmud khan.

⁵ Nur-Sultan (Nursultan) (around 1451, died in 1519/20) was the daughter of bekларibek of Ahmad, the khan of the Great Horde. In 1466 she married Khalil khan and after his death became the wife of his younger brother Ibrahim, gave birth to his two sons—the future Kazan khans: Muhammad Amin (1487–1496, 1502–1517) and Abdul-Latif (1497–1502) and daughter Gauharshad. After Ibrahim's death at the end of 1487 she married Crimean khan Mengli Giray I. In 1494/95 she completed a hajj.

⁶ That is, Ibrahim—the khan of Kazan (1467–1478).

⁷ Abdul Latif (d. 1517) was the Kazan khan (1496–1502).

⁸ Apparently, it refers to Fatima Sultan. The pronunciation of the name Fatima, Arabic in origin, in the form of 'Patima', 'Batima', 'Batma' took place among the Tatars, therefore we may assume that Sigismund von Herberstein's informants were Tatars who stayed in Moscow.

⁹ Ilkham was the khan of Kazan (1479–1487), Ibrahim's eldest son; in July of 1487, after the conquest of Kazan by the Russian army of Ivan III he was dethroned and captured. He was held in Vologda, where he died.

¹⁰ Ilkham's mother, brothers and sisters were exiled to Beloozero in Kargolom. At that time, Abdul Latif resided in the Crimea, while Muhammad Amin became the khan of Kazan.

¹¹ Khudai Kul (d. 1523) was in exile in Kargolom. In 1505, after he agreed to adopt Orthodoxy, was brought to Moscow in December, baptised and received a new name—Pyotr Ibragimovich, after which he was married to Vasily Third's younger sister, Evdokiya. In 1521 he led the defence of Moscow against the Crimean and Kazan Tatars. He is buried in the Cathedral of the Archangel of the Moscow Kremlin.

¹² Apparently, it refers to Malik-Takhir who, unlike his brother, refused to convert to Orthodoxy, however, his two sons were baptised and given new names: Vasily and Fyodor. Moreover, Fyodor was consecrated a saint in the Russian Orthodox Church.

him there). After Alega's abduction into Moscow, Abdelatiw succeeded him, but was removed from the sovereignty for a similar reason to that which had caused the removal of Alega, and Machmedemin was released by the prince from Bieloiesero, and placed on the throne in his stead. He continued to reign until the year of our Lord 1518. Nursulta, whom I have described as the wife of the kings Chalealeck and Abrahemin, after the death of Alega, married Mendliger, King of Perekop¹. Having no offspring by Mendliger, she, from love of her first children, went to Moscow to Abdelatiw, and subsequently, A.D. 1504, to her other son Machmedemin, who ruled over Kazan. The people of Kazan have now rebelled against the Prince of Moscow²; and as this rebellion has given rise to many wars, and daily conflicts among the various princes who have united in the cause of each contending party, and as the war remains unterminated up to the present day, I have thought it right to describe its reason below (and then to the other son, Machmedemin. The Kazan people were never loyal to the Muscovites, and in 1504 they declared themselves independent. This instigated many great wars with the participation of many kings, as I will recount below). Upon the rebellion becoming known to Vasiley, Prince of Moscow, his indignation and thirst for revenge was such that he sent an immense army with artillery against the people of Kazan. When the latter, who had to fight for life and liberty, heard of the terrible preparations made by the prince against them, and saw that they were unequal to contend with the enemy in an engagement hand to hand, they reasoned how they might circumvent them by stratagem. After having, therefore, first openly pitched their camp in front of the enemy, they placed the flower of their forces in ambush in convenient spots, and then assuming the appearance of being struck by panic, suddenly deserted their camp and betook themselves to flight. The Russians, who were at no great distance, becoming aware of the flight of the Tartars, broke their ranks and rushed precipitately upon the camp of the enemy. And while they were engaged in plunder, and trusting in their own security (knowing approximately when the enemies were going to attack them, they left the encampment at an appointed time and hid in an ambush. Seeing nobody in the encampment, the Muscovites decided that the Tartars had run away out of fear and attacked it without misgivings, starting to rob the tents. Meanwhile, the Tartars came forth from their ambush, together with the Czeremissian archers, and carried such slaughter amongst them that the Russians were compelled to leave their artillery and flee. In that flight, two bombardiers left their guns and fled, but were kindly received by the prince upon their return to Moscow. One of them, named Bartholomew, who was an Italian by birth, afterwards conformed to the Russian ritual, and received large presents, together with great authority and favour, from the prince. (I had occasion to talk to him)³. A third bombardier returned from the slaughter, with the gun under his charge, and hoped that he should receive great and substantial favour from the prince, for the care with which he had preserved and brought back his piece. But the prince addressing him with reproaches, said: "In thus exposing me and thyself to so great danger, you has shown a wish either readily to take to flight, or else to surrender both thyself and thy gun to the enemy. To what purpose is this preposterous diligence in preserving thy gun? I make no account of thy boasting. I have still men remaining who know not only how to found artillery, but also how to use them." (thus he was granted neither kindness nor praise). Upon the death of King Machmedemin, under whom the people of Kazan had revolted, Scheale⁴ who married his widow, attained possession of the kingdom of Kazan by the assistance of the Prince of Moscow and his wife's brother⁵. He reigned only four years, greatly hated and despised by his subjects. These feelings were increased by his effeminate and degraded constitution of body, for he was a corpulent man, with a small beard, and an almost feminine face, which showed that he was by no means fit for a warrior. In addition to this, he despised and slighted the good will of his own subjects, showed an unreason-

¹ Mengli Giray was the Crimean khan (1467, 1469–1475, 1478–1515).

² This refers to the events of 1505.

³ Bartholomew was an Italian architect and artillerist in the Russian service. In 1509 he built a wooden fortress in Dorogobuzh.

⁴ Sheikh (Shah) Ali was the ruler of the Kasimov khanate (1516–1519, 1537–1566) and the khan of Kazan (1519–1521, 1546, 1551–1552).

⁵ The Latin text 'fratris uxoris auxilio' allows us to also understand it another way: of the brother's wife.

able spirit of conciliation to the Prince of Moscow, and trusted foreigners rather than his own people. The people of Kazan were induced, by these circumstances, to offer the kingdom to Sapgirei [Sahib Girei]¹, son of Mendliger, one of the kings of Taurida. Upon which Scheale [Schich Alei], being ordered to give up the kingdom, and finding himself inferior in forces, and that the minds of his own subjects were set against him, thought it best to yield to his fate, and returned with his wives, concubines, and all his chattels, to Moscow, whence he had come. This took place A.D. 1521. After this flight of Scheale from the kingdom, Machmetgirei² King of Taurida, conducted his brother Sapgirei into Kazan with a great army, and after confirming the good will of the people of Kazan towards his brother, on his road back to Taurida crossed the Don, and bent his steps towards Moscow. Vasiley, feeling at that time tolerably secure, and not apprehending an occurrence of the kind, when he heard of the approach of the Tartars, hastily collected an army, which he placed under the command of the General Dimitry Bielski, and sent it towards the river Occa, to check the advance of the Tartars. (The prince was young, and paid no regard to the old men, who were offended by this: they had been at the head of the troops in so many wars, and now they were left out. As usually happens in such cases, both sides behaved rather badly.) Machmetgirei speedily crossed the Occa, and pitched his tent near certain fish ponds thirteen versts from Moscow itself. Sallying thence he spread fire and plunder over all the country. At the same time Sapgirei, who had also left Kazan with an army, laid waste Vladimir and Lower Novogorod. After these transactions, the two brother kings met at the city of Columna and united their forces. Vasiley, finding himself unequal to engage with so powerful an enemy, fled from Moscow, leaving his half brother Peter, a descendant of the kings of Tartary, (the one who was christened)³ together with some other noblemen, with a garrison to defend the fortress. So great was his fright, that he is said in his despair to have hidden himself for some time under a hay stack. On the 29th (20th) of July, the Tartars made a farther advance, and devastated the country with fire in all directions; and such was the terror which they inspired amongst the people of Moscow, that they had little confidence in their security even in the city and the fortress. Such was the tumult which arose at the gates from the thronging of women, children, and other helpless people, who in their intrepidity fled into the fortress with carriages and vehicles of all kinds, that in their haste they checked each other's progress, and many were trampled under foot. This immense concourse of persons caused the air to become so pestilential in the fortress, that if the enemy had remained three or four days under the walls of the city, they must have been seized by the plague and died, for in so great a crowd huddled together, they was obliged to satisfy nature wherever they could find place. There were at that time at Moscow some Livonian ambassadors⁴, who mounted their horses and betook themselves to flight, And seeing nothing around them but fire and smoke, and supposing themselves to be surrounded by the Tartars, made such speed, that in one day they reached Tver, which is thirty-six German miles distant from Moscow. The German bombardiers deserved great praise on that occasion, especially one Nicholas, born not far from Spier, an imperial city of Germany, near the Rhine, to whom was committed in very flattering terms the task of defending the city by the governor⁵ and all the counsellors, who were almost stupified with excess of fear, and who begged him to bring up the larger guns which were used for breaching walls, under the gate of the fortress, in order to drive away the Tartars. The size of these guns, however, was such, that three days would scarcely be sufficient to convey them to that spot, and they had not enough gunpowder even to load the largest gun with one charge. For it is constantly the custom with the Russians to be behind a hand in everything, and never to have anything ready; but when necessity presses, they are anxious to finish everything rapidly. Nicholas, therefore, considered it advisable to have the smaller guns, which were kept hidden at

¹ Sahib Giray was the Kazan (1521–1524) and Crimean (1532–1551) khan. He founded the city of Bakhchysaray.

² Muhammad Giray was the son of Mengli Giray and brother of Sahib Giray, the Crimean khan (1515–1523).

³ That is, Pyotr Ibragimovich (Khudai-Kul).

⁴ The Lithuanian embassy led by Bogush Voitkov was in Moscow from 29 August to 4 September 1521.

⁵ The Latin and German texts contain contradictory data: the former speaks about a 'chief'—that is a prince Pyotr, the latter—about a treasurer Yury Dmitrievich Trakhaniot (Junior).

a distance from the fortress, quickly fetched into the interior on men's shoulders; but during the delay a cry suddenly arose that the Tartars were at hand, which caused so much fear amongst the towns-folk, that the guns were left scattered about the streets, and even the defence of the walls was neglected. If a hundred of the enemy's cavalry had at that time attacked the city, they might easily have rased it to the ground with fire. (The paymaster called for a German artilleryman called Nicholas and asked him rather kindly to roll an enormous old cannon which had remained unused for years to the gate. The artilleryman started laughing, and the offended paymaster asked him what he was laughing at. 'Even if I do it', replied the artilleryman, 'it would still be useless because it would smash the gate'. 'What shall we do?' asked the paymaster. 'I thought, the more, the better'. Then they started looking for the smaller cannons hidden far away from the fortress, and peasant carried the falconets on their backs without any special aids or appliances. Suddenly there came shouts: 'the Tartars, the Tartars!' All of them left the cannons at once and fled to the fortress, so the guns lay along the street in a long line. Just a few horsemen could have easily burned down the city. There was no more than one centner of gunpowder, so first of all they had to grind gunpowder. Many cannons had been cast on the prince's orders, but there was nothing in the arsenal. Everything was under lock and key, and when the need arose, they had to prepare it in haste.) In the midst of their fear, the governor and the garrison (the counsellors) thought it best to appease King Machmetgirei by sending him a great number of presents, principally consisting of mead, in order to induce him to raise the siege (so that he would not advance and would not do even greater damage). Machmetgirei accepted the gifts, and promised that he would not only raise the siege, but would also quit the province, if Vasiley binded himself in writing to pay him a perpetual tribute as his father and ancestors had done. Letters to this effect having been willingly written and accepted, Machmetgirei withdrew his army to Rezan, and after granting the Russians permission to redeem and exchange prisoners, he sold the rest of his booty by auction. There was at that time in the camp of the Tartars one Eustace, surnamed Taskowich¹, a subject of the King of Poland, who had brought forces (several hundred horsemen) to the assistance of Machmetgirei (the Tartars), for hostilities were at that time pending between the King of Poland and the Grand Duke of Muscovy. This man brought up to the fortress some of the spoils for sale, with the intention that when opportunity offered he should rush into the gates, together with the Russians, who had come out to make purchases, and beating down the sentinels, thus take possession of the fortress. The king was willing to aid the attempt with corresponding subtlety. He sent one of his people, in whom he could place confidence, to demand of the governor of the fortress, as the servant of his tributary, to supply him with whatever he required, (provisions and other necessary things) and to come himself to him. The governor, however, Ivan Kovar², who was well acquainted with warlike matters and with the stratagems employed therein, could not be induced on any account to leave the fortress, but simply replied, that he had not yet learned that his prince had become the tributary and servant of the Tartars, but that when he should be officially informed on that point, it would be necessary that he should receive instructions as to what he should do. Whereupon the prince's letters, in which he had bound himself to the king, were produced and exhibited. While the governor was thus perplexed by the exhibition of these letters (over which many of them wept), Eustace, in pursuance of his own plan, approached nearer and nearer to the fortress, and in order the more perfectly to conceal his plan, the Knes Feodor Lopata³, a man of distinction, with several other Russians who had fallen into the en-

¹ Eustace Dashkovich (Evstafy, Ostafy, Ostap Dashkevich) (around 1470 to 25.11.1536)—Krichev's foreman, in 1504 was enrolled in the service of Ivan III, was a governor of Kanev and Cherkassy, afterward he returned to the Grand Duchy of Lithuania in 1508. He strengthened borders of the Grand Duchy of Lithuania, negotiated with the Crimean Khanate in 1521 on the eve of Muhammad Giray's campaign against Muscovite Rus.

² Ivan Vasilievich Obraztsov Khabar-Simsky (about 1465—after January 1533) is referred to here. He was the head of Nizhny Novgorod's defence in 1505 against the Kazan Tatars, a voivode during the campaigns against Lithuania in 1507 and 1508, okolnichy since 1509; in 1514, 1519, 1517 he defended Western and Southwestern borders, since 1519/20—a governor in Perevitsk and then in Ryazan, in 1522 and 1523 he was a voivode at Southern borders, in 1523 and 1524 he participated in the campaign against the Kazan Khanate. From December 1525 to February 1527 he was governor in Novgorod and in 1528 he was mentioned for the first time in the boyar rank.

³ Fyodor Vasilievich Bolshoy Telepnev Obolensky (d. 1530) is referred to here. He was a prince, voivode,

emy's hands, in the taking of Moscow, were restored upon payment of a certain ransom. In addition to this, several of the prisoners who had been too negligently guarded, or who had in any manner been relieved from labour, had escaped into the fortress (the Tartars demanded that Prince Feodor Lopata, who was captured during the raid and had run away, as well as many others released by the Tartars out of cunning, be returned), and as the Tartars approached the fortress in great multitudes to demand them back again, and did not withdraw from the fortress, although the Russians in their fright gave up the refugees, this accession of new comers greatly increased the number of the Tartars assailants, so that the terror and despair of the Russians on account of the danger which threatened them was so complete that they were quite at a loss what to do. At this juncture one Johann Jordan, an artillery-man, a German, who came from the Innthal, estimating more clearly than the Russians the magnitude of the danger, of his own accord discharged the guns which had been ranged in order against the Tartars and Lithuanians (having been an armourer in his motherland, he guessed at their malicious intent when they approached the walls so that no damage could be done to them using the big cannon. He reported this to the authorities and wanted to fire, but they did not agree to that out of fear. He still fired one time at the crowd near the king), and so terrified them that they all left the fortress and fled. The king sent Eustace, the contriver of the above plan, to remonstrate with the governor on account of the injury thus inflicted; but the latter declared that the bombardier had fired the guns without his consent or knowledge, and laid all the blame of the offence upon him; upon which the king demanded that the bombardier should be delivered up to him, and, as often occurs in desperate cases, the greatest number decided that the man by whom they had been delivered from the fear of their enemies should be given up. The governor, Ivan Kovar, alone refused, and by his extreme goodness that German was on that occasion saved; For it so happened that the king, either from impatience of further delay, or because he considered his soldiers already sufficiently encumbered with booty, and that his own interests required it, raised his camp, and departed for Taurida, leaving behind him in the fortress those letters of the Prince of Moscow by which he had bound himself to pay him a perpetual tribute. But he took with him from Moscow so great a multitude of prisoners as would scarcely be considered credible; they say that the number exceeded eight hundred thousand, part of whom he sold in Kaffa to the Turks, and part he slew. The old and infirm men, who will not fetch much at a sale, are given up to the Tartar youths (much as hares are given to whelps by way of their first lesson in hunting), either to be stoned, or to be thrown into the sea, or to be killed by any sort of death they might please. Those who are sold (or kept) are compelled to serve for full six years; after that they are set free, but dare not leave the province (and must serve or earn their living in some other way). Sapgirei, king of Kazan, sold all the captives which he took from Moscow to the Tartars in the mercantile city of Astrakhan, which is situated not far from the mouths of the Volga. After the departure of the Tartar kings from Moscow, the Prince Vasiley returned again to Moscow. [...] Afterward, as summer came on, Vasiley, resolving to revenge the slaughter inflicted by the Tartars, and to wipe out the shame which he himself had incurred from his flight and his concealment under the haystack, levied a large army, and providing himself with great store of guns and various kinds of offensive contrivances, such as had never been used in battle before by the Russians, and marching out of Moscow with all his army as far as the river Occa, took up his quarters before the city of Columna¹. Thence he dispatched heralds into Tamida, to Machmetgerei, to provoke him to a conflict, saying that in the previous year he had been insidiously attacked, without a proclamation of war, after the fashion of thieves and plunderers. To this the king replied, that, in warfare opportunities were of as much importance as arms, and that consequently he made it his custom to choose his own time for fighting, in preference to allowing others to choose for him (a convenient time; he did not intend to arrange his military campaigns according to someone else's wishes). Vasiley, being irritated by this language, and burning with the thirst of revenge, moved his camp, A.D. 1523, to Lower Novogorod, with the view of laying waste and taking possession of the kingdom of Kazan. Thence marching as

participated in the defence of the Southern borders of Muscovite Rus from the Crimean Tatars and died in the campaign against Kazan.

¹ This refers to the campaign of 1524 against the Kazan Khanate.

far as the river Sura, on the confines of Kazan, he built a fortress, which he called after his own name¹: beyond this point he made no advance, but led his army back. In the following year, however, he sent out Michael Georgiovich (Grigorievich)², one of his chief counsellors, with greater forces than before, to subjugate the kingdom of Kazan. Sapgerai, king of Kazan, being alarmed at so formidable an array, sent for his nephew, the son of his brother the king of Taurida³, a youth of thirteen years of age (one of his brother's younger sons) to preside over the kingdom in the interim, and himself fled to the emperor of the Turks to beg his assistance and cooperation. As the youth, in obedience to his uncle's suggestion, arrived on his road at Gostinovosero, Gostinovosero (that is, the island of merchants)⁴, lying amidst the waters of the Volga, not far from the fortress of Kazan, he was received with honour and liberality by the princes of the kingdom (the inhabitants). For the chief priest in that district was one Seyd⁵, who was held in such great authority and veneration amongst them, that even kings in meeting him would stand, and bowing the head, take his hand as he sat on horseback, an honour otherwise granted only to kings. Dukes did not salute even his hand, but his knees, simple nobles merely saluted his feet, while plebeians were content if they could only touch his garments or his horse with their hand. As this Seyd secretly favoured the cause of Vasiley, he took diligent measures to seize the youth, in order that he might send him bound to Moscow; but when the lad was at length captured, he was publicly put to death by the knife. Meanwhile Michael, the commander-in-chief of the Russian forces, hastened with his army to Kazan, and for that purpose despatched so great a number of vessels to Lower Novogorod, for the purpose of transporting away his guns and provisions, that the river, otherwise large, seemed to be absolutely covered all over with the crowd upon it; and on arriving at Gostinovosero, the island of merchants, he pitched his camp on the 7th of July, and remained there twenty days awaiting the arrival of his cavalry (his Russian regiments). In the meanwhile the fortress of Kazan, which was built of wood, was set on fire by some of the Russians who had been bribed for that purpose, and was burnt to the ground under the eyes of the Russian army. Even this favourable opportunity of taking the fortress was so completely neglected through the cowardice and indolence of the Grand Duke, that not only did he not lead out his soldiers to attack the castle hill, but he took no measures to prevent the Tartars building it again. But on the 28th day of the same month, he crossed the Volga, at that point where the fortress lay, and encamped with his army on the river Kazanka, and waited twenty days for a favourable opportunity of accomplishing his object. While stationed there, the Regulus of the Kazan army (a young man) pitched his tent not far from him, and often annoyed the Russians, though fruitlessly, with skirmishes of Czeremissian infantry. Upon this, King Scheale, who had come with his vessels to engage in that way, sent letters to him to demand his surrender to his hereditary sovereign. To which the latter briefly replied: "If you wish to have my kingdom, take it by the sword; let us settle it between ourselves, and let him to whom fortune gives it, hold it." While the Russians thus uselessly delayed, they began to suffer hunger from having sent away the provisions which they had brought with them; for as the Czeremissi had laid waste all the surrounding territory, and diligently watched the track of the enemy, there was nothing left to be seized upon; so that the prince was unable to gain information respecting the scarcity which oppressed his army, nor could they make any communication to him. Two governors had been appointed by Vasiley to attend to this business, one of whom, the Knes Ivan Palitzki⁶, after loading the vessels with provisions from Novogorod, had to descend the river to join the army; but he, after depositing the provisions, returned home rather precipitately, considering the existing state of affairs.

¹ It is about the construction of Vasiliev Novgorod or Vasilgorod in the Sura river estuary, which was consequently called Vasil'sursk.

² Mikhail Yurievich Zakharyin (d. 1538)—an okolnichy and then a boyar is being referred to. In 1519 he was sent to Kazan along with Sheikh (Shah) Ali, a Vasily Third's protege.

³ That is, of Safa Giray.

⁴ Because of a change in the Volga corridor and especially—the construction of the Kuybyshev reservoir, the island went under water. It is possible that a part of Gostiny island is the modern island of Markiz.

⁵ Seid (Sayyid) are descendants of the Prophet Muhammad from Husein, son of Ali and Fatima, and Muhammad's daughter. The Seidov were considered to be the heads of the Islamic community in Tatar khanates.

⁶ Ivan Fyodorovich Paletsky Shchereda (d. 1531/32)—okolnichy (since 1524) is referred to here.

The other had been sent for the same purpose with five hundred soldiers over land, but was slaughtered with his men by the Czeremissi, into whose hands he fell, scarcely nine of them escaping by flight amidst the confusion. The governor himself, being severely wounded, fell three days after into the hands of the enemy and died. When the rumour of this slaughter reached the army, so great a consternation arose in the camp, increased by a groundless report that the whole of the cavalry were slain to a man, that nothing was thought of but flight; and though all were agreed upon this point, the only subject of doubt was whether they should return against the tide, which was very difficult, or wait to descend the river when time served, so as to enable them to reach other rivers, from which they might afterwards return home by a circuitous land journey (without being subjected to danger from the enemy). During these consultations, the army meanwhile suffering under extreme famine, the nine men whom I have described as escaping from the slaughter of the five hundred, happened to arrive, and announced that Ivan Palitzki was to come with provisions; but although the latter had hastened his journey, he had had the misfortune to lose the greater part of his vessels, and had but few remaining when he reached the camp. For, being weary with his daily labour, he had laid up one night to rest himself on the shore of the Volga, but was hailed by the Czeremissi, who came upon him with great clamour, inquiring who sailed by that way; They were answered by the servants of Palitzki, who took them for servants a-shipboard, and with much abuse threatened them with stripes on the following day for disturbing their master's sleep with their unseasonable vociferations. The Czeremissi replied: "You and we shall have other business to attend to to-morrow, for we will take you all bound to Kazan." In the morning, accordingly, before the sun was up, and while the entire bank of the river was covered with a thick fog, the Czeremissi made a sudden attack upon the ships, and threw such terror amongst the Russians, that Palitzki, the commander of the fleet, left ninety of his largest vessels, each containing thirty men, in the hands of the enemy, and loosing his vessel from the shore, and taking the Volga in midstream, escaped under cover of the mist, and reached the army almost in a state of nudity. A similar misfortune afterwards occurred to him in returning with several vessels in his train, when he again fell into the snares of the Czeremissi, and not only lost his vessels, but himself escaped only with great difficulty, and with very few of his men. While the Russians were thus oppressed on all sides by hunger and the enemy's force, a troop of horse, dispatched by Vasiley to join the army, was twice surprised by the Tartars and Czeremissi in crossing the river Viega, which flows northward into the Volga. The engagement was keen on both sides, but the Tartars at length gave way, and the Russians were enabled to join the rest of the army, which being thus reinforced with cavalry, commenced the siege of the fortress of Kazan on the 15th of August. On learning this, the governor pitched his own camp also on the other side of the town in sight of the enemy; and as the enemy sent out from time to time detachments of cavalry to ride about the fortress and challenge them to fight, many skirmishes took place between the opposing armies. We were informed by men worthy of credit, who were engaged in that war, that sometimes six Tartars had advanced into the plain to the Russian camp, and when King Scheale would have attacked them with one hundred and fifty Tartar horsemen, he was forbidden by the general of the army; and with two thousand horsemen drawn up before him in battle array, he was thus deprived of the opportunity of achieving his object. When the Russians attempted to surround the Tartars, and, as it were, to preclude their taking to flight, the latter would elude the attempt by gradually retreating before the Russians, and after gaining a little distance, would halt; but as the Russians would then do the same, the Tartars observing their timidity, would presently take to their bows, and send a flight of arrows amongst them, and thus putting them to the route, would pursue and would kill a great number. When the Russians a second time turned upon them, they would give way for a little space, again come to a halt, and thus baffled the enemy by pretending flight. While these manoeuvres were going on, two of the Tartar horses were struck with cannon balls, but their wounded riders were carried off by their four remaining comrades, who were safe and sound in the sight of the two thousand Russian cavalry.

During this by-play of the horse soldiers, a great force was brought up against the fortress with artillery, to besiege it; but the besieged defended themselves with no less activity, and also discharged their artillery against the enemy; in the engagement they lost the only artilleryman that they had in the for-

treass, who fell struck by a cannon shot from the Russian station. On discovering this, some of the German and Lithuanian conceived the hope of taking the fortress, which would unquestionably have been taken that day had the inclination of the general responded to their wish; but as he, observing the daily increasing famine under which his men were suffering, had already privately treated by messengers for a truce with the Tartars, he so strongly disapproved of this attempt of his soldiers, that he angrily reprimanded them, and threatened them with stripes for daring to attack the fortress without his knowledge or sanction. For he considered that he should best consult his prince's interests in so great a strait if he could enter into any kind of truce with the enemy, and could only carry back his artillery and army in safety. The Tartars also, on learning the wish of the commander, regarded it as a hopeful circumstance, and willingly fell in with the conditions proposed, that they should make peace with the prince by sending ambassadors to Moscow; which being thus settled, the General Palitzki raised the siege and marched to Moscow with his army. There was a report that the general had been bribed with presents from the Tartars to raise the siege; and this report was strengthened by the fact, that a certain Savoyard had been caught in the attempt to decamp to the enemy with the gun which had been intrusted to him, and acknowledged, upon close examination, that he had received from the enemy silver money and Tartar goblets that he might induce many to desert with him. But although taken in so manifest a crime, the general did not inflict a very heavy punishment upon him. After this withdrawal of the army, which was said to have consisted of a hundred and eighty thousand men¹, ambassadors came from the King of Kazan to Vasiley, to ratify the peace, and were still at Moscow at the time that I was there; and even at that time no permanent hope of peace was yet established, for Vasiley had, to the great prejudice of the people of Kazan, transferred to Novogorod the fairs which it had been the custom to hold near Kazan, in the Island of Merchants, and had proclaimed a heavy penalty upon any of his subjects who should in future go to the island for purposes of merchandize. In the hope that this removal of the fair might prove a great inconvenience to the people of Kazan; and that being prevented from buying salt, which they received in large quantities from the Russians at that fair alone, they might be induced to surrender. It happened, however, that by the removal of a fair of this sort, the Russians suffered as much inconvenience as the people of Kazan; for it produced a scarcity and dearness in many articles, which it had been the custom to import through the Caspian Sea from Persia and Armenia by the Volga from the emporium of Astrakhan, and especially of the finer kinds of fish, amongst which was the beluga, which is taken in the Volga, both on this side and the other of Kazan. (I failed to find any during my second journey to Moscow).

Thus far I have been treating of the war which the Prince of Moscow waged against the Tartars of Kazan. I now return a second time to the general description of the Tartars, from which I had digressed.

Next to the Tartars of Kazan, we come to the Tartars known by the name of Nagai (in pronunciation this name sounds like Nahai), who are located beyond the Volga, in the neighbourhood of the Caspian Sea, and dwell mainly by the shores of the river Jaick, which flows down from the province of Siberia. These people have no kings, but are governed by chiefs, or dukes. At the time that I was in Russia, three brothers gained possession of those duchies, and divided the provinces equally between them. The first of them, Schidack², had allotted to him the city of Scharaitzick, lying eastward beyond the Volga³, together with the district immediately adjacent to the river Jaick; the second, named Cossum⁴, had the territory lying between the rivers Kama, Jaick, and Volga; while the possessions of Schichmamai, the third brother, included a part of the province of Siberia, with the country immediately surrounding it. The meaning of the name Schichmamai is holy or powerful⁵. Nearly all

¹ The number of participants in battles with the Kazanians, as well as captives (800 thousand, 180 thousand) is pure exaggeration. The size of the Russian state's population, according to historians' calculations, did not exceed 6.5 million people in the mid 16th century.

² Shidak (Shaydak, Sheydak, Shiydyak) was a Nogai murza, bey.

³ Ra is an ancient Greek name of the Volga river.

⁴ In Russian sources: Koshum.

⁵ Shih Mamai is a Nogai murza. Speaking about the semantics of this name, Sigismund von Herberstein reveals the content of its first component—'sheikh (shaikh)' which informally means: an elder, a respected man, tutor of sufis and the head of the Dervish order.

these countries are covered with wood, except that which borders upon Scharaitzick, which is all champaign country.

Between the Volga and Jaick, in the neighbourhood of the Caspian Sea, formerly dwelt the kings of Savolha, of whom we shall say more hereafter. In connexion with these Tartars, I heard a wonderful and almost incredible story from one Dimitry Danielovich¹, a man who, considering that he was a barbarian, was of remarkable dignity and truthfulness. He stated that his father had been on a former occasion sent by the Prince of Moscow to the King of Savolha, and that in that embassy he had seen in the island a certain seed, somewhat larger and rounder, but not unlike the seed of a melon, from which, when planted, grew up something very like a lamb, of the height of five palms, and that it was called in their language "boranetz", which signifies a lambkin, for it had a head, eyes, ears, and everything else in the form of a lamb. He also stated, that it bore a very fine wool, which was used by many people in those countries for making caps; and, indeed, I was assured by many people, that they had seen wool of that kind. He said, moreover, that the plant — if plant it could be called — had blood in it, but no flesh; but in lieu of flesh, there was a kind of matter very like the flesh of crabs; It also had hoofs, not horny like those of a lamb, but covered with a hairy substance resembling horn. Its stem came to the navel, or middle of the belly; it continued alive until the grass around it was eaten away, so that the root dried up for want of nourishment. The sweetness of this plant was said to be remarkable, so that it was very much sought after by wolves and other ravenous beasts².

Although I received this account about the seed and the plant as a passing observation, yet I have related it, as described to me by men by no means given to vain talking; and I repeat it with the less hesitation, because I was told by William Postel³, a man of great learning, that he had heard from one Michael, who was public interpreter of Turkish and Arabic in the Venetian republic, That he had seen certain very delicate furs from a plant growing in those countries, which were used by the Mussulmauns to keep their heads warm after shaving them, and were applied also to their naked breasts, and which were brought from the neighbourhood of the Tartar city of Samarcand⁴, and the countries lying north-east of the Caspian Sea, to Chalibontis⁵. He said, moreover, that it was from an animal fixed on the ground like a plant, but that he had not seen the plant, nor knew its name, except that it was called "Samarcandeos". "As these details are not incompatible, they almost lead me to think," says Postel, "that this statement is not altogether fabulous, but rather that it is a fact, redounding to the glory of the Creator, to whom all things are possible." (I am writing as told by them, whatever might be the case in fact, and let each man discover the truth himself).

Twenty days' journey eastward from the territory of Prince Schidack, we come to a people whom the Russians call Jurgenci⁶, whose sovereign is the Sultan Barack⁷, brother to the Great Khan or King of

¹ Dmitry Danilovich Ivanov the Blind (d. 1543) was an okolnichy [member of the highest rank of boyars] in the service of Ivan III, Vasily III and Ivan IV.

² Apparently, a messy description of a watermelon, melon, caracul lambs and their lambskins is given here. During a mass stockpiling of caracul lamb skins, bodies of yearlings or of those extracted from sheep's body before their birth, were thrown away (nomadic Turks did not eat meat of misborn or not grown enough animals) which attracted wild predators. The similarity of terms for denoting a watermelon and a skin probably also helped in their being mixed up. 'Baranets' served to denote a lamb (both in Russian and Slovakian) and plants (clubmoss, thyme, mother-of-thyme). It is possible that at the beginning of the 16th century 'water-melon' also bore the name 'Baranets'.

³ Guillaume Postel (1510–1581), a French philosopher and mystic, is being referred to. Between 1535 and 1537 he was a member of the French embassy to the Ottoman Empire. In 1554 he visited Turkey for a second time. Between 1554 and 1555 he stayed in Vienna. His acquaintance with Sigismund von Herberstein possibly occurred around this time.

⁴ Samarkand is a city situated in the valley of the Zeravshan river in Central Asia. Well-known since 329 BC under the name of Marakand. In 1370–1499 it was the capital of the Timurid state. In 1500 it was conquered by the Uzbeks led by Shaybani khan, until the 1530s—the capital of the Shaybanid state.

⁵ Khalibontida was a locality inhabited by the Khalibs, ancient tribes living on the coast of the Black Sea, near the borders of Armenia and Mesopotamia.

⁶ That is, citizens of Urgench, the main city of Khwarezm.

⁷ Barak khan (d. 1556) was the Shaybanid sultan, who was also known as Nauruz khan Ahmad, the khan of Bukhara (1551–1556).

Cathaia. Ten days' journey from the dominions of Sultan Barack we come to those of the Khan Bebeid, this is that same Great Khan of Cathaia¹.

Astrakhan is a wealthy city, and the great emporium of the Tartars, which gives its name to all the surrounding country. It lies on this side of the Volga, near to its mouth, ten days' journey below Kazan. Some say that it is not situated on the mouths of the Volga, but some days' journey thence. I think that the position of Astrakhan is at that point where the Volga divides itself into many branches, described by some as seventy in number, and after making many islands, falls into the Caspian by the same number of mouths, with so great an abundance of water, that to people looking from a distance it has the appearance of a sea. There are some who call the city Citrahan².

Between Viatka and Kazan, in the neighbourhood of Permia, dwell the Tartars who are severally named Tamenskii, Schibanskii, and Cosatzskii; of these the Tamenskii are said to dwell in the woods, and not to exceed ten thousand in number. There are, moreover, other Tartars beyond the Volga, called Calmucks, because they alone let their hair grow³; and on the Caspian Sea is Schamachia, which gives its name to the country around it, and whose inhabitants excel in weaving silk dresses. The city is six days' journey distant from Astrakhan, and was not long since, they tell me, subject, together with its district, to the King of Persia⁴.

The city of Azov, of which I have already spoken, is situated on the Don, and is seven days' journey distant from Astrakhan. It is five days' journey from the Taurica Chersonesus⁵, reckoned principally from the city of Perekop. Between Kazan and Astrakhan, in an extensive tract along the Volga as far as the Dneiper⁶ lie desert plains, which are inhabited by Tartars, having no fixed abodes (uncultivated lands where, nonetheless, many people live), with the exception of Azov and the city of Achas, which lies on the Don twelve miles above Azov, excepting also those Tartars who live in the neighbourhood of the lesser Don, and who cultivate the soil and have settled habitations. The distance from Azov to Schamachia is twelve days' journey.

Returning in a south-west direction towards the neighbourhood of the Palus Maeotis and the Black Sea⁷, we come to the people of the Aphgasi⁸, who dwell on the river Cupa, which flows into the said marshes [the Palus Maeotis] at the point where the mountains, inhabited by the Circassians or Ciki⁹, meet the river Morula¹⁰, which flows into the Black Sea.. These people, relying on their mountain fastnesses, yield no obedience either to the Turks or the Tartars. The Russians assert that they are Christians, that they live under their own independent laws, conform to the Greek ceremonials and ritual, and perform their sacred service in the Slavonic language, which, indeed, they use in general¹¹. They are most audacious pirates, and sail down to the sea by the rivers which flow from their mountains, and plunder whomsoever they can, especially those merchants who take the route from Caffa to Constantinople. [...]

The marshes of the Taurica Chersonesus, which are said to extend three hundred Italian miles in length, from the mouths of the Don up to St. John's Headland, measure in the narrowest part¹² only two

¹ Bebeid khan is not mentioned in other sources.

² Tsitrakhan is a distorted Tatar toponym of Xacitarxan, the original name of the modern city of Astrakhan.

³ Apparently, Sigismund von Herberstein's 'Kalmuks' (Turkish 'the rest') are possibly not the ancestors of present-day Kalmyks who in the 16th century lived between the Altai and Tien Shan and between the Gobi Steppe and Lake Balkhash, but they are steppe inhabitants who continued to practice a pagan religion and did not adopt Islam.

⁴ Shamakhi is a city in Azerbaijan, the residence of the Shirvan shahs (1027–1382—the Kesranid dynasty; 1382–1538—the Derbendi dynasty), in 1538 it was included in Safavid Iran. The message about it is included in 'The Notes' in the 40s.

⁵ Khersones (Kherson, Kersona, Korsun) is a city in Southwestern Crimea, the modern-day city of Sevastopol.

⁶ Borysthenes is an ancient Greek name for the Dnieper river.

⁷ That is, the Black Sea.

⁸ Aphgasi were ancestors of present-day Abazins and Abkhazians. A mistake in the river's name may possibly be explained by the proximity of springs of the Kuban and Kuba—a branch of the Terek.

⁹ 'Adzyhs' means 'people'. It is about Adyghe tribes, ancestors of the present-day Adyghe, Kabardins, Circassians and Shapsugs.

¹⁰ Merula—probably, the Merula river which falls into the Black Sea, 50 km south of Sukhumi.

¹¹ In the 16th century, the Adyghe's active transition from Christianity into Islam began.

¹² The Kerch Strait is being referred to.

Italian miles (after which it joins the sea. The Perekop country, as it is called now, borders on one side with the Palus Maeotis, but for the most part with the sea. When one enters there from the mainland, there are no more than one thousand two hundred paces between the sea and the swamps). There stands the city of Krim¹, formerly the seat of the kings of Taurida, from which they received the name of Krimskii. The whole isthmus being hollowed out in the form of an island² island, to the extent of a mile and a fifth, the kings took the name of Perekopskii instead of Krimskii, deriving the term from that hollowing out; for precop in the Slavonic language signifies "dug through" (One of them wanted to connect the waters, digging up a strip of land to make an island. The ditch was dug, but only partway, and it was not as deep as such a ditch was supposed to be. When they built a town near this ditch, the town and the country were called 'Perekop', because 'kopat' means 'dig' in the Slavonic language. Thus the local kings are called Perekopskii now as well). Whence it is evident that a certain writer was in error, when he said that (during the time of Emperor Maximilian) one Procopius had reigned there (or that beyond the Volga in the country which in Slavonic is called Sawolha, one Sawolhius had reigned)³. Moreover the whole Chersonesus is divided in two by a wood, and that part which looks towards the Black Sea, in which is situated the celebrated city of Caffa, and which was peopled by a colony from Genoa, formerly called Theodosia, is entirely in the possession of the Turks. The Turkish sultan, however, after the siege of Constantinople and the overthrow of the Greek sovereignty, bought Caffa from the Genoese⁴. The other part of the island (adjacent to the isthmus, on the near side of the wood) is possessed by the Tartars. All the Tartar kings of Taurida, however, derive their origin from the kings of Savolha, and after some of them were driven out from the kingdom by internal sedition, being unable to find any fixed abode in the neighbourhood, they took possession of that part of Europe⁵, and still mindful of the ancient grievance, continually carried on war with the people of Savolha. At length, within the memory of the last generation, Scheachmet⁶, King of Savolha, came into Lithuania at the time that Alexander, the Grand Duke of Lithuania, held sway in Poland, and entering into a treaty with him, with their united forces drove out Machmetgerei, King of Taurida⁷. Both of the princes agreed in this movement, but afterwards, when the Lithuanians, according to their custom, delayed the war to an unreasonable period, the wife of the king of Savolha, together with the army which was then kept in the field, becoming impatient both of the delay and the cold, begged of their king, who was busying himself in some of the towns, to get rid of the King of Poland, in order that they might provide for their own interests in good time. As, however, they could not prevail upon him, the wife deserted her husband, and went over with part of the army to Machmetgerei, King of Perekop, who at her instigation dispatched the army of Perekop to disperse the remainder of the forces of Savolha. After the rout of these forces (unaccustomed frost, because there was no so heavy snow in lands they come from, became irritated and sent ambassadors to the king of Perekop to say that if he married Scheachmet's wife all the people would come to him. This proposal was accepted, and the king of Perekop sent supplementary forces to defeat the remainder of the army that stayed with Scheachmet), Scheachmet, King of Savolha, seeing the miserable plight in which he was, fled, accompanied by nearly six hundred⁸ horsemen, to Alba, which is situated on the river Thyra, in the hope of obtaining assistance from the Turks⁹; but learning that a

¹ Krym (Solkhad, Solkhat, Eski Krym) is a city from the antiquities, which is located on the site of modern town of Stary Krym. During the epoch of the Golden Horde it was the centre of the Crimean Ulus and the first capital of the Crimean Khanate. The Tatar name of the city—Krym—is known according to written sources and coins were minted with it. The Genoese called the city Solkhat.

² Istm is the Greek name for the Perekop isthmus.

³ Sigismund von Herberstein argues with Maciej Miechowita.

⁴ Ottoman Sultan Mehmed II the Conqueror (Fatih) (reigned between 1444–1446 and 1451–1481) is being referred to here. Caffa was conquered in 1475 and Constantinople—on 29 May 1453. The capital of the Byzantine Empire, after receiving the name of Istanbul, became the capital of the Ottoman Empire.

⁵ Then, just as Maciej Miechowita, Sigismund von Herberstein retells Sheikh-Ahmad's story about the last years of the existence of the Great Horde.

⁶ Sheikh Ahmad, son of Ahmad, was the last khan of the Great Horde (1481–1502).

⁷ Sheikh Ahmad waged a battle with Muhammad Giray's father—Mengli Giray.

⁸ It is given in the German edition as such; in the Latin text the unclear sexingentis is given.

⁹ Akkerman is referred to here (present-day Bilhorod-Dnistrovskiy)—a city on the right bank of the Dniester

plot was laid in that city to take him he turned back, and (but as he had concluded an alliance with Christians against the enemies of their faith, the Turk ordered that he be seized. Having learned of this, he) arrived with scarcely half of his cavalry at Kiev. In that city he was surrounded by Lithuanians and taken, and on being conducted to Vilna by order of the King of Poland, The king came forward to meet him, and after giving him an honourable reception, escorted him in his own company to a convention of the Poles¹, at which the desirableness of a war against Mendligerei was decided upon. But as the Poles took an unreasonable time in mustering their army, the Tartar took grievous offence (When the issue was postponed, the Tartar, knowing that a decision to go to war had already been made, asked what they were going to do now. He was told: muster an army and send it. He replied: 'Aren't you going on the campaign yourselves?' as he thought that the war would be fruitless without them), and began a second time to contemplate flight, but was apprehended in the attempt and taken back to the castle of Troky² four miles from Vilna, where I saw him³ and dined with him (where he was kept with great honour. The local Waivoda of Troky⁴ invited me as his guest; the king was also sitting at the table. Although he was released, he was soon killed)⁵. This was the termination of the reign of the kings of Savolha, and together with them ended the race of the kings of Astrakhan, who derived their origin from the same royal line⁶. After their extinction, the power of the kings of Taurida received a great accession, and they became so formidable to the neighbouring nations that they compelled the king of Poland to pay a certain stipend⁷ on condition that he should have their assistance in any case of pressing necessity (according to the Poles, this is remuneration paid in return for sending Tartar troops to the king if necessary, although it looks like a tribute). The prince of Muscovy also used from time to time to conciliate him [the King of Taurida] by sending presents, which he did because, as they [the prince of Muscovy and the king of Poland] were constantly embroiled in mutual wars, each strove to overwhelm the other by engaging the cooperation of the Tartar forces. He being aware of this, deluded both with vain hopes while he accepted presents from each, a course of conduct which became very apparent at the time that I was treating with the prince of Muscovy, in the name of the Emperor Maximilian, upon the subject of concluding a treaty of peace with the King of Poland. For as the Prince of Muscovy could not be induced to enter upon equitable terms of peace⁸, the King of Poland gained over the King of Perekop by a bribe to attack Moscow with an army on one side, while he on the other should make an onset on the Russian territory in the direction of Opotzka. By this contrivance, the King of Poland hoped to be able to compel the Prince of Muscovy to reasonable terms of peace. The Prince of Muscovy perceiving this, on his part sent ambassadors to negotiate with the Tartar prince, for the purpose of persuading him to turn his forces against Lithuania, which he stated to be entirely off its guard and unprotected by garrisons (he incited the Tartar prince against the Prince of Muscovy, and he gave his assent. But when the Polish king found himself in the territory of the Prince of Muscovy near Opotzka, the Prince of Muscovy conducted negotiations with the Tartars himself, saying that, as the King of Poland had sent his army out of the country, a sudden attack from the Tartars would make them the masters of Poland). The Tartar, consulting only his own advantage, followed his advice. As his power thus increased by the quarrels of these princes, and as he was occupied solely with the restless desire of increasing his own domain, his ambition enlarged itself in proportion, and having gained the alliance of Mamai⁹, Prince of Nahaica, he marched from Taurida with an army in the month of January, A.D.

Liman. In Tatar this name means 'White fortress'.

¹ This refers to the Brest Sejm where Alexander stayed from 8 February to 15 March 1505.

² Troki (present-day Trakai) is one of the centres of the Tatar community in Lithuania.

³ 30 December 1517.

⁴ The Trokian voivode between 1510–1518 was Grigory Ostik (d. 1518/19).

⁵ Sheikh Ahmad was released from Lithuanian captivity in 1527. At the end of his life he lived in the Lower Volga region and died around 1528.

⁶ The Astrakhan Khanate existed until 1556. The last Astrakhan khan, Dervish Ali, was Sheikh Ahmad's grandson.

⁷ These payments were given the name 'Serebshchina' or silver coin taxes.

⁸ Vasily Third's refusal to return Smolensk to Lithuania is being referred to here.

⁹ Mamai was son of the Nogai Horde's bey, Musa.

1524¹, and attacked the King of Astrakhan; and as the latter deserted the city and took to flight in great trepidation, he besieged and took it, and remained housed within the walls as conqueror (spending several days there). Meantime Agis², one of the princes of Nahaica, rebuked his brother Mamai for having lent the aid of his forces to so powerful a neighbour. He at the same time warned him to keep a suspicious eye upon the daily increasing power of King Machmetgerei, for that it was possible from his intractable disposition that he might turn his arms both against himself and his brother, and not only expel both from the kingdom, but perhaps slay them or reduce them to slavery (to their common misfortune, he had brought in a powerful king who would want to become their lord). Mamai, under the influence of these suggestions, sent a messenger to his brother, to exhort him to hasten to him with all the forces that he could muster, for that it was possible that Machmetgerei might, from the elation naturally consequent upon his great successes, be resting in comparative security, and that thus they might both be relieved from the fears which they entertained. Agis, yielding to his brother's advice, promised implicitly to be on the spot at the appointed time with an army which he had already levied for the purpose of defending the outposts of his kingdom in the midst of so many wars. Upon this understanding, Mamai immediately sent to King Machmetgerei, advising him not to corrupt his soldiery, and neglect their discipline, by keeping them constantly housed, but rather to leave the city and dwell in the open field, according to the custom of the Tartars. The king, in accordance with his advice, brought out his troops and encamped in the open country, upon which Agis advanced with his army and joined his brother. A short time after, they made a sudden onslaught upon King Machmetgerei, while he was dining with the son of the Sultan Bathir and far from having any apprehension of such an attack, and slew him (both of them)³; and overwhelming the greater part of his army, put the rest to flight. They pursued their conquest with great slaughter beyond the Don, even to Taurida. They laid siege to the city of Perekop, which, as I have said, lies at the entrance of the Chersonese. But finding that they could not reduce it to surrender by force or any kind of effort, they raised the siege and returned home. The King of Astrakhan having thus by the agency of these princes, regained his kingdom, the strength of the kingdom of Taurida gave way under the loss of their valiant and successful King Machmetgerei, who had reigned over them for a considerable time with great power. After the murder of Machmetgerei, his brother Sadachgerei gained possession of the kingdom of Perekop by the aid of the sultan of the Turks, in whose service he was at the time⁴. But being accustomed to Turkish habits, he offended the prejudices of the Tartars, by not appearing much in public, and did not allow himself to be seen by his subjects. The result of this was that the Tartars, who could not endure so unusual a mode of conduct in their prince, expelled him, and put his brother's son in his place. Sadachgerei, being taken prisoner by his nephew, implored him suppliantly not to pursue him to the death, and from pity to his old age not to shed his blood, begging to be allowed to spend the remainder of his life in private in some fortress, and to retain only the name of king, while his nephew held the entire administration of the kingdom. His request was granted⁵.

The titles of dignity amongst the Tartars are nearly as follows: khan, as I have said above, signifies a king; sultan, the son of a king; bū, a duke; mursa, the son of a duke; olbond, a noble or councillor; olboadula, the son of a nobleman; said, a chief priest. A private man is called ksi. The post of rank next to that of the king is called ulan. The Tartar kings have four councillors, whose advice they mainly take in matters of importance. The first of these is called schirni; the second, barni; the third, gargni; the fourth, tziptzan⁶. Thus much about the Tartars [...].

¹ Muhammad Giray is being referred to.

² Agish, son of Yamgurchi, the Nogai Horde's bey and Mamai's cousin. In 1524. Agish was defeated by Sahib Giray after which no information was provided about him in the sources.

³ Batyr sultan (Batyr Giray) and Muhammad Giray were killed in spring 1523.

⁴ Before Saadat Giray khan occupied the Crimean throne and ruled between 1523 and 1524 there was Ğazi Giray.

⁵ The struggle between Saadat Giray and his nephew lasted until May 1532, when Saadat Giray rejected to occupy the Crimean throne and departed to Istanbul where he died in 1538.f

⁶ Sigismund von Herberstein rendered common information about social layers of Tatar countries. The phonetic form of some terms and peculiarities of their semantics evidence of the fact that Sigismund von Her-

Of Lithuania

Lithuania is the province which lies nearest to Muscovite Rus; but it is not of the province alone that I now mean to speak but also of such districts immediately adjacent to it as are comprehended under the name of Lithuania (The Grand Duchy of Lithuania and the principalities which belong to it border with the lands of the Muscovites). This country extends in a long tract from the town of Circass on the Dneper as far as Livonia (which begins at Dunaburg on the Duna River, called the Dvina by the Russians). I may here remark that the Circassians who dwell upon the Dneper¹ are Russians and are distinct from those whom I have described above as dwelling in the mountains near the Black Sea. At the time that I was at Moscow, these people were governed by one Eustace Tascovitz, whom I have before spoken of as going with King Machmetgiray to Moscow²; he was a man of great skill in military matters, and remarkable for his shrewdness, and, from the frequent intercourse he had had with the Tartars, was able the more repeatedly to conquer them. He often even drew the Prince of Moscow himself, whose captive he had for some time been, into great dangers (here there is an unclear phrase which is omitted in all modern translations: *So ist er auch bey dem Moscoviter gewest, die alle auch seinen herrn Khuenig oft uberfueert*; it can be understood in the following way: that is how he treated the Muscovite (or perhaps: he also visited the Muscovite) who often deceived the king in his turn (meaning the following story about the cowardice of Tascovitz). In the same year that I was at Moscow, he showed remarkable skill in routing the Russians, a circumstance which I have thought worthy of description here. He led certain Tartars dressed in the Lithuanian costume into Russia, knowing that the Russians, taking them for Lithuanians, would fearlessly rush out upon them without hesitation. After having set an ambush in a suitable position, he awaited the arrival of the vengeful Russians. The Tartars, meanwhile, after depopulating the province of Severa, directed their march towards Lithuania; upon which the Russians, supposing them to be Lithuanians, changed their route, and, inspired with a thirst of vengeance, marched impetuously with a great force upon Lithuania. After laying waste the country, as they were returning laden with spoil, they were surrounded by Eustace, who came forth from his ambuscade and had all of them slaughtered, to a man. When the Prince of Muscovy heard of this, he sent ambassadors to the King of Poland to complain of the injury which had been done to him (despite the armistice). To which complaint the king replied that his people had not inflicted an injury but had simply revenged one done to themselves. The Prince of Muscovy, having been thus deceived on both sides, was ignominiously compelled to put up with his loss.

Beyond the country of the Circassians, there are no habitations of Christian men. At the mouth of the Dneper stands the fortress and the city of Otchakov, forty miles from Circass (on the bank closest to Wallachia). It was not since in the possession of the King of Taurida, who took it from the King of Poland (the Grand Duchy of Lithuania)³. It is now held by the Turks. [...] There is also a law that the property of foreign merchants, who happen to die there, is confiscated to the king or his viceroy (the authorities); and the same rule, which is observed among the Tartars and Turks with respect to the natives of Kiev, is also observed by the people of Kiev with respect to the Tartars and Turks after their death⁴. [...]

berstein used oral tidings of those Tatar informers who lived in Moscow. The nomenclature requires several phonetic adjustments, for example, instead of 'ksi', we should pronounce it as 'k'ji', 'a man' ('k'jilar'—people, 'k'jilarimiz'—our people, our servants). By 'four persons'—the counselors—we should understand four karachis, the main counselors of Tatar khans who represented four kin-clans, to be more specific: Shirin, Baryn, Arghyn and Kipchak.

¹ Circassians was the Tatar and then Russian designation for Ukrainian Cossacks.

² Eustace Dashkovich's attack of Chernigov, Starodub and Novgorod-Seversky was attempted in March 1515 together with Crimean prince Muhammad Giray and Kievan voivode Andrey Nemirov.

³ Before 1502 Ochakov was part of the Crimean Khanate and then fell under control of the Ottoman sultans. The original Tatar name of the city was Kara-Kerman (literally— Black city), then—Ozu, Turkish—Ozi. The last names are related to the Turkic designation of the Dnieper: Uzi, Yuzi, Ozi, Ozu.

⁴ The custom of 'otumershchina' spurred multiple protests from the side of Russian merchants who visited Istanbul.

The people wear a long dress and carry bows like the Tartars¹; but they have also a spear (hasta, Spiess oder Copien) and shield (as well a sabre) like the Hungarians. They have excellent geldings, which they ride unshod and with soft bits. [...]

At the time that I was in Lithuania, there were two men principally distinguished for warlike renown—that is, the Knes Constantine Ostrozhsy² (although he was once defeated and captured by the Muscovites, but he was still very successful and gained many victories over the Muscovites, Turks, and Tartars. I was not fortunate enough to see him although I often was in Lithuania when he was alive) and the Knes Michael Linzki³. Constantine had routed the Tartars very frequently. It was his custom not to attack the horde while out on their predatory excursions but to pursue them when returning laden with booty. For as they retired to a spot where they thought they might have an opportunity of resting and refreshing themselves without fear of disturbance, but which spot was known to him and fixed upon as the point of attack, he would give notice to his own soldiers to cook their food for that night beforehand for that he would not be able to allow them much fire the following night. On the following day, therefore, the Tartars would continue their journey, and when night came, seeing no flame or smoke, would suppose that the enemy had either retreated or dispersed themselves, and would then let their horses loose upon the pasture, take their meal, and go to sleep. Constantine would then make his onset at break of day, and thus overwhelm them with a terrific slaughter. [...]

The Navigation of the Frozen Ocean

[...] The ocean which lies about the mouths of the river Petchora, to the right of the mouths of the Dwina, is said to contain animals of great size. Amongst others, there is one animal of the size of an ox, which the people of the country call walrus. It has short feet like those of a beaver; a chest rather broad and deep compared to the rest of its body; and two tusks in the upper jaw protruding to a considerable length. This animal together with other animals of its kind, on account of its offspring and for the sake of rest, leaves the ocean and goes in herds to the mountains, and before yielding itself to the very deep sleep, which naturally comes over it, sets, like the crane, one of its number to keep watch. And if this one should slumber or happen to be killed by a hunter, the others may easily be taken; but if he gives the customary sign, by lowing, the rest of the herd immediately take the alarm. They precipitate themselves into the ocean with great rapidity as if they were carried down the mountain in a carriage, and there they rest for a time upon the surface of the floating blocks of ice. The hunters pursue these animals only for the tusks, of which the Russians, the Tartars, and especially the Turks, skilfully make handles for their swords and daggers (especially the short ones worn by hunters), rather for ornament than for inflicting a heavier blow, as has been incorrectly stated. These tusks are sold by weight and are described as fishes' teeth. [...]

My Return

[...] (From Smolensk to the border, for the course of two days, two hundred horsemen accompanied me with honour. We spent these) two nights in the open air in the midst of a deep snow; but I received much cheerful and respectful attention from my guides (and in severe frost. I was invited to supper the first evening.) We strewed hay to some depth upon the ground and covered it with the bark of trees; spread a table-cloth, and—sitting down to the table cross-legged, after the fashion of the Turks or Tartars—we took our meal and, drinking somewhat freely, made a long supper of it (they regaled me generously, and made me drink much more than I really wanted to). [...]

¹ The comparison between the Lithuanian and Tatar armouries is more justified by the fact that in the Grand Duchy of Lithuania from the end of the 14th century, settlements of the Horde people appeared—for the first time—in surroundings of Wilno and Troki along the Vokè river, later—in the Belarus lands (Grodno, Navahrudak, Ashmyany, Lida, Orsha, Minsk, Kletsk), near Smolensk and Volyn.

² Konstantin Ivanovich Ostrozhsy (1460–1530) is referred to. He was a commander in the Grand Duchy of Lithuania and the Great Lithuanian Hetman (1497–1500, 1507–1530).

³ Mikhail Lvovich Glinsky (1470–1534)—prince and commander—is referred to here. He defeated the Crimean Tatars in the Battle of Kletsk (06.08.1506). He was the initiator of the transfer of the Glinsky clan into the service of Vasily III. In 1530 he participated in the campaign against the Kazan Khanate.

After the departure of the king for Poland (Krakow)¹, while my servants were returning with my horses from Novogorod through Livonia, I stayed. On receiving my horses (on 30 December)², I immediately made a diversion of four miles from the road into Troki in order to see some bison called by some 'uri, ' but in German, 'auroxen, ' which were there kept enclosed in a garden. The palatine (sir Gregory Radovil)³, although somewhat offended by my sudden and unexpected arrival, nevertheless invited me to a banquet, at which Scheachmet, the Tartar king of Savolha, was present, who was kept there in honourable servitude, as if in free custody, in two castles surrounded with walls and situated amongst the lakes. In the course of dinner, he conversed with me on many subjects, through a dragoon, calling the emperor his brother, and declaring that all princes and kings were brothers to each other. [...]

4. Translation

Of The Conditions of the Crimean Khan Mahmet Giray sent by Yaskulsky in 1654 AD

This text has been reproduced from the following publication: Documents about the Ukrainian people's liberation war in 1648–1654; Kiev: Naukova Dumka, 1965.

Having praised with infinite gratitude to the Lord of the people, the God Most High, for his special mercy and care over His creation, having bowed low to his great Prophets Mahmet and Moustapha—may they rest in everlasting peace—and to all other heavenly spirits, through whom the Most High, who rules the world, to whom submits all of creation, who made everything out of nothing, dressed me in an attire of greatness and decorated me with a wreath of glory and honour, finally put me on the high throne of the great state and monarchy, made me the sovereign and monarch of great Hordes and great states, of the lands of Kibdyats and of the capital of the Crimea, of an incalculably great number of the Tatars, of the wild Nogais, extending to the Circassian Region itself, we, the great Caesar, the high and invincible sovereign and monarch, the great Khan Mahmet Giray—may the Lord prolong his happy and fruitful reign—to the great monarch and the king of the great states and monarchies of Russia, Prussia, Masovia, Poland, Lithuania, Chernigov, and all the Nazarene people, to his Highness our brother Jan Casimir, to the invincible from the invincible kings, sincerely we wish countless times that the Lord will prolong his life and grant success to all, and we wish also good health, a blessed reign, and the benevolence of fate, and we declare to you on behalf of our Khan's Majesty that our brother of virtuous memory the Khan Islam Giray—may the Lord have mercy on his soul—sent to you one of his servants, Suleiman Aga, who told us that from this time on you promised friendship and brotherhood to the Crimean Khans, promised to be a friend to the friends of the Crimean Khans and vice versa: an enemy to their enemies, and in return counted on the help of our army against your enemies.

Since your enemy is our enemy and the common enemy of all Crimean Khans, we send troops immediately, demanding in our turn reinforcements, so that you will also send troops to our people. And thus forever will our friendship and brotherhood last if you do not turn away from the Crimean Khans. Because you have sworn for yourself and for your successors, and the Polish-Lithuanian Commonwealth [has sworn] friendship and brotherhood with us, and first of all the loyalty to the union against Moscow, we, having done the same, believe that if the Lord ever has His mercy on us and allows us to capture their land, we will own the Astrakhan, Kazan, and Bergitvasky Provinces and all the states where the Tatars and Nogai people live: any of these lands neither you, our brother, nor any of the Polish szlachta must touch. They will belong to us alone. As for the traditional gifts to us, they should annually be sent to Kamenets for us, where our people will come for them.

¹ Sigismund I was in Krakow from 25 April 1518. His stay in Wilno is dated to 4 December 1518.

² 1518.

³ Apparently, Nikolai Nikolaevich (Mikolai Mikolaevich) Radziwiłł (d. 1521) is referred to here. He was the voivode of Wilno (from 1510), and the Great Lithuanian Chancellor (from 1510). Participant of the Battle of Kletsk (05.08.1506).

Never doubt the friendship and brotherhood of the Crimeans, when you yourself sincerely observe what you, our brother, with the senators and the szlachta have sworn in Suleyman Aga's presence and according to this oath wrote the sacred contract, having sent it to our Crimean Region with the ambassador Mark Stanislav Yaskulsky. After our brother Islam Giray by the Lord's verdict had faced His Judgment, and the throne of our father passed over to me by the Lord's will, we, keeping the oath, thought to write according to it the present contract and, by our Khan's power, send it to you in a gold-plated case.

With gratitude we accepted everything that the ambassador verbally reported to us on your behalf.

You, in return, adhering to your contract and oath, will never reconcile with the Moscow Tsar: on the contrary, do not stop tormenting him with your troops. When over time with the help of the Lord Most High you capture his lands, do not touch, however, neither you, our brother, or any of the Polish szlachta, the Muslims from the Astrakhan, Kazan, Bergitvasky, and other people, the Tatars and the Nogais. This we reserve to ourselves.

And if somewhere our enemy appears, you with your troops would have to help us against him, as we would for our part in such a case.

In a word, each friend will be our mutual friend, and each enemy will be our mutual enemy.

Also your merchants, coming to us, and ours to you ...

5. Abdulgaffar Qirimi. 'Umdet al-akhbar'

Abdulgaffar Qirimi. Umdet al-axbar (Umdet ul-ahbar). Book 1: Transcription, facsimile. Series 'Yazma Miras. Textual Heritage.' Issue 1 / Transcription by Derya Derin Pashaoglu; editor-in-chief I. Mirgaleev. Kazan, 2014.

II. FROM THE HISTORY OF THE CRIMEAN KHANS

(The reign of Hacı Giray, Mengli Giray, Muhammed Giray I and Saadet Giray I)

[278]

In the exposition about the Bash-Timur heirs

Ichkily Hassan, the father of Ulug Muhammad Khan, is the eldest son of Jagay-oghlan mentioned earlier. His other son was called Bash-Timur-oghlan¹. He had two sons by the name of Giyaseddin and Devlet-Berdi. There are no descendants of Giyaseddin. Devlet-Berdi, during [the reign] of the son of his uncle Ulug Muhammad Khan, lived in the Crimea surrounded only by his nökers. Being a dullard, he did not interfere with any affairs. He died in the Crimea. His grave is in the Crimea in a place called Salachik. He had two sons named Hacı Giray and Jihan Giray.

Then: Ulug Muhammad, fleeing from Kongrat Haidar, went to Kazan and remained [there]. Ahmed Khan, the son of Jalal ad-Din Khan, ascended the throne. Since he intended to execute the aforementioned Hacı Giray and Jihan Giray, they fled, and during their wanderings Sayyid Ahmed Khan

[278r]

appointed men for the murder of those mentioned [Hacı Giray and Jihan Giray]. At that time the camp of Haidar-Beg was in the area of the well-known Kolay located between the rivers Erel and Samar, which is called Kara-Agach. They say that the mentioned Hacı Giray [with his brother] wandered between the cattle and sheep camps in the valleys of the [small rivers] Tur and Byorekli, which flow out of Buzuk. Having heard that people had been appointed for their [murder], they fled. And as their mother was Beg's daughter of the Ademi tribe of the Kemerkuysky Circassians, they, with a desire [to enter] Circassia, ran towards the side of the river Don². And because the persecutors reached them when

¹ 'Oglañ'—the title in the Golden Horde designating a blood prince.

² The Crimean-Tatar name of the Don river.

they were near the river, these [two], having abandoned their quivers and bows, plunged into the water with only their horses. They had a reliable *nöker*. He too rushed in with them. They were shot at with numerous arrows. By the preordination of Allah, the arrow hit Hacı Giray's horse. His reliable [*nöker*] gave him his horse, and remained, having taken the wounded horse. And said: 'If Allah the Almighty gives you well-being and wealth, do not forget my orphans,' and with these words drowned in the river.

Then the two brothers came ashore. But being hungry and undressed, they—having thought that there might be scattered wandering communities of the Edil people¹, with thousands of difficulties, eating grass—eventually reached a whole group [of these] communities. They say that their head was called Devlet-Keldi Hafiz. Having come to him, they said: 'We were merchants. We were robbed by thieves,' and thus became his day-labourers, looking after sheep and cows. But from their carriage and behaviour, the Mullah², naturally, suspected that they must be the children of a noble person and instructed his wife to be respectful to them. However, his wife had a nasty character and she caused them sufferings.

When the rule of Sayyid Ahmed Khan³ reached three and a half years, they, roaming in the vicinities of the Muscovite fortress⁴ Mankerman⁵, known in the valley of the river Ozyu⁶ and having become the enemies of the tribe of infidels [living there], raided its neighbourhood. After a while they made peace and returned the captives. But since in the heads of the infidels the aforementioned coldness [of relations] remained, one night, when Ahmed Khan was careless, they attacked his camp and killed him. This news spread throughout the world, and Hacı Giray, as soon as he heard [about it], arrived and appeared among his people [and] became the Khan.

Melek⁷ Hacı Giray, son of Devlet-Berdi-Khan

This Melek Hacı Giray became a famous Khan. But being rather cruel, he intended to execute his brothers and perhaps sons, and [therefore] his brothers hated him. He died after having ruled as the Khan for 18 years. His body was brought and buried in Sary Krym⁸. Since he had not appointed either of his brothers or sons as the heir to the throne, battles began between them. When in the eight hundred and seventieth year of Hijrah⁹ these episodes took place, Hacı Giray's son named Mengli Giray,

[Addition in the margins:]

On the last page were briefly mentioned Ejderkhan¹⁰ and Kazan¹¹. The majority of the people of Tatarstan are the people of Oguz, which is situated towards Khitai. The Seljuq dynasty and the Ottoman bloodline come from there. And after that the Kiyat and Kayi people are respected. And after them—the tribes Khirkehir, Kyrgyz, D-rikh, Kimak, N-jtak-n, M-h-rka and Saklab, which in the Tatar language are called the Kara-kalmuk¹². After that the tribes Chagatai, Tangut, and S-rka are respected.

¹ 'The Edil people' or 'the people of Edil'—the Turkic population of the Volga region is referred to here; Edil is the Crimean-Tatar name of the Volga. The name 'Idil' is more accepted in scientific literature, however, below, in the original text, p. 279 v., this word is written with the corresponding vowel marks.

² That is, Devlet Keldi Hafiz; 'hafiz' is the title of a man who knows the Quran by heart.

³ Bolded words in the presented text are marked with red ink in the original.

⁴ 'Muscovys' in the Crimean-Tatar written sources was the designation of inhabitants of the Moscow Principality, Muscovite State and, traditionally, the Russian Empire.

⁵ The Crimean-Tatar name of Kiev.

⁶ The Crimean-Tatar name of the Dnieper river.

⁷ This word in the original text may also be read in the form 'melik'—that is, 'tsar'. In the translation, we used the form 'melek' ('angel') following the explanation given in 'Gulbün-i xanan' of Khalim Giray about Hajji Giray's handsome face which became the reason why people called him 'Melek Hajjigiray' (Istanbul, 1287/1870, p. 6). At the same time, Abdulgaffar Qirimi's pointing out of Hajji Giray's cruelty, in our opinion, signifies that this word rather means 'tsar', not 'angel'.

⁸ In the original: 'Eski Qirim' is the modern Crimean Tatar name of this city in the Crimea.

⁹ 1465/66.

¹⁰ Astrakhan.

¹¹ Kazan.

¹² 'Kara-Kalmuk'—the Black Kalmyks.

And when the Franks captured the steppes of Desht-i Kipchak, they named them Sarmasiya¹. The tribes place [of living], called the 'Kuman' or 'Poloz, ' is located here. And the famous lake called Kitayskoye Lake—[also] known as the Sea of Khwarezm—is the homeland of the Kazakhs and the Karakalpaks. And the Far North, which is called 'the ninetieth latitude'—beyond which the sons of men will not be able to live because of the excessive cold. There there is a tribe called 'Bulgar, ' which ranks amongst the Tatar tribes. This tribe accepted Islam in the times of the Abbasids. And their region became extremely well-organised. During the longest of the days (during the time of the constellation of Cancer² in that latitude³) for up to ten days no nighttime prayer is held in their time zone. For example, before the sunset's glow fades, the dawn has already begun; therefore, experiencing difficulty over whether it is possible to compensate for the nighttime prayer [as it has been skipped], they, having sent to the Khwarezm Region

[279]

fleeing, he came to the fortress named Mangub, which is situated in the Crimean Region, in the area of Balyklaghy⁴. It is known for its inaccessibility. They say that its commandant was a representative of the ruler Bogdan⁵, one of the Christian rulers. And as there was a number of the Tatar tribe called 'As' there, he, having joined them, became the guest of the commandant of the infidels.

Being at that time a ruler from the Ottoman dynasty—the pride of the Ottoman dynasty, the father of victory and the battles for faith, the conqueror of Istanbul⁶, Sultan Mehmed Khan, having captured Istanbul, made his throne there. Because he approached the vicinities of [the lands of] the Chinggisids, who caused great concern, and because for his diligence as a Padishah it was necessary to strengthen the Crimean island properly, having learned that there was great confusion among Hacı Giray's children, he sent by sea his vizier by the name of Ghedik Ahmed-Pasha with a fleet. By force of arms he took from the infidels Kafa⁷ and Sugdak. And having captured Mangub from the Christian infidels, out of feigned ignorance he also took Mengli Giray Sultan⁸ away with him, having included him in a number of the captives who fell into his hands. They say that on his arrival to the Sultan Mehmed, he rendered Ahmed-Pasha a great favour. And said:

'Ahmed! This is my respect to you, not for your capture of Kafa. You gave into my hands the reins [of power] of a strong enemy, from the descendants of the ancient Muslim tsars. This service of yours is the first and foremost.'

After that he brought up Mengli Giray Sultan in a happy harem together with [his] other princes. However, the disorder in the area of Desht-i Kipchak reached its highest peak. The then head emir⁹ from Shirins, Emenek-Beg, the son of Mamak-Beg, the son of Tegene-Beg, the son of Ruktemur-Beg, who was the head karachi¹⁰, showed diligence in maintaining order in the area for some time. But as it was beyond the bounds of possibility, having considered that: 'Relying on the High State¹¹, I will stop this disorder, ' he sailed with a ship to Istanbul. And having submitted the request, he presented himself and

¹ 'Sarmasia' is a clear distortion of 'Sarmatia'. This note and the following mention of the Comans and Cumans (Polovtsians) evidence of the fact that Abdulgaffar Qirimi was acquainted with European historiography.

⁴ Balaklava.

⁵ Moldavia.

⁶ In the original 'Istanbul' is everywhere.

⁷ In the original, the Crimean-Tatar name of the city is used everywhere: 'Kefe'.

⁸ In the Crimean Khanate, unlike the Central Asian states and Ottoman Turkey, the title 'sultan' denoted not the ruler, but a blood prince—that is, a member of the ruling house who had no state power.

⁹ 'Mir-i miran'—the emir of emirs.

¹⁰ There are different hypotheses regarding the etymology and meaning of this title. We totally share L. Budagov's opinion about the origin of this title which possibly took root in the verb 'karamak' ('to look', 'to look after') with the suffix of a doer's name - '-chi'. Therefore, the word 'karachi' corresponds the Arabic 'nazyr' and means 'an observer', 'minister', 'servant looking after someone' (The Comparative Dictionary of Turkish-Tatar Dialects, vol. 2, p. 45).

¹¹ That is, the Ottoman state.

asked for [the hand over of] the Khan's son. Then the Padishah, the protector of the world, being very content, honoured the aforementioned emir with the Shah's favour. And having appointed Mengli Giray as Khan, made him take an oath to the State. And by [making] various contracts, he gained [his] trust. And he also gave him summer and winter dwellings, arpaliks¹, and hasses². And ordered it to be written down in the register of the Sultan's possessions as a guidance for action that under no pretext his [i.e., Mengli Giray's] request should be rejected. And he also granted to Emenek-Beg boundless honours, grants, favours, a bunchuk, and the Khan's³ military orchestra⁴. Having boarded a galley⁵, they arrived to Kafa and came [ashore]. 890 [year]⁶.

Mengli Giray Khan, son of Hacı Giray Khan

In the capital, Sary Krym, he was a glorious Khan. By means of fine measures he eliminated all trouble-makers and oppressors. And every year continuing the Sacred War against the Muscovites, he relied on the foundation of glorious brilliance of being in jihad and gazavat. He died in the nine hundred and twentieth year of Hijrah⁷.

[Addition in the margins:]

Khwarezm—that is, in Khiva, a person, they asked for a fatwah from imam Bakkali⁸, who was the imam of the time. And the imam gave a [fatwah] about the absence of [the need for] compensation. When, about this news, a fatwah was requested from the respectable Shamsu-l-aimm⁹ al-Halvani¹⁰, they gave a fatwah about [the necessity for] compensation. Two mujtahids¹¹ entered into a lawsuit [between themselves]. But since their regions were far [from one another], and they could not meet with each other, eventually Shamsu-l-aimma, having sent one of his students to Khwarezm, gave him an instruction saying: 'Do not reveal yourself and ask for a fatwah—tell him: 'Should not somebody become an infidel if he rejects one of the five times [of prayer] that Allah ordered as obligatory?' The student arrived to Khwarezm. He came to the meeting, when the imam Bakkali stated the case and asked for a fatwah. Bakkali immediately understood everything [and] gave a polite answer: 'Oh, Mulah, if someone has his feet cut off from the anklebones, how many orders for ablution will relate to him?' To this he answered: 'There will be three [orders] as for the fourth there is no place.' To this Bakkali answered and won the lawsuit saying: 'If there is no namaz time, then it is similar to [this].' And Shamsu-l-aimma also approved and recognized [this fatwah]. It is written down in 'Ravzat al-muattar'¹²

And the tribes called 'Bashkurt' and 'Tyumen' are numerous. They are obedient to the Khan of Khitais. And their side is the same. And they are Muslims. They are at war with the Kalmuks. Also they are at war with the infidel Tatars living on the mountain Imalus. It is written down in 'Jihan-nūma.'

[279v]

(Topic: Muhammad Giray Khan the Elder)

On the indicated date¹ his eldest son Muhammad Giray, having become the Khan, was in a religious war against the Muscovites. When he saddled the horse with the intention to lead out the sons of Orak Mamay and reached the area of Edil², the Nogais³ broke their agreements. There was a battle. The Khan died [in it] a martyr's death. His rule lasted twenty-three years.

[After the death of Muhammad Giray Khan] they wanted to make his brother Gazi Giray, who was in his circle, [and who was then] a small child, the Khan but considered that he would not be able to rule Tataristan, and in the year of nine hundred and forty-three (943)⁴ Saadet Giray, the son of Mengli Giray, was appointed as the Khan. He sent his brother Sahib Giray as a hostage to the High Threshold. It was the time of the Sultan Selim, the son of the Sultan Bayezid. The fact that sending hostages originates from the Sultan Selim, we are told by Ali-efendi who specified it in his [book] 'Kyunkh al-akhbar.'

Then: while Saadet Giray ruled with honour and justice, his brother, who was called Islam Giray, rebelled. And the Tatar warriors split into two camps. To the aid of Saadet Giray were sent the Beg of Kafa Baly-Beg and the Beg of Azak (Azov) Shahin-Beg by a firman from the High State. There was a battle with an evil-minded Islam Giray in the field of Azak near the river Don. The Beg of Kafa and many more fine men died [in it] the death of martyrs for the faith. Saadet Giray returned defeated and spent many more days in continuous battles. As a result, Islam Giray came, by force, to be called the Khan. And Saadet Giray set off to the Threshold⁵. There the Sultan Selim granted him a generous annual income⁶. They say that he even took him to the Persian campaign⁷. After that he died in Istanbul. The term of his rule was fourteen years.

Events of 834 (= 19 September 1430–8 September 1431)... Suddenly a messenger arrived from the Khwarezm Region and reported that the Uzbek army had split the ashes of treachery on its own destiny and stirred up the dust of revolt, that a numerous army at once had intruded Khwarezm, that the Emir Ibrahim, the son of the Emir Shahmelik, having no power to resist, had fled to Kyat and Khiva, that vizier Hoja Asil-ad-din had prepared supplies for being under siege and had raised the banner of resistance and battle but eventually had been exhausted and killed, that the Uzbek army, having captured Khwarezm, had caused huge devastation and, having spread extreme destruction and devastation, had left again to Desht. Listening to this news was very difficult for someone of sound mind (Shakhrukh).

¹ That is, in 920 Hijrah (1514/1515).

² In this place, the name 'Edil' is read in accordance with vowel marks of the initial letter.

³ In the original: 'Nogailyar'—'inhabitants of Nogai'.

⁴ 1536/37.

⁵ That is, to the court of the Turkish sultan (Sublime Porte).

⁶ 'Saljane'—the form of provision of the highest officials in the Ottoman state.

⁷ In the original: 'Adjem seferi'—that is, 'the Adjem campaign'.

He appointed several emirs to that region, and (these) eminent emirs, who had shown signs of bravery and courage, attacked the Uzbek people and ulus, destroyed and dispersed all the insolent...

Events of 839 (= 27 July 1435–15 August 1436). The story of the wintering of the victorious Khakan (Shakhrukh) in Karabag of Arran... In this time an ambassador arrived from the country of Khwarezm and reported that Abulkhayr-oghlan had suddenly come from Desht to the vicinities of Khwarezm, that Mirza Sultan Ibrakhim, the son of the Emir Shakhmelik, having not had an opportunity to fight, [199] had fled, that his subjects, exhausted, had handed over the city, and that these ruthless insolents, having turned upside down the whole region and the city of Khwarezm, had left again by untrodden paths and the roads of the steppe.

Events of 844 (= 2 June 1440–21 May 1441)... In that year a messenger arrived from Astrabad with the speed of wind and reported that the Uzbek army had come to that state from Desht and that the Emir Haji-Yusuf-Jalil had been killed. The explanation of these words is as follows: at times some of the Uzbek army, having become the Cossacks, would come to Mazanderan and, having plundered everywhere, would return again (to where it had come from). The fortunate Khakan (Shakhrukh) ordered that annually some emir-generals (temniks) should go to Mazanderan to watch over its borders and winter in that region. Several times Mirza Baysungar, and after him Mirza Ala-ad-doule, wintered there. In that year Emir Haji-Yusuf-Jalil and his brother Emir Sheikh-Haji and some other emir-generals were appointed to watch over those borderlands, and the emirs, each of them having taken his *tumen* there, spent day and night out on full guard. Suddenly the Uzbek army descended upon the emirs in such a way that they broke up (their) entire army; Emir Haji-Yusuf-Jalil stayed firmly put and gave the hand of bravery from the sleeve of courage, he made heroic attacks and undertook courageous feats but since the people he had were very few, all his efforts led to nothing. During the battle an arrow came from the quiver of destiny's bow to kill him, and he received the happiness of martyrdom. His brother Emir Mubariz-ad-din Sheikh-Haji, on a horse as fast as the wind, pursued the enemies for a long time but could not reach them.

Events of 851 (= 19 March 1447–06 March 1448)... The fortunate Khakan (Shakhrukh) gave the highest command that annually several emirs-generals (temniks) should winter in the Jurjan Region and should watch over the actions of the army of Desht-i Kipchak and of the Uzbek Cossacks...

Events of 855 (= 3 February 1451–22 January 1452) ... At this time one confidant from the court servants reported that the Uzbek Tsar Abulkhayr-Khan had already for some time been exclusively following the path of sincerity, considered himself included in the ranks of friends, and expected that as soon as His Majesty (Sultan-Abu-Sa'id) allowed the Khan, accompanied by happiness and prosperity, would be alongside the victorious stirrup (of Abu-Sa'id). These words were pleasant to the Sovereign, he sent one of his confidants to the Khan's horde and expressed his consent to his request. Abulkhayr-Khan took advantage of His Majesty's attention and with the greatest haste took to the road and joined the Highest Horde. Mirza Sultan-Abu-Sa'id honoured the terms of respect and the customs of celebration, engaged in the arrangement of affairs and management of people's needs, and together with Abulkhayr-Khan made preparations for the capture of Samarkand. From the borders of the city of Yasa they came to the region of Tashkent and Hojend. Having learned of this, Mirza Sultan-Abdallakh set off to war (with them) with a huge army.

Events of 864 (= 28 October 1459–16 October 1460)... At the beginning of the month Rabi' I (= 26 December 1459–29 January 1460) great ambassadors arrived from the Kalmyk land and Desht-i Kipchak, and through the great emirs they received the honour of kissing the foot of His Majesty (Abu-Sa'id) and reported (to him) their assignment. Having given them gifts and offerings and having rendered unto them imperial favour, he treated all of them kindly... (Abu-Sa'id), having shown complete attention to the Kalmyk envoys and to the ambassadors of the tsars of Desht-i Kipchak and Muhammad-Khalil and having written kind letters, permitted them all to return...

Events of 869 (= 31 October 1464–23 August 1465)... In the middle of Jumada II (= 29 January–26 February 1465) the imperial decree arrived from the Highest Horde to send Sayyid-Yeke-Sultan, the brother of Uzbek Abulkhayrkhan, who had been taken captive by the emirs in the vicinity of Khwarezm and had spent some time in prison in Herat, to the Highest Horde. He was a young man, fine in charac-

ter and pure in faith, who was constantly occupied with reading the Quran, and at the time when he was freed from imprisonment, he stayed for some time with the Men of God and asked for help from their inner world with dispersing mercy. Emirs and the officials of the Diwan sent him away, having supplied him with all the imperial accessories. When he arrived at the Highest Horde, Mirza Sultan-Abu-Sa'id honoured him with different favours, granted him a horse, gold, a cap, and a belt, and sent him—grateful and satisfied—to the Uzbek Region.

7. Masud bin Othman Kohistani. 'The history of Abu'l-Khayr Khan (Ta'rikh-i Abu'l-Khayr khani)'

On the publication of: The Work of Masud bin Othman Kohistani 'The History of Abu'l-Khayr Khan' // Proceedings of the Academy of Sciences of the Kazakh SSR. History, archeology, and ethnography series. Almaty, 1958, No. 3 (8).

When high-ranking khan and famous padishah Abu'l-Khayr Khan attained majority, his brow started to shine with glory of the universe sovereign. [At that time Abu'l-Khayr Khan], in accordance with the rules of affinity and a related agreement, submitted to Jamaduk Khan, who was one of the glorious Shaybanid padishahs, and focused on gathering troops and arranging state affairs...

High-ranking khan [and] ruler His Majesty Abu'l-Khayr Khan, who destroyed the rebels and defended believers, was born in 816, in the year of the luy—that is, in the crocodile year...

In the reign and sultanate of Jamaduk Khan, Gazy Bey Mangyt, son of Idiku Bey, under his father's will became the head of the tribe and nation, conquered and subjected the aimag and tribes. When Gazy Bey established himself over the throne of power and supremacy, he became oppressive and violent, stepped out of the circle of justice, and diverged from the path of mercy...

... When the emirs and leader of Desht-i Kipchak lost their patience because of Gazy Bey's evil behaviour, cried out because of his violence and oppression, and when fortune and welfare turned their back on him, they [the emirs and leaders] made a plan and killed him. And they saved inhabitants of the country from his evil. [Later] they happily went to Jamaduk Khan. When they arrived to Jamaduk Khan horde, they were honoured to be in his employ and became great emirs and men of the supreme khan. But their expectation of help and mercy from Jamaduk Khan, did not come true, [and] the khan—because of extreme arrogance and pride of supreme power—did not consider the condition people were in. When emirs were desperate in getting grace and mercy of the khan, they all together left the khan's horde and went to Jaitar Jalkin, joined the emirs and troop leaders, such as Kibek hoja Bey Mangyt, Omar Bey Burkut, Muta hoja, [87]Turdi hoja Mangyt, Jatan Madr Nukus, Bay hoja Bahadur, Sarig Shiman Mangyt, who were full of hatred and resistance against Jamaduk Khan.

As soon as Jamaduk learned that emirs and troops left him, he ordered to gather troops. The left wing of the army was ornamented with Abul-Khayr Khan's impressiveness and impetuosity, while the right wing of the army was ornamented with the great courage of Hoja-oghan and other bahadurs. [Then] Jamaduk Khan followed his troops to Jantar Jalkin.

When the enemy emirs and troop leaders learned that the khan-ruler was coming with seventy thousand equipped soldiers, they—without caring of the consequences—arranged their combat armour and got ready to fight.

When by the command of the ruler Jamaduk Khan his troops got to JaytarJalkin, the two armies stood against each other.

As soon as suddenly sunrise—the telltale sign of the morning—appeared on the battlefield, and the sky was clear of motionless stars and planets, the sun was starting to shine in the sky, the black night hid from the arising heartwarming sun, and a golden sun ray appeared from behind the mountain peak, both enormous armies began to move. At the command of the powerful ruler the glorious bagalurs and knights bravely stepped to the battlefield. The battlefield boasted with brave people and battle heroes. Both armies were excited, and the army leaders had a fire of anger burning inside of them.

Bay Khoja Bahadur, one of the enemy's slashers and bahadurs, took into his hand a morning star, that could brake granite and knock down a person, turned his brave face to the army of Sa'atHaji-oglan and in one blow with a morning star killed him by knocking down from horse. [Then] by heading towards other oglans and [troop] leaders, knocked down the majority of Jamaduk Khan's bogatyrs and time-proven soldiers. One of the elder emirs [from the dynasty] of Kushchi told that on that day Bay Hoja Bahadur sent twelve oghlans from this perishable world to eternity.

When his soldiers [Bay Hoja Bahadur's] saw his bravery, they took their courage in both hands and—rapidly following him with their swords glittering like a lightning and with a lance of revenge—destroyed Jamaduk Khan's army and drove away his soldiers. According to God's predestination, Jamaduk Khan died in that battle.

At the same time, according to the predestination of the Merciful Father, a 16-year-old Abu'l-Khayr Khan was captured by Sarig Shiman Mangyt. As the Holy Lord God's grace for this tsarevich was as boundless as the sea, Sarig Shiman, when he got to know His Majesty Abu'l Khayr, took him under his protection and did his best to look after him.

After some time [Sarig Shiman] equipped Abu'l-Khayr with good horses and appropriate armament and let him go [home].

After getting free from the hands of his enemies with the God's help and returning home, Abu'l-Khayr, the sultan [that] was as clever as Suleiman, praised the Almighty God. At the time, when the sun did not get along with its own rays—that is, the sultan of the forth climate and the ruler of the fifth climate was standing on the plain of winter, dressed in winter clothes and preventing the power of growth to interference with the nature, and branches of trees like a naked butler, without dress and without voice, were waiting for the New Year dress—Abu'l-Khayr, the sultan, possessing characteristics of angels, hoping for welfare and happiness stopped at the camp of Alash-bahadur, the senior beg of the main aimak. Alash-bahadur and other powerful leaders of great tribes acknowledged and respected the powerful sultan and, girded with the belt of sincere friendship and service, were serving all day long without hesitation. His Majesty Abu'l-Khayr Sultan with the help and grace of God spent that winter there.

When the sun, which lightens the world, left the house of winter with the Merciful God's help and moved to the house of the Aries, located in the East, Abu'l-Khayr, the sultan, as great as a heavenly throne, lightened by the sun, with the Almighty God's help, brought together his troops, retinue, supporters and servants from those people, and with the Almighty God's help, may he be glorified and exalted, directed the reins of [his] horse towards Hesil, his retinue, nation, and ulus.

On the shah's arrival, the entire army and neighbourhood residents acquired refuge [88] peace, new life, and boundless joy.

All of them were emirs, leaders, and other glorious and honourable Sayyids, and other rulers, enjoying a good reputation—sons of: OghlanKul-Muhammad-Sayyid, Kara-Sayyid-sultan, "God bless their secret"; Buzundzhar-bey-kyyat, Waqqas-bey-mangit, Sheikh-Sufi-oghlans, Hasan-oghlans-chimbay, Tashbekt-oglan-idzhan, Shad-bekht-oghlans, Timur-oghlans-satug-bay, Suyunich-bay Daulet-Sufi-oghlans, Barak-oghlans-kaan-bayly, Marat-Sufi-oghlans-tabgut, Mahmud-bekkonrat, Mane-oghlans-tabgut, Hazret-sheikh-oghlans-idzhan-bey, Yakub-durman, Karakedey-durian, Tuli-haji-bey-kushchi, Marat-sufya-utarchy Daylet-khoja-divan kushchi, Sheikh-Sufi-nayman, As-Sufi-nayman. Kara-gusman-nayman, Sarig-gusman-nayman, Yusuf-hoja-ukrish-nayman, Abubekr-ukrish-nayman, Kuday-berdy-tarkhan, Mumin-dervish-tupay, Gerey-hoja-bagadurtaymas, Sufi-bey-dzhat, Haji-Mirza-dajat, Jamaduk-bagadur-tubay, Sabir-sheikh-tubay, Yadygar-bagadur-tubay, Kungur-bay-kushchy, Abke-bagadu-hitay, Kebek-bey-kushchi, Hojabagadur-barak, Tirchik-bey-durman, Bulakdak-bagadur-hitay, Kebek-bey-kushchi, Hojabagadur-uyghur, Ichki-biagu-divan-uyghur, Bay-sheikh-uyghur, Abdalmalik-karluk, TungachukTuluhoja-nayman, Hakim-sheikh-kushchy, Akcheurus-kushchy, Timur-bagadur-keneges, Kuragaygenan-bagadur-uysun, Kilich-bay-bagadur-uysun, Tulkujy-bey-tubay, Sarikh-Shiman-mangyt, Kilich-buka-tarkhan, Bagly-hoja-konrat, Hojalak-kurleut, Sheikh-Muhammad-bagadur-uysun, Birim-hoja-bagadur-uygur, Bahty-hoja-uyghur, Sufi-hoja-ichky, Hoja-amin-ichky-mangyt, Tangry-Berdy-tuman, Anikey-hoja-durman, Tulun-hoja-tuman-ming, Urus-konrat, Omar-nayman, Tulun-hoja-

nayman, Daulet-hoja-yurchi-kara and other great people came to the powerful ruler like happiness and welfare, became his victorious soldiers and happy servants.

In 833 AH, in the year of bidzhin—that is, the year of monkey—at the age of 17, [Abu'l-Khayr], in welfare and happiness, was enthroned as a ruler. [Then] Abu'l-Khayr, thanks to the abundance of God's grace and heavenly help, prepared a tool for conquering the world, and the high-ranking sultan, who with his position was equal to Jupiter, armed troops of Islam, with hope in God raised the flag of victory and prevailing, and turned the reins of the universe conqueror towards the city of Tara.

When the flags of victory exposed their arrival throwing a shadow over the inhabitants of the city of Adadbekburkut, which was a hakim of the city of Tara, and Kebek-hoja-bey-burkut with all his emirs, leaders, troop leaders side by side passed through the doors of assistance and submission and became mulyazims of lord of the world. [And] other [89] masters of sword and word, servants, and close associates from powerful rulers and high-ranking emirs [also] rushed to the court of the ruler [i.e., Abu'l-Khayr Khan].

When the heavenly voice of happiness informed people about the victory and conquest, thanks to the Almighty God's help, all the enemies and people persisting approached the sultan's court and joined his brilliant and large retinue.

When the gallant flag started blowing from the dreamland like the sun in the winds of welfare and happiness over the city of Tara, which had become the throne-city and capital, and people felt the fragrance of victory and triumph, a dawn, hinting of soonest happiness and grandeur, raised on the horizon of glory. By the most august blessing this line growing day by day ornamented the crown and throne of monarch, and retribution of God and Master of the universe ornamented his Majesty [Abu al-Khair], a person blessed, by divine goodness and God's grace, similar to endless heavenly welfare. An astronomer, with the heavenly help, from a shaat of favourable grace developed a calendar of khalif's dignity and of His Majesty hakan, the ruler of the entire world.

According to the tradition of the great sovereigns and rule of powerful hakans and by the grace of the supreme Creator, Abu'l-Khayr Khan—just like Feridun—was enthroned as the khan on the throne ruling the entire world. Powerful sultans, great emirs and sayyids, leaders of high-ranking dynasties inclined heads in submission and service in front of his firman, and all together, bent the knee to him, greeted him and wished all the best. Abu'l-Khayr Khan performed a traditional ritual and adat that was known to faithful sultans enthroning as khans on the throne of the entire world ruler. Abu'l-Khayr Khan treated Sarik-Shiman-mangyt with grace and gifts because he was serving [him] kindly to the extent that [Abu'l-Khayr] promoted him to high and dignitary ranks, and [he] became an object of envy by the great emirs and powerful sultans. [And] Alash-bagadur and his aimag, who were his best friends [and] served well and diligently prayed, were given expensive dressing-gowns and treated with grace to the extent possible. [Moreover, Abu'l-Khayr] placed his powerful hand to control the territory [his] and property.

This behaviour of Abu'l-Khayr Khan shows his tradition [awareness], which for a sultan—just like heavenly powers of the Almighty—is a key to power and eternal welfare.

After [he] showering the triumphant army with gifts and treating them kindly, he let bagadurs and soldiers go back home.

Brave troop leaders and [bagadurs] with retinue went toward their herds of horses and valety, got rid of difficulties of campaigns and burden of combats, wars and battles, began to celebrate, drink wine and hunt.

The story about the battle and combat of the khan, who was as exalted as Jupiter, against Mahmud-hoji-khan and about his death by the decree of God.

After the triumphant troops of Abu al-Khair Khan spent some time celebrating and got what they wanted, the conqueror khan decided to conquer other lands and their inhabitants... When he, graced by the Almighty God with grandeur and welfare, wanted new conquests, and victories, and troops inspired with power in welfare and excellence of the Almighty, All-holy God, they all came to the court, which was like heaven, which in number was like eternal happiness, such that by joining forces and aspirations [they] were able to drive an opponent into the ground, [his], troop leaders from the great and high-

ranking leaders, glorious sultans, and famous emirs said that: 'All the orders issued by the triumphant khan will be executed, we will entrust him with our lives and earn [his] rewards by our service.'

When the most august [Abu'l-Khayr Khan] heard what they said and [he] reinforced his padishah intention, equivalent to destiny and fate, accompanying conquests and victories, he told his glorious emirs and battle-tested bagadurs, like Omarbey-burkut, Mahmud-bey-konrat, Bagly-hoja-konrat, Urus-konrat, Sufi-bey-nayman, KaraGusman-nayman, Omar, Abubekr-nayman, Kara-Gusman-nayman, Tuli-hoja-kushchi, Daulethoja-divan-kushchi, Kungur-bay-kushchi, Hakim-sheikh-bagadur, Akcha-urus, Saryk-Shimanmangyt, Hoja-bagazur-barak, Tashbekt-oghlan-iijan, Sheikh-Muhammed-bagadur-uysun, [90] Kylych-bay-bagadur-uysun, Hyzr-sheikh-bagadur-iijan, ukrasiz [by presence] from the left wing of troops, to set off for battle and combat. Sayyids' sultan, the source of power and happiness, Kyl-Muhammad-sayyid, Kara-sayyid, Yakub-durman, Karakedey-durman, Dulyatak-bey-durman, Anikey-hoja-durman, Kara-tirchik-durman, Mumin-dervish-bagadur-tubay, Huseyn-oghlanchimbay, Daulet-sufi-oghlan-kaan-bayli, Sabir-sheikh-bagadur-uyghur, Yadygar-bagadur-uyghur, and other knights and glorious soldiers, ornamented and strengthened [by presence] the right wing and prepared the reins of determination to fight against Mahmud-hoja-khan, one of the distinguished rulers of that time.

As soon as the triumphant sultan issued the order, Bahtiyar-sultan, with a troop of bagadurs, with trust in God, headed the triumphant troops. With such grandeur and splendor [Abu'l-Khayr Khan], the legitimate hakan and padishah of the entire land, with troops whose number a person could not even imagine, and a painter could not even depict, the legion of troops headed out to battle and combat against Mahmud-hoja-khan.

When the aforementioned khan [Mahmud-hoja-khan], who for some time had been strong and powerful and was enthroned as supreme ruler, heard about approaching troops, the shelter of victory, he gathered his troops and headed out to the battle with all his soldiers and glorious fighters and oghlans of the Jochid dynasty.

When the enemy troops approached on the Tobola River bank, the ruler of the assembly of stars grandly left his palace that was shining especially on the sunset horizon, and the beauty of the world that was lighting the gloomy evening horizon was hidden, and the area, like yellow-green chrysolite, was lit by stars, and both armies clashed with each other and began to cry out 'Be alert!', 'Watch out!'

[As soon as] the first golden ray of dawn appeared in the East, and the lord of stars with a crown ornamented with pearls became visible from the mountains, both armies started to move and lined up in rows. As soon as the soldiers had prepared their battle and combat weapons, they bravely headed to the battleground.

Sounds of drums, trumpets, and kettledrums coming from both sides rose to the heavens. When fire of war and battle and the flame of combat and fighting was inflamed, Eagle—the bird of death

—captured the souls of enemies with claws of violence. The heart of the coward [person] was trembling in fear of his life like branches of a willow as the wind sweeps over them. Blood was flowing from the lightning of the bared swords of brave [soldiers], and the colour of the heat-forged daggers turned red like a ruby from the blood of brave [soldiers].

Abu'l-Khayr Khan, the conqueror of the world and powerful ruler, with God's help and by the grace of God, sent his triumphant troops marching toward the enemy. His soldiers assailed the enemy with eagerness, like heavenly fate, to ornament the precious steel of dagger with the blood of enemies without honour. The javelin cried out 'Watch out for the blow of the lord, O God!' and was heard by the enemy, and the soldiers of Abu'l-Khayr Khan by the water of the sword doused the flame of arrogance and pride from the heads of the enemy like ash.

The bravest soldiers, experienced in combat and battle-tested, attacked the enemy from the left and right wings, and like belligerent lions grappled with the enemy soldiers and covered the battlefield with the blood of the enemy.

When Mahmud-hoja-khan, who was dreaming of dominance and wanted to be a padishah, saw the courage of the triumphant troops [of Abu'l-Khayr Khan], he gave up his throne, property, and empire and, exhausted from the battle, ran away. Mahmud-hoja-khan wanted to escape with his life from the battlefield on a speedy horse. But by predestination of the Almighty God, brave soldiers and knights,

beating down the people, stopped [him], and with the help of God and heavenly grace, captured him, [and] at the order of [Abu'l-Khayr Khan] his highness hakan sent [him] from the city's fortifications to eternity.

Hakim-sheikh-bagadur-kushchi, whom Abu'l-Khayr Khan, the shelter of grandeur, entrusted with the position of atalik, was involved in the attack together with Kungurbay-kushchi, who was one of his closest associates and ichkians, and put Mahmud-Gazi-sultan and Sudayash-sultan to death.

[Thus, the soldiers of Abu'l-Khayr Khan], with the grace of the Almighty God, destroyed and dispersed the entire army of the enemy. Most of them were captured by troops of the shelter of victory. In line with Islamic traditions, Abu'l-Khayr Khan married the wife of Mahmud-hoja-khan, named Aganak-Begim-Bike, who was [as beautiful] as the moon, and lived a happy joyful life. [91] After the victory [Abu'l-Khayr Khan] turned the reins of his happy horse towards [his] august horde.

Troop leaders and nobleman of the court, the shelter of the caliphate, approached the throne [of Abu'l-Khayr Khan], the shelter of the caliphate's dignity, and offered him congratulations on the victory.

[Abu'l-Khayr Khan], the sea of blessing and with the of Feridun, looked with mercy and affection on [his] army and gave order to organise a feast of happiness and joy and prepare all the items of joy and happiness that they [soldiers] wanted.

The wealth and spoils of war won by the troops [of Khan Abu al-Khair] from the enemy army, starting with apple-cheeked bond-maids, swift horses, camels, tents, armour, various weapons [and ending with] horse armour, were all brought to the doorstep of [Khan Abu al-Khair tent] the shelter of lords. And he offered everything to emirs and soldiers... He offered objects and belts to all high-ranking sultans and glorious emirs and promoted them.

When most of Desht-i Kipchak, with the help and grace of the Almighty God, came under the control of the lord of the horizon [Abu'l-Khayr Khan] and the mind of the lustrous hakan, the conqueror of countries, was free of thoughts about conquering the entire province [Desht-t Kipchak], ulus, aymak and tribes, shahinshah Abu'l-Khayr Khan, the shelter of grandeur, head of the great khans, triumphant [khan] ordered all the soldiers to go back home and have fun.

[Abu'l-Khayr Khan], in the tradition of a ruler who takes care his subjects and spreads justice with his hand, caressing a friend and destroying an enemy, with dignity and pride together with his associates and servants, made enormous efforts and spent his time day and night in the court of the Almighty God [i.e., in a mosque] praying.

Story about how [Abu'l-Khayr Khan] sent troops towards Khwarezm

When [Abu'l-Khayr Khan], as glorious as Feridun, and noble emirs, with the help of the Almighty God and the grace of the Almighty, All-holy God, had spent some time celebrating, [Abu'l-Khayr Khan] the conqueror of the world, wise and great ruler, like sunlight, began to wish, with the help of the Almighty God, to bring another province under [his] rule and conquer it and clean the entire territory of the state, roads, and routes of the opponent's ash and the enemy's evil.

[Abu'l-Khayr Khan] gathered [one-time] troop leaders and brave [heads] of the triumphant army, the cream of glorious leaders: Kyl-Muhammed-sayyid, Kara-sayyid, Bakhtiyar-sultan, Adadbek-burkut, Kebek-hoja-bey-burkut, Buzunjar-bey-kiyat, Muhammed-bey-konrat, Khakim-sheikh-bagadur-kushchi, Kungur-bay-bagadur-kushchi, Tuli-hoja-bey-kushchi, Daulethoja-divan-kushchia, Akche-urus-kushchi, Kylych-bay-bagadur-uyghur, Sufi-bey-nayman, Kara-gusman-nayman, Hojalak-kurleut, Bagly-hoja-konrat, Yakhshi-bey-tarkhan, Kutlug Buka-tarkhan, Hankly-nayman, and other leaders of the triumphant army and after counsel and discussion told them [that he] had decided to conquer Khwarezm and wanted to head out for a fierce battle against the hakim of Khwarezm as soon as the troops were ready.

These emirs and the triumphant army leaders and other pillars of the state, owners of wealth, and masters of people were honoured to report to the padishah, the shelter of Islam: 'Whatever [Abu'l-Khayr Khan] decides to do, if it makes the world better and improves lives, 'the pillars of state suggested by God..., ' that will be the right faith, and will lead to the well-being of the empire and serve the state and people.' But [Abu'l-Khayr Khan], the just and powerful padishah, high-ranking hakan and shelter of the universe, in his heart, sunlit by all-seeing rays, clearly understood that rumors about the rule and gran-

deur of Shakhrukh-sultan, the heir of the ruler Timur-Guregan and throne holder of Samarkand and Khorasan, had spread across the world, and all the lands from the borders of Rum to the remote countries of Hind, Persian and Arabic Iraq, Azerbaijan, Khorasan, Transoxiana, Turkestan, [as well as] to the borders of Kashgar and Badakhshan, were controlled by the governors of this high-ranking padishah, [and] Khwarezm [also] was associated with the divan of this shah, the center of justice, [for this reason] 'it [should] have been thoroughly considered and [everything] weighed.'

Given that His Majesty [Abu'l-Khayr Khan] hakan had high intentions, he did not pay attention to what his emirs told him and declared that: 'Since the state is the property of God, 'he gets anything he wants'—victory and help are by God's grace not by the number of troops. [For this reason], we want to carry out the decision we made, hoping by God's grace, that conquest of that province and its people was possible.' [Abu'l-Khayr Khan] turned his thoughts to the meaning of the words of hoja Abdal Ansari, a role model for all the saints, a place where the power of God was seen, 'let his high name be blessed.' 'If you decided not to give, then do not give' [i.e., if you have decided to do something, then do it] and headed out to the raging battle and [to] the conquest of Khwarezm.

[Abu'l-Khayr Khan] made the bold decision to conquer Khwarezm and, acting in the traditions of hakans, conquerors of the world and [92] rulers of states, prepared the [army] for conquest, and appointed Bahtiyar-sultan, who was a crocodile in the sea of courage, as the leader of the vanguard. The great emirs and high-ranking leaders, whose presence ornamented and glorified the world and inhabitants of the world, i.e., the cream of the Sayyids—the source of glory and happiness—Kyl-Muhammed-sayyid and Karasayyid, Vakas-bey-mangyt, Buzunjar-bey-kiyat, and all the emirs, knights, and bagadurs, with God's help [and] brave actions, got the army ready and headed out to Khwarezm.

[Abu'l-Khayr Khan] the triumphant khan, under the patronage of God, the kind giver, made the final decision to fight against the hakim of Khwarezm and, after ornamenting the centre of army with kingly brilliance and splendor worthy of a hakan, headed to Khwarezm. After several crossing and stops, Abu'l-Khayr Khan chose the outskirts of Khwarezm as the place for the army to halt, the shelter of victory.

The hakim of Khwarezm, the descendant of Shah-Melik-Bilkut, was occupied with fixing up the citadel and strengthening [its] towers and walls. But it was obvious to the clever and well-informed people that a partridge is helpless, it [is no match for] a hunting eagle.

The next day, early in the morning, Abu'l-Khayr Khan, the conqueror of the world, asked God for victory and help and then ordered bagadurs, soldiers, and other fighters to prepare the weapons of war and assassination and bravely head towards the citadel, [and] they lit the flame of war and assassination. When the hakim of the citadel saw what was happening, [then] he was horrified and afraid of the impressive look and actions of soldiers.

The nobility of the city, the eldest famous sheikhs, high-ranking scholars, owners of abstinence and religion, owners of knowledge and fatwas, began to give their advice and persuade the hakim of the citadel: 'It is useless to argue and fight against this padishah, the powerful khan, [who is] as splendid as Feridun. If he takes the city by war, battle, combat, and force, [then] our wives, [our] children, [we] ourselves, relatives, property, people, their wives, children, and servants of Muslims will become [their] spoil and captives, and then it will be too late to repent and feel sorry.' When the hakim heard this speech from the nobility [of Khwarezm], he lost his hope in the residents of the city and defenders of the citadel...

Sayyids, scholars, judges, owners, and other residents of the city of Khwarezm brought presents and gifts to the court of Abu'l-Khayr Khan, the shelter of the state and, approaching the court of the shelter of the world with an expression of true friendship, gave to governor of the court [of Abu'l-Khayr Khan] keys from the city and treasury.

[Thus], with God's help [Abu'l-Khayr Khan] easily conquered [the city]. Then Abu'l-Khayr Khan, like a heavenly force, dressed the residents of the city of Khwarezm in the honorary coat of mercy and tranquility and offered them a place under the shade of [his] mercy and justice.

[Abu'l-Khayr Khan], the shelter of faith, when he, with the help and grace of the Almighty, all-holy God, was enthroned as the ruler spreading justice, he opened the doors of old treasure troves [and]

started to spread wealth among [his] troops. Suyunich-hoja-khan, from the khan's garden, told me, who recorded it: 'When Khwarezm was conquered, my father gave orders to open the treasury, which was collected with difficulty by the former lords, and told two of the great emirs to sit by the doors of the treasury, while all the leaders, people of the khan's retinue, and ordinary soldiers in pairs went inside, took what they were able to take, and left. In line with this khan's order, all the soldiers entered the treasury [in pairs], each took what he was able to take with him [without difficulty], and walked out. As a result, by the grace of God, the army enriched itself with gold and precious gems.'

[Then], when all the soldiers had gathered, [Abu'l-Khayr Khan], the khan of the sea of blessing, [khan] spreading justice, and a ruler who takes care of his subjects, looked at [the inhabitants of the city] and issued an order that [everyone] should obey, so that no creature could harm the property of Khwarezm residents and Muslims...

The story about why Abu'l-Khayr Khan, like Jupiter, returned from the city of Khwarezm [to Desht-i Kipchak].

When residents of the city of Khwarezm and the outskirts of the vilayet had spent some time [under the protection of] the sea of justice and blessing [Abu'l-Khayr Khan], as wise as Suleyman, by the predestination of God and heavenly fate, plague broke out in Khwarezm. [For this reason], the nobles of [Abu'l-Khayr Khan's] troops and glorious knights, who were used to the pure air of Desht-i Kipchak, felt ill from the rotten air of Khwarezm, and all the troop leaders told the khan, the heavenly palace, that in order to save the army from the horror of plague and the disasters of heat they should resolve to turn towards Desht-i Kipchak. [93]

Based on [this] forceful request of emirs and well-wishers [Khan Abu al-Khair], the high-ranking khan, decided to return and headed towards [his] horde. When [Abu'l-Khayr Khan], with the help of the Almighty God, returned to [his] horde, people from all sides and edges of Desht-i Kipchak came [to him] and were honoured to kiss the hakan's carpet, and the monarch's favour and grace...

The story about the battle and combat [of Abu'l-Khayr Khan] against Mahmud-khan and Ahmed-khan and about their defeat at Ikri-Tup.

Mahmud-khan and Ahmed-khan, padishahs of the house of Jochi, did not submit [to Abu'l-Khayr Khan], and raising the standard of revolt and uprising, took the path of insubordination and disobedience.

For this reason [Abu'l-Khayr Khan], called Sayyids, holders of high knowledge, and sultans with glittering retinues, [and similarly] zveds, emirs, and glorious bagadurs and in a generous tone said: 'Mahmud-khan and Ahmed-khan took the path of disobedience and conflict, and setting their foot [of disobedience] on the path of dissent [with me], they took the path of uprising.' When [Abu'l-Khayr Khan], the shelter of the world, stopped talking, the cream of descendants of His Majesty sayyid Al-Mursalin, said 'Let the Lord bless him, and grant him peace!', Kara-sayyid said that: 'The righteous Heaven and the Almighty God gifted [Abu'l-Khayr Khan], the generous hakan, with the glory, grandeur, and talent of a padishah and commander, and troops are gathering around [his] palace and [for this reason], trusting in Allah [and] preparing the army, shall go and fight against them [Mahmud-khan and Ahmed-khan].' When the hakan heard this, the ruler's mettle and prince's jealousy surged up in him, and he immediately ordered his 'triumphant soldiers, the shelter of well-deserved victories, to prepare for a fight with Mahmud-khan and Ahmed-khan and immediately come to [his] palace.'

When the army, the shelter of God's help, had gathered around the palace of the hakan, like Feridun, [Abu'l-Khayr Khan] after taking council [with emirs and troop leaders] resolutely turned towards Ikri-Tup, which was the enemy [of Mahmud-khan and Ahmed-khan] horde on that side; he put Bahtiyar sultan together with other famous emirs in the vanguard...

Vakas-bey-mangyt, Adad-bey-burkut, Buzunjar-bey-kiyat, Iagly-hoja-konrat, Timuroghlan-Suyunich-kylyi, Daylet-sufi-oghlantangan-bayly, Iarek-oghlantangan-bayly, Mane-oghlantangan, Tuly-hojakushchi, Kungur-bay-kushchi, Daulet-hoja-divan-kushchi, Hakim-sheikhkushchi, Kichik-bey-uyghur, Hasan-bey-uyghur, Iabagu-divan-uyghur, Hasan-oghlantangan-chimbay, Kutlugbuka-tarkhan, Yakub-durman-kushchi, Sheikh-Muhammed-bagadur-uysun, Kylych-bay-bagadur-uysun, Saryk-gusman-ukrishnayman, Abubekr-ukrishnayman, Timur-sheikh-bagadur-keneges, and other emirs and leaders of

troops glorified [by their presence] the left and right wings, raised the standards of God's help, and headed towards Ikry-Tup.

[Abu'l-Khayr Khan], with the glory of Feridun and the happiest omen, with God's help and mercy, stood at the centre of the army and like Naudar and Iskander, cutting the ranks of the enemy army, marched out [against Mahmud-khan and Ahmed-khan].

When Mahmud-khan and Ahmed-khan learned of the arrival of the army [of Abu'l-Khayr Khan], the conqueror of the world, they started to gather the army in all earnestness. They sent messengers to all the subject provinces and the steppe and, asking them for help, started to prepare for battle [with Abu'l-Khayr Khan].

When the army of the enemy [of Mahmud-khan and Ahmed-khan] came face to face with the army of justice [of Abu'l-Khayr Khan], as powerful as the heavenly force, he ordered poisoners to put poisoned rocks into the water and do their job.

When the poisoners, at the order of [Abu'l-Khayr] khan, whose orders are carried out [by everyone], eagerly started to do their job, by the omnipotence of the Lord God. A dark cloud of the Almighty and All-holy, like a black curtain, appeared in expanse of the world and put a blue veil on the bright sun, [and] sent elephants of speedy clouds across the heavens one after another, [and] raised huge waves in the blue sea, [Abu'l-Khayr Khan], the face of the army, the shelter of help, trusting in God, set out towards the enemy, [and] the sound of horses and cries of soldiers assaulted the ears of the sky, [and] with the help of the dark cloud, wind [and] lightning, the earth's padishah blinded the enemy, and you could read the fear and horror of Judgment Day on their faces. The wind of victory and God's help started to blow from the side [of Abu'l-Khayr] [94] of khan, the great and wise ruler. The night of conflict started the hunt for birds of spirit of enemies, and at the same time, the bright day of deluded people became a dark night.

[Warriors of Abu'l-Khayr Khan] put most of the brave enemy army leaders into the grave of scorn and shame, and the battlefield became purple-red with the bodies of the slain and blood of heroes like the rubies of Badakhshan.

When Mahmud-khan and Ahmed-khan saw with their own eyes what was happening, they [immediately] refused to continue the battle [further] and, giving up claims to supreme power and state, started to run from the army [of Abu'l-Khayr Khan], the shelter of God's help.

[Warriors of Abu'l-Khayr Khan] threw into the grave of scorn many soldiers and troop leaders [of Mahmud-khan and Ahmed-khan], who had the wind of arrogance, authority, and the wish to govern in their thoughts.

In this battle, the bagadurs of Abu'l-Khayr Khan's army, soldiers experienced in battle and heroes of combat showed courage, the art of bravery, and dedication, and they turned the surface of the battlefield red with the enemy's blood. Sheikh-Timur-Bagadur, in particular, crossed the water and, using his javelin, showed such signs of heroism and courage that both sides expressed praise and approval. Kungurbay-kushchi [also] crossed the water and with his heat-forged sword made so many blows killing enemies that he broke two swords. [Abu'l-Khayr Khan], khan of the Heavenly throne, beheaded most of the captured enemies.

The brave [warriors] of the triumphant army [of Abu'l-Khayr Khan], followed the fugitives and captured boundless wealth and much property and returned [to Abu'l-Khayr Khan] cheerful and happy.

When the [warriors of Abu'l-Khayr Khan], with the boundless help of the Almighty, All-holy God, destroyed and dispersed the enemies, [Abu'l-Khayr Khan] bent his knee to the padishah of padishahs [God] and, with a face full of sincerity and obedience, showing gratitude [for] the victory, gave thanks and praise, as humans do.

After [Abu'l-Khayr Khan], the triumphant and successful khan, had shown his gratitude and praise, he headed out towards the horde of the most august Ordu Bazar, the capital of Desht-i Kipchak, which was the glory of the world's sultans, and became the governor of the khan's court, the shelter of the world. Khutbah [was read] here [for the name of Abu'l-Khayr Khan] and new coins [mint] with the glorious name and noble title of His Majesty [Abu'l-Khayr Khan] were put into circulation. [And after that], when the throne of Sayn-Khan [Batu] was occupied by the influential khan, the shelter of the

world, the court mulyazims, at the order of the hakan, the shelter of the world, started to organize the padishah's celebration and feast.

In this house of heaven, the monarch of the world [Abu'l-Khayr Khan] indulged in enjoyment. [Abu'l-Khayr Khan] honoured famous bagadurs and warriors, who in the battle [with Mahmud-khan and Ahmed-khan] tried hard and showed courage and bravery, with padishah coats and princely gifts, [and] he was also pleased to honour all the soldiers with property and horses of the enemy, caravans of camels, wagon-mounted pavilions, and tents and weapons. [Abu'l-Khayr Khan] provided his protection, various mercies, and justice to the population of Ordu Bazar and thus cut off the hands of violence of tyrants and oppressors.

Subjects and warriors [of Abu'l-Khayr Khan] approached the court of the padishah of padishahs [God] and, lying on the ground and lifting up their hands in entreaty, asked God, who listens to all the entreaties and satisfies the needs of all the creatures, to increase happiness and offer eternal life to the ruler and the grandeur of the padishah, the shelter of Islam, and spent time in complete peace under the protection of the righteous ruler [Abu'l-Khayr Khan].

The story about the war [between Abu'l-Khayr Khan] and Mustafa-khan and his defeat with the help of God, who is asked for help, about the treason of Vakas-bey-mangyt against the heavenly khan. Against the All-seeing (Abu'l-Khayr Khan), and about the union of [Vakas-bey] with Mustafa-khan.

At that time of year, when spring had already drawn picturesque views all over the steppe, and the spring wind had removed the cover from well-watered bunches [of roses], the roses were covered with green thorns, and a gust of spring wind freed up the motley flower garden from trouble, Abu'l-Khayr Khan, khan of a powerful court, which was the spring flower garden of state and sovereignty and cypress tree of the garden of khalif dignity and monarchy, was sitting enthroned in the meadows in grandeur, which were as beautiful as the gardens of Heaven and competed with the garden of Heaven, refreshing life, the roving [his] troops of victory, approaching [him], were honoured to report that Mustafa-khan, with a large and numerous army and by the efforts of Vakas-bey, had prepared [his] own army and raised the standards of conflict, and was heading out [for a campaign] against the triumphant army [of Abu'l-Khayr Khan]. [Abu'l-Khayr] khan, the sea of grace, based on the Almighty God's grace, ordered, with the appropriate dignity [becoming to such a khan], the heavenly army to gather [around his palace] and prepare weapons to get ready for the battle.

Bakhtiyar-sultan and the great emirs and notorious bagadurs—that is: Buzunjar-bey-kiyat, Hash-nikda-oghlan-iijan, Tuli-hoja-bey-kushchi, Kungur-bay-kushchi, Hakim-sheikh-kushchi, Mahmud-bey-kunrat, Kylych-bay-bagadur-uyshun, Murat-sufi-utarchi, Saryk-Gusman-ukrishnayman, Sufi-bey-jat, Kebek-bey-kushchi, Hoja-mirza-jat, Hasan-oghlan-chimbay, Shadbehtbalh, Kutlug-buka-tarkhan, Abd-al-Malik-karluk, and other famous [bagadurs] and troop leaders prepared [for the battle] and, arranging the right and left wings, headed towards the battlefield.

Bakhtiyar-sultan, at the order of [Abu'l-Khayr Khan], like heaven, with a troop of brave soldiers and bagadurs was in the vanguard, followed by the rest of the bagadurs and emirs of the left and right wings of [Abu'l-Khayr Khan's] army.

When two armies by the predestination of God approached each other, the sun put up [its] sword into night, and the shah of light covered the world with the curtain of the black army. The two armies came and stood facing each other, and [Abu'l-Khayr Khan], like a heavenly force, ordered the powerful and numerous soldiers, like a hunting lion, whose shining sword caused horror and turned fire into stone and iron into water, barred the enemy way from every side and cautiously prepared an ambush.

[Abu'l-Khayr Khan], the great khakan, prepared his army on the same night, assigned brave soldiers and glorious bagadurs to the centre and both wings, and in the princely tradition put his determined foot into the stirrup, and with hope in God turned the reins of the world conqueror's restive horse toward the At-Basar River.

Dust ascended to the dome of heaven and a dark circle in the image of another world rose above the battlefield from the dust raised by the triumphant army [of Abu'l-Khayr Khan].

Mustafa-khan with his numerous army fearlessly started to move against [the army of Abu'l-Khayr Khan].

Sounds of trumpets and kettledrums from both sides began to rise up to the heavens. The two blood-thirsty armies, like fire and water, began to move, and the ground on the battlefield turned [red] like tulips from the blood of brave soldiers, and fire of fighting and slaughter was lit.

When the two armies clashed, sword-bearing bagadurs and brave knights [of Abu'l-Khayr Khan] came out of the ambush of hatred, put on expressions of bravery, and evading the swords of hatred attacked [the army of Mustafa-khan], like heavenly fate. The enemies started to fight [against each other] and lit the fire of battle and combat by order of the Almighty God.

When the defiant and mutinous [warriors of Mustafa-khan] saw the sea of warriors [of Abu'l-Khayr Khan], the conqueror of the world, besieging them, like a fish out of the water they were dismayed and afraid of the Day of Judgment, and they felt the greatest fear, and dropping the reins of will [they] fled. Mustafa-khan expelled the great passion for leadership and being a padishah from his mind and fled together with the other fugitives. The army, the shelter of victory [of Abu'l-Khayr Khan], with the help of Allah, turned its sword of bloodshed towards them, and so many enemy warriors were killed that even an accounting clerk could not count.

Mustafa-khan out of necessity gave up his claims to property, state, and family, safely escaped to the opposite bank of this bloody river on a skittish horse, and the majority of his retinue and servants, property, and wealth were taken by soldiers of [Abu'l-Khayr] khan, the standard of victory. It is said that 4, 5 enemy warriors were killed in that battle.

Among the pillars of the state and those in high positions and power, it is customary to say that, according to Allah's predestination, out a thousand killed men, one remains alive. [However,] very strangely and surprisingly, these words of reasonable men of wisdom, perspicacious savants of mysteries, were not proven correct this time. In short, while fleeing in extreme haste and excitement, Mustafa-khan could not tell the difference between the reins and the stirrup, descent and ascent.

After the defeat and flight of Mustafa-khan [Abu'l-Khayr], the Khan, a refuge of justice and Khakan, who in his wisdom was like Suleiman, gave praise and thanks to God the Almighty and the All-Holy, and whose scribes, at his orders, wrote 'The Tsar giveth to whomever he pleaseth, and taketh from whomever he pleaseth, and humiliateth whomever he pleaseth, ' and by the grace of the Almighty Creator, has returned victorious and powerful to the place of his abode.

[Abu'l-Khayr Khan] gave orders to distribute all the wealth and spoils of war taken from the enemy troops to the sultans, emirs, and warriors depending on their position. [96]

The story about the campaign of the Khan, [the ruler] of horizons, to conquer the city of Sygnak.

When the victorious Khan [Abu'l-Khayr], with the help of God, whose help is sought, returned victorious and powerful from the battle with Mustafa-khan, it was the time of year when the sun that illuminates the world entered into the constellation of Libra, and from the rotation of the firmament, the nature of the world found its balance; and from the arrival of the ruler of autumn, the gardens and plantations scattered their gold, [then he], the Khan, like the firmament, with the help of his protector, for better wintering, decided to go and conquer the city of Sygnak and ordered the sultans, emirs, and leaders of the troops—that is, Bakhtiarsultan, Pishinda-oghlan-iijan, Vakas-bey-mangyt, Mane-oghlan-tangut, Hasan-oghlan-chimbay, Buzunjar-bet-kiyat, Daulet-hodja-divan-kushchi, Akche-urus-kushchi, Sheikh-sufi-nayman, Kylych-bey-bahadur-uysun, Mahmud-beg-konrat, Abubekr-ukrish-nayman, Ho-jalak-kurleut, Kichikbey-uighur, Hasan-bey-uighur to set out on a rapid march with a detachment of knights and bagadurs. The emirs and leaders immediately rushed out and quickly reached the fortress of Sygnak.

When he saw the large number and the greatness of the troops of [Abu'l-Khayr Khan], the Hakan, the Hakim of the city [of Sygnak], came to him in submission and obedience, surrendered the city to the emirs and servants of [Abu'l-Khayr Khan] the Hakan, who is like Jupiter, and Ak-Kurgan, and Arkuk, and Suzak, and Uzgend also entered into possession of power and conquest of [his] governors.

[Abu'l-Khayr] Khan, who in his power [is like] the heavenly throne of Jamshid, offered the city of Suzak to Bakhtiyar Sultan, who is the sultan of sultans, turned the rule over Sygnak to Manedanoghlan and Uzgend to Vakas-bey-mangyt.

[Abu'l-Khayr] khan of inimitable glory, by the grace and favour of the Almighty and the sagest, after arranging for wintering, spent the winter in happiness and prosperity by engaging in hunting, merriment, and joy.

When the sun illuminating the world moved into the constellation of Aries, the place, which is the East, the world, and its inhabitants were delivered from the harsh and cruel frosts, and the expanses of gardens and fields, by the grace of the sultan of spring, put on their colourful clothes, like seven colours of brocade, and the whole steppe turned into an object of jealousy for the Chinese art gallery and the ninth sky, [and when] His Majesty [Abu'l-Khayr] the Khan, who is like Jupiter, decided to send his banners of victory towards Ilak, [then] came the news that the padishah, the refuge of justice, Mirza Shah-rukh Bahadur preferred eternal paradise to the inconstant world... and Ulugh Beg Guregan, a powerful ruler who achieved his desires, went with a large and infinite army of Khorasan. [Abu'l-Khayr], the highly placed Khan, checked the accuracy of this news, gathered the leaders of his troops, and said that the city of Samarkand was empty, Mirza Ulugh Beg had gone to Khorasan and Iraq, and that he wanted to turn resolutely toward the city of Samarkand. The emirs and sultans heeded the words of [Abu'l-Khayr], the Khan, who in his power is like Jamshid, with honour, and according to the order, the warriors in the retinue of [Abu'l-Khayr] khan, like Faridun, took the road.

Everywhere the army of [Abu'l-Khayr Khan] went, the protection of Islam, the aymaks and tribes, farmers and nomads among the Tajiks and Turks came and presented them with gifts and offerings, showed obedience, and submitted to [their] orders and [thereby] showed the signs of service and wishes of every kind of well-being.

When the troops of [Abu'l-Khayr Khan], the high-ranking Khan, came to the village of Shiraei [and], with glory made a stop [there], an order was issued, which was followed by the source of greatness, favour, and mercy—that is, 'To make sure that the warriors keep their hands off the property of farmers and nomads and do not harm or disturb crops and buildings of the vilayet people, and every person who violates this order will be brought by punishment [to the end] of his earthly existence.'

When the herald brought this [order] to the ears of the vilayet people, [they] came with the face of sincerity to the court of the padishah, who in his greatness is like Jamshid.

Emir Jalal ad-Din Bayazid, who was Hakim of Samarkand, together with the magnates, nobles, owners [of wealth and high ranks], and the ruler of the city, after sending to [Abu'l-Khayr Khan] those who were trustworthy among the great people of [that] time and emirs, and making offerings, made a strong request for peace, and said: 'In his benevolence and disposition, Sultan Ulugh Beg has so far created no guilt toward [Abu'l-Khayr Khan], the governor of the heavenly palace, and he has [always] fulfilled the conditions on the one hand and showed submission, and if the Khan, the conqueror of the world, whose greatness is like the heavenly throne, extends his grace [97] shown to the property of farmers to all the subjects [and] directs his banners of return towards the august horde, [this] would be appropriate for the owner of the two worlds [the present and future worlds].'

The story of the initial deeds by Sultan Abusaid and his escape with the help of the padishah of the Glorious [God] to the Desht-i Kipchak, to the palace of [Abu'l-Khayr] khan, who is powerful like the heavens.

In the last days of the reign of Sultan Mirza Abd-al-Latif, Sultan Abusaid, whose clear face was illuminated by the grace of Allah with the brilliance of sultan and padishah power, fled toward the famed Bukhara. Like the new moon, he shed the light of happiness in the corners of Bukhara. [However,] some of the Bukhara nobles, like Maulyana-Shams al-din Muhammad-ordukuchi, the pride of savants and cream of purity, and other great descendants of the nobles took the prince under their protection.

At the same time, Sultan Abd al-Latif suddenly expressed the desire to leave the unenduring world for the eternal paradise. On the same day Sultan Abusaid rebelled and raised the banner of insubmission, [but] kazi, daruga, and the leaders of the troops, who were in Bukhara, fearing the prince Sultan Abd al-Latif, seized Prince Abusaid and kept him under arrest in a room, which like the soul of a sinner was narrow and dark. Some short-sighted people had made a conspiracy against Prince Abusaid and sought to extinguish, with the wind of injustice, the light kindled by the grace of God Almighty and full of splendor and contentment. [But] some of the nobles resisted it.

The next day, the news reached [Bukhara] that the bird of the soul of Mirza Abd al-Latif had left the cage of his body and flown from the abyss of this world to the highest position. When the news that Sultan Abd al-Latif had been murdered was confirmed, then all society, which [previously] dwelt in hostility towards Sultan Abusaid, [came to him] on the feet of respect and service and put Sultan Abusaid, the point of sultanate's resurgence, in alliance with the magnates, nobles, and people of that vilayet [of Bukhara], on the throne of the [state] rule that issues the orders. All the warriors and darugas of the city and its environs, girded themselves with a belt of obedience and accord, stayed at the home of service and servants of [Sultan Abusaid]. When the glorious city of sacred Bukhara became the possession of Sultan Abusaid, this opened the gates of justice and mercy for the people of that vilayet. [Sultan Abusaid] shortened the people's arm of cruelty and hostility and other holders of insubmission and disobedience so that they could not reach the property of Muslims.

When the army of Bukhara, with the help of the Lord God who achieves his desires, gathered in the palace of the glorious Sultan [Abusaid], who, with the help of the Lord God, achieves his desires, then [he] expressed his dissatisfaction with [his] initial position and the lack of independence as the holder of supreme power in Bukhara, and [therefore], with the purpose of high intention, he decided to conquer Samarkand, the city of heavenly beauty. Although some nobles and emirs said that 'Mirza Abdullah has an abundant treasury and a well-equipped army, [and] it makes no sense to fight against these capabilities and this army,' but Sultan Abusaid declared: 'This decision has firmed up in [my] thought, [and we] will implement it.' [After that,] Mirza Sultan Abusaid left Bukhara for Samarkand with a firm intention to fight Abdullah. When this news reached the ears of Prince Abdullah, he gathered a large army and, after adorning its right and left wings with the brave men of courage and well-known bahadurs, went into battle.

When the armies of enemies met, and the sounds of trumpets and kettledrums reached the highest point of the sky painted in gold, the knights of both armies attacked each other. By the turn of the firmament [i.e., fate] and [by] predestination of the Almighty Creator, [the defeat fell] on the [troops] of Sultan Abusaid. For this reason, [Sultan Abusaid] fled the field of battle and, with God's help, went toward Turkestan. Prince Abdullah returned to his capital victorious and happy, joyful, and cheerful.

In the hope that the august arm would bring into action the state falcon, Sultan Abusaid wandered in Turkestan regions, like a roaming spring wind, so that with the help of luck he could capture the fortress of Yassa, which is one of the most important fortresses in Turkestan.

When the glory of greatness and the conqueror of the lands, the glory of the conqueror of the world that rules the entire world, Khakan Abu'l-Khayr Khan, who by the grace of God is like the sun illuminating and warming the world, spread to the East and West of the universe, the happy tsarevich [and] brave Sultan Abusaid who, as a result of harassment from his brothers and and injustice of fate, wandered like the spring wind, had, after numerous difficulties and countless disasters, with the help of the Almighty Creator, by predestination of the firmament, taken the city of Yassa into his possession. After conquering the city of Yassa, [Sultan Abusaid], under the persuasion and inspiration of God, went to the palace [of Abu'l-Khayr Khan], the refuge of sultans, His Majesty the Khakan, who in his power is like the heavens.

After a series of stops and marches, [Sultan Abusaid], when he reached the august horde [of Abu'l-Khayr Khan], he was given the honour of being in the suite of [Abu'l-Khayr] the highly placed Khan. Given that such was the universal grace of the padishah and the high favour of the tsar [to [98] Sultan Abusaid on the part of Abu'l-Khayr Khan], who showed respect and esteem for the arrival of this prince, distinguished him with various high honours and ordered to be placed for him a royal tent and fence and a covered courtyard for an audience.

[Abu'l-Khayr Khan] appointed some people from among the respectable and experienced emirs, with excellent wit and whose advice he trusted, to the company and suite of aforementioned padishah [Abusaid] and ordered that they should follow his secret and open actions and words and report everything to [him]. [Abu'l-Khayr Khan] who, in his wisdom, is like Suleiman, called emirs, nobles, sultans, generals and, after [holding] a meeting on the advice of the pillars of the state and [with] the approval of state officials, firmly decided to conquer Samarkand and ordered that his army, the shelter of victory, should be gathered at the court of the refuge of the universe.

After the army of victory of [Abu'l-Khayr] khan, with the gift of Feridun, had gathered, [he] held a feast in honour of Sultan Abusaid and gave him the gifts of padishah, including the tsar's robe and other items of luxury and splendor—that is, excellent horses, caravans of camels, tents and pavilions on wheels, curtain and royal tent. [Abu'l-Khayr Khan] also exalted the emirs and leaders of his army with the Khakan's gifts, addressed Sultan Abusaid in a language of generous declarations, and deigned to say: 'With the help of Allah the Almighty and the All-Holy, I want to go with all my army, servants, and entourage towards Samarkand, and when (this region), with the help of God—Let him be great and praised!—will be captured by my victorious army and the enemies of faith, state, and people will be crushed and defeated, then I will give you the throne and rule of Samarkand and [afterwards] I will return to my capital...'

...When, with the grace of the Creator, the army, distinguished by the divine assistance, was put in order and arranged, [Abu'l-Khayr] khan, who in his greatness is like the heavens, and padishah, who in his wisdom is like Jamshid, ordered that Sultan Bakhtiyar, the glory of sultans, who in his bravery and courage was like the third most powerful Asfendiyar with a body made of copper, should go in the vanguard of the victorious army, and the glorious and brave emirs of [that] time—that is, Burunjar-bey-kiyat, Muhammad-beg-kungrat, Tuli-hoja-kushchi, Daulet-hoja-divan-kushchi, Kungur-bey-kushchi, Akche-urus-kushchi, Pishkendi-oghlan-iijan, Suyunich-Kutly-Timur-oghlan, Barack-oghlan, Shaykh-Mahmud-bahadur-uysun, Timur-shaykh-bahadur-keneges, Kylych-bey-bagaduruysun, Iakhshi-bektarkhan, Iabagu-beg-masit, Kutlugh-buka-tarkhan, Iaghly-hoja-konrat, Uruskonrat, Yakub-beg-durman, Karakedey-durman, Dulatak-bey-durman, Anikey-hoja-durman, Kara-tirchik, Kuday-bey, Hojalak-kurleut, Jamaduk-bey-tupay, Yadygar-bagadur-tupay, and other warriors should adorn with their presence the left wing of the victorious army and go to the battle, and that Saryg Shiman-mangyt, Timur-hoja-mangyt, Sufi-beg, Kara-gusmannayman, Birim-hoja-bagadur-uighur, Yabagu-bagadur-uighur, Bahti hoja, Shadi-beg-malik, Hasan-oghlan-beychimbay, Bey-shaykh-uighur, Abd al-malik-uighur, Timur-shaykh-bagadur-keneges, Gusman-bagadur-kudagai, Ayuke-bagadur-keneges, Tulu-hojanaiman, and other bahadurs and knights of the victorious army should also adorn by the presence the right wing and, by raising the banner of conquest and victory, go towards the city of Samarkand.

When the army, the shelter of divine assistance, with Allah's help, has been brought to perfection and put in order, [Abu'l-Khayr Khan], the Khan, who in his power is like Suleiman, and Khakan, the refuge of the world, adorned the centre of the army with their regal glory and greatness of the conqueror of universe...

When the Khan and Sultan of ninth heaven, the tsar of four climates, padishah of the collection of stars, like the nomad camps, raised the banners of the sultanate on his northern 'houses,' it was very hot, and the air was heated to the extreme, and then [Abu'l-Khayr Khan] the Khakan of heavenly forces, ordered to yadachi experts to engage in their work of yada so that the troops, the shelter of victory, could pass across the steppe without obstacles, and when those people became engaged in the work of yada and started to use the stones [yada] [and], on the orders of the lord of the universe and omnipotent God, the blue cloud of the summer, like the clouds [in the month] of Nisan, began to pour rain, and precious pearls from the sky-blue casket started to fall on the green and blooming carpet, then the air cleared from the ashes of dust with the help of the rain. [As a result], the warriors [of Abu'l-Khayr Khan], the shelter of divine help and victory, easily passed through the infernal desert.

Prince Abdullah, the son of Sultan Ibrahim, who was padishah of Samarkand, Turkestan, and all the cities of Transoxiana, Kabul, and Badakhshan, when he learned about the movement of the victorious army [99] [of Abu'l-Khayr Khan], he ordered that all commanders of the troops should come to the court. When the troops assembled in the palace, [Prince Abdullah] ordered that the doors of the treasures of Timur-Guregan, collected from all over the world, should be opened and that the warriors should be given the best [precious] cups and scales. [By doing this, Prince Abdullah] adorned his army so much that[even] thousands of celestial eyes had rarely seen such a magnificent and adorned army. [Abdullah led this army] out of the city and went to the battle [with Abu'l-Khayr Khan and Sultan Abusaid].

After several days and nights the armies drew close to each other. On the banks of the Bulangur River, in the steppe of Keyvan, in the district of Shiraz, the troops became agitated. To the north of the

river, on the edge of [its bank], lined up the army of His Majesty [Abu'l-Khayr], the Khan, who is like Feridun, and to the south of the above river stopped the army of Shah Abdullah by lining up its columns.

On the order of the Lord of the lords, simurg of the sun hid in the west behind the mountain of Kaf fearing the impressive sight of [these] troops, who were constantly attacking and retreating, and again the whitish-silver day disappeared into the shelter of darkness, [and] the necklace of the Pleiades from the highest sphere of heaven appeared in the form of shattered debris on a meadow dotted with tulips. The sun hid [its] face in a place of solitude and put [its] feet in the bedroom of sunset, and Bahram—the bloodsucker—drew his bloodied sword from the scabbard. The heavenly judge took a seat on four pillows of the silver sky. The hindu of the seventh castle appeared in the corner of the heavenly roof. And these two armies of countless and belligerent men of courage dismounted and stood against each other... The guards and sentries appointed from each army began to guard [them and stayed] up until the sun again stretched [its] wings that propagate the light in all directions of the universe, and the appearance of the banner of the Shah transformed the set of banners of the fortunate Sultan Zengibar.

[In the morning,] the warriors of the adversaries stood face to face. On each side people hit the kettledrums, drums and began to play the trumpets and horns, and [their] sound reached the firmament, and the firmament began to tremble from neighing of horses and shouting of pehlivans.

[Abu'l-Khayr] khan, who is the conqueror of the world, the khakan, who in his wisdom is like Solomon, the throne of padishah of heavenly servants, [the khakan] who breaks the ranks of enemies and has the heavenly splendour of a man with a body made of copper, put the foot of strong resolution in the stirrup of the horse that belongs to the conqueror of the world, and with the hands of hope he took the reins of the horse that belongs to the conqueror of the world, and like Iskander he took the place at the centre of [the Army], and famed sultans and highly placed emirs stood on the right and left wings...

Prince Abdullah who, for considerable time, was brought up in the rosary of sultans and had the dignity of a caliph, when he examined the numerous army [of Abu'l-Khayr Khan] made of those who seek the splendour of battles, he made the right and left wing of his own army like an iron mountain by including in it the men of courage and warriors from the Ulus of Chagatay, who spent a long time in the conquest of the world and other countries. The steppe field has become like a decorated heaven from the glitter of pikes, swords, helmets, shields, and multicoloured banners. In such a manner and with such greatness, [Abdullah] came to fight with the victorious army [of Abu'l-Khayr Khan] by adorning the ranks of his troops with brave warriors and famous men of courage as well as by bringing in order the weapons for the battle, and after igniting the fire of war and adversity he moved forward. As it is said, the two belligerent armies met each other and like two fiery mountains came into terrible excitement. The battlefield [covered] with armour-clad warriors and warriors in mail became like an iron mountain, and, from the glitter and strikes of swords, the air over the battlefield turned fiery. By the efforts and zeal of the brave warriors and courageous knights, the heads of fighters, like the balls, rolled over the field, the mail on opponents' bodies was ripped like paper on a lamp. From the clashes and attacks of bahadurs and brave men from both armies, the celestial lion shook like a reed in the water. At this time, Sultan Bakhtiyar, who was a crocodile of the sea of deception and a leopard of the mountain of ruse, with a sword steeped in deadly blood, rushed like a furious lion at the enemy and, with the blood of the enemy, made the face of the earth look like a sea of blood. From the other side, Sultan Abusaid and other famous and big horsemen, experienced in military affairs, like the heavenly fate rushed by divine predestination. [100] into the steppe of the battle, and, from the glitter of lances and swords as well as strikes of pikes and pole axes, the day of the enemy has darkened like the night of death.

The brave men and commanders of the army of Prince Abdullah also exerted their efforts in the attacks and the battle in order to be honoured by the awards of the padishah. When the warriors [on both sides] like lions came together in the battle [with each other, they] used [all] the opportunities that were there [to show] bravery and courage, but the warriors [of Abu'l-Khayr Khan], who in his wisdom is like Suleiman, rushed to the attack and threw most of enemy bahadurs and brave men into the grave of insignificance and contempt.

From the corpses of those who were killed and the blood of the enemy, the steppe battlefield turned purple, and from the steppe slaughter and the battle place the streams of blood bubbled like the blue sea.

Reflecting the blood, the firmament became colourful, and [the reflection of] the celestial moon floated in a sea of blood.

Prince Abdullah, who was not similar to Rustam the Brave and Asfendiar the Bronzed, and who wished on the day of battle to try his strength against a lion-like padishah [Abu'l-Khayr Khan], languished like a fox that had shortened its paw in a fight and fled.

According to divine predestination, the brave spirits of the army, the victory shelter [of Abu'l-Khayr Khan], having overtaken Prince Abdullah, who wished to flee [from the battlefield], saving his soul, on a light-footed horse, was taken prisoner, [and] by order of the throne [of Abu'l-Khayr Khan], issuing decrees, was sent out of the city fortifications of existence into the world of eternity. A young shoot from the happy garden of Timur-Guregan and a rose bush as fresh as a garden of roses Ibrahim sultan, in a strong wind of divine predetermination, fell in the grave of contempt. Prince Abdullah was murdered on the 10th of dzhumad ul-Ulya 855 AH [July 1451 AD], and most vityazes and pehlivans from the Chagatay Ulus became captives of the servants of [Abu'l-Khayr] the heavenly Khan. All [the bodies of] the wounded and dead made the steppe battlefield and the very place of the battle look like mountains and hills.

[When the battle ended, Abu'l-Khayr] Khan, the conqueror of the world, on the occasion of victory ordered the bahadurs, brave men, and other troops to liberate the captives and to withdraw the hand of usurpation and possession from their subjects' property.

When the Shah of all the planets, victorious and sovereign, from the realm of heaven proudly made his way to the skyline of sunset, [Abu'l-Khayr Khan] the padishah, as wise as Suleiman, and the autocrat by the grace of God, steered his skittish stallion towards the august horde.

When the aforementioned padishah [Abusaid], with the divine help and [with] the blessings of Khakan [Abu'l-Khayr Khan], established himself on the throne of governing [Samarkand] and power, then, according to the pillars of the state and the rulers of the army and people, he gave 'the greatest cradle and the finest veil, the glory of women, ' the daughter of the sultan, a martyr and a blissful Khakan, Ulugbek-Guregan—'may the Lord lighten his tomb!'—Rabiga-sultan-Begim with [all] the luxury and splendour, by the custom of the faithful sultans, in marriage to [Abu'l-Khayr] Khan, as powerful as Suleiman.

The story about the battle of the heavenly Khakan with the padishah of the Kalmyks

When [Abu'l-Khayr] the Khan of his time, victorious and happy, with the glorious sultans and the army, enemy hunters, with the help and support of the Supreme Creator, arrived in Desht-i Kipchak, he indulged in kindness, justice, and mercy towards the nomads and [also] to merriment and joy.

At this time, when Uz-Timur-Taisha, the padishah of the Kalmyks, heard about the greatness and power of [Abu'l-Khayr] the high-standing Khan, the fire of envy blazed in his chest, full of hatred. Uz-Timur-Taisha gathered emirs, bahadurs, and the chiefs of his troops and said: 'Abu'l-Khayr Khan has secured great wealth and numerous weapons and engaged in merriment in his summer quarters. We should gather the victorious troops and attack him unexpectedly.' The chief of the troops and the leaders of troops of this errant [Khan] said that the words of the padishah, asylum of the world, made sense.

Uz-Timur-Taisha ordered the soldiers to bring the weapons in order and to present themselves at his court. The next day all the impious warriors prepared countless weapons and, according to the order of the Khan [Uz-Timur-Taisha], with their wives and family members set out [on the campaign]. When [they] reached the banks of the river Chu, [then] they left their wives and folks and carts and went further [without any baggage] on a raid.

[Thus] The Khan of Kalmyks with the countless army, so large that the dust of the horses' hooves made the mirror of heaven damp and dark like a grave, [and] the calculation would make a mathematician exhausted, and the width and length of the troops on a big road would scarcely let a traveler pass, made his way into battle and struggle.

[Abu'l-Khayr Khan], equal in position to Feridun, after having verified [the news about] the campaign of Uz-Timur-Taishi against him, ordered that the famous sultans Bakhtiyar-Sultan and Ahmed-Sultan together with some of the glorious sultans, emirs bearing revenge, and victorious bahadurs should go ahead of the troops. Kyl-Mohammed-sayyid, Kara-Sayyid, Buzunjar-bey-kiyat, Hassan-ogh-

lan-chimbay, Pishinkde-oghlan-iijan, Mustafa-oghlan-balgyjar, Timur-oghlan-suyunich-kylyi, Muhammad-beg-konrat, Daulet-hoja-divan-kushchi, Tuli-hoja-bey-kushchi, Kungurbay-kushchi, Kibek-bey-kushchi, Saryg-Shiman-mangyt, Abubekrnayman, Yaqub bey-durman, and other bahadurs and warriors, facing the enemy, went to the place Kuk-Kashane...

[Thus Abu'l-Khayr] Khan, the conqueror of the world, with bahadurs, who crush swords, and soldiers, who defeat armies, like a raging sea, went [to battle with the Kalmyks] ...

... When [the warriors of Abu'l-Khayr Khan] reached the place Kuk-Kashane, [then] the soldiers of enemy troops seemed like an iron mountain [to them].

When both troops, following the predetermination of the Supreme Creator, met each other, the sounds of kettledrums and trumpets [coming] from each side reached the vault of heaven and the seat of the moon and the pleiades.

The Khan of the Kalmyks, despite the vast number of [his] troops, sent one of his most famous warriors so that [he], stepping in the middle of the battlefield, communicated to the padishah, asylum of Islam, the message of peace and harmony. The messenger, reaching the middle of the battlefield, loudly declared:

'Do not let the sweat stand out of shirts, do not let the blood come out of heroes' bodies.' [However,] Bakhtiyar-Sultan and the other famous [bahadurs], contrary to the idea of the poem 'Peace is better than any imprudence,' carelessly ignored that peace, [and] when the pen of divine predestination fore-ordained these two faithful sultans [Bakhtiyar-Sultan and Ahmed Sultan] and glorious bahadurs to die a death of martyrs for the faith, they did not heed the words of peace and concord, the signs of reason. Being extremely brave and courageous, [they] did not take into account the number of enemy troops and launched the fire of attack and battle.

The dust of the battlefield reached the vault of heaven and the bloodthirsty enemy warriors, blood-suckers, pouring with anger, attacked [and], like the lions of battles and the leopards of mountains, redoubled the stabs of arrows, poleaxes, and swords. From the blood [of the wounded and dead] the battlefield turned mahogany-coloured.

Bakhtiyar-Sultan and Ahmed Sultan, who [first], like enraged lions and mighty elephants, attacked the enemy and in every attack knocked down whole groups of warriors, [but] eventually became exhausted, and their adversaries, like a dark fate, encircled [these] two glorious sultans and put them to the death of martyrs for their faith. [Abu'l-Khayr] Khan, likened to Bahram in battle and Jupiter [in] rage, learned of this situation. The brave men of both militant troops attacked each other [and] rained down swords and daggers on each other's heads.

The air over the battlefield, filled with the sounds of mail and the warriors' armour, was noisy as a roaring sea. The wind of victory blew from the enemy's side.

[Abu'l-Khayr Khan], taking command of the battle, headed toward the city of Sygnak. [Abu'l-Khayr] the heavenly Khan arrived in Sygnak, [and meanwhile] the army of the enemy began plundering and ravaging the population. When [Abu'l-Khayr] the heavenly Khan fortified in Sygnak, the padishah of the Kalmyks sent a man [to him] offering peace and concord again [and], as a result, concluded an agreement [with] Abu'l-Khayr Khan. But the warriors of the Kalmyks' Khan even before the conclusion of peace had devastated the outskirts of Turkestan, Shahruhiya, and inhabitants of the Tashkent outskirts. After the conclusion of peace Uz-Timur-Taisha steered the reins of determination and power hastily through Sairam in the direction of the river Chu, where his carts and folks were. From there, together with all [his] army he made his way to Kalmykia, his inherited appanage.

Abu'l-Khayr Khan, after the departure of Uz-Timur-Taishi, left the city of Sygnak [and], gathering people and ulus together, engaged in the affairs of state and his subjects, and bringing the troops, asylum of victory, in order. In a short time, thanks to the goodness, justice, and mercy of God, Desht-i Kipchak became the object of envy of the ninth highest celestial sphere.

When all the servants and nomads of Desht-i Kipchak had come under the control of Abu'l-Khayr, the Khan, whose orders they fulfill, he, happily and victoriously, by the grace and generosity of God, established himself on the throne of the world Caesar and world conqueror.

The prince Muhammad-Juki, who was the son of Abd al-Latif, after awhile, with the help of a guide, leading to happiness, went the right way towards an august horde of Abu'l-Khayr Khan, shelter of the caliph's dignity, who was the Qiblah of sultans of [his] time and the Kaaba of khakans of supreme virtues. When he reached the tsar's threshold, he had the honour of kissing the Khakan's hand. [Abu'l-Khayr] Khan, the sea of benefactions, the abode of God's omnipotence rule, gave him [102] a place under the patronage of his mercy...

The highly-respected wife of the heavenly Khan [Abu'l-Khayr], the Queen of Bardi and Bilkis of [her] time, Rabiga-Sultan Begim, who was a paternal aunt to the prince, arranged entertainments and favours for her nephew.

Muhammad-Juki Mirza with a serene soul, enjoying the peace, was engaged in prayers in the house of the Khan, who was like Suleiman.

After some time, when the Sultan Abusaid Mirza was busy conquering Khurasan, Mazanderan, and other regions of Iran, Muhammad-Juki Mirza, who laid claim to rule Samarkand and the state inherited from the father, asked Abu'l-Khayr, a Feridun-like Khan, for the army so that, with the help of God and [with] the blessings [of Abu'l-Khayr Khan], he could bring the state and Samarkand under the throne of his possession. His Majesty [Abu'l-Khayr Khan] agreed to send the sultan Pishkendioghlan with a group of emirs and bahadurs toward Samarkand, to accompany Muhammad-Juki.

When Desht-i Kipchak that stood out from the other vilayets by the charm of water and air, from one border to the other, [including] the [seat of the] throne of Sain Khan, was brought under the control of the servants [of Abu'l-Khayr Khan], Saturn-like, the justice and mercy of the heavenly padishah [Abu'l-Khayr Khan] established peace among the people and their belongings. The glory of the innate tsar's traits of justice and kindness [of Abu'l-Khayr Khan] spread all around the world.

The items of greatness and world's conquest, the affairs of governing and reign [of Abu'l-Khayr Khan] by the grace of God the Almighty and All-Holy reached the highest degree of perfection and the highest degree of power.

When he was 57 years old, in 874 AH, corresponding to the year of the Mouse, [Abu'l-Khayr Khan], hearing the call of a high-flying falcon, the spirit, full of grace—'Oh, the soothed soul, come back to your Lord, he will treat you mercifully'—wished to move to the supreme abode, the paradise and, having left the state, according to his incomparable will, to his glorious and happy sons, preferred eternal paradise to the perishable world.

8. Siberian Chronicle (concise Abramov edition of the Yesipov's Chronicle, 17th century)

Published in: N. Dvoretzkaya, P. Medvedev New Copy of the Siberian Chronicle edited by Abramov // New Materials on the History of Siberia in the Pre-Soviet Period. Novosibirsk, 1986.

So this is a Siberian northern country situated at the distance of 2000 day-journeys from the great reigning city of Moscow in Russia. Between these two great kingdoms, the Russian and the Siberian, the lands are surrounded by the Kamen (the Rock) of such height that it could reach the clouds in the sky; God arranged it that way, and it stands like a city wall. On this Kamen grow different trees: cedars and others. And there live various beasts: some of them are meant for a faithful Christian's food, the others are for decoration and for garments; these beasts are deer, elk, hare, goat, wild pig; and the ones for decoration are fox, sable, beaver, glutton, lynx, squirrel, ermine, otter, and the others like that. There are also various songbirds and many grass birds. From this Kamen spring many rivers: some of them flow to the Russian kingdom, some of them to the Siberian marvellous land, as God created there such rivers that they wear away solid stone. They are wide and very beautiful, in their water sweet and good there is a great number of different kinds of fish; the valleys of these rivers are fertile in crops and pasture and are very extensive.

The first river springing from the Kamen to the Siberian land is called the Tura. Along that river live people, called Vagulich by the foreigners, they speak their own language and worship idols. The river

Tagil and the second river, Nitsa, flow into the river Tura—all the three rivers merge, but the name Tura is given to them as it is the oldest. From there the Tura flows into the Siberian land; along that river live people called the Tatars. The river Tura flows into the river Tobol, the Tobol flows into the Irtysh, the mouth of the latter joins the great river Ob. Along the river banks live various peoples: the Tatars and the Kalmyks, the Mungals and the Piebald Horde, the Ostyaks and the Samoyads, and the other pagans. The Tatars observe the law of Mohammad, the Kalmyks' law or the tradition of their ancestors is unknown because there is no written or spoken word about it. The Piebald Horde, the Ostyaks, and the Samoyads do not have law, they worship the idols, and make sacrifices to them as to a god, who, by a miraculous cunning of no purpose, rules their houses, and they bring the donations to their idols according to what their idols give them, and there are many riches in their houses. These people are likened to cattle as cattle does not speak: it does not eat what God does not let them: animals or birds or green grass. These people are not like that because they know neither God in the sky, nor His law, they eat raw meat of beasts and reptiles, drink the blood of animals, eat grass and roots. They, the Ostyaks, make clothes from fish. The Samoyads eat deer and other beasts and reptiles and are called the raw eaters. The Ostyaks ride on dog sleds over long distances; the Samoyads ride on deer sleds sometimes, they make a sled of a half-man height so that a man could sit there.

And the great river Ob's mouth flows into the sea gulf. The way goes through this gulf to the rivers Tazha and Mangazey; and that sea gulf's two mouths flow into the ocean right to the north. In these mouths the ice is age-old and is kept away from the sun's heat, nobody can go there, to that strange place.

The Siberian tsars and princes

If you go up the Irtysh river in the Siberian land, there is a river called Ishim, the mouth of which flow into the Irtysh. And on that river Ishim there was a tsar of Mohammad's law—his name was On. And rose the men of the common people from his country against him, led by Chingin who opposed On, the tsar, like an outlaw with his people, and Chingin killed On and seized the kingdom. And some of On's servants kept On's son, named Taibuga, safe. After some time the Tsar Chingin learned about Taibuga, Tsar's On son, and he did him great honour and gave him the principedom and the power. Having accepted all that, Prince Taibuga asked Tsar Chingin to let him go. Tsar Chingin, having gathered the armed warriors, let Taibuga go along the river Irtysh where Chut lived. Prince Taibuga with his army conquered many peoples that lived along the river Irtysh and the river Ob and he happily returned home. Tsar Chingin, having heard from Taibuga that he had conquered many people and made them his subjects, especially honoured him. Taibuga, asking Tsar Chingin to let him go, wanted to settle somewhere. So went Taibuga with all his households and folks to the river Tura and he built a city there and called it Chingiden, now at that very place the city of Tyumen is situated. Taibuga lived for many years in the city of Chingin and then died. After him, Taibuga, was left a son named Khodzha. After Khodzha ruled Mar, Mor's children, Abalak and Oder. Prince Maman was married to a sister of Kazan's tsar Upak. That Kazan's tsar Upak killed his son-in-law Maru and seized the city and ruled for many years. Meanwhile, Maram's children Abalak and Oder died a natural death. After that Oder's son Mammet ruled the city and he killed the Kazan's tsar Upak and built his own city Chingiden. From there he went to the Siberian lands and built a city on the Irtysh River, naming it Siberia, in their foreign language it means the first city. He reigned there for many years and died there, that is why the kingdom is called Siberia.

Siberia and why it was called Siberia

When Ider's son Mamet defeated tsar Upak and ordered the building of a city in Siberia in honour of this victory and to demonstrate his prowess, and he ordered that it be named Siberia, all other Siberian cities were named either according to their ancient names or upon discussion. Altogether they were called Siberia, just like the Roman country Italy was named after Italib who owned the evening countries, as reported in the Latin Chronicles, there are a number of different Roman countries altogether called Italy. Its previous name is not known, and now it is known as Siberia. Chut used to live in Siberian lands, but no one knows what name it had. After Mamet, Abalak's son Agish reigned, after Agash Mamet's son Kasyn reigned, Kasyn was followed by his children—Itigar, Ubuk, Bulat, and Seydak.

Tsar Kuchum

Tsar Kuchum, Murtaza's son, came across the steppes with his troops of the Cossack Horde and entered Siberia. He killed all the princes and Tatars, as well as Bekbulat ubi, and started reigning as Siberian Tsar Kuchum, and imposed yasaks on his new lands. And he became arrogant and died in accordance with the prophet's words, God resisteth the proud, but giveth grace unto the humble. Tsar Kuchum reigned for many years in Siberia in well-being and joy, and he collected taxes until God interfered and decided to ruin his empire and to allow it to be conquered by Christians.

Tsar Kuchum's faith

That was Tsar Kuchum's law, and Mamet's law was applied in his territory, and it said to worship and offer sacrifices to idols.

Holy apostles wrote their rules and spread them around the world, and they said, those who obey Mamet's laws and testaments shall be accursed, so shall an idolater be cursed and excluded from the tsar's army; and all his people rebelled against it, and even troops supported them in their rioting. It seems that God unleashed his fury on them, on Tsar Kuchum and his people, because he did not obey God's laws and worshipped idols and not God, as if they had not known about the Israeli people who made a golden calf and worshipped it instead of God in the time of Moses. 'These are your gods, Israel.' And God unleashed his fury on them, sending snakes to eat them. And those stung by a snake died; and God took compassion and suggested that Moses should make a copper snake, place it on a stick in the form of the future cross, and forbid them to worship anyone but God, and they took the cross and started praising God. And this was followed by other plagues—famine, ulcers, captivity, war and devastation—and Moses said to those people: 'Wrath is coming.' And so God saw this and grew angry with their sons, as their daughters were sacrificed to idols, and God said: 'I will turn my face away from them, they put me into a rage with their idols.' And God takes care of us like a bird does its chicks, and God turned his face away from those idolaters who forsook their God for idols and blood sacrifices to them. And He sent down famine, plague, and fire to them, he beat them with stones and with two-edge swords, killing and ruining their temples where they worshipped idols.

The conquest of Siberia by Yermak and his troops

After that God cleared the holy space and defeated the Muslim tsar Kuchum, destroying their impious temples. And God chose neither noble men nor tsar voivodes, but he armed cossack chieftain Yermak and his 540 cossacks ready to die for glory and the true faith, they stood strong and brave against the infidels and did not think on good food or a life of ease. They preferred battles and did not sleep, and God helped them against the infidels. They shed their blood and fasted, they were injured by arrows sent by unorthodox Hagarenes, and they tried to cover their wounds; and the Hagarenes stopped them, God's hand helped them. It was written: fear not giants, beasts nor crocodiles because you have an advocate of all force and power. And warriors relied on God and said: 'They proudly died for Christ and the Russian orthodox faith, they suffered and served our tsar.' Because it's not the warrior who achieved victory but God. These words are true: a few cossacks could defeat the infidels and subdue them, and they celebrated their victory freely all around the free Siberia. And there they built a city and churches because there had been pagan temples, and now they were all ruined, and the Holy Trinity reigned over the land and the created God was worshipped according to the prophet: Yet their voice goes out into all the earth, their words to the ends of the world. The holy apostles were sent to preach in different countries.

In the summer of 7089 troops from the Volga came to Siberia, part of the empire of the pious Tsar and the Grand Prince Ivan Vasilyevich, Tsar of all Russia. They moved along the Chusovaya River and reached the Tagil, sailed along the Tagil and the Tura, and reached the Tavda. At the mouth of the river the Tatar Taiuzak, tsarevich of Kuchum's court, told them everything about Tsar Kuchum. As Tsar Kuchum learned about the Russian troops and their bravery, he grew angry and issued a call to his people to come and fight against the Russians. Shortly, many Tatars, Ostyaks, and Voguliches as well as other people obeying him came to him. The tsar sent his son Mametkul and his troops to fight against the invaders; whereas Kuchum ordered the building of an abatis near the Irtysh River close to Chuvash and make an earth mound and fortifications. Mametkul and his troops arrived in Babasany district. Yermak

and his cossacks were frightened upon seeing so many infidels and had a fight with them, and beat them, and the infidels left the battlefield. And the cossacks remained intact and sailed along the Tobola in their boats. The Tatars began firing arrows at the cossacks' boats, but the cossacks went by, and God kept them safe.

About Karachin Ulus.

Yermak and his cossacks sailed along the Tobola and reached Karachin Ulus; there lived his dunnoy Tsar Kuchum's Tatar named Karacha. The cossacks fought with Karacha and conquered his ulus, took his treasures, and filled their boats with tsar's honey. The cossacks then reached the Irtysh and anchored at the Knyazhya River; the infidels went ashore, some mounted, others on foot. The cossacks went ashore and attacked the infidels and defeated them, and the latter took flight. Tsar Kuchum, seeing his people run, went together with his people. The cossacks sailed up the Irtysh and conquered the settlement of Atik murza and stayed there. At night they thought about what to do with infidels because there were too many of them, one for 10 or 20 people. The cossacks were afraid and were about to leave the battlefield, but some of them were not and answered the higher calling of God creator of heaven and earth. They decided to attack the infidels in the morning and answered the higher calling and came to Chuvashhev to the Tsar's abatis and brought their arms with them.

The cossacks' battle

On the 23rd of October all of the Russian cossacks stood near the abatis calling out 'In God we trust! Hear this, all you distant lands, in God we trust!' And added: 'Oh, Lord, help us, your slaves.' And they attacked the abatis and fought against the infidels. They demonstrated ferocity and used spears to kill the infidels, they were full of anger and fury. They wore suits of armour and copper shields and had iron bows and fought from different sides. The infidels sent many arrows from their abatis, and the cossacks fired against them, and there was a great hand to hand fight. And God helped them in their fight against the infidels, and the latter left the battlefield. The cossacks pursued and beat them, the foes fell down and were trod upon, the field was bloody and covered with dead bodies. After that the cossacks came together near the city of Troinsk near the river of Komazdra and captured Akilesa. God helped them to defeat the infidels because the fury of God was unleashed upon the iniquities and idolatry of those who saw the real God. Prince Mametkul, defeated by the Russian troops, was captured, but his people took him across the Irtysh.

Tsar Kuchum stayed in the Chuvashhevs and ordered his abyzes and asked them to pray to their Northern gods, but the gods did not come to help them. Whereas Ostyak princes left the abatis and Tsar Kuchum and returned home. Tsar Kuchum saw his empire devastated and said to his people: 'We shall leave this place. We have lost everything and are exhausted, because we were heavily wounded. Woe to us! Poor us! Alas! What have they done to us? We had to leave the battlefield. I am full of shame. Who defeated me and drove me away from my land? Yermak, one of common people, brought small troops and defeated me, driving me away from my empire and devastating me.' And that villain did not know that children had been hungry and naked, had died in fire, or had been eaten by beasts. And the villain prayed and wanted to fight as the lies filled his heart with anger. And Tsar Kuchum said to himself: 'I defeated princes Itigir and Bekbulat in Siberia and obtained treasures in the Siberian empire, I went there and I defeated them purely for covetousness and glory.' At that time Tsar Kuchum secretly came to Siberia, taking with him part of his treasures and left Siberia with all of his troops.

Yermak coming to Siberia

There was a fight at the abatis near Chuvashhev, the cossacks got tired as the night came and left the battlefield, leaving guards there to keep their place from the infidels. In the morning all the cossacks woke up and answered a higher calling, going to Siberia. Yermak came to Siberia on the 26th of October 1589, on the day of Dmitry Selunsky remembrance. They confessed God for giving them such a victory over the infidels and idolaters, and they celebrated it. This victory deserves to be remembered long after because Yermak's troops, though small in number, conquered Siberia with the help of God and His passion bearer Dmitry.

Ostyak Prince Boyar came to Siberia on the fourth day after Siberia had been conquered and brought many gifts to Yermak and his army. After that many Tatars with their wives and children came to live in Siberia in their first houses. Seeing the orthodox troops, God ordered that the Tatars should be subjugated to the Russian government and the orthodox Christians.

On the 5th of December one of Yermak's cossack was on his way home from fishing in Abalak, and he set up camp and fell asleep without any guards. Prince Mametkul attacked them and captured their camp. When Yermak found out that his cossacks had been killed, he attacked the infidels, reaching them near the field. There was a great fight with the infidels. Many Tatars were killed, and Prince Mametkul fled. Yermak and his cossacks were unhurt and returned to Siberia.

Sending a somuchak tsarevich to the Moscow tsar

After God had helped the orthodox Christians to conquer the Siberian empire, Yermak sent a somuchak and a chieftain to the Moscow tsar with a letter to Tsar and the Grand Prince of all Russia Ivan Vasilyevich that by the grace of God and Holy Trinity, and the Virgin Mary and all saints and wonder-workers of Russia, and thanks to tsar and the Grand Prince's prayers to magnanimous God, they conquered Siberian empire and defeated Tsar Kuchum and brought Tatars, Ostyaks, and Vagulichs to submission, made them swear an oath to Russians according to the Tatar religion and to obey the Russian tsar until the end of time, and imposed yasak on them, excluding orthodox Christians. And if foreigners wanted to serve the tsar, they were allowed to do that by guarding him against foes; no betrayal was admitted; they could not leave to go to Tsar Kuchum or other hordes or uluses; they should not plot mischief against orthodox Christians, and they swore to the Russians, according to their religion.

The chieftain and cossacks came to the Moscow tsar, and their arrival was reported to the tsar. The pious Tsar and the Grand Prince of all Russia Ivan Vasilyevich ordered that the letter should be taken and read aloud. And when he knew that God had helped them to conquer different lands surrounding them, bringing their foes to submission, so he praised God and the Virgin Mary for their mercy towards Christians: the small Russian troops had managed to defeat the infidels. Yermak was rewarded by correspondence; the chieftain and the cossacks were paid the tsar's rewards—money and draperies. After that the tsar ordered them to return to Siberia to Yermak and bring the tsar's rewards to him for his service and the bloodshed.

The capture of Siberian Tsarevich Mametkul by Russian cossacks

A Tatar by the name of Senbakht once came to Yermak in Siberia and told him that Kuchum's son Prince Mametkul was near the Vagaya River, one hundred poprishe from Siberia. Yermak sent his troops to take Mametkul's goods and his young and armed people. By the grace of God they reached his camp and attacked them in their sleep, defeated them, then they came to tsarevich's tent and went around it, and took Mametkul alive with all his treasures and brought him to Yermak and his adherents in Siberia. Yermak welcomed him, rewarded him, and dealt gently with him. Tsar Kuchum had waited for his son Tsarevich Mametkul for a long time. Messengers came to him and said that his son had been captured and taken to Yermak. Tsar Kuchum suffered a great deal when he heard this and cried passionately.

Messengers came to Kuchum from the steppes and said that Prince Seydak, Bekbulat's son, was leading his troops to him from the Bugarian lands. Hearing this, Kuchum was afraid and fled to save himself from death. Prince Seydak wanted to take revenge for the murder of his father Besbulat, remembering his motherland and his heritage. After that Kuchum's dumnoy, who was a member of his Council, left him and did not want to obey him. When he learned of this, he cried out and said: 'God has left me, my dumnoy and my friends are leaving me.' And his foes left him. Karacha came to Lake Yulmin and went up the Irtysh between the rivers Tara and Om and stayed there.

Yermak and his troops marched freely around the Siberian lands and they feared no one, instead inspiring fear, because they were led by their two-edge sword. They harried many towns and uluses along the Irtysh and they seized the city of Kazym near Ob with all its princes and their treasures. Then Yermak and his troops returned to Siberia and brought the princes with him.

Sending Kuchum's son Tsarevich Mametkul to the Moscow tsar

Tsarevich Mametkul and many of his military men were sent to Moscow. When Mametkul was brought to Moscow, the Moscow Tsar and the Grand Prince of all Russia Ivan Vasilyevich passed away. After his death Tsar and the Grand Prince of all Russia Feodor Ivanovich was crowned. And so Feodor Ivanovich ordered the welcome of Kuchum's son Mametkul, rewarded him, and paid the serving people who had accompanied Mametkul from Siberia to Moscow, giving them money, draperies, and food.

The killing of Yermak's cossacks by Kuchum's dumnoy Karacha

In the same year of 7091, after Prince Mametkul left for Moscow, ambassadors of dumnoy Karacha to Yermak arrived in the city of Siberia and asked him to help them to stand against the Cossack Horde. When Yermak heard it, he asked them to swear they did not mean any harm, and so they did. Yermak had a meeting with his people, and they decided their pagan oath. They chose the best warriors, chieftain Ivan Koltsov, and his forty cossacks and sent them to dumnoy Karacha. And when chieftain and his cossacks came to the infidel Karacha, the latter killed all of them, as was willed by God. When Yermak learnt of the death of the chieftain and his cossacks, he spent hours crying as if they had been his own children. As the infidels came to know of that slaughter, they began killing other cossacks in other settlements and regions.

Karacha coming to Siberia

In the same year of 7091, when the lenten fast had begun, dumnoy Karacha came to Siberia with his troops, went around the city, and encamped near it. Karacha committed crimes in Sayuskan, seven versts from Siberia, and shed people's blood. In July of that year many people of the city attacked the camp and carts at night and killed many infidel Tatars, putting others to flight. They also killed the two sons of Karacha, and the infidels fled in disorder; and dumnoy Karacha and a few of his people ran. Some of them came to Siberia and told everyone about it, and the people of the city and Tatars heard that the infidels wanted to leave the city, and they ran to Sauskan and said that the cossacks would either win or die, and that they were ready to die. The cossacks did not contact the infidels, relying on God, but some time after they came out and fought against them until noon. The Tatars retired, and the cossacks returned to Siberia happy and unhurt. Karacha saw it and said: 'We need more people to fight against the cossacks because God helps them.' And so the infidels went back to their faraway lands with shame. And so the cossacks lived in Siberia, worshipped God and His passion bearer Dmitry.

The murder of Yermak and the cossacks by the infidel Tatars

In the summer of 7092 the cossacks were put to death as was willed by God. Messengers came to Yermak and told that Tsar Kuchum would not allow Bukharan merchants to come to Siberia. Yermak took a few warriors and went to meet the merchants sailing in boats along the Irtysh. He reached Vagaya and did not see any Bukharans and went farther up to Atbash camp and, seeing no one, went back. They reached a cross-ditch and made camp, setting a guard, but they were tired and could not see that their death was coming. Tsar Kuchum, upon seeing their camp, collected lots of Tatars from all the regions. And that night many infidels attacked the sleeping cossacks and killed all of them but one. Yermak saw his cossacks killed, and, knowing there would be no help, he ran to his boats but could not reach them because they floated away from the bank, and Yermak drowned in the Irtysh. This was the way Yermak and his cossacks died on the 5th of August, on the eve of Christ's Transfiguration.

As other cossacks learnt of this slaughter and how Yermak had drowned, they produced a great cry because they were now left without any governance, and so they were afraid to live in the city, and left Siberia. They sailed down the Irtysh, Ob, and Kamen in their boats, leaving Siberia.

When Kuchum's son Tsarevich Alei came to know about this flight, he went to Siberia and settled there. When Prince Seydak Bekbulatov found out that chieftain Yermak and his cossacks had been killed near the cross-ditch, and all the rest had left the city, he brought his troops to Siberia and invaded it, defeating Tsarevich Alei, and now owning his father Bekbulat's lands. And he started governing the city, living there with his family.

In the second summer after Yermak's murder, voivode Ivan Mansurov and his military men were sent by the Tsar and the Grand Prince of all Russia Feodor Ivanovich to Siberia, and they sailed along

the Tobol until they reached the Irtysh. There were many infidel Tatars on the bank of the Irtysh. The voivode saw them, and, knowing that the cossacks left Siberia sailing along Kamen, he kept away from the bank and sailed down the Irtysh with his men until they reached the great river Ob. It was autumn at that time, and the rivers had begun to freeze over. Voivode Ivan Manzurov saw the winter coming and ordered his cossacks to make a camp near the mouth of Irtysh and stayed there for the winter.

A few days later many Ostyaks came along the Ob and Irtysh and attacked their settlement from all sides. The Russian troops fought back, and the battle lasted until the evening, and after that the infidels retreated.

In the morning the infidels came to the settlement and brought the idol that they worshipped. They placed it under the tree and prayed and made sacrifices to it, asking for his help to conquer the orthodox Christians and kill or enslave them. At the same time the troops in the settlement fired a canon, and the ball hit the idol and destroyed it. The infidels became very afraid, not knowing what had happened and thinking that it had been an arrow. And they said to each other: 'Military men/p. 140/are sending arrows from their settlement and they managed to destroy our wooden idol.' From that time they left the settlement, returning to their uluses with shame, and their idol had not helped them. Voivode Ivan Mansurov waited for high water and sailed in his boats along the Ob through Kamen to Rusa, burning down their former settlement. <...>

Supplying the city of Tobolsk

The same year, Prince Seydak went from the the city of Siberia with the prince of the Cossack Horde Saltan and Tsar Kuchum's dumnoy Karach, who took about 500 warriors. Having achieved the destination, the Prince Meadow, he started hunting for birds using hawks. And having seen them from the city of Tobolsk, voivode Danilo Chulov and Russian warriors, having complained about it, sent their messengers to Prince Seydak to inform him to come to the city of Tobolsk for negotiations, to stop the struggle against Christians. The messengers came to the city and told the voivode about Seydak's response. Prince Seydak listened to their proposals, consulted with Prince Saltan and Karach, and decided to go to the city of Tobolsk to the voivode Danila Chulkov with Tsarevich Saltan, the Karach retinue, and their guardians. Having come to the voivode in the city, he sat at the table by custom. And the voivode stood a treat for them and started talking about peace. Prince Seydak ruminated, not drinking, not eating. The voivode looked at him and start speaking: 'Prince Seydak, what are you thinking about? You do not eat. Does it mean that you are contriving something evil?' And Seydak answered the voivode's question: 'I contrive nothing against you.' Voivode Danilo took his bowl, filled it with drink, and said: 'Prince Seydak, if you contrive nothing against us, then drink this bowl.' Having taken the bowl, Prince Seydak started drinking and suddenly choked. The same happened to Tsarevich Saltan. Karacha also choked, not having realized their trick. The voivode did not trust them and suspected them of contriving something evil against Christians; he analysed their sly behaviour and ordered his warriors to kill all the enemies. Prince Seydak, having seen the slaughter, ran to the window with Tsarevich Saltan and Karacha, but all their warriors were killed and captured. In the end, there was nobody in the city of Siberia.

The same year the voivode Danilo Chulkov sent Prince Seydak, Tsarevich Saltan, and Karach, guarded by the best warriors, to the grand prince in the city of Moscow.

When Tsar Kuchum was defeated, he fled into the steppe, and during his rule he tried to attack the city of Siberia and capture Christians several times, but he was of afraid of a new defeat. Once Kuchum decided to gather his people and go to Siberia. Having reached the river Irtysh, he approached the city of Tobolsk, having frightened, beaten, and captured its citizens. And having understood that Tsar Kuchum had occupied Tatar volosts and escaped, Russian warriors immediately pursued Tsar Kuchum, and, having run him down, they beat him and captured his two wives, his son, and his treasures. After all, they returned to the city. Due to the negligence of his guards, Kuchum fled from his tsarinas and, having taken the rest of his people with him, headed towards the Kalmyk lands. And staying at the Kalmyk uluses, he noticed horse herds and decided to chase them. But the Kalmyk people recognised him and hunted him. After reaching him, they beat many of the tsar's people and returned many of their

horses. Thus, Tsar Kuchum escaped to the Nogai land and was killed by the Nogai people there. And that was the end of his life. <...>

9. Charter to Ivan IV from Kuchum Khan. (1570, Russian Clerk Translation of the 16th Century)

Published in: Collection of State Charters and Contracts. Part 2. M., 1819. P. 52.

Free man Kuchum Tsar, Grand Prince Bely [White] Tsar. Have you heard that... it is just that we and all peoples of the earth do fight; and if they do not begin to fight, they make peace. Your father with our father lived in peace side by side, and both parties were amiable guests at each other's homes... because your land is close, and our people existed in calm, and there was no evil between them, and the people lived in kindness and calm, but now, under your reign and my reign, black people [bondmen] do not live in peace. And I have not sent charters to some of your places if there occurred war between them and us, and we captured our enemy there; and if you now wish for peace, we shall make up, and if you desire to start a war, let us fight, what is the reason for keeping those five people in prison in those lands? I shall send my ambassador and guests so that we could make it up, you just need to wish for peace. And you had better choose one person of those in prison, release him, and send him as a messenger to us. One cannot be friends with one who was not a friend for his father; but if his father was a friend of this person, the latter would also be a friend to this father's son. If the father obtained someone as a friend and as a brother, would not this person mean the same to the son? And thus... let us make up for we have been old brothers [...] and live in peace in our motherlands and brotherhood, you just wish for peace, and send a messenger to us. Having said it, I have sent you a charter and a bow.

10. Correspondence between Ivan IV and Kuchum Khan (1569–1571, the Russian Clerk Translation and Retelling of the 16th Century)

Published in: Collection of State Charters and Contracts. Part 2. M., 1819. Pp. 63–65.

Beginning of the correspondence between Kuchum Tsar and the Tsar and Grand Prince.

The following is written in the charter which the Tsar and Grand Prince sent to Kuchum Tsar with his messenger Aisa, after they had made obeisance to him:

By the grace of God, from Great Ruler, Tsar and Grand Prince Ivan Vasilyevich of all Russia, of Vladimir, Moscow, Novgorod; the Tsar of Kazan, the Tsar of Astrakhan, the Ruler of Pskov, the Grand Prince of Smolensk, Tver, Yugra, Perm, Vyatka, Bolgar and others; the Ruler and Grand Prince of the Lower Novegrade lands, Chernigov, Ryazan, Polotsk, Rostov, Yaroslavl, Beloozero, Udorsk, Obdorsk, Kondinsk and others; the Sovereign of all Siberian lands and Northern countries, and the Ruler of all Viflyansk lands and others, here is my word to Kuchum, the Tsar of Siberia: Siberian prince Ediger used to look at us in the first place, and used to collect the tribute from all the Siberian lands and send it to us.

The bottom of the charter says: written at the court of our State, of the city of Moscow, in the year 1571 in the month of March.

The beginning of the charter says: sent by Kuchum, the Siberian Tsar, to the Tsar and Grand Prince with his ambassador Tomas and his messenger Aisa, in 1571:

To Bely [White] Christian Tsar and Grand Prince Ivan Vasilyevich of All Russia. And in the field it is written: Kuchum bogatyr-tsar sent his messenger to the Tsar and Grand Prince so that he took up the governance and collected the tribute from all over Siberia, as he did in the former times.

And at the bottom of the charter, the text is written with a nishan, but the year is not indicated.

Thus, the Tsar and Grand Prince accepted his charter and listened to him making obeisance, and took him under his arm and protection, and designated the tribute for him to pay—to send one hundred sables a year, and also one thousand squirrels to the tsar's messenger who would come to collect them, as the charters and documents state; and thus, the tsar sent his knight Tretiak Chabukov with the charter to Kuchum Tsar, and also sent ambassador Taimas to keep records so that they obtained the shert

from them, as stated in the papers, and also sent messenger Aisa so that to collect the tribute from Tsar Kuchum.

And here is what is written in the charter which was sent to Tsar Kuchum with TretiakChabukov, sealed with the tsar's gold stamp.

By the ineffable grace of omnipotent eternal God, the only righteous Tsar of the Christian law, Grand Prince Ivan Vasilyevich of All Russia, of Vladimir, of Moscow, of Novgorod; the tsar of Kazan, the tsar of Astrakhan, the Sovereign of Pskov, Grand Prince of Smolensk, Tver, Yugra, Perm, Vyatka, Bolgar and others, the Tsar and Grand Prince of the Lower Novagorod lands, of Chernigov, Ryazan, Polotsk, Rostov, Yaroslavl, Beloozersk, Udorsk, Obdorsk, Kondinsk and the sovereign of all Siberian lands and the Northern countries, and the ruler of all the Viflandian lands, and other lands, here is my kind word to Kuchum, the ruling tsar of Siberia: I grant you my amiable reward and great protection of my kind thoughts, and also our God-loving forces to guard the people of your ulus so that they stayed fearlessly there, I give you my word.

And at the bottom of the charter, it is written: in order to confirm the yarliq, I seal it with my gold stamp, from the creation of Adam, in the year 1571 in the month of October. Written at the court of our State, the city of Moscow, the year <...>

And the following is written at the beginning of the shert [oath] records which Siberian ambassador Tamas and messenger Aisa had taken:

By the grace of God, and Tsar and Grand Prince Ivan Vasilyevich of all Russia, in response to Siberian khan Kuchum who had sent his ambassador Tamas and his messenger Aisa to make obeisance to the Tsar and Grand Prince, and had brought one thousand sables with them; Tsar and Grand Prince Ivan Vasilyevich of all Russia, the Ruler of Kazan, Astrakhan, and many other lands had mercy upon us and granted rewards to us, and included all the Siberian lands to his rewards plan, and ordered Siberia to pay only one thousand sables a year and only one thousand squirrels as an ambassadorial fee, in accordance with his previous order. And our ambassador Taimas and messenger Aisa, thanking God and the Tsar and Grand Prince for his rewards with all their soul, and on behalf of all kind people and all bondmen, they send him a strong squadron and the shert, as it had been conditioned in the records.

And the bottom of the charter says: to confirm this charter, I, Tsar Kuchum, seal it with my stamp, and the best Siberian people also sign it. This shert record was taken by Magmed Bak, son of Khozeseip.

And the postscript of the charter says: as it is written in the shert record, I, ambassador Taimos, together with messenger Aisa on behalf of Kuchum Tsar and all the best Siberian people and all the Siberian lands, as it is stated in the shert record, we take a shert [oath] to our ruler. When Tretiak Chabukov, the messenger of the Tsar and Grand Prince, comes to our Siberian Tsar Kuchum and his best people to take the shert on this granted yarliq, Tsar Kuchum will seal it with his gold stamp and thereafter will reign in the Siberian lands, as stated in the charter; and there are neither my—Taimus's seal nor the seal of Aisa, and there are no our signatures since we do not know how to write correctly.

And in the text to Tretiak from Tsar Kuchum there was also an order to send a bow and give a speech, as instructed.

11. On religious wars of sheikh Bagauddin's apprentices against outlanders of Western Siberia

Published in: N. Katanov On religious wars of sheikh Bagauddin's apprentices against outlanders of Western Siberia // Annual Publication of the Tobolsk Governorate Museum. 1904. Ed. 14. Tobolsk, 1904. Pp. 18–28.

According to the Muslim chronology, 797 AH (27 October 1394 to 15 October 1395) was a year filled with true friendship with Islam. In Holy Bukhara, during the reign of Khan Abul Leisi, by the exalted order and assent of Imam Hajji Bahau-l-Hakkochad-Din of the Naqshbandiyya Dervish Order, 366 sheikhs who had gathered from diverse cities in Eastern and Western countries became his sincere

followers after conversations with him and after seeing his miracles. But these saints lived divided into three parts in different years:

One part stayed with the sheikhs and engaged in the mysteries of the divine.

Another part lived in the environs of Bukhara and taught the people in its settlements.

The third part led the struggle with the pagans for the faith.

When it was time to go to war for the faith, the followers gathered before the bright eyes of the venerable sheikh Bahauddin and awaited the direction his orders would take. After the morning prayer, the Khoja turned his blessed face to the sheikhs and said: 'In big historical books, I saw this: 'When the ruler of the faithful, Ali, departed and entered into Hindustan, he spread Islam in the lands of Chin and Machin; he converted half of China to Islam and lay a tribute on the other half. But a number of the disobedient revolted, left the country of Tarlai-khan, and escaped from the sword of the ruler of the faithful Ali; they reached the estuary of the river known among the Turks as the Irtysh, or Abi-Jarul in the Tajik language, which flows to the west. The following nomadic tribes lived there:

1. the Khotan people ('khotan' was a name for the Tatars in general used by the Irtysh Ostyaks),
2. the Nogai peoples (the tribes between the Emba and the Ural brought there by Nogai, grandson of Taval, grandson of Chinggis Khan; at present all the Muslim Tatars are called Kirghiz-Kaisak Nogais),
3. the Kara-Kipchak (disappeared as an independent nation and became part of the Uzbeks and the Kirghiz-Kaisaks).

Entering among them, those who had left China to escape from the sword of caliph Ali stayed there and started living with them, but they had neither true faith nor true principles to follow—all of them were Tatars who worshipped puppet idols.'

And here is my order to you: invite others to profess Islam; and if they do not accept your invitation, begin a great war with them for the faith.' When he had given this exalted order, the above-mentioned 366 sheikhs came to Shaybani Khan, to the steppes of the Mrednets Horde, and were his guests. After he learned of the life of these saints, he expressed his like-mindedness, armed 1700 of his heroes, and departed with them on horseback to take part in the great war. He came down to the Irtysh and started a great battle there for the faith. At that time there lived three different nations by the Irtysh: the Khotan, the Nogais, and the Kara-Kipchaks, and then others — the escaped rebels of Tarkhan-khan — came and started living with them; the Kets, an Ostyak nation, also helped them and participated in the battle because they were of the same faith. The sheikhs mentioned here previously, having united their forces with Shaybani, fought as true men of courage.

They exterminated a great number of the pagans and the Tatars, fighting such that there was no stream along the banks of the Irtysh near which there was no battle. While they did not let those pagans escape, 300 of the sheikhs attained crowns of martyrdom, falling either on the land, or in the water, or in the swamps. The runaways of Tarkhan returned to China. The Ostyak people escaped to the forest. Some nations of the Khotan, Nogai, and Kara-Kipchak practiced Islam, while some, though they had escaped safe and sound, still, having met the sheikhs' fury, were to some extent weakened, to some extent mad, and, becoming frightened, they converted to Islam and could not run any further. The Ostyaks later became pagans and lost their faith. 1448 of Shaybani Khan's heroes fell and attained the crown of martyrdom. Shaybani Khan set off with his remaining 252 heroes to the people of the Middle Horde, to the steppe regions, and was called Vali Khan, i.e., the holy khan, for he had led the war for the faith together with the saints, and 300 of the horsemen had attained the crown of martyrdom. Three out of sixty-six knights stayed here and started to teach the basics of the faith to those of the Nogai, Khotan, and Kara-Kipchak nations who practiced Islam. And khojas and sheikhs in Tobolsk, Tyumen, Tara, and Tomsk are among their descendants. 63 horsemen headed to Holy Bukhara and reported to master Bahauddin on their matters. And since those times the Islamic faith was revealed here, and paths were revealed so that caravans started travelling along the Irtysh, and many different khojas and imams began to visit here in order to teach the faith; and the majority of them were people who could work wonders. Moreover, master Imam Devlet Khan Khoja, son of Shah Abdu Valgab from Astechan, passed through this region on his way from Holy Bukhara. He visited the Kalmyk nomad camps and brought the

Kalmyk khan Khuptaichzh to the Islamic faith, and also ordered the construction of 18 mausoleums on the banks of the Irtysh. Many faithful people turned to him and became his diligent followers. And then Sheikh Iskander of Minlyan arrived from Khwarezm and opened 9 mausoleums. One of the first sheikhs who stayed there to teach the faith was the honourable Sheikh Sherpeti, the younger brother of Sheikh Nazar and Sheikh Biriya. After opening 12 mausoleums, he lay down at the feet of his elder brothers. Out of the 39 mausoleums mentioned in this genealogy, 30 mausoleums of men, women, and girls are described in this genealogical charter, together with their names. And with the names of the places in which they repose.

1. From the saints reposing on the bank of the Irtysh — in Isker, the honourable Sheikh Aikani.
2. At the same place, before Isker, Sheikh Biriya.
3. Sheikh Nazar.
4. Sheikh Sherpeti (all three of them were brothers and grandsons of Zengi-Baba, who lived in the region of Shash and died in 658 AH/1258).
5. Sheikh Musa in Kucha-Yaman, who was one of the children of Imam Malik (Abu Abdullah Malik ibn Anas lived in 712 AH (1315)–795 (1394) and laid the foundation of the Maliki school of jurisprudence).
6. On the hills also lies master Sheikh Yusuf, who was one of the grandsons of Imam Abu-Yusuf (Abu Yusuf Yakub al Apsary (died 798), was a lawyer and a disciple of the famous Abu-Khanafa, who among the Tatars bears the name of Imam-Azam—'the greatest imam').
7. At the Bashta lies master Hakim-sheikh, who was one of the children of imam Shafni (Abu Abdila Muhammad Ali Shafni, a lawyer and the founder of Shafni school of jurisprudence, who lived 797–820).
8. In Vagai (Vagai is the name of the steppe watered by the Vagai, a left-bank tributary of the Irtysh, which arises in the Yalutorovsk district. In ancient times the Vagai steppe was densely populated by foreign tribes) lies Hakim-sheikh. He was one of the children of Imam Ahmed (Abu Abdilla Ahmed ibn Hambal died in 855; he was the founder of the Hanbali school of jurisprudence).
9. At the Sobr, on the right side of the Irtysh, rests sheikh Ahmed Ali.
10. on the left side of the Irtysh lies sheikh Dervish Ali.
11. In Uvat lies Sheikh Turazi-Ali.
12. At the Vagai river, on the Yurul, lies sheikh Devlet-Ali (Ahmed-Ali, Dervish-Ali, Tursun-Ali). All four of them are the sons of the same father and grandsons of Abu-l Hasan Harimaki (925–1033).
13. In Tebende lies Sheikh Anjetan. He was one of the grandsons of sheikh Ba-Machin.
14. At the Ishim estuary, in the village of Bolshoy Burgan, is the mausoleum of sheikh Binel-Ata; he was the grandson of Jallil (Nur Ad-Din Abu-r-Rahman Jallil, 1492), the founder of the Mevlevi Order; his companions lay with three stones on the lakeshore.
15. In Vagai lies the honourable elder Sheikh Bairam.
16. On the bank of the Vagai lies the honourable Sheikh Nazar; they were brothers and grandsons of Sayyid-Ata (Khoja Sayyid Ahmet Ata died in 710 AH = 1310).
17. In Bikatun lies Sheikh Mur-Kemal.
18. In Karagai lies Khojat-sheikh; they are blood brothers, the sons of Bakhshi-Ata.
19. The honourable Natsf lies near Lake Mochuk.
20. The honourable Alaf lies in Atyan; they were blood brothers and sons of sultan Bayezid (Bayezid Taifuri Bastami Khoja lived in 774–845 AH).
21. In Burbar lies Daud of Kandagar (died in 765 AH); in the opinion of the Tatars, all oracles originate from this person (Saryn).
22. Sheikh Abdul-Aziz rests in the village of Kat.
23. In Kan-Shubari (Kashgari) lies Abul-Melasr; they both were blood brothers of wise Suleyman (Khoja Hakim Ata (died in 582 AH = 1186), a follower of the mystic Khoja Ahmed Yesevi, who died in 1166).

24. In Erum-Jin lies the honourable Sheikh Daud from the grandsons of Husein (the grandson of Muhammad, died in 670).

25. Sheikh Omar-Ali rests in Karbin.

26. On the hill of the ancient village of Karagai, near Krasny Yar, at the place. Both – Baktari in the village of Kyuneshli, Sheikh Kepesh-Agi, – both of them were blood brothers and the children of Omar Al Faruk (the second caliph, who ascended to the throne in 634).

27. Akyl-Bibi, in Il-Tashal.

28. Hadija-Bibi, in Yurush.

29. Sheikh Muslih-d-Din of Kerman is buried together with his two daughters. He took part in the war for the faith. The elder one, Saliha-Bibi, fell in the ravine called Charby (Jarby) near the village of Saurgach, and since that time she has rested there.

30. The younger is Afifa-Bibi; she fell in the ravine called Aput, which begins in Vagai, and has rested there since that time.

As for the master Sheikh himself, when he had finished off all the infidels, he departed to Kyzym and was the ruler of Ak-Gisar there. The wives of all the above-mentioned sheikhs, as well as the daughters of some and the sons of some, stayed together during the battle for the faith. Therefore, there are mausoleums in these places for women, girls, and boys; it is no wonder, for all of them — mothers and children — were together and all of them were saints. The 30 holy mausoleums listed in this table were collected in a single table by judge Abdul-Kerim, the akhund of Tobolsk and Toms, and one of the khan's descendents, Harshi Lebiv-Yashin.

The table does not contain any information on the nine mausoleums that were opened here by master Sheikh Iskander, one of the inhabitants of Melmen in the administration of the city of Khwarezm, and on the mausoleums that were established by the two above-described venerable men, for there is a separate table for them. The information on those nine was collected in this table and sent by Sheikh Iskander from Turkestan. He sent them through the deceased neighbour of the sultan, i.e., of Bahaud-din, Khoja Mir-Sherif, to the Tobol akhunds. And it is also said that from the city of Sayram the honourable imam Sheikh Jusuf, who worked wonders, visited the banks of the Irtysh and Siberia and discovered 10 mausoleums. After he collected them in the genealogy, he sent them and entrusted them to his brother, Sheikh Alin. This all became a mystery that was only known to the akhunds of the city of Tara. 49 mausoleums have been discovered; moreover, the remains of 251 men are yet undiscovered along the banks of the Irtysh. Then 300 honourable men are mentioned: master Imam Khoja Devlet, master Imam Iskander, and a Khwarezmian from Melkish. They sent the 39 mausoleums which they discovered to Holy Bukhara (in a description) with a request to publish the names of the saints from Holy Bukhara, with such benevolence as if they had been mysteries of divine revelation. And they believed so strongly that they confirmed and verified that, and blessed each one in every possible way, and also commanded the following:

'We beg you most humbly to rigorously guard the holy graves, be they on the rivers running into the Irtysh, be they on the banks of the Irtysh itself or in the swamps. 251 people, not having shown themselves, have remained hidden. Righteous men, women, and girls, if someone in your secret thoughts towards the Lord Most High receives His directions as to where these men are hidden, or if these men give some hints about themselves, do not be remiss about revealing the graves and constructing mausoleums so that the sheikhs will not be angry with them and will not disgrace them and their descendants.'

Having given such a commandment and having set their seals to the mausoleums discovered by the three of them and having laid on their hands, they sent in their sympathy to show these great favour and grace. The mausoleum of Sheikh Kefish Ali is situated in the Tobolsk district, on the bank of the Irtysh, on the high side of the place called Karagai, in the village of Kyumyunli, on the hill called aba Bakyr. The name of the closest sheikh to him is Burai; his son is Sheikh Safar, and the latter's sons are Sheikh Uras and Sheikh Ir-Setet. The son of Sheikh Uras is Sheikh Ramazan, his son is Sheikh Abul Hasan, and his son is Sheikh Muhammad Sherif.

This tale was written by Sad Vakas Redzhebov Memet Alakulov.

12. Documents on Russian–Siberian relations in 1597–1598

Published in: Collection of State Charters and Contracts. Part 2. M., 1819. Pp. 129, 131–134; Historical acts collected and published by the Archaeographical Committee. Volume 1, 1334–1598. Saint Petersburg, 1841. Pp. 1–5, 6–8.

1. Charter (in translation) to His Majesty Tsar Feodor Ioannovich from Baiseit Mirza of Siberia (1597)

The Siberian lands and all your bondsmen from great to small make obeisance to the Grand Prince and White Tsar. And we obey the voivodes according to our own truth, but the Tyumen people have revolted, and we do not know who started it: whether this came from the voivodes or from someone else. Only God and you know what could have happened. At present neither guests nor merchants visit us here in Siberia, and we live in scarcity; but if only people of commerce would come here, we would replenish our supplies and would be full. But the local voivodes do not dare to send ambassadors without your permission. Your Majesty, if you would, by... send ambassadors to Bukhara and to the Nogais so that our land would obtain profit, regarding which all your bondsmen the Siberians, great and small, make obeisance to you. And as you, Your Majesty, let me, your bondsman Baiseit, go to Siberia and granted me your monetary gift of ten rubles, and now you have given me six more rubles, such is your will; while head people of Avbasta and Keldiuraz, old and good people, keep guarding your yurt, but your gifts do not reach them. You ought to grant them a monetary gift, regarding which we all, your bondmen, from great to small, make obeisance; and we have sent to you, our Sovereign, Yesaul Kyzylbai to make obeisance to you, and we ask you to grant us your charter. And we beg you and make obeisance to you, our Sovereign, I, Baseit mirza and all your bondmen, great and small, that you would order that Shih, Molla and Babuazei, all three, might be released back to their land, to Bukhara; they bring no profit to your land—all they can do is to weep. It would be no sin for you, White Tsar, and we all feel sorry for them and beg you to release them.

2. Letter of Siberian Tsar Kuchum to the voivodes of the city of Tara (1597, Russian clerical translation)

God is rich.

I, a free man and Tsar, send a bow to the boyars and this word: why did you want to talk with me, and has your Sovereign, the White Prince, ordered you to do that? And if there is an order, we shall talk and accept his word, and he would accept our petition; and here is my petition: I ask the Grand Prince, the White Tsar, to grant me the bank of the Irtysh, and I also make obeisance to you, the voivodes, and ask you the same thing; I ask you t[...] things, and if you grant at least one of those things, your word will be truthful; but if you do not, your word will be false; and here is my petition: I ask for Shaina and other two guests whom you captured to be sent to me among the ambassadors, as they were entrusted to you by God, and I also ask one horse-load of ambassadorial trappings. I have had sore eyes, and those ambassadors had potions with them, and they also had a recipe for those potions with them, and I ask you for that as well. Give me those three things, and your word thus will be truthful, and if you want to have a talk with me, send me your dragoman Bogdan. And Syuyunduk has arrived; he has seen the eyes of the Grand Prince, the White Tsar, and I would like to hear the Tsar's order from his lips, and ask that you send him to me; let those things come true, and send Bahtyuraz, who has now arrived. And since Yermak's arrival and to this day I have tried to be welcoming; but I did not give up Siberia; you took it yourselves. And this time we shall also try to make up, it will be better at the end of the day; but I am allied with the Nogais, and we shall only stand on both sides, and the treasury of the Prince will be shaken; now I want to make peace by fair means, and I will do everything I can in order to achieve peace.

3. Charter of Tsarevich Abu'l-Khayr to his father, Tsar Kuchum of Siberia (1597).

Your bondman Abdul Khayr Tsarevich makes many obeisances to Your Majesty the Tsar. Previously you sent your man Magmet with a charter to the Great Sovereign Tsar and Grand Prince Feodor Ivanov-

ich, Autocrat of All Russia, [...] and in your charter you asked the Great Sovereign Tsar and Grand Prince Feodor Ivanovich the Autocrat to grant you a yurt [...] ordered that it be given to you and that our brother Magmet Kul be released to you; at that time I was in disfavour with the Tsar and I made obeisance to the Great Tsar and Grand Prince Feodor Ivanovich, Autocrat of All Russia, that he would have mercy upon me and allow me to write a letter to you, so that you might cover your transgressions and submit under his royal hand, and that you might send your son the tsarevich to His Majesty. And the Great Sovereign Tsar and Grand Prince Feodor Ivanovich, Autocrat of All Russia, not remembering our transgressions, allowed me to write a letter to you, but you did nothing of what I asked you in the m[...] letter, [...] not to send the tsarevich to the Great Sovereign Tsar and Grand Prince Feodor Ivanovich, Autocrat of All [Russia]. And now the Great Sovereign Tsar and Gra[nd Prince] Feodor Ivanovich, Autocrat of All Russia, the merciful and true Great Christian Tsar, despite our rudeness and lies, had mercy upon me, remitted the death penalty, and granted me [...] volosts together with my brother Magmet K[ul] Tsarevich; and there has been a rumour about Your Majesty that you are in need and great scarcity, and that our brothers Tsareviches Kanai and Idelin, together with many people, have turned away from you, and there are now very few people by Your Majesty's side. My brother Tsarevich Magmet Kul and I made obeisance to His Majesty the Great Sovereign Tsar and Grand Prince Feodor Ivanovich, Autocrat of All Russia, that he would have mercy upon us and allow us to write a letter to you, and we hope that Your Majesty now wants to be under the protection of the His Majesty the Great Sovereign; and the Great Sovereign and Grand Prince Fe[odor] Ivanovich, Autocrat of All Russia... allowed us and ordered us to write a letter to you; and you, Your Majesty, had better go to the Great Sovereign Tsar and Grand Prince Fe[odor] Ivanovich, Autocrat of All Russia. Meanwhile, from the printer and ambassadorial secretary Vasily Yakovlya [...] of His Majesty is known to us: if you want to be by the side of the His Majesty and under his delightful eyes, the Great Sovereign Tsar and Grand Prince Feodor Ivanovich of All Russia will grant you a royal gift, volosts and cities and monetary rewards, according to your merit. Many tsars and tsareviches serve His Majesty the Great Sovereign Tsar and Grand Prince Feodor Ivanovich, Autocrat of All Russia, as do the voivodes of Volos and Mutyansk, and Tsars' children from many states, and all of them receive monetary rewards regularly and live without scarcity; and if you wish to stay by the side of His Majesty, he will grant you the Siberian yurt and will order that you should become the tsar in the land of [Sib]eria.

4. Granted Charter of Tsar Feodor Ioannovich to Siberian Tsar Kuchum (1597).

...I, the [Gr]eat Sovereign Tsar and Grand Prince F[eodor Ioanno]vich, Autocrat of All Russia, of Vladimir, Moscow, and Novgorod, Tsar of Kazan, Tsar of Astrakhan, the ruler of Pskov and the Grand Prince of Smolensk, Tver, Yugra, Perm, Vyatka, Bulgaria and others, the Sovereign and Grand Prince of the Lower Novgorod lands, Chernigov, Riazan, Polotsk, Rostov, Yaroslavl, Beloozero, Udorsk, Obdorsk, Kondinsk and all Siberian lands and Northern countries, the ruler of the Iverian lands, of the Georgian tsars and Kabardin lands, and of the Circassian and Mountain princes, and the ruler and owner of many other states, give my gracious word and a great reward to Tsar Kuchum. Since olden times the Siberian state has been a patrimony of our ancestors, the Great Sovereign Russian Tsars of blessed memory, since the times when your grandfather Ibak Tsar ruled Siberia, and gave all kinds of tribute from the Siberian land to our ancestors, the Great Sovereign Tsars; and after your grandfather Ibak, the princes of the Taibugid dynasty reigned in the Siberian state—Prince Magmet, then Prince Kazy, and after Kazy Prince Ediger, and all those princes collected tribute from the Siberian lands and sent it to our grandfather of blessed memory, the Great Sovereign Tsar and Grand Prince Vasily Ivanovich of All Russia, and our father of blessed memory, the Great Sovereign Tsar and Grand Prince Ivan Vasiliyevich of All Russia.

And as you, Kuchum Tsar, have established yourself in the Siberian land as the tsar, and used to be obedient to our father [...] Ivan Vasiliyevich of All Russia, and used to send tribute from the Siberian lands; and our father [...] in his royal favour would keep you under his high royal protection; and after that you, Kuchum Tsar, deserted our father [...] and his royal favour [...], became disobedient, and stopped paying the tribute, and killed the boyar's son Tretiak Chebukov, who was sent to collect it, and

made war many times on our outskirts in the Permian land. [...] And as, by our royal order, our people came to Siberia, drove you from the kingdom and took the Siberian land, and you went to camp among the Cossacks, and living in the fields, you repeatedly showed rudeness and disobedience to our Majesty, and without our royal favour, you, Kuchum Tsar, entered into the Siberian volosts; and you had with you your nephew Tsarevich Magmet Kul and your son Tsarevich Abdul Khayr, and both of those tsareviches fell into the hands of our people [...] despite your rudeness and lies, we did not execute your nephew Magmet Kul and your son Tsarevich Abdul Khayr; instead, we treated them with favour in our state and ordered that they be provided with towns and volosts and money [...] And now [...] the towns in our patrimony, the Siberian land, are fortified, and there are military men with fiery cannons in those towns; but we did not send our great hosts against you, Kuchum Tsar, because we were waiting for you, Kuchum Tsar, [...] to admit your transgressions and lies and come to Our Majesty to make obeisance...

[...] Before this, four years ago, you sent your man Magmet to Our Majesty with a letter[...] you wrote with [...] request that [...] to have mercy upon you, and grant you the yurt, and release your nephew to you, and that in our royal favour you will be under our high royal hand. And we [...] wanted to enthrone you in the Siberian land, so that you would henceforth be strong and immovable in our royal favour; and your nephew Tsarevich Magmet Kul is now established in our state and has been granted towns and volosts [...] to serve Our Majesty; and then Chin Murza Isupov, son of Il Murza, came from your ulus to serve Our Majesty with his ulus, and Our Majesty granted Chin Murza volosts and money [], and [...] extent you camp in the fields as a cossack with a few of your people, [...] known. And those Nogai Uluses of the Taibugid yurt who camped with you deserted you, though you had great expectations of them; and Chin Murza departed to Our Majesty [...], and the rest of your people left you with Tsarevich Kanai and Ydelin, while others went to Bukhara and to the Nogais and the Cossack Horde; and now you have very few people [] we declare to you our royal favour and our gracious word, that you, Kuchum Tsar, would come to Our Majesty [...] and we shall show favour to you [...], and grant you many towns and volosts and a monetary reward, [...] if you desire to stay in your previous yurt in Siberia [...], we shall enthrone you in the Siberian l[and] and graciously keep you in our royal favour.

5. Report of Voivode Andrey Voyeykov of Tara to the tsar (4 September 1598)

Your bondman Ondryushka Voyeykov makes obeisance to the Sovereign Tsar and Grand Prince Boris Fedorovich of All Russia. Last year, in August of 106, on the first day, the ataman of Tara, Yelistrat Nikitin, brought the charter of Your Majesty the Sovereign Tsar and Grand Prince Boris Fedorovich of All Russia to us in Tara. In the charter of Your Majesty the Sovereign Tsar and Grand Prince Boris Fedorovich of All Russia the following was written: I, your bondman, was ordered to march against Kuchum Tsar and fight his volosts which are disobedient to you, the Sovereign Tsar and Grand Prince Boris Fedorovich of All Russia, and do not pay the yasak to Tara, and I was also ordered to truthfully write to you, the Sovereign Tsar and Grand Prince Boris Fedorovich of All Russia, of all local matters: And, as ordered in the charter of Your Majesty the Sovereign Tsar and Grand Prince Boris Fedorovich of All Russia, I, your bondman, marched from Tara against Kuchum Tsar on 4 August; and the host of Your Majesty the Sovereign Tsar and Grand Prince Boris Fedorovich of All Russia went with me, your bondman: three men of the gentry, two atamans, and soldiers from Tara, Lithuanians and Cossacks, one hundred men; thirty Tatar soldiers from the yurt; sixty yasak payers from around the volosts; soldiers from Tobolsk [...] the Tatar head, the ataman, and Lithuanians and Cossacks, fifty-three men, and one hundred Tatars of the Tobolsk yurt; soldiers from Tyumen, Lithuanians and Cossacks, fourteen men, and ten Tatars of the yurt; [...] participated in your campaign [...] of the hosts of Your Majesty the Tsar and Grand Prince Boris Fedorovich of All Russia: three men of the gentry and the head of the Tatars, three atamans, and four hundred less three men, Lithuanians and Cossacks and Tatars from the yurts and volosts. On 10 August, I, your bondman, sent Ilya Beklemishev, a man of the gentry, together with the Tatar head Cherkas Oleksandrov, into those volosts to find informants; these were the volosts which Kuchum Tsar took away from you, the Sovereign Tsar and Grand

Prince Boris Feodorovich of All Russia, in the year 106, the Turash and Lyubar volosts. On 10 August, the man of the gentry Ilya Beklemishev and the Tatar head Cherkas Oleksandrov brought to me the best man of Turash, Kuzdemysh Makhleyev, and Akbulat Chemychakov from their expedition; and Kuzdemysh and Akbulat told me during the interrogation that Kuchum Tsar had ordered all the best volost men from Kurpitsk and Turash and Lyubar [...] and Choi and Kurom to live by the Ub [...] Kuchum Tsar is camping [...] around the Black waters, and he has five hundred men with him, and also fifty men of commerce from Bukhara. And I, your bondman, after hearing this information, came to Lake Ub on 15 August, and captured the best men of the volosts who were lured away from you, Sovereign Tsar and Grand Prince Boris Feodorovich of All Russia, by Kuchum Tsar last year, in 106: Chadyshau Saul from Kirpitskaya Volost, Itkuryuk and his comrades from Turashsk Volost, and the best men from all seven volosts whom Kuchum Tsar lured away from you, the Sovereign Tsar and Grand Prince Boris Feodorovich of All Russia. And during the interrogation the best men told me, your bondman, the following about Kuchum Tsar: Kuchum Tsar headed from the Black Waters towards the Ob River together with his children and people, to where his grain is sown; and he ordered them all to live at Ub Lake; and he ordered them not to pay the yasak to Your Majesty the Sovereign Tsar and Grand Prince Boris Feodorovich of All Russia; and ordered the best man of Barabinsk, Yesnigildey Turundaev, to save it for his volost. And I, your bondman, captured the best men of the volosts [...] Chadysh and Itkuryuk with their fellows; and I told the yasak payers the gracious word of Your Majesty the Sovereign Tsar and Grand Prince Boris Feodorovich of All Russia: that henceforth they should remain under your royal protection without fear, and that they should pay the yasak to Your Majesty the Sovereign Tsar and Grand Prince Boris Feodorovich of All Russia. And I, your bondman, ordered them to return to their native yurts; and I, your bondman, Sire, sent the gentleman Ilya Beklemishev and ataman Kazarin Volnin to the volost of Borabinsk. And on 16 August, the gentleman Ilya Beklemishev and ataman Kazarin Volnin brought three of Kuchum's men from the volost of Barabinsk – Barsanda with his fellows, as well as the best man of Barabinsk, Yesnigildey Turundaev, with his two sons, and fifteen yasak payers from the volost of Yesnigilday. And during the interrogation and torture, Kuchum's men, Barsanda and his fellows, told me, your bondman: Kuchum Tsar is camping near the Ob river, where his grain is sown, and there are five hundred people by the side of Kuchum Tsar; and Kuchum is planning to march against the towns of Your Majesty the Great Sovereign Tsar Boris Feodorovich of All Russia soon – against Tara and the Yapyn and Kaurdatsk volosts; and about thirty families of Kuchum's people are living at Lake Ik, four days from Kuchum's camp. After hearing this information, I, your bondman, sent the gentlemen Mosei Glebov and Feodor Lopukhin to Lake Ik, as well as the Tatar head Cherkas Oleksandrov with forty Tatar Cossacks on horseback and sixty Yugra Tatars. Thus, Sire, Mosei Glebov and Feodor Lopukhin and Cherkas Oleksandrov found Kuchum's people at Lake Ik, and defeated them, and brought five of them to me alive, and during their interrogation and torture, they told me, your bondman: Kuchum Tsar is camping at the Ob river and he has sent for them to join his gathering, and Kuchum Tsar wants to march against Tara and against Yalynsk and Kaurdatsk volosts soon, and others of Kuchum's people are camping one or two days from Kuchum's camp, about twenty families. And I, your bondman, sent the gentlemen Mosei Glebov and Feodor Lopukhin and [...] Tara Cossacks on horseback, and thirty Tatars from the Tara yurt, and ordered them to attack Kuchum's people at night, so that they did not pass the news to Kuchum Tsar. And Mosei Glebov and Feodor Lopukhin defeated Kuchum's people who nomadised two days far from Kuchum's camp utterly, and left no one who could notify Kuchum. And I, your bondman, leaving the camp at Lake Ik, marched against Kuchum Tsar swiftly, and marched day and night along the Ob river after Kuchum Tsar, and found him three days above Chaty, at the meadow at Ormen, two days away from the Kalmaks. And I, your kholop, marched against Kuchum Tsar on 20 August at dawn and fought with Kuchum Tsar till midday; and by the grace of God and by the blessing of Your Majesty the Sovereign Tsar and Grand Prince Boris Feodorovich of All Russia, I defeated Kuchum Tsar and captured his tsareviches and tsarinas, and Kuchum's brother Tsarevich Iliten and Kuchum's son Tsarevich Kanai; and two tsareviches, the children of Tsarevich Alei, were killed on the battlefield; and we captured Kuchum's children alive – five tsareviches, Asmanak, Shaim, Bibadsh, Molla and Kumysh, and eight

tsarinas, Kuchum's wives, and eight of the tsar's daughters, as well as Tsarevich Osmei [...] with his son and daughter, as well as tsarevich Churai [...] the daughter of Nogai Prince Urus with her two daughters; we also captured Kuchum's best men on the battlefield: five princes and murzas, and Baiteryak Murza and his fellows; and we also killed six princes, Prince Moimurat with his fellows; and ten murzas, Ahit Murza with his fellows; and five atalyks, Chegei Atalyk, Kuchum's father-in-law, with his fellows; as well as one hundred fifty soldiers; and a hundred people drowned in the Ob river, Sire, as they tried to cross it; and the men of Your Majesty the Sovereign Tsar and Grand Prince Boris Feodorovich of All Russia shot at them from the bank with arquebuses and with bows; and about fifty soldiers were captured alive, and I, your bondman, ordered that some of them be beaten and others hanged. And many say, Sire, that Kuchum Tsar drowned in the Ob River, while others say that Kuchum escaped beyond the Ob by boat; and I, your bondman, sailed across the Ob on rafts with the host of Your Majesty the Sovereign Tsar and Grand Prince Boris Feodorovich of All Russia and searched for Kuchum Tsar beyond the Ob River, in the forests and on the islands in the Ob, but did not find him anywhere. And I, your bondman, brought Kuchum's Tul Mamet Sayyid to shert [oath], and sent him to search for Kuchum Tsar in Chaty and Kolmaki, and should Kuchum Tsar be found anywhere, I ordered him to tell Kuchum to go to serve you, Sovereign Tsar and Grand Prince Boris Feodorovich of All Russia, and that you, Sovereign Tsar and Grand Prince Boris Feodorovich of All Russia, would grant him your royal favour. And Tul Mamet Sayyid had not come to me, Sire, by 4 September. And I, your bondman, sent the gentleman Mosei Glebov and Ataman Tretiak Zharenovo, and forty Tara Cossacks on horseback, and thirty people on foot with them, to pursue those of Kuchum's horsemen, about fifty men, who had escaped from the battle; and Mosei and Tretiak chased them two days before they could reach Chaty, and killed them all. And I, your bondman, followed from the city of Tara to Kuchum, at a rapid march, for sixteen days; and I did not go to fight in Chaty, because the Chaty people [...] could not be fought in the summer time, before the frosts; and I, your bondman, ordered Kuchum's Kul Mamet Sayyid to go the best men of Chaty, that all of the best men would go to Tara, the city of Your Majesty the Sovereign Tsar and Grand Prince Boris Feodorovich of All Russia; and there was no message from Chaty to me, your bondman, by September 4. And those volosts, Sire, which are located on this side of the Ob river, and are disobedient to you, Sovereign Tsar and Grand Prince Boris Feodorovich of All Russia, and do not pay the yasak to Tara: the big volost of Boroba, the volost of Terenya, half of Kirpotsovo and half of Kuroma, and half of [...] volost, which were the first to disobey and not pay the yasak to Your Majesty the Sovereign Tsar and Grand Prince Boris Feodorovich of All Russia at Tara, and I, your bondman, sent expeditions into those volosts, men of the gentry with sotnias and the Tatar head and atamans, and we captured the best men of those volosts; and regarding those volosts which Kuchum Tsar lured away from Your Majesty the Sovereign Tsar and Grand Prince Boris Feodorovich of All Russia in the year 106, I, your bondman, sent all of the yasak payers in those volosts to their native yurts and ordered them to pay the yasak to Your Majesty the Sovereign Tsar and Grand Prince Boris Feodorovich of All Russia; and as for those volosts which I recently brought under your protectorate, I, your bondsman, did not have time to impose the yasak on them, for I did not dare to stay at Kuchum's camp for a long time. The Kolmaks are two days from Kuchum's camp, and, Sire, five thousand Kolmak military men are gathering; and I, your bondman, advanced towards Tara from the Ob River, from Kuchum's camp, on 27 August, and I brought the tsareviches, Kuchum's children, and his tsarinas with me, and I also took Kuchum's best men and the best yasak-paying men of the volosts with me towards Tara. And when I, your bondman, reach Tara, I shall immediately release the tsareviches and tsarinas to Your Majesty the Sovereign Tsar and Grand Prince Boris Feodorovich of All Russia, and I shall write to Your Majesty the Sovereign Tsar and Grand Prince Boris Feodorovich of All Russia about the new volosts, and how much yasak I shall impose on them. And I, your bondman, have sent the gentleman Mosei Glebov and the Tatar head Cherkas Oleksandrov with the charter to you, our Sovereign Tsar and Grand Prince Boris Feodorovich of All Russia, on 4 September, from the Om river, six days away from the city of Tara; and I have also sent the record of service for all the soldiers of Your Majesty the Sovereign Tsar and Grand Prince Boris Feodorovich to Your Majesty the Sovereign Tsar and Grand Prince Boris Feodorovich of All Russia with them.

6. A name-by-name list of the captured members of Kuchum's family, and Siberian princes, murzas, atalyks and service class people (4 September 1598)

Of Kuchumov's children, 5 tsareviches were captured: Asmanak, 30 years old; Shaim, 20 years old; Bibadsha, 12 years old; Molla, 5 years old; Kumysh, 6 years old; Tsarevich Alei escaped from the battlefield. And 8 tsarinas, Kuchum's wives, and 8 of the Tsar's daughters, and Tsarevich Alei's tsarina with her son and daughter, and Tsarevich Konai's tsaritsa, the daughter of the Nogai Prince Urus, with her two daughters. Of Kuchum's best men 5 princes and murzas, Murza Bayterak and his comrades, were captured in battle. 6 princes were killed, Prince Moimurat and his comrades, as well as 10 murzas, [...] Murza and his comrades; 5 atalyks, Kuchum's father-in-law Atalyk Chegey and his comrades; and 150 soldiers. And 100 people drowned in the River Ob when they were crossing the river. About 50 people were captured alive; they were beaten and some were hanged. Kuchum's brother Tsarevich Iliten and Kuchum's son Tsarevich [...] were killed.

7. Report from the Tara voivodes Stepan Kozmin, Andrei Voyeykov and Piotr Pivov to the Tsar (17 October 1598)

Your bondmen Stepanko Kuzmin, Ondriushka Voyeykov, and Petrushka Pivov make obeisance to the Sovereign Tsar and Grand Prince of All Russia Boris Feodorovich. Last year, Sire, 23 August 106, I, your bondman Ondriushko, from the defeat of Kuchum, sent Kuchum's Siberian Seyyit Tul-Mamet to Chaty to find out about Tsar Kuchum, whether he is alive or drowned; and if he found Kuchum, I, your bondman, ordered him to tell Tsar Kuchum to come and serve Your Majesty, and that you, Sire, would show him your royal favour and order that his children and wives be given back to him. I, Your bondman, told the seyyit to go to Chaty and talk to the best men of Chaty, to the princes and murzas, to Prince Kuzemenkey and to Tokkash and to Murza Kozhbakhtyi and his comrades, that all the people of Chaty would be under your royal protection, and that the best men would go to the new town on the Tara and pay the yasak to Your Majesty from all their volosts and to serve to Your Majesty; and if Tsar Kuchum comes to Chaty, that they would capture him and send him to Your Majesty, and Your Majesty will grant them your royal favour and defend them with Your Majesty's troops from all the hordes. However, if the people of Chaty do not want to be under your royal protection, I, your bondman, asked the seyyit to tell the Chaty people that Your Majesty ordered me, your bondman Ondriushka, to march with the entire Siberian host and fight against their volosts. And this year, Sire, 5 October 107, Seyyit Tul-Mamet came from Chaty to the Tara, and brought a letter from the Chaty murzas and brought to us, to Your bondmen, forty sabres from the Chaty mirzas, and upon questioning he told us, your bondmen, about Tsar Kuchum: he found Kuchum Tsar beyond the River Ob, in the forest, two days downstream from the battlefield with three of his sons and about thirty men. Kuchum escaped from the battle by boat down the River Ob while his sons and men were fighting against me, Your bondman. The seyyit told Kuchum from me to go to Your Majesty to serve, and Your Majesty will grant him your royal favour and give his sons and wives back to him. And Kuchum told us through the seyyit: I did not go to His Majesty, neither by His Majesty's charter nor by my own will; when I was completely well there was no reason to go to His Majesty for a sword, and now I am deaf and blind and I have no means of subsistence: my breadwinner, my son Tsarevich Asmanak, has been taken from me; even if all my children had been captured, but only Asmanak had been left to me, I would still be able to survive through him; but now I am going to the Nogais and I am sending my son to Bukhara. And Kuchum led the seyyit with him around the battlefield for two days and buried the dead. And in the presence of the seyyit, Kuchum sent two people to Chaty to Murza Kozhbakhtyi and asked for horses and clothes, and Mirza Kozhbahtyi sent him a horse and a fur coat. Kozhbakhtyi himself arrived the next day after his gift and camped beyond the Ob across from Tsar Kuchum and wanted to see Kuchum, but Kuchum, seeing Kozhbbakhtyi, did not wait for him, but ran away from his camp up the River Ob, and sent the seyyit to Chaty. In Chaty, he said to the best Chaty people to come under your high tsar reign and to send the best men to a new town on the Tara and to pay in furs to You, My Lord, from all the volost, and to serve to You, My Lord, in everything. The Chaty people said to us, your bondsmen, through the seyyit: until now we have not served His Majesty and have not paid the yasak, and we

obeyed Tsar Kuchum. Kuchum was near to us and ruled our volosts. Now His Majesty's men have defeated Kuchum and Kuchum has left us, and we are happy to serve His Majesty with our heads and pay the yasak from our volosts. But we cannot go to Tara with you now, as the Kolmaks are our enemies and we are at war with them. When it is time to pay the yasak, have them send you, seyyit, and along with you the yasak collectors, Russians and yurt Tatars, and we will pay the yasak from our volosts and send our best men to Tara. And we, your bondmen, sent Seyyit Tul-Mamet to Chaty for for the yasak, along with two Russian men, the Lithuanian Martin Fiodorov and the Cavalry Cossak Pospel Golubin, as well as the Tara yurt Tatar Akmanay Obuchev, on 17 October. And we ordered them to tell the best men in Chaty to pay the yasak to Your Majesty from all their volosts and send their best men with the yasak to Tara. And we, your bondmen, translated the letter of the Chaty murzas and sent it to Your Majesty with the cavalry Cossack Timokha Drozhdelov on 17 October, but we did not send Seyyit Tul-Mamet to Your Majesty, because the Chaty people wrote to us about him and asked us to send the seyyit with the yasak collectors to them in Chaty for the yasak.

13. The account of 'Tawarikh-i guzida — Nusrat-name' about Khan Abu'l-Khayr

Published according to: Tawarikh-i guzida – Nusrat-name. Tashkent, 1967. Pp. 264, 266–267 Arab. pag.

...Abu'l-Khayr Khan... having completed his military campaigns, twice took the throne of Sain Khan from the descendants of Timur Qutlugh Mahmud [Khan] and Ahmed Khan, and, while sitting on [this] throne, held many banquets [and] gave many gifts to his Begs and servants. From him a lot of good things were left¹... For forty years he was the khan in Desht-i Kipchak. // Having conquered the peoples of the Tualas, Chinggi Bashgyrt, Buliar, and Bulgar, he spent summers [on their lands], with righteousness collecting the yasak from these peoples. Moving to Turkestan to spend the winters, with righteousness he took the tithe. The merchants of Iran and Turan were able to safely trade, freely travelling around [the land of Abu'l-Khayr Khan], and none [of them] were hurt². The entire ulus during his reign achieved its wishes, [and he] was called 'Saint'³ Jani[Beg], bringing good luck to his people⁴.

During his reign, from the descendants⁵ of Kyshlyk⁶, who served well with a sword⁷, were Yahshibeg-bahadur [and] Qutlugh-Bugabahadur. The others Begs, who served well with a sword to the khan, were *Beg Yakub Karagida from the Diurmens and Sheikh Sufi from the Naimans.

The story about their granting [by Abu'l-Khayr Khan] of the positions of the darugas of Chimgi-Tura.

He⁸ granted them⁹ the position of the darugas of Chimgi-Tura. *Kirli Tarichak-bahadur from the Diurmens,

*Ilin-Hoja [and] Sufrachi Edje from the [tribe] Ichki during the Kozakdom [of Abu'l-Khayr Khan] served well with a sword and were the reason for [his] power. And the names of the Begs [of that time], when [his] power had been established, were [as follows]: Beg Budanjar from the kin of Kiyat Beg Astay,

¹ Literally: 'occurred'.

² Apparently, the security of merchants set by Abu'l Khayr in his possessions is referred to here.

³ The word 'aziz' in medieval Turkic-Islamic texts also has the meaning of 'deceased'.

⁴ A clear hint at the Golden Horde khan—Jani Beg, whose period of rule (1342–1357/58) is presented as the era of universal well-being in sources of the late Golden Horde.

⁵ Literally: 'sons'.

⁶ Kyshlyk is a horse-wrangler of Eke-Cheren, one of the eldest emirs of Ong khan. Warned Chinggis khan about the scheme of Ong khan and his son Sangun against him, for which Chinggis khan made him a tarkhan and an eldest emir; his descendants also used these privileges.

⁷ That is, which served the khan.

⁸ That is, Abu'l-Khayr khan.

⁹ That is, to the beys listed above.

Beg Muhammed from the kin of Kungrat Beg Ali, Beg Tengribirdi from the Tyumens, and Beg Vakkas from the Mangyts, a grandson of Beg Edigu. This Beg was the reason [of the fact that] the khan conquered the throne of Sain on two occasions. He fought with the sword many times and brought glory [to the khan]. This ulus during the reign of Sultan Bahtiyar [and] Beg Vakkas was flourishing; the ulus flourished and called [them] 'the well-doers.' Those who served well during the Kozakdom [of Abu'l-Khayr Khan], were: Yakub Hojasy Hoja, Yusuf Hoja, Kyrykmysh Bahram Hoja, Tunkachuk Kulun Hoja; *Kylychbay-bahadur [and] Yirchi Kara Daulut Hoja// a bahadur from the commanders of thousands from the [tribe] Tyumen, Yabagu Bahti Hoja from the Uyghurs, * Anka Hoja from the Diurmens, Yumaduk from the [tribe] Tubay, the Tyumen Dervish-bahadur; Sheikh Muhammed-bahadur [and] Kudagay Usman-bahadur from the Ushuns, Inak Yagly Hoja [and] his younger brother Urus-bahadur. Besides those listed above, a large number of people came [to the khan] when [he] attained power.

From those who came: Beg Meret Sufi from the omak Utarchi¹, Beg Haji Sufi from the omak Chat, Beg Yabagugu [and] Beg Giray Hoja from the omak Mesit, Umar-bahadur, Abakir and Usman-bahadur from the Naimans. Also, from the Kyuyuns: Meret Sufi-oghlan *from the Tangkuts, Shekh Sufi-oghlan *from the Boals, Hasan-oghlan from the Chimtays, *Idel-oghlan from the Sungkar, s and also Balkh-oghlan *from the Shahbahts, Bishkend-oghlan [and] his younger brother Khizr Sheikh-oghlan from the Injanliks—* all of them during the reign [of Abu'l-Khayr Khan] were in favour.

14. The translation of the passage in the 'Hikayat' chronicle about the history of the origin of Kazan'

Source: Saint Petersburg Institute of Oriental Manuscripts of the Russian Academy of Sciences, V 4070, p. 38a.

In a word, when the people of Old Bulgar recovered from the massacre, [caused by] Khazrat Aksak-Timur, the survivors gathered together. At first, the Black Idil flowed near Old Bulgar. When the great battle was over (mokatale)², they saw that the Black Idil had moved away [from the town] three miles to the west. That was why they (the people of Old Bulgar. – I. M.) decided that it was impractical to rebuild [the town]. Having conferred with each other, they built a new town (kala) on the side of the summer sunset [of the sun]³, near the [River] Black Idil (Idil-i siyah⁴), on the bank of the River Gazani. [The new town] was named Gazan. It was also called 'New Bulgar' (Bulgari jadid). In that place they lived well under the banner of Islam for some time. In all the cases, according to the Holy Shari'ah, they made an appeal to [the court of] the Muslim qadis and great sayyids. They (qadis and sayyids. – I. M.), by following the Sunna of the Prophet, also took part in the cessation of strife and suppression of enmity. The town saw the reign of sixteen khans. When Old Bulgar (Bulgari kadim) faced difficult times, its khan was Gabdulla. At that time (literally.: that day. – I. M.) he became a shahid. He left behind two sons: Altun bik and Galim bik. In order to ensure that the family line continued, they were taken away to the forest and hidden [there]. That was why they were saved. When the town was built (literally: fortress. – I. M.) Gazan, by an old rule (kānun) the first khan was Altun bik. The [exactly] same way, the 2nd khan was Galim bik, the 3rd - Muhammad, the 4th - Mamtiak, the 5th - Halil, the 6th - Ibrahim, the 7th - Ilham, the 8 - Mohammed Amin, the 9th - Mamuk, the 10th - Gabdul Latif, the 11th - Sahib Giray, the 12th - Safa Giray, the 13th - Gali, the 14th - Utiaash, the 15 - Yadigar. During [the reign of] Khan Yadigar, in 950 there was a solar eclipse. The sixteenth [khan was] Khan Shagali.

⁴ The Persian translation of the Tatar hydronym 'Kara Idel'—the name of the Volga higher than the Kama's fall into it (Ak Idel).

1. 'Fi Beyani Tarih'

Source: The Department of Manuscripts, Scientific and Archival Fund of the Ibragimov Institute of Language, Literature and Arts, G. Ibragimova of the Academy of Sciences of the Republic of Tatarstan, reserve 18, list 1, file 6, pp. 64–66.

In the narration of history. It was in 693¹, the year of the cow, Mir-Timur² with his troops besieged the town of Bolgar³; up to seven years they remained, encircling [it] in a ring. It was in year 700, in Dhu al-Hijjah month 20, [he] conquered the town of Bolgar. [There] were 124 great noble princes, and all of them died. Each of them had a wife like a pearl, [and] Mir-Timur captured all of them. Among those princes, there were four grand princes, nobles tsareviches: one [was] Ikbal bik, the other was Kol Ali bik, the third was called Khuashi bik, [and] the last one was Kashi bik. The town was turned into ruins; a lot of people died. Khan Abdullah passed away. Two sons of the khan were hidden in the forest⁴. One of them was nine years old, the other one was seven years old; one was named Altun bik, the other one was named Alim bik. [They] were well-brought up. Altun bik was put on the throne at age of 14. On the River Kazanka the fortress was built. They lived there for 104 years; [then] they moved away. The town was built on the estuary of the River Kazanka. They were there for 158 years. When the family line of the khans discontinued, and there was no [khan], they brought Khan Shah-Ali, [who] was a prisoner of the Russians. [He] was the khan for 33 years. After committing treason, violence flared up. Many people [thus] were killed. The Russian khan arrived; [it] was two years earlier (?). It was in 959, the year of the Mouse, it was the second day of Scorpio⁵, the Russian Tsar took the town of Kazan; it was Sunday. In 963, the year of Panther, in the month of Shavval, Khan Shah-Ali died⁶, [and] God knows more! Altun bik is said to have had the tamga, so called × ; it was named the tamga of thief-fighting. Having left⁷ the Golden throne, they arrived at Iske-Kazan⁸. The Golden throne was the name of the town of Bolgar. When Mir-Timur came, he took the town of Bolgar and plundered [it], this Altun bik with the rest of his people kept the yurt⁹ in Kazan. When the yurt was in that¹⁰ Kazan, Altun bik and Alim bik allegedly said (?)¹¹. Alim bik did not like Kazan and went to Tobol-Tura. Having arrived there, he kept [there] the yurt. Old Tobol-Tura was built by him¹². And Altun bik came to the new Kazan. He was followed by Khan Mahmud; [he] is mentioned above. The representatives of the family of Altun bik [and]¹³ Alim bik are said to be also in Crimea. By that reason, if there was a need of the khan in Kazan, the khan was always taken from Crimea. Finished.

16. The letter of the Crimean Khan Mehmed Giray I to the Ottoman Sultan Suleyman I with an explanation of the reasons why it was impossible for the Crimean troops to conduct a campaign against Poland. [1521, March–April]

TSMA, E. 1308/2

Translation

To His Just Caliph Majesty, May Allah the Master All-Helping make him stronger!

Being thrown to the earth of Master's Sublime Porte—may Allah the Lord All-Giving make it stronger—Your humble, slave-like, servant.

Recently, with one of the sultan's servants, equal to Husein Beg, we received the Padishah's order that we must follow. From the glorious contents we found out that Your august person with good intentions and troops, like the sea, is eager to conduct a great holy campaign against the condemned Hungarians—may Allah the Lord All-Helping make them weak! We ask God All-Mercy and All-Generous—may his glory be exalted and his mercy flow on all his creations!—so you [it was destined] come back to the throne of the caliphate in good health, burdened with the spoils of war, with victory and subjugation. Your loyal servant was ordered to conduct a campaign against the King of Poland.

This [your] humble servant, his sons, younger and elder, all your helpers and supporters—we all are sincere and loyal servants of [our] Lord and Padishah of the inhabited quarter world. And [our] country, and [our] people belong to [your] august person, who is under a blissful combination of stars.

Our circumstances and positions will be described [below].

Some time ago, the Polish King sent an ambassador to this [your] humble servant, and to protect the country from raids, he took the responsibility to pay the jizyah annually at fifteen thousand florins¹, and we approved the vow and made peace. This [your] servant, by their² request, in order for them to trust [us], I always leave him as a ho³stage one of the Begs and Mirzas from the tribe (ایل), known as the Shirin, and their man is always with us. And they⁴ annually pay us the Kharaj. Now one of the above-mentioned Mirzas⁵, the son of Devletek Beg, a Mirza named Evliya, is taken as hostage, and until another Beg or Mirza from them⁶ does not replace him, he cannot go back [to Crimea]. If, by violating the agreement, we attack them⁷, this Mirza will be imprisoned forever or killed, and then the tribe (قوم) of the Shirins and their Begs and Mirzas *will revolt against us⁸. Order in the country will be broken, and the country will be ruined.

[Moreover,] our old oppressor and deadly enemy, Khan *of Capital country⁹, Khan Sheikh Ahmed, is being kept by the [Polish] King. If they [Poles] see hostility from our side, they will set him free, and order in the country will be broken.

The khan of the country, known as Kazan¹⁰, was our brother Khan Muhammad-Emin. As after his death the Begs and Mirzas [of Kazan] sent fifteen reliable men to us and asked this [your] servant [to give them a new] khan, I sent [there] my younger brother Sahib Giray accompanied by several people. Before his arrival [in Kazan], the Moscow Grand Prince exiled the qadi of Kazan, appointed [Christian] priests to govern Muslim affairs, and built churches. When he [in this way] made the Muslims by force follow the ceremonies of the infidels and, acting against the Sharia, brought sorrow upon the Muslims, my above-mentioned brother entered the town and became a khan.

¹ Florin (zecchino)—a European golden coin.

² That is, the Poles

³ That is, the Polish king.

⁴ That is, the Poles

⁵ That is, mirzas who were members of the Shirin clan.

⁶ That is, the Shirin clan.

⁷ That is the Poles

⁸ Literally: 'turn the face away from us' (بزدن یوز دندردر لر).

⁹ ولایت تخت⁴ تخت ایلی. Along with تخت مملکتی. It was the Turkic-Tatar name of 'the Great Horde' in Russian sources.

¹⁰ In the text: گازان 'Gazan'

Having found out about it, the Moscow Prince sent large numbers of troops and made [them] guard the crossings in order to complete halt communication [between Crimea and Kazan]. Because of this, my brother is said to be in a quite complicated situation. Having found out about the situation [in Kazan] from a letter, which was secretly delivered by a person [from there], we decided to provide my brother with help and support. To stop the unrest provoked by those idolaters acerbated against Islam, we got on our horses with the intention to fight against them, and we hope for victory and subjugation. *Three months have passed since the troops of our country were ordered to set off [on the campaign]¹. Half the troops [consisting of the warriors] of the Shirin tribe have [already] passed the place called Injike (?) and are waiting for your attendant in the place [known as] Syut². After our army decides to set off [on a campaign] to any country, it is impossible to bring it back as [the warriors] are not our mercenaries. They are nomads, people of the steppe. Even the warriors who are here³, following them [in a campaign], choose a Beg as their commander by themselves.

The land, conquered by us earlier and inhabited by the Nogais, was settled by *a numerous tribe known as the Kazakhs (قزاق)⁴, which had come under the leadership of their khan. Now they are attentively watching us. Even if we gain the opportunity, and we conduct a campaign against the country of the king⁵, they, uniting with our long-time enemy Khan of Hajji Tarkhan, will come and destroy [our] country. This year all our enemies are in the saddle.

This [your] loyal slave also intended to climb onto the saddle and join the campaign, when this [your] order was delivered, which the [entire] world is obliged to follow. The actual situation is as is described [above]. We can only follow the orders coming from Porte, which is the citadel of the Universe.

Let the [extending over you] shelter of might and shadow of bliss last long with the help of God *for one hundred and thirty years⁶!

The weakest of the slaves of God, poor Mehmed Giray.

On the reverse side, on the bottom left is a round seal print with the legend:

(in the upper part) محمد رای خان بن 'Mehmed Giray khan b.'; (in the lower part)

منگی رای خان 'Khan Mengli Giray'; (in the centre) a picture of the Giray tamga.

Translation

He, the Strengthening!

To His Majesty Sultan Suleyman, who achieved the supreme happiness of the embodiment of the sultanate, of glorious origin, marked with righteous, to the carrier of the caliph power, to the glory of the rulers' epoch, to the pillar of the servants of God, to the beauty of all things, to the fortifier of the country, faith, caliphate, and peace, to the Sun of Islam and Muslims, to the one marked by the kindness of the All-Generous God, to my brother—May Allah prolong his age until the end of time!

We offer prayers and praise [to God], send you our many greetings and express the wish to see [you], and here is [our] word: we are in good health and peace, and we live in prosperity. May the *Supreme Creator¹ allow you to be under the protection of God and be marked by magnificence, prosperity, and grandeur determined by the blissful combination of stars.

Second, [our] respectful message [to you] is as follows. The servant of God is able to deal with only what is destined to him by the All-Perfect Creator. How can our good name fall in the shadow of the actions of the road robber and looters, who cannot be ruled? From now on, in our endeavour to honour you, we will hold back [from hostile actions] those who depend on us and live in peace with those who depend on you.

Moreover, since ancient times there have been close friendly relations between our ancestors. Being well aware of that previous custom, surely we can follow it by letting each other know about our health in accordance with the saying 'Letters are like talks' and not exchanging respectful messages containing lists of information and gifts of notices in accordance with the statement 'Support communication between each other through letters'!

In this respect, I have sent [to you] a loyal man, the most reliable from the noble men, our Haji Taki, with his two servants. And what words to say [to us] through him is your choice.

This is how [our] letter is written. The year of 938.

Note:

On the reverse side, there is a grammatically incorrect note with the same handwriting that is used in the main text: 'Copy of the letter of Khan of Hajji Tarkhan.'

18. The letter of Khan Sahib Giray to the Ottoman Sultan Suleyman I describing the situation in the Crimean Khanate ([940,] Jumada I not earlier than 11–not later than 30 = 1533, November, not earlier than 28–December, not later than 17)

TSMA, E. 5434

Translation

To His Majesty and Holder of might, mercy, and magnificence, to his presence to my master, whose desires are fulfilled and intentions are accomplished—may he not stop being healthy and safe until Lord's Day!

By following the rule of reading obligatory prayers—may they not stop being kindly accepted [by the Almighty]—for the one who is an ideal example of an acting mind, the embodiment of prosperity and [the object of] deep respect, may the following be embraced and acquired [by the Padishah's mind].

If [Your Majesty] decides to ask about the affairs of [our] country, as it was reported [by us] before, Islam¹ has put its hand on the gifts sent to this weak servant and infidel, and Sultan Safa Giray was offended and went to the Kazan land. Now, in the middle of the month Jemaziel-Evvel, his messenger arrived² with his letters, who informed him that [Safa Giray] safely arrived at the above-mentioned vilayet³ and, by his will, became the khan [there], and the noble and common people, being sincerely obedient [to him], killed their former khan⁴ and sent the news about the enthronement of the above-mentioned [Safa Giray] to the khanate. Now when after the departure of the above-mentioned khan most of the Oghlans and Begs, who were at Islam's time, came with numerous apologies to this pure in heart servant to demonstrate their obedience and humbleness, the above-mentioned Islam became weak and powerless, and he could not do anything but persuade and beg [his supporters].

The only⁵ all-embracing wish and high dream, being addressed [by us] to the high place of God, is that [their Sultan Majesty] will not stop to witness how the hearts of the people are filled with joy, delight, and glee when they hear about their reign and the abode of their sacred presence and good nature of their sacred residence and noble place being in health and welfare.

May [to you] with the help of God the happiness of two worlds be destined and may [all] dreams come true in two places!

On the reverse side, in the right lower corner, there is an almond-shaped seal print with the legend: (in the upper part) صاحب کرای خان بن 'Sahib Giray khan b.'; (in the centre) ای خان [the Giray tamga] منکلی کر 'Khan Mengli Giray'; (in the lower part) بن حاجی کرای خان 'b. Khan Hacı Giray.'

19. The letter of Prince Islam Giray to the Ottoman Sultan Suleyman I Kanuni with the request to grant him the Crimean throne or to replace Khan Sahib Giray with the previous Crimean Khan Saadet Giray. (Not earlier than 1533—not later than 1537).

TSMA, E. 2365

Translation

To the Threshold, the sanctuary of justice, and to the Court, the place of welfare—may it not stop being great and overcome the hardships of the time—the message of the weakest of the servants of God is as follows.

A lot of time has passed since the death of my father, late Khan Mehmed Giray, may [God] have mercy on him! And my uncle (اغام), his Majesty Khan Saadet Giray, by your sacred order and banner, arrived [in Crimea] and became the khan. All this time this slave has never ceased to worry about the country. Sometimes the instigation of trouble-makers, sometimes duplicity, numerous intrigues and threats of the present Khan Sahib Giray, being the Sultan at that time, repeatedly put the country in turmoil. The country was not safe, nor were the people in peace. Then the Sublime Porte appointed the above-mentioned Khan Sahib-Giray to be the khan and sent him [to Crimea]. Since that time he has not done any good deed and has not said any true word. A real and detailed description of the circumstances was repeatedly reported [by us] to your¹ Sublime Porte. If his Majesty Happy Padishah, Sanctuary of Peace—may he be healthy!—gives me, to his servant, the khanate, with all my efforts I will demonstrate my service, and it will become a model for the entire world. Whether the khanate is given [to me] or not, [in any case,] I² [will] remain loyal and obedient to the Happy Padishah.

For so many years *I seem³ to have been a reason for the civil strife and destruction in our country. My⁴ request to your [High] Threshold and the hope of all the people and the noble men is to appoint my uncle Khan Saadet Giray, who has been Khan before, to the khan [again] and send him [to Crimea]. [For even] if there is an order to reconcile with Khan Sahib Giray again, it will be impossible. Actually, the reasons for this were more than once reported [by us] to your⁵ Sublime Porte. It is impossible, [even] if *two worlds⁶ become one. If the khanate is given to my uncle Saadet Giray, I, your servant, will not stay in this country, will not hope for the khanate in this country, will leave behind [my] hopes and give up [my] intrigues. If there is a sacred order from the Happy Padishah, and he shows his mercy, with his banner *and the khan's help⁷ I will go to Astrakhan, become a khan [there], read the Khutbah on [behalf of] the Padishah, and make the country flourish. If it is ordered to fight against the Kyzylbash tribe or other enemies of the faith and state, may my service of valour be witnessed! [And] it will be.

If I do not go away and demonstrate disobedience and give excuses, may there be no trust for any word of mine, and—Heaven forbid!—may I be considered as an insurgent against Allah and his Rasul. And may [your] punishment befall me then. In case Khan Saadet Giray is sent as a khan, I vow in front of Allah and his Rasul that I will not renounce my word and promise. As [this] country entirely belongs to the Happy Padishah, *the county can be joined by another country⁸. But while here is Khan Sahib Giray, considering his previous intrigues and our enmity with him, while this paltry is alive, he will not go anywhere. We hope that the Happy Padishah will demonstrate his charity to the people of [our] country. Some of our words about the above-mentioned [to the Sublime Porte] was entrusted to be reported,

¹ In the text اول. Literally: 'that one'.

² In the text—'we'.

³ In the text—'we seem'.

⁴ In the text—'our'.

⁵ In the text اول. Literally: 'that one'.

⁶ Worlds—this life and the afterlife.

⁷ In the text و خان مرفتيه. Literally: 'and through intermediary of the khan'. In the publication of Gökbilgin and KCAMPT, this phrase is not translated.

⁸ In the text مملكته دخي قاتله مملكت. The meaning of this phrase is not totally clear.

sent to your¹ High Threshold ambassador, your humble servant, Sheikh-zade Sha'ban. May he be inter-rogated about it.

The right of the decree belongs to the Sublime Porte.

Notes:

On the reverse side, at the top, there is an address with handwriting that is different from the main one: دولتستانه دولته to 'the Threshold of Happiness.'²

Under the address, there is a round seal print with the legend: (in the upper part) اسچم کرای س. طان 'Sultan Islam Giray'; (in the centre) بن 'b.'; (in the lower part) محمد کرای خان 'Khan Mehmed Giray.'³

TSM, K. 888, f. 74a

Translation

The Decree to Khan Devlet Giray.

Now one of the Nogai Beys Mirza Ismail sent his ambassador Kuvandyk to my Happy Threshold. [From him] I asked [to send to him my] august banner, a certain number of harquebusiers and [permit] reading of the khutbah on behalf of [my] highest name on his lands. [The ambassador also informed that] at the moment when the above-mentioned Mirza Ismail [with his people] was attacking Muscovy, one of the servants of Khan Yagmurja, his mirza, a trouble-maker named Karagalpak, attacked [the lands of Mirza Ismail] and, having plundered and captured some of his people, put them on the ground (?)³. To stop [this violence], he⁴ asks for my highest decree.

As the Nogai land is far from [our Porte], and you know all the affairs concerning those lands, [the solution of] this issue⁵ is delegated to you. Act in the way you consider the most appropriate and be guided by what is most useful and preferable.

Note:

Above the document text on the right: 'Rewritten [fair].'

¹ In the text اول. Literally: 'to this one'.

Translation

To Bey, His Highness Khan¹.

[We] received your loyal letter, [where] you tell [us] about [the affairs concerning] Astrakhan and Muscovy, inform us about the merchants, who arrived from Shamakhi to Astrakhan, and about the Nogais. Besides, you sent the letters delivered to you from Astrakhan and Muscovy. Everything you said was entirely embraced by our noble cognition.

As you have got some information and knowledge about all the affairs concerning these lands (Astrakhan, the Nogais, and Muscovy), all the affairs concerning these lands were delegated [by us] to your clear understanding. Let your actions be guided by what is [most] appropriate for the state and faith. Through your fine work may you defend and protect Islam and defeat the wicked infidels and other unrepentant people!

Sending the message to our Threshold of Happiness about Astrakhan and other similar affairs and [waiting for] the reply requires a lot of time, which would lead to the solution to [these] issues being postponed and slowed down. Should there be such issues, do not wait for [our] reply to your message, immediately take all the steps you consider appropriate, and inform us about the measures taken.

[We] have the intention, if the All-Glorious and Supreme Creator helps, [to arrange] an imperial campaign, followed by good prognostications and glory and accompanied by prosperity and happiness, [about what] we send you the highest message. Be ready in accordance with your extreme loyalty and wonderful dedication to our Highest Threshold. In case of necessity, may your enormous courage and valour [in confronting enemies] be manifested both in respect of the Muscovy infidels and in respect of any other party for faith and in the affairs concerning my august state. May the All-Glorious and Supreme God honour [us] with [his] bounties and help [us] in the miracles we ask from the Lord, Head of Messengers, for the Islam warriors to always win and prevail [and] the enemies of the faith to be defeated and conquered.

Take all the necessary measures concerning the affairs in Astrakhan [in order] not to let the enemies win, and [this land] to be protected and defended from contemptible infidels.

Translation

Copy of the message to the Tatar Khan.

Our capital as the eternally happy home of well-being and our Threshold as the centre of might and splendor are a refuge for powerful chagans and glorious khans. Therefore, messages have arrived from Samarkand and Bukhara, in particular from His Highness Khan of the Region of Khwarezm Haji Muhammad Khan, containing sincere expressions of amity. They mention the [need] to conquer Ejderkhan and open the way for pilgrims—those possessing joy, who travel from there to¹ walk around the sacred home of Allah² and visit the illustrious shrine of the Commander of the Humans—may the best of prayers and peace be with them!—and also all the merchants, who obtain profit, so that they can make their journey peacefully and without sorrow. The Kazan and Ejderkhan Region (ولایت قزان و اژدرهان) has been controlled by the Nogais since ancient times. I have detailed information on the reason why [the region] came into the hands of the abominable infidels, on Tatar Mirzas who stayed in the conquered land and beyond it, and on when and why [the land] was lost. As the conquest of the region is an undertaking of utter importance, my imperial thought is now also convinced of the need to conquer it with the help of God Almighty.

Therefore, please consider the issue of conquering the above region in accordance with your long established rectitude and loyalty to our mighty Threshold and provide us with very detailed reports on any measures and preparations undertaken by you for this purpose to make sure its conquest is successful when the [right] time comes, with the help of Allah the Almighty.

He!

¹ That is from Central Asia.

² That is the Kaaba.

Report of a contemptible slave to be thrown to the ashes of the Sublime Threshold and the Highest Court —may its splendour be incessant until Judgment Day!—is as follows. This¹ slave of theirs has now received the highest decree from a chiaus of the Sublime Porte Akhmed the Chiaus, who the [entire] world obeys. In it they² kindly informed them that 'his Emir's Highness Devlet Giray Khan—may his noble qualities be eternal!—has sent a letter to my Threshold of Happiness to report that he heard that Sipahi, appointed for the campaign against Ejderkhan, has arrived in Bender' and that he 'sent a man to inform [me], *that Ejderkhan can be reached in 80 [single-day] marches³.' [The khan has also reported to you,] that the Kumyk Shamkhal sent him a letter to express his loyalty and obedience [to the Porte]. [The highest decree also mentioned] the mercy shown to the contemptible one⁴, whom they⁵ appointed the commander-in-chief. [The decree also stated] that [His Kindness] kindly sent a most august message to the above Shakhmal and encourage His Highness Khan to build a new fortress on the site of Eski Ejderkhan in order to march to Ejderkhan when the favourable moment comes and seize it with the help of Allah Almighty. According to the [same (?)] highest firman, 'if the approaching winter makes it impossible to take possession of the fortress, which is the main purpose [of the campaign], after a new fortress is built instead of Eski Ejderkhan⁶, you shall personally stay in that fortress with as many Janissaries, Kapudans, Azabs, and Nogai Mirzas as His Highness Khan finds suitable and proper.' [The firman also prescribed the following:] 'you shall personally stay in that fortress with as many Janissaries, Kapudans, Azabs, and Nogai Mirzas as His Highness Khan finds suitable and proper; *have the Zagarij bashi with you⁷, if necessary; and, without neglecting the [danger presented] by the enemy, put in effort and be a model of vigilance on guard [of the fortress]. Recruit and enter in the register the required [number] of Beshlu Eris and Hisar Eris to [guard] the fortress. Let them receive a salary from the treasury you have *in the Akcha of Caffa⁸. Let part of the Sipahi appointed [to you] spend the winter in Caffa, and [the other], in Azak [in order to] complete the [initiated] undertaking in spring, Allah the Almighty willing, by joining the [army] of His Highness Khan, *when the occasion offers, according to the situation, for which you should put in effort, ⁹ the firman read.

Before a detachment of [your] Sipahi servants, having started in Bender¹⁰ in good health and well-being, crossed the Khoshgechid¹¹ at the crossing and reached that servant [of yours] in the for-

¹ The Ottoman sultan is referred to here.

⁴ That is Kasim pasha.

⁵ That is the Ottoman sultan.

⁶ Eski Ejderkhan (Rus. 'Old Astrakhan') is the former capital of the Astrakhan Khanate on the right bank of the Volga, 8 km from the new Russian city of Astrakhan located on the left bank (Gökbilgin T. L'expédition ottomane contre Astrakhan en 1569 // CMRS, 1970, vol. 11, No. 1, p. 122, note 8).

⁷ لازم اولورسه يانكده زغرجي باشي اليقويوب. This fragment in T. Gökbilgin's publication and in KCAMPT was not translated.

⁸ In the text: نفوی حسابي اوزره. V. Ostapchuk notes that here salaries in akcha were minted in Kaffa are implied. Three Kaffa akchas equated to one Istanbul akcha (V. Ostapchuk Op. cit., p. 263).

⁹ محل اقتضا ایلدونه وره فرصت نوجهله ال وپورسه اتمام مصلحت ایتیمک بابنده مجد و ساعی اولاسن. This fragment in T. Gökbilgin's publication is not translated. V. Ostapchuk paid attention to that (V. Ostapchuk Op. cit., p. 263).

¹⁰ 'Bender' here should possibly be understood as the city of Bender located in present-day Moldova, since 1538 it was the centre of the sanjak (T. Sezen Osmanlı Yer Adları (Alfabetik Sırayla), Ankara, 2006, p. 74). The first publisher of the document, T. Gökbilgin, adheres to the same view (T. Gökbilgin L'expédition ottomane contre Astrakhan en 1569 // CMRS, 1970, vol. 11, No. 1, p. 122, note 5).

¹¹ In the text: خوش یچید نام یچیده لموب. Literally: 'upon arriving in the ferry named Khoshgechid'. The ferry Khoshgechid was located on the Dnieper (see delivery of the most august message to Devlet Giray khan dated 10 Dhu al-Qi'dah 975 / 7 May 1568 (7 Numaralı Mühimme Defteri (975–976/1567–1569): Özet-transkripsiyon-indeks. [C.] III. Ankara, 1999, p. 387; 7 Numaralı Mühimme Defteri (975–976/1567–1569): Tıpkıbasım. [C.] II, Ankara, 1997, p. 994)). It seems that this refers to the Sipahi sent to take part in the Astrakhan campaign from the Empire's European sanjaks (see: A. Kurat Türkiye ve İdil Boyu (1569 Astarhan Seferi, Ten, İdil Kanalı ve 16–17 Yüzyıl Münasebetleri). Ankara, 1966, p. 117).

tress of Azak. We prepared properly in Azak, then the imperial fleet moved up the Don, and the Muslim troops marched along the bank of the river without taking a rest break of [more than] two days in the same place. With the help of Allah the Blessed and Almighty, we did not face any difficulties during our stops and crossings; nobody suffered from disease. Having successfully reached, on the fifth of the month of Rebiul-evvel¹, the place called Erdilme², we met the subjects of His Highness Khan. On the following [day] they desired to go towards [the river of] Idil bravely and happily to prevent the worthless infidels from inflicting casualties on the Muslim troops and causing damage by setting on fire [the steppe, which is] the pasture ground for our animal stock. We, your servants, are working on moving the ships from Erdilme to the Idil, may Glorious God and the Almighty help [us]!

By the goodness and grace of God Almighty, by intercession of the Commander to all³—may the best of prayers be with them!—and by the highest mercy of His Padishah Highness, the supreme and happy home of peace—may his caliphate be eternal!—none of the [sailors] of the imperial navy nor the [soldiers] of the Muslim army were captured or wounded, and harm was done to none of his servants. On the contrary, during the happy days when [you] were the Padishah, [your] servants—that is, numerous gazis and knights both of the army of His Highness Khan and of the victorious [Ottoman] army, having annihilated numerous abominable infidels and [captured] many, showed valour and heroism on many occasions. [Besides,] messages and messengers arrived from the Kumyk shamkhal, [through which] he expressed his loyalty and obedience [to the Padishah]; he declared that he was ready to serve the ruler and that [he and his people] were a friend of the Padishah's friends and an enemy of his enemies. Therefore, we expect significant help and assistance from them.

As for issues related to the construction of the fortress, your slave staying their over the winter, as well as the warriors [assigned] to him staying there over the winter, and the selection of Beshlu Eris and Hisar Eris, it is not the right time [to address these issues now]. Since [we] are presently busy in the Erdilme, we have not discussed [it with anyone]. [We] have not announced it to your servants commander-in-chief and the rest of the troops lest it should act as a pretext for the spreading of [bad] rumours and impede the accomplishment of our undertakings. *If it is the will of Allah the Most Merciful, as soon as the [right] time comes, this highest decree by your Highness will also be executed so that [your] first highest firman can be properly executed⁴; for the rest we shall rely on the will of the Sublime Porte.

Kasim the contemptible slave

Sheets 93–94. Photocopy

Translation

Let the most august message [below] be written to the king of Moscow.

Your message full of [expressions] of amity has arrived to our highest Court, the home of peace and the Sublime Threshold, the abode of happiness, which is residence to glorious sultans and the seat of highly dignified Khakans, with your ambassador Andrey Kuzminsky. [In it,] you declare that, according to the [requirements specified] on our [previously delivered] most august message on the destruction of the fortress previously built on the request of the Prince of Kabardia and [people] subject to him, the above fortress was destroyed, the people in it transferred to the fortress of Astrakhan, and the administrator of the above fortress strictly ordered to prevent any harm to travelers coming from Samarkand and Bukhara to our land from thieves and robbers, as well as to state your sincere and single-hearted [relationships] of subjection to and friendship with our mighty Porte.

[This] and the rest as mentioned [in your message] was brought to the foot of our happy throne, [after which] it was embraced and fathomed by my world-embracing noble emperor's cognition. Allah the Almighty be thanked, I am sitting on the throne of rule and imperial power over and the caliphate and residing in joy and kindness. In order to vanquish our enemies in different parts and places, [I], trusting in the highest mercy of God—may he be praised and exalted!—turning to the miracles blessed on many occasions of the commander of all and pride of [all] creatures—may the best of prayers and peace be with him!—and soliciting the help of the sacred souls of dignified God pleasers, appointed dignified commanders to lead the troops of Muslims and the army of those who have faith in the single God and sent them in different directions. Each of them, having reached the abominable enemies, by mercy of Allah the Almighty, defeated them and conquered the fortresses in their regions. [Thus, God] bringing us multiple victories and subjugation. In particular, by the grace of Allah the Almighty, according to our highest will, we have been able to use our tremendous imperious power to conquer one of the large isles, Cyprus, which had belonged to Venice up to recent times, which many mighty sultans who put in great effort for [this purpose] failed to do. [And] now it is among our properties protected by God. Undoubtedly, we are destined to obtain many more glorious victories. We do hope that God Almighty predestined it to our best advantage.

¹ V. Ostapchuk's reading: الوائى بالملك پ قاسم پ الفقير 'Hoping for God... Kasim... pauper' (V. Ostapchuk The publication of documents on the Crimean Khanate in the Topkapı Sarayı: The Documentary Legacy of Crimean-Ottoman Relations // *Turcica. Revue d'études turques*. 1987, vol. 19, p. 270).

Our happy Porte is always open, and there are no hindrances to those coming with amity or hostility. Since the fortresses of Ejderkhan and Kazan have been the residence of those professing Islam since ancient times, to ensure that they remain the abiding place of Muslims, [we] have found it reasonable [for you] to hand the fortress of Ejderkhan over to our Threshold of Happiness, and the fortress of Kazan to His Emir's Highness, the support of vicarious power Devlet Giray Khan, who is in [relations] of great loyalty, utter devotion, and amity to our happy Threshold—may his noble qualities be eternal! Therefore, if you wish to be subject to our happy Threshold with all loyalty, you should not believe that any delay or negligence in the business of handing over the above fortresses in the manner described above would be appropriate. Since [all] who follow the path of submission to our happy Porte with sincerity and steadfast adherence enjoy the benefits of our protection and grace and are greatly favoured in our most happy shelter, and those inhabiting their regions and countries are fully protected against the oppressive hand of enemies, rulers of many countries, putting in great effort and showing much industry, being eager to win the amity of our Threshold of Happiness, have given up [the possession of] many fortresses and lands lying in the countries and regions subject to them and do not cross the limits of obedience and submission.

If your most cherish wish is also to be subjected and obedient to our mighty Porte, you are required to take pains without hesitation to hand the above fortresses over to us upon receiving our most august message so that no damage is inflicted upon the building of [our] friendship, and nobody can act contrary to [our] friendly relations. Therefore, [we expect] you to meet the requirements of amity too and not to neglect to inform our Threshold of Happiness about things that must be advised and communicated.

25. Sending the sultan's decree to the sanjakhbey of Azov on studying the issue of the possibility of providing help to the Nogai mirza Urus. (982, not later than Rabi' al-awwal 28 = 1574, not later than 18 July)

BOA, Mühimme Defteri № 26, hüküm 241

Translation

Decree to the bey² of Azak³ Mohammed-Bey.

¹ In the text: ٩٧٩ ج ١٧ في. 17 Jumada al-Thani 979 corresponds to 6 November 1571. It may be a slip of the pen, but it should be read as ٩٧٩ ج ١٧ في 17 Jumada al-awwal 979' (corresponds to 7 October 1571).

² Bey (sanjakhbey) was a governor of a province (sanjak) bearing responsibilities of internal order and security, control over tax collection and army command. In the 16th century, the Azak district was one of 28 European sanjaks of the Ottoman Empire.

³ The fortress of Azak (Azov) on the Don had been under Turkish control since 1471. In 1552/1553 it became the centre of the most northerly Ottoman sanjak. In the latter half of the 16th century, mostly Tatar, Turkish and Greek people inhabited Azov; the steppes around the city served as a nomadic territory for the Crimean Tatars and Nogais. Azov was the most important centre of international trade in the Northern Black Sea region.

The fact has been brought to my hearing that a messenger has arrived to you from one of the Nogai mirzas¹ [named] Rus—may his glory be eternal!—to solicit for help of my Threshold of Happiness². Therefore I order: upon the arrival [of my decree, inform] whether a messenger arrived to you indeed from the one mentioned above³. If he did, discuss the matter⁴ with his Emir's Highness Devlet Giray Khan⁵—may his noble traits be eternal! If they⁶ are not opposed [to providing help], inform my Threshold of Happiness in detail in writing on what kind of help they would find reasonable so that proper measures can be taken in this respect.

Note:

Perpendicular to the text of the document: 'It was given to⁷ Ketkhuda⁸ Nasuh. Rebi I 28, 982.'

**26. Issuance of the sultan's decree to the sanjak-bey of Azov on resolving
a number of issues related to the Sanjak of Azov.
(984, not later than 9 Rejeb = 1576, not later than 2 October)**

BOA, Mühimme Defteri № 28, hüküm 579

Translation

Decree to the Sanjak-bey of Azak.

You sent a letter in which you report [the following]. 'Since [that] region⁹ is at peace, and the Don Ruses¹⁰ continuously supply great amounts of wood, Azak no longer wants for firewood. Furthermore, the Nogai tribe sows grain crops near Azak, and the [crop] yield is good. When the inhabitants of Azak need grain, they sow and harvest a lot of grain crops. The poor [among them] sow [grain] together with the Nogai tribe. They¹¹ not only supply grain to the vilayet of Azov¹² but also have been providing the vilayets of Caffa¹³ and Krym [with grain] for about two years.'

[You also reported that] 'in winter the Nogais¹⁴ camping¹⁵ near Ejderkhan¹⁶ come close to the Nogais¹⁷ by crossing the ice on the Adil River¹⁸ and stay (?) in places three to four days from Azak. Then they

¹ Mirza (abbr. Persian 'emir-zade') is a title of the Tatar and Nogai aristocracy who did not belong to the khan's dynasty. In the Nogai Horde, only descendants of Manghit bey Edigy became mirzas. In the 1570 there were nearly or over 200 people.

² The Threshold of Happiness is a metaphoric name of the palace of the Ottoman sultans.

³ That is of Urus mirza.

⁴ That is of Urus mirza.

⁵ Devlet Giray I was the Crimean khan between 1551–1577.

⁶ That is khan.

⁷ That is of the Azov bey.

⁸ Ketkhuda was an administrative rank in the Ottoman Empire. Both published documents mention 'kapu ketkhudasi'—a representative of an Azov sandjak-bey at the Sublime Porte. The functions of beylerbeys' and sandjak-beys' kapu ketkhudasi included communication between their chiefs and the central government.

⁹ That is Azov with its surroundings.

¹⁰ The Don Ruses mean the Don Cossacks.

¹¹ Apparently, inhabitants of Azov and the Nogais are referred to here.

¹² Vilayet is an administrative district, region.

¹³ Kaffa (present-day Feodosia) is a city on the Southern coast of the Crimea, from 1475 it was included in the Ottoman Empire, in the 16th century it was a centre of a special sanjak.

¹⁴ The Nogais of the Great Nogai Horde are meant here.

¹⁵ Literally: 'located'.

¹⁶ Ejderkhan was the Russian fortress Astrakhan in 1576 which was founded by voivodes in 1558 on the opposite (left) bank of the Volga on the site of the former city (Khajji-Tarkhan, Ashtrakhan, Edjerkhan)—the capital of the Tatar yurt conquered by the army of Ivan IV in 1556.

¹⁷ Apparently this refers to the Nogais, who led a nomadic lifestyle near Azov.

¹⁸ The Adil river—the Volga. In the second half of the 16th century, the Great Nogais developed nomadic camps on the right bank of the Volga, annually moving there with herds from the left bank 'with the first ice' in autumn and returning 'with the last (or: blue) ice' in spring.

cross the Adil River on the ice to get to the opposite bank. This winter the Nogai tribe stayed (?) on the bank (?) of the Ten River¹, destroyed the settlement (?)² of some Ruses, and moved on, leaving no place for the Don Ruses to take shelter near Azak.' [Furthermore, you reported that] 'there are a couple of places where a small fortress³ could be built, in which case the Nogai tribe would be safe⁴, staying on the bank (?) of the Ten River summer and winter. [In such case] the Don Ruses would be unable to approach Azak and would have to leave the Ten River.'

[You also reported that,] 'as the chiaus⁵ sent for [the arrangement of] the repair [of the fortress of Azak] was delayed, and little time remained, the necessary places were repaired [by us] before he arrived. He has arrived and is [currently] occupied with the repair of certain parts [of the fortress]. Lime is being burned and stone is being brought [by us]. However, as it was previously reported [by me], we will not be able to [complete] the repair this year; only the most critical repairs will be done. Allah willing, the construction lumber that we need this year will be prepared closer to the winter, and the repair of the necessary places will be completed in spring'.

[Furthermore,] you reported that 'the Ruses, having crossed the Caspian Sea from Astrakhan, have started to reconstruct⁶ the fortress *on the bank of the Buyuk River, which falls into the Terek River⁷.' [This,] as well as the other things which you reported, were reported [to me] in detail and taken in by my sacred cognition. I order: upon arrival [of the present decree], properly address the issues of ensuring the safety of that [vilayet]⁸ and the repair of the fortress of Azak. Always be in concord and on good terms with the Nogai murzas. Do not let the Ruses settle along the banks of the Ten River and enter the fortress on the pretext of supplying firewood. Be perfectly circumspect and take necessary measures as you reported. Do not let the Ruses settle near Azak and take all necessary measures to ensure the security of the vilayet. Do not delay in reporting any reliable information on the enemy's actions or regarding the affairs of [that] region in future.

Note:

Above the document text: 'Given to the bey's kethüda Nasuh. Rajab 9, 984.'

Translated into Russian and prepared for publication by Vadim Trepavlov

27. Issuance of the sultan's decree to Urus, the ruler (bey) of the Great Nogai Horde, on the preparation for the campaign against Astrakhan. (995, not later than 22 Zilqad = 1587, not later than 14 October)

BOA, Mühimme Defteri № 62, s. 105, hüküm 231

Translation

To the pride of the most glorious and noble ones, to the centre of praiseworthy and valiant deeds, to Rus, Bey, Murza of Murzas of the Country of the Great Nogais—may his glory be multiplied! When the [present] most august high decree arrives, may [the following] be known.

¹ The Ten river—the Don.

² An unknown word: اصطبورلرين. May be this refers to the settlements (stanitsas) of the Don Cossacks? Then the phrase 'ba'zy rusun [istabur]laryn'—settlements of some Ruses (~Cossacks)' should be written in the following way: 'rusun ba'zy [istabur]laryn 'some Cossack settlements'.

³ پلانقه.

⁴ Literally: 'would enjoy peace'.

⁵ Chiaus—a public servant from different court services. Chiauses usually performed the duties of messengers and couriers for the Sultan or the Grand Vizier.

⁶ In the text: تمير. Other meanings of this word: 'repair; construction'.

⁷ The translation is hypothetical. In the text: ترك صوبى بيوك صواوزرنده. Apparently, it is about the attempt—unknown from other sources—of Astrakhan voivodes to restore the fortress near the Sunzha river's flow into the Terek—the Sunzha town. It was founded by Russians in 1567 at the request of Sublime Porte and the Crimeans and was demolished by them in 1571 and rebuilt in 1578.

⁸ That is Azov and its surroundings.

A message from His Excellency and Highest Dignity Abdullah Khan, who is currently the khan of Bukhara—may his noble traits be eternal!—has arrived at our highest Court, the home of peace, and the Sublime Porte, the abode of happiness, which is residence to the glorious sultans and the seat of the noble khakans, with his trusted messenger. [In it,] he provided information on the campaign against Ejderkhan. Since he has asked our Sublime Threshold for help and assistance in that undertaking, in the blessed spring, Allah the Almighty willing, having entrusted himself to the grace of God most Glorious and Most High and relying on the miracles of the Commander of all — may the best of prayers and the most complete of greetings be with him! — the Crimean Khan His Highness Islam Giray Khan — may his noble traits be eternal! — will personally [set forth] to conquer Ejderkhan. The emir of noble emirs Piyale—may his prosperity be eternal!—who has returned from Bukhara, has been appointed commander of the victorious troops to be sent from my Sublime Porte. *He is [currently] occupied with the preparation of the necessary victuals, cannons, guns, and other arms and munitions. Since your participation is necessary and important in every aspect for this campaign¹, a chiaus of my Sublime Porte, Suleyman Chiaus—may his importance be multiplied!—has been sent [to you]. I order: upon his arrival with my highest decree, be ready for the mentioned undertaking along with the Tatar warriors at your command, who are as fast as the wind, in accordance with the great courage and valour and exceptional perspicacity and acumen inherent in your nature and character, so that you, being in good unity and concord [with the Ottoman serdar and the Crimean Khan], when the [suitable] time comes, if Allah wills, upon the arrival of the victorious troops, according to the situation, may show numerous acts of valour for the sake of our Majesty in conquering the above-mentioned fortress and repelling the despicable enemies by making abundant effort and applying great industry [for this purpose]. If Allah wishes, you will be truly distinguished through my royal favour for your good service in this undertaking. Be in concord and unity with the Crimean Khan Islam Giray Khan and the commander of my victorious troops Piyale Pasha—may his prosperity be eternal!—as expected [by us] and demonstrate much wonderful zeal in accomplishing [this] deed. Having described in detail what measures are being taken for the [accomplishment of this] deed and what has to be done, submit [this report] to our Sublime Porte through my above-mentioned chiaus.

Notes:

1. There is a list of 12 Nogai mirzas to whom the same decree was also sent, below the text of the document. 'One copy to Sayyid-Ahmed Mirza, one copy to [Bek(?)] Mirza, one copy to Ur-Muhammad Mirza, one copy to Amanlyk Miza, one copy to [Bik(?)] Mirza, one copy to Küçük Mirza, one copy to [Chin(?)-] Muhammad Mirza, one copy to Khan Mirza, one copy to Jan-Arslan Mirza, one copy to [Bay(?)] Mirza, one copy to [Hafiz(?)] Mirza, one copy to [Ishterek(?)] Mirza.'

2. Above the text of the document, in the centre: 'All [charters] were handed over to Lord Effendi² on Zilqad 22, [9]95.'

¹ Written down on the margins.

² Apparently, in this and the following document 'Lord Effendi' implied 'Reis ül-Küttab'.

³ Here and in the following document, a draft copy of the edict is implied under the project.

⁴ ۛ

28. Report of Sayyid Muhammad Riza on the events in Desht-i Qipchaq after the termination of the power of Khan Tokhtamysh

When the time of the reign of the khans belonging to the Blue Tent — that is, those numbering among Batu's descendants, the great representatives of the Jochid dynasty — [named] Toktimur and his brother Toktamys, who were the link connecting the dynasty of the Crimean khans who are still ruling and that of Jochi, was over, one of the emirs of the Ulus of Jochi, a usurper¹ of the Mangud tribe named Idiku, [who was] an initiator of riots and revolts, [subsequently] enthroned [such] Chinggisid protégés [as] Qutlugh Temür, Shadibek, and another Temür. Then [this] declining throne was occupied, either due to good luck or through the efforts of the sons² of Idiku, by sultans named Jalal ad-Din, Huda Berdi, Küçük Muhammad, Barak, Ulugh Muhammad, Chekre, Jabbar Berdi, and Dervish. During that time, when most of the Tatar tribes had moved from Desht-i Kipchak to the Crimea, khans named Khyzr, Mahmud Hoja, Abul-Khayr, Sheikh Haidar, Bayan Hoja, Yagdar and Emenek from Shiban's dynasty ruled the above-mentioned Desht³ and the Bulgar land. Descendants of Rus Khan then took over the land. Sheibek, a descendant of Abu'l-Khayr in Transoxiana; Ilbars, a descendant of Yagdar in Khwarezm; and descendants of Hajji Muhammad in the region of Siberia became independent [rulers]. When in the region of Crimea another grandson of Toktamys Khan, who had fought against Timurlenk Gurgan, named *Ahmed Küçük Muhammad Khan⁴, was granted [the right to] rule and command in the region of the Crimea, and the Engraver of Fate and Predestination had [already] engraved a ruling seal for Hacı Giray, three Shibanid sultans of the Jochid dynasty became the rulers of Transoxania, Khwarezm, and Siberia, one Rus[-khan]id sultan of the Jochid dynasty ruled Bulgar, and three sultans of the Jochid dynasty originating from Toktamys ruled Desht-i Itil, Kazan, and the Crimea⁵.

29. Note of Hurremi Çelebi Akai Efendi on the events in Desht-i Kipchak after the termination of the power of Khan Tokhtamysh

When Tokhtamysh ceased to rule, Idiku, one of the princes of the Ulus of Jochi and one of the most powerful members of the Mangut tribe, due to the great numbers of his people and his tribe, rose above the khans. One after another he enthroned Temür Qutlugh, Shadibek, and Temür. Then subsequent khans were Jalal ad-Din, Kerim Birdi, Köpek, Chegre, Jabbar Birdi, Sayyid Ahmed, Dervish, Hyuda Birdi, Küçük Muhammad, Barak, and Ulugh Muhammad, some of whom gained the throne with the help of Idiku's children, and some on their own. These khans made most of the Tatar tribes move out of Desht-i Kipchak to the Crimea; khans Mahmud Hoja, Khizr, Abdul-Khayr, Sheikh Gaider, Bayan Hoja, Yadigar, and Eminek of the dynasty of Sheiban remained to rule Desht and Bulgar. The descendants of Rus Khan then took over the above-mentioned countries; the son of Abul-Khayr, Shaibek, took the throne of Transoxania; the son of Yadigar, Ilbars, that of Khwarezm; and the sons of Hoja Muhammad that of Siberia. In the Crimea, during the reign of the descendants of Tokhtamysh *Sayyid Ahmed Küçük and Mahmud Khan⁶, Hacı Giray was established on the throne. At that time, three khans of Sheiban's dynasty were ruling Transoxania, Khwarezm, and Siberia; one of Rus Khan's kin was ruling

¹ Literally: 'one of the usurpers'.

² Or 'descendants' (دلاوا).

³ This refers to Desht-i Kipchak.

⁴ Apparently, a contamination of names of two different khans reigning in different periods occurred: Seyyid-Ahmed and Küçük Muhammad (see also: V. Trepavlov *The Great Horde—Takht Eli. Essay on History*. Tula, 2010, p. 50).

⁵ Sayyid Muhammad Riza. *Seven Planets*. Kazan, 1832, pp. 67–68.

⁶ It is obvious that we should agree with V. Trepavlov's remark that there is a mistake in the chronicle's translation and this phrase should look like: 'Seyyid-Ahmed and Kuchuk Muhammed khan' (V. Trepavlov *The Great Horde—Takht Eli. Essay on History*. Tula, 2010, p. 50). At the same time, Tokhtamysh's only descendant was Seyyid-Ahmed.

Bulgar; two of Tokhtamysh's kin were ruling the Volga Steppe and Kazan, respectively; so there were seven (?) khans of the Jochid origin at the same time¹.

**30. Translation of the yarliq list issued by Khan Ibrahim to a group
of feudal lords carried out by abyz Artyk Imanayev.
(Not earlier than June 1682—not later than 19 January 1685²).**

Russian State Archive of Ancient Acts, Collection 1173, List 1, File 196, Sheet 2. Original.

Translation of the yarliq

(1) We, Ibrahim Khan.

(2) My granted word [is as follows]. In the name of God's blessing [and] in the name of the mercy of Muhammad, God's messenger, *these orphaned youths³

(3–4) [and] widow have been granted the status of tarkhans. The names of those⁴ granted⁵ this are: Gulbustan Khatun at the head, her son[s Muhammad-‘Ali and] Muhammad-‘Aziz, [descended] from the kin of the khans, from the kin of the shahs, [from the kin of] Janeke Sultan—on those listed this has been granted [by us]⁶.

(5–6) Along with them we have granted [the status of tarkhan] on her servant (?) named Khushkildi. [In addition to the status of tarkhan], having granted the two tamgas of the Forest of Irektin that were [previously] granted to the father of Muhammad-‘Ali [and] Muhammad-‘Aziz, we have conferred the grant upon [them] among [other] noblemen.

(7) Nobody shall enter the forest without informing those mentioned above; if they⁷ till, grain tax shall not be imposed

(8) on them. The above-mentioned shall not be forced to receive guests for lodging; tarkhans and messengers shall not take their horse carts;

(9) violence shall not be done to them on anyone's part. Having thus said, [I have bestowed the grant] on those on whom Hajdar-‘Ali Sultan has bestowed the grant⁸, Gulbustan (10) Khatun and her sons⁹ Muhammad-‘Ali [and Muhammad-]‘Aziz, [descended] from the kin of the khans, from the kin of the shahs, [from the kin of] Janeke Sultan, and her servant named Khushkildi.

(11) This yarliq has been issued by the above-mentioned with a nishan. Written in eight hundred¹⁰ ... [year], in the beginning of the month of Ramadan.

(12) Written by Hajji Kurban Hafiz.

Translation of the nishan¹¹

* There is no God but Allah and Muhammad is the Prophet of Allah¹².

¹ A. Negri. Extracts from the Turkish Manuscript of the Community Containing the History of Crimean Khans // Notes of the Odessa Society of the History and Antiquities. - Odessa: at the city printing house, 1844, vol. 1, pp. 380–381.

² The lower date on the document is considered to be the enthronement of Ivan and Pyotr Alekseevich and the upper date is the day when the Ufa voivode considered Kutlugh Muhammad Kutlugushev's petition.

³ In the text: these orphaned youth.

⁴ In the text: name.

⁵ Literally: released free [from taxes and duties].

⁶ Literally: released free [from taxes and duties].

⁷ In the text: will do.

⁸ Literally: released free [from taxes and duties].

⁹ In the text: son.

¹⁰ After the words 'eight hundred' are absent the words indicating decades.

¹¹ Nişan (also tamga) is a large square seal which in Chinggisid acts had an approving function.

¹² The formula is repeated twice.

Greatest ruler, glory [of peace and faith], Ibra[him] Khan—may Allah perpetuate his dominion and reinforce his power!

31. Confirmatory tarkhan yarliq issued by Kazan Khan Sahib-Giray to a group of persons (929, Safar 13 = 1 January 1523)

National Museum of the Republic of Tatarstan, Collection of Rarities, No. 5757. Original.

Translation

- [1] ... [word of] the conqueror Sahib Giray [Khan]
 [2] to viceregents (walis), governors (hakims), great sul[tans, Muslim qadis],
 [3] dignified mullahs, elders, town administrators, [local] representatives, messengers, relay station keepers,
 [4] ship inspectors, road guards, toll collectors, tamga collectors, all dwellers and inhabitants
 [5] *of the Kazan vilayets¹ and domains protected by God—may they be protected against trouble and misery!—is this order,
 [6] when it arrives; [our] word is as follows: this Sheikh Ahmed, son of Muhammad; the son of Sheikh Ahmed, Abdal; the younger brother of Sayyid Ahmed², Mahmut; his son, Musa;
 [7] the son of Sayyid, Jakub; his younger brother, Bulans³; and [also] his younger brother, Nur Sayyid—the seven of them came to us and made obeisance
 [8] [as they are] people who were granted the title⁴ of tarkhans by our elder brothers and khans. We, having also bestowed the grant,
 [9] to please God Almighty and for the protection of Muhammad, the Messenger of Allah, bestowed upon the above-mentioned persons
 [10] the title of tarkhan. From now on, on roads and pathways,
 [11] while travelling or in their place of residence, during their stay [anywhere] or when they are leaving, [12] nobody shall by any means exercise any interference or oppression to those mentioned above [13] or to their servants and slaves, their baggage or livestock;
 no yasak, qalan, or *poll tax⁵
 shall be imposed on them;
 [14] no requests, duties, and cost fees shall be demanded; nobody shall attempt to capture their livestock and horse carts, water and land [along the river] Ik⁶ (?)
 [15], force them to lodge messengers and couriers,
 impose [16] a rural tax, land loans(?), or a hearth tax on them, or demand any victuals and fodder [when lodged];
 [17] nobody shall inflict any harm or damage on them. Living in peace,
 [18] in the evening and in the morning, at sunrise and at sunset [19] let them say prayers and blessings to us and our clans. No violence or insult shall be done to them. After
 [20] what has been said above, those who do not adhere to the yarliq and do any violence or insults [to them] [21] will not enjoy the consequences. A yarliq bearing a red seal has been issued to this effect
 [22] in the year nine hundred twenty-one, on the thirteenth day of the blessed month of Safar [23] [it] was.

¹ It is likely either a mistake or a slip and instead of ولايات غزان 'Kazan vilayets' there should be ولايت غزان of 'the Kazan vilayet' (here: 'Kazan country', 'Kazan state').

² Should be: Sheikh-Akhmed (?).

³ Should be: Bulyak (?).

⁴ In the text: produced.

⁵ Salig mösämma. Literally: 'named "salig"'.
⁶ The word 'Ik' (?) is written down with a different ink and by a different hand.

Nishan*Outer square:*

بسم الله الرحمن الرحيم (In the name of Allah, the Compassionate, the Merciful)

لا اله الا الله محمد رسول الله (There is no God but Allah and Muhammad is the Prophet of Allah.)
(three times)*Inner square:*

السلطان الاعظم عز الدنيا و الدين ابو المظفر صاحب راي بهادر خان خلد الله مملكته و ايد سلطنته (Greatest ruler, glory of peace and faith, victorious Sahib Giray Bahadur Khan—may Allah perpetuate his dominion and reinforce his power!)

**32. Charter ('letter') of the king of Poland and Grand Prince
of Lithuania Sigismund I to Kazan Khan Muhammad-Amin with a proposal
of a military alliance against Moscow (18 November 1514)**

Russian State Archive of Ancient Acts, Collection 389, List 1, File 7, Sheets 577 (578)–579 (580).

228. – 1514. Letter of King Sigismund to the Tsar of Kazan Mahmet-Amin with a report on the actions of the tsar's troops against the Grand Prince of Moscow, who attacked the land of the king, and a request to unite against the Grand Prince of Moscow. 291–292. (S. 577 (578)) From Sigismund, by God's grace King of Poland, Grand Duke of Lithuania and Russia, Duke of Prussia, Samogitia, and others, to our brother Mahmet-Amin, Tsar of Kazan. We shall tell you, our brother, that, as soon as we ascended the throne in the land inherited from our father to rule the Kingdom of Poland and the Grand Duchy of Lithuania, the Grand Prince of Moscow Vasily Ivanovich, without any reason, sent all of his people to our fatherland, the Grand Duchy of Lithuania, to do us harm. With God's help, we repelled his people from our land. Then he made eternal peace with us with firm oaths, and we confirmed it in writing // (S. 578 (579)) on both sides. And he, having forgotten God, his honour and his soul, broke his firm oath and written word and, for no reason, attacked our fatherland the Grand Duchy of Lithuania with all of his people and occupied the castles of our fatherland unjustly through his deceit. We sent our men against his men. Our men killed many of his over several months and caught many famous persons. He would not admit his fault. Relying on God's help, we had a great battle of infantry against him and, with God's help, defeated his troops and, by God's IX mercy, took our castles in our hand, and many commanders and princes and noblemen of his fell into our hands. The ambassador we sent to you before fell there. We are sincerely sorry to have no response from you. We remind you, our brother, not to make peace with our enemy of Moscow and to be our // (S. 579 (580)) friend and join us against the enemy. We will tell you, our brother, that we, relying on God's help, do not cease wanting to do our business with him and take revenge on him for offenses done to us as long as God helps us. You, our brother, should sense this from your side. If he marches against us, you should attack his land and inflict great damage upon him. And we will have the same kind of vigilance in this regard. And if he wanted to march against you, our brother, we would also send all of our troops to his land and inflict damage on him. By this letter we want to express our wish to enjoy brotherhood and amity with you. We want to unite with you against that enemy of ours. Written in Wilno, 18 November, indict 3¹.

Prepared for publication by Vadim Trepavlov

¹ This indiction corresponds to the period from 1 September 1514 to 31 August 1515.

**33. Charter ('letter') of the King of Poland and Grand Prince of Lithuania
Sigismund I to Kazan Khan Muhammad-Amin with a description of a victory over the
army of Vasily III and a proposal of a military alliance against Moscow (18 June 1516)**

Russian State Archive of Ancient Acts, Collection 389, List 1, File 7, Sheet 661 (662)–667 (668).

242. – 1516. Letter of King Sigismund to the Tsar of Kazan Mahmet-Amin with a request that he be in brotherhood and amity with the king, and with a report of the victory of the king's army over the Grand Prince of Moscow, and with a request that the tsar attack the land of the latter, with a promise to aid the tsar with troops in the case the Grand Prince of Moscow attacks his land, asking him to make an oath before the dragoman and promising to make an oath before the person whom the tsar sends. (S. 661 (662)) The charter was sent to the Tsar of Kazan by dragoman Makarets on the 18th day of the month of July, indict 4¹. From Zygmunt, by God's grace King of Poland, Grand Duke of Lithuania and Russia, Duke of Prussia, Samogitia, and others, to our brother Mahmet-Amin, Tsar of Kazan, greetings. Our brother, several years ago you sent us a man of yours, Akimberdey, to ask about our health and to tell us about yours // (S. 662 (663)), and reminding us that during the reign of our ancestor Grand Duke Vytautas your ancestors were guests in Lithuania and enjoyed brotherhood and amity in spite of the great distance. When you, our brother, began to rule as tsar, you had relations of brotherhood and an oath with Grand Prince Ivan of Moscow. And when he began to act against you, you did not stand for it and stood up for yourself. Then his son, the current Grand Prince Vasily, sent his large army against you by water and by land. And, with God's help, you defeated the two armies². We were happy to hear it and sent to you our nobleman Soroka with your servant to ask about your health and to come to an agreement with you. That XII nobleman of ours died in Kazan and never came back to us. Later we sent other ambassadors to you, our brother, but they could not reach you safely. Such infrequent // (S. 663 (664)) communication impeded our brotherhood and amity. Now that we have remembered the amity of our grandfather Grand Duke Vytautas with your ancestor, we have sent our interpreter Makarets to you with a light mention and a heavy bow³ to ask about your health and tell you about ours, and to remind you, our brother, to remember your and our ancestors and be our brother and friend so that both are friends to our friend and both are enemies to our enemy. And as for the enemy of yours and ours in Moscow, you, our brother, know that the Grand Duke of Moscow Ivan, having married his daughter to our brother Alexander⁴, having bound himself by blood and given him oaths, occupied many towns and volosts in our fatherland and the land around them. Then his son, Prince Vasily, who made an oath to us and betrayed us, initiated a battle against us. Relying on the help of God the Creator and our justice, we marched against him. And thus // (S. 664 (665)) two years ago in autumn, God helped us to defeat his army of eighty thousand, capturing dozens of his voivodes and numerous princes, boyars, and men, whom we now have in our hands as captives. Our army goes to his land and fight withoutrest. God granted grace and victory over him; he did not tell his army to march against ours, but, hearing our people, to flee.

God grant that we may enjoy this good fortune from God over them for a long time. We shall also tell you, our brother, that during that time we entered into brotherhood and eternal amity with out brother tsar Mahmet Kgiray, since, having united with his father Mendli Kgiray, relying on God's help,

¹ This indiction corresponds to the period from 1 September 1515 to 31 August 1516.

² The fragment of the charter from the words 'under Grand Duke Vytautas' to 'you defeated the two armies' is a retelling of Mohammed Amin's unpreserved message to the king.

³ In order to win the addressee's favour, Sigismund (on his behalf, the Chancellery of the Grand Duchy of Lithuania) uses a pastiche—a phrase usual for the Tatar diplomatic practice and in particular present in the first letter of Mohammad Amin (Lietuvos Metrika. Knyga 8 (1499–1514) // Parengė A. R. Baliulis D. Firkovičius Antanavičius. Vilnius, 1994, p. 57). The phrase 'with a light greeting, but a heavy bow' is a repetition of the Turkish formula 'ağır selâm yingil bōlek' (see, for example: A. Özyetgin M. Altın Ordu, Kırım ve Kazan Sahasına ait Yarlık ve Bitiklerin Dil ve Üslup İncelemesi. – Ankara, 1996, pp. 110, 111).

⁴ In 1495, the Grand Duke of Lithuania, Alexander Kazimirovich married Ivan Third's daughter Elena. In 1501 he simultaneously became the Polish king.

our troops XIV marched to the enemy's land this summer and fought until winter, wishing to take revenge on him for the offences done to our brother King Alexander and ourselves and make war against his land // (S. 665 (666)) as long as merciful God helps us. We remind you and request, our brother, that you march your troops to the land of our enemy and yours from another direction toward Nizhnyi Novgorod and fight against his land, and accomplish our undertaking in unity, for a better opportunity against that enemy may not come for a long time. If God helps us to defeat that enemy of ours, and if God lets you conquer Nizhnyi Novgorod and other castles and volosts and return your fatherland to your hands, you will receive your tribute from him as of old. And would that God would let us win back the castles of our fatherland which he occupied unfairly. Then that enemy of ours would not be so powerful and brave against us and would not raise his hand to us, for he is distinguished through nothing but occupying your and our castles. And if he then wanted to attack you, our brother, and march his army against you, we would send our army to his land from our side to help you, our brother, as soon as we heard about it. // (S. 666 (667)) And you, our brother, would also send a large army of yours to his land from your side to help us.

If he wanted to attack us and send his army to our land, with this agreement with you, our brother, with God's help, we can accomplish every undertaking against our enemy. If you, our brother, have peace or truce with him at that time of need, you would not want to march your troops to his land. But you know that his ancestors, and his father, and he himself have never done a favour, XV but, seeing an opportunity, have betrayed their oath unjustly and without XVI cause and have initiated battles with each neighbour and spilled blood. God most merciful will not let them go unpunished for that. According to your ancestors and you, our brother, their unjust oaths have caused great trouble. And you, our brother, remembering their enmity and seeing the current situation, should join us this summer and autumn and march your army to his land from another direction, thus showing your brotherhood and amity toward us. And if // (S. 667 (668)) you, our brother, have need of the same, we would also help you immediately and send our troops to his land from our side. If you, our brother, want to stand with us in brotherhood and amity and unite with us against our enemy, you, our brother, should make an oath to us in the presence of our interpreter and communicate regarding any matters through him, and then send him back to us without delay, accompanied by a man of yours. We are also willing to show our loyalty to you in the presence of your man, for whatever oaths we have made before him we adhere to. Therefore, know this and believe in it with all fairness.

Prepared for publication by Vadim Trepavlov

34. Tsar of Safakgiria¹. Word. By God's grace to the King of Poland, Grand Duke of Lithuania and Russia, Duke of Prussia, Samogitia², Mazovia³, and others, my father the Great King Sigismund⁴

By this letter⁵ of mine I inform Your Grace that you showed kindness⁶ by calling me your son back⁷ when I was in the Perekop Horde⁸ as a Tsarevich in my father's land⁹; Your Grace said¹⁰ that you shall have me for your son¹¹, and I shall have Your Grace for my father. And in the same way, being a son of Your Grace, I shall stay true to my oath—I am a friend to every friend of Your Grace and an enemy to every enemy of Your Grace and of our Muscovite enemy¹². I conquered the lands of Muscovy and devastated them myself: I was there with my entire army and captured some¹³ castles, and burnt down others, and was beyond the Oka River deep in enemy territory with my entire army.

I also report to Your Grace, my father the great king, that when I came to be the tsar of Kazimir¹⁴, all the murzas and vlans, and the entire community of the land of Kazan welcomed me, the son of Your Grace, with humble gratitude¹⁵; then I, the son of Your Grace, reached an agreement¹⁶ with all the princes, murzas, and vlans of the land of Kazan and killed the tsar sent by the tsar of Moscow to rule in Kazan¹⁷. I ordered that the ambassadors of Moscow be seized and put into prison, and that others be executed¹⁸. And I took his land. I rule the land I took from him, and I have tribute from that land, the land of Nakrat¹⁹, from which tribute used to be paid to our ancestors, the tsars of Kazan. When Kazan was subject to the Muscovite, the Muscovite took power²⁰ over the land and collected the tribute which

used to be paid to our ancestors. Elders of the land of Nokrat were sent to us, wishing to serve me according to the ancient custom and give the tribute that used to be given to our ancestors, the tsars of Kazan. I, the son of Your Grace, want to stay true to my oath, being a friend to each friend of Your Grace, and showing my hostility to the enemy of Your Grace with my // [S. 2] sword.

I²¹ sent a messenger of mine named Gamzu to Your Grace to inquire about the health of Your Grace, my father²², and to tell Your Grace, my father, that I had sent an army of forty thousand men to the land of Your Grace's enemy, the Muscovite, by ship from Kazan, and appointed Kozuchak Ulan the commander of those men. And that Kuzuchak Ulan went beyond the River Oka with all those men and burnt the city and the castle named Borsumu²³. They inflicted unutterably great damage²⁴ on the land of the enemy of Your Grace and returned intact with all their belongings. I, the son of Your Grace, being eager to be of better²⁵ and greater service to Your Grace, my father²⁶, sent Yamurch Atalyk²⁷ to the land of Your Grace's enemy the Muscovite and gave him an army of seventy thousand men. Having entered²⁸ the enemy's land with all those men, he fought and destroyed and brought those men almost all the way²⁹ beyond Kirmyanchik, near Borkauch³⁰, and having devastated³¹ and burnt the enemy's land, they returned to us their king intact. Later, after they arrived, I sent ten thousand of my servants to the enemy's land. Those servants of ours entered the enemy's land, fought and devastated, and burnt a city named Balakhanyu³², and returned to us intact with all their belongings. Your Grace, my father, kindly understood it from my letter which I wrote to Your Grace with the help of my servant Gamza.

And Your Grace, my father, sent me, your son, your servant, the Tatar dragoman³³ Afendey with your letters, that I would be a friend to each friend of Your Grace and devastate the land of Your Grace's enemy the Muscovite. When Your Grace's messenger Afendey, the dragoman, came with the letters from Your Grace, I understood this from the letters from Your Grace, my father. I sent ten thousand men to fight in the land of Your Grace's enemy the Muscovite. Those men, having entered // [S.3] the enemy's land, devastated his land, and conquered and burnt a castle of the prince of Kasym named Namrlyn³⁴, and returned to us intact. I, the son of Your Grace, wishing to be of better service to Your Grace, my father, sent Akhmagn Ulan with forty thousand men to the land of Your Grace's enemy. He entered the land of Moscow, and fought and devastated it, and returned to me intact.

Then I, the son of Your Grace, wishing to be of better service to Your Grace, my father, and wishing to devastate more of the enemy's land, marched³⁵ myself with my entire army to the enemy's land and took along the entire regiment of that messenger of Your Grace, Afendey the dragoman, so that he could see our service and tell Your Grace, my father, about it. And, having entered³⁶ the enemy's land with all of those men of mine, I devastated his land, and conquered it, and burnt a castle of his named Borom³⁷. The army that went on the incursion went all the way up to Volodimer and devastated the enemy's land. And that ten thousand men marched as far as Kostroma and, having devastated his land, returned to us intact.

And whatever princes, murzas, and vlans I have under my command have seen that I, the son of Your Grace, am a good friend to Your Grace. They made an oath to me, their ruler, at once, to the effect that they shall be friends to each friend of Your Grace and enemies to each enemy of Your Grace. Your Grace could kindly ask your dragoman Afendey what kind of service we did for Your Grace in the land of Your Grace's enemy the Muscovite, for he is aware of our service.

I shall also tell³⁸ Your Grace, my father, that Mamai, the murza's son,³⁹ came to us with ten thousand men, wanting to do me a favour against Your Grace's enemy the Muscovite, and Avragman Tsar of Ocharkhan⁴⁰ sent a thousand men to help me; all those men are at our command now. I shall tell Your [Grace], my father, that the Grand Prince of Moscow sent us // [S.4] his ambassadors and messages, asking me and wanting me not to fight against him and to make peace with him. However, I did not want that and I did not accept his offer of peace.

And now this land where I sent my men and where I myself marched is empty, from Volodimer to Borom, Yunkcheyuch near Kostroma⁴¹ of Bele Khan to Kirmenchik, and from there up to the Frigid Sea⁴² I devastated the town of Kasym Oltan⁴³ and many other lands and cities of Your Grace's enemy the Muscovite. Your Grace's dragoman is a witness to this. God most merciful be praised, Your Grace's enemy and mine the Muscovite suffered considerable damage⁴⁴ from us. We have risen greatly in the

reign of Your Grace my father⁴⁵. Now Your Grace could kindly think how good it would be with the wealth of Your Grace, my father, for now I, son of Your Grace, have the entire Nogai and Oshtrafan⁴⁶ army at my command, which Your Grace wants to know. Besides, our Horde of Kazan has made an oath to me to the effect that they shall serve me with faith and justice.

I have sent my treasurer Bogush to Your Grace with that oath letter⁴⁷. Your Grace can kindly believe what he says to Your Grace, my father, for it is our speech. Your⁴⁸ Grace should kindly send me an ambassador of yours, a good man, and without delay⁴⁹, that the friend of Your Grace and of ours, hearing the communication between us, would order that it be executed, and that the enemy's heart would ache.

This letter was written in Kazan. From Sapkirey Tsar⁵⁰.

35. From Tsar Sapkirey. Word. By God's grace to the King of Poland, the Grand Duke of Lithuania, Russia, Prussia, etc., my⁵¹ father, the Great King Sigismund

I will tell Your Grace, my father, that wishing for Your Grace's service // [p.5] to⁵² the lands of Your Grace's enemy the Muscovite, I raised up Alei Murza, the son of the Nogai Murza Mamai, and there were ten thousand men with him. In addition, the tsar of Arshtafan⁵³ sent me a thousand men with princes, mirzas, and uhlans in order to serve Your Grace. For this, I humbly ask Your Grace, my father, to do me a favour and send me, your son, one thousand gold pieces⁵⁴, that I may reward the princes, mirzas, and uhlans from Your Grace, and they would come to Your Grace's aid more willingly in the future. May Your Grace, my father, pay attention to the request of Your son. And if Your Grace would be so kind as to send me those thousand gold pieces, give them, Your Grace, to my messenger Bogush.

Written in Kazan⁵⁵.

36. From Tsar Sapkirey⁵⁶. Word. By God's grace to the King of Poland, etc., to my father, the Great Polish King Sigismund

Your Grace, I ask a favour: earlier, two of my servants were captured in your kingdom. One is named Kugurch, and he is held by Pan Yury, the head of Grodno; the other is named Husein, and he is held by Your Grace, my father. I beg Your Grace, my father, to do me a great favour and send these two servants to me, you son, with my treasurer Bogush, whom I have sent to Your Grace⁵⁷.

Notes

¹ Tsar Safakgiray, Safa Giray (1510–1549), Crimean Tsarevich, Khan of Kazan (not earlier than 10 May 1524 – not later than May 1532, September 1535 – January 1546, March 1546 – March 1549). A son of Sultan Mahmud Giray (not of Fatih Giray, as M. Khudiakov and some other contemporary authors have erroneously thought) and a grandson of Mengli Giray. He not only became the successor to the throne of Kazan after his uncle Sahib Giray, his father's brother; he also turned out to be a loyal ally and confederate during the reign of Sahib Giray in the Crimea. ² Zhomoitskii – of Žemaitija or Žmudž. This name in the title of Lithuanian rulers comes from the name of the western part of Lithuania located between the lower Neman and the Venta, called Žemaitija or Žmudž. It lost its independence during the reign of Mindaugas, but regained it at his death. It faced claims from the German knights and the Lithuanians. It was incorporated into Lithuania during the reign of Gediminas, who gave it to his son Kęstutis. However, Jagiello and Vytautas had to cede Žemaitija to the Teutonic Order in 1382 and in 1387, respectively. In accordance with the terms of the agreement (the Peace of Thorn, 1411) reached after the Battle of Grunwald in 1410, it was given back to Lithuania. In Latin sources it is called Samogitia (see: Collection of the

Russian Historical Society. – V. 35. Records of diplomatic relations between Ancient Russia and foreign states. – 4.1. Records of the diplomatic relations between the Muscovite state and the Polish-Lithuanian State (1487–1533) – Saint Petersburg, 1882. – pp. 500, 563, 624, 637, 674, 700; Liubavsky M. A Historical Sketch... – pp. 14, 15, 43, 165–167, 171, etc.; Pashuto V., Florya B., Khoroshkevich A. The Population of Ancient Russia and the Historic Destiny of Eastern Slavdom. – Moscow, 1982. – pp. 54–150).

³ Mazovetskii - this definition in the title of King Sigismund I of Poland was created in 1526 when the historic region along the middle Vistula and the lower Narew and Bug, called the Mazovian lands, Mazovia, or Mazowsze, was incorporated into Poland. Since 1168 (since 1207 by other data) Mazovia had been an independent duchy, and, after being incorporated into the Grand Duchy of Lithuania, it retained a special position and peculiarities in its governance (see: Collection of the Russian Historical Society. – V. 35. – pp. 714, 732, 744, 774; Lyubavsky M. The regional division and local government of the Lithuanian and Russian State by the time of the issuance of the First Statute of Lithuania. – Moscow, 1892. – pp. 201–209).

⁴ Zhikgimont or Sigismund I the Old Kazimirovich (1467–1548), King of Poland (6 December 1506–1545) and Grand Duke of Lithuania (20 October 1506–1544), of the Jagiello dynasty. He sought in vain to strengthen central authority through reforms in the financial and military fields, and attempted unsuccessfully to return the lands occupied by the magnates to the Crown. While still alive, in October 1544, by the consent of the Brest Sejm, he let his son Sigismund II August start ruling the Grand Duchy of Lithuania. In his foreign policy, he tended toward alliance with the Crimean and Kazan Khanates. He fought against Russia (1507–1508, 1512–1514, 1517–1518) and the Teutonic Order (1519–1521) (see: Liubavsky M. A Historical Sketch... pp. 197, 217–224, 239; Picheta V. Belarus and Lithuania in the 15th–16th centuries. – Moscow, 1961; Polosin I. The Socio-Political History of Russia in the 16th–Early 17th centuries. – Moscow: 1963. – pp. 83–87; The History the Lithuanian SSR from ancient times to the present day. – Vilnius, 1978; Russia, Poland, and the Black Sea Region in the 15th–18th centuries. – Moscow, 1979. – pp. 62–70, 135–158).

⁵ List - a letter, a message; in Modern Polish it is used to mean 'letter.'

⁶ Milost rachil: within this context it means '(he) did a favour.' (On the various meanings of the word 'rachit,' see: Sreznevsky I. Materials for a glossary of Old Russian. – V. 3. – 4.1 – Moscow, 1958. – columns 111–112).

⁷ kdym: literally means 'when I am'; the ending 'm' indicates the first person of the past tense of the verb 'to be' (Polish 'być').

⁸ Perekop Horde - the name for the Crimean Khanate common in the Grand Duchy of Lithuania. The term 'orda' (Turkic) originally meant 'tent,' 'the Khan's headquarters,' 'centre of the ulus,' and later, the state in general; the term 'perekop' refers to a ditch on the Crimean isthmus that connects the peninsula with the mainland. This feudal state was one of the heirs to the Golden Horde which separated from it in 1426–1428. It occupied the Crimean peninsula and the northeastern and western steppes up to the Dnieper and the Don. Its first capital was the city of Solkhat (Stary Krym); the second was the city of Bakhchysaray. The first independent Crimean Khan was the founder of the Giray dynasty, Hacı Devlet Khan, who added the affix 'Giray' to his name (around 1428–1466). Gradually it became a vassal of Turkey. In 1783 it was incorporated into the Russian Empire (see: Smirnov V. The Crimean Khanate under the Ottoman Porte before the 18th century. – Saint Petersburg, 1887. – 772 p; Herberstein S. Notes... – p. 167; Litvin M. On the Manners of the Tatars, the Lithuanians and the Muscovites. – Moscow, 1994. – SIZ, comment 39, 41–46; Collection of the Russian Historical Society. – V. 59. Saint Petersburg, 1887. – pp. 450–463; Fyodorov-Davidov G. The Nomadic Horde in the Ulus of Jochi // Vesti. Moscow University. – Ser. 9 History. – 1970. No. 5. – pp. 75–86; Kuznetsov A. Russia and the Politics of the Crimea in Eastern Europe in the First Third of the 16th Century // Russia, Poland, and the Black Sea Region in the 15th–18th Centuries. – Moscow, 1979. – pp. 62–70).

⁹ was... in the place of my father as tsarevich – the experssion means 'was in my father's land as a tsarevich' (atam uirend'). The word 'mestys' (place) is used in the meaning of 'land, region, state' (see: Sreznevsky I. Materials... – V. 2. – 4.2. – columns 245–247).

¹⁰ prirekli - named, declared.

¹¹ meti - to have.

¹² Muscovite - this term was applied to the Grand Princes of Moscow (Vasily III and Ivan IV) in 1526–1547.

¹³ inshii: others, some (see: Polish-Russian Dictionary. – Moscow, 1960. – p. 168).

¹⁴ Apparently this is a writing error. It should read 'Kazan.'

¹⁵ Sogbe vdiachne: here it means 'with the humblest gratitude.' The word 'sogbe' is a derivative of the verb 'to bend,' and the word 'vdiachne' is a distortion of the Polish 'wdzięcznie' — gratefully (see: Polish-Russian Dictionary. – Moscow, 1960. – p. 678).

¹⁶ ...v odno slovo zmovivshisia: having agreed, i.e., having come to one word or decision.

¹⁷ ...killed the tsar. This refers to Jan Ali Khan of Kazan, killed on 25 September 1535. A son of Tsarevich Sheikh Auliar, a grandson of Kichi Muhammad, and a brother of Shakh Ali. He was appointed as the 'ruling prince' of the appanage of Kasimov in 1518, when he was only two years old. After being deposed as a result of Khan Safa Giray's plot on 29 June 1532, he was placed on the throne of Kazan by a temporary government headed by Tsarevna Gaukharshad, a sister of Mohammad Amin and Abdul Latif (see: Complete Collection of Russian Chronicles. – V. 13. – 4.1. – pp. 57, 88–89, 100, 106; Veliaminov-Zernov V. Research on the Tsars and Tsareviches of Kasimov. – 4.1. – Pg., 1863. – pp. 269, 271; Fakhretdin R. The Khans of Kazan. – pp. 113–117; Khudiakov M. Essays on History... – Reprinted edition. – Kazan, 1990. – pp. 76–77, 95–96, 98–99).

- ¹⁸ potratit: to exterminate, to destroy (see: Sreznevsky I. Materials... – V. 2. – 4.2. – column 1295).
- ¹⁹ land of Nokrat: the Viatka land. Incorporated into Principality of Moscow in 1489 during the reign of Ivan III (1462–1505).
- ²⁰ privlaschil: pulled, nailed, attacked (see: Sreznevsky I. Materials... – V.2. – 4.2. – columns 1384–1385).
- ²¹ In the manuscript the words 'a shtom ya' are written twice.
- ²² navezhayuchi - literally means 'visiting' (see: Sreznevsky I. Materials... – V. 2. – 4.1. – column 273).
- ²³ The toponym is clearly distorted. Most likely this is Murom. The town of Murom played an important military role. It was one of the fortified links on the Nizhny Novgorod – Murom border line. It was a gathering place for the military forces of Zamoscovye - the noble cavalry and staff. This is why the Kazan khans made attacks on this town. In 1552 it became the centre of a voivodeship.
- ²⁴ I shkody nie vymovnie velikiy pochinili: (they) did incalculably (unutterably) great harm (see: Sreznevsky I. Materials... – V. 1. 4.1. – column 446; V. 3. – 4.2. – columns 1596–1597).
- ²⁵ Lepshaya: good, attractive, the best, noble (see: Sreznevsky I. Materials... – V. 2. – 4.1. – column 75).
- ²⁶ vchiniti - to carry out (see: Sreznevsky I. Materials... – V. 2. – 4.1. – column 436).
- ²⁷ Atalyk - the word was used in two meanings: 1) An educator of the khan's children (a tutor); 2) a chief, a voivode. Here it is more appropriate to assume the latter interpretation. Regarding this term, see: Kunzevich G. The History of the Kazan Tsardom or the Kazan Chronicler: An Experiment in Historical and Literary Research // Chronicle of the Activities of the Archaeological Commission. – Issue 16. Saint Petersburg, 1905. – p. 288, note 6.
- ²⁸ vtiagnuvshi - having entered, having headed for.
- ²⁹ oli zhe: almost, close to (see: Sreznevsky I. Materials... – V. 2. – 4.1. – column 465).
- ³⁰ Kirmenchik means Khankirman — the khan's townlet, a fortress in the modern Ryazan Region. It is better known as 'Old Gorodets' or 'Meschersky Gorodok.' It was granted by Vasily II the Dark to Tsarevich Kasim, a son of Ulug Muhammad, who went to Rus in 1446, and it came to be called Kasimov after him. It became the centre of an appanage which was given by the Moscow princes to Crimean, Kazan, and Astrakhan tsareviches who went to them to serve. The Kasimov Tsardom was liquidated in 1681. (See: Veliaminov-Zernov V. Research... – 4.1. – pp. 13–43; Shishkin N. The History of the Town of Kasimov since Ancient Times. – Riazan, 1891; Tikhomirov M. A list of Russian towns, near and far // IZ. – 1992. – Book 40; Tikhomirov M. 16th century Russia. – Moscow, 1962; Mardjani Sh. Mustafad al-ahbar... – pp. 177–187; Khudyakov M. Essays on History... – pp. 31, 35–37).
- ³¹ In the manuscript, 'vivpustavshi.'
- ³² This is Balakhna.
- ³³ Tolmach (dragoman) - an interpreter, a translator from one language into another.
- ³⁴ The toponym 'Namrlyn' has not been identified.
- ³⁵ potiagnulom - set out.
- ³⁶ utyagnuvshi - having entered.
- ³⁷ This is Murom.
- ³⁸ The letter 'p' in the word 'povedayu' is corrected over what was written previously.
- ³⁹ the son of Mamai Murza - this refers to Alei Murza, the brother of Safa Giray's first wife, the son of Shaikh Mamai (Shikh Mamai). Since 1516 the Nogai Murza Shaikh Mamai, the brother of Yusuf and Ismagil, was in the Crimea, and carried out campaigns against Astrakhan in 1523 (together with the Crimean Khan Muhammad Giray), in 1524 (with Yusuf, Süyümbike's father) and in 1538. He killed (together with Murza Agish) the Crimean Khan Muhammad Giray. Died in 1549. Had 4 sons and a daughter (see: Complete Collection of Russian Chronicles. – V. 13. – 4.1. – p. 43; Herberstein S. Notes... p. 337, comment 587; Peretiatkovich G. The Volga Region in the 15th–16th centuries. – Moscow, 1877. – p. 134; Usmanov M. Tatar Historical Sources of the 17th–18th centuries. – Kazan, 1972. – p. 83; Atlasi Kh. Süyümbike. – Reprinted edition. – Kazan, 1992. – p. 6 (in Tatar).
- ⁴⁰ Avragman Tsar of Ocharkhan (Abdyl Ragman, Abdul Rahman, Gabderrahman, Abdurrahman) took the throne of Astrakhan in August 1533 by displacing Khan Akkubeg. In October 1537, as a result of the campaign of the Nogai Murza Shaikh Mamai, he was forced to yield power to Derbysh Alei. In September 1539 he reascended the throne. In December 1542, for a short period, he was exiled by Sheikh Haydar, but he managed to take power for the third time and kept it until 1545 (until 1551 according to other sources), when he was displaced by Khan Yamgurchey (Yagmurchi). (See: Complete Collection of Russian Chronicles. – V. 13. – 4.1. – pp. 61, 72, 120, 132, 133, 137, 143–144, 170, 177; 4.2. – p. 441 (and others); V. 20. – 4.1. – pp. 413, 418; Marjani Sh. Mustafad al-ahbar... p. 175).
- ⁴¹ voskhu... Yunkcheyuch - another reading is possible.
- ⁴² The North Sea.
- ⁴³ This is Kasimov.
- ⁴⁴ upad - destruction, death.
- ⁴⁵ sia povyshili: rose up, were elevated.
- ⁴⁶ this is a distortion of Turkic 'Astrakhan.'
- ⁴⁷ podskarbego svoego Bogusha. The term 'podskarbi' is derived from the word 'skarb'—that is, treasury, property. In the Grand Duchy of Lithuania, a podskarbi ziemski was an official in charge of the state treasury, or an establishment where all kinds of revenue were collected: silver coin taxes, customs and court duties, and revenues

from state lands and from the sale of grain. The Grand Duke's regalia, documents and books, firearms and ammunition were also stored there. The assistant of the podskarbi ziemski was the podskarbi gubnoj. The name of the podskarbi is quite interesting. The Russian chronicles mention the ambassador of Kazan to the Grand Prince of Moscow Baush and Bogush Bolkhovitinov, the Lithuanian ambassador to Moscow. (See: Liubavsky M. A Historical Sketch... – pp. 175–178; Complete Collection of Russian Chronicles – V. 13. – 4.1. – pp. 45, 54.)

⁴⁸ In the manuscript, 'tvoya'.

⁴⁹ neomeshkivayuchi - without delay, without being late.

⁵⁰ Further in the manuscript one line was left without writing.

⁵¹ In the manuscript, 'moiemu.' Furthermore, the letters 'ie' are corrected over what was written previously.

⁵² Further, in a word consisting of 6–7 letters, only three letters in the middle are clearly legible: '...azi.'

⁵³ Arshtafanskii - Astrakhan.

⁵⁴ gold pieces - most likely he was asking for Hungarian gold pieces.

⁵⁵ Further in the manuscript one line was left without writing.

⁵⁶ The last letters in the words 'Sapkgiray Tsar' were corrected over what was written previously.

⁵⁷ Further in the manuscript two lines were left without writing.

The material was prepared for publication by Dina Mustafina

37. 'The Conquest of Kazan' According to the Russian Chronicles

The Complete Collection of Russian Chronicles. The collection of chronicles known as the Patriarch's (Nikon's) Chronicle. – Volume XIII. – Part 1. – Saint Petersburg: Printing house of I. Skorokhodov, 1904. – 302 p.

Kloss B.M. Nikon Chronicle // The Dictionary of the Scribes and Literary Arts of Ancient Rus. 14–16 centuries. – Part 2. L.-Ya. – Leningrad, 1989. – pp. 50–51.

Contained in this work are the materials of the so-called Nikon Chronicle, a monumental compilation of the chronicles, which dates to 16th century Russia. The Chronicle was named after the manuscript belonging to Patriarch Nikon. The Chronicle was introduced into scholarship by V. Tatischev, who thought, erroneously, that Patriarch Nikon had taken part in writing the Chronicle. The first edition of the Nikon Chronicle covers the years until 1520 and was compiled at the Moscow Metropolitan Cathedral in the late 1520s. 16th century

The historical material of the Nikon Chronicle was closely examined both in terms of its literary qualities and also historical. The stylistic devices employed in the editorial insertions in the text of the Nikon Chronicle tell us that the editor and compiler was Metropolitan Daniil (1522–1539). In the late 1550s the chronicles of Metropolitan Daniil were combined with the materials of the official historiography. The metropolitan's chronicles were copied and added along with the Voskresensk Chronicle and the Chronicle of the Beginning of the Reign edited in 1556. This is how the Patriarch's manuscript came to be. The original of Metropolitan Daniil's chronicles was kept at the State Treasury and was added along with sources from Patriarch's copy: the Voskresensk Chronicle (in a different volume) and the Chronicle of the Beginning of the Reign. Some time later the description of the events of 1556–1558 was added to the manuscript, thus resulting in the Obolensky copy. It is thought that in 1560, during his stay in Livonia, A. Adashev, a renowned state official of the Elected Parliament period, laboured over precisely this manuscript.

The source is cited by the publication: The Complete Collection of Russian Chronicles. The collection of chronicles known as the Patriarch's (Nikon's) Chronicle. – Volume XIII – Part 1. – Saint Petersburg: Printing House of I. Skorokhodov, 1904. – pp. 146–283.

[...]

The tsar's arrival in Grad Sviyazhsk [...] And the tsar went to the meadow and stayed in one hundred pavilions on the meadows beneath Grad Sviyazhsk. And he ordered Tsar Shigaley to come to him, and the ruler conferred with Prince Volodimir Andreyevich and with Tsar Shigaley, with his boyars and voivodes, how he, the ruler, should further govern his matters. And the tsar ordered an advance towards the city of Kazan, without a moment's delay, and that charters should be sent to them—if they make obeisance to him, the ruler would have mercy upon them. Our ruler, who expresses his righteousness—

God sees!—for God rejects the proud ones and gives grace to the humble and righteous ones, ordered Tsar Shigaley to send a letter to Ediger-Mohammed from himself because they were blood relatives, so that the latter believed him and did not oppose the tsar, went to our tsar, and so he would have mercy upon him and would reward him. And the righteous tsar sent charters to Kulsharif-molna and to all the Kazan lands so that they could make obeisance to the tsar, and if they neither stand for evil matters nor support those initiating rebellions against the tsar and the boyars, the tsar would have mercy upon them and reward them, too. And the tsar sent a Kazan tezik [merchant] to them on 15 August [1552]. On 16 August the ruler ordered that they should move to the place beyond the river, and the following regiments were to be deployed opposite the town of Sviyazhsk at the meadows on the Kazan side: the yar-taul [a temporary small-size command; prince A. Kurbsky called it an advance guard in his 'Tales...'] the first line of troops, the right hand, and the large regiment. On 18 August, on Thursday, the tsar came to the Cathedral Church of the Holy Nativity and, singing prayers, kissed the Holy image and the miraculous image of Sergius the wonder-worker, praying with many kisses for a long time, secretly sending prayers to the One knowing everything, and received blessings from the archpriest and all the clergy [201] staying at the same place. And then the tsar rode to the place behind the Volga River and ordered the guard regiment and the left hand to prepare to outdo themselves. He ordered Tsar Shigaley to sail to the Gostin island; in the same way the tsar sent his boyar Mikhail Yakovlevich and his dyak [clerk] Ivan Vyrodkov with troops. He also ordered his people to bring in towers and log tarases [wreathed wooden fences] that were ready to be used against the Kazan walls. And here the ruler spent nights and waited for all the troops to arrive; and sent them towards Kazan; and ordered the construction of many bridges since it had been rainy and the rivers had many waters in them. — The tsar comes to the Kazan River. On 20 of the same month, on Saturday, the tsar went to the place beyond the Kazan River; and instantly Tsar Ediger-Mohammed directed a captive to them with a charter to Tsar Shigaley. He wrote proud and loathsome words, blasphemies, abusing the Orthodox religion and the righteous tsar, also reproaching and upbraiding Shigaley, pledging he was ready to accept battle. The pious tsar, hearing abuses towards the Christian faith from the godless, asked God for mercy and suffered for the Christian faith. And he stood on Teren-Uzyak, and all his troops stood on the Tsar Meadow and along the Volga. And the tsar ordered the troops from the ships to deploy and organise his way towards the city. On Sunday and on Monday the tsar stood there. And here Kamay-mirza, the son of Usein, came to serve the tsar bringing seven cossacks with him; he said that he before he had two hundred people ready to help the tsar, but the Kazan Tartars found out and killed them. And he told the tsar about Kazan: in the city Tsar Ediger-Mohammed gained a foothold with his evil council of those who did not want to make obeisance to the Russian ruler; his fellows are Kulsharif-molna and kadi; Zaynesh—the Nogai prince, traitors Chapkun-prince with that one atalik; Islam-prince, Alikey Narykov, Kebek—the Tumen prince, Derbish-prince: they caused evil to all the land; and the city was well-supplied; 'and their council ordered that the ruler's traitors should be sent to the Arsk abatis—Yapancha-prince and Chapkun's nephew Shunak-mirza, as well as Yavush—the Arsk prince, and ordered that all the people should gather at the Arsk abatis so that when the Russian ruler's people came here, they would not let them proceed into the Arsk abatis.' And Kamay-mirza was rewarded with a great reward from the tsar. — About the positioning of the tsar's voivodes near the city. And the tsar called to himself his brother Vladimir Andreyevich and Tsar Shaigaley, as well as his boyars and voivodes and told them about Kamay's arrival and relayed what he had said. And the tsar advised on how to proceed to the city and added: he himself and Prince Volodimir Andreyevich must stand on the meadow near the Otuchev mizgiti [mosque], and Tsar Shigaley must situate himself behind the Bulak, by the cemetery, and the tsar must advance with the large regiment; and the large regiment with the advance troops as well as Prince Volodimir Andreyevich, and boyar, and voivode Prince Yury must go to Arsk; and the right hand must deploy beyond the Kazan River along with many cossacks; and the guard regiment must stay at the Bulak estuary; and the left hand, higher up this estuary. And the ruler ordered the court voivodes to prepare all the troops so that in each army there was one tura [a flexile wooden tower] for every ten men, and so that every man prepared a log to be able to make a stockade, so that after they mob the city [202], they could fortify it with turas and stockades. Thus, the ruler ordered all boyars and voivodes, all heads and knights and ordered all the troops not to attempt to

fight without his—the tsar's—and without the voivodes' permission as there would be time for that later; and the tsar confirmed with his great formidable word that they would not cease their bold affairs until they build fortresses around this city. – On 23 August the tsar marches against the city of Kazan. After preparing the army, the tsar advanced from Teren-Uzyak to the city and also ordered the yartoul, Prince Yury Shemyakin and Prince Fedor Troekurov, with archers and cossacks proceeding on foot before the troops, to advance on the city. The archers' command must march at the head of their troops, and the squadrons must escort them; and atamans, centurions, and cossacks must be divided in accordance with their ranks. Thus the ruler ordered the advance regiment and the large regiment of Tsar Shigaley as well as the voivodes to go to the Arsk field, up the Bulak, to the Kaban Lake; and he ordered the right hand to advance beneath the city of Kazan, beyond the Kazan River, and the left hand with the guard regiment must be deployed opposite the city, behind the Bulak. And the ruler positioned himself at the rear of the large regiment and ordered the artillery, the sentries, and the left hand to follow him. And once the ruler stepped onto the meadow opposite the city, he ordered the Christian gonfalons be hung elsewhere—that is, the image not made by hands of Our God Jesus Christ with the Life-Giving cross above it, just as his ancestor Grand Prince Dmitry on the Don used to do, and ordered the singing of prayers; and the ruler himself, and Prince Vladimir Andreyevich, and all boyars, and voivodes dismounted from their horses and started singing prayers to the Precious image of the Savior and to the Holy cross for the spiritual purification of the troops. – The tsar's speech to Prince Vladimir. The pious tsar himself, beholding the gonfalon with the image of the Creator and the Life-Giving cross, incessantly sobbed and ceaselessly sent prayers to God. After praying, the ruler summoned Prince Vladimir Andreyevich, his boyars, and his voivodes to him, summoned all his warriors from his forces, and in a humble manner proceeded to address them: 'Come to me, Prince Volodimer Andreyevich and all my boyars and voivodes, the time has come for our act of bravery, prepare yourselves, I beseech you, to fight and all as one suffer for godliness, for the hallowed churches and for our Orthodox Christian faith, appealing for God's mercy and help, and casting off all doubts, fighting for our only-begotten brotherhood of Orthodox Christians, who for many years have in vain suffered captivity and evil from the infidel forces of the Kazan Tatars. Let us now remember the Word of Christ: there is nothing more precious than when you sacrifice your soul for the soul of your fellow creature; so let us appeal to our Creator, Jesus Christ, with our pure hearts and ask Him to release the humble Christians, ask Him not to let us fall into the hands of our foes, so that our enemies may never rejoice at our death. And you now serve us, as far as God helps you, do not spare your heads to guard your godliness, whether it shall bring you death or life; if we do not die now, we shall die another way, and if we leave these unbelievers now, how shall we keep on living? For I have come here with you myself, it is better to die here than to live and contemplate those Kazan defiers as they commit sins and abuse Christianity and [203] torture Christians who have been entrusted to me. We hope that merciful God will send you His mercy after seeing how strong and grateful you are in your faith, He will help you at His discretion, and I am glad to bestow on you great rewards and my love, and make you a fortune, as far as our God helps us: and if someone is injured, I will keep providing great rewards to your wives and children up till the end of the century.' – The response to the tsar. Prince Vladimir Andreyevich and all of the boyars and voivodes unanimously responded to the ruler with tears in their eyes and with much crying: 'We see you, Tsar, you are firm in the law of truth and you do not spare yourself for the Orthodox faith and you prompt us to do the same, if we must, we all shall die for our faith together with those godless Agaryans [Muslims]; so go ahead, our Tsar, as you have come, and be the one who shall bring to them the Christian Word; all who pray will accept you, and any land will be opened to the one who brings the Word of Christ.' The righteous tsar heard that they responded differently, though in one voice they strove to fight for holiness and to suffer with him, and he remembered that God let the united into His home, and, looking at the image of the Creator, the tsar said so that everyone heard: 'Oh, our sovereign Lord! We move only remembering Your name; You, our Lord, please support us with Your holy strength and harden us with the power of Your Life-Giving cross and with the grace of Your Heavenly Spirit!' All the troops cried for a long time, asking for help and contemplating the image of Christ. And the tsar came to his spiritual father, the archpriest Andrey and he blessed him with the Life-Giving cross and told him: 'Be brave, servant of God,

for the One who will defeat all foes is the Lover of mankind, and our sovereign Lord Christ is indeed the Lover of mankind!' He crossed the tsar with the cross and blessed him with it, and the tsar took aim at his enemies. The ruler thus ordered his armies to cross themselves, saddled his argamak, and all his warriors were filled with spiritual joy as they had chosen death over the rot of life, desiring to fight for Christ and inspired by the grace of the Heavenly Spirit. And the armies advanced straight towards the city, and the tsar's yartouls proceeded up the Bulak to the Kaban lake, and the Kazan Tatars crawled out of the city and headed out in the direction of the tsar's troops. But, as the tsar had ordered, no one attempted to initiate a fight. However, when the Kazan people arrived, they started shooting at the army, and the archers of our tsar started to shoot at them from arquebuses; and the Kazan horsemen started fighting the tsar's foot regiments, and prince Yury Ivanovich Shemyakin and prince Fedor ordered their knights to help the archers. And the Russians and the Tatars battled, and God helped the Orthodox to press the Kazan people towards the very gates and beat the Tatars and injure some of them; and the voivodes gathered at the city and sent their knights back into their regiments. All the tsar's warriors were spared, only a few of them were injured; and no one from other regiments took part in the battle: such was not ordered; and everyone observed this and wondered at the tsar's order. Meanwhile, Tsar Shigaley and the voivodes came to the Bulak and stood on the Arsk field—as the ruler had instructed. – The tsar's arrival at Kazan The ruler reached the appointed place, where he and his forces were supposed to stay, on 23, on Tuesday. And he ordered the construction of churches of canvas: One, of Archangel Mikhail [204], another, of Yekaterina, Christs' martyr, and the third one, of Reverend Father Sergius the Wonderworker, and to him the tsar would go every day; and after this he ordered the construction of the tsar's pavilions. After organising the camp, the tsar dismounted from his horse and came to Sergius to pray, and then he entered into his pavilion and ordered his voivodes to strictly comply with what the tsar had told them, and all the troops heeded the tsar's command. For tomorrow, Wednesday, the tsar ordered the guard regiment to the voivode, the boyar prince Vasily Semenovich Serebreny, as well as voivode Semen Vasilievich Sheretetev, and the voivodes of the left hand—prince Dmitry Ivanovich Mikulinsky and Dmitry Mikhaylovich Pleshcheev—to set turas (towers) along the Bulak above Kazan from the river. And the voivodes came on Friday night and constructed the turas, thank God, without a fight; and the archers, as ordered by voivodes, dug themselves trenches on the opposite side of the Bulak so that no Tatar could leave the city. And there was a stone banya [bath house] by the city wall, named after Dair, and over there the cossacks hid themselves, as ordered by the voivodes. And cannons were brought to be set on those turas. – The battle between the yartoul and the Kazan people. On the 25 of the same month, on Thursday, the tsar ordered the yartoul to go beyond Kazan leaving the upper territory—the Arsk field—and instructed the right hand to go beyond Kazan, beyond the river, and station themselves opposite the city. And many Kazan people exited Kazan to attack the yartoul, and the rivals fought with arrows for a long time, and the voivode of the advance regiment Dmitry Ivanovich Khilkov sent his knights to help the yartoul. And, as God supported the Orthodox people, the Kazan people were defeated and pressed towards the city. Some were killed, and some were injured, while the Orthodox were spared by God; however, the voivode prince Yury was injured. – And on Wednesday evening there appeared a great storm. On that very day a great storm arose, and the tsar's pavilions and many troops fell, and on the Volga many boats were dashed against the isles, and the tsar's supplies for the army were lost. And grief was sown in the hearts of the Russian people; and the tsar sent an order to the town of Sviyazhsk to bring abundant supplies from there and bring them to those who lacked them, and the tsar sent another order to Moscow so that they arrived in haste to the army bearing the treasury and abundant supplies, as the tsar wanted to winter here. – The tsar observes the territory around the city. The tsar himself rode around the city over nights and days, escorted by not many people, observing places around the city where it was possible to construct fortresses. And on Friday, on the 26th of the same month, the ruler ordered the construction of a big fortress in front of the Tsarist gates, and the Arsk, Atalyk, and Tyumen gates. And from the large regiment he ordered another voivode servant Prince Mikhail Ivanovich Vorotynsky to have his men dismounted from their horses, proceed to the city on foot, and roll the turas; the big voivode boyar prince Ivan Fedorovich and his troops were to be on horseback; the tsar also sent several commanders on foot from his own forces to mingle with the knights,

and he instructed them as follows: when the calvary marched against Prince Mikhail, Prince Ivan would do as God allowed; and from his own forces, the tsar sent certain knights [205]—strong and skilled in military matters—divided them and gave each of them a hundred people and ordered them to go to Prince Mikhail on foot. – On the setting up of the turas at the city of Kazan. On the same day, in the evening, Prince Mikhailo, as ordered by the tsar, prepared his people: he commanded the archers' commanders—Ivan Cheremisov, Grigory Zhelobov, Fedor Durasov, dyak Rzhevsky—to advance towards the city with all of their archers, together with the cossacks' ataman and together with other commanders and boyars with their people, and ordered them to roll turas to the appointed place, and prince Mikhailo himself would go on foot behind them. – On the coup de main of the Kazan people. And when they marched towards the city, many Kazan forces—on foot and on horseback—appeared, and both parties—Christians and Tatars—waged a brutal battle; and cannons shot at the city and at the gates, and in the same manner cannons and arquebuses shot from the city; and it was a massacre, great and terrible; and it was impossible to hear each other because of the firing of the main guns, and of noises and voices, and of the thundering of the weaponry, and of the the mighty screams. There was a great thunder and many flashes of cannons and sundry arquebus shooting, as well as voluminous smoke. And God helped the Orthodox, and the godless were defeated, and many Tatars were beaten and pressed back into the city, and the city bridges were full of the dead. And the commanders of the archers, the archers themselves, and the very commanders of the boyars with their people and the cossacks stood along the city's canal and started shooting from arquebuses and with bows; meanwhile, Prince Mikhailo Ivanovich established turas and made embankments fifty sazhen [old Russian measure of distance—a fathom] far from the city, from the river Bulak and to the gates, in front of all of the places from which it was possible to attack, and ordered all of the commanders to come to the turas and instructed the archers and cossacks to hide in the canals in front of the city. But the Kazan forces continued exiting the city and continued approaching the turas and engaging in hand-to-hand fighting up till midnight, and, with God's help, the unbelievers were beaten by the Orthodox and were pushed back into the city; and they fought those approaching the turas throughout the night and fought hand-to-hand, without a wink of sleep, and, by the grace of God, they triumphed over the unbelievers. In the meantime, the righteous ruler ordered that prayers in the churches should be incessantly sung, and he sent his boyars to the church every hour, so that the warriors were hardened and never weakened. And during that fight many Kazan men were slain, and they killed the princes Islam Narykov, Bashkandu Brantsov, and Syunchelei-bogatyr, while many princes and mirzas met defeat. Meanwhile, there were few fallen among the Orthodox, by God's mercy; among the designated commanders and boyars—the boyar Levonty Borisov, son of Shushera, was killed; and many were injured but recovered by God's mercy; and for this our tsar was grateful to God and promised to keep on effecting just deeds. – A large detail is sent to the city. On Saturday, 27 August, the tsar instructed his boyar Mikhail Yakovlevich Morozov to find a big detail [206] for turas; and the tsar ordered his okolnichiy [a lower boyar rank, a courtier] Petr Vasilievich Morozov to come to those same turas which Prince Mikhailo had established. And after boyar Mikhailo Yakovlevich sent the detail and organised his place, he started incessantly battering the city and shooting at it with fiery cannons. Those from the detail defeated many people, as did the archers in the canals who did not let the Kazan forces exit the city gates and defeated many of them. On the same day, the tsar sent his okolnichy Ivan Mikhaylovich Vorontsov to examine the places where the large regiment was to take a stand. At the same time, Karamish-ulan, son of Kudaigu-ulan, exited the Kirim (Crimean) gates in order to take captive a warrior from the adversary's camp and interrogate him. He tried to kidnap one near the Mstislavsky's regiment as his regiment was not completely prepared. But Prince Ivan Fedorovich hurried to help them, and Karamish-ulan was caught alive. However, Prince Ivan was wounded by two arrows, while all of the other Christians remained uninjured. And Prince Ivan Fedorovich sent Karamish-ulan to the ruler of the tsar and the grand prince, and the latter ordered that he should be cruelly tortured. And Karamish revealed that many people had been injured on Friday in the city, while the Kazan Tsar Ediger-Mohammed and all the Kazan nobility hid for their life in the city and did not want to make obeisance to the ruler, God hardened their hearts, just as the pharaohs' hearts were hardened, let His Holy name be blessed in us. – The Kazan people's attack against the advance regiment. And on

Sunday, 28 August, many Kazan people came from the forest to the Arsk field and launched a surprise attack on the advance regiment, and killed the commander of those guarding the forests Tretiak Loshakov. Voivode prince Dmitry Ivanovich Khilkov hurried to repel their attack, arrived to fight their army, and was brave at it. He fought like a beast, as did the boyar prince Ivan Ivanovich Pronsky, who had hurried to the fighting, as did boyar prince Ivan Fedorovich Mstislavsky, who came with a small contingent of his large regiment, as did boyar prince Volodimir Andreyevich and Prince Yury Obolensky. The voivodes informed the tsar about this incident, and soon he commanded that more people should be sent to the court of the voivodes, and he himself hurried to attend his affairs. Fighting like beasts, the voivodes trampled the Tatars and the rivals drifted away; however, the Russians captured Mirza Shabolotov, a prince's son, and his companions. Many warriors fell at that battle, many were injured. Meanwhile, the captives told the tsar that Yapancha-prince and Yevush-prince followed the Russians from the ostrog [a small fort] and to Arsk with the sole aim of keeping watch on the tsar's army and causing trouble for the Russians as much as possible. Thus, on Monday, 29 August, the ruler ordered the right hand, and boyar prince Petr Mikhaylovich Shchenyatev, and voivode prince Andrey Mikhaylovich Kurbsky, and the yartoul, and prince Yury Ivanovich Pronsky, and prince Fedor Ivanovich Troekurov to set turas along the shore of the Kazan River, opposite the city. And [207] the voivodes constructed what the tsar had ordered and sent the commander of the archers Ivan Yershov with many archers and many atamans to go before them so they could hide in the trenches. Meanwhile, the city-dwellers shot from cannons and arquebuses and bows, while our archers shot at them from arquebuses, and the cossacks shot from bows. The voivodes bravely constructed turas and fortified the earth and stood themselves beneath the turas, as ordered by the ruler; and the right hand and the yartoul went to the Arsk field. Meanwhile, many Tatars emerged from the forest and went to the Arsk field both on foot and on horseback, and stuck close to the forest; the ruler instructed his troops to keep calm by the river and to not engage in a battle and ordered each of the men to desist from fighting. Therefore, the large regiment and the advance regiment, the big voivodes and prince Vladimir Andreyevich and boyar prince Yury Obolensky, and the commanders with the people from the tsar's forces awaited throughout the day. The same day the ruler ordered the construction of turas on the Arsk field opposite the city and on behalf of himself sent the boyar prince Dmitry Fedorovich Paletsky and Alexy Adashev, and other voivodes of the advance regiment, and the yartoul, and sent Yakov Bundov, the commander of the archers, and many commanders and the boyar's people from his own forces to accompany Prince Dmitry. And all of the turas were set in a row from the big turas, which were erected by Prince Mikhailo, to the Kazan River opposite the Kabats gates and in front of the Zboiliv gates and the Yelabuga gates—all were erected without a battle: the Kazan forces did not appear, they simply fired their cannons and arquebuses and shot their bows from the city; and the archers and boyar's people fired back. And in the places where turas could not be erected, the tsar ordered dyak Ivan Vyrodkov to observe those places and construct a tyn (a stockade) there. And thus the tsar enclosed the city of Kazan with his fortresses so that not a soul could leave the city nor enter it. And the ruler ordered his boyar Mikhail Yakovlevich Morozov to disperse his troop around the perimeter of the whole city and constantly attack it. – On the defeat of the Tatars on the Arsk field. On the 30th of the same month, August, the tsar decided to neutralise those people who attacked his warriors, as well as the foragers from the forests. And the ruler sent his boyar and voivode prince Alexander Borisovich Gorbaty and boyar prince Petr Semenovich Serebreny, and some commanders from his forces with them, and the archers' commanders with the archers, and many commanders of the knights, and many of the boyar's people and ordered Prince Alexander to march directly from Arsk field; and Prince Yury Ivanovich Shemyakin with his knights and his regiments, as well as many

people on foot and the boyar's people and the Mordvins—the tsar instructed these to advance from the Kazan River so that when prince Alexander Borisovich gave them a sign, Prince Yury was to attack. And when Prince Alexander Borisovich started marching with all his people, and when he sent all those who were on foot through the forest, the Tatars noticed Prince Alexander, left the forest—on horseback and on foot—and Prince Alexander commanded the troops to march against them, an orda of them. All the Tatars rushed to the battlefield while the Orthodox appealed to God, and so Prince Yury Shemyakin

ordered an attack against them from the forest, while Prince Alexander Borisovich, trusting in God, eloquently said: 'Let us go. [208] It is time! God protects us, but who guards them?' and ordered all his people to attack. All the believers rushed to fight the unclean ones, and, supported by the omnipotent God, they defeated the Tatars overwhelmingly, chasing them for 15 versts and defeating them. And boyar prince Alexander Borisovich, together with his fellows, stood on the Kiliri-river and ordered the trumpets to sound to gather the warriors, who were dispersed all over the land. And all the troops came back to the forest to pursue other people since they had knocked down many Tatars from their horses, and those Tatars, who found themselves on foot, ran into the forest; and Prince Alexander went to the field through the forest, and all the archers and boyar's people, who were on foot, also passed through the forest and sought out and defeated the Tatars along the way. They defeated many of the unclean in the forest, who hid in the trees, caught others, and brought 340 persons to the ruler. And Prince Alexander Borisovich sent God's bounties to the tsar and asked the head of the tsar's regiment, Ivan Ivanovich Kashin, to notify the tsar.

And after the ruler heard that the grace of God was conferred to him, the tsar of the Orthodox—that the unclean were defeated—he went to the Church of Sergius the Wonder-worker with tears of gratitude and sent much gratitude to God and asked for His pardon and mercy henceforth. On the same day, the voivodes approached the tsar with all their knights, and the tsar granted them a huge reward and greeted them with loving words and praised them for their bravery and promised to grant them further rewards. – About the message to the city of Kazan. The humble tsar sent one of the captive Tatars to the city and wrote to them demanding that they should make obeisance to him. The tsar would have mercy upon all of them and if they rejected his offer, he would order the beating of all who had been captured alive. The citizens did not give an answer, and the tsar ordered that they should be flogged in front of the city. – On the tunnel. On the 31st of the same month, August, on Wednesday, the tsar called a nemchin to him, whose name was Razmysl, who was cunning and savvy in the matters of subjugating a city. And the tsar ordered him to dig a tunnel into the city. And he started to create a tunnel from the Bulak River near the turas of okolnichy Morozov and Petr, and between the Talyk gates and the Tyumen gates. – The Tsar asks about water. And the tsar called Kamay-mirza to come to him and asked him where the townsmen find water. For the Kazan River was now lost to them; and they also lost the captives who in those days fled from the city to the tsar. And the answer was that they had a secret source providing water from the Kazan River, near the Muraleyev gates, which they access through a subterranean portal. And the tsar ordered the guard regiment, voivodes boyar prince Vasily Semenovich and Semen Vasilievich to set forth and destroy their access to water. But they did not manage to do this since the soil was hard. But the voivodes explained to the tsar that their path lies close to the stone bathhouse in which the tsar's cossacks hid, and it was possible to access the secret route from the bathhouse. – On the destruction of the secret route. And the tsar sent Alexy Adashev and Razmysl to those voivodes and ordered them to start digging their way to the secret route; and he instructed Razmysl to send his apprentices to attend to this and save himself for a more important deed. He also ordered that he should be notified when the tunnel was ready. And boyar prince Vasily Semenovich, asking God for mercy, and working hard for days and nights, as ordered by the tsar, managed to complete the tunnel in 10 days. And when Prince Vasily himself and his fellows heard the voices of the Tatars and saw them as they went for water, the prince notified the tsar.

Summer 7061 [1552]. On 4 September the ruler ordered the voivodes—boyar prince Vasily Semenovich Serebreny and Semen Vasilievich and Alexy—to plant 11 barrels of gunpowder under the secret route. And on Sunday, at early dawn, they blew up the secret spot, together with the Kazan citizens, who had come for some water, and the city walls trembled and were destroyed, and many inhabitants of Kazan were injured or killed by stones and logs that fell from above, as the secret spot was blown up by gunpowder. And the people of the city were petrified, and much discord was sown among them: some thought of offering obeisance to the tsar as they were exhausted, and other traitors started digging to find water elsewhere and never found it for all they could find was a thin stinking stream; and before they were completely conquered, they used that water and it brought them disease, swelling, and death. And the righteous tsar, throughout all the days and all the nights, asked God for mercy and visited his

troops around the city, examined all his turas, and ordered his voivodes to fortify the city further, and the voivodes executed his orders carefully, and the tsar granted abundant allowances and payments to them, and praised their work and promised to grant them more, prompting them to work day and night. And the warriors shot unceasingly from cannons, and they razed the Arsk gates and shattered the degree and attacked many people, and they shot fiery cannon balls and stones up at the city throughout the night so that the unclean could not sleep. – The voivodes' campaign towards the Arsk. On the 6th day of the same month, on Tuesday, the ruler ordered his voivodes to advance to the ostrog at the Arsk and divided them into three regiments: boyar and voivode prince Alexander Borisovich Gorbatoy and boyar and voivode prince Zakharia Petrovich Yakovlya were appointed to the large regiment; boyar and voivode prince Semen Ivanovich Mikulinskoy and boyar and courtier Danilo Romanovich were to stay in the advance regiment; and voivode prince Petr Andreyevich Bulgakov and Prince David Fedorovich Paletskoy were sent to the guard regiment. And he ordered all the commanders of the tsar's regiment to be with their knights, and all the commanders of the archers to be with their archers, and all the atamans to be with their cossacks, and the city sayyid to be with the city Tatars, and Yenikei-prince to be with the Temnikov Mordvins and all the mountain people—those were also on horseback. And the voivodes marched, and their archers and cossacks went on foot before their main troops, and then they reached the high mountain and the ostrog—but the ostrog was enclosed by gorodnyas [settlement's defensive walls], mounds of earth, and felled trees, and impassable bogs surrounded it, – On occupying the ostrog, – and the voivodes started repeating the tsar's speech to their [210] knights: 'Now sacrifice yourself to serve God and the tsar, onward to fight the unclean!' Prince Semen Ivanovich and Danilo Romanovich approached the gates of the ostrog and ordered the knights should go to the ostrog on foot; and the commanders themselves dismounted from their horses and approached the ostrog on foot. And when the fight for the ostrog started, every single arquebus fired, and both the Tatars and Christians shot with bows. And so many arrows flew, and so much thunder was heard as if a rain cloud had descended and dampened the earth with a torrent of raindrops. The battle moved to the gates, and princes Alexander Borisovich and Zakharia Petrovich went to the right with the large regiment, arrived at the other side of the ostrog, and ordered those on foot to do the same as the ground was impassable for those on horseback: fortifications were great there, and the forest was thick. Meanwhile, the Orthodox asked God for help, and together they all hastened to attack the impious, and the latter surrendered, helping God, and the tsar's Orthodox voivodes defeated the Tatars and occupied the ostrog, and defeated many Tatars, and captured 200 persons alive. And they went further, fighting and burning villages, to reach the Arsk fort on a hill; and after they found themselves there, both boyars and voivodes sent their commanders to the tsar troop, while all the rest stayed there for two days and took a different tack to Kazan. And the battle spread all over the Arsk side, and many people were defeated, and their wives and children were captured, and a great number of Christians were freed. The battlefield spread over 150 versts—from the valley and to the Kama River: they burnt villages, attacked their cattle, and took a great number of cattle with them, to the troops near Kazan. And God sent much livestock to the voivodes, from many cattle sheds. – On the voivodes' journey to the tsar. And they headed back to the pious tsar and other humble Christians, and beforehand they sent for the commander of the tsar's regiment Semen Vasilyevich Yakovlya to notify him about God's bountifulness. And the tsar, chosen by God, came to the church with many prayerful tears and said secretly and openly: 'What can I give you for your blessings except for my tears and my broken heart? Gracious Lord Jesus Christ, give us, poor Christians, complete freedom: give glory not to us but to Your own name.' And he hugged his voivodes amiably and extended his hand to be kissed and made them compliments, and praised their bravery and courage; and the tsar granted rewards to all his warriors in accordance with their ranks. – In the same month the tsar ordered his dyak Ivan Vyrodkov to construct a tower near the turas of Mikhail Vorotynsky, opposite the Tsarist gates. And after constructing this tower, which was six sazhenes high, they stationed much weaponry on it and many polutorny arquebuses (or arquebuses whose size could reach 1, 5 sazhenes), and they fired onto the streets and at the city walls and killed many people. And the impious ones hid themselves in holes and in trenches and started digging tunnels under the tarases—for there were tarases behind every single gate, and they were strengthened with earth—and the impious crawled from behind the tarases as if they

had been snakes crawling out of their holes, [211] and, crawling out of them, they kept fighting day and night. – About rolling turas towards the trench. And the tsar, righteous and great, ordered Prince Mikhail Vorotynsky to roll turas to their trench opposite the Arsk tower and the Arsk gates towards the tarases set opposite the Tsar gates. And it took more than a day for prince Mikhail to roll the turas towards the trench, constantly asking God to give him grace, force, and courage; meanwhile, the Tatars fought cruelly and did not let the Orthodox approach; but the tsar's voivodes, appealing to God, kept moving closer, as ordered by the tsar. On Sunday, the tsar ordered Prince Mikhail to stand at the turas near the trench, near the tarases opposite the Tsarist and Arsk gates; and, as the tsar instructed, there came the archers and cossacks together with the boyar's people and stood along the trench and and they were ordered to fight; and Prince Mikhail rolled the turas towards the trench but did not set them close to the tarases: thus, many archers and cossacks were injured and weakened; and when they were at last erected, the knights and archers and cossacks were sent to those turas. And the Tatars now saw that by the grace of God the Christians stood along the unclean ones' trench, and between the city walls and the tsar's turas there was one single trench three sazhenes wide and seven sazhenes deep, and the rivals fought unendingly, and fired from cannons, from arquebuses, and with bows, and launched many stones. And many Russians took rest during the lunchtime, but then they saw that there were not many people standing by the turas, and thus from the holes and from behind the tarases the Tatars suddenly attacked the turas; the Christians faltered and ran away. – On driving the Tatars away from the turas. Meanwhile, the tsar's voivodes took courage and attacked the Tatars furiously; and when all the Christians saw that their voivodes battled with the Tatars, they were inspired and rushed to defeat them as well. So they hurried to help them from every single place, and the unclean hastened to their own trenches to defeat the tsar's warriors, but then they streamed back to the city through their holes. And thus the Orthodox rose and strengthened their turas. And that battle brought many deaths, and many voivodes were injured: they attempted to wound Prince Mikhailo Ivanovich many times and with many weapons, but his armour was strong, and thus only his face was slightly injured; the face of okolnichy and voivode Petr Morozov was very wounded, he was taken from the battlefield and then cured; voivode prince Yury Ivanovich Kashin was wounded in his breast; in the same manner many leaders of the archers and boyars were injured. At the same time Zaynesh-prince with many Nogais and many Kazan forces exited from the Zboiliv gates and headed to the turas of the advance regiment and of the yartoul; but those turas were not near the city and were seen by the voivodes. So they allowed the Tatars to move in closer and then fired at them from arquebuses, and, in the same manner, the voivodes attacked them and pressed them to the city trenches and defeated many of them; meanwhile, God spared all of the Orthodox.

And the humble tsar sent his okolnichy Alexy Danilovich Pleshcheyev to help Prince Mikhail, and [212] sent treasurer Foma Petrov to Petr's place, in the same manner, he sent the commanders of his tsar's regiment, together with the knights and also many leaders with their boyar's people. Meanwhile, the humble tsar rode around his troops, and, approaching the turas, he lent support to everyone so that their armour could be strong by the grace of God, and visited all the injured and granted them monetary rewards; and everyone, seeing the tsar, who was prudent and courageous, was inspired to continue waging battle. And here the tsar noticed treachery—there were many Tatars hiding behind the tarasys—and he ordered tunnels be dug beneath them. On the 30th day of the same month, September, on Friday, the tsar ordered to gunpowder be place there to blow up the tarases; and he also ordered the erection of turas opposite the Tsar and Arsk gates, and he also ordered those voivodes, standing by those turas, to prepare for battle. And he instructed everyone else not to interfere. And so, the gunpowder was ignited, and the tarases exploded, and the Kazan people fell from a great height, and from this great height many logs fell and they defeated many Tatars; the inhabitants were frightened and terrified, and they fired arrows at the Russians for many hours. – On erecting the turas. And the voivodes stood along the trench opposite the Tsarist gates and the Arsk gates, and the Atalyk and Tyumen gates—all along the trench—and after the turas were erected, the inhabitants emerged and started viciously fighting, while the tsar's regiment ferociously rushed at the city. The pious tsar went to the city himself and saw that his troops rushed to attack the city and bravely fought the unclean on the city bridges, and on the gates, and on the

walls; and they fired endlessly from cannons, and hit stone walls with battering-rams and with fiery cannon balls, and his archers fired from their arquebuses, and other warriors fought with spears and sabres. And it was carnage, huge and terrible, and there was much cannon thunder, and the city and all the people were covered with the smoke of fire and fumes, and there was much noise produced by the warriors and weapons. God rescued the Christians as they battled on the city walls and at the gates and on the city tower—all the way from the Arsk field. The humble tsar saw his warriors fighting at the walls and in the city, and Prince Mikhailo Vorotynsky informed the tsar that in the city of Kazan, by the grace of God, the Christians had defeated many Tatars, and asked the tsar to withdraw the troops as many of them were unprepared for that day—and thus ordered the tsar—he commanded the voivodes and sent many yesauls to make sure the troops were withdrawn. The warriors, however, did not want to leave the battlefield, but as ordered by the tsar, they were sent away; meanwhile, the city walls and bridges were burnt, while the warriors hid near the city walls and the Arsk gates. – The Taking of Kazan. Voivodes prince Mikhailo Ivanovich and Alexey Danilovich commanded the construction of strong shields on the city walls and that the turas be filled with earth, and so they stayed at the city wall for two days and two nights awaiting the final attack. In the meantime, the Tatars constructed blockhouses opposite those gates and filled different breaches and fortified them with earth. – On the burning of the bridges. [213] Meanwhile, the bridges at the Tsar gates and the Atalyk and the Nogai ones burned throughout the night, and the city walls burnt down, and earth fell from the city, and the whole city was covered with earth and grit. – On preparation for purification. The righteous tsar ordered all the regiments to brace for an attack on the city by Sunday and told them to purify themselves and make confessions to their spiritual fathers so that the dignified could be granted grace, as the day approached when everyone would share and drink from the same bowl. – On filling in the trenches and bridges. On 1 October, on Saturday, on the day of the Protecting Veil of the Holy Mother of God, the tsar ordered the trenches be filled with wood and earth, and the construction of many bridges, and the relentless firing upon the city wall from bigger guns, and the razing of the city wall to the very ground. – On the message to the city of Kazan. The Christian ruler, the righteous tsar, did not want to contemplate human blood and sent Kamay-mirza, a Kazan citizen, to the city and other mountain people so that they might persuade the inhabitants to make obeisance to the tsar, to observe the grace of God when the tsar's forces entered the city: if they rendered obeisance and recognised the tsar's power and revealed the traitors, no trouble would be inflicted on them. But the Kazan people spoke unanimously: 'We shall not make obeisance! Even if Russia is now on the city walls and in the towers, we shall construct other walls, we shall either die or withstand your siege.' And they replied, as if they were out of their minds. God, blind their rage! For they did not see the righteous way of the tsar. Meanwhile, the Orthodox tsar spoke: 'Holy Lord! Behold my heart for I asked them to lay down their arms and render obeisance peacefully, but they preferred blood to peace. Now send disease upon their heads and let blood be on them and on their children.' – On allocating the voivodes before taking the city. And thus the righteous tsar ordered all who were ready to gather in their regiments, to brace for marching against the city, and the tsar evaluated many warriors of his, and he ordered his boyars to provide knights and skillful military warriors—who had been chosen beforehand—one hundred people for each boyar. The first ones to attack were the atamans and cossacks, and boyars' forces and their commanders, and the archers and their commanders. And as soon as his people reach the city walls, the tsar ordered them to assist other voivodes and other knights from all regiments; he ordered the same to all of the hundreds of soldiers, who had been ordered to accompany the chosen skilled warriors; the ruler ordered the same to the voivodes so that they could assist all their people. The righteous tsar and his brother Prince Vladimir Andreyevich stood with all their troops before the Tsarist gates, at the fauborg the near the cemetery, and advanced in all directions, appealing for God's help. And the tsar ordered protection for the regiments that were near the forests, and in case of attacks from the city or from the forests, on the Arsk field and on the Arsk and Chuvash roads, the tsar ordered Tsar Shigaley to remain there, and he ordered the same to all of the princes and mirzas of the city who were with him, and he ordered the same to Prince Ivan [214] Fedorovich Mstislavsky with his regiment, and to all the mountain people who accompanied him. And he ordered the boyar prince Vladimir Andreyevich, Prince Yury Obolensky with his regiment, as well as the commander of his tsar's

regiment, Grigory Fedorovich Meshchersky to watch the Nogai road. And his voivode prince Ivan Romodanovsky with his people were to stand by the Galitsk road, beyond the Kazan River; and Prince Volodimir Andreyevich and voivode Ivan Ugrimov were to remain near Bezhbald; and the commander of the tsar's regiment Mikhail Ivanovich Voronoy together with his nobles were to stand beyond the Kazan River; and the commander Mikhail Petrov Golovin was to remain above Kazan, near the ancient settlement. On the same day the tsar appointed everyone to different regiments so that everyone could prepare and stand where they were stationed. – On how the voivodes helped each other And the ruler commanded the voivodes to attack once, by God's mercy, the tunnel was blown up; and to move from the tower to the breach once the tsar gave an order to Prince Mikhail Ivanovich Vorotynsky and okolnichy Alexey Danilovich Basmanov; and he also ordered the commanders of the tsar's regiment to be sent to the breached walls; and he commanded treasurer Ivan Foma Petrovich of Prince Mikhail to move to the breach in the Atalyk gates; and the tsar and grand prince himself with his forces would help them. And the voivodes from the advance regiment were to guard the Kabatsk gates—they were prince Dmitry Ivanovich Khilkov and boyar prince Ivan Ivanovich Pronsky—to help him. The yartoul were to stay by the Zboiliv gates: Prince Fedor with Prince Yury Ivanovich Shemyakin, rendering assistance, were to take a stand there. And Prince Andrey Mikhaylovich Kurbsky was to deploy his troops over the territory from the Kazan River to the Yelabuga gates, and boyar prince Petr Mikhaylovich Shchenyatev was to help him. And voivode Semen Vasilyevich Sheremetev was to stay by the Muraleyev gates, and Prince Vasily Semenovich Serebryany was to help him. Voivode Dmitry Mikhaylovich Pleshcheyev was to stand by the Tyumen gates, and voivode prince Dmitry Ivanovich Mikulinsky was to help him. And the tsar ordered all of them to prepare to march on Sunday by the third hour after noon. – On how the tsar spent time with his spiritual father and on the armament. And the night from Saturday to Sunday the tsar spent with his spiritual father, archpriest Andrey; and then he started to arm himself and heard the sound of many bells, and so he told his closest companions: 'The bells are tolling, this must be the tolling of the Simonov Monastery.' And the tsar heard the voice of his heart that the grace of God came upon him, and he came to the church and began singing a morning prayer. – On setting gunpowder beneath the city. And Prince Mikhailo Vorotynsky sent a message to the tsar: 'Razmysl has set gunpowder under the city, but the townsmen saw him, so we cannot wait till the third hour after noon.' The righteous tsar thus ordered all regiments to prepare to launch an attack. – The tsar goes to the church. And the tsar himself went to the church [215] but commanded all to comply with all his orders, while he himself shed many tears and asked God for His grace; when the noon hour came he let boyar prince Volodimir Ivanovich of his tsar's regiment and boyar Ivan Vasilyevich Sheremetev and all the regiments advance. He ordered them to fall into line at a fixed place and wait for the tsar's coming. – On being present at the Holy Liturgy. And the tsar ordered the commencement of the liturgy as he wanted to touch Holiness, and after it was concluded, he intended to send prayers and gratitudes to God and set off for his regiment. Although it was frightful to begin the liturgy, it was worthy of praise to see the righteous tsar at the church, without the shield of his armour, with all his companions armed in the same manner, who sought godliness as they approached the fateful hour [...]

On blowing up the tunnel. And the time came for the liturgy honouring the holy New Testament, and the sun rose, and when the dyakon approached the end, he uttered the last line of the New Testament: 'And there will be one flock and one shepherd, ' and there came a strong clap of thunder, and the earth shook and trembled. And the righteous tsar glanced out of the church doors and saw the earth blast open by an explosion, and it was terrible as if darkness had descended on the earth and then risen high above, and many logs fell from high above, flying into many of the ungodly. The righteous tsar returned to praying, when there came another clap—the second tunnel had exploded, and the damage done to the city wall was even more terrible. Many people stood on the walls, and the floor beneath them caved in, and many people fell from on high, while others lost their noses and arms, and many of the godless were dead. – And the tsar's army marches to the city from all corners. And all of the Orthodox warriors, appealing to Lord, cried: [216] 'Our God is with us' so is 'The Lord by our side, ' and quickly advanced forward to defeat the ungodly. Meanwhile, the Tatars in the city appealed to their repugnant, deceitful Mohammed, called all his apostles to help them and said: 'We all shall die for our yurt.' And both parties

fought desperately at the gates and on the walls, while the righteous tsar remained in the church and prayed, appealing to Lord Creator, and all other people did the same, with many tears and heavy hearts, and then someone close to the tsar came to him and whispered: 'It is time for you to go, dear tsar, as your people are suffering as they are struggling with the unclean ones, many warriors await you.' And the tsar responded: 'We must finish praying, and then we shall receive the grace of Christ.' And so the second message came from the city—the time had come for the tsar to advance there and to strengthen the spirit of his warriors. And the tsar sighed from the bottom of his heart, shed many tears, and said: 'My dear God, do not abandon me and do not move away from me, render me Your aid.' And the tsar approached the image of Sergius the Wonder-worker, kissed it tenderly, and said: 'You who enjoy God's grace, help, help us with your prayers!' And the tsar took communion with holy water and partook of the wafer and bread of the Holy Mother of God, and, as the liturgy was finished, his spiritual father Andrey blessed him with the Life-Giving cross. – The tsar goes to his regiment. And the tsar left the church, protected by his prayers, but asked the devout men of the church: 'Bless me and forgive me, and pray to God incessantly, and help us with your prayers.' And the tsar placed his foot into the stirrup, mounted his horse, and hurried to his regiment, towards the city. And the ruler saw Christian flags on the city walls, and the sovereign arrived at his regiment and sent messengers to all his troops to ascertain their military preparedness. And once the warriors saw that the tsar had arrived and that he was courageous and ready to support them, immediately from all parts they rushed towards the city walls as if they had been winged, and from the walls they jumped into the city and waged ferocious battle. – The massacre in Kazan. And Mikhail Vorotynsky sent a messenger to the tsar to notify him that by the grace of God the pious were fighting the unclean ones and asked the tsar to help them. Meanwhile, the tsar dispatched the commanders of his tsar's regiment and ordered them to hasten to render assistance to their fellow warriors, but not on horseback for the city was overcrowded, and the passages were narrow. The tsar's commanders and knights attacked the impious bravely, and the tsar's warriors battled in every single spot at every single gate, in close fights, with spears and sabres, with knives in narrow passages; in many streets and in many parts both the Christians and Tatars fought each other with many spears and for many hours, and no one surrendered. – The Orthodox defeat the Tatars by the grace of God. Meanwhile, God helped the Orthodox, who were up above and defeated the Tatars on high, but the voivodes appealed to the tsar from every single corner: 'Your warriors are strong at fighting, and God helps both you, our pious tsar, and them, but many of the weak are seeking Kazan treasures, and you, tsar, should help us.' And the tsar sent his boyars [217] and many entrusted comrades to fight those who were greedy for treasures without helping their own; and he sent the commanders of his tsar's troops with their people to help those who needed it. And the Christians approached the Kul-Sharif Mosque, the Tezit trench, and here many impious colluded with Kul Sharif-molna and fought evilly, – The slaughter of Kul Sharif and his forces, – and by the grace of God, the Orthodox defeated Kul Sharif and overpowered all of his forces. Meanwhile, the Tatars rushed to the tsar's court, and the Orthodox warriors approached the tsar's court and slaughtered the unclean without any mercy—both men and women so there were rivers of blood. And the Tatars gathered at the tsar's court in anticipation of their impending death and decided between themselves: 'Let us leave the city immediately, for God fights with them. Otherwise, many our people will die.' And everyone ran towards the Yelabuga gates and started to strike and hack at the gates, and many of them rushed to the forest to hide. And at that hour the tsar was informed that many people were spread around and had fled beyond Kazan to escape. And at that place there were the voivodes boyar prince Petr Mikhaylovich Shchenyatev, who sent his regiment to attack them and defeat them, and Prince Andrey Mikhaylovich Kurbsky, who left the city on horseback and rushed in pursuit of them but found himself surrounded by them. Thus, they knocked him off his horse and inflicted many wounds on him. Although they thought they had killed him, by the grace of God, he survived and was subsequently returned to health. And the Tatars fled haphazardly towards the forest. The devout tsar sent boyar prince Semen Ivanovich Mikulinsky and armourer Lev Andreyevich Saltykov to Bezhbalda, and ordered boyar prince Mikhail Vasilyevich Glinsky and court boyar voivode Ivan Vasilyevich Sheremetev to go to the other side of Kazan; over there, beyond Kazan, the commander of the tsar's regiment Mikhailo Voronoy and Prince Vladimir Andreyevich, and voivode Ivan Ugrimov

were stationed. Boyars and voivodes, by the grace of God, defeated many of the unclean, and especially from the Kazan River to the forest many dead Tatars were strewn about, many were submerged in the river, and many suffered multiple wounds. – On defeating the impious. And with the help of omnipotent God, Jesus Christ, and with the help of the prayers of Our Lady Mother of God, and with the support of great Archangel Mikhail, and other ethereal forces—with the help of the prayers of the great wonder-workers and kinsmen of our Orthodox tsar, and with the prayers of all the saints—the tsar's victory over the foes —pious and crowned by God, our Orthodox Tsar and Grand Prince Ivan Vasilyevich, the sovereign of All-Russia, fought the unclean ones and defeated them overwhelmingly, and he defeated the Kazan Tsar Ediger-Mohammed, and took the Kazan gonfalons; and the tsardom, and the populous city was lifted in spirit. And the tsar ordered the capture of all the wives and children and had the warriors beat for their betrayals; and he took so many Tatars in his captivity that [218] all the Russian army was crowded with captives: as if every Russian man had his personal prison filled with Tatars; meanwhile, many Russians were released from Tatar captivity. And so many of them were slain, so all the city was covered with dead bodies, and it was impossible to step anywhere without touching corpses. And beyond the tsar's court, from where the Tatars rushed to escape from the city, and on the streets, there were equal rows of corpses and of fragments of the city wall; the trenches on the other side of the city were filled with dead people as well; and up to the Kazan river, and in the river itself, and beyond the river, and around the meadow, corpses of the Tatars were lying everywhere. The tsar praised God and saw the pious tsar and grand prince of All-Russia Ivan Vasilyevich that God's grace was bestowed upon him and his warriors, beloved by Christ, and he raised his hands towards God and began reciting prayers of thanks [...] The tsar-ruler is greeted in the Kazan tsardom. And so Prince Vladimir Andreyevich and all the boyars greeted the tsar: 'Be happy, Orthodox tsar, for we have defeated the foes! Stay in good health, our tsar, for many years in the Kazan tsardom that God has granted to you! God gave you to us as a real protector from the ungodly Agaryans for now the poor Christians have been set free by you, and this unclean place is purified with delight; and from now on we shall ask God to grant you longevity and defeat all other foes and bring them to your feet, and we wish your sons to provide your tsardom with successors, and we wish for ourselves that we may live in peace and calm.'

– The tsar responds. The tsar responded to them amiably: 'God did it with your, my brother's help, and through he sacrifice of our entire army [219] and through the prayers of the entire nation; now let the God's will be!' – Tsar Shigaley greets the tsar and the grand prince. And then tsar Shigaley came to greet the ruler: 'Stay in good health, our ruler, who has defeated the foes, and may you reside in your domain in Kazan for centuries.' – The tsar's response to Tsar Shigaley. The pious ruler replied to him: 'Tsar landlord, you, our brother, know this: you sent many messengers to them to achieve peace; and you know their cruelty—that they lied a lot and had been using much trickery for many years and had shed Christian blood; but merciful God showed them His righteous judgment and showed us His grace, and took vengeance on them for the Christian blood.' – On the tsar's arrival in the city. And the tsar ordered one street be cleaned by the time of the tsar's arrival—that the dead bodies be removed from the Mura-leyev gates; and once it was done, the tsar entered the city. In front of him proceeded his voivodes and many noblemen, the archpriest Andrey with the Life-Giving cross; while Prince Vladimir Andreyevich and Tsar Shigaley proceeded behind the tsar. And the ruler came to the tsar's court; and all of the voivodes and Orthodox people greeted the ruler, and the people shouted: 'Long live the righteous tsar, the victor over the barbarians! Stay in good health, our tsar, for centuries, in the dominion given to you by God!' And the Orthodox people beheld the Life-Giving cross and the pious tsar in the desolate ugliness of Kazan. This court had been ruled by godless tsars before, and much Christian blood had been spilled for many years, and many Christians had suffered evil, but now the righteous sun shines above it—the Life-Giving tree—the Holy cross, and the images of our Lord, Christ, and His Holy Mother and of great wonder-workers. And the Orthodox pious tsar, a kind sufferer together with his brother Prince Vladimir Andreyevich, with all the Christian army, and with all the people returned their gratitude to God and uttered: 'We thank you, our Lord Christ, for our generation has managed to do a wonderful deed—the dark, desolate ugliness was destroyed by the sun of the truth, and we sinners have erected Your Life-Giving cross and Your miraculous image instead of impure Mohammed, and You swiftly

managed to overthrow their kin with their tsar. We thank you, our God, our Heavenly Lord Christ, blessed by the Trinity, for giving us Christians such a pious tsar for the last time, who is as devout as previous tsars, and brave, and courageous, who lives in accordance with Your Commandments, and is prudent, merciful, and eternally patient, who succeeded in saving us from the foes.' After thanking God, the pious tsar ordered his voivodes to enter into the city and extinguish lights so that his warriors could extract many Kazan treasures; but the tsar asked for naught a copper for himself nor for captives—only tsar Ediger-Mohammed, tsar gonfalons, and the city's cannons; and he gave all his wives and children, and all his treasures to the tsar's warriors. And the tsar himself returned to his court, beyond the city, and went to the church of Sergius the Wonder-worker, and he shed many tears [220] thanking God on behalf of himself and his warriors. And then the tsar came to the feast, and praised his warriors with kind words, and promised to pay rewards to them, and gave a multitude of thanks to all of the injured voivodes and warriors. On the message to Moscow. And the tsar sent a messenger to Moscow to send news of the miraculous and great deeds—he sent his boyar personal aide Danila Romanovich Yuryev to his tsarina Anastasia, and to his father, and to his prayer Metropolitan Makary. – On sending charters to uluses. And the tsar himself sent his charters to the dark people [bondmen] all around the yurt, who were obliged to pay yasak [tribute], so that they could come to the tsar without any fear because God had already brought revenge to those who had committed evil; and the tsar promised to extend mercy upon these so that they could pay yasak in the same way they had done to the Kazan tsars. – The Arsk people send people to make obeisance to the tsar. And the Arsk people sent the cossacks Shemay and Kubish with a charter so that they could make obeisance to the tsar, and so that the ruler could have mercy upon the dark people, let his rage go, and order the collection of yasak, as previous tsars did, and the Arsk people asked the tsar to send a knight to them so that he could bring the tsar's chartered word, and gather them together because they, frightened, had scattered in all directions, and so they took a shert [an oath] and went to the tsar. And the tsar and grand prince sent the knight Mikita Kazarinov and Kamay-mirza to them. And the Cheremisa came from direction of the Meadow to make obeisance to the tsar, and the ruler had mercy on them and accepted them. – On consecrating of the city. On 4 October of the same year the city of Kazan was cleaned of many corpses, and the tsar arrived, chose a place in the middle of the city, and erected a cross there with his own hands, and laid the foundation for the Cathedral of the Holy Mother of God, of Her Holy Annunciation. And archpriest Andrey, and the abbots, and priests sang molebens [prayers] and consecrated the city with holy water; and the tsar walked with the cross along the city wall, blessing the city in the name of the Holy Trinity, the Father, the Son, and the Holy Spirit, and the Holy Mother of God and the great wonder-workers. – On consecrating of the church On 6 of the same month the tsar consecrated the cathedral church of the Annunciation of the Holy Mother of God, and archpriest Andrey and archpriest Ofonasey from the Christmas Church on the Sviyaga with the abbots and priests also consecrated it. – On the same day the ruler and tsar chose the voivodes who were to stay in Kazan after him. And he decided that the big boyar and voivode prince Alexander Borisovich Gorbaty must govern the tsar's place and ordered many other voivodes to stay with him, and many tsar's nobles, and many knights, and archers, and cossacks to help them. – The Arsk people made obeisance to the tsar. On 10 of that very month Nikita Kazarinov and Kamay-mirza arrived, and a lot of Arsk folk came with them, and they made obeisance to the tsar so that he could show them his mercy, and and entire land would make obeisance to him and pay the tribute. Also, the tsar of the rabble and the Arsk people came, and he ordered the payment of direct yasaks (tribute) [221] as it was in the times of the Magmedelim Tsar, and he ordered his boyar prince Aleksander Borisovich, and ordered them to make a shert (oath) and levy a tribute and rule there. – Meadow people made obeisance to the tsar. On the same day the Meadow people from Yak and many other places came to the tsar to make obeisance from all Meadow people, and as the Arsk people, they sought the mercy of tsar. Also, the tsar made a visit, ordered his boyar to make them take a shert (oath) and rule there; on the same day the rabble swore. – On the 11th of the same day the tsar decided to go to Moscow together with his brother Vladimir Andreyevich and their boyars: the tsar himself sailed down the Colga River, his servant and voivode prince Mikhail Ivanovich Vorotynsky with his companions went on horseback towards Basil City. – On the campaign from Kazan. On that day the tsar listened to the prayers at the

Annunciation Exalted and placed all his hopes on the mercy of the God and the Most Holy Mother of God and on the mighty wonders-workers and the rivers: 'Our Lord and King, who created this, save this city and its people in Your name!' And he ordered his boyar and voivode prince Aleksander Borisovich with his men to obey his order and go to the Volga and sleep on the banks of the river. The next day the tsar and his brother sat in ushkuls and went up the Volga River and arrived at Sviyaz city and stayed there overnight. And he ordered the boyar and voivode Petr Ivanovich to rule over the Mountain people and make them pay yasaks (tribute), and to guard them and ordered the Mountain people to rule in the city of Sviyaz; and the Meadow and Arsk people, to rule in Kazan; and the Kazan people, to hold consultations with the Sviyaz people and vice versa, when there were common issues [...] [222]

Documents from the Astrakhan Provincial Office on Migration of Kazan Tatars from the Russian Empire to the Crimean Khanate in 1754–1755

In these publication the documents are presented summarising the migration of Kazan Tatars and the representatives of other Turkic-speaking folks of the Volga Region from Russia to the territory of the Crimean Khanate, their presence in the capital of the Ottoman Empire in order to receive a Turkish-Crimean citizenship, and preventing measures taken by Russian Central and Regional government in 1754–1755. Apart from covering these aspects, the releasable sources contain the unique case of fixation of endonym of bulgars declared as migrants.

These documents are saved in Fund No. 394 of the Astrakhan State Record Office (ASRO), containing the remains of Astrakhan provincial chancery archives (1717–1786), in two files as per checklist No. 1: file No. 1812 with the following title: 'Edict of the Directing Senate from the State military division on the investigation of mass escape of Mohammedans to the Tatar Horde, ' 11 sheets, and file No. 1757, 'Case over prevention of escape of the Kazan Tatars to Crimea, ' 27 sheets. These are the original documents with the accurate numbering and in a good condition.

The selection of the documents for the purpose of publishing was made according to criteria of the maximum informational value concerning the reasons, directions, quantity index, and the circumstances of this migration. Documents are provided in the fragments in the abstract of the extract. The text was reproduced in the contemporary Russian alphabet and orthography.

No. 1

1755 January 1755. – The imperial edict from Astrakhan provincial chancery Directing Senate over the secret investigation of the circumstances of the secret migration of the Kazan Tatars and measures to prevent it. Fragment

1 On 18 January the State foreign affairs board introduced to the Senate a message from a Russian resident in Istanbul, A. Obreskov, dated 1 November 1754¹, ' about 70 Mohammedans that escaped from the Russian Empire to the Belgorod Horde²... At the end of September 10 people out of those 70 Mohammedans residents of Her Imperial Majesty came there [to Constantinople], who escaped from the land of Her Imperial Majesty to the Akirman or Belgorod Tatar Horde. Calling themselves Bolgars,

¹ 1 The consideration of this message at the Senate session is reflected in the publication: Senate Archive. Vol. 9: Protocols of the Ruling Senate. 1753–1757. St. Petersburg, 1901, p. 311, 19 November 1754—that is before the State Collegium of Foreign Affairs sent the message of A. Obreskov, the Kiev Governorate Chancellery had directed the order to the Zaporozhian Sich about covertly sending the Cossacks to the Crimea to reconnoiter 'subordinate Mohammedans in the number of 70 people, escaped from Russia, the Kazan Governorate, to Akkerman, where they founded their own settlement'. The Zaporozhian people twice were sent out to find out their location, but could not manage to do so (Архів Коша Нової Запорозької Січі. Case documents. 1734–1775. Vol. 4. K., 2006. pp. 55, 57).

² The Belgorod or Budzhak Horde. Was formed at the turn of the 16–17th centuries in the Northwestern Black Sea area as a result of the Nogais' migration from the Volga-Ural Region who formed a local group Akkermen Nogailar (the name takes root in Turkish fortress Akkermen—present-day Bilhorod-Dnistrovskyi, the Odessa Region, Ukraine); was in the composition of the Crimean Khanate.

* Hereinafter, the title 'Her Imperial Majesty' written in capital letters in the original is given in the abbreviation.

[they] complained to Porta about fire and other torments, which took place in Her Imperial Majesty's Empire, about being forced to abandon their Mohammedan religion, and they asked for permission for their nation consisting of thirty thousand people to remain in the Turkish State. These arrivals (except for the ingoing) received permission. [Porta ordered], the Crimean Khan gave them // 1 overleaf, at his discretion, a proper place, so they were sent to Crimea, and they have been there now for 4 days, and fairly secretly. And he, the resident, having failed to find information about the districts they came from and their names because of their cautiousness, tried to send the petition sent by them to the supreme wazir, and though he got hold of it, there was nothing useful contained in it, as no places they came from or titles are indicated. And the simple name Bulgar only causes confusion because this nation professes the Orthodox Christian religion, maybe the Kazan Tatars settled down in the places where Bulgars used to stay and took their name. But as this is unknown to him, as a resident, then he suspended his judgment, and is in anticipation of if Her Imperial Majesty, by her supreme command, will deign to learn from the Kazan province and other provinces, where the Mohammedans live, where these seventy people came from, as so many people could not go unnoticed. *In response to this message the Senate resolved: to send to the Kazan, Nizhny Novgorod, Voronezh, Astrakhan, Orenburg, and Siberia province chanceries an edict on the secret investigation of the escape.*

Marking: received 26 February 1755.

Astrakhan state record office, f. 394, inventory 1, file 1812, sheet 1-1 overleaf.

No. 2

1755 August 1755. – The imperial edict from the State Board of Foreign Affairs to the Astrakhan governor major-general A. Zhilin over the identity of the Kazan Tatars and Bashkirs, travelling to the Ottoman Empire with the secret letters. Fragment

11.'...As some of the Bashkirs were bold enough to stand in oppositon¹, and though measures were taken to pacify them, although, if the disorders continued, there is no doubt that those opponents would send someone to Ottoman Porta, and especially to Crimea and Kuban for such an agreement and request for help. That is why you should order, without announcing the rebellions of the Bashkirs, in all places of your authority and outposts caution and verification of whether any of the Bashkirs and Kazan Tatars close to them travel abroad with any letters or verbal orders, and if there are any, they should be apprehended and the confiscated letters sent to the foreign affairs board, and those apprehended shall be held// overleaf 11 under guard. For more security, you should keep this decree and not give it to the chancellery, and not inform anyone of this matter, except for the foreign affairs board. This decree has been sent to general-major Yefremov, to foreman Somov, and to colonel Spit-syn, as well...'

Note: received 21 September 1755

Astrakhan state record office, f. 394, inventory 1, file 1812, sheet 11—11 overleaf.

No. 3

1755 July 1755. – The imperial edict from the Directing Senate of the Astrakhan provincial chancery informing of the discovery of the Kazan Tatar migration to the Crimea, and the receipt

¹ This refers to the Bashkir Rebellion from May 1755 to summer 1756, the spiritual leader of which was Batyrsha Galiev (see: T. Khudaigulov. Batyrsha Galiev—the Ideologist of the Bashkir Rebellion 1755–1756 // The History of Science and Technology. Special issue No. 5. Ufa, 2008. pp. 47–50). The migration of the Kazan Tatars which happened on the eve of this uprising should be observed within the general context of the Islamic population of the Volga-Ural region's dissatisfaction at the strengthened centralised policy-making of the Russian authorities (including forced Christianisation) in the first half of the 18th century (see: N. Baidakova. The Policy of Russian Authorities Towards the Non-Christian Population and the Newly-Baptised from the 16th to the beginning of the 20th Centuries. Dissertation for Candidate of Historical Sciences M., 2006. pp. 86–97).

of information from him about the preparations for the mass migration of Kazan Tatars abroad, and containing measures to prevent the above-described events. Fragment

1 *21 July 1755 The state foreign affairs board submitted to the Senate the fragment sent by Kiev's Vice Governor I. I. Kostyrin on 8 May 1755, informing of the following:* Warrant officer Klimovskoy from the Zaporozhian Sich reported in his letters sent to the Crimea Khan together with the letters from the Kiev military post on May the 5th that while he was in Bakhchisaray he learned that in Crimea, in the town of Karasev¹, there lives a runaway Tatar from the Kazan Governorate who said that he was not alone in coming here from the Kazan Governorate, and that there are many of them, seeking suitable land to settle in within the region of Crimea, reasoning that almost all Tatars in the Kazan Governorate had been drafted into the military and christened by force, while in Crimea life is more free and the religion is the same. That is why about twenty people, who were in the Crimean area in 1754, returned to the Kazan Governorate to inform others, and to take their wives, children, and belongings in order to escape to the region of Crimea through the steppes past Tsarytsyno and Cherny Yar. They will go overseas to Yeni-Kale², and while traveling from the Kazan Governorate to the Crimean area, they dressed their wives as men and called them workers; as for their children, they pretended that they were going to learn the craft of the merchant and were moving to Tsarytsyn. // 1 overleaf. Under a decree of the Directing Senate of Her Imperial Majesty, the Kazan provincial chancellery was ordered to send a decree with a hander, to order a secret meeting about this escape by the Tatars and as with the issuance of a sea letter, required for work and the merchant craft, as well as in their houses, with their wives and children, as described in the fragment, and as they travel past Tsarytsyno and Cherny Yar they are hidden. And if there are men like that with their wives and children, women dressed as men, looking suspicious, they should be taken under the guard and interrogated and they shall see what is revealed by investigations, and they shall not appear in their houses and secretly escape, which is why this should be done very cautiously, not provoking any confusion in their houses about an alien religion and without any evident suspicion, but still observing them attentively, as wrote the Directing Senate. Also near Saratov and Tsarytsyn, such runaways, as well as those suspected of escaping, should be caught and reported, and secret orders should be sent to Colonel Kazarinov in Saratov and to the Astrakhan province chancellery from the Senate to the commander at the Tsarytsyno border, and the Astrakhan province chancellery shall be informed, and the edict of Her Imperial Majesty obeyed. And the orders shall be sent to the mentioned places...'

No. 5

15 March 1755. – Report of the Tatar and Kalmyk issues office¹ worker Kologrivov addressed to the Astrakhan province chancellery over the status of the migration of the Muslim population abroad and the difficulties of locating them. Fragment

19.'..As... a result of the investigation which appeared in [1]740 the Astrakhan Tatars and their servants are on the run, and their names and year of escape, those with the above-mentioned decree on the investigation and information of Tatar and Kalmyk issues, some of them have been reported to the province // 19 overleaf chancellery, some of them have not been reported, and the register is attached. Moreover, since [1]740 and before it.. some of the Yurt Tatars escaped, but no one remembers their names and how many there were and where they ran to. Now there are no such intentions of escaping among the Mohammedans, only some heard from the dependent Kalmyk Tatars who was in Kubana, that some of the runaway Astrakhan Tatars want to come back to Astrakhan.'

39. Kh.Sherifi. 'Zafer name-i Vilaiet-i Kazan'

This text has been reproduced from the following publication: Publication of A. Melek Uzyetgin – Kh. Sherifi 'Zafer name-i vilayet- i Kazan' // Gasyrlar avazy – Echo of centuries. No. 1. 1995.

It is indisputable, irrefutable, and evident for all-knowing people with sincere and faithful souls and for honourable people with faithful thoughts that Bulgar vilayet is in the seventh heaven out of all seven. It's related to the Moon—that is, it is under the aegis of the Moon. And as noted in the books on mathematics, this Bulgar vilayet, for the reason that it is too close to the the North Pole, it lacks one out of five times for namaz—yastu namaz at the end of May and at the beginning of April. That is because the dawn is like a blaze in the presence of two imams. Also, as indicated in the books 'Al-Kenz, ' 'Al-Vafi, ' and 'Al-Kafi, ' a little before its [dawn] disappearance at the indicated time, the time of morning namaz comes—that is, of the genuine morning. For that reason, namaz yastu is unnecessary for the people.

Also, the capital of the Bulgar vilayet, beautiful and serene city—one of the greatest cities of the Islamic world—Kazan is a phenomenon of time, and located far away from the Islamic vilayets, it shares borders with the states of the infidel.

A saying: 'Do not be close to the bad.'

There is nowhere to await help and support from for Kazan, apart from the protection of the Lord of the worlds and the help of the angels. In accordance with the needs of the epoch, for the purpose of ensuring the wealth and well-being of the country, calm, and security for the people, for the purpose of ensuring peace in the world, the rulers of the beautiful city of Kazan pretended to be friends, exchanged ambassadors and government officials.

A poem:

*'The tranquility of the world is based on an understanding of these two words:
To be true to friends and to be falsely hospitable with enemies.'*

The holder of a sable and a pen, the source of nobility and generosity, honoured by the grace of Allah and forgiven by him, Abul-Gazi Safa-Girey Bakhadir-Khan, when he became the ruler of the Kazan vilayet for the second time, because of the difference in religion with the unfaithful in this world and a

¹ Established in 1724 for the general supervision and dispute resolution between the nomadic population of the Astrakhan Governorate; was subordinate to the secretariat of the Astrakhan Governorate and abolished in 1771.

retreat in the afterworld, adhering to the directions of Ayati Karim: 'Verily, the virtuous will be in bliss, and the wicked will be in Hell' (Quran, LXXXII, 14), 'Fight the idolaters altogether' (Quran, IX, 36), 'And fight in the cause of Allah with your property and your life' (Quran, IX, 20), heeding the words of the Prophet: 'In a fight there will be one thing out of two wonderful things—either victory and a trophy, or death for the sake of faith and paradise' and according to this Hadith shall be happy.

Beyt:

*'There is one wonderful thing for the family of fighters for the faith in the world,
If they win—they are awarded a trophy, if they die—they ascend to Heaven.'*

He was gladdened by the words of Muhammad the Chosen: 'The one who sends an arrow flying on the path of Allah, will be considered one who has succeeded, as shall be the one who gave him the arrow.'

Kyitga:

*'If someone sends an arrow flying into the idolaters for the sake of faith,
He shall be considered equivalent to a freed slave.
Each one who releases an arrow in the hope of a holy war,
Or swings his sable, will be equal in mercy.'*

And also, having thought over the Hadith of the Prophet: 'Waiting for an enemy on the front line throughout the day and the night is more useful than abstinence for a month.'

Kyitga:

*'Hitching his horse up and spending night and day dreaming of gazavat
Is better than a month of abstinence and evening namaz.
If there will be living and oblation, it will be put into the grave,
If there won't be any, it will become a place to hide from the Dezhal rebellion.'*

Anticipating an excellent reward and many blessings from Allah the Almighty, having laid the foundation for enmity and having cut the thread of friendship between them, having opened the gates of contradictions and having closed the gates of relations, saying: 'If I don't avenge myself against the oppressors, I will become the oppressor myself,' saddling the horses of the holy war and spreading Islam, girding the glittering and killing the unfaithful blessed sable.

A poem:

*'Each bird from the wealth of the sea of his sable
Will catch one hundred crocodiles on the day of battle.'*

Having taken up the reins: 'Strive with your property and your persons in the cause of Allah (Quran, IX, 41) and have placed feet into the stirrups of bravery and desire, and encouraged by the hope of power 'Allah has exalted those who strive above those who sit still, by a great reward' (Quran, IV, 95), received different pleasures and nobility and peace a thousand and one times over from the serene content of ayat: 'Think not of those, who have been slain in the cause of Allah, as dead. Nay, they are living! 3754 They are granted gifts from Him' (Quran, III, 169). In the vineyards 'Thou giveth sovereignty to whomsoever Thou pleases, and Thou taketh away sovereignty from whomsoever Thou pleases' (Quran, III, 26) elevating the knowledge of Ayati-i Kerim whereby thus Allah strengthens with his Aid whomsoever he pleaseth' (Quran, III, 13), saying: 'How many a small party has triumphed over a large party by Allah's command!' (Quran, II, 249), taking the happy warriors of Islam, as devotees of bad religion with warped views are evildoers— 'They are in manifest error' (Quran, XXXIX, 22) —going and killing them and having destroyed them, they brought innumerable captives and untold wealth.

Thus pass much time. Accidental is the saying of a fate speaker: 'Wheresoever you may be, death will overtake you, even if you be in strongly built towers' (Quran, IV, 78) reached blessed Highness Khan, and he heard Say, 'the Death from which you flee will surely meet you' (Quran, LXII, 8), and Khan at once, handing his life into the hands of fate, awaiting the mercy and Grace of the Lord Almighty, saying: 'Surely, we belong to Allah, and to Him we shall return!' (Quran, II, 156), seeing in the words of ayat: 'When their time has come, they cannot leave behind a single hour, nor can they move ahead of

it' (Quran, VII, 34), giving up on living and the desire for the hope of revival, at the feast 'whosoever is taken away'(Quran, III, 185) poured from the hands of a cup-bearer – 'The Lord gave them to drink'(Quran, XVI, 21) a drink – 'All that is on it (earth) shall pass away'(Quran, LV, 26), moving from the house of arrogance to the house of happiness: 'This is the decree of the Mighty, the Wise!'(Quran, VI, 96).

Ghazal:

*'Oh, what a shame! The soul encased in the body at death will tremble,
Saying, parting with the soul is a grief, the body will tremble.
This death wrapped the soul in grief and worry,
The spring of immortality will tremble from the fear of death.
When death strikes on earth among the people
The stars and sun will tremble.
And changing the colour of its face into black and red, and yellow,
Or becoming invisible, even the bright moon will tremble.
Having given away one's wealth and gathering an army, one cannot cheat death,
Even the khan or sultan will quake in fear at this.
Because of the sudden appearance in the soul of the fear of death
The earth will quake, and many mountains and fields will tremble.
Hey, Sherifi, one should prepare up to the moment of death,
It is no use, saying 'either there,
or here, there shall be trembling.'*

The unfaithful, being satisfied with the events wrought by fortune, and happy with what's happening in the base world, he is unfaithful, conceited and arrogant, he is an idolator and defeatist of the epoch, and a troublemaker with the gold of the world, one of the two devils, the leader of the cursed army, godless Ivan, with his look of the pharaoh and Nimrod, wishing to be at the head, gathered a massive, many-numbered army and vile warriors, about 800, 000 strong with guns and weapons, but it is said: 'As for those who violate the promise to God after pledging to keep it, and sever what God has commanded to be joined, and spread corruption on earth, in fact, they inflict harm'(Quran, XII, 25). They came, and encircled the great city of Kazan and besieged it.

The hostile army was numerous, like ants swarm and the tribe of Yajuj, not like people.

Ghazal:

*'What a wonder! This city of Kazan is a place of rejoicing in the world,
There is no other city in the world providing shelter,
There is no other city in the world that blooms like Kazan,
One can always find food and drink in Kazan – the city of the Universe!
We have inherited our power from our ancestor khan,
This place on the globe has always been a city of the khan, the place for a khan's son,
Having sold his land and house, he will not pay his father's tax,
Why is this villain here? This is not Ivan's city!
Sharifi, do not leave this city as long as you believe in gazavat,
From this day forth, they shall proclaim him the lord of Kazan.*

At the fortress gates, having gathered the young, stood the supporter of the state and path finder for all these people, the son of the late Polat-bik Mamay-bik together with Nurgali-mirza – may their significance rise, – experienced in military art, the one who defeated the brave and destroyed those like Dara and Iskander.

A poem:

*'With the garlands of excellence on their heads,
The warriors stand in line side by side.
Each of them, like a lion on the battlefield –*

Will always kill the enemy with a sable.'

And at one of the Khan's gates there is a devoted friend of the field of bravery, a lion of the art of courage—Kozydjak ulan—may Allah increase his power. A poem:

'Each one, when fighting with the enemy,

Will feel within trust in the sable of Islam.

This happens just once in a lifetime:

'Man of the men is Ali, the sharpest among the sables is
Zulfikar.'

He is master of his craft, he took under his care the young and the truly brave.

And at the other fortress gates is the head of the group of the brave, Iskander of the field of courage, Ak-Mohammed-ulan—may his life be long.

Beyt:

At the meeting, he is Iskander, in battle, he is Rustem,

May his shadow on this earth not fade.' A poem:

'Hey, blue bell on his horse's neck—

The sound of the bells is sometimes like the sun.

Everyone, who shoots an arrow into the world of infidel warriors,

Should call it not an arrow, but a gun.'

And at the other gates of the fortress, the grandson of Kutbi-l-aktab Sayyid Ata from the Prophet's line, the son of the late Sayyid, Kul Muhammad Sayyid, may his virtue continue, took the lead of the dervish-like youths and gathered his Sufi subordinates. Inspired by Ayati Kerim: 'Say: As for me, my Lord has guided me onto a straight path—the right religion, the religion of Abraham, the upright'(Quran, VI, 161) and Ayati Sherif: 'The religion of God is Islam' (Quran, III, 19), resorting to the protection of tekke the Prophet and the Lord Almighty, at the chieftaincy of the spirit of the Prophet Mohammed, asking for help from allos the prophets' spirits, the spirit of the father, Seyyid-Ata—may Allah bless his secrets—fulfilling 'in any case, when in doubt what to do next, ask for the help of those who are in the grave' and, having asked for help, saddling the horse of holy war and preparing for battle, were the steadfast were ready to fight the unfaithful.

And at the other fortress gates—Barbolsyn Atalyk, the one as if with a flag of Dar and as dexterous as Iskander, the example of Rustem and similar to Bakhram.

A poem:

'May he live in the divine world,

And may conquests always be his companions.

May there always be the courage,

If he dies for you today, may there be no grief.'

He was together with those who served with him.

And at the other gates of the fortress—the city Bey, the ruler of Bulgar vilayet, 'much fancied by sultans, relics of mother-of-pearl and the pearl of esteem, the one who regulates business in the districts of sultan, the conqueror(key-keeper (?)— F.Kh.) of khan's treasury, from the clan of ameers' Baybars-Bey—may his power increase—adding courage and displaying bravery (the heart of a courage), always said:

Kyitga:

'I'm not one who would leave the battlefield,

That's my head, covered in blood and dust,

Anyone, who starts a battle, plays with his blood,

The one who flees on the day of a battle, plays with the blood of the entire army''.

Some of well-known brave men and happy strongmen—Narikhibeg, Ay Kildi-Beg and Ak Matay-Beg and the community of hajjis—may Allah help them—going anywhere attacked by wicked destroyers, without regard to their own life, helping and fighting the wicked unfaithful, destroying them and breaking their spears, were honoured as fighters for their faith and were respected.

All in all, two forces faced each other to fight, struggle, and battle each other.

Mesnevi:

*'Stood in the line among the detachments,
Lined up the troops from the sea to the moon.
The troops stood in groups like mountains,
Like sea waves.
Head-to-toe in chain armour is Rustem, and with a spear,
Head-to-toe they are in metal.
Warrior-lions are everywhere,
With their arrows and bows.'*

By hearsay, and it was found, proved and confirmed that there were 11 firing guns in the forces of the infidel. One artillerist went over as well. Each gun shell weighed about 1 batman (32 kg - F.Kh.) according to Kazan weighs. It was the size of a horse feeder. There were different spells and various other things inside of a shell, which would surprise even the mind of Aristotel and the meaning of 'Aristo' would be 'confused and shocked.' These shells are belted from outside with iron, inside of beaten copper there are 'white oil' and sulfur, joined and fastened tiny guns, armed with pellets of 4-5 leads, and they were firing on a dark night 'like a heavy rain from the clouds. 'Wherein is thick darkness and thunder and lightning' (Quran, II, 19). And the flashes in the air flying out of the flaming shell on a dark night could be compared to the stars and planets falling in a single stroke.

These huge shells were falling at night everywhere in the town and no one could approach and put them out.

Beyt:

*You can walk up to every fire and extinguish it with water;
But even water cannot extinguish this fire.'*

Only some brave young and courageous men, remembering that 'a man will ascend only by his own efforts,' rushed to this fire like a salamander, and with the help of the angel Yudje and mental effort quenched this house so that no trace, nor signs, remained.

A poem:

*'Salamander is needed for water, fish-fire,
The brave man is needed for work.
If assiduity will accompany a man,
He will achieve success eventually.'*

There were 4-5 air guns as well. Every stone shell was like a piece of a mountain. Each time these guns were fired, these stone shells were launched into motion by expulsive force, flying out like a bird—'the bird is flying using its wings,' —climbed into the air. 'And you see the mountains, and imagine them fixed, yet they pass, as the passing of the clouds—the making of God'(Quran, XXVII, 88). Appearing in the sky as a spot in the air, i.e. moving in the sky, after the waning of the expulsive force, it fell in a natural trajectory. It fell more powerfully than a tornado, faster than the arrows of fortune.

A poem:

*'When a worse fate befalls us
All scholars will become blind and dumb.'*

Wherever it falls, as it's said: 'He (Allah) sends thunderbolts, striking with them whomever He wills' (Quran, XIII, 13), destroying the earth it passed through seven layers of the earth.

A poem:

*'One stone fell down from the sky,
The mountain and the earth roared like a lion.'*

Beyt:

*'As if fish fell down onto the earth, and upon the head,
One cannot say that this 1001 is a property of it.'*

It's impossible to count all of the things and guns striking the fortress. People, afraid of the sounds of the guns coming from the sky and muffling all other sounds could not recognize each other— 'And you will see the people drunk, even though they are not drunk. But the punishment of God is severe' (Quran, XXII, 2). 'And that day will be occupied with suffering' (Quran, LXIX, 37). We were amazed that the Righteous Lord and Almighty did an ambiguous favour to his servant by providing these cruel infidel and self-conceited, arrogant idolaters such a show, these troops and warriors, such tremendousness and kingship!..

A poem:

*'That the other people were amazed, —I forgive Allah,
For no one can comprehend the perfections of Allah through intellect and knowledge.'*

A poem:

*'My Lord, you are so generous, when from the reservoir of guilt
Fire-worshipers and Christians received their shares.
My Lord, will you deprive your friends of
The rain of mercy and blessings?'*

All in all, two forces that have drowned in iron were equally fighting and struggling against each other.

Beyt:

*'The distance between two walls is as firm as iron,
You should know—for all the world like the street of an invisible city.
Two forces started moving,
The world started trembling from this amusement
Frp, tje rumble and moaning of Karnay (?)
Hands and feet started trembling.'*

So this battle, as khashir, went on for ten days.

Mysra:

*'It was such a battle—like the day of Last Judgment,
The world was filled with the sound of hanjars,
Blood ran in torrents in Kazan.'*

May the help and mercy of Allah be praise and a greeting for the Prophet. With the aid of Allah, the mercy of the worlds of the Supreme Creator are close, and with the help of angels, the sounds of Ayati Kerim: 'Indeed, Allah will know wherever you are and no matter what you do'(Quran, III, 160), prolonging life, reached the ears of the Muslims and the meaning of Ayati Kerim appeared: 'If Allah helps you, no one will defeat you anymore'(Quran, IX, 25). The evildoers, devotees of the false religion and warped views were destroyed to the extent that their traces were even ripped out from the pages of Time. 'Thus, the last remnant of the people who did wrong was cut out. And praise be to God, Lord of the Worlds!'(Quran, VI, 45). The sinful infidels, having thus died, were lying on the two plains of the fortress and were food for dogs, wolves and hyenas. There was no place to set a foot.

A poem:

*'As if loaded up with firewood, without a cut
People's heads lay on this broad and open place.'*

In short, these battles went on for 16 nights without a break. On the fifteenth day, the destructive infidel turned back in a disintegrated, withdrawn, driven out, and devastated state. 'Praise Allah, who helps his servant, values his forces, having destroyed the enemy.'

Beyt:

*'Prosperity and fortune do not come from knowledge of the deed,
It all means nothing without the help of the Lord Almighty.'*

Kyitga:

*'If immortal Allah defends someone from their enemies,
He doesn't need armour and high fortress.'*

*If they aren't saved, there's no use of these things,
Even if they are saved, you won't cut a hair from Zulfikar's head.'*

The appeal and mercy of the scholars, hope for the kindness of commentators is that if this 'Zafer Name' will be noticed by these kindhearted, poor (Sherifi) will accept his drawbacks and fault and admit them. His grief and fault and he honours the Righteous too, for his defense, sinful and indignant, they should sincerely read one 'Fatikh' sura.

This event took place in the month of muharram of the year 957. The author of this valuable script and the one who inked these white sheets was the poorest of servants, Sherif Khadji Tarkhani.

Translated from Turkish by Farid Khakimzyanov

40. From a collection of the 17th century

Russian State Archive of Ancient Acts. Collection 181. File 591. Sheets 787–789.

In the summer of 708 of the seventh¹ the Kazan princes Mamai, the prince at the head, and uhlans, and molns, and afizs, and azeis, and all princes, and centurion-princes, and decurions, the common (black) people, and the princes of Arsk, all² betrayed the God-appointed sovereign tsar and Grand Prince Ivan Vasilyevich, the autocrat of all Russia, and sent to Crimea to ask humbly from the Crimean tsar³ that he give them Prince Dovlet Kirey⁴ to rule over the Kozan kingdom. And with their envoys they sent the Crimean tsar a book as a gift. And that book was written in the Persian language, and its name was 'Yazaib el`maluk`kat, ' in Russian 'Wisdom of All the World,' according to their busurman heresy. And the Urak people with their companions beat those envoys and Kazan Tatars of the tsar grand duke in the field, and took that book from them and the yarliqs, and sent it to Moscow in that summer 708 seventh on the 1st day of May. And there were four written yarliqs. And the first yarliq read as follows⁵. – To the Highest Threshold of the great sovereign holding great power and to the just lord and victor, his tsar majesty of Kozan lands, Momai prince at the head and [uh]lans, and molns, afizs and azeis, and all princes, and all setennye (centurions – V. T.) princes, and decurions, and all common people, and princes of Arsk, and all people ask humbly for your favour. And the petition is this. To our death we did not want to betray our sovereign, the deceased Safa Giray, and in his happy times to fight and slash those Russian people, and we could avoid it, or again those enemies of ours would defeat us in battle. And that made us worthy of Heaven. We lived with that hope. It is true that we reached God with our destinies. And now we praise your long-lived name and we pray to God (for) your happiness. And now, sire, if only you want that Yurt not to stray from you and fall into the hands of another, and when your servants Yanbars and Syalkish arrive with this petition charter, you, sire, will let him, Tsarevich Dovlet Kirey, leave this land. Muslim people will pray to God for you, and you will receive salvation. And when these people come to you, and you will not send him, the Yurt will fall into other hands. And you would not take Muslim sins. If the deceased Mahmet tsar rests in God's

¹ The year 7087 from the world creation, in view of the date 1 May, mentioned below, corresponds to 1579. However, if we judge by names present in the text, events unfolded exactly thirty years earlier, in 1549. It is likely a slip in the source and we should read 7057.

² This refers to the Oghlans, mullahs, hafizes, khojas, beys: different categories of the aristocracy and clergy.

³ That is Sahib Giray ibn Mengli Giray—the Crimean Khan from 1532 to 1551.

⁴ Devlet Giray ibn Mubarek Giray—the Crimean khan between 1551–1577. After learning that Kazan people invited the prince to the throne (therefore, some of their embassades broke through steppes to the South) sultan Suleyman I allegedly sent Devlet Giray to Kazan. In reality, it was a trick to lull Sahib Giray's vigilance with whom the Padishah was displeased. Upon arriving in the Crimea, Devlet Giray led the conspiracy against the khan and soon the latter was killed. Devlet Giray occupied the throne of Bakhchysaray, while Kazan people who decided not to await prince Giray, enthroned the minor Utemish Giray ibn Safa Giray.

⁵ The text of the document till this place was published by A. Sedelnikov, the next text below is M. Tikhomirov's translation of Kazan people's letter to Sahib Giray up to the words 'and you will receive salvation'.

will and left none of his kin¹, and therefore that Yurt fell to another². And now if it is your favour, take care of this land and people, so that the Yurt will not be taken by another. And you know how you will decide. This petition is from all the land, so that you will do a favour, hurry, and soon send [Devlet-Giray], and with him Prince Yangurchej and Prince Chalagozinya³. Yours is the land, and yours are the people. You know how you will decide. Having spoken, we sent the petition charter⁴.

**Extract from the report of the continuator of 'Chinggis-name'
by Ötemish Hajji about the late Shibaniids**

Translation

Fol. 72r. This section

fol. 72v will tell of Beg Kondy's lineage. Altunay Sultan, his father Kuchum Khan, his father Mur-taza, his father Aybak, his father Muhammad, his father Beg Kondy, his father Melik Timur, his father Batavul, his father Juji Buga, his father Kalbak Buga, his father Bahadir, his father Shibani-khan, his father Juji, his father Chinggis Khan, may Allah be pleased with them. We begin the story of Shibani-khan. Shibani-khan had three sons. One was called Shagban, the next one, Shevval, and the other one, Bahadir, and his (Bahadir's) son Kalbak Buga, his son Juji Buga, his son Batavul, his son Melik Timur, and of Melik Timur several princes were born. These are the names: the eldest son Ilik, younger ones Pusat, Janta, Sivinch Bey, and Beg Kondy. The mentioned Pusat had two sons. One named Arab, the other, Ayba. From the lineage of Ayba came Abulkhaer-khan, from the lineage of Arab, the famous Khan Yadigar. And from the lineage of Beg Kondy came Aybak khan, who was a famous khan and ruled having joined the countries of Kyrgyz and Kazan. It is also known

fol. 73r. son of oghlan Ilik Kan Bay and his son Mahmudek Hoja. The mentioned Abulkhaer-khan, his father Tugly Sheikh, his father Ibrahim, his father Pusat now deceased, may Allah forgive his sins and take him to Heaven, Abulkhaer-khan, may Allah be pleased with him, oghlan Shah Budag-sultan was born of him, he was his son. A famous shahid (fallen for the faith) Shakhi-beg and one more son of Shah Budag Mahmud-sultan was his son, the just and perfect in faith Gabdullah Bakhadir-khan. The father of the mentioned Yadigar-khan was Temir Sheikh-oghlan. And his father Hajji Tugly-oghlan, they say, his father was Arab-oghlan. He was a man of much wealth. The father of the last Kydyr—Ibrahim and Hyzyr-oghlan Bakhtiyar-sultan, son of Hamza Sultan, son of Mekhdi Sultan—after him Hajji Muhammad-khan became the Khan. He ruled Bashkurt, Alatyr, Mokshy and captured the renowned Shekhr-i Tura that was in the direction of the Shekhr-i Bolgar territories of Mangyts and was a great Padishah. And more about the sons of Gali, son of the famous Beg Kondy. This khan

fol. 73v. had three sons. Aky, Shaybak, and Mahmud. Shaybak also had three sons. One was named Ak Kurt, then Bobey, and one more Ak Muhammad, and then Muhammad had four sons. Their names were Aybak, Aky, Mamuk, and Musa Chalush. This mentioned Aybak had two sons. They had three princes. The names of the oghlans are Sary Sultan and Murtaza Sultan, and when they finally became adults, they gained control over all Transoxiana, between (the rivers) Inrek and Suvnak Derya-i Tur in the houses of Elif (?) became the Khan. This Murtaza-khan had three sons. One was named Ahmed Giray, and the other, they say, was Kuchum-khan. And he (Kuchum-khan) was clever and perfect, they

¹ It is obvious that it is about Mohammed Amin, Kazan khan (who ruled between 1478–1496 and 1502–1518), after whose death the dynasty of Ulugh Muhammad, the founder of the Kazan Khanate, was interrupted.

² This refers to the enthronement in Kazan of Shah Ali ibn Sheikh Auliara in 1519—a Russian protege and representative of the dynasty of the Great Horde khan, Ahmed ibn Küchük Muhammad (1465–1481).

³ Yamgurchi Bey was one of the closest allies of Safa Giray during his life in the Crimea (consultation of A. Nekrasov). We did not manage to find out who 'Chalagozinya' bey was.

⁴ Texts of the rest three 'yerliqs' are not presented in the source.

say. And Chaylu-sultan also was a son of Murtaza-khan, and by now, they say, in Kazakh yurts (Kazak yurtlarynda) he has a son. Kuchum-khan also fought in Turkestan in the area of Otrar, and he resisted and fought with all the country of the Kazakhs (Kazak mämläkäti). The Supreme God gave him power and help, and he captured them and distributed their possessions among the people and became the Great Khan of Tau Buga Ishdege Yurt (Tau Buga yurty Ishdege). The names of the sons (descendants) of Kuchum-khan appeared because of this. Galikhan, Tash sultan, Kytai

fol. 74r. sultan, Muhammad Kul sultan, Chavak sultan, Hajim sultan, Ishim sultan and Altun Tai sultan, and there was another sultan, but he died in infancy. This was known to his karachas and spread among the people, and he also had ten daughters. Those mentioned here, during the times of his eldest son Gali-khan, their state (yurtlary) was shattered and disintegrated, and some territories of Bashkurt, Alatyr, and Moksha were captured by Russian kafirs (Urus kuffar) and still remain under the mentioned kafirs. To gather the army (or to join the armies), Gali-khan came to the famous Ishtirak beg. However, he also, after saying that my brother's son (inim ugly?) could not bind me to himself, did not help him, and, having taken the money that remained from his great father, having lost hope, and having put the body of his dead son on his horse's back, he crossed over the famous passage Jan Sebuk of the river Yaik (Derya-i Dzhyik) and buried him in the fortress of Ufi situated on the bank of the Belaya.'

42. Story of the 'Tatar Spade'

The story was preserved in a family of an ancient Tatar lineage of the Aghishevs. The story was told to I.Mirgaleev by its representative Ravil Aghish, who lives in Turkey. Ravil Aghish said that this story had been passed on in their line from time immemorial. A Tatar baskak, collector of yasak, was sitting in a cart on a throne, and a Russian prince with his noblemen was standing before him. After the announcement that yasak tax would be collected on behalf of the Khan, for which year, and its sum; the tax collectors, without getting off the cart 'arba, ' would hold out a special big 'spade, ' on which the Russians would put the money. The yasak collectors, without touching the money, would empty the contents of the 'spade' into a chest, which was on a special cart.

The story belongs not only to the initial period of the Kazan Khanate, when part of the so-called vykhod (tax) of the Horde was transferred to the Kazan khans (and later until the last days of its existence, the Kazan Khanate continued to receive kharaj, although disguised by Muscovite princes under the name 'pominki').

Translation

'A story circulated among our ancestors, which has survived to our day from the times of the Kazan Khanate. In ancient times the Khanate collected taxes from the Grand Duchy of Moscow and the Russian people. And since the Russians were infidels, and their bodies were considered impure, the yasak tax was collected from them with a spade. In order to clean the collected tax money, it was even washed. This is why the expression 'Tatar spade' remained in the Russian language.

43. Documents of the Russian State on the Foundation and First Years of the Town of Tara

1593–1594 – The order to the Prince Andrey Yeletsky and his companions, sent to Siberia to build a town on the Tara River; with the attached list of the emissary sent with them.

...go and build a town up the Irtysh, on the Tara River, where it would be henceforth more profitable for the sovereign to make tillage, and to force Kuchum Tsar away and spite him, and those volosts, that bol... on this side of Tobolsk and Tobolsk Districts to remove from sight... and bring to the sovereign and fortify and r... as Prince Ondrey decides with Prince Fedor, but who will go, to ar[rive] in that place, and ship and land ar[my], so that, after taking the town on the Tara River, to bui[ld] a town, find a place, either further up or down from that place, where it is more suitable to build and fortify a town. And bread supplies, and money reserves, and different attire to carry on ships. And before themselves, to send from Tobolsk the children of boyars, and Tatars, and Cossacks to the volo[sts], which are on the Irtysh, gather mounted yasak Tatars according to the list, which is sent with h[im], the yasaks who live up the Irtysh, and give them the sovereign's favourable word that the sovereign will favour them and lessen their yasak. And now all, gathered together, would set out on horseback and on foot, with the sovereign's voivodes, against Kuchum Tsar and the traitors of the sovereign, against mirza and the Nogai people. And the yasak people who do not give yasak to the sovereign, and...s[tockade] will be built for them all so that t[hey], and first of all the sovereign's yasak people, would live on the Irtysh without fearing Kuchum Tsar and the Nogai people. And going from Tobolsk, would tell voivode Prince Ondrey and his companions about Kuchum Tsar and the Nogai people, where /fol. 152v/ now Kuchum Tsar [wanders], and s[end] mounted guards ahead so that Kuchum Tsar and the Nogai people would not cause any damage to the voivodes and bread supplies. And therefore the horsemen should go carefully and be on guard against Kuchum Tsar so that he does not come to them. And if the yasak people and princes who live along the Irtysh do not listen and go with voivode Prince [Ondrey] against Kuchum Tsar and the Nogai people and do not listen and go to build [a town], then voivode Prince Ondrey Vasilyevich, going along the Irtysh, will fight those volosts, and send horsemen, and search for traitors, and execute the guilty, and bring the common people to [shert], and from some deposits will be tak[en], and yasak, the previous and the next one, will be collected in ful[l from] the volosts, those who do not obey. And those volosts, which soon gather together and obey and go with prince Ondrey, they will have a lesser yasak; and some will have none, judging by the circumstances, will decide how it would be more profitable for the sovereign's affairs. And war will be waged against those who do not listen, and pledges will be taken to the sovereign's will from all of them. And all the way from the town of Tobolsk to Tara, and from Tara to the town of Tobolsk, and all field from the new town of Tara to Ufa...so that ahead of them all will be devoid of fear. And after coming to the Tara River, find a place for the town, where it would be convenient for the town to be, clear the place, and build the town. And build the town and carry timber with all the army, all people, on horseback and on foot, and build /fol. 153/ a town with walls, and with towers, and with a fence...about half three hundred or [three] hundred sazhen, depending on the place, and p[ut up] a stockade of 300 sazhen, or of 400, and..., depending on the people, up to 500 sazhen... stockade, depending on the people, on the af[fairs there]. And Prince Ondrey himself would be in the town, and Bo[r]is an[d] Grigory, so that one would be near the treasury, and at collection, and at granaries, and the bread would be in barns in the town' ...and the priests, and the gunners, and the streltsy would have palaces in the town. And in the stockade, plots for gardens and places to cook food will be given, and besides at voivode's and the chie[fs], there is nowhere else to cook; and voivode and the ch[iefs] will make kitchens in the ground as if to... and in the stockade so that the Cossack horsemen and Tatar service men from Tobolsk, and local, and from Tyumen could be safe. And it is truly written in the list, which people from which date will be released and which will winter, and prepare hay for those horses. How many horsemen to keep will depend on Kuchum Tsar: if he remains the tsar and does not run and obey, then more horsemen should be left to winter; but if he obeys and makes an agreement, and gives his son, the tsarevich, as a pledge and sends him to the sovereign in Moscow, then fewer of

[these] horsemen shall be left to winter. And when Prince Ondrey comes with a naval force and cavalry, write to the sovereign about it, and when he arrives in the new place and builds and fortifies the town, also write to the sovereign about it. And the town's place, and the town, and the stockade shall be drawn, and all fortresses shall be written down /fol.153v/, where the town will st[and], and send that to the sovereign truly so that he knows about everything. And en[gage] all people in building the town: boyar children, and Lithuanians, and the Cossacks from Tobolsk and Tyumen, and newly recruited and inhabitants, and Tatars. And give orders to cut light timber for building the town so that it will be built quickly. And give orders to build granaries for the sovereign's supplies, and store a[ll] the sovereign's supplies in the barns. And build the town with all military people and the Tatars from the local volosts, as many of them who will come and build the town. And first count them, order them to cut timber and bring it to the town, but not let them go inside the town until it is fortified so that th[ey] do not see the sovereign's people. And those who will not listen and bring timber for the town [affair], will be attacked, and after being cap[tured, sub]dued. And after establishing the town and placing squads around the to[wn], set up all cannon supplies in the treasury according to the list that was sent. And thus be in the new town in accordance with this sovereign's order. And keep the sovereign's supplies in granaries under seal. And build the outskirts and have Grigory Yelizarov as governor and for an[y affair] and at the granaries, and he with Prince Ondrey and Boris will be companions in any affair, and he will know of any collection and yasak. And order the carpenters to build gra[naries] at the same time the town is built. And Kuchum Tsar shall be ordered to pay glad.. and pay it until the [to]wn is fortified; and command [th]at the sovereign wants to hold Kuchum Tsar under his /fol. 154/ royal hand, and will let his son Oblaghair and [his] people go, after granting him with his royal favours; and for now he will live up from the new town, in any towns he likes so that he will not bring the volosts of the new town to the town of Tobolsk. And Kuchum Tsar will send his son... tsarevich so that it will not be dishonourable for the tsar to send his son and two or three best men with him, and the sovereign tsar and grand prince will immediately send Kuchum Tsar his son Prince Oblaghair and his people with him who were sent from Tobolsk. And for Prince Ondrey to take care that Kuchum Tsar sends the sovereign... best princes, the best of whom would... more humane. And about the man whom the sovereign sends from the prince, the sovereign will write to [Prince] Ondrey of how to act. And the tsar will be hunted and searched for, and a lar[ge] dispatch of Tatar men will be sent to search for Kuchum Tsar and his wives and children and fight hard. And to keep strong defences against Kuchum Tsar. And those of his volosts on the Irtysh bet[ween] Tobolsk and the new city, [in those] volosts the tsar himself will not enter, and they shall be strongly guarded against Kuchum Tsar. And if Kuchum Tsar comes together with many people against the sovereign's voivodes and will not let them build the town, and starts oppressing them, [voi]vode Prince Ondrey Vasilyevich with companions shall guard against Kuchum Tsar so that if Kuchum Tsar comes, he will not cause damage. And personally choose a town on the Tara River and build it earlier in a convenient place. And at the time /fol. 154v/ the town is being built, and timber is brought to the town, at in that time be on guard against Kuchum Tsar, and in the town take great care against Kuchum Tsar to know his whereabouts. And when the town is fortified, Prince Ondrey and his companions will search for Kuchum Tsar with large dispatches to protect themselves from him. And after leaning of his whereabouts for certain, send a large dispatch of all horsemen from Kazan and Tobolsk for battle: Lithuanian[s] of Tobolsk and Tyumen, and atamans, and the Cossacks, and military Tatars, and the Bashkirs, and local yasak Tatars, after picking the best ones; Mamley Maltsev with Kazan people, and with people of Tobolsk and Tyumen, the chief Svoitin Ruposov, and ataman Circass, and other best people. And if the hunt for Kuchum Tsar does not start, and people do not come from him in the sovereign's name, a large dispatch shall not be sent against Kuchum Tsar without thorough scouting, and he shall be paid, and a place of residence shall be made for him in the upper towns. And search for the Nogai mirza Aley, search for him with karge dispatches. And dissuade the best men from Kuchum Tsar so they go to serve the sovereign; and Tobolsk military Tatars go with them. And those who come from the tsar shall be favoured and given broadcloth and s[ome] bread. And the best two [or three] shall be sent to the sovereign, and the sovereign will favour them greatly. And when Kuchum Tsar is located and defeated and pushed back, voivode Prince Ondrey and his companions shall send the Kazan and Sviyazhsk people

and the Bashkirs back /fol. 155/ to their place so that they arrive before winter and not die of hunger; and Tobolsk people to Tobolsk, and Tyumen people to Tyumen, and leave people in the new town according to lists and allocation. And if a search for Kuchum Tsar is not possible this summer, and the truth is not known beforehand, voivode Prince Ondrey and the people of Tobolsk and Tyumen shall search for him in winter when he starts wandering in order to find and fight him. And when Tobolsk and Tyumen Cossacks and Muscovite streletsy run out of yea[rly] supplies and are in urgent need of them, voivode Prince Ondrey Vasilyevich shall supply their needs from the sovereign's stock which is sent with him, one-eighth [of flour] for a man, for some half and eighth, and a quarter of cereals, a quarter of oatmeal, depending on need, so they will not die of hunger. And when voivode Prince Ondrey and his companions build a town and deal with Kuchum, they shall send the sovereign in Moscow on the order of the dyak Ondrey Shchekalov so that the sovereign will know. And all the volosts that are up the Irtysh shall be drawn to the new town, and they shall be ordered to come to [them] and pay the same yasak they paid to the town of Tobolsk. And yasak books on all volosts can be taken in Tobolsk from voivode Prince Fedor Lobanov, about how much yasak used to be taken from them in Tobolsk. And take great care of those volosts /fol. 155v/ and consult with Prince Fedor Lobanov on everything. And after collecting yasak, send it... to the town of Tobolsk. And the yasak sent to the sovereign shall be reported to Tobolsk so that Prince Fedor will know and not take another yasak from the upstream lands, from which Prince Ondrey has already taken one. And the yasak that is taken from those volosts to the new town, and how much yasak was taken, and from which volost shall be written in books in separate articles, and this yasak collection shall be stored in the treasury under seal. And voivode Ondrey will go the new town clerk Kryank Ivanov for writing, who was sent with him from Moscow; and his payment will be four quarters of flour, one-eighth of cereals, one-eighth of oatmeal; and order him to be a clerk for the sovereign's various affairs, and write them down. And those who do not listen and do not [co]me to the town, wage w[ar] on those volosts, [and] defeat their chiefs and princes, and divide their possessions: horses, cattle, movable property, shall all be given to military people, sables and silver foxes shall all be sent to the sovereign, and weasels, squirrels, red foxes, and beavers shall be distributed among the military people. And a reminder to voivode Prince Ondrey Vasilyevich Yeletsky and companions. By the order of the sovereign Tsar and Grand Prince Fedor Ivanovich of all Russia 700 rubles was sent from Moscow with Mikita Ushakov and with Uhlan Onichkov, 35 cauldrons /sheet 156/ made of copper, which weigh 9 poods and a quarter, were sent to the new town on the Irtysh, and 356 cauldrons, again of 9 poods and a quarter, were sent to the new town up the Ob. And when Mikita and Uhlan arrive on the Lozva with money and cauldrons, voivode Prince Ondrey Vasilyevich and companions will take this money from Mikita Ushakov and cauldrons from Uhlan and give from this money on the Lozva: to the town of Pelym, 100 rubles for the wages of the military people of Vasily Tolstoy, 200 rubles to the town of Berezov to Ofonasy Blagoy, 100 rubles to Surgut to Volodimir Onichkov, 100 rubles to Tyumen to Prince Petr Boryatinsky, as it is written by the sovereign. And take 200 rubles with them to the new town on Irtysh as a reserve. And give to Volodimir Onichkov half of the 35 cauldrons, and take another half to the Irtysh, and exchange them for sables and silver foxes and sable coats from the local people, one pound for 2 grivnas, and one pood for 8 rubles; and sables and foxes and sable coat exchanged for cauldrons, and the poods bought will be kept as possessions by voivode Prince Ondrey Vasilyevich and companions in the sovereign's treasury of Grigory Yelizarov under their seal and send it to Moscow to the sovereign with the yasak, and write it down in the order to the clerk Ondrey Shchekalov. The list sent with voivode Prince Ondrey Vasilyevich Yeletsky and his companions to the new town on the river Tar on the military people, and cereal supplies, and attire, and spirits, and lead /sheet 156 backside/. With the sotnik Samoil Lodyzhensky there are 100 Muscovite streletsy; with another sotnik Zamyatnya Shokurov there are 47 people; and 147 Muscovite streletsy are sent with two sotniks; and they are given enough bread supplies for 102 of a year, and for the journey they also are given a quarter of dried bread per man and a large monetary payment; and in Perm, after collecting from the lands of Perm, they give them a quarter of flour per man; and when they arrive at the new town on the Tara River, they give them a quarter of flour per man, one-eighth of cereals, half an eighth of oatmeal per man from the stock, for a total of 147 quarters of rye flour, 73 quarters of cereals, 37 quarters less half an eighth of oatmeal. And

from Kazan and Ufa 100 Kazan and Sviyazhsk Tatars, 300 Bashkirs, and 4 boyar children, one for each hundred are sent to the town of Tobolsk, and from the town of Tobolsk they would go with voivode prince Ondrey Vasilievich and his companions against Kuchum tsar with the chief Mamley Maltsov. And with the sotnik from Kazan, 50 streltsy on horses, and from Laishev with the same sotnik 50 men with muzzle guns, and from Tetyush with the sotnik Mikita Koraykin, 50 Polish Cossacks; and with Mamley it is ordered to send 554 horsemen in total from the lower lands. And from the town of Tobolsk take to the new town 100 selected Lithuanian, and Circassian men, and good Cossack horsemen with firearms and their chief Svoitin Ruposov /sheet 157/ and 100 Tobolsk military Tatar horsemen with ataman Circass Aleksandrov and chiefs Baiseit and Baibahta, and Lithuanians and Cossack horsemen shall be together with the chiefs Svoitin Ruposov and Circass; and it is ordered to send a total of 200 horsemen from Tobolsk. Along with that gather 300 good yasak Tatar horsemen with their Tatar chiefs from the volosts up the Irtysh. And 150 of foot-borne Tatars with muzzleguns on the ships, and the ships for them with prince Ondrey are ready, and they would be with the Muscovite streltsy. And it is ordered to send 40 Lithuanian, and Circassian men, and Cossack horsemen from Tyumen; and 50 good horsemen shall be chosen from Tyumen, Verkhotur, Ondreyev, Belyakov, and Zyryantsov Tatars, who have pledges in Tobolsk and Tyumen and will not be traitors; and the sovereign's reward for them is 2 rubles per person, for a total 100 rubles, and it is ordered to send a total of 90 men from Tyumen. And Prince Ondrey will take 30 Tatar horsemen from the Tabors, 20 horsemen from the Koshuks, and 50 men from both the Tabors and Koshuks. And 30 Permich carpenters on foot from Tobolsk, and send 20 Permich carpenters to the new town with prince Fedor Boryatinsky /fol.157v/, and from Perm it is ordered to send three quarters of flour per man, one-eighth of cereals, one-eighth of oatmeal and 3 rubles per man. And it is ordered to send all kinds of military horsemen from the lowland towns, and 1, 194 horsemen, and 347 men on foot from Tobolsk and from Tyumen, from the volosts of Tobolsk and Tyumen, with voivode Prince Ondrey Yeletsky and his companions, in total 1, 641 mounted and unmounted military people. And when the town is built and fortified, voivode Prince Andrey Vasilyevich and his companions will let 550 Cossack horsemen and boyar children go. And after that they will let 50 Tatar horsemen from Tobolsk with Baiseit go by winter. And keep the 50 best men with Baibahta for the winter. And send 300 horsemen and 150 men on foot away to their volosts. And depending on the news, gather 300 horsemen again. And send 50 Tyumen Tatars away by [winter]. And Prince Ondrey and his companions shall keep 100 Muscovite streltsy with them for the winter. And let 47 men go back to winter in Tobolsk with their wives, and after fortifying the town, let 100 men go, up to 10 men as a guard, if they prefer to live with them, or come with them to the new town, and bring their wives and children, respectively, either by winter or in spring by summer. And the streltsy will build huts for themselves /fol.158/. And keep 100 Lithuanian horsemen and Tobolsk Cossacks for the winter in the new town. And keep 40 Lithuanian men from Tyumen and Cossack horsemen. And let 50 horsemen of Toborinskiye and Koshutskiye Tatars go back to their places. And keep 30 carpenters. And depending on the news, if more are needed, Prince Fedor shall send 50 Tatar horsemen to Prince Ondrey. And 50 Tatar horsemen from Tyumen. And take 500 quarters of rye flour, 100 quarters of cereals, and 100 quarters of oatmeal from the Lozva from the Ustuzhsky stock to the new town. And 200 rubles of reserve money is to be sent. And for Tatar use, two rolls of broadcloth and 10 Yaroslavskiye halves, and from that amount give 3 halves to Volodimir Onichkov for the new town. And weaponry is sent from Moscow to the new town with the voivodes: a muzzle gun with a ball of 4 grivenka, and 200 iron balls for it; a nine-span muzzle gun, ball of 2 grivenka, and 200 iron balls for it, 10 zatynnie muzzle guns, and 200 balls for each muzzle gun, 2, 000 balls in total; 10 long muzzle guns, and 200 lead balls for them, 2, 000 balls in total. And from Pelym take from Prince Petr Gorchakov a nine-span muzzle gun and 200 balls for it /fol. 158v/. And 50 poods of spirits and 50 poods of lead are to be sent to the same new town. And take 10 poods of iron from Lozva from Ivan Nagoy to the same new town for the town's needs. And from the Lozva take 70 poods of salt for the needs of different people, and in addition send Tatars and streltsy from the new town to Lake Yamysh, and bring salt in ships and give it for the needs of military people. And send volosts from the town of Tobolsk up the Irtysh to the upper lands to the new town to Yalom, where the sovereign's town will be on the Tar River: volost Kurdak, and in it Prince Kankul, and in it 350 men, 4

days ride along the Irtysh from Tobolsk; volost Sorgach, and in it Prince Yanbish and in it 80 men, 8 days from Tobolsk; volost Otuz, and in it 15 men, 2 days ride to it; volost Tava, and there the best man Andilghey, and 10 men with him, 2 days ride to that volost; volost Urus, in it 6 men; volost Tokuz, and in it the best man Baishep and in it 3 men; volost Supra; volost Ayaly, and in it 500 men, and to that volost from the town of Tobolosk it is a 15-day journey by ship up the Irtysh /fol. 159/. And half of the yasak from those volosts shall be to the sovereign, and the other half to Kuchum Tsar, to be safe from war. And only when the sovereign's town is built in the volost of Yalah will full yasak be collected from those volosts. And Merzloi town, and Turash, and Kirpiki, and Malogorodtsi, which are now under the Nogai mirza Aley, will all be under that town. And it will be possible to send for yasak to the Skewbald Horde, and also mounted and unmounted squads for war. And the volosts and towns that exist but are not written down here shall be found, and yasak shall be collected from them, and the sovereign shall be informed about them.

Archives of the Academy of Sciences reserve 21, list 4, No. 15, fols. 152–159, No. 66 and No. 67.

Note (from the author of the publication): G. Miller started working at the Tara archives as early as 1734 and noted at that time that the archives were quite well-preserved. However, he postponed serious work there until he visited the town again on his way back. Later (in 1753) G. Miller explained some neglect of the archive studies at the beginning of his travels by his insufficient command of Old Russian. This was why he had difficulties in dealing with archive columns and books. G. Miller did not get to Tara on his way back. That was why all his stock of Tara copies was limited to some issues that were taken in 1734. They are stored in the archives of the Academy of Sciences, reserve 21, list 4, No. 15, fols. 138–148: 'the extract from the register of the archive documents of the Tara Secretariat' and fols. 149–189 of the same copies numbering 24 issues, most of which are related to Russian history in general, and only four issues are related to the history of Tara and its district. An order to Prince Andrey Yeletsky (No. 1, Tara copies, Appendix No. 13) edited in 1750, printed on the list made by student I. Yakhontov, 'as much as it was possible to read.' However, a lot of missing places in this document can be restored by context and by the analogies with other similar orders. All additions of this type are marked in parentheses. As there are no data in the copy about the number of missing lines or omissions, our edition marks all the unrestored omissions with three dots.

1595 February 1595, the order to Prince Fedor Yeletsky and Chief Vasily Khlopov appointed to the town of Tara.

10 February 7103 Tsar and Grand Prince of All Russia, Fedor Ivanovich ordered Prince Fedor Mikhaylovich Khlopov to be in state service in Siberia, in a new town called Tara, to replace Prince Andey Yeletsky, Chief Boris Domozhirov, and Chief Grigory Yelezarov and send Prince Ondrey Yeletsky from a new town called Tara in Siberia to the Tsar in Moscow. From Moscow they were sent together with the children of the nobility and the artillerymen, the herbs, and the lead. And from Lozva they were accompanied by servicemen on the allowance of Tsar's bread stores (fol. 3v) and money. They were ordered to take ships in Lozva for these bread stores and money, and that was why an authentic list signed by the scribe called Vasily Shelkalov was sent with them. After taking the herbs, the lead, and the carts by a post-horse order, the voivode Prince Fedor and Chief Vasily headed from Moscow to the new town on the Lozva. After arriving in Lozva, they had to take some servicemen on the allowance of the Tsar's bread stores and money by the list from the voivode Ivan Vasilyevich with his friends to the new town called Tara, and to take a ship for these bread stores and to place the bread stores on these ships. For the voivode Ivan Vasilyevich with his friends, 7 is written authentically in the order and in the list, and this is how much of the bread stores (fol. 4) and how many ships must be given to them to go to Lozva. And if God wills, in spring at ice breakup the voivode Prince Fedor and Chief Vasily must put the bread stores and money on the ships and go from Lozva to Siberia, to the new town called Tara. From Lozva they must also take the Lozva streltsy on the ships to convey the Tsar's stores up to Pelym. After arriving in Pelym, they must take the Pelym streltsy for conveying up to the town of Tobolsk and

let the Lozva streltsy go back to Lozva. And after arriving with the Tsar's bread stores in the town of Tobolsk, they must take streltsy and cossacks from the Tobolsk voivode Prince Merkury Alexandrovich to convey the bread stores up to the town of Tara (fol. 4v). After arriving in the new town of Tara, they must place Tsar's bread stores from the ships in Tsar's barns, and the money in Tsar's treasury, and keep them under lock and key, and let the Tobolsk cossacks and streltsy go back to the town of Tobolsk. And after placing the bread stores, they must take from the voivode Prince Ondrey Yeletsky an authentic order and Tsar's charters about different state and territorial affairs, town and stockade keys, the town and the stockade, and their duties, to keep herbs and lead and other cannon stores in the treasury, the bread in the barns, and to revise the books about bread and money receipts and expenses, the list of servicemen by looking at their faces, and the yasak books, to take the yasak from the towns and volosts with yasak people, princes, and Tartars, who (fol. 5) are moved from the town of Tobolsk up along the Irtysh to the new town called Tara and some volosts upstream from Tara. After taking the Tsar's authentic order and charters about different state affairs, the voivode Prince Fedor and Chief Vasily must start dealing with local affairs to make them more profitable, and to question the voivode Prince Ondrey Vasilyevich Yeletsky closely about local state and territorial affairs, to carry out the order by following the instructions. And servicemen shall be with him according to the list, which is sent with him and signed by the scribe Vasil Shelkalov. And by the yasak books and by the Tsar's order, they must collect the yasak from the yasak people from all the towns and volosts located from Tobolsk (fol. 5v) to Tara, and some volosts that go up along the Irtysh. And when taking the yasak (sable, fox, squirrel and sable fur-coats, beaver), they must write everything in the books in separate articles. And for the Tsar, they must take the yasak with good sables and beavers and black foxes and not take the yasak with bad sables, foxes, and beavers. And everything that the yasak people bring besides the yasak with a petition to the Tsar to give a gift to the voivodes is to be written accurately in the books in separate articles and be kept the yasak treasury under lock and key. And if some princes and Ostiaks disobey and do not pay the yasak (fol. 6) to the Tsar and do not come to the Tsar's town, and send them the heads: Lithuanian, Cherkese, Cossack horsemen, and start fighting against them, take them hostage and make them calm down and bring them back to Tsar's arm and take the yasak from them again. And those princes and Tartars who serve the Tsar, and come to the town, and pay the yasak, and bring different news about Kuchum Tsar and his plans and about the Nogais must be given drink and food from Tsar's stores by the voivode Prince Fedor and Chief Vasily, must be well treated and taken care of, and be allowed to go home without being detained. And to live in the new town with great care for servicemen, atamans, cossacks, streltsy, and all other (fol. 6v) common people so that they will not be in need of anything in such a remote place. And Tsar's money and bread allowance to the servicemen must be given out by the list sent with the signature of the scribe Vasily Schelkalov. The money and bread shall not be given all at once but in two terms of half a year in order to have stored bread in the barns in case of siege. And let the voivode Prince Ondrey Yeletsky go from the new town in Siberia to the Tsar in Moscow. And everything he collected as the yasak (sables, foxes, sable fur-coats and other smaller furs) as well as the yasak treasury must be sent with him to the Tsar in Moscow. For conveying the treasury, he shall be accompanied by as many cossacks and streltsy (fol. 7) as necessary, depending on the current local situation, in order to bring the treasure safely. And after Prince Ondrey Yeletsky, the voivode Prince Fedor and Chief Vasily shall be very careful in the new city of Tara and always have strong cossacks and streltsy replacing each other while watching in the town, stockade, and other watch posts. And to send the Nogais, Lithuanians, Cherkeses, and Tobolsk and Tyumen cossacks, who will be left in the new town, to other remote settlements in order to learn the news about Kuchum Tsar, and Kuchum Tsar will not come to the town suddenly, and he will not do harm to the town and he will not conquer the yasak volosts. And in the time of the voivode Prince Ondrey Vasilyevich Yeletsky with his friends, that winter there was no fight against Kuchum tsar and the Nogai Mirza Aley from the Siberian volosts (fol. 7v), which they controlled up along the Irtysh. The voivode Prince Fedor Borisovich and Chief Vasily must be in contact with the voivodes from Tobolsk and Tyumen in order for them to send their people, the Lithuanians, the cossacks, the Tartar horsemen for service in case of news about Kuchum Tsar and to fight against him and the volosts that are out of the Tsar's control and to conquer them, if God wills. And

to send Chief Vasily Khlopov and Chief Boris Domozhirov against the volosts of Kuchum Tsar, with the best Lithuanians and cossacks on horses and on foot, in order to find and conquer Kuchum Tsar and be safe from him. To write all the local news about Kuchum Tsar and (fol. 8) his plans and about the Nogais to the Tobolsk and Tyumen voivodes in order to let them know all the news about Kuchum Tsar and the Nogais. And some merchants will start coming to the a new town of Tara from Bukhara and Nogai with different goods, horses, and cattle. The servicemen and other people must be made to buy the goods, horses, and cattle and care for merchants from Bukhara and Nogai in order to teach them, and when they sell their goods, let them go without any detention. And some merchants will pass by the new town on the way to the Siberian towns, to Tobolsk and Tyumen to sell different goods, horses, and cattle. They should be allowed to pass and be treated well. And when the Bukharans start coming and telling about local state and territorial affairs, the voivode Prince Fedor and Chief Vasily shall write to the Tsar about it (fol. 8v) and let them go. The Tsar demands that they follow the order. And everything that will be taken from the voivode Ondrey Yeletsky from the bread stores, money, and all cannon stores shall be written by the voivode Prince Fedor in the list and sent to the Tsar in Moscow to the Fetial quarter board to the scribe Vasily Shelkalov in order to inform the Tsar.

And for the voivode Prince Fedor Borisovich Yeletsky to remember. Tsar and Grand Prince of All Russia Fedor Ivanovich was asked in the letter by the Tobolsk voivode Prince Fedor Lobanov Rostovsky with his friends to send 5 rapid-fire arquebuses to Siberia in order to fight against Kuchum Tsar when he comes to the town. At present Prokofy and Ivan have been sent to Lozva with 5 rapid-fire arquebuses and with six hundred cannon shots and other cannon stores. And when the voivode Prince Fedor Borisovich arrives in Lozva, he must take from Prokofy and Ivan (fol. 163) the Tsar's apparel, different cannon stores, artillerymen, herbs, and lead according to the list and put them on the ship and bring them to the new town of Tara and keep all this in Tsar's treasury for a campaign against Kuchum Tsar.

And for the voivode Prince Fedor Borisovich to remember this. After arriving in the new town of Tara, to examine all the Siberian furs in the yards of Prince Ondrey Yeletsky, the chiefs Boris Domozhirov and Grigory Yelizarov, the streltsy captains, the children of the nobility: brought, gifted, bought sables, black foxes, sable, squirrel, and ermine fur coats and beavers. All that is found must be written down accurately and sealed. And the servicemen and merchants must also be examined accurately: what furs they have bought and from whom, how many furs have been sent from Siberia, with whom, and in what year. Examine all this, and the list of all the furs shall be sent to Tsar and Grand Prince of All Russia Fedor Ivanovich in Moscow from the Tsar's treasury to the Fetial quarter board to the scribe Vasily Shelkalov.

44. The Charter from the Great Horde Khan Sheikh Ahmed to the Lithuanian Grand Duke Alexander (20 July 1492–1494)

A bow to our brother Grand Duke Alexander from Khan Sheikh Ahmed.

After the bow, there is a message.

We have been living in brotherhood and friendship since Great Batu Tsar's times. And this brotherhood between your father King Kazimir and our father Tsar Ahmed was built up, ambassadors were sent, an agreement was achieved. Being angry with Ivan, our Tsar got on a horse, and your father King did not support this agreement. Our uhlans and princes said to our father: 'Ivan is your bondman, but King did not support this agreement, and you have to come back.' And they took my father's horse and brought him back. And then God's grace condescended on our father. And we, with our elder brother

Tsar Sid Ihmat went to the Dnieper. At that time Sultan Dovlesh came to us and with us went against the Perekop Tsar Mendli Giray, and we conquered some of his uhlans. And then Tsar Sid Ihmat, by God's will, went away, but I was not strong enough, and the matter of Sultan Dovlesh was stopped. You, doing your duty to Sultan Edemir, who had gone against Mendli Giray, had a fight, and told me about it. And by God's will, I am very happy, and I would like an agreement with you, by which we could wait until spring or autumn. I see it this way: we could go against them, and how they will reap. What is better is how you see. To ensure these words, I sent my kind servant Prince Abdula Bogatyr to learn of your health and affairs by God's will, and your reply will make us glad; the way there was truth and friendship between our fathers; and a friend was glad, and an enemy was afraid. With light wishes and a deep bow, with a blue nishan the letter is written.

A bow from Tsar Sheikh Ahmed to Grand Prince Alexander.

Our ancestors and your ancestors were in brotherhood and friendship and established good relations with each other. And we want to be a friend to your friend and an enemy to your enemy. May your friend be happy to hear that and your enemy be frightened. I sent the messengers to Your Honour: my servant and scribe called Prince Dan to learn about Your health. Your Honour will thank him and let him go to us. As the letter is sent with a blue nishan.

A bow from Tsar Sheikh Ahmed to Grand Prince Alexander.

Your letter was sent to us. We all, uhlans and princes, gathered a council and discussed it, remembering our brotherhood and our enmity against enemies. And they told me: 'Make an agreement between each other.' You should give the allowance to Sultan Azdemir, give some of your men to him but stay on the near side. And we want to cross the Don with our horde on horses and to be there by agreement. After learning of all the affairs about Prince Asakim, Prince Dan, and Prince Abdul, we sent our good ambassadors. With the letter I sent my servant and your Kulak. He did good work between us. I thanked him for that and you do the same.

45. The Charter of the Tsar Ivan IV to the Nogai mirza Urus (1576, not earlier than the 14th September)

This charter was sent to Urus Mirza with Boris Domozyrov.

This is, by God's grace, our word to Urus Mirza from the Tsar and Grand Prince of All Russia Ivan Vasilyevich. You sent us your ambassadors Keldeuraz and Kurman with your charters. In your charters you wrote to us: if we call you our direct friend, we will grant what Tsar Temir Kutlui gave to your father Nuradin Mirza, forty thousand altyns in full. If we do not have the full amount, we shall call you our indirect friend. If what we give you is not enough, what was the oath you gave? Safa Kirei Tsar granted forty thousand altyns from Kazan to your father Prince Ismail. We have Tsar Temir Kutlui's yurt Astrakhan, that of Alibai, and that of Altyb[ai], and the yurt of the tsar of Bolgar, and that of Ardabai with thirty tumens in our hands. A part of our father's yurt... is also in our hands. Your father gave us gifts, which we know. Not all of the yurts and gifts are in our hands. And your father Prince Idigi served both our father and our grandfather and received gifts. And your father Nuradin Mirza served Tsar Temir Kutlui and was granted gifts. And your father Ismail served Tsar Safa Kirei and got gifts. And our father enjoys the brotherhood and gifts. And you took an oath to shoot our enemy with arrows and fight him with swords, and be a friend to every friend of ours, and an enemy to our enemy. If we gave you the twice forty thousand altyns that your father had from the two yurts, if you mention it, you would have the oath and on your neck it would be. But we will not give the

twice forty thousand altyns—this we know. We could give you fur and woolen coats of good quality from our treasury instead of twenty thousand altyns of the forty thousand altyns, and give five thousand altyns in money to your treasurer imeldesh Kurman. We would send fifteen thousand altyns from the treasury. Your petition is as follows. As your ambassadors were moving along the Volga last year, gunmen and cossacks from Kungul met them and killed Khan Mirza's ambassador Aktugan with an arquebus. Druzhina Kovarditskoy, the ambassador's captain, brought the two men who killed him to Kungul. Please instruct us whether to give them to you or to give what we gave for Bulaksufa. There are two wives and a daughter of Yamgurch Ulan, three captive women, and Almagmet and Ichkara—two cooks of yours. We shall kindly give them to you. Last year your ambassador Yantemir bought two captives in Kasimov; he was to sell one man named Yarlagramysh in Kasimov, but the man persuaded him not to, and so Yantemir kept him. We shall kindly give them to you. Last winter I sent forty-five of my best men, together with men of Astrakhan, against the cossacks who attack ships. They fought them and killed seven men, and one of your good men was also killed. He left many nephews, and you ask us to reward the other brothers. You sent his brother named Tereberdei to us, whom we should reward. We have many friends and enemies, and if any besmirch you or your brothers, younger or older, or your son Khan Mirza, we would not believe it unless we have seen you and your son Khan Mirza face to face. We shall kindly order You requested to be given winter clothing for yourself: a marten fur coat of good quality covered with cloth, and a black hat made of neck fur, and victuals—that is, fifteen batmans of honey to drink in winter, and fifteen batmans of crops, and fifteen cartloads of fish from uchugs. We shall let your treasurer Kurman buy for you captive men and women. Having bestowed the grant on your treasurer Kurman, we shall let him go without delay. We shall let your cook Abash and his wife Isenya return to you. We shall order the money of the mirza who died at [Prince] Tugash's to be given to you. There are eleven of your runaways in Kungul headed by Ivan and Ivashko. We shall write to the voivodes of Kungul ordering them to give them to you. The son of your nephew Seidahmet Mirza imeldesh, of the Khat tribe, son of Baichur, Kozelei, went to war with Maitamal aga, and he was captured. You want us to order that he should be released. A man of yours, of the Naiman tribe, Ishmamet, went to Moscow, and we shall order that no tamga should be imposed on him. We shall bestow a grant on Asa Mirza and As Mirza, and Kaplan Mirza, and send gifts to their sons and daughters. We shall bestow a grant on your nephew Kuchuk Mirza's wife and son, and their daughter...you have a sister named Karatat..., whose marriage you are arranging. We shall grant her a velvet coat with sable fur and gold, and a marten fur coat of colourful silk, and a black fox hat. We shall also bestow a grant on Bulat Mirza and Asanak Mirza, and Tinalei Mirza, and Akbabei Mirza, and Akbular Mirza, and Ai Mirza, the children of Shigim. We shall also bestow a grant on the wife of Akbebei Mirza, Prince Sheidiyak's daughter. We shall also send gifts to Ulukany Mirza, and Ayslan Mirza, and Ali Mirza's son Ishali Mirza. We shall order that the twelve persons whom Sabak Mirza captured should be given to you. You have warriors from that side, and we shall send one hundred fifty mounted archers to you from Kungul. Having heard your charters, we understood them fully. You wrote to us that Temir Kutlui Tsar had granted your father Nuradin Mirza forty thousand altyns, and we shall also send you forty thousand altyns—we can send fur and cloth coats to cover twenty thousand altyns. We sent our gifts—fur and cloth coats—to you with our Boris Domozhirov, one of the gentry. We sent to you one hundred rubles with your ambassador. You should not write requests like that in future for your father did not write such requests, and you should be true to us since you have given an oath. And... [our?] gifts to you will remain plenty in the future, depending on how true you are. You wrote to us that, as your ambassadors were moving along the Volga last year, gunmen and cossacks from Kungul met them and killed Khan Mirza's ambassador Aktugan with an arquebus. And we should pay what we paid for Bulaksufa last year. Voivodes from Astrakhan wrote to us as follows: an officer of Sviyazhsk Mitka Slinkov was travelling from Astrakhan on a vessel carrying fish, and, as he reached the end of the Zmeevy (Serpent's) Mountains, the Nogai people, who travelled from Moscow through the field on horseback last year, took twelve of his barge haulers... Kuzemka Balakhonets and his coworkers, and six men were wounded, of whom three died. Our cossacks took the ship... and when they were in the Devyi Mountains... the Nogai

ambassadors, who came to us last summer, turned to his ship, and he began to ask themx who they were, and they would not answer him nor in Russian nor in Tatar and began to approach his ship. And he, Mitka, seeing that there were no Russian men or interpreters, began to shoot with an arquebus. The Nogai ambassadors turned away from his ship. He fled from them on his ship. The Nogai ambassadors were followed by the gunman captain Druzhina Kovarditskoi, who followed the ambassadors from Kazan to Astrakhan. The Nogai ambassadors told the captain that a man of theirs had been killed. And the centurion Druzhina the killed man of [theirs ?]... Druzhina ... Mitka Slinkov to Astrakhan, to the voivodes. As per your request, we ordered that fifty rubles should be taken from Mitka Slinkov of Sviyazhsk and given to your ambassador for Khan Mirza's ambassador. You shall order that the cossacks of his who were caught by the Nogai ambassadors should be found and, when found, sent to Astrakhan to our voivodes. When in Kazan they ordered that captain Druzhina, who was accompanying the Nogai ambassadors, should be lashed for he had stayed instead of being with the ambassadors and he had failed to protect them. You wrote to us, There are [two wives] and a daughter of Yamgurch Ulan, three captive women, and Almagmet, and Ichkara—two cooks of yours. We shall give them to you. You shall tell us the truth about where the wives and children of Yagmurch are, and where the captives are, and where your men Almagmet and Ichkara were captured, or how they arrived, and in what year. We shall order that they should be found and you should be informed. You wrote to us that your ambassador Yantemir bought two captives in Kasimov and was to sell one man named Yarlagamysh in Kasimov, but the man persuaded him not to, and so Yantemir kept him. We sent people to find him, but it took a long time. Instead... [br?]others. When they find him, if they can get him, they ...[you?] You wrote to us... [that] we shall do you a favour by ordering that a winter robe for you to wear should be sent from Astrakhan, and victuals—that is, honey, and groats, and fish; we did not neglect that request of yours—we wrote to voivodes in Astrakhan ordering them to sent you a marten fur coat covered with cloth, and a colourful silk kaftan, and a black hat, and victuals—that is, fifteen poods of honey and fifteen quarts of groats, and five quarts of oats, and a cartload of fish. You wrote that we shall let your treasurer Kurman buy good captive men and women for you, and that we shall let your [treasurer] Kurman go to you, having bestowed a grant on him. We let your treasurer Kurman go without delay, and we let your treasurer Kurman buy captive men and women for you. You wrote to us that we shall let your cook Abash and his wife Isenya go to you, and we enquired about him and obtained no information regarding him. You should give us detailed information on where he was captured or how he arrived, and we shall enquire about him in the future. You also mentioned a mirza who died at Prince Togush's, saying that we should give you his money, and we wrote to you that thieves who came... to the forests of Kazan, to the Meadow Side, and lured men of the meadows away from us... wanted to bring those men of the meadows who would not steal to our voivodes, and they ran away. Prince Tugush of Sviyazhsk found them. Prince Tugush attacked them, and Prince Tugush's nephew was killed over that business. It is something not to remember; one should be ashamed of such things. The thief stole, and so it happened. Both sides came to battle. What is there to look for? You wrote to us about eleven runaway captives of yours in Kungul, one of the leaders called Iv[an], and the other Ivashko, and that we should [write to the voivode in Kungul] and order them to be [released]. The voivodes of Astrakhan wrote to us, saying that they had failed to find your captives and... [I]vashko. Those captives, who were found, were immediately sent to you. We wrote to the voivodes of Astrakhan to order them to find any captives of other faiths who ran away from you, whether to Astrakhan or to Kazan, any German or Polish captives, and to give them to you. We shall not give you captives of our Christian faith who run away to Astrakhan for they are of our faith. You should order that your captives should be well guarded lest your captives should run away, to prevent tumult. You wrote to us that ... imeldesh (foster-brother) of [Saidahmet Mirza]... son of Baichur, Kozelei, imeldesh Maitamal... from Ulus went to war... and he was captured, and that we should order that he should be found. Such a man is not here now. Those captives of the Crimea and Azov who come to our land to fight are killed. You should not ruin your faithfulness over such minor affairs. What you did to us with the people of Azov should not even be mentioned. You should refrain from such affairs. Maitamal... Ours and the prince's... our lands and those... henchmen of his... wrote

to you... that he came to us for trade...to grant tamga... at your request. You also wrote to us that we should bestow a grant on Ais Mirza, and Aryslan Mirza, and Kaplan Mirza. We have not bestowed any grant on them before. Now we have sent our gifts to Ais Mirza, and Aryslan Mirza, and Kaplan Mirza according to your request. You also wrote to us about Kuchuk Mirza Magomet... that we should send our [gifts], and we... and to children with [gifts]... you wrote about... you give... flatter... with gold... and ermine... marten and a black fox fur hat... we sent your brothers gifts of a velvet fur coat and a hat. You also wrote to us that we shall send gifts to Bulat Mirza, and Asasnak Mirza, and Akbulat Mirza, and Ak Mirza, and Ai Mirza of Shigim... and order... the sovereign to Urus's son Khan Mirza... And Boris shall give Semen a Tatar servant from his village for the king's service.

45. The Charter of Tsar Ivan IV to the Nogai Bey Yusuf (1553, not later than 30th January)

This charter was sent to Prince Yusuf with Tafkei Timeyev and his companions.

The word of, by God's grace, Tsar and Grand Prince Ivan Vasilyevich of all Russia, of Vladimir, Moscow, Novgorod, Kazan, Pskov, Smolensk, Tver, Yugra, Perm, Vyatsk, Bulgar, and other lands, to the Prince Yusuf. Our word is as follows. You sent to us your man Enebek with a charter. In your charter you wrote that we should let your daughter go to you. We have given gifts to your daughter and respected her for the sake of our friendship, and to show our friendship to you, married her to Tsar Shigalei with plenty of gifts and money. We sent a good cossack Suyunduk Tulusupov to you, before we did so, to inform you. After we took your daughter from Kazan, the people of Kazan betrayed us again—they made Tsar Ediger their tsar. This year we undertook a campaign against them for their treachery. God had mercy on us and let Kazan with all its people come into our hands. Those in Kazan who were rude to us all died by our swords. We captured their wives and children. For your sake, we had mercy on Tsar Ediger—we did not put him to death. Tsar Ediger is now in Moscow, and he made obeisance to us so that he could cease to be in our disfavour. And we bestowed a grant on him and were graceful to him. You should know it. From Kazan I sent a messenger to you, my cossack Tafkei Timeev, to inform you. Your men robbed Tafkei on his journey and would not let him reach you. You should find those men who robbed Tafkei and order that they should all be executed so that nothing obstructs the route between us for our people in the future. Your ambassadors asked us humbly to spend the winter here, and we permitted them to do so. When they wanted to return, we let them go. With your ambassadors, we sent you our cossack Tafkei Timeev with his companions. When Tafkei reaches you with this charter of ours, you should permit our cossacks Suyunduk and Tafkei with their companions to come to us without delay. Along with our cossacks, you should send us your grand ambassadors. You should tell them what to tell us on all issues so that we can do good business together in future. When your guests or those of other lands want to come to Kazan for trade, tell them to go without fear. We ordered our boyar and the governor-general of Kazan Prince Aleksandr Borisovich of Suzdal to protect them from any trouble. We ordered that all our cossacks on the Volga should be forced to move off the Volga for your sake lest they should do any harm to your ambassadors, your people, or uluses. Those things that you asked us for // (fol. 159v), those that you need, and those that we had, we sent to you with our cossack Tafkei.

Written in Moscow.

**47. The Charter of Nogai Bey Ismail to Tsar Ivan IV
(1557, not later than the 26th July)**

This is a charter by Ismail sent with his ambassador Tauzar.

It has the strength of the princely word of Ismail. Bows to the white tsar. With many bows comes this word. The word is as follows. We are true to our agreement with you. You should not ruin this faithfulness either lest you should be a liar. It is true that we agreed to undertake a campaign against the Crimea. My nephews, who have betrayed us, are now fighting us behind the Volga. They have joined the Crimean tsar. My nephews have also betrayed us beyond the Yaik. They have joined the Kazakh tsar and waged war against me. We have not had a good opportunity to fight against the Crimea this year. We have no horses or victuals; we are famished. When the right time comes, we will inform you of the beginning of the Crimean war. You should know it. If you do not lie, we will not lie. There is only one God; there is only one word. Ivan Cheremisinov waged war against our uluses and captured people; we asked him to give them to us, but he refused. They waged war at the uluses on the border of Lyapun and Isup and captured one hundred persons. We asked them to give them to us, but they refused. You should threaten them greatly, get the captives, and give them to us. If the captives fail to reach our hands, your faithfulness will be ruined. The children of my elder brother Prince Yusuf will not betray you; they will adhere to my promise. I shall call for the children of Shikhmamayev Mirza; if they come, I shall accept them. If they do not come, I shall wage war on them and call for those mirzas who are behind the Volga. If they come, I shall accept them; if they do not come, I shall wage war on them. You should know it. I should be an enemy to your enemy. And you should be an enemy to my enemy. I shall now wage war on the uluses behind the Volga, which have betrayed us, and they will flee to the Crimea. Send numerous troops to the Don. If they do not let them cross the Don, I will prevent them from reaching the Crimea and catch them if God wills. You should know it. The boyar I have sent to you is a good man. Send a noble man to me, too. Water took the tilled land of Saraychiq; our uluses have lost their livestock and are famished. You should send us a shipload of crops by Semen's day and some bread. Send us four shiploads of honey, too. What lumber you sent me I gave to my nephews, and my children, and my servants. You should now send me winter clothing and winter clothing for my wives. We have to go to war, and you should send me battle clothing: a suit of armour, a tegilai, a full armour helmet, and two saddles. Also send me a winter fur coat with a shawl and a hat. You wanted to give me twenty hundred rubles but did not. You should send this money. Send me ten roldugs of yuft. Yunus Mirza's ambassador and Kadysh told you that I had appointed Yunus Mirza prince And been to Mecca. You should execute those liars if you call me your brother. You should not have mercy on Kadysh lest people should lie to either of us. You should let my ambassador go, by ship, without delay. Whatever words I say, I say with Prince Tavbuzar through my servant. Send me a tent. If you send a suit of armour for me, take that of Tsar Ediger and send it to me; it was my armour. If you are our brother, receive my servants with honour Yakshylyk's son Prince Epchury, and Prince Ishmagmet, and Prince Yanbakhty, and Prince Tobutai. Accept their charters for me. They wish me well and used to be my closest men. You should know it. You accepted charters from Prince Yakshylyk when I was a mirza. You should know it. We ask you to put Tsarevich Takhtamysh with Ivan Cheremisinov. He has adhered to your word. He will not disobey ours; you can march your troops against the Crimea, and the common people of Astrakhan will find him good if you let the tsarevich go now. Let Kitai Semen Mirza return. Semen Mirza could bring a suit of armour.

**48. The officer Zakhary Shishkin's Report about the meeting of tsarevich
Devlet-Giray's ambassadors with tsarevich Ablai in Beloozero
(1639, not earlier than the 17th of March)**

On day [...] of March in the year 147, according to the kingly decree of the Tsar and Grand Prince Mikhail Fedorovich of All Russia, Zakhary Grigoryevich Shishkin and Fedor Tarbeyev from Ufa, having come to Beloozero with the ambassadors of Kalmyk tsarevich Devlet Giray Koplanda and Yshei and taken with them an officer from the voivode Mikita Laskirev, went to tsarevich Ablai where he sits. Having come, dragomen spoke to tsarevich Ablai. Your brother tsarevich Devlet Giray and your wife Princess Chigindar have sent the great Tsar and Grand Prince Mikhail Fedorovich of All Russia their ambassadors Koplanda and Ishei. Those ambassadors asked the Tsar's Majesty to be able to see you, tsarevich Ablai, and tsarevich Tevka. His Tsar's Majesty kindly permitted them to see you. Having said so, they let the ambassadors in to see the prince. And the ambassadors Koplanda and Ishei, having come to tsarevich Ablai, said: 'Your brother tsarevich Devlet Giray and your wife Princess Chigindar have sent us to find out whether you are alive.' The tsarevich said to the ambassadors: 'By God's grace, I am alive. I live by the mercy of the great Tsar and Grand Prince Mikhail Fedorovich of All Russia. Have been there and seen my home? Are my mother Kerekhtel, and tsarevich Devlet Giray, and my brother Islam, and my wife and children healthy?' And the ambassadors said: 'By God's grace, they are healthy. We have been to your home and have served your wife and children constantly.' And the prince replied: 'Thank you. What shall I do? I am eager to win the favour of the tsar and do not know what will come of me.'

And the ambassadors said to him: 'Pray to God and ask the tsar humbly. Tsarevich Devlet Giray, and your wife, and we, your servants, shall be by your side. What is your message for tsarevich Devlet Giray?' And the prince told them: 'God knows, I cannot give orders to Devlet Giray. My order for my wife is that she should immediately come under the tsar's hand and come to me without delay. Tell Devlet Giray to let her and my children go without delay.' Tsarevich Ablai asked the ambassadors: 'Did the great Tsar and Grand Prince Mikhail Fedorovich of All Russia bestow a grant on you?' And the ambassadors said to him: 'The great tsar did bestow a grant on us.' 'Who told you of the tsar's grant?' And the ambassadors said: 'It was Duma scribe Fedor Likhachov who told us about the tsar's grant.'

Ambassador Koplanda said: 'Now that we have seen you alive, we can tell your brother tsarevich Devlet Giray and your wife. Your wife will come to you at once. Tsarevich Devlet Giray will let you go.' Tsarevich Ablai ordered the ambassadors that tsarevich Devlet Giray should himself come under the tsar's hand without delaying his wife.

Tsarevich Ablai humbly asked the great Tsar and Grand Prince Mikhail Fedorovich of All Russia 'to kindly order that our ambassadors should be given freedom to go without delay and to kindly send Fedor Tarbeyev from Ufa and the dragoman Vasily Kirzhatskov from Ufa to my wife for I have seen them serve the great tsar. The ambassadors spoke: 'It is not for trade that we were sent to you but to enquire about your health.' They presented the tsarevich with a kizylbashy silk sash and a shirt of coarse calico, and a dark blue velvet hat with a fox fur front piece. 'Having found out that you are alive, your brother tsarevich Devlet Giray, and your wife, and your children sent us to you.' They want Your Honour and Devlet Giray to stand in favour with the great tsar. If they fail, they shall come under the tsar's highest hand immediately. We, your servants, have not heard about you, our master, for four summers and four winters. Now we have seen you. Now we rely on the will of the great Tsar and Grand Prince Mikhail Fedorovich of All Russia. As soon as your mother, and tsarevich Devlet Giray, and your wife, and your children hear about you, they will come under the tsar's highest hand immediately.'

The ambassadors said: 'Your father-in-law Kalmyk Chentui Chechein came and said to his daughter, your wife: if tsarevich Ablā is alive, go to him at once, and hurry in the day and in the night to the great tsar. We will follow you and come under the tsar's highest hand.'

According to the tsar's order, Zakhary Shishkin ordered the dragomen to speak. The dragomen told him to write to his brother tsarevich Devlet Giray or his wife, ordering strictly as follows: if tsarevich Devlet Giray and your wife are willing to set you, Ablā, free, your brother tsarevich Devlet Giray will come under the tsar's highest hand at once as His Majesty orders him. Your wife should take your children and set off at once. If they do not do so, you, Ablā, will suffer great oppression. They will be to blame.

And tsarevich Ablā said: 'I cannot write, so I give the following strict order orally through my ambassador: Devlet Giray with my mother and brother Slam must come under the tsar's highest hand at once and let my wife come with my children to me without delay. They will believe them. Those men whom Devlet Giray sent to me are Koplanda, a faithful man, and Ishim, a faithful man of mine.'

And the ambassadors said: 'This is why we were sent here, and tsarevich Devlet Giray and his wife will believe us.' The ambassadors said to tsarevich Ablā: 'Last year you sent your braid to tsarevich Devlet Giray, and to your mother, and to your wife. They would not believe it and chose somebody to send to you from among many men, and they sent those chosen.'

Tsarevich Ablā rose to bow to the ambassadors and said: 'Thank you for not leaving me, and for coming to His Majesty, and for asking the great tsar humbly to see us.' And he began to cry. And he ordered to them that Devlet Giray should come under the great tsar's hand at once and let his wife and children come to him without delay. He took off his short silk caftan, gave it to the ambassador Koplanda, and wrote with his hand its seal: 'This is very firm in our land, this seal is our tamga. Would the tsar kindly order this seal to be sent to my mother, and to Devlet Giray, and to my wife?' The seal was under seven scripts. Tsarevich Ablā humbly asked the great Tsar and Grand Prince Mikhail Fedorovich of All Russia to kindly order that he should be at home and not in prison, and to be permitted to be allowed to walk outside somewhere by the great tsar's grace. And the ambassadors said to tsarevich Ablā: 'What is your order to your brother Tevka?' Tsarevich Ablā told him that he should be in the fortress. Tsarevich Ablā calls Devlet Giray his uncle. The dragomen asked him whether Devlet Giray was his brother or uncle. And tsarevich Ablā said: 'Devlet Giray is now my uncle.'

On the 8th day of March, having come to Kargopol and taken an officer from the voivode of Alexander Anichkov, they went to tsarevich Tevka, where he lives. Having arrived to tsarevich Tevka, the dragoman said: 'Your brother tsarevich Devlet Giray and tsarevich Ablā's wife Princess Chigindar have sent the great Tsar and Grand Prince Mikhail Fedorovich of All Russia their ambassadors Koplanda and Ishei. Those ambassadors asked the Tsar's Majesty to be allowed to see you both, tsarevich Tevka and tsarevich Ablā. His Tsar's Majesty kindly permitted them to see you. They have already seen tsarevich Ablā at Beloozero.' Having said this, the ambassadors were allowed in to see tsarevich Tevka.

Coming up to tsarevich Tevka, the ambassadors spoke: 'Your mother Kerekhtel and your brother tsarevich Devlet Giray ordered us to pay obeisance to you. Please instruct me on what to tell your mother and your family.' And tsarevich Tevka told them: 'I make obeisance to my mother and my brother.'

Ambassador Koplanda said: 'Should your brother come under the tsar's hand?'

And the tsarevich told them: 'My brother Ablā's wife and children shall come to him, and the tsar will bestow a grant on him. I have no wife or children, and my mother and my brother Devlet Giray should come under the tsar's highest hand so that I can win his favour.'

And the ambassador gave the following gifts to the tsarevich. Koplanda presented him with crimson feryezes, and Ishei presented him with a shirt of coarse calico, and pants and kizylbashy silk sash. And they said to him: 'Order your mother and your brother (Sheet 41) to come under the tsar's highest hand. They will obey you. You are your mother's dearest son, she loves you more than anyone.' And the tsarevich told them: 'It is good, I am glad not to have been betrayed.'

Tsarevich Tevka asked the great Tsar and Grand Prince Mikhail Fedorovich of All Russia to order that the ambassadors should not be delayed.

He ordered his ambassadors to pay obeisance to his men Sare Mergen and Kozyash: 'When I was in my land, you were my men and served me. Why have you left me now, why will you not come to me for the sake of my regal tsar name (title)? You should come to my home and persuade my brother tsarevich Devlet Giray and my mother to come under the tsar's highest hand.'

Tsarevich Tevka asked the tsar humbly to kindly order that Fedor Tarbeyev from Ufa and the dragoman Vasily Kirzhatskov, also from Ufa, should be permitted to go to his mother and his brother Devlet Giray. He ordered his ambassadors that his mother and his brother should obey the tsar's ambassadors and not disobey them, and come under the tsar's highest hand.

And by the order of the great Tsar and Grand Prince Mikhail Fedorovich of All Russia, Zakhary Shishkin ordered the dragomen to speak. The dragomen told tsarevich Tevka to write to his mother, and to his brother, and to Ablā's wife, or to order them verbally as follows: if they are willing to set Tevka free, his brother would come under the tsar's highest hand at once as His Majesty ordered him. Ablā's wife with her children would go to tsarevich Ablā immediately. If they did not do so, he, Tevka, would suffer great oppression. They would be to blame.

And tsarevich Tevka ordered the ambassadors that his mother, and his brother, and his sister-in-law should come under the tsar's highest hand immediately, avoid any disobedience, and stay by his side. He cut off some of his hair and ordered that it should be taken to his mother and brother. He gave his brick-coloured Kaftan of silk to ambassador Koplānda. He said to him: 'Koplānda, I order you strictly that my mother and brother should come obediently under the tsar's highest hand without any delay. My sister-in-law, Princess Chigindar, must go to her husband tsarevich Ablā at once. I have nothing more to say.' He wrote with his hand and said: 'This seal is the tamga of our land. Would the tsar kindly order that this should be sent to my mother and my brother Devlet Giray?'

Tsarevich Ablā called Devlet Giray uncle, and the dragomen asked tsarevich Tevka whether Devlet Giray was their brother or uncle. And tsarevich Tevka said: 'Tsarevich Devlet Giray is our brother, and the reason why Obyla called him uncle is that he Devlet Giray married our mother.'
