Orthodox Church into the centre of the social life for members of the region's nascent ethnic intelligentsia (except for Muslim Tatars and Bashkirs), offering them opportunities for social, educational and financial promotion. The activities of most representatives of the ethnic intelligentsia, especially in the latter half of the 19th century, showed a close connection to the church. It was not uncommon for them to start their careers at educational establishments founded by Orthodox Christians, where they received a primary Christian education that enabled them to later teach at confessional educational establishments and work for their nation's cultural and religious enlightenment, until they eventually joined the clergy. The most talented and active Chuvashes, Maris, Udmurts, Christian Tatars, and Mordvins succeeded in ethnic education and enlightenment, forming a non-Russian intellectual elite. They proved extremely helpful to Orthodox missionaries as active Christian enlighteners. Thanks to Ilminsky's system, Christianity and Russian Orthodox institutions became key to the cultural mobilisation of non-Russian Christian peoples; their 'high' culture and literary traditions all stemmed from Orthodox values. N. Ilminsky's first disciples and associates led the ethnic Orthodox missionary movement, including the Chuvash I. Yakovlev and D. Filimonov, Mordvin A. Yurtov and M. Yevseyev, Mari S. Chavain and V. Vasilyev, Udmurt G. Vereshchagin and K. Andreev, Christian Tatar V. Timofeev, and others. This was a strong team of professionals, and the most dedicated adherents to N. Ilminsky's ideas.

The terms 'assimilation', 'Russianisation', and 'Russification' have been much discussed in literature, mostly from abroad, in recent years [Matsuzato, 2003, p. 5]. Most authors are inclined to view the Russianisation of non-Russian peoples as a complex and controversial process that is best studied at the most profound level of its dynamics. To quote A. Kappeler, 'the umbrella term 'Russification' cannot account for every aspect of the complex notion it references... '[Kappeler, 2000,

I. Yakovlev (sitting third from the right) with lecturers of Simbirsk School for Chuvash Teachers. Photo from the early 20th century.

p. 204]. He thus agreed with M. Slavinsky that imperial policies in this sphere were 'as motley and diverse in their manifestations' as was the Empire's population [quoted by: Kapeler, 2000, p. 204]. It is impossible to shape this diversity into a coherent system, not to mention unity, as no unity in reality actually exists. N. Ilminsky viewed 'Russianisation' as the shift in the confessional orientation of non-Russian peoples when they adopted the Orthodox faith, the Russian language, and finally Russian customs. He did not anticipate any ethno-cultural unity of Orthodox peoples; only in the long-term perspective did he see this as a possibility. Being opposed to aggressive short-term measures he believed to be generally ineffective, he insisted on a spiritual Russianisation that could attract the leaders of the fledging ethnic intelligentsia and clergy. I. Yakovlev shared a memory from the very first week after they met, about how Ilminsky gave him his letter to the Minister of Public Education and Chief Procurator of the Synod Count D. Tolstoy, which read that 'whatever good things the Russians have should be imposed on Russia's indigenous peoples while preserving their positive historical ethnic features' [Yakovlev, 1998, p. 179]. However, KED Cu-

rator P. Shestakov convinced Ilminsky not to send the letter, lest it irritate D. Tolstoy, as the approach to Russification consisting of the direct implementation of Orthodox Christianity, the Russian language and its culture, was popular among the high-ranking officials of the time. N. Ilminsky attached great importance to ensuring tolerance for co-education. Children from different peoples of the

Volga-Ural region studied together in the TSK. It had a total of 554 graduates while Ilminsky was the principle, including 332 Russians and 222 non-Russians (56 Tatars, 68 Chuvashes, 47 Maris, 12 Udmurts, 30 Mordvins, 2 Kalmyks, and 4 Altaians) [Bezzubov, 1960, p. 23; Rogachev, 2002, pp. 28–29]. The Seminary aspired to instill humanism and high moral standards in its students. Its teaching staff attached primary importance to inter-ethnic relations among students. Other educational establishments also widely employed the TSK model. For instance, I. Yakovlev practiced co-education among the Chuvash, Russian and Mordvin, believing it to facilitate their mastering of the other groups' languages and culture. I. Yakovlev's work describes numerous cases of cooperation between the Chuvash, Russians and representatives of other ethnic groups to address educational issues.

N. Ilminsky found it necessary to ensure a deep religious rebirth for each non-Russian person: 'We have a more profound idea of Russianisation. We take the ideal Russian person and try to impose that image on non-Russians. The Russian ideal is essentially Orthodox Christianity, which is the reason why we are insisting upon it. A non-Russian who

Non-Russian
Orthodox Clergy
at the Congress
of Missionaries in
Samara, 1899

has deliberately fathomed the Orthodox faith mentally and accepted it with their heart has been Russianised' [quoted by: Znamensky, 1892, p. 204]. Still, it should not be forgotten that the Russianisation of non-Russian peoples in the latter half of the 19th –the beginning of the 20th century depended more on the large-scale socio-economic transformations of the country, which dismantled the patriarchal order and undermined the monolithic peasant community, engaging it instead with new economic and cultural contacts, than on how effective Christian enlightenment was. A. Kappeler was right to state that 'unification required the Russian language to be introduced to the administrative and education system, which determined the disadvantaged status of non-Russians compared to the "official people"' [Kappeler, 2000, p. 204]. A 'Russianised non-Russian' was regarded as having a higher social and cultural status both by his own ethnic group and by other peoples. Therefore, many Christian non-Russians viewed eagerness to be 'Russianised' as a progressive trend. It should be added, however, that bourgeois modernisation also increasingly made Russian an instrument for inter-ethnic communication. It was life itself that

ultimately motivated Russia's peoples to learn the Russian language and adopt the culture.

In summation, N. Ilminsky established a missionary and enlightenment system resulting from his many-year search for the best forms and methods of influencing the religious sense of the non-Russian population and the confessional orientation of Christian non-Russians. The missionary enlightenment theorist founded the following missionary enlightenment institutions to see his ideas through to the end: the KCCTS, the TSK, and the Brotherhood of Saint Gury, along with its network of missionary schools.

The reception of N. Ilminsky's activities was polarised, as the missionary enlightenment system developed in the midst of fierce disputes. Attacks 'from both the right and the left' did not prevent N. Ilminsky's system from operating until the 1917 Revolution, which is undoubtedly indicative of the fact it was thoroughly developed.

The wide range of opinions on it today is attributable to a number of subjective and objective reasons, namely the political situation, the authors' ideological and ethno-confessional affiliation, etc For example, Soviet literature presented N. Ilminsky and his mis-

sionary and enlightenment system in a negative light, although popular education ideologists often used his ideas without knowing it. Muslims of the Volga-Ural region rightfully criticised Ilminsky's system for being anti-Islamic and largely causing a confessional rift in the Tatar ethnos by narrowing its ethno-cultural sphere. Traditional believers were no less categorical: they accuse N. Ilminsky and his associates of ruining the traditional religion and national culture of 'Pagan' peoples. Russian patriots criticised N. Ilminsky for giving rise to separatism and anti-Russian nationalism. The region's Orthodox population has been immensely grateful to the missionary and enlightener for fostering a unification between Russian and non-Russian peoples, enabling the former to become familiar with

the Christian and global civilisation, and creating a writing system and professional culture of their own. N. Ilminsky acted within the ideological, moral, and ethical framework of the time to ensure progress for all of Russia's peoples as he imagined it. He viewed the Russianisation of Christian non-Russian peoples as a spiritual unity determined by the Orthodox faith, and both inevitable and progressive.

As anti-Islamic as it was, N. Ilminsky's system had a positive effect on the ethno-cultural mobilisation of the Tatars, where some elements of it were used for the modernised Islamic education system, and then in the Soviet education system. It is beyond any doubt that smoothing out the educational and cultural differences among Russia's peoples was crucial to inter-cultural communication.

Section VII

Anti-Governmental Campaigns and a National Movement

CHAPTER 1

Campaigns of the Tatar Rural Population

§ 1. Social Protests of Various Groups of the Rural Population in the Pre-reform Period

Ilshat Fayzrakhmanov

In the Russian reality, any disobedience to the authorities was perceived as resistance and an anti-governmental campaign. There were various forms of social protest among the peasant masses, and as to the 19th century, they can be called ‘protests by deviation’—a method in which rural communities or groups of peasants ‘tried to alleviate the hardship of their life and to express dissatisfaction by a short-term refusal to perform the prescribed as well as other activities minimising the probability of colliding with those whom they considered to be their oppressors’ [cited from: Werth, 2005, p. 55].

Villagers also enjoyed the possibility of filing petitions to express their dissatisfaction with the actions of individual government representatives and governmental innovations, as well as unpopular measures.

In the first half of the 19th century, peasants’ campaigns took place in rural communities belonging to a particular category of a rural tax-paying class. Such campaigns were usually a protest the invasion of the authorities into the economic life of the community. Carrying out reforms ‘for the benefit of peasants’, all the costs associated with the implementation of the innovations were laid by the government on the rural population, which increased the tax burden and control over the internal life of the land community. As the institutional ‘control’ over social and economic relations in peasant communities was growing, there were several campaigns of peasants of various categories. Peasants of various ethnic groups and social classes protested, but there was no ‘unified single movement’ [Zagidullin, 2011a, pp. 215, 216].

In the first quarter of the 19th century, there was increased exploitation by landlords of their peasant serfs, therefore, the most significant unrest occurred in the estates of the chernozem zone of Russia, Ukraine, Lithuania and Belarus [Ignatovich, 1963, pp. 10, 466].

The status of the residents of a state village was much better than the economic and social position of peasants living in an appanage village. Cases of transferring state serfs to the appanage department, which worsened their social position and led to stricter control over their life, provoked anti-governmental campaigns.

In 1835, state-owned peasants (including lashmans) of Simbirsk guberniya were transferred to the appanage department. The new administration subjected their life and economy to administrative regulation and forced them to introduce public ploughing. Lashmans responded to this with a massive protest that included 40 thousand peasants in 1836, mainly in Buinsk, Kurmysh and Simbirsk uyezds [Druzhinin, 1946, pp. 221–222].

Lashmans were afraid that they would be deprived of their former benefits and ownership of the land which they had purchased. In periods of heightened social, political and economic problems in Russia, there were rumours that clearly reflected the peculiarities of the peasants’ mentality and ploughmen’s attitude to the events in the country. Tatar rural communities spread a rumour about the forced conversion of Muslims to Christianity. Bezdna village in Buinsk Uyezd became a centre for the mass movement, where there were meetings and conflicts with the administration. One after

another, rural communities refused to fulfill the orders of their administration to allocate and plough public land plots. Armed with knives and bludgeons, peasants traveled all over their fields. Some detachments of the local garrison and the horse gendarmerie were sent to the region of unrest. In several villages whose residents did not obey, there were mass floggings of activists; 25 peasants were made soldiers, exiled to Siberia, etc., without any trial [Druzhinin, 1946, p. 222].

In 1834, after another crop failure, the appanage department ordered the planting of potatoes on the state ploughed land, where each peasant family was granted 30 square sazhen of land for the crop, leading to protests of the rural population in the Vyatka and Vladimir governorates: the peasants refused to plant potatoes.

The mass social protest of the rural population in the Ural region in 1834–1835 should also be considered as a response of the rural communities to the management reform. The main motivation for the campaign of the state village residents in the region was based on rumours about the governments' intention to transfer them to the appanage department. Shortly before the events of 1834–1835, volosts in the Perm guberniya introduced a new seal with the guberniya's coat of arms which depicted a bear. On this basis, it was concluded that the Tatars and Mari people had already been assigned to the appanage department and transferred to a widely-known landowner by the name of Medvedev, and that the tribute would be paid in his favour [Druzhinin, 1946, p. 226].

There were rumours among the Tatars, Bashkirs and Meshcheryaks that there would be forced conversion of Muslims to Christianity, for which purpose a mission was supposedly established in Perm guberniya. These rumours in various versions caused mass unrest among peasants not only in Perm, but also in the neighbouring Orenburg guberniya, especially among the Tatars, Teptyars and Mishar Tatars of Ufa, Belebey and Troitsk uyezds.

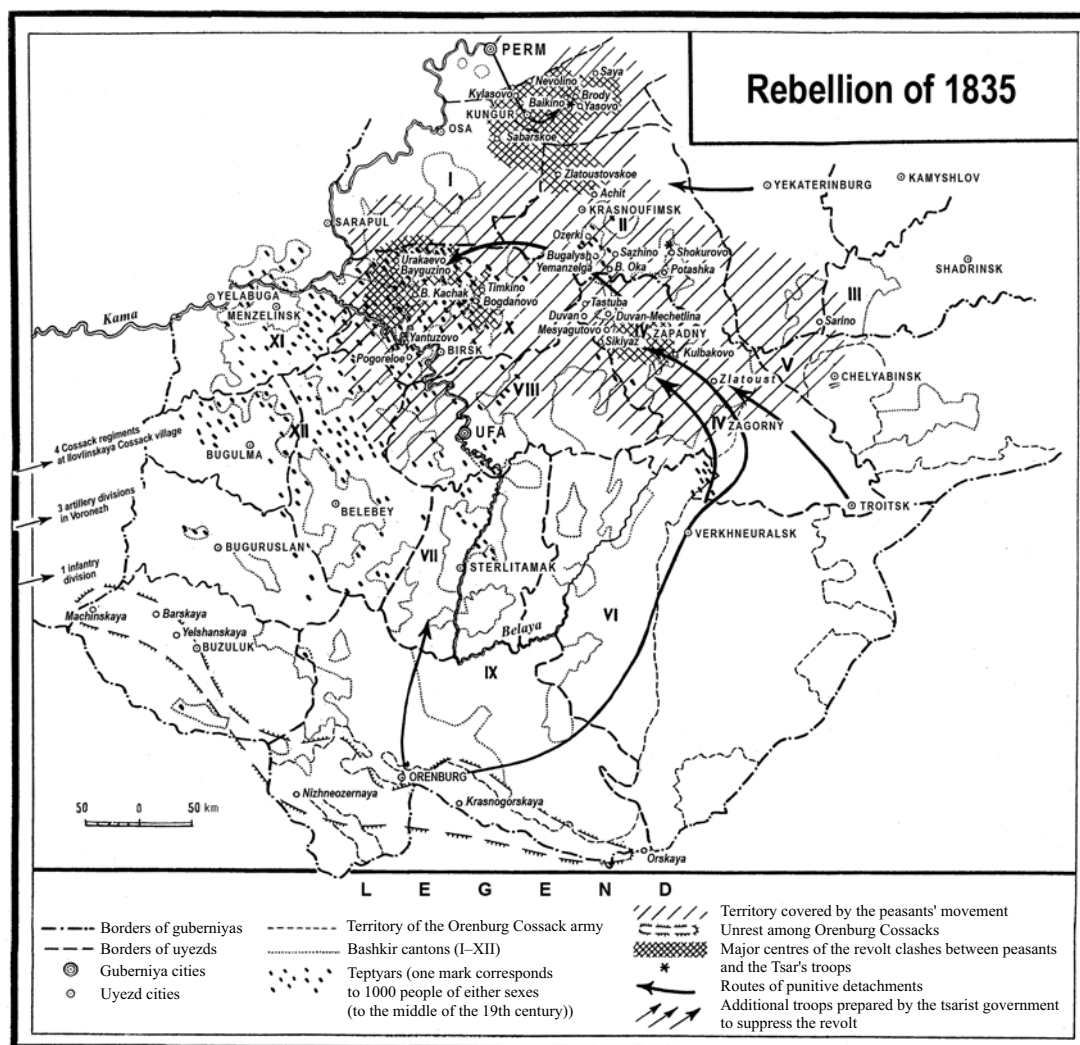

During this period, bread reserve stores were planned to be built in the villages of state peasants, Mishar Tatars and Bashkirs. Vo-

losts were sent corresponding drawings with an image of the granary's cross-section. The Muslim population saw that the crossbars and posts in the drawing were shaped in the form of a cross. It was concluded that the buildings to be erected were Christian churches. This interpretation further intensified fears that forced Christianisation was being prepared [Druzhinin, 1946, p. 235].

By the beginning of 1835, a huge area consisting of three uyezds of Perm guberniya and five uyezds of Orenburg guberniya was covered by mass unrest. Crowds of people carried out searches in the volosts' management departments in order to find decrees about their enslavement by the landowner Medvedev and to deal with those who were guilty in the alleged sale—volost heads and, especially, clerks. The movement included six cantons of Bashkir troops: the 2nd (Krasnoufimsk Uyezd of Perm guberniya), the 4th Zagorny (Troitsk Uyezd), the 8th (Ufa Uyezd), the 10th (Birsk Uyezd), the 12th (Belebey Uyezd of Orenburg Guberniya), the Mishar Tatars of the 3rd and 4th cantons, as well as Teptyars of several commands in the north-eastern Ural region. 'Outrageous letters' were sent from one canton to another, Muslims agreed on a joint campaign against the 'main administration'. Just in Birsk Uyezd, there were 20 thousand revolting Teptyars. The most significant unrest was observed in Shakurovo village of Krasnoufimsk Uyezd and Mesyagutovo village of Ufa Uyezd [Istoriya Bashkortostana, 2004, pp. 340–341].

In general, the unrest of social groups and classes of the multinational population of the Ural region was reduced to a refusal to fulfill the authorities' orders to construct bread reserve stores and the beating of several representatives of the local administration. Actions of the rebels were uncoordinated; the management of cantons and officials tried to prevent any coordinated campaigns among the population [Istoriya Bashkortostana, 1997, pp. 417–426].

Suppression of the peasants' movement in the Ural region was entrusted to the Orenburg Governor-General V. Perovsky. He subjected thousands of peasants to flogging, carried out

Map 1. Revolt of the multinational rural population of Orenburg guberniya in 1835.

raids in the woods, and arrested hundreds of participants of the social protest. By the end of August 1835, the population was pacified [Istoriya Bashkortostana, 2004, pp. 342–343].

After crop failures in previous years, Nicholas I issued a decree in 1840 prescribing to cultivate potatoes all over the country to act as a substitute for grains in years of bad harvest. The Ministry of State Property immediately started to implement the emperor's decree, but the innovation was perceived by ploughmen as an attempt to assign them to the appanage. In 1841, the authorities ordered the introduction of compulsory public ploughing, without an agreement on the issue with the rural commu-

nities. Meanwhile, public ploughing became a common phenomenon in the appanage village since 1827, which reinforced the idea among the peasants that the authorities were intending to infringe on their legal status and worsen their social and economic position.

In 1841, the main cause of disaffection of state peasants in the Ural region was a law on the exchange of impoverished appanage peasants from central guberniyas with state peasants from large guberniyas, including Perm and Orenburg guberniyas, dated 16 January 1840; this meant the transformation of relatively free ploughmen into serfs of the imperial court who were close to landowner's peasants in terms

of their position. Bashkirs and Mishar Tatars of the Ural region were dissatisfied with an increase in labour tributes; they saw this as a governmental attempt to deprive them of their personal freedoms and to take away their patrimonial lands [Istoriya Bashkortostana, 1997, pp. 430–432].

In 1841–1842, a severe peasants' revolt against planting potatoes broke out in Petrovsk uyezd of Saratov guberniya and several neighbouring uyezds, where there were Russian, Mordvinian and Tatar villages [Druzhinin, 1958, p. 466].

In Kazan guberniya, especially acute disaffection among peasants was caused by the forced introduction of public ploughing lands, which was accompanied by the confiscation of their best land, the forced exchange of land plots, and untimely and unequal work orders. Already in 1841, there was remote 'unrest' in all of the uyezds of Kazan guberniya; there were continuous discussions about the 'appanage' in the markets [Druzhinin, 1958, p. 467]. In 1841 and 1842, peasants from Yadrinsk, Cheboksary, Tsivilsk, and Kozmodemyansk uyezds of Kazan guberniya began a revolt against the planting of potatoes. Particularly severe unrest was observed in Akramovo volost Of the Kozmodemyansk uyezd [Vosstanie chuvashskogo krest'yanstva, 1942, pp. 6–7]. The campaigns were uncoordinated and spontaneous and were aimed at the abolishment of some of the innovations [Tokarev, 1939, pp. 72–73].

During the Crimean War, along with emergency recruitment into the army, a moving state militia was convened on the basis of a

manifesto dated 29 January 1855. The militia was convened from 32 guberniyas in three conscriptions, lasting until September 1855. Altogether, the militia comprised 364, 624 people.

The disturbances became especially acute among the Laschmann Tatars in 1855 in response to their conscription. Prior to this, Laschmann Tatars were not obliged to serve in the army. The Tatar population did not want to serve and strongly opposed it: in Timergalinsk volost of Malmyzh uyezd 'the Tatars altogether launched a revolt during the verification of recruiting lists for the conscription, with beatings of members of the volost and village authorities and an intent to beat the district head, who was also there'. Twelve leaders of the movement in Timergalinsk volost were arrested [Linkov, 1952, p. 141].

In Nizhny Novgorod guberniya, unrest connected with recruitment was observed in three uyezds—Sergach, Vasilkov, and Knyagin. By the end of May 1855, the movement was suppressed.

Thus, the 'cholera' and 'potato' revolts, and the anti-governmental campaigns of the population against the innovations were a result of the aggravated contradictions between the authorities and the peasants. Peasant unrest could be observed in various forms: from individual protests to the refusal of whole villages to enter into the state military service. Muslim Tatars and Bashkirs associated the reform with the threat of losing their confessional identity. The campaigns of rural communities resulted in some relaxation of the administrative pressure in conducting reforms.

§ 2. Campaigns of Peasants Caused by Socio- Economic Reasons in the Post-Reform Period

Ildus Zagidullin

The disobedience of peasants in the given period was the direct result of a deteriorated economic situation among the rural population, strengthened fiscal oppression by the monarchy, abuse by representatives of the local administration in their relations with the plough-

men, etc. The abolition of serfdom and related modifications contributed to a rise in the social activities of the population. Several regions were marked by the disobedience of the rural tax-paying population towards the innovations introduced by the authorities.

Proper implementation of the agrarian reform in the state village in 1866 contributed to the prevention of unrest. The main reasons for the reluctance of Tatar ploughmen to receive 'certificates of ownership' were as follows: assignment of smaller land plots than before, the granting of land plots uncomfortable for agriculture or far from their place of residence, and a variety of rumours about the deterioration of their financial situation after the assignment of land [Smykov, 1973, p. 157].

The largest campaign of Tatar peasants connected with the implementation of the agrarian reform took place in June 1869 in Spassk uyezd. It was caused by rumours that peasants would be transferred to the control of the appanage department and that they would be obliged to pay large tributes and high taxes. To suppress the unrest, the governor N. Skaryatin came to the uyezd [Materialy', 1936, pp. 141–142].

The predatory plunder of Bashkir patrimonial lands in the Ural region and the lack of new owners in the vast lands led to the fact that in 1882–1884, 1888 and 1889, the Tatar and Bashkir populations cut large amounts of forest that had become private in Birk, Ufa and Sterlitamak uyezds, seized the meadows and ploughed land of the new owners, as well as the land of the moved peasants who had purchased the land on favourable terms from Bashkirs or the state. Moreover, they began to seize the land of local landowners, including the Tevkelevs. The weakness of the local administration contributed to an increase in the number of such cases. It even happened that some landowners were forced to leave their estates [Krest'yanskoe dvizhenie, 1959, pp. 245–254, 379–380, 672–673, 720–721].

The organised cutting of forests by Tatar peasants of the Volga and Ural regions was an integral part of the offenses committed by the rural population. The receipt of the worst and very small land plots as a result of the land assignment and a lack of proper control over forest protection contributed to the frequent collective cutting down of forests [Smykov, 1973, pp. 215–269; Zagidullin, 1992, pp. 114–115].

Land was the main source of livelihood for any peasant. The sense of common ownership

and the peasants' intent to get even the smallest land plot at the slightest possibility transformed land disputes into severe conflicts. The number of conflicting villages and old offences were very significant in these situations. For example, in July 1861, Tatar peasants from Maly Sulabash village of Kazan uyezd resisted the cutting of the land they used in favour of the landowner Mamaev. They were supported by peasants from the neighbouring Dubyazy village. The unrest acquired such a threatening nature that a conciliator, who had come to pacify the peasants, 'could hardly leave, and could do it only by deception' [Ustyuzhanin, 1948a, pp. 485–486].

Disputes over land between communities were even fiercer. They often grew into clashes between large groups of peasants. In autumn 1886, one such clash took place between the Tatars living in the Timerchi, Kuyuk and Bukmysh villages of Mamadysh uyezd. The conflict was caused by 63 desyatinas of land that were taken away from the community of the Kuyuk and Timerchi villages and added to the Bukmysh village [Zagidullin, 1992, p. 159].

During conflicts with the local authorities on agricultural issues, peasants often directed their anger against their village headmen, who usually tried to unquestioningly follow the instructions of the administration.

In the following decades, in the climate of an increased land hunger, some inter-community conflicts were caused by land and forest land cutting in the 1860s and 1870s [Daishev, 1955, pp. 257–258].

The unwillingness to pay mandatory insurance duties was sometimes motivated by a prohibition of the Shariah or the unprofitableness of their payment. In particular, in November 1882, residents of the Kurtamysh village of Chelyabinsk uyezd, Orenburg guberniya, refused to pay the insurance duty; their resistance was suppressed by a military detachment [Krest'yanskoe dvizhenie, 1969, p. 794].

Fiscal oppression was another, equally important reason for the unrest of Tatar peasants. The unrest during the collection of taxes and arrears was a direct consequence of their difficult economic situation. The local authorities

usually made an inventory of indebted peasants' property and arranged the sale of their domestic cattle, household items, and even household buildings, at reasonable prices. This caused outrage and resistance on the part of the villagers. On 22 April 1883, residents of the large Tatar village Nizhny Elyuzan in Kuznetsk uyezd of Saratov guberniya (200 people), armed with stakes and pitchforks, hampered the inventory of the villagers' property for their arrears to the government and private persons, attacked the bailiff and the village constable, and beat several witnesses [Krest'yanskoe dvizhenie, 1960, pp. 377–378]. After a year of bad harvest, peasants restrained themselves from paying taxes. In this regard, it is worth mentioning the collective refusal of peasants from a number of Tatar villages of Bugulma Uyezd of Samara guberniya from paying redemption charges, as well as all governmental and volost charges, which occurred in November 1903 [Krest'yanskoe dvizhenie, 1988, pp. 165–167].

Anti-plague and anti-cholera regulations required the correspondence of people's traditions and lifestyles to strict medical standards, which was perceived by Muslims as a threat to their religious rights on the part of the authorities.

The unrest among the Muslims of Bugulma, Buguruslan, and Buzuluk uyezds was caused by the 'Rules of application in Samara guberniya of measures in the form of killing plague-deceased and plague-suspected cattle...' dated 1884. In accordance with these rules, plague commissions and veterinary guards were established in the villages to monitor cattle drives, which were maintained at the expense of the population. These measures, which were unpopular among peasants, were conducted with various violations that negatively affected their economic situation. A brochure about plague published in the Tatar language stated that the animals were to be slaughtered with the help of an injection in the neck, which was seen by the Tatars as a threat to Islam [Rafikova, 2004, pp. 105–109].

At the beginning of 1885, peasants did not allow doctors to slaughter their cattle, refused to pay for the zemstvo's activities aimed at combating the plague and compiling lists of cattle. On 19 May 1885, high officials came to Suleevo village of Bugulma uyezd 'for the purpose of exhortation'. After the governor ordered the arrest of the village headman and for those gathered to get down to their knees, '... a crowd of up to 600 people, armed with stakes, marched to the governor and his companions with threats, and only the bare sabres of 14 constables and policemen stopped their movement'. A few days later, a military detachment arrived in Suleevo: the activists were arrested, and an inventory of the peasants' cattle was made. In spring–summer of 1885, armed campaigns against the local authorities took place in several other villages of the guberniya, where residents were forced to submit to the authorities on pain of death [Smykov, 1973, pp. 191–192].

338 campaigns for socio-economic motives conducted by various groups of the multinational peasantry of Kazan, Samara and Simbirsk guberniyas in 1860–1900 were arranged by former peasant serfs (2/3 of them took place after the issuance of charters after the abolition of serfdom), and 79 campaigns were arranged by former appanage, mainly Russian peasants. According to incomplete statistics, there were 6 campaigns of Tatar peasants in Simbirsk guberniya, 10 in Samara guberniya (cutting of wood and prevention of sanitary and epidemiological activities) [Smykov, 1963, pp. 117–125], and 127 in Kazan guberniya [Zagidullin, 1992, p. 246].

The interaction of neighbouring rural communities largely depended on the grounds for peasants' actions. Resistance against the state land ownership system, tax oppression, command-administrative methods of control of the authorities, and power abuse on the part of their individual representatives was the main type of anti-governmental activity among the Tatar peasants.

CHAPTER 2

Movement of Baptised Tatars for their Return to Islam

§ 1. Christian Instruction and Movements of Christened Tatars for their Return to Islam in the Pre-Reform Period

Paul Werth, Radik Iskhakov

Recognition of Islam's status as one of the sanctioned religious traditions in the empire and the integration of Islamic institutions in the administrative and legal space of the state in the latter third of the 18th century did not mean a governmental rejection of the policy of religious unification (christening) of the Tatars. During the existence of the 'Department for Christening Affairs' (Christening Department in 1740–1764), a large number of Tatars were converted to Orthodoxy, though many superficially and formally, and were called the 'newly-christened'.¹ Since canonical regulations of the Russian Orthodox Church and the state laws of the empire strictly prohibited 'otpadenie' ['falling away'] from the Orthodox Church to any other faith or confession, the authorities had to seriously consider the question of preventing a return to Islam of those who were previously christened, and of maintaining them in Christianity. Therefore, if we talk about the Christian education of the Tatars in the 19th century, we should first of all speak about a fight against 'defection', which periodically occurred throughout the century in the form of more or less organised movements.

The fight against 'falling away' was mainly the church's business, which could not be considered only as one of the structures of the state bureaucratic apparatus. But we should not deny that a close relationship between the state and

the church in Russia forced the government to look at this struggle as at its own task.

'Falling away' could take hidden forms: for example, Christened Tatars could go to church and at the same time secretly observe the tenets of Islam. There is ground to believe that many Christened Tatars were more or less constantly in such a hidden state. Sometimes, 'falling away' took more open forms: for example, christened Tatars petitioned the emperor or other officials of the central or local administration, saying that they officially wanted to profess Islam. Such movements, involving multiple uyezds or guberniyas, often coincided with coronations (1802, 1826–1827, 1856, 1882–1883 and 1896), which were often accompanied by expressions of imperial mercy to the subordinates and, therefore, were the best times for filing petitions. In other cases, an open break with the Russian Orthodox Church was associated with some event, which was interpreted by the local population as a sign that the government was changing its religious policy and could now allow christened Tatars to return to Islam.

Newly christened Tatars, who were completely ignorant of the Christian doctrine and did not understand Orthodox rites and the divine service held in the church Slavonic language, perceived Orthodoxy as an alien, 'strange', 'Russian' faith, in contrast to the 'Tatar' (Islam) religion. Despite the adoption of Christianity, Islam remained an important component of their world outlook and sense of national identity. An important role in preserving Muslim self-consciousness in this group of christened Tatars was played by their living near Muslim Tatars. In the conditions of

¹ According to incomplete statistical data compiled by E. Malov, by the mid-19th century, there were 21,592 newly-baptised Tatars of both sexes in six eparchies of the Volga-Kama Region (the guberniyas of Kazan, Vyatka, Simbirsk, Penza, Samara, and Nizhny Novgorod) [see: Malov, 1866].

close cultural, religious, and often family contacts with the latter, they continued to consider themselves as Muslims. An important reason for the preservation of this situation lied in the position of 'official Muslims', who perceived the newly christened as their brothers in faith who had been forced to abandon Islam.

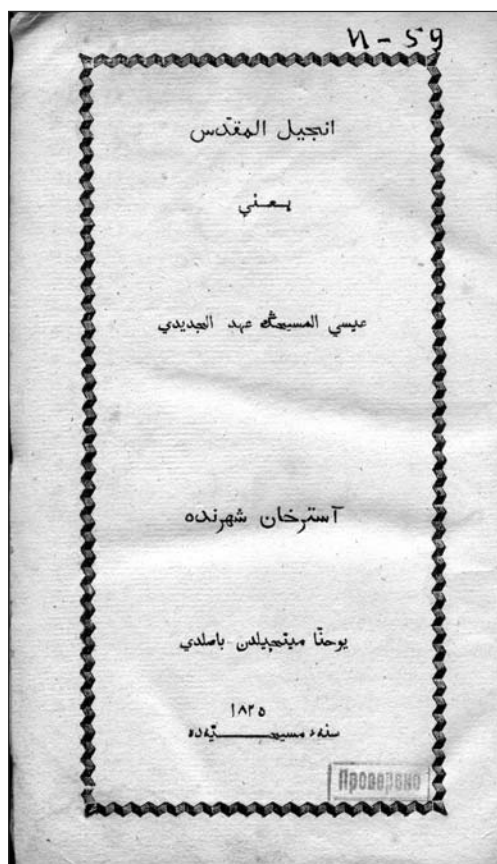

Of course, we should not idealise the relations between the newly christened and non-christened Tatars. A christened person, even though he was christened forcibly or under difficult circumstances, was perceived by Muslim Tatars as a person who had lost the 'purity' of his natural faith, who was compelled, despite his commitment to Islam, to attend Church, to christen his children, to bury his dead relatives in accordance with the Orthodox tradition. The dual position of the newly christened Tatars, which gave them a marginal status within the Tatar society, forced them to look for ways to legalise their actual confessional status.

The first such attempt was made in 1802–1803, when a desire to openly profess Islam was declared by christened Tatars from Maklakovo, Bazlovo, Isheevo, and Andreevka villages of Vasilsursk Uyezd of Nizhny Novgorod guberniya [Russian State Historical Archive, f. 796, inv. 84, file 4, s. 31]. The movement affected the neighbouring Kazan guberniya, although cases of withdrawal from Orthodoxy were rare there [Malov, 1868–1870, p. 325]. During the investigation of the reasons for 'falling away' in Nizhny Novgorod guberniya, it turned out that these Tatars, despite their adoption of Orthodoxy, continued to perform Islamic rites and send their children to study in Islamic schools [Russian State Historical Archive, f. 796, inv. 84, file 4, s. 33]. Those who 'fell away' not only did not know Orthodox prayers but did not have any idea about the Christian tradition. At the same time, they knew the Islamic doctrine, and one of the organisers of the movement—Vasily Evstifyev—could read in the Arabic and Persian languages [Ilminsky, 1883, p. 67].

The movement of 1802–1803 was passive in nature, and when the local administration interfered, the majority of those newly-baptised formally returned to Orthodoxy [Russian State

Historical Archive, f. 815, inv. 15, file 237, s. 3]. Although tough actions helped to suspend the return of christened Tatars to Islam for a while, the authorities had no real opportunities to cardinaly solve this problem. The local church and secular authorities had a vague idea about the causes for the phenomenon, thinking that 'falling away' from Orthodoxy was due to external factors, while the true desire of the 'newly christened' Tatars to profess Islam lay deeper and was associated with a desire to preserve the Tatar ethnic and cultural identity, which was only possible within the Islamic community.

In 1811 and 1824 there was a new 'falling away' that took hold of three villages of Chistopol uyezd in the Kazan guberniya [Malov, 1868–1870, p. 229]. In 1825, two petitions to the emperor were filed by baptised Tatars of Yelabuga Uyezd of the Vyatka diocese in the name of the emperor, stating a wish to return to Islam [Russian State Historical Archive, f. 797, inv. 3, file 12644, s. 11]. The movement grew even larger in 1827, when only according to the official data, 3, 274 people from Sviyazhsk, Tsivilsk, Tetyusi, Buinsk, Simbirsk, and Stavropol uyezds of the Kazan diocese and Buzuluk Uyezd of Orenburg guberniya expressed their wish to publicly profess Islam [Russian State Historical Archive, f. 797, inv. 3, file 12644, s. 159]. In this case, an important role was played by the coronation of Nicholas I, but there were other circumstances as well. One of the formal causes for the beginning of a mass withdrawal from Orthodoxy lay in the rumours that christened Tatars were allowed to profess Islam. An important role in the strengthening of these rumors was played by a decree of the Kazan guberniya authorities dated 13 March 1826, according to which christened Tatars listed in the 7th audit and living in Azeyevo and Romashkino villages of Kazan guberniya (44 people) were allowed to profess Islam. Since the local Orthodox consistory failed to prove the fact of their christening (a fire in 1815 destroyed most of its documents), the authorities recognised that these Tatars had not been christened and therefore should be considered as Muslims [Malov,

Cover page of a Gospel in the Tatar language
'Inzhil el-mokaddes' (Astrakhan, 1825).

1868–1870, pp. 331–332]. It must be emphasised that in this case, the authorities did not allow them to return to Islam, but only agreed to correct the error. But this created an impression among the residents of Tatar villages that christened Tatars could again become Muslims, and that others could do this as well. It is this concurrence of circumstances that served as a basis for the movement of 1827.

In their petitions, christened Tatars stated a number of arguments which, in their opinion, should have justified a positive response of the authorities to their request. In particular, some of them stated that their ancestors had been forcibly christened and that they were brought up as Muslims. Others reported that the circumstances of the christening of their ancestors were completely unclear or that the ancestors had adopted Christianity to avoid recruitment. Some of them denied the fact of their christen-

ing and attributed their official status to an error of machinations of the local Orthodox clergy. In almost all cases, the petitioners expressed a readiness to fulfill the will of the emperor and stressed that their desire to profess Islam did not prevent them from being loyal subjects [Russian State Historical Archive, f. 797, inv. 3, file 12630, file 12644, s. 2 reverse–3 reverse, 50–51; f. 796, inv. 108, file 595, s. 9 reverse–10 reverse, 13 reverse].

Activation of the process of returning to the ancestral faith, which covered the territory of the three largest guberniyas of the Volga region, forced the imperial authorities to take decisive countermeasures. With a decree dated 23 June 1827, The Synod ordered Kazan archbishop Iona (Pavinsky) to establish positions of special preachers in the diocese to be appointed from among the priests who knew the languages of the local peoples, to provide them with guidance, a Tatar translation of the New Testament and to send them to villages inhabited by 'apostates' [PSPR, Vol. 1, No. 169]. Three archpriests were appointed to these positions. The success of their work depended on local conditions, but in general, we can talk about a lengthy process: the preachers, using the method of persuasion and compulsion, tried to force the Tatars to abandon their 'Mohammedan delusion'. In autumn 1827, they faced a minor resistance on the part of petitioners from the Kazan guberniya [Mozharovsky, 1880, p. 131]. Most christened Tatars retracted their claims when they became sure of the negative position of the higher authorities and attributed their 'delusion' to factors that were beyond their control [Werth, 2002, pp. 52–54]. Thus, gradually reducing the number of those resisting, the local diocese management had managed to suppress the movement by the beginning of the 1830s and reported that 'almost all christened Tatars from the mentioned uyezds, who have deviated to Mohammedanism, recognised their delusion and turned to the Orthodox Greek-Russian Church, and fulfill its sacraments' [Russian State Historical Archive, f. 797, inv. 3, file 12644, s. 120 reverse; f. 796, inv. 108, file 595].

The 'falling away' in 1802 and especially in 1827 showed that the church authorities should be more actively engaged in the Christian education of christened Tatars. These activities included three main directions: translation of Christian liturgical books into the Tatar language, organisation of an institution of Orthodox missionaries, and organisation of an anti-Islamic department at Kazan Spiritual Academy.

During the first half of the 19th century, there were several attempts to translate Orthodox spiritual and liturgical literature into the Tatar language. In 1803, in connection with the massive 'falling away' of newly Christened Tatars to Islam in Nizhny Novgorod guberniya, Alexander I ordered the authorities of the Volga and Siberian dioceses to organise work on the translation of the Creed, the Decalogue, and some common prayers into the Tatar language [Complete Code of Laws of the Russian Empire–1, Vol. 27, No. 20535]. These translations were published as a separate publication in 1805 after they were prepared on the basis of the Kazan Theological Academy (old one) and with the involvement of a teacher of the Tatar language in a Kazan gymnasium, Iskhak Khalfin [Ilminsky, 1883, p. 170; Karimulin, 1983, pp. 236–237]. In 1820, The Russian Bible Society translated the New Testament into the Tatar language [Znamensky, 1892a, pp. 33–34]. In the future, most of the work on the translations of Orthodox books into the Tatar language was undertaken by a commission at Kazan Theological Academy, established in 1847 in Kazan by order of the Ober-Procurator of Synod A. Protasov².

As was later noted by the missionaries, the effect of this large-scale and hard work of several generations of translators was minimal. The lack of experience in translation and imperfect terminology made these translations

'unconvincing' [Ilminsky, 1856, s. 21]. In addition, almost all of the works used Arabic graphics; the text was full of Arabic and Persian loanwords, which made the books understandable only to a few Tatar intellectuals and absolutely incomprehensible for christened Tatars, who were far from higher Islamic education and culture. The Orthodox clergy working in parishes with christened Tatars was not ready to comprehend these translations, as they did not know the Tatar language.

By the middle of the 1830s, missions had been established in almost all of the dioceses of the Volga-Kama Region. In the case of the Kazan and Vyatka guberniyas, this was a direct response both to the 'falling away' of christened Tatars and to the large-scale 'pagan' pilgrimage among the Mari people, which was discovered by the authorities in 1828. The Simbirsk diocese, which was established in 1832, obtained its own mission in 1836. In each case, the mission consisted of preachers who traveled all over their districts and helped the local clergy to confirm christened 'foreigners' to Orthodoxy and to christen Muslims and 'heathens'.

These missions were apparently focused on non-Tatar peoples of the region: Vyatka missionaries acted among the Mari and Udmurt people, and Chuvashes were the main focus of the missionaries' attention in the Simbirsk diocese. In his missionary project, even Filaret (Amfiteatrov), the Archbishop of Kazan, stressed the need to work mainly among the Chuvashes, who were the largest group of the christened non-Russian population in the guberniya.

However, this does not mean that the church authorities did not pay attention to the Tatars at all. On the contrary, it had become clear by the 1840s that Tatars and Islam were a 'special difficulty' requiring special methods. The so-called anti-Islamic missionary department, opened at Kazan Theological Academy in 1854, should be considered exactly from this point of view [National Archives of the Republic of Tatarstan, f. 10, inv. 1, file 1324, s. 1].

Along with forms of Christian educational activities, since the middle of the 1830s, church authorities supported by the govern-

² The Translation Committee of the Kazan Spiritual Academy translated 'The Divine Liturgy of St John Chrysostom' (1850), 'The Acts of the Apostles' (1852), 'Horologion' (1852), 'The New Testament' (1855), and 'The Book of Psalms' (1862) [National Archives of the Republic of Tatarstan, f. 10, inv. 1, file 292, file 822, file 1185; Znamensky, 1894, p. 243].

ment increasingly resorted to coercive methods of fighting against 'falling away'. This was connected with the strengthening of the movement of Christened Tatars in the Trans-Kama region of the Kazan and Simbirsk guberniyas (Chistopol, Spassk, Buinsk, Simbirsk uyezds), as well as in Buzuluk Uyezd of the Orenburg Guberniya. Unlike previous cases, the 'falling away' was organised there and persistent from the very beginning. The local diocese authorities could no longer cope with it by persuasion and threats. In these conditions, they started a campaign for the resettlement of those 'fallen away' to Russian villages [Russian State Historical Archive, f. 797, inv. 3, file 12644, s. 186–190]. According to incomplete data, 2, 696 christened Tatars and Chuvashes from Kazan, Simbirsk and Orenburg guberniyas were to be resettled to Russian villages by order of the supreme authorities from 1834 to 1850 [State Archive of Samara Oblast, f. 32, inv. 1, file 232, s. 2, 144; National Archives of the Republic of Tatarstan, f. 4, inv. 86, file 66, s. 79; inv. 72, file 12, s. 1–2; f. 13, inv. 1, file 67, s. 32; file 99, s. 8–10; f. 1, inv. 2, file 745, s. 20; State Archive of Ulyanovsk Oblast, f. 322, inv. 3, file 8, s. 119; Martynov, 1903, pp. 327–328].

The sluggishness of the administrative and police system of Nicholas's Russia and abuses of officials transformed the resettlement into a brutal execution and undermined the economic condition of those who had 'fallen away' [National Archives of the Republic of Tatarstan, f. 1, inv. 2, file 292, s. 1–1 reverse]. The situation was aggravated by the fact that the local authorities did not trouble themselves with a careful analysis of the complex issue. The actions themselves were of a clear repressive nature and were aimed primarily at intimidation of those 'fallen away' to return them to Orthodoxy.

Despite the harsh actions of the authorities, they did not manage to fully suppress the movement. At the beginning of the 1840s, there were new cases of deviation of christened Tatars from Orthodoxy. By 1844, the number of those that had 'deviated' to Islam had reached 4, 448 [Russian State Historical Archive, f. 796, inv. 125, file 1518, s. 14]. One of the

likely reasons for this mass 'falling away' lay in the introduction of a new Charter of spiritual consistories in 1841, which required the Orthodox clergy to report to the church and even civil authorities on all the Orthodox parishioners, who had not confessed or received communion for 2–3 years [Complete Code of Laws of the Russian Empire–2, Vol. 16, No. 14409]. Thus, a large group of 'secret' Muslims was revealed, who did not file petitions or officially state their withdrawal from the Orthodox Church, but did not fulfill its prescriptions and secretly practiced Islam. In response to an increased number of the 'fallen away', who were considered by the authorities as a serious threat to the interests of the Orthodox Church and the state, the government resorted to further toughening of the measures against the withdrawal of christened Tatars from Orthodoxy. Along with the resettlement and prosecution of 'seducers', the decrees approved by the supreme power on 20 November 1849 and 4 July 1855 allowed to apply such measures as divorce of the marriages concluded according to Muslim rites, taking of children from their parents until they returned to Orthodoxy, and their forced christening [National Archives of the Republic of Tatarstan, f. 4, inv. 97, file 34, s. 232–233]. But even the toughest administrative measures lost their efficacy in the fight against the re-Islamisation of christened Tatars. As shown in practice, the actions of the authorities only led to bitterness on behalf of the majority of those who had 'fallen away' and an aggravation of the inter-confessional situation in the region. Due to the mass nature of the 'falling away' to Islam, it became very difficult to resettle those who 'deviated' to Russian villages. The decrees of the supreme authorities to resettle those 'fallen away' practically ceased to be fulfilled from the middle of the 40s of the 19th century; decisions on these cases were delayed for an indefinite period of time [National Archives of the Republic of Tatarstan, f. 2, inv. 1, file 1372, s. 1].

The local authorities encountered even greater problems in relation to the christening of children of those who had 'fallen away' to Islam. People who had 'deviated' to Islam, ac-

cording to the observations of local officials and the police, were more ready to undergo a trial or exile to Siberia than to give their children to the Orthodox priests to be christened.

The situation with the struggle against 'illegal marriages' was not better. According to the decree of the Synod dated 23 May 1855, 'those, who have married... without a ceremony, if it turns out that their wives have been christened, should be made to agree to marry according to the Christian rite; but in case they disagree, they should be sent to their former place of residence and be subjected to the strict supervision of the rural community' [National Archives of the Republic of Tatarstan, f. 4, inv. 86, file 66, s. 24 reverse–25]. The attempts of the authorities to implement this requirement led to severe unrest, which developed into campaigns of mass disobedience. Even in cas-

es where the police managed to send the wives to their parents with the help of units of the domestic guard, they returned to their husbands at the earliest opportunity [National Archives of the Republic of Tatarstan, f. 4, inv. 97, file 34, s. 237].

The mass nature of the movement and persistence of its participants in defending their rights led to the fact that the organisation and consideration of cases on these issues took many years. Courts and uyezd councils were literally overloaded with unsolved cases of those who had 'fallen away' to Islam [National Archives of the Republic of Tatarstan, f. 13, inv. 1, file 322, s. 4 reverse].

Realising the impossibility of further toughening administrative prosecution of 'the fallen', the state gradually abandoned repressive measures against 'unofficial' Muslims.

§ 2. Peculiarities of the Movement of Christened Tatars for their Return to Islam in the Post-Reform Period

Paul Werth

By the middle of the 1860s, the mass movement of christened Tatars for a return to Islam had gained momentum once again. By the end of the decade, more than 10 thousand christened Tatars had filed petitions with a request to officially recognise them as Muslims. The 'apostate' movement, which began in the Vasilsursk and Sergach uyezds of Nizhny Novgorod guberniya, quickly spread to the neighbouring uyezds of Kazan and Simbirsk guberniyas, and then crossed the Volga and the Kama rivers, and covered the eastern part of Kazan, the southern part of Vyatka and the north-western part of Ufa guberniyas. In 1867, the Chief Procurator of the Holy Synod reported to the Ministry of Internal Affairs that the Kazan Archbishop Antonius (Amfiteatrov) 'continuously' received reports 'on new seduction of tens and whole families of christened Tatars to Islam, and whole villages and volosts threaten to do so' [Russian State Historical Archive, f. 821, inv. 8, file 759, s. 220; National Archives of the Republic of Tatarstan, f. 4, inv.

98, file 34, s. 1]. Indeed, the situation now concerned hundreds of villages. Nearly all the 'newly christened'—including those who were forced to stay in Christianity at the end of the 1820s—rejected Orthodoxy firmly and, in most cases, irrevocably. Furthermore, some 'long-christened' Tatars who had been considered good Christians to that point rejected Orthodoxy in favour of Islam; sometimes this also included Udmurts, Chuvashes and Mari people. In short, the apostate movement reached an entirely new geographical and quantitative scale.

The origin of the resumption of apostasy should be sought in the dynamic situation of the era of the Great Reforms, when much—both bad and good—seemed possible. After all, the abolition of serfdom (1861) itself and other reforms of the institutions of the sovereignty provided that significant changes could occur in a prescribed manner. At the beginning of the 1860s, the Minister of Internal Affairs P. Valuev raised the issue of substantial reform of the religious policy in the empire, and though his

Family of Isidor, a baptised Tatar man, near their new house in Bolshiye Kibyak-Kozi village of Laishev uyezd of the Kazan guberniya.
Photo, 1904.

offers were not implemented, in March 1865 significant concessions were made in favour of Lutherans on the issue of the faith of children born in mixed marriages [Werth, 2008, pp. 296–331]. Therefore, christened Tatars could hope that the reform would affect the religious policy on the eastern outskirts of the empire and would allow them to become Muslims.

However, the most immediate reasons of the renewed 'falling away' were connected with the state's policy on the issue in the previous years. After the 'falling away' of 1827, the authorities resettled the most stubborn apostates (sometimes even to Siberia), and by 1834 they had already developed a policy of resettling apostates within the Kazan guberniya. The fate of the two groups greatly influenced the events under consideration. In 1841, 114 'fallen' people and their families were resettled from Spassk uyezd to Mamadysh uyezd. After all the exhortations to return to Orthodoxy proved to be futile, the Secret Committee on Dissenters' Affairs ordered to apply more severe measures to them in 1855: their non-christened children were taken away for upbringing by guardians; women married after the resettlement were forced to marry according to the Christian rites, and if they refused, they were separated from their husbands and returned to their parents. In 1856, such measures were ap-

plied to a large group of people (1721 apostates). They strongly resisted and complained to the Ministry of State Property about the taking of their children and wives for the purposes of christening. The Ministry of State Property supported them, stating

that these measures were extremely arduous for the Tatars and were contrary to its (Ministry's) intent to establish 'the rule of law and humanity' in its actions. It proposed to suspend the application of the measures until a determination was made on the results of the activities of the Anti-Islamic Department of Kazan Theological Academy, opened in 1854. Taking into account the impending abolition of serfdom, the resolute resistance of apostates and doubtful circumstances of their initial christening, the Ministry of Internal Affairs agreed with the proposal. The harsh measures were abandoned in respect to both groups in 1861 and 1865 respectively.

It should be emphasised that this abolition did not mean that the state recognised apostates as Muslims. It was only a tactical retreat by the government because of the difficult situation in the early 1860s. However, it is unsurprising that christened Tatars viewed the situation differently. One enterprising Tatar man, Galim Samigulov, managed to present the government's retreat as a positive response to a series of petitions that he had filed to St. Petersburg on behalf of his village in Chistopol uyezd during the 1850s. Samigulov apparently convinced many Tatars that numerous petitions and persistence would bring about the desired result. He was subsequently declared one of the main 'seducers' to apostasy.

Indeed, the missionary E. Malov, assigned by the Kazan theological consistory to Sviyazhsk, Tetyushi and Buinsk uyezds at the end of 1865–the beginning of 1866, found that many residents of the village were convinced that the emperor had adopted a law allowing christened Tatars to profess Islam. There were even rumours that petitions of this type would only be accepted until the beginning of the coming year of 1866, which, of course, served as a reason to ‘fall away’ as soon as possible. At the beginning of 1866, police officers found a group of Tatars from five various uyezds in Kazan, including Samigulov, who wrote petitions and copied the official correspondence on the issue with the intent of distributing them in villages where christened Tatars lived.

The ‘falling away’ usually occurred as follows: a meeting of christened Tatars decided to fall away and elected representatives to go to Kazan to file a petition to the emperor. Then the congregation went to a local priest or the village authorities to file an application stating that they would no longer perform Christian duties. Apparently, the ‘fallen away’ believed that such a procedure already constituted their official defection and considered themselves Muslims in the full sense of the word. After that, people, who had ‘fallen away’ wore Tatar clothes; men shaved their heads and wore tyubeteykas, thus becoming Muslims in their appearance.

The authorities tried to counteract the ‘falling away’ in two ways. Along with a common appeal to priests to ‘admonish’ christened Tatars, the diocesan authorities sent E. Malov and, later, Vasily Timofeev, a christened Tatar man, to the villages, where there was a ‘falling away’. One can easily imagine that the ‘admonitions’ did not have any effect on the christened Tatars and that the church alone could do little without the help of the secular authorities. As stated by the *Sovremenny Listok* newspaper, attributing ‘political’ value to the apostate movement, ‘parish priests without any assistance from the part of the government could do nothing in this respect, no matter how well they knew the Tatar language and the Mohammedan law and how much

they wanted to convert those lost’ [O religiozno-politicheskom, 1866].

Therefore, secular authorities were forced to take an active part in the matter, primarily in order to dissuade the petitioners from thinking that they could now consider themselves Muslims. The Ministry of Internal Affairs ordered the Kazan governor to inform the petitioners that ‘their solicitation with respect to the conversion to Islam will never be taken into account by the government and that those who inspire them to the contrary cheat them and abuse their trust’ [National Archives of the Republic of Tatarstan, f. 1, inv. 3, file 231, s. 6]. Subsequently, vice-governor E. Rozov went, accompanied by N. Ilminsky, who knew the Tatar language well, to the villages where christened Tatars lived to make the solemn announcement. But despite the announcement, the vast majority of the petitioners categorically refused to return to Orthodoxy. As stated by governor N. Skaryatin, the ‘petitioners continue to believe that the announcement was suggested not by the emperor but by the local guberniya authorities’ [Kazan Central Christian Tatar School, 1887, pp. 280–281]. Even the return of the original petitions with a refusal did not induce the petitioners to turn away from their chosen path.

After that, secular authorities began to focus on the so-called instigators, suggesting that the ‘falling away’ was arranged by just a few ‘agents’ exciting the majority of christened Tatars. However, the matter was complicated by the question whether the instigators should be prosecuted in the court or be subjected to administrative measures. Meanwhile, some of the ‘fallen away’ complained that they had been arrested as ‘instigators’ while ‘falling away’ was a common practice in their villages and that they should not be arrested while their companions went free. They could not understand how long they would be under arrest and how they would correct their economic affairs as ‘everything would get ruined in their absence’. By the end of the 1860s, the Ministry of Internal Affairs decided that they should be released due to the fact that they had spent a lot of time in prison. Although some of the major ‘insti-

A baptised Tatar man and a man who 'fell away' into Islam in the Yantsevary settlement of Laishev uyezd of the Kazan guberniya. Photo, 1904.

gators' were eventually exiled to Siberia, the Ministry of Justice decided to close the proceedings, and the prisoners were released in the autumn of 1869.

It can be assumed that this circumstance raised a new wave of 'falling away' as christened Tatars in other villages came to the conclusion that local authorities did not have any reason to obstruct them in their return to Islam. As reported by a rural dean in late 1869, apostates said that many Tatars, 'although they had been sued and kept in prison for falling away from the Christian faith, were now released and live free according to the Mohammedan tradition' [Russian State Historical Archive, f. 821, inv. 8, file 763, s. 238 reverse–239].

In general, it should be stated that the authorities had misunderstandings regarding the method of combating the falling away from Orthodoxy. Some officials deemed it necessary to act decisively, while others doubted the efficiency and expediency of severe measures. On the local level, judicial investigators sometimes released the 'instigators' because of a lack of evidence. Christened Tatars, 'seeing

that one authority was paralysed by another', came to the conclusion 'that the law did not prohibit deviation from Orthodoxy, and that the local police officer, volost authorities, and priest illegally hampered their desire to convert to Islam' [National Archives of the Republic of Tatarstan, f. 1, inv. 3, file 231, s. 63 reverse].

Despite the tendency of officials to emphasise the role of the 'instigators' in the 'falling away' from Orthodoxy, they were forced to recognise that the desire of christened Tatars to return to Islam had deeper roots. Perhaps, as claimed by the missionaries, some christened Tatars had little formal knowledge about Islam, but they apparently knew many legends, songs, and stories of Islamic nature, so their familiarity with Islam in traditional forms could not be denied [Kefeli, 2005 pp. 539–569]. In many cases, christened Tatars lived with Muslims in a single village, which not only allowed them to get acquainted with Islam at the household level but also forced them to have close contacts with Muslims in many spheres. The deviation of many christened Tatars brought them into the wider Muslim world as they often worked for Muslims in other governorates. In this context, it was profitable for them not to emphasise their Christianity or even to hide it. The wealthy stratum of the village population often took part in the deviation, thereby affecting the others. Thus, Christianity became a religion of the poor. Meanwhile, Russians often treated christened Tatars with a certain disdain, thereby antagonising them in respect to Christianity. As explained by some Tatar parishioners, 'Russians do not like us; they scold or laugh at us, but Muslims treat us kindly and patiently teach their faith' [Timofeev, 1872, p. 486]. Orthodox priests sometimes demanded too high of a payment from their Tatar parishioners for the implementation of religious rites, which created another reason for 'falling away'.

It seems that the main reason for 'falling away' lay in the fact that the idea of conversion violated the fundamental idea of Tatar identity, which perceived Christianity as a 'Russian faith'. From this point of view, the adoption of Islam was perceived by christened Tatars as a return to the original community, that is,

as a reunion with their traditional community (regardless of whether this really was so) and not as conversion. When christened Tatars 'fell away' from Christianity, they often spoke about a return to the 'old faith', the faith of their ancestors. On the other hand, the relatively recent emergence of Christianity in the region and its distinct connection with the foreign people (Russians) made its adoption a more radical rejection of the past. In short, in the 1860s, there were few real opportunities to become a Christian while preserving the 'Tatar identity'.

Finally, many officials and church leaders had to admit that christened Tatars were Christians only by name. But they could not allow their return to Islam for two reasons. First, the law forbade falling away, and there were no grounds for an exclusion to this rule. It would constitute a radical rejection of one of the main principles of the Russian confessional state of the 19th century. Second, even those who strongly criticised the missionary activities of the previous decades and centuries recognised that formal affiliation with Christianity in many cases constituted a prerequisite for 'Christian education' in the future [Malov, 1865, p. 451].

It should be emphasised that not all christened Tatars fell away from Christianity. However, almost all of the newly christened Tatars fell away in the 1860s, and the matter now concerned the 'long-baptised' Tatars, as well as other christened non-Russians, including the Chuvash, Mari, and Udmurt people, who had no historical connection with Islam. But the idea was questioned in many other communities. The matter was not just that an open 'falling away' was a risk, for which people could be subjected to criminal liability, but also in the fact that the majority of christened Tatars had ambiguous or undefined religious inclinations. While some of them easily chose the path to Islam, others—particularly the 'long-christened' Tatars—faced a difficult choice and did not know what to do. Sources reveal conflicts between apostates and those remaining in Christianity in single villages and sometimes in single families. Apostates sometimes returned to Christianity, which was evidence of a lack

of confidence in their religious beliefs. Sometimes christened Tatars resisted any attempts to convert them to Islam. There were whole communities and volosts where only a few people had fallen away from Christianity, primarily in uyezds bordering the Kazan, Ufa, and Vyatka guberniyas. This was the geographic centre of the old-christened world, a centre of the Christian identity, which was further developed in Ilminsky's system and has been preserved to the present day.

Indeed, the 'falling away' was the main stimulus for reforming the missionary methods, vigorously undertaken by Ilminsky and his christened Tatar colleague Vasily Timofeev. The fight against apostasy took another form: they began to open missionary schools in villages where christened Tatars and other 'indigenous people' lived, actively pursued a policy of appointing priests and teachers from among the non-Russians, and improved translations and distributed religious books among the non-Russian population; the liturgy was conducted in 'indigenous' languages. Of course, such measures were not always successful. However, this attempt to 'educate inorodcy [indigenous people] through the foreigners themselves' [Mashanov, 1892, p. 184] had a significant impact on the residents of many villages where christened Tatars and other non-Russians lived. Christianity gradually became accessible in the non-Russian form.

Unfortunately, available sources do not allow us to draw a clear social portrait of those who adopted Christianity and rejected Islam. Apparently, in many cases, it was enough to open an Orthodox school in a village to prevent the idea of 'apostasy' from developing. And similarly, in most cases, no active attempts of the Orthodox church could reverse the 'falling away' if it had already started. Many argued that the presence of one student of the Kazan Central Christian Tatar School could affect the mood of a whole village 'because if one boy from a village studied there, the idea of the benefits of literacy and the desire to come to study in our school were transferred through him to almost the whole generation in the village' [Ilminsky, p. 107].

The issue over those who had fallen away, returned Islam reached a dead-end after the 1860s. On one side, both the government and the church had no means to make the baptised Tatars return to Orthodoxy. On the other, the state kept refusing to recognise them as Muslims.

Meanwhile, new 'falling away' cases were witnessed. In the 1870s, these cases mostly concerned the 'long-baptised' Tatars of Kazan and Vyatka guberniyas, while in 1880s, the movement spread to Menzelinsk uyezd of the Ufa guberniya, in which the citizens of several 'long-baptised' villages filed for permission to convert to Islam [Central Historical Archives of the Republic of Bashkortostan, f. I–11, inv. 1, file 1390; Russian State Historical Archive, fund 821, inv. 8, file 786]. It is worth saying that the baptised Chuvash, Udmurt, and Mari people, who frequently had close everyday and economic relations with Muslims and 'fallen away' Tatars, occasionally joined the movement to renounce Orthodoxy. As for more eastern governorates—Ufa and Perm—this trend also involved the non-baptised Chuvash, Udmurt, and Mari people, that is, the heathens, despite the fact that the government set a goal to hinder such conversions. The authorities were especially concerned about their conversion to Islam. 'The falling away' of baptised Tatars could be considered as a 'return' of a certain group of people to its 'natural' religion; however, from the perspective of the church and bureaucracy, Tatars' conversion to Islam—whether the Tatars were baptised or not—represented a clear encroachment on the (future) legacy of Orthodoxy and on 'Russianness' in the context of assimilation and civilisation. It also provoked the suspicion that Muslims conducted active propaganda for non-compliance with the law, which gave the right to proselytise exclusively to the Orthodox church.

Despite new cases of 'falling away', starting from the 1880s, new petitioners were mostly represented by not only those who had rejected Orthodoxy but also by their children and even grandchildren, who were not baptised and were brought up in the Islamic tradition (they were only 'liable to' baptism according to the laws

of the Empire). In their petitions, they insisted on the fact that they could not be considered as apostates, as 'the so-called fallen away are merely children, or even the descendants of the Tatars and Muslims' [Russian State Historical Archive, f. 821, inv. 8, file 774, s. 56–56 reverse]. Such a change of generations clearly changed the picture.

Nevertheless, the autocracy did not incline to make concessions. On the whole, church representatives insisted on the fact that even children and grandchildren of the abjurers were still Christians. According to K. Pobedonostsev, who quoted a report prepared by the archbishop of Kazan nearly verbatim, 'granting all the recanted the right to practice Mohammedanism will become a victory for the most vicious enemy of Christianity—Mohammedans—and will enhance their fanaticism and propaganda and serve as seduction for those who are weak in the faith and are in doubt. In any case, this will cause huge damage to the Holy Church' [Russian State Historical Archive, f. 821, inv. 8, file 788, s. 113 reverse–114]. A compromise with 'foreign beliefs' became less likely due to 'the scenario of power' developed during the reign of Alexander III and based, to some degree, on Orthodoxy as a source of unity between the Russians and the monarchy [Vortman, 2004].

We should note that starting from the 1880s, some officials began cautiously talking about the possibility of recognising the abjurers, at least in part, as Muslims, in the context of administrative efficiency; in other words, in order 'to get rid of' the problem. In 1894–1895, pleas from three villages 'were satisfied' due to the fact that the villagers were very far from Christianity (though other pleas were denied). It is remarkable that this was also the period in which the autocracy made several small concessions to those 'stubborn in Catholicism' (ex-Uniates).

The issue of 'falling away' was solved to some extent in 1905, when the government made it legal to convert from Christianity to other Christian beliefs and officially allowed the 'fallen away' baptised Tatars and their descendants to be considered Muslims. On the verge of the 1905 Revolution, the autocracy

A family that returned to Islam from the Elyshovo settlement of Mamadysh uyezd of the Kazan guberniya. Photo, 1904.

found it necessary to determine the fate of different 'stubborn' people—the ex-Uniates, Estonians and Latvians, who had converted to Orthodoxy due to material reasons, and the 'fallen away' baptised Tatars. Having scrupulously studied the history of the formation of these groups in early 1905, the Department of Religious Affairs of Foreign Faiths came to the conclusion that all cases of rejection of the leading Russian Church were 'in direct connection with the abnormal conditions in which the adherents of different faiths converted to Orthodoxy', meaning that they had not done it because of their beliefs but due to material reasons, or due to the fact that they had been forced to do it. The strange status of these unfortunate people 'calls out to the government and requires it to stop further development of this chronic disease' [Yachevsky, pp. 8–10]. Meanwhile, representatives of the Kazan Muslim Society made statements to the Committee of Ministers, in which they marked that the 'recanted' 'represent something utterly pathetic, causing sorrow', and asked to allow them 'to exercise Islam openly and fearlessly with the

right for acknowledgment by the Islamic society' [Dokladnaya zapiska, p. 7]. Such an allowance was granted in a well-known decree dated 17 April 1905.

According to the Department of Religious Affairs of Foreign Faiths, from 1905 to 1912, over 50, 000 people grasped the opportunity (just in 1906, more than 33, 000 people became Muslims) [Russian State Historical Archive, f. 821, inv. 10, file 252, s. 235; inv. 150, file 13, s. 4a]. Apparently, those who wanted to become Muslims faced no obstacles, primarily due to the fact that the decree dated 17 April covered this exact group of people: 'people registered as Orthodox but in fact exercising the non-Christian belief, which had been exercised by them and their ancestors before the conversion to Orthodoxy' [Complete Code of Laws of the Russian Empire—3, No. 26126, p. 259]. By comparison, the baptised 'indigenous dwellers' willing to return to paganism could receive the permission only in specific cases; overall from 1905 to 1909, only 150 people in the empire managed to become pagans officially. Moreover, there were sev-

eral complications for those living in western governorates who wanted to be considered as Catholics after 1905. Therefore, the Tatars' 'recantation' was comparatively successful.

What is the historic meaning of the 'recantation'? The conversion movement was an important element of the Tatar people's consolidation as those who had been separated from their people through baptism could reunite with the others and create an integral unit with the Tatar-Muslims. But 'recantation' created a new missionary project, which turned out to be rather effective for the 'retention' of a certain part of the Tatar population—the old-baptised—in Orthodoxy. All in all, if we consider 'the old-baptised' to be Tatars, then we should admit that the consolidation of the Tatar population could not be carried out only by Islam, if for no other reason than because a part of the population was conscientiously practicing another

religion. The movement of rejection laid bare the significant disadvantages in the assimilatory potential of the Russian-Orthodox element of the empire. Just as the Poles in the west of the empire, the Tatars represented a competitor, able not only to oppose the inculcation of 'Russian civic consciousness' in regions with a Tatar population but also to attract and unite representatives of other peoples—the Chuvash, Udmurt, and Mari peoples—who, as the authorities believed, were to be 'Russified'. The fact that the conversion movement reached its peak in the period when the imperial authorities, trying to imitate the national states developing in the West, strove for a fuller integration of the population made this movement all the more significant. As a result, the movement played a role in the development of new, broader notions about religious freedoms in Russia on the verge of the events which took place in 1905.

CHAPTER 3

National Bourgeoisie in Socio-political Processes

§ 1. The charitable activities of the Tatar bourgeoisie

Radik Salikhov

After the Tatar Muslim ummah became a member of the Russian Orthodox state and considering the fact that the authorities ignored the needs of indigenous dwellers and non-Orthodox communities, private philanthropy became concentrated on the spiritual needs and problems of the Tatar population. Up to the end of the 18th century, traditional Islamic charity was spontaneous and in many ways unregulated, which was explained mainly by the low economic status of the Muslim population and by the discriminative policy of the state. As a result, many Muslim communities led a wretched existence and found it extremely difficult to maintain mosques and preachers. Afterwards, with the development of capitalist relations and the realisation of the liberal reforms of Catherine II, the charity situation changed dramatically. The epoch of enlightened 'religious tolerance', expressed in 'permits' for the construction of stone mosques and the establishment of the Orenburg Muslim Spiritual Assembly, as well as the formation of the Tatar guild of merchants, contributed to a rapid increase in charity funds and to a systematic flow of donations and their allotment. Starting from the 18th century, the mobile, socially active, prosperous Islamic bourgeoisie began collecting a charity fund which was spent on the construction of cult buildings and madrasahs, publication of theological literature, financial help to imams and muezzins, financial support for shakirds, and improvement of dwellings for Muslims. Apart from that, representatives of the Tatar entrepreneurship tried to circumvent limiting social strata restrictions and achieve a higher social position by means of systematic donations. Financing major social programs, allocating funds for urgent state needs, and

active participation in the boards of guardians of different institutions and charity organisations played a decisive role in the governmental awarding of some entrepreneurs with titles, benefits, and rights [National Archives of the Republic of Tatarstan, f. 418, inv. 1, file 240, s. 1–2; Bokhanov, 1985, No. 4, pp. 108–112]. One of the most vivid examples is that of Ibragim Yunusov, one of the most powerful Tatar entrepreneurs of the 19th century, who, thanks to active and diversified charitable activity, had vast connections and authority in the supreme circles of Kazan, and even of the capital of the Russian Empire. The merchant was elected mayor of the Tatar city hall in Kazan three times, that is, he was the official leader of local Muslims, a councilor of the City Duma (1871–1886). In 1844, he founded an Islamic orphanage in Kazan with his brother; this was the first Tatar charitable institution, existing up to 1917. The Yunusovs donated 14 stone benches and built a two-storey stone building for the orphanage. This first-class charitable institution, the second in Kazan after the Nikolaevsky orphanage, soon became a source of pride not only for local Muslims but also for the whole population of the city. Annually, up to 30 boys of the Mohammedan faith from 7 to 16 years old were accepted in the orphanage. They received clothes and food, were taught the basics of the faith, Sharia, arithmetics, Arabic, Persian, and Russian languages; moreover, they had access to qualified medical help. It goes without saying that all these amenities required significant financial investments.

For the opening of the orphanage, Ibragim Yunusov was granted a gold medal and the Order of Saint Anna of the 3rd class, whereas his brother Iskhak was granted a gold medal

and the Order of Saint Stanislaus of the 3rd class and other national awards [Gasırlar avazı—E'xo vekov, 1996, Nos. 1–2, pp. 46–47]. These awards played an important role in the recognition of the Yunusovs as 'councilors of commerces'—this title was granted 'for merits to the fatherland in the spreading of commerce, recognised by the Minister of Finance' and was equal to the title of collegiate assessor. The Yunusovs remained the first and only Tatar merchants who had such grand titles.

Systematic charity strengthened the influence of the Tatar bourgeoisie in the life of traditional Islamic communities. In Kazan, for example, from the 18th to the beginning of the 20th century, charity-givers paid for the construction of 17 mosques; herewith, only one of them—the Marjani Mosque—was erected by means of the collective donations of mosque-goers. Merchant dynasties monopolised charity in parishes; charity suddenly started being more individualised and depended on subjective factors; moreover, piety deeds gradually became an instrument for career and social influence. All of the above contradicted the collective spirit of community and did not contribute to the creation of a reliable material basis for the comfortable existence of congregations. If a guardian died or changed his mind and refused to finance a mosque due to this or that reason, Muslims, having no other sources and means of financial support, found themselves in tight situations. For example, when M. Usmanov, a textile manufacturer and a merchant belonging to the 1st guild, became bankrupt, a famous madrasah in Kshkary lost its required economic support, which became one of the reasons for the decline of this authoritative educational institution.

Building of the former Yunusovs' Islamic orphanage in Kazan.
Present-day Tuqay street, 89. Photo, 2005.

Summing up, on the one hand, the strengthening of the status of the national bourgeoisie and its indisputable domination in city mahallahs provided an inflow of charitable funds and endowment establishments; on the other hand, it suppressed the collective will and initiative of congregations as they could not possibly control and participate in philanthropic activity, which resulted in inefficiency in the system of donations, a deterioration in its formal character, and, in some cases, even the superfluity of such institutions as zakat, waqf endowments, and others.

In the latter half of the 19th century, due to initiated large-scale transformations in the lives of Russian Muslims, traditional Muslim charity was in a period of development and transformation. It considered the collection of zakat, the property tax for religious needs and support of the poor, and the collection of other natural and financial donations for the spiritual needs of Muslims. This was the time when the practice of endowments of property for mosques and communities became widespread. This practice became a countermeasure to state missionary ambitions and created a serious financial basis for the reform of religious schools.

The growth of endowments was explained by the strengthening of the economic position of Muslim entrepreneurs and the needs of the

communities, which strongly required stable income sources. Even though the endowment institution fully responded to the requirements of a compromise between the will of donors and the interests of the whole mahallah, in the beginning of its establishment—the end of the 18th to the beginning of the 19th centuries—it served only as a strong means for the influence of the donor and his family on co-religionists. It is interesting to mention the fact that one of the first officially registered endowments in Kazan, bequeathed to the 1st cathedral mosque by Gubaydulla Yunusov in 1830, did not stipulate the order of estate administration and control over its income. The donor specified only the spheres of usage of the donated assets [Central Historical Archives of the Republic of Bashkortostan, f. I–295, inv. 4, file 15035, s. 3]. Years later, Sh. Marjani, the imam of the mosque, wrote bitterly: 'His sons (G. Yunusov's — *R. S.*) has been using these shops for more than forty years, embezzling the mosque's income and not sharing a dime with the imams and muezzins. There was no respect of the clergy, no possibility of its development' [Marjani, 1989, p. 221]. The same situation was relevant to the endowment of Utyamyshev, a rich manufacturer from Maskara, whose descendants refused to follow the donor's will, saying that there was no concrete regulation for its fulfillment.

In the latter half of the 19th century, there was a fight for transferring the endowment from the control of separate rich donors and their families to joint possession by all the members of the community. This made it possible to end frequent misuse of charity and to concentrate and direct the assets of congregations in order to satisfy the actual needs of Muslims, as well as to carry out the reform of religious education. Sh. Marjani, the imam-khatib of the 1st cathedral mosque in Kazan, started this process, and in 1870, with the support of the community members, he managed to restrict the power of the self-perpetuating guardians of the mahallah, the Yunusov brothers. He created a special board of guardians, which purposefully and accountably provided for the economic self-government of the community, marking the turning point in interrelations in the mahal-

lah. Sh. Marjani initiated creation of the collective system of self-government in each individual Muslim congregation through a cardinal solution to the issue of the direct purpose of the endowment and its true owner.

The elected guardian had all the rights required for the execution of the property, economic, and financial activity of the mosque and madrasah with an obligatory preparation of detailed annual reports [Russian State Historical Archive, f. 821, inv. 133, file 477, s. 155].

Boards of guardians were created for separate institutions in the mahallah, in particular, The Guardianship for Endowment, headed by A.-V. Chukin, under the Marjani Mosque provided for a special school for orphans. Moreover, at the beginning of the 20th century, Muslims created mutawalliats (guardianships) for carrying out control over congregational educational institutions without any reliance on the endowment. Overall, the reform of the traditional Muslim charity in Tatar communities, which involved organising congregational boards of guardians and benevolent societies, was aimed at providing not only for the decent existence of community institutions but also for the stable financing of Jadid transformations in the maktab and madrasah institutions.

As per our calculations, in 1917, the cost of property owned by mahallahs in Kazan, Orenburg, Troitsk, and Moscow made up approximately 550 thousand roubles. The communities in Orenburg were the richest in Russia, thanks to the support of A. Khusainov and other entrepreneurs. They owned assets and real estate in the value of 313 thousand roubles. The mahallahs in Kazan owned property in the value of 136 thousand roubles; in Moscow, approximately 50 thousand roubles; and in Troitsk, in the value of 46 thousand roubles.

We should mark another important consequence of the changes in charity, that is, the fact that the personal wills of distinguished representatives of the Muslim bourgeoisie started having an increasingly social nature. A vivid example of this is the last will of A. Khusainov (1837–1906), a major entrepreneur and the founder of the Jadid madrasah 'Khusainiya' in Orenburg, who bequeathed approximately

500 thousand roubles in an endowment for the needs of national education. Apart from fixed recompenses, traditional for Muslims, the will actually formulated a long-term programme for the financing and development of Tatar confessional and secular education, which provided for the creation of solid endowments under the biggest Jadid madrasah, the existence of targeted scholarships for the education of gifted shakirds in secondary, secondary technical, and higher educational institutions in Russia, as well as in Muslim educational centres of the Arabic East, and the creation of unusual 'grants' for writing and publishing popular-scientific, educational, and enlightening literature [Central Historical Archives of the Republic of Bashkortostan, f. I-295, inv. 6, file 1386, s. 1-10]. Thanks to the will of A. Khusainov, the mahallah of the 6th cathedral mosque in Orenburg, where the madrasah 'Khusainiya'—one of the most authoritative and famous Jadid educational institutions—was located, became the richest Muslim community in Russia, with property which accounted for more than 300 thousand roubles. The merchant also directed income from his assets of 120 thousand roubles—secured in guest houses in Kazan—to publications of religious, ethical, and enlightening character, as well as to granting benefits to mugallims teaching in 60 madrasahs as per the new method. It goes without saying that the charitable deed of A. Khusainov became a particular culmination in the reformation of traditional Muslim philanthropy. He took into account the interests of the whole system of confessional education, which was in a complicated and controversial process of reformation, not the interests of a particular Muslim community.

Such a positive experience of charitable funds concentrated at the level of local Muslim communities allowed the bourgeoisie to exercise new organisational forms of philanthropy. This refers to Muslim benevolent societies, which were wide-spread among the Tatars in the post-reform period. The Kasimov Muslim Benevolent Society, the charter of which was enacted on 8 October 1897, started its work on 18 February 1898, that is, almost immedi-

ately after the Kasimov Anti-Muslim Mission, established on 2 June 1897. That is why from the very beginning, this non-governmental organisation, created by the rich and powerful Muslim bourgeoisie in the environment of increased 'protective attitudes', found its priority in combating poverty and illiteracy as the major factors for the confessional and national assimilation of the Tatars.

By the way, the first paragraphs of the Society's Charter stipulated execution of broad enlightening activities and publication of literature devoted to ethics. Apparently, all major efforts of the Muslims in Kasimov were aimed at a peculiar 'counter-propaganda', as they tried to oppose the ideological offensive of the missionaries. Only a year after the beginning of the society's activity, it had 252 members, including 33 honorary members, 175 full members, and 44 associate members. Entrepreneurs played a leading role in the society. Gradually, with the growth in the financial prosperity of the society, the number of its members significantly decreased, as the capacity of the organisation ceased to depend on small fixed membership fees. For instance, in 1916, the society owned a rather significant sum of 24, 704 roubles in securities and real estate. Meanwhile, its annual income made up 1, 793 roubles 90 kopecks, and annual expenditures made up 1, 326 roubles and 21 kopecks. There were 107 members in the society in this period. The society granted benefits to those in need, supported students, and financed Muslim libraries-reading rooms [Otchet, 1917, pp. 1-46].

Referring to the reasons for the mass appearance of Muslim benevolent societies at the end of the 19th century, we should mention one important issue. This issue was the fact that representatives of major entrepreneurs and intelligentsia should have recognised the fact that the poverty and ignorance of the Muslim population were a decisive condition for the rejection of Islamic life principles and a severe social catastrophe undermining the fundamental tenets of the faith. It is interesting that one of the most important factors which made the entrepreneurs of Kazan unite their charitable efforts in the framework of the officially reg-

istered organisation was a polemical article by an official for special errands under the governor Z. Shamil. In this article, he indignantly wrote about the phenomenon of Tatar children panhandling near Orthodox cathedrals, which seemed outrageous for the rich Muslim community of Kazan [Kazansky Telegraf, 1897, No. 1498, 14 Dec.]. All in all, it questioned the reputation of the whole Muslim bourgeoisie, whose social success and leadership meant an organised, systematic, and oriented charitable activity among their co-religionists.

That is why it is not accidental that one of the first and biggest organisations of this type was 'The Kazan Society for the Benefit of Poor Muslims', which was created in 1898. Its example is emblematic for the development of systematic and oriented charitable activities directed at the population, who had no notable support from the government.

The society was created as a mass non-governmental organisation, which had no national, confessional, class, or other restrictions for its members. Its members were divided into three categories: honorary, life, and full members. The first got their titles through the ordinance of the general meeting for big donations or for other merits which contributed to the establishment and development of the organisation. Life members of the benevolent society were people who donated 60 or more roubles, whereas full members were those who donated 5 roubles in a one-year period. The other members of the Society as per the special ordinance of the general meeting dated 28 March 1904 and Paragraph 7 of the Charter were all edict mulahs of Kazan. Although there were no benefits or rewards for participation in the society's activities, the number of organised Muslim benefactors in the city continued to grow year after year. For example, in 1900 there were 9 honorary, 46 life, and 49 full members in the society, whereas in 1911 there were 15 honorary, 48 life, and 233 full members [Otchet, 1901, pp. 1–3; 1912, pp. 12–20]. Representatives of the city entrepreneurship were the main members of the society.

The efficiency of the society and its normal activities were achieved by the existence of 15

divisional guardianships—the lowest components of the organisation—'focusing on poor people living in their district, collecting data on their financial situation, and providing help restricted by the managing board...' [Ustav, 1903, p. 20]. The guardianships were headed by the society's members (who were elected by the managing board). Mostly they were rich entrepreneurs, secular people, or simply people respected in the district.

Economically, the organisation relied on assets in cash, securities, or real estate, collected by Russian and Tatar philanthropists. The income was formed by targeted contributions for special goals, rental payments for income generating properties, zakat collection, membership fees, donations via check-books, benefits from the city council, collections from alms boxes located in divisional guardianships, and capital stock percents. In the future, as all special institutions of the society were finally formed, the support from the city self-administrative bodies, zemstvos, and class organisations increased significantly, becoming the major source of the income.

When the society stated its goal as 'the collection of means for the improvement of the financial and ethical condition of poor Muslims in Kazan, no matter what their sex, age, titles or conditions are' [Ustav, 1903, p. 3], it clearly specified the major spheres of its activity. Aside from usual philanthropic activities, such as: granting of nonrecurring and monthly benefits, providing help with employment or accommodation, providing urgent help for fire victims or the starving, the society initially prioritised such spheres of activity which considered the ethnic and confessional peculiarities of the Tatar population living in Kazan.

First of all, in order to eradicate poverty in the city, the society allocated funds for those Tatar-migrants whose affairs in Kazan had fouled up, to help them return to their homes. This measure was certainly well-timed, as at the turn of the century, the inflow of Muslims from country suburbs to the commercial and industrial centre of the governorate resulting from the development of capitalist relations and the destruction of patriarchal orders in the

Tatar village became avalanche-like. This led to a sharp population growth in the Old and New Tatar Slobodas and, correspondingly, to a drop in the living standards.

Secondly, the society officially consolidated the right to finance enlightenment activities among Muslims [Ustav, 1903, pp. 3–4]. The funds were mostly allocated for the teaching of poor shakirds in secondary and higher secular institutions of Russia, for the distribution of 'ethic' literature, as well as for the creation of Russian-Tatar primary schools under the auspices of the society.

Thirdly, great sums were spent on the creation of conditions for the rigorous observation of the Sharia law by the city's Muslims. The charter stipulated obligatory financial support to needy families for the organisation of funerals according to Islamic customs [Ustav, 1903, pp. 3–4].

The recorded expenditures were preserved during the whole period of 'The Kazan Society for the Benefit of Poor Muslims' existence.

Creation of specialised institutions of this charity organisation became possible due to the sincere commitment of the progressive bourgeoisie and intelligentsia representatives, who were the majority in the managing board, to future improvement and development of the Muslim public assistance system.

One such institution was the Muslim alms-house. In fact, it started its activity on 6 December 1900, owning 13, 200 roubles in interest-bearing securities. This institution was controlled by a board of guardians. A guardian was elected at the general meeting of the institution and controlled its economic life. The alms-house took care of people of Muslim origin who were incapable of any personal labour and who had no relatives or people 'obliged by law to provide them with money for a living'. The alms-house could only take care of 10 people; however, it was stipulated that this number could be increased or decreased, depending on the financial situation [Ustav, 1903, pp. 1–14].

The alms-house was accommodated in a perfectly equipped building of the society (ex-house of the Yunusovs, currently 4 F. Karimov Str.). For instance, in 1911 there were 13 old

men from different uyezds of the Kazan guberniya who received free accommodation, food, clothes, and medical care on the premises of the alms-house [Ustav, 1903, p. 6; 1912, p. 7].

The next institution of the society after its creation (1902) was its ambulance station, which was opened in the alms-house building. The best doctors of Kazan received patients in this station three times a week free of charge, and all of the necessary drugs were also free, at the expense of the society. We should note that this medical institution became very famous in the city, not only with the Tatars but also with the Russians [Otchet, 1912, p. 6].

At the beginning of the 20th century, the first success in creating charity institutions under the aegis of the society was further developed. Thanks to the efforts of the society's members, an orphanage was solemnly opened in Kazan on 13 February 1905 (existing from 16 November 1904). It became the second Muslim orphanage for boys in the history of the city after the institution which had been opened by the Yunusovs. In 1911, 23 orphan boys permanently lived in the orphanage and received a full pension. Apart from that, after 1909, a Russian-Tatar school existed in the orphanage, which taught not only orphans but also 58 non-resident boys from poor families. Moreover, a Russian-Tatar female school was also opened, where 82 girls were taught. All students of the schools enjoyed free educational literature from the society [Otchet, 1912, pp. 8–13; National Archives of the Republic of Tatarstan, f. 1, inv. 4, file 6191; Otchet, 1906, pp. 3–6].

The last major undertaking of the society which was successfully completed was the establishment of a Muslim maternity home. The founding of the institution was decided at the general meeting on 15 April 1906, and in the next six years, the city's Muslims collected the required sum of money. Finally, on 22 January 1912, the society, having spent 15 thousand roubles, got its own maternity home, where the Muslim women of Kazan could receive high-quality medical assistance.

All in all, the Muslim benevolent society managed to become widely popular among

residents of the governorate's centre thanks to its focused daily activities and multi-field social assistance. In 1914, the society involved 5,220 people in its activities, which made up 16.9% of the Tatar population of the city [Otchet, 1915, pp. 6–24].

It is also interesting to review the work experience of the Muslim Benevolent Society of Saint Petersburg. It was founded in 1898 on the initiative of distinguished Caucasian industrialists and businessmen, representatives of Turkish high-born, nobles, and intelligentsia³. It must be said that it was Tatar entrepreneurs, living in different Russian governorates, who became the most active members of the society immediately after its creation: the Ramievs, Khusainovs (Orenburg), Akchurins (Simbirsk guberniya), Alyshevs, Bayrashevs, Bekbulatovs (Kasimov), Agafurovs (Yekaterinburg), S. Shamigulov (Ufa), and others. If we consider one-time fees, once again the Tatar merchants were the most responsive and sympathetic to requests and appeals from the society's heads. Overall, from 1898 to 1899, there were 125 members in the society.

Therefore, the society entered the limelight of the whole national class of entrepreneurs, nobles, and intelligentsia, which was caused by its 'capital location'.

The society's annual income in 1898–1907 averaged 4,596 roubles and was derived from several sources: capital stock percentages, which made up a reserve fund (12.6%), revenues from annual 'eastern evenings' (50.5%), and membership fees and one-time donations (36.9%) [Islam, 2009, p. 157].

In 1906, a Tatar school was opened, the first in the capital (cohort: 34 male students, 16 female students). The fact that an up-to-date educational process, where the basics of faith were taught, was created in the capital, where congregational organisations of Mus-

Muhammadrakhim Yunusov.
Photo from the early 20th century.

lims were weak, had a decisive meaning and prepared all the required conditions for bringing up a young generation in the national spirit. This institution, being the only institution owned by the society, was the subject of its special care and attention. In 1913, the school's educational programme was changed in order to conform to the requirements of the Ministry of National Education. The studying period was prolonged from 3 to 4 years. Apart from that, new subjects—singing and drawing—were introduced and teachers' salaries were increased (to 600 roubles). Mandatory annual medical examinations of the students were introduced. Furthermore, the students were vaccinated for different diseases [Otchet, 1914, pp. 1–2].

Taking into consideration the vital role of education in counteracting assimilation processes, the Muslim Benevolent Society spent 2/3 of its income on enlightening needs. Expenditure items for the society's activity in 1908 allow us to imagine the main spheres of its activity: benefits for students amounted to 1085 roubles; for widows and orphans, 377 roubles; for funerals, 30 roubles; renting and maintenance of the premises for the managing board and school, 970 roubles; typographic

³ Baku first-class merchants Sh. Asadullayev, M. Nagiev, Z. Tagiev, medical doctor A. Akhundov, teacher S. Ganiev, Major General and Kazakh Sultan Vali Khan Gazi Bulatovich, Active State Councillor D. Smolsky, et al. Tagiev laid the organisation's financial foundation by contributing 11,000 roubles to its account [Otchet, 1909, p. 31].

and postal expenditures, 148 roubles 95 kopecks, production of tokens, 94 roubles 50 kopecks; expenditures for cemetery maintenance, 36 roubles; various unforeseen expenditures, 32 roubles. If we consider the cash balance, the society 'had expenditures for the sum of 3, 442 roubles 13 kopecks' [Otchet, 1910, pp. 3–4].

We should mark that this rather small and modest organisation aspired to participate in the financing of Russian social projects. For example, in 1902–1903, the society sent 493 roubles 60 kopecks to the victims of the earthquake in Central Asia; in 1905, it sent 7, 500 prayer books and 50 roubles to Muslim soldiers in the Far East; in 1906–1907, it sent 200 roubles to the victims of the poor harvest in Orenburg guberniya, etc.

In 1913, the Muslim Philanthropic Society founded two scholarships named after G. Tuqay (100 roubles each) for Muslims studying in higher education institutions in the capital [Otchet, 1914, p. 42]. It goes without saying that these actions increased the organisation's authority nationwide, giving it one of the key roles in the developing system of financing for national needs. Muslim benevolent societies were also established for financing individual congregations. At its core, they were similar to

mahallah guardianships. However, they united not only citizens of a certain quarter but also all Muslims living in the city.

In this historic period, Muslim benevolent societies in Russia, despite their different nature and scale of activities, had one common goal. This goal was to provide worldwide support for satisfying the ethnic, confessional, social, and cultural needs of the population. The total capital of all Muslim benevolent societies in the empire did not comprise half a million roubles; however, the efficient concentration and targeted spending of the available sum allowed them to solve complicated and acute problems.

As a result, on the cusp of the 19–and 20th centuries, the Tatar bourgeoisie managed to create its own neat and complete finance system for the satisfaction of national needs, which included elements of traditional charity (one-time donations for various needs of certain people), special benevolent organisations for the provision of social assistance to the broad strata of Tatars, and madrasah guardianships, which provided for the stable economic existence of mosques and the Muslim clergy, as well as for the functioning and reformation of maktab and madrasahs.

§ 2. Participation of the Tatar Bourgeoisie in Socio-political and Social Processes

Radik Salikhov

For many decades, the idea that the socio-political activity of Muslim entrepreneurship was weak was dominant in Russian historiography, pertaining to the period from the latter half of the 19th to the beginning of the 20th centuries. For instance, in his work 'The Tatars in Revolutionary Movement of 1905', G. Ibragimov noted the oppositional mood of the national bourgeoisie towards the autocracy but specified that it was indecisive and disorganised, incapable of open and rough confrontation with the authorities. He questioned its self-sufficiency in political processes and stressed that the bourgeoisie delegated

ideological functions to representatives of the nobles, clergy, and intelligentsia [Ibragimov, 1984, pp. 354–355]. For a long time, this point of view was secured in historical literature, which, as a rule, indicated that commercial and industrial capital served as a social basis with a supporting role, limited to providing financial support for certain political actions. We believe that such a restriction is not fully justified because it does not consider the history and character of Muslim mass movements for the protection of the right to religious freedom and community autonomy, which appeared in the post-reform period. The character of the po-

litical activity of the Tatar bourgeoisie, which had started long before 1905, was determined primarily by protective goals, among which were opposition to the state missionary policy and the execution of contemporary transformations in the spiritual, enlightenment, cultural, and social spheres. At the same time, one of the most important conditions for this activity was the legitimisation of reforms, both in the eyes of society and the imperial bureaucracy. These circumstances dictated the special form of political activity played by the bourgeoisie, expressed in utter carefulness, strict abidance to the law, and the utilisation of legal methods of community service.

The first indicators of political 'fermentation' in the Tatar community, which was generally conservative and, in a way, socially calm, could be noticed in the 1870s, when the government started taking political measures aimed at the submission of the Muslim education system—which used to be autonomous—to the Ministry of National Education. This policy was accompanied by the interference of officials into the lives of mahallahs and restriction of the rights of imams. All the above took place against the background of continuous pressure from missionary circles, the disregard of confessional needs, and gross suppression of social processes, and as a result, this policy could not but contribute to the consolidation of the Muslim bourgeoisie and its concentration on protective goals. This refers to 'The Regulations for Measures Taken for the Education of Indigenous Dwellers Living in Russia' dated 26 March 1870.

However, even the first attempts at the subjection of the Muslim educational system, which were, in fact, rough and crude, destroyed this quasi-'pedagogic' intention and showed the true aggressive intentions of the decree's authors. The growth of tensions and the suppressed discontent in the Tatar community were directly proportional to the increasing pressure on the clergy, the representatives of which did not want state bodies to interfere into the affairs of the state madrasahs. This is why the trust between Muslims and the state did not strengthen as a result of the 1874 subjection of

Muslim educational institutions to the Ministry of National Education.

Such a straightforward, explicit policy inevitably led to unrests and triggered a large-scale national movement, the first of the kind after the disturbances after Catherine II's prolonged epoch of 'religious tolerance'.

During the peasant movement of 1878–1879, entrepreneurs became the authors of the first Islamic political programme in Russia, and they openly declared their demands for confessional and national equality. This programme was presented to the governor of Kazan on 26 and 29 January 1879 by the most respected representatives of the Tatar society, major entrepreneurs, and industrialists⁴. They intended (as a special deputation) to present it to the Minister of Internal affairs. In this regard, on 29 January 1879, the governor of Kazan confidentially informed the Minister as follows: 'They wish to request of Your Excellency the following: 1) they will request divisions of Mohammedan property to be carried out by respected religious imams, that is, as per the Sharia law and without the plea side of the district court; 2) they will request to free madrasahs, mudarises, imams, and all the clergy from the control of the Ministry of National Education; moreover, they will ask not to consider the knowledge of Russian obligatory for the aforementioned clergy; 3) they will also ask for exemption from military service of Mohammedan shakirds studying in secular madrasahs as per article 62 of the Statute on military service. Apart from that, they want to ask for the following: a) granting all Mohammedan Russian subjects the right to elect mufti independently from among the clergy; b) elections of assessors of the Mohammedan secular assembly of imams for everyone in the governorates; c) salary increases for the assessors of the Mohammedan secular assembly; and d) exemption of all Mohammedans in mandatory posts, serving, or acting as witnesses or defendants in court on Fridays and all Mohammedan

⁴ First-class merchants I. Apakov, M. -Y. Apanayev, M. Azimov, councilor of commerce I. Yunusov, second-class merchants M. Galeev and M. -G. Utyamyshev.

calendar holidays' [National Archives of the Republic of Tatarstan, f. 1, inv. 3, file 4468, s. 4–5]. Therefore, the request was not only about autonomy for Muslim communities and the establishment of broad religious rights, but it was also about the cancellation of decisions previously adopted by the government.

In fact, some of the mentioned claims had been previously filed to the supreme bodies in other governorates. For instance, it is known that on 5 August 1876, Izatulla Davletkamov, senior akhun of the Khan's Mosque in Kasimov, sent a report to the mufti with a request to send a plea to the government and free Muslims from court obligations on Fridays [Central Historical Archive of the Republic of Bashkortostan, f. I–295, inv. 3, file 9111, s. 1]. Apparently, Davlekamov's claim reflected the overall atmosphere of the latter half of the 1870s, when Muslim communities of the empire were becoming more and more discontent with state policy towards the Islamic educational system and clergy. It is not accidental that a significant part of the plea was subsequently added as a separate item on the 'programme' petition of the businessmen and industrialists of Kazan.

Inherently, the authorities could not resist the growing activities of Muslim entrepreneurship, as it acted strictly within the limits of legislation, having chosen the method of petitions and pleas beforehand. The fact that the Kazan delegation, which tried to inform the authorities about the worries of distinguished representatives of Muslim communities, was refused reception, and the fact that the government clearly showed its unwillingness to review any claims, only enhanced the subsequent consolidation of the bourgeoisie for finding solutions to actual spiritual problems, which were to be politically hued.

We should mention the fact that in June 1883, despite the active resistance of local and central authorities, the Tatar merchants and industrialists M. Azimov, M. Apanayev, M. Galeev, M. Utyamyshev, I. Yunusov managed to deliver a new petition to the emperor's chancellery with requests to cancel the Ministry of National Education's control over madrasahs and maktabas and to free the edict mullahs from

obligatory knowledge of Russian [National Archives of the Republic of Tatarstan, f. 92, inv. 1, file 15539, s. 23]. Even though this action was not successful, it once again underlined the decisiveness of prosperous Muslims to assert the madrasah's independence. Additionally, this action showed their aspiration to lead an emerging movement to protect mahallahs from state and missionary pressure [Alishev, 2000, p. 102].

This trend was reflected in a mass campaign against the law on the educational standard of the Muslim clergy, endorsed on 16 July 1888, which had been initiated by 'The Rules' of 1870. The Tatar entrepreneurship regarded this document as the practical destruction of the congregational Muslim clergy, and together with the Ministry of National Education's control over maktabas and madrasahs, it seemed like an escalation of the state's missionary policy.

The Kazan guberniya became the centre of organised bourgeois protests. In this governorate, A. Sajdashev, a merchant belonging to the 1st guild, headed a mass petition campaign for the abolishment of the discriminatory law. Along with the entrepreneurship, other full participants of the campaign were the following religious activists and intelligentsia representatives: H. Gabashi, G. Gazeev, A. Kulmametov, M. Salikhov, M. Yakhin, M. Shamsutdinov, Sh. Shamsutdinov, A. Apakov, and others. As a result, the governorate authorities threatened A. Sajdashev with administrative exile [National Archives of the Republic of Tatarstan, f. 1, inv. 3, file 7797, s. 211]. Nevertheless, similar claims were also filed from other governorates. According to D. Azamatov, '1, 000 collective pleas from more than half a million people were filed to the Spiritual Assembly just in January 1889. On 31 January 1889, while the mufti was absent, the religious institution discussed the petitions and came to the conclusion that all Muslims consider that the new law '... is going to destroy their faith, and cannot be obeyed in its exact sense, as the rules of their belief make them strictly obey the laws and directions of the authorities so far as they are equal to the religion' [Azamatov, 1999, p. 153]. On 4 November 1889, the Ministry of Internal

Affairs declined all the pleas which had been filed to its chancellery on the grounds of the mildness of the law's requirements [National Archives of the Republic of Tatarstan, f. 1, inv. 3, file 7798, s. 5].

Such a negative response of the government did not stop the Muslim bourgeoisie and clergy from further actions. It's known that in December 1889, A. Sajdashev managed to organise new pleas for the abolishment of the law on behalf of mosque-goers from 13 mosques in Kazan. The trip of the Kazan deputation was financed by the merchants M. Toykich, A. Sajdashev, M. Burnaev, H. Usmanov, and M. Galikeev, who accumulated 15, 800 roubles [National Archives of the Republic of Tatarstan, f. 1, inv. 3, file 7798, s. 112]. Despite the fact that the deputation repeatedly visited the capital in April 1890 and filed the pleas to the emperor's chancellery, it failed to reach its goal [National Archives of the Republic of Tatarstan, f. 1, inv. 3, file 7798, s. 112].

Therefore, the Muslim bourgeoisie movement continued to openly oppose the official governmental measures for the subjection and control of the spiritual and enlightening activity of mahallahs and continued to protect their traditional autonomy. Such activity became a form of political education for the Muslim bourgeoisie. It contributed to the formation of specific programme guidelines of the Tatar commercial and industrial class in the socio-political sphere, which were generally restricted to the protection of religious institutes from the excessive surveillance of the state and cries for spiritual and cultural equality.

We should note that the entrepreneurship had an organised plan of action and made an outcry against any initiatives of the government which affected the interests of co-religionists. For instance, on 10 July 1892, the Ministry of National Education published a circular which allowed maktabhs and madrasahs to use printed books only, reviewed by the Russian censor, and prohibited teaching with hand-written books. This circular provoked fierce criticism from the Muslim entrepreneurship and clergy. According to D. Azamatov, the circular immediately 'triggered "the all-Russian address" to

Akhmetzyan
Sajdashev.

the early
20th century.

the Ministry of Internal Affairs, prepared by merchants from Kazan, Orenburg, Ufa, Ryazan, Kasimov, and Irkutsk. In this address, the recent measures of the government were heavily criticised' [Azamatov, 1996, pp. 153–155].

On 7 December 1893, on behalf of all Muslims in Kazan, the merchants M. Burnaev, M. Apanayev, and M. Ibragimov addressed the governor with a request to send a special deputation to the capital: 'We are concerned about the preservation of religious books in proper completeness and inviolability, as their studying is a critical need for the true perception of Islam. In this regard, the Mohammedan Society of Kazan arrived at an idea that there is a necessity in judgment by governmental authorities and institutions of those works, composed as per religious beliefs and Islamic views, which are hereby requested to be printed without changes in texts...' [National Archives of the Republic of Tatarstan, f. 1, inv. 3, file 9126, s. 2]. The merchants M. Galeev, M. Ibragimov, M. Apanayev, and the imam of the 10th cathedral mosque of Kazan A. Abdulbadigov became the deputies. Later G. Barudi, M. Galeev's son and the mullah of the 5th cathedral mosque of Kazan, joined the deputation. According to the police data, on 12 December 1893, the house 'of merchant Murtaza Ibragimov became the venue for a festive Majlis of distinguished mullahs and Mohammedans', where the new governmental circular was discussed and the details of the future trip to Saint-Petersburg were specified. The deputation itself had been allowed by the governor on 23 March

1893 [National Archives of the Republic of Tatarstan, f. 1, inv. 3, file 9126, s. 7–10]. Thanks to the joint efforts of the Muslim community of Russia, this circular of the Ministry of National Education was temporarily abolished in 1894.

The Tatar bourgeoisie was equally active in the local self-government bodies. In the late 18th and first half of the 19th century, the government managed to considerably decrease the restrictions and closed nature of the Tatar community, which had been forming for ages, thanks to the legislative inclusion of the Tatar business world into the common socio-cultural space of Russian entrepreneurship. The Muslim merchantry got the right to be elected for posts in class organisations and local self-government bodies. They also could acquire honorary titles and earn state awards, that is, they were restrictively integrated into the 'ruling' society.

During the Great Reforms period, as capitalist relations in the country were developing, a steady trend of smoothing social frames and the abolishment of corresponding benefits emerged. For the Tatar entrepreneurship, this meant the possible loss of vital means of social influence as well as advantageous conditions for easy integration into the Russian merchant class. In 1855, the Tatar City Hall was liquidated, which had an adverse effect on the administrative ambitions of the Muslim bourgeoisie. Moreover, the introduction of a new system of city public administration could not compensate for the lost benefits for a long time. For instance, in 1871–1874, only 8 Muslims were elected to the Kazan State Duma, while overall there were 72 members. This number increased to 13 in the next four years (1875–1878). Up to 1917, the number of Tatar councilors did not exceed 16. 1883–1886 became an exclusion when the Muslim representation in the Duma accounted for 20 councilors [Kratkij, 1896, pp. 19–35]. Representation of the Tatars in local self-government bodies of other cities in Russia was even more modest. For instance, in 1892–1893, out of 50 councilors of the City Duma in Orenburg, only 5 were Muslims [Adres-kalendar', 1893, p. 9].

Such evident social 'estrangement' of the Tatar entrepreneurship, which accompanied the process of legal unification and did not consider national and confessional peculiarities, coincided with the arrival of a new party in commercial and industrial relations—a new generation of Muslim financiers who had not had solid bonds yet, that is, who had no unconditional obligations towards the society. Besides, the pressure of missionary circles on the long-established autonomy of Muslim communities contributed to the creation of a completely new situation, when the Tatar bourgeoisie, generally loyal and law-abiding, started expressing certain oppositional opinions. The feeling of 'alienness', which once again arose in such conditions, inspired the Tatar entrepreneurs not only to carry out successful and competitive trading and industrial activities but also to actively protect their spiritual and cultural rights, to strengthen local Muslim communities in every possible way through reforms and targeted charity. These aims were practically the only goals dictating the activity of the Tatar bourgeoisie in city Dumas and uyezds and governorate zemstvos [Salikhov, 2001, pp. 39–56]. It is interesting to mention the fact that during the post-reform period, the leading Muslim entrepreneurs did not aspire to obtain any appointments or posts in public administration bodies or official organisations in contrast to their predecessors. They preferred to actually strengthen their influence among the Tatar population of city slobodas.

For example, members of the administrative board of Kazan were financiers who could not boast of prosperity and indisputable authority among their co-religionists. These posts were held by representatives of the 'middle' entrepreneurship, who were diligent, good at operational work, had connections among the Tatars and Russians, and who did not pursue a special role in the life of local Muslims. For example, Burganutdin Mullin (1836–1917), a merchant belonging to the 2nd guild, was, in fact, a 'professional' member of the city administration from 1877 to 1910. He knew Russian rather well, wanted to disassociate himself from the politically-active part of the national

entrepreneurship, and these traits helped him to become a peculiar representative of the Muslim city population both in the new system of public administration and in class organisations, which were losing their significance [National Archives of the Republic of Tatarstan, f. 299, inv. 1, file 112, s. 2–9]. B. Mullin was that public figure who symbolised the high degree of involvement of the Tatars, primarily the bourgeoisie, in state and social affairs.

The Muslim delegation in the City Duma of Kazan, which was composed of 'progressive' merchants and national intelligentsia, tried to turn the city assembly into a practical instrument for the economic, spiritual, and cultural resurrection of the Tatar people. The first signs of growing activity could be seen in the middle of the 1880s, that is, in the period which could be characterised by the rapid growth of national self-consciousness, the birth of new-method education, general cultural development and, what is more important, the beginning of deliberate and well-organised opposition to the anti-Muslim policy of tsarism. Intensified discriminatory activities of the authorities against the Tatar population in the region determined the basic emotional mood and became a special stimulant for the challenging work undertaken by Muslim representatives in elective bodies of self-administration. One can say that all more or less publicised actions of the Tatar councilors in the City Duma were a direct response to attempts of administrative discrimination against their people. For example, in 1884, there was a protest organised by the councilors Sh. Sagadeev and M. Galeev, merchants belonging to the 2nd guild, which was a response to a request by the Makaryevskaya church warden, who wanted to close the Muslim cemetery in Admiralteyskaya sloboda [Protokoly', 1884, pp. 692–693]. This protest does not seem like an accidental episode in the Duma's activities but appears as a logical element of the established policy if we consider the fact that the event took place against the background of an unprecedented 'war' of pleas and deputations against the missionary goals of the government.

We should note that in their demands for equal conditions for representatives of differ-

ent nationalities, the Tatar public figures of the period, mostly entrepreneurs, were governed not only by pragmatic directives but also by spiritual ones. In particular, the sentiment of denied justice quite often became one of the key factors which regulated the attitude of Muslim councilors to various problems of city life. This was clearly displayed in a story with the Tatar Orphans' Court, which dealt with inheritance and custodial cases and which was financed by the city treasury. In 1892, the city council, trying to cut the expenditures, carried out a 'reform' usual for the bureaucracy of the period—it terminated the Tatar Orphans' Court and handed over the cases of Muslims to the Russian Orphans' Court. The Tatar leaders organised a full-fledged campaign against the transformation of the Russian Orphans' Court into a mixed Russian-Tatar one. Pleas from merchants and citizens were supported by speeches of the councilors M. Galeev and A. Sajdashev in the City Duma. In these addresses, they stressed the necessity of increasing the number of juries in the court by one new member, elected not from the classes but from the city's Muslims [Zhurnal, 1895, pp. 251–252]. In a year and a half, they managed to obtain the solution they wanted, which became a small but significant victory and fixed the local electoral rights of the Kazan Tatars [Zhurnal, 1896, pp. 238–240].

The stumbling blocks in discussions of almost every agenda, which provoked volcanic reactions by the Tatar representatives in the Duma, were the issues of beautification, national education, and health care. The fact is that the Old Tatar and New Tatar slobodas, and partially the Porokhovaya and Admiralteyskaya slobodas of Kazan, which occupied a significant territory of Zabulachye, accommodated more than 20, 000 Muslims and had already existed for a hundred years from the moment of their definitive formation in a rather closed autonomous state, oftentimes were neglected of attention by the Kazan administration, as it often forgot to include these areas in city programmes of reconstruction and development.

We should say that the Tatar councilors presented a well-organised and disciplined fac-

Muhammadzyan Galeev.
Photo from the early 20th century.

tion united by a common idea and capable of solving nationwide issues. In 1886, 'The Kazan Stock List' noted that 'one Tatar as a public activist equals three Russians. The Tatars are so powerful thanks to exemplary unanimity and agreement of opinions in finding solutions to common issues... Incredible as it may seem, but despite the small representation of the Tatars in the Kazan Duma, they are such a great force that many issues are settled as per their will and against the will of the rest of the councilors' [quoted from Sverdlova, 1991, p. 37].

Their style was notable for its rationality and was determined by a well-deliberated strategy and tactics. In spite of inevitable differences in views and occasionally complicated personal relations, when finding a solution to an issue, the members of the 'faction' united behind one or two leaders, often handing over part of their authority to them. In almost all cases, they unanimously supported the initiatives and tribune speeches of the leaders, after having discussed them on the sidelines of the assembly. The merchants M. Galeev and A. Sa-

jdashev were the virtual heads of the Muslim councilors in the State Duma at the beginning of its existence, approximately from the 1870s to the beginning of the 20th century.

The main condition for the unity of the 'faction' was a common ideological platform—rather than merely a theoretical programme—which meant Muslim-wide values, or even their necessary value transformations, resulting from the unavoidable influence of the European lifestyle on the city Tatars. That is why in the beginning of the 20th century, along with vivid, even propagandistic actions for the defense of Islam (protests against the decrease of the tavern tax as a measure encouraging drinking, the addition of the major streets of Tatar slobodas to the register of the streets, where the opening of pubs and taverns was prohibited, collective refusal of the elections on the issue of staging an opera performance, timed to an Orthodox holiday, etc.) [Zhurnaly', 1908, p. 107; 1909, p. 325; 1911, p. 52], the Muslim councilors made efforts to make the city financially assist the emerging system of new secular education and the newly established cultural, enlightening, and benevolent Muslim organisations. The Tatar representation in zemsky councils of the uyezds and governorates in many ways followed the trends and development dynamics, and just as the City Duma, they were the result of bourgeois-democratic reforms. Muslims living in the Kazan guberniya could distinguish between the stages in the development of zemsky institutions. The first stage started in 1864 and lasted up to the middle of the 1880s–1890s, when the needs of the Tatar rural population were financed without taking into account their national peculiarities and on the same basis as the Russian, Orthodox population of the region. The second stage, from the 1890s all the way up to 1917, was characterised by the continuous demands of the Tatar population to respect their confessional and national peculiarities. In some measure, this period became an example of constructive cooperation between Muslim reformers and the democratic part of the Russian ruling class.

It should be pointed out that census, class, and other restrictions of the electoral rights in

regions densely populated by 'non-Russians' completely discredited the very idea of zemstvo as popular representation.

However, the pro-reform bourgeoisie still remained active under such conditions. As early as in 1886, councilor A. Sajdashev delivered a speech to the 22nd regular uyezd zemsky council and initiated the 'creation of the first Muslim alms-house in the history of the governorate', promising to allocate his own money for its construction. The alms-house, which took care of 15 old men, opened in 1894 [Postanovleniya, 1896, pp. 17–40]. In 1889 A. Sajdashev, being a councilor of the Kazan guberniya zemsky council, managed to obtain its approval for filing a plea to the government in order to ask for permission to trade brick tea not per the guild rules but according to retail trade regulations. This measure significantly facilitated the life of rural Muslims and many others, as it greatly broadened the suburban retail chain of this essential good. Moreover, it substantially helped aspiring Tatar financiers, who were gathering capital mainly from buying and selling groceries [Kazansky birzhevoy listok, 1890, 1 March].

Therefore, state policy in the sphere of Muslim education and missionary pressure explained both the continuation of political consolidation of the national entrepreneurship and the formation of its specific protective ideology. This ideology contained within itself the idea of preserving and strengthening Islam and provided for the two fundamental directions in the struggle for national rights. The first direction was based on a legal, 'parliamentary' method, when the interests of the Muslim population were protected by elective bodies of local self-administration—city dumas and zemstvos—and by means of mass solicitations, requests and petitions to the highest bodies of the Empire. The second direction was based on clear recognition of the fact that the closed patriarchal lifestyle of the Tatars could not effectively respond to the pressures of another culture, and that cardinal changes, reforms, which would transform the Muslim Tatars into an economically developed people

with a progressive culture, were obligatory for strengthening Islam during the epoch of bourgeois transformations. In this regard, there was a need for limiting the interrelation of jadidistic transformations in the system of confessional education, the development of new principles for Muslim charity, the creation of a series of foundational institutes for civil society such as a multi-party system, developed national press and book publishing, formation of professional secular literature, musical art, theatre.

We should also note that the power, which embraced this ideology, changed fundamentally. The development of capitalistic relations significantly broadened the social basis of the Tatar bourgeoisie and contributed to the quantitative growth and, if it can be thus expressed, the democratisation of large entrepreneurship. Starting from the middle of the 1870s—the beginning of the 1880s, representatives of old merchant dynasties of Kazan—the Apakovs, partially the Apanayevs, Burnaevs, Mustakimovs, Yunusovs, etc.—were actively pushed out of the dominant positions in commercial and social life. Thanks to almost a hundred years of success in trade and industry, they had become a peculiar national aristocracy.

They were replaced by a new wave of entrepreneurs, first generation entrepreneurs—yesterday's peasants and retired soldiers, who had started their businesses almost from scratch and achieved impressive results due only to amazing diligence and remarkable personal qualities. They came from rural areas, where Islam was traditionally strong and authoritative. As a result, these new activists were critical and even aggressive towards any deviation from Sharia by urban Muslims. Such deviations were inevitable because of daily interaction with the Orthodox majority of the city. Their attitude towards the authorities, openly carrying out anti-Muslim policy, was no less tough and conceptual. On the other hand, being practical and pragmatical people with rational thinking, they realised that there was a necessity in reforming the previous lifestyle, which ceased to correspond to the realities of progressive capitalism.

§ 3. The Tatar merchantry and the Orenburg Muslim Spiritual Assembly

Ildus Zagidullin

In the first half of the 19th century, the Muslim clergy believed that nomination of candidates for the post of the Orenburg mufti was its vested right. However, after the first two muftis had died, this right was not exercised [Azamatov, 1996, pp. 49, 53] by 'the Mohammedan community', as fixed by the Russian legislation of 1817, which stipulated that one candidate should be presented by the Minister of Internal Affairs and confirmed by the Emperor [Svod uchrezhdenij, 1857, art. 1236]. In the post-reform period, Tatar merchants valued the activity of the Orenburg Muslim Spiritual Assembly in coordinating the religious and sacramental life and the consolidation of the mahallahs. According to the Ministry of Internal Affairs officials (1872), the Spiritual Assembly turned into a 'centre uniting all... the clergy and determining both the internal connection between its members and their spiritual unity and the connection between the clergy and Mohammedan population, which recognised the existence of this central spiritual administration as the symbol of their tribal and religious unity' [Materialy', 1936, p. 206].

New phenomena could be clearly seen after mufti G. Suleymanov's death. On 22 August 1862, a large group of merchants and tradesmen of the Nizhny Novgorod fair prepared a petition for the promotion of Kamaletdin Nagaev, akhun of Sterlitamak, to the post of mufti. The petitioners were led by Kazan merchants belonging to 1st guild Iskhak Yunusov, Negalim Apanayev, and Murtaza Usmanov.

The authorities were not prompt in solving this crucial issue for Muslims as the Ministry of Internal Affairs was developing the rules for holding the Orenburg mufti elections in Ufa with participation of Muslim representatives from different governorates. These rules were finished no later than 5 November 1864. Still Muslims were becoming more and more concerned due to the indefinite postponement of the mufti assignment. This topic once again became the subject of serious discussion at the Nizhny Novgorod fair. On 2 September the

major merchants⁵ repeatedly reminded the government about the situation in a new petition, underlining that their candidate, K. Nagaev, deserves a high secular post thanks to his personal qualities and 'religious life'.

Information about the development of government regulations on the election of the mufti reached the merchant community. In December 1864, the Kazan merchants⁶ and city mullahs lobbied the governor to promote their candidate for mufti to the government. It was also stated that if the government found elections necessary, they should be held only in Kazan, as it was 'the centre' of the Orenburg Muslim Spiritual Assembly region [Russian State Historical Archive, f. 821, inv. 8, file 601, s. 174–176].

This was the period when the merchants had just joined the governmental initiative for holding the mufti elections. The actions of the Tatar nobles stood out favourably against this background. In particular, on 20 July 1864, landlord S. Tevkelev (future mufti) addressed the director of Department of Religious Affairs of Foreign Faiths with a request to speed up the elections of a new Orenburg mufti. In his letter dated 6 February 1865, he insisted on 'the electoral principle' and named Ufa as the best place for holding the elections [Russian State Historical Archive, f. 821, inv. 8, file 601, s. 181–182]. The deed of Shagiakhmet Alkin, Kazan police chief deputy in 1846–1859, also deserves re-

⁵ First-class merchants Iskhak Yunusov, Iskhak Apanayev (Kazan), Guberniya Secretary Abdulkhakim Enikeev, honorary citizens by birth. Khasan Khamzinovich Shakirov, Syukai Enikeev (Temnikov), honorary citizen by birth, first-class merchant Muhammadshakir Akhmetshakhovich Utyamyshev, first-class merchant Iskhak Musich Utyamov (Malmyzh), merchant Mustafa Muhammadaminovich Davydov (Moscow), Murza Salikh Yanbayev (Kasimov), and another merchant.

⁶ First-class merchants Ibragim and Iskhak Yunusov, Mustafa Nazirovich Azimov, Murtaza Azmetyev, Ismail Iskhakovich Apanayev, honorary citizen by birth, second-class merchant Muhammad Musich Apanayev, honorary citizen by birth. Muhammadgali Kurbangaleyevich Yaushev.

spect: in January 1865, he tried to make this issue a subject of public discussion, having published his project in a metropolitan newspaper⁷. Sh. Alkin offered to elect the candidates for mufti from among the Tatar nobles living in Orenburg guberniya and holding secular posts. He believed that a noble who knew Islam and religious rules would not turn his back on the interests of both the government and Muslim population [Russian State Historical Archive, f. 821, inv. 8, file 601, s. 178].

Thus, for the first time representative of the Tatar elite of the region advanced the democratic Sharia principle of electing the mufti as the Muslim community leader, the ummah of the Orenburg Muslim Spiritual Assembly area (amir al-muminin) by the Muslim assembly itself. This was put front and centre as part of the reformation of the Orenburg Muslim Spiritual Assembly in 1864–1865.

However, in the end, the opinion of P. Valuev, Minister of Internal Affairs, was decisive in this situation. He stated the following: 'Candidates from Ufa would transmit solidarity and common ideas and directives to their local communities, while the government would like to avoid such a union of the Mohammedan population in various locations... that is why it is much better to restrict the election by specifying several candidates from separate localities so that the government would be able to appoint one as per its choice' [Materialy', 1936, p. 180]. As a result, on 24 April 1865, the government appointed nobleman S. Tevkelev, who had no religious education. Thus, it was the first time a practice introduced by Peter I in respect of the Synod was extended to Muslims—a new chairperson of the Orenburg Muslim Spiritual As-

sembly was a secular nobleman. The opinion of the Tatar elite was ignored, whereas the delegation of authority in accordance with the model 'autocrat–personal agent' was preserved.

The next stage in activity of the Tatar merchants coincided with mass disturbances among the rural Muslim communities of Kazan guberniya, which took place in 1878–1879. This activity was triggered by the news that S. Tevkelev had become seriously ill. The Kazan merchants decided to be proactive. At the end of January 1879, they recommended their own candidate for the post of mufti: the akhun of Azeyevo village, Yelantma Uyezd, Perm guberniya, whose name was Sayfulla Urmanov. In February 1879, they chose another candidate, Sh. Bagautdinov (Sh. Marjani), akhun of 1st Kazan city mosque [National Archives of the Republic of Tatarstan, f. 1, inv. 3, file 4659, s. 9].

On 29 January 1879, a group of powerful merchants on behalf of 'all the Tatars' presented a list of issues for discussion with the Minister of Internal Affairs to the Kazan governor. The first item in the issue was dedicated to provision of Russian Muslims with 'full authority' to elect a mufti 'among the clergy, a worthy and religious person' [National Archives of the Republic of Tatarstan, f. 1, inv. 3, file 4468, s. 13]. Clearly, this item was fundamental in the merchants' programme. Their proposal for holding elections of the Orenburg Muslim Spiritual Assembly assessors by the clergy seemed natural in the concept of transforming the Orenburg mufti into a secular leader for Muslim society in the European Russia and Siberia. This provision was stipulated in the law: 'Members of the Spiritual Assembly are elected by the Mohammedan community every three years and are approved by local officials' [Svod uchrezhdenij, 1857, art. 1237]. Therefore, the second item of the request also came down to a veiled call of Muslims to the imperial authorities to carry out the laws about Islam adopted by the Russian autocracy. According to current legislation, the mufti's fatwas did not have the force of the law behind them. If the election were held, the collective decisions of the mufti and assessors—people elected by the Muslim community—would hold the force of law for

⁷ In order to avoid the authorities' distrust, S. Alkin suggested that the administrations of 11 guberniyas elect delegates to the Pan-Islamic Congress in Ufa from representatives of four social groups—the nobility (45 people), the merchants (46), the clergy (at least 50 people), and the peasants' volost elders (70)—according to the recommended quota. His project was based on the principle that the Orenburg mufti was to be elected locally by deputies, themselves elected by the local administration [Zagidullin, 2009a, pp. 46–58], but nevertheless was a step forward in the democratisation of elections.

Muslims. Consequently, the resolutions of the Orenburg Muslim Spiritual Assembly would become obligatory for co-religionists and the mufti would become the head of the Russian ummah. This approach provided an opportunity for the parallel existence of a Sharia-abiding Muslim community in Russia; the government would still determine the limits for application of Islamic norms in the public and family lives of Russian Muslim subjects. These changes would allow the religious and cultural autonomy of Muslims living in the Orenburg Muslim Spiritual Assembly region to shift to a new level. Moreover, they would make it a full-fledged Muslim community existing under the conditions of a confessional minority. If these items were fulfilled, the Orenburg Muslim Spiritual Assembly would become a representative body of the Muslim community living in the European Russia and Siberia, which would have the status of a governmental institution. The subsequent demands of the merchants should also be reviewed in the same sense, that is, in the sense of reformation of spiritual administration in the Orenburg Muslim Spiritual Assembly region and provision of Muslims with rights equal to those of the Russians. The requests to abolish the Ministry of National Education's control over traditional Muslim schools and the cancellation of obligatory knowledge of Russian by the clergy should be particularly noted. The requests of the Kazan merchants from 1879 up to 1904 remained the most comprehensive complaints of the Tatar national elite against the internal Muslim policy of the autocracy.

In the beginning of the 1880s, a new generation of merchants, one leader of which was A. Sajdashev, started playing an eminent role in the social life of Kazan. Co-religionists called him 'the Tatar governor'. The merchants decided to increase their influence on the Orenburg Muslim Spiritual Assembly through their representatives—Mukhammadey Salikhov, mullah of the Usmanovskaya city mosque, and Z. Maksyutov, assessor of the Orenburg Muslim Spiritual Assembly, who knew how a religious institution worked. The merchants demanded mullahs-electors arriving from uyezds to elect these assessors. Moreover, they managed to obtain the

governor's permission for participation of 'worthy' members of the Orenburg Muslim Spiritual Assembly in voting by secret ballot. Additionally, they secured high salary for two elected members. An unprecedented event took place for the first time: on 17 December 1883, 35 mullahs and 20 Kazan merchants took part in the elections of the Orenburg Muslim Spiritual Assembly assessors,⁸ and candidates from the merchants were elected by an overwhelming majority of votes [National Archives of the Republic of Tatarstan, f. 2, inv. 1, file 1269, s. 33–34].

Commenting upon the situation in his secret letter to Pobedonostsev, attorney general of the Synod, dated 10 February 1884, N. Ilminsky offered to abolish the religious administration and confidently announced: 'I believe that there is an influence of pan-Muslim ideas of the Tatar intelligentsia hidden in this new phenomenon, more private than Gasparinsky and K... And if the Tatars are not thinking about using the Ufa centre, they certainly will' [Ilminsky, 1895, pp. 64–65]. The shrewd N. Ilminsky was close to the truth in his evaluations. The merchants was in need of the Orenburg Muslim Spiritual Assembly, an institution consolidating Muslims from different governorates, and it recognised the Assembly as a body representing the interests of co-religionists.

In 1885, actions of the Tatar elite significantly changed in the period of candidates selection for the once again vacant post of mufti. While the autocratic policy of conservative nationalism was underway, the merchants limited themselves to statements 'about preferableness of assigning' mufti who should be a secular man, not a man without the basics of the religious knowledge. This meant for them a lack of illusions about the possibility to elect a spiritual leader themselves and testified to the existence of a unified guideline and possibly their hope

⁸ A. Saidashev, Murtaza Azimov, Iskhak Apanayev, Garif Utyamyshev, Muhammadzyan Galeev, Vali Apanayev, Yusup Apanayev, Burganutdin Mullin, Abdrakhman Ibragimov, Vali Chukin, Iskhak Aituganov, Shamsutdin Sagadeyev, Izmail Galansky, Shagi Aminev, Safa Galikeev, Garafutdin Abdullin, Vali Yaushev, Zainulla Usmanov, Galiaskar Bigashev, and Abdulgani Biktemirov.

to see the vacant post of senior assessor of the Orenburg Muslim Spiritual Assembly filled by the acting mufti, Mukhammadey Salikhov.

Another distinctive feature was the filing of all collective pleas only via the Spiritual Assembly, which indicated the growing role of the religious administration and the authority of its members in dealing with this issue. Previously, the pleas had been filed by a corporative group of merchants, but now the broad involvement of the clergy and local inhabitants, irrespective of class status, could be observed.

The fact that in 1885 the national bourgeoisie was directing the process of composition and filing of collective pleas was confirmed by participation of major Tatar city communities (Kazan, Seitov Posad, Orenburg, Semipalatinsk, Petropavlovsk, Troitsk, Simbirsk) in the petition actions. A great number of prosperous entrepreneurs from these communities, as well as the entrepreneurs who came to take part in the Irbit'sk (15 February) and Nizhny Novgorod (August 1885) fairs, participated in the petition campaign. 7 pleas were filed on behalf of the mullahs. If we review the criteria for a candidate for the post of the Orenburg mufti, proposed by the government and the national elite, we will notice a great discrepancy in their opinions. The government was looking for a candidate from the nobility with Russian education, devoted to the autocracy, and having governmental experience. Religious education was not obligatory.

One of the candidates (self-nominated) was an official for special errands under the Turkestan governor general, a Tatar called Shagimurat Ibragimov, who handed over a 'report note', dated 10 May 1885, to the head of the Department of Religious Affairs of Foreign Faiths, in which he shortly stated his point of view on the meaning of the Orenburg mufti for the government and Muslims [Zagidullin, 2011, pp. 287–309].

The candidature of Sh. Ibragimov had been apparently discussed by the Muslims of Kazan. N. Ilminsky somehow had found out about this, and on 29 April 1885 he hurried to warn the attorney general of the Synod: Ibragimov 'sees and knows the whole Muslim world across the globe; he personally knows many figures in Rus-

sia, Central Asia, India, the Kirghiz steppe, etc. So if the pan-Muslim idea suddenly pops into his head, he knows all the required facts and moral means... In a word, we are too unprepared to cope with such a fine mind. Now this is what would be suitable for us: he should blush and get confused while speaking Russian, write in Russian with numerous mistakes, be scared not only by the governor but also by any department head [Ilminsky, 1895, pp. 176–177]. This letter of the missionary deprived Sh. Ibragimov of the clerical position he was seeking⁹. M. Sultanov, an official, was assigned mufti, and once again the government ignored the opinion of the Tatar elite.

At the 1886 elections of the members of the Orenburg Muslim Spiritual Assembly, the merchant A. Sajdashev once again was unable to get M. Salikhov assigned mullah. Z. Maksudov was re-elected [Tärcäman, 1887, 11 January]. The new assessors of the Orenburg Muslim Spiritual Assembly, elected in 1886 and 1889, diligently reported to Kazan the recent data on the relations between the state and Islam.

The outlined cooperation of the national bourgeoisie and the new mufti discontinued after the announcement of the law from 16 July 1888 on the introduction of the Russian educational standard for candidates to spiritual posts. In the beginning of 1890s, when the government started taking measures against Islamic institutes, a mutual understanding between M. Sultanov and the Kazan merchants was re-established. A festive dinner, which took place at the city stock exchange building on 29 May 1896, honouring the mufti's arrival, publicly symbolised this unity. It was organised by tradesmen, who had invited officials [Kazansky Telegraf, 1896, 30 May]. Carrying out the reforms of the Muslim community contributed to further bonding of the merchants and mufti M. Sultanov. He was consistently defending new ideas and protecting the religious rights of Muslims. At the turn of the century, M. Sultanov and the Orenburg Muslim Spiritual Assembly members openly positioned themselves as progressives.

⁹ He was assigned by the Russian Consul to Jidda, but died of cholera the very first year of his appointment (1892) [Sibgatullina, 2010a, p. 384].

CHAPTER 4

Social Protest Movements Against the Threat of the Loss Of Ethnic and Confessional Identity and for Protection of Religious and Cultural Autonomy

Ildus Zagidullin

In the middle of the 19th century, there were local groups of Tatars who knew the Russian language and could read and write in Russian. Only a small group of nobles among the Tatar elite knew Russian as they recognised Russian education as a source for material well-being by means of a career as officials. Merchants, conducting business at Russian fairs and markets, knew the colloquial language and quite often could read and write. As for the countryside, this list of the Russian-speaking Tatars was supplemented by retired soldiers, as well as by representatives of the peasant self-administration bodies and, partially, by the clergy.

This situation can be explained by the following reasons.

The absolute majority of the Tatars lived in the country, where their contacts with Russian officials were minimal, while interaction with state bodies was carried out through elected representatives.

The Muslim clergy, who considered Central Asia the ideal of values and cultural tradition, did not appreciate the Russian language. Some 'mullah-fanatics' turned learning Russian language by the congregation into a religious taboo and called it 'a sin' [Russian State Historical Archive, f. 733, inv. 171, file 656, s. 109 reverse]. Traditional scholastic education and upbringing suggested following the established religious traditions: 'Anything which is not provided, stipulated, or allowed by Sharia is a novelty for a Tatar, which requires at least approval or sanction of the clergy' [Akhmerov, 1893, p. 4].

In contrast to the baptised indigenous peoples of the Volga and Ural Regions, who had

had no writing system and schools of their own up to the last third of 19th century, the Tatars had had their own active system of confessional education. The Tatars believed that literacy in their native language was more important than in Russian language [Russian State Historical Archive, f. 733, inv. 171, file 656, s. 42]. A Tatar recognised school as an educational institution pursuing religious and moral aims, which formed distrust to Russian primary schools 'due to their Orthodox character' [Russian State Historical Archive, f. 733, inv. 170, file 143, s. 19]. Rumours about the anticipated baptismal of the Tatars were caused by intensified activity of the government in the post-reform period, which was spreading Russian educational institutes among the Tatars living in Volga-Ural regions.

The population did not trust any innovations of the government even though these sometimes had no relation to 'the national issue'.

Tatar protests were against alien things in the cultural and territorial spheres of the rural community as the Tatars' family life was in many ways dictated by the Sharia norms. One of these phenomena was the selling of alcoholic drinks in villages. If there was a volost administration in a village, this village would certainly have had a saloon or a pub, which was one of the reasons why Muslims did not want any volost administrations in their villages. That is why in the 19th century, a pub or a saloon were a rare phenomenon in Tatar villages. Infrequently mullahs and authoritative Tatars were bribed, and persistent entrepreneurs managed to open such drinking establishments, trying to get local peasants used to alcoholic beverages. At times, peasants were against open-

ing of a pub, even if the community was for it [Krest'yanskoe dvizhenie, 1959, pp. 152–153].

Such a nervous atmosphere in rural communities, provoked by rumours about future baptisms, the inefficient actions and provocations of local officials, as well as other factors, led to different Muslim protests: starting

from armed anti-governmental protests of peasants to mass petition campaigns, filing of collective or personal petitions to the highest instances with demands to abolish certain decrees as encroaching on their religious freedom, or requests to protect their religious or national interests.

§ 1. The Tatar peasant movement of 1878–1879

The main factor which contributed to formation of a stressful atmosphere and creation of the Tatars' opinion that negative changes in the governmental policy were to be anticipated was the Russo-Turkish war (1877–1878). The Tatars perceived the war as a religious one—the war of Orthodoxy and Islam. Defeat of the Ottoman Empire made Muslims worry about the possibility of preservation of their confessional identity in future. Rumours that 'the cross defeated the crescent moon and His Majesty the Emperor, being displeased with the sultan, ordered to baptise all Mohammedans in Russia' were spread [Russian State Historical Archive, f. 821, inv. 8, file 785, s. 8 reverse].

By the beginning of 1878, the atmosphere in society was so stressed that the slightest reason from the authorities could cause peasant disturbances. The main reason for gossip spreading in Middle Volga Region was the order of the Bishop of Samara Eparchy dated 21 March 1878, according to which priests had to collect data on all non-Christians for their attribution to Orthodox congregations, so that Christians living among the Bashkirs would have an opportunity to know which priest they could address to satisfy their religious needs [Materialy', 1936, p. 405].

The doubts about the sincerity of the governmental actions intensified in the autumn of 1878, when the Red Cross distributed written appeals for donations in volost administrations of the Samara and Ufa guberniyas. The Tatar peasants, unaware of the peculiarities of Russian documentation management, found this event as another confirmation of the rumours about 'the cross being underway'.

In the Ural region, the rumours about baptisms were triggered by the ordinance of the administration of Ufa guberniya, according to which alarm bells were to be installed in villages for annunciation and collection of local residents in case of a fire. Locals associated the toll with bell-towers and churches. The Muslims living in Ufa guberniya, a region, which had never experienced active Christianisation, were shocked by this ordinance of the authorities.

As for Kazan guberniya, the protests of residents of 12 Tatar, 2 Mordvin, and 1 Chuvash villages of Spassk and Chistopol uyezds, which took place in October 1878, were provoked by the decision of the urgent Kazan guberniya zemsky council dated 9 March 1877, announced at rural meetings. According to the decision, peasant dwellings were to be subject to compulsory fire insurance for a term of three years. Another solid reason for such a negative reaction of the Tatars was an established opinion that collection of insurance fees contradicted Sharia norms. Some mullahs stated that 'insurance is a card game' [National Archives of the Republic of Tatarstan, f. 1, inv. 3, file 4627, s. 112 reverse].

The situation in Kazan guberniya slipped out of the authorities' control after announcement of 'The Regulations to Rural Communities on Performance of Duties Imposed by the Law' dated 1878, which contained extracts from the laws in effect imposing duties on peasants, as well as a range of materials relevant to the population obliged to pay the poll tax.

In the Regulations' section dedicated to the rules of primary institutions maintenance,

it was stated that Scripture Knowledge 'may be taught in institutions or by a priest, or by a special teacher of religion with the Eparchy's executive approval of the candidate nominated by the inspector of public institutions'. The section dedicated to fees for earthly expenditures specified that 'earthly duties are the duties which are fulfilled by each community for satisfaction of its needs, such as construction and maintenance of churches', opening and maintenance of rural educational institutions, teachers' salary, etc.

Having rewritten the laws mechanically, officials forgot to specify that they referred only to Orthodox Christians, and it would be very handy, if we consider the fact that Muslims made up approximately one third of the population of Kazan guberniya. As a result, the Regulations were considered to be a 'baptismal charter', the beginning of an involuntary baptismal process.

Senator M. Kovalevsky, who carried out the 1880 inspection of Kazan guberniya, enlisted the following reasons for the anti-governmental protests: 1) 'inflamed religious fanaticism of Muslims'; 2) 'tactless and inefficient police officers'; 3) mistakes made by the governorate administration [Russian State Historical Archive, f. 821, inv. 8, file 785, s. 9].

In November 1878, political 'fermentation' embraced the Muslims living in Kazan, Samara, Vyatka, and Orenburg guberniyas, as well as Ural and Turgay regions [Russian State Historical Archive, f. 821, inv. 8, file 785, s. 1 reverse–2].

In October and November 1878, peasants from several dozens Tatar villages located in Spassk and Chistopol uyezds took part in the unrests. The rebels beat police representatives, willfully elected new village chiefs, refused to maintain fire sheds and their horses and guards, did not allow village chiefs to leave for the volost administrations, did not pay taxes and did not fulfill duties [National Archives of the Republic of Tatarstan, f. 1, inv. 3, file 4627, s. 98–99 reverse, etc.]. The authorities failed to instantly suppress the rebels in Spassk and Chistopol uyezds with the help of the army due to the absence of transportation means across

the Volga and Kama rivers: rivers did not freeze for a long time that autumn.

At the end of November, the governorate executives printed an addendum to the Regulations, in which they specified that paragraphs 40, 41, 42, 43, and 44, encroaching upon the dignity of Muslims, did not refer to the Tatars. The indication that fees paid by Muslims would be spent on mosques and maktab maintenance also provoked protests, because Sharia stipulated that maintenance of Islamic institutions should be carried out by means of voluntary donations and mutawallis [Materialy', 1936, p. 399].

Attempts to distribute the addenda in Tatar villages also caused unrests.

An integral part of the Tatar peasants anti-governmental protests was a campaign for filing petitions addressed to the local governors, the Emperor, and the Orenburg Muslim Spiritual Assembly.

When the Muslim issue occurred beyond the borders of Kazan guberniya, it became national. 83 petitions from different communities were submitted to the Orenburg Muslim Spiritual Assembly. Moreover, trusted representatives from Muslims arrived for consultations [Fäxretdin, 2010, p. 130].

On the basis of rumours about the threat of baptism, the rural communities of Orenburg and Ufa guberniyas filed petitions at the beginning of 1879 to the Orenburg Muslim Spiritual Assembly and to local governors. They demanded the termination of Russian-Tatar schools and 'guarantees for their religious rights' [Farkhshatov, 2010, pp. 203, 204]. The population calmed down only after the reception of a notification from the Orenburg Governor General, in which he specified 'the inviolability of Islam' [Russian State Historical Archive, f. 821, inv. 8, file 1076, s. 207–207 reverse].

The Minister of Internal Affairs received petitions in his name sent from 41 volosts of 8 uyezds of Kazan, Samara, and Ufa guberniyas. 82 (out of 91) petitions were composed in the Kazan guberniya. Most of the petitioners from Spassk (17 pleas) and Chistopol (13 pleas) uyezds wrote against the insurance fees. All the petitions from Laishev (9) and Mamadysh uyezds (31) mentioned the threat of baptism.

10 petitions were sent to the capital from Samara guberniya, 9 of which mentioned the threat of Christianisation [Materialy', 1936, pp. 483–486].

Several protests by the Tatar peasants living in Kazan uyezd were conducted at an absolutely new level. The peasants, seeking an explanation of certain paragraphs of the Regulations and demanding dismissal of village chiefs, went to the volost administrations. On 27 November, an uyezd police officer arrived at Bolshoi Menger village, where he was met by village chiefs and 800 peasants. He witnessed the beating of the volost elder, a scribe, policeman, and mullah of this village. The volost elder was substituted after the uyezd police officer departure.

On 27 November 1879, peasants living in the neighbouring Bolshaya Atnya Volost dismissed and replaced all 13 village chiefs and volost heads; Russian industrialists living in Bolshaya Atnya were exiled.

The peasants of Mamsya volost were categorical in their actions. They stationed guards along every road and on every bridge. These guards 'kept an eye on all those coming and going from the volost centre' [Smykov, 1973, pp. 172–173]. Thus, on 27–28 November, Tatars from 45 villages in 3 neighbouring volosts of Kazan uyezd (11. 5 thousand people) set up the legitimate authority with the use of the system of election in the peasant self-administration bodies. That is how national 'peasant republics' were established at the level of volosts. The unrest ceased; new authorities completely controlled the situation.

New authorities remained up to 4 December, until a squadron of soldiers, headed by the governor, arrived. The Tatars in one such volost made an unsuccessful attempt at armed rebellion. They went for the soldiers with polls, forks, and scythes. But no sooner had they heard military music than they hid their weaponry in the snow, following the advice of retired soldiers' [Firsov, 1926, p. 41].

Governor N. Skaryatin reinstated all the dismissed volost elders and village chiefs; additionally he dismissed three village chiefs

for violation of police directions [National Archives of the Republic of Tatarstan, f. 1, inv. 3, file 4627, s. 216]. 500 Russian peasants from neighbouring volosts were hired for corporal punishments, and they whipped the rebels with rods. Approximately 450 people in three volosts were punished without charge or trial; they received 100 or more lashes [Russian State Historical Archive, f. 821, inv. 8, file 785, s. 12].

The governor personally 'grabbed someone by the beard, hit someone in the chest or face with a stick, not allowing them to say a word', herewith he abused religious feelings of the Muslims involved, saying: 'Here is your Muhammad, here is your Quran, here is for your disapproval of six paragraphs of the Regulations' [Gubaydullin, 1925a, p. 39; Rakhim, 1928, p. 147]. The army and Russian peasants, brought for whipping the rebels, remained in the Tatar villages for some time. They forcefully deprived the locals of livestock, crops, different food products, and money' [Russian State Historical Archive, f. 1356, inv. 1, file 46, s. 1 reverse], which had an adverse impact on the economic situation of the communities.

As a result of the anti-governmental protests in October–December 1879, which covered approximately 150 rural communities and 14 other ethnic groups, about 30% of Tatar village chiefs were dismissed and substituted. This number was especially high in Kazan (71%), Spassk (37%), and Chistopol (20, 8%) uyezds [Zagidullin, 1992, p. 154].

The events which took place in Kazan guberniya had a great influence on activation of Muslims in Middle Volga region.

In Bugulma Uyezd of Samara guberniya, the unrests covered 8 volosts. 17 rural communities filed pleas via trusted representatives. In their petitions they inquired about trustworthiness of the government's intention to baptise Muslims. Simultaneously, they inquired members of the volost administrations, wanted to receive 'documents with the cross', conducted searches in the volost administrations in order to find baptismal crosses. Leaflets in the Tatar language were spread, which stated that

churches with bells would be built by the authorities in every village: one of the bells would be for fire announcements, the other would be for church purposes. Moreover, they stated that soon all Muslims would be converted to Orthodoxy. People started to calm down only in December, when they received a printed address from the Orenburg mufti, in which it was stated that the government guaranteed preservation of the religious rights of Muslims, and thanks to active explanatory activity of the administration [Materialy', 1936, pp. 405–417].

On 25 December 1879, when the citizens of Lomot village, located in Ardatov volost of Simbirsk uyezd, received news from Kazan that the authorities wanted to baptise the Tatars, they closed down the local Russian-Tatar school. While searching the school library, they found a book by the chairperson of Brotherhood of St. Gury, a missionary society council, whose name was Bishop Viktorin. The book was called 'On the Superiority of Christianity over Mohammedanism' (Kazan, 1875) and had been sent by the local inspector of public institutions. This finding significantly intensified citizens' worries about the intention of the authorities to baptise Tatars [Materialy', 1936, pp. 377–379].

On December 8, the Vyatka governor rode into villages of Urzhum and Malmyzh uyezds, embraced by the unrests, where he distributed sheets, signed by him and with his stamp, which guaranteed religious rights of Muslims [Materialy', 1936, pp. 398–340].

The administration of Orenburg guberniya attracted the most authoritative akhuns in the regions 'for persuasion', sent a governorate official to the uyezds, and thus managed to calm down the worried [Materialy', 1936, pp. 418–419].

In 1879, the unrests continued in many villages of Kazan guberniya. Almost all measures taken by the authorities—insurance of structures, announcement of decisions on various issues, elections of village policemen, etc.—made Muslims suspicious, and sometimes even caused their disobedience.

One of the reasons for weakening of the peasant movement was the fact that the local

clergy stopped supporting the rebels. It stopped fighting, knowing that its position and the religious issue would remain unchanged. Peasants beat those mullahs who helped the authorities. Peasants were taking the initiative, so they demanded the mullahs to act in accordance with the rural community's decision. However, if they disobeyed directives from the administration, they would lose their posts and all income.

In spring 1879, the anti-governmental protests of peasants were accompanied by seizures of village chiefs' stamps and refusal to make any official decisions.

In October–November 1878, peasants from 3 out of 10 villages of Spassk uyezd stopped their disobedience after judicial inquiries (June–July 1879), and at the end of August, it had been done by the inhabitants of Sukhie Kurnali village. The inhabitants of four villages: Nizhnie, Srednie, Bolshiye Tigany and Adelshino obstinately and cohesively continued fighting. On 12 December, a squadron of soldiers headed by governor N. Skaryatin came to Srednie Tigany village. Here is how it was described in 'The Sredne-Tiganovsk Beit':

When the governor arrived, he forced the removal of hats.

Three carts brought gunpowder and bullets [Tatar Folk Arts, 1983, p. 114].

Having no opportunity to counter the military forces, the peasants had to 'admit guilt' [Materialy', 1936, pp. 391–392].

According to our calculations, approximately 150 rural communities took part in the 1878–1879 movement in Kazan guberniya, and 2/3 of the protests took place in November 1878 [Zagidullin, 1992, table 18, p. 154].

The Tatar peasant movement of 1878–1879 in its scope, sharpness, organisational nature, and means of activity was the climax of such movements in the post-reform period in Middle Volga and Ural regions. According to the results of the revision, senator M. Kovalevsky specified that there could be further protests, similar to those in Kazan guberniya, resulting from religious issues [Russian State Historical Archive, f. 821, inv. 8, file 785, s. 8]. So he warned that the government should refrain from any ill-considered actions. For the first

time, the government felt the great potential and decisiveness of Muslims fighting for their religious rights. It realised that even the most harmless actions of the authorities, to some extent relevant to the religious position of Muslims, could cause mass disobedience. It became obvious that there was a need for a proper attitude towards religious and national feelings of the Tatars and for a balanced national policy.

The 1878–1879 movement was aimed at preservation of the established tradition

in the relations between the state and Islam. The events showed the Tatars that mass and cohesive protests could make the authorities change or cancel their decision. That is how the population reacted to the deletion of certain paragraphs of the Regulations and dismissal of governor N. Skaryatin on the grounds of complaints from merchants and peasant communities, as well as a private investigation of beatings in Kazan uyezd without charge or trial conducted by M. Kovalevsky.

§ 2. Petition Campaigns Against the Elimination of Religious and Cultural Autonomy

Pleas against establishment of governmental control over the national system of education in 1883. After the publication of the law dated 24 November 1874 on the establishment of control of the Ministry of National Education over maktab and madrasahs had been ordained, no concrete measures for establishment of control over confessional schools were taken by the authorities. The situation in Kazan guberniya changed drastically in 1882, when the inspector of muslim schools V. Radlov sent a circular letter dated 15 April to a Kazan madrasah chief. In this letter, he outlined the Emperor's decree dated 5 February 1882 about the establishment of governmental control over their schools. He asked for information about the number of junior and senior shakirds, etc. In response, the majority of mullahs asked V. Radlov to send a copy of the decree, some of them ignored his requests, and only one of them sent the requested statistical data.

On 21 December 1882, V. Radlov for the second time attempted to establish control: along with governor L. Cherkasov, he visited all the madrasahs in Kazan. The major-general announced everywhere that Muslim schools 'are under control' of the Ministry of National Education and that the control was carried out by inspector V. Radlov, which resulted in cries of protests from shakirds and Tatars [National Archives of the Republic of Tatarstan, f. 1, inv. 3, file 6811, s. 6–8].

Therefore, V. Radlov's actions and words created a broad resonance and were interpreted as the destruction of historical relations between the state and Islam [National Archives of the Republic of Tatarstan, f. 1, inv. 3, file 5883, s. 3 reverse, 4].

Rumours and rural meetings, held in uyezds of Kazan guberniya in March–beginning of May 1883 were triggered by exemplary texts of pleas, received from Kazan, which contained explanations for their concerns and Muslim demands.

In them it was announced that inspector V. Radlov had spoken about the requirement according to which mullahs had to know Russian and this requirement would be introduced in 1883. This statement had a bombshell effect: the rural clergy thought that it showed the authorities' intention to conduct an inspection among the aforementioned mullahs, find out whether they were literate or not, and therefore, as per the results of the inspection, dismiss them. As a result, the congregational clergy organised a petition campaign, as it was interested in its results.

In March 1883, petitions were filed simultaneously in Kazan, Tetyushi, Laishev, Mamadysh, and Spassk uyezds. A group of scribes worked in Kazan and requested from 5 to 15 roubles for every composed petition; moreover, they issued their copies, certified by the city notary. Most of the pleas (197) were ad-

dressed to the governor of Kazan; (50) to the Emperor.

We managed to find two variants of the exemplary texts (No. 1 and No. 2). Exemplary text No. 1, with a reference to the 'Regulations' dated 1870, which stipulated the mullahs' obligatory knowledge of Russian, expressed fears that only those candidates for religious posts who knew Russian well but who 'cannot teach Mohammedan doctrine accurately and correctly' would be assigned. In this regard, the exemplary text insisted that Muslim schools should be controlled by the Orenburg Muslim Spiritual Assembly without interference of the Ministry of National Education, so that 'as it was before, no one meddles in our religious affairs'. Moreover, the text stated that mullahs assignment should depend only on the Spiritual Assembly, which could 'understand better the suitability' of the elected candidates for spiritual posts and assess their abilities of teaching Islamic doctrine in schools. It was stated that if Muslims solved these problems, it would allow them to avoid the consequences 'which could have a negative effect on Mohammedan doctrine' [National Archives of the Republic of Tatarstan, f. 1, inv. 3, file 5881, s. 1–1 reverse].

Exemplary text No. 2 was composed more adequately. It provided arguments for the ineligibility of establishing governmental control (these arguments had been sent to V. Radlov in a written form by Apanayev madrasah chief S. Salikhov back in 1873) [Materialy', 1936, pp. 312–313], namely: the fact that religious schools were maintained at the expense of communities or certain Muslims, that most of them had endowments (which was a characteristic feature of Kazan, not of rural regions), that donors specified in their wills that they had left money for teaching of religious subjects only, that schools were targeted at teaching religious subjects for 15 years 'without mixing in another language' [National Archives of the Republic of Tatarstan, f. 1, inv. 3, file 5881, s. 21–23]. It was alleged that Muslims had a possibility to be educated in Russian educational institutions, that is why 'there is no need in making people study what they do not want to learn, or what is prohibited by our religion'. In accordance with

the abovementioned facts, the text proposed the following: 1) change the governmental decision on introduction of obligatory studying of Russian in Muslim schools, which complicated shakirds' learning and preparation of candidates 'for religious posts'; 2) declare learning of Russian non-mandatory; 3) keep in force the previous (existing before 1870) system of education in madrasahs and maktab; 4) free Muslim schools from control of the Ministry of National Education and leave it under control of the Orenburg Muslim Spiritual Assembly; 5) to prohibit the assignment of mullahs who graduated from Russian 'people's schools' because they 'cannot adequately know the notions of the Muslim doctrine' [National Archives of the Republic of Tatarstan, f. 1, inv. 3, file 5881, s. 21–21 reverse]. As a matter of fact, the text hinted at abolishment of the law dated 24 November 1874 and several provisions of the 'Regulations' dated 1870 (opening of Russian classes at the premises of madrasahs, introduction of the Russian educational standard for mullahs in future).

Despite the campaign carried out during the 1878–1879 peasant movement, when the requests of the Tatar bourgeoisie and rural communities differed significantly, in 1882 the demands of different social groups of Muslims were very much alike. For the first time ever, common national issues, raised by the entrepreneurial elite of Kazan, which in fact did not reflect the opinion of peasant communities, were put front and centre. Those mullahs who were afraid to lose their posts initiated an addition to the request—'not to impose' the Russian educational standard on mullahs. Kazan became the centre for submitting petitions, establishing a tradition in this sphere for the next two decades.

The failures of the inspection carrying out the control over maktab and madrasahs after 1874, when they had been handed over to the Ministry of National Education, strengthened the Tatars' certainty in their ability to protest openly and not to follow the inspector's directions. The 'think tank' of the campaign was located in Kazan, while the mullahs carried out the deeds. The petition campaign was carried out along the following scheme: the exampla-

ry text of the petition from Kazan—composition of the community's decision and elections of the responsible in rural communities—composition of approved pleas addressed to the governor and (or) the Emperor—filing of the 'final' petition by Kazan merchants (June 1883). In this way the government could become acquainted with the clear position of Muslims, who disagreed with violation of the autonomy in the sphere of national and religious education.

The 1888–1890 petition movement against introduction of Russian educational standards for candidates for Muslim spiritual posts The decree dated 16 July 1888 played a determined role in the further progressive development of the renovating processes in the school sphere. The decree 'On the introduction of the educational standard for the Moham-medan clergy' was to be put into action in 1891.

This governmental initiative was met by the bourgeoisie and clergy as a new step 'towards blurring' national principles and traditional religious practice of the Tatars, as an intervention into the clergy's monopoly in the sphere of school education for 'faithful Muslims', as a real threat of transformation of the attitude to religion in the minds of future mullahs who would be educated in Russian educational institutions, which would in the end lead to the weakening of Islam and its authority among Tatars. Merchants were afraid that the candidates who had successfully passed the exams and knew the Islamic doctrine very well would not be given certificates by the committees, as the committees would prefer Russified candidates, even if their knowledge of Sharia was poor.

Kazan became the place for development of approaches and means of delivery to the authorities of the principle position of Muslims living in Volga and Ural regions and Siberia.

At the merchants' meeting, it was decided that it should be explained to communities that the Emperor's decree was another measure aimed at assimilation of the Tatars through baptismal. In his talks with his inner circle, merchant A. Sajdashev repeatedly stated that

only the threat of Christianisation can consolidate and induce rural communities to submit petitions unanimously in order to abolish the decree [Russian State Historical Archive, f. 821, inv. 8, file 1075, s. 282–284].

The clergy in the regions was stimulated to active measures by the rumours, according to which all mullahs not knowing Russian would be replaced by new imams, who would act in accordance with the new requirements. Moreover, according to the rumours, starting from 1891 future mullahs would have to pass the exams to Orthodox Bishops [Russian State Historical Archive, f. 821, inv. 8, file 1075, s. 239; file 1076, s. 165, 225 reverse, 269 reverse]. The law dated 16 July 1888 was presented as 'the beginning of baptising of Muslims'. Among other effective means of influence were the following: appeals of the clergy after prayers; travelling across the regions with a special mission—to explain from an Islamic point of view' governmental decrees; private correspondence between mullahs, shakirds, and tradesmen from Kazan and their relatives and acquaintances from other regions; special letters-addresses sent to certain people who would start explanatory work among local mullahs and rural communities.

From December–January 1888, Kazan became a place for the composition of pleas to the authorised officials from rural communities of the Kazan guberniya, as well as neighbouring governorates. In his letter to V. Radlov from 25 January 1889, Sh. Akhmerov wrote, 'For several months Kazan has been a gathering place for different rural mullahs: they deliberate here, write pleas on behalf of their congregations, and send them to the Orenburg Muslim Spiritual Assembly with requests to resend them to a senior official' [Archive of the Russian Academy of Sciences, f. 177, inv. 2, file 11, s. 17].

The petition campaign assumed all-Russian proportions thanks to the efficient use of regional fairs in Menzelinsk (end of December–beginning of January) and Irbit (end of January–February), which were visited by merchants from far-away regions, as well as by local tradesmen and peasants from neighbouring villages.

The city and rural communities of Orenburg, Ufa, Perm and Tobolsk Governorates, the Ural Region commenced sending pleas directly to the Emperor in order so that they would reach him. As a result, from the end of January 1889 the petitioners from the above mentioned regions started sending numerous pleas and community decisions on abolishment of the law from 16 July 1888.

Locally, Muslims were acting as per the directions given at the fair in Menzelinsk, which can be summed up by the words of the military governor of the Ural region: decisions and petitions addressed to the Emperor were composed in mosques secretly and in a hurry, so that delays could not spoil the business, as, according to Muslims' joint agreement, only a cooperative, simultaneous and countrywide petition could make the government worry that implementation of the new law on mullahs would lead to unrests and protests [Russian State Historical Archive, f. 821, inv. 8, file 1076, s. 3 reverse, 154].

In July-August 1889 the Orenburg Mohammedan Spiritual Assembly started turning down the petitions, and its notifications of refusal were distributed in rural communities by the local police against signed receipt. However, in some regions peasants refused to accept the Orenburg Mohammedan Spiritual Assembly's notifications. On 27 August 1889 a meeting of Tatar merchants took place at the Nizhny Novgorod fair, which, however, was held without A. Saydashev and M. Galeev, who were afraid of prosecution. Major entrepreneurs took part in its work: Ahmet Khusainov, Bakiy Salikhov (Orenburg Governorate), Negmatulla Kuramshin (Tyumen), etc. The absence of the Tatar leaders of Kazan provoked 'reproaches and reprimands'. The issue of counter-measures against the educational standard law was on the agenda. It was decided to send another petition 'addressed to His Majesty personally, through authorised people who were provided with large sums of money, who would be sent to Petersburg and would get on the right side of the Minister and make him grant a right to be introduced to His Majesty' [National Archives of the Republic of Tatarstan, f. 1, inv. 3, file

7797, s. 249]. Further events showed that the Muslim clergy and bourgeoisie acted in accordance with this plan.

A new wave of petitions in Kazan Governorate started in the end of September–beginning of October 1889. The Ministry of Internal Affairs issued a circular letter dated 4 November 1889 which prohibited the filing of such petitions [National Archives of the Republic of Tatarstan, f. 1, inv. 3, file 7798, s. 35 reverse, 63, 133–134]. Starting from this moment, the actions of the petitioners could be qualified as opposition to the authorities. However, this prohibition did not affect the dynamics of submitting petitions.

'The Chancellery for acceptance of petitions addressed to senior officials' was literally buried in petitions from different areas of the Orenburg Mohammedan Spiritual Assembly region. In particular, 511 petitions were sent from Kazan guberniya, 203 petitions (according to incomplete data) were sent from Samara guberniya [Zagidullin, 2008, p. 285].

The majority of the petitions were dedicated to the necessity of abolishing the decree from 16 July 1888 while a portion of them stated that its implementation should be delayed. Illegitimacy of the decree's implementation was explained as a measure, controversial to the principle of broad religious tolerance, functional in the Motherland. It was underlined that the novelty encroached on religious rights of Muslims and would lead to weakening of their religious spirit, paving the way for 'moral decline' and their further subsequent conversion into Christianity. Herewith, frequently the petitions referred to the article of a student of the anti-Muslim department of the Kazan Spiritual Academy, extracts from which were unofficially distributed in Kazan by A. Kulmametov, an authorised representative of A. Saydashev. The petitions expressed the opinion that up to this moment Muslims, as loyal subjects of the Russian sovereign, had been always serving him faithfully and gladly obeyed all his laws and governmental decrees, 'but not the decrees contravening to their religious laws', however, the law dated 16 July, 1888 was clearly aimed at elimination of Islam. It could not be obeyed

by Muslims in its strict sense, because the rules of Islam 'oblige it to obey the law blindly' so far as it is not controversial to the spirit of the religion". Some of the petitions specified negative consequences for the novelty. Due to the fact that preparation of the clergy in madrasahs took 10 or more years, the shakirds' learning of Russian would take much time and would do harm to their religious education, which would in its turn lead to graduated mullahs, not good enough for their posts both in knowing Islamic laws and due to poor moral qualities. Long-term studying in Russian schools, staying in alien to the spirit and doctrine of Islam environment would inevitably have an adverse effect on their lifestyle, on their views of carrying out their clerical, judicial and educational obligations, which in the end would lead to a decline of religious and moral qualities of the congregation.

Communities asked to leave the clergy and assessors of the Orenburg Mohammedan Spiritual Assembly 'in their previous states without the obligatory educational requirement, as secular education is extremely important as per our religious belief and will restrict us in electing worthy people, who while not having received an education, but who have decided to become one of the clergy by vocation' [Russian State Historical Archive, f. 821, inv. 8, file 1076, s. 76–76 reverse]. The community of Uralsk called the law an 'abasement' of the faith, as future imams should 'without fail be religious' [Russian State Historical Archive, f. 821, inv. 8, file 1076, s. 17–17 reverse].

From time to time the petitioners raised broader demands. For instance, the Tatar community of Iletskaia Zashchita sent a petition in which it specified that the clergy, maktabas and madrasah should be 'left in their previous state', confessional institutions should not be controlled by the Ministry of National Education, and teachers in Islamic schools should not be obliged to teach Russian [Russian State Historical Archive, f. 821, inv. 8, file 1076, s. 5–5 reverse].

As we can see, the new law was recognised as a necessity in teaching candidates for mul-

lahs in Russian schools, and the long term of studying in madrasahs was mechanically projected on studying of another language (Russian), which also required long time of learning.

Creators of the texts addressed to 'superior' officials preserved ethical norms in the petitions to the head of the state. However, Muslims' demands were expressed more sharply and openly in the anonymous note 'The Denouncement to the Sovereign through State Secretary Sergey Alexandrovich Taneev sent in special trust' dated 2 January 1889 and signed by a Mamet Galimov from Kazan. According to the text of the note, the Tatars were attentively monitoring the initiatives of Alexander III government aimed at realisation of the course of 'conservative nationalism', which would strengthen Russian Orthodox Church, religiousness of the titular nation, Russian authority in the suburbs and would restrict the rights of ethnic minorities of the Empire. Therefore, Muslims drew the corresponding conclusions¹⁰.

The note bitterly stated that in near future the Orenburg Mohammedan Spiritual Assembly would have 'pupils', i. e. graduates from Russian educational institutions, who knew no Sharia basics, just like 'second lieutenant,

¹⁰ An anonymous note asserted that the Russian state was ruled by the Synod in the persons of Count D. Tolstoy and K. Pobedonostsev, who took actions to destroy the Islamic element in the country and on purpose reduced the number of Muslims: instead of 20 million, they reported two million, that is, fewer than Jews and pagans, and intentionally labelled Kazakhs as pagans. To prevent this lie from being disclosed, they postponed the eleventh census until Russia conquered Constantinople. The emperor's attention was brought to the fact that the Synod, Interior Ministry, and National Education Ministry were spending all the state income for Russification purposes. The author maintained that D. Tolstoy integrated the 'Wilson system of cosmopolitanism' with 'the general school of Russification', as well. He explained to the emperor: 'The Koran teaches obedience to the tsar regardless of religion until he encroaches on religion. If Muslims are not terrorists, embezzlers, nihilists, or regicides, if they bring profit to the country with trade, then what is the point of hurting their religious beliefs? If the Holy Synod and its studhorses have nothing else to do, let them unite the Christian Old Believers and make their Christian peasants pray', alluding to problems of the Russian Orthodox Church.

draftsman' M. Sultanov, instead of assessor-judges.

The note is finalised by a warning that if the imperial administration of Islamic education changed and the assimilation policy went on, 'Muslims would spill all their blood in order to prevent pupils' access to mosques. And as soon as pupils became judges in spiritual administrations, we, Muslims, would pray for the Turkish sultan and Mahdia, asking all enemies of Greek-Russian faith for help. If the government does not want this, then let us be as Catherine II and Alexander I' [Russian State Historical Archive, f. 821, inv. 8, file 1075, s. 263–265 reverse].

Thus, the Tatar bourgeoisie and Muslims found that the main danger in introduction of the Russian educational standard was in the following: 1) principle requirements of the law dated 16 July 1888, which could not be met by unprepared candidates for spiritual posts; 2) the possible assignment of officials, who knew the basics of Islam poorly, in order to accommodate this new criterion, as well as assignment of passive Islam enthusiasts, which would have a negative effect on the traditional educational and pedagogic process in maktab and madrasahs; 3) assignment of non-Islamic assessors to the Orenburg Mohammedan Spiritual Assembly due to high (4 grades of gymnasium education) requirements, which was regarded as a dangerous transformation of the Islamic leading religious institution.

Mass petition campaigns, which covered Volga, Ural regions and Siberia, steppe regions, inhabited by the Tatars and Bashkirs, and were addressed to the Orenburg Mohammedan Spiritual Assembly and the Emperor made the government weaken the norms of the Russian educational standard, which was fixed in the decree dated 11 October 1890. Therefore, a peculiar compromise between the government and Muslims was reached.

This petition campaign became a serious test for the union of the bourgeoisie and clergy. The Tatar merchants in Kazan appeared to be more consistent and decisive ideologists and administrators of social movements, than imams, who ubiquitously called for preserva-

tion of the existing traditions, but, being afraid to be held accountable and lose their posts, refused to proceed with their participation in the social movement.

The 1892 pleas of Muslims–1894 The complication of 'the Muslim issue' in Volga-Ural region in the first half of 1890s triggered anti-Islamic initiatives by the autocracy, which became a part of the internal policy of Alexander III government aimed at 'protection' of the interests of the titular population and Christianity. It's important to note that they became public domain in a short period of time and sharply aggravated the tension in almost every strata of the population. Previously the advocates for Jadidism and Cadimism had differences in their attitude toward learning of the Russian language by candidates for Imams and teaching of Russian at ethnic schools, but by the beginning of 1890s they consolidated their efforts to protect the of interests of Islam and the nation, to prevent the disappearance of ethnic and confessional uniqueness. However, the advocates for Jadidism and Cadimism chose different means to oppose the anti-Muslim governmental measures, which is explained by their different mentality, social position and activeness of regional authorities, which brought these innovations¹¹.

In the beginning of 1890s the national elite had serious concerns that the autocratic authorities would subsequently stop adhering to the foundational principles of the relations between the state and Islam, established by Catherine of Russia. A new wave of restrictions was started by a circular from the Ministry of National Education dated 30 June 1892, according to which all Muslim confessional schools were to be controlled by the Direkciya Narodnykh Uchilishch [Directorate of National Schools]

¹¹ Specifically, in regard to the revision of religious books, the local group of Muslims most integrated into the Russian cultural space tried to comfort their brothers-in-faith, saying that 'the supreme administration did not agree with censorship. . . that sooner or later the central authorities will discover the irrationality of an ongoing prosecution of holy books and will end it' [Russian State Historical Archive, f. 821, inv. 8, file 791, s. 167].

which would only strengthen the control of officials over mugallims and mudarrises (school attendance, request for the number of students, set of students and staff, etc.).

The second reason for concerns of the national elite was the ill-fated circular of the Ministry of National Education dated 10 July 1892. Having read the text of the circular composed by Minister I. Delyanov printed in the 'Orenburg Vedomosti', the Tatars of Orenburg bought out the entire circulation of the newspaper and distributed it in the villages of Ufa and Samara guberniyas [National Archives of the Republic of Tatarstan, f. 1, inv. 3, file 9602, s. 28–30, 35–37 reverse, 45–45 reverse].

The third solid reason was shortening the text in manuscripts of religious books by the censor in 1890–1891. The fact that sacred texts had been crossed out created an international resonance.

The Rural communities of the Tatars and Bashkirs were greatly influenced by secret 'appeals', forming a 'systematic view' on Islamic policy and uncovering 'secret plans' of the autocracy. Due to the fact that the Tatars and Bashkirs were unable to familiarise themselves with socio-political news from the newspapers in their mother tongue, the influence of 'appeals' on the population was enormous. They were regarded as true information, carefully hidden by the authorities.

In particular, in 1894 a district police officer of Menzelinsk uyezd confiscated 'proclamations' by an anonymous writer, in which he expressed concerns about 'the decline of Islamic faith' in the Volga-Ural regions and addressed the co-religionists calling for Islamic restoration and Islamic education for children. The author's attitude to the state language attracts our attention: he believed that it was necessary to study 'in Russian, in order not to be fooled by a Russian, know how to read his papers and not to be his slave. We can have our teachers, as many Muslims know Russian' [Russian State Historical Archive, f. 821, inv. 8, file 791, s. 79–79 reverse].

The proclamation proposed several directives: 1) to be vigilant and monitor actions of

local authorities, anticipating tricks or new anti-Islamic initiatives; 2) not to trust the authorities, because officials were acting together with Orthodox bishops; 3) to deny all novelties of the administration in the sphere of school education; not to allow rural communities to open Russian-Tatar and tradesmen schools in villages and, if they were opened, they were to be boycotted; 4) to steel oneself for further aggravation of Islam and Muslims legal status; 5) to do everything possible to strengthen Islam, not only opposing the administration, but also teaching children the basics of Islam at schools, not to be indifferent to the problems faced by Muslims; 6) to send authorised Muslims to the Emperor, in order to let him know that the authorities interfere with freedom of religion and encroach upon religious rights of their co-religionists [Russian State Historical Archive, f. 821, inv. 8, file 791, s. 78–80 reverse].

Finally, it's worth mentioning that socially active Muslims, who, as a rule, knew Russian played an important role in the organisation of submitting petitions. Some of them earned a living initiating and composing collective petitions [Farkhshatov, 2010, pp. 197–198].

On the whole, the protest of the Tatar and Bashkir rural communities against anti-Islamic initiatives of the autocracy was expressed in the following manner: 1) refusal of school head masters to give away handwritten books in accordance with the directions; 2) submitting petitions to different bodies with demands for the abolishment or delays in realising the discriminatory laws; 3) forced migration to the Ottoman Empire.

The Ministry of National Education set forth a task to confiscate all handwritten textbooks and foreign publications from educational institutions by 1 January 1893. The realisation of the directive started in the Orenburg Board of Education. On 31 October 1892 inspector V. Katarinsky visited the Tatar schools of Orenburg. The head masters stated that: 1) the prohibition of foreign publications of a religious nature, which did no harm the interest of the state, equaled intervention in the Islamic religion, as these books were used for teaching

candidates for the posts of imams and mugalims; 2) prior to prohibition it was necessary to publish all textbooks which had been previously published abroad in Russia; 3) hand over the existing foreign books to the censor committee for competent judgment; 4) postpone the enforcement of the circular dated 10 July 1892 prepared by Minister I. Delyanov.

The curator of the Orenburg Board of Education decided to keep foreign books 'in the learning process', but asked the head masters to sent one book each for competent judgment, moreover he ordered to commence the confiscation of hand-written books (according to the decree of the Ministry of National Education, hand-written textbooks were prohibited in Russian secondary and primary schools).

In response to the active actions of the officials of Orenburg guberniya, which took place in the first half of 1893, many rural communities filed petitions addressed to the governor 'with demands to keep hand-written textbooks' in confessional schools¹². Some rural communities looked into the matter more broadly: they asked 'to free maktab and madrasahs from the control' of the Ministry of National Education and hand them over to the Orenburg Mohammedan Spiritual Assembly. So, virtually they offered to change the legal basis for confessional schools, which would allow them to legally make schools inaccessible to inspectors.

According to R. Fakhretdin's data, over a thousand petitions were filed to the Orenburg Mohammedan Spiritual Assembly. The petitions were against the circular and ordinance of the Orenburg governor (dated 9 September 1892), according to which the Tatar schools of the Orenburg Cossack Army had to be closed [Fakhretdin, 2011, p. 173].

The temporary suspension of the circular dated 10 July 1892 gave Muslims hope that with the help of petitions they could get other laws that encroached up their rights suspended. This circumstance can apparently explain the

appearance of a list of requests, demands to the texts of petitions, in other words, it explains the 'complex approach' in finding solutions to all the interconnected religious issues faced by Muslims within the Orenburg Mohammedan Spiritual Assembly region.

The anti-Islamic measures of the government were: submission of Muslim schools to the Ministry of National Education, confiscation of hand-written textbooks and 'resistance to initiatives of publishing of religious books, undesirable for Russia', appeals to elimination of the Spiritual Assembly, the reduction of mosques, the clergy and confessional schools (it is referred to a preposition of Ufa eparchy, expressed in the most humble report of Ober [Chief] Procurator of the Synod dated 1894—I. Z.), merger of Muslim volosts with Orthodox ones in order to assign 'Russian people' for volost and village posts [Russian State Historical Archive, f. 821, inv. 8, file 791, s. 70 reverse–71].

In 1891 the Chief Department for Press Affairs and the Ministry of Internal Affairs received the first complaints from Kazan publishers about the actions of censor V. Smirnov [Karimullin, 1983, p. 117]. In February 1892 27 imams from all the Orenburg and Seitov Posad mosques lodged a protest against 9 out of 11 abbreviations of the censor made to the Tatar manuscript 'Risalai gadai-l ikhvan' ('Рисаләи гадай-ль ихван') ('The Treatise of Brothers' Food). As a result, the Censor committee prohibited the publication of the manuscript [Russian State Historical Archive, f. 821, inv. 8, file 829, s. 199 reverse–200]. This decision created wide resonance in the Muslim community.

In March 1893 a group of Muslims representing major Tatar communities of Russia addressed the Department of Religious Affairs of Foreign Faiths¹³. The petitioners informed the head of the Department of Religious Affairs of Foreign Faiths in their 'Report Note' that the is-

¹² For example, residents of Kuzebakovskaya, Murzabayev and Ik Nazirovo in the Burzyan-Kipchak volost in the Orenburg uyezd asked about this (15 March 1893) [Farkhatov, 2010, p. 204].

¹³ The honorary citizen by birth Mustafa Adamov (Orenburg), temporary merchant Khaliulla Galeev (Kazan), representative of the residents of Seitov Posad, Orenburg guberniya, Mustafa Salikhov, representatives of Muslims from the Ufa guberniya: teachers N. Akhmerov and A. Akhmedzhanov.

sue of confiscation and correction of religious texts, along with the ordinance of the Ministry of Internal Affairs, according to which all hand-written and foreign religious books were to be confiscated from madrasahs and maktabas, were not a 'censoring formality' for the Muslim community of Russia. They were foundational for complying with the principle of freedom of religion in relations between the state and Islam: it showed the state's opinion on 'whether it is possible or not to allow the confession of Mohammedan belief in the forms and as per the religious directives, which have been exercised unchanged for more than 300 years' [Russian State Historical Archive, f. 773, inv. 171, file 2271, s. 169–169 reverse].

Highlighting the absence of Muslim political and economic treatises, they were asked to pay attention to the following: 1) the fact of crossing out certain sentences and words by the Russian censor, the words which had been published freely in different religious books; 2) the fact that these deletions were made in texts proposed for repeated edition; 3) the fact that due to the circular of the Ministry of National Education (temporarily abolished) dated 10 July 1892 Muslims were unable to print full texts of their religious books abroad, 'meanwhile in Russia is almost impossible to do so' [Russian State Historical Archive, f. 773, inv. 171, file 2271, s. 170–170 reverse].

In May 1894 the Ministry of Internal Affairs held a Special meeting with representatives of the Ministry of National Education and scientists-orientalists, dedicated to the issue of Muslim hand-written books. As a result of the meeting it was decided that 'these books could be allowed for maktabas and madrasahs' [Farkhshatov, 2010, pp. 211–212]. It would seem that the threat of handwritten manuals had passed. Meanwhile, the temporary suspension of I. Delyanov's circular generated among the population the assumption that the government intended to convert Muslims to Christianity after 1 January 1895 [Russian State Historical Archive, f. 821, inv. 8, file 791, s. 1 reverse]. A part of the population completely lost hope that living in the Russian state they would be

able to preserve their unique ethnic and confessional traditions, and the government would respect freedom of religion.

In this challenging environment a natural question arose: how to further counter the actions of the autocracy, which threatened the ethnic and cultural identity of the Muslim peoples. We can assume, that the tactics, developed by the Tatar merchantry and clergy, stipulated the filing of collective petitions to governmental bodies on behalf of the authoritative Tatars from different regions of Russia. These petitions would explain the concerns and reasons for worries of the Muslim community, moreover, they would contain short but concrete solutions to the problems. They were aimed at the restoration of the previous cultural and religious autonomy of the Tatars and Bashkirs and proposed to abolish the temporarily discontinued circular of the Ministry of National Education from 10 July 1892, as well as other laws on Islamic institutions, which had been previously adopted. Or at least this is the feeling we got from studying the collective petitions filed to the Ministry of Internal Affairs in 1894.

Most of the aspects of 'the national issue' were competently exposed in the collective plea from 14 people, calling themselves 'the deputies and representatives of Mohammedans from different governorates'. This plea was presented to the Minister of Internal Affairs I. Durnovo (no later than 13 June 1894) [Russian State Historical Archive, f. 821, inv. 8, file 791, s. 51–55 reverse] by well-known entrepreneurs of Kazan, Kasimov, Irkutsk and imams from the Kazan and Orenburg and Ufa guberniyas¹⁴.

¹⁴ The petition was signed by Kazan merchants Muhammadrakhim Yunusov, Muhammadzhan Galeev, Orenburg merchants Mirkhaidar Kurpyachev, Khasan Enaliev, Kasimov merchant Khabibulla Akbulatov, entrepreneurs Rakhmetulla Khalitov and Nazir Bikbulatov, a merchant from Irkutsk (?), clergymen: imams from Kazan Abdulkayum Abdulbadygov and Galimzhan Galeev (Barudi), imams of the Orenburg guberniya Mukhammadsaifa Alabirdin and Shagiakhmet Imtikov, of the Ufa guberniya Mukhetdin Akhmetov, Sabir Birabiyev [Russian State Historical Archive, f. 821, inv. 8, file 791, s. 55 reverse].

The authors of the pleas said that it was their 'moral obligation to speak out clearly and openly' about the reasons of worries among their co-religionists on the topic of observance of their religious rights. Moreover, they wanted to disprove the opinion, which had been established in the Russian press and governmental circles, according to which the 'troubled minds' of Muslims could be explained by their 'fanaticism' and clerical influence.

The authors of the petition signified the 'Regulations' of 1870 as the key reason for the existing situation. The petitioners stated that if the appearance of Russian classes in madrasahs had been regarded as 'an unnatural phenomenon' in their religious system of education, than the circular of the Ministry of National Education dated 10 July 1892 was assessed as 'an intervention' of the government 'into the sphere of their religious belief'. Furthermore, the authors of the address saw a political motive in the authorities' actions. They called this act 'suspicion in strength of Islamic political views', underlining that 'not a single word contrary to the governmental views has been ever said in madrasahs and maktabas'. The law dated 16 July 1888, included the impossible to meet requirement, according to which all candidates for assessors of the Orenburg Mohammedan Spiritual Assembly had to study for 4 years in a gymnasium, was called the third reason for Muslims' concerns. The fourth reason for people's discontent was the restriction of publishing holy and theological books, which had been previously published in full volume, and their publishing with shortened or cut-out passages, which worsened their sense and value.

The 1892–1894 governmental measures aimed at encroaching on religious rights of Muslims contributed to the increase in social

activity of different groups of Muslims—the Tatars and Bashkirs. They more bravely announced their demands, proving the illegitimacy of the actions of the Imperial authorities, which were destroying the fundamental principles of freedom of religion.

The 1892–1894 petition campaign showed the government its blunders and the necessity to act more carefully while regulating the system of national education of Muslims. Petitions played a determined role in having the government admit that it was unjust in accusing Muslims of disloyalty to the autocracy. Moreover, the obstinate search of the separatist movement in their community appeared to be ineffective. Furthermore, the government acknowledged its role in formation of the negative attitude towards measures aimed at cultural assimilation and destruction of the Tatars' and Bashkirs' autonomous culture, as well as at creation of the national Russian state. The addresses indicated a growing movement for the preservation of religious and cultural autonomy by Muslims, as well as the increasingly active involvement of certain groups of Muslims in the country's politics and public life. The petition campaigns led to the correction of Muslim religious books being stopped, and a list of books, allowed to be used in maktabas and madrasahs, was prepared. The government gave its consent to the usage of hand-written textbooks in educational institutions.

Driven by the unrest and commenced migration to the Ottoman State the government had to hold a meeting in 1894, as a result of which it approved a list of books, allowed 'for use' in confessional schools. This managed to take the issue of revising hand-written and printed books, used during the learning process in madrasahs and maktabas, off the table.

§ 3. Protests Against Holding of the 1897 First General Census of the Population

In the mid-1890s the credit of trust in the government among a large part of the Volga-Ural region Muslims had been exhausted. This was shown by the events, linked to the 1897 First General Census of the population, which

was intended to examine each household and collect detailed data on every family member as per European standards.

Apart from the novelty of this statistical event, the governorate administrations did

not take enough time to explain the aims and goals of the census (October 1896), which was a great omission. Moreover, the nationalities of census takers did not conform with ethnic and confessional set of the population living in census areas. Almost all census takers were not Muslims, which deprived rural communities of the opportunity to receive information from their co-religionists.

The publishing of census forms in Russian and Tatar languages could have brought about a unique opportunity of census taking in the Tatar language. However, despite acute shortage of census takers knowing the Tatar language, the governors did not venture to take this step.

The column for indication of class affiliation caused unrest in Ufa guberniya. The problem was that the Tatars equated the word 'peasant' with the term 'Christian'. That is why, 'in order to calm down the local population', on 28 December 1896 governor N. Bogdanovich issued a circular, which allowed other Muslims of the governorate (not only the Bashkirs) to write 'Bashkir' instead of 'peasant' in 4th paragraph of the census form [Russian State Historical Archive, f. 1290, inv. 10, file 244, s. 20–20 reverse].

Due to an information vacuum, caused by the fact that Muslims did not know Russian and by the drawbacks of administrative explanatory work, playful and scornful words of the volost administrators, certain peasants and even Russian census takers in response to Muslims' requests to explain the aim of data collection and to give an answer 'whether they are going to be baptised after the census' provoked boycotts of this statistical event, which had been already underway in villages [Ronin, 1913, pp. 179–180; Zagidullin, 2000, pp. 128–131, 136–141].

The Tatar bourgeoisie had nothing to do with the peasant disturbances. It had to face existing mass social protest of corn growers and decided to seize the moment and affect the authorities by organisation of the petition filing campaign with a reminder of the main demands of Muslims: they distributed proclamations with appeals to boycott the census

for the sake of protecting Islam, to carry out the petition campaign, not to obey the clergy, to send pleas to foreign embassies in order to draw attention of the international community to the encroachment of Muslims' rights.

The movement of submitting petitions, based on the date of their filing in Kazan Governorate covers the period from 30 December 1896 to 17 January 1897. Three city mahallahs (from Kazan and Tetyushi) and 218 rural communities filed their petitions.

In December 1896–beginning of January 1897 the census takers conducted a preliminary household census in order to unravel and mark changes in household compositions on January 28 during village meetings.

From that moment the events developed along two scenarios: the census began peacefully in those rural communities where census-takers were Muslim Tatars, primarily local mullahs. However, before it was completed, under the influence of rumours about baptismal spread by the Tatars, coming from Kazan and markets, dwellers demanded to stop the census and asked census takers not to hand over census forms to the officials before completion of the census in neighbouring Tatar villages. In some cases, thanks to the influence of authoritative fellow villagers, the census was completed. Another scenario was more typical to the areas, where disturbances occurred: 'The Tatar population... is deeply preoccupied and announces that it won't allow any census takers and won't believe any explanations and notifications of the authorities' [Zagidullin, 2000, p. 169].

Mosques during the period under consideration became places for holding 'small' rural meetings. After namaz, the congregation discussed the issues related to the census and exchanged news about the state of affairs in neighbouring villages. Simultaneously, unauthorised rural meetings were organised at night, where oppositional measures were discussed.

It was not infrequent for rural communities to agree upon joint actions, if they noticed a census taker and policemen. They wanted to prevent the census in every household, in order

to avert a possible split in society. It's important to note that a group of officials from the bodies of peasant self-administration led this oppositional disobedience movement. Their high position in society and organisational skills made the Tatar peasants' speeches more organised and united.

The government made the census a personal duty of the population, disobedience to which was punished as a provocation against the autocracy. For the purpose of performing the census on time, the governors of Vyatka, Kazan and Ufa received the right of emergency powers on the basis of 'The provisions about the measures on defending the public order and social peace' on the 14th of August 1881.

Three punitive detachments were formed in the Kazan guberniya. The first (regiment of soldiers) under the command of vice-governor from the 10th of January rode around the settlements of Mamadyshsky, Laishevo, Spassky and Tetyushsky uyezds, having the participants disciplined with the rod and the activists from the resistance arrested. The second punitive detachment (3 detachments) under the command of the governor P. Poltoratsky from the 19th to the 30th of January was performing arrests and executions in the settlements of Kazansky, Tsaryovokokshaysky and Tsvil'sky uyezds. The third party (160 bayonets), having arrived in Chistopol on the 14th of January, conducted the census of the city Tatars. From the 19th to the 30th of January, the local authorities, with the assistance of troops had arrested 254 peasants in Chistopol uyezd, criminal cases were later initiated against them and the majority of them suffered punishment. The execution was not performed [Zagidullin, 2000, pp. 166–213].

According to incomplete data, Tatar addresses were held in 85 volosts of Kazan guberniya and covered 422 settlements. Eliminating the opposition in rural communities with the assistance of troops in eight out of ten uyezds Tatars lived in, was decisive in speeding up the census.

In a number of settlements of the Ufimsky, Zlatoustovsky, Birs'k and in a large part of villages of Belebey uyezds people refused

to supply information, did not let in and (or) drove away recorders and destroyed the census questionnaires. Only through active advocacy of the administration and the clergy were open clashes avoided [Russian State Historical Archive, f. 1290, inv. 10, file 244, s. 9–9 reverse]. In Kuruchevskaya volost of Belebey Uyezd, several hundred people attacked the zemstvo chief, he was saved from torture by the local mullahs. In the village Akhmetyevo of Menzelinsky uyezd, the zemstvo chief was beaten, the district superintendent of police was beaten in the village Melitaka. With the arrival of troops, unrest in the western volosts of Belebey Uyezd ceased and the census continued. Two detachments of soldiers remained in the Menzelinsky uyezd from the 9th to the 18th of January: one (under the command of the vice-governor) in the north-eastern volosts, another (under the command of the uyezd police officer) in the western and southern volosts. At the very beginning of his travel through uyezds, the vice-governor conducted public punishment of 15 obstinate peasants in one of the Tatar settlements. In other locales zemstvo chiefs brought about order within their duties [Russian State Historical Archive, f. 821, inv. 8, file 791, s. 184–189].

A number of Tatar rural communities of Yelabuzhsky and Malmyzhsky uyezds of Vyatka guberniya prevented the preliminary census in December 1896. To intimidate the rural communities, on January 11 the police officer of the Yelabuzhsky uyezd arrested without charge or trial 70 Tatar peasants from nearby villages, who arrived for the fair in Yelabuga, which allowed them to finish the census in the uyezd by the 17th of January [Märdanov, 2007].

The head of Samara guberniya rode with a military squadron (4 detachments) to the Bugulma Uyezd to suppress 30 Tatar rural communities who rebelled against the census, troops were also sent to the defiant authorities village Borovka of Stavropolsky uyezd [State Archive of Samara Oblast, f. 3, inv. 233, file 1492, s. 24–25].

The Mullahs provided invaluable help to the local administration in the regions: they explained to their parishioners the gist of the cen-

sus, convinced them, that this innovation bore no threat to Islam, advised the police about the names of activists, who offered resistance to the census. For the cooperation of mullahs with the administration, the Ministry Of Internal Affairs expressed gratitude to the mufti of Orenburg on behalf of the Government [Rus-

sian State Historical Archive, f. 821, inv. 8, file 791, s. 190–190 reverse].

Thus, police measures, implementing military control, cruel public executions in a number of uyezds of the North Volga Region and Cis-Urals proved crucial as Muslims admitted in the census.

§ 4. Movements of Forced Resettlement to the Ottoman Empire

The Russian conquest of Muslim territories and further integration of regions into the imperial political and legal field gradually led to the transformation of traditional social institutions of local societies. Distrust and disloyalty to the new authority were often expressed as the mass migration of the population from the outlying districts to neighbouring Muslim countries. Waves of mass resettlements of Crimean Tatars, Nogais, Caucasian people were provoked by concrete reforms of the Russian authorities. They had a clear political content and demonstrated the reluctance on the part of the population to accept Russia as their new homeland and their preference of the Ottoman Empire Sultan—khalif—the protector of all the world's Muslims. It should be noted that at some point those migrations were profitable for Russian state—the most ardent and discontented with the new regime Muslims left the country, leaving the place to be populated by inhabitants from other governorates, who served as the social foundation for the authorities on the Muslim outskirts. The existence of such an agreement between Russia and Turkey is well-known: the first solved the problem of liberating the native population of the Black Sea region, the second received human resources for the economic development of unpopulated regions [Türkoğlu, 2012, p. 476].

The migratory flows of Tatars in the first half of the 19th century were determined, first of all, by social and religious motives and were conditioned by the prevailing traditional economic, trade and cultural connections. The Central Asian States were an important migration route. In large centres of Asian commerce

some Tatars merchants had their own trade offices. Moreover, the Tatar Diasporas that appeared in Central Asian cities played an important role in the successful commerce of Central Asia. A part of the Tatars arrived there to avoid compulsory military service or criminal sanction, while another part was in desperate need and in search of better life. In the early 19th century, Bukhara, Samarkand, Khiva and Shirbyaza had communities of Tatar refugees. They settled in small groups, usually in caravanserais. Most of them lived in poverty, some engages in trade and crafts. Another part of Tatar Diaspora consisted of shakirds of madrasah. It is known, that there were 60 madrasahs in Bukhara [Shkunov, 2007, p. 184–186].

The influence of mass migrations to the south of Russia by various Muslim peoples cannot be excluded from the emergence and strengthening of intentions among Tatars to resettle in the Ottoman Empire in the 19th century [Kylynch, 2012, p. 45].

The escalating situation around the issue of the upcoming baptism of Muslims in the Volga-Ural Region began in the mid- 19th century, when after almost two decades of peace after the military actions of 1828–1829 relations between Russia and Turkey once again went 'on the war path'. Tatars from the Middle Volga Region, who lived in contact zones with Russians, saw the intensification of Pan-Slavism in the Empire and were aware of the reasons for the war between Russia and the Ottoman Empire. It was thought that Christians 'suffered persecution' in the Ottoman Empire and this became a reason for the Russian Emperor to get justice. The Tatars interpreted the beginning of military

actions as evidence of the serious intentions of Nicholas I, who acted as protector of all the world's Orthodox. Because of this some Tatars concluded that if 'Christians suffered persecution' in Turkey, then the government would 'act in exactly the same manner' with Muslim subjects of Russia.

A series of initiatives by the Russian authorities contributed to the appearance of such views. Pursuant to the report by his most humble Civil Governor of Orenburg for 1852, Nicholas I I ordered that efforts to Christianise the 'heathen' in Orenburg Oblast be intensified. Pursuant to the Synod's decision on 5 September 1853, 15 additional priests were sent to the parishes of Belebey, Menzelinsky and Birskey uyezds, where followers of more traditional religions had previously settled. They took with them instructions for converting the 'infidels' to Christianity. The Russian Orthodox Church also intensified its missionary work in the region. As a result, in the spring 1854 rumors spread in Belebey Uyezd, Orenburg guberniya and in Samara guberniya that the Emperor had ordered 'all Muslims' and pagans be forcefully baptised. During periods of military upheaval, the authorities sought to quickly 'stamp out the fire' among Muslims. Upon appeal by the authorities in Orenburg and Samara guberniyas, the Russian Orthodox Church in June 1854 suspended attempts at Christianisation [Materialy', 1936, pp. 158–159, 163–164].

During Russia's military campaign against Islamic countries, the authorities regarded Muslim Tatars as 'unreliable' citizens, and their clergy as 'fanatics'; the police began to 'visit' Tatar madrasahs more frequently, where shakirds from different areas of the country studied, and went to villages where they checked passports in order to find agitators and other enemies of Russia. This occurred, in particular, during the Crimean War. Tatars were suspected of aiding the Turkish Sultan, who was the caliph of all Muslims around the world. During the Crimean War, Authorities in Orenburg guberniya believed that the local Muslim population was waiting for the Turkish army to appear and 'free all Muslims from

the yoke of Christianity' [Materialy', 1936, pp. 196–197].

According to information provided by researcher Agness Kefeli-Clay, before the Crimean War and in 1865 and 1867, sufis and mullahs could be seen walking among the Chuvash and Mari people in Samara guberniya, attempting to convince them to go to Turkey and wait for 'Retribution Day'. They 'followed the tradition of Hijrah, which was started by the Prophet Muhammad when, in 622, his enemies forced him to flee from Mecca to Medina. They proclaimed the end of the world and the complete victory of Islam; in passionate speeches they reawakened in people's memories the prophecies of Mahdi (like the Messiah or our Savior), who, according to tradition, would restore justice upon the earth at the end of time. They believed that the Turkish Sultan would rule over all Muslim lands and restore the Kazan Khanate' [Kefeli, 2005, pp. 544. 569]. Certain actions on the part of both spiritual and secular leaders also contributed to tensions among Muslim groups. The Russian ambassador to Constantinople, Duke G. Ignatyev's thoughts on this are very interesting. In 1865 he noted that while Russian Muslims from the Volga Region had previously participated in the hajj, they never intended to move to Turkey. In his opinion, local officials and internal state policy were behind this phenomenon: 'our administrative actions and management style should dictate the mindset of Muslims living in Russian lands' [Materialy', 1936, p. 216].

Governor General of Orenburg, N. Kryzhanovsky, wrote on 31 January 1867 that reforms in the Bashkir army, which had been enacted under the influence of Muslim clerics, provided inspiration for many Bashkirs, Mishar Tatars and Teptyars to move to Turkey or Siberia to join Cossack regiments [Materialy', 1936, p. 197]. The following rumors, which were widespread among the Muslim population, were recorded by authorities in Orenburg guberniya: that the State intended to seize ancestral lands belonging to the Bashkirs; to convert Muslims to Christianity; and to extend compulsory military service for former

soldiers, which up to that time had included only members of taxable estates¹⁵.

As we know from letters provided by the gendarmerie in 1865, some clergy maintained ties with their relatives or fellow villagers in Turkey. According to information obtained during secret interrogations conducted by the police in Kazan and Simbirsk guberniyas, appeals for resettlement in order to avoid baptism were coming from A. Alkin, the former muezzin of Chechkab village, Sviyazhsky uyezd, and from his murshid, the mullah of Almetevo village, Chistopol uyezd. Ataulla Nigmatullin [National Archives of the Republic of Tatarstan, f. 1, inv. 3, file 270, s. 54–55 reverse]. Except for newly baptised Tatars, sufis appealed for resettlement to former lashmans, who, after they were officially registered by the State in 1860, became subject to military conscription. They told them that in the Ottoman Empire they would be free from compulsory military service and taxes [National Archives of the Republic of Tatarstan, f. 1, inv. 2, file 2111, s. 1–1 reverse].

Usually peasants left in small groups. In Chistopol uyezd, of the 95 peasants suspected of emigrating by the police, 16 had left with their families, having sold all their belongings. Some families managed to leave their native villages in Sviyazhsky, Tetyushsky, and Spassky uyezds before their passports were confiscated by the State in the spring of 1865 [National Archives of the Republic of Tatarstan, f. 1, inv. 2, file 2111, s. 11–80].

Having learned that Muslims were beginning to emigrate from the Middle Volga Region to Turkey, the Ministry of Internal Affairs sent out a secret injunction on 17 August 1865 against delivery of foreign passports to Tatars [Russian State Historical Archive, f. 821, inv. 8, file 1175, s. 2].

The emigration of Tatars from the Cis-Ural and Volga Regions increased and took on all

the characteristics of local movements during the reform. Distrust of government reforms, which some Tatars regarded merely as attempts at baptism, together with the Russo-Turkish War of 1877–1878, the Tatar peasant movement of 1878–1879, and other anti-government peasant protests—in general, the entire notion of the 'national question'—only increased the distrust of these reforms. Motivated by these events, emigrants put preservation of their ethno-religious identity above all and agreed to change their citizenship. Emigration to a foreign land became, for them, a unique form of protest: they did not want to live in a country that trespassed on their religious rights, although, in reality, this was often based more on rumor than fact.

Another reason for emigration was the deterioration of the social and economic position of the rural population, which was aggravated by frequent poor harvests and years of hunger. And letters from their fellow countrymen in Turkey, from which they learned of state support for immigrants, provided hope for a better life [National Archives of the Republic of Tatarstan, f. 1, inv. 2, file 2111, s. 32–32 reverse]. Enterprising people regarded emigration as a source of new opportunities for enrichment.

In the beginning of the 1890's people in the Orenburg region became convinced that the authorities were persecuting Muslims, and that a mass baptism of Muslims was about to occur; that parish and clerical leaders were servants of the authorities and thus did not defend religious interests. These notions were based upon several events: 1) Russian educational qualifications were demanded from mullahs 2) in 1890–1891 religious publications were censored 3) the publication of a circular by the Ministry of National Education on 10 July 1892 4) maktab and madrasahs were put under the authority of public school inspectors 5) several leading mudarrisii in Sterlitamaksky uyezd who had studied abroad were dismissed without cause from their posts; the madrasah in Iletsk was closed; a large group of shakirds from the madrasah in Khanskaya Stavka were fired.

¹⁵ As the events of the next few decades showed, these rumours proved to have some truth to them: Mishars, Bashkirs, and Teptyars were on military service, and the government carried out a policy of looting Bashkir patrimonial lands as the region was being actively colonised.

On 9 September 1892, the Orenburg Cossack Army Command issued an order to close all makhtabs and madrasahs in Tatar villages; Muslim discontent resulted very quickly in emigration to the Ottoman Empire.

From the moment the Ministry of National Education published its circular on 10 July 1892, a number of rural communities in Orenburg guberniya began to compose public condemnations and petitions addressed to the governor concerning the granting of foreign passports for resettlement to the Ottoman Empire. Some even presented an ultimatum: if the circular was not withdrawn, they would definitely leave Russia.

The Minister of Internal Affairs informed Alexander III about the emigration of Tatars. Alexander ordered them 'to halt and calm the people'. During the last days of April 1894, governors, gendarmerie and mufti in Orenburg concentrated all of their efforts on fulfilling the Emperor's orders [Russian State Historical Archive, f. 821, inv. 8, file 791, s. 4 reverse–5, 29–30 reverse, 33, 92 reverse].

Mufti M. Sultanov played an enormous role in calming the population. He composed an appeal to the clergy and sent it to mahallahs in Ufa, Orenburg, Samara, Kazan and other nearby Governorates; he went to villages in Ufa guberniya, where he explained the necessity of religious rights for Muslims, and called upon clergy from other governorates to meet. On 9 July–3 August, mufti Sultanov visited, on his own initiative, villages in Orenburg guberniya in which there had been unrest. As it turned out, citizens from numerous Cossack settlements had left the country after receiving foreign passports: 13 families left Zubochistensky settlement, 20 families left Chesnokovsky settlement, 5 left Rychkovsky settlement and so on. Thus, Orenburg guberniya became the source from which news of government attacks on Islam spread. Information about the intentions of some Muslims in Orenburg oblast to migrate reached other regions through two channels: 1) before leaving for Turkey, natives from other uyezds returned to their homeland to bid farewell to their relatives and told them about the situation in the

region, or wrote letters 2) based upon the situation in Orenburg guberniya, proclamations warning about the 'upcoming danger for Islam' and the necessity of resisting the opening of Russian schools were distributed [National Archives of the Republic of Tatarstan, f. 1, inv. 3, file 9602, s. 28–45 reverse].

If emigration had previously taken place secretly, either because an absence had been granted officially, as reflected in one's passport, or under the guise of pilgrimage, then now for the first time it became legal: through intermediaries, those wishing to emigrate composed group petitions in which they designated the name of the family wishing to leave and its head, its size and place of residence, and then sent them to the relevant agencies in the Ottoman Empire. This information was then forwarded to the Russian Ministry of Foreign Affairs and the various governorate administrations via the Turkish consulate. Imperial power stood in the way of those wishing to leave their native villages.

Several hundred Tatar families from Kazan guberniya, mostly from Chistopol uyezd (8 settlements), and a few from Spassky uyezd addressed the Ottoman authorities officially. During the investigation it turned out that in 1893 many decided to emigrate based upon proclamations concerning an upcoming baptism, and the rumor that, beginning in 1896, schools would be opened in settlements where children 8 years and older would be forced to learn Russian. They were firmly convinced that this would cause the children to take less of an interest in Islam and to change their religious affiliation. The sale of property increased after they heard that refugees were offered significant rights to fertile land, tax benefits, as well as cancellation of their debts to the Russian guberniya by the Ottoman authorities. In the spring of 1894 approximately 40 families from Chistopol uyezd secretly left Russia [National Archives of the Republic of Tatarstan, f. 1, inv. 3, file 9602, s. 25; file 9603, s. 17–17 reverse, 45–45 reverse]. The departure of mullah Mukhametvaleev from Narat-Elga village effected the locals greatly, although in his letters from Turkey he informed his fellow countrymen quite honestly about the difficulties muhajir faced there. 'I advise pa-

tience to those wishing to emigrate, as trade is not developed in this country: among the thousands who have moved here not one seems able to run a decent business. They live a sorry life. If they are ordered to study in Russian in every madrasah, there is really no harm in that, such things we will see here as well', he warned. 'If the authorities don't touch our religious beliefs, then it really isn't worth leaving [National Archives of the Republic of Tatarstan, f. 1, inv. 3, file 10050, s. 4].

Emigration ceased, however, in 1895, because many received letters from their fellow countrymen who had left, in which the Ottoman Empire's commitment to cancel their debts to the Russian authorities remained unconfirmed. Undoubtedly, investigative work by the authorities, persecution, the punishment of 'troublemakers', and the withdrawal of absence permits from peasants' passports played a major role in this. As a result, out of the 363 families that had petitioned the Turkish government for resettlement, only one local group managed to leave Kazan guberniya [National Archives of the Republic of Tatarstan, f. 1, inv. 3, file 9602, s. 71–71 reverse, 77–78].

In 1894, 94 householders from Bugulma Uyezd, Samara guberniya applied to the Ministry of Internal Affairs for approval to emigrate to the Ottoman Empire [State Archive of Samara Oblast, f. 3, inv. 10, file 1097, s. 82–83]. In April, the governor A. Bryanchaninov traveled around Bugulma and Buguruslan uyezds to explain the groundlessness of rumors, concerning the impending baptism. He visited 25 Tatar settlements, met with the clergy and summoned people from nearby villages to these settlements. There they were given a written document in which the religious rights of Muslims was explained [State Archive of Samara Oblast, f. 3, inv. 233, file 1373, s. 2–10]. This same goal was at the heart of the governor of Ufa's 'announcement' [Tardzheman, 1894, No. 23, 1 June] and the appeal launched by mufti M. Sultanov on 12 April 1894 to fellow akhunds and imams concerning the need to clarify the situation: 'there will be no forced baptism, and all natural born Muslims in Russia may freely

practice Islam as they did previously, do so now, and may in the future as guaranteed by law' [Russian State Historical Archive, f. 821, inv. 8, file 807, s. 181–182].

Unrest among Tatars in Buinsky Uyezd, Simbirsk guberniya, abated after the local governor visited villages in August [Russian State Historical Archive, f. 821, inv. 8, file 791, s. 149].

As a result of a new wave of emigration brought about by fear of baptism, authorities conducted a new census in 1897 in several of the Middle Volga and Cis-Urals guberniyas. Altogether there were 395 families in Samara and Ufa guberniya planning to emigrate to Turkey. The authorities sent the first group of immigrants from Samara and Ufa (448 people) back to their native settlements in 1898; the second group of Tatars (373 people) received passports and were allowed to enter the city of Samsun [Guseva, 2008, p. 172]. In 1899 the citizens of several villages in Bugulma Uyezd were quite excited about the idea of resettlement. But on 29 April 1899 a meeting took place in the police department, to which interested representatives of the central government were invited. The main subject discussed was how to put an end to the emigration of Russian Muslims to the Ottoman Empire [Russian State Historical Archive, f. 821, inv. 8, file 791, s. 198]. Involuntary resettlement of Tatars in the 1890s was classified by the police department as 'religious and political ferment' [Iskhakov, 2007, p. 69]¹⁶. Indeed, emigration of Tatars to Turkey at the end of the 19th century became a form of political protest against the internal politics of autocracy, a reflection of Catherine's ideas on public-Islamic relations.

Thus, in the latter half of the 19th century one way in which Muslims could protest the infringement of their rights by the government was through involuntary emigration from internal governorates to the Ottoman Empire, where they counted on the support of an Islamic state and the Caliph.

¹⁶ The ban on Hajj for Russian Muslims was lifted by the government only five years later, in 1901 [Iskhakov, 2007, p. 73].

CHAPTER 5

Vaisov Movement

Dilyara Usmanova

In the latter half of 19th century a movement took place among the Muslim population of the Volga Region which was known in the literature of the time as the Vaisov Movement or 'God's Regiment of Vaisov Muslim Old Believers' [Katanov, 1909; Sagidullin, 1930; Klimovich, 1936; Quelquejay, 1959; Kemper, 1998, pp. 393–429; Valeev, 1999; Kemper, Usmanova, 2001, pp. 86–122; Usmanova, 2002; Crews, 2006; Valeev, 2007; Kemper, 2008; Frank, 2008; Usmanova, 2009]. This movement represented a complicated symbiotic union of religious, social, ethnic, cultural and political conditions that united, at certain historical stages, a considerable part of the Tatar population in Kazan guberniya. Chronologically, the movement dates to the period between 1862 and 1923, and passed through several crucial developmental steps. The history of the Vaisov Movement is usually broken down into four periods: from the moment it was declared an independent community in 1862 until the mid-1880s; from the mid-1880s until 1905; from 1905 to some time in the 1910s, and from 1917 until the middle of the 1920s.

Although the movement is constantly linked in the literature of the period with members of one family, namely, Bagautdin, Gainan and Gazizyan Vaisov, for whom it was named, it would, nevertheless, be erroneous to attribute the entire movement only to them. Three historical personalities, Dzhagfar Salikhov, Gabdullat'f Khalitov and Bagautdin Vaisov, were the original architects of the movement. Their vision, ideas and practicality gave rise to a specific community that later evolved into a full-scale socio-religious movement.

Although Sheikh Dzhagfar had no immediate relation to the Vaisov community, nevertheless, in all of the documents pertaining

to the Vaisovs, he was portrayed as the moral compass and spiritual forerunner of the movement. Dzhagfar al-Kulatki al-Bulgari Salikhov (1790–1862) was born in the village of Staraya Kulatka in Khvalynsk uyezd, Saratov guberniya [Archive of the Institute of Oriental Manuscripts, Saint-Petersburg, f. 131, inv. 1, file 2, s. 21–24; Fäxreddin, 1908, pp. 389–391; Usmanova, 2009, pp. 36–40]. After years of studying in a Kazan madrasah under Khazrat Muhammad-Karim bin Gabdrakhim, he embarked on a long journey. He spent time in Tashkent and Samarkand in Central Asia, and lived in Bukhara for more than three years. There, he mainly met with sufi scholars (*golyama*), among which was his mentor, a well-known *sheikh* belonging to the Nakshband Brotherhood, Abdul-Khaliq al-Ballikuli al-Kazanly. There he also spent time in reflection, prayed and took part in ritual radeniya at the tomb of Bagautdin Nakshbandi, who died in 1389. From Turkestan Dzh. Salikhov set off on the *hajj*. After traveling in Baghdad and Egypt, he settled down in Medina, where for more than 12 years he was a cemetery watchman (*mudzhavir*) and dervish. In 1834/1835 (the year 1250 according to Hijrah), after eighteen years of travel, he returned to his native land in tatters, a half-blind dervish. Dzhagfar-ishan's fame spread far and wide, and he attracted many scholars, devotees and disciples. Equally numerous were his enemies—representatives of the official clergy. Following his next failed pilgrimage, (Dzh. Salikhov only managed to get as far as the Caucasus [al-Bulgari, 1874]) where, returning to his native village, he died in December 1862 at the age of 72. Dzh. Salikhov left almost no significant written works, yet he was an active preacher and had many students and followers who considered him their spiritual leader. Among the lat-

ter were B. Vaisov and G. Khalitov, architects of the Old Believer community. Former imam in the village of Bedenga, Simbirsk guberniya, Gabdullat'f Khalitov (Gabdullat'f bin Khalid al-Bidengi, 1809/1810–1891) was stripped, in the middle of the 1870's, of his priestly rank for improper behavior, and found himself in opposition to the Orenburg Muslim Spiritual Assembly. Experts believed that he was the most educated of the two, and the author of the majority of works published by them in the 1870s. And yet, it was dervish Bagautdin Khamzin Vaisov (1819/1820–1893) who was the real founder of God's Regiment of Muslim Old Believers [Fäxreddin, Asar, manuscript, b. 180–183 reverse].

B. Vaisov was the epitomy of a 19th century thinker, one whose actions remained within the confines of Islamic religious tradition. His works and other documents dating from this period demonstrate this. This independent religious community took shape over the course of two decades, from the 1860's to the middle of the 1880's.

B. Vaisov's early biography is replete with conflicting accounts and distortions, and was, to a great degree, mythologised by his followers and descendants. We do know that B. Vaisov was born in the village of Satlamyshevo, Sviyazhsk uyezd, Kazan guberniya either in 1810, according to some sources, or 1819–1820, according to others. And yet, he was registered as a peasant in the village of Molvino, where, up to the late 1870s, he shared a plot of land with his brother. Having lost his father early in life, B. Vaisov was raised, together with his brother and sister, by his mother, Bibizhamilya Muhamedyarovna, who moved them to Kazan. After studying in a Kazan madrasah (some sources say it was the one attached to the 2nd Cathedral Mosque), he became a trader. Sometime around 1841, having heard of a famous Ishan from Kulatki, he became acquainted with him and decided to become his 'disciple'; he 'studied' with him for 20 years, up to the death of Dzh. Salikhov.

When the sheikh from Kulatki died, B. Vaisov proclaimed himself his successor (*khalifa*), gathered together his disciples and like-minded

followers, and began to preach. In the first half of the 1860s B. Vaisov founded a separate community in Kazan and opened a prayer house on the estate he owned in Novotatarskaya settlement. Beginning in the 1860's he often asked the authorities for material support of his community. He also sharply criticised the official Muslim clergy and leaders of the Orenburg Muslim Spiritual Assembly, accusing them of transgressions, of corruption, immorality and retreating from 'true Islam'. At the same time, B. Vaisov continued to preach among his followers.

The Vaisovs' first public appearance took place in 1874 in conjunction with the publication of 'Tarik-i-Khodzhagan, ' an essay dedicated to Dzh. Salikhov's life and views. In this work B. Vaisov wrote not only about the famous Ishan's life, including his trip to the Caucasus and his views on Muslim society there, but also expressed his willingness to pray for the health of the Tsar, to contribute to the appeasement of the Muslim population, and to strengthen the power of the Russian Tsar among unruly Muslim communities. In the 1870–1880s B. Vaisov and G. Khalitov published several works: an essay on Muslim law, which included a commentary; a volume of verse ascribed to Bagautdin Nakshbandi and collected by Dzh. Salikhov and others [älbulgari, 1874; Divan-i-Shakh-i-Nakshband, 1874]. An entire series of essays written by B. Vaisov, in which he attacked the mufti quite harshly, were not approved for publication by the censor. The originals were stored in the censor's archives [Russian State Historical Archive, f. 777, 1881, inv. 3, file 5; Usmanova, 2009, p. 66–71, 498–511].

Most probably after the dervish's death, his son Gainan published a part of his 'literary heritage' in a reworked form under the title Dzhavakhir-i khikmat-i darvishan (Kazan, 1907, 2nd edition). In this essay the author, (it was actually B. Vaisov who wrote most of the book), reflects on Judgement Day, which was expected in the year 1300 (1882) according to Hijrah), criticises contemporary life, and condemns the vices of Tatar-Muslim society and representatives of 'official Islam'.

The Vaisovs regarded the authorities' actions as Satan's machinations (*Dajjal*), and the world's vices as signs of the end of the world and Judgement Day. The omen of the upcoming arrival of *Dajjal* (Antichrist, Satan) in the process of Russification saw local and central authorities pursuing the Muslim population in many vices and immorality, affecting the Kazan Tartars, led by the mufti and the qadies. The confrontation with the leaders of the Orenburg Religious Board of Muslims laid the foundation for the negative attitude the Vaisovs developed for dominant Islam, the approach to which they clearly formulated as early as the beginning of the 20th century.

B. Vaisov proclaimed himself to be the foreteller of the world's end, had the title of 'commander' (*sardar*), and called his followers members of the so-called saving group (*firka-i-nadzhiya*). A dervish-guided turning back to true Islam was seen as a condition necessary for salvation. The eschatological component of Vaisovs' religious doctrine was formulated in the works of B. Vaisov; from the 1870's to the 1890's it was the main language used to describe social and political reality. With an allowance for some originality of the eschatological concept by B. Vaisov (first of all, his dating), religious thinking of the community founder is traditionally seen in the context of other eschatological movements (of the Mahdism type) that gained ground in many Muslim countries with the advent of the 14th century AH [Kemper, 1998, pp. 393–429].

Later, Vaisovs' texts pushed eschatological language to the sidelines and rationalised the vision of the political situation. 'The Saving Group' that spoke of salvation and Judgement Day was gradually evolving into a 'sect', that applied to officers of the imperial authorities, and, later, to the members of Duma, realised its special social position and that 'segregation' within the Muslim community had some political advantages.

The central idea of Bulgar heritage was the core of Vaisovs' historical genealogy and religious teaching. The Vaisovs called themselves the Bulgars (*al-Bulgari*) and old believing Muslims, ignoring class and ethnic names

like 'Tatar', 'peasant', 'honorary citizen by birth', etc. The Vaisovs believed that, being the ancestors of the Bulgars, they were more ancient and genuine ('true') Muslims compared to the Tatars, because their faith was 'al-misaktan-birle', that is had existed since the covenant between the Abraham of the Old Testament and God himself. The Vaisovs employed 'Old Believer' as a term of self-representation, mainly in documents written in Russian, where they referred to this Orthodox phenomenon, quite familiar to non-Muslims. Meanwhile, the Vaisovs pointed out that they were Muslim Old Believers and realised they were not similar to the Russian Old Believers.

De-facto, the group positioned itself as a separate class, as it ignored bureaucratic instances and contacted the Emperor through 'holy statements' and petitions. The Vaisovs rejected usual class affiliation, and, therefore, claimed the status of a specific clerical order. Mismatch between Russian-language categories (and appropriate practices) and original self-describing categories that the Vaisovs adopted forced them to invent their own Russian-language term for class identity 'born in Islam', instead of the generally recognised class denomination ('peasant', 'bourgeois', etc.), and to compile a so-called 'Holy Oath List' — a kind of identification document that the Vaisovs attempted to introduce in replacement of a civil passport. [Usmanova, 2009, p. 119].

The Vaisovs recognised only the direct power of the Emperor, denied any submission to civil authorities, and refused compulsory military service. Prayer read five times a day dedicated to the health of the Tsar was plain duty for the Vaisovs, who believed in protection of the higher power to be superior, compared to that of armed weaponry. This idea became the core of the pacifist ideas that the Vaisovs expressed in the first decades of the movement's existence.

More than once, the personal and family life of B. Vaisov gave reason to authorities for his persecution¹⁷. B. Vaisov never turned to a par-

¹⁷ B. Vaisov had at least five wives. The first two died in 1870 while giving birth, and his marriage with

ish imam and personally performed all important rites (baptism, funerals and even marriage/*nikah*), which drew violent criticism from imams as well as from the leaders of the Orenburg Religious Board of Muslims. The official clergy was frustrated as B. Vaisov became a de-facto imam without any legal grounds. Numerous conflicts resulted in the fact that by early 1880s B. Vaisov claimed that the members of his community would completely ignore mosques and official mullahs, attempt to introduce their own parish registers, and not recognise the Orenburg Religious Board of Muslims.

The activity of the movement leader, Bagautdin Vaisov, made the authorities anxious, and in the late 1870's to the early 1880's, he was repeatedly brought before civil and criminal court and examined by psychiatrists. In January 1885, the head of the 'sect' and some of his followers were arrested. Those Vaisovs

the third was declared illegitimate. Out of Vaisov's numerous children (according to our calculations, there were more than 20, while according to Vaisov himself, he had 42 sons), the majority died at a very young age or before they reached maturity.

who resisted the authorities were convicted and exiled from the city, and their leader was declared insane and brought to a mental hospital of Kazan, where he died in September 1893.

After his arrest and death, his followers and disciples continued the cause of their community's founder. In the final twenty years of the 19th century, from the mid 1880's to 1905, the community struggled through hard times of the threat of collapse and the aspiration to the continuity of its traditions. The place of a charismatic leader remained vacant. His children were too young to take up their father's cause. In those years, a group of the most active and influenced people (Jusuf Fayzullin, Shigabutdin Sayfutdinov, Nazmutdin Izhbayev, etc.), disciples and immediate followers of B. Vaisov stood out, but even they could not replace him and 'nominate' a legitimate head of the movement that would be recognised by everyone. With the conviction that their cause was just, they possessed neither the necessary knowledge nor moral the authority or charisma of their teacher. Moreover, cataclysms of life brought them to an extremely marginal posi-

tion among the Tatars and they were at the very bottom of social and intellectual hierarchy. More important was the fact that in those days, the Vaisovs were in search of actual problems that could replace the ideas that had united their community beforehand. This took place as Tatar society was forming a wider intellectual context—an intricate combination of Islamic and European forms that affected the make-up and organisational structure of the community.

From the 1870's to the 1880's, the movement was an obvious exponent of religious protest by Volga Region Muslims against the Russification and Christianisation policies of the government. During the 1897 general census of the population, the Vaisovs were propagandising among the peasants, as they saw the census as a measure the government was taking for the further Christianisation of Muslims. At the same time, the movement featured some traits of social protest against the aggravation of social contradictions resulting from the capitalist modernisation of Russian society. The Vaisovs were very active in propagation of B. Vaisov's teaching and attracting numerous followers among Tatar peasants of the Volga region, who suffered a shortage or lack of arable land.

By the early 20th century, the movement had spread beyond Kazan to cover some areas of the Kazan and Simbirsk guberniyas. Some cases were noted in Siberia and Central Asia. The movement totaled approximately two thousand followers. In the early 20th century, his sons, Gainan (1905–1918) and Gazizyan (1918–early 1920's) headed the movement,

which had obviously become political by then. Its ideology underwent further evolution.

The Vaisovs community (and the entire movement) appeared out of a compound of various moods and ideas of the Muslim environment in the Volga-Urals region in the late Empire period. Protest movements aroused by an uprising in social tension were of great importance alongside modernisation, the religious policy the Christian state pursued against people of different faiths, deepened bureaucracy in official Islamic structures, and their alienation from common believers. Terrors and phobias traditional of religious thought also made their contributions, as they caused by anxieties in the reality of modern life and denial of modern civilisation. Some ideas are rooted in the bizarre historical memory of the people. The personal delusions and ambitions of some charismatic personalities should not be overlooked. However, the conflicts that arose from both the unsociable (or perhaps even quarrelsome) nature of Bagautdin and provocations by authorities and people of the same faith could have remained a personal problem for one of many historical figures relegated to obscurity. This, if not for the fact that the preachings and ideas of B. Vaisov fell on the favourable grounds of the social, national, and religious tensions and dissatisfactions that were so obvious before the collapse of the Russian Empire. Ultimately, the movement took a form that allowed it to be treated like a peculiar cultural, religious, and political phenomenon in Tatar history.

CHAPTER 6

New Phenomena in the Tatar-Islamic Social Movement at the Turn of the 19–20th Centuries

Ildus Zagidullin

Miroslav Hroch, a Czech historian, distinguished three phases of development when he modelled the national movements of European nations. In phase *A*, a rather small group of educated people develops an interest in language, history and folklore. The cultural phase is followed by phase *B*—national agitation, when a group of patriots yearns for a wider distribution of national self-consciousness among the population and its mobilisation into single national community. The third phase *C* is marked by a mass movement where most of society feels seized with ideas of a national self-consciousness and aspires to political autonomy. In Russian nations, these processes took place in different periods and depended on a number of factors, from cultural and social development to the extent of industrialisation and urbanisation. Factors of extreme importance were the elite, traditions (if any), a high level of general culture (language included), typical for 'older' nations (the Russians, the Poles, the Georgians, the Tatars of Crimea, and, to some extent, the Muslims of Central Asia). 'Smaller' or 'younger' nations lacked elites of their own, a middle-class urban population, and had no political structures of their own. Their traditions of medieval statehood were destroyed in the beginning of the New Times, and generally, they were 'peasant nations' dominated by other ethnic elites. Their actions were social by nature and, initially, were directed against 'foreign' dominating power rather than against the state itself. They aimed to eliminate this deficiency, particularly through the creation of a full-scale social structure. 'Younger' nations of Russia were the Ukrainians, the Belorussians, the Lithuanians, the Latvians, and the Finns [Kappeler, 1996, pp. 175–176].

On the basis of social class, a moving force in each stage, A. Kappeler presents the question of possibly ideal noble, bourgeois and peasant national movements. Simultaneously, he is correct in his statement regarding the difficulty of projecting the 'European historical experience' onto national movements in Asia [Kappeler, 1996, p. 176].

A question arises in this regard: what place does the pre-1905 Tatar Muslim social movement take in this model? As known, up until the middle of the 18th century, the Tatars' ideas of national revival, which manifested in a number of public demonstrations, were first of all due to the invitation of their coreligionist, the representative of the feudal estate, the Khan. For the first time, the main ideologists and organising force of the rebellion, led by Batyrsha in 1755, were representatives of the Islamic clergy who turned the slogan 'fight for Islam and free the region from elite representatives of other ethnic confessional groups, exploiting Muslims' into a banner of antigovernment demonstrations. As there were no national representatives among the nobility, religious figures naturally became the driving force of the national movement. However, having acknowledged the Islamic clergy and brought it under its control, gaining its loyalty to the regime, Catherine II government managed to isolate it from participating in the political struggle. As a result, 1755 saw the last attempt of Tatars to revive their national sovereignty. In the late 18th century, new Tatar elite groups were formed: loyal to the legal authority of the Islamic clergy; rehabilitation of descendants of Tatar murzas and princes, inclusion of Muslims in the noble estate based on the period of their

civil and military service; establishment of the entrepreneurial and merchant class.

The Tatar Islamic social movement did not particularly fit in with the classic model of national movements of European peoples regarding the sequence of phases. The Tatar enlightenment, which promoted the cultural awakening of the Tatars, started in the second half of the 19th century and continued up until 1917. The works and educational activities of Sh. Marjani, Q. Nasiri, R. Fakhretdin, M. Aqmulla, G. Chokry and others contributed to the awakening and reinforcement of the interest in their national history and culture. An important step towards success in renovation processes was taken by I. Gasprinski, who profitably employed the newspaper 'Tärceman' to arouse an interest in secular knowledge among Tatars. I. Gasprinski suggested modernising the Tatar community through donations and the use of the legal framework in the Empire to the fullest as to develop a national culture while remaining in cultural-educational institutions. The newspaper encouraged its readers to improve their knowledge and serve society for the good of the people.

In the early 20th century, the baton was passed on to new representatives of the Tatar intelligentsia, who were familiar with Russian culture and often had received education abroad. The introduction of new education methods led to renovations in the confessional school system and brought changes in almost all the spheres of socio-cultural life of the Islamic community in the Volga region and Cis-Urals. As it has been rightfully noted by A. Kappeler, phase *A* of the Tatar national movement was religious in nature [Kappeler, 1996, p. 195].

The start of phase *B*— the phase of national agitation — was driven by the active government policy against the feudal foundations of the Islamic community and its involvement in the modernisation processes, which were implemented at the expense of authentic culture and traditions without choice. The first indications of new phenomena manifested in the peasant movement of 1878–1879.

The starting point of phase *B* in the Tatar national movement is considered to be 1879, when members of the Kazan bourgeoisie, after con-

sultation with the Orenburg Muslim Spiritual Assembly [Fäxreddin, 2010, p. 130], informed the Russian authorities of their demands, aimed at preservation of the key principles of Tatar and Bashkir religious and cultural autonomy, upgrading of the status of the head institution of traditional religious communities and the extension of the Muslims' civil rights. Concept-wise, these demands were a reflection of the common opinion of various Tatar elite groups headed by the merchants, considering that at the time the Mufti was the nobleman, S. Tevkelev, and the members of the Orenburg Muslim Spiritual Assembly board were mullahs from the Kazan guberniya. The merchants, along with the members of clergy, were against the governmental initiatives, aimed at taking over the national educational system and its transformation through the forced entrenchment of Russian educational institutions. The government's actions were primarily driven by the ideology towards the modernisation of Russia and the policy of establishing a national Russian state, according to which not only the Russian peasantry had to be educated, but also the non-Russian peoples were required to speak the state language.

The Tatar merchant estate tried to include large sections of population in petition campaigns against government reforms in the field of school education, pushing forward the slogan of the protection of Islam and preservation of traditional principles. In the latter quarter of the 19th century, the social movement proceeded on a religious basis, which was initially explained by the religious mindset, specific cultural development of the merchant class, lack of officials, small numbers, and the economic weakness of the nobility. In general, the national movement was protective in nature; it protected traditional principles, its ideologists were members of bourgeoisie, and the driving force was traditional religious communities. The main motive of the Islamic social movement and antigovernment demonstrations of the masses during the post-reform period was the 'protection of Islam' and the religious rights of Muslims, the fight for preservation of confessional identity, against interference by the government in the system of national education and the life of mahallahs.

The appointment of spiritual figures with progressive views as members of the religious administration by Mufti M. Sultanov, based on the law of 9 January 1890, soon transformed the Orenburg Muslim Spiritual Assembly into a sort of center for propaganda and agitation of progressive ideas. The majority of board members of the Assembly continued their educational activities even after they had left the religious administration.

In this regard, the consolidation of progressive members of various professional and estate groups of Islamic population was an important event, carried out by the Assembly board members on 6 January 1898, along with the establishment of an unofficial organisation 'Islax-i mäqatip vä nöshr-i mägarif muslimin' in Ufa with the sanction of Mufti M. Sultanov, which was the first Tatar society dedicated to solving pressing national problems, including: preparation and the following implementation of reforms regarding the improvement of the Tatar language, school programmes and the publication of new textbooks. From 15–17 June of the same year, Ufa hosted an unofficial meeting of the society, which featured the reformers¹⁸. During the meeting, the participants discussed and exchanged opinions on the key problems of national development, allocated responsibilities along different lines, made a decision with regard to the reformation and programmes of educational institutions [Marash, 2005, p. 182–183]. Although the society was later disbanded and not registered, the Ufa meeting definitely gave a new push for reformations.

At the turn of the century, the influence of the Jadids in the Islamic community increased, many representatives of the conservative part of bourgeoisie reconsidered their attitude towards Russian education, encouraged the development of new method schools, and were actively involved in the renovation processes.

The social movement was not only based on the opposition of Muslims and the government concerning the issues of school education, but became diverse, multifaceted. The new-method schools were shattering the monopoly of mullahs in the field of religious education, as the administrators of these schools became their rivals, and, most importantly, the changes involved financing, by means of which the education system existed (funding from parents and prosperous Tatars).

Intellectual polemics became the new form of opposition among the Qadimists and the Jadids. In terms of lacking national periodicals, it was manifested in the publication of several leaflets by Qadimist mullahs. The new method of education and the changes it brought were evaluated by its antagonists 'as a neofaith threatening Tatars with the falling off of Islam and conversion to kafirs'. Specifically, in 1899 in Kazan, Mullah Gillazetdin Mukhid-dinov published a book 'Steel pikes against the new method', leveled against the modernisation and Europeanisation of Tatar society.

During this period, the Jadids acted cautiously and did not argue with the Qadimists directly. They were sending their new ideas and views to readers through fictional literature, through thoughts and polemics of literary characters about the future of the Tatar society, through their actions. During the Revival of Learning period, literature turned into one of the most important instruments of influence and education for people of the new formation. Significantly, the appearance of such publications was proof of fundamental changes happening in urban communities: it is known that not all of the literary works that passed the Russian censorship in the 1890s, were published; publishers, in fear of confrontation with mullahs, refused to take on their completion. Pieces of literature and publicist essays were produced at the expense of the national bourgeoisie. At the turn of the century, thanks to the 'patron-intellectual' dyad in regard of the ideological influence on the reading audience through the printer's ink, the Jadids seized the initiative and became more decisive in their actions.

¹⁸ Members of the Orenburg Muslim Spiritual Assembly R. Fakhreddin, K. -G. Gabashi, G. Kapkaev; Orenburg merchant Gani Khusainov, Galimzhan Barudi, Akhmadkhadi Maksudi, Shakirzyan Tagirov, Akhun Gylman Karimi, his son Fatikh Karimi, Ufa akhun K. Usmanov, et al. [Gani, 1998, pp. 113–114, 125–126].

Fatykh Karimi. Photo from the early 20th century.

A member of the Orenburg Muslim Spiritual Assembly, R. Fakhretdin, began publishing a series of educational books for adults and school students aimed at achieving positive changes in the sociocultural life of the people. Readers were greatly impacted by R. Fakhretddin's short novel, 'Salima, and Chastity' ('Sālimā, yāki Giyffāt', 1898), which he published under a pen-name. The main character of the short novel, shakird, addresses his fellows in the old-method of madrasah: 'Our leaders have to be knowledgeable in the studies of Islam as well as philosophically informed on the modern state of things... . National progress comes with the advancement of education, development of trade, and industry'.

The story by F. Karimi, 'Shakird and a student' (1899), where the author shows the advantages of European education compared to a scholastic religious one while comparing the Russian and Tatar youth, was truly a hit among Tatars and took a heavy toll on the Qadimists' position.

In this regard, there is a notably detailed description of literary works and publicist essays of the Jadids given by the police department from early 1901: 'Supporters of new ideas encourage the Tatar population with their literature to receive an education, obtain practical skills in the field of trades and industry, as well as to learn foreign languages, so they would be educated and wealthy. With that, the innovators invite their coreligionists not to join the

common general knowledge school, meaning Russian gymnasiums and higher education institutions, but special Tatar seminaries of higher wisdom, where European studies go hand in hand with the Quran and teach students in Tatar. They point out how important it is to comprehend your own faith, clean it from superstitions and ignorant interpretations of mullahs, consolidate your national ethos, while expanding the use of native language in literature, science and religion, and generally care about the progress of Islam and the Turkic nation' [National Archives of the Republic of Tatarstan, f. 1, inv. 6, file 99, s. 1–2 reverse].

In his fantastic short novel '200 yeldan son inkiyraz' ('Devolution Two Hundred Years Later') (Kazan, 1904) a young talented writer, Gayaz Iskhaki, showcased the key ideas of the philosophical publicistic leaflet 'Human Kind' (Kazan, 1899). The author of this leaflet, Surudeddin Miftakhuddinov, wrote that peoples with ancient educational traditions that are stuck in their development and refuse to leave the old views behind, are doomed to extinction in the modern world. The future belongs to people with modern knowledge. At present, this could be said about Europeans, who, by the virtue of their high culture, dominate almost the entire world and continuously reach new achievements [Miftakhedin, 1899, p. 5–26].

During this time period, there were two groups of activists within the new generation to take on the role of leaders of the Tatar social movement. The members of the first group had been educated abroad: in secular and religious educational institutions of the Ottoman Empire and Egypt. While studying as well as travelling and interacting with the local population, they had realised the influence that Europe had on the life of Islamic countries (which Tatars saw as an ideal) and the unfortunate position of Muslims in the world community. The second group was represented by ambitious young people, mostly students and graduates of the Kazan Tatar Teachers' School, raised on national traditions and Russian culture, whose works were also actively published [Khabutdinov, 2005, p. 15–17].

The modern model of the Islamic national development in the Orenburg Muslim Spiri-

tual Assembly, appropriate to the challenges of the time, made the experience and initiative of Tatars attractive to the national elite of Islamic peoples. They made Tatar social activists general Turkic leaders, carrying the banner of the renewal of the Russian Ummah. 'This model was accompanied by an ideology that combined Pan-Turkism and Pan-Islamism into a unique mix, which, though it protected the cultural unity of all Turkic peoples, nevertheless featured the characteristics of the very Tatar nature', as noted by E. Lazzerini [Lazzerini, 2011, p. 22].

In the late 19th century, the public stage was taken by two figures who played an important role in the spiritual and political consolidation of the Turkic peoples of Russia, I. Gasprinski and R. Ibragimov. From 1871 to 1873, I. Gasprinski traveled to Europe and visited the Eastern countries: Algeria, Tunisia, Egypt, and the Ottoman Empire. In 1881, he came to the conclusion that it was the Turkic peoples of Russia who were destined to take the reins in the intellectual development of the Islamic world.

As there were no other private periodical publications in Turkic languages, the newspaper 'Tärceman - Translator' (Bakhchisarai), published since 1883, was the only platform for social activists of Islamic nations where they could publicly express their opinion on events happening in the regions and the country in general; it was their way of communication [Gasprinsky, 2006, p. 213]. By publishing news about the lives of Turkic people and discussing their future in editorial articles, he essentially declared how similar the fates of Islamic peoples of the Empire was. The illuminator called for the idea of cultural and national unity of Turkic peoples of the country, based on the 'unity of language, mindset and actions'. He believed that the creation of a united literary language of Russian Turkic peoples was of political importance [Gasprinsky, 2006, p. 264–465]. The intellectual elite of the Tatars, Bashkirs, Uzbeks, Kazakhs, peoples of Caucasus as well as others were all among the readers of the newspaper [Validov, 1998, p. 78]. However, up until 1905, I. Gasprinski worked only within cultural and educational framework.

Gabdrashit Gumerovich Ibragimov (1857–1914) described himself as a pan-Turkic leader. He was born in a family of akhun in the city of Tara and studied in the madrasahs of the Tobol and Kazan guberniyas. While studying in Medina (1879–1885), he acquainted himself with the works of Sayyid Ahmad Khan (1817–1898), an Islamic reformer from India, who saw the opportunity for the progressive development of his coreligionists in enlightenment and the promotion of European scientific education and culture; he also became familiar with the works of Jamal ad-Din al-Afghani (1839–1897), the founder of the Pan-Islamism doctrine. While in Medina, Ibragimov fully realised the need for a fundamental reformation of the system of religious education in Russia, the development of a new method of training, and to upgrade the programme through the inclusion of natural disciplines [Galimullin, 2003, p. 14–28].

Having left his place on the board of the Orenburg Muslim Spiritual Assembly (1892–1895), Ibragimov went abroad. F. Galimullin does not rule out the possibility of him, when visiting Paris, coming into contact with representatives of the Turkish Emigrant Opposition Centre, organised in 1891 and headed by Ahmed Riza-Bashi (1857–1930), and the secret Turkish society 'Ittihad vâ tarakki' ('Unity and progress') [Galimullin, 2003, p. 36].

Gabderashit Ibragimov.

In 1895, while abroad, Ibragimov published a publicist book called 'Çulpan yoldizi' ('The Morning Star'), which was very popular among Muslims of the Volga-Ural region and secretly passed from hand to hand. According to Galimzhan Ibragimov, up until the 1905–1907 Revolution, this work, which exposed the unfortunate position of Muslims in Russia and called for reforms and introduction to European culture, was 'the only voice of one crying in the desert' [Ibrahimov, Vol. 7, p. 267–268]. The author wrote that the Russian administration discriminates against Tatars with secular education when compared with Christians: law school graduates can be promoted only to the position of assistant attorney; Muslims, as well as Poles, Finns, Jews and Old Believers, can attain the rank of general only under 'special circumstances'.

Ibragimov believed that the first and foremost condition for a 'bright future for the Tatars' was the reformation of the Orenburg Muslim Spiritual Assembly. In order to raise the moral credibility of the Assembly, overcome by bribery during exams and formality of tests for mullah candidates, he suggested increasing the monthly salary for assessors of the religious administration and to choose honest and hard-working scholars for these important positions, the appointment of which, he believed, had to be decided through counseling sessions of the Mufti with representatives of the Tatar elite, scientists and wealthy landowners. In their turn, qadis were meant to transform the religious administration into an authoritative institution of Islamic community and raise the demands on candidates for religious positions.

To strengthen the ties between the Assembly and the clergy, he suggested holding an-

nual congresses with prominent scholars so that the Assembly's work could be aimed at the implementation of collective decisions by the nation's leaders. Ibragimov thought that the most important sources of extra-budgetary funds for the Assembly could be put towards creating an official newspaper of the religious establishment with compulsory subscription for all members of the clergy, as well as the exclusive publication of the Quran in the Assembly's typography. According to him, the religious administration had to take care of training for talented shakirds, award the teachers with bonuses and medals, and publicly criticise careless mudarrises. He believed that this approach would hasten reform in the Islamic community. By introducing scholarships in madrasahs and encouraging shakirds to acquire knowledge, the religious figures, as he thought, would cease their personal rows and quarrelling and give people sermons that were useful for the present and for the afterlife [Galimullin, 2003, pp. 36–40].

After his return to his homeland, Ibragimov repeated the actions of I. Gasprinski by translating his ideas to his coreligionists. In 1900, in Saint-Petersburg, he began publishing an almanac 'Mirat yaxud közge', known by people as 'Közge' ('The Mirror'). He published eight issues of the almanac in 1902 and four in 1903.

Ibragimov was the only Tatar activist who appealed (1901) to the state administration with a suggestion (note 'On the status of Islamic primary and high schools (maktab and madrasah) in Russia') to support the reformation of traditional Islamic schools: to determine academic programmes; introduce general education subjects; establish examination procedures; grant madrasah graduates with the benefits and privileges in terms of military duty, and pass the supervision of them to special honoured Muslims, liable to the patron of the educational circuit [Samatova, 2010, p. 188].

In 1902–1903, Ibragimov visited Japan, where he spread anti-Russian propaganda, for which he was removed from the country at the request of the Russian Embassy. Upon his return to the capital, he continued publishing his almanac [Galimullin, 2003, p. 41].

In the spring of 1904, Ibragimov once again took a trip to Istanbul, where his political activity came to the attention of Russian intelligence. Members of the club of Russian migrants, which he organised, drafted a programme of demands to extend the civil rights of fellow citizens-coreligionists in the fields of education and religious and confessional affairs, where Russian Muslims were considered as a single cultural social community for the first time. Notably, the document was not only sent to a number of fellow countrymen, including the first class merchant from Orenburg, Makhmut Khusainov, but to the embassies of England and Germany in Istanbul as well.

The main demands of the programme were found in the subject of Muslims' religious and cultural autonomy: to give them the right to choose members and a chairman (mufti) of religious administrations (clause 1), to transfer the management of religious and national education to the mufti and school curators (clause 3); to stop appointing graduates from Russian educational institutions to the rank of mufti (read: without religious education) (clause 2); to resolve divorce cases and issues of inheritance only according to the norms of Sharia (clause 7); to allow rural communities to have a complete self-government and forbid their integration into Russian peasant communities (clause 15); to open stalls for Muslims during Christian feasts (clause 24); to abolish the practice of burying Muslims only after the issuance of a death certificate (clause 28).

The demands aimed at the implementation of the principle of voluntary studying and advancement of the state language can be put into a separate group: no requirements to introduce secular studies in schools, of imams being fluent and teaching in Russian (clauses 4, 6); abolition of threatening of educational institutions closing if Muslims refuse to introduce secular subjects (clause 5).

Key to understanding demands regarding freedom of religion were the provisions on implementation of the freedom of conscience principle in Russia: 'no one should be forbidden from keeping the commandments of divine

law' (clause 11); 'give us back our rights and the liberty of conscience' (clause 23); to give 'full freedom' when it comes to religion (clause 25); to put an end to Christian instruction of Muslims (clause 17); to allow those willing to convert to Islam (clause 22); to stop priests listing Muslims in parish registration books with Christian names (clause 20) (apparently, this refers to baptised Tatars who converted back to Islam, but were not legally acknowledged as Muslims. — *I. Z.*) et al.

Some of the provisions were related to the need for protection of religious rights and the dignity of Muslims from encroachments by secular authorities, the Russian Orthodox Church, and Christians: do not ridicule Islam (clause 19); forbid district leaders to interfere in divorce cases (clause 29). Protection of religious rights of Muslims in military service came down to the appointment of a military mullah in every military unit where Muslims were serving, a prohibition on feeding them with pork (clause 26), and 'not forcing them to fight against coreligionists' (clause 27). In regard to equal rights with Orthodox priests, it was demanded that mullahs be exempt from compulsory military service (clause 16). There were also demands concerning protection of the religious rights of nomadic Kazakhs: to ban Christian education for Kazakhs, allow them to freely profess Islam and to act according the laws of Islam (clause 10); to allow Tatar and Kazakh ulamas to teach them fundamentals of Islam (clauses 8, 9).

The programme's economic demands: to end the willful interference of the local administration with commercial business, especially of Kazakhs, even with a trade license (clause 14); restore possession (not to take away) of lands to Muslims arriving from Khiva and Bukhara and settling in Siberia (clause 12); to abolish taxes imposed on Muslims' lands on which they built their houses (clause 13); to release Kazakhs and Crimean Tatars handed in to penal battalions, or deported by an administrative procedure, or sentenced to hard labour for signing documents whose contents they had not read (clauses 31, 32) [State Archive of the

Russian Federation, f. 102, DPOO, inv. 226 (1898), file 11, part 3, s. 166–169 reverse]

Importantly, a similar text was distributed among Tatars of different regions as a secret proclamation. Although they were signed by a certain 'Hajji Akhmed from Kazan', the letters were in fact sent by post from Istanbul. [Russian State Historical Archive, f. 821, inv. 8, file 791, s. 210, 218]

Thus, the Istanbul political demands of G. Ibragimov were intended to achieve equality for Russian Muslims with the Empire's majority population and an extension of their religious and cultural autonomy. They played an important part in the transformation of the Tatar Islamic movement's priorities in the early twentieth century. On 7 August 1904, Ibragimov was arrested in the Consulate-General of Russia in Istanbul and sent to Russia. However, due to lack of hard evidence, he was released from prison in Odessa on 21 August [State Archive of the Russian Federation, f. 102, DPOO, inv. 226 (1898), file 11, part 3, s. 163–163 reverse]

In the beginning of September, Ibragimov met up with the Interior Minister, P. Svyatopolk-Mirsky, where they discussed the country's political situation. After his meetings in Moscow with leaders of the Zemstvo liberal movement (late September 1904), Ibragimov visited large-scale educational centres and Tatar communities (Orenburg, Ufa, Troitsk, Petropavlovsk, the town of Izh-Bobi in the Vyatka guberniya), met with regional leaders and youth representatives, and resolved organisational and financial issues of the future political unification of Tatars. Initially, Ibragimov was planning to hold a pan-Tatar Islamic congress at the Menzelinsk Fair (end of December—early January). However, after his January 1905 meeting in Kazan with Yusuf Akchura, the author of an academic paper about political Turkism ('Three policies', Cairo, 1903), they took the decision to organise an All-Russian party of Muslims [Senyutkina, 2007, pp. 215–218] Thus the idea of the political unification of Russian Muslims was gaining momentum.

Akchura (1876–1935) was a Tatar leader of the new generation, who in the early 20th century played a crucial part in establishing the

Pan-Turkic movement in Russia. Akchura, a representative of the Akchurins, a clan of Tatar industrialists, was educated in Istanbul, and at a military college there from 1892 to 1896. In 1897, he was arrested and sent into exile for his views by the Turkish government. After his release, he studied at the Free School of Political Studies (1899–1903), and at the same time attended lectures at the Sorbonne's Higher School of Applied Sciences. Having finished his education, he arrived in Kazan in 1904. He had the reputation of an 'intellectual with a European education'. While implementing his plan he drafted with Ibragimov, Akchura sent letters to the prominent activists of the Turkic nations with information about the meeting which was to be held in St. Petersburg regarding the further consolidation of efforts¹⁹.

News about the defeat of the Russian army in the war with Japan, escalation of the agrarian problem, the masses' worsening economic status, and other factors contributed to the population's frustration and social activism. As a countermeasure, the government issued an edict of His Imperial Majesty directed to the Senate, dated 12 December 1904, 'On precepts towards the improvement of the state order'. Government agencies were ordered to 'take appropriate administrative measures to eliminate any constraints in their religious activities that are not established directly by law' [Farkhshatov, 2000, p. 156]. The edict gave rise to new developments in the Tatars' social movement.

One was a petition campaign demanding the urgent resolution of Muslims' day-to-day problems. The first petition requesting political and civil rights for Muslims was submitted in December 1904 to Prime Minister S. Vitte from the akhun of Petropavlovsk, G. Yaushev. On 23 January 1905, Tatar entrepreneurs, on Ibragimov's initiative, gathered in the house

¹⁹ The St. Petersburg congress, which was held on 8 March 1905 in the house of G. -R. Ibragimov, was attended by Alimardan Topchibashev, Akhmet Agaev, Ali Khusainzade, Galim Maksudov, Ibniamin Akhtyamov. I. Gasprinsky, who arrived in St. Petersburg a few days later, also supported the idea of creating a party which could defend the interests of Russia's Muslims [Galimullin, 2003, p. 92].

of the merchant A. Khusainov and worked out a plan for organising a petition campaign [Tataria, 1955, p. 47]. On 29 January, a meeting of about 200 Tatars was held in Kazan, where they discussed and approved the petition's text, drafted by Akçura, the lawyer Said Girei Alkin, and the merchants A. Saidashev and A. Apanayev [Khabutdinov, 2008, p. 121].

Many provisions of the Kazan initiative ran along the same lines as Ibragimov's Istanbul programme (Clauses 1, 3, 4, 6, 7, 12, 16, 19, 22). It most notably dropped the special clauses concerning ending Christian education and granting Muslims freedom of religion. It contained more detailed formulations of clauses regarding the abolition of restrictions against Tatars in their rights of residency, free trade, and property acquisition in a number of Russian regions.

There were new proposals to name spiritual figures honoured citizens, to legalise waqfs, to put them under the supervision of the Orenburg Muslim Spiritual Assembly, to grant freedom of speech and of the press, and to equalise the rights of Tatars with those of the ethnic majority: the opportunity to be appointed to public and official positions, the elimination of restrictions in some professions, and the right to open general education and private schools teaching in the native language. It is worth pointing out the suggestion to invite Muslim experts recommended by the Orenburg assembly to draft legislation, in cooperation with government representatives, concerning the religious and social activities of Tatars and their civil rights in general [Tärceman, 1905, No. 17, 4 March].

The petition of Kazan residents to the capital was followed by tens of similar petitions from the guberniya's rural communities. The government received a total of 500 requests, mainly from the Volga region and the region west of the Urals, which had a lot in common regarding the issues of religious rights and creeds, and social (regional) problems [Senyutkina, 2007, pp. 220–243]. Similar to the period of the petition campaigns of 1883 and 1888–1890, regional leaders managed to mobilise religious communities and communicate

the most pressing problems to the government on their behalf.

The 1905 petition of the Orenburg mufti to the Committee of Ministers stood out among these petitions. His request was mainly focused on the idea of equal rights between Muslims and the empire's majority population. Essentially, it pinpointed the key aspects of Tatars' unequal status. The petition of the Orenburg assembly chairman requested the abolition of the following religious restrictions: 1) the removal of the right of Muslims with a diploma from a Russian institution to teach Christians in Russian primary and secondary schools; 2) the disqualification of Muslims studying in institutions of higher education for scholarships and benefits; 3) the prohibition for Muslims called annually for military service to perform religious rituals in military units and even burial ceremonies, the dire shortage of military chaplain-mullahs in the army, and a reconsideration of established procedures on the matter; 4) the ability to open mosques in religiously diverse settlements only upon the approval of the Orthodox diocesan administration; 5) the practice of guberniya administrations of expelling spiritual figures, elected by parishioners, without charge and trial [Tärceman, 1905, No. 28, 12 April].

In March 1905, the Kazan delegation (Yu. Akchurin, S. G. Alkin, G. Apanayev, and A. Saidashev), on behalf of all Russian Muslims, had a meeting with Prime Minister Witte [Tärceman, 1905, No. 26, 5 April]. On 8 April 1905, a group of Tatars gathered for a meeting in Kazan, where they decided to call a nationwide Islamic congress during the August fair in Nizhny Novgorod in order to establish an Islamic union [Khabutdinov, 2010, p. 121].

The 12 December edict and the start of the first Russian Revolution contributed to the development of a new model of Islamic religious governance, designed to raise the status of Islamic institutes and create a millet in the area of the Orenburg assembly according to the Ottoman model [Khabutdinov, 2010, pp. 183–185]. In 1905, during his meeting with Witte, Mufti M. Sultanov received approval to hold

Yusuf Akchura.

beginning of the
20th century.

a conference. In April, a conference was held in Ufa, attended by around 40 influential clergymen from different regions. On

Sultanov's recommendation, it was decided to extend the statute of management of Sunni Transcaucasian Islamic clergy—an 1872 regulatory document granting the region's Muslims the broadest rights in Russia—to the Orenburg assembly. The conference issued a resolution to develop new regulations on managing religious affairs in the assembly's area, based on existing examples and more adapted to Muslims' needs [Fäxreddin, 1905].

However, Sultanov's initiative did not receive the government's support.

Several months later, the issue of religious institutions and Muslims' needs was discussed at a whole new level in Ufa guberniya, half of whose population was Muslim, at an officially authorised guberniya conference with an invitation to attorneys (Ufa, 22, 23, and 25 June 1905). The conference developed a new package of recommendations [Protocol]. Moreover, while in the Kazan guberniya, decisions were made by the merchant class with others following its directions, in the Urals, leadership was in the hands of the Orenburg assembly (taking advantage of the country's revolutionary circumstances), in conjunction with the district councillors, who were mainly Tatar noblemen. The conference secured public joint discussion of religious problems with Muslim delegates from the smaller districts. As a result, the participants approved a new project, recommended by the April clergy congress, for the management of Islamic institutions in the assembly's area.

At the turn of the century, under the influence of social processes in the country, the

entrepreneurial elite had realised the obsolescence of Muslim opposition to Christianisation. It was aiming to use Russian education and opportunities within existing laws for cultural development, focusing on the expansion of the network of new-style schools and publications promoting a renewal of Muslim sociocultural life. During this period, the direction of social movement was based not on the relationship between Muslims and the authorities, but on attempts to figure out ways to resolve Muslims' pressing problems, to lead them out of crisis, and transform the Tatars into a competitive nation.

The building sociopolitical processes had a positive impact on the elite's activism. Having organised a massive petition campaign in the first half of 1905, it created the appearance of Muslims' preoccupation with their unenviable legal and social status in Russia, while for the larger part of the rural population, these problems were of no concern.

Thus, the changes happening in the Tatar national movement on the cusp of the 19th and 20th centuries, became a sort of transitional stage towards phase *C*. The national movement of 'the Islamic nation of the Volga-Urals region' (a term used by K. Noack) was clearly splitting in two directions: 1) thanks to the new generation of the Tatar creative intelligentsia—the Jadidists—and their published works, the ideas of Europeanisation and progress were growing stronger; 2) new public leaders started a process of the consolidation of sociopolitical Islamic groups, under the slogans of protection of the civil and religious rights of all Muslim peoples of Russia. The most important factors for the transition of the national movement of the 'Volga-Urals Islamic nation' from phase *B* to phase *C* and its transformation into a mass national movement were the 1905 Revolution and the associated democratisation of Russia, the rise of a free press and Tatar printed media, and the formation of political parties. The significant event that led the Tatars to phase *C* of the national movement was the establishment of the All-Russian Party of Muslims, Ittifaq al muslimin, in August 1905.

Section VIII

Ethnocultural Relations of the Peoples of the Middle Volga Region

In the course of the Russian state's development, the Volga-Urals region transformed from a border territory into 'an internal border land', and then, in the second half of the nineteenth century, into 'internal Russia'. In each of the region's administrative-political and socioeconomic positions, ethnic and religious issues underwent particular changes, although the main components of the imperial system of state-confessional relations remained the same.

In the late 19th century, the region had only two governorates where Russians came to less than a half of the population. In the Ufa and Kazan guberniyas, along with Ukrainians and Belorussians, they made up 38 percent of local residents¹. While in the Ufa guberniya, Muslims (Tatars, Bashkirs, Mishars, and Teptyars) were a little more than a half the population, in the Kazan-Volga region, the largest ethnic groups were Tatars and Chuvash (31. 1 and 23. 1 percent, respectively).

The main enclave of Udmurt migration covered uyezds of the Vyatka guberniya (377, 900, or 12. 5 percent of the population). Relatively smaller groups of them settled in the Ufa guberniya west of the Urals (22, 500), the Kazan-Volga region (9, 600), and neighbouring regions.

Another large non-Russian population in the Vyatka guberniya was the Mari people (145, 400, or 4. 8 percent of the population). Major areas of their migration were also the Kazan, Ufa, and Perm guberniyas (122, 700, 80, 700, and 20, 100, respectively).

At the end of the century, there were 843, 700 Chuvash, making up one of the largest ethnic groups of the Middle Volga region. The largest Chuvash groups settled in the Kazan, Simbirsk, Samara, and Ufa guberniyas (59. 9, 19. 1, 11. 0, and 7. 2 percent, respectively), and smaller groups in the Saratov, Orenburg, and Tomsk guberniyas [Chuvashi, Vol. 1, pp. 186–187].

In the late 19th century, Mordvins in the Volga-Urals region resided mainly in the guberniyas of Penza (187, 890), Saratov (123, 900), Nizhny Novgorod (53, 000), Ufa (37, 300), Orenburg (38, 400) and Kazan (22, 200) [Pervaya vseobshchaya, vols. 10, 14, 25, 28, 30, 31, 35, 36, 38, 39, 45, TableXIII]. The centuries-long interaction of Islam, Christianity, and 'paganism' in the Volga-Urals region in many ways predetermined the emergence of a 'peculiar' model of religious self-consciousness amongst the local population and tolerance to members of other religious communities.

CHAPTER 1

The World of a Multiconfessional Village

The region's confessional topography. Religious diversity is a historically developed characteristic of the living space in the Middle Volga multinational village. In the 19th century, this village was a 'common home' for followers of different confessions and confessional groups. The overall majority,

¹ In Simbirsk guberniya they made up 68. 1 % of the population, 68. 9 % in Samara, 73. 1 % in Orenburg, 77. 4 % in Vyatka, 83 % in Saratov, 83. 1 % in Penza, 90. 4 % in Perm, and 93. 2 % in Nizhny Novgorod.

Gennady Nikolaev

the region's rural population, was represented by three religious communities—Christians, Muslims and 'pagans'.

By far, the largest community was Orthodox Christians. Their cultural field united almost the entire rural population of the peoples residing there, with the exception of the Tatars. But this confessional 'mixture' included a fundamentally inconsistent component, since the historical paths of the Russian ethnos and the Volga peoples in Christianity were of dif-

ferent lengths. Based on the level of devotion to faith, and of the acquisition and acceptance of its main tenets, the 'fabric' of the Orthodox living space in the Middle Volga village was torn into a number of 'pieces'. The main social support of Orthodox Christianity were Russian grain farmers, whose syncretic religious worldview and everyday life were based on the principles of Christianity. In the course of centuries-long presence of the ethnos within Christianity, the Orthodox confession grew into a marker and the most important part of Russian national identity. As for the non-Russian village, by the end of the 19th century, the Orthodox adherents with the least 'paganism' in them were Mordvins, who had been living in close contact with Russians from very ancient times. Since long before, there had been synthetic forms of religion in Mordvins' religious consciousness and ceremonial practice, combining Mordovian paganism with Eastern Slavic paganism, and then with Russian Orthodoxy, as well [Mokshin, 1998, p. 225]. By the turn of the century, Christians among the Chuvash, Mari, and Udmurts were mainly 'dual believers' and Orthodox 'pagans'. In the body of their syncretised religious views and rituals, the archaic layer of primeval beliefs was much stronger and more commanding than for the Mordvins [Denisov, 2001, p. 10]. The last ones in line are baptised Tatars: while many 'long-time baptised', although retaining traces of paganism and an affinity for Islam, were relatively firm in their Orthodoxy, the majority of 'newly baptised' (baptised in the post-Petrine era) were Christians only nominally [Kratkaya zametka, 1897, pp. 20–27; Nikolsky, 1912, p. X–LXV].

The Christians in the Middle Volga region who fell outside the fold of the official Church were mainly Russian agriculturalists. The populated areas 'infected' with dissent in the administrative territorial units were relatively few in number. As a rule, Old Believers and those who deviated from standard Orthodoxy lived in groups of no more than a few dozen members. But there also were true 'cradles' of dissent, with public chapels and numerous supporters of the 'ancient godliness': The Kazan

Guberniya Tsivilsk Uyezd—Mozharki village; Simbirsk Guberniya Alatyry Uyezd—Kladbishhi village [Scientific Archive of Chuvash State Institute of Humanities, dept. I, item 166, p. 61; State Archive of Ulyanovsk Oblast, f. 76, file 1418; p. 24, 25].

'Authentic paganism' in the countryside was of a non-Russian origin. Those who were the most unyielding in their 'old' faith were the Mari and Udmurts. In the Middle Volga countryside, small groups of supporters of other confessions—Catholics, Jews, Lutherans, Anglicans, Mennonites and others—were represented by late settlers, natives of different governorates and foreign subjects (Lithuanians, Estonians, Latvians, Jews, Polish, Germans etc.).

The existence of various groups of believers in the non-Russian countryside called for the creation of a number of nominal confessionals. Thus, in the second half of the 19th—the beginning of the 20th century, Orthodox missionaries divided the baptised Tatars into the following groups of believers: 1) '*taza keräshen*' ('*çista keräshen*') (literally: pure baptised) or '*çi keräshen*' (literally: raw baptised)—'a Tatar who is baptised, but not enlightened, not fully educated in the truths of the new religion, who had not forgotten the old religion, nor abandoned pagan rituals and superstitions'; 2) '*qara keräshen*' (literally: black baptised) or '*urissimaq*' (literally: a baptised person resembling a Russian, russified)—a Tatar who is 'relatively more loyal to Christianity and Orthodox Russian traditions'; 3) '*aq keräshen*' (literally: white baptised) or '*tatarsymaq*' (literally: a baptised person resembling a Tatar, tatarified)—'most loyal to Muhammadism, with an ingrained Tatar Muhammadan spirit, follows Muhammadan rituals and superstitions, always washes himself, keeps his body clean, wears clean clothes [Sofiysky, 1891, p. 77, 78].

The issue of interrelations between religious communities is multifaceted, involving ethnic and confessional identity, a dialogue between cultures, the worldviews of members of small and large confessional communities and the milieu of their everyday life, state-confessional relations, etc. An interpretation of life in a Middle Volga multiconfessional village from

the viewpoint of 'insider'/'outsider' relation allows us to enter the backstage of many processes that had been ongoing within it for a long time, and to fill in the gaps in the picture of the co-residence of peasants belonging to different confessions.

The concepts of 'insider' and 'outsider' in a rural environment. The opposition 'our' / 'others' was an integral part of the daily social life in rural communities. This differentiation of the community members was historically based on different types of markers: costume, customs and traditions, dialect, economics, socio-financial and legal status, kinship, administrative-territorial divisions, estate and ethnicity, nationality, and more. This situation automatically forced the peasants to simultaneously play two 'polar' socio-cultural 'roles': 'insider' by ethnicity, but 'outsider' by place of residence; 'insider' by dialect, but 'outsider' by kinship etc. The frequency, closeness and nature of social relations among those who tilled the soils were, firstly, defined by this concept. An observant contemporary pointed out the cautiousness of the baptised Tatars in the way they communicated with Russians: 'When the baptised notice that a Russian among them understands Tatar, they instantly try to warn each other with a phrase: *'çabatasi tishek'* (*çabata*—lapy, bast shoes; *tishek*—a hole) [Mashanov, 1875, p. 40].

Naturally, the content of their own socio-cultural space in all aspects, socio-economic, socio-cultural, spiritual, moral and others, was better for peasants than others, with some minor exceptions. According to the ethnographic notes of a contemporary Chuvash, 'They always put themselves higher in all aspects. They think their nation is kind, patient, that they speak right, and their clothes are more beautiful, and they tread lightly, and [they are not arrogant]. The people are hardworking: they have builders, woodworkers and blacksmiths; their village is wealthier; there are priests, teachers from their village; they have grocery shops, they trade in textiles, have a number of windmills, hulling mills' [Scientific Archive of Chuvash State Institute of Humanities, dept. I, item 158, p. 152].

Faith was a foundation of the peasant community lifestyle, its spiritual brace. While being the core foundation of their worldview, perception and outlook, it defined the farmers' attitude towards the earth, nature, family, life values, and informed their household, family, marriage rituals and traditions. The peasants' business, leisure, ethics, morals, customary law were also imbued with faith. Due to its major importance as regards the identification of the cultural field, objectively, the confession served to differentiate the social environment from the onset. All four confessions—Orthodoxy, Islam, Old Russian Orthodoxy, 'Authentic Paganism'—in the Middle Volga villages were represented by loyal supporters, strictly oriented to their own cultural field. Every confessional community, both major and minor, believed that its system of religious views was the true faith. The ones setting the tone of intolerance towards other confessions in rural communities were true believers in their faith [Scientific Archive of Chuvash State Institute of Humanities, dept. I, item 266, p. 137].

The confession served the residents of the Middle Volga villages as a useful, complementary criterion for assessments in terms of their perception of reality in the mirror of attraction/repulsion; it defined their patterns of behaviour.

As a useful, complementary criterion, the confession was particularly prevalent in the marital sphere of peasant life. Young people chose their husbands and wives only from among those of like faith, almost without exception. In villages and towns surrounded by communities with another confession, boys and girls went 'to far off lands' in search of marital partners of like faith. In the densely settled communities, interconfessional marriages were extremely rare, and were limited to singular cases. In such instances a young wife usually accepted her husband's faith. In so doing, the woman showed the members of her husband's family and his home folk that she obeyed her husband, respected and accepted his world—customs, traditions, behavioural norms, morals, ethics and other aspects, and tied her life to his forever. A minuscule number of interconfessional marriages in the

rural areas of the Middle Volga resulted naturally from the fact that conversion of Christians to Islam was legally prohibited and subject to prosecution.

Residents of the Middle Volga were supporters of religions with differing belief structures in terms of their acceptance or non-acceptance of resistance. As justly stated by the contemporary ethnologist, A. Salmin, the conceptual frameworks of the monotheistic religions are more conflicted than are those of traditional national confessions [Salmin, 2007, p. 33]. The polytheistic tradition includes beliefs in many gods and divinities; it is flexible, yielding, open and does not have a socio-cultural system with strictly outlined borders. Conceptual ideas of such views are tolerable by their nature, for they are not canonised, hence, they do not reject other Gods from other religions. Missionaries actively working to convert Chuvash pagans to Christianity were met by the supporters of traditional confessions with a rebuff dictated by their subtle worldview. They often received the same answer: 'No one knows whose faith is better, yours or ours, because God sends rain to our fields as well and gives us all that we need for mortal life. If God did not approve of our faith, He would not have given us a harvest and other worldly blessings, but would only bless the baptised. But now we see that God cares about us, too... God created 77 languages and 77 confessions, and that includes paganism as well... Everyone can live the way he thinks best and in which he has lived up until now' [Efremov, 1913, pp. 714].

Adherents of traditional national confessions, having views that the confessionally 'other' is an alternative to one's 'own', were open for a spiritual dialogue—both in the narrow and broad meaning of this word—with people of other confessions. Against the reality of daily life, this socio-psychological quality manifested itself in respect of what was sacred to 'outsiders', their orientation towards trusting relationships with 'outsiders' regarding religion and, if needed, in turning to 'other' Gods for patronage. In the town of Oshtormo-Yumye and its outskirts (Mamadysh Uyezd of Kazan guberniya) Udmurt adherents of tradi-

tional national confessions 'always welcomed the clergymen with a bow, and one of them, old man Petash, during religious processions' even invited them to his house, gladly listened to the moleben, kissed the cross, but refused to get baptised, 'pleading his age: if I were young, then I would get baptised, but my time has passed—I am old, I will die the way I have lived' [Istoriko-statisticheskoe opisanie, 1904, p. 233].

The space inhabited by the worldview of monotheism was a closed system based on the doctrine of the one and only, universal, personified being—the creator of the world and humankind. All three, Islam, Christianity and Judaism, reject other belief systems. The rejection of the confessional 'other' by Orthodox Christians and Muslims in the Middle Volga was manifested in numerous multifaceted forms. In the 19th century, from early childhood, when Tatar Muslim children misbehaved, their mothers would say to them 'Stop crying, or else I'll send you away to the Russians' [read: Christians.—G.N. [Nasyri, 1977, p. 75]. 'To this day, while living among Muhammadans,—as pointed out by a contemporary in the 1870s,—many Russians refuse to eat with them' [Mashanov, 1875, p. 40]. Adherents of different confessions also blackened other religions, depicting their sociocultural universe as a centre of savagery and barbarism. Committed enemies of Christianity among the Tatar Muslims spread rumours in their ethno-confessional environment that when building a cathedral the Orthodox Christians 'bury a person under it alive and it must be from among the newly baptised' [Koblov, 1911, p. 97].

The confessional tension between monotheists and polytheists was lessened, first of all, due to the fact that the versions of Islam and Orthodoxy that had spread throughout the social sphere in the region were more fluid than in other regions of the Russian Empire. Thus, the Volga region Orthodoxy did not have a 'tradition of medieval monastic asceticism' such as prevailed in the territory of the 'Holy Rus'; here it was gaining its momentum 'in the New Age, when Holy miracles and ascetic deeds of religious hermits were a rarity' [Filatov, 2002,

p. 61]. Here is where the most liberal Islamic school of jurisprudence, the Hanafi, were established. The Naqshbandi Sufi order that found its followers among Volga Tatars, was also flexible in its attitude towards people of other confessions [Malashenko, 1998, p. 22]. Secondly, the religious views of the Middle Volga rural community, both Orthodox Russian and Muslim Tatar, included a massive block of 'pagan' beliefs and rituals. The massive consciousness of both of these groups still maintained a number of universal pagan characters as 'evil spirits': including *leshya* and *shurale* (forest sprite), *domovoy* and *yort iyäse* (house sprite), *vodyanoy* and *su iyäse* (water sprite), *kikimora* and *biçura* (female hobgoblin) etc. In these regions, both Russian 'popular Orthodoxy' and Tatar 'popular Islam' were immersed in an unfathomable world of superstitions and beliefs: in Russian villages, at the least gasp of the dying, peasants opened oven chimneys in order to let the soul leave freely; Russian girls wanting to marry the lads of their choice put notes with their sweet dreams into the canons of the Orthodox church bells; before going to sleep, superstitious Muslims, with the goal of protecting themselves against an 'evil spirit', put iron items under the bed—a spoon, an axe, a knife, etc.; Tatar girls honouring ancient traditions, after seeing the first starling in spring, rubbed their face with snow to look beautiful throughout the whole year [Istoriko-statisticheskoe, 1904, p. 202, 247; Koblov, 1910, p. 6, 9, 11, 26, 40, 41].

The pagan component embedded in the belief system thus objectively served well both the Orthodox believers and the Muslims when dealing with ethnic groups which mostly lived 'by grandfather practices', for it allowed them to some extent belong to the foreign confessional environment, reducing or even erasing socio-psychological friction.

Due to the specificity of the Middle Volga community, religious 'hesitation' was a common enough phenomenon even in monotheism. Thus, in 'indigenous' Orthodoxy in the cultural field of those Christians who practised paganism and those who practised two different religions, this kind of peasants' behaviour

was a daily phenomenon. Sometimes in predicaments even parishioners who were zealous in faith sought patronage from some 'other' divine principle. It was this very behavioural stereotype of a peasant woman that was noted, in particular, by the Chuvash priest K. Prokopiev: 'In my parish there is one woman, a zealous Christian, whose husband has the Epilepsy. She served a service of intercession in the church, but when it didn't help, she, as she confessed to me afterward, contacted a *yumza*. Then, she took her husband 12 versts away to a Tatar mullah. Finally, she again came to me' [Prokopiev, 1905a, appendix 1, p. 126].

The opposition monotheist/monotheist in the social space of a village, due to the nature of different religions, a priori should have triggered severe mutual cultural rejection. But only short periods of its everyday existence manifested in such a situation here. In general, this concept should be characterised as neutral and careful, tolerant. The relationships between Orthodox believers and Muslims in the majority of populated areas in Russian-Tatar contact zones reflected the same image as that evidenced by the inhabitants of the Mishavka village in a Kazan uyezd near the governorate of the same name in 1864: 'We are not close with them [Muslims]; and we are not in conflict: there's nothing to argue about. We have our own environs, our own estate, and our own land. The Tatars, too, have their own possessions... There are almost no [debates and arguments about religion]' [Malov, 1892, p. 67]. Both a Russian peasant and a Tatar ploughman built the world of harmony and goodwill in their families, or even beyond, relying not so much on the dogmas of faith—which, by the way, they adopted very superficially [State Archive of the Mary-El Republic, f. 25, inv. 1, file 8, s. 36, 37; Malov, 1892, p. 136]—as on the pragmatic beginning. The mission of a ploughman is to feed society; the abode of religious workers is confessional matters. In the 19th century people of the plough, scythe and flail both from the among the Russians and the Tatars continued to build relationships of trust with each other, considering the 'other' cultural field to be God's providence, as their fathers

and grandfathers once had. By honouring 'alien' religious holidays, as they called them, both Russian Orthodox believers and Tatar Muslims developed close mutually-beneficial contacts. Thus, at the turn of 19th–20th centuries, in Sviyazhsk uyezd of Kazan Guberniya, the neighbouring Tatar Muslims celebrated Theotokos of Tikhvin Day together with the Russian Orthodox peasants [Koblov, 1907a, p. 41].

Gradually mastering the basics of the confessional world of their mothers and fathers, by the age of six or seven, children naturally saw themselves as the adherents of their parents' faith. In this regard, the young generation of Tatar Muslims was more advanced than their peers who followed a different faith. Such a situation was the result of the greater ethnic and confessional readiness of the Tatars, as well as of the relative sophistication of the organisational fundamentals in the form of Islam their followed. The Kazan diocesan foreign missionary V. Eslivanov noted that in a Tatar-Muslim family 'the child from the cradle was subjected to the father's and mother's irresistible influence in education in the spirit of Islam', and 'the 7–to 8-year-old child acquired such a strong Islamic-tribal inoculation that he would surprise each new observer and challenge each zealous Russifier about this' [Eslivanov, 1915, p. 1138]. In the cultural field of Orthodoxy and Islam, confessional educational institutions, primarily represented by grade schools of various types, played a major role in the development of the fundamentals of religious consciousness and behavioural stereotypes that the young generation of Middle Volga ploughmen in the family were exposed to, providing them with structure and inner harmony. In these schools, students not only acquired knowledge about the fundamentals of religion, the history of religion, responsibilities of parishioners, they were also imbued in the spirit of confessions—they read prayers, observed religious rites, attended divine services, etc. [Zakharyevsky, 1909; Koblov, 1916]. In the polytheistic tradition, the confessional education and upbringing of the younger generation were carried out only in the cultural space of such traditional social institutions as the family and rural community. In

Photo from the late 19th century

some of pagan rites of the Volga peoples—for example, in rainmaking among the Chuvashes [Salmin, 2007, p. 116]—the main participants in ritual displays were children. The youth entered adulthood equipped with a solid sense of their confessional identity. As a rule, those who reached a ripe old age became: in monotheistic traditions, pious parishioners, zealous in faith, and in polytheistic traditions, proficient judges and keepers of religious practices and traditions, inveterate custodians of the spiritual-moral life of the community [Scientific Archive of Chuvash State Institute of Humanities, dept. I, item 266, p. 115, 116].

Usually the younger generation, as opposed to the confessional 'alien' generation, was at the cutting edge of the 'automatic' struggle against heterodoxy. Owing to youthful maximalism, it was, as a rule, characterised by intemperance—when defending their point of view, they easily used fists and were prone to rash steps and radical actions: they would

cut down sacred groves, destroyed the objects of the religious cult, etc. [Scientific Archive of Chuvash State Institute of Humanities, dept. I, item 587, p. 36; Prokopiev, 1906, p. 333, 334]. The middle generation usually responded to confessional ‘aliens’ with confidence, thus nipping in the bud all potential friction on religious grounds. Only the external challenges of a confessionally intolerant nature could throw staid family men off balance and make them take reciprocal steps corresponding to a threat. A similar case of religious confrontation took place, in particular, at the end of 19th century in Simbirsk uyezd: on 9 May 1897, a procession of Chuvash Orthodox peasants with religious hymns went from Simbirsk to Nizhniye Timersyany village. The participants of the procession held aloft a cross, which they intended to put on a parish church. Their route took them through the Tatar village of Novye Timersyany. The people of Novye Timersyany blocked the sacred procession, driving it from the road in a hailstorm of stones. Soon, new groups of believers started to join both the Christians and the Muslims. A great confessional conflict with unpredictable consequences loomed. It took the intervention of the local administration. The procession, accompanied by a police sergeant, successfully passed through the Islamic village. At the same time, due respect was accorded to the religious feelings of Muslims—the participants of the procession did not sing religious songs or pronounce prayers; the cross was half-mast and wrapped in canvas [Kobzev, 2005, p. 473, 474].

In the confessional opposition to heterodoxy, the senior generation of ploughmen was, in fact, the ideological custodians of a traditional lifestyle. Being a supporter of inflexible positions in questions of faith, it as a rule firmly rejected what was alien to the confession, creating a point of conflict in peasant families and rural societies [Yakovlev, 1904, p. 55, 63].

Socio-cultural mobilisation of religious communities. In the latter half of 19th century, the importance of religious affiliation as a factor differentiating the society grew due to circumstances and conditions of the internal and external environment. After the onset of the

era of capitalism, the ethnic self-consciousness of the rural population of the region rose to a qualitatively new level. These changes were the result of the destruction of former closed communities, an increase in the mobility of members of rural societies, increased communications between ploughmen and their compatriots and members of other communities, a rise in their educational level, and an opportunity to satisfy to some extent their interest in the history of their people. In the minds of village inhabitants, the ethnic principle was solidly intertwined with the confessional, and the confessional was intertwined with the ethnic. A severe external challenge—a sharp activation of missionary work and the introduction of the so-called N. Ilminsky's missionary educational system by the autocracy—served as a confessionally mobilising factor for the rural population of the region.

Losses incurred by ‘true paganism’ in its harsh confrontation with the Russian Orthodox Church were considerable, but by no means disastrous to the community. Even in their best year, the ‘catch’ of missionaries in the provinces of the region did not exceed several dozens of people [Otchet o deyatel'nosti, 1893, pp. 87–89]. The adherents of ‘paganism’ from the Volga peoples regarded those who left their native confession to be alien not only in faith, but also in nationality. Highlighting their ethno-confessional commonness among the compatriots, unbaptised Chuvashes were prone to call themselves ‘*çän çävaş*’ (literally: a real, true Chuvash); unbaptised Maris called themselves ‘*çimariy*’ (literally: a real, true Mari), and unbaptised Udmurts called themselves ‘*çin udmurt`e s*’ (literally: a real, true Udmurt). An interesting fact: an Udmurt who had served in the army tended to consider himself an ‘unclean votyak’ [Yakovlev, 1904, pp. 56]. From a psychological perspective, those ethnoconfessionisms were the locus of two moral-ethical principles. The first of them was a reproach; it was addressed to the compatriots who abandoned their ‘old’ faith. The second was merit; it was ascribed by the adherents of polytheism to, above all, its fathers and grandfathers who, against all odds, had

defended the traditional cultural heritage and passed it on to their children.

In advocating the right of their cultural heritage to exist, the adherents of traditional faith mostly were very determined, firm, and consistent [Prokopiev, 1906, p. 332]. The arsenal used by the adherents of traditionalism to influence those compatriots who plunged into the 'Russian faith' encompassed even such a painful tool as psychological pressure. In Mari El villages of Kozmodemyansk uyezd in Kazan Governorate, 'pagans' in the post-reform time made special sacrifices to Kiremets and asked them to destroy compatriots of the 'Russian faith' who cut down sacred groves [Yakovlev, 1892, p. 11, 12].

The attitude towards former 'insiders' and resistance to external confessional pressure in the space of 'paganism' ranged from grudging to very rigid. In the region, the upholders of the traditional faith represented a heterogeneous cultural field. Some of them maintained the faith of their fathers and grandfathers; others sought a reform of their religion; of these, some were under the 'Christian influence'; others were somewhat submerged in the space of Islam [Kremlev, 1913, p. 938]. And the groups oriented towards monotheistic traditions encompassed different categories of traditionalists [Kremlev, 1902, p. 401–402]. Among those pagans who observed Christianity, the rejection of their former spiritual compatriots was, as a rule, relatively soft.

The absolute majority of the Orthodox non-Russian rural population of the region entered the era of capitalism as nominal adherents of Christianity. Having become an object of impact of N. Ilminsky's missionary educational system, they, for the most part, became the followers of two different religions. Such a confessional shift led to confessional tension in their environment. In the third quarter of the 19th century, during the years of public disasters—a drought, hailstorm, epizootic outbreak, etc.—the members of the Chuvash, Mari El, Mordvin, and Udmurt rural societies conducted their ancient pagan rites almost everywhere and without any disputes, but in the last quarter of the century the unity of peasant communi-

ties of these ethnic commonalities over this question became a thing of the past [Otchet o deyatel'nosti, 1893, p. 81]. Peasants' 'worlds' divided into 'insider' and 'outsider'—into the Christian party and the pagan party. In this religious confrontation, the Christian party whose advanced guard was represented by the younger generation started to take over. The 'fathers' had to, though not without dissent, surrender one confessional position after another to their 'sons': the axe and the plough entered the territory of Kiremet groves and land adjacent to them; rural gatherings began to adopt carnal sentences banning public prayers, etc.

Having become an object of impact in the institutions founded by missionaries, the baptised Tatars preserving loyalty to Orthodoxy became even stronger in faith. In the post-reform era in rural societies, confessional 'battles of local importance' often broke out concerning 'insider'/'outsider' relations between the adherents of Christianity and 'apostates.' Both 'unofficial' Muslims and 'Christian Tatars', trying to reason with their 'lost' compatriots, put powerful socio-psychological, physical and economic pressure on the confessionally disjointed minority. Urging, generous promises, setting dogs on them, manhandling, deprivation of land allotments, etc., were used. [Bagin, 1910, p. 393; Istoriko-statisticheskoe opisanie, 1904, p. 268, 269, 383]. On 12 May 1881, archpriest E. Malov made the following note in his missionary diary: 'F[ather] Kuzma said, as before, that those who fell into Islam had toppled a cross from the old chapel in the heartland of the Yelyshevo village so as not to be ashamed of Mohammedans passing through the village' [Malov, 1999, p. 27].

The confessionally mobilised and organisationally advanced Tatar Islamic community of the region was strengthening its position as a cultural space. Tatar Muslims who betrayed their faith, as 'outsiders', became pariahs both in their families and rural communities. In the post-reform period in the Russian village, ostracism was also used as an effective tool in the fight against confessional betrayals. But this kind of phenomenon was rare in the Russian environment [Arnoldov, 1868, no. 45].

In the latter half of 19th century, a separation from the confessionally 'alien' manifested itself particularly clearly in the contact Islamic-Christian areas. In the socio-cultural space of multinational villages and villages where the adherents of Islam and Orthodoxy lived together in conditions of an ethnic and confessional mobilisation of commonalities, as well as in 'apostate' towns, a movement to establish confessionally and ethnically pure rural societies and land unions began to gain momentum [National Archives of the Republic of Tatarstan, f. 51, inv. 5, file 885, s. 2 reverse, 3]. A similar means of eliminating ethno-confessional tension was, as a rule, a painful, bureaucratic and economic operation, incurring significant material costs and spreading over many years. At the same time, this method often made it possible to put an end to longstanding mutual resentments and complaints [National Archives of the Republic of Tatarstan, f. 51, inv. 5, file 1258, s. 1–17].

A relatively high level of confessional tension in the Islamic rural community of the region in the latter half of the 19th century was supported by several conditions: a religious reformation experienced by the Tatar society; the historical 'tradition' of treating socio-economic, socio-political, and socio-cultural decisions of the autocratic state as preliminary steps to Christianisation [Zagidullin, 2000, p. 166–191]; the second rate nature of the practised confession in the socio-cultural space of the country [Nogmanov, 2003, p. 178], 'clum-

sy administrative steps of local authorities' [Koblov, 1907a, p. 11]; active Christian education implemented by the church in the circles of Tatar 'apostates'; criminal prosecution of the members of rural communities for promoting Islam, etc.

The 'insider'/'outsider' opposition was an integral part of the social life of a Middle Volga village in the latter half of the 19th to the beginning of the 20th century. For some time, the basis for such differentiation of members of the rural community served as characteristics of different types. The existence of this division on a confessional basis was the natural consequence of the multi-confessionalism of its population. Faith, by virtue of its great significance for one's cultural identity, objectively was a principle differentiating the social environment. It defined a behavioural stereotype of the peasant community and served as an evaluative and complementary criterion when perceiving reality in a mirror of attraction/rejection. In the era of capitalism under the conditions of ethnic and confessional mobilisation of its population, the demand for and significance of the 'insider'/'outsider' concept as a principle regulating the confessional life in a Middle Volga village increased significantly. The religious confrontation in the ethno-cultural space of the region had different magnitudes. However, almost everywhere its intensity was relative. For the most part, peasants of all confessions were open to a cultural dialogue with each other.

CHAPTER 2

Ethnocultural Interaction of the Russians and Tatars

Guzel Stolyarova, Nail Khalikov

From the middle of the 16th century, Kazan became the centre of the expansion of Orthodoxy to the east. It was from this historical moment in Tatar society that two main stereotypes can be discerned regarding the actions of the Russians against the Tatar state: the stereotype that 'the Russians were colonisers', and, as regards faith, the stereotype whereby 'the Russians were pursuers of Muslims'; to some extent these stereotypes have survived to the present day [Sagitova, 1998, p. 113]. Meanwhile, it's evident that these stereotypes emerged as a result of the policy of the Russian state and had nothing to do with the majority of the Russian population. The absence of antagonism in inter-ethnic relations (including Russian-Tatar) in this and later periods, as L. Sagitova fairly pointed out, 'could be extracted from the fact that the Russians and the Tatars were united by the shared interests of various social groups in their opposition to their state' [Sagitova, 1998, p. 116].

At the state-political level, the relationships between the Tatars and the Russians (represented by their ruling elite) from the moment of incorporation of the Kazan Khanate (however, with some attenuation starting from the end of the 18th century) were a confrontation of an ethno-confessional nature rather than a merely ethnic conflict, and in this economic and cultural elements were subordinate. At the same time, at the domestic level no serious confrontation between the Tatars and the Russians was revealed. As noted by K. Nasyri, 'By virtue of the fact that a Russian and a Muslim (Tatar) live on the same land, eat the same bread, these two nations know each other's habits well and are in close relationships' [Nasyri, 1977, p. 18]. Due to various reasons, mixed villages from the Russian and local yasak-paying people,

including the Tatars, were formed, where the representatives of different nationalities lived 'on their plots of land', autonomously enough, but at the same time belonged to one community ('society', or 'community'). The so-called complex communities (which encompassed the populations of several towns with different nationalities) could be found only in the Middle Volga region. The incorporation of people of different nationalities into one community was the most important factor in the inter-ethnic interaction in the region. In the complex communities, there were common traditions which governed the processes underlying coexistence. 'Pomochi' were the norm in the community's daily life—the joint erection of a house or other household outbuildings, the joint stocking of timber, etc. Even barge haulers' brigades in the Middle Volga region were multinational [Busygin, 1966, p. 80].

Scholars note that in a number of spheres, above all in the spiritual, the influence of Russian culture, including language, affected the Islamic peoples of the region (Tatars, Bashkirs) less than it did the Finno-Ugric peoples [Kuzeev, 1992, p. 209].

Despite a significant cultural and confessional distance, the Tatars also borrowed many cultural elements from their foreign neighbours. K. Fuchs acknowledged their mutual influence with the Russians as a result of the extended coexistence. 'Their houses are built by the Russians, who even worked on the restoration of mosques, and vice versa; I've seen Tatar peasants building wooden houses in Russian villages many times... Houses of wealthy merchants differ little in their appearance from houses of Russian noblemen and merchants. Inside houses, walls are often painted by Russian painters; landscapes with trees, flowers, and a river are

common images; sometimes a sea with ships is depicted; but you will see neither people nor beasts nor birds, for this is strictly forbidden' [Fuchs, 1991, pp. 22–24]. Borrowings by both parties and the similarity of different elements of material and spiritual culture are pointed out by the scholar in the same detail: in the headgear of Tatar women; in childbirth rites of the Tatars and the Russians; in the mastering of traditional Tatar craft of gold embroidery by Russian craftswomen; in the joint participation in Tatar and Russian celebrations and public activities [Fuchs, 1991, pp. 33, 85, 116–117, 140–142]. K. Fuchs also did not overlook some negative, in his opinion, nuances in the relationships, especially noting the unwillingness of the Tatars to study the Russian language, which surprised him the most [Fuchs, 1991, pp. 129–130, 138, 139, 144].

According to the famous ethnographer N. Vorobyev, Tatar culture absorbed influences of different origins. The following influences (according to the magnitude of the impact) became part of the main forms of Tatar culture: 'the Persian, mostly interpreted through the culture of the Middle Asian Turks; the European interpreted through the Russians; and lastly, the Finnish interpreted through the Maris, Votyaks, and Mordvins. The difficulties in conducting ethnographic analyses become even more challenging due to the fact that all the peoples of the region, after living together for almost 500 years, had grown close in terms of culture thanks to their shared interests both in the material and spiritual culture; there are a lot of features common to all the nations of the region' [Vorobyev, 1925].

The 'addition' of largely similar agricultural practices of the Tatars to that of the Russians and the other peoples of the region was one of the most important results of the ethno-cultural contacts of the population of the Middle Volga region and Ural. 'A Tatar's agricultural practice', as N. Vorobyev wrote, 'is in general terms identical to that of the other nations of the region: the same systems of land tenure are used; the same cereals are sown; the same agricultural equipment is used; the breeds of livestock are the same. To move in summer, mainly a cart

of the so-called 'Cheremis' type is used, which differs from a Russian peasant cart in that it has a higher backrest' [Vorobyev, 1925].

Cannabis (a plant typical for the steppe) was especially characteristic of the Tatars, whereas flax cultivation (a plant which due to its biological properties is more suitable for a forest zone) was, most likely, borrowed by the Tatars from the ancestors of the Maris and the Udmurts. From the Russian tradition of land cultivation, the Tatars inherited the cribbed barn under the Russian name (*även*); an ancient shish (*şäş*) was a Tatar construction fire drying sheaves, also known as a 'Tatar drying barn' among the peoples of the Middle Volga region and the Urals [Busygin, 1966, p. 241; Khalikov, 1995, p. 87–88]. But we should not rule out the possibility that Tatar cultivators borrowed a drying barn from their Mari and Udmurt neighbours [Vorobyev, 1953, p. 92]. Thanks to Russian settlers from the Upper Volga and Northern Russia, in the fields cultivated by Tatar peasants such kinds of sheaf laying as *soslan* and *bäbkä* (Russian *suslon* and *babka*; the Tatars also called them *marja başı*—'a head of a Russian woman') became widespread. Tatar types of laying such as a *cross*, and a *sacrum* originate from the agriculture practices of Russian peasants from the southern governorates of European Russia and the Ukrainian people. They also introduced a threshing stone into the practice of the Tatars of South Ural [Busygin, 1966, p. 102; Khalikov, 1995, p. 76–78]. Often such borrowings are not entirely correctly interpreted. For example, it is thought that a prong hoe with a reversible *politsa* that is both traditional and typical of the 19th century was introduced into the Middle Volga by Russian settlers [Busygin, 1966, p. 93]. But the metal parts similar to those of a 'Great-Russian' plough (*soshniks*, *politsas*) were found in the territory of pre-Mongolian Volga Bulgaria and Udmurt lands several centuries before the large-scale migrations of the Russians into the Middle Volga and the Kama regions [Khalikov, 1983, p. 18]. The plough—an instrument which due to its mechanical properties was meant for ploughing light forest soils—likely appeared among the

local Finnish peoples. The plough was most likely borrowed by the Bulgars (Tatars) from local cultivators, since a tool such a plough was a traditional ploughing instrument of the early Bulgars; ploughshares and chiefs of such tools are known from the monuments of the 6–13th centuries both on the Lower Volga and Northern Caucasus, as well as the Kama region.

A special role in the enrichment of the vocabulary of the Tatar language was played by Russian. Words referring to various areas of life (authority, court, trade, military science) were taken from Russian to Tatar over the course of linguistic developments. The vast majority of borrowings from Russian can be considered loanwords only in terms of etymology. In fact, they have been deeply rooted in the Tatar language for a long time and are not perceived as loans anymore. In the bilingual dictionaries of the 19th century, they were already listed along with Tatar words. Some words became part of the Tatar vernacular as a result of oral communications between the Tatars and the Russians; others resulted from the exposure of the Tatars to Russian written texts. The enrichment of the Tatar vocabulary by Russian-European loan words in the 19th century was due to changes in the public and political, economic, and cultural spheres of Tatars' life. At the beginning of the 20th century, a rise in education among the Tatars led to the active exclusion of Arab-Persian loan words concomitant with their substitution by Russian and European words. A. Yusupova classifies this vocabulary thematically, thereby enabling a delineation of the spheres of activity in which the most significant changes were occurring². Among the specified thematic groups,

the largest—that is, the one comprising of the largest number of Russian loan words—is the group denoting different spheres of activity, namely names of plants, beverages, food, etc.; the smallest thematic group contains terms from the area of medicine; the majority of Russian and European loan words belong to the realm of everyday life. Very similar processes also occurred with Tatar loan words adopted in the Russian language [Yusupova, 2009].

The Tatars, in their turn, were influencing their neighbours, which is also reflected in local literature. In particular, the influence of Tatar national cuisine on the cuisine of the other peoples of the area is mentioned [Arkhangelsky, 1911]; borrowings in clothes and decorations are mentioned [Nikolsky, 1911, p. 546; 1925, p. 168; Sokolov, 1925, p. 174]; the influence of the Tatar language is particularly notable: some population groups added 'tatarisms' to their native language; in places inhabited by both peoples, the non-Tatar population spoke fluent Tatar [Nikolsky, 1925, p. 167; Yevseyev, 1925, p. 181, Shestakov, 1884, p. 4].

Forced Christianisation, as well as attempts at Islamisation, were among the negative factors impacting inter-ethnic interaction. Indeed, ethnic conflicts of interest might even have occurred in everyday life. Mentions of ethnophobia among the Middle Volga peoples are rare, but can be found in descriptions of the past [Nikolsky, 1911a].

Regional ethnographers of the 19th century have written about inter-ethnic marriages in the territory of the Kazan Governorate [Laptev, 1861; Lyadov, 1861; Maksimov, 1894; 1902; Rittikh, 1870; Sboev, 1856; Shein, 1907]. There is virtually no mention made of Russian-Tatar marriages: while supporting close economic ties and friendly relations with their neighbours

² On the basis of Russian and European vocabulary, A. Yusupova has formulated 17 thematic categories: 1) the names of dishes and household equipment: *kukshin*, *padnus*, *tyarlinkya*, *samavyr*, etc.; 2) household items: *munchala*, *ponar*, *plitya*, *bstyal*, etc.; 3) tools: *lum*, *shpaler*, *shotka*, *ystan*, etc.; 4) units of measurement: *lot*, *ger*, *birshuk*, *pot*, etc.; 5) names of buildings and structures: *matcha*, *mich*, *zhdesheke*, *zastun*, etc.; 6) names of plants and food items: *kyabestya*, *kryan*, *anise*, *upunka*, etc.; 7) names of clothing items and fabrics: *eshlepe*, *kartus*, *materia*, *plis*, etc.; 8) items used in agriculture: *suka*, *kamyt*, *buryanya*, *burazna*, *salam*, etc.; 9) classroom-related vocabulary: *karta*, *kanikul*, *kompas*,

lineyka, etc.; 10) military vocabulary: *drushka*, *pulyn*, *shtik*, *pristup*, etc.; 11) names of professions: *apikun*, *piser*, *patriot*, *passazhir*, etc.; 12) financial vocabulary: *kassa*, *suma*, *banka*, *pankrutlyk*, etc.; 13) legal terms: *shtrau*, *sut'*, *kontrakt*, etc.; 14) medical terms: *apteka*, *likyer*, *chakutka*, etc. 15) musical terms: *sripkya*, *argan*, *gitar*, etc.; 16) names of minerals: *lazur*, *magnit*, *izbis*, *labastyr tashy*, etc.; 17) religious vocabulary: *manastyr*, *grup*, *pup*, *porfira*, *sochel'nik*, etc.

of other nationalities, the Tatars nevertheless persistently resisted Christianisation, and religious differences became an insurmountable barrier to mixed marriages. At the same time, in areas inhabited by multiple nationalities, mention is made inter-ethnic marriages of the Tatars with the Chuvashes and settled Bashkirs, as well as Maris, Udmurts, and Mordvins. An important role in this was played by linguistic similarities, common features in business and culture, the influence of the Islamic religion, whereby a person was made a Tatar through conversion. Lastly, gender-related differences in inter-ethnic marriages were revealed: Russian women entered into mixed marriages far more often than men; the reverse trend was noted for the other the Middle Volga peoples. Russian men preferred marriages within their ethnic groups and hardly ever married non-Russians.

The writer S. Aksakov, who spent his childhood and youth at his grandfather's estate south of the Kama River in the early 19th century, noted that the peoples who had settled in the same place differed in terms of their languages, cultures and confessions, and yet enjoyed good, neighbourly relations with each other. He argued that the clothes, language and lifestyle of the Russians living south of the Kama River are a patchwork of Tatar and Russian customs, and he emphasised that the Russians knew the

languages of their neighbours very well [Busygin, 2007, p. 286]

Inter-cultural collaboration became a key factor in the formation of the of the Volga Russians, a specific ethno-territorial group in the Volga-Ural region. The influence of other peoples, including the Tatars, on the ethno-cultural image of the Russians, can be traced to many factors that are multifaceted in their origin.

First of all, the ancestors of some of the Russians in the region were the representatives of non-Russian peoples who had been subjected to assimilation, and, as a result, had accepted the

Russian language and culture, but at the same time preserved separate features of their former ethno-cultural identity which were the most convenient and adaptable to local conditions [Busygin, 1996, p. 79].

The second reason for the maintenance of a layer of elements of the culture of other Volga peoples in the ethnic culture of the Volga Russians is the direct interaction of these peoples with each other. The interaction of the Russians with other Volga peoples was manifested in their everyday life, language and anthropological aspect.³

Thus, the Tatar plough—*saban*, known from Bulgarian times, was well-adapted for breaking virgin sod and fallows, and was widely used by the Russians throughout the territory of the region. Russian peasants adopted such crops as spelt wheat from the local peoples, which had a ritual significance to the Tatars. They also used a typical Tatar method to bind sheaves in the field. *chumele* haystack *kibens* on a threshing-floor.

While a U-shaped construction to connect the house with the outbuildings, whereby the house and outbuildings would form a continuous U-shaped line, leaving the inner part of the courtyard open, was the most widespread

³ All of the evidence about Russian-Tatar interactions that follows is taken from: [Busygin, 1966]

in the past, the Russians primarily used courtyards with separate household structures (a farmstead consisted of several farm structures separated from the house and each other). In the past, an estate of this type was typical for Tatars. In regions where the Russian settlements alternated with those inhabited by Tatars, the interior of the Russian dwelling had a free stove placement (in a traditional Russian dwelling a stove always stood close to a wall), boilers embedded or suspended in a stove, which is typical for the Tatar and Chuvash dwellings, as well as Tatar curtains (*kashaga*), separating the residential sections of the house. In many districts inhabited by both Russians and Tatars, polychromatic (multicoloured, in three, four, and even five colours) house painting was a typical feature of the dwellings of the Russian population of the region. Skills and traditions that became widespread in the region back in the Middle Ages, such as gold-work, high quality leather (yuft) work and tanning, felt work, the production of various art objects from metal, were widespread among the Russian peasants in the Volga region.

As for clothing, the Volga Russians adopted attire such as robes and sleeveless clothes, felt footwear with leather galoshes, Tatar hats and Bashkir fur caps (*malakhais*). Russian peasants used to buy Tatar hats at bazaars or ordered them from tailors who visited the Russian villages. It was noted that the women in the Russian villages bound their shawls in the 'Tatar way', wore black onuchas (as the Mari did), used ornamental motifs of the Volga peoples in adorning the individual elements of their costumes.

There were numerous culinary borrowings. From olden times the Russians living in the Western districts of Tatarstan used to eat *kaymak* (a thick brown greasy mass made of baked milk). Sour milk was a widespread dish among the Russians. To cook it, milk was heated until it turned red, and after it cooled, it was mixed with new milk and curd. In many Russian settlements, especially those located near the Tatars, sour milk was cooked in the same way as the Tatar dish *katyk*. Sour milk was used to cook *aryem* (in Tatar—*ayran*), made by stir-

Spoon manufacture in Deyanovo village of Nizhny Novgorod guberniya.
Photo by M. Dmitriev. 1897.

ring one spoon of *katyk* in a cup of water. The water would then be little bit sour, and allayed thirst; *aryem* was drunk during the harvest and hay-making.

As for housewares, of note is that the Russians used Tatar *kumgans*—copper or tin pitchers with a spout, ear and a top, which were used by the Russians to store beer or kvass. Traditional Russian means of transportation were also marked with some distinctive features. Throughout the territory of the region, Russians made wide use of specific tarantasses—from primitive woven ones to more sophisticated city carriages; small Tatar-style hand trucks were also widespread. The existence of some kinds of jewellery, harnesses, the custom of covering horses with coloured pompoms are undoubtedly connected with the Tatar influence. Of course, the similarity of some cultural elements cannot always be explained by borrowings; rather they should be viewed as a result of the long-term cohabitation and joint creative activity of the Russians and other peoples, who lived in the same socio-economic, natural and geographic conditions.

The longstanding working relations and intermingled settlements influenced the manner in which folk holidays were celebrated. Russians took part in the celebrations of Tatar *Sabantuy* and *Dzhiyen*. Holiday traditions of the Volga Russians included sporting competitions, games and entertainments, typical for the Tatars. Even the Russian wedding rite reveals a range of elements typical for the neighbouring peoples: the use of non-Russian terminology (for example, *kalym* instead of *kladka*), supplementing holiday and ceremonial foods with local ethnic dishes, etc.

During the long period of living as neighbours, the language of the Russian population of the Middle Volga region was enriched with a number of words and expressions commonly used by the Volga peoples. In the works of 19th century local historians it is frequently mentioned that Russians living amid the Tatars, Chuvashes, Mordvins, had a good command of those languages, and it is even concluded that the languages of the non-Russian peoples found their way into the Russian environment more often than the reverse. Russians used local terminology to refer to separate parts of settlements, dwellings and farmsteads, articles of clothing, utensils, etc. Linguists who research Turkic and Slavonic interaction present a wide range of Tatar words that were widely used by the Russian long-term residents of Tatarstan. Among them, for instance, is *chilyak*—a wooden bucket (any bucket in the Tatar language); *sarcha*—sheep; *ash*—flour soup (any soup in the Tatar language); *besmet*—an old coat (one of the types of outer protective clothing against the elements in the Tatar language); *bashmak*—a one-year-old calf; *kazan*—a cauldron;

maidan—a square; *urman*—a forest; *bagan*—a post; *urema*—a bush, a thicket along a river; *saban*—a plough, and so on. Not without reason, G. Tukay wrote:

*'We have become relatives with the Russians
Through the centuries, we have exchanged
languages,*

*We have given birth to the same songs,
And glorified the same events'* [Tukay, 1943, p. 265].

Kazan linguists have noted the influence of foreign languages on the Russian dialects of Kazan and adjacent areas, which is reflected in the existence of certain lexical borrowings from the Tatar language, not typical for the Russian language and its dialects outside the Kazan territory [Almukhamedova, 1958, p. 232].

The anthropological appearance of the Volga Russians was also affected by local peoples (both by means of inter-ethnic marriages and by means of the Russification of separate groups of non-Russian peoples) [Shestakov, 1884, p. 4]. Traits of a sub-Lapanoid (Volga-Kama, mixed Caucasian-Mongoloid) anthropological nature are seen in epicanthus, high cheekbones, the generally reduced height, inherent in individuals among the Volga Russians.

Thus, the history of land invasion and cohabitation of territory by the Volga peoples extends back over several centuries. The circumstances and factors of inter-ethnic cooperation were rather different, with some of the forms being anything but peaceful among them. However, the dominant features of inter-ethnic relationships still were, on the whole, marked by tolerance, cultural and language inter-influences, and economic cooperation.

CHAPTER 3

Ethnocultural Interaction of the Chuvash and Tatars

Gennady Nikolaev

The living space of the Middle Volga region is woven from heterogeneous ethnic cultures, which are Turkic, Finno-Ugric and East Slavic. Their complex interaction has continued here for many centuries. The Chuvashes and Tatars are inseparable ethnocultural components of the social space of the region. In distant antiquity, their remote ancestors in Central Asia were members of the same linguistic community: The Chuvash and Tatar languages belong to the Bulgar and Kypchak groups of the Turkic language family and are characterised by a similarity of structure and their lexical nucleus. It was determined by history that the Chuvashes and Tatars would share a 'common home' in the Middle Volga region, having found their niche on its social, economic and cultural realms.

In the conditions of the co-residence of different peoples in the same 'common home', a segment of the ethnically 'pure' settlements of the Chuvashes and Tatars inevitably acquired a new ethnocultural quality over the course of time, and became Chuvash-Tatar or Tatar-Chuvash. According to estimates which we carried out in our economical and statistical investigations of the district councils, at the beginning of the –20th century, in 34 villages of the Kazan and Simbirsk Guberniyas, the Chuvashes lived side by side with the Tatars. In 14 other settlements, these ethnicities were neighbours either with the Russians or the Mordovians, or with both the Russians and Mordovians [Nikolaev, 2009, p. 81]. Changes in the ethnic composition of the settlements were caused by the joint household and economic activities of the representatives of different peoples, their migrations and permanent economic relations with each other, the settlement of 'aliens' on vacant land allotments by village communes, regulations governing the rural communities put in place by

the authorities, and other circumstances [Martynov, 1903, p. 257].

In the latter half of 19th –the beginning of the –20th century, the Tatars and Chuvashes appeared to inhabit different religious worlds in the social space of the Middle Volga villages. In the everyday life of the Middle Volga village, faith principles were deeply intertwined with national principles, and vice versa. In the latter half of 19th –the beginning of the –20th century, Muslim Tatars couldn't envision an ethnic identity outside Islam. For them, faith was one of the most important components of their ethnic identity and lifestyle. A remarkable thing is that up to the beginning of the –20th century many of them continued to designate their national identity as synonymous with their confessional identity of 'Muslim' [Bagin, 1910, p. 119]. In the context of the historically formed ethno-confessional situation, Chuvash ploughmen considered Muslim Tatars to be the ethnic 'face' of Islam in the region. Like other neighbours sharing a 'common home', they regarded 'Muslim' as identical to the definition of 'Tatar'. Chuvash peasants, who lived as a large, continuous massif, were sometimes completely unaware of the existence of an ethno-confessional group of Christian Tatars [Scientific Archive of Chuvash State Institute of Humanities, dept. I, item 233, sheet 426]. The behaviour pattern of the Chuvashes can also serve as evidence of how they conceived of the religious and confessional identity of the Tatars. Chuvash peasants who adopted Islam introduced themselves as Tatars, not Chuvashes [Scientific Archive of Chuvash State Institute of Humanities, dept. 1, item 242, s. 249].

If the vast majority of the Middle Volga villagers qualified Islam as the faith of the Tatars, Christianity was considered to be the faith of the Russians. In the perception of unbaptised

Chuvashes, their congeners who changed their faith, broke their ancestral spiritual bonds, lost their singularity, and, as a result, were deprived of the key component to their ethnic identity.

Every ethnic community was a special world. The Chuvashes and Tatars were distinguished by their origin and historical destiny, spiritual and social experience, world perception, customs and traditions, religious beliefs, mentality and other such components. By dint of their respective natures, each of them evolved into a relatively closed, specific cultural field over the course of their historical development. In folk wisdom, such socio-cultural ethnic specificity spiralled into succinct and insightful aphorisms. What follows are Chuvash proverbs read:

'Чăвайăн—чăвайла алак, ырайăн—ырайла алак'—A Chuvash has a Chuvash gate, and a Russian has a Russian gate [Nikolsky, s. 488]; *'Чăвайăн—чăкăт, тутарăн—турăх'*—A Chuvash treats you to cheese, a Tatar treats you to sour milk [Vattisen sâmkhêsem, 2004, p. 160]. The fact that the Volga 'common home' was surrounded by the representatives of different confessions and ethnicities was seen by the Chuvashes as an unalterable reality. According to their world perception, all peoples are the creation of God, therefore all are equal participants in the historical process (*'Этем нур те нĕр: ырайă та, тутар та, чăвай та, мăкши те'*—Everyone is equal: Russians, Tatars, Chuvashes, Mordovians); their cultural field deserves the same respect, as your native one (*'Тутар та турра нуççанат'*—A Tatar also prays to his own God) [Ваттисен сăмахĕсем, 2004, p. 12, 153]. While respecting the socio-cultural space of their neighbours, the Chuvashes, like all the other Volga peoples, were oriented towards their own world in their everyday life. This motif was reflected, for instance, in one of their songs [Scientific Archive of Chuvash State Institute of Humanities, dept. I, item 176, s. 257]:

*Ати мана ырайă парас тет,
Каймастăн, килместĕн.
Ырайă, кулач хушинче,
Каймастăн, килместĕн,
Кулачă нĕçерме нĕлместĕн.
Ати мана тутара парас тет,
Каймастăн, килместĕн.*

*Тутар самовар хушинче,
Каймастăн, килместĕн,
Самовар лартма нĕлместĕн.*

*My father wants to marry me to a Russian,
but I don't want to and I won't do it.*

*I don't want to be in the Russian community
where they eat kalatches, I won't do it, I can't
cook kalatches.*

*My father wants to marry me to a Tatar, but
I don't want to and I won't do it.*

*I don't want to be in the Tatar community,
where they have samovars, I won't do it, I can't
use samovars.*

Similarly to their Volga neighbours, the Chuvashes used to find many of the lifestyle features, inherent and typical to other ethnicities, either unfavourable or unwarranted in their culture. This either didn't interface or else it interfaced badly with their behaviour pattern, traditions and standards. Thus, according to Chuvash etiquette, their congeners shouldn't sit down at the dining table at the first invitation. Every Chuvash who ignored this ancient tradition, was bestowed with an uncomplimentary characteristic behind his back: 'just like a Tatar, he sat down at the first invitation' [Scientific Archive of Chuvash State Institute of Humanities, dept. I, item 158, s. 153, 154]. Those who lived well without sufficient funds didn't acquire the reputation of clever hosts in the Chuvash community. According to a contemporary, the Chuvashes referred to them thusly: 'like the Tatars, when they have money, they live in lordly fashion, and when the money is gone, they come and make requests of the people' [Scientific Archive of Chuvash State Institute of Humanities, dept. I, item 158, pp. 153, 154]. Socio-psychological and ethnocultural distancing from the Tatar living space was more noticeable among the upper Chuvashes (those living upstream of the Volga River), as due to geographic factors they had more contacts with the Russians and Mari, rather than with the Tatars. At the beginning of the 20th century, a resident of the Anatkassy village of the Yadrin uyezd of the Kazan Guberniya characterised the relationships between

the Chuvashes and Tatars as follows: 'The local Chuvashes don't like the Tatars at all. They are always spoken of as wicked people. They are said to be inhospitable, they won't invite you to stay with them and share their dinner... That is the reason why the Chuvashes are very afraid of the Tatars' [Scientific Archive of Chuvash State Institute of Humanities, dept. 1, item 184, s. 363]. At the same time, the rejection of the culture of the Muslim Tatars remained relative, especially as regards the economic sphere. The Chuvashes, strong in their Orthodox faith, tended to view the Muslim Tatars as bearers of another monotheistic tradition in the 'mirror' of rejection, while as the participants of economic relations and neighbours at the 'common home' the latter were viewed in the 'mirror' of attraction. As is further written in the ethnographic notes of the Anatkassy village resident, 'Although they don't like the Tatars and are afraid of them, when they approach them for one reason or another, either on a contractual basis or to trade, they are very friendly to the Tatars'. They offer lodging for the night, share their food and drink, provide cheap accommodation' [Scientific Archive of Chuvash State Institute of Humanities, dept. 1, item 184, s. 363].

Ethnocultural exchanges have always accompanied ethnicities on their thorny way in the historical space. The culture of every nation is not a kind of formation that is based entirely on its own ethnocultural component. It certainly includes elements of other people's culture with which these nations have direct or indirect contacts. At the same time, ethnocultural exchanges are not a multilateral process of an automatic exchange of cultural elements. An alien element takes roots in a new culture and becomes its integral part only when it finds an appropriate 'response' in the body of the 'foster mother', and passes a cross-match test with her 'flesh and blood'. In the course of implantation, a borrowed element nearly always undergoes a certain transformation. For instance, an anonymous author of ethnographic notes, writes at the beginning of the 20th century about the residents of Apanasovo-Temyashi village of the Tetyush uyezd of the Kazan guberniya as follows: On the whole, the local Chuvashes have

become strongly Russified; there are many Russianisms in their language, clothes and all skills related to the struggle for existence. They have adopted many features from the neighbouring Tatars, but, I guess, this happened long ago, and, in terms of customs, these things are currently held as something native [Scientific Archive of Chuvash State Institute of Humanities, dept. I, item 151, p. 280].

Genetic affinity, cohabitation, and contacts between ethnic groups indispensably result in numerous 'markings' on their cultural. Brief songs of the Chuvashes and Tatars, with all their differences, though essential, but not fundamental,—as musicologist M. Kondratyev concludes, are distinguished by the identity of the principal elements of the plot composition, as well as the identity of particular plots, including the most ancient ritual and mythological motifs [Kondratyev, 1993, p. 56]. The mythologies of these peoples are congruent. They have many similarities—both in the names of the main characters (Tatar: *arish anasi*, Chuvash: *irash amāshē*, 'rye mother'; Tatar: *alip*, Chuvash: *olān*, *ylān*, 'a hero; a giant; a mythological giant ancestor', etc.), and in the plot motifs (the Tatar *yarymytk* and the Chuvash *ar suri* were known as those who liked to tickle people to their death, while the Tatar *upkin* and the Chuvash *vupkhān*, *vupkān* were famous for their extraordinary gluttony, and so on) [Akhmetyanov, 1981, p. 9, 17, 44, 49]. The Lower dialect of the Chuvash language, which had interfaced with the dialects of the Tatar language for a relatively long time, is richer due to the Tatar borrowings than are the Middle and the Upper dialects. It was discovered by the linguist N. Egorov that the Tatarisms in the Lower Chuvash dialect 'often pushed out existing Chuvash national words, or co-existed with them, sometimes pushing them to second place' [Egorov, 1985, p. 64]. By conducting comparative analyses, the linguist A. Akhmetyanov concluded that the majority of words that were 'equally understandable by both Chuvashes and Tatars' were borrowed from the Tatar language by the Chuvash and vice versa—from the Chuvash language by Tatar [Akhmetyanov, 1978, p. 104]. The wedding poetry of Mishar Tatars has distinctive features

A group of Chuvash people in national costumes.
Photo from the late 19–beginning of the 20th century.

that are close to Chuvash poetry [Mukhamedova, 1972, p. 200]. The Chuvash headdress for women was an intricate concoction that included several separate details, including a headscarf *surpan*. Molkeevo Kryashens, Mishar Tatars and Qasim Tatars had similar headdresses *tastars*. They were wrapped around the face under the chin. It allowed the woman to fully cover her hair, neck, back and shoulders. The way of wearing *surpans* was the same among the lower Chuvashes (the upper and middle Chuvashes used it as a decoration for the neck and the back) [Yagafova, 2007, p. 52, 55]. The traditional cuisine of Chuvashes, Kazan Tatars, and Mishar Tatars suggested keeping sour dairy products that 'were not prepared by sun-drying, as other Turkic peoples did it, but by wringing out the whey' [Mukhamedova, 1972, p. 129]. Such remnants of ethnocultural inter-influence between two kindred peoples are very common [Ivanov, 1984, p. 103–120].

The ethnocultural exchanges between Chuvashes and Tatars resulted from ethnic pro-

cesses that took place in the Middle Volga Region. Chuvash ancestors became part of the Kazan Tatar nationality that formed in the Middle Ages [Khalikov, 2011, p. 248]. The Chuvash nationality that formed during the same period also included an ethnic layer from the Kypchak Tatars. However, this was insignificant [Ivanov, 2000, p. 37]. Chuvashes who converted to Islam during different periods of their history, were assimilated by the Kazan Tatars and Mishar Tatars before the abolition of serfdom [Yagafova, 2009, p. 10–29]. The process whereby Chuvashes became part of the Tatar ethnos in zones or contact resulted from their ethnocultural assimilation with

their neighbours, as well. According to calculations made by D. Iskhakov, during the 18–19th centuries, 4–5 thousands of Chuvashes were assimilated by Molkeevo Kryashens who lived in 9 villages of Tsivilsk and Tetyushi uyezds in the Kazan Guberniya [Iskhakov, 1993a, p. 16]. There were Tatars joined the Chuvashes as well, although this was a rare phenomenon [Nasyri, 1977, p. 54, 55].

In the latter half of 19th –the beginning of the –20th centuries, ethnocultural contacts between Chuvashes and Tatars in Middle Volga villages 'differed in frequency and closeness'. In this regard, villages situated at small distances from one another and mixed Chuvash-Tatar and Tatar-Chuvash settlements formed a special zone in the socio-cultural space of the Middle Volga. As a rule, this was the space for good neighbourly relations and mutual understanding based on common everyday contacts. A report done by a priest from the Bayglychevo village in Tetyushi uyezd Kazan guberniya, Alexei Rekeev (1898), paints the following

picture: 'In Chuvash settlements of Menchi, Vyshnyovaya Polyana, Bilyar-Ozero and Alexandrov sloboda all of the Chuvash like to speak Tatar with each other. They sing Tatar songs and have begun adopting Mohammedan traditions, such as shaving their mustache the Tatar way. Relationships between Chuvashes and Tatars are so close here that Christian Chuvashes relate to Tatar Mohammedans' [Scientific Archive of Chuvash State Institute of Humanities, dept. I, item 195, p. 556]. In the vicinities of the Izbakhtino village of Tetyushi uyezd, Tatars organised banquets for Chuvashes. 'During the feast they were served special dishes—*bäleş* (a large round pie with sweet or savoury filling.—*G.N.*) and *kort* (a dairy product, a sort of curd.—*G.N.*). Chuvashes did the same for their hospitable guests' [Kremlev, 1913, p. 1075]. Mixed Chuvash-Tatar-Kryashna round dances for maidens were common in neighbouring villages of the Christian Tatars and Chuvashes from the Tetyushi and Tsivilsk uyezds [Filippov, 1915, p. 753–759].

Chuvash-Tatar ethnocultural exchanges in the Middle Volga region were an asymmetrical process: The Tatar cultural influence was dominant. This was especially evident from the traces of ethnocultural predominance in the latter's contact zones. In some places, only a keen observer would be able to distinguish Chuvashes from Tatars, namely in Chuvash villages situated as islands among Tatar settlements, and in some mixed Tatar-Chuvash villages where Chuvashes were the minority⁴.

⁴ For example, in the early 20th century, in the village of Maloye Rusakovo in Sviyazhsk uyezd, Kazan guberniya, the population of Chuvash peasants was half that of their co-confessionals, the Muslim Tatars. Here is how local teacher Mikhail Maksimov portrayed the everyday life of a Chuvash grain farmer in his ethnographic notes: 'One can hardly recognise the Chuvashes from Maloye Rusakovo during the winter. The Tatars sew fur coats for them and remove shirs from them; they also sew Tatar-style chapans for them out of grey homespun cloth. They never take off their Tatar caps, which all of them have. On holidays, they wear Tatar beshmets. Everyone wears long knee-length shirts and no belts; the Chuvashes can be distinguished only by their long hair' [Scientific Archive of Chuvash State Institute of Humanities, dept. I., item 207, s. 82–83].

But this picture was not universal throughout the socio-cultural space of the contact zones in the Middle Volga region. To some extent, acculturation of Tatars by the Chuvashes also occurred. This was typical of the regions where Tatars lived in small communities surrounded by Chuvashes. In the vicinity of the village of Podgornye Timyashi of the Tsivilsk uyezd in Kazan Guberniya, for instance, Christian Tatars spoke the Chuvash language [Manuscripts Department of the Russian State Library, f. 424, inv. 1, card 1, file 11, s. 2, 3]. Tatars who lived near the village of Kovali of the Tsivilsk uyezd spoke Chuvash well. As a contemporary wrote, they 'adopted the culture of cultivating hop from the Chuvashes of the Kovalinsky region' [Scientific Archive of Chuvash State Institute of Humanities, dept. I, item 217, p. 454]. Sometimes Muslim Tatars settled in Chuvash villages and 'dissolved' in the foreign ethnocultural environment [Scientific Archive of Chuvash State Institute of Humanities, dept. I, item 183, s. 194]. Molkeev Kryashens were especially embedded in the cultural field of Kazan guberniya Chuvashes as they lived nearby and had Chuvashes in their midst. They presented a peculiar cultural field in the ethnocultural sense: ethnic borders between 'Chuvash' and 'Tatar' areas, as well as between Tatar-Kryashens and local Chuvashes, 'were rather vague' [Iskhakov, 1993b, p. 138, 139]. According to a statement of a contemporary, Molkeev Kryashens adopted almost all of their traditions from Chuvashes [Filippov, 1915, p. 753]. For a long time, as was mentioned by N. Zolotnitsky in the 1870s, Chuvashes spoke Tatar fluently, while Christian Tatars spoke fluent Chuvash. During joint 'maiden feasts' (literally: in Chuvash—*xěp cāpu*, in Tatar—*kiz sirasi*) for Chuvash and Christian Tatar young women, songs were sung in the two languages 'with almost equal' motifs and lyrics 'from the olden times' [Zolotnitsky, 1875, p. 227]. Close ethnocultural connections 'between Molkeev Kryashens and Chuvashes were based on mixed marriages' that were a typical phenomenon in the 19th–the beginning of the 20th century [Magnitsky, 1896, p. 248; Pchelov, 1913, p. 126, 127]. In such an ethnic and ethnocultural situation, some Molkeev

Kryashens were inclined to see themselves more as Chuvash than Christian Tatar [Scientific Archive of Chuvash State Institute of Humanities, dept. I, item 310, p. 224].

The ethnocultural dominance of the Tatars over the Chuvashes was preconditioned by a number of factors. The first is the *demographic* factor. The second is the *socio-economic* factor. The Tatar ethnocultural community surpassed that of the Chuvashes in socio-economic development. Chuvash peasants acknowledged that Tatars were the leaders in trading and industry, while the Chuvashes were not. Ethnographic records written by a resident of the Chuvash village Murzyvan-kassy in the Tsivilsk uyezd, A. Adelev (1914), said: 'Tatars... are people who trade. If they have at least 50 rubles, they don't just sit at home. But even if our Chuvashes have 1500 rubles, they are not successful at anything' [Scientific Archive of Chuvash State Institute of Humanities, dept. I, item 251, p. 317]. The social systems of Tatar and Chuvash farms had their own peculiarities. Tatars who were 'wealthy peasants' were more economically powerful than the same social group in Chuvash villages [Nikolaev, 1998, p. 148–166]. Owning smaller allotments and being less proletarianised, Tatar crop farmers were less focused on producing bread. As a result, they were forced to look for side work outside their villages, and even outside their uyezds much more often than did Chuvash farmers. The Tatar 'industrial wave' represented by small merchants, tailors, reapers, horse doctors, tinsmiths, glaziers and other working class people 'washed over' the Chuvash socio-cultural space sporadically, penetrating its most hidden corners. For example, in the 1880s in Yangildino, a Tatar village in the Cheboksary uyezd in Kazan Guberniya, 'up to 60 peasants' were engaged in herding the cattle in different villages of the Chuvash region. 'All the rest' were selling lemons, apples, fish, cattle and other goods there [State Historical Archive of the Chuvash Republic, f. 15, inv. 1, file 2087, s. 123]. Chuvash peasants, had more agricultural land, and so they tended to prefer earning a living by farming [Nikolaev, 2006, p. 309, 311]. Chuvashes engaged in trade and business visited Tatar villages as well, but there were few in

number. 'Chuvashes prefer to work among Russians, less often—among Tatars'—as was stated in the ethnographic notes of the beginning of the 20th century [State Historical Archive of the Chuvash Republic, dept. I, item 151, p. 106].

The third factor was *socio-cultural*. Owing to their dramatic historical fate, the Tatars and Chuvash entered the age of capitalism as 'rural' ethnic groups. But, unlike the Chuvashes, the Tatars were not strictly a 'minor' nation because they had the remnants of a nobility and a basis for a new elite made up of merchants, business people and clergy, they had maintained a literary language and their Islamic culture [Kapel'ner, 1996, p. 204].

As for the Chuvash ploughmen, their knowledge of their own historical past was fragmentary and less distinct. According to the records of the Chuvash educator S. Mikhaylov, many of his contemporaries in the 19th century lacked even 'a flawed conception', only the 'wise' among them spoke about their ancestral heritage, and this was done 'haltingly' [Mikhaylov, 2004, p. 50]. In the community of nations of the Volga region, this particular community was also distinguished by a relatively low conception of their national identity. Very few among the Chuvash peasants put their ethnic community on the same level as that of the Russian or Tatar communities. The humble attitude of the Chuvash to their ethnic identity is found, in particular, in their folklore. A Chuvash proverb states: '*Чăваш кайран шухайлатъ тет, тутар малтан шухайлатъ тет*' ('The Tatar will first think everything over, and the Chuvash will think afterwards') [Timofeev, 2002, p. 194]. They say in one of their songs: '*Мăн çул тăрăх утмашкăн, / вырăс-тутар мар эфир*' ('We are neither Russians nor Tatars, /to walk on the main roads') [Ashmarin, 1892, p. 51]. '*Темĕскер кирлĕ мара çуратса янă тире Турă, чăвашене*' ('For what purpose did God bring us, the Chuvash, into the world'),—according to a contemporary, some of the Chuvash who lived 'in the Russian manner' spoke thusly about their ethnic community at the turn of the 19–20th centuries [Timofeev, 2002, p. 57].

The ethnocultural realm of the Tatars was distinguished by the confessional mobilisation

that was expressed, and an earnest attitude towards religious belief. To some extent, nearly everyone was a missionary among the Tatars. Owing to the specific features of the way their spiritual life was arranged in the Muslim community and, as a result, the structure of religious culture, the Tatar ploughmen, as a rule, prevailed in religious disputes with the Chuvash 'pagans', whose religious worldview was in an acute ideological crisis during the post-reform period. Similar verbal 'fights' pertaining to their worldview between the Muslim Tatars and Orthodox Chuvash, who for the most part were not consolidated in the 'Russian faith' usually ended to the detriment of the latter⁵. The world of the Chuvash village in confessional relations was variegated—followers of traditional beliefs, Orthodox Christians, and Muslims were represented. Among the first, a part of the community 'stood behind' the belief of their fathers and grandfathers, a part called for

⁵ Here is how N. Okhotnikov, a native inhabitant of the village of Chuvashskaya Cheboksarka, reflected in his memoirs on an incident from everyday peasant life during the first post-reform decades in the town of Chistopol, Chistopol uyezd, Kazan guberniya: 'We delivered bread to the same merchant and returned home the next morning after staying there overnight. My curiosity was aroused as I listened to the arguments that the Russians, Chuvashes and Tatars carried on in the merchant's hall, where there were always many people, and everyone slept in groups on plank-beds, on sleeping-benches underneath the ceiling and atop the oven. The Tatars always started arguments over trifles. For example, a Chuvash might pronounce a Tatar word incorrectly when talking to a Tatar in his language. This was enough of an excuse to start an argument. The Tatars start to pick on the Chuvash without delay: How is it that he still can't speak Tatar correctly after having lived amongst them for a century? That's how they drag him into an argument. The number of people arguing keeps growing and growing; first they talk about customs, then about ways of dressing, and lastly, they move on to religion. It goes without saying that the Tatars usually emerge victorious, as the incoherent, muddled religious views of the Chuvashes hold no water against the Islamic faith, on which the Tatars most rely in their arguments; on the other hand, the christened Chuvashes cannot say much in defense of Christian religion, because the truths and fundamentals of religion are alien to a Chuvash Christian, who cannot understand what he hears only at church, let alone in the Church Slavonic language which is completely incomprehensible for him' [Okhotnikov, s. 25 reverse–26].

a reform of this, a part supported 'the Russian faith', and a part—the Tatar faith'. The orthodox Chuvash community also united different groups of believers—firm in 'the Russian faith', 'believers in two different religions', 'pagans' and 'Mohammedans'. In the after-reform period, the most of the Chuvash ethnic community was drawing close to a firm faith system: the category of 'strictly Orthodox Christians' were in the minority among them [Kremlev, 1913, p. 938; 1913a, p. 1069–1078].

The fourth factor was *socio-psychological*. In the ethnocultural interaction between the Tatars and the Chuvash, the Tatars, owing to their mentality were, figuratively speaking, the driving members, while the Chuvash were driven. This feature of the two 'elements' is reflected in the works of many contemporaries. Writing about the above specific feature of the relations between the two ethnic communities, the ethnologist G. Komissarov, for example, deemed it necessary to emphasise that 'tribal kinship and some similarity of languages promoted the unification of the Chuvash with the Tatars, and the mobility of character of the Kazan Tatars, their aptitude for trading, cleanliness, sobriety and the external attributes of the religion led the Chuvash to recognise the superiority of the Tatar over him' [Komissarov, 1911, p. 414]. The Chuvash gave those tribesmen who were noted for their quickness and courage a flattering socio-psychological characteristic—'as courageous as a Tatar' [State Historical Archive of the Chuvash Republic, dept. I, item 217, p. 453].

As economic entities, the Chuvash and Tatar peasants, together with other ethnic communities of the region, were participants in economic relations. In this respect, the social space of the village was itself a unified living organism. Directly or indirectly, the economic activity of all of the ethnic groups of peasants was interdependent. Thus, the economic space of the village, both for the Chuvash, and for the Tatars, as well as for other ethnic groups, was a realm of mutual interaction. The ethnographic notes of contemporaries made at the beginning of the 20th century provide a very detailed picture of the joint economic and community

relations of peasants of various nationalities in 'a common house'⁶.

In areas of contact, close economic relations between neighbours, as a rule, developed into close good-neighbourly trusting relations. In the villages of Alsheyev, Takovary, Rakovo, Kishhak, Pimurzino, Byurgany, Koshki Tenyakov, Novye Mertli and Chuvash Sorokamysh in Buinsk Uyezd in Simbirsk Guberniya at the turn of the 19th–20th centuries, in bumper-crop years, the Tatar peasants were employed in harvesting the crops of the Chuvash. The Chuvash used Tatar women and girls of the adjacent villages to spin linen and weave. The Tatars and the Chuvash interacted with each other easily in business and maintained mutually hospitable relations. Many Chuvash peasants had sworn friends among the Tatars—places to socialise, 'in times of need' they invited their neighbours to heal the sick. The Chuvash youth communicated with their Tatar peers on equally friendly terms, and would take part in their merrymaking [Timofeev, 2002, p. 23, 91, 162]. The inhabitants of Tatar villages located 10 versts from Podgornye Timyashi village in Tsivilsky uyezd in Kazan Guberniya were hired on as shepherds and watchmen by the Chuvash, and together with them 'kept bees'. On 8 November, on 'Mikhaylov day' (the Day

of Archangel Michael), which coincided with dedication day in the parish church, 'welcome guests from olden times'—the neighbouring Tatars visited the Chuvash 'almost every house' [Manuscripts Department of The Russian State Library, f. 424, inv. 1, card 1, file 11, s. 3, 4]. A similar situation prevailed in Tsivilsky uyezd in the Chuvash village of Staroe Muratovo and in the outskirts. And here, the Muslim Tatars worked among the Chuvash, some were shepherds, others were watchmen. Neighbours 'served bread and salt' to each other. 'on the Chuvash holidays the Tatars visited the Chuvash, and on the Tatar holidays, the reverse was the case, the Chuvash visited the Tatars' [Otchet o deyatel'nosti, 1883, p. 766].

The economic relations between the Chuvash and Tatar peasants were based on pragmatic principles. They strengthened the relations with those tribes people who entirely discharged their obligations by the target date, provided competent 'economic' services, traded fair and square, purchased agricultural products at reasonable prices, etc.: they showed them affection, provided them with board and lodging⁷.

But in their economic relations, in their dealings with the Tatars the Chuvash were faced with trading partners with rather high standards, as the Tatar farmers were a more advanced community in terms of their socio-cultural development. The Chuvash were not always able to meet these standards, and sometimes had to refuse engaging in transactions with their neighbours. In the ethnographic notes of one native of Malye Bikshikhi village of Tsivilsky County from M. Zaitsev we read: 'When the Chuvash

⁶ Yargunkino village, Yadrin uyezd, Kazan guberniya 'The Chuvashes trade with the Russians and the Tatars. The Russians buy meat, skins and fresh wool from the Chuvashes. The Tatars buy old horses from the Chuvashes; in their turn, they bring them dried fish. The Chuvashes buy good horses and other highly-demanded items from the Russians. Both Russians and Tatars earn money at the expense of the Chuvashes... The Chuvashes are taken in as workers by wealthy Russians' [National Archive of Chuvash State Institute of Humanitarian Sciences, section I, item 151, sheet 105, 106]. Novoye Izambayevo village, Tetyushi uyezd: 'Chuvashes and Russians live well together here; they borrow things and money from each other when necessary and spend time at each other's houses during holidays. And they live in peace with the Tatars: Many of them lend money to each other and borrow bread' [Scientific Archive of Chuvash State Institute of Humanities, dept. I, item 151, sheet 260]. Azbaba village, Sviyazhsk uyezd, Kazan guberniya 'More than half of Tatar homeowners lease out their land allotments to Chuvashes living in the same village' [Scientific Archive of Chuvash State Institute of Humanities, dept. I, item 208, sheet 96].

⁷ A resident of Mokry village, Tsivilsk uyezd, wrote the following in his ethnographic memoirs, which were compiled in 1911: 'The Chuvashes love the Tatars very much; they wear Tatar hats. When they come to the countryside to sell dried fish, even though they do not know the language properly, they engage them in conversation with great pleasure. To imitate the Tatars, some Chuvashes started shaving their heads. They also invite the Tatar fish-sellers to spend the night with them. Their horses are fed with oats. The Tatars are very happy to be received in such a way, and they treat the owners of the house to dried fish' [Scientific Archive of Chuvash State Institute of Humanities, dept. I, item 179, sheet 33].

do not manage to finish reaping, they employ co-villagers who have already reaped completely or the Tatars coming to the village. Sometimes there come whole families of the Tatars, but the Chuvash employ the Tatars reluctantly, only by necessity when there is nobody else to employ because the Tatars demand good food from the Chuvash; otherwise they reap badly and treat the Chuvash roughly' [Scientific Archive of Chuvash State Institute of Humanities, dept. I, item 271, p. 241].

Due in part to the conditions of national heterogeneity of the social space in the villages of the Middle Volga region, the economic life as well as other components of daily country life was imbued with an ethno-cultural component. In order to build strong and durable economic links, both the Chuvash and Tatar farmers, first of all, had to consider one another's sense of 'self'. Ethno-cultural and ethno-confessional diplomacy was an important factor and condition that defined the economic-relations dynamic between the two ethnic communities. In some form or other it preceded or accompanied all of their interactions in this sphere. Courteous acknowledgment, show of thoughtfulness, and respect for a foreign culture, in addition to other habits, were customary. Making economic and other contacts with the neighbouring Tatars, the inhabitants of the Chuvash village of Novoe Izambaev of Tetyushi County often invited them over. Keeping this in mind, the Chuvash always were interested in whether the Tatars ate this or that product. And the Tatars showed a similar courtesy towards the Chuvash farmers [Scientific archive of Chuvash State Institute of Humanities, dept. I, item 151, p. 280]. Some Chuvash peasants who engaged in seasonal sartorial work for Muslim Tatars put on the Tatar skullcap with the hope of earning their affection [Nikolsky, 2004, p. 69].

The economic, living, and everyday relations between the Chuvash and Tatars resulted not only from the process of ethno-cultural merging of the two communities, but also from the emergence of local hot spots despite any ethno-cultural chill. In trading, contractual, credit, rent, and other operations, the Tatars, more developed in these spheres of activities,

did not always consider the interests of the Chuvash, which, based on the realities of the market conditions, resulted in the emergence of short-term economic frictions [Scientific archive of Chuvash State Institute of Humanities, dept. I, item 237, s. 87]. Within the sphere of land relations, in cases of substantial infringement of one of the side's interests, the frictions between representatives of the two communities sometimes turned cutting and long-lasting [Scientific archive of Chuvash State Institute of Humanities, dept. I, item 208, p. 293–295]. In certain settlements unprovoked violence by Tatars against the Chuvash took place [Scientific archive of Chuvash State Institute of Humanities, dept. I, item 237, s. 87]. The Chuvash, who incurred material and moral damages as a result of forgery, deception, false-weight, fraud, physical abuse, and other harms, were inclined to see the entire ethnic community as offenders in the 'mirror of rejection' [Scientific archive of Chuvash State Institute of Humanities, dept. X, item 1070, p. 239 reverse].

As is well known, religion unites, and separates, society. Owing to its nature, religion and the religious component had a mixed effect on the relationship between the Chuvash and Tatars. The Chuvash peasants entered the capitalist period as 'pagans', which in large part meant 'pagan' Christians [Smelov, 1880, p. 529]. In the Chuvash village, still living according to age-old traditions, the fact that they called on mulahs or invited them over to perform religious ceremonies in cases of diseases of relatives in the second half of the 19th –the beginning of the –20th century was not an isolated phenomenon [Shilek, 1913, p. 909, 910]. The Tatar 'national Islam' was relatively tolerant towards the religion of their neighbours. In N. Okhotnikov's memoirs, written in 1888, we read: 'I myself heard the Tatars assuring the Chuvash that we were children of one God' [Okhotnikov, p. 27 reverse, 28]. Under the administrative policy for religious unification of the country and in the existing situation of relative confessional tolerance, a part of the Chuvash 'pagans' and 'pagan' Christians 'became Tatars'; choosing the belief of their neighbours—Islam—as a moral support in life. Long-term co-residence, affini-

ty for languages and cultures, and close contact in different spheres were the major factors that determined their choice. According to modern researcher A. Kobzev, the number of Muslim Chuvash in Simbirsk guberniya amounted to around 400–600 people at the beginning of the 20th century [Kobzev, 2007, p. 124]. The community of the Muslim Chuvash in Kazan guberniya was rather striking: several thousands of adherents were united [Yagafova, 210, p. 126]. So-called Muslim-neophytes of the Chuvash already preferred to have economic, everyday, household, and marital relations with Muslim Tatars⁸.

During the period of capitalist modernisation, a main part of the Chuvash rural population became an object of attention of the missionary and educational system of N. Iminsky, a system that was fully entrenched in the 'Russian belief'. Such a religious change resulted in confessional and ethno-cultural distancing of the Chuvash peasants from Muslim Tatars. Becoming firm Christians, they began to focus and adhere to the Russian manner of life in household and everyday spheres. And so, the inhabitants of the Chuvash villages Kovali and Musirma of Tsivilsky County 'were on intimate terms' with the Tatar farmers of the villages of Akzegitovo, Tugayevo, and Sunchelevo up until the 1880's: 'Tatars were welcome guests at the Chuvash, the Chuvash welcome at the Tatars'. During Easter and Semik, whole families of the latter stayed with their neighbours. In the early 20th cen-

tury in the villages Kovali and Musirma, there was a different situation on holidays—as a rule, except watchmen and shepherds, there were no other Tatars amongst the Chuvash [Spiridonov, 1909, p. 538–539; Scientific archive of Chuvash State Institute of Humanities, dept. I, item 206, p. 183]. In some multi-ethnic settlements, during a period of ethnic and confessional mobilisation of the two distinct ethnic communities, 'the cultural pressure' of the Tatars sharply increased upon the Chuvash. Most frequently, passions ran high in those Chuvash-Tatar settlements where one part of the Chuvash accepted Islam and the other remained faithful to the Orthodox belief [Kobzev, 2007, p. 124].

By the end of the 19th century, 98.9% of the Chuvash lived in the Volga-Ural region [Ivanov, 2005, p. 151]. Outside this ethno-historical territory—in the Samara, Ufa, Saratov, and Orenburg guberniyas—a part of the Chuvash people lived side by side with the Volga-Ural Tatars. In the second half of the 19th –the beginning of the 20th century, the ethno-cultural interaction of the Chuvash and the Tatars in new territories had the same nature and dynamic as in the Kazan and Simbirsk guberniyas. And almost everywhere in the multi-ethnic settlements and contact areas, the Chuvash lived 'the Tatar way': They, among others, celebrated Friday instead of Sunday, shaved their heads, wore skullcaps, ate horse meat, and secretly or openly kept Muslim ceremonies. At the same time, in certain areas the palette of the Tatar ethno-cultural dominance had many different shades. They were expressed, in addition to others, through the extent of the Chuvashes' acceptance of their neighbours' life style, their practice of speaking the Tatar language in daily life, and the close contact of the two communities in economic, everyday and household spheres [Yagafova, 2010, p. 115–127]. In the latter half of 19th –the beginning of the 20th century, outside the Kazan and Simbirsk guberniyas—and as a rule in contact zones—the Chuvash endured several waves of 'backslide' to Islam. Here, as well as in the ethno-historical territory, the Chuvash Muslim-neophytes considered themselves part of the Tatar ethnic community [Yagafova, 2010, p. 115–127].

⁸ On 15 December 1908, peasants in the Tatar village of Nizhneye Chekurskoye and the Chuvash-Tatar village of Staroye Chekurskoye (which consisted of two societies: one Tatar and one Chuvash), Buinsk Uyezd, Simbirsk guberniya, issued a decree on the division of the common plot of land between the three village societies proportional to the number of people in each of them according to the census. A year later, as the land was being allotted, 18 Starochekurovsk Chuvash peasant families who had adopted Islam appealed to the land surveyor of the land survey commission with a request to be given land in the same area as that of their co-confessionals the Muslim Tatar society of the village of Nizhneye Chekurskoye. This unforeseen development was quickly resolved. Assemblies of all three of the village societies found it possible to honor the request of these new 'Tatars' [National Archives of the Republic of Tatarstan, f. 1311, inv. 1, file 204, s. 238].

CHAPTER 4

Tatar-Mari Relations

Guzel Stolyarova

The Tatars and the Mari were close neighbours and active partners in interethnic interactions. In the east of the Mari El Republic and in the north-west of Tatarstan, it is almost impossible to draw a dividing line of ethnic areas of the Mari and the Tatars: here we can see the imposition of ethnic territories and, as a result, the existence of long-standing Tatar, Mari, and mixed settlements (including the Arsk and Baltasi districts of the Republic of Tatarstan and the Paranginsky, Mari-Turek, and Morkinsky districts of the Mari El Republic). Contacts between the Tatars and the Mari in this region are the earliest. Researchers note that the Finno-Ugric element is considerable among the Tatar population of the northern area of Trans-Kazan, and based on the toponymy in many Tatar villages they have '*çirmeş yagi*' (Cheremis region) [Galimzyanov].

Another area of the Mari settlement amongst the Tatars—the Kama-Ural region—was formed both as a result of resettlement in the 16–18th centuries of parts of the Mari into Zakamye and Cisurals and when, still amidst the ethnic majority of the Tatars and the Bashkir, another ethnic group of the east Mari appeared in the middle *e'rvet mari*) [Sepeev, 2006, p. 126]. Thus, the Tatars had the greatest impact on the meadow and east Mari, while the mountain Mari who lived on the right bank of the Volga among the Chuvash and Russians had closer contact with these groups.

The results of the historical contact between the Tatars and the Mari can be observed in numerous materials pertaining to cultural and linguistic subjects.

In the territory of Tatarstan, the Mari toponymies apply across an immense territory and indicate that the ancient Mari tribes lived

here. In the Yelabuga district of the Republic of Tatarstan, for example, the Mari influence is distinguished in the following toponymies: Aitalan village, Atiaz village (inhabited by the Kryashen Tatars); and the following place names: Aktazik, Akhtiyal, Dyum-Dyum (Tatar and Russian), Kokshan, Kuklyuk, El-net, Yurash (the settlements include the toponym 'Tatar'), Pseevo village, Tzhesh village (Tekashevo), Lake Pinere, the Shurminka river, Anzirka village [Arslanov]. Moreover, names of some settlements can be explained by the linguistic traces of the Mari language. Kuk Mari, Kukmari—Mari villages in Kukmor district of the Republic of Tatarstan. The Mari of Russko-Mariyskie Kovaly village (the Mari name is Mari Kaval, the Tatar—Rus-Mari Kovaly) in the Vysokogorsky District (in Tatar: Zur Kaval and Keche Kaval) and also 6 villages in the Volzhsky District of Mari El (located closer to the border of Tatarstan) consider themselves belonging to the Kukmari village. 'Kuk mari' of the Zvenigov Mari meant 'Chuvash'. Perhaps, 'kuk mari' meant '(up)hill Mari, people of the uphill side'. In the Mari El Republic there are several place names of Kukmor (Mari: Kukmara) and Kukmari. Knya-Bash—the Tatar village in Kukmor district—was originally Mari. In Ocharma—officially the village of Berezhnyak of Kukmor district in the Republic of Tatarstan, live the Tatars. The Tatar name is Buchirme, the Udmurt name is Chaltaygurt. The Mari of the village Pochinok-Kuchuk believe that their ancestors were forced out of there. The Vochkash Pamash is a spring (and the area around it) near Staraya Knya village of Kukmor district in the Republic of Tatarstan. The Mari name was Vochkash, which means 'a tree suitable to make a barrel'; Baydankino

village (Nizhnekamsk district in the Republic of Tatarstan) bore the informal name 'Shirmesh Avyly', meaning 'Mari village'; and in the name of the village Bolshye Aty, the word 'Aty' is close to the Mari word '*oto*' (grove). The people of some Chuvash and Mari villages, being in close proximity to the Tatars, lost their national features: they accepted the language, life and customs of the Tatars. Among such villages are Staroe Azmeevo (*Iske Äcmi*) of Bakalinsky district in Bashkortostan. The population of the village Staroe Azmeevo is mixed. The founders were the pagan Mari who in the middle of the 19th century moved here from Menzelinsk County. According to the archive materials and stories of the natives, the baptised Tatars, the Chuvash also began to arrive almost at the same time. In the sources of the Ufa diocese it is said that in Staroe Azmeevo village there were '35 yards of pagan Cheremis... gradually they became absolute Tatars, speaking only Tatar (even old men do not know the Mari language). Their dialect differs slightly to not at all from the dialect of the baptised Tatars with whom they have lived for many years together'. However, these Mari have Old Turkic or borrowed names (of Arab-Persian origin) unlike the baptised Tatars: Gölbikä, Balbikä, Gölcimeş, Göşikär, Minnegol, Karligaç, Sandugaç, Asiliy, Çäčkä, Minnekäy, Timerkäy. Almysh, Täñkä, Satiy, Satybal, Tatliy, Balliy, and others. The names of clothes are also interesting: şarpan—tastar: 'head cover'; kikça: 'kerchief', izü—muysa: 'pectoral', etc. [Bayazitova, 1986].

The founders of some Tatar villages were the Udmurt and Mari who were afterwards forced out or became Tatars as a result of relationships with the Tatars. The Mari names of the Tatar villages of Trans-Kazan: Bimer, Bitaman, Ilnet, Kenär, Mängär, Pimer, etc.—is evidence of the ethnic assimilation of the Mari by the Tatars [Galimzyanov]. Adayevo village (Kukmor district in the Republic of Tatarstan), Izh-Bob'a village (Agryz district in the Republic of Tatarstan), Mari Yamaly village (Aktanysh district in the Republic of Tatarstan), and so forth are referred to as settlements that in the past were Mari, but became Tatar af-

ter adoption of Islam. In Tatarstan, there are Mari villages whose people have practically lost their native language and speak Tatar; but they maintain their self-identity since they still practice their traditional religion (in the Terpele village of Aktanysh district, the Bikmes' village of Muslyumovo district, etc.) [Molotova, 2011, pp. 172]. The Cheremysh (Tatar, Cheremysh-Apakaevo, and Cheremyshovo (on the Nurme and Ushne rivers)) lived among settlements on the Zyureyskaya Road (Trans-Kazan) in the Kazan Khanate. According to the first toponymist of the Kazan region, I. Iznoskov, the Cheremysh-Apakaevo village had the names Cheremyshevo Poganoë, Maloe Cheremyshevo, and Apakaëvo, while in Tatar—Apakay Chirmesh and Chirmesh ile. Concerning the name of Cheremyshevo village, I. Iznoskov wrote: 'According to the name of the village, it is possible to assume that the Cheremis were the first inhabitants there. In the Kozmodemyansk County there is a Cheremis village by the name Cheremyshevo' [cited by: Sattarov]. In the villages of Perm Krai (Ottuz, Chistyakovo, Tesh Bash, Solyanka) the Tatars mixed with the Mari. The same happened in the Agafonkovo village (there, a Mari is considered to be the founder of 'kăbăç năsel'). Such mixture is explained by the fact that in the past the population was not great in these regions. Therefore, the Tatars and the Mari lived in the same villages and mixed [Mukhametshin].

In the Tatar and Mari languages you can find a large number of linguistic parallels and mutual influencing. As noted one founder of the Ural-Altai linguistic studies, Strahlenberg, the Mari language is very close to Finnish but at the same time it is mixed, and the Tatar influence is expressed stronger than the Russian. G. Miller noted practically the same: 'The Cheremis language resembles Finnish, and there is a lot of Tatar words as well as a small number of Russian words on account of their habitation near the Tatars and Russians [Miller, 1791, p. 38]. Close contact with Turkic languages resulted in different changes in the Mari language: labial harmony and similar tendencies in word stress developed under the

influence of the Tatar and Chuvash languages there; types of doubled verbs, many suffixes, and analytical past forms were borrowed. Of four dialects of the Mari language (mountain, north-west, meadow and east), the east and meadow dialects were affected by the Tatar language most of all, and this effect is found both at the phonetic-grammatical and lexical-semantic level. In general, there are about 4 thousand words of Tatar origin in various lexical blocks of the Mari language. For example, there is vocabulary connected with wedding rites—*archi*—a wedding train (in Tatar: *arçi*); *aulak*—the house where the youth gather in the absence of seniors (also a Tatar term); *bashkyda*—matchmakers (in Tatar: *baş koda*); *kaynesh*—the younger brother of the wife (*kaenesh*); *kalash*—bride (*käläsh*); *kiyau*—son-in-law (*kiyäu*); *baldyz*—sister-in-law (in Tatar: *baldyz*); *bicha*—wife (in Tatar: *biçä*); *akcha*—women's decorations of the wedding clothes ('money' in Tatar is *akça*). Names of many Mari national heroes also bear the mark of Turkisms: *Boltush* (from the word 'balta'—an axe), *Ak patyr*, *Ak pars*, etc. [Galimzyanov].

In the Tatar language the influence of the Mari is much weaker but is present; researchers distinguished about 100 lexical units—Marrisms, generally in the form of the middle dialect of the Tatar language. For example, in *Zakazanye* dialect of the middle dialect they use *alabaj*—camomile (scentless) (Tatar: *ala* + Mari: *vuj* 'head', 'ear'); *be'lche*—a truss, a bunch, a fruit spur, an ear of oats or millet (Mari: *velshe* 'shattered'); *e'shhen*—a tendon, a gullet (Mari: *shun* 'vein', 'rubber', Udmurt: *son* 'vein, tendon'); *ly'by'*—a bag made of lime bast (Mari: *lupo* 'brush pile'); *ne'shte*—a layer of red clay (Mari: *ne'nche* 'mud, clay'; cf. Komi: *nyasha* 'mud deposits on the meadows'); *ongo*—a ring of a scythe or a hook (Mari: *ongo* 'ring, loop', Udmurt: *ugy* 'ear-ring'; cf. Finnish: *onki* 'fishing rod'); *te'nel*—a chair, a stool (Mari: *tengy'l* 'bench'; *shue'jk* 'joker, deceiver') (Mari: *shaya* 'speech', 'rumor', 'story', 'offer, short message', 'insignificant talk, fiction'; *shoya* 'tale, fiction'; *shoyache* 'liar'); *shy'lan*—a silty horsetail (Mari: *shy'lan*,

A group of Mari. Photo from the late 19th century

Udmurt: *shilan* 'marsh horsetail'); *y'shty'r*—onucha (also puttee), puttee, footcloth (Mari: *y'shty'r*, Udmurt: 'y'shty'r'), etc. The frequency of usage of some Marrisms in the dialects of the baptised Tatars is also worth mentioning: *buty'sh*; *surzhe'*; *shy'lshh* etc. A large number of the Mari borrowings are used also in the peripheral (marginal) Cis-Ural dialects of the middle dialect of the Tatar language: *mzhe*; *csugy'l*; *csy'bry'*; *csy'jshannac*; *labra*; *le'pzh*; *ly'py'sh*; *nor*; *pechter*; *poshy'j*; *terke*; *she'mke'*; *she'mke'lek* etc. In sub-dialects of the Mishar dialect, Marrisms are uncommon [Nasipov].

Language contacts and language compatibility of the Tatars and the Mari contributed to the successful acquisition of both languages by them. Local historians and researchers of the 19th century had noted the mastery of the Tatar language by the Mari. As the local historian N. Spassky noted, the Kazan Mari knew both the Russian and the Tatar languages while the Mamadysh Mari knew only Tatar. 'The Cheremis of the Kazan guberniya, if not greater in fact, are exposed no less than the

Chuvash to the influence of the Tatars; as well as the Cheremis in the east part of Tsaryovokokshaysk uyezd, Kazan uyezd, and Mamadysh uyezd, and the Cheremis of the Birk and Menzelinsk uyezds of the Ufa Guberniya and part of Malmyzh Uyezd of the Vyatka Guberniya. The Cheremis of the mentioned areas are very close to the Tatars and took the Tatar customs and morals, together with the language. Many Cheremis have Tatar names, try to wear clothes similar to the Tatar, and feel honoured if it is difficult to distinguish them from the Tatars. The speech of a Cheremis of these areas is enriched with Tatar words, proverbs and humorous sayings... In other places of the Kazan guberniya, though, the Cheremis didn't become Tatars so yet, but nevertheless it is necessary to say that the Cheremis of the above-mentioned uyezds considerably lost their national features, and familiarised themselves with the Tatar customs, morals and language so that sometimes it is absolutely impossible to distinguish them from the Tatars' [cited by: Khafizov].

Language contacts of the Tatars and Mari in the 19th century were also supported by the fact that the written Mari language was crafted in Kazan, where many Mari teachers were also receiving an education. In 1817, the archbishop Ambrose (Protasov) ordered the Kazan academic administration to craft an alphabet and grammar for the Mari language. The priest A. Albinsky attempted to improve the alphabet and to systematise the grammar of the Mari language. His 'Cheremis grammar' was published in 1837. Albinsky's major accomplishment was to provide a complete alphabet for the first time in the history of Mari writing. The first alphabet book in the Mari language was made by I. Kedrov and published in Kazan in 1867. In 1870, G. Yakovlev wrote an alphabet book on the meadow dialect which he then republished in 1873 and 1892. In 1892, 'The Alphabet Book for the Mountain Cheremis' by I. Udyurminsky and 'The Alphabet Book for a Beginning Education of Russian Grammar For Cheremis Children' by S. Nurminsky were published, among others. The latter half of the 19th century was a time

of rapid development of writing in the Mari language; from 1867 to 1905, more than 80 books were published. In 1732, the episcopal school was reorganised into a school of theology and in 1906, the first Mari scientist, V. M. Vasiliev, graduated. He was also a famous linguist, specialist in folklore, and ethnographer. Teachers for the Mari schools were trained by the Kazan Central Christian Tatar School which was officially opened by N. I. Ilminsky in 1864. The Mari also studied translation of their native language there [Islamov, Bashirova, 1999]. The baptised Tatars who were appointed as priests in their settlements played a significant role in the mass education of the Mari (and Udmurt).

The influence of the Tatars on the Mari was observed in ethno-contact zones in the confessional sphere. G. Miller noted that 'some of the Cheremis keep within the Mohammedan law and soon after birth they continue the rite of circumcision: this may be due to the fact that the Cheremis and other pagan people, just as the Mohammedans, celebrate Friday as a great day in the week when they do not do any work. They do not hold a service on this day and do not know the reason why they celebrate Friday more than other days of the week; it seems to me that it was a civil custom which came from the neighbouring Tatars' [Miller, 1791, p. 53]. And at the end of the 19th century, A. Eruslanov wrote: 'The Cheremis of the Ufa guberniya, owing to a long-term relationship with the Mohammedans and hidden unscrupulous propaganda of Islam, were strongly affected by the Mohammedans. Islam enters into all aspects of life of the Cheremis, forcing out all original, cheremis-pagan features both in the external living environment as well as in their religious, moral, and legal views' [cited by: Molotova, 2010, page 86]. And so, under the influence of Islam, the meadow Mari began to call the pagan priests 'kart' (the Tatar word '*kart*' means 'old man') while the Eastern Mari called them 'molla' in the second half of the 19th century. The latter began their prayers with the Tatar exclamation 'Basmalah—My God, bless me'. Up to the present day, a cap of white felt still

exists as an obligatory attribute for the priest-mollas. A part of the Mari living among the Tatars and the Bashkir also gradually came over to Islam. Appeals from pagan Mari to the Spiritual Assembly for adoption of Islam, as a rule, occurred in two cases: either due to the registration of mixed marriages with Muslims or due to the actual fidelity to the Islamic religion [Molotova, 2010, page 86, 88]. In the Mari settlements of Tatarstan, there remained many ceremonial places where prayers and sacrifices to various hierarchies were made in the past. For example, Mari sacred groves in Kukmor district have been well preserved [Molotova, 2011, p. 171]. And according to one version, the word 'keremet' appeared in Mari paganism under the influence of the Tatars. In some sources, there are mentions of a keremet spirit appearing in the form of a Tatar as well as mentions of the Mari offering sacrifices to a keremet by the name of Sultan (Soltan), etc. The influence of Islam explains the Mari's custom up to the end of the 19th century to celebrate Friday instead of Sunday [Zeleneeva, 2011, pp. 325–326].

In pre-revolutionary literature, there is much evidence of the Tatar-Mari cultural interactions in which the Tatar components clearly prevailed. 'These people (the Mari and the Udmurt—G. S.), ' G. Miller wrote at the turn of the 19th century, 'have their yards built like the yards of the Tatars, a fact that distinguishes them from the rural yards of the Russian peasant because they have no black huts; but they do make smoke windows and chimneys above furnaces and fireplaces. In their huts, as well as the Tatar huts, they have wide benches everywhere so that a man can lie across them, but these benches do not have equal width inside the hut [Miller, 1791, pp. 19–20].

The North Russian traditions of planning remained in the Mari huts: the furnace was placed near the entrance door on wooden foundations, the 'red' corner was diagonally across from it. In the Kama Mari huts, according to travellers of the first half of the 19th century, the features of a Tatar-Bashkir house were observed. It was expressed to a large de-

gree by the presence of plank beds [Mode of Life]. The hut of the Mari who lived among the Tatars had a different interior: a furnace with an imbedded boiler, wide plank beds along the front wall, a curtain instead of a kitchen partition, with small curtains on walls and in other parts of the house. The Mari villages in the west and north regions of Bashkortostan were little different from the Bashkir and Tatar settlements. However, in comparison with the latter, they were rather small. The furnace was to the right of the entrance and the fireplace was located on the front wall. Along this wall, there were wide plank beds. Small plank beds were also to the left of the entrance. The entrance of old houses faced the south.

The Mari clothes, both of men and women, were also affected by the Tatars. Trousers were cut the same as the Chuvash and Tatar and were held at the waist by means of straps. Inhabitants of villages located near the Tatar settlements wore oriental broad-brimmed bicorne hats similar to the Tatar hats. Shirts of Eastern Mari women were a little different from the shirts of meadow and mountain Mari. Women's shirts were often made of white linen and also of striped linen, and sleeves were made of factory fabric. The style of a woman's shirt was also affected by the Tatars and the Bashkirs. Its placket was trimmed with several strips of coloured material and multi-coloured bands, like shirts of the Tatar and Bashkir women. The Eastern Mari also wore trousers, but they, as well as their Bashkir neighbours, sewed them using striped linen. The east Mari women's summer caftans resembled the Bashkir and Tatar waistcoats; they sewed them to the waist with gores, sometimes without sleeves. There were also caftans of white, black and green cloth. Green caftans were wedding clothes for the bride and matchmaker. The female hennin, '*shnashoby'cho*', gradually fell out of daily use and was put on only on great holidays. It was informally called by the term 'bashlyk', borrowed from the Tatars [E'tnografiya, 2001, pp. 66–79].

In the traditional suit of the Mari, like the Bashkir and Tatar suits, there are caftans with

side plackets and pegged-leg trousers. In some Cheremis settlements of Birska Uyezd, for example in the villages of Cherlak, Sakhayaz, Torgem-dur, all men wore tubeteikas. They even had a custom: during a wedding, the father-in-law would give his son-in-law a brocade tubeteika as a sign of respect. The Mari peoples inhabiting suburban settlements and settlements near highways, who were engaged in forest and other seasonal works (the wealthy elite and, especially, the younger generation) generally switched to new forms of clothing, headwear and footwear. Along with Russian clothes, such as shirts-kosovorotkas and trousers made from industrial fabrics, wide-brimmed hats, forage caps and peaked caps, ear-flapped caps and flat round fur hats (kubankas), pleated boots, among the Mari, there began to appear Tatar caftans, waistcoats and tubeteikas. The latter were mainly worn by the Eastern Mari. And the language itself has preserved many borrowed words connected with costumes and their details: *takiya*—maiden cap of the Belsky and Ufa Mari, *peshmet*—outer garments, *chachkap*—a helmet-shaped hat resembling *kashpau*, it was put on a white piece of cloth (*tastar*).

Griddle cakes with porridge or puree inside were popular with the Eastern Mari. *ky'sty'vi* (*ky'sty'by'j*), a pie with meat and fat filling with cereal—*paly'sh* (*bälesh*). They stocked up on dried horse sausage for the winter (*kaza*), prepared ajran (*gyra*). G. Miller also mentioned that the Mari were 'great hunters for horse meat, and they do not keep pigs according to Tatar customs' [Miller, 1791, p. 34]. During prayers, they used 'only wooden dishware', the only exception were pots where sacrificial meat was cooked (in broth or in porridge). In the past, they also used leather vessels for storing meat and dairy products like their Turkic neighbours. Thus, at the beginning of the 20th century, during a wedding ceremony, according to tradition, they put ceremonial food in a leather bag belonging to the wedding's chief as gifts for the bride's relatives (bread, pancakes, cottage cheese and omelettes). Through the Tatars, tea and a number of fermented-milk drinks

became popular with the Mari [E'tnografiya, 2001, pp. 79–88].

Researchers found several features in the rites of family ceremonies borrowed by the Mari from the Tatars. Thus, the Mari, along with their own ancient Mari names, also had popular Tatar names. When a daughter was born again after her sister had died, she was given the name Almashbika (Tashbika) so that the girl would not die [Molotova, 2011, p. 180]. G. Miller mentions that the Mari do the following: 'parents or close relatives do not marry their maids for nothing, but according to Tatar tradition, the groom pays some money for the marriage... the Cheremis call it Olon... When the groom comes to the village where his bride lives, he goes... with his best man around the yard several times, and all the while his best man loudly congratulates him in Tatar: Solom Maliko!' [Miller, 1791, pp. 80, 87]. The following elements have been observed during wedding ceremonies of the Eastern Mari: the kidnapping of the bride (during traditional Mari marriage by way of match-making); a large size of bride wealth and dowry, part of which was paid in cattle; the groom's premarital visit to the bride; several crucial wedding events take place in the house of the bride; the bride gives presents not only to her own relatives, but also to the relatives of the groom; the simplification of a very significant procedure in the traditional wedding ceremony of the Mari—the use of a woman's headwear instead of a girl's headwear—and moving it into the post-wedding period; the unusual phenomenon of a post-wedding cycle in general, when the bride came back to her parental home after the wedding where her husband had the right to visit her. She moved into the house of her husband after her parents had given the rest of the dowry to the husband [Belevtsova, 2010, pp. 94–96]. In the funeral tradition of the Mari, there is an element considered to be Tatar, which is 'the custom to bury the dead in a wooden block in *lyakhet* niches, with the head turned towards the Kaaba' [Sadikov, 2010, p. 14]. The place on the small plank beds (Tatar tradition) was

honourable among the pagan Mari: candles were placed there, as well as food for the dead during family funeral feasts.

Describing the culture and life of the Cheremis, G. Miller dwells on their concepts of months and weeks: 'By the same token, they have no concept of months, however, they know of weeks, one week being seven days, and each day of the week has its own proper name, which they mostly borrowed from the Tatars'. He also mentions Mari musical instruments: *gusli—kyusel'* (considering that the term was borrowed from the Tatars—'*gusli*'), the Tatar bagpipe (*surnaj*), in Cheremis language—*shyubber* [Miller, 1791, pp. 41, 91]. Tatar-Mari links are certainly found in music

(the presence of pentatonic scale) and song poetry. Kayum Nasyri highlighted the ancient friendship of the Tatars and the Mari in his works. In 1900, his article 'Tales of the Kazan Tatars and their Comparison with the Tales of other Peoples' was published, where he covers in detail the tales of the Mari. The Tatar scholar described Mari tales presented to him by the famous Mari writer-ethnographer T. Semenov.

Thus, we can state the Tatars and the Mari had a tradition of good-neighbourly relations and cooperation over the centuries. Historical parallels give ground to highlight the social, ethnocultural and linguistic compatibility of these peoples.

CHAPTER 5

Zones of Contact Between Udmurts and Tatars

Nikolai Pislegin, Vladimir Churakov

By the early 19th century, the Volga-Ural region developed several contact zones in which there were cross-cultural interactions of the Tatars and the Udmurts. It is possible to distinguish five separate Tatar-Udmurt contact zones: 1) *the southern zone* (Kazan and Mamadysh uyezds of Kazan guberniya, Yelabuga, Malmyzh and Sarapul uyezds of Vyatka guberniya), 2) *the northern zone* (Glazov and Sloboda uyezds of Vyatka guberniya), 3) *the eastern zone* (Belebey and Birsik uyezds of Ufa guberniya, Osa uyezd of Perm guberniya), 4) *the south-eastern zone or the Iksk zone* (Bugulma Uyezd of Samara guberniya), 5) *the central zone or the Izhevsk zone* (the village of Izhevsk Factory of Sarapul uyezd). It should be noted that interethnic interaction with the neighbouring Tatars was generally at the level of peasant folk culture and education.

The southern contact zone is the most ancient one. It appeared as a result of natural changes in the settlement of neighbouring ethnic groups even before the Kazan Khanate joined the Russian State⁹. One of the most recent micro-regions of this contact zone is the territory settled by Tatars in the River Izh basin, currently found in Agryz District of Tatarstan. It began to form in the middle of the 16th century (Tersya volost) and it became the boundary which stopped the advance of the Udmurts eastward in the area of the lower reaches of the Izh river. The southern contact zone had the following distinctive features: clear ethnic boundaries dividing one people from the other

and a variety of options for their interaction. In particular, only in this region could the so-called 'conversion to a Tatar' be accomplished twofold: an Udmurt (a pagan or an Orthodox Christian) could become either a Muslim Tatar or a Tatar Kryashen.

The Muslim Tatars exercised significant influence over their non-Russian neighbours. Pre-revolutionary researchers noted the custom to celebrate Fridays, the high prevalence of the Tatar language, as well as the adoption of certain items of clothes and daily life habits, and ultimately the conversion to Islam. When in 1832, the Malmyzh uyezd court reported to the church administration about the acceptance of 'Mohammedanism' by 30 Udmurts in Maskara village, thereby confirming the 'fact of the Votyaks becoming Tatars and assimilating the Tatar way of life': the inhabitants of the village spoke Tatar, they intermarried with the Tatars, and 'their clothes, the arrangement of houses, their ceremonies and prayers—*N. P., V. Ch.* was all Tatar' [Luppov, 1911, pp. 485–486]. In the official report (1840) to the higher management, the rural dean of Malmyzh uyezd, the priest of Adzhim village, Georgij Voyetskoy noted that the baptised Udmurts of Tsy'pyinsky parish who lived among pagans and Tatars 'are much more rough and persistent in their misconception; and although they do not perform idolatrous ceremonies openly and fearlessly, they do attend gatherings of the unbaptised for offering pagan sacrifice' [Luppov, 1911, p. 114]. Similar situations existed in Yelabuga Uyezd as well [Luppov, 1911, pp. 486–487]. According to Sh. Marjani, during his time, the population of several Udmurt villages converted to Islam. For example, he wrote about a certain Mussa who convert the local Udmurts [Märcani, 1989, pp. 352–353,

⁹ This land mostly coincided with the territory of the modern adjacent districts of the Republic of Tatarstan and the Udmurt Republic; it also included the native area of the Udmurts within the Baltasinsky and Kukmorsky districts of Tatarstan and the Mari-Turek district of the Republic of Mari El.

388]. In 1881, the baptised Udmurts of Kainsar village of Mamadysh uyezd adopted Islam. The strong influence of Islam was also registered 'in other Udmurt villages of this guberniya—Novy Kumor, Suter, Ishturganov, Vezheshura, Maly Yumey, and others' [Iskhakov, 2009, pp. 125, 140]. Researchers pointed out that such influences could be even stronger if the Tatars 'had been kindly disposed towards the Votyaks', without oppressing them [Lupov, 1911, p. 487].

The pagan Udmurts worshipped Aktash, Alyak-inmar, Kaba-inmar. Undoubtedly, this was due to the influence of the Muslim national culture. In particular, according to contemporaries, the fact that the south Udmurt (pagan and baptised) did sacrifice of horses was accounted for the influence of Tatars [State Archive of Kirov Oblast, f. 56, inv. 1, file 278, s. 15 reverse–15].

G. Vereshchagin called the Agryz Tatars the main sellers of headscarves and chintz (and other textiles), and noted that Udmurt women preferred these sellers to Russian sellers because 'the Tatars speak the Votyak language and that bargains are much better in the native tongue'. Among the so-called retailers and sellers of various miracle remedies the Tatars also prevailed. Since the Tatars knew the Udmurt language it primarily 'provided them with trust and hospitality' [Vereshchagin, 1996, pp. 60–63]. The lack of division in Islam between the secular and the spiritual allowed 'not only Tatars, but also other non-Russian people of the district, to perceive and follow the Muslim clergy'. Mullahs served as mentors, healers and teachers [Iskhakov, 2009a, p. 122].

It was in the southern zone that baptised Tatars played a crucial role at the level of interethnic contacts by acting as missionaries of Christianity amongst the Udmurts. There were recorded cases of official and unofficial 'church services of baptised Tatars by scribes in volosts', inhabited by the Udmurts and the Mari. Tatar Kryashens took part in the prosecution of pagan ceremonies [State Archive of Kirov Oblast, f. 56, inv. 1, file 300, s. 2 reverse—2, 53, 57]. In the post-reform period in Kry'ndy' village, along with the old-baptised,

Udmurts who knew the Tatar language took part in prayers. Sh. Marjani, noting that the female costume of the Tatar-Kryashens was similar to that of the southern Udmurts, assumed that the former had Finnish roots [Marjani, 1989, p. 74–75].

Touching upon the issues of interethnic cooperation, it is important to note the presence of conflict situations which inevitably arose between the communities which differed from one another. Apart from the above-mentioned cases of tension based on religious belief, there were other conflicts which occurred and were reflected in the sphere of criminal proceedings. The high level of socio-cultural development of the Tatars, among others, contributed to a significant increase in population which aggravated the problem of land shortage and brought about a clear polarisation in terms of material and behavioural factors. On one side, there were people with delinquent behaviour, on the other side, were 'trading Tatars' and merchants. In the 19th century, the cardinal measure was applied twice in relation to the inhabitants of Tatar settlements of Sarapul uyezd, in the mid-thirties and the early sixties. In 1834–1835, there was an investigation of 'thefts and robberies by Tatars in the vicinity of the Izhevsk plant'. In June 1834, during a gathering of Danilov Volost inhabitants, comprising the Tatar villages of Agryz, Izh-Bob'a and Izh-Bajki, it was resolved 'to remove from residence' 139 people along with their families. Most of them were actually conscripted or sent to Siberia [Pislegin, 2011, p. 97–98]. These events were described in journalism as 'a robbery in full daylight' by several Tatars of a populous Udmurt village [Herzen, 1838, p. 11–12].

Another case took place on the eve of the Great Reforms. On 28 August 1860, the Udmurts of Bolshaya Norya and Buranovo volosts of Sarapul Uyezd and Ilyinskaya volost of Yelabuga Uyezd, totalling more than 700 people, 'summoned by representatives of the elected self-administration', surrounded Agryz village and carried out the lynching of 13 inhabitants, accusing them of stealing horses and cattle. There were cries such as

'we need to beat the rich', and that they would expose thieves. The speakers singled out 40 to 70 people who had to be exiled, as was the case 20 years before. This was followed by an investigation and a village assembly resolution. This time the relatively homogeneous society of Agryz volost, in terms of ethnic composition, agreed to exile only 3 persons. This was obviously not enough for the authorities and the indignant neighbouring Tatars, therefore in March 1862, a new sentence was passed 'on the exile of 18 people from society'. The Vyatka chamber of state property recommended 10 more persons for exile. According to the Sarapul district police officer, the reason for 'the growth of theft among the Agryz Tatars' was due to the lack of land (a little more than 2 desyatinas of arable land and 1.5 desyatinas of meadow plots per capita) [Pislegin, 2011, p. 98].

In 1822–1825 (at intervals), in the territory of Sarapul, Yelabuga and Malmyzh uyezds of Vyatka guberniya and in several neighbouring areas of Perm guberniya, 'a band of robbers' existed, led by the unbaptised Udmurt Hamit Usmanov. His henchmen were Tatars, the brothers Kurbanavevs (Vakhit and Mukhit). The period from 1811–1814 also became well-known when robber chieftains Abdullah Saparov and Fayzulla Munasypov operated in Sarapul and Yelabuga uyezds. Mainly non-Russian peasants (Tatars, Udmurts, and the Mari) were members of their gang [Pislegin, 2011, p. 96–97].

Traditions are very important in everyday consciousness. Perhaps, this is what accounts for the recorded in 1835 intention of Russian and Udmurt inhabitants of the Danilov volost in Sarapul uyezd to separate the Tatars 'into a special volost', along with the relief of duties. At least, two villains (koshtans) from Izh-Bob'a village wanted the same thing [Pislegin, 2011, p. 101]. Before a separate Tatar Agryz volost appeared in 1859, there was a polyethnic Kyrlygan volost (it was not completely homogeneous) [Pislegin, 2010, p. 256].

The northern contact zone consisted of two micro-regions—the slobodsky (appeared first) and the glazovsky (a noticeable influx of Ta-

tars occurred in the early 18th century). The Tatars lived here among the Udmurts, in close vicinity to the Besermians. Since there was a small number of them, their influence on the Udmurt neighbours was as a rule limited to the sphere of direct contacts. For instance, according to a remark of a priest from Balezino village (1840), Udmurts living as workers for the Muslim Tatars were weakened in faith and morality [Luppov, 1911, p. 110]. The reverse influence was also insignificant, at least owing to the historical memory of their possessory status as the Arsk princes. At the same time, for example, sacrifices among the Chepetsk Tatars in honour of the construction of new buildings (building sacrifice), prayers for good weather, and so on, can be explained by the Udmurt-Besermian influence. Such holidays as Roshpo, Bozho, Mashhenshha-bajram are probably borrowed from the Russian Orthodox culture through the Udmurts [Kasimov, 2012, pp. 50–52].

Among the original crafts of the Kestym and Paderin Tatars at the end of the 19th century, P. Sorokin considered their shepherd-ing (pastushestvo) amongst the neighbouring Udmurts. The Tatars were hired for a specific type of horse protection for the summer period, and in case of loss of a horse, they helped in searches, demanding payment for the return of a lost horse. They rewarded them with '30 kopeks per head', products (flour, meat, oil, etc.), and arranged 'friendly meals'. Some took 5–10 villages under their protection and behaved as 'the real suzerains': 'One village provides him with flour, another one gives oil, and a third one pays monetary tribute'. The poor Tatars of Glazov uyezd wore clothes similar to Udmurt homespun clothes made from linen which they bought from their neighbours (very often paying half the price); the Kestyms, having finished works on their small land plots, were hired by the Udmurts as farm labourers. This researcher did not agree with the statements found in literature, claiming that the reason for the alienation of Russians, Udmurts and Besermians towards the Tatars was due to their religion [Sorokin, 1896, pp. 86–87, 92–94].

According to remarks by contemporaries, 'the Tatars do not forget their past; they cherish commendations, given to them by sovereigns at different times, and use any convenient or inconvenient opportunity to assert their rights' [Spitsyn, 1884, p. 156]. Scarcity of land, which was also characteristic of the Tatar population of the northern contact zone, led to land wars which paved the way for appeals to ancient charters. As part of the General land division, the offspring of the Karinsky Tatar Mavlish (Mavlyush) Kasimov, inhabitants of Kestym'skaya village and Padera village (72 census serfs in the petition of 1830, peasants and bourgeois, the latter were the descendants of Usman Kasimov, who in 1791 registered as a merchant of Glazov), like many others who lost their land, tried to get it back. Asking to return the meadows to the area of Gordynsky ancient settlement which had been given to the Udmurts of the villages of Omutnitskaya, Kozhils'kaya, Bolshoi and Maliy Karavai, Verh Kestym (Pybya) and Nuryzov'sky, the petitioners relied upon the decree of the Moscow city hall dated 5 December 1709, and, perhaps, upon even more ancient documents. Petitions and claims first appear in 1811 up to the middle of the 19th century. At a certain point, in the 1840's, they brought about the desired result. The adverse party, hypothetically recognising the possible purchase of Mavlish Kasimov's land by the Udmurts ('Mavlish Kasimov was given a lot of land in Glazov Uyezd, but he could not cultivate it himself'), doubted that so many inhabitants of Kestym and Padera were descended from one common ancestor and, accordingly, they doubted the existence of the ancient document itself ('and when all this was forgotten, and our old men who knew all the affairs with the Tatars had already passed away,... only now do they think of asking'). Both parties 'appealed on the lack of land and the need to pay tribute' [Pislegin, 2011, p. 102].

Closer ties between the Tatars and the Besermians led to mass conversion of the latter into Islam and they ultimately became Tatarised. There were many among the yukamen Tatars of the Glazov group. The report of

Vyatka bishop Nil to the Synod of 17 January 1837 states that the Besermians ('or the newly-baptised Tatars'), 'quite often co-existing in the same villages with the unbaptised, for example, in Vortsy',... are strongly interested in Mohammedanism. They do not know of fasting days established by the church here and they very seldom go to church' [Luppov, 1911a, p. 72]. The strong influence of Islam was also noted among the Besermians of the villages of Imanaev, Dososa, Kashchur [Iskhakov, 2009, p. 125]. It was suggested that they 'spoke the Votyak language, while conforming to Tatar customs. The wives of wealthy people dressed like the Tatars' [Rednikov, 1839, p. 12]. The Vyatka missionary A. Emelyanov noted that during the post-reform period, a mullah was more respected than a priest in many Besermian settlements: '...a mullah for the Besermians was a person whom they trusted, who perfectly spoke the Besermian language, and in terms of everyday life he was a regular farmer', 'Tatar mullahs treat the Besermians like their spiritual children...', the latter make it a point of honouring the mullah the same way they honour a priest' [cit. ex: Iskhakov, 2009a, page 122, 125].

The eastern contact zone was the third according to the time of occurrence. It covers the areas of settlement of the Trans-Kama Region Udmurts. The joining of the Kazan Khanate to the Moscow state and the policy of forced Christianisation served as the basis for its formation. Mainly the Udmurts of Trans-Vyatka, partially the migrants of Cheptsy' village, including the Besermians, and to a lesser extent the inhabitants of the central regions moved to this territory. Distinctive features of this contact zone include a sustained (up to the present day) retention of paganism, and very close ties with Tatar and Tatar-speaking Bashkirs. Most Udmurts adopted Islam and became Tatarised. In the 18th century, the inhabitants of the villages of Klyashevo, Votskiye Kurzi, Yanaul (1756), Tuprala (1789) became Tatars [Sadikov, 2001, p. 29–30]. The Udmurts of Garibashevo village (Tatyshlinsky district of the Republic of Bashkortostan) began to speak Tatar, presenting themselves as Bashkirs. In

the middle of the 19th century, mullah Fajzulla, an Udmurt who converted to Islam, settled in Gareybash village. Before him there were about 10–15 Muslims in the settlement [Sadikov, 2010a, p. 10–11]. Tatar Dymsky village is also considered to be Tatarised [Atamanov, 2005, p. 112]. The terms *ar zirati* (cemetery of the Udmurts), *arlar oči* (Udmurt neighbourhood), *arlar urami* (Udmurt street) are traces of such assimilation of the Udmurts. On the other hand, such a Slav-Turkic-Finnish neighbourhood contributed to the preservation of many archetypes of compact residential places lost by the Udmurts.

Conversion to Islam at the same time meant a change of ethnic self-consciousness: the Udmurts perceived the adoption of Islam as 'a conversion to Tatars' and called Islam 'biger vos' ('Tatar belief'). Finnish scholar Yu. Vikhmann who visited the Udmurts of Birkseyezd in 1894, noted that 'a majority of Udmurt villages have become Tatarised completely and have converted to Islam' [cit. ex: Chuch, 1990, p. 40].

Islam also had an impact on the traditional beliefs of the Udmurts of the eastern contact zone, in particular on the evolution of beliefs about the Kylchin deity; a great number of characters of Tatar and Bashkir mythology entered the mythology and demonology sphere of the Trans-Kama Region Udmurts. Under Muslim influence, the Trans-Kama Region Udmurts sometimes use the terms *ran* (instead of *lul*) and *ky't* (instead of *urt*) [Sadikov, 2011a, p. 33, 36].

The southeastern contact zone was formed from 1740's due to the resettlement of the recently baptised Udmurts and pagans. Nowadays, it comprises of several settlements incorporated into Bavly district of the Republic of Tatarstan (before the revolution—Bugulma Uyezd) and Kupcheneevo village of Yermekyevo District of Belebey Uyezd). Tatar influence on the Bavly Udmurts was weaker in comparison to the eastern contact zone. In particular, it resulted in the fact that Turkic origin names, which were replaced in the 19th century by Arab-Persian names amongst unbaptised Udmurts of Bashkiria and Perm Krai, remained here [Sadikov, 2007, pp. 119–120, 125].

The central contact zone (Izhevsk contact zone) This contact zone has substantial differences from the other zones as it emerged under urbanistic conditions of a large factory settlement. Tatar-Udmurt interaction is ruled out due to an extremely small number of the non-Russian population, nevertheless, the so-called 'Tatar bazar' had a considerable impact on the development and the cultural image of Izhevsk.

The rise of the Tatar settlement on the Zarechnaya side of Izhevsk falls on the early 19th century. In the autumn of 1822, an Islamic parish was organised here [Märdanov, 2006, p. 259; Vasina, 2006, p. 89]. By 1859, Tatars and Udmurts accounted for around 2 % of the twenty-one thousand people of the Izhevsk factory (456 and 424 respectively) [Vasina, 2006, p. 92]. The number of Tatars and Udmurts increased mainly at the expense of recruits who came to work at the arms factory and iron plant [Central State Archive of the Udmurt Republic, f. 4, inv. 1, file 417, s. 44–102, 103–136, 187–203 reverse]. The factory administration kept strict records on the marital status of newcomers, it sought to marry bachelors to the daughters of factory foremen and it required the civil authorities to send the wives and children of married recruits to the factory immediately. Such a requirement caused stubborn resistance on the part of peasants and even compassion from local authorities [Grishkina, 2009, p. 113; Central State Archive of the Udmurt Republic, f. 4, inv. 1, file 34, s. 5 reverse].

In 1870, the Tatar settlement numbered 88 yards. In the post-reform era (1875) some of them, within the framework of the program on the allotment of land to former serf-craftsmen, moved out from Izhevsk (1866) and founded the village of Abdulmenevo.

The interaction of the Tatar and Udmurt peoples was reflected in the educational sphere. In areas where the Udmurt population had converted to Islam, parents often sent their children to maktab of neighbouring Tatar villages. They often opened new schools at places where the newly-converted created their own mahallah [Sadikov, 2011, pp. 90–93;

Marjani, 1989, pp. 352–353; Yuzefovich, 1883, p. 33]. As a rule, the program of these elementary educational institutions only provided for reading, writing and learning prayers by heart. Despite a low educational level [Steinfeld, 1893, p. 247], these schools allowed to achieve another goal—the complete adoption of Islam and the Tatar language by Udmurt children. Some of them, having finally become Tatars, continued studying in local madrasahs and educational institutions of Bukhara [Sadikov, 2011, pp. 90–93; Marjani, 1989, pp. 352–353], and eventually became mullahs.

In the early 19th century, the government and the Synod allowed the organisation of primary education of several non-Russian peoples including the Udmurts in their native languages [Grigoryev, 1948, p. 253]. But no specific measures were taken in this direction for a long time. Only the mass conversion of baptised and unbaptised non-Russians of the Middle Volga region into Islam forced the authorities to undertake a number of 'anti-Muslim' measures, for example, in the sphere of elementary Christian education. The system of education developed by N. Ilminsky also became popular with the Udmurts. Among the first followers of V. Timofeev, who became the head of the Kazan Central Christian Tatar School in 1864, there were Udmurt children present as well. Some of them, for example, an inhabitant of the Udmurt village of Kuzmichi (Kazan guberniya), later became teachers themselves [Ilminsky, 1913, p. 59; Zhurnal po obozreniyu cerkvej, 1875, p. 151; Bobrovnikov, 1899, pp. 46–47; Timofeev, 1868, p. 219]. Education at Christian Tatar schools did not always mean the loss of Udmurt ethnic identity; it also consolidated them within the orthodox church.

Afterwards, they established elementary educational institutions which used the Udmurt language, taking into consideration the experience of Christian Tatar schools. Udmurt-speaking Christian Tatar teachers made a significant contribution to the creation and formation of these institutions in terms of the educational process during the initial stages [Bobrovnikov, 1899, pp. 46–47]. Namesakes

B. Gavrilov and F. Gavrilov are especially noteworthy.

The priest F. Gavrilov (from the christened Tatars) is connected with the history of a school located in Stary Karlygan village, Urzhumsky uyezd, Vyatka guberniya. This school was destined to become one of the training centres for Udmurt teachers like Kazan Central Christian Tatar School. The school was founded in 1882 (initially as a private school) by a local native K. Andreev who had completed Starotsipyinsky and Sardabashsky Christian Tatar schools. In the ensuing years, relying on assistance and support from N. Ilminsky, he became a distinguished teacher and missionary, and he played a crucial role in educating Udmurt people [Zaitsev, 2006]. Since the first years of the school's existence and up to his death (1896), non-Russian diocesan missionary F. Gavrilov provided invaluable assistance in terms of the school's development and the organisation of the educational process. K. Andreev held religious and moral conversations with pupils and their parents under his supervision [Turanov, 2009, p. 15]. Talented Udmurt teacher and educator I. Mikheev worked at the Central Udmurt School as a teacher's assistant after graduating from Kazan Seminary for Non-Russian Teachers (1896)¹⁰.

B. Gavrilov, being a schoolteacher in Apazovo village, Kazan uyezd, where he came to work in 1867 after graduating from Kazan Central Christian Tatar School, began to be interested in the Udmurt language. In 1868, he was transferred again to an Udmurt school in the neighbouring Ushma village. In 1873, according to the instructions of the missionary Brotherhood of St. Gury, he studied the Udmurt language in Verkhnyaya Shun village, Mamadyshsk uyezd [Gavrilov, 1891, p. 80] and by 1874, on the basis of christened Tatar textbooks, he had prepared an ABC-book and a work entitled the Initial Doctrine of the Christian Faith in the Udmurt language, later used in Udmurt schools as teaching manuals

¹⁰ In the early 20th century, he developed an original method of teaching Russian to pupils of national schools, which also found practical use in Tatar schools [Suvorova, 1990, pp. 71–72].

[Izvlecheniya iz otcheta, 1874, p. 462]. In the late 1870s, before becoming a priest and transferring to Kyryndy village, Yelabuga Uyezd, Vyatka guberniya, B. Gavrilov was a teacher in a non-Russian college in the Udmurt village of Puzhe-Ucha (at present—Ilinsky village, Malopurginsky district, Udmurtia) [Turanov, 2009, p. 5].

B. Gavrilov had a distinguished record not only as a teacher and missionary but also as a researcher. Samples of Udmurt storytellings and unique information on the customs and rites of the Udmurts of Kazan and Vyatka guberniyas, collected by him in the late 19th century, form a priceless collection of Udmurt folklore and ethnography [Gavrilov, 1880, 1891]. The manuscript by B. Gavrilov 'Pagan religious and ritual life of contemporary Votyaks from Kazan and Vyatka guberniyas, which includes a preface on Votyak dwellings, costumes, jewels, food and drinks,

as well as their character', received the Minor gold medal of the Russian Geographical Society in 1884 [Korobeynikov, 2008, p. 9].

Other ethnographic works on Tatars of Vyatka guberniya were made by distinguished Udmurt educator, scientist, and writer G. Vereshchagin. In particular, he pointed out the aspects of Tatar mentality which allowed to find mutual understanding with Udmurts, which was due to 'Tatar influence on Udmurt women's costume in the Izh river region' [Vereshchagin, 1996, pp. 52, 60–63].

Tatar-Udmurt relations reflect a centuries-old history. Starting at the peasant and household level, in the latter half of the 19th century, these relations soon reached a new level of contacts in the sphere of education and science. This example shows how ambiguous and complex the process of longstanding interethnic and intercultural interaction was, but at the same time it was productive.

CHAPTER 6

Mordovian-Tatar Relations

Guzel Stolyarova

In the territory of the Volga-Ural region, there are two directions of interaction between Finno-Ugric (Mordovian) and Turkic (Tatar) elements: 1) the formation of local ethnocultural groups of Finnish-Turkic origin and 2) Mordovian-Tatar mutual influence conditioned by close proximity.

Several Tatar and Mordovian sub-ethnic groups exist in the region, having a strong Finnish-Turkic influence in their ethnogenesis: Tatar-Mishars, Kasimov Tatars, Tatar-Kryashens and Mordovian-Karatais.

The Tatar-Mishars emerged during direct contact with Mordovian groups influenced by Finno-Ugric components in the area between the Volga, Tsna and Oka.

The Kasimov Tatars' ethnic substratum was formed by Finno-Ugric (mainly Mordovians) and Turkic groups, inhabiting the lands of Meshhera before the existence of Kasimov khanate. Subsequently, this stratum was heavily influenced by the Turkic and Finno-Ugric people, taking into account their close proximity. Mordovian groups had the greatest impact. Traces of burial mounds and burials left by the Mordovians have been found near Tatar villages (Temgenevo, Muntovo, Akhmatovo, Sobakino). The inhabitants of these villages remembered legends about the fact that Mordovians (Moksha) lived close to their ancestors. A small portion of Mordovians started practising Islam in the 16th century and later they intermarried with the Kasimov Tatars [Sharifullina, 2004a, p. 545].

Some Tatar-Kryashens were the offspring of those who used to be pagans, especially from the borderline Finno-Ugric population which long had strong Turkic linguistic and ethnocultural traditions. As a result of christening, a part of the Finno-Ugric population, af-

ter its subsequent migration into mixed Tatar-Udmurt, Tatar-Chuvash and Tatar-Mordovian villages, gradually assimilated with the Tatar-Kryashens [Makarov, 2002; Bayazitova, 1986]. Many facts confirming that several villages of Tatar-Kryashens belonged to neighbouring peoples in the past, may be found in the works by I. Lyapidovsky, I. Iznoskov, I. Smirnov, Y. Koblov, etc. [Mukhametshin, 1977].

If in the 18th century, Mordovians actively settled remote territories, increasing their share in population of the Middle Volga region, including the territory of modern Tatarstan, then in the first part of the 19th century, the share of Mordovians in the Volga-Ural region decreased in every area. This was related to a reduction in the intensity of Mordovian migration processes, but even more so, it was due to the intensification of Mordovian assimilation which was typical in the post-reform period [Kabuzan, 2002].

The manner of settlement of Mordovians in the region is mainly the disperse type. At the same time, a network of Mordovian settlements was being formed in the Republic of Tatarstan. Some were mono-ethnic Mordovian, however, the majority intermarried with other Volga peoples. For example, in Kazan guberniya in the late 19th century, Mordovians only lived in the territory of three uyezds (Spassk, Tetyushsk, and Chistopole), only 9 of them were purely Mordovian [Yurchenkov, 2007]. From an ethno-demographic point of view, contacts between the Tatars and the Mordovians are expressed by intermarrying and forming mixed-race families, as well as ethnic identification of the younger generation in such families. Regional and scientific studies of the 19th century contain many plots concerning the Russification of Mordovians, inter alia, at the

expense of inter-ethnic marriages, however, actual instances are presented incompletely. For example, there is evidence that the Tatars had a special influence on their neighbours, especially the Bashkirs and the Chuvash, to a lesser extent—on the Mari, the Udmurts and the Mordovians [Laptev, 1861].

Local cultural complexes were formed as a result of close ethnic ties between the Mordovians and the Tatars, closely intertwined with Finnish and Turkic components. This was reflected in all the spheres of culture (the material, social and spiritual spheres), in different elements of culture and with a varying degree of intensity.

First of all, one can see a similarity in the domestic forms of all Volga peoples in the literature sphere, conditioned by close economic-cultural ties, common natural-geographical conditions and a generally close level of economic and social development of the region's peoples. This similarity can be seen in household equipment and labour instruments (types of harrows, ploughs, other agricultural instruments), in means of transport, as well as in the cultivation of crops and methods of harvesting and processing (drying, threshing, grinding), and also in the felling character of construction machinery, architectural-decorative design and in the interior design of residential and farm buildings. There were many common elements in terms of clothes (fabrics, style of clothing, aprons, outerwear like sheepskin coats and fur coats, jewellery, etc.), food (products, types of vegetable, meat, and dairy products—griddle-cakes, pancakes, pies, butter, sour cream, beverages, and their methods of preparation and storage, kitchen utensils, etc. [Mukhametshin, 1977] At the same time, there were direct Tatar-Mordovian word borrowings. For example, N. Vorobyev who studied the Tatar-Kryashens in detail wrote, 'Tatar-Kryashens do not have the majority of urban meals imported from the East. The great number of vegetables and kvas that they have is undoubtedly a direct influence of their Russian or Finnish neighbours... Their unique restraint, remoteness to trade centres, lack of aspiration for trade and trade skills makes the Kryashens similar to their Finnish

neighbours who have been making homemade fabrics for clothing since olden times. A direct Finnish influence is seen here, the Tatars do not have this, since it was overshadowed due to trade ties with the East and Russians. Another method of cloth ornamentation was—embroidery which was not as wide-spread among the Kryashens. Apart from the ancient way of embroidery using the chain stitch, they also had a Finnish embroidery technique...' [Vorobyev, 1929]. Ethnographers claimed that amongst western Trans-Kama Region Tatar Kryashens, 'there was a certain Mordovian influence': the consumption of mushrooms, ways of wearing onuchas (puttees) on cloth stockings, wearing belts around women's shirt, similarities in outerwear, certain types of headbands, men's headwear, styles of bast shoes, etc. The prevalence amongst Tatar-Kryashens (especially amongst northern groups) of two-storey barns, cages, log gates, several types of wood crafts (tar-distilling, spinning, producing bast mats and mat-bags) can be also explained by ancient ties with Finno-Ugric peoples of the Volga region [Vorobyev, 1928; Mukhametshin, 1977]. Many elements of the Tatar national costume (for women), as well as headwear, footwear and jewels had a lot in common with those of Finno-Ugric peoples living close by, including the Mordovians. 'This refers to horn-shaped headwear, coin-shaped neck and chest ornaments, made from cloth, the Muslim amulet-ornament khesite, a similar local chest ornament like a shoulder belt which was a pagan talisman for Finno-Ugric peoples. The Temnikov-Azeyev (southern) group of Mishars had Mordovian bast shoes (with a slanted front, low sides, and twisted elements), which were worn with knitted, not broadcloth stockings, as was customary among other groups of Tatars' [Suslova, 2004, pp. 542–543]. V. Gordlevsky noticed traces of the pagan Finnish elements in the compact arrangement of settlements amongst Kasimov Tatars [Sharifullina, 2004a, p. 545]. As for the Tatar-Mishars, according to N. Mokshin, such details in their material culture as a kosulya (plow), putmar (bed), bast footwear (first of all, lapti), typical for Mordovians since ancient times should be considered

Mordovian borrowings [Mokshin, 2006, p. 690].

The Tatars had a significantly weaker influence on the Mordovians than the Russians. Information about Tatar influence on Mordovians is insubstantial. For instance, M. Evsev'ev writes, '...the shape of the Mordovian headwear for women in Saransk uyezd resembles that of Kazan Tatar women, the so-called kolpak (pointed cap)' [Yevseyev, 1925, p. 180].

It follows from the above-mentioned materials that there is a lot of evidence on Finno-Ugric components in the material culture of various Tatar groups, however, the situation is not the same in the social culture sphere. Here we can only refer to Y. Mukhametshin's statement about the fact that the contacts of Tatars with neighbouring peoples were also reflected in social everyday life: in the more lasting existence of large patriarchal families [Mukhametshin, 1977] and also to Mordovian researcher M. Akashkin's remark that 'the pre-Christian way of life of the Mordovians and the pre-Islamic one of the Mishars were very similar, if not identical' [Akashkin, 2001]. But as far as spiritual culture is concerned, the interaction of the Tatars and the Mordovians is manifested more clearly. Researchers noted the closeness of religious notions of the Kasimov Tatars, the Tatar-Kryashens, the Tatar-Mishars, especially in regard to their ancient cults with elements from Finnish-speaking peoples [Vorobyev, 1929; Mokshin, 2006; Mukhametshin, 1977]. Scholars find a lot in common in the wedding ceremonies of different Tatar and Mordovian groups. For example, the Tatar-Mishars often married 13–14-year-old boys to 18–20-year-old girls which was a wide-spread phenomenon amongst neighbouring Mordovians

Mordvins. 1885.

[Sharifullina, 2004a, p. 547]. The quantitative ratio of the percentage of similarities and differences between Mishar and Mordovian wedding rituals is the following one: 73 % of Tatar-Mishar and Mordovian wedding rites are very similar, around 53 % coincide almost completely; the latter include—matchmaking, dowry, the groom's visit to the bride, only girls' bath, buying out (gates, doors), the similarity of wedding rituals, certain rites when the groom meets the bride, presentation of gifts, the introduction to a new home, taking the bride to a well, post-wedding festivities, etc. [Akashkin, 2001]. M. Yevseyev discovered in Saransk uyezd several specific wedding rituals with non-Mordovian titles, which are not found in other areas inhabited by Mordovians [Yevseyev, 1925, pp. 183–184].

Among other components of Tatar spiritual culture, influenced by Tatar-Mordovian contacts, researchers emphasise the musical works of the Tatar-Kryashens (to be more precise, circle songs) [Mukhametshin, 1977] and folk dances. The basis of the peoples' choreography is formed by working and social practices. Many dance elements arose from imitating the work process: a work mode is reflected in both men's and women's dances. The elements

of labour which are common for Tatars and Mordovians were reflected in the Tatar dance 'Almagachlary' and the Mordovian one called 'Umarina' [Khuzina].

As for Mordvinic languages, Tatarisms rank first in comparison with other Turkic borrowings, in addition, there are more Tatar borrowings in the Moksha-Mordovian language than in the Erzya-Mordovian one [Butylov, 1998].

Mordovian-Tatar ties had an effect on Mordovian anthroponymy where there were both pre-Muslim Tatar and Muslim names in the period before conversion to Christianity. These were mainly preserved in Russian records and various bureaucratic documents. Some have reached us as surname stems and are widespread amongst Mordovians at present.¹¹ [Mokshin, 2006, p. 691]

Thus, ethnographic, folk and linguistic materials confirm the close ethnocultural ties between Mordovians and various Tatar groups from the Volga-Ural region.

During this period, the social basis, contributing to sustainable ethnocultural interaction of the rural multiethnic population of the Middle Volga region, was formed by: a tradition of tolerant relations and the equal social and legal status of cultivators (taxed population, inhabitants of state villages); favourable climatic conditions and an economic system; joint settlements in several villages¹² and the existence of contact zones—the close location of various ethnic groups, economic ties, seasonal work, etc.

The predominance of the Tatar population in comparison with the Chuvash and Finno-Ugric populations, their activity in commercial transactions and their relatively high literacy, the favourable attitude of the Tatar clergy (unlike Orthodox priests) to pagans, a rational lifestyle, etc. formed an attractive image of the social and cultural life of the Tatar population. However, interaction had its limits, the main limitations were the following: religion and ethnic traditions, stereotypes and mentality, knowledge of neighbouring languages, etc.

Ideologically, there was a struggle between the Russian Orthodox church and the Muslims for spiritual influence on non-Russian peoples in the region. After the introduction of N. Ilminsky's system, when contacts between Christians and Muslims began to be monitored by priests of national parishes and teachers of the Brotherhood of Saint Gury, as well as the Ministry of National Education, Islamic influence became less intense. The clerical culture created by N. Ilminsky and several missionaries contributed to the rapprochement of christened non-Russian peoples.

The traditions of interaction between Tatars and Russians go back to the Golden Horde era. During this period, relations between rural Russians and the Tatar population were mainly determined by economic ties. The influence of Russian culture on the Tatars began to increase in cities where the latter constituted an ethno-religious minority.

¹² According to the 10th revision, in Kazan guberniya, 12. 4 %, of state peasants, mainly Russians, Tatars and Udmurts, lived in multi-ethnic settlements [Shkapin, 2011, p. 161].

Section IX

**Ethnography
and Tatar Folk Art**

CHAPTER 1

Settlements and Dwellings

§ 1. Rural Settlements and Dwellings

Nail Khalikov

Settlements and dwellings are essential aspects of material life and form the basic life necessities for people and their families. Building and construction, as they developed, assumed the form of an integrated complex with complicated functional, territorial, temporal, ethnographical, and other parameters.

Traditional Tatar settlements—villages (*avyl, il*)—were built along waterways: rivers, brooks, streams, and also lakes. In this respect they differed from the settlements of other peoples. Tatar villages in the 19th century were somewhat larger than the settlements of the Mari people or the Udmurts. There was a steady increase in the number of homesteads as well as the population of the villages in a north-south direction. By the end of the 19th century there were often fewer than 100 homesteads in the villages of the Vyatka and Perm guberniyas [Materialy' po statistike, Vol. 9, part 2, p. 410; Materialy' dlya statistiki Krasnoufimskogo, Ed. 1, 2, 4]. In the Laishevo Uyezd of the Kazan Guberniya there were on average 139 homesteads in Tatar settlements [Materialy' dlya zemlevladieniya, Ed. 7]. The majority of the Tatar settlements in the Samara and Saratov Guberniyas contained over 100 homesteads, often as many as 500 [Yakhontov, 2008, pp. 310–311]. 40 Tatar villages in the Orenburg Guberniya had an average of 160 homesteads [State Archive of Orenburg Region, f. 164, inv. 1, file 5, 6, 80, 81, 82].

Street planning in most Tatar villages in the late 19–early 20th centuries were along the lines of: two rows of manors, facing each other, or linear planning: one row of manors. Streets (*uram*) had side streets after every few homesteads (*tykryk*) for access to a watering place, vegetable garden, or a field. Large vil-

lages had block planning. In the Middle Volga Region, the Ural, and neighbouring regions this was the result of the replanning of traditional settlements, which was carried out in 1839 at the initiative of the Moscow State Mining University and further developed in the post-reform period thanks to the activities of Zemstva.

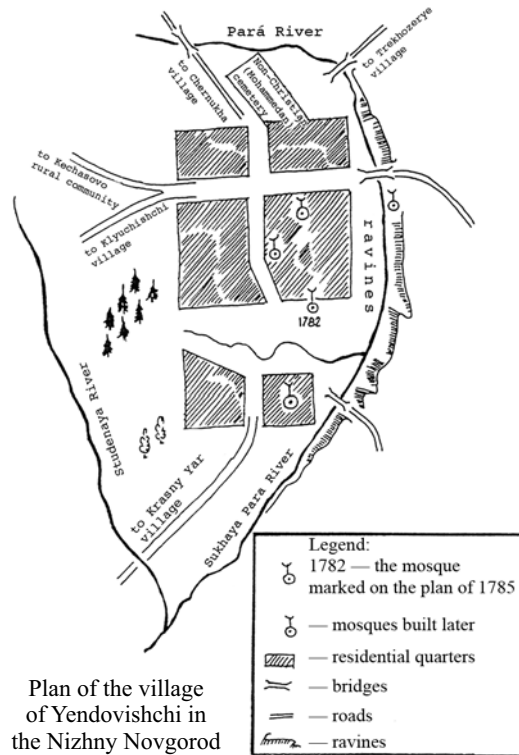

The replanning was most successfully carried out in the settlements of military estates. In 1843 the model plan for the aul, drawn mainly from the 'Building Statute,' was approved by the Orenburg military governor: straight streets in regular lines, 10 to 15 sazhen apart, the distance between the houses should be around 12 sazhen, the bath houses and blacksmiths shops should be placed outside the estate, close to natural water sources or on the slope of the ravine. From 1847 a mass resettlement from the river valleys to the post roads and cart tracks was in process as well as the migration of a significant part of the Bashkir-Mishar army, whose settlements were built according to the model plan [Shitova, 1984, pp. 38, 47; Shirgazin, 1992, p. 47]. Almost half of the housing stock of the Muslim irregular army was renewed in 4 to 6 years [Yanguzin, 1989, p. 114].

The old-style curved street planning, referred to as 'purely Tatar' or 'oriental,' was preserved chiefly in the Kama region, in settlements untouched by the replanning [Krest'yanskoe zemlevladienie, Ed. 8, p. 80]. The planning of such villages was cumulative and clustered and was characterised by a mesh of tangled streets, back streets, and cul-de-sacs. This was a relic of the early stages of the settlement of the Tatars' semi-nomadic ancestors into ethnic and tribal groups and of the formation of permanent settlements.

The layout of the village was also defined by social conditions. Civic buildings were found in the centre of the settlement: shops, fire brigades, occasionally the volost's authorities, and also estates with permanent buildings of wealthy householders. There were also bazaars. A mosque was built on a small square roughly in the middle of each hundred or so homesteads; there might be several mosques in large settlements. On the outskirts of the settlements were clusters of dilapidated houses belonging to poor peasants, with several simple farm buildings.

In the Tatar villages of the Kama Region, as in the villages of the Mari and Chuvash peoples, a lot of the streets were tree-lined and almost every house had a small garden in front of it. This tradition was practically non-existent in the Mishar Tatar villages. But common to and obligatory for all groups of Tatars was the planting of trees and shrubs in cemeteries, a custom which found its origins in the distant past.

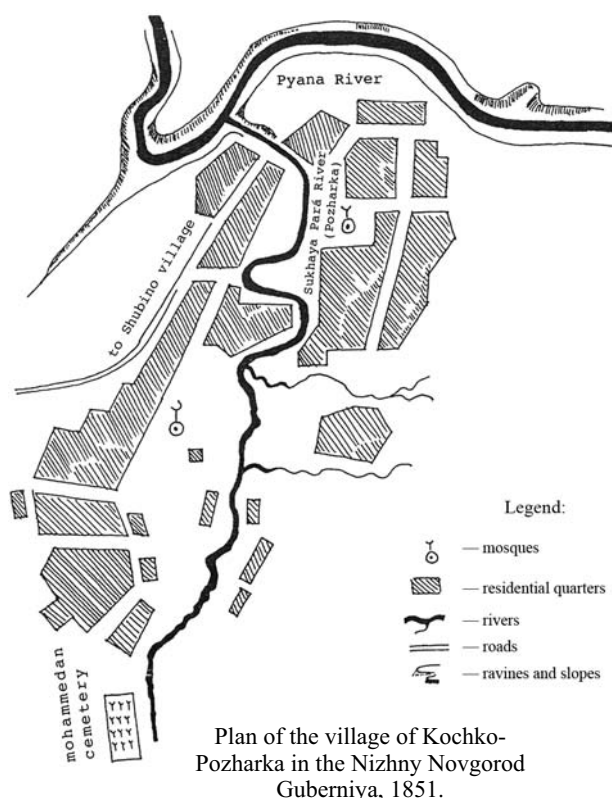

Tatar rural manors (*jort*, *naz'ma*) were usually rectangular in form and were divided into two parts: the homestead itself with its buildings and a vegetable garden. Manors with a homestead only, and no vegetable garden, were occasionally found among poor peasants. In the southern steppe regions, where the population kept large numbers of cattle, and among the Tatars of the Kasimov Uyezd of the Ryazan Guberniya manors were sometimes divided into three parts: a 'clean' homestead with a dwelling; a farmstead with barns and sheds; and a vegetable garden. The manor was usually separated from the neighbours by the backs of the homestead's structures and fences (*kojma*, *kura*) in between them. The vegetable gardens were separated by simple fences—wattling, a stack stand, baulk, or an earth trench. The homesteads were securely fenced off from the street; the fencing was of timber, or more rarely of logs or stones, etc. Gates, especially in forest and forest-steppe regions, were built high, on 3 or 4 posts. There were so-called 'Tatar' gates (the posts were connected at the top by a board or bar, or were not connected at all) and 'Russian' gates

Plan of the village of Yendovishchi in the Nizhny Novgorod Guberniya, 1785.

(with a dual-slope covering). In the southern steppe regions gates were not usually higher than the fences.

Homesteads differed in the number of their buildings and their grouping. The manors of poor peasants, who kept hardly any cattle, consisted of one or two structures constructed from the materials they had to hand (poles, wattle, clay) and located at random. The appearance of the homesteads was also affected by adverse environmental factors: droughts, livestock disease, fires, etc., which led to the impoverishment of the peasants. In contrast to the poor homesteads, the manors of wealthy peasants, merchants, and the clergy were distinguished by their order and the large number of farming facilities (several store rooms, cold and warm barns, stables, sheds). The buildings were made of quality materials and, even in unforested regions, were often constructed from wood. For example, the generally wealthy Tatar Cossacks from Orenburg had 'barns, sheds, various cowsheds, aviaries, and special stables for horses..., constructed for the most part of thin logs...' [Litunovsky, 1878, p. 102].

Plan of the village of Kochko-Pozharka in the Nizhny Novgorod Guberniya, 1851.

The manor's appearance also depended on the system for building cattle yards. A typical feature of the Tatar manors in the northern uyezds of the Kazan Guberniya, the Vyatka and Perm guberniyas, the Oka-Sur' interfluvial area and the Trans-Kama Region was the erection of timber barns and stables under a dual-slope overhang or under the entire roof of the barn (*lapas*, *aran*, *abzar*). The vacant space between the timber barns and stables formed an enclosure (*karda*) where cattle were kept during the daytime. A semi-dugout for cattle and birds or a paddock (*karda*) sometimes adjoined the wall of the building from the side of the vegetable garden.

In the south-eastern uyezds of the region structures in the barnyards were set apart. More space was allocated for cattle enclosures, shelters, and light sheds made from wattling or wooden stakes. Heated buildings for cattle were much less common than in the forested areas. According to N. Litunovsky, the building of the Tatar homesteads in the Orenburg Guberniya consisted 'mainly of poorly constructed sheds and shelters with partitions for keeping cattle...' [Litunovsky, 1878, p. 102].

The appearance of the homestead was defined to a large extent by the position of the dwelling and its orientation in relation to the street, as the dwelling was the centre of the homestead and determined the positioning of the farm structures.

In the Tatar settlements of the Volga-Ural Region the dwelling was situated at the heart of the manor, in accordance with ancient traditions, which set a precedence for later forms. In the middle of the 19th century M. Laptev remarked that in ancient times the Tatars 'positioned their houses in the oriental manner, in the middle of the homestead, fenced off on all sides; nowadays not only cities are built according to plans, there are also villages constructed in the correct layout, but even here the Tatars try to hide their houses from public view' [Laptev, 1861, p. 216]. This old style reflected the Turkic tradition, whereby buildings were scattered haphazardly, and curved street planning in villages in the near Kama, Trans-Kama, and Ural Regions.

In some Tatar settlements houses were positioned at some distance from the street. This different style of layout for dwellings is the next level in the development of the early form, which was necessitated by the replanning of settlements and the replacement of the old, unsystematic building plan by a new, structured one. A third type was the positioning of houses in line with the street. This style, known as the 'posad' or 'urban' style, was used by the Tatars during the complete reconstruction of settlements from the beginning of the 1870s. In accordance with the latter style, houses were placed at a short distance behind the line of the street, which gave the street an irregular, zigzag appearance. This tradition appeared as a result of the close proximity of the manors; this feature was most common in the narrow homesteads of the Oka-Sur' interfluvial Region.

In rural manors there were open, half-covered, and covered types of homesteads. The open-type homestead had no covering over the central space, which was free of structures. The half-covered homestead had a well-

ordered arrangement: the space between the house and the farm buildings, placed in parallel to it, was enclosed by a covering made of wooden stakes and straw. In the summer the covering was dismantled. In the covered homestead the structures were under a common permanent roof.

The covered and half-covered types were generally characteristic of manors with a dwelling located on its building line. In Oka-Sur' interfluvial area and in the southern volosts of the Trans-Kazan covered homesteads could be found, where the house and the homestead had dual-slope roofs. The covered homestead was sometimes positioned at some distance from the house, and the space between them was covered with a flat roof for the winter. In the Trans-Kazan, Volga, and western Kama Regions covered homesteads were built, adjoining the house on two sides. In the covered Tatar homesteads of the northern areas of the Kama, Ural, and partly the Volga Regions, which were characterised by their large size and massive walls and roof, the house and household buildings, placed in parallel, had their own roofs, and the centre of the homestead was covered with a sloping roof made of boards. There were also other versions of covered homesteads.

The Tatars of the Volga-Ural generally possessed open homesteads, which was an ethno-cultural tradition of the rural manor, preserved in all natural zones throughout the long history of the development of architecture. The traditional conditions for household activities could be met most closely by a manor that was suitable for keeping cattle without a cowshed, which was common in southern areas, and with a cowshed, which could be found in northern areas.

Half-covered and covered homesteads were far less common. The first type was mainly encountered in certain areas of the Kama Region and the Middle Volga Region; the second was evident in the Perm and Kungur Uyezds of the Perm Guberniya, in the Sloboda Uyezd of the Vyatka Guberniya, in the Kazan, Mamadysh, and Laishevo Uyezds of the Kazan Guberniya, in the Simbirsk Uyezd of the Simbirsk Guber-

niya, in the Saransk and Kerensk Uyezds of the Penza Guberniya.

The half-covered type of homestead was found in manors with coverings between sheds and barns, and on this basis covered homesteads appeared in the early 20th century. The appearance of covered homesteads amongst the Tatars can be partly explained by the fact that they kept inns in settlements near the road.

Certain patterns could be seen in the layout structure of the manor (types of homesteads). The most archaic of these in the late 19–early 20th was the haphazard layout of Tatar manors, which was a feature only of the open homestead: structures were positioned without any kind of order, and with no connection between them. This form, reflecting the first stage in the development of the manors, and which dated back to the 'traditions of the semi-nomads during settlement' [Shennikov, 1977, p. 26], could be observed in old Tatar manors in the Volga, Kama, Trans-Kama and Lower Volga regions and the Perm Trans-Urals. In contrast to this unsystematic layout was the ordered form of different types: single-row, 'II' and 'T'-shaped, and other forms of homesteads.

The most common layout in the Tatar manors was the 'chamber' style, where the homestead buildings were positioned in a 'II' shape around the perimeter of the homestead, leaving its inner area open. The 'T' form of layout was widespread amongst the Tatar manors. The house was most often situated with its narrow side facing the street. At the rear in a single line, or most often adjoining an inner porch, were a cage, a shed or a overhang. Another group of structures, consisting of a barn, an overhang and stables, was positioned along the rear side of the homestead, forming, together with the house, a 'T'. Wealthy Tatars in Kasimov uyezd owned triple-row and 'T'-form manors. In the first case the house, situated in the centre of the manor, divided the homestead into 'clean' and household halves. With the 'T' form the house was positioned with its long side facing the street; its blind side was adjacent to a terrace which was attached to a shed, then a barn and a storage room under a common roof. Each of homesteads had separate gates to the street.

Drawing by A. Haxthausen.
Mid-1840s.

- a) peasant's dwelling house; b) the first yard or homestead; c) overhang on wooden columns, open at the front; d) bath house; e) overhang on wooden columns, open at the front and serving as stables during the summer; hence the trough in the rear wall and hayloft under the

roof; f) two facilities for storing flour and grain; g) a facility for tools; h) overhang with scales above; i) store, one part for oats and the other for farming tools; k) the second or horse yard; l) stables; m) overhangs; n) vault; o) the third or cattle yard for cows, sheep, and goats; p) different stalls for them.

In addition to the reasons mentioned above, ethnic and cultural traditions reflecting the early stages of the appearance of settlements (open homesteads with an asymmetrical plan, the unsystematic or disordered placement of buildings in the manor, the positioning of the house at the back of the homestead) also had a part to play in the formation of the homestead's structure. It would appear that the forms of covered homesteads and the 'П', 'Г' and 'Г' layout of the homesteads were in most cases a

In rural house building, the structures were designed for the storage of supplies of bread, produce and property, and were divided into ground pantries, barns, storerooms and basements and cellars built into the ground.

Single-chamber pantries were widespread. Double-chamber and two-level pantries could be found in the Kama region. Barns, which differed from pantries in that they were larger and had a wide two-leaf door, could be found mostly in the Kama region, the northern areas of the Volga region, in the Sergach uyezd of the Nizhny Novgorod guberniya and in the Perm and Ufa Cis-Urals.

Domestic pantries were generally referred to as black (*kara kelät*), and contained chests (*lar*; *bura*) made of custom-fitted thick plates. An ancient tradition of the Tatars was to use the pantries for newlyweds as a summer dwelling. (*ak kelät*). They had a floor, ceiling and a small

window, and had thorough internal finishings. Pantries of this kind were typical for the Tatars of the Kama region, the Perm part of the Ural and Trans-Urals regions and the western and Eastern Trans-Kama Region.

Storerooms with brick walls appeared in the final quarter of the 19–early 20th century. Like other brick buildings, these belonged to the wealthier peasants, the clergy, merchants, owners of artisan businesses and were concentrated in the economically more developed areas of the Kazan region and the northern districts of the Oka-Sura interfluvium.

Stone storerooms (*tash kelät*) were often found in Tatar villages in the Kama, Trans-Kama, Ufa, Orenburg Cis-Urals and Trans-Urals regions; in the unforested steppe regions, in the southern area of the forest-steppe zone storage rooms made of adobe were widespread.

A common occurrence were semi-basement storerooms (*podval*), designed for storing household goods.

Most households had underground storage cellars (*baz*) for keeping potatoes, meat and dairy products. These cellars were often built underneath sheds, coverings, pantries, granaries and storerooms.

A cone-shaped covering (in the form of a tent), which even in the middle of the 19th century was described as one of the characteristic features of the Tatar homesteads in the Kazan guberniya [Sboev, 1856a, p. 18], was an ancient traditional building, typical of the agricultural lifestyle of the Kazan Tatars. All other forms of coverings were characteristic of all groups of Volga Tatars.

The most important buildings in the peasant households were those used for housing animals: cowsheds, stables, overhangs, paddocks, etc.

A traditional, important and almost obligatory building of the Tatars of the Volga-Ural region was the bath house (*muncha*). In three villages in the north-western part of the Malmyzh uyezd of the Vyatka Guberniya there were 234 bath houses

Wattle hayloft (*çitän çinnek*) in the village of Chegakly. Abdulinsky District of the Orenburg Region. Reconstruction by N. Khalikov.

es for 453 residential homesteads [Statisticheskoe opisanie, 1876, Table]. The Meshcheryaks of the Orenburg guberniya were characterised as 'great lovers of bath houses', baths were for them the 'necessary attributes of almost every house' [Litunovsky, 1878, pp. 93, 104]. But there were villages where these buildings were rare [Glotov, 1929, p. 37]. Bath houses were sometimes located on the front yard or in the vegetable garden, but in most cases, for reasons of fire safety, away from the manors, near water.

Baths were constructed of wood (logs, poles, wattle), stone, adobe and so on. Log bath houses were most commonly found throughout the forest and forest-steppe zone of the Volga-Ural region. Adobe bath houses were predominant in the steppe areas of the Lower Trans-Volga Region and in the Orenburg Cis-Urals. Bath houses made of poles and wattle were found in the same areas as those made of adobe. Stone baths were occasionally built in the villages of the forest-steppe and steppe areas, from the Kama region to Orenburg Trans-Urals region.

Depending on whether the stove had a chimney, bath houses were divided into those with 'black' heating (*kara muncha*) and 'white' heating (*ak muncha*). The first type of stove was archaic and common to all bath types. This type of stove was of clay adobe or of stone. Water was heated in a boiler, installed on the stove or in front its mouth. Smoke was emitted through an opened door. This bath type was most common in all Tatar villages of the Volga-

Peasant's house in the village of Yepanchino of the Kazan Uyezd and its plan.

Drawing by A. Haxthausen.

Mid-1840s.

a) large living room; b) small rooms; c) part of the covered stairway leading to the men's half, white stairway; d) black stairway; e) bench against the outside wall of the house; about 2 arshins in height and 3.5 arshins in length, underneath an overhang, sometimes uncovered, serves as a sleeping place for men during the summer; f) hallway.

ly used in the forest areas and, to some degree, in the forest-steppe areas. The walls of storerooms (pantries and granaries), bath houses, barns, stables and summer kitchens were made of timber. An embedded technique was used in the construction of fences, walls of buildings for livestock, semi-cellar storage rooms, etc. In the absence of construction timber

Ural region, with the exception of the Kasimov and Yelatma uyezds. The above-ground two or three-chamber bath house was supplied with a 'white' heating type stove. The stove was made of brick, occasionally of stone, and had a niche over it, above which was a straight smoke chimney. Water was heated in the same way as in the 'black' bath, or in a cemented-in boiler at the side of the stove chamber. These bath houses were mainly found in the original territory of settlements of the Tatars in the Kama region and of their close neighbours, the Kasim Tatars.

Common amongst the buildings of the homestead was the summer kitchen (*alachyk*), which was widespread throughout the Middle and Lower Volga region, the Orenburg Cis-Urals and the Trans-Urals region. The *alachyk* was used for residential and household purposes at the same time. In summer the older family members and young couples lived and also cooked here.

An analysis of the structure of the household buildings clearly shows the dependence of the materials used in the construction on the local natural conditions. Naturally, wood was wide-

for these buildings a frame-pillared technique with single and double walls of poles or wattle was widely used in the southern, south-eastern and eastern uyezds of the Cis- and Trans-Ural regions. In the unforested steppe and forest-steppe areas, adobe (Lower Volga region, Orenburg Cis-Urals) and stone (Cis-Urals and Trans-Urals regions) were also common forms of construction material. Bricks were used for construction predominantly in the economically developed areas, where the tradition of the stone and brick architecture of the ancestors of the Volga Tatars (the Kasimov Tatars in the Kazan area) had been handed down.

Log huts were most widespread in the forest and forest-steppe areas. The timber was cut by the men of the family, hired carpenters from amongst fellow villagers, or foreign craftsmen (Russians, Mordvins, Tatars). Up until the end of the 19th century poor peasants in the forest-steppe area had frame-pillared houses with walls made of poles and wattle.

Brick houses appeared in Tatar settlements at the end of the 19th century—beginning of the 20th century. Their appearance was occasioned

by the development of commodity-monetary relations and the growing numbers of the trading class in rural areas.

Adobe huts made of mud bricks were widespread in the unforested south-eastern uyezds, and stone was used for construction in the foothills of the Urals.

Walls of timber or other material were placed directly on the ground or on a foundation. The absence of a foundation was typical for low ground-level huts, built in the southern steppe regions with a mild, dry and warm climate. Similar huts were also encountered occasionally among the poor Tatars in the southern areas of the Kama region. In Tatar rural architecture in general walls were erected on a foundation (*nigez*) of wood, stone or other material raised above the ground. Almost all ground-level dwelling types, regardless of the structure of the foundation, had a cellar (*idän asti*). In the tall houses, 15–18 beams high, of the northern regions, the cellar was often replaced with an underground space up to 1 m deep, which could be extended to form a basement storey. At the end of the 19th century, L. Zmeev described the dwellings in the Bugulma Uyezd as follows: 'But the main feature of the Mahometan dwellings was a striving for height, that is half to two arshines, sometimes three, from the ground..., which in ancient times was called the basement...' [Zmeev, 1883, p. 43].

The floor in the rural dwelling could be earthen or wooden: of poles, logs, planks. Earthen, clay and adobe floors were mainly found in the adobe, wattle mud huts in the villages of the forest-steppe and, especially, the steppe areas. But dwellings with wooden flooring (*idän*) were prevalent throughout the Volga-Ural region.

The roof (*tübü*) was erected with or without rafters. In the middle of the 19–to the early 20th century most rural dwellings had a two or, more rarely, four-sloped rafter roof. Mass dwellings with two-sloped rafter roofs had blind gables and were covered with planks. A variant of the non-rafter roof, which was common in the southern-east areas, was a flat roof sheeting of thin logs, which at the same time served as a ceiling.

Planks were the most commonly used material for wooden roofs. Wooden laths and lime bast were quite often used for making roofs. Of the other types of material used for roofing (except for wood) the most widespread and traditional was rye straw. A well-fixed straw roof could last 10–20 years or more without much renovation. The methods of straw covering were either heaped or, more rarely, harvested. Roofs made with rushes were also encountered, which were covered over with earth and turf layers. In the early 20th century metal roofs started to appear sporadically, mainly among the prosperous Tatars of the Yelatma and Kasimov uyezds, and among merchants and the clergy in the Kazan area. This type of roof was often painted green.

A lot of attention was paid to the external decoration of houses to meet the artistic and national demands of the population. But this decoration depended to a significant degree on the wealth of the homeowners [Vorobyev, 1953, p. 170].

The houses' timber covering, the method of fastening external panels and the form of the laths were often of a decorative architectural style. The panels on the walls were applied vertically or horizontally. Walls 'with a herringbone-design covering' were particularly beautiful. The same techniques were applied to cover the gable niche, the angles of the timber and also the gate posts.

A variety of techniques for creating ornamentation were used in the log houses: notched blank carving, blind carving in bas-relief, flat applique work, joint open ornament, lathe applique or freely located details (balusters, etc).

A combination of wooden decorations and painting was typical for the rural Tatar dwellings. Gates, the street side of the fence, the covered walls of the house, gables, architraves, etc. were all painted.

Different coloured paints (so-called polychromy) were usual. They were chosen to be bright and contrasting, which created a special 'Tatar style'. The most common colours were white, yellow, brown, light blue, dark blue, green and combinations of these (white + blue, white + green, yellow + brown, etc.). The walls

of the house, the gable and gates were often painted in dark tones: green, dark blue, brown, and the prominent parts of the architectural decor and applique details in the lighter tones: white, yellow and so on.

At the turn of the 19th century, the 20th centuries, the architectural decoration of dwellings decor was prevalent first and foremost among the Tatars of the Kazan region, in the Kasimov uyezd, and to a lesser extent in the Sergach uyezd, in the Middle Volga and West Trans-Kama regions, and practically did not exist in the Glazov uyezd of the Vyatka and Perm guberniyas, and in the southern forest-steppe and steppe regions.

All types of dwellings were divided into houses built along horizontal and vertical lines. These in turn may be divided further according to the number of rooms.

The simplest dwelling among the horizontally built buildings was the single-chamber type, which was called a *yalgy'z öy*. Appearing in the early stages of the house building culture development, were related to the beginning of the 20th century, the *yalgy'z öy* was preserved only among the poorest peasants. In the forest-steppe regions it was frequently made of logs, and in the unforested areas a frame-pillared structure. The dwelling had a roof with two sloping surfaces, sometimes with very shallow slopes, or a single-slope roof made of log roof sheeting with filled earth. These buildings could be found in the southern areas of the Oka-Sura interfluvium, in the Lower Pre-Volga, Trans-Volga regions, Cis- and Trans-Urals, and among the baptised Tatars of the Volga area.

Two-roomed dwellings were developed from single-roomed dwellings when hut extensions were added. At first these consisted either of lean-to porches made from thin poles covered with brushwood or straw, or an inclined awning resting on supports outside the entrance. They featured open or partially occluded walls. In the mid-19th century entrances such as these 'were known in the Tatar dwellings of the Orenburg region' [Cheremshansky, 1859, p. 169]. Up until the 1920s similar extensions were still present among the Tatars of the Trans-Kazan. However from the middle of the 19th century

to the early 20th century three-walled log cabins were the most widespread dwellings. They consisted of an outer entrance hall connected by an opened side with rear (entrance) side of the hut. The dwelling's two rooms were under one single roof.

Three-roomed dwellings typically consisted of a hut plus an outer entrance hall plus another hut (*kara-karshy' öy*). Both rooms in old huts were equipped with bread ovens. At the turn of the century, the room facing the street was kept as the clean half *ak öy* (white hut), in which there was often a tile stove or burner in place of a bread oven. The second room was known as the *kara öy* (black hut) or *ash öy* (kitchen). It always contained a bread oven, and this was where household chores were carried out. By the end of the 19th century, and start of the 20th century, this type of house was increasingly replaced by tripartite dwellings consisting of two huts plus an outer entrance hall (a five-wall butt and pass log cabin) known as a groined vault hut. Another sort of three room dwelling consisted of a hut, which was connected to a storeroom via an entrance hall. The storeroom was not only used to store goods, but was also used for work and for living in during warm weather. Dwellings such as these were present in the Kama, Perm Cis-Ural, Pre-Volga, and Trans-Kama regions. They were more common among Christian Tatars.

Five-walled houses and butt pass log cabins (hut+hut+outer entrance hall) *alty' pochmakly' öy* had identical layouts. Five-walled houses dominated in the Kasimov uyezd of Ryazan guberniya, in the Yelatma Uyezd of Tambov guberniya, were present in the adjacent uyezds to the South, and also among the Tatars of the Sergach uyezd of Nizhny Novgorod guberniya, in the Glazov uyezd of Vyatka guberniya and in Perm guberniya. They appeared in the second half of the 19th century, originating in the Russian population of the Kama and the Middle Volga regions [Busygina, 1966, p. 148]. They also spread among the Tatars [Vorobyev, 1853, p. 159]. In the early 20th century, the area over which five-walled houses were built expanded. Butt pass log cabins were often built in the forest-steppe and steppe zones.

Half-earth dwellings (*cir izba*) were occasionally used by poor peasants and the first settlers in the forest-steppe and steppe zones in the second half of the 19th century. Walls made from logs or using a wood frame technique were built atop a pit measuring up to one metre deep. Roofs of one or two pitches were covered with earth and lined with turf. The floor was earthen or covered with planks. The entrance was covered with a porch supported by poles. Often the building gained a second room thanks to an entrance being built from the materials to hand. In the living quarters a bread oven would be constructed near the entrance: a fireplace would be installed and a cauldron cemented in place.

In the second half of the 19th century two-storey houses were built by wealthy homeowners in the Kasimov uyezd as well as the Kama and Cis-Ural regions. There were many to be found in settlements near highways and trading villages: in the village of Karabolka in the Yekaterinburg uyezd of Perm guberniya, for example, the main street consisted solely of two-storey buildings.

Two-storey houses with living quarters in semi-basements were usually made solely from logs. It was uncommon for a semi-basement level to be stone built. The two-pitched roofs were made from planks. The layout of both stories of these houses followed that of four-walled log cabins (a hut plus outer entrance hall). In the semi-basement living quarters a large bakery furnace was installed. Its chimney led to the upper floor, where there was a tile stove.

More sophisticated two-storey log houses (*asly'-ösle öy*) were built by the wealthy part of the rural population. They were uncommon throughout the region as a whole, but in the Kama region, northern parts of the Oka-Sura interfluvium and the Perm Cis-Urals they were present in almost every village.

The population's dwellings in the southern regions of the Oka-Sura interfluvium, Lower Volga and Trans-Volga Regions, Southern foothills of the Urals and Trans-Urals shared general similarities. They mostly consisted of a hut plus outer entrance hall. Archaic single-room constructions, though rare, could still be found almost

throughout the steppe and forest areas. Three-room dwellings, five-wall houses and butt and pass cabins were particularly widespread in the steppe and forest-steppe areas. However, there were almost no multi-roomed groined vault huts or similar, two-storey buildings.

The most important aspect of a dwelling is the organization of its inner space, its layout: the division of rooms by function, the location of the heating system, furnishings, fabrics and other interior decor.

The interior layouts of the rural dwellings depended on the location and orientation of the stove. It was usually situated to the right or left of the entrance, more rarely—on the front wall facing the door. The first arrangement was typical of Tatars in the Middle Volga and Kama regions. It dated back to the ancient Turkic nomad dwelling, the yurt. The latter was used by the Tatar-Mishars and, most likely, was borrowed from the surrounding Russian and Mordvin populations. In the first instance they placed the furnace away from the walls. This distinguished the layout of Tatar peasant dwellings from those of neighbouring peoples.

The interior layout and stove location were closely linked to how the living space was divided by function and where the furniture was placed. A typical four-walled hut was divided from front to back this way, along the line of the stove. The area facing the stove was used as a kitchen—this was known as the 'female' half (*pochmak*). In front of the window there were narrow beds. Shelves were fastened to the walls, as well as cupboards and racks to store dishes. The other half of the hut was known as the male or 'white' half (*ak yak, tür yak*); narrow beds (*säke*) were laid along the end wall. The two halves of the hut were separated by a curtain (*charshau*) or a partition made of planks (*bülem*).

At the time in question, plank beds (*säke*) were the most notable hard furnishings. They were placed along the front wall from one corner to the other. They were an essential aspect of the interiors of Tatar dwellings almost everywhere. This was because plank beds were traditionally given pride of place (*tür*), and also because of their universal function: they were a place to work, rest, eat, and enjoy festivities.

Plank beds were made of two logs topped by wooden planks. They were usually 1.5 m wide and 0.5 m in height. In some cases, in the southern uyezds of Kazan, Samara, Ufa and Orenburg guberniyas, the plank beds were lower (15–20 cm) and wider. They were filled with clay board (*idän*). At the end of the 19th century, when hut furnishings were integrated into the shape of the hut, short plank-beds appeared. A table was placed in the vacant room. In the second half of the 19th century, short plank beds (*ishek säke*), located in the corner near the entrance were still in evidence in the Volga, Trans-Kama and Cis-Urals regions. In the huts of the Tatars in the Oka-Sura interfluvial area, a closed form of plank bed was called a *woodbunk*.

In Tatar dwellings in the Kama region, Kasimov uyezd, and Nizhny Novgorod and Penza provinces wooden beds were quite common. Long, wide benches were very often used, sometimes replacing plank beds. Benches were especially widespread among Christian Tatars in the Kasimov and Glazov uyezds, and the Oka-Sura interfluvial area.

The upper space of a relatively modest residential four-walled hut was used to place furniture: plank beds, benches, cupboards and other items.

Plank beds (*sänderä pulat*) were present in peasant dwellings across the area to the west of the Volga (with the exception of the Sergach uyezd), in most of the uyezds of the Vyatka guberniya, and in the Kungur and Perm uyezds. They were rarely used by Christian Tatars of the Trans-Kazan. 'The Tatars considered the plank beds they used in their everyday as being borrowed from the Russians' [Vorobyev, 1953, p. 100].

Shelving (*kishtä*) was the second type of hanging fixture. They took the form of thick, wide planks, extended under the ceiling along the walls and joists. They were a place to store baked bread, tow, crockery, small objects and religious books. Long shelves made of poles were often fitted along with wooden shelves. They were used for storing fancy fabrics, clothes, prayer rugs, and bedding.

Cupboards (*kishtä*), either open or with two doors, were hung in the kitchen. They

were used for storing tableware. Other types of crockery storage spaces (*tabakly'k*) varied in size. They featured solid side walls and a rod lattice at the front. Short, single plank shelves for storing large crockery were common. Spoons, soup ladles and knives were kept on the plank (*kashy'kly'k*), which was nailed to the wall. All kinds of ladles, soup spoons, sieves, baskets and other utensils were hung from the walls on wooden sticks and nails. All these objects in one way or another were used to furnish the domestic kitchens of the Volga-Ural Tatars.

At the end of the 19th century and beginning of the 20th century, clocks appeared in peasant dwellings. Following the urban fashion, they first began to be acquired in the settlements of the more highly developed commercial and industrial regions, in the Kama region, northern districts of the Oka-Sura basin and Perm Cis-Urals, where there was a significant wealthy and rich rural population that had links with urban centres. By the beginning of the 20th century the 'wag on the wall' clock featuring a pendulum and weights had become a part of middle-income peasants' everyday lives.

In the second half of the 19th century, after being made available on markets, factory-made mirrors became common in the houses of Tatar villagers. Wall barometers were found in the well-kept reception rooms of houses belonging to merchants, priests and other affluent social groups. Due to their attractive appearance they were placed as wall decoration, along with clocks and mirrors.

The *shamail* was an essential part of Tatar-Muslim interiors. They featured a framed Quranic text written on glass or paper containing a wish of peace and wellbeing for the family. They were hung above the door or between windows. The walls of houses belonging to the educated part of population, featured beautifully executed drawings *shäcärä*—which depicted the family tree of the head of the family through the male line. These were even more common among the clergy.

Flowers were often kept on window ledges. They were well cared for. The pots were decorated: either with paint or wrapped in paper. Geranium, balsam and basil were especially

well loved. Figs and palm trees were sometimes placed in the large reception rooms.

Inside Tatar huts, furnishings (wooden beds, tables, chairs, benches, chests) were limited in number. This was also typical of other nationalities' peasant dwellings.

At the turn of the 19–20th centuries, wooden tables (*östäl*) made by rural craftsmen were a popular sort of furniture. Chests were a typical piece of furniture among all Tatar groups (*sandy'k*). Their exterior appearance and quantity were a means of estimating wealth. Affluent Tatars used tall, capacious coffers, featuring beautiful tin-strip detailing.

Thus, at the turn of the 19–20th centuries, Tatar rural dwellings featured pieces of furniture that differed by era, quality, social significance and prestige. Some of these—wooden beds, low tables, chairs without a seat back, short benches, small chests—due to simplicity of their form and modest appearance can be categorized as the 'old' or 'primitive' style. They first appeared earlier than the period under review and were widespread. Another category of furnishings—wardrobes, high tables, chairs and benches with seat backs, artistically decorated chests, couches, sofas, pier glasses and so on, appeared no earlier than the last quarter of the 19th century or the early 20th century. This relatively recent furniture style had a different origin. Some of these items appeared as a result of improvements made to traditional furniture by local craftsmen while other innovations had factory origins that originated in urban centres. The spread of these objects and the time of their appearance in rural life differed significantly by geography. Differences can be noted between the forest areas, some of the northern regions of the forest-steppe zone and the regions to the south. Dwellings in the south-eastern areas were characterized by a significant amount of traditional 'primitive' furniture styles and a small amount of urban-style furniture. The picture is different in the forest and northern forest-steppe regions. Here, there was a mixture of 'old' and 'new' styles, often with the latter being more prevalent. Having coming into direct contact with urban culture, the affluent population also undertook seasonal

work, (either craft or trade), and often fully furnished their homes with factory-made furniture. The process started in the Tatar houses of the Kasimov uyezd, in the northern areas of the Oka-Sura basin, and the Trans-Kama and Perm Cis-Ural regions. These are also the areas where these changes were to be found in the largest concentrations. In comparison with the northern areas, the southern forest-steppe and steppe regions was home to a large number of former state communal peasants, especially Tatar-pripushchenniks, who tended not to change their traditional furniture. Houses belonging to servant Tatar-Cossacks, merchants and wealthy peasants were furnished equally well as those belonging to wealthy Tatars in northern areas.

Curtains (*charshau*) were a mass and geographically widespread element of fabric decor in daily life. They had both a functional and decorative purpose. They were used as an elegant way of separating the different parts of the dwelling and pieces of furniture: they separated off the food preparation area, the guest space in front of the plank-beds, partitions, the gap between the stove and the abutting walls, the sleeping areas on the plank beds or wooden beds, and so on.

A particularly noticeable feature of Tatar dwellings was the division of the hut into male and female parts, sectioning off of the front corner (*tür*), and so on. Plank beds were typically found in the interiors. Their widespread use, the preservation of their archaic form and ritual significance (*tür*), are proof of the ancient origins of plank beds, which were first used in Old Turkic semi-dugout dwellings. Shelving (*kishtä*) was a distinctive aspect of kitchen furnishing. The average Tatar dwelling tended to have a lot of bedding. Apart from its main purpose it was also used as decoration during the day. Chests, mirrors, clocks and so on were part of the interior decor. Aside from their main purpose, they were also decorative. Textiles used for mainly aesthetic, artistic and decorative purposes were typical in Tatar dwellings: they comprised valances, curtains, festive towels, tablecloths, napkins, homemade rugs, carpets, and so on. All of these made traditional rural Tatar interiors unique.

§ 2. Urban Dwellings

Dilyara Suleymanova

Kazan was home to the largest urban Tatar community. The Starotatarskaya sloboda took shape here in the second half of the 16th century. After a great fire in the middle of the 18th century, part of the urban population was resettled, moving to the south of the Starotatarskaya sloboda. This was 'the beginning of the Novotatarskaya sloboda' [Nugmanova, 2001, p. 7]. Kazan's Starotatarskaya sloboda was the most prestigious Tatar quarter. In the middle of the 19th century it was home to all of the noble merchants [Nugmanova, 2002, p. 133]. The Novotatarskaya sloboda was populated mainly by the craftsmen and small-scale entrepreneurs. It featured single-story wooden houses with outbuildings built on small plots.

The Starotatarskaya sloboda in Kazan was different from the Russian part of the city in terms of its structural layout, dimensions and architectural features. While the Russian part of the city, combining Orthodox traditions with secular European novelties, resplendently showed off its luxury and wealth, the Tatar part of the city featured no large pompous buildings: the houses opened onto large open courtyard spaces [Valeeva-Suleymanova, 2008, p. 141].

The Tatar slobodas, as a rule, were comprised of wooden and stone manor houses with individual houses one or several families lived. City manor houses were privately owned. They featured numerous buildings constructed for residential and domestic purposes, including premises for trade and industry [Nugmanova, 2001, p. 4]. Most Tatar urban manor house estates were multipurpose. They were home to shops, warehouses and workshops, as well as residential buildings where the owners lived. Some manors had additional residential areas that were rented out. The unique feature of Tatar manor houses was that several families would live often there, mainly close relatives. Furthermore, relatives from the countryside and fellow villagers who had decided to move to the city often moved in. For this reason, the residential areas of the house were intended to accommodate a large number of residents.

Outbuildings were added to the house with the same aim.

Despite the enforcement of building rules which homogenised the construction of Russian and Tatar manor house estates in Kazan, the latter retained certain particularities mainly related to the position of the house in relation to the street and room layout. As was the tradition in rural house building, up until the second half of the 19th century, many residential houses in the Starotatarskaya sloboda were placed in the heart of the property, significantly set back from the 'red line'. The properties themselves were surrounded by high solid fences.

From the middle of the 19th century, Russian building regulations stated that residential buildings and outbuildings should be built with a facade on a red line that ran along the street. This development met with resistance from owners. Nevertheless, the Tatar slobodas changed significantly when houses started to be constructed along the red line. However, even in this case, a traditional front garden was often laid out in front of the house, which allowed it to be set back slightly from the street. These instructions were not observed as strictly in the outskirts of the Tatar slobodas. This is why houses there retained their central positioning and high fences until the start of the 20th century [Aydarova-Volkova, 1999, p. 25].

Urban manor houses belonging to Tatar entrepreneurs were almost indistinguishable from Russian ones in composition and layout. The grounds of manor houses were divided into two parts—a yard, which covered most of the plot, and the garden. The house was located in the centre of the property. An outbuilding would be constructed in the yard. This would be either a separate house or an annex to the main house. It would be used to provide additional residential accommodation. A large yard would be surrounded by domestic buildings (storerooms, stables, sheds for drying and storing grain, kitchens, bathhouses and so on). They stood on the edge of the yard and garden. The yards were often planted with trees and bushes, and

Former estate of the Sabitov family, second half of the 19th century. Kazan, 8 Ş. Märcani St. Photo, 2010

were overlooked by interior balconies and walkways.

A garden was essential to a Tartar manor. Gardens would feature a summer house for drinking tea in the warm months. A source of water (a well) was also usually situated here. Rich merchants often had two gardens and two wells. The gardens were located behind the house. They would usually occupy approximately 1/3 of the plot, but could occupy up to half of a large plot [Nazmieva, 2007, p. 22]. In most cases, the garden and the courtyard's perimeter were planted with deciduous trees for shadow. Vegetable gardens were almost absent from manor house properties. These were usually located on land outside the sloboda [Nazmieva, 2007, p. 22].

If in the manors of the 18–19th centuries the houses functioned both as residences and as places for their owners to conduct business, by the end of the 19th century, there emerged a tendency to build commercial, industrial or rental properties. This was especially prevalent among wealthy Tatar merchants. For example, in the Sennaya Square area of the Starotatarskaya sloboda 'revenue' houses dominated. They contained shops on the ground floor and rented accommodation on the first floor. The Tatar elite conducted their social and intellectual lives in these houses, especially at the turn of the 19th and 20th centuries. Tatar newspapers and magazines set up their offices in hotel rooms and 'revenue' houses, which greatly increased in number after 1905 [Nugmanova, 2002, p. 148].

Residential Houses: Layout and Interior.

The diverse urban dwellings in the Tatar slobodas may be divided for our purposes into two groups—normal houses and manor houses. Most of the urban buildings were made up of

houses belonging to townspeople, small merchants, clergy, intellectuals, workers, craftsmen—the majority of the urban population. Most of these houses were wooden single- or two-storey dwellings. They were constructed in the traditional village style. In general these houses featured three to five windows along their facades. Sometimes houses were improved—they were significantly enlarged, extensions added, window dimensions increased, the room layout became more complex. Typically, the introduction of an attic story and mezzanine floors provided additional accommodation.

Wooden houses in the Tatar slobodas were richly decorated with carvings. Multicoloured decorative wood cuts on the facade followed the traditional form. They were made using overlaid ornamentation [Valeeva-Suleymanova, 2008, p. 141].

Wooden houses with a stone-built ground or semi-basement floor became widespread in the cities. Houses made half from stone were typical of the merchant class. The ground floor was used for trading or domestic purposes: shops, kitchens, storerooms, workshops and servants' quarters. The first floor was residential, containing the owners' reception and living rooms [Nugmanova, 2001, p. 14].

The houses of the rich and influential townspeople formed another group. They were built by professional architects and engineers

in line with the prevailing pan-European architectural style. These houses were one and two-storey stone manors featuring many facade windows—from 5 to 8 or more. Their size, opulent facades and complexity of their structural layout made them stand out from the surrounding buildings. Manors such as these were divided by function: shops and servant rooms were on the ground floor, while the upper floor contained reception rooms. This was also reflected in the decoration of the facade [Nugmanova, 2001, p. 14]. The lower storage or domestic rooms were simply decorated. Unlike the other rooms, they had small windows. The main floor was decorated more extravagantly, especially with rich wall carvings.

The external appearance of manors belonging to the nobility adopted the following styles, popular between the 18th and 20th centuries: baroque, empire, modernist and eclectic. At the same time, elements of Islamic architecture were also present. The presence of semi-circular and pointed arches, as well as stalactite and ornamental architecture serve as examples [Valeeva-Suleymanova, 2008, p. 142].

The middle classes lived in houses featuring a traditional, rural layout (with four, five or six walls). To the right or left of the entrance there was a stove. This formed a line, along which the room was divided into two parts—the kitchen and residential/guest areas. Usually wooden or iron beds were used in place of *säke* in the guest part of urban houses. *Säke* were still used in the kitchen part. Opposite the entrance, a table and chairs would be placed by the front wall. Along the side or rear wall there would be a sideboard for crockery. Clocks and mirrors hung from partition walls. The entrance area could be separated off using a partition or a curtain, forming a small hallway. In six and five-walled houses, the principle of dividing the house into male (guest) and female (private) parts was retained. Each had their own room. The outer entrance hall in houses such as these was also divided into male and female parts. They often also had separate entrances, which were connected by a small passageway inside the house [National Archives of the Republic of Tatarstan, f. 408, inv. 36].

Due to their size, houses with four, five or six walls could have a multiple-room layout. By placing a large bread oven in the middle of the house, the area could be divided 'into three to four rooms (the hallway, guest and sleeping rooms), with the oven connected to each' [National Archives of the Republic of Tatarstan, f. 2, inv. 13].

The interiors of multiple room urban houses combined urban features with rural elements [Suleymanova, 2007, p. 35]. The guest rooms (the hall, parlour and study where they hosted visitors) would be decorated in a European style. The parlour was usually in the street-facing part of the house. It would feature European furniture of urban origin and a tile stove in the corner, which was sometimes decorated. European business furniture was often on display—a desk or a secretaire. Clocks and mirrors hung from the walls. These Europeanized interiors were given local flavour by *shamails*, ornately bound Qurans, decorative textiles (*prayer mats*, carpets, homemade embroidered tablecloths and napkins), domestic utensils (pitchers, basins), and numerous potted plants on windowsills. At the same time, private rooms (bedrooms, personal rooms), and domestic rooms retained traditional features. In private rooms *säke* were used instead of beds, and chests instead of chairs and furniture. Rooms were decorated with textiles—towels, prayer mats, and curtains (*charshau*) and valances (*kashaga*) were widely used. Console mirrors and dressing tables were popular in the female rooms.

The typical layout of manors belonging to wealthy city-dwellers—merchants and manufacturers—was different. The division of the house into a guest (male) and private (female) parts was a distinctive feature. Both halves had their own entrance. The main entrance from the street led into the male (guest) part. The back entrance from the yard led to the female half where the private rooms and some of the domestic rooms were situated. At the same time, separate (male and female) staircases were built along the end walls of the house or from the rear facade, which had separate rooms.

As a consequence, wooden balcony-walkways were often built connecting the staircases. These were also a typical feature of Tatar manors. Furthermore, these walkways were often glazed in with stained glass, and connected different buildings on the manor house property, for example the main house and its annex.

The reception rooms were usually located along the street facade. The windows of the owners' bedrooms faced the yard. This was typical of Russian and Tatar landowners' manors in general. The front normally featured a suite of rooms: typically, a hall, lounge and study. These rooms were mainly used for welcoming guests and they were usually empty. In the part of the house facing the yard there were small private rooms on the entresol floor. Family members and servants had their bedrooms here. In the centre, between these two parts of the house, there was a corridor with a staircase that led to the upper entresol and mezzanine floors [Tydman, 2000, p. 70].

This layout, typical of classical architecture, was especially attractive to Tatar townspeople because it suited their way of life and religious customs [Suleymanova, 2007, p. 35]. The well-established tradition of separating women's living spaces from men's as well as restricting access to the former, determined the division of the house into isolated parts with separate entrances and staircases [Nugmanova, 2001, p. 14]. Tatar mansions had numerous doors enabling the woman to move around it unnoticed if there was a stranger man in the house [Aydarova-Volkova, 1999, p. 29]. The whole family's life was centred on the women's half. Women, young girls, and children spend most of their time in galleries, on balconies and tea verandas in the summer.

The interior of wealthy Tatars' mansions was distinguished by its richness and ornate decorations due to their high financial status. In the opulent interiors of their reception rooms, the Tatar merchants applied the Oriental idea of luxury, represented by brightly patterned carpets, wall mirrors, numerous pot flowers, and caged song birds. However, there was still a clear difference between reception and private rooms. According to A. Rittich, 'In cities, especially in Kazan, the appearance of Tatar houses and buildings is exactly the same as that of others... The reception rooms, namely the parlour and drawing room, have a European interior, usually with upholstered furniture, mirrors, chandeliers, curtains, carpets, tissues, and pot flowers at the windows [Rittich, 1870, p. 17].

The drawing room as the most impressive part of the house lay nearly at its heart, next to the parlour. It contained a variety of furniture such as sofas, small side tables, and armchairs. Console mirrors along the walls and large cupboards showing off exquisite tableware for special occasions were also popular. Glazed tile stoves were installed symmetrically in the corners opposite to the windows. The parlour was usually decorated with several clocks, mirrors, shamails, and gold-embroidered towels in wooden frames.

Furniture in wealthy Tatars' homes was made of costly wood, predominantly mahoga-

ny or nut, rich in carving and otherwise ornate. Furthermore, the interior wall surfaces were commonly decorated. Narrative wall paintings with landscape and still life compositions typical of classical interiors were popular [Fuchs, 1991, p. 24]. Intricate plasterwork, decorative shaped cornices, and sometimes paintings were common ceiling and wall decorations. Parquet or painted wood floor was covered with carpets. Doors in the reception rooms were frequently decorated with ornamental carving, in particular carved arches, and pilaster inlay. This applied not only to urban houses but to rural ones, in particular in Trans-Kazan localities [Khali-tov, 1991, p. 96].

Women's private rooms in mansions looked very different. Hidden from visitors' view, this part of the house had simpler and more traditional interiors. Women's rooms included dwelling entresols for young women, children, and servants. K. Fuchs described the interior of a woman's room, mentioning broad *säke* beds, chests, as well as numerous cushions, carpets, curtains, and costly women's garments used as interior decorations [Fuchs, 1991, p. 25]. Contemporaries described this part of the house as follows: 'The private interiors are dominated by the Asian style with low sofas along the walls, on which Tatar women would sit with their legs pulled up' [Rittich, 1870, p. 17].

Mirrors in carved wooden frames as well as wall or free-standing clocks were popular interior decorations in urban Tatar houses. Wealthy Tatars adorned their private chambers with paintings, often portraits (in particular photographs) [Nasyri, 1997, p. 19]. In addition to candles, tabletop and pendant kerosene lamps,

rich houses in the middle of the 19th century also had lamp lighting in the form of cut-glass ceiling chandeliers and wall bracket lamps. Metal articles such as chandeliers, candlesticks, trays, etc. were also included in the interior ensemble.

Islamic objects determined the ethnic flavour of Tatar reception rooms. Intricate shamails, mostly produced in Kazan, and *namazlik* praying mats hung on the walls of reception rooms, in the drawing room or study. A kumgan pitcher and a copper ablation bowl stood next to the stove. Handwritten or printed Qurans, leather-bounds or secure in silver cases, lay in the closet or on the table. Flowers on windowsills, such as 'potted lemon trees, geraniums, and, most importantly, balsams and aromatic basil' [Fuchs, 1991, p. 25], fitted in perfectly and gave a special tinge to the interior. Numerous Persian and Middle Asian carpets lay on the floor.

To sum up, the interior of the urban Tatar house was a sophisticated ensemble representative of the owners' aesthetic outlook and ethnically determined preferences. Traditional as they were, the rural-looking private interiors, as well as the ancient custom and lifestyle of Tatar city dwellers, stood in stark contrast to the impressive reception part of the house with its European architecture and decorations. This ambiguity in urban interiors and general lifestyle was to some extent suggestive of the social status of Tatar city dwellers, especially the bourgeoisie, which had to comply with official Russian standards on the exterior while upholding its religious and ethnic traditions in private.

CHAPTER 2

Mosque Architecture

Niyaz Khalitov

Tatar mosque architecture was both complex and heterogeneous, determined by a broad range of socio-political influences. They directly affected both the scale of religious construction and its style.

Modern Tatar architecture evolved in a similar way to that of many other peoples of the Russian Empire, within the narrow confines of bureaucratic regulations, and was formed by Russian architects within the framework of the state's general town-planning policy. This is why Tatar buildings reveal, in addition to ethnic features, the Russian architect's mindset. The governmental policy and measures taken by the Orthodox Mission to restrict the development of Tatar architecture also affected its scope. They caused it to degrade, leaving us essentially unambitious samples of *mäxäl-lä mäçete* and *comga mäçete*. Other types of mosques disappeared completely.

The development of the mosque architecture was generally determined by the search for compromise solutions brought about by the interaction between Tatar clients and Russian architects within the Russian framework of monumental architecture or, more generally, that between Russian architectural and artistic concepts and the Tatar mindset and traditional values.

Despite the significant dependence of architecture on external circumstances, its evolution is indicative of a powerful core idea precluding any material deviations from tradition and, consequently, the constructors' spiritual tyranny over the client. The fact that the aesthetic conception is traceable, quite clearly, at all levels, suggests a viable and stable tradition in religious architecture of the Modern history, originating from the medieval building practice. The tradition of individual clients repre-

sented the people, formed the diverse mosque architecture of the Modern history which while uniform was resistant to external influences which can be subjected to a systemic analysis at various levels.

All the compositional types of mosques widely spread in Kazan architecture of the Modern history, can be classified in the following three groups:

1. *Mosques with a minaret on the roof*, genetically dating back to the period of the Kazan Khanate or even earlier. This composition was the most common in the 18th –20th centuries. Wood as the construction material determined the design as a trabeated solid wooden structure with a pitched roof.

Mosques with a minaret on the roof, both stone and wooden, were rectangular single-storey buildings with a gable roof oriented from North to South. The rectangular plant mihrab was adjacent to the southern end. An octagonal or sometimes cylindrical minaret with a high pyramidal or conical tent on top of it pierced the roof. The minaret was located, in most cases, above the geometric center of the building (sometimes at the northern end). It was essentially a two or three tier tower, consisting of a shaft (with or without a foundation), an internal, usually glazed, muezzin's area (sometimes surrounded by an external gallery), and a tent. Wooden minarets were always octagonal, whereas those made of stone could also be cylindrical or combine several shapes. In terms of design, stone minarets rested on a thick transverse wall, which usually divided the mosque into the ritual and lobby areas, while the wooden ones were attached to roof joists and rafters.

The functional layout of the mosque with a minaret on the roof showed quite consistent patterns. If the building had two storeys, the

Zasarevskaya Mosque in Astrakhan.
Photo from the early 20th century.

ground floor was occupied by a utility zone, hosting fireproof storage rooms, which looked like insulated vaults with separate exits and were used to store the goods of local merchants, as well as mosque utensils, a library, firewood stock, etc. It was also common for a school to be located on the ground floor. In the northern part of the building, there was the lobby area (hallway, lobby, cloakroom, administration), which occupied about 1/5 of the floor. The southern half hosted the ritual zone (praying halls, mihrab). These patterns can be found both in surviving monuments and in descriptions by contemporaries.

A special function was assigned to the minaret, from the top section of which the adhan (the call to prayer) was proclaimed.

2. *Mosques with a minaret above the entrance.* This is a type of a one-hall mosque, where the minaret is located above the main wall that separates the prayer hall from the relatively small lobby. The minaret is noticeably moved towards the entrance, and situated on the ridge of the roof. Such mosques were built both in the Kazan guberniya and outside of it.

3. *Mosques with two minarets.* The difference between the traditional mosque type specified in the reference design of 1782 and the previous type is that the former has two minarets flanking the lobby symmetrically to the long axis of the building. The prayer hall can stand out as a dome or cupola. Such mosques could be found in the Kargaly sloboda near Orenburg and other localities.

4. *Mosques with a minaret above a protruding portal.* This mosque type became common in the Mid-19th century under the 1844 reference project, which combined the key composition features of traditional medieval Tatar mosques and classical Russian churches. Such mosques were romantically shaped and generally ornate.

Architectural and Stylistic Features of Tatar Mosques. The scale of traditional mosques conforming to the folk tradition was determined by unambitious wall shaping and laconic front decorations. The primacy of colour over the decorative moulding is not the only reason. It is a common fact that the scale of a building in the architectural environment is determined not only by its absolute dimensions but by how fragmented it is. Less fragmented buildings have greater monumentality [Kirillova, 1986, p. 125–127]. This approach enabled architects to add monumentality and scale to their mosques against the backdrop of highly fragmented residential buildings without increasing their physical dimensions.

Minaret height became the symbol and criterion for the scale of the mosque in the urban environment. The minaret to building ratio of proportions and weights influenced the perceived scale of the mosque from a material point of view. Taller towers made the building appear smaller and vice versa.

The specific *silhouette* of the Tatar mosque was largely determined by the contrast between the vigorous, ornately shaped openwork minaret tower to the resting horizontal of the roof ridge and the whole massive building.

In mosques with a minaret above the entrance, the static volume of the building was crucial when viewed from the lateral faces. However, it was not common for the architect

Ācem Mosque in Kazan. Photo from the early 20th century.

to provide for such a point of view. Therefore, the tall minaret tower in the foreground stressed the vertical aspiration and vertical proportions¹.

An analysis of the *proportional relations* of frontal elements in modern Tatar mosques yields two distinct proportion systems: the traditional canonic one and the temporary system adjusted to the dominant style and the architect's preferences. The former type of proportions, which mostly applied to the minaret to building ratio of dimensions and proportions was nearly immutable, even symbolic. The latter changed with time and added detail to the former. The two systems interacted in multiple aspects to generate diverse images of buildings as invisible 'power lines' behind the front and general silhouette of the mosque.

It is natural for Islamic architectural and artistic tradition to dominate the *image* of a mosque. However, it may take innocuous forms. As the regulating role of the government was enhanced, the Russian-European concept of style began to heavily influence further development of Russia's religious, in particular Islamic, architecture.

The general appearance of Tatar mosques was rooted in well-established traditions and stemmed from the common composition, silhouette, decorative elements, and specific colours. This resulted in set of diverse factors forming mosque appearance specific to the Tatar regional culture, easy to decipher for locals and unintelligible to other mindsets. Minarets as a symbolic canonization of medieval shapes were essential to it. Mosque architecture never gave up the traditional archetype in the Modern history.

Taking into account the specific conditions under which visual perception takes place, *the artistic language of architecture* rests on the multi-layer foundation of cultural traditions as a complex information and sign system. The information encoded using this language takes the form of works of architecture [Efimov, 1986, p. 101], acting 'in each case as a specific formal sign referring to its content' [Novikov, 1877, p. 44], in particular, national.

Many elements of traditional architecture were preserved in external, formal signs of the Tatar mosques as symbols of the 'holy roots' of the ancestral culture, which appeared more accessible in other spheres of artistic culture. Those included solar symbols, 'shouldered' arches—they resembled the classical and baroque Venetian window—various kinds of

¹ The Azimov Mosque, where the minaret was much longer than the building itself, for the purposes of providing an impressive side view, was an exception.

'luster', unique colouring, and the general combination of sculptural, decorative, and colour elements.

The design of mosques with a minaret above a protruding frontal portal, which Russian architects owe to the Romanticism of the Mid-19th century, aesthetically stemmed chiefly from the Russian style concept of the Mid-19–early 20th century. In their designs for Tatar clients, architects often referred to the 'theoretical foundation' of the Russian Romanticism, according to which Islamic art (naturally interpreted by them to include that of Tatars) was essentially viewed as exotic opulence. It is especially true in Russian cities with a relatively low Muslim percentage. The local architectural traditions came to prevail again in the centres of Islam (Kazan, Orenburg, the Crimea). The minaret became a mark of regional architectural traditions, as in the case of mosques with roof minarets. At the same time, the front of the building could be rather neutral or 'generally Oriental' in terms of shape.

Stylistically, the appearance of Tatar mosques was usually determined by key cul-

tural trends, because mosques were designed by architects from the construction departments of governorate associates, who were true to the traditions of the school in the capital city. However, every style applied (Baroque, Classicism, not to speak of Romanticism) was subjected to major transformations to adjust to the client's ethnic outlook. This generated Tatar forms of the styles, which enriched Tatar monumental architecture and which were unprecedented in Russian architecture.

Any decorations used in Tatar religious buildings conformed with the general rule, according to which small mouldings prevailed over large mouldings and colour prevailed over moulding. Inconsistent ethnic colour traditions brought about different approaches to frontal decoration in the 19th century, namely Russian monochromatic moulding style and the Tatar polychromatic planar one. Quite naturally, the fundamental principle of Islamic architecture applied: narrative frontal and interior compositions, especially those involving animals and human beings, were to be avoided.

Architectural details, followed by wall texture, determined how the front looked in terms of moulding. Primary mouldings in the artistic impression of mosque fronts included rectangular, arch-shaped, lancet, and U-shaped openings and niches with simple anvil plates and relatively sophisticated stained glass fillings. Decorative details revealed the influence of both the dominant Russian style and specifically Oriental elements. Images of humans, lion masks and similar elements, which were extremely popular in Russian classical and eclectic architecture, were never used².

The polychromatic colouring of Tatar mosques, which became extremely diverse at the turn of the 19th century, is of special interest. Polychromy contributes to architectural form making by both emphasizing the intended purpose of the building and setting out its aes-

² The ideological controversy between Christianity and Islam caused the restrictions in Tatar architectures as well as cross motives (common in geometric patterns, for example, in Middle Asia) to become symbolic. Tatars avoided such signs when decorating their mosques.

Interior of a mosque
in Kostanay.

20th century.

thetic values [Efimov, 1986, p. 101]. It became key to the appearance of the mosque from the first years after it emerged. It was the Tatars of the Middle Volga region who promoted the polychromatic tradition in the Modern history architecture.

The oldest surviving mosques in Kazan (al-Marjani and Apanayev) were painted ochre, white, and blue. In the 1st half of the 19th century, the 'official' residential colours (light blue, white, yellow, and others) faced the vibrant contrast polychromy of the Bazaar (gray, white, red, green, black), then Soltan (green, red, golden), Burnayev (yellow, green), Kazakov (green, white, pistachio) mosques. The colouring of wooden mosques (ochre, white and light blue, white and green, red) was traditional and applied to residential buildings as well. It was especially pronounced in rural areas, where it became a colour canon. The basic surface of the wall of a wooden mosque was usually painted with ochre, against which details were blue, light blue, white, green, and red. The minaret tent and the roof were painted green.

Unlike Russian buildings, where reduced pigments were used, Tatar fronts were boldly coloured without half-tones.

Research has revealed that building walls were painted regardless of cladding or stucco. Light brown or ochre, sometimes light blue or green were used for solid wall painting. Multi-

colour surfaces or front elements (pilaster-strips, pediments, minaret stem) preferably combined blue and white, white and green.

The colouring of Tatar buildings was so distinct against the Russian background that ethnographers termed it 'Tatar taste'. The Tatars' resistance to unwritten or even legislative regulations on frontal colouring appears quite natural in the context of Islamic colouristic rules, from which the Tatar decorative features clearly stemmed [Massignon, 1978, p. 46–59].

The unique Tatar architectural polychromy apparently dates back to the medieval traditions of local monumental architecture [see: Khalitov, 1981, pp. 74–79; 1982, pp. 20–22; 1985, pp. 127–128; 1989].

The key factors that determined the local architectural polychromy were nature and traditions. Besides, the religious and ideological factor dramatically affected its further development. N. Vorobyev wrote in the early 19th century, 'it is common for Tatar bourgeois to send their children to study in Khwarezm and Bukhara, where they soak in the Islamic scholastic principles prevalent at that time. After receiving their education in Middle Asia, the students on their return introduced the culture to the Tatars... The Oriental culture that they introduced, of course in its external manifestations, was soon adopted by the peasant masses, and their everyday life was gradually filled

with Middle Asian Islamic elements' [Vorobyev, 1930, p. 33–34]. Then, as clients, they opted for colours that could be at least associated with the Middle Asian polychromy by imitating the ochre-coloured surface of Bukharan yellow bricks, clad in white and light blue or green tiles typical of Bukharan architecture. Moreover, the trend accorded with the local monumental architecture. All this pre-determined the key colour schemes of Tatar mosques.

In contact areas, the mosque front colour clearly became a symbol of a visible bridge with Oriental cultures and the ancestral architecture while making the mosque stand out. Russian ethnic architecture relied on wood carving for decoration as it did not have such traditions and stimuli.

Tatar polychromatic traditions combined the local, Russian, and Oriental decorative features into a unique style in the ethnic architecture of the European Russia's centre. According to ethnographer Ye. Busygin, this system over time also influenced the architectures of other ethnic groups in the region [Busygin, 1966, p. 266], bringing about regional architectural polychromy in the Middle Volga region.

Sophisticated monuments pertaining to the last period in the development of Russian Tatar mosque architecture indicate that the evolution of modern Tatar religious construction had been completed by that time. The further development of this branch of monumental architecture was apparently guided by different principles and stylistic policies.

CHAPTER 3

The National Costume

Svetlana Suslova

The Costume within the System of Folk Decorative Arts. The Tatar Costume developed as a special system of folk arts, synthesizing the sedentary agricultural culture and the nomadic one. The most well-developed folk decorative arts related to costume production, such as leather mosaic, gold embroidery, tambour stitching, jewelry, and clasped weaving are representative of the traditions of the ancient and medieval Turkic-Tatar urban culture.

Folk arts had been influenced by the artistic traditions and aesthetic canons of the Islamic Turkic civilizations of the Orient since the time of Volga Bulgaria, which brought about special production techniques, functions of certain costume elements, and specifically Turkic-Tatar ornaments. Due to close commercial relations with Middle Asia and, with its mediation, Persia, China, and India, the Tatars began to use velvet, satin, coloured woolen and silk fabrics (*ädrs, bikasab, binares*, etc.) at an early stage. Oriental gemstones came along the fabrics: turquoise, amethyst, carnelian, etc. Thin cloth was imported from European countries. Russian goods, such as brocade, Russian leather, and others, were common.

The Tatar nobility, especially in towns, consumed most of the silk, brocade, other costly fabrics, fur, and jewelry. Clothes made of expensive and heavy silk (shorts, camisoles, cilän jackets, women's shawls) matched with massive women's jewelry of silver and gold. Such a monumental style of clothing symbolized the nobility's power and grandeur. Extensive evidence can be found in illustrative materials from the first half of the 19th century.³

Imported fabrics, especially cotton and half-silk, accessories and decorative costume elements were also in demand with the rural population from ancient times. They are part and parcel of the ceremonial costume of most of Tatar peasants. Everyday clothes were made of domestically produced fabrics.

Weaving was the most common domestic industry in clothes making. Craftswomen specializing in fabrics with sophisticated polychromatic patterns were few and far between in the rural areas. Tatar female weavers practiced nearly all domestic weaving techniques. Clasped and loom weaving were the key techniques for decorative textile patterns. Multi-heddle weaving was less common.

Clasped weaving is traditional for the Tatars in particular and the Turkic world in general. The shapes and motives of clasped patterns have much in common with Uzbek, Karakalpak, Kazakh, Kirghiz, and, especially Azerbaijani and Bashkir woven articles. Older clasped fabrics are especially monumental. Large geometric patterns on a background of matt red tended to form three border stripes on the ends of the cloth: a wide one in the middle and two to three narrow ones on both sides. Polychromatic clasped patterns decorated women's *tastars*, the head wear of Kasimov Tatars and Mishar women.

By the end of the 19th century, clasped weaving, being the most labour-consuming technique, was replaced by loom weaving. It was the most common weaving technique with most of peoples of East Europe. Patterns on loom-woven cloths used to make clothes usually contains extremely intricate geometric

³ The author deliberately uses the terms 'costume' and 'clothing' as synonyms while being aware of the

chronological and etymological differences between them in humanitarian studies.

shapes. Tatars began to practice loom weaving in the 15th century following their settlement in a Russian-populated area [Valeev, 1984, p. 13].

Clothes were mainly made of flat fabrics. White silky flax fiber was used to produce clothes for festive and ceremonial costumes. Coarse hemp yarn fabrics were used for everyday and work clothes. Solid-coloured (white, dyed *buyak*) and motley fabrics (*alacha*) were used for clothes. Domestically produced yarn was usually dyed with soft lusterless vegetable colours until bright aniline dyes were invented in the middle of the 19th century. All peoples in the Volga region had essentially the same dyeing techniques, but Tatars 'preferred to use tre bark' [Safina, 1996, p. 33]. Combining several yarn types (flax, cotton, wool) in one article generated highly artistic patterns, diverse textile and colours.

White undyed fabric was the most popular solid-coloured cloth used for clothes. As with other Turkic peoples, it was the elderly who preferred white clothes. Blue and red-brown were the most common dyes. Threads for motley fabrics were also dyed blue and red-brown. They were often combined with white ones. Yellow and black was sometimes introduced for greater contrast. The weaver would vary colours, scales, and frequency of certain elements of the pattern depending on her purpose. For instance, motley fabrics used for overdresses (*çoba*) and legwear (*iştan*) was often finely striped. Chequered fabrics were more common in men's and women's shirts. Apart from common features, fabric colours differed depending on regional traditions. For instance, Tatars in the Trans-Kazan and Cis-Volga regions, as well as in the north-west of Bashkortostan, preferred to use blue coarse linen for women's and men's shirts. Red-brown coarse linen, as well as striped motley fabrics, were used for legwear. White cloth women's shirts were mainly popular in Mishar-populated areas in the Oka and Sura basin in the middle of the 19th century. Apart from white shirts, women in the same area wore chequered ones.

Chequered fabrics usually had an orange or yellow background in the Perm and Bashkir

Cis-Ural region. The traditional textile colouring in the reference Tatar group included all hues except for black [Valeev, 1984, p. 13]. However, black is present in patterns woven by Cis-Ural Tatars. Scholars attribute it to the influence of Bashkir traditional weaving [Safina, 1983, p. 97]. In the Cis-Ural region, the composition of relatively large checks is complete with small multi-colour loom-woven (multi-weft) rosette patterns. Unlike the classical (two-weft) loom-woven patterns, which often formed solid stripes, polychromatic multi-weft loom-woven patterns were scattered all across the cloth. Cloth was made of flax and cotton threads (motley fabric warp), while loom-woven patterns are usually made of multi-colour factory-manufactured woolen yarn, which came in a wide variety of hues. Loom fabric ornamentation was used for overdress (*çoba*) fabrics as well as those for the groom's ceremonial legwear (*kiyai iştanı*) and women's aprons. Multi-coloured loom-woven patterns were applied to the towel-like headgear of Molkeevo Kryashens women. However, women's shirts with multi-coloured loom-woven patterns were more common in the Cis-Ural region in the 19th – the beginning of the 20th century.

Embroidery was one of the most popular traditional crafts of Tatar women. It required no sophisticated devices, so any woman could do it. Unlike artistic weaving, which was replaced by factory fabric production, embroidery survived for a long time, performing its traditional functions, largely similar to those of artistic weaving, like folk costume decoration—this is especially true with headgears, shirts, aprons, and chest jewelry.

Polychromatic embroidery, especially tambour type, was the most common type. Tambour stitch was used both to outline the pattern and fill it. The Tatars used to practice low (*älmä*) and high, or raised (*küpertkän älmä*) tambour stitching. Low tambour was done using a special form of crochet, in relatively large stitches, usually in a thin silk thread. Such embroidery was flat. It resembled an elegant drawing. Raised tambour was done with twisted silk threads or worsted yarn, in very small

stitches, which added a third dimension to the embroidery, making it look like a cord applique. Multi-colour interweaving was popular with Mishar Tatars and those of the Cis-Ural region. Thin woolen threads were applied to a slack cloth using a common needle on a tambour frame. A thinner thread was wrapped around the warp threads resulting from slackening and the weft. Multi-colour interweaving was used to decorate the edges of head wear (*tastar*). The fact that Mishar Tatars adopted this technique and typical zoo- and anthropomorphic motives must be attributable to 'the influence of the traditions of the Russian population, especially that of the upper reaches of the Oka' [Mukhamedova, 2008, p. 275]. Satin stitch was also common, especially with Mishar Tatars. Silk polychromatic threads were used to fill the interior of the pattern. The pattern was usually outlined in tambour stitches. Satin stitch was used for headgear, aprons, chest and braid adornments. Cross stitch was also quite popular with Mishar and Kryashen Tatars [Suslov, 2000, p. 98].

Gold embroidery is an ancient, well-established tradition in Tatar folk arts. Gold and silver-embroidered decorative elements of the costume are the most expressive and elegant part of it. It was the headgear which was usually embroidered in men's and, especially, women's costumes. It includes gold-embroidered hair adornments, aprons, and bands worn by Mishar Tatars and Kryashen women's headgears known as *süräkä*, the famous Kazan Tatar *kalfaks* with the typical flower bouquet, golden feather, or 'bird of happiness' gold embroidery. Gold embroidery was also applied to other costume elements—collars, footwear, and accessories. They are no less elegant and impressive than Tatar jewelry. Regional variants of the Tatar costume combined such decorative elements for perfect harmony.

Leather mosaic, the unique technique for ornamented footwear, is connected directly with the traditional costume. Solid-coloured or ornamented *ichigs* (embroidery, applique) have been common with most of eastern Turkic-Mongol ethnoses from ancient times [Satarova, 2004, p. 10–19]. However, the so-

called Kazan boots were special. They were made of high-quality saffian cut into intricate fragments to form a plant pattern. Silk, sometimes even gold, threads were used to hold pieces of leather together with side stitches [Gulova, 1983, p. 22–25]. Mosaic footwear is specific to the Tatars.

The Tatar, especially urban, costume was completed with a set of women's jewelry, which gave it an ethnic twist. Much Tatar jewelry was unique and unparalleled by any peoples in the region except for the related Bashkirs. These include almond-shaped filigree earrings (*sırğa*), pectoral jewelry (*yaka çilbiri*), and jewelry bauldrics (*xasitā*) [Suslova, 1980, p. 93]. Caulking, casting, and engraving were the most common jewelry techniques. Popular engraving motives were traditional Oriental inscriptions in the Arabic script. The text often merged with a plant pattern, forming an ornamental composition. Engraved articles also featured niello or, less commonly, inlays of other metals. The most skillful craftsmen also made filigree articles. Kazan is the only city in the Volga region where filigree was well-developed. Notably, it had some local features. In Russia, filigree ornaments were decorated with enamel. Tatar filigree was an exception because it is purely graphic and forms intricate fine patterns. Scholars believe that Tatar filigree is related to Middle Asian or Greek techniques rather than Russian [Goldberg, 1967, p. 49]. Embossed filigree, in which each filigree quirk is raised over the article surface, was the most accomplished Tatar jewelry technique. It was used to make jewelry for high-class women. The art of filigree flourished from the middle of the 18th to the beginning of the 19th century. Granulation work, namely seeding metal balls into filigree, was also common. Popular gemstones included topaz, aquamarine, amethyst, jasper, carnelian, and turquoise, which usually formed rosettes on the surface of the article.

The Tatar Costume as an Ethno-Cultural Complex. The folk costume performs the special function of synthesizing the material and the spiritual, representing moments of ethnic history, ethnic cultural values and inter-ethnic

contacts, as well as confessional affiliation. It symbolized the nation's ethnic identification. It has been changing for centuries to adopt to the people's natural and economic activities, moral and religious standards, aesthetic taste, and practical purposes.

The folk costume as a unique ethno-cultural complex included the production of fabrics, richly and intricately ornamented headgears, various footwear, sophisticated jewelry, and small accessories to complete the ensemble. All elements within the complex matched with each other in terms of colour, shape, and material, thus forming a harmonious stylistic ensemble.

All Tatar groups have shared the key elements of folk clothing from ancient times. All pre-national forms of Tatar clothing are monumental. Back in the 19th century, it was common for both men and women to wear long, wide tunic shirts and a long wide-framed wrap-over overdress. Women's massive chest, braid, and hand adornments and sophisticated headgears, usually combined with large shawls, accentuated the multi-layer monumental impression. The four-wedge hemispherical scullcap was worn by Muslim men under a hemispherical fur or stitched fur-trimmed winter outdoor hat, which women wore over shawls. Men's sashes and traditional leather footwear, namely soft or hard-soled ichigs and bashmak shoes. Straw shoes were the rural work footwear. They were combined with white cloth or knitted stockings.

Despite a number of ethnic features, folk customs varied. Even within the same group of an ethnos (territorial, age, etc.), no elements occurred twice. Cultural variation is a requisite for the maintenance of ethnic traditions [Chistov, 1986, p. 119]. Folk costume has developed over centuries as a set of reciprocal local traditions, which grow within the ethnic, cultural and confessional consolidation of the nation.

Tatars continued to wear predominantly traditional clothes in the Mid-19th century. Ethnographic expeditions, museum collections, and archive data have provided extensive evidence of it.

Clothing. The shirt (*külmäk*) and the trousers (*ıştan*) of relatively light fabrics formed the basis of the men's and women's traditional costume. Until as late as the Mid-19th century, the ancient style tunic shirt (of straight homespun cloth folded laterally, without shoulder seams, with underarm gores, wide side wedges, and a central chest slit) was the only and universal shirt type. Tatars, especially Kazan Tatars, preferred shirts with stand up collars. Turn-down collars were more common in men's ceremonial wedding shirts (*kiyaiü külmäge*). Baptised Tatars sometimes wore shirts with a side chest slit. Unlike the Russian kosovorotka, it had a slit on the right side of the chest. The Tatar shirt was different from the tunic shirts of the neighbouring peoples—Russians, Maris, Udmurts, etc.—due to its length and width. Men's shirts were baggy and long (knee-length). They had wide long sleeves. Shirts were never girdled (except for baptised Tatars). A related proverb has come down to us: 'One without a cross and a girdle looks like a Tatar'. White homespun shirts were embroidered or decorated with gimp or multi-coloured homespun inkle.

Women's shirts were nearly ankle-long. In the Mid-19th century, wealthy Tatar women wore shirts of expensive store-bought 'Chinese' fabrics (light silk, wool, cotton, and fine brocade). Such shirts were decorated with fly rollers, mutli-colour silk and satin ribbons and lace, gimp tassels, and inkle. Kazan and Kryashen Tatar women wore shirts with top fly rollers, while Mishar Tatars had them on the bottom. The bottom chest piece was part and parcel of the old style women's shirt. It is also known as *kükräkçä*, *tüşeldrek*. It was worn under a shirt with a traditionally deep (no placket) chest slit to prevent it from being too revealing in motion.

In the latter half of the 19th century, both men and women became to wear modern style shirts of factory-produced fabrics, with gored shoulders and round armholes, usually with a turn-down collar. Fine frills (*bala itäk*) became a common decoration. It was not infrequent for the entire hem of a women's shirt to be decorated with horizontal frills. In the early

20th century, this shirt style was prevalent across the Tatar-inhabited territory.

Trousers (*ıştan*) were the well-known Turkic leg wear with a wide crotch. Men's pants were usually made of striped (motley) fabrics, while women preferred solid-coloured ones. Ceremonial and wedding groom's trousers (*kiyai ıştanı*) were made of homespun fabrics with small bright loom-woven patterns.

Aprons (*alyapkiç, alçıprāk*) were characteristic of the late 19–early 20th century costume. Muslim women wore homespun patterned or embroidered in polychromatic, often carpet, tambour stitch aprons over the shirt. Young baptised Tatars also wore them with overdresses. Men mostly wore unornamented aprons as work clothes. In the Perm guberniya, richly tambour-stitched aprons were included in the dowry and used as a ceremonial element in the groom's costume.

All overdresses were wrap-over, with sleeves or armholes. It can be classified as home and outdoor (summer, in-between-season, winter) clothes. It was made of factory-produced (cotton, wool) fabrics, homespun cloth, canvas, and half-canvas, as well as fur. Regardless of sex and age, Tatars preferred double-breasted clothes with a right Turkic wrap and a whole-cut slim-waisted back piece (*çabulı kiyem*), and wedge pieces on the sides below the waist [Suslova, 2000, p. 56]. It usually had a buttoned up collar and cut shoulder pieces. This type of clothes included: *the camisole*—as home clothes, *the kazaki*,—common in-between-season clothes, *the bişmät*, winter clothes lined with cotton or sheep wool, *the çabulı çıkmän*, work clothes of homespun canvas, and *the çabulı tun*, a fur coat, often clad in textile. The light homespun *çoba*, made of solid white or thin-striped flax or hem linen for men and multi-colour for women, is one of the most ancient types of such clothing. As late as in the early 20th century, *the çoba* was part of the bride's dowry in Tatar communities in the Cis-Kama, Perm, and Ufa Ural regions. *The turi kiem*, an overdress with a straight back piece, was broad and long, resembling a tunic, usually without fasteners. It could be girdled or sashed with a *cilän*. The *çapan* is a men's

mosque robe. The *turi çıkmän* is—an interim season work and travel garment., *the tolıp, turi tun*—is winter clothing. Overdresses with waist-cut back pieces and plaits (*borchatka*) were popular among baptised Tatars as well as *Russians*. The belt (*bilbau, äzär*) was inherent to the traditional Tatar overdress. Mostly textile belts made of homespun or factory-produced fabrics or, less commonly, knit of wool. Museum collections contain wide gimp, carpet, and velvet belts as well as those of silver plates connected with pivot joints (*kämär*) with massive, ornate silver buckles. They well into disuse early with Kazan Tatars. However, buckle and onlay belts were common as part of both the men's and women's Tatar costume in Astrakhan [Suslova, 1992, p. 88], Siberia [Yushkov, 1961, p. 83], and the Crimea [Roslavtseva, 2000, p. 40].

The only way in which women's overdresses were different from men's was decorative fur, gimp, embroidery, and stitching. The camisole was the most characteristic type of light home and outdoor women's clothes. To

make the back segment more fitted to the waist, it was often tailored in two halves (with a vertical axial seam) wider towards the hips with side wedge pieces (*äç bille kamzol, biş bille kamzol*). Using shop-bought fabrics, trimming, and related accessories brought about commitment to innovation and high variability.

Headgear. Men's headgear can be classified into home (undercaps) and outdoor (overhats). The former include the scullcap (*tübätäy*), which is a small cap worn on the top of the hat under textile and fur hats (*bürek*), felt hats (*tula eşläpā*), and ceremonial headgear (*çalma*). The earliest and most common scullcap type was tailored of four wedges and shaped as a hemisphere. Bright embroidered skull caps were meant for youth, while the elderly preferred modest designs. The later *käläpuş* type, with a flat top and a hard band, was initially adopted by urban Kazan Tatars, probably under the Turkish influence (*fäs*).

The round Tatar-style conical hats, tailored of four wedges, with fur band (*kämkäli bürek*), were a type of over-hat also worn by Russians, in particular in the Kazan guberniya [Melkaya kustarnaya, 1911, p. 144]. Cylindrical hats with a flat top and a hard band of black karakul (*kara bürek*) or gray Bukharan astrakhan (*danadar bürek*) were popular with city dwellers.

With a few exceptions, no significant regional differences in men's headgear have been recorded. Apart from baptised Tatars, all groups shared nearly the same set of headgear types.

Age differentiation was clear in women's headgear, especially in the middle of the 19th century. Young girls wore hats, or kalfak-shaped headgear. Plaited hair lay on the back, uncovered or covered by a special adornment, *çäç täñkäse*. The earliest of them was the open-top cap (*tayka*) and closed-top cap (*takiya, tupiy*), worn in the north-east of the Volga-Ural regions. They were characteristic of certain groups of Mishar Tatar groups in the Oka and Sura region. Early girls' caps, in particular those called *takiya*, have much in common with the traditional girls' headgear of other Eurasian Turkic-speaking peoples [Lobacheva, 2001, p. 71].

The *kalfak* was the most common type of girls' headgear. It was worn with a decorative head band, *uka-çaçak*, its conical end topped with a tassel put back (or to the side). The so-called *ak kalfak*, knit from white cotton threads, is the most famous type. It was more common with village girls, especially baptised Tatars. Small kalfaks of multi-colour silk threads, with transversal stripes on them, became popular in cities in the mid-19th century. N. Vorobyev termed them 'city kalfaks' [Vorobyev, 1953, p. 277]. Some unique kalfaks are decorated with luxurious embroidery, chenille, or the so-called guide applique have come down to us. The 'city' kalfak was often worn with an *uka-çaçak*, which in combination was transformed into the headgear known as *kalfak-çaçak*.

Married women's traditional headgear is more diverse and sophisticated. Unlike girls', they covered not only the woman's head but her neck, shoulders, and back. Despite the numerous territorial variations in shape and decorative detail, the Tatar women's headgear always included three essential components [Suslova, 2000, p. 136]. Volosnik undercaps were used to hold and cover the hair. Therefore, their shapes were largely determined by the hairstyle. Muslim women arranged their hair in two braids, which lay on their back, so their volosniks usually consisted of a cap (or hair case) and a braid adornment. Baptised Tatar women also arranged their hair in two braids, which they lay around their head and covered with a bonnet like Russian women. The basic headgear, the shawl, was typical of elderly women. They had a wide range of age-specific details and were generally more sophisticated because the older generation tended to uphold their traditions. They differed in terms of shape (towel-shaped, triangular, square), territory and time of use. The terms used to denote them (*tastar, caulik, kiekça, örpäk*) apparently originate from certain ancient cultural traditions (for instance, the term *tastar* is of Iranian origin, while *yaulik, kiekça* are Turkic). Over-hats were worn (wrapped) on shawls to hold them tight on the head. These include short and long *tastımal* towels, the *caulik*, and the *ak caulik*, Baptised Tatar rect-

angular wedding shawls (*tugäräk yaulık*), and hats. The textile hat *stüpiy*, *kamçat bürek* were used as over clothes.

Of special interest are old (17–Mid–19th century) coin hats. They were described by I. Georgi [Georgi, 1799, p. 12], I. Lepekhin [Lepekhin, 1771, p. 160], K. Fuchs [Fuchs, 1991, p. 18], and other authors. They appear in drawings by many artists (I. Leprince, A. Martynov, Cornelis de Bruijn). They were made on hard frames (*takiya bürek*) caps shaped as a cone clad in silk fabric and decorated with gilded ruble coins, corals, and pearls, topped with a gilded pommel. It was worn by Kazan Tatars. The soft-frame coin cap (*kaşpau bile*) is characteristic of the Mishar Tatars of the Oka and Sura interfluvium and the Molkeevo Kryashens.

Foot wear. Men's and women's traditional footwear differed in details (decorative elements, bootleg size, heel height). Tatars wore woolen knit stockings on bare feet. Cloth stockings (*tula oek*) were the most authentic, ancient, yet wide-spread type of foot underwear. They were made of home-made, usually white cloth, and worn with everyday bast or leather footwear. Another type of Kazan Tatar foot underwear is chausses (*ayakçu, ayak çol-gau*). They were wrapped around the calf and worn with ichigs or cloth stockings. Special ceremonial *ayakçu* types existed, showing that the elements were very old. The bride would present to the groom a pair of *kiyaiü ayakçısı* with ornamented ends.

The most common foot over-wear consisted of leather, bast, and felt. Leather footwear was popular in cities as well as with wealthy villagers and clergymen. Knee-high boots of soft solid-coloured leather, with a soft sole, known as *çitek*, were mainly worn by men. Women had shorter topless boots. Ornamented *kayulı çitek*, made using the traditional leather mosaic technique, were ceremonial women's footwear. Outdoors, short hard-soled shoes were worn over ichigs. Short felt boots were used in winter. Ichigs looked rather like leather stockings. They had a wider scope of application. They were especially popular with the elderly. Hard-soled boots (*itek*) were also popular. Ta-

tars in the Trans-Ural region, as well as Bashkirs, wore boots (*sarık* of rawhide tailored in a specific way and galoshes with white cloth bootles. Women's *sarık* boots were decorated with applique and tambour stitch embroidery. A sophisticated arch composition on the back piece formed the base of the pattern.

Galoshes (*käveş, kata*) were the everyday variant of leather footwear. Shoes (*başmak*) were a more formal type of footwear. Women wore patterned *başmak* shoes, often with heels. Shoes with a slightly raised pointed toe were the most traditional. Women's *başmak* shoes were sometimes made of velvet, decorated with silver and gold metallic threads, glass beads, and fresh-water pearls.

Bast shoes, especially *lapti (çabata)* were Tatar work footwear as they were the lightest and the most comfortable for field work. Most of them had a directly woven 'face' and an obliquely woven sole (*tatar çabatası*).

Short and high felt boots were widely used in winter (*kiez itek, pima*). Coloured felt boots, known as Kukmor style, were especially popular with wealthy Tatars.

Jewelry. Male aristocrats wore jewelry rings, signet rings, and belt buckles. The range of women's jewelry was much broader due to the general Muslim tradition of assessing a man's wealth by his clothes and his women's jewelry.

Braid adornments were probably the most wide-spread type of jewelry among all ethno-territorial, age, and social Tatar groups. They came in a broad variety of shapes, materials, techniques, and styles. Apart from numerous variants of coin braid adornments, those shaped as ornate plates, primarily blade-like, were common. Earrings are one of the most archaic yet lingering elements in the Tatar women's costume. Almond-shaped filigree earrings with pendants (*tatar sırgası*) were an ethnically specific element of the Kazan Tatar costume, though they were worn by Tatars or nearly all geographical groups. Apart from traditional earrings, Tatar women borrowed from other peoples—the Russians and those from the Caucasus, Middle Asia, and Kazakhstan [Suslova, 1980, p. 26–27].

In addition to being decorative, Tatar women's neck and chest adornments had the practical function of holding together or covering the traditionally deep slit of the women's shirt. This applies primarily to textile chest pieces of various shapes, styles, and names. In the Middle Ages, Tatar noble women from Kazan, Siberian, and Astrakhan wore their jewelry equivalents. They were made of embossed lunula-shaped gilded plates (*ayçık*) and inlaid with precious and semi-precious stones. The baldric, usually textile, was another authentic type of chest adornment. All authors when briefly describing the Tatar costume mentioned this detail. 'Mishar Tatars... like to wear broad baldrics with silver and local plate sets on them across their shoulders' [Georgi, 1799, p. 13]. Muslims often wore baldrics with 'a specially pocket for the *Quran* in a small handwriting' [Fuchs, 1991, p. 17]. Baptised Tatars and those groups who were not particularly adherent to Islamic canons often used cowrie shells as protective amulets. *The yaka çılıbırı* collar fastener with pendants on it was an especially impressive and authentic neck and chest adornment worn by Kazan Tatar women. *Yaka çılıbırı* fasteners could be often represent exquisite jewelery, many items of which are the apogee of the Tatar jewelery art.

Hand jewelery—bracelets, rings—used to be part and parcel of the Tatar women's costume. It is deeply rooted in the ethnic folk arts [Suslova, 1980, p. 50–56]. Tatar women wore bracelets very often, usually in pairs, one on each hand, to maintain good relations between spouses. This is why bracelet types and styles were so diverse, ranging from finest gold filigree inlaid with precious stones, worn by noble women, and simple engraved bracelets of low-grade silver for the lower classes. This also applied to rings, for 'the Tatar woman wore two to three rings every day; she had them on nearly every finger for visits' [Fuchs, 1991, p. 71].

Regional Features of the Tatar Ethnic Costume (Mid–19th century). The specific ethnic history, uneven socio-economic development depending on the social groups, climatic conditions, ethnic environment, and

confessional affiliation affected the development of the ethnic conflict considerably. The high territorial dispersion and remoteness of peripheral groups within the ethnos from the reference group, brought about by the nation's complicated history, also favoured high variability in clothing⁴. For instance, the territorial remoteness of the Mishars of the Oka and Sura interfluvium, Kasimov, Astrakhan, Siberian, and other Tatar groups caused them to develop local costume features along with common ethnic traits. This primarily applies to the women's costume, which is attributable to their reserved lifestyle and adherence to traditional moral and ethical standards.

Baptised Tatars had quite traditional costumes because they were early subjected to cultural isolation from Muslim Tatars and underwent special ethno-cultural development determined by the ethnic environment and the influence of Christian, most importantly Russian, cultures. At the same time, their traditional clothing is identical to that of the Kazan Tatars in terms of key criteria, such as cut. It includes the tunic shirt, in particular the ethnically specific Kazan Tatar women's shirt with an upper fringe (*öske itäkle külmäk*), 'wide crotch pants', overdresses with whole-cut slim-waisted back pieces, girls' headgear known as *ak kalfak* worn with a textile coin braid adornment, a coin set of neck and chest jewelery, etc.

The traditional costume of Trans-Kazan and Western Trans-Kama baptised Tatars, who lived scattered in the Spassk, Chistopol, Laishev, and Mamadysh uyezds, Kazan guberniya, the Malmyzh uyezd, Vyatka guberniya, and the Menzelinsk uyezd, Ufa guberniya, was characterized by a special set of women's headgear, which consisted of a volosnik (*mälänçek*), a head shawl (*suräkä*), a towel-like headband (*ak yaulık*), and an authentic wedding shawl (*tugäräk yaulık*). Young women's headgear was finished with a special set of

⁴ The regional historical and ethnographic features of the Tatar folk costume of the middle of the 19th century were identified according to the Historical and Ethnographic Atlas of the Tatar People [see: Suslova, 2000].

jewelry, consisting of coin temple jewelry known as *cilkäläk* and large filigree or coin earrings interconnected with a special chain or ribbon (*sırğa bavi*). A set of chest and neck textile-based coin jewelry, known as *meunsa* (*tamaksa*), was worn over the shirt and the apron (sometimes also the camisole) along with a large coin pectoral and a baldric. Popular overdresses included the slim-waisted *ädäp* the *camisole* or *cilän*, as well as the *çikmân*, or *ärmäk* with a tailored gathered back. Popular footwear included traditional Tatar bast shoes worn with cloth stockings *tula oek*.

In terms of its key components—headgear, overdresses and other clothing, footwear, and jewelry, the costume of Orenburg Nağaybäk women is structurally similar to that of baptised Tatar women in the Volga-Ural region, especially in Trans-Kazan and western Trans-Kama areas [Suslova, 1995 p. 61]. However, it is marked by a number of distinctive features. In terms of decoration, the Nağaybäk women's costume of the Troitsk uyezd, Orenburg guberniya is based on the polychromatic artistic weaving technique known as *çultar*. Vibrantly-coloured loom-woven fabrics were used to make frills on the ceremonial tunic shirts. Troitsk Nağaybäk women also used patterned cloth made with various techniques—loom-weaving, *vybornaya*, and *perebor* (variants of loom-weaving)—which provided an eye-catching appearance for festive *ačupräk* aprons. The chest-piece, hem, and frills of such aprons were all ornamental. Artistic applique formed the decorative basis of the Nağaybäk women's costume of the Verkhneuralsk uyezd, Orenburg guberniya. In addition to the linear hem applique of multi-coloured ribbons, inkle, and textile strips, which was common with baptised Tatars, their festive shirts were decorated with applique on the chest, sometimes also below the waist. The circular composition of the chest applique consisted of contrast vibrantly coloured sets of triangular and diamond-shaped pieces of factory-produced fabrics. Such shirts were known as *koramalı külmäk*. The women's headgear *koramalı süräkä* bore appliques of exactly the same style as the shirts.

The National Tatar Costume. Traditional clothing was not unchanged and remained static across the Tatar-inhabited territory. It formed over edcenturies as a set of interdependent local traditions, which develop and grew in parallel with the ethnic and cultural consolidation of the nation. Various groups within the ethnos and their ethno-territorial, confessional, and other groups at different stage of their development (emergence, peak activity, fading) differed greatly in terms of culture. Thus, differences between the general and the particular in the clothing of such groups are not absolute: it was not uncommon for the particular to extend to the general level at a certain stage and vice versa. For instance, women's headgear *kalfak* was rather a specifically Kazan Tatar notion in the Mid–19th century. However, it developed into a nationwide costume element, spreading to Siberian and Astrakhan Tatars, in the late 19–early 20th century. At the same time, the girls' *ak kalfak*, which was worn by nearly all Tatar groups, at least in the Volga-Ural region, until the Mid–19th century, was

preserved only by baptised Tatars until the early 20th century.

In the latter half of the 19th century, during the intensive development of capitalism and major Tatar bourgeois commercial, industrial, and ethnic cultural centres in cities, as economic and cultural connections between the Tatar communities of different regions of Russia expanded, the previously stable local variants ethnic clothing also disintegrated. The period of the formation of the nationwide culture is the most complicated development stage in the history of the Tatar costume. On the one hand, the influence of European and Russian cultures was powerful. On the other hand, the consolidation of the Tatar ethnos around the reference group (Kazan Tatars) also affected it. A trend towards a modified costume style emerged; from archaic monumental folk forms to more elegant and refined forms which fit in with European fashion.

The basis for the nationwide Tatar costume was the traditional clothing of the Tatars, especially those of Kazan and Transcaucasia [Suslova, 2000, p. 244]. They created highly artistic variants of the folk costume with exquisite shapes and aesthetically accomplished decorations. The techniques included embossed filigree, unique leather mosaics, and sophisticated gold and pearl embroidery. The nationwide costume based on the urban Tatar traditions was soon adopted by all ethno-territorial Tatar groups except for baptised Tatars. Folk culture, in particular costume as a special ethno-cultural element, belonged to the was influenced by general Islamic traditions. It is quite natural, therefore, that the traditional costume of baptised Tatars developed in a different direction from that of Muslim groups within the ethnos.

Stylistic changes affected the key elements of the costume, cuts of overdresses and other clothing, and headgears. The shirt ceased to resemble a tunic. It had round armholes, tailored shoulder pieces, and a cut waist. In urban communities, women's dresses often had a raised waist, a train, and a peculiar draping where the sleeve was stitched in and the hem attached to the frame. It was often worn with a short sleeveless camisole of the same fabric

with highly flared tails. Such dresses (*kısmalı külmäk*) of expensive silk, satin, and light brocade fabrics were decorated with gimp, swan down, and had fringed edges, sleeve bottom, and a hem. Like the early traditional camisole, this type had an open chest and a fastener on the end-to-end front (*kaptırma*). The headgear was a small *kalfak* to be fastened to the head (*mögez kalfak*), ornamented with pearls and glass beads, which acted as a decorative element in women's hair-dress. Traditionally, a silk knitted shawl with long tassels or a light muslin scarf of a colour to match the costume, also decorated with fringe, swan down, and gimp, was often worn over it.

The change in style was also visible in rural clothing. Chintz shirts acquired tailored shoulder pieces and round armholes. Their frame was often shortened to a yoke. They also had a wide veil fringe. It was common for village girls to wear such shirts with aprons (*alyapkiç*), which were viewed as an element of festive ethnic clothing. Aprons were richly decorated with tambour, often carpet embroidery. Cut details, hem width, and decorative elements such as frills, tabs, wings, etc. Beads of semi-precious stones or amber finished the attire. Girls and young women across the territory began to wear multi-colour silk, chintz, or thin cashmere shawls 'Tatar style', with the cloth loose on the back and two adjacent corners tied in a knot on the nape. Decorative brooches (*çulpi*) or, less commonly, antique textile braid adornments (*tezmä*) were worn on the hair, which was arranged in two braids. Coin earrings with dangles or traditional lunula styles (*alka*) were worn.

In the early 20th century, the influence of European traditions, representative of the aesthetic taste of the bourgeoisie, in particular Tatar, brought about even more pronounced changes to women's clothing, especially in cities and among advanced rural dwellers, eventually smoothing out both ethno-territorial and class and age-based differences. Small *kalfaks* and leather mosaic footwear as ethnically specific elements of the traditional Kazan Tatar costume remained part and parcel of the women's attire nationwide.

Family of a rich Kazan merchant in costumes of the 19–early 20th centuries. Photo 1910.

Men's costume remained largely uniform until as late as the Mid-19th century. In the late 19–early 20th century, the set of a shirt with tailored narrow sleeves, a short *kazaki*, European-cut trousers, a velvet 'Kazan style' headgear (*käläpuş*), and factory-produced boots was perceived as a national costume.

The sets of traditional clothing dating back to the Mid-19th century took different courses of development in the early 20th century. Mus-

lim groups within the ethnos (Volga-Ural, Astrakhan, and Siberian Tatar ethno-territorial groups) tended to adopt the urban Kazan Tatar costume under the influence of European cultural traditions. The clothing of baptised Tatars was affected by their orientation towards larger Christian ethnic groups. For instance, Molkeevo Kryashens Tatars adopted most of the Anatri Chuvash ethnic costume, while Nağaybäks preferred the Russian Cossack style.

CHAPTER 4

Ceremonies and Festivities

Raufa Urazmanova

The ceremonial and festive component of the everyday culture of the 19th century is commonly referred to as traditional, meaning relatively stable forms (rites, ceremonies, behaviour standards, etc.), regularity, and prevalence on a mass scale. It developed and existed under the formative influence of religion. Of great importance were ethnic roots, natural, climatic, social, and economic conditions, as well as the degree of territorial dispersion of the ethnoses.

The Tatars developed in an ethnically (Slavic-Finno-Ugric) and confessionally (Orthodox Christian, Pagan) alien environment, occupying a large territory that covered a number of natural and climatic areas. This brought about diverse calendar (public) rituals and holidays, usually marking the essential stages of agricultural (farming) work, which was largely determined by the change of seasons. The Islamic system of rites in holidays, which evolved into a specific form to fit in with the local conditions, proved unifying for all Tatars.

The traditional Tatar system of rites, ceremonies, and holidays suggests that scholars were right to define Islam as a lifestyle. It included daily behaviour standards, formalization of key moments in a person's life (birth, wedding, death), a system of holidays and a set of ideas about how they should be celebrated. The adhan delivered from mosque minarets established the time of day. The weekly Islamic holiday, Friday, was preceded by bathing, while the festive morning was marked by tea with *qoymaq* pancakes, baked over coal in an oven. Children learned table manners—praying before and after each meal, being aware of the schedule, being able to prepare for and perform the mandatory Is-

lamic prayer, *namaz*, five times a day, as well as proper prayers when receiving guests—at their mothers' knees. Maktab and madrasah education reinforced teenagers' knowledge of such standards.

According to G. Sablukov, Tatar Muslims believed Quranic words to be 'reliable protection against all harmful influences, evil eye, and any bewitchment.' It was thus common to place them on 'household items, tableware for eating and drinking, attire elements, especially women's, earrings, rings, bracelets, metal mirrors, or dedicated metal plates or pieces of paper which were carried as a talisman' [Sablukov, 1884, p. 66].

Young women often knew numerous religiously edifying baits and munajats by heart, in particular those from the books '*Bädävam*', '*Bakırgan qıtabı*', '*Yosıf qıtabı*', and others. They often also recited them at girls' gatherings. They loved to embroider or loom-weave dedicated praying rugs, *namazlık*, which were part and parcel of the dowry. The bride presented them to her husband's parents and elderly relatives.

The entwining of rituals of ethnic origin and Islamic ones rituals which were canonized under the Sharia and spread all across the Muslim world, was an invariable feature of the traditional family everyday and ceremonial culture. Quran reading (*Qorän uku*), praying (*doga kılı*), and almsgiving (*sädaka öläşü*) were core to such events as wedding ceremonies, name giving, and the set of burial and commemorative rituals. The entwining was so seamless that even the official, legal registration of the events took place not at institutions or in mosques but at home, during formal meals known as *nikax tue*, *isem kuşu*. It was at home where all rituals performed to

prepare the dead for burial and commemoration took place. They were largely unified and perceived as Islamic. They were commonly accepted, stable, passed on from generation to generation and instilled 'from an early age'. Religious knowledge became a matrix for behavioural standards, a habit, a kind of custom. Everyone could quote the poet addressing his native aul:

Here God breathed soul into me; here I saw light,

Was able to read my first prayer from the Quran,

Here I hear the words of the Prophet for the first time... [Tukay, 1969, p. 188].

Tatars referred to the most revered Islamic holidays with the Arabic word *gaet*⁵. As in the rest of the Muslim world, they were two, namely *Uraza Gaete*, or the Fasting Holiday, and *Qorban Gaete*, the Sacrifice Feast. This is reported by K. Fuchs who witnessed Tatar holidays in the first quarter of the 19th centuries: 'They call this day Hayd...' [Fuchs, 1991, p. 108]. The word *bäyram*, which linguists believe to etymologically mean 'spring beauty (charm)' and 'spring feast', was used to denote ethnic holidays [Ezlänülär, 1989, p. 207]. The *Gaet* was perceived as something revered, sacred, God-given.

All Muslim Tatars celebrated the holidays in the same way. The ceremony included the collective morning prayer, *Gaet namazı*, attended by the entire male population including boys. It was common for them to gather in groups on the way to the mosque and loudly chant the *täkbir*, a standard praise to Allah. When the weather was favourable, the festive divine service often took place in the open, not far from cemeteries. If the weather was bad, it was delivered in mosques. Men and boys then went to the cemetery, where everyone performed namaz near their relatives' graves.

⁵ The word *gaet* is derived from the Arabic for holiday [see: Russko-arabskij, 1959, p. 494]. Furthermore, the same terms were used for these holidays by Central Asian peoples: *Qurban-hait* (sacrifice feast) and *Ramazan-hait* (uraza end) [see: Lobacheva, 1995, no. 5, p. 24].

In the meanwhile, women cooked festive treats at home. They waited for the men to come home to have breakfast. On these holidays, each lasting for three days, it was common to visit one's relatives and neighbours and congratulate them. People wanted to congratulate everyone in person. Everyone was expected to visit one's parents. Presents, treats, and dinner parties were optional but encouraged where possible.

During the *Qorban Gaete*, the *qorban çalu* the offering was performed in adherence to the Islamic rules. The more people tasted the sacrificial meat, the better. Scholars reported: 'On holidays Tatars leave the table set for the whole day, usually for two to three days straight. Everyone who enters the house, no matter who he is, can help himself to everything. Such holidays are the most representative of the *kunak itü* tradition' [Gubaydullin, Gubaydullina, 1926, No. 6].

Furthermore, Tatars were well aware of and celebrated those remarkable dates in the history of Islam that were believed to be blessed: Prophet Muhammad's birthday, Mawlid⁶, the miraculous journey to Jerusalem and ascension into heaven—Laylat al-Isra wa al-Miraj—celebrated in the night of Rajab 26–27 according to the lunar calendar, Laylat al-Qadr (Tatar: *qader kiçäse*), or the night when the Quran was revealed,⁷ etc.

Shakirds at numerous madrasahs had their own ways of celebrating special occasions. For instance, on Mawlid, they decorated the minaret of the mosque with multi-colour paper strips and put lamps with burning candles in minaret windows. In addition to prayer

⁶ Mawlid a-nabi (Arabic: prophet's birth) is celebrated on the 12th day of Rabi' al-Awwal according to the Islamic calendar. It is both the date of Muhammad's birth and his death [Kratkij, 2000, pp. 148].

⁷ Laylat al-Qadr is the night of the 27th of Ramadan, mentioned in the Quran (Surah XCVII). It is sacred because the 'descent' of the Quran to Muhammad began that night. It is believed to be the night every year when Allah decides on the destiny of each person, based on the wishes expressed in prayer. Therefore, the night is traditionally spent in a mosque, reading the Quran and praying to the Allah and angels [Islam, 1983, pp. 75].

and almsgiving, reciting (chanting) poems praising Muhammad and his deeds—*mawlid al-nabi*—as well as poetic narratives of the Prophet's birth, *mirajname* (or *mirajiya*) about his miraculous ascension, etc. were essential to the celebration of the blessed dates. Many of the works were written in Tatar, 'a language that was simple and easy to understand for any Tatar, even those who had no madrasah education, and in a convenient style which enabled every Muslim in remote Tatar communities to adopt the ideas of monotheism and the specific ideal image of the Prophet' [Sibgatullina, 2006, p. 658–665; Shamsutdinova, 2001, p. 15–16]⁸.

The emotional and psychological effect of Islamic holidays and blessed dates was enhanced because everybody was a direct participant. K. Fuchs described the 'special prayer'—*gaet namazı*—to celebrate the end of the fast: '...the first day following Ramazan was celebrated in the summer. At 8 o'clock in the morning, on Friday, all Tatars, old and young, numbering over 6,000, gathered not far from the New Tatar Sloboda for a Divine Service in the open air. To see so many people arranged in great order to pray, during which they often bow and fall down, was astonishing. It must have a powerful effect on the witness' [Fuchs, 1991, p. 107].

Not only the most revered Islamic holidays, namely *Qorban Gaete* and *Uraza Gaete*, but the fasting period preceding the latter was celebrated according to strict ritual rules. The morning (predawn) breakfast, *säxär*, was usually more substantial and 'special'—it was a family feast (fasting began at the age of 6–7 years), preceded by a special prayer, or ritual intention, known as *niyat*. The evening (afterdark) meal, *avız açu*, colloquially termed

'mouth-opening', was also a ritual. During the entire month special after dark prayers, *Tarawih namazı*, were said in mosques. The prayer ritual included a collective (men only!) prayer to Allah and Prophet Muhammad, *tärawix täsbixi*, gladly attended by an audience of women and girls⁹.

A set of poetic works known as *Ramazaniya* was dedicated to praising the fasting month of Ramazan as the 'crown' of all months. 'In the first half of the month, verses with the redif "märxäbä" ("welcome") were recited to express the Muslims' joy at seeing the holy month come... The verse encouraged charitable deeds during Ramazan and mentioned examples of prophets and saints. In the second half of the month, a sad verse with the redif "äl-vidag" ("farewell, good bye") was recited to mark the end of the festive month. It expressed regret because Ramazan had been so short and the wish that it could have been longer' [Sibgatullina, 2006, p. 668].

Munajats, baits, and qasidas, which were the most frequently performed during Ramazan and Mawlid, were typical of the music and poetic art of Muslim Tatars within the so-called 'Islamic confessional art' [Islamoxristianskoe, 1994, p. 186–196]. 'Confessional professionals' were able to impress the audience both emotionally and psychologically. It was at madrasahs where the first cultural, educational, literary, music, and drama classes were offered, in particular, the Muhammadiya Madrasah in Kazan [Ämirkhan, 1997, p. 217–218], Galiya in Ufa, and others, which acted

⁸ 'Religious literature about Prophet Muhammad is central to home libraries in all social classes. The Tatars did not view Prophet Muhammad as divine but respected such qualities of his as patience, kindness, mercy, and poverty, thus making him resemble a common man. For people deprived of statehood and administrative institutions, for 450 years the Prophet symbolized the supreme, just authority and represented support not only in the real world but hereafter, acting as a mediator between Allah and people.'

⁹ This is mentioned in the novelette 'Köz' by G. Iskhaki: 'Berence könnärdä uraza toty çiten bulsa da, min bik tiz öyrändem. Kızlar berlä azan äytkäne, kiç berlä tärawix äytkäne tñlarga baru bik küñelle buldı' [Miras, 2004, No.12, p. 73]. In his article 'Memories of Youth', N. Khabibullin wrote, '...during Tarawih Namaz, when the 'Tarawih Tasbih' was recited in choir, he added 'Jalali wal Jamali wal Jabarut' following 'Qudrati wal Qibriya i wal Jabarut.' Salih Mullah thus raised his authority to an unprecedented level. This event became known as "Kazanča tarawix äytu", or reading of the Tarawih in the Kazan manner... Therefore, when men read Tarawih Namaz, women and children would gather around the mosque to listen to Salih Mullah reading the Tarawih in the Kazan style' [see: Khabibullin, 2008, pp. 61].

as precursors to any trends in professional art and literature, in particular concert performance and musical arts [Gaziev, 2009].

Islamic rules were the a key conceptual and binding part to all family ceremonies, both joyful (wedding, birthday) and sad, related to death.

Certain actions and set phrases were prescribed for all rituals. Specific paraphernalia was used, pre-determined by local conditions to become an ethnic tradition. It is difficult to single out a purely religious (Islamic) and purely ethnic (Tatar) component in this highly syncretic ritual system. The order and names of ritual activities, their form and concept were representative of both the ethnic and confessional character, as well as a specific type of culture, which held a special place in the all-Russian and Eastern European system.

The wedding ceremony began with recording the financial terms and conditions of the marriage, the so-called 'wedding gift' [Fäxret-din, 2006, p. 158], or *mähär*, which chiefly regulated the groom's responsibilities. The Tatar *mähär* specified what items the groom's family was to send to the bride, primarily clothing: dress fabrics, textile or fur coats, ichegs, shwals, etc. The set of items was more or less universal, albeit differing in quality depending on the families' financial standing. A list of foods which were to be sent to the bride's house to be cooked for the ceremonial meal (flour, meat, butter, tea, sugar, etc.) was also included. In the *mähär*, the property to be transferred to the bride was also specified. Most importantly, it stipulated that in case of divorce of the husband's initiative the latter was to pay a specified amount of money to the wife. The amount was usually not paid. However, it was a legal guarantee for the woman. This is why it was known as invisible money, *kurenmägän akça, kalmış mähär*.

The above was known as *mähär* in Mishar Tatar auls. Kazan Tatars called clothes for the bride *kalın* and money spent for the wedding *tartu*, or *tartu akçası*. Yet, the overall term of *mähär* was entered into the wedding register.

The Nikah ceremony took place in the bride's house. The wedding feast was known as *nikah tue* and opened the series of wedding celebrations. Only men ate at the table. Women enjoyed wedding treats later or in a different room. The newlyweds did not participate in it because the groom was at home, often in another village, while the bride sat behind the curtain in this or that half of the izba.

Following the ceremonial *mähär*, the mullah asked the newlyweds for consent to the marriage. The groom's father answered on his behalf. In addition to the bride's father, two witnesses from among the men present (*väkillär*), were sent to ask for the bride's consent. The mullah then recited an extract about marriage from the Quran. This was the end of the official part.

The religious name-giving ritual, *isem kuşu*, or *am kuşu*, was performed a few days after the birth and attended by the mullah and well-respected elderly relatives and neighbours. The baby, lying on a cushion, was brought to the mullah. He turned the cushion so that the newborn's feet faced Mecca (*qıybla*). Standing at the baby's head, the mullah recited an adhan from the Quran, after which he bent down to the baby to call its name. This was repeated three times, after which an entry was made in the birth register.

Tombstone inscriptions, census lists, and other historical sources suggest that names of Turkic-Tatar origin were prevalent until the 19th century. In the 19th century, the situation changed dramatically. Under the influence and with the active participation of the clergy, who had received religious education in Bukharian madrasahs, 'Islamic names' praising Allah and Prophet Muhammad were introduced. 'Sharia' name books and circular orders regulating the spelling of certain names were published and re-published in numerous copies [Sattarov, 1981, p. 14–15]. By the end of the 19th century, such names had become mainstream.

The name-giving ceremony ended with the feast known as *aş*. It was the only feast related to childbirth attended by men, albeit mostly elderly. The festive dinner for women, held

just after the men's one or a bit later, attracted more guests. Women always brought presents for the newborn.

Circumcision *sönnät*. was performed on every boy by professionals, known as *baba*, *babaçı*, who inherited the skill from their fathers and grandfathers. It became the key trade for the male population of some villages. For instance, two villages in the Kazan guberniya—Koshman, Sviyazhsk uyezd, and Masra, Kazan uyezd, were famous for that. Professionals would go from aul to aul, offering their service. They worked for a specified remuneration.

Only one part of the traditional burial and commemorative ceremonies, namely the burial (burial and ablation time, funeral clothing for the dead person, and grave structure) was regulated by Sharia. The remaining rituals, in particular commemorative ones, stem from the people's ethnic history. They came together to form a ceremonial complex. Taken holistically, it was perceived as Islamic and universally binding.

The funeral was expected to take place as soon as possible. If a person died at night or early in the morning, burial followed on the same day¹⁰. In rural cemeteries, graves were placed where the deceased person's relatives had been buried. Graves had a side niche (*läxet*).

In the meanwhile, washing paraphernalia and the burial clothing (*käfen*, *tunnık*) were prepared under the guidance of a woman who knew the rules.

The washing was done by people specially invited (men for men and women for women) after the grave was reported to have been prepared.

The vesture procedure was stringent and ended with tying the shroud over the deceased person's head, body, and legs with stripes of fabric prepared in advance. All actions were accompanied by proper prayers—specific Quranic ayahs. When in the cemetery, the deceased person was carried on special litter known as *tabut*. Only men attended the funeral procession and the pre-burial prayer, *cinaza namazi*.

Alms were traditionally given to many people. Those who came to the funeral received small items to remind them of the deceased person—spoons, threads, kerchiefs, etc.—known as *töse itep*. Body washers received a set of items according to the local tradition. Towels were given to those who helped carry the deceased person and lower the body into the grave. The so-called grave alms, *gür sädakası*, consisted of an animal, usually a sheep, given to the mullah before the deceased person was lowered into the grave. The so-called 'sin absolution', *fidiya*, was encouraged¹¹. In this case, the mullah received a horse, a cow, a building, etc. Only wealthy families paid *fidiya*. This canonized part of the ceremonial complex was essentially universal for Muslims.

As part of the ethnic history of the Tatars, the commemorative rituals varied across the wide territory populated by them, although its key components such as form and timing were unified. A commemoration meeting took place on the third (*öçese*), seventh (*cidesse*), and fortieth (*kırıgı*) day after the burial, as well as after a year (*eli*). The meetings were formal dinners attended by either men or women. The feast was preceded by Quran reading and almsgiving (*sädaka*). The deceased person's belonging were given away on the fortieth (occasionally seventh) day.

The everyday culture of Muslim Tatars in the 19th century was generally characterized by uniform ritual behaviour, which became even more uniform on family celebrations, re-

¹⁰ Quoting K. Fuchs, 'The Russian law, under which deceased people must be buried after two days, is not observed that strictly by Tatars' [Fuchs, 1991, p. 86]. The following fact is curious: Gabdesattar Sagitov, Chief Akhund of Kazan, ventured to criticize the emperor's decree and the respective fatwah by the Orenburg Mufti, under which the deceased were to be buried three days after death, claiming them to be inconsistent with Islam, for which a severe penalty was imposed on him.

¹¹ As noted by K. Nasyri, 'Each deceased person that was more or less rich needs *fidiya* for prayers not read and fasts not kept' [Nasyri, 1977, pp. 40–41].

ligious holidays, and blessed dates, universal knowledge of and ability to recite the Quran, and the practice of chanting numerous poems, both folk and written by individual authors. Taken together, this determined the special spiritual life of the people and the emotional state which was deeper than just a festive mood. Due to their emotional and psychological effect, religious (Islamic) knowledge and rules were adopted subconsciously. They were ultimately part of the lifestyle of a vast majority of Tatars, regardless of their social, economic, and educational status, the essence of their sense of being Tatar.

At the same time, Islam with its lunar (floating) calendar failed to incorporate, as Christianity did, the local holidays marking the transition between the key stages of agricultural work, important moments in the life of peasant communities, as well as specific social, age and gender population groups (conscripts, youth, girls, women, etc.) in terms of collective work, rest, and socialization. It was these holidays that differed across the vast Tatar-populated territory as intense social phenomena¹².

An analysis of the annual cycle of the traditional festive culture (local rituals and feasts) yields two distinct elements. The key criteria is whether these or those folk holidays share a set of stable uniform elements. The first of these elements can be characterized by two holidays—Sabantuy and Djien. While the latter does not contain them. The former element is termed Kazan Tatar due to its absolute prevalence, and is often unparalleled in the territory populated by Kazan Tatars [Iskhakov, 2001, p. 11–15], who were the most numerous,

compact, and geographically ethnos, central to the Volga-Ural region. It was also practiced by other Tatar ethnic groups in areas of contact with the Kazan Tatars.

The latter is termed Mishar Tatar, although it was prevalent with Kasimov Tatars (uyezds of the Tambov, Ryazan, Penza, Nizhny Novgorod, Simbirsk, and Saratov guberniyas).

Sabantuy is a multi-variant summer folk festival. It preceded the beginning of the most important stage of agricultural work, the sowing of spring crops, which was commonly perceived as the beginning of the new year. The folk nature of the holiday lies in its meaning. It is a 'self-organized' festival with full self-service in both organizational and financial terms. It is notable that active organizers, participants, and winners of competitions were encouraged rather morally, emotionally, and psychologically than financially. Shortly before the holiday, aul dwellers donated presents. Depending on the region, these were collected by mounted or unmounted young or elderly men.

There was a uniform list of presents, which consisted mainly of women's craft work and fabrics. An ornamented towel, *yaş kilen*, embroidered by a young wife married after the previous Sabantuy, was considered the most valuable present. Everybody was expected to donate a present. Otherwise, village dwellers would criticize the person for greediness. Some contributors promised to donate a present provided that their wish, *odarinıp*, came true, or as alms (*sādaka itep*). It was common to specify, 'My present is meant for a fighter', or the winner of the horserace, or the horseman who finished in the last place, etc.

Sabantuy did not have a specified day of the week, nor calendar date. It depended on the weather, the intensity of snow melting, and how ready the soil was for spring crop sowing. Various spring-welcoming rituals marked the beginning of the preparations for the festival. One of them was the collective eating of porridge cooked in the open air from foods collected from each household (it was children's responsibility in the 19th century). In Cis-Kama areas in the Kazan

¹² The author collected representative material on Tatar traditional rites and festive culture in the 19th century when forming the scientific base for the Historical and Ethnographic Atlas of the Tatars of the Volga and Ural Regions, in particular in many years of ethnographic expeditions (regular since 1917) to nearly all regions of compact Tatar residence. All the evidence has been described, systematized, and analyzed [see: Urazmanova, 2001]. Information on the urban Sabantuy in the 19th century can be found in the book by D. Sharafutdinov [Sharafutdinov, 2004a, p. 198, 204, 209–11].

and Vyatka guberniyas, it was known as *zärä (därä) botkası*, the meaning of which term is unclear, while in the southern uyezds of the Vyatka Guberniya and in the west of the Ufa guberniya the name was *karga botkası*, meaning 'rooks' porridge'.

Children collected dyed eggs in anticipation of Sabantuy. All householders were informed beforehand of the aksakals' decision so that housewives could make the necessary preparations. Moreover, all groups of Tatar practiced collection of dyed eggs. In Kryashen and Mishar Tatar villages, the ritual was performed on the first day of Easter. In most Mishar communities, it was known as *kızıl yomırka*, meaning 'red egg'. Kasimov Tatars collected eggs shortly before Easter to distinguish it from the Christians (Russians).

Sabantuy was essentially a community festival. Guests from other villages were not invited. However, villages within the same district wanted to hold the competition as the main event on different days, in order that everyone willing could attend the event. Sabantuy was generally unfit for visits because it was followed by sowing.

In some Tatar-populated areas, Sabantuy was characterized by a set of rituals, symbols, and entertainments specific to this holiday. The four variants of Sabantuy can be considered evidence of its being traditional, long-established and relatively stable. Academics have proven that variability is a mode of existence of tradition [Chistov, 1986, p. 116]. Each variant applied to a clearly limited territory.

It should be emphasized that it was Sabantuy, of all the national holidays, which efficiently indicated Tatar integration during the development of the Tatar nation. It was then adopted by Mishar Tatars, in particular, in certain uyezds of the Kazan, Simbirsk, Samara, and Ufa guberniyas, to which they had moved as serving people following the expansion of the Russian State or settled as free colonists [Mukhamedova, 2008, p. 39–47].

In the 19th century, Sabantuy extended to urban Tatars, in particular in Kazan, Ufa, Orenburg, etc. There it was regulated by other

laws and performed somewhat different functions. The cost of its organisation also changed. Quoting witnesses, 'It should be mentioned that, crowded as it is, the Saban is hardly ever attended by drunken or rough people. The people maintain perfect order themselves. In this case, the Tatars show a laudable ability to use their recreation sensibly' [Kazansky Telegraph, 1912, No.5727].

Djien took place in a period which was relatively free of agricultural work—from the end of sowing to the beginning of hay-making and harvest. The group of villages referred to as a 'Djien district' began on a specified date. Another Djien district celebrated the following week. The order was traditional. Unlike Sabantuy, Djien was a guest-welcoming festival. It attracted villagers where Djien was being celebrated in another week.

Guest reception and stay regulations were uniform. Personal invitations specified the time of arrival and the number of people invited from each family. The hosts prepared the beds and food.

A Djien trip also required some preparations. It was common to borrow festive clothing, horse harnessed, or carts where necessary. In addition, each hostess brought along a treat depending on her financial standing. The treat was useful for festive dinners and was a great help to the mistress of the host house.

A mass horse race in decorated carts with songs and music usually took place on Thursday. This was the beginning of the festival which lasted until the following Monday.

Bathing was always organized for spouses, who washed alternately, on Friday morning. Bathing took place every morning during the visit period. This was part of the reception custom. There is a Tatar proverb which translates as follows: 'A bath is the greatest honour for the guest'—'*Kunakññ xörmätä—munça.*'

At around noon, a formal dinner took place, known as *aş*. It was attended by the family's relatives and friends from the village. The manner in which the Djien feast was organised was the same in all regions: the traditional serving of traditional dishes was preceded by a presentation of treats brought by the

guests. After that pies, kalach loafs, etc. were cut into pieces and served. Those invited to the aş from the same village as a rule did not bring treats. However, they were expected to invite those who did bring treats to take part in the feast. Sometimes they were invited by four to five families on the same day. Certain deviations from Islamic rules were acceptable during Djien. According to E. Malov, few people attended the mosque even for Friday prayer because 'men were busy receiving guests' [Malov, 1892, p. 22].

The other aspect of the festival consisted in youth entertainment. It began on Friday and took place in the afternoon and in the evening on all festive days. It was both acceptable and common for young men to take walks with the girls whom they were courting during such events. Numerous games included songs and dance—they were known as *cırlı-biyule uennar*. Ensemble music was also performed. Cart rides were a popular form of amusement. Adults sometimes came to watch the youth.

It was during Djien when young wives moved to their husbands' houses. The participation of a large number of relatives, spectacular rituals, music, and such like, all contributed to the special atmosphere of the village festival.

In those villages where the competitions—horse races, distance running, belt wrestling (*körüş*)—were not held in spring, they took place during the festival. This is a specific feature of the second Djien variant. Just as it is with Sabantuy, each variant of Djien was confined to a certain territory.

It should be noted that despite Christian features, not particularly Orthodox but largely similar to local Russian, Udmurt, Mari, Chuvash, and Mordvin rituals, those of Kryashen Tatars had key elements which were ethnically specific to the Kazan Tatars¹³. For instance, Sabantuy preceded sowing. Yet, it was often held on Easter days. Moreover, it lost

Sabantuy. Photo from the early 20th century.

its very name 'Sabantuy' in many villages. For example, the Nağaybäks of the Troitsk uyezd, Orenburg guberniya, and the Tsivilsk and Tsarevokokshaysk uyezd, Kazan guberniya, held an Easter competition known as *Sörän*. In a number of localities it was named *Şıylık*.

Even though it was usually held on a Christian saint's day, the summer festival of the Christian Tatars resembled a variant of Djien celebrated in the neighbouring Tatar villages.

Some of the elements to the Mishar Tatar holiday system were universal. Nearly in all areas, it was traditional to celebrate New Year and the sacred period in general. Such holidays usually took the form of gatherings, girls' fortune-telling sessions, and were referred to with the borrowed name *Roştva* for Christmas.

Other universal spring rituals included children's collection of dyed eggs and street games with them, namely *kızıl yomırka* and *Yomırka köne*, held on Easter days.

In summer, the collective eating of the meat of a sacrificed animal with group Islamic namaz prayer, *namaz—Qorban*, or *Qor-bännek*, was practiced. Wishes for prosperity were common during the feast. In regions of compact co-habitation with Kazan Tatars, Sabantuy became part of the yearly ritual cycle,

¹³ The conclusions are consistent with the findings of studies on the Kryashen Tatar language and material culture [see: Bayazitova, 1986, pp. 197–198; Burganova, 1985, p. 11; Mukhametshin, 1977, pp. 154–156].

in particular in the Chistopol uyezd, Kazan guberniya. In the Bashkirian Urals (Belebey, Birsik, and other uyezds of the Ufa guberniya), Mishar Tatars adopted the full Kazan Tatar complex of holiday rituals.

It was the same case for the Kasimov Tatars with a few exceptions. Unlike the Mishar Tatars, it was common for them to have summer picnics in the open air, at which amusement-events for the young people were held. They were known as *söer itü*. The Kasimov Tatars used the term 'Djien' to refer to annual family commemorative meetings, at which relatives and neighbours were treated to food. They

were held in any season which was convenient. Thus, the term 'Djien' was common but had a different meaning to the Kazan Tatar use.

Nevertheless, in the 19th the common (uniform) cultural relationship remained stable and different from those of the neighbouring peoples with whom the Tatars were in contact. This diversity was based on Islamic rules, rituals, and holidays, which were adjusted to the local conditions and became inherent to the behaviour and communication standards, guest reception custom, and the traditional lifestyle of the Tatars as a united nation in general.

CHAPTER 5

Tatar National Oral Tradition

Fanzilya Zavgarova

Tatar folk poetry has undergone a long period of development, during which ancestral traditions evolved and new genres emerged. Encompassing the life of the nation and man in the specific historical social environment, the folk arts fulfilled the cultural needs of all social groups [Anikin, 1984, p. 64].

The wide diversity of folk genres was the result of the century-long development of the art of the word amongst the Turkic-speaking tribes and ethnic groups which contributed to the ethnogenesis of the Tatar nation. Some of them can be traced back to most ancient social institutions, relations, and ideas, which were artistically generalized in folklore. They include oral poetic genres, such as epics, tales about animals, magic, and everyday life, riddles, proverbs, sayings, songs—game, historical, and lyrical—ritual poetry and its musical components, incantations, and many others depending on the national tradition.

In the 19th century, genres representative of the patriarchal, tribal mindset of Turkic-Tatar peoples, which is especially true with family ritual genres. For instance, bridal lamentations (*kız elatu, tañ kuçat*) continued to perform the same functions as they did in the previous periods, because the ritual, moral, and psychological features of family custom and related matrimonial ceremonies were essentially unchanged. Ritual contents, performers, themes, and imagery remained traditional too.

The bride remained the central figure of wedding rituals. This is why she acts as the heroine in such wedding songs as 'Yar-yar' and 'Kız señläü'. While in the Siberian Tatar song 'Yar-yar', the welcoming of newlyweds is the main theme in *Kız señläü* (a ritual specific to Cis-Ural Tatars), which is performed before the bride departs for the groom's house, the

young bride (*kilen*) says goodbye to her parents' house, native village, and friends.

In some Tatar ethnic groups, the custom of levirate, or the inheritance of the bride or wife of one's deceased relative, survived, turning marriage 'from a joyful event into a tragic prelude to a life of misery' [Mukhamedova, 2004, p. 74]. Levirate is one of the subjects in the lyrico-epic Tatar folk genre known as *bait*.

The calendar rites within the agricultural cycle, which synthesized the nomadic and sedentary lifestyles, preserved their traditional structure until as late as the first quarter of the 20th century. Farming sedentism had dominated since ancient times. Therefore, the seasonal order of agricultural work had enabled the people to develop a calendar. Thus, in the second half of the 19th century N. Ostroumov recorded the calendar of the Christian Tatars of the Kazan guberniya (1. *Agam kırılac ae*; 2. *Enem kırılac ae*; 3. *Buş ay*; 4. *Näurüz ae*; 5. *Yaz ae*; 6. *Saban ae*; 7. *Cäy ae*; 8. *Çellä ae*; 9. *Urak ae*; 10. *Aşlık sugu ae*; 11. *Keläü ae*; 12. *Kış ae*) [Ostroumov, 1876, p. 37].

In the 19th century, Mishar Tatars and Christian Tatars in all regions celebrated Nardugan—the feast of winter solstice. Nardugan rituals included dressing up and walking from house to house as well as a fortune-telling custom stemming from ancient Pagan traditions. According to L. Vinogradov, 'mummers in the context of calendar ceremonies are people of ritual importance, capable of mediating communication with the world with the dead and perceived as representatives of the dead, while giving generous presents to them is a vestige of commemorative offerings' [Vinogradov, 1982, p. 146].

According to 19th century studies, Christian Tatars began to celebrate Christmastide when

boys called: 'Narduganga—şaytan tuena' ('To Nardugan—to the devil's wedding') [Moshkov, 1898, p. 45; Dauley, 1903, p. 18]. On the following day, the mummers—first children, then the young people of both sexes—gathered to dance to the accordion in everybody's house. The mummers entered the house, where the hosts treated them to special dishes. (Myth had it that misfortune or illness could befall those hosts who provided no treatment to guisers.) Adults joined them, and a folk theatrical show began. The main characters of the right were Nardugan baba and Bandugan äbi. Those were usually men in disguise. They were expected to amuse the audience with jokes and make them laugh. On the New Year's eve, the girls would perform a set of fortune-telling rites to find out who their betrothed ones were. This was accompanied by a number of fortune-telling songs. E.g.

Alıym, salıym, (Kız iseme äytelä)

Kıyaü saylıym.

Bal salmagan çiläkkä

Balavız kaydan yabışkan?

(Kız iseme äytelä)

Berläñ fälän eget

Kayan kipe tabışkan?

[Dauley, 1903, p. 22].

*I take, I put, I choose the groom for
(the girl's name).*

*Why did wax stick to a bucket with
no honey in it?*

*How did (the same girl's name)
and this lad find each other?*

Mishar Tatar girls' fortune-telling songs used the word 'Nardugan' as an incantation:

Narduganıñ nar bulsın,

Eçe tulı nur bulsın.

Nardugan köven kem küläsä,

Şul дәülәtle, bay bulsın.

[Moshkov, 1898, p. 254].

May my nardugan be beautiful,

May he be radiant.

May one who sings the Nardugan song

Be rich.

Guessing (podblyudnaya) songs mentioning representatives of various social groups,

like mullahs, merchants, etc. were also included in the Nardugan ritual complex of the Mishar Tatars [Nigmedzyanov, 2003, p. 33].

Traditional spring rituals included Boz ozatu and Boz karau (saying goodbye to or watching the ice drifting), during which, for example in the Middle Volga Region, fires were placed on ice blocks to float along a river. Tatars living in the Cis-Urals burned a straw effigy [Mukhamedzyanov, 1982, p. 102], while Siberian Tatars in the Tyumen Uyezd sent a special wooden doll down the river as they believed the ice to carry away all misfortune and illnesses. In addition to the rites, the participants in the ice drifting event played songs and danced on the river bank.

They continued to prepare for sowing in early spring, according to the century-old tradition, even in the 19th century. It was central to many rituals. One of the most important sowing rituals was Karga botkası, or Zärä botkası (Rooks' Porridge, Porridge of Zarya), performed by children. Karga botkası was performed all across the Middle Volga River as a precursor to the main holiday—Sabantuy. It should be noted that many incantations for Karga botkası were recorded by folklore collectors in the period in question. They are clearly related to ancient Tatar Pagan beliefs. E.g.

Et koyaşı, tegeläy kit,

Bezneñ koyaş volay kil.

Koyaş, çık, çık, çık!

Bolıt, kaç, kaç, kaç!

Bez uynarbız cilitkaç.

Täti kaşık bazarda,

Maylı botka kazanda,

Äti kitte bazarga,

Kızıl ügez bar anda.

Äti kaytkaç bazardan,

Bokta töşär kazannan.

Koyaş, çık, çık, çık!

[Tatar Folk Arts, 1983, p. 51].

Dog sun, go there,

Our sun, come here.

Sun, come, come, come!

Cloud, hide, hide, hide!

We will play when it gets warm.

A pretty spoon on the market,

Buttery porridge in the pot.

*Father went to the market;
There is a red bull there.
When Father comes back from the market,
Porridge will have been cooked in the pot.
Sun, come, come, come!*

The *ritual porridge*, and *red bull* in the rhyme, which symbolize the Sun, are mythological gems of the plot of the poem.

The folk calendar rituals of the 19th century also include a number of verbal prayer structures—forms of addressing (*keläülär*) the land, the sun, or the rain. They are essentially set phrases embodying mythological content. For example,

*Cir atası—cirän sakal,
Cir anası—asıl bikä.
Tübäsenä tuklğın bir:
Ramırına nıklğın bir:
Il östenä mullğın bir:
Il eçendä bezgä dä bir.
Başlıy teläkne.
Kütärik beläkne.
Koyaş, şahit bul.
[Tatar Folk Arts, 1988, p. 50].*

*Father of the earth is a red beard,
Mother of the earth is a beautiful woman.
Make the tops filling
And the roots strong.
Give richness to the whole country
, And to us in this country.
Let us start the prayer.
Let us put our hand up.
Sun, be our witness.*

The cycle of calendar rituals ended in autumn, when stack-yard work was done. Autumn work ended with a harvest festival, which had different names depending on the local traditions: *Söbmel*, or *Kır cıenı*, or *Aşlık başı bāyrāme* [Iskhakova-Vamba, 1997, p. 50]. Having lost their mythological content, they turned into a youth festival.

In the late 18–early 19th century, scholars noted enhanced influence of Islam and Sharia on the everyday life of Tatars. This is why descriptions of the festive and ritual culture rarely mention songs and dance. Quoting K. Fuchs, 'Village Tatar women celebrate their holidays with the same rites as those in the city... but with greater mirth: they sing occasionally or

dance at weddings...' Speaking of 'the rigorous Islamic custom,' he noted that common people 'show less adherence to them' [Fuchs, 1991, p. 37]. When describing the ancient folk Tatar festival *Djien*, which 'mullahs and pious people did not attend' [Makhmudov, 1857, p. 251] K. Fuchs mentioned Tatar women's singing and the lively *quray* music [Fuchs, 1991, p. 328]. Despite the ancient Islamic pressure on folk culture, M. Makhmudov's dictionary reports that Tatars to have used the following traditional instruments, in the first half of the 19th century: the violin, the *domra*, the *quray*, the *gusli*, the *tambourine* (*dyumbri*), and the *qubız* [Makhmudov, 1857, p. 253].

Starting in the middle of the 19th century, 'the culture of the Tatar people gradually entered a new "dimension", developing into a dynamic "West to East" oriented civilization' [Saydasheva, 2008, p. 50]. Russian culture became a mediator between the Tatar and West European traditions. The famous music scholar M. Nigmedzyanov referred to V. Belinsky's and M. Laptev's notes to claim that Russian, Ukrainian, and other lively and cheerful dance melodies were popular with Tatars at that time, reporting the Italian double-row accordion had been adopted by Tatars and was soon to become one of the most popular instruments. 'Unlike all previous instruments, the accordion was a melodious and harmonious instrument capable of producing a full and powerful sound without other instruments. Being highly mobile and easy to master, it was soon adopted by Tatars' [Nigmedzyanov, 2003, p. 59]. Although discouraged by ministers of Islam, music, songs, and dance remained popular with the young people. The young people would gather near a brook, on a hill or in a meadow on a warm evening to indulge in *kiçke uen* (youth amusements), play *äylän-bäylän* (round dance), singing humorous *taqmaqs* based on the *äyteş* musical and poetic dispute, and they would play song and dance games. Games of various form and content were played at both winter and summer gatherings, *aulak öy* (home gatherings without adults), where folk *äyteş* between young men and women on subjects determined by the type of the event was encouraged.

During this period, the domestic interest in folklore developed into professional interest in cities. By the middle of the 19th century, artists had begun to perform folk songs and instrumental music. Tatars had started to dance at inns, tea shops, clubs, and parties. 'Artistic interpenetration with non-Tatar, primarily Russian culture has increased in Tatar folk music. The prohibition of half tones seems to have been removed and diatonic elements introduced' [Saydasheva, 2008, p. 31].

In this period, the motives of social protest became more pronounced in Tatar songs of the cycle 'Kaçaklar cırı' ('Song of Runaways'). Folklore scholars classify these folk works of art as historical songs, the genre of which 'dates back to the ancient Bulgar period' [Bakirov, 2008, p. 264]. 'Kaçaklar cırı' as a type of historical song emerged in the 17th to–18th century. It mainly narrated the life of runaway soldiers, participants in Pugachyov's rebellions, and peasants in exile. In the 19th century, 'those at odds with the authorities' became the new runaway heroes. The songs were usually known by the names of their protagonists, such as 'Şärük the Runaway', 'Tali', 'Taşqay', etc. [Iskhakova-Vamba, 1997, p. 120]. They are portrayed as high-hearted outlaws who share the hardships of the common man and are well aware of them:

Kara urman utäli karadım,

Yarlğa timäde zararım.

'Şärük the Runaway' [Tatar Folk Arts, 1980, p. 47].

He looked through the dark woods

But never hurt the poor.

They also presented the feelings of the hero, who had to keep away from his family and home:

Ni avırdır kaçkınnıñ könnäre,

Rızıklı, äy, meñnänäñ berläre.

'Kaçakın cırı' [Tatar Folk Arts, 1980, p. 68].

How hard are days of a runaway,

For he is not hungry, one out of a thousand.

The folklore in that period still contained historical songs telling about the canton system,

within which serving Tatars were subjected to ethnic oppression and abuse by military commanders. This type of historical songs dates back to the 18th century. It continued to exist in the 19th century [Bakirov, 2008, p. 187]. 'Azamatov Kanton' is a popular song classified as historical. It tells the life of Canton Officer Azamanot, who left this world at a very young age. We believe the song 'Abdulla Axun' to be of special interest [Yusupov, 2004, p. 336]. It is an ironic story about Abdulla the Akhund who became a canton officer. It criticizes his servility to senior ranks, neglect of popular aspirations, and, according to the author, betrayal of the interest of Islam. Themes and emotions are very different in songs about the Patriotic War of 1812. They mostly convey a patriotic mood and pride in Tatar warriors who participated in the battles.

The lyrico-epic Tatar folk genre of bait, which some scholars trace back to the Bulgar period, also deals with social protest as well as military and historical subjects [Bakirov, 2008, p. 263]. Part of the 19th century baits were composed by Tatar soldiers in the Patriotic War of 1812. These include 'Rus-frantsuz sugış bāete' ('On the Russian-French War') [Tatar Folk Arts, 1983, p. 40]. Its lyricism is determined by the common joy of winning the Patriotic War. Like many other peoples, Tatars and the Bashkirs risked their lives to protect the Motherland. They felt like national heroes. Such emotions are absent in baits on other wars. For instance, the bait referring to the Caucasian War expresses sympathy with Shamil [Tatar Folk Arts, 1983, p. 46–49].

A large set of baits pertaining to the period refer to peasant sedition. For instance, the folk work 'Urta Tigänäle bāete' [Tatar Folk Arts, p. 125] tells about the arrival of a punitive brigade at the village of Sredniye Tigany, Kazan guberniya, the dwellers of which defied the government, in 1879. Such baits were composed frequently and circulated within a certain territory. Baits also referred to the deprivations Tatar women in the patriarchal family, aggravated by financial hardships. In famine years, some parents sold their parents to Central Asians on the pretext of marital contracts

('Satılğan kız bāete' ('Bait on a Girl Who Was Sold'), 'Galimā', etc.) [Tatar Folk Arts, 1983, p. 135]. The most popular baits retold about the tragic early death of the protagonist ('Suga batıp ülgän Gaişā bāete') [Tatar Folk Arts, 1983, p. 138] and accidents during work ('Tegermänçe Şeyxelislam bāete') [Tatar Folk Arts, 1983, p. 134], etc.

The 19th century Tatar folklore largely deals with the conflict between the old and new. Traditions were still traceable in folk genres connected with patriarchal upbringing, in the form of aphorisms, family rituals, and tales. Islamic concepts and images penetrated increasingly into moralistic and ritual poetry, in particular due to the popular Tatar religious and moralistic literary genre relating to the prophets and Islamic saints, known as *qıyssa*. The printing of Tatar books led to an activation of large-scale translation. Compilations of Oriental folk works, in particular Arab-Persian tales, were also published: 'Meñ dä ber säxär' ('One Thousand and One Nights'), 'Tutıy namā' ('Book of a Parrot'), 'Kırık wāzir' ('Forty Wazirs'), 'Kälilä wä Dimnä' ('Kalila and Dimna'), and others [Karimullin, 1993, p. 8]. Imported Oriental subject matter led to the appearance of novella-like Tatar folk tales. Numerous Tatar adventure tales stemmed from 'One Thousand and One Nights'. They told about a hero who could speak the language of animals, beautiful khans' wives, a

daughter of a wazir who told tales, etc. The plots of 'Kalila and Dimna' and 'The Book of a Parrot' also influenced Tatar narrative. The bird Samruq (Simurg), the magic assistant of many heroes, as well as folklore images from the Orient—shaitans, peris, jabrails, and others—became increasingly frequent in tales. Close cultural contacts enabled the distribution of books of anecdotes about Nasreddin Hodja, which 'merged with Tatar folklore to accelerate the development of the mǎzāk (anecdote)' [Karimullin, 1993, p. 8].

Thus, folklore closely related to family rituals demonstrated the persistence of traditional custom based on patriarchal principles. The folklore tradition that underlies the 19th century calendar rites is based on mythological concepts of Pagan origin. Traditional lyrico-epic genres still existed, although their themes and imagery were modified. Music folklore underwent major changes. The synthesis with foreign cultural traditions became popular. Folklore-based professional art began to appear. Adherence to the pentatonic scale became less strict; diatonic elements began to enter the Tatar melos. Under the influence of Islamic written culture, the *Qıyssa*—a genre which narrated the life of Islamic prophets and saints—became more dynamic. As a result of translation and Oriental tales, novella-like tales of adventure began to appear. New influences also enriched the imagery of folk tales.

CHAPTER 6

Tatar Musical Culture

Gennady Makarov

The music culture of the Volga and Cis-Ural Tatars in the 19th century developed within the context of the transition from dominant patriarchal traditions of the late medieval ethnic and Sufi religious music to supra-ethnic, national modern music, at a time when the culture of the Tatar society began to model itself upon the national communities of the new European type.

Migration in the form of the mass outflow of population from the Kazan Region to the Urals following the conquest of Kazan (1552) led to different variants of Tatar community culture, custom, and rites to mix, bringing about major changes to the old traditional song, poetic, and musical traditions in the new environment. As ethnic groups of the Kazan Tatar, Mishar Tatar, and Finno-Ugric population of the right bank of the Volga, Kazan guberniya, migrated to the Cis-Urals and Siberia, a non-ritual song culture of the Tatar-speaking Teptyar population began to develop. This process was greatly influenced by Cis-Ural Bashkir songs with its *ozın köy* ornamental chant.

The key song genres of the Tatar population remained the *ozın köy* (long chant) and *kıska köy* (short chant). The structure of the text of the songs was the criterion for ascribing a given musical work to the *ozın köy* genre. Texts chanted as *ozın köy* were termed *cır/cıru* and were essentially quatrains with nine to ten syllables per line. Where the chant consisted of seven to eight syllables, it was called *kıska köy* and the text *taqmaq*. In the 19th century, ornamental chanting developed into the form of lyrical *ozın köy* songs. Such songs as *Täftiläu*, *Sakmar*, *Aşkazar*, and *Uel* were highly popular in the late 19th century. They often show a connection to Cis-Ural river names. The origin and development of Tatar ornamental chanting have not been sufficiently researched. Such ornamental signing is known to be character-

istic of Kazan and Siberian Tatar lyrical songs. However, *Kryashen*, *Mishar*, and *Perm Tatar ozın köy* is not represented in either ritual or lyrical songs.

In all Tatar groups, including *Kryashen* Tatars, the most ancient and uniform type of *cır* songs in the *ozın köy* style are old guest songs with a much less degree of melisma. This group of songs is currently known as *avıl köyläre* (village chants) and retains its connection to the old ethnic music of the Volga-Ural Tatars.

The Islamic factor was a major contribution to the decay of Tatar ritual ethnic art. Persecution, oppression, and coercive conversion of Tatars into Christianity triggered the so-called 'struggle for faith'. It caused the Tatar population to take aggressive measures, in order to maintain Islamic values. Tatar ritual ethnic music thus slid into irrelevance, and was replaced by non-ceremonial lyrical songs.

Tatar spiritual culture, in particular its ethnic and Islamic part, remained essentially conservative and opposed to external influences. The establishment of the OMSA on 1788 affected the status of Islam in Russia, as well as the opportunities for Tatar groups to contact the rest of the world, as well as the further development of the culture of Russian Tatars, in a radical way.

The development of Russian Islamic institutions and centralized governmental control with regard to Russia's interest led to a delay in the uncontrolled development of Islamic culture, in particular musical trends based on the dominance of Sufism, and the weakening of connections between the muslim ummah of Russia and other Muslim regions, primarily Middle Asia.

OMSA reforms to Tatar Muslim culture, assisted by the Russian authorities, were aimed

at bringing Tatar Islamic institutions to compliance with classical Islam.

The reduction of religious and, consequently, the cultural connections between Tatars and Middle Asian Sufi spiritual centres led the Tatars to adapt their religious life to fit in with Russia's domestic and foreign policies and adopt the Russian tradition of urban everyday music using European instruments. By the middle of the 19th century, a new musical instrument, the accordion, had entered the life of peoples in the Volga Region. The Livny Italian double-row accordion with a diatonic right keyboard became especially popular with Tatars. The left-hand part was adjusted to folk music. Unlike all previous instruments, the accordion was a melodious and harmonious instrument capable of producing a full and powerful sound without other instruments [Nigmedzyanov, 2003, p. 58]. In addition to the accordion, the *gusli* and the violin remained common in Tatar music during this period. Unlike Muslim Tatars, whose music was affected by Islamic rituals, Kryashen Tatars preserved ancient wedding, guest, and humorous songs, funeral lamentations, and such ritual songs as *Nardugan* (the New Year celebrated on the day of winter solstice), *May köe* (May *çabu*, or *Maslenitsa*, celebrated as the transition from winter to spring), *Urak öste köe* (harvest end celebrations), and *Ömä köe* (help at the end of field work in summer) [Iskhakova-Vamba, 1997, pp. 16–18].

In addition to nationwide Tatar culture, the culture of the Kryashen Tatars was determined by specific historical causes. Muslim and Christian Tatars shared the *djien* tradition. The only difference was that the Christians celebrated *Djien* on the days of the patron saints of Kryashen villages, when such festivals could be held openly. Furthermore, the Kryashen Tatars preserved the ancient traditions of guest songs, while the surviving vestiges of Muslim Tatar ritual address drinking songs were transformed into drinking lyrics. Therefore, Kryashen Tatar materials are of primary importance for the reconstruction of Tatar community singing traditions. Representatives of related clans visited each other's houses, where the host offered them a treat. All people at the table used the

same glass, known as *tustigan*, for alcoholic beverages. The host addressed each relative with a well-wishing song that he prepared in advance and received a specially prepared response. The standard ritual chant went under different names depending on the Kryashen Tatar subgroup: *eçe köe* (table chant), *cien köe* (*Djien* chant), *mäcles köe* (guest chant), *rät köe* (circle chant), etc. Until the middle of the 19th century, the traditional *Djien* community structure of Kryashen Tatar life was closely related to the hereditary archaic cultural forms. Living in exclusively rural communities, their customs preserved their archaic arts to a significant extent. The new layer of ritual culture was inconspicuous and did not prevail over the older culture. Characteristically, it emerged in the form of non-ritualistic lyrics, free of local stylistic features. The modern culture owed some of its novelty to interactions with Russian everyday culture, in particular new musical instruments, such as the violin, the *gudok*, the *balalaika*, and small *physharmonicas* (*ärgän*). The above features also apply to most of Muslim Tatar groups. However, the content of certain components, such as performance style, varied.

The intonations of Kryashen Tatar music differed from Tatar style due to a lack of communication with the Tatar masses. In terms of economy, a network of intra-national comprehensive educational establishments, culture and arts, and shared religious interests. The Kryashen Tatars were historically excluded from the renovation of Tatar culture and its transition to the new stage of development.

Despite the Islamic regulation of their everyday life, Muslim Tatars continued to celebrate *Djien*, which preserved their music traditions. During *Djien* the young people would sing their favourite songs, indulged in circle dance, walks, and traditional song and dance games to *quray*, violin, and accordion music. In addition to *Djien*, a number of other calendar rituals were performed, such as *Karga botkası* and *Sabantuy*, accompanied by ritual narrow-scale recitations like *Karga botkası taqmaqları* and *Sörän köe*. The ritual complex still included a system of prayers addressing

the earth, the sun, and the rain, also with special ritual recitations.

Muslim Tatar wedding ceremonies were performed in accordance with Sharia and attended by mullahs. This did not prevent the young people, especially in poorer groups of the population, from amusing themselves when the mullah was not there. They danced, sang, played musical instruments, sang ritual songs, such as *Işek bavi cırları*, *Kodalar cırları*, *Mäcles taqmaqları*, etc. [Akhmarov, 1907; Kolobov, 1908a, p. 26; Iskhakova-Vamba, 1997, pp. 16–18]. Traditional summer youth amusements (*tügäräk uen*) and winter gatherings (*aulak öy*) maintained the traditions of music, songs, and games.

Relaxed religious discipline within Muslim communities brought led to the active development of non-ceremonial genres of song and dance lyrics. This was also the beginning of the unification of a nationwide modern Tatar culture. This was determined by nascent bourgeois relations in the Tatar society, the involvement of Tatars in urbanization and internal migration to industrial centres.

The key features of the style of modern nationwide Tatar music developed at a time when the Tatar ethnos evolved into a nation. New Tatar music was essentially different from the local traditions, since the old ethnic layer had been replaced by customary musical, intonational, vocal, and stylistic vocabulary. This also led to the appearance of a national democratic culture, and laid the foundation for further cultural and artistic development and reciprocal enrichment of spiritual values between peoples. New features became noticeable in Tatar music practices, especially in merchant communities. Polka, marches, *kazachok*, and specific songs of Russian or Ukrainian origin became extremely popular at fairs (Nizhny Novgorod, Menzelinsk, and others). The inflow affected Tatar everyday music, bringing new intonations, rhythms, and melodies. Such music became distinctly major or minor with clear functional relations, tight rhythms, square in structure and diatonic [Nigmedzyanov, 2003, p. 65]. Taken together, these influences led to the appearance of urban

folk songs which did not become popular in rural communities.

Tatar musical culture connected to 19th century Islamic arts was represented by such Tatar thinkers and poets as G. Utyz Imyani, T. Yalçıgül, Dzhagfar as-Safari, G. Kandaly, Sh. Marjani, and K. Nasyri. Their legacy reveals a connection to the traditions of the history, theory, and practice of ethnic and classical Islamic music culture in terms of local Volga Turkic music aesthetics.

As the market economy expanded in the 19th century, Tatars became increasingly involved in economically advantageous relations and the appealing cultural diversity of Russia. The number of those wanting to study in Bukhara, Samarkand, Kabul, and Kandahar gradually decreased. The influx of Central Asian religious and theological literature and imported secular and religious arts dwindled until it was unable to support the old Tatar culture of written traditions, music, poetical and instrumental arts dating back to the Middle Ages.

During this period, the music of Muslim Tatars was also influenced by the Sufi movement, which was quite wide-spread in the Volga and Ural Regions. Dzhagfar as-Safari was a 19th century Tatar Sufi and a musical instrument player. He is known as an outstanding representative of Sufism. An excellent performer of the *tanbur* and other Oriental instruments, Jagfar Ishan taught his art to the *murids*, or followers. Legend has it that he organized spectacular sufi rejoicing sessions with musical instruments, songs, and dance. Jagfar Ishan and his *murids* were often invited to celebrations of religious holidays and other occasions, at which they presented elegant musical and poetical Sufi works. Their clients were mostly wealthy people and village Muslim communities from across the Volga and Cis-Ural Regions. It was apparently in Bukhara and Kabul, where he participated in various Sufi musical practice to master the principles of classical Islamic theory and aesthetics, both in poetry and in music, that Jagfar perfected his knowledge in the theory of music as well as practical skills.

The life and legacy of Jagfar indicates that Tatar religious artists' maintained contacts with

the Sufi musical and poetical culture of Middle Asia enabled them to preserve traditions of classical Islamic instrumental performance in the Volga and Cis-Ural Regions.

Works by G. Utyz Imyani provide valuable information on a number of musical instruments. The poem 'Gawarifez-zaman' mentioned that the Muslim communities in the basins of the rivers Zay, Sheshma, and Cheremshan had musical ensembles:

*Kubız, tanbur vānāy, gayre uenlar
Killer urtaga kız wā cāvanlar.
Bu rāsvalık belān ta sōbxe sadıq,
Idārlār eş-şāyatinga muafiq.*

(They play the kobyz, the tanbur, they'a, and other instruments;

Young men and women enter the circle.

The performances lasted until dawn,

And they attracted the attention of the shaitan.

In addition to the common Tatar kobyz (jaw harp), the poem mentions such classical instruments of the Muslim Orient as the tanbur and the nai. The fact that they survived into late medieval Tatar art indicates succession to earlier periods of culture of Volga peoples. Other sources also confirm that the use of these classical instruments by Kazan Tatars was natural.

G. Kandaly's astonishingly musical poems spread beyond the homeland of the poet. At majlises (feasts), Tatars played the tanbur and the daf. The presence of these classical musical instruments, which were also mentioned by G. Utyz Imyani, shows that they were characteristic of Tatar musical practices. In addition to the instruments, Kandaly reported it to be common for Tatars to use such oral professional classical genres of music and poetry as the naqsh (nāqış) and the sawt (sāwet), which were popular in Muslim countries.

Works by the above authors suggest that the young Tatars (Muslim) at that time continued to play the kubyz, the tanbur, the nai, and the daf, which the Tatar people were able to preserve even in their most difficult times from the Mid-16th to the Mid-19th century, where the essentially elite Muslim instruments were un-

likely to survive in village communities. The Tatar clergy demonstrated a high level of orthodoxy and intolerance to worldly arts in the late Middle Ages, when even the above Muslim instruments, which had been miraculously preserved, were declared to be sinful.

Works by K. Nasyri also provide information on Tatar musical culture in the 19th century. The fullest overview of Tatar musical instruments can be found in his 'Lāhcāi tatarı' ('Definition Dictionary of the Tatar Language') and several editions of Tatar dictionaries, which provide two variants of pronouncing the word 'dombra': دومبرا (dumbıra) and دومرا (dumra). Besides 'dumbıra', the term دوطار (dutar), which was also used in the Tatar language and culture, apparently as a synonym to 'dombra' (dumbıra), was suggested as a translation of the Russian 'balalaika'. K. Nasyri reported that the Tatars use not only the terms 'dumbyra' and 'dutar' but 'saz'. However, 'saz' meant any musical instrument, such as the kubyz, the accordion, the violin, or the sybyzgy.

In his 'Practical Guide to Learning the Tatar Language' (Section 'Tatar Musical Instruments'), M. Makhmudov mentioned the gusli (köslä), meaning the classical Muslim qanun, and other instruments of Oriental origin (dumbıra, dumbıryy, kubız, sıbızgı, kuray, translated as balalaika, tambourine, kubza, and musical pipes, respectively). In this historical period, Tatar musical practices actively employed other classical Muslim instruments, such as the arilya (arilya bit tyurki), a term which originates from the word for the wheel (or lyre), popular with blind traveling lyre players in Russia, Ukraine, and Belarus in the 19th century. The term 'arilya' in the Tatar language has a broader meaning. It is not a traditional instrument name in Islamic arts. The tanbur (xöräsän tanburı, törki tanbur) is a kind of chordophone with a pear-shaped carved-out body, a long neck with sinew frets tied over it or wooden ones carved into it (pārdä), and three metal strings. The daf is a percussion musical instrument used to play classical metres and rhythms in Islamic musical and poetic arts. Harp playing traditions developed in the medieval vocal and instrumental culture of the

Tatars when the Volga Region became part of the Islamic civilization.

Tatar culture shifted from Oriental civilizations to European models at the Tatar society's transition from the Late Middle Ages to the Modern Time. It was a time when Tatar culture began to use all-Russian communication structures to gradually integrate itself into the cultural and information territory of European civilization for both 'low' and 'high' (professional) arts, which were now dominated by new European musical genres. Tatar culture began to develop new features of national music, and by doing so it lost some ethnic traditional features while unifying others. A new Tatar musical culture emerged, possessing a new range of artistic tools.

No dedicated studies have been performed on the phenomena which represented the internal structure of Tatar culture in the late feudal period. Nevertheless, the period is of great interest. Why did young Tatars removed the ethnic kavushes, ichigs, and chekmements and adopt European style boots and coats? Why did they give up the 'half-dead' ancient stringed and percussion instruments, such as the tanbur, the dombra and the daf, for the violin, the accordion, the mandolin? What made them master the piano and go to concerts and theatres? The answer is simple. The top stratum of national Tatar culture was Europeanized. Its Oriental origin (for instance, musical instruments) survived only as vestiges at the lower level of the ethnic layer of arts (kubyz and kuray plating), while the part of Oriental high arts, influential relics of which survived until as late as the Mid-19th century, faded away. It was apparently impossible to combine high medieval

Tatar culture with the newly created European style modern high culture.

Information on Tatar instrumental traditions in the 19th century provides an insight into the complicated historical situation at the end of the late medieval period in Tatar music. This suggests the important conclusion that the history of Tatar arts in the 19th century cannot be reduced to the narrow scope of folklore, ritual, and everyday ethnic art. Tatar music during this period shows a relationship with the general phenomena in Oriental classical music, rooted deeply in the elite medieval Tatar culture.

By the end of the 19th century, Tatar popular everyday musical culture had only preserved weak relics of ritual music and consisted almost exclusively of lyrical songs with novel intonations, which emerged when the everyday culture of the Russian Empire reached the peak of its development in that period. The development of Tatar musical culture over the century can be characterized by the fact that the worldly gradually came to dominate the mindset and artistic cognition of the Tatar society. The latter half of the 19th century was marked by the adoption of certain forms of European everyday music and the emergence of supra-ethnic forms of national music. Tatar musicians gave up the medieval traditions of classical Oriental music. The period ended with the beginning of concert-determined development of Tatar national composer music and wide spreading of the European notation. The emergence of new forms of Tatar music in the late 19–early 20th century was determined by intensified national enlightenment in Tatar culture and integration with modern European culture.

Section X

Tatar Culture and Nation-Forming Processes

CHAPTER 1

Traditionalism and Muslim Reformation

Rafik Mukhametshin

Social awareness always depends, to a large extent, on inherited ideas, cultural values and traditions. Considering the development of the Tatar social idea in the 19th –the beginning of the 20th centuries, we must take into account the unique situation presented by Islam, which was not only a system of religious dogmas, but also mainly a system of norms for the private and social life of Tatars that had a significant influence on their mindsets. In fact, during this period the battle between the 'new' and the 'old' constantly intruded into the sphere of traditional views and moral norms based on religious principles. During this battle, attitudes towards Islam became quite clear. That is why the ideological and political tendencies related to interpreting the role of Islam in societal life defined a lot of trends typical of Tatar society.

In this period, Islamic traditions in Tatar social thinking found form in such tendencies as traditionalism, reformation and jadidism. Some researchers consider these types of Muslim theology and Islamic political and ideological concepts as various types of religious awareness [Zhdanov, 1989, p. 16]. In the opinion of German researcher Peter Antes, over time belonging to these tendencies 'may become a more important indicator than the traditional division of Muslims into Sunnites and Shiites, or the discovery of their belonging to different madhabs, or schools of law and doctrines' [Islam v Evrazii, 2001, p. 68].

Traditionalism is characterised by the fact that its followers do not support any reforms in Islam, instead claiming to preserve it in large part identical to how it was formed in the context of specific ethno-confessional values. The bearers of a traditional awareness were usually representatives of the official clergy.

The famous Islamic researcher A. Malashenko notes that the formation of traditionalist Islam is related to local ethno-cultural features [Malashenko, 2001, p. 64; Musul'manskaya Srednyaya Aziya, 2004]. Here, it is necessary to emphasise that the socio-cultural differences of the Muslim states and regions are implemented through 'regular law' (*adat*). This law is allowed, to the degree in which it does not contradict Islam, mainly in its doctrine of absolute monotheism.

In A. Malashenko's opinion, 'it is precisely traditionalist, and not theological Islam, that is associated with the indivisibility of ethnic and confessional origins... It is precisely through traditionalist, and not dogmatic Islam, where there happens, firstly, a formation of stereotypes of the behaviour of every single Muslim, who, at a daily life level, is a member of their ethno-confessional communities, and only at a micro-level is one is a bearer of the values and attributes of the world *umma*' [Malashenko, 2001, p. 64–65; 2007]. In the opinion of the French Islamic researcher O. Roy, traditionalism is that which 'is related to all that is conservative', and his 'grief about the past is more moralistic rather than defined by a thriving for social justice' [Roy, 1985, p. 25].

Traditionalists insist on following strictly developed, mainly in the Middle Ages, theological approaches to the sacred texts, underline the inviolability of traditions from the past and the indisputability of the opinions of religious authorities. These are the essence and principles of the *taqlid*. Their positions are characterised with a sharply critical attitude to a rationalistic analysis of religious dogmas. Traditionalists did not recognise the studies of medieval Muslim philosophers stuck in ancient modes of philosophising, as they believed it

was a phenomenon radically foreign to Islam, or they subjected it to a religious and theological interpretation.

As for Tatar traditionalism, it is first and foremost related to *cadimism* [Mukhametzyanova, 2008; Mukhametshin, 2005; 2006, p. 129–136; Salikhov, 2006, p. 23–29]. It can be regarded as the worldviews of a definite type of ideology, the Tatar variant of traditionalism, aimed at the sanctification and preservation of immutable religious and moral values, social state and social institutions being formed in Tatar society throughout its historical development. Cadimism appeared as a result of the changes or the possibility of future changes defined in the social, economic, spiritual and ideological life of Tatar society in the first part of 110th century, when there was a trace of a major turning point in modern development.

The formation and spread of cadimism in Tatar society influenced the social and political position of Tatars in the Russian Empire. After the Tatars in the latter half of the 1616 century lost their sovereignty and, respectively, traditional political and religious institutions, Islam provided a certain stability in society. While not protecting society from changes, it still helped regenerate and preserve elements of the social structure and prolong cultural traditions. Religion in Tatar society found the ability to survive by taking over, to a large extent, the functions of social integration, the role of the devotee and guardian of 'law and order'. The religious institutions that were retained unified and reconciled socially and politically disparate elements, making society's self-organisation possible. In the early 19th century, in Tatar society there were intellectual forces that considered a society with only religious organisation was deprived of the possibility of comprehensive development, and that the universal function of Islam, which initially helped stabilise social life, became in time a component of the stagnation mechanism. The absolutisation of the religious element in the many-sided process of integration led to a sharp limitation of the possibilities of development in the society's cultural, ideological and other identities. At the same time, the majority of society was not sure

that new changes would not lead to the dissolution of the fundamentals of traditional society that had been preserving the unification of their ethno-confessional identity. Cadimism appeared precisely during this period with a main goal of protecting society from ruinous changes.

The theoretical base of cadimism was the idea that the foundation of society was a naturally formed continuity with limited boundaries. The given community, mainly confessional, possessed a self-existent character and transcendental essence. Another main element of cadimism is also its tenant on the necessity of preserving traditions, which is represented by the wisdom of ancestors, and the negation of which can lead to the extinction of Tatars as an ethno-confessional community. Its representatives appealed not to the individual, but to the collective mind accumulated by the experience of generations. In the defense of tradition, cadimists proposed preserving its legacy as an indivisible unit, but not in separate fields (mahallah, family, religious customs, etc.), which is why changes to any side of the spiritual life of society is quite dangerous for the existence of the whole. Garif Badamshin, one of the ideologists of cadimism, stated that '... religious beliefs of the Muslims around the world are becoming weaker, and their atheism is becoming stronger'. The author singles out two parties among Muslims. 'The party of our old people is afraid and claims that the Islamic world is growing weaker, which is why they want each issue and action to be agreed to the requirements of religion and morality' [National Archives of the Republic of Tatarstan, f. 199, inv. 1, file 773, s. 209]. G. Badamshin continues his thought: 'Our young people studying in Russian schools or madrasahs with new methods obtained a very weak religious education' [National Archives of the Republic of Tatarstan, f. 199, inv. 1, file 773, s. 209]. In an attempt to maintain the traditions of Tatar society, the representatives of cadimism objected to all, sometimes even seemingly insignificant, innovations, including 'the European way of dress: with a forage cap on the head instead of a turban or a fez; use of a waist belt, or an

overcoat instead of a chapan' [Dinmöxämätov, 2000, p. 6–7]. In the opinions of Ishmukhammad Dinmukhametov (Ishmi-ishan), 'likening oneself to the infidels in clothes, speech, behaviour and customs means making concessions to the enemies of God... and one, who does this turns away from God, and their master is Satan. Looking similar to the infidels in daily behaviour is forbidden; it is not allowed in teaching, either; meaning education using the methods of the infidels...' [Dinmöxämätov, 1906, p. 8].

This tendency is characterised by the perception of the world as a single unit. Social order is a part of the divine and natural permanent order of the world, the violation of which must end with the return to its initial position. The world-views adhered to in cadimism do not recognise any alternatives: they do not have the problem of choosing the principles of behaviour, as they were accepted only once and forever as the only natural and possible options. Other ways of perceiving the world, even if the possibility of their existence is recognised, are not a starting point for comparison, but instead help to form a stable enmity against them. That is why traditionalists severely criticised all the new phenomena in the field of cultural and ideological relations and education, including Muslim reformation, jadidism, etc. I. Dinmukhametov stated that 'among the Muslims of Russia, the jadidism movement was started by Kursavi, Marjani, Barudi, Riza qadi (Riza Fakhretdinov—*R. M.*), Rashid efendi (G.-R. Ibragimov—*R. M.*), and others. All of them were inclined to politics and oratory; they condemned everything related to the Sharia, and on the contrary, approved of everything that contradicted the canons of religion' [Dinmöxämätov, 1906, p. 8].

The well-known social and political figure Yusuf Akchur estimated the position of cadimists in the following way:

1. Muslims must never be Europeanised. They must preserve the way of life that was lived by their fathers. At their schools they must study old disciplines in accordance with the old system. Geography, mathematics, history, and knowledge of the environment are not

necessary. They must not even study in their own language, as Arabic is enough for them.

2. Women must not be educated in maktab and madrasahs. Women must be taught subjects related to religion and how to pray from early childhood. They learn all the rest that they need from their husbands after getting married.

3. Learning Russian is by no means advisable, and studying in Russian schools is a terrible sin [Mukhametshin, 2005, p. 60].

The ideas of cadimism among Tatars were widespread as late as 1917 as a way to preserve traditional society in the absence of other social and political institutions, and the conditions for their establishment did not lose their importance for them. One of the most important centres for reproducing the ideas of cadimism were (cadimist) madrasahs with old methods, among which the most popular were educational establishments in the villages of Kyshkar, Machkara, Menger, Satysh, saba (Kazan Region), Tyunter (Vyatka Guberniya), Sterlibshevo, and Sterlitamak (Ufa Region) [Mädräsälärdä, 1989].

In the opinion of some researchers, what initially seems to be an irreconcilable confrontation between the followers of cadimism and jadidism is in fact not so essential. Thus, French researcher S. Dudoignon supposes that the core of the conflict is in the differences of defining the goals of 'cultural and social establishments in the Muslim community' [Dudoignon, 1997, p. 63]. In particular, he believes that jadids were in support of encouragement for individual enrichment with further investments in education and culture. In the opinion of the author, cadimists preferred 'social governing and the distribution of these means' [Dudoignon, 1997, p. 63]. Disagreements also concerned the issues of financing confession-al education establishments. Jadids, according to Dudoignon, suggested financing a national system of education using resources from communities and also from the Russian state treasury. Cadimists believed that the crucial role regarding financing had to be played by the Orenburg Muslim Spiritual Assembly. S. Dudoignon concludes that discordances between the jadids and cadimists 'were mainly

blurry and deprived of any clear ideological definitions' [Dudoignon, 1997, p. 63].

The German researcher M. Kemper also considers that these tendencies 'competed with each other in the fields of ethics, sufism, law, theology and historiography. As a consequence, they did not develop independently from each other. On the contrary, the establishments, language, symbolism and means of expression were tightly interconnected in the unitary Muslim discourse' [Kemper, 2008].

M. Kemper believes that 'that is why the defining concept of this Muslim discourse is *the islah* (reform or rebirth) of religion [Kemper, 2008]. He states that the 'reform' in a wider meaning is not an issue of thinkers such as Kursavi or Marjani, 'who were critically tuned to traditions... On the contrary, both the traditionalist researchers and the 'oppositional' sermoners, such as Gabderahim al-Bulgari and Bagautdin Vaisov, also engaged with the idea of reformation. Therefore, *the islah* should not be treated as a definite, unitary programme. Indeed, this massively diverse concept in the Volga-Ural Islamic context includes a wide range of competing and contradicting lines of spiritual history. The point of unity for all thinkers of the *the islah* is their striving to expand their own studies about faith, promote their respective interpretation of Islamic laws and ethics in order to prevent their communities from following false and criminal ways... And at the same time, the concrete means, ways and goals could look absolutely different and even contradict one another' [Kemper, 2008].

The next tendency in Islam is *reformation*, or *modernism*, which is defined by the efforts of its followers to adapt Islamic dogmas to the needs of modern development. They insisted on synthesising Islam with modern western liberal values and institutions. The circle of modernists (or reformers) include followers of the 'renewal' who adhered to the reconceptualisation of the Quran and Sunnah, and regulations for the Sharia and fiqh. Reformers of the dogmas, social doctrine, cult, Sharia and other trends in Islam strove to 'purify' it from various archaic elements, extreme limitations and excessive prohibitions.

The modernisation movement was born at the end of the 18th century among the Muslims of Russian and other Muslim countries.

Among the most significant representatives who laid the foundation for modernistic tendencies is the Indian thinker and sheikh Ahmad Faruqi Sinhindi (1564–1624), also known as the imam Imam Rabbani (Divine imam) [Shimmel, 2000, p. 284]. He sharply criticised the innovations of the government and called for the restoration of traditional Islamic values. Therefore, L. Gordon-Polonskaya noted the fact that his studies were directed firstly against various Islamic and Hindu heresies.

Another not a less prominent figure was Ahmad Gabdrahim Shah Waliullah (1703–1762). Shah Waliullah emphasised that 'he was interested not in abstract theological disputes, but in the concrete application of the ideas of an Islamic rebirth in Indian reality' [Gordon-Polonskaya, 1963, p. 37]. One of the most famous works of this scientist is the treatise 'Khajjat Allah al-baliga' ('The perfect argument of Allah'), where he analyses issues of the divine essence of Allah and human nature, the problem of sin and the Good, and also the fundamentals of Sharia and Islamic law. The second part of the book is devoted to Islamic ethics, and also covers issues related to power and the state.

The next outstanding figure is Makhmad Birgevi, who lived in the Anatolian city of Balikesir [Islamskie finansy', 2004, p. 38].

Starting in the middle of the 19th century, the historical development of the Islamic world took place among the colonial expansion of European states. Colonialism radically influenced the features and character of theological and ideological views of Muslim religious figures. It became necessary to adapt to new realities, and synthesis with various elements of western culture was simply unavoidable. The result of this was the appearance of the first modernist doctrine in Islam. From the very beginning of this type of 'renewed' Islam were the prominent Islamic thinkers of the New Time: Jamal ad-din al-Afghani (1838–1897) and Muhammad Abduh (1849–1905).

The most outstanding, and probably the most famous, Islamic modernist of the 20th

century was the poet and philosopher Muhammad Iqbal Lahori (1873–1938), who obtained wide popularity owing to his peculiar 'philosophical' poetry, as well as to the theoretical work of the 'Reconstruction of Religious Thought in Islam', and finally to his social and political activities.

Thus, the reformation of Islam took various different forms of expression. A portion of reformers who spoke out at first from positions of enlightenment adopted a more nihilistic position in relation to their proper cultural, religious and philosophic traditions. They openly cast the ruling religion as responsible for the social, economic and political backwardness of the Islamic world, and saw in it a reason for the absence of spiritual motivation towards progress. The most radical wing of reforming educators were inclined towards the indisputable perception of the spiritual, world-view paradigm of the West.

Modernist tendencies in the form of purposeful trends in Tatar society can be spoken about only from the end of the 18th century. In this period it had already become clear that the community, which had only a religious organisation, was deprived of the possibility of complete development. The Islam that initially promoted the stability of social life step-by-step became a mere component of the society's stagnation. The Tatar people was starting to come to terms with an understanding of the core of these processes. This can be clearly seen in the mass riots headed by the authorities of Batyrsha and mullah of Murad in the 1750s–1760s [Valiullin, 2005]. By the early 19th century, in Tatar society there were conditions for the intensive development of factors that determined the direction of its further economic, social and intellectual evolution. In terms of the social and economic perspective, this means the birth and consolidation of elements of the capitalistic system, the social stratification of society, and the formation of the national, first and foremost, trading bourgeoisie.

It should also be taken into account that the government, especially during the reign of Catherine II, was already aware that Tatar society, functioning mainly by its universal

links of Islam, remained quite a serious potential source of separatism inside Russia. That is why it was necessary to develop more effective rather than more violent forms of Christianisation, or rather mechanisms of involving the Tatar population in the Russian state system. The first step in this direction were the measures taken by the government aimed at controlling the Tatar clergy, especially by limiting their activities in Islamic law, for example, in all Sharia trials, which were widespread and by that time had a growing influence [Azamatov, 1999, p. 12–20; Nogmanov, 2005].

In general, it can be said that by the end of the 18th–the beginning of the 19th centuries, the transformation of Tatar society on the path to modern development had already been determined. At the same time, social awareness was developing in tight relation to traditional Islamic thoughts and ideas. On the other hand, the structural changes in society, related to the appearance of bourgeois relations in Russia defined the general direction of the social and economic development as capitalistic, which in its turn served as the catalyst for essential changes in mass awareness. The social and philosophical idea at the end of the 18th–the beginning of the 19th centuries reflected this exact duality of social awareness. This appeared as a result of the interaction of two directions: understanding the necessity of ideological changes, and the preservation of the powerful conservative layer in the powers of tradition and Islam. In these conditions new views, conceptions and norms could only be considered through the prism of Islam in images and ideas customary for the people [Mukhametshin, 2003, p. 42]. That is why it was not a coincidence that the religious and political reaction of Islam here in the beginning of the 19th century was expressed in two forms: traditionalism and reformation.

G. Kursavi and Sh. Marjani were the founders of this new movement among Tatars. The famous scientist A. Bennigsen wrote that Tatar religious reformers 'were ones of the first Islamic thinkers, much earlier than Arabs, Turks, Iranians and Hindus, who declared the right of each believer to find in the Quran and the Hadith replies to all the questions of politics,

society and religion. Their influence upon the development of the reformation movement not only in Russia but also the entire Muslim world was absolutely exclusive in terms of its importance. Owing precisely to their activities scarcely known in the West and ignored by the proper Islamic historians, Islam ceased to be an obstacle towards progress, and the paths to reforms in other fields (language, enlightenment and political organisation) was finally cleared' [Bennigsen, 1983, p. 17].

The main achievement of Tatar religious reformers in the first half of the 19th century was the modernisation of the religious, world-view, ethical and value-related problems related to its new closeness to the 'worldly' demands of the present. By the expression of A. Bennigsen, they 'tried to solve the problem of the intellectual backwardness of Islam by returning to intellectual liberalism' [Bennigsen, 1983, p. 17]. The religious reformation of the 19th century served as a unique transition from the old stereotypes of mass awareness to more modern forms of political thinking. Moving the centre of gravity from purely theological problems to social and political issues meant new approaches to how they were stated, and a higher level of critical thought.

The Tatar Muslim reformation had innate features of an all-Muslim reformation movement that was expressed in criticising traditionalism, and appealing to the values of early Islam and the concept of 'opening the gates of the *ijtihad*'. While developing in new social and political conditions, this modernism corresponded to the spiritual demands of Tatar society, as early as on the initial stage of its evolution, proposed admissible and sensible ways to combine the spiritual with the worldly.

G. Kursavi, a trustworthy expert on the Quran, the sunnah of the Prophet and other sources of Islamic law, also made his own attempt to interpret the problems of the *ijtihad* in a new way. K. Nasyri wrote about him: 'He strove to take directly from the Quran any judgment of his, and created a court of justice in accordance with its teachings' [Nasyri, 1977, p. 17]. The legacy of Kursavi is relatively small. He gained the most notoriety from his

work '*al-Irshad li-l-ibad*' ('Exhortations to servants [of God]'), first published only in 1903 [Idiyatullina, 2006].

Its problems are related to such phenomena as *ijtihad*, or the right to make an independent judgment on issues of *fiqh* (Muslim law). The owners of this right, *mujtahids*, were traditionally considered as fellows of the Prophet, their close followers, the transmitters of authentic *hadiths* and founders of the four *madhabs* (schools of law). Over time, the belief emerged that only the lawyers of the past had the right for *ijtihad*, as all legal issues had already been solved, the statement '*ijtihad munkaryd*' (the *ijtihad* stopped) became commonplace, and the time of the *taqlid* had finally arrived—the unwavering adherence to the authorities of the past.

The contributions of G. Kursavi to the development of theological thought is difficult to overestimate. Under the influence of his works Sh. Marjani's viewpoints were formed, and in his intellectual career he worked towards their further development. In the beginning of the 20th century, the ideas of G. Kursavi found their reflection in the works of G. Bubi, M. Bigiev and Z. Kamali. The criticism of scholastics and defense of the right for independent thought typical of the works of G. Kursavi were the ideological basis for all further development of Tatar theological thought.

The most prominent representatives of the second generation of thinkers in the reformation movement were Sh. Marjani, Kh. Faizkhanov, K. Nasyri (1825–1902), Sh. Kultasi (1858–1930), and others. After becoming successors to the affair started by their predecessors, they increased their emphasis on the combination of confessional and national elements. They were the ones to realise the necessity of utilising the national component to build up ideological and political constructions.

Sh. Marjani is the greatest Tatar theologian in the second half of the 19th century, a man who acquired the recognition of not only Russian, but also foreign, including western, scientists [Yusupov, 2005]. Sh. Marjani is the author of numerous theological treatise. He was the first to suggest adopting everything

useful from the European achievements in the sciences, educational sphere, and crafts and industry, legitimising this concept with the Muslim statement that wisdom is the believer's goal [Märcani mäcmugacı, 1915, p. 528–530]. During that time he criticised the practice of Taqlid in Tatar society, as he considered it the soil for fanaticism and the basis for obduracy and backwardness. In the footsteps of G. Kursavi, Sh. Marjani rejected the statement accepted in Islamic theology '*ijtihad munkarid*', declaring that the time for creative proding into the basis of the Quran and Sunnah had already passed. He wrote, 'At any time during the existence of the human race every one of us must be on the path of creative searching. And human beings must accomplish this by following the Quran and the Sunnah [Märcani mäcmugacı, 1915, p. 528–530].

The religious reformation views of Sh. Marjani carry clearer social characters when compared to his ideological predecessors, as he had to deal with the categories of religious dogmas and philosophy as he strove to apply certain statements of Muslim law in accordance with the social reality of the second half of the 19th century.

The Muslim reformation at the turn of the 20th century was not a homogeneous ideological phenomenon that gave birth to any uniformity or structure in philosophical or theological studies. However, all the representatives of this trend of social ideas were characterised by 'their striving to combine Muslim values with the achievements of European science and philosophy' [Tukhvatullina, 2003, p. 184].

R. Fakhretdinov published an article in the magazine 'Şura' that included the programme statement of the famous Muslim reformer Jamal ad-Din al-Afghani about this issue: 'There is no need to clarify that I am referring to the reform of Islam when I discuss the religious movement. The reform of religion does not mean to add to it something that was not stated first by the Prophet, and not to destroy or alter Muslim fundamentals by any means, but to eliminate what people added further, to return the religion to its initial content, in which it was born in the first century of Islam' [Şura, 1913, No.1, p. 4]. This approach to reforming Islam, which at first glance seems so definite, has three separate aspects: the appeal to return back to the Quran and Sunnah, or rather to follow them strictly; the approval of the right for *ijtihad* in opposition to the *taqlid*; the confirmation of the truth and uniqueness of the experience of the Quran. Perhaps that is why this approach left space for different, sometimes absolutely opposite interpretations [Mukhametshin, 1998, p. 114].

Thus, in the 19th century, Muslim reformers in Tatar society mainly did not step outside the boundaries of theological problems. The representatives of this tendency paid much attention to thinking through the various aspects of Muslim ideas. For them, issues related to the analysis of such important theological aspects as the role and place of *ijtihad* in the life of society were of the utmost importance. They also focused a great deal on the issue of the *taqlid*'s role in modern theology, attempted to define their attitude to the madhabs and also to determine common grounds for religion and science.

CHAPTER 2

Jadidism

§ 1. Sources of a new paradigm

Edward J. Lazzerini

Starting from the 1870s and as late as the 1920s, the new times as a type of a new ideology called Jadidism entered the social discourse of the Tatars and other Turkic Muslim peoples of the Russian Empire. For them, as for a lot of non-European peoples, the propaganda of the New Times with its new ideology was a way to oppose social decline, the growing influence of the West and its authority in all aspects of private and social life. Acquiring a new discourse was also the denial of traditional beliefs in the improbability that something essentially new could appear.

At the basis of this intellectual search there was the inevitable collision of two antagonistic world-view attributes, a kind of way of life related to using the respective epistemological conceptions. The first epistemological system is usually connected with traditions of commenting on texts and emphasising their interpretation with a knowing harmony between the mind and world of expressing the supreme spirit. These are predominately religious systems, as we understand them as a whole, because for people it is more accepted to believe in supernatural powers and inhabit this space with supreme creatures, that is Gods.

The second epistemological system, referred to by us as the New system, perhaps exists in a wholly unique embodiment, although it has different variants in terms of its cultural interpretation. It denies the possibility of the above-mentioned harmony and is instead an appeal to human intellectual efforts from the celestial world to the terrestrial world, with an aim at deciding immanent social problems. The New Time is seen as a self-developing process of changing reality with the parallel development of respective discourses featuring a long

initial period and a chain of countless changes in the material and technical character of European (Western) civilization, starting from the district century. Among the features of this new discourse, which differentiate it from those that represented and formed all the pre-New Time communities, there was the faith that the future was unpredictable, especially in the sense of its final goal. However, this goal can be figured out by using the human mind. Thus, the future becomes not only new, but better than the past. The human race can continuously overcome its eternally existing limits with knowledge. The later is now not only a simple sum of static information reflecting reality, but a tool that provides reality with radically new trends for development.

The manuscript tradition based on abstract theology and philosophy, determined a pathway for the development of human civilisation in Eurasia for the entire period of its formation, starting in the middle of the I millenium BC and as late as the New Time. Within this tradition, there was a permanent search for order and harmony ('cosmos' in Greek), predicted to be found from similar studies in the permanent truth, after which they were found and clearly defined. In time, a lot of generations of commentators with a small set of interpreting techniques applicable to clearly hierarchised canonic texts and ritualised faith-beliefs and religious practice. This only increased the tendency towards Orthodoxy, conformism and collectivism in religious ideas, and also provided the impulse to its confrontation of a variety of opinions, innovations, freedom of thought and individualism.

Manuscript traditions, the destiny of which is surprisingly similar to various cultural areas,

was retranslated not passively, but was persistently transformed in the process of their transmission and introduction of remarks by commentators, which took place for centuries. The given processes partially helped in dissolving traditions and entropy in the form of textual losses, linguistic deviations and the errors of copyists. This led to the loss of unique information, but on the other hand the introduction of remarks by copyists or the scholastic studies of scientists enriched the texts with stereotypical information. A lot of generations of commentators followed the goal of creating coordinated and ordered textual canons by freeing the supposedly reputable texts from their inner contradictions. In time, the given work was to lead to the tradition of creating complex interdependent (correlative) textual systems, in which each part, while describing reality, coincides and, supposedly, will coincide with all other parts. One of these manuscript traditions, with its origin dating back to the Quran and Sunnah, is represented by the religion of Islam (obedience), which would be more precise to refer to with the polysemantic word 'din', which means faith and religion, and includes certain norms of behaviour.

For Tatars, the history of whom is deeply related to Islam, jadidism became a way to adapt to the New Time and all that came along with this historical period of human development. The appearance of jadidism as a form of perceiving the world in the New Time was helped by a thorough reconceptualisation of the Will of Allah sent to Prophet Muhammad. This reconceptualisation did not necessarily include a denial of accepting this Will, although in the process of acquiring a new paradigm some jadids actively declined the idea of the New Time about the secularisation of the religious sphere towards a more obvious expression of religious indifference or even atheism. However, in most cases jadids granted a certain significance to religion and God in the life of contemporary society. Meanwhile, the orders of Allah, based on unconditional obedience and on following 'the direct way' (Sirat al-mustakim) must be, in their opinion, limited to the field of private life and the needs of the soul,

and not spread over social life or determine social processes.

According to their point of view, moral people form a virtuous society. However, this does not imply that it will be a productive and successful society in this new world demanding a creative approach, high productivity, competitiveness and a thorough attention to the issues of power. In the opinion of the jadids, following the will of God by itself cannot guarantee the discovery of inner human potential. Only active concentration on secular affairs, an orientation towards individual personality and not on God, will allow people to successfully develop. Thus, this proves that their faith is an authentic divine order to people. Jadidism as the New Time ideology presupposed the acquisition of an essentially different epistemology that looked to the past not as a tragic loss, but as a tool for creating a new future; they perceived Allah as a personal God close to human kind. He determines human ethics and morals, but does not dictate at all how to complete earthly tasks that demand daily attention. This change of paradigm allowed Tatars to independently determine their own future, which they now based on freedom, varied and practically oriented education, a large amount of experience, attentive study of the world, and a creative approach to any task.

In this research I use the terms 'archeology' and 'genealogy' in the meanings used by Michel Foucault (1926–1984). His works are devoted to the re-evaluation of the theory of causality, or 'critical philosophy' based on the works of John Locke (1632–1704), David Hume (1711–1776) and Immanuel Kant (1724–1804), all thinkers who changed philosophy in the direction of a fundamental criticism of perception.

M. Foucault's statement on chance is the main starting point for my understanding of jadidism. The figures of that period were ancestors and pioneers in acquiring that transformative epistemology discussed above; they could justly be called jadids. Reading their works from the perspective of different contexts leads to the understanding that their works reflect equal significance for what is present and what is absent for whatever reason [see: Ismail Bey,

1988, p. 149–169]. If a simple description of jadids, their ideas and social activities defined by attitudes of a new world-view is quite important to scientific perception, and at its core gives very little when determining the sources of the given phenomenon.

Therefore, it is quite surprising that in all the above-mentioned communities where Islam was dominant in the culture, gradually, over approximately a full century (1750s–1850s), there is an epistemological transformation that resulted in the end of the period in the substitution of the former concept of the 'old method' (*usul al-kadim*) with the idea of the 'new method' (*usul al-jadid*). At the same time, the motivating power for positive change was the movement away from an orientation towards the past—*tajdid* (renewal in the meaning of returning to initial purity) to an orientation towards the future—*jadid* (new). What was the reason for this long-lasting, century-long, invisible ripening of the alternative outlook that finally separated itself from tradition. Its adherents, relieved from the burden of supernaturalism and charmed by earthly mysteries, expected revelations from experiments, exploration of the world and the persistent use of the human intellect. They were certain that time served humanity and did not follow some mysterious plan that had been earlier developed at a metaphysical level.

Dipping into the archeology of the term '*jadid*', one can find a number of rules that defined the system of notional and conceptional possibilities, and determined the borders of philosophism and discussions within the framework of culture oriented towards the *tajdid*. We also gain an impression on the inner and external forces that gradually contributed to the loss of accuracy of previous ideological structures, which were replaced with open spaces; and through these gaps entered crucially new tendencies that later came to stay permanently in the consciousness of the people of that time. Such an approach helps change the historiographic tradition to some extent that is still concentrating on the examination of individual consciousness instead of studying this phenomenon on two levels: the one that ex-

ists in the conscious mind, and the one on the unconscious level. The study of Volga region Tatars (that were at that time in the vanguard of Turkic, Islamic people and Russian subjects), who first started on the path of progress allows us to define the entire set of reasons that made it possible. Meanwhile, it is important to note again that we will never be able to exactly define all the possible elements of this process, and should be careful with the unnecessary accentuation of one of them as the most important, or limit the investigation with what is obvious to us.

Five of the most important factors should be defined that allow Tatar society to enter the new world: the new universal Russian development strategy founded during the reign of Peter I; the Tatar Diaspora and capitalisation of its economy; resuming the contradictions within the Islamic discourse; different ways of involving Tatars into Russian society, and the appearance of a new class of mediators, who became a link between the Russian and Tatar worlds.

Each of these elements was, beyond all doubt, necessary yet insufficient by itself to push the Tatars to develop new possibilities, leave behind their established patterns, open up new perspectives, the risk of the unknown and hope for a more productive future, or jump from the world of restrictions into the world of possibilities. By the time the first rudiments of the New outlook arose in 1870, its adherents were actively using the benefits of the periodical press to spread their ideas, thus preparing the ground for their further advancement. Meanwhile, the combination of these five factors set the stage for Jadidism and helped it survive and not be overcome by outmoded ideas, ideals and institutions, or just remain plain fantasy in people's minds. I will dwell on only one, the third factor, which was interpreted incorrectly in the works of researchers for a long time, or rather the resumption of contradictions inside of the Islamic discourse.

By the time when Ekaterina the of Russia became empress, most Muslim researchers of the Volga Kama region belonged to the Hanafi madhhab, but nevertheless they relied on a methodology opposite to the dialectical

approach (*'ilm al-kalâm*), or the method of searching for theological foundations through the disputes and arguments Abu Hanifa (699–767) prohibited his students to use¹. They also defended the practice of *taqlid*, or the unconditional acceptance of the opinion of the religious authorities, who were often represented in certain schools of jurisprudence; here, the Hanafi school.

Taqlid is usually opposed to *ijtihad*, or the independent interpretation of *Sharia*, which is realised through the intellectual efforts (*jihad*) of the individual themselves. It is important to note that one who does not have comprehensive knowledge of Muslim law (*Fiqh*) and detailed knowledge of the mandatory instructions (*wajib*), forbidden actions (*haram*), recommended (*mandub*), damnable (*makruh*) and neutral (*mubahah*) actions within the scope of this Law, are not authorised to interpret Muslim law on their own.

It is quite illustrative that Abu Hanifa himself disapproved of his students' use of the *Taqlid*, and encouraged them to think independently and not rely only on their teacher's interpretation. Apart from issues of methodology, local researchers apparently also acted within the parameters typical for the Hanafi religious tradition, which defined positions on a number of questions and issues related to them, including classic questions like the nature of the Quran and number of Allah's eternal attributes, freedom of will and predestination, commitment of faith and sin, prayer in twilight and group prayers on Fridays, and such specific issues of the region as loyalty before the Russian authorities.

By the end of the 18th century a number of new circumstances appear that created condi-

tions for the development of the Volga-Kama Region in another area, which possibly had its influence upon the change of content of the Islamic discourse unlike the way it had been being perceived throughout the centuries.

First of all, we must note the factor of the reign of Ekaterina of Russia, which managed to change the system of relationships between the Russian authorities and Muslim population under the influence of the European Enlightenment. Secondly, the development and improvement of trading routes from the Volga region into Central Asia after the gradual advancement of Russian borders to the South and peacemaking among the Kazakh tribes, all contributed to the expansion of connections among these territories, which in turn had a positive impact on the stabilisation of the position of Tatar businesses and the expansion of spiritual contacts with the Muslims of those regions who were of political interest for the Russian government.

Thirdly, the development of Tatar assets stimulated the expansion of the Tatar villages network, particularly in the Kazakh steppes, and partly in Central Asia, the South of Siberia and along caravan tracks through the valley or to East Turkestan. The international business success of the Tatar merchants stimulated not only the creation of Tatar diasporas and the presence of Tatars on distant lands, but the creation of centres of influence in the surrounding non-Tatar population. Gradually, these centres started exerting not only economic, but cultural and intellectual influence as well through the new neighbors of the Tatars.

In giving up habitual social models, merchants used their assets as a way to create their own social space between these two classes represented by traditional nobles and commons. They managed to provide more independent positions for themselves compared to the other two classes, also partly thanks to the completion of complicated, long-term projects that in the course of time established their position in the society as a third force. As its representatives, they were more confident in themselves, exposed to less fear and risks, and truly believed that their future would be far better than their present.

¹ Kala has a long and at times very difficult history, dating primarily from the post-classical period (after 1050s) up to the present time. In the historiography of the spiritual culture of Islam, starting with Muslim scholars themselves, Kala was considered a theology that opposed philosophy (*falsafa*). The main difference from the latter was the fact that Kala was engaged in a search for truth by appealing to tradition (*nakl*), rather than to reason (*akl*). However, the division of Muslim thought into the oppositions *kala*–*falsafa* is not a good tool for evaluating all its wealth.

As a whole, these processes made up the new array of features for members of Tatar society. Moreover, some of the changes were almost invisible at first, while others were revealed in their entirety and were immediately observable. This last part is especially true for the Orenburg Mohammedan Spiritual Assembly institution, with the help of which the Tatars were forced into a certain form of organised authority, the muftiate, which was previously unknown to the Muslims and created as a result of the actions of a non-Muslim government, a fact that cannot go unnoted. The creation of the muftiate was meant to structure Russian Islam and consequently make it easier for the Russian bureaucratic apparatus to rule the Muslim population. Receiving an annual salary, mufti and his assistants in fact became Russian officials with duties determined by imperial authorities that in the course of time were gradually expanded. As can be seen from the recent works of several researchers, imperial decrees determined the Spiritual Assembly with all its employees as a body where all the social and religious issues of the Muslims were to be addressed. If the issue was not solved on the level of the muftiate, the Muslims were to transfer it over to the Russian authorities [see: Crews, 2006]. Thus, the private interests of the Muslim population were becoming imperial interests that led to the rapprochement of both Muslims and Russians.

After the collapse of the USSR, researchers started paying attention to the well-preserved and now available source base from that period, as a result of which we now know a lot more of what Muslims were writing about [Almazova, 2010; Idiyatullina, 2005; Yuzeev, Gimadeev, 2009; Kemper, 1998; Khayrutdinov, 2005–2006; Spannaus, 2011; Tukhvatullina, 2003]. Nevertheless, the attempts of modern researchers to sort the works of the Muslim authors into some sort of historical succession and sequence, to my mind, have their own drawbacks, as the leading tradition in historiography is always in support of the previous interpretations that first appeared in the beginning of the 20th century and continued on without significant changes throughout the entire Soviet period and es-

tablished itself just after Russian researchers were relieved of their limitations in the scientific sphere after the collapse of the USSR. To my mind, the following features are typical of historiography of this sort: 1) the teleological approach, which applies the idea of progress in a somewhat mechanistic way, in this case insisted on the linear evolution of philosophical thought that went from all-embracing devotion to the traditions of Islam, the appearance of Jadidism and acceptance of the ideology of the New Times; 2) confusion with the term 'reform' that does not allow to see the differences in approaches between Muslim authors to the changes, and their inner aims and intentions, which is also related to my first critical comment; 3) the inability to understand the New Times in terms of epistemological shifts that can be considered revolutionary.

Starting in the second half of the 18th century, according to sources, several generations of Tatars had a feeling that something was wrong with the Islamic ummah. They were united by the perception of the necessity of reforms that could improve their position, and as a mechanism of reform they insistently offered *ijtkhad* (literally 'eagerness, trying') as a means to resolve the issues faced by society. The list of authors, as accepted in historiography, was headed by G. Utyz Imyani al-Bulgari, after which was G. Kursavi, Sh. Marjani, R. Fakhretdin, G. Barudi, M. Bigi, Z. Kamali and other representatives of the clergy, although the list also included secular figures Kh. Faizkhanov, I. Gasprinsky and Yu. Akchura.

The first issue that becomes obvious when reading this list is the fundamental difference between the initial names and the three that follow them, which evidences the groundlessness and superficiality of the connections between these two groups. Besides, an attempt to connect them all would more so confuse than clarify this extremely important period in the modern history of the Tatar people. What is considered in a lot of the research as a single course is in fact two courses: the first strives to return Islamic society back to its due form and practice, to a society where religion is in the central and defining position, whereas the other

represents the view of society where none of the religions is superior, and in fact religion does not have a great political or other influence upon society.

The second issue is related to the universal human inclination towards opposition, and sometimes even desperate resistance to change. When religious faith is the object of discussion, changes can be immediately rejected as dangerous and even malevolent; in Islam they are called *bid'a*, a term that is usually used to assign a negative meaning to the belief, practice or traditions that supposedly do not have any precedent in the Islamic tradition.

Despite the fact that the term cannot be found in the Quran, many researchers for many centuries have accepted categorically different Hadiths, condemning 'innovators' and 'innovations', and usually blaming objectors for adherence to the *bid'a*, and were thus persecuted.

This tendency made it difficult to implement reforms, especially if they appeared at the grassroots level and their adherents revised the issues of religious practice on religious grounds which they always challenged in some way or another. At the turn of the 18th–19th centuries we can observe examples of how accusations of *bid'a* were addressed to Muslim researchers from the Volga-Kama Region, in their homeland, and in Middle Asia where they studied. We can also see accusations of *bid'a* addressed a century later to the *jadids*, when their periodicals and other 'new' kinds of activities became objects of hate for conservative researchers. In addition, confusion with the term 'reform' is reflective of the contradiction present in Islam itself between the issues of detection and eradication of *bid'a* and the converse creedal display of the fact that God himself—exclusively in relation to religious aims—set up the necessity for the periodical renovation (*tajdid*) of the religion with the help of correctly used *ijtihād*.

Thus, the Islamic transformation model was legitimated and could have been used to prevent the development of *bid'a*, as well as to implement reforms in order to return, correct or restore the intended nature of Islamic society. Resorting to *tajdid* may seem 'progressive' for modern researchers in the framework of tra-

ditional theology, but it can barely be defined using the term '*jadid*', as *tajdid* was lacking in the epistemology that was the basis for the former and provided '*usuljadid*'. Such researchers as Marjani, Fakhretdin, Barudi, Bubi, Bigiev and Kamali should all be considered progressive theologians,² as they strove to preserve the concept of God in the centre of social life, although they recognised the necessity of correcting false interpretations of religion and the reformation of religious life where distortions might have crept in³. Due to the fact that public figures like Marjani strove to immortalise the smoothly running system specific to the commentarial tradition that dates back to the sources of Islam, they cannot be brought into one line with such personalities as Faizkhanov, Gasprinsky, Akchurin and Kerimov, who cut ties completely with religious and theological epistemology. The progressive propensity of theologians to reforms, no matter how radical they seemed, was of a solely corrective and restorative nature, and it was not meant to open the gates on the path to a new society. This is not surprising, as among the authorities outside of the Islamic world for these Tatar intellectuals was Orthodox dissenter district—district centuries. Martin Luther (1483–1546).

The third problem is the most important and most complex. As has already been mentioned, disputes about the New Time were sometimes rather heated; however, they often fail to reflect its essence, because historians and other researchers are averse to offering a single explanation to what happened in the past. We tend to search for a multitude of causes, influences and forces, especially when we attempt to explain a fundamental phenomenon such as the New Time. Intellectual relativism makes its appearance during this search when all causes become equal, and we can easily miss some data for the sake of making one or another 'substantiated' choice. In my opinion, this approach is unacceptable with respect to the New Time. The

² The term 'religious reformers' (Ed.) became widespread in Russian historiography.

³ There are visible similarities with European neo-Aristotelians.

reason is that it offers a multitude of reasons, each worthy of detailed discussion, although none of them is crucial for explaining the New Time phenomenon in the history of humankind.

Islamic discourse in the Volga-Kama Region in the 19th century should be primarily treated as a recurrence of the periodically arising conflict between those who strove for reform for the sake of restoring the Islamic community (progressive theologians) and those who opposed them on the grounds that such reform would be too dangerous for integrity of the Islamic ummah (conservative theologians). In historiography, the first group is constantly praised as 'reformers', 'progressive thinkers', 'enlighteners' and 'Jadids', while the latter are denounced as 'conservatives', 'reactionary thinkers', 'obscurants', 'Islamists' and 'Qadimists' (as such, the antagonists of 'usul ul-jadid', or the 'new method', and proponents of 'usul ul-qadim', or the 'old method'). This approach added more confusion rather than clarifying the situation, especially since two different conflicts were mixed within it: the one between progressive and conservative parties within Islamic theology itself, and between Islamic theology in general and Jadidism, which was characterized by a completely different understanding and was based on other epistemological arguments.

No alliances and agreements between the progressive theologians and the Jadids on the achievement of short-term goals should deceive us with respect to this conclusion, because, in the end, these two movements are divided by an insurmountable schism. For more than a century, progressive theologians were treated as modernists (Jadids) only because of their conflict with the conservatives, because they were more flexible, liberal and understood the changes that were occurring. However, on assessing the subject from a different angle, we discover another set of differences that lead us to state that progressive theologians belonged to tradition and not to the New Time.

First, although progressive theologians relied on Sunnah and not the Quran, they believed that society requires a renewal (tajdid) from time to time in order to purify the faith

through correct application of *ijtihad*, while for the Jadids this renewal was insufficient, because it would result only in the restoration of what used to be, while in their opinion, what was and what is had to be replaced with what was supposed to be. Second, for progressive theologians, the long-gone Golden Age was the spiritual ideal, and its imitation was the best that humanity was capable of achieving, while the Jadid believed that human communities could compete only between each other in the never-ending process of achieving goals and their future development and replacement with new ones. Third, progressive theologians had always felt nostalgic about the 'lost Paradise' and were convinced that nothing radically new could appear in this world until the end of time, while the Jadids dreamed of a Paradise that could be achieved through a struggle, unrestricted by the strict rules of tradition. Finally, progressive theologians were absolutely devoted to Islamist discourse, which the Jadids believed to be the antithesis to their project.

The great thinker, al-Ghazali (1058–1111) in his work *Tahāfut al-Falāsifa*^h (*The Incoherence of Philosophers*) declared: "The inconceivable decisions of God cannot be weighed on the scales of reason; only faith in God as the highest Truth can keep those weak in spirit on the 'straight road', the only thing of importance for them".

The above statement can be considered the most attractive of what was present in the theological systems relying on the religious canon. Their promise of a spiritual world achievable during mortal life requires the selection of the difficult straight road that, in turn, implies unconditional devotion stipulated by the fundamental importance of this major goal of a person. Since everything truly important can be traced to God, there is nothing left but to follow his decrees, although they are often very difficult. This promise of the spiritual world and peace is epistemologically opposite to the promise of boundless opportunities typical for the ideology of the New Time. Ever since God had been replaced and ceased to be the center of everything, both at the level of society and at the level of an individual, the vacuum started

filling with the idea of choice. However, this choice was not between good and evil, but between the growing number of choices associated in one way or another with good. And these different kinds of good, which had never been exactly defined by anyone before, were currently competing in attracting people's attention and winning their allegiance. In the New World, the destiny of people's souls may also be independent of the result of this struggle; however, when it comes to human lives, they most definitely depend on the choice that is made. Throughout the 19th century, the Muslim Tatars faced the continuously growing realization that eternal truths they had relied upon for centuries, that for a long time had granted them the feeling of peace, spiritual contentedness and confidence in the future, started losing their importance, where peace of mind became just another concept requiring critical rethinking. Defendants of the traditional way of life were very inventive in their resistance to the New Time and found various ways to protect their Muslim identity. For the Sufis—brotherhoods of Yasaviya and Naqshbandiya—adherence to the canons of Islam could mean resistance to the Russian law prohibiting evangelical activities among non-Russian or recently baptised peoples; moreover, for them, the call to Jihad against the Russians also served as a means of reviving the faith. For Muslim theologians, the defense of the faith could have a more intellectual nature and in most cases caused interminable debates on extremely esoteric matters of the faith or philosophy that might seem insignificant to an outsider. However, these very religious debates ensured the succession of spiritual culture during the many centuries of existence of Islam. For the absolute majority of Muslim Tatars, the idea that God could die was completely inconceivable in the 19th century; however, while God was dying, it was expected that a human would take his place.

If at the dawn of the reign of Catherine II the Great, the intellectual life of the Tatars was defined by prophetic discourse, where moral revival and re-Islamization were articulated through concepts reflecting the prophetic perception of historical time, and this call for

a moral and religious revival took place by means of the traditional written genres, then how could Jadidism have gained importance and dominated Tatar life in little more than a century?

The degree of difficulty faced by Jadidism can be traced through the history of the movement starting from the 70s of the 19th century until the late 20s of the 20th century. This was a period of unprecedented upheavals, including wars and revolutions. At the same time, despite the chaos, this difficult period was able to give rise to a number of sometimes not overly popular sometimes frightening and Utopian movements, fighting a lone fight and gathering adherents. It seemed as if they were carried by the unknown and more powerful forces of the New Time that overtook Russia and the rest of Europe. The transformation of relations established between people, especially in case of their deeply social nature and association with strong moral principles, was extremely difficult, and history is full of examples of unsuccessful attempts of this kind. We need only think of the Populism movement in 1860s–1870s in Russia; despite its dramatic quality, its importance was a pale imitation of Jadidism, and its lack of success implied that Jadidism was much more likely to end its days on the garbage heap of history and much more quickly. This is what would have happened if not for the cumulative effect of innumerable known and unknown choices made by both powerful and unimportant people, as well as for numerous events that had been directed by conscious act of individual people. Isolated, disconnected and unrelated elements comprising the substance of the New Time/Jadidism made up a continuous sequence that could no longer be stopped. It was epistemology that ensured not only the survival of the Jadidism phenomenon, but also its amazing success.

This epistemology also hides the reasons for forceful resistance to the New Time. One of the most impressive descriptions of this resistance was given by the prominent Syrian scientist and Muslim legal scholar, Muhammad Rashid Rida (1865–1935), in his article published in the progressive theological maga-

zine 'al-Manar'⁴: 'During this troubled period of ideological, intellectual, political, Communist and Bolshevik transformations, when chaos reigned in the sphere of religion, education and social relations, the society was threatened by the feminist revolution and promiscuity; when families fell apart and kinship relations were broken, when heretical doctrines prevailed in society, enemies openly attacked the nation's religion, its language, values, traditions, customary clothing and origins—we have no foundations left, on which we could raise and teach our youth.

During that period, ideas of renewal became widespread among us. Truly, we were in dire need of renewal and renewers. Everything that would have helped us to preserve our national character and religious heritage, would have assisted us in reaching the path of civilized progress, was cancelled and destroyed. Our entire historical past, true religion, our flourishing civilization and great empire—all this has been effaced, condemned, left behind and forgotten by us. In our desire to assimilate the new and to borrow the foreign we were able to only grasp the exterior and could never reproduce it completely. And what we have now from the past

and the modernity is just a shell, an imitation, like the husk of an almond or walnut that is spread in a thick layer underfoot; in itself, it is useless and unable to preserve the essence' [Rida, 1931, p. 770].

I have highlighted individual words and expressions in this text that I believe speak of the conviction and uncompromising nature of the answer of Rashid Rida to the New Time. This is a person who believes that he faces some external threat related to such a profound change of the world, where nothing would remain the same, and whatever comes, it would not esteem what was most precious for humankind. His words illustrate the attitudes of millions of those who felt that current events were beyond their control, because the society and community no longer ensured the existence of an individual and personality, and the historical connection between these two spheres threatened to be broken forever. For these masses and those who spoke for them, the New Time was a revolution of desperation that could not be fought, because it had no definite ideology of its own, or a specific plan, or an advance guard. The New Time had only the future.

§ 2. Ideology of Renewal

Rafik Mukhametshin

As early as at the dawn of its formation, Jadidism found itself at the center of the ideological struggle of different political epochs in Tatar society. The progressive part of the population saw it as an intellectual and ideological force capable of leading Tatar society out of its centuries-long stagnation. Tatar traditionalists considered it a serious threat to the Muslim community because, in their opinion, Jadidism brought free-thinking and libertinism bordering on atheism to society.

⁴ Rida was the most prominent among the disciples of Dzhamaletdin Afghani (1838–1897) and Muhammad Abduh (1849–1905), two leading progressive Muslim theologians.

The situation has not really changed in modern conditions. Some, mainly the scientific and artistic intelligentsia, consider Jadidism as the most effective form of the return of Islam to the public and political life of modern Tatarstan, since in the late 19th to early 20th centuries, it assimilated the characteristics and achievements of the 'Tatar version' of Islam and therefore is the sole acceptable form of religious and moral renewal of society and a secure shield against penetration into the Republic of phenomena alien to Tatar Islam [Mukhametshin, 2005a, p. 59–81]. Part of the intelligentsia and the clergy in particular are wary about the ability of Jadidism to revive religious traditions in modern conditions. Furthermore, they have

good reason to believe that this phenomenon has too many ideological and political roots, and they fear the occurrence of serious reasons for revising the foundations of Islam to please other forces that do not take into account the interests of the Muslim community itself. According to them, Jadidism, as a singular form of social reform, is completely capable of destroying the fundamentals of the traditional Islamic ummah, which does not need any innovation [Nuzhna li reforma, 2004].

The main stumbling block for opponents is the problem of the origins of Jadidism. Different approaches to the topic exist in both domestic and foreign historiography. Many researchers connect the establishment of Jadidism with the activities of I. Gasprinsky—the founder of the new education system. For example, V. Gankevich insists that 'Jadidism appeared in the late 19th century primarily as an attempt to reform the primary schools... Jadidism appeared in Crimea as a social pedagogic movement. The most famous promoter of the audio method, and the generally recognized leader of Jadidism was... Ismail Gasprinsky' [Gankevich, 1998, p. 239–240]. Some academics admit the possibility that the ideas of Jadidism formed under the influence of the ideas of Murad mullah, who spoke of the need to create a 'renewed' religion uniting many peoples [Iskhakov, 1997a, p. 13]. A number of researchers are convinced that its origins go back to Muslim reform activities and are related to the activities of A. Kursavi, who had proposed to open 'the gates of ijtihad' [Idiyatullina, 2006].

In fact, the choice of a particular theory is not just about determining the starting point but the selection of radically different approaches to assessing the essence of Jadidism. If one relates the attitude towards Jadidism to the activities of I. Gasprinsky, then the enlightening and educational component will dominate in it. If, on the other hand, one connects the formation of Jadidism with the activities of Murad mullah, then the essence of this phenomenon takes a political and ideological tint, because Murad mullah, like Batyrsha, was closer in spirit to politicians than to religious activists. If one assumes that G. Kursavi was the originator of

Jadidism, then its contents nearly merge with religious reforms.

One of the decisive aspects of determining the essence of Jadidism is establishing its relationship with Muslim reform activities, that is, 'if Muslim reform activities are a component of Jadidism, or if Jadidism is just one of its theoretical sources'.

This is a matter of principle, because the characteristics of Jadidism in general depend on its answer. If it is treated as the evolution of ideas of the Muslim reforms in Tatar society, then Jadidism acquires the same religious content. On the other hand, separation of Jadidism from the Muslim reform implies its recognition as a radically new phenomenon, with mainly secular content, although with a significant religious component.

After generalizing all opinions, we can state that Jadidism, starting with Murad mullah and Bartysha, became a movement that put to the forefront not only the religious, but also ethno-political interests of the Tatar community, as well as the problem of its political establishment.

However, as has been already stated above, in domestic historiography, the formation of Jadidism is nearly always connected to the reform of the education system. Muslim education served as the foundation for the ideological and intellectual transformation in Tatar society in the socio-political situation which Russian Muslims found themselves in. The education system became the center of transformations, primarily because it proved to be the only possible form of spiritual renewal and reproduction of the intellectual potential of society in the 19th century. In the opinion of D. Iskhakov, 'political reformism' became possible only after the Revolution of 1905 [Iskhakov, 1997a, p. 9], since previously, apart from the education system, there had been no other structures or institutions that could function, if not fully, then at least in some other form. This is why the system undoubtedly became the foundation and center of intellectual renewal.

Does this mean that reform of the education system became the main goal set by the first Jadids? Was it the objective of the pro-

posed transformations or only a means for implementing them? The prevailing opinion in Western European historiography is that true Jadids did not support only religious reforms and renewals. This approach is more productive, because it allows one to determine the contents of Jadidism more clearly. In reality, when the meaning of this phenomenon is tightly bound to reform of the public education system, its content is blurred, it becomes even more patchy, and in fact does not allow any kind of rigorous definition. More likely, we must proceed from the premise that Jadidism as a phenomenon was initially aimed at modernizing Muslim society.

Furthermore, it should be kept in mind that there were other forces in Tatar society interested in modernizing its socio-political life. Even now, the role of other factors in promoting the establishment of Jadidism is somewhat underrated. In the past few years, researchers have started focusing on the economic basis of operation of the new education method. The institution of trustees in the Tatar mahallahs, activities of charitable organizations and foundations, and the contribution of the national bourgeoisie in financial support of the system indicate that Jadidism initially formed as a multi-faceted phenomenon [see: Salikhov, 1998]. There is actually a certain logic in this, because when reform of the education system took place, it was carried out using the internal resources of the Tatar community, and this would have been impossible without understanding the prospects and end results of these reforms. The resurgent Tatar bourgeoisie and merchant class were naturally interested in the end results of the reform: the new social classes needed a skilled work force able to adequately understand the processes taking place in Russia, find their place in the new socio-economic conditions, and determine the real prospects of the Tatar community, that is, in creating an education system not for the sake of improving teaching methods but for producing real results. Therefore, as a social and ideological movement, Jadidism of the late 19th century was functioning and developing within the system of religious education. However, even

then it also appeared in other forms that took it beyond the system; that is, it may be said that even before the 20th century, there was an understanding of the need for radical changes in society.

In the early 20th century, new opportunities arose in Tatar society for implementing the ideas that had previously been set out in Tatar Jadidism. This was the ambition to create a political base for the renewal of Tatar society. Active participation of nearly all intellectual forces in the political processes and organizations indicates that Tatar society was ripe for a wider and more radical solution to socio-political problems. In these circumstances, the secular and national component was so popular that Jadidism turned into a leading movement in the Tatar community.

As an ideology still undergoing formation, Jadidism needed a new perspective on the national factor. Whereas before the early 19th century this problem had not been discussed, or, more frequently, had been ignored, starting in the latter half of the century, more and more attention was paid to national problems. This was quite natural, because the formation of the ideology of national liberation movement started with an appeal to the national culture and revival of interest to the national language, from the resurrection of the memory of the former greatness of the people, its 'Golden Age', and teaching a feeling of patriotism and formation of the national consciousness. All of these were the principal factors in formation of a nation. However, it should be kept in mind, that Islam remained the principal element of the outlook on life and determined not only the moral and ethical, but also the socio-political views of a significant portion of the population. The development of social thought took place under conditions of, if not unconditional piety, then at least the complete, sometimes unconscious submission of the people, especially in the country, where the majority of population lived, to the system of customs, system of living formed under the influence of Islam.

Fundamental problems related to rethinking of the role and place of Islam in the life of society arose during the fairly intensive formation

of national identity in Tatar society that had been developing for many centuries as a part of Muslim civilization. In fact, the Tatars had no other force capable of inspiring and directing the national liberation movement until nearly the Mid-19th century. However, despite this, the process of formation and spread of the national ideology that was secular in nature was fairly rapid, because it had originated from the internal needs of society.

This feature of Islam in Tatar society was used by the Jadids to build an effectively functioning ideological system. The Jadids assumed that Islam was a component of the national culture, the moral and ethical foundation of society, the creative force of its people, and its spiritual energy. In this context, the problem was assessed in detail in the publications of Yusuf Akchura [Mukhametdinov, 2004]. For example, he believed that 'Islam was one of the religions that attached great significance to political and public affairs'. However, 'to allow the formation of nations within it', 'it had to undergo modifications... After abandoning the social functions, religions act as leaders showing the correct way to the hearts, they become merely a kind intermediary between the Creator and His creations. As a result, religions can preserve their political and social meaning only by uniting with ethnicities, assisting and even serving them' [Akchura, 1994, p. 132].

After recognizing the close connection of Islam with national problems, the Jadids needed to establish the precise place of religion in the system of new ideological relations. Of course, this was not an easy task, because, as we have already stated above, aspects serving national interests can always be discovered in religious universals. Moreover, Islamic values were sometimes treated as national universals. For example, in the political sphere, the idea of solidarity of co-religionists and unification of the ummah, originating in Islam, was treated as the symbol of solidarity and unification of the nation. In the early 20th century, Islam, as the foundation of traditional Muslim society, was considered to be a symbol of national identity.

Undoubtedly, the discovery of interaction of these to beginnings does not comprise an at-

tempt to blur the lines between them. Attempts were made once again select the aspects of Islam serving the interests of the Tatar nation and society. In the early 20th century, Tatar society needed Islam primarily as a code of moral and ethical norms, a symbol of ideological complexes based on religious and cultural values. The Tatar intelligentsia attempted to propose a new model of renewal of statehood for the country, based on pluralistic principles well known in the West. This model, first proposed in Russian conditions by I. Gasprinsky, placed Russians and Muslims in positions of formal equality and prompted a search for more civilized approaches to solving the national question.

One of the features of Jadidism in the early 20th century was a shift of the center of gravity from purely theological problems to social and political ones. Its representatives understood that the Tatar community needed a modern outlook and strove to bring the traditional belief systems in line with requirements of the epoch. In the new circumstances, the interest in problems of religion and outlook was becoming more dependent on the formation of state legal and socio-economic doctrines. This trend could not help but disclose the narrowness of traditional principles of understanding the fundamentals of socio-political life. The search for answers to the increasingly complex questions of life forced the Jadids make radical changes in their ideas about the pace and role of Islam in the life of society and to borrow from Soviet doctrines. Therefore, it is no coincidence that in the early 20th century, Islam played an important role in Tatar society in the formation of a national ideology and in national integration of the population.

For Jadidism, religion was necessary as the principal tool for social renewal, as the basis of internal faith, and a complex of ethical instructions. For them, Islam was the embodiment of the social unity of the Tatars, the creative powers of the people, their spiritual energy, culture and one of the foundations of national existence. It is no coincidence that everything was aimed at the renewal of Tatar society, including religious and belief searches, was treated as a

whole: 'The battle with false notions in Islam, the desire to prove that Islam is a godly and socio-scientific religion, the origin of the women's question and new methods of teaching and upbringing, the national culture, and resolution of political, social and scientific questions—all of these carried out in a very short time, are our national affairs' [Tormysh, 1914, 12 Feb.]. This may be why the Tatar Jadids, unlike their predecessors, attempted to form a system of opinions on the social structure of modern Tatar society and Russia, the nature of its internal connections and its operating mechanism. In doing so, they turned to both traditional ideas, and new scientific statements, and the experiences of Western European civilization.

G. Bayazitov [Tatarskie intellektualy', 2005] believes that there is no 'disincentive for the cultural development, or challenge preventing a Muslim from joining the ranks of cultured Europeans. We can confidently state that the Quran and Sharia can go hand in hand with all reasonable reforms' [Bayazitov, 1898, p. 6]. At the same time, he stressed that, 'despite the favorable reception of the Islamic doctrine concerning its compatibility with all reasonable civil reforms recognized as a present-day need, unfortunately, we cannot confirm such as successful resolution of the issue' [Bayazitov, 1898, p. 6]. G. Bayazitov attempted to dispel the myth that enemies of Islam who try to shake its foundations from the outside are to blame for all the misfortunes and problems of Muslim society. This theologian insisted that such forces must be looked for within society as well. G. Bayazitov believed that his contemporary Islam had turned into a dogmatic doctrine that had no place for logic and rational judgment when assessing social realities.

This problem was also discussed by other religious activists. The Tatar intelligentsia paid a lot of attention to discussing the issue of reform of the public education system and the place of Jadidism within this system.

Thus, Jadidism turned into a socio-political, modernist movement of the Muslims of the Volga Region, Crimea, Transcaucasia and Central Asia in the latter half of the 19th and—first third of the 20th centuries. It was formed and became widespread in Tatar society and created prerequisites for revising the fundamentals of the obsolete outlook, disruption of the ruling dogmas and scholasticism, replacement of the traditional norms of relations between people as universal and absolute regulators with new ones, and served as a kind of transition from former stereotypes of the mass consciousness to modern forms of political thinking. The shift of the center of gravity from purely theological problems to social and political issues implied new approaches to presenting them, and a higher level of thinking.

Jadidism determined the principal direction of the evolution of Islam:—the intellectualization of spiritual life, the use of historical mobility of religion, and its ability to adapt to new circumstances and assimilate the new social quality. The Jadids understood the extreme difficulty of even setting such an objective. Would Muslims be able to adhere to the principal tenets of Islam during the radical changes taking place in the society; would they be capable of following not only the religious, but also the political and social principles of religious doctrine; would they look for a way out during the transformation by restricting the role and function of religion to the spiritual life, leaving the day-to-day, secular living outside its purview? These questions troubled Tatar thinkers, and they searched for the best ways of incorporating religion into public and political life.

The principal centers of Jadidism were the madrasas Muhammadiya in Kazan, Galiya in Ufa, Khusainiya in Orenburg, Rasuliya in Troitsk, Nizamiya in Astrakhan, and Bubi in the village of Izh-Bobya. Leading representatives of Jadidism are Yu. Akchura, G. Barudi, J. Validi, G. Bubi, F. Karimi, S. Maksudov, R. Ibragimov and F. Tuktarov.

CHAPTER 3

Oriental Studies at Kazan University and Study of the Historical and Cultural Heritage of the Asian Peoples

Ramil Valeev

In the 19th and the early 20th centuries, Kazan University had become the leading European and Russian center for the study of the multifaceted historical and cultural heritage of the Turkic, Mongolian-speaking and Finno-Ugric peoples of Russia and countries of the Near and Middle East, Central and East Asia.

Sources of the official teaching of Oriental languages in Kazan are associated with the First Kazan Gymnasium (1758), where, starting in 1769, a Tatar language class was set up due to the geographic location and availability of Turkic and Tatar manuscripts. The renowned Turkologist A. Kononov, in stressing the start of teaching the Tatar language in Kazan in the late 1760s, stated: 'These are the years that should be considered the beginning of the scientific stage in the history of domestic Turkology, preceded by a centuries-long period of practical familiarization of the Russians with Turkic languages' [Kononov, 1982, pp. 201].

For many years, the Tatar language was taught by the well-known educators Sagit Khalfin (1732–1785), the author of 'The Alphabet of the Tatar Language...' (1778) and 'Russian-Tatar Dictionary', Iskhak Khalfin (died in 1800) and Ibragim Khalfin (1778–1829) [Khanbikov, 1968; Mazitova, 1972; Mikhaylova, 1972, and others]. The First Kazan Gymnasium became a large secular educational establishment in Russia where Oriental languages were taught. It served as the training and teaching base for the establishment and development of Kazan University Oriental Studies in the first half of the 19th century.

The First Kazan Gymnasium and the category of Oriental language arts of Kazan University prior to its closing in 1854/1855 prepared Oriental language teachers for gen-

eral education institutions and for translators employed by the authorities responsible for eastern regions of the Russian Empire. In the 1820s to the first half of the 1830s, this was where the system of teaching Asian languages was first developed—in 1822, the study of the Arabic and Persian languages was first officially introduced (taught by F. Erdman; in 1826, Mirza Kazembek was appointed to the position of teacher of Muslim languages; in 1827 and 1833, I. Vernikovskiy taught Arabic; in 1828, A. Onisiforov became a teacher of the Tatar language; in 1833, K. Voigt and A. Popov were approved as teachers of the Persian and Mongolian languages; in 1835, Mirza Kazembek started teaching the Turkic-Tatar language; in June 1835, Nicholas I of Russia issued an edict on including teaching of the Arabic, Persian, Tatar and Mongolian languages in the curriculum of Kazan Gymnasium for the purpose of training translators for the Empire's departments, etc. [Kulikova, 1994, p. 347–348]. These official activities expanded the sphere of Oriental languages and determined the status of the main secondary educational establishment for Oriental studies in Russia in the first half of the 19th century. In his report, a trustee of Kazan Teaching District, M. Magnitsky (26 May 1825), wrote to the Ministry of National Education: '... Not only state-funded students are taught the Tatar language in the gymnasium, but also children who are sent there from remote places, for example from Siberia, Astrakhan, etc., to prepare these young people for the position of translator and for other positions requiring knowledge of Oriental languages, so now, instead of 5 or 7 people as before, he manages 35 people of the Mohammedan and Greek-Russian faith...

Kh. Fren.

A. Kazembek.

F. Erdman.

[Russian State Historical Archive, f. 733, inv. 40, file 182, s. 1–1reverse].

The Ministry of National Education also recognized 'as useful... the teaching of the following languages in Kazan Gymnasium: Arabic, Persian, Tatar and Mongolian'. Three categories were created in 1836: 1) Arabic and Persian, 2) Turkic-Tatar and Persian, 3) Mongolian and Turkic-Tatar; teachers were appointed for study of the four Asian languages; and for the practical study of languages, supervisors were appointed 'from among non-Christians who were fluent in these languages'; the gymnasium accepted the following 'non-Christians as state-funded students of the gymnasium in Oriental languages: Tatars, Buryats and others'. With the approval of the supervisor of the teaching district, the best students were given an opportunity 'to enter a university, with a state stipend, for further improvement of their knowledge of Oriental languages'; out of 80 state-funded students of the gymnasium, only 14 were able to study Oriental languages [Complete Code of Laws of the Russian Empire–2, Vol. 11, sect. 1, No.8742; National Archives of the Republic of Tatarstan, f. 92, inv. 1, file 3833, s. 75]. This procedure remained in place until the 40s of the 19th century. Soon, in addition to Oriental languages, they started teaching Chinese (from 1838), Armenian (from 1842) and Manchu (from 1845). Between 1800 and 1841, nearly 300 people studied Oriental languages

at the gymnasium [National Archives of the Republic of Tatarstan, f. 92, inv. 1, file 5357, s. 18–22 reverse].

As a whole, the period from the middle to the second half of the 19th century in Russian Oriental Studies is associated with the restriction and cessation of study of Oriental languages in secondary general education establishments of Russia [Russian State Historical Archive, f. 733, inv. 46, file 4; s. 48, f. 212; National Archives of the Republic of Tatarstan, f. 92, inv. 1, files 6721, 7267, 8759, 15877]. The project for centralizing education in Oriental studies and sciences in Saint Petersburg and its implementation in the Department of Oriental Languages at the university in 1854/1855 affected the system of teaching Asian languages in Russian gymnasiums and schools.

By the Mid-19th century, the category of Oriental language arts of Kazan University had become a major center of university-based Oriental studies in Russia and Europe. The initial stage of Kazan University Oriental studies covers 1804–1827. The University Charter dated 5 November 1804 provided for a professor of Oriental languages and a lecturer in the Tatar language in the Department of Language Arts [Complete Code of Laws of the Russian Empire–1, Vol. 28, No.21500; Periodicheskoe, 1805, No.11, pp. 329–405; Kulikova, 1994, p. 216]. In 1807, Kh. Fren (1782–1851), Doctor of Philosophy and professor of Rostok

University, was appointed as a full professor of Oriental language arts at Kazan University (1807–1817) [Kulikova, p. 218]. These official activities laid the foundation for the development of Kazan University Oriental Studies in the 19th century.

The first experience of teaching Oriental languages in Kazan University was the Tatar language, which was taught to students under the direction of I. Khalfin (1778–1829). In August 1805, the first supervisor of the Kazan Teaching District (1803–1812), S. Rumovsky (1734–1812), instructed the director of the First Kazan Gymnasium an University, Yakovkin, to select 5 talented young men for further study of the Tatar language. I. Khalfin was also recommended to start developing a new grammar of the Tatar language [Zagoskin, 1902, p. 221]. In 1809, the university printing house published the 'Alphabet and Grammar of the Tatar Language, with the Rules of Arabic Reading' by I. Khalfin. Two years later, he was elected as a lecturer of the Tatar language at Kazan University. In August 1823, the University Council elected him as an adjunct professor of Oriental language arts.

The period from the early 1820s was the most difficult one in the development of teaching Oriental languages in universities: there was a lack of students in the Department of Oriental Languages, and what is more important, there were no teachers or a goal-oriented teaching process, the question of terminating the teaching of Oriental language arts was even raised, and the methods and management of teaching Asian languages had not been developed. The well-known university revision of 1819 by M. Magnitsky significantly restricted the teaching of Oriental languages.

The second, more fruitful, stage the development of Kazan University Oriental Studies occurred in 1827–1846. According to the provisions of the 'General Charter of Imperial Russian Universities', in 1835–1837, the principal courses in Oriental languages—Arabic, Turkic-Tatar, Persian and Mongolian—were united in the category of Oriental language arts of the Department of Philosophy [Shofman, Shamov, 1956, p. 423]. The category of Oriental lan-

guage arts of Kazan University in 1828–1854 was based on the Arabic-Persian (1828), Turkic-Tatar (1828), Mongolian (1833), Chinese (1837), Sanskrit (1842), Armenian (1842) and Kalmyk (1846) Chairs.

University-based Oriental studies in Kazan in the 1820s to 1840s included the organization of research trips to the countries of the Muslim East and Central Asia. Along with practical classes for students, conducted by native speakers of living Asian languages, the direct study of the history, languages, culture, day-to-day life and customs during research trips and travel became the characteristic feature of the Kazan school of Oriental scholars in the 19th to early 20th centuries. There were research trips for students of Oriental language arts at the University: O. Kovalevsky and A. Popov to Central Asia (1828–1833), V. Vasilyev to China (1840–1850), and I. Berezin and V. Dittel to the Near East (1842–1845) [National Archives of the Republic of Tatarstan, f. 92, inv. 1, files 2237, 4814; f. 977, inv. Sovet, file 1266, vol. 1; file 1267, vol. 2; file 2283; 2450; inv. Rektor, file 654; 837; Russian State Historical Archive, f. 733, inv. 42, files 90, 306; Mazitova, 1972, pp. 71–96; Shamov, 1983, pp. 19–68]. The tradition of research trips to Eastern countries was preserved and developed in Kazan Oriental Studies in the latter half of the 19th and early 20th centuries.

In 1855, Kazan University stopped teaching Oriental languages; professors and teachers V. Vasilyev, I. Berezin, N. Sonin, M. Navrotsky and students of the Oriental Department of the university were transferred to the Department of Oriental Languages of Saint Petersburg University, and the principal Oriental collections of the teaching library and the coin cabinet of Kazan University were also transferred there.

In the first half to the Mid-19th century, the Kazan University Department of Eastern Philology became a teaching and research center for the study of the history and culture of Islamic nations of the East. This period was associated with the origin and development of Turkic, Iranian, Arabic and Islamic Studies. Countries of the foreign Muslim world—the Ottoman Empire, Persia, Arab East and regions where

I. Berezin.

K. Fuchs.

I. Gotwald.

Islam had traditionally spread in the Russian empire (the Volga and Ural regions, Caucasus, Central Asia and Crimea)—became the research focus in the works and articles of Kazan University Orientalists Kh. Fren, I. Khalfin, F. Erdman, A. Kazembek, S. Nazaryants, I. Berezin, V. Dittel, I. Gotwald and others. Their works established a defined academic tradition, which developed in Russian centers of Oriental Studies in the second half of the 19th century.

Research into the history and culture of peoples of the Muslim world was concentrated in areas such as preparing and publishing educational programmes, books, anthologies and dictionaries; the compilation of a reserve of Oriental manuscripts and books; the collection, study and publication of written and physical Eastern historical sites and sources; translations of Eastern authors; research trips to the Muslim East; original philological, historical, cultural, natural geographic, archaeological and ethnographic publications, and so on [Is-toriya, 1990, p. 137]. These academic pursuits found focus in the educational and research activities of the departments of Eastern philology, Arabic-Persian, Turkic-Tatar and Armenian languages. The academic research and instructional activities of Kazan University Oriental Studies scholars are notable for their variety and close connection with a range of related disciplines and Orientalists from other centres of academic Oriental studies. Until the Mid-

19th century, most of the teachers and Orientalist scholars at the university were alumni of the Department of Eastern Philology. Russian academic Oriental studies found a solid base in the works of the first generation of Russian Oriental Studies scholars.

In the 1820s–1850s, professors of the Department of Muslim languages prepared and published a series of instructional programmes and textbooks, anthologies and dictionaries [Berezin, 1846; 1853; 1857; 1862; 1876; 1890; Kazembek, 1839; 1846; Makhmudov, 1857; Khalfin Ibragim, 1809 and others]. One of the first educational programmes for teaching Arabic at Kazan University was compiled in October 1807 by Kh. Fren, a professor from the School of Oriental Languages [Mazitova, 1972, p. 23].

Textbooks and anthologies by I. Khalfin, A. Kazembek and I. Berezin also played a formative role in the history of Russian Turkic, Iranian and Arabic studies programmes. The most talented students accepted to the School of Arab-Persian and Turkic-Tatar Literature contributed to the compilation of educational publications.

In 1838 M. Pervukhin, a senior teacher of the First Kazan Gymnasium, compiled the 'Grammar and Syntax of the Arabic Language'. M. Kazembek published the 'Grammar of the Turkic-Tatar Language'—one of the planned educational publications and a well-known

study into the history of Turkology. The first draft of the grammar by M. Kazembek with his notes and additions was written on the basis of the well-known 'Grammar of the Turkiv-Tatar Language' by Zhober, translated by I. Berezin [Mazitova, 1972, s. 42–42 reverse].

The academic tradition of research, collection and later textual studies of Oriental manuscripts and texts was developed extensively in the classic, university-based Oriental studies in Kazan. Professors and teachers of the University's Department of Eastern Languages actively stocked and expanded the University Library with Islamic manuscripts and Russian and West European literature on Oriental Studies [National Archives of the Republic of Tatarstan, f. 92, inv. 1, file 1901, 2301, 2319; 2711, 4527, 4719, 5472, 5871, 6157, 6747, 7997 and others]. From 1807–1818, the University Library purchased more than 70 books and manuscripts in Arabic, Syriac, Hebrew, Persian, Turkish and Tatar [National Archives of the Republic of Tatarstan, f. 92, inv. 1, file 197, 250, 765; Mazitov, 1972, p. 54].

The latter half of the 1820s to the first half of the 1850s was marked by significant acquisitions, cataloging and study of the written sources of Muslim peoples of the East and Russia.

The two most notable research fields in the Muslim world and the East in general in Kazan University Oriental Studies of the 19th century were: first—direct familiarisation with and study of the history and culture of Asian peoples; and second—instruction in Oriental languages and the history of Asia in university centres, and research on the written and material heritage of the peoples of Asia.

The research trips of members of the Department of Eastern Philology I. Berezin (1818–1896) and V. Dittel (1816–1848) in 1842–1845 to the countries and regions of the Muslim East—the Caucasus, Iraq, Iran, Syria, Palestine, Egypt and Turkey—was extremely important in the history and culture of the peoples of Russia [Shofman, Shamov, 1956, pp. 429–430; Mazitova, 1972, pp. 86–96; Dantsig, 1973, pp. 200–203 and others]. The living, distinctive and unique East, already well-known through personal observations and

impressions, was introduced in the university-based Oriental studies of the first half of the 19th century.

Various Orientalist materials from Russian university centres marked the appearance of new information and knowledge about Asian peoples, fundamental changes in the status of the East from a historical perspective, and the formation of a paradigm of Russian classical Oriental studies. Mongolian, Kalmyk, Chinese, Manchu and Sanskrit studies were also established and developed at Kazan University. Thanks to the works of Orientalists such as O. Kovalevsky (1800–1878), A. Popov (1808–1865), Archimandrite Daniil (1798–1871), I. Voytsekhovskiy (1793–1850), V. Vasilyev (1818–1900), P. Petrov (1814–1875), F. Bollenzen (born around 1813) and others, the teaching and study of the languages, history, ethnography and cultural heritage of the peoples of Mongolia, Kalmykia, Buryatia, China and India became a regular and intensive component of Oriental studies in Kazan.

The sources of university-based Mongolian studies in Kazan were closely connected with the names of O. Kovalevsky and A. Popov from the Department of Eastern Philology [Shamov, 1983, p. 3], who were appointed junior research assistants of the Mongolian language in July 1833 [National Archives of the Republic of Tatarstan, f. 92, inv. 1, file 3829, s. 7–8]. They played an extremely significant role in the teaching of the Mongolian language in the First Kazan Gymnasium and the university, providing the library with manuscripts and works, preparing and publishing educational materials, devising curricula, and going on research trips to Siberia, Buryatia, Mongolia and China. In Kazan, they published works on the languages, ways of life, customs, history, ethnography and religion of the Mongolian-speaking peoples of Asia and Russia [Kovalevsky, 1834, p. 263–292; 1834a; 1835; 1835a; 1837; 1836; 1837a; Popov, 1836, part I–II; 1839, part 22, dept. 2; 1847; 1850, part 67 and others].

In 1835 the university acquired O. Kovalevsky's collection. This collection, consisting of 1,272 titles, included Chinese, Manchurian and Mongolian works and ethnographic col-

Imperial Kazan University. Lithography of V. Turin. 1834.

lections (lamas' costumes, Buddhist deities, coins, paintings, etc.) [National Archives of the Republic of Tatarstan, f. 92, inv. 1, file 4251, s. 6–17].

The Department of Mongolian Language of Kazan University marked the official start of Mongolian studies in the university centres of Russia and Europe on the foundation of practical and academic Mongolian studies first established in the 17–18th centuries.

The development of university-based Chinese, Manchurian and Tibetan studies in Kazan until 1855 was closely associated with members of the famous Ecclesiastical Mission in Beijing Archimandrite Daniil (1798–1871, Beijing, 1821–1830) and I. Voytsekhovskiy (1793–1850, Beijing, 1819–1831), a student of the Department of Oriental Studies and a member of the mission in 1839–1850. V. Vasilyev (1818–1890). The linguistic, literary, historical and ethnographic works of these scholars during the Kazan phase of their work, both published and unpublished manuscripts, significantly contributed to the study of the history and culture of the peoples of Central Asia [Daniil (Sivillov), 1837; 1837a; 1838; Department of Manuscripts and Rare Books of the Scientific Library of Kazan State University, No.4478; No.4485; Vasilyev, 1851, No.50; 1852, Vol. 113; 1852a, part 73; 1855, part 15; 1857, part 1; 1857a, Vol. 9, Book 2; Russian bulletin, 1857, Vol. 11, p. 309]. For example, in October 1839, Archimandrite Daniil submitted the 'Chinese Anthology' with a dictionary for publication [National Archives

of the Republic of Tatarstan, f. 92, inv. 1, file 5007, s. 1–2 reverse]. I. Voytsekhovskiy completed the compilation of a 'Chinese-Manchurian-Russian Dictionary' in Kazan [Istoriya, 1990, p. 124, 274]. The university's School of Chinese Language and Literature (1837), which was reorganised in 1844 into the School of Chinese Manchurian Literature, and the research of Kazan

Orientalists formed both the source and further development of the university tradition of the study of Far Eastern civilizations and states in Russia.

The teaching of Sanskrit, compilation of literature and manuscript collections, and study of Sanskrit texts in 1842–1856 were carried out mainly by P. Petrov (1841–1851) and F. Bollenzen (1852–1856). Certain educational and linguistic areas were associated with their names, mainly the teaching and studying of Sanskrit, preparation and publishing of programmes, catalogs and Sanskrit texts, etc. [Petrov, 1842, Book 2, p. 77–95; 1842, part 33; 1844; 1845, part 48, No.11; 1846; 1849, No.18; 1846]. The opening of the first domestic Department of Sanskrit Literature at Kazan University in 1842 marked a new period in the development of Sanskrit and Indian studies in Russia.

The academic tradition of Sanskrit studies at Kazan University was preserved in the latter half of the 19th and early 20th centuries. Later on, the teaching of Sanskrit was also crucial to the pedagogical and academic careers of scholars from the Kazan linguistic school—I. Baudouin de Courtenay, N. Krushevskiy, V. Bogoroditskiy and others. They taught courses in comparative grammar and Sanskrit in the Departments of Classical, Slavic and Russian Philology in the School of History and Philology. During that period, the study of Sanskrit lost its prominent position and became a secondary discipline of general language studies and comparative philology [National Archives of

O. Kovalevsky.

N. Katanov.

N. Ashmarin.

the Republic of Tatarstan, f. 977, inv. HFF, file 1370, s. 4; National Archives of the Republic of Tatarstan, f. 977, inv. HFF, file 1642, s. 1–5].

Unfortunately, after the 'frivolous destruction' (V. Bartold) of the Department of Oriental Studies at Kazan University, Oriental studies as a discipline in university education and research in Kazan no longer enjoyed full status compared to other Oriental centres in Russia.

In the 60s–80s of the 19th century the Ministry of National Education attempted to restore Kazan's academic Oriental studies with the help of certain organisational maneuvers in the university. These innovations primarily concerned the introduction of the Arabic, Persian, Turkic-Tatar and Finno-Ugric languages in the School of History and Philology [Russian State Historical Archive, f. 733, inv. 48, file 91; National Archives of the Republic of Tatarstan, f. 92, inv. 1, file 7754; f. 977, inv. HFF, file 1249]. The practice of teaching Oriental languages only to 'interested students' from the 1880s to the early 20th century did not facilitate a complete restoration of the uniquely complex historical, philological and historiographic heritage of study in Kazan University Oriental Studies.

In the 1860s and early 1870s, former graduate of the Oriental Department of Kazan University I. Kholmogorov (1818–1891) remained and taught Arabic and Persian. During those same years, N. Ilminsky (1822–1891) also taught (up to 1872) a course in the Turkic-Tatar language at the university.

I. Kholmogorov's working trip to Persia in 1867–1868 was a continuation of the tradition of research trips to the East by professors from Kazan University's Department of Oriental Languages [National Archives of the Republic of Tatarstan, f. 977, inv. HFF, file 864, s. 1]. He purchased various handwritten and printed publications, as well as ethnographic and numismatic sources, for the university's collection [National Archives of the Republic of Tatarstan, f. 977, inv. HFF, file 864, s. 3–12].

At the end of the 1860s and early 1870s, due to the resignation of I. Kholmogorov (1868) and the appointment of N. Ilminsky as the Head of the Kazan Seminary for Non-Russian Teachers (1872), teaching Muslim languages at the university was temporarily suspended [National Archives of the Republic of Tatarstan, f. 977, inv. IFF, file 897; f. 92, inv. 1, file 10685].

In January 1871, N. Ilminsky presented a report to the School of History and Philology, where he emphasised the importance of inviting Turkologist V. Radlov 'to fill a current vacancy at Kazan University for one of two teachers of Oriental languages from assigned staff' [National Archives of the Republic of Tatarstan, f. 977, inv. HFF, file 897, s. 22]. Upon arrival in Kazan, the researcher accepted the position of Inspector of Tatar, Bashkir and Kyrgyz schools in the Kazan Educational District [Bio-bibliography, 1989, p. 103–104].

The 1880s marked a new period in Oriental studies disciplines at the University and in the

development of Oriental studies in Kazan in general. This most important period, confirmed by original materials, continued up to 1917–1918. During these years, I. Gotwald (1813–1897), V. Radlov (1837–1918), N. Krush-evsky (1851–1887), I. Baudouin de Courtenay (1845–1829), M. Veske (1843–1890), N. Katanov (1862–1922), N. Anderson (1845–1905), V. Bogoroditsky (1857–1941), I. Smirnov (1856–1904), N. Ashmarin (1870–1933), N. Nikolsky (1878–1961) and Ya. Kalim (born in 1884) and others played the most significant roles in the revival of Oriental studies at the University. Oriental studies in Kazan at the end of the 19th to the first decades of the 20th century and close academic contact with Russian and foreign Orientalists were both inextricably linked with these individuals.

The restoration of Oriental Studies at Kazan University in the mid 1880s, specifically Finno-Ugric and Turkic-Tatar philology, owes its success to Professor I. Baudouin de Courtenay. His most prominent contribution was the development of Turkic and Finno-Turkic philology 'that would allow Kazan University to take the lead in linguistic and ethnographic research into the eastern regions of Russia' [Biobibliograficheskij, 1989, p. 2]. He made an offer to V. Radlov to head the department of 'Turkic languages'. But the election of V. Radlov as a full Academician of the Literature and History of the Asian Peoples (June 1884) prevented the implementation of important and promising measures for the inclusion of Oriental languages, especially Turkic, at the university. The revival of the tradition of Turkological research at the university started only ten years later thanks to N. Katanov, a scholar of the Arabic, Persian, Turkic and Tatar languages from the Department of Oriental Languages of Saint Petersburg University [Gordlevsky, 1922, pp. 448–451; Ivanov, 1962; Iskhakov, 1960, p. 87–90].

At the end of the 1880s the university started teaching Finno-Ugric languages, which was associated with the pedagogical activities of M. Veske, PhD, a lecturer in the Estonian language from Dorpat University. From 1887–1890 M.

Veske taught Finnish dialects. He was a scholar of the Leipzig linguistic school in Kazan Oriental Studies, and received European training in comparative historical linguistics. During his Kazan period of research and teaching activity, he published a range of works on current issues in Finno-Ugric studies [Veske, 1889; 1890]. Finno-Ugric studies experts from Kazan University during the 1880s–1890s embarked on ethnographic research trips to Nizhny Novgorod and Simbirsk guberniyas (M. Veske) and Vyatka, Perm, Nizhny Novgorod and Penza guberniyas (I. Smirnov) [National Archives of the Republic of Tatarstan, f. 977, inv. HFF, file 1500, 1530].

During the last quarter of the 19th century to the early 20th century, the teaching and study of the history, language and culture of the Finno-Ugric people in Eurasia were carried out by M. Veske, N. Anderson and Ya. Kalim, scholars of European and Russian Finno-Ugric studies. They were prominent members of one of the first domestic departments of Finno-Ugric philology, established at Kazan University in the 19th century. Historical and philological issues of the Finno-Ugric peoples of the Volga and Ural regions were the focus of attention of the Kazan school of Orientalists in the late 19–early 20th centuries. Kazan researchers and teachers made major contributions to elucidating current issues in the relations of the Finno-Ugric, Eastern and Indo-European language families and groups, and the history, ethnography and archeology of the Finno-Ugric peoples in the Volga-Ural region. The origins of domestic Finno-Ugric studies—a complex discipline encompassing the languages, history, ethnography, folklore and archeology of the Finno-Ugric peoples—were also directly associated with Kazan educational institutions and societies. Researchers from Kazan studied Finno-Ugric languages, along with the ethnography, folklore and history of the Mordvin, Mari and Udmurt peoples of the Volga-Kama Region [Veske, 1889; 1890; Vikhman, 1893; Katanov, 1904, No. 9, p. 133–134; 1904a, vol. 71, Book 9, p. 48–51; Smirnov, 1869].

An entire epoch in the history of Kazan Oriental studies from the 1890s to the first two decades of the 20th century was associated with the teaching and research activity of Doctor of Comparative Linguistics N. Katanov (1862–1922), whose multi-faceted approaches to Oriental studies contributed to the preservation and development of Oriental education and research in Kazan.

In the first decade of the 19th century, Turkic studies at Kazan University were led by S. Malov, a graduate of the Department of Oriental Languages at Saint Petersburg University (1909).

In Kazan in the latter half of the 19th to early 20th centuries, higher educational institutions continued to teach Oriental languages and host orientalist societies, with the main disciplines and research activities of Kazan Orientalists being both preserved and developed. Kazan Orientalists collected and studied historical, linguistic, archaeological and ethnographic materials related to the peoples of the East. The scientific foundation of Oriental research in Kazan formed in the first half of the 19th century and from that point on continued to develop.

Scientific societies played an extremely significant role in the history of Oriental studies in Russia from the 19th to early 20th centuries. I. Gotwald, G. Sablukov, Bachelor N. Ilminsky and the University's Tatar language instructor M. Makhmudov, established the Oriental Society in Kazan in 1855 [National Archives of the Republic of Tatarstan, f. 968, inv. 1, file 1, s. 4]. Its mission statement was defined as 'research and the revelation of the East in philology, jurisprudence and history' [National Archives of the Republic of Tatarstan, f. 968, inv. 1, file 1, s. 4]. Plans to achieve this goal centered around resolving a number of urgent research tasks: '... through the publication of original texts, namely, original works in the Chagatai language, along with popular stories, songs, sayings, riddles and so on in Tatar, Chuvash and other languages; through translations of Muslim and other books and articles into Russian; through the compilation of a Dictionary and Grammar of the Tatar-Finnish languages, and finally,

through independent studies based mainly on Eastern data' [National Archives of the Republic of Tatarstan, f. 968, inv. 1, file 1, s. 4].

The Oriental Society in Kazan became one of the first provincial public scientific organisations for Oriental studies established in Russia in the 19th century. During its sessions, one particularly well-known work on Tatar linguistics by M. Makhmudov [Makhmudov, 1857], and the issue of research into the Tatar vocabulary, 'which should be drafted according to the present needs of science...' were considered and discussed [National Archives of the Republic of Tatarstan, f. 968, inv. 1, file 1, s. 2]. This first valuable initiative of Kazan Orientalists in the last quarter of the 19th century maintained its energy through the various activities of the Society of Archaeology, Ethnography and History at Kazan University.

The importance and overall volume of the Orientalists' research work occupied a very special place in the activities of the Society of Archaeology, Ethnography and History during the formation and development of unique research associations. The origin of the Society of Archaeology, Ethnography and History is best known through Russian Orientalists I. Berezin (1818–1878), V. Velyaminov-Zernov (1830–1904), I. Gotwald (1813–1897), N. Ilminsky (1822–1891), P. Lerkh (1828–1884), V. Radlov (1837–1918), V. Rozen (1849–1908), G. Sablukov (1804–1880), V. Tiesenhausen (1825–1902) and others. They contributed to the preparation and organisation of the 4th Archaeological Congress (Kazan, 1877). At the request of the Congress, the issue of centralising research on the vast region of eastern Russia (the Volga-Kama Region, Siberia, Central Asia and the Far East) was resolved through the establishment of the Society of Archaeology, Ethnography and History.

During subsequent periods in the Society's history, its honorable, fellow and staff members included famous Russian Orientalists such as V. Vasilyev (1818–1900), V. Rozen (1849–1908), G. Potanin (1835–1920), V. Nalivkin (1852–1918), N. Ostroumov (1846–1930) and others. The intelligentsia of the peoples of the Volga River made up the Society's members, most

notably Sh. Mardjani, K. Nasyri, G. Akhmarov, A. Ilyasov, Sh. Akhmerov, S. Aitov, M. Zaitov, M. Yusupov, N. Zolotnitsky, N. Nikolsky, V. Magnitsky, N. Ashmarin and other prominent figures in the science and culture of the Tatar, Chuvash, Mari and Mordvin peoples.

The research and promotional activities of the Society precisely reflected the current stage in the study of the history and culture of the peoples of the East of Russia (Volga-Ural, Central Asia and Siberia). Eastern countries were less represented in the activities of the Society and its publication, 'Reports of the Society of Archaeology, Ethnography and History'⁵.

The three most significant periods of activity of the Society of Archaeology, Ethnography and History at Kazan University should be pointed out: 1) the late 1870s—the middle of 1890s; 2) the middle of 1890s–1917; 3) 1917–1929.⁶ During these periods, oriental studies and various fields on the study of historical and cultural heritage of the peoples of the Russian East played an integral part in the scientific work of the Society of Archaeology, Ethnography and History. Its scientific and educational activities reflected the close relations with Russian and foreign oriental institutions and

associations of the late 19—the first decades of the 20th century. Kazan orientalist and active members of the Society (I. Gotwald, V. Radlov, I. Baudouin de Courtenay and others) took part in the work of the international Congresses of Orientalists [National Archives of the Republic of Tatarstan, f. 977, inv. HFF, file 1187, 1188, 2175, 2176]. In the period from 1878 to 1904 'The Society was related to 167 individuals and institutions in Russia and 44—from abroad' [Izvestiya, 1905, Vol. 21, Ed. 2, p. 26].

In 1870s—the first half of the 1890s scientific research covered the history and culture of the peoples of the Volga and Ural Regions. In 1897 the society's new charter included the regions of Central Asia and Siberia.

From 1896–1914 N. Katanov, the prominent orientalist and traveller, a researcher of languages, history, ethnography and culture of Turkic-speaking peoples, was the secretary (from 1896) and the Chairman (from 1898) of the Society of Archaeology, Ethnography and History.

N. Katanov's published and specially archived legacy [Valeev, Tuguzhekova, 2008–2009; National Archives of the Republic of Tatarstan, f. 969, inv. 1–2] is a vivid testimony of the fruitful and versatile organisational and scientific work of the Society in the field of oriental studies.

The most important area of oriental research was the history and culture of the Turkic-speaking and Finno-Ugric peoples. They paid great attention to the study of history and ethnography of peoples of the Russian East—the Kirghiz, Kazakh, Yakuts, Mongols and others. Ancient history, material and written sources on the history and culture of peoples, their customs, manners, folklore, legends and so on manifested themselves in the research work of members of the Society of Archaeology, Ethnography and History.

The scientific and educational research of teachers and scientists of the First Kazan gymnasium and the university on the history and culture of the peoples of the East became a phenomenon in Russian culture and science. The scientific and pedagogical work of the Ori-

⁵ In 1878–1929, 34 volumes of 'Izvestiya OAIE' were published. Before 1892 three issues of 'Izvestiya' were published, and subsequently six issues per year were published. Original and translated articles and works were published in editions dedicated to the problems of archeology, history, ethnography, and culture of Russia's Eastern peoples; news and chronicles of the discoveries, excavation, archaeological, anthropological, archaeographical and ethnographic expeditions of Russian and foreign Orientalists, bibliographic reviews of books and sites on oriental studies, etc. To this day 'Izvestiya' is a unique publication and an historical resource of Middle Eastern research in Russia and Europe. In 1903 'Izvestiya' was distributed to 175 addresses in Russia and 40 addresses abroad [Izvestiya, 1904, Vol. XX. Annex, pp. 17–19].

⁶ In 1929–1930 the biggest historical Oriental Society of Archeology, History, and Ethnography at the University of Kazan was combined with the Society for the Study of Tatarstan, thereby ending its independent existence. The Scientific Society of the Study of Tatars (1923–1929) also played a crucial role in the development of Soviet Oriental studies and has become a major centre for Oriental studies in the Volga and Ural Regions [Khabibullin, 1979, pp. 12–14].

entalists of the university and other centres of Kazan significantly contributed to the further development of Oriental studies as a prospective humanitarian education and science. The study of Eastern languages in the gymnasium and the Department of Eastern Philology of Kazan University marked the beginning of systematic and comprehensive oriental studies education in Russia.

University oriental studies education in Kazan and in Russia as a whole became the foundation for the development of scientific and applied sciences about the East and a significant direction for the socio-political and general cultural activity in all spheres of Russian society.

Unfortunately, the closure of the Department of Eastern Philology at the university interrupted the research-scientific and pedagogical tradition and comprehensive and systematic study of historical and cultural traditional societies and states of Islamic East, Central and Southern Asia at Kazan University.

During the 19–early 20th century important organisational, research and socio-cultural changes occurred in oriental studies at Kazan University. This period, despite the critical milestones in the history of oriental studies at Kazan University, was characterised by progress and its influence on the development of humanitarian education and science.

CHAPTER 4

The Study of the History and Culture of the Tatars in the Synodal Institutions of Kazan

Mars Khabibullin, Radik Iskhakov

The history of studying the ethnography, linguistics and religious beliefs of the Tatars at Synodal educational establishments of Kazan is inextricably related to the missionary activity of the Russian Orthodox Church in Eastern Russia, a policy of religious unification, adopted by the Russian State towards heterodox subjects. Its origins date back to the activity of schools for the newly-baptised, established in the 18th century, for teaching the basics of Orthodoxy to children of non-Russian peoples in the region, who adopted Christianity. In these schools, for the first time in the history of the Orthodox schools, classes in Eastern languages were introduced, scientific research in the field of Turkic studies and comparative philology were made. 'Persons of Tatar origin' appeared among the Tatar language teachers of schools for newly-baptised [Nikolsky, 2007, pp. 227–229, 321].

With the closure of schools in 1800 for the newly-baptised, had implications of great significance for fluency in the Tatar language, which was a common language of cultural communication for local Turkic and partially for the Finno-Ugric peoples, its teaching was implemented in 1797 by the Kazan Spiritual Academy (old). A special class was opened there—the Department of Tatar language, led by a priest from the village of Sontury from Tsarevokokshaysk uyezd Kazan guberniya. Alexander Alexandrovich Troyansky. A native of the baptised Tatar village of Apazovo (Kazan uyezd), A. Troyansky while still a child, lived among the Tatars, learnt their language, he acquired the language 'in the same pure and fluent manner, as a native' [Opy'ty', 1883, p. 168]. Later he continued to improve his knowledge

of the language, learning from the Tatars-Muslims living in the city.

During his work in the Kazan Spiritual Academy, A. Troyansky asserted himself as a talented teacher and scientist-orientalist. In the course developed by him it was proposed to study the writing system and grammatical basis of Tatar language, parses of the sentences, translation of Christian prayers into Tatar. Without having any academic basis, the students studied the above-mentioned disciplines according to handwritten works and teacher's notebooks and from 1814—according to his published 'Short Tatar grammar' [Pokrovsky, 1900, p. 584]. In 1820 in order to help students, A. Troyansky prepared for publication the two-volume 'Dictionary of the Tatar Language and Some Commonly Used Arabic and Persian sayings', published in Kazan in 1822 with a circulation of 1200 copies [National Archives of the Republic of Tatarstan, f. 11, inv. 1, file 102, s. 472–475].

Apart from the preparation of priestly staff, who have knowledge of Tatar language, in the Kazan Spiritual Academy (in 1818 was transformed into the Seminary and subordinate to the government of Moscow Spiritual Academy) they made attempts to encourage teaching pupils from other regions. In 1821 diocese management sent to study at Kazan Peter Listov and Peter Vvedensky (from Nizhny Novgorod Seminary), Timofey Uglyansky and Philip Kamensky (from Tambov Seminary), Timofey Turchaninov and Egor Pechenezhsky (from Penza Seminary) [National Archives of the Republic of Tatarstan, f. 11, inv. 1, file 181, s. 472–475], in 1822—Vasily Paradoksov and Egor Revyev (from Simbirsk Spiritual School),

Mikhail Stefanov, Nikolay Yakimov (Vyatka Seminary) [Pokrovsky, 1900, p. 602], in 1831—Adrian Kostylev, Matfey Bogolyubov, Vasily Unsvitsky, Georgy Ilyin (from Orenburg Seminary) [National Archives of the Republic of Tatarstan, f. 116, inv. 1, file 111, s. 1]. Later these individuals became teachers of the Tatar language in seminaries and schools in their native dioceses.

Despite the attempt to create a stable system for teaching the Tatar language, teaching Islam and the ethnography of Tatars, in the spiritual and educational institutions of Kazan of the first third 19th of the century this task was not resolved. In 1824, after the death of A. Troyansky in the Kazan Seminary an overt crisis in the study of these disciplines was noted. For a number of reasons A. Troyansky did not manage to establish his own school of oriental studies. His successors in the Department of Tatar language did not possess the scientific or pedagogical talent of their teacher. A significant reason for the decline in the study of oriental disciplines during this period was their unofficial status. They were not obliged to attend and success in their studies did not provide any advantage with regards to priestly appointments. Teaching local languages had not been foreseen in the Charter of Seminaries, that's why periods for their study were assigned to after school hours. While they planned to assign two hours per week for studying the Tatar language, in fact 'classes were confined to one hour on Saturday afternoon, when the majority of seminary students were resting' [Kolesova, 2000, p. 38]. This was obviously not enough for studying these disciplines, that's why even the few seminary students, who attended classes during two years, at the end of the course could not speak fluently in Tatar. It should be added that the teachers of Tatar classes were prepared according to the same system as usual seminary students, that is why their level of training was only slightly different from the level of their pupils.

A new page in the history of studying Eastern languages, history, ethnography, Tatar language and languages of other non-Russian peoples of the Russian Empire occurred in the

1840s–1850s, when the Spiritual Academy was re-established in Kazan (1842), the departments of oriental languages were open under it (1845) and also special missionary departments (1854). The goals and objectives put before the Kazan Spiritual Academy and also specific character of this institution demanded attracting talented instructors. The administration of the Kazan Spiritual Academy sought to tie state policy on the Christianisation of non-Russian peoples with an active study of its research. That's why we can say that in missionary departments of the Kazan Spiritual Academy the learning process of religious beliefs and languages of non-Russian peoples, their history and lifestyle gained features, typical for the 'Kazan school'; there were its inherent research methods and techniques, new ideas were put into practice and a whole host of eminent scientists appeared. G. Sablukov, N. Ilminsky, A. Bobrovnikov, E. Malov, N. Ostroumov, M. Mashanov, N. Katanov, P. Zhuze and others were the most prominent representatives of that school [Valeev, 1993, p. 6].

Due to the specific nature of educational and science-practical activity, Kazan Spiritual Academy quickly turned into a large scientific, Islamic and missionary centre of pre-revolutionary Russia. Its influence covered not only the territory of the Middle Volga region but also the entire Eastern part of the Russian Empire. The most important prerogative of the Kazan Spiritual Academy was studying the languages of the non-Russian peoples of Russia to perform active missionary work among them. To carry out these tasks it was necessary to establish the professional specialist training, that is, who possessed a good knowledge of history, ethnography, culture, linguistic peculiarities in the languages of the non-Russian peoples of the Middle Volga Region.

Work on the creation of the missionary departments in the Kazan Spiritual Academy begun immediately after its opening [Znamensky, 1892, p. 5]. Having determined the most widespread languages of the non-Russian peoples living in the lands of the Middle Volga Region and eastern fringes of the Russian State, in 1845 the administration of the educational

establishment opened two departments: 1) Turkish, Tatar and Arabic languages and 2) Mongol and Kalmyk languages [National Archives of the Republic of Tatarstan, f. 10, inv. 1, file 463, s. 1; file 827, s. 40]. The rector (1844–1851) Grigory (Mitkevich) took care of the introduction to serious study of oriental languages at the Academy. Upon his initiative, in 1845 two classes for language learning were opened—Mongol-Kalmyk and Tatar with Arabic. The outstanding scientists of Kazan University, A. Kazembek (taught Turkish-Tatar and Arabic languages) and A. Popov (taught Mongol-Kalmyk language) became the first teachers-linguists. Both professors were mainly involved in studying languages, and provided information about history, ethnography and religion of Arabs, Mongols and Kalmyks in a superficial way. Nonetheless, during the year and half of teaching at the Academy, they managed to prepare a few excellent mentors of non-Russian languages for the seminaries and two for the Kazan Spiritual Academy—A. Bobrovnikov and N. Ilminsky. The latter compiled an entire epoch in the history of missionary education not only in the Academy itself but also in the entire Kazan academic district [Kharlampovich, 1907, p. 740]. That is why it should be stated here that even 'short term teaching of university professors was very important for the subsequent fate of oriental studies in the Kazan Spiritual Academy. It determined the main directions for its development—the study of languages of the Turkic peoples in Russia, Islamic history, created the succession of scientific research of the Kazan university and Kazan Spiritual Academy [Kolesova, 2000, pp. 47–48].

The Anti-Islamic department of the Kazan Spiritual Academy was supposed to become the centre of specialists training to perform missionary activities among the Muslims, newly-baptised Christians and pagans, who lived mainly in the territory of the Middle Volga and Urals Region. N. Ilminsky and G. Sablukov were appointed as teachers there (1856) and interns of the Tatar language Yambulatov. Over

Modern-day 2, Yershov Street.

the course of four years students at the department studied the following disciplines: 'The history of Muhammad', 'Mohammedan faith' according to its sources with the revelation of the general nature of the Tatars, their way of thinking, customs and habits, 'pedagogy', 'Tatar' and 'Arabic' languages to the extent that students would be able to speak fluently with Tatars in an everyday setting not only about simple things, but also about Christian religious doctrine, the commandments, concepts and so on [Gvozdev, 1868, p. 49]. Summer classes for the vernacular Tatar language were conducted in the Tatar Quarter, where students were accommodated at the government's expense. Thus, the pupils of the missionary anti-Islamic department were well educated in religious doctrines and the history of Islam, Christianity, the languages of non-Russian peoples, which allowed them to efficiently use them in their future missionary activity.

The anti-Islamic department in its purpose and definition became scientific centre for studying the history, ethnography and languages of the non-Russian peoples in Russia, as well as the history and foundations of Islam. It was here where there was a concentration of famous teachers and experts on the Muslim

religion. As M. Batunsky noted, students and teachers of the anti-Islamic department of the Kazan Spiritual Academy 'were the first professional missionary-Islamic scholars in Russia' [Batunsky, 1987, p. 261]. I. Alekseev also highly appreciated the activity of that department, calling it an innovation and political-cultural project: 'The establishment of a missionary anti-Islamic department, preparing highly qualified specialists, who had an integrated knowledge of socio-cultural realities, languages and religious beliefs of Muslim peoples of the Russian Empire, was a certain innovation in the religious educational practice of the Orthodox Church and did not necessarily evoke sympathy among the clergymen themselves. It can be stated that it was a cultural and political project rather than a church project, initiated by secular persons, such as N. Ilminsky. It was focused on the actual implementation of the provisions on the dominant character of Orthodoxy with methods of purposeful cultural policy' [Alekseev, 2004, p. 68].

At the initial stage of its existence, the anti-Islamic department performed the collection of materials about a subject of their scientific research, purchased Muslim literature and sources, developed methods for working on them [Valeev, 1993, p. 7]. The fact, that Kazan experts were invited to participate in organizing the III International Conference of Orientalists, held in Saint Petersburg in 1876, indicates the growing reputation of this department [Protokoly', 1876, pp. 127–131].

In 1851 the Kazan Spiritual Academy sent N. Ilminsky to Islamic countries (Egypt, Arabia, Syria and others) for two and half years with the aim of deepening his knowledge of the Arabic language, Islam and also in relation to the increased necessity of analysing the organisation of missionary work by the Catholic clergy [Spassky, 1900, pp. 32–33]. After returning from this scientific business trip in 1854, N. Ilminsky was appointed a teacher in the missionary anti-Islamic department of the Academy. He taught the stories of the prophet Mohammed, 'Mohammedan faith', pedagogy, the Tatar and Arabic languages. At first he placed 'the study of languages above the study

of Islam and especially theological polemic against it' [Krachkovsky, 1958, pp. 125–126]. Nevertheless, a certain fascination of N. Ilminsky with missionary ideas, which according to I. Krachkovsky, did not allow his talents to fully manifest themselves: 'N. Ilminsky, was an outstanding representative of the Kazan school, a brilliant specialist in Turkic and Arabic philology, deeply fascinated by missionary ideas and 'educational' activities among 'non-Russians', did not give Turkic nor Arabic philology what he could have given them' [Krachkovsky, 1958, p. 127].

N. Ilminsky paid great attention to study the history, ethnography and languages of the non-Russian peoples of Russia. Apart from a desk job, he sought to study the Tatar language 'from Tatars' own lips'. For this purpose he lived some time in the Tatar suburb in Kazan and attended madrasah classes. On the instructions of Archbishop Grigory (Postnikov) of Kazan, he travelled extensively within the settlements of Kazan Governorate and collected valuable information on the religious situation on site, on the history of the Tatar people, ethnographic materials.

Many articles by N. Ilminsky, introduced the popular folklore of non-Russian peoples, their customs, rituals, and also a great number of his linguistic studies were published in 'Proceedings of the Archaeological Society', 'Bulletin of the Academy of Sciences', 'Proceedings of the Kazan University', 'Journal of the Ministry of National Education', 'Orthodox observer' (from 1863), 'Orthodox interlocutor', 'Parochial school' (1888 and 1889), 'Bulletins of the Eparchy of Kazan' and others. Among the main works that can be emphasized are the 'Russian grammar self-teacher for the Kirghiz' (Kazan, 1861), 'From the correspondence about the application of the Russian alphabet to foreign languages' (1883), 'Baptised Tatar School of Kazan. Materials for the History of Tatar Education' (1887) and others.

G. Sablukov was another teacher in the missionary anti-Muslim department. He was transferred to the Kazan Spiritual Academy from the Saratov Spiritual Seminary in 1849. The alumnus of the Moscow Spiritual Academy

was fluent in three Oriental languages (Jewish, Arabic and Tatar). According to I. Krachkovsky, the meeting and communication with academicians Kh. Fren and P. Savelyev replaced G. Sablukov and 'did not help him obtain his special school' [Krachkovsky, 1958, p. 218]. During the teaching process at the anti-Muslim department, G. Sablukov developed a strict system of studying missionary disciplines. On the basis of his own lectures and scientific research he composed an extensive study guide for the students (in 1858–1859) 'The Collection of Information on the Mohammedan doctrine, suitable for conversations of a Christian with Mohammedan about the truths of faith', played a prominent role in the formation of the polemical Islamic Studies in Kazan and defining in many respects the main vectors of its development. In the future, G. Sablukov continued his Islamic studies investigations: in 1873 his fundamental work 'Collation of Mohammedan study about God's names with the Christian study about them' was published. After the death of G. Sablukov, in 1889 his research 'Stories of Mohammedans about the Qibla' was published. But undoubtedly the most significant achievement of the scientist was the translation of the Quran into Russian. It was created as a textbook for Orthodox missionaries and students of the Kazan Spiritual Academy, this translation, according to famous modern Islamist E. Rezvan, 'emerged because of the need to have an adequate image of the 'Tatar' Islam, which was very important for the success of missionary activities' [Rezvan, 1991, p. 18]. This work became the first print translation of the Quran from the primary source into Russian was greatly appreciated by the scientific community of Russian and Europe. It testified to the serious scientific level, achieved by the Kazan missionary-polemical school in Islamic studies.

Significant changes and transformations in the field of education at Kazan Spiritual Academy in the latter half of the 19th century are related to the actions of its Rector, Bishop John (Sokolov) (1858–1864). His activities in this field were first of all directed, primarily, against the actions of missionary departments.

He reduced the number of faculties in missionary departments, each department was left with one mentor and fired the intern of vernacular Tatar language. As a result, the best professors fled from the Academy and the most important faculties were emptied out [Kharlampovich, 1907, p. 709]. 3 November 1858. N. Ilminsky left Kazan and went to work in the Orenburg Border Commission. One of the main reasons for him to leave the Academy was the divergence of views with the academic authorities. N. Ilminsky was 'rebuked for being fascinated by Islam and even its propaganda' [Krachkovsky, 1958, p. 126].

After the departure of N. Ilminsky from the anti-muslim department, the authorities demanded that G. Sablukov cover all questions of polemic with muslims, 'putting languages on the back burner'. It is enough to say that for some time he was forced to leave only one hour every two weeks for Arabic and Tatar languages. Contemporaries of G. Sablukov highly appreciated his pedagogical work, but in such conditions it was ineffective and short. In the 1862, due to the dislike of the bishop Ioan, G. Sablukov left the anti-muslim department at the Academy.

With the departure of G. Sablukov, Evfimiy Aleksandrovich Malov led the department of anti-muslim polemic in the 1864, 'from the first steps he distinguished himself not only as a scientist but as an energetic leader in the missionary field' [Kharlampovich, 1907, p. 748]. E. Malov, besides his teaching, actively practiced missionary work and was famous for his numerous essays. He knew in detail Christianity, Judaism and Islam, their dogmas and sources [Istoriya, 1997, p. 38].

At the Kazan Spiritual Academy E. Malov taught Tatar language, the ethnography of Tatar tribes and the 'history of their christianisation'. P. Znamensky wrote: his 'nature was as if he was created for practical missionary work; and he's a historian of the mission and a skillful observer of behaviours, mental and religious terms of Tatars' [Znamensky, 1892a, pp. 156–161]. The practical activities of E. Malov also reflected the direction of his literary-scientific

Photo from the late 19th century

works, which were mostly polemic. Among them: 'Essay on the religious state of baptised Tatars, who were under the influence of Mohammedanism' (1871), 'Collation of Mohammedan study about God's names with a Christian study about them' (1874), 'Laws of Moses on Bible and Quranic Studies' (Experience of explaining one of the most explicit contradiction in Quran)' (1889), 'About baptised Tatars (from the missionary diary' (1891), 'The Mohammedan ABCs (missionary-critical essay)' (1894) and others.

From his first years at the Kazan Spiritual Academy E. Malov showed great interest in studying the ethnography of the non-Russian peoples of the Middle Volga Region. Numerous observations about the everyday life of the peoples of the Volga Region, made during his visits to the uyezds of Kazan guberniya, became the foundation for his ethnographic studies. Significant attention was paid to the study of everyday life, its quality and the quality of the whole system of moral and ethical values of Kazan, baptised Tatars, Chuvash, and especially the Mishar Tatars [Malov, 1885].

Some changes regarding the missionary departments occurred during the time of Rector Innokenty (Novgorodov) (1864–1868). He began the reconstruction of missionary departments to go back to their previous form. In

1865 with the initiative of teachers from the anti-muslim department, the Synod once again reformed the missionary departments. They restored them to the form they had had until 1858, having destroyed the necessity of missionary subjects of any group for all students [Kharlampovich, 1907, p. 710].

The transformation of the Kazan Spiritual Academy according to the approval by the Synod on 30 May 1869. The statute and staff of the spiritual academies was completed on 15 August 1870. Three new departments were introduced in the Academy—theological, church-historical and church-practical.

The new statute almost excluded missionary departments from the structure of such educational institutions [Berdnikov, 1892, p. 18]. Only through the insistence of the Kazan Archbishop Antonius (Amfiteatrov), by decree No. 1408 on 24 June 1870, did the Synod accept teaching some missionary subjects against 'Mohammedanism' and against 'Buddhism' at the Kazan Spiritual Academy, though on relatively unfavorable terms: '1) having left inviolable the aforementioned distribution of departments by the academic statute, allowing the teaching of missionary subjects in Kazan Academy—anti-muslim and anti-Buddhism and teaching of languages related to them; 2) assigning this task to two mentors with the

grant of equal rights with teachers of other subjects regarding salary and official advantages, but without categorising them as teachers of any academic department; 3) assigning special hours for missionary subjects, above those officially assigned for other subjects; 4) not making the attendance of missionary subjects required for students of the Academy... ' [Protokoly', 1870, pp. 6–7]. Such a setting for missionary subjects could not guarantee a certain amount of listeners and attract workers to them. Following N. Ilminsky, E. Malov also left the former anti-muslim department. He transferred to the Department of Hebrew and Biblical Archaeology of the Academy. It appeared that things were going toward the closure of missionary departments, to cease the studying of missionary subjects. But thanks to certain persons, including N. Ostroumov and M. Mashanov, the former missionary departments gained significant support and were not closed.

N. Ostroumov (1870–1877) became the representative of the anti-muslim missionary department of the Academy after the departure of E. Malov, and after his departure to Turkestan his position was taken by M. Mashanov (1878–1911, fired in 1911 but kept in the Academy as a supernumerary professor until 1921) [Ternovsky, 1892, p. 21, 30].

Nicolay Petrovich Ostroumov was born in 1846 in Tambov guberniya to a family of a protoiereus. In the 1870 after he graduated from the Kazan Spiritual Academy, he taught 'missionary subjects against Mohammedanism': 'the repudiation of Mohammedanism', 'history of Mohammed', Arabic and Tatar languages. In Kazan he studied history, ethnography and the language of Tatars. In particular, he composed and developed 'The first experience of the Tatar dictionary on the dialect of baptised Tatars of Kazan guberniya' (1876) and the 'Tatar-Russian dictionary' (1892).

Mikhail Aleksandrovich Mashanov was born 11 May 1852 in Petropavlovsk to a family of a protoiereus. In 1876 after he graduated from the Kazan Spiritual Academy, he taught there the same disciplines as Ostroumov. There is a lot of interesting data on history, ethnog-

raphy and language of Tatars and on Islam in the scientific works and reports of M. Mashanov. Several of them should be emphasized: 'A note on religious and mental condition of baptised Tatars of Kazan guberniya, Mamadyshsky uyezd' (1875), 'Summary about a trip to the Nikiforova village of Mamadyshsky uyezd for moral suasion of those who left Christianity' (1881), 'The Personality of Mohammed in Physical, Mental and Ethical Relations', 'The Personality of Muhammad', 'Essay on the religious life of Arabic Pagans during the time of Muhammad' and others.

In his research M. Mashanov reviewed different aspects of functioning of muslim religion, the actions of the Prophet Muhammad, his nature and moral qualities, problems of marriage in Islam, the role of women, sects, the role and the place of Arabic people in the foundation of Islam as a religion and other questions. His works undoubtedly contributed a lot to Russian Oriental Studies [Mazitova, 1989, p. 89].

In 1885 M. Mashanov had a scientific business trip to the Muslim East (Egypt, Saudi Arabia, Syria). I. Krachkovsky wrote about the positive impact this trip had on Mashanov: 'It provided him with a good acquaintance not only of the Arabic Language, but of the whole Muslim world, different representatives of which he could met in Hejaz' [Krachkovsky, 1958, p. 129].

The teachers of missionary subjects in Kazan Spiritual Academy, who actively engaged in researching Islamic studies and Tatar studies, sought to test the results of their research in the mass media. 'The Missionary anti-muslim digest' was supposed to become the printed foothold for a polemic with muslims [National Archives of the Republic of Tatarstan, f. 1207, inv. 1, file 1]. The first volume was printed in the 1873, the last volume (14th) in the 1914.

The thematic review of the editions of the 'Missionary anti-muslim digest', separately printed works, and also a course of works demonstrates the wide thematic research made by teachers and graduates of the Kazan Spiritual Academy. They were engaged in the identification of the religious and philosophical foun-

dations of the various Muslim sects, the study of the beliefs of non-Russian peoples of the Middle Volga region, their cosmological and eschatological views, the religious situation of Muslim communities in Russia and the Christian communities in the Muslim East, etc. However, the key focus in the study of Islam by the Kazan missionaries was the development of issues related to the personality of the Prophet Muhammad and criticism of the Quran. On 15 August 1884 the new Statute of spiritual academies was introduced at the Kazan Spiritual Academy, which had been developed with the participation of the new Ober-Procurator of the Synod, K. Pobedonostsev. To a great extent, the new statute took into account the desires and requests of the teachers at the missionary departments of the Kazan Spiritual Academy, who were constantly looking to improve the quality of education at the only missionary departments in pre-revolutionary Russia.

In 1884 structural changes were conducted at the Kazan Spiritual Academy: the Theological, Church-historical and Church-practical departments, existing from the 1870 were closed. The subjects of the academic course were divided into two groups: verbal and historical. Besides this, the Statute introduced into the Kazan Spiritual Academy a third, completely new group—missionary, which were divided into two departments: Tatar and Mongol. The introduction of the missionary group was a big accomplishment for the Kazan Spiritual Academy and gave it a distinctive feature in comparison to other similar educational institutions in Russia. Thus, the state had recognised the importance and the necessity of the special missionary education for the Middle Volga and Cis-Ural Regions, which was lost in 1869 when the missionary departments at the Kazan Spiritual Academy were abolished.

The Statute of 1884 prescribed the following subjects to be taught in the Tatar Department: 1) the history and repudiation of Mohammedanism; 2) the ethnography of Tatars, Kyrgyz, Bashkirs, Chuvash, Cheremis, Votyaks and Mordvins; 3) the history of Christianity spreading among the aforementioned foreign tribes; 4) Arabic and Tatar languages

with the common philological review of the languages and dialects of the aforementioned tribes [Ternovsky, 1892, p. 246].

From 1884 on, the Department of Tatar Language and Ethnography of the Tatar section was filled by the extraordinary professor of the Academy E. Malov [Ternovsky, 1892, p. 252]. He taught the Tatar language, the ethnography of Tatar tribes and the history of the spread of Christianity among them. 29 January 1886. E. Malov was made acting full Professor and from March 1889 an Honorary Professor. From 1884 the Department of Arabic language and the Repudiation of Mohammedanism was filled by acting docent of the academy, M. Mashanov, who taught Tatar language and the 'Repudiation of Mohammedanism' [Kazanskaya, no year, pp. 810–811, 814]. The baptised Tatar priest Vasily Timofeev remained in the position of staff intern of the Tatar language. After his death in December 1895 this position was filled by his apprentice and successor in the education of the old-baptised Tatars, the priest Timofey Egorov. He also took the place of V. Timofeev in charge of the Kazan Central Christian Tatar School. The Muslim Tatar Sakhb-Girey Akhmerov, who upon being baptised took on the 'name Pavel', was appointed as a supernumerary intern of Arabic language from March 1891, according to the special decree of Synod dated 6 February 1891 [Protokoly', 1891, pp. 19, 33]. Archimandrite Rafail, an Arab by nationality, was temporary assigned to this department in 1893 (in 1895 he went to America where he became the Bishop of Brooklyn). After the death of Akhmerov, the position of a supernumerary intern of Arabic language was from the 12 August 1896 (and from 1900—the only one) filled by the Syrian, Panteleimon Krestovich Zhuze, who finished the Academy the same year and later became a Master of Theology.

Thus, the Kazan Spiritual Academy throughout the 19th century and the beginning of the 20th century, and being the centre of the Christian enlightenment of people of the Middle Volga Region, Cis-Urals and Siberia, contributed greatly to the study of the history and ethnography of Tatars. Its teachers developed

a number of interesting works on the history of the non-Russian peoples, their relationships with Russians and on the spread of Christianity among them. The missionary departments created a solid foundation for the Kazan Spiritual Academy as a centre for Oriental Studies. Teachers at the missionary departments of the Kazan Spiritual Academy made a significant contribution to the study of the history, ethnography and language of Tatars and other non-Russian nations of the Middle Volga Region. Such well-known persons as N. Ilminsky, G. Sablukov, E. Malov, N. Ostroumov, M.

Mashanov and others left a great legacy after themselves: works on history and ethnography, reviews of their enlightening trips to villages with non-Russian populations, various notes and lecture courses. The missionary departments became 'producers of scientifically informed personnel' for the enlightenment of baptised Tatars, Mari, Chuvash, Kalmyks and other peoples. The teachers at the missionary departments launched an active policy of developing methodological toolkits, grammar books, textbooks for studying the Russian language by non-Russian peoples.

CHAPTER 5

Enlightened Education and Tatar Literature

Daniya Zagidullina

The origin of the Enlightenment and Tatar literature of the first half of the 19th century.

The positive changes occurring in the social life of Tatars at the turn of the 18th–I centuries made a significant impact on the socio-cultural situation of the first half of the 19th which primarily is reflected in the origins of the ideology of Enlightenment.

Enlightenment as an intellectual and cultural movement and paradigm, underpinned by the ideas of societal modernisation and human improvement, meant moving to a higher stage of civilisation. Ideas of enlightenment appeared in Tatar social thought in the end of the 18th to the early 19th [Abdullin, 1976, p. 24]. Important political events: the peasant rebellion under the command of Yemelyan Pugachev 1773–1775, the Patriotic War of 1812 and others—had a significant impact on the development of social thought, produced ideas of revival, which were reflected in the national enlightenment movement in Russia. However, the period of traditionalism and following of canons continued in Tatar literature, which became a mirror for the enlightenment ideology, up until the latter half of the 19th century, '... to the middle of the 19th I, may refer to the prehistory of the Tatar enlightenment' [Usmanov, 1980, p. 188].

The opening of the Kazan University (1804), the beginning of teaching Tatar language there and in other educational institutions, the foundation of the Department of Oriental Languages (1807) contributed to the formation of the Tatar enlightenment, the transformation of religious and philosophical views of Tatars.

The university prepared teachers for the re-opening of educational institutions, provided them with educational and instructional materials, and attracted representatives of non-Russian tribes of the region in the work in those

institutions. Thus, S. Mikhaylova, describing in her biography the project by M. Niyazov on the opening 'the school for teaching Tatars Russian language' in Astrakhan, pointed out that there were in Tatar society such assistants as Mukhtasip Niyazov, who sincerely wished the enlightenment of their people. S. Mikhaylova also mentioned other projects of professors and teachers at the Kazan University, the project about organisation of the special Oriental Institution in Kazan by F. Erdman and K. Voigt in particular. The position of F. Erdman (1829) was noteworthy: he suggested that the opening of the institute on the one hand would contribute to the enlightenment of the Tatar people, and on the other hand would allow us to explain the 'many dark aspects of the history and geography' of the Oriental peoples and also 'different properties of languages and religions of Asian Russia, about which educated Europe still had no clear knowledge and probably would never have them without the help of such institution' [Mikhaylova, 1972, pp. 52–54]. The opening of several gymnasiums, schools or departments in the existing gymnasiums for teaching Tatar languages in a number of cities can be considered a result of understanding the requirements of the time: In the early 19th century, the Tatar language was studied in the gymnasiums of Tobolsk, Tomsk, Orenburg, Saratov, Astrakhan, Stavropol and Simferopol [Kononov, 1974, p. 34]. Oriental languages and the foundations of the Islamic religion were also taught in certain educational institutions of military service.

According to N. Mukhitdinov, these innovations were due to the changing of state policy toward Tatars in the late 18th century. 'If until the middle of the 18th century, the policy of repressions continued, the policy of open persecutions of Tatars, legislative acts reinforcing the

restrictions on rights of Tatar peasants, clergy, merchants and industrialists, then the expansion to the East, 'peaceful' penetration to Bukhara, Khiva, India and China, the conquest of Kirghizia made the tsarist government change their policy against Tatars. 'Giaour' could not get inside of Bukhara and Khiva; Muslim trading intermediaries were needed here. The Kazan Tatars acted as trade and diplomatic intermediaries.... That is the economic basis on which they began to build an ideological bedrock. It was during the heyday of the Tatar commercial and industrial bourgeoisie when the reform movement became animated among the Tatars. This movement appeared also in the field of education' [Mukhitdinov, 1930, pp. 106–107].

According to the data of N. Mukhitdinov, the archives of Moscow, Leningrad and Kazan preserved 5 projects on the organisation of the Tatar middle schools which pertain to the years 1825–1830, and two projects pertaining to the years 1860–1880. The first-time project belonged to the mufti M. Khusainov, the second to the merchant of the third guild of Chistopol, Mukhitdin Said-Burgan, the third—to the head of the Main Kazan national school, Pyatov, the fourth and the fifth were to—The Ministry of National Education and the Ministry of Internal Affairs [Mukhitdinov, 1930, p. 108].

The project of the mufti M. Khusainov was aimed at the organisation of two middle schools (gymnasiums) for the Muslims of Ufa and Kazan: one under the command of the university and the other under the Governor. In the project under consideration the necessity for 'equaling' programmes of these educational institutions to the programmes of existing gymnasiums, so those young people who having graduated from these institutions could attend university without any obstacles.

The project of the 3rd guild merchant Mukhitdin Said-Burgan on the organization of a Large (Central) Tatar School in Chisopol (N. Mukhitdinov thought that the initiator of this project was the Serving Tatar of Chistopol, Ibragim Akhmerov, grandfather of Shakhbazgery Akhmerov, the inspector of the Kazan Tatar Pedagogical School) concerned an advanced school, illegally existing under the cover of a

common confessional school, which could be turned into a gymnasium according to the presented training plan and statute. The university Recotr, Professor G. Solntsev gave a good review with respect to the school statute and the project as a whole, however, the new trustee of the Kazan Educational District, M. Magnitsky thwarted this initiative.

The project of the director of the main Kazan public school Pyatov (1816) envisaged some renewal of the Muslim confessional school, at the same time it supposed to keep its theological nature and make it closer to the official state schools. The author of the project came from the need for the subordination of the national schools to the university.

The fourth project, prepared by the Department of Religious Affairs of Foreign Faiths, suggested the establishment of Muslim schools at the Kazan gymnasium 'to transform Mohammedans, who devoted themselves to a spiritual vocation'.

The next in the line was the draft organisation of 'Oriental Institute' in Kazan. The plan for its organisation was proposed by the trustee of Kazan Educational District, M. Magnitsky (he filled that post from 1819–1826), but it was denied by the Ministry of National Education. Later this project became the basis for the opening of the Department of Oriental Language Arts at Kazan University.

The most interesting was the project of V. Radlov to create the 'Tatar Pedagogical Institute' in Kazan, an organisation that was motivated by the necessity of involving the existing madrasahs in preparing teachers for national schools. According to N. Mukhitdinov 'this project is either an exact copy of the project of Faizkhanov and Marjani, or was made under their strong influence, because during this time (1874–until the opening of Kazan Tatar Pedagogical School) this project was developed during the period of collaboration between Radlov and Marjani' [Mukhitdinov, 1930, p. 119]. However, this project was denied too, but Radlov managed to get the Kazan Tatar Pedagogical School opened and was in charge of it.

Although the projects weren't successful, they testify to the appearance in society about

the idea of a Tatar middle school, which would open the way to the university for its students, where the preparation of teachers was performed, of translators, clerks and others.

An important moment of the educational work of Kazan University was its impact on the social, political and cultural life of the region. The university became the centre, around which all intellectual powers gathered. It played an instrumental role in creating the periodic press of the region. In 1808, the draft edition of a newspaper in Russian and Tatar languages appeared and was authored by university associate I. Zapolsky. However, the government approved the publication only in Russian and the first edition of 'Kazanskie izvestiya' (Kazan news) came out on 19 April 1811, already after the death of I. Zapolsky. The newspaper existed until 1820.

The second attempt to create a newspaper in the Tatar language, named 'Bäxer äl-äxbär' ('The sea of news') was made in 1834 by a student at the Oriental Department of Kazan University, M. Nikolsky. The project was approved by professor A. Kazembek and the trustee of the Kazan Educational District, M. Musin-Pushkin. However, as the initiator he was quickly removed from his position at the university and sent to work in the Astrakhan Governorate [Amirkhanov, 2002, p. 34].

An important place in the cultural life of the region was played by the magazine 'The Volga Ant', a private periodic publication of professors and teachers from the University. Material about Bulgar history and the history of the Kazan Khanate were printed on its pages, examples of native literature, descriptions of the Bulgar ruins, as well as analysis of ancient Tatar writings.

In 1806 'The society of free exercise in Russian language arts' was created, and led by the teacher of Slavic grammar and Russian language arts, N. Ibragimov, who had been educated at Moscow University [Tatar Encyclopaedia, Vol. 2, 2005, p. 513]. Society sought to contribute as much as they could to the study of everyday life and the spiritual heritage of local people. During the ceremonial meeting that took place on 12 December 1814, its secretary P. Kondyrev, summing up the Society's activ-

ity, noted: 'Besides general subjects, there are also those that are by circumstance closer to us and we can benefit by paying attention to them from time to time. We live among many foreign peoples, in the ancient Tatar kingdom, meaning the former Bulgarian capital. Tatars, Chuvash, Cheremis, Mordvins, Votyaks, Zyrrians surround us. Armenians, Persians, Bashkirs, Kalmyks, Bukharans and Chinese are closer to us, than to other societies. We can feel more comfortable about their language or language arts, to communicate and to make use of them. It is very useful to collect different songs of these people, tales, notes, novels, books, inscriptions and so on, and this is still very new for us' [quote from: Mikhaylova, 1972, p. 67].

The university strove for its activity to be considered by the local peoples as answering their needs. A printing house, financed by the University, printed books in the Tatar language (dictionaries, textbooks, anthologies, scientific publications of Tatar historical and literary writings, prepared by university scientists), and with the lack of the government funding, the staff provided funds from their own pockets. Thus, in 1849 the famous orientalist I. Berezin published, at his own expense 'Sheibaniada' ('The History of Mongols-Turks in Chagatai Dialect with Translation, Notes and Appendices') from the series 'The Library of Oriental Historians', and at the university's expense the texts of the 'Khan yarliks' were published [Karimullin, 1983, p. 45].

The university published invitations in the Tatar language for the ceremonial meetings that had been arranged, public exams and from the 1812—'public teaching of the Tatar language'. In 1830 the university library became the public city library. The university's offices and museums were open for public viewing and scientific discussions were held in them. Professors and teachers at the university participated actively in charity work.

Kazan University is related to the fate of *Ibrahim Iskhakovich Khalfin* (1778–1829), who in 1823, was the first of the Tatars, confirmed as an adjunct-professor in the oriental language arts. In 1800, at the age of 22 he was appointed the teacher of Tatar class in Kazan Gymnasi-

um, and with the opening of the University became a lecturer of Tatar Language. I. Khalfin was one of the first Enlighteners, who raised the issue of the necessity of Tatar enlightenment. He outlined the plan 'Curious thoughts of I. Khalfin on the Education of Tatars' and transmitted it to the Academic Senate of the Kazan University. I. Khalfin suggested to work with the ignorant mass 'for their enlightenment through university students'. He combined his pedagogical work with his scientific work: in 1804 his textbook 'The Alphabet and Etymology of the Tatar Language' was published (in 1809 it was published under the name 'The Alphabet and Grammar of the Tatar Language with Arabic rule for reading'), in 1819 his 'Tatar Chrestomathy' was published, and the writings of oriental historians were ready for printing: 'Šacäräi törek' ('The family tree of Turks', 1825) by Abulgazi Bahadur Khan (1603–1663) and 'As-sabgıs-sayar' ('Seven planets') by Crimean historian Seid Muhammad Riza (died in 1756), medical books, ancient Tatar manuscripts. The works of I. Khalfin triggered the publications of Tatar historical sources, from his 'easy hand' they were re-printed in the prestigious scientific magazines of Western Europe.

The Kazan orientalists made significant contributions to the formation of Tatar studies as a science. The issues of Tatar language and the history of the Tatar people were especially actively developed. One example which may be cited is the data from the biography of the Tatar educator *Abdyush Vagapov* (1814–1876), who, being a teacher at a military school of the Kazan garrison, at the age of 46 went to the university as a guest student to improve his knowledges in oriental languages. He became an orientalist and one of the first Tatars source studies student. For the needs of Asian University printing house Vagapov engaged in translating the ancient oriental manuscripts, his work 'Tatar fairy tales about the capture of Bulgar by Timur' was printed in 1852 in 'Kazanskie gubernskie vedomosti' ('Kazan guberniya news'). Together with M. Makhmudov and R. Amirkhanov he took part in publishing books in the Tatar language. He thought the necessary condition for the mutual understanding of two nations was

Cover of M. Ivanov's book 'Tatar reader book' (Kazan, 1842).

the 'respect for their native languages'. In pursuing this goal Vagapov created 'the self-teacher for Russian-Tatar and Tatar-Russian', which was later widely distributed. The 'Russian-Tatar alphabet' (1852) by A. Vagapov was re-printed several times. A. Vagapov put these essays in the section 'Songs of the Tatars' as an appendix. Consequently, I. Berezin included the collected songs in the 'Turkish Chrestomathy' (1890). Vagapov put a lot of time and energy into collecting examples of national oral traditions. The textbook on the national oral traditions of Tatars prepared by him is preserved in handwritten form [Mazitova, 1965, p. 34].

Graduate of Neplyuev's school *Martinian Ivanov* (1812–?), who after he passed his exam in the Oriental Department of Kazan University in Tatar and Persian languages for the right to be a teacher at the gymnasium (1832) became a teacher of this school, created a 'Tatar grammar' and 'Tatar chrestomathy' (1842) out of Tatar folklore and fiction and translations from different languages. In particular, they included 128 Tatar proverbs, 8 tales, 70 songs and 35 puzzles, and also examples of written literature: poetry

Eastern researcher M. Makhmudov with his wife and daughter. Photo, 1870.

of Mukhammedyar, A. Kargaly and others) [Minnegulov, 1982, pp. 20–25].

His classmate and a graduate of the Oriental Department, who 'received a degree of candidate' (1836), teacher of Arabic and Persian languages in the Neplyuev's military school *Salikhdzhan Kuklyashev* (1811–1864) prepared the 'Tatar Chrestomathy' ('Divane xikāyāte tatar') and 'The Dictionary to the Tatar Chrestomathy' (1859). The chrestomathy includes rich literature and historical material: examples of national oral traditions (proverbs, sayings, epics, songs, aphorisms), passages from the medieval oriental manuscripts or books, historical works.

Muhammadgali Makhmudov (1824–1891)—state councilor and calligrapher, in the 1843 through the recommendation of A. Kazembek he was accepted as a teacher of the Arabic and Persian languages, and also the Turkish-Tatar calligraphy in the Oriental Department of the University and in the gymnasium. After the Oriental Department moved to Saint Petersburg he was appointed teacher of Tatar language and practiced the methodology of its teaching.

M. Makhmudov is well known as a copyist of manuscript books in Arabic, artist designer, author of handwritings of the Arabic script. In particular, in 1849 he wrote in Arabic script in the Tatar language, the manuscript of 'Tatar chrestomathy' (1942) by M. Ivanov, the work 'History of the Bulgars and Kazan' by Sh. Marjani etc. [Tatar Encyclopaedia, Vol. 4, p. 97]. M. Makhmudov is the author of 'A practical guide to the study of the Tatar language' (1857). The purpose of this book was not only to establish regularities of the development of the Tatar language, but to familiarise Russians with Tatar folklore, lifestyle, customs, the lexical richness of the Tatar language. According to S. Mikhaylova, 'on the scale that Makhmudov did it, any of his predecessors failed' [Mikhaylova, 1972, p. 192]. In 1858—and 1859 he worked on the compilation of the Russian-Tatar dictionary and engaged in translating it into the Tatar language.

Khusain Faizkhanov (1828–1866) was an orientalist, historian, linguist, was prominent in the educational movement of the first half of the 19th century. Student of Sh. Marjani. At the suggestion of A. Kazembek, in 1854 he moved to Saint Petersburg, where he began to teach the Turkish and Tartar languages at the Oriental Department at the university. From 1858, on the orders of the Academy of Sciences, he explored the funds of the Moscow Main archive of the Ministry of Foreign Affairs with an eye to identifying and arranging diplomatic credentials of the Crimean khans. In 1859 Faizkhanov was elected the member of the Russian Archaeological society that sent him to Kasimov in 1860 to study the Tatar epigraphic monuments. Copies, taken from 29 epitaphs, later became history of the Tatar literary culture. In 1862 he published the textbook on the grammar of the Tatar language. At the same time he collected and copied oriental manuscripts, translations of various historical works and documents from the eastern languages. During these years, Kh. Faizkhanov was engaged in the preparation of manuscripts of scientific works, that were later collected together: the project on the reform of the Tatar madrassah 'Islakhi madaris', historical non-fiction treatise 'Risälä' ('Essay'), studies in the history of the Tatar people 'Kazan

tarikhi' ('Khanate of Kazan') and 'Qasim khan-lyg' ('Qasim Khanate'), and a description of 25 ancient epigraphic monuments [Khusain Faiz-khanov, 2006, pp. 694, –695]. The work begins traditionally: with an appeal to Allah and to the prophet Muhammad. In the introduction the author urges Muslims to become educated, calling it a holy deed. The first chapter 'On the Benefits of Knowledge' is about the history of science in the Muslim world, the second chapter, 'On the Status of Muslim Tatars in Russia' is devoted to a brief history of the Tatars of the Ural and Volga regions. In the third chapter 'On The State of Our Madrasah', the author examines the structure of Tatar educational institutions, thinking about the possibility of making changes to the curricula of the madrasahs. The fourth chapter 'On the Benefits and Necessity of Opening a New Madrasah' is devoted to explaining the author's ideas on the establishment of a new type of madrasahs, where the curriculum would be comprised of religious and secular disciplines.

Thus, Kazan University and the opening of the Oriental faculty helped to strengthen the educational activities of a whole galaxy of Orientalists. The works of the aforementioned professors and many other educators—M. Ivanova ('Tatar grammar', 1842), A. Kazembek ('Grammar of the Turco-Tatar language, 1839), I. Berezin ('Supplement to the Grammar of the Turco-Tatar language by Kazembek', 1846), etc.—greatly expanded the information in the field of language, literature, history and ethnography of the Tatars. Despite the fact that in 1854, the Oriental faculty was transferred to Saint Petersburg, in Kazan a scientific school operated that became the research centre for the further development of the Humanities.

The key frameworks within Tatar urban communities developed from the end of the 19th century, the printing houses of Kazan and other cities in Russia began mass publications of Tatar books. Along with religious and Sufi books, works of a literary-historical nature were published. So, from 1819 I. Khalfin studied the manuscript of the 17th century. 'Dastane Chyngyz Khan vā Aksak-Timer' ('The Legend of Chinggis (Genghis) Khan and Aksak Timur') and in 1822 he published it [Gaynullin, 1975,

Hussein
Fayeze Khanov.

p. 14]. In 1824 Utyz Imyani conducted textual work on the poem 'Kyissai Iosyf' by Kul Gali: having collected around ten of the oldest lists, he collated them and made a summary of the scientific-critical text, which was published in 1839 [Karimullin, 1979, p. 39–40].

However, the first half of the 19th century was the heyday of Tatar theological thought. At the same time many poets and prose writers were well-known religious figures, the promoters of Islam and Sufi ideas. The emerging educational ideals were organically connected to the traditions of Muslim culture. The exaltation of the role of knowledge, the definition of educated people as moral pillars of the society, criticism of the ignorant and immoral acts of individual members of the clergy are the artistic ties that have linked Tatar literature of the traditionalist wing of the beginning of the 19th century and secular educational literature of the second half of the 19th century.

A prominent representative of Tatar culture *Tadzheddin Yalchygul* (1768–1838) was a sheikh, healer, religious leader, teacher and historian, in his numerous works he raised many problems of a religious and philosophical nature. Yalchygul is the author of over ten works: 'Tarikhnamai Bulgar' ('The History of Bulgars'), 'Waemsyszlarny iskartu' ('Warning to the careless'), 'Gylme tyibb' ('About medicine'), 'Tafsir' ('Comments to 'Khaphtiyak'), etc. The Arabic work of Yalchygul 'Inayat äs-sebkhani',

was created as a teaching manual for shakirds for the interpretations of the mystical state (guyilme äl-khāl) according to the technique of the teachings of the Naqshbandi like any other medieval Tatar Sufi literature. His book 'Risäläi Gazizä' (1806) is particularly well-known. It is a Turkic-language commentary to 'Säbat äl-gazhizin' by Sufi Allahyar in which many principles of Islam and his religious-Sufi views are presented. According to M. Kemper, the works of Yalchygul were the only treatises of that period that represented the tradition of the concept 'väkhdat äl-vezhud'—unity of being [Kemper, 2008, p. 161]. Over the entire 19th century, the concept related to the idea of a perfect man, to the faith in the creative potential of man, played a significant role in the development of the Tatar literature and philosophical thought.

This tendency toward the transformation of the religious-didactic thought manifests clearly in the works of *Ghabdennasir Qursawi* (1776–1812) was a famous Tatar theologian, philosopher. He outlined his religious and legal views in Arabic publications: 'Kitab äl-Irshad li-l-ibad' ('The book of admonition to people') and in the commentary to 'Mukhtasar äl-Manar' by Tahir Khussain b. Jilly. In them, he turned to the interpretation of one of the most important issues of the fiqh—ijtihād, making independent judgments [Yuzeev, 2007, p. 70].

In his works Qursawi criticizes the ignorant and praises those who aspire to knowledge. In the introduction to 'Kitab äl-Irshad li-l-ibad', when specifying the main purpose of his work, he writes: 'We must know that among the people of our past centuries, there are those, who having no knowledge, present themselves as men of science. It would be nice if I released these words and dedicated individual pages of this book to exposing the depravity of their thoughts, the result would create a certain opinion and the right mindset, and thus made would be a step to getting rid of the ignorant and unlearned, even to the oblivion of their names. But, fearing that the end for me would be very sad I didn't follow that path. In particular, I was afraid of people who disguise themselves in the mantle of scientists but welter in ignorance. So I found that it would be better and more appro-

priate if I limit the exposure of the depravity of their words, and gradually they will be rejected by the thoughts expressed by them' [cited in: Gaynullin, 1975, p. 10].

According to G. Idiyatullina, G. Qursawi saw the path to fixing society through the eradication of bid'ah—innovation, a distortion of the norms of early Islam, the return to the pure origins of the faith and the revival of the right to ijtihād. Demanding under any circumstance to strictly follow the example of the pious Muslims of the early centuries, Qursawi gives the rationale for a particular line of behaviour, defines a fundamentally new relationship between individuals and society—opposition of a man to society, his isolation from the crowd appears as a kind of selfless service [Idiyatullina, 2005, pp. 32–33]. Speaking for a knowledgeable, enthusiastic and open-minded person, proved the ability of critical remarks about individual members of the clergy, Qursawi paved the way for the formation of Tatar educational literature.

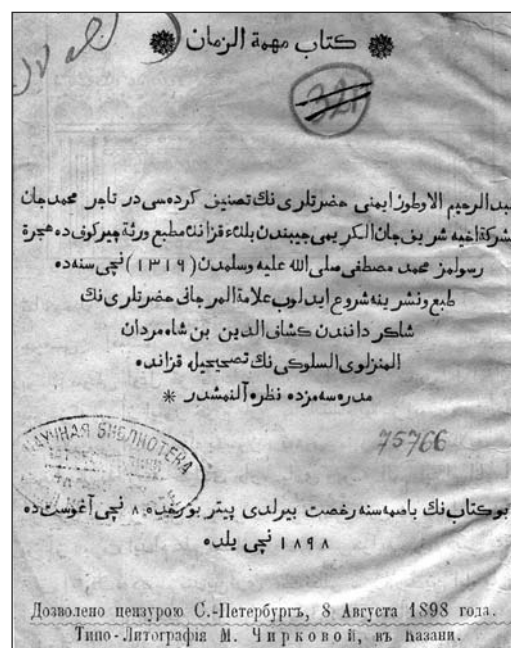

One of the prominent representatives of the enlightenment was *Gabdrakhim Utyz Imyani äl-Bulgari* (1754–1834) a poet, philosopher, religious reformer. He left behind a rich scientific and artistic heritage: over 100 works of different genres in Tatar and Arabic, including treatises on philosophy and theology, 10 poems: 'Täkhfät äl-gorabä vä lätaif äl-gazä' ('The gift to the disadvantaged and proverbs about patience'), 'Gavarif äz-zaman' ('Gifts of the age'), 'Tänzikh äl-äfkär fi näsäikh äl-äkhjar' ('Good counsel for purification of thoughts'), 'Mähimät äz-zaman' ('The most important problems of the age', 1820), etc. Religious and moral-ethical issues were addressed in them. The poem 'Tänzikh äl-äfkär fi näsäikh äl-äkhjar' deals with the state of society, the author associated improvement with the moral development of people. The poet indicates the moral vices of his contemporaries—hypocrisy, insincerity, the desire for personal enrichment, the loss of social ideals. The highest moral qualities, in his opinion, are education and knowledge ('*Feel free to acquire knowledge, because knowledge is the essence of human life; knowledge is the key to overcoming any difficulties. Knowledge is the pearl of the human soul, and it cannot be*

taken away by an enemy or a thief' [cit.: Istoriya tatarskoj, 2003, p. 28]). According to the author, mutual understanding, friendship and mutual aid can lead society to peace and harmony.

The religious-ethical and literary-aesthetic views of Utyz Imyani, despite the presence of his individual ideas, was characterised by traditionalism and a penchant for rhetoric. The leading motives of Utyz Imyani's works are criticism of the ignorant and vicious Bukhara and Tatar clergy and the approval of the ethical and aesthetic ideals of the perfect man (äl-Insan äl-Kamil). They are closely connected to the problems of mind and knowledge, body and soul, 'the poet's reflections about divine justice and the search for the consent within himself and the surrounding reality' [Ganieva, 2002, pp. 31–32]. Thus, the educational discourse, aimed at a comprehensive critique of the existing foundations being based upon the principles of humanism and justice, and is read as a call for religious reforms in the works of Tatar poets.

The poet glorifies the educated person who possesses religious knowledge. In the poem 'Gavarif äz-zaman' ('The gifts of the age') he divides the scholars by the degree of education into seven categories. The representatives of the first five—the mujtahids are those who can think in new ways, the rest are blind imitators of predecessors. In the poem 'Täkhfät äl-gorabä vä lätaif äl-gazä' he criticizes those who imagine themselves to be enlightened without having enough knowledge to claim this. For Utyz Imyani knowledge, education is a concept of both a religious and secular nature. He talks about a dedication to the scientific knowledge of the world and to the Sufi knowledge of the foundations of life.

The poem 'Mähimmät äz-zaman', consisting of introduction (the traditional invocation to Allah, the prophet Muhammad and other saints), 26 chapters, and a conclusion, reminds one of the didactic works of the Middle Ages. Each chapter is devoted to a vital problem which the author explains, based on Sharia law. For example, in the chapter 'Don't be careless', he warns readers about the dangers in the road of life. In the chapter 'Imitation of time', the author points out the signs of the times that, in his view, are destroy-

Cover of G. Utyz Imyani's book
'Kitabe mahimmatez-zaman' (Kazan, 1898).

ing the moral foundations of society: disobedience of elders, the pursuit of material wealth, pride, etc. In order to preserve humane qualities in such circumstances, one must be humble and patient ('About friendship), learn a profession ('The profession), honour family ('How to preserve the family'), where women are the mainstay ('The sanctity of women'). The author gives his advice in simple and clear terms: 'If you are a true Dzhigit, hence prove your valour: / Be thrilled by your boundless love for the Motherland. / Be fair, be the defender of fidelity / don't hurt anyone; / If the character of your wife does not appeal to you, / She will be worth five wives, do not dream of two or three wives, / It will be harder for you to live'; 'Where you are, may your family be with you / As they open their eyes may them see you / do not let women go alone, take care of them'; 'the one who is against service to the common cause, / everything will go wrong for him' etc. [word-for-word translation.]

Thus, in contrast to other Sufis, who perceived earthly life as flawed and unworthy of attention, Utyz Imyani in his works calls the people of indecent behaviour and bad morals the cause of all the ills of mankind ('Don't say:

'The world was corrupted!'/ It is tranquil. The people are the cause'). This motive A. Sibgatullina traces in the works of other poets—Kh. Salikhov, A. Kargaly, M. Yumachikov, arguing that 'the plight in society' is associated with ignorance in the poems [Sibgatullina, 2001, pp. 28–29]. At the same time in the works of poets of the first half of 19th century one can see faith in human potential. Not only the feelings associated with divine purpose, but ordinary earthly experiences gradually become the basis of artistic creativity. After the death of his beloved wife, Hamida, Utyz Imyani writes elegies 'Märsiyai Hämidä, zäuzitā Gabdrakhim Bulgari' ('Elegy, dedicated to Hamida, the wife of Gabdrakhim Bulgari) and 'Märsiyai Gabdennasyir, välädä Gabdrakhim' ('Elegy of Gabdennasyir, the son of Gabdrakhim'). In the former one he presents the image of Hamida as a close friend and adviser, a humble and faithful life partner who has always supported her husband and has been a woman of high moral qualities, in the latter elegy he presents the image of Hamida as a loving and beloved mother, he elevates her to the status of a saint.

Utyz Imyani was a well-educated man. He wrote works in the Tatar, Persian and Arabic languages and he also knew Russian. He worked on the correction, editing and elaboration of manuscripts, wrote commentaries on the books of Ghazali, Attar, Jami, Rumi, Sufi, Allahyar, transcribed many volumes of the works of important scholars and poets of the East, compiled bilingual dictionaries and gave explanations of difficult words in the scientific treatises of well-known oriental scholars.

Abulmanikh Gabessalyamov Kargaly (1782–after 1833) was a Sufi poet and theologian, one of the representatives of the movement for religious reformation. He was the grandson of the poet Gabdessalam Ibn Urai. He studied at the madrasah of Bukhara, and was employed in the diplomatic service at the court of the Emir of Bukhara (1816–1817). After returning home, he took up arable farming. In 1833, under the pretext of the Hajj, he left the country [Tatar Encyclopaedia, Vol. 3, 2006, p. 237].

The book by Kargaly 'Tärzhemäi khazhi Abelmänikh äl-bistävi-Sägyidi' ('Translations

of Abulmanikh-Hadja from the Seitov sloboda', 1845) consists of 10 stories in verse in which a number of religious and philosophical problems were raised, which were of concern to the Tatar clergy at that time. The collection contains an autobiographical narration about one of the author's journeys in the Near East, as well as odes and elegies praising the prominent proponents of Sufism—Khasan Basryj, Rabiga Goduvani.

Kargaly created works of a purely Sufi and lyrical nature glorifying God. For example, in the poem '... Tändä canim' ('... the soul in the body') he describes the state of tawbah. The work features a technique which was quite new to Tatar Sufi literature: the poet distances himself from the poetical 'I', he speaks in the name of a person living his life in ignorance: *'I did not say the zikr together with those who knew the Quran, / The most honourable thing for Allah is—The Quran, I didn't know'*. Several laws of life are established in the poem: *'the soul in the body—is a guest'; 'life should be built according to the divine canons'; 'you must pray at night'; 'a man should be merciful, show clemency'* [Tatar poeziyase, 1992, p. 260].

Motifs of the renunciation of the world are predominant in his poems: the glorification of asceticism, the recognition of the corruptibility of things and the unattainability of justice ('Cikhanniñ cani... ' ('The Wealth of the World')). The poet reminds us that progress along the Path requires a constant struggle with the nafes (passion, the inferior ego). Kargaly also describes a person in a state of zuhd (abstinence), stating that 'the wealth and the glory of the world' are deceptive, and, addressing himself, he exclaims: you can't expect any good of them, 'for the sake of one joy the world gives a man a thousand troubles'.

Letters in verse are an important part of the works of Kargaly. The semi-literary, semi-publicist genre allowed the poet to express openly his educational views, primarily in the form of a criticism of wealth and those who are in power, who live for their own pleasure ('Kibay bayga' ('To the rich man Kibai'), 'Khaci Mökhämmät bayga' ('To Muhammad-Haji Bai'), and not in the interests of society. The poet expresses his disappointment about the fact that there was no

place for his knowledge, experience and abilities in his home country. In these works the critical motifs are more 'down-to-earth' and separated from religious and philosophical ideas, the poet uses satire to draw an image of an ignorant, backward and greedy man—his contemporary.

Kargaly's poetic travel writings 'Säyaxät-namä' turned over a new page in the chronicles of this form. They describe his studies in Bukhara, his travels to Istanbul in 1815, the author shares his memories of Egypt and Arabia. Although, according to the tradition of medieval oriental literature, the work is illustrated with quasi-fictional translated stories from the life of the ishans and sheikhs, it contains the first samples of landscape lyrics (*'Today I took a leisurely stroll in the steppes, / The meadows, so full of flowers, were beautiful. / Somewhere a cuckoo cries: 'kak-kuk', / From her voice, so full of longing, I lost my mind. Divine larks ceaselessly circle the sky, / A quail prowls, ducks swim with their heads held high. / Cranes soar; but the geese stand still and dour. / Nightingales sing like mad things, shedding tears upon the flowers.'* [Gaynullin, 1975, p. 96]), dedications to his motherland, to his native country (*'Yearning for one's motherland never dies, / So I went back to my country. / For the love of one's motherland is sacred, / A love felt by man and woman until they die.'* [quote in: Gaynullin, 1975, p. 97]).

A. Kargaly is the author of numerous munajats, madkhis, dedicated to the prophet Muhammad ('Mönäcäte äl-khaci Äbelmänikh' ('Munajats of Abulmanikh-Haji')), and other works. 'The optimistic motifs of his verses are not derived from life in general but are based on his belief in God, in his omnipotence,' says M. Gaynullin, and cites as an example the following lines: *'Oh, friend, do not be too saddened about the insignificance of this world; / Some day God will make your dark days bright, as the light of the moon'* [Gaynullin, 1975, p. 95] Indeed, this remarkable poet continued the traditions of Tatar Sufi poetry, above all, of M. Koly and Qolşarif. However, his poems started to reveal a faith in the power of human feelings, associated not only with the spiritual world but with the material world too.

Shamseddin Zaki (1822–1865)—Tatar poet, Shamseddin Gubaydullin was blind from birth. He was a teacher and knew the Quran, a great many hadiths and the works of eastern authors by heart. The largest part of S. Zaki's legacy is a corpus of lyrical poems written in the genres of the madhia and ghazal. They are suffused with Sufi religious ideas and philosophical musings about human life and destiny. The main theme of his poems is the mystical love of the Almighty. Thus, in his poem 'Ästäsäm galämdä dik yar bulgay-bulmagay' ('If I search the Universe, shall I find a man as much in love as you?') Zaki employs the traditional Sufi symbols of the marketplace and trade (bazaar—säüdä) representing being and life. The interplay of symbols serves to depict a philosophical world view. The poet speaks of death as a destructive force which takes away lovers, youth and friends: *'You're on horseback, so travel this earth and see its worth / For who knows how long your horse will last... / In the city of this world there's a lot of bargaining at the market: So bargain, for who knows how long the market will last'*. [Tatar poeziyase, 1992, p. 254]. The poem stands out in Tatar Sufi literature because it reveals the illusory nature of existence.

An exhortation to repent is the subject of the poem '...hay, nä oersän' ('Ah, why do you sleep?'). Appealing to his own soul, the poet employs the same words as Qolşarif: 'nä oersän' ('why do you sleep?'), 'eçmä gaflät şirbäten' ('don't drink the wine of indifference'), 'näfse... hälakeñ—oşbu doşmanıñdadır' ('passion is the enemy that leads to perdition'). The hero of the poems '...Bu süze kägazä yazmak kiräkder' and '...Gaflät uykusınnan uyangım kiler' is also in a state of 'tawbah' (penitence).

Restoring the tradition of the zikr, S. Zaki in his poem '... Tınmayın gizmäkne agın sudan ügränmäk kiräk' ('The incessancy of motion should be learned from flowing water') advises that reunion with God starts from the zikr 'Hu'. For a Sufi every speck of dust, every particle of nature is a subject for emulation and admiration; generosity can be learned from the rain and self-sacrifice from a butterfly. Advocating self-restraint in everything, he calls worldly goods an 'enemy' and an 'evil Div'. Confronta-

tion with the nafes, the lower human self, is one of the main themes in Zaki's poems.

His prose deals with various tenets of Islam. In 'Är-risälät äl-farız' ('The Treatise of the Indispensable') he looks at questions of Sufism. S. Zaki argued for the active acquisition of knowledge that can open up the truth to human beings. In his monograph M. Gaynullin quotes a letter by Zaki addressed to the mullah Akhmejan Nariman, in which the Sufi poet expresses his view of life: *'Hey, you who call upon me to quit studying philosophy and teaching this science, hear me! Taking you and the person beside you as witnesses, I say: the prophet Ibrahim, seeing how the heavenly bodies light up and then become extinguished under the influence of some force, has come to the philosophical conclusion that these bodies do not have the right to be God; I find nothing bad in that. Given such strong evidence, it takes a bright, rich and perfect mind to draw the right conclusion. It is not for nothing that the prophet Ibrahim—is said to be Plato's and Aristotle's shakird. When you attain the Truth, however, you have no need of philosophical*

judgements, for philosophy—is only the beginning, which prepares seekers of Truth... Upon my soul, it was only after I studied philosophy that I understood the meaning of God's words, that people will come to meditate on the creation of the world and that I would need God's assistance for my own development...' [quote in: Gaynullin, 1975, p. 105].

S. Zaki entered the history of literature as a subtle lyricist and author of elegant philosophical poems.

Khibatulla Salikhov (1794–1867) was renowned as the author of the book 'Texfät äl-äuläd' ('A Gift to Children'), in which 'tajwid', the Arabic pronunciation rules are treated in verse. His poetic legacy (more than 2,000 lines) came to light in the collection entitled 'Mäcmäg äl-ädäb' ('A Collection of Pieties', 1839). This book is a corpus of religious and ethical instruction. The poet appeals his readers to abstain from bad deeds and to be kind to others. Written as illustrations to number of exhortations, his stories revive the traditions of the medieval fable.

K. Salikhov's poetical persona perceives life as a turbulent sea, hostile to humans, covered by the darkness of ignorance, leaving humans lonely and helpless against this dark element: *'The sea of ignorance—wave upon wave, / People drowned there... / Who will see my hand, reaching out from the darkness, / Who will save me from this abyss?'* There is, however, no hope of light: *'To love life—is to drink the devil's brew'* [Khibatulla Salikhov, 2000, p. 168]. This can only be countermanded by following the Sufi commandments. In the poems 'Täässef' ('Regret') and '... Äbelmänixneñ "Tändä canım" şıgyrenä' ('On Abulmanikh's poem "Soul in the Body"') the hero, in the state of tawbah (repentance), recalls his life and shows remorse: 'I didn't know that the soul is the body's guest'; 'life has passed me by'; 'I have built my life on ignorance'; 'I couldn't open my eyes because of indifference [(*'gaflätän küzemne açmadım, tönlä torıp'* [Khibatulla Salikhov, 2000, p. 168], the most common motif in Sufi poetry); 'I have wasted my life on worldly pleasures' and so on. The radif 'belmädäm' / 'didn't know' serves as an intertextual link to a poem by Kargaly.

Gabdeljabbar Kandaly (1797–1860) is one of the more original poets of the period, who influenced the development of Tatar enlightenment literature. He was born to the family of a mullah, in the village of Sary Kandal (Irtugan) in the Samara guberniya. He wrote his first poem 'Risäläi äl-irşad' ('The book of guidance on the path of righteousness', ca. 1815–1816) when he was studying at the madrasah. It was a religious and didactic poem, which consisted of an introduction, 28 chapters and a concluding munajat. The author exhorts the reader towards righteousness, which, to his mind, is only attainable through Islam. The poem emphasises the caducity of earthly existence and the necessity to prepare for future eternal life. For this, it is necessary to study, be kind, patient and compassionate and to shun evil and cunning. G. Kandaly repeatedly tells us that ignorance is evil and knowledge is good (*'Run away from ignorance, / Open the doors of knowledge, / How many people there are in the world, who, like you, / Live in the darkness of ignorance'* [quote in: Istoriya tatarskoj, 2003, p. 37]). The poem reflects the author's critical attitude to earthly existence (*'This world—is a cave where streams of sorrow flow, its bazaar makes you cry a thousand times over, and from which there is no escape'*), to the morals of society (*'This world is polluted with dung, it—is an abode full of discord... The people of this age are remarkable indeed,—they are worthy only of spiritual stagnation, and are bound to depravity'*), and to human relations (*'The world is an astonishing, quite astounding place if you cast a look at it: there is no regard for the poor; while the rich are greatly honoured'*) [Istoriya tatarskoj, 2003, p. 37]. Exhorting his readers to be merciful, he reminds them that human behaviour leads them either to heaven or to hell, which is depicted in the poem.

Kandaly's next work was a major ethical and philosophical poem 'Kiyssai Ibrahim Adham' ('The Kiyssa of Ibrahim Adham'), named after one of its characters, Sultan Balha Adham Ibrahim. In search of the truth, he decided to abandon his throne and started wandering as a dervish. In relating the story of this character, Kandaly draws parallels with his own life,

describing how he took to travelling to seek wisdom. Like all his poems, this is an autobiographical work, which is reinforced, according to R. Akhmetov, 'by its intimacy and subjectivity' [Akhmetov, 2003, p. 40]. The poem is rich in didactics, raising many problems characteristic of Turko-Tatar literature, such as the justice of a ruler, the relationship between rulers and the people, the meaning of life and the secret of humanity. As far as the novelty of the poem is concerned, A. Sibgatullina remarks that it was not for nothing that the traditional 'common-place' topics of Eastern poetry were recurrent themes in the literature of the Islamic countries, and argues that Ibrahim Adham figures as an ideal of independence from power and wealth, being an enlightened and socially just ruler [Sibgatullina, 2001, p. 25]. According to Sibgatullina, Kandaly introduced into Tatar poetry an irrepressible striving towards self-realisation.

The poetical persona of G. Kandaly's poems is an educated mullah, who is bound up in the interests of his spirit and his heart, independent in his actions and striving for happiness in love. He behaves in ways that are contrary to the accepted moral norms, and openly speaks of sensual love: *'My heart has succumbed the fire of love, / My heart is burning with the passion of love'* (*'...Gışık ilä vä illyä xäyranım mänem...'*). He declares openly: *'Sending letter after letter, / I fell into disrepute'* (*'Bu süzlärne išetübän...'*), and appeals to us to take delight in love in earthly life: *'Has God prescribed that I take you [for my wife], / And taking you, to remain in bliss. / Lay my hands upon your breasts. / In this world and the hereafter I want to be together with you'* (*'Näzmi Yosif'*) [quote in: Sibgatullina, 2001, p. 102].

Kandaly overcame the edification and didacticism of Sufi poetry, praising instead the beauty of the world and the inner life of man. Romantic poetry comprises the largest part of Kandaly's works. In his youth Kandaly extolled the beauty of girls, comparing them to fresh fruits, natural phenomena, the moon, water springs, gardens, houris, flowers, doves and so on, and praised the beauty of romance ('Amina', 'Kamile' etc.). The feelings of the poem's hero progress from the assurance of mu-

tual love ('Süräteñ dösemä kerer...', 'I'll see your face in a dream...') to suffering caused by his beloved's refusal ('Ax, barmıym digän süzen karadır...'—'Ah, your black refusal...'), 'Söygän-emä ısanmasañ, Bädiga...'—'If you don't trust my love, Badiga...')

Divine and earthy love are mutually complementary in Kandaly's poems: '*As soon as I finish my prayers with the words 'Allah is great', / Your face at once appears in my soul*' ('Fah-ri'); '*After my prayers, my darling, / I'll ask God for your hand*' ('Kolak totıp ıset, canıy...' 'Hear me, my darling...') [quote in: Sibgatullina, 2001, p. 103]. The hero of the poem—an educated mullah—is juxtaposed with an ignorant boor—a man of the crowd. G. Kandaly's ideal was particularly clearly depicted in his poem 'Sahibjamal', innovative for its time. It was written in an epistolary style and depicts the hero's love of a simple country girl:

*'You are like a golden fruit,
Your beauty burns my heart,
I can't bear the burden of separation,
I am so weary!'*

(Transl. by R. Moran) [Anthologiya, 1957 p. 84].

The hero's desire to win the heart of the girl is frustrated by her reluctance to yield. He loses temper and, infuriated, speaks of the dull life of the Tatar woman, doomed to hard physical work and anguish of the soul, living with a 'common boor'. Addressing the girl, the protagonist urges her to choose an enlightened mullah for her husband, while arguing in favour of freedom of choice in love and matters of the heart:

'All your life,—year after year,—you will spend in a rich abode,

In play and caresses, without a care, away from the troubles of life.

You will be dressed, night and day,—in different garments...

The godly (khazret) husband will cherish his wife, who adorns—his house.

Rich ichigs will squeak on her feet, her earrings of pearl will glimmer.

She will be crowned with a silk kalfak, radiating light.

You will not be wronged, you will not reap your bread in sweat, or sleep,

Stricken with heat, not having wiped the bitter sweat from your face.

When you get tired of play and wither with boredom,

You will travel everywhere to see the wide world'

(Transl. by R. Moran) [Anthologiya, 1957, p. 87].

This motif appears in other poems by G. Kandaly. In 'Bän sezlärä ber suzemne...' ('I shall speak my mind'), while advising girls to fight for their happiness ('Don't be shy, my dear, tell them (the parents) what your word is / If you keep silent, you'll remain in misfortune, / And God will not forgive you'), he concedes that if a wife's love for her husband ends, she should be entitled to leave the man she no longer loves ('Seek your way forward by yourself,—/ God will grant you your true love'). In the opinion of M. Usmanov, the poet, 'in spite of the existing norms of law and behaviour, which limited the rights of Tatar women, virtually leaving them without any rights, becomes the first staunch proponent of women's emancipation in the history of Tatar social thought...' [Usmanov, 1988, p. 552].

In his mature works ('Faxrisorur', 'Fatiyma', 'Bädiga', and others) G. Kandaly juxtaposes his hero with the ignorant representatives of different classes, be they mullahs, the wealthy or commoners. The protagonist harshly opposes the ignorant mullahs: '*Even if you turn me away, I won't despair; / And I won't stop writing, / You will not get rid of me, / This won't be the end of it, / In my chalma-chapan, / I'll roam the steppes, / And I won't forget you, ignoramus,—/ I shall requite you a hundred-fold*'. ('Bu illärdä torıp kalsam...'). Thus Kandaly laid the foundations for a critical evaluation of the clergy's moral qualities. In his poems he depicts the tragic fate of Tatar women, and appeals for enlightenment by raising the standard of education. Kandaly takes an interest in social issues and in the cause of improving the material life of the people. In the poem 'Mulla belän abistay' ('The mullah and the abistay [mullah's wife]', 1855) he creates an image of a mullah whose purpose in life is to attend the majlis, to eat well and to sleep.

Hence, it was in the works of G. Kandaly that the programme of enlightenment was born, which called for the spread not only of religious, but also of secular education and morality among all societal strata.

In the literary process of the early 19th century there is a strong presence of folklore and romantic traditions in eastern literature. The rebirth of dastan fiction ('Kryssai Tamimdar' by I. Tubakov, 1831; 'Kryssai Äbü Gali Sina', 1836 and others) is closely interrelated with the tendency of Tatar literature to drift away from religious and didactic traditions. The romantic epic poems by Bakhavi ('Büz eget', 1842), Ahmet Uruzaev-Kurmashi ('Taxir-Zöxrä'), Yusufbek Shaikhulislam ('Säyfelmölek vä Bädigrälcämal'), 'xikayats' by S. Kuklyashev and other poets tell of great love and conflicts between reason and feelings, between duty and distractions. Continuing the spiritual traditions of the Middle Ages, these works inculcated in their readers the idea that love and freedom are the most important values of human life. Dastan literature was popular up to 1917. It is exemplified in the works of Maulekay Yumachikov, G. Makhmudov, Sh. Ibragimov, F. Khalidi, S. Rakhmatullin. According to M. Gainutdinov, this literary trend 'shook the traditional foundations' and 'set the stage for the development of the literary language and the different genres of the new realist literature' [Gaynutdinov, 2003, p. 56].

In summary, the emergence of the Tatar enlightenment in the first half of the 19th century was the result of a complex of subjective and objective influences, brought about by the changing political and social life of Russia. The opening of Kazan University played a key role in the enlightenment. The University became a seat of learning which contributed to the development of the culture of the numerous peoples of the Volga and Ural regions, and transformed Kazan into the centre of the Tatar renaissance.

The enlightenment depended on the introduction of various forms of secular science and the spread of secular forms of culture. The movement for religious reform also had a part to play, as it opposed dogmatism without refut-

ing or controverting religion, which found its expression in the philosophical searchings of fictional literature and in the interest for social problems (the improvement of people's lives) and freedom of thought. 'In the Tatar society, as in Russia generally, the direct expression of progressive socio-political aspirations was impossible, so its literature served as its press, its public tribune and as an institute of social science' [Sibgatullina, 2001, p. 4].

Tatar literature in the first half of the 19th century was a complex mosaic with certain elements that laid the foundation for the subsequent transition from the medieval religious concept of the individual to that of the enlightenment. The literary life of this period sees the appearance of religious didactic treatises, eloquent Sufi poems, social satire, travel essays, adventure dastans and hagiographical poems. Tatar Sufi poetry of the first half of the 19th century traditionally reflects the different stages of the mystic's Path: the tawbah and the zuhd, and also mahabbat, love of the Almighty. But apart from Sufi motifs, the works of the poets included poems that dealt directly with nature, love or everyday life, which may be called the first examples of secular Tatar literature. (Concerning the poem 'Saxibdjamel', G. Rahim writes: 'This poem by Gabdeljabbar Kandaly, written in the pure Tatar language, which speaks openly and with no Sufi subtext about earthly love, sets him apart from his predecessors and makes him quite unique. This is why we value him' [Räxim, 1925, p. 297]). The poets were laying the foundations for the new enlightenment literature, bringing the human potential to know, love, feel and create to the forefront. Even though all poets were Muslims, and at the forefront of their artistic world view was the sole opposition of the microcosm and macrocosm (God and human), which involved a gradual evolution, leading to an appreciation of the self-worth and civil duty of humans and the dependence of the human character on the social environment and morals of its time. Tatar literature in the first half of the 19th century reflected this shift in all its detail.

The progress of the enlightenment and Tatar literature in the second half of the 19th century.

The Tatar enlightenment, as the enlightenment movement of other peoples, was a way of ideologically overcoming the feudal and medieval societal relations. The emergence of capitalism in Russia led to a gradual breakdown of centuries-old traditions and caused profound changes in the spiritual life of the Tatar people. These new phenomena activated national life, gave impetus to the national conscience and made visible the clash between the medieval ways, which were still predominant in society, and the challenges of social development [Abdullin, 2003, p. 75].

As previously, Kazan University played the leading role in this process. In 1861, its Turkic-Tatar Language Department was reopened. Several scientific societies were established, such as the Society of Kazan Physicians (1868), the Natural Science Society (1869), the Society of Archaeology, History and Ethnography (1878). Kazan became Russia's third-largest centre of learning, after Moscow and Saint Petersburg.

In the late century, the University's printing office became one of the largest publishing centres of the empire, where Tatar publications accounted for over 50% of orders. These were mainly folklore and fiction publications. Thus, the poem 'Kıysai Yosıf' ('The Tale of Yusuf') by Kul Gali was published in 23 editions during this period [Karimullin, 1983, p. 60]. 150 editions of textbooks in the Tatar language were produced, as well as textbooks and teaching materials in all branches of knowledge.

In the 1860s, Tatars joined the movement for the creation of printed periodicals in their native language. In 1863, Q. Nasiri and the owner of a lithography printing office M. Yakhin petitioned for permission to publish a newspaper. Their petition was refused, and for years Q. Nasiri continued patiently to insist on the need to publish the newspaper 'Tañ yoldızı' ('Morning Star'). Teacher of the Turkic languages of St. Petersburg University X. Faizxanov also petitioned for this (1857–1859). In the early 1870s, a petition by non-commissioned officer A. Kutluyarov and merchant's son Kh. Bikbulatov (St.

Petersburg), who wanted to publish the newspaper 'Däftäre möcdävär' ('News Digest') was rejected. A. Kutluyarov submitted two more petitions for permission to publish the newspaper 'Möcdävär' in the capital. In 1885, an unsuccessful attempt was made by a native of the Spassk uyezd of the Kazan guberniya, S. Akhmerov. A petition by the founder of Tatar drama G. Ilyasi (1887) for the publication of the newspaper 'Kazan' was not given any consideration. In 1891–1895, G. Bayazitov, translator with the Ministry of Foreign Affairs, collegiate assessor and akhun of the 2nd mahalla of St. Petersburg, was denied permission to publish the newspapers 'Xäftä' ('The Week'), 'Çışmä' ('Spring'), and 'Nur' ('Ray'). Similar requests by the writer Z. Bigiev, Honorary Chairman of the Imperial Society for the Study of the Orient O. Lebedeva (1893) and inspector of the Tatar Pedagogical School of Kazan Sh. Akhmerov (1894–1895) were not met. According to R. Amirkhanov, by 1905 over 20 petitions were addressed to the Minister of Internal Affairs, the General Directorate for the Press, the St. Petersburg Censorship Committee and to the Governor of Kazan by Tatars requesting permission to publish periodicals in their native language. However, the government authorities responded to the persons trying to assume responsibility for the publication unvaryingly with a refusal, citing either their alleged incompetence or the fact that it was impossible to provide censorship control of the periodicals in the Tatar language [Amirkhanov, 2002 pp. 35–36].

A breakthrough in this direction was the establishment of the newspaper 'Tärceman' ('Translator') in 1883 by Ismail Gasprinski (1851–1914). The newspaper was issued once or twice a week, but the effect it had on the Turkic peoples was enormous. The educator used this publication to put forward the idea of the cultural and national unity of the Turkic peoples of Russia, based on the 'unity of language, thought and actions' of the Muslims, and assumed that education would play a key role in the national revival of the Muslims of the country [Tatar Encyclopaedia, Vol. 2, p. 64]. The newspaper urged people to improve their knowledge, to engage in work for the good of

society, and served as a stimulus to literary and pedagogical activity. Under the influence of 'Tärce-man' new schools and charitable institutions were opened in different parts of Russia, and literary activity flourished [Mukhametdinov, 2005 p. 65].

The Tatar intelligentsia paid special attention to the publication and distribution of books, and literature was regarded as a means to promote the ideas of the enlightenment. Of significance in this respect is a letter of the future gold industry entrepreneur and publisher Shakir Ramiev, which he wrote in 1881 to his 21-year-old brother Zakir, who was studying at a university in Istanbul: 'The issue of resolving matters of education is being gradually raised in our region, but I don't know how far it will go, it is hard to say as yet. You have seen for yourself and you know that our people do not pay any attention to the words of people who do not have a chapman or turban on their heads. Some people were alarmed when they heard that Gasprinski was intending to publish a newspaper and, pointing with their fingers, declared: "A newspaper, a newspaper... will lead to the ruin of the world". Mind you, everyone can be educated, and it is essential, therefore, to read new books, collections depicting the events of life. What our nation needs right now are books, not newspapers. For this reason, try to bring more books of different kinds that give knowledge, and novels showing progressive development. Write about the availability, cost and delivery of printing types. Whether you can bring them during this trip or on another, but you have to try...' [Pis'mo, 1913, p. 189].

These ideas were prevalent among educators. For example, *Raxmatullah Amirxanov* (1805–1876)—educator, translator and publisher—published, at his own expense, his own essays as well as educational and didactic works ('Zöbdäten-nä-saix' ('Best Advice', 1849), 'Gakai-de mänzumä' ('Religious doctrine in verse', 1856), 'Mäğrifät-namä' ('The Book of Knowledge', 1845, by the Turkish poet İbrahim Haqqı, etc.)), and donated them free of charge to rural schools. In 1841, he started publishing Tatar calendars [Gaynutdinov, 2002 p. 140], which served as the foundation for forming Ta-

tar periodicals. This area was developed strongly in the second half of the 19th century.

'Kazan qalendare' ('Kazan Calendar') by Q. Nasiri was published in 1871 (it was issued annually until 1898). Nasiri paid special attention to the chronology of events that were taking place in Russia and in the world, to the informative material on the rules of trade, prices, banking activity and on drafting trade documents. Such advertising was found in the reference desk calendars of the teacher, writer and translator Sh. Rakhmatullin, which had been published for 10 years (since 1891).

In 1893, F. Xalidi started publishing wall calendars containing information on Muslim and Christian holidays, literary and historical materials, as well as recipes, useful tips, entertaining short stories and legends, which had delighted the Tatar reader for 30 years [Möxämmätšin 2001, pp. 47–71]. In 1898, A. Maksudi issued the first tear-off wall calendar 'Takvimi divari' ('Wall Calendar'). All calendars contained works of folklore and historical information.

In the early 20th century, these traditions were continued in the calendars 'Zaman' ('Epoch') by Sh. Shagidullin, 'Möshävarät' ('Advisor') by M. Kadermatı, 'Şärık' ('East') by K. Bashirov, et al., which at the same time became popular scientific, informational and entertaining illustrated publications in large format. In the early 20th century, the 'Sabax' and 'Millyat' calendars took pride of place amongst the printed products of the national publishing houses of the Karimov brothers [Zayni, 2004, p. 11].

The Dastan literature also developed as a result of the striving of the Tatar intelligentsia to make books attractive to the people ('Marzban namä' G. Makhmudov, 1864; 'The Tales of the Forty Viziers' by Q. Nasiri, 1868; 'The Tale of Xatam Tai', 1876), and others. By the end of the 19th century, books appeared in which answers of popular appeal to acute problems were propounded: 'Äsbab äl-fökr vâl-gana' ('The Causes of Poverty and Wealth', 1899) by Sh. Khamidi, 'Näsaix näfiga' ('Useful Tips', 1899) by M. Galimov, etc.

Of great significance during the enlightenment era were translations of the finest works

of Russian literature into the Tatar language. In 1867, Josif E`rak translated and published 'The Fountain of Bakhchisaray' by A. Pushkin under the title 'Küz yashe çış-mäse' with a dedication to A. Kazembek. In 1890, the story by L. Tolstoy 'A Spark Neglected Burns the House' was published as a single book, and by the end of the 1890s 'Robinson Crusoe' by D. Defoe (1897), 'Ashik Kerib' and 'Bela' by M. Lermontov (1898) were published, and 'The Captain's Daughter' by A. Pushkin, 'The Old World Landowners', 'The Government Inspector', 'Marriage' by N. Gogol, etc. were translated.

The striving towards Europeanisation which had emerged in Tatar society and at the same time the desire to preserve oriental traditions did not contradict, but rather complemented each other. This tendency is clearly seen in the works of Ş. Märcani (1818–1889), Q. Nasırı (1825–1902) et al.

Şihabetdin Märcani had an excellent command of the oriental languages and an extensive knowledge of eastern culture. He actively collaborated with the Orientalist scholars of the University of Kazan (Prof. I. Gotwald, Turkologist V. Radlov, Prof. A. Kazembek, the first female Orientalist O. Lebedeva, known among the Tatars as Gülnar hanım, et al.), and St. Petersburg (V. Velyaminov-Zernov, Sheikh at-Tantawy). He was the first of the Muslim scholars to be elected a member of the Society of Archaeology, History and Ethnography and became one of its active participants [Yuzeev, 2005, p. 48].

Ş. Märcani's occupation focused on scientific work, his six-volume dictionary 'Vafiyat äl-äslyaf vä täxiyät äl-äxlyaf' ('Detailed Information on our Predecessors and their Salute to their Descendants') became an encyclopaedia of the spiritual life of the East. The author compiled a 'Mökaddimä' ('Introduction') to the dictionary, which described the birth of sciences in the Orient, gave them their classification and discussed the specific features of the major schools of Islam. This work (1883) belongs to a particular genre of Oriental literature—the *Tabaqat* (biographies), in which the author propounds his views on various issues of the liberal arts.

Märcani considered science to be the driving force of society and divided the sciences into rational (*gakliya*) and traditional (*nakliya*) sciences. Rational sciences included mathematics, physics, medicine, etc., traditional sciences were linguistics, syntax and some areas of literary theory: 'magan—the science of creating logically correct content by arranging words in a special order, bayan—the science of expressing one and the same meaning, badig—the science of beauty, figurative speech, garuz—the science of versification' [Märcani, 1999, p. 47]. According to the author, the linguistic disciplines, which started as a means for understanding the Qur'an and the Sunnah, later became branches of science in their own right. Philosophy and philology, in his opinion, came into being predominantly under the influence of the works of Ancient Greek scholars. Märcani analyses the views of Aristotle, Plato, Socrates et al. on literature and works of fiction. He believed that al-Farabi, Abu Ali ibn Sina were proponents of these concepts in the Muslim world [Märcani, 1999, pp. 31–32]. Although Märcani created a classification of sciences similar to that of Ibn Khaldun, he tried hard to elaborate on it with his own additions and discoveries [Xismätullin, 1999, p. 23].

'Muqaddimah' contains certain statements about the specific features of poetry and literature. The author believed that poetry should be harmonious and should please people. As far as the essence of art is concerned, Märcani saw this in the expression of the truth and in the impact on the minds and hearts of people. He considered genuineness to be not an optional feature of artistic expression, but an inherent quality of literature: the non-genuine is not poetry. The confirmation of the inseparability of poetry and truth, the requirement for literature to be something more than just the artistic presentation of material, and the appreciation of the significance of literature in terms of moral values were reinforced by Ş. Märcani not only in a religious but also in a scientific context. Taking this into consideration, G. Gubaydullin called this book the work of a man in love with beauty, who strove to synthesise religious and scientific thought [Gobäydullin, 1989, pp. 314–315].

Indeed, Ş. Märcani attempted to give science a position of priority in society, alongside religion. His classification of sciences, including the study of literature, was very instrumental in their popularisation among the Tatar population.

The expansion of the historical and literary perspectives of the Tatars began with the publication of Märcani's historical book on Volga Bulgaria and the Khanate of Kazan 'Möstäfadäl-ähbar fi ähvali Kazan vâ Bolğar' ('Information Presented for the History of Kazan and Bolghar', 1885, Vol. 1), in which he tried to trace the connection of traditional Tatar national science and culture with the history, literature and science of the central regions of the Muslim world, and to show the contribution of the Tatars to all-Muslim science and culture. In particular, Ş. Märcani was the first to examine the Turko-Tatar records 'Nähc äl-färadis', 'Kıyssai Yosıf', 'Bädavam' and others, and prove that they were truly part of the spiritual heritage of the Tatars. In addition, he provided information about the Tatar poets Qol Ghali, G. Utız İmyani and others.

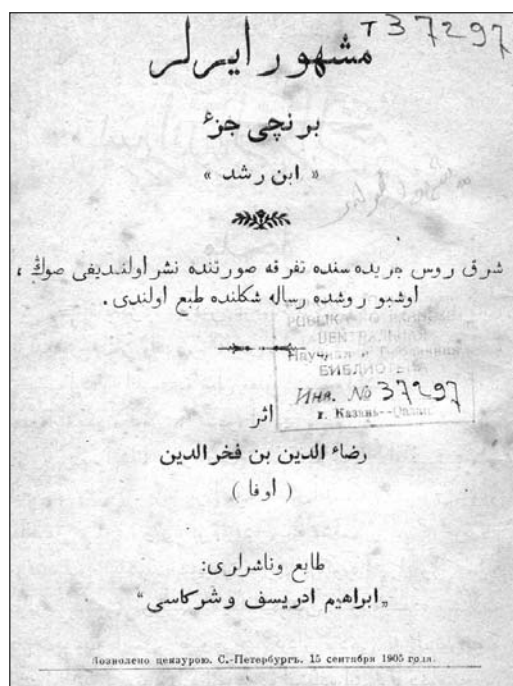

Ş. Märcani's activity in the area of historic and literary research was continued by *Riza Faxretdin* (1858–1936)—thinker, social activist, and writer. He was born in the village of Kichuchatovo in the Bugulma Uyezd of the Samara guberniya into the family of a mullah. He received his primary education at his father's madrasah and spent 10 years at the madrasah of the village of Nizhnie Chershily'. In 1886, he went to Kazan, where he met Märcani. In 1889, he began working as an imam khatib in a mosque, and a mudarris of the madrasah in the village of İlbyakovo of the Bugulma Uyezd. At the same time he was engaged in scientific activities. His first treatises 'Kitab ät-tasrif' and 'Kitab äl-iğtibar' (1887–1888) were devoted to the teaching of the Arabic language and Islamic law.

In 1891, R. Faxretdin was appointed to the position of qadi of the Spiritual Assembly. At this time he was collecting material for his six-volume bibliographical work 'Asar' ('Monuments'), which included biographies of Muslim Tatars from the 13th century to the beginning of the 20th century. In addition, as part of the

series 'Famous Men', he published a number of books about famous Arab-Muslim thinkers: Ibn Rushd (1905), Al-Ma'arri (1908), Ghazali (1909), Ibn Taymiyyah (1911), Ibn al-'Arabi (1911), about the outstanding women of the Muslim world—'Mäshür hatinnar' ('Famous Women', 1903). He considered their life and work to be models to emulate.

R. Faxretdin authored 11 books devoted to the moral education of children ('The Well Brought Up Mother' (1898), 'The Well Brought Up Child' (1898), 'Morality of a shakird' (1899), etc.). They were used as textbooks in the madrasahs. He wrote two novels: 'Salima, or Chastity' ('Sälimä, yaki Gıyffät', 1898), 'Asma, or Deed and Retribution' ('Äsma, yaki Gamäl vâ Cäza', 1903), where he put forward the ideal of a Muslim woman with a European education, who could be not only the mother to the family, but the mother to the whole nation. Thus, the protagonist of the novel 'Salima...' is a Tatar shakird, who studied in a madrasah with old methods of teaching, but then moved to a Jadidist one. However, he is not familiar with true enlightenment, crafts, art. Compared with other schoolboys and students, he seems backward. In contrast to him, R. Faxretdin created an idealized character, Salima—the educated and cultured Muslim girl, a graduate of one of the Egyptian universities and fluent in Arabic, French and English. Author wrote about her with admiration: 'She is lovely and practical, attractive and tender, as she is intelligent. She is as smart and charming as she is educated and ethical. As soft as oil, her voice enchants the soul, it's as lulling as the nightingale's song, as the breath of the morning breeze. She could be called the ideal girl, which is the sea of science' [quot. from: *Istoriya tatarskoj*, 2003, p. 130]. Salima became the embodiment of the author's ideal: through his characters, the writer conveyed educational ideas significant for that time.

In addition, numerous set pieces, aimed at creating a new mindset, promoted his educational beliefs. Here is a typical quote: 'Knowledge religious dogmas alone is not enough for life—scientific knowledge is needed. In order for youth to serve the people, we shall reform

Cover of R. Fakhretdin's 'Ibn Rashd' (Orenburg, 1905).

the methods of training and education in the madrasahs. Without knowledge of the Russian language and mastery of the basics of science, it is impossible to serve the people. If you want to make the nation happy, you need to convey knowledge to it and develop the crafts. Without mastering the Russian language, all this is impossible' [quot. from: *Istoriya tatarskoj*, 2003, p. 130]. The beliefs of the author were in tune with the cultural demands and aspirations of the Tatar intelligentsia.

The famous encyclopaedist, educator and social activist *Qayum Nasiri* (1825–1902) emphasised sustained interest in Russian culture and social life as an important factor in the cultural development of the Tatars. As a shakird, he had learned Russian alongside studying in the madrasah. In 1855, he began to teach Tatar at the Kazan Theological Seminary. In 1871, he opened the first Russian-Tatar elementary school in Kazan. Annual calendars, published by him for 24 years, adequately fulfilled the function of the Tatar periodicals. In 1885, Nasiri was elected as a member of the Society of Archaeology, History and Ethnography.

Q. Nasiri made a huge contribution in almost all the major fields of science and culture. In 1860, his textbook for elementary schools 'Buş vakit' ('At Leisure'), which considered questions of morality within the Muslim ethic tradition, was published. Nasiri used specific examples from Tatar families everyday lives to tell young readers about kindness, compassion, respect for elders, deceit, cunning etc., and of the consequences of certain actions.

Later, the scientist wrote textbooks on mathematics ('Xisaplık, yağni Gıylme hisap kagıydäläre, yaki arifmetika və hisaplık mäsäläläre' ('Arithmetics', 1873), 'İstıylahät gıylme händäsä' ('Geometry', 1895), geography ('İstılähate cäğräfiya' ('Basics of Geography', 1890), 'Cäğräfiyai käbir' ('Complete Geography' in three parts, 1894-1899), botany ('Gıylme zirägat' ('Basics of Agriculture', 1892), 'Gölzar və çämänzar' ('Plants and Flowers', 1894), and medicine ('Mönafığ ağza və kanune sıyxxät' ('Human Body and Hygiene', 1892), brochures about the jewelry and locksmith trades, and the art of cooking. The textbooks 'Äxlak risaläse' ('Anthology of Morality', 1881, 1890), 'Tärbiya kitabı' ('The Book of Upbringing', 1891), 'Tärbiya' ('Upbringing', 1892), etc. raised questions of ethics, upbringing and pedagogy. His textbooks and manuals for studying the Russian language occupy a special place: 'Kavagıyde kıyraäte rus' ('Russian Reading Rules', 1889), 'Nämünä, yaki Änmüzäc' ('Grammar of the Russian Language based on the Arabic Language Model', 1891), 'Lögate rus kitabı' ('Russian-Tatar Dictionary', 1892), 'Zöbdäten min tävarixe äre Rusı' ('Concise Russian History', 1890).

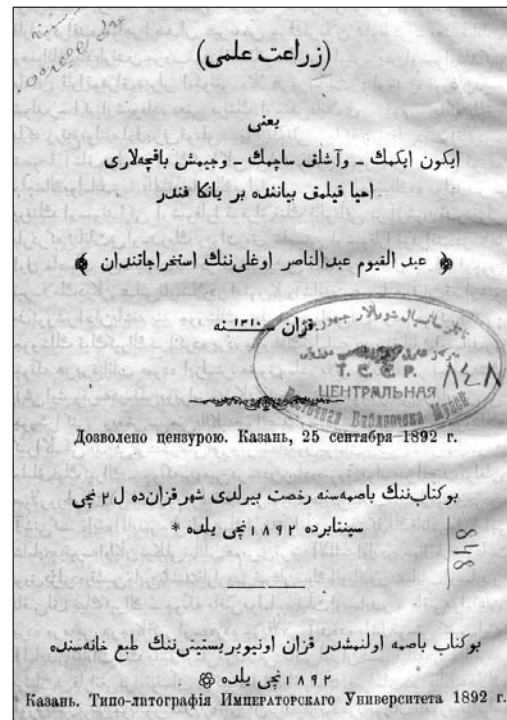

In 1882, Q. Nasiri published a treatise on poetics by Keikavus 'Kabusnamä', translated by him from Persian (16th century). In his accompanying commentary he set out his requirements of poetic speech. Following Keikavus, Q. Nasiri imposed certain conditions on Tatar poets: the works should be meaningful, well-organised, rhymed and rich in fantasy. The book sets out the school of thought regarding the differences between poetry and prose, poetic forms and styles. The release of the treatise heralded the end of the 'trilingual' development

period in literary theory, although Arabic and Persian still remained the languages of science. The book had a huge impact on the development of national poetry, as this was the time when the practice of the national art form and literary theory converged.

In the second half of the 19th century, national folkloric monuments began to be studied using concepts from literary theory. Q. Nasiri was also associated with this field of study. In 1871, he published samples of Tatar folklore in his 'Kazan Calendar'. And in 1880, his book 'Kırık bakça' ('Forty Sections') appeared, in which the author introduced readers to samples of Tatar folk literature and provides instruction about the genres of folk poetry. In particular, he identified six Tatar folk song genres: songs of woe, songs of praise, melancholy songs, songs about love and separation, about suffering.

Referring to the medieval adab—requirements for the educated and civilised person—he wrote a book 'Fävakiñ ä-l-cöläsa fi-l-ädäbiyat' ('Fruits of Conversations about Literature', 1884), in which he re-created the human ideal, expounding upon positive and negative human qualities. The fortieth chapter of the book is devoted to the problems of theory and history of literature. Q. Nasiri translated some of the theoretical issues from the treatises in 'Mostatraf' written by the 14 century Egyptian scholar Muhammad Ahmad al-Khatib and 'Ravzıl-axyar' by the 12th century lexicologist Zamakhshari. The author informs the reader of this in the preface of the book.

Here, Q. Nasiri continued the study of literature and, in addition to motivational classification, raised the question of the structure of folk texts. For example, the scholar pointed out that the Tatar poetic strophe consisted of two lines, whereas the first couplet of the folk song verse differed in content from the last couplet. He also revealed the variability of the Tatar song. The scholar was interested in the origins of folklore, and expressed his thoughts about the purposes and functions of literature. Along with Ş. Märcani, Q. Nasiri saw literature as an effective tool for influencing people, and he stated that aesthetic enjoyment was a natural human

Cover of K. Nasyri's book 'Ziragat Giyleme' (Kazan, 1892).

need, paying particular attention to the concept of catharsis. For the first time in Tatar literary theory, Q. Nasiri meditated on the criteria for evaluating individual works. With regard to Tatar folk songs, he defined evaluation criteria such as beauty of style, elegance of lyrics and pleasantness of meaning. With respect to axiology, the author saw literature as the ideal, rarefied standard.

In the book, he attempted to analyse the rhythm and metre of folk and literary works (for example, the poem 'Säxipcämal' by G. Kandaly). The author used garuz metres to do this. This fact was significant for Tatar theoretical thought. It is known that in 19th century Tatar literature, many artistic and aesthetic systems coexisted (Sufi, educational, religious-didactic literature, etc.), and, from each point of view the boundaries, goals and achievements of literature itself were seen in a different light. Each system had its own theory, which took on a particular form. Folklore had its own strict, although not expressly stated, theoretical basis. In his analysis that 'switched' from literature

to folklore, Q. Nasiri, proved it was possible to develop a single scientific concept for the study of different literary systems. A statement such as this could be made because of the theoretical fragmentation had become a realised fact through which the multiple styles of Tatar literature were viewed. In addition to this, Q. Nasiri's research on *garuz* intensified the study of the Tatar *garuz*, and facilitated the search for variations in Tatar *vazen* metres from Arabic and Persian.

At the turn of 1840–1850s, in West-European and Russian philology, a special research area—the so-called mythological school—was formed. Starting in 1894, the 'IOAIE' printed articles by E. Malov, N. Katanov, Ya. Koblov, A. Dmitriev, S. Matveev and I. Smirnov, in which the comparative-historical method was used in the study of Tatar literature and folklore. Q. Nasiri was also interested in the concept of the mythological school. In his work 'Beliefs and Rituals of the Kazan Tatars' (1880), he compared Tatar folk beliefs with the folklore of other nations. Applying the principle of naturalisation, or migration theory, Q. Nasiri tried to determine the origins of some of the myths and fairy tales. In 1896, he published his work 'Samples of the Folk Literature of the Kazan Tatars', and in 1900—in collaboration with P. Polyakov—'The tales of the Kazan Tatars and a comparison with the tales of other nations'. The authors commented on individual works and made connections with the life of the people. They emphasized that the mythical tales of mankind and nature that the language had preserved was in fact the people's understanding of nature and the spirit, being expressed in certain ways.

Q. Nasiri has gone down in the history of Tatar literature as the author of several fiction works. In particular, his works 'Äbügalisina' ('Abugalisina', 1872), dedicated to the great medieval thinker Ibn Sina, and 'Kırık vâzir kıyssası' ('The Tale of Forty Viziers', 1868), 'Äfsânâi Gölruş vâ Kamârçan' ('The Legend of Gul'ruş and Kamardjan', 1896) et al., which included revised novellas and stories from Arab, Persian and Turkish literature, were popular among the Tatars. Their fantastic motifs were intertwined

with moral teaching. The hero lost his epic-heroic status and became an ordinary person. The storylines were simply allegorical.

Thus, in the second half of the 19th the socio-cultural life of the Tatars experienced a gradual crisis. An awareness of the need for closer relations with European culture grew, and for ways of life to adapt to the needs of modern times. J. Validi wrote on this subject: 'We have seen the tendency to this (awakening) both in Ş. Märcani and represented by the translated calendar literature. However, all this as a spontaneously universal and coherently continuous phenomenon is reflected in a special kind of mental-cultural movement known as 'usul jadid', that is 'the new method'. Representatives of this movement decided that it was proper to start with school and alphabet reform. This made the movement very popular and full of vitality. The issue of school reform was discussed not only among scientists and educators: reform would affect the lower classes as well, so all sections of the population were deeply interested in it. It is probable that the problem of school reform raised more agitation among the Tatar than any other problem in their history up to this point' [Validov, 1998, p. 40].

Indeed, in the 19th century, the development of education was the only possible way of engendering a spiritual revival and a growth in society's intellectual potential. Educators focused training specialists who could show their worth in reforming the life of the nation. The Muslim education system was largely dependent on charitable organisations and foundations interested in the outcomes of the educational movement. Private charitable giving was widespread among Muslims. These donations were used to build and maintain educational institutions and libraries, and to publish books.

These innovations contributed to a shift of direction in literature: In the second half of the 19th Tatar secular educational literature took shape. This educational movement specifically became the fertile soil from which the new literature emerged.

Educators wrote works that concerned the most burning issues of national life, from their

point of view. An increasing desire to perceive actuality realistically led to them to a completely different, realistic model of the world in literature, where two sides of reality were presented in opposition: new/old; enlightenment/ignorance; good/evil; happiness/misery; living/dead; spiritual/material; poverty/wealth. This model was grounded in a faith in the transformative power of the human mind, a desire to revive the ideas of a just society, and a distaste for any manifestations of ignorance, hypocrisy or anger. Although all the writers were Muslims, the secularisation process focused on representing reality, while irreality could now serve only as a distant background in this model of the world.

These new ideological, aesthetic attitudes to genre manifested themselves mostly in poetry. According to A. Sibgatullina, poetry served as a bridge in the literary process, helping to smooth the transition from one stage of development to a more sophisticated stage, from a medieval concept of the human character to a modern one [Sibgatullina, 2001 p. 10]. The works of G. Chokry, Aqmulla, Bahawetdin Vaisov (1819–1893), Galimatelbanat Biktimirova (1876–1906), Gaziza Samitova (1862–1929) et al., captured contemporary reality, raised topical issues, criticised certain manifestations of ignorance and celebrated those who were educated. As a result of criticism of certain human qualities by representatives of the Tatar clergy, Tatar poetry switched to biting satire, aimed at coping with the ‘intolerable conditions’ in which mankind lives. The pens of poet-educators recreated aspects of life that were previously considered unworthy of attention in fiction.

The works of *Miftaxetdin Aqmulla* (1831–1895), a representative of the Tatar, Kazakh, Bashkir literature, are noted for their aphoristic nature; most of his works are in the Turkic aqyn tradition, written to be recited. A son of a village mullah, born in the village of Tuksanbaevo in Belebey Uyezd, Orenburg guberniya, he took lessons from the Sufi poet Sh. Zaki. In Troitsk, he studied under Sheikh Z. Rasulev. He wandered from village to village, teaching children and selling books. He was arrested as

Cover of G. Biktimirova's book 'Targiybel-banat fi taglimel adabiyat' (Saint Petersburg, 1897).

a result of a tip off. In 1867–1871, in Troitsk prison, he wrote a famous cycle of prison poems. He died a tragic death.

Sufism attracted Aqmulla as it offered the possibility of self-improvement. For example, in the poem 'Böradär, çın mullah kem...?' ('Brothers, who is the real mullah?'), he exclaims, 'Brothers, do you know who is the real mullah? / See any books on Sufism?'. The poet dreamed of building an ideal society through education and improving mankind. He saw the root cause of the nation's troubles in its ignorance and carelessness, believing its collective consciousness to be in a century-long hibernation ('How many troubles fall to our lot, / But the people, knowing that, remain careless. / No anxiety from carelessness, no awakening, / And on the caravans go, one after another'). His actions were aimed at overcoming this hibernation. It was through education, upbringing, improvement of mankind—with the help of books and cautionary advice—that the poet thought it was possible to change the

world and its order. Aqmulla extolled science, knowledge and crafts:

It is difficult for a person to keep up with the riches,

Outdated concepts have no use.

A man's quality lies in education,

Crafts should not be treated carelessly.

('The trait of courage is in education', transl. by R. Shakur) [Shakur, 2006, p. 103].

Although the Sufi poetry tradition strongly influenced his work, especially that of Sh. Zaki [Akhmetov, 2003 p. 162], the creation of a lyrical persona—a common man, interested in everything happening around him, a caring and thinking person—led to new themes and motifs. The theme of glorifying educators most clearly manifested itself in the marcia dedicated to the blessed memory of Ş. Märcani 'Elegy in memory of the Reverend Shigabutdin' (1892). As a historical figure, the educator is praised in the manner and style of prophets and saints. In the poem, the poet calls Kazan the centre of Tatar culture, and calls Märcani his spiritual mentor (as the Sufis did), but glorifies him as the leader and protector of the people, thus making him more 'earthly'. 'Aqmulla's character is a person boldly speaking out against the old principles, a fighter' [Sadretdinov, 1983, p. 51]. This character appears in his other marcia—'Xörmätle Rizaetdin—ber kamil zat...' ('Honourable Rizaetdin has a perfect character'). In announcing that famous scientists of his time had perfect characters, the poet thus elevated the roles of education and science, identifying them as two of the most significant charitable deeds.

Another theme was criticism of the existing order and the moral state of Tatar society. His persona is full of self-irony: he presents himself as an imperfect representatives of the imperfect Muslim community. Sometimes Aqmulla speaks the words of negative characters, those who are the objects of his criticism: *'We clouded the eyes of our people, / We became their misfortune, their plague. / What terrible nonsense is often spoken / By a respectable man with a big turban!'* (Transl. by S. Lipkin). This device moved national poetry away from its predetermined didactic course.

Aqmulla knew people's everyday lives inside out and tackled the most pressing and urgent problems of the time. Aqmulla saw the root cause of all society's ills in ignorance and carelessness, and believed the poet's mission was to promote knowledge and learning. His persona is ready to give his all for this, in the belief that mind and morals, education and morality are all united. Only a highly educated society can raise honest, pure people. In his famous introduction to the didactic ethical treatise 'First of all, we need holy beliefs..., which lives on in the form of munajat, he defines a person's necessary qualities. They are: noble beliefs, pure soul, intellect, reasonable demands, good manners, self-control, fidelity, sincerity' [quot. from: Akhmetov, 2003, p. 166]. These qualities include freethinking, which stands out in his works as an independent theme. At the same time we feel that he is aware of the futility of his attempts to change society.

M. Aqmulla, continuing the tradition of çığan folk singers, strove to become a part of the era and to cover its most important events. He was one of the first poets able to convey the people's suffering and their hopes for the revival of their former greatness.

Ghaly Chokry (Muxammadghali Gabdessalixovich Kiikov, 1826–1889)—a poet and writer, educator, whose works were also deeply affected by the revival. The son of a mullah, he was born in the village of Staryj Chokur of Birskeyezd, Ufa guberniya. He received elementary education from his parents, and studied in many madrasahs in the Volga and Ural regions until he was 21. In 1849, after his father's death, he became the imam in his native village. Chokry belonged to a Sufi brotherhood called Naqshbandiyya Mujaddidya and was a student of Sheikh Muhammad Murad al-Badakhshani. He made the Hajj pilgrimage to Mecca on four occasions (in 1872, 1879, 1880, and 1889), during which he became an heir to the founder of the Mujaddidya branch, Ahmad Sirhindi, as Sheikh Muhammad Mazkhar Sahib-Zade [Gumerov, 2003, p. 13].

The first work by G. Chokry 'Täcvid' ('Teaching the correct reading of the Qur'an', 1873), was planned as a textbook for maktabas. He

wrote a series of textbooks—religious instructions filled with religious-mystical ideas and descriptions of religious rites: 'Zammı nazıyr' ('A supplement to the work "The End of the World" by S. Bakırgani', 1888), 'Tarxibe ramazan' ('Veneration of Ramadan') and others. In his poem dedicated to the Prophet Muhammad, Chokry called Him 'xäbib äl-mustigan' (the favourite of Allah), 'şäfiğ äl-möznibiyn' (protector of the despised). Chokry's persona tells the prophet of his troubles and hopes, and is willing to give his life for him: 'If I had a thousand lives, I would like to give them all for You'.

His manuscript 'Tävarixe Bolgariya, yaki tägribe Gari' ('History of Bulgaria, retold by Gari') has a poem written in the Sufi style. 'Fosule ärbaga' ('Seasons'), 'Zammu nazıyr' ('A Similar Bond'), 'Fäyzi Gari' ('Chokry's Generosity') and others are devoted to celebrating love for God. Chokry expressed the idea of the union of God and mankind through various symbolic images: the nightingale and rose, the sea (bäxer), the pearl (dörre), the diver (gauvas), the beam of light (nur), roads (tarika), spring, autumn, etc. Within the Sufi understanding of truth, Chokry pays special attention to Dhikr as the first step on the path to divine love. In the poem 'Fosule arbaga', Dhikr is compared with the sounds of nature in spring, his persona can hear the song of divine love in birdsong and animal calls, in the sound of the wind: *'They all speak of one thing only, / They sing a song of love'* [quot. from: Gumerov, 2003, p. 16].

Chokry's writings include roughly 200 madhias and marcias, his collection 'Şämg äziya' ('The Source of Light', 1883) is devoted solely to praising past leaders who have left a significant mark in history. The poem 'A Hymn for Kazan' ('Mädxä Kazan', 1889) has become a reference point for works that reconstruct the historical past of the Tatar people. On the one hand, the exalted, romanticized image of Kazan is presented as the elite centre of the nation. This depiction of 'incomparable Kazan' is at the forefront of portrayals that mythologize the city as a centre of Tatar culture, science and education:

It is a place where shoes, gowns, ichigs and scarves are made.

They are praised by experts, captivated by the perfection of the work.

The women's craftwork is beautiful, their embroidery is resplendent,

And there are as many tubeteikas as people in the world!

Everywhere, the houses are clean and the men and women, pure.

From one direction bursts a stream of fair songs, in another direction lies a precious treasure trove of knowledge.

There are many doctors, singers, writers and men of wisdom living there,

And from all quarters praises flow to you, oh, blessed shelter!

(Transl. by S. Lipkin) [Anthologiya, 1957, p. 96].

Against this background, the author reflects on his nation's past: in the first chapter of the poem he describes the destruction of the holy city of Bolghar—the capital of the ideal state, in which the culture of Islam flourished (Darel-Islam) ('Bolghar, the holy house of Islam, has been turned to ruins'). Kazan is named as the spiritual heir of Bulgar [Gumerov, 2003, p. 16]. On the other hand, historical events are described from the perspective of representative of the Tatar people (*'There came Aksak-Timur; the villain, the killer of the young and old, / To crush the Muslims rapidly and turn the city to ruins. / He struck the city with all his might, he burst like wildfire alight, / And he debased and crushed Bolghar; many men and women perished...'*, transl. by S. Lipkin). The poem shows the desire to awaken a sense of national pride, to draw the contemporary reader's attention to the creative potential of the nation. This trend would be further developed in all genres of educational literature.

Another motif—praising contemporaries for specific acts—takes on a different meaning in the odes of Ghaly Chokry. Two of his odes provide a clear example of this. In the first, dedicated to Ş. Märcani's educational work, the object of admiration is represented traditionally—with saintly status (*'Having studied many sciences and philosophy, he guided us to the truth'*). However, the ode dedicated to Nigmatulla-ışhan notes the good work that he has

Ghali
Chokry.

century

done for the people, in particular the pipes that Nigmatulla laid from the spring to the centre of the village, allowing the water to flow through them and to be used by all.

In this way, Tatar literature displays an educational ideal that differs from the medieval 'perfect man' ('*āl-insan āl-kamil*'): he is a simple, active business man, who uses his mind, wealth and skills to be of use to society. This protagonist is also present in Tatar educational prose.

The interest in the surrounding world and the social status of a people of other nationalities combined with the establishment of the high educational role of literature was most in evidence in the *sayakhatname* genre. This was a form of travel writing, which, from being on the fringes of medieval literature, became a fully-fledged literary genre. One example of this is 'The History of the Hajj' ('*Xacnamā*', 1876–1879) by G. Chokry. In addition to placing the autobiographical protagonist-traveller in a real geographical position, the work also contains the author's assessment 'of his and a stranger's reality' from an Enlightenment perspective: the author advocates the Europeanization of Eastern culture. He praises the scientific and technological progress throughout Russia and encourages people to acquire knowledge and professional skills. His pride in Russia is his leitmotif. 'On the journey to Odessa, I did not meet any Russian Muslims. I travelled around Russia with Russian people all the time. The wealth of the Russian state is enormous. From your home vil-

lage to Odessa, you pass through hundreds of villages and towns. The well-built houses, vast arable lands and buildings are clear evidence of their wealth. Moscow is particularly large and well appointed. The city has many different plants and factories that are known throughout the empire. Imagine the distance by railway from Nizhni Novgorod to Odessa. Imagine how much cast iron was used! Thousands of well-equipped carts called wagons travel along these railroads. It is impossible to describe all the ingenious and valuable things that the machines pulling these carts are equipped with. Hundreds of thousands of rubles were spent on the construction of this road!...' [quot. from: Gaynullin, 1975, p. 128]. Even comparing Russia with Arab countries, the author emphasizes the 'order' that exists in his native country. It is as though the educator wishes to focus the reader's attention on the fact that the Tatars living in the empire, with advantageous conditions for making technical and cultural progress, should not be lagging behind the Russians in this respect. This view was completely new to Tatar literature, which was dominated by the clarion call for education within the bounds of a narrow society, isolated from Orthodox Russia.

Yakov Emelyanov (1848–1893) was a Kryashen Tatar poet, who authored two collections under a single title 'Poems in the Kryashen Tatar language. Deacon Ya. Emelyanov stixları' (1879; 1888). He became famous for his socially-oriented poems describing the hardships of peasant life:

*It's the fifth day of the month.
Well. I got up early,
And once again I looked in all my pockets:
Nothing. Everything vanished into thin air!
I took my last rags
And went to the rich man to pawn them.
He refused.
And I sadly walked back home.*

('Yarlı tormış' ('Living in poverty', transl. by R. Moran) [Anthologiya, 1957, p. 104].

Social injustice and human vices such as greed, deceitfulness and vanity were the poet's objects of ridicule ('*Olısmaklık*' ('Pride'), '*Ālāk*' ('Slander'), '*Saran bay*' ('The greedy rich man') and others. The poet believed the under-

lying reason for these traits was the people's ignorance. Written in a conversational style and based on folklore, Ya. Emelyanov's poetry opened up new ways to criticise the existing social order. For example, in the poem 'Äläk', which contains sarcasm aimed at ridiculing slanderers, the persona also expresses ironic views about society, that, having inventing new moral canons, still cannot cleanse itself of slander:

*No matter how law-abiding yo may be,
How rightful, fair and true,
No matter, if your conscience is clean—
The slanderer will name and shame!
However silently you suffer,
However loud you cry and weep,
However deep your grief,
However hard you may hold your tongue,
It's no matter—
The slander will stick!*

(Transl. by R. Moran) [Anthologiya, 1957 p. 105].

Ya. Emelyanov's writings include romantic elements. Most in evidence is his faith in the power of the soul, which not only elevates a person above the mundane, but also stops them from succumbing to the pressure of grief and misery. This theme is especially prominent in the poem 'Kaigr' ('Grief'). In the last lines of the poem, the persona proudly proclaims the victory of the spirit over grief (*'Although you boil inside my soul, / You cannot break me!'*).

This theme would return with renewed vigour in the romantic poems of the early 20th century poets G. Tukay, S. Ramiev, and N. Dumavi.

The figure of the rebellious romantic character, who challenges fate and remains undefeated despite suffering blows, appears in works by *Ahmet Urazaev-Kurmashi* (circa 1855–1883), in particular his romantic love poems adapted from well-known folk dastans. The poem 'Kıyssai Büz eget' ('The Legend of a Young Jigit', 1874) is based on a work of the same name by the Tatar poet Bahawî (from the first half of the 19th century) about the tragic fate of young lovers. The plot of the dastan is simple: The warrior hero Büz eget and the beautiful Karaçâçsılı fall in love, having seen each other in a dream.

After overcoming numerous obstacles in a four-year search, the protagonist finds his lover. However the Shah, the girl's father, wants her to marry the son of another Khan. The Shah wants to get rid of the young man, so he gives an order for the protagonist to be captured and killed. Unable to endure the death of her lover, Karaçâçsılı commits suicide. 'Kıyssai Tahir ilä Zöhrä' ('The Legend of Taxir and Zuxra', 1876) tells a similar story. It was freely adapted from 'Dastan Babaxan' by Kylych bin Sayyadi, which was popular among the Tatars.

The Tatars had numerous lists of these dastans. The romantic theme and the sincerity of the characters' relationships attracted readers' attentions. Influenced by the time in which they were written, A. Urazaev-Kurmashi's poems the socio-philosophical leanings are indisputable. The protagonists—Büz eget and Tahir—allow the author to express the strength of the human spirit and the pursuit of happiness through poetry. The greatness of their dream and their energy in overcoming all obstacles are the most important aspects of their characters. Even the protagonists' deaths are considered a victory: neither hardship, nor betrayal by their loved ones, nor despair could break them—they remain true to their ideals until their dying breath. Through his characters, Kurmashi tried to stir people into activity and give them hope. He praised the beauty of the human pursuit of happiness. As a result, these works—adaptations of medieval dastans—became popular and were loved by Tatar readers in the 19th century, the readers of the age of enlightenment.

Changes in the social life of the Tatars were also reflected in the 'female literature'. Prominent female writers in the second half of the 19th century were G. Biktimirova, Kh. Gismatullina, G. Rakhmatullina, G. Samitova and others. The fact that literature was open to them is first and foremost a sign of a newly-awakened desire to participate in public life. Secondly, it shows how the treatment of women in Muslim society was transformed during the enlightenment period. An example of this is the literary career of *Galimatelbanat Biktimirova* (1876–1906). She was born into a mul-

lah's family in the village of Kyshlau in Kazan uyezd. She studied in an all-girls' madrasah opened by her father Lotfullah akhoond, and started teaching there from the age of 16. She mastered Arabic and Persian, and was familiar with Eastern literature. After getting married, she moved to the village of Yaubash in Kasimov uyezd (1895) and opened a maktab for girls there. She is the author of the books 'Tärgıyb äl-banat' ('Encouraging Girls', 1892), 'Hösne äl-vasıya' ('A Perfect Guardian', 1895), 'Möğaşärät ädäbe' ('Ethics of Communication', 1895), on the role of the Tatar woman in the family and on the methods of bringing up orphans. The books express the need to spread knowledge and education among women as well as men. Happiness through knowledge is the motto of the first female writer. In the preface to 'Möğaşärät ädäbe', she writes: *'All my thoughts are concentrated on how to spread education among my fellow countrywomen and give them knowledge. After all, women constitute half of the world's population. Families are happy and prosperous when women are intelligent and educated. Women educate their children as they raise them, and as a result they bring great personalities into the world...'* [quot. from: Gaynullin, 1975, p. 157]. The pages of Tatar newspapers and magazines were full of similar thoughts in the early 20th century.

In her poetry, G. Biktimirova also reflects on the place and role of women in Tatar society. It is noteworthy that she not only advocates gender equality in her poems, but also argues that men's happiness and the future of the nation are more dependent on women than on men. In addition she argues that poor family relationships will inevitably lead to the disruption of society itself, causing a fall in social mores. Well-being and prosperity can only be created through the true union of husband and wife: *'A good wife is one who knows no idle talk, / But cheers her husband with sweet and agreeable words... / She will tell no one, if your soul grieves, / But will point out your vice to you'* [Ömet yoldızları, 1988, b. 49]. Her writing that a husband should behave like a slave to a well brought-up wife sounds innovative in contrast with the majority of Tatar literature:

She is a nestling in the bright palace of the world,

*She is a breath of wind—a sign of comfort,
If such a soft flower falls to you,
Say: I am yours, I am your slave.*

(Word for word translation.).

Khanıfa Gismatullina became famous for her journalism books 'Gakıydätel-ähle xak' ('Beliefs of the people of truth', 1895), 'Tärgıyb' ('Interest', 1898), 'Mäğdänel-mäsail' ('The Source of Tasks', 1900), which raised the issues of education, family and the status of women in Tatar society. Particular attention was paid to education of girls. Gismatullina proposed dividing pupils into separate classes to teach them their native language, arithmetic, geography, and other subjects. She reflected also on ways to accustom children to cleanliness and methods of teaching the ethics of communication, etc. [Gaynullin, 1975, p. 155].

Gismatullina's lyrical poetry is autobiographical: they express her grief over the death of her husband, who passed away at a young age. An affirmation of love's higher calling is present in all her works.

Gaziza Bagautdinovna Samitova (1862–1929) was a poetess from Astrakhan who started to write poetry in her youth. Poems written in 1876–1882 tell us about her youth, her dreams of a bright and happy life as a girl. A traditional folk style is harmoniously intertwined with elements of classical Sufism. For example, the poem 'Ükenerseñ' ('You'll be sorry') is read in the context of Sufi aesthetics. The persona often talks to a young female friend. Styled on folklore, these poems are full of lightness. The beauty of human emotions is seen as giving existence its ultimate value ('Xädiçägä' ('Xadiche'), 'Sin elama, yash` tutash!' ('Do not cry, young tutash!'), 'Bän eğlamıy, kem eğlasın?' ('Who will cry, if not me'), 'Küp sayrama, sandugaç!' ('Nightingale, do not sing so often')). G. Samitova's verses keep to certain themes such as simple-hearted love letters, correspondence with friends (or reminiscences about them), and lamentations about parting. However, in the last quarter of the 19th century, these unpretentious themes introduced a completely new persona into Tatar poetry—that of

a simple Tatar village woman with her worldview, problems and search for personal happiness. This image is the same as that of Xanifa, Xadicha, Magruj in the first realistic short novels, only it is shown in a way the reader would have found familiar: *'The banks of the Volga are full of green stones. / Why are you crying bitter tears? Who will cry, if not me—/ A lonely orphan* [Gaynutdinov, 1982].

Gaziza experienced many hardships. During this period, the main theme of her poems became the fate of Tatar women, which was her own fate:

For thirteen years, day and night, I have secretly shed my tears.

My dear soul, my poor little head Has gone through so much in this world!

I have visited many places, moved from home to home.

I drank many potions, Waiting for them to heal me.

(Word for word tr.) [Gazizä Sämitova, 1965, p. 28].

Whether talking to her beloved man or to a severed fate, Samitova's persona reflects on the inevitable arrival of love, of the predetermination of earthly life ('Özeldem lä, özeldem' ('I was worried, I was worried'), 'Säügännän aerd' ('You parted me from my beloved'), 'Niçek tüzim?' ('How shall I bear it?').

Researchers consider 1894–1900 to be Samitova's most creative period [Gaynullin, 1975, p. 159]. Deep apathy, confusion and despair emerge as a response to understanding the meaning of life. Themes of trouble, sorrow, anguish, absolute loneliness ('Dönya fanımı?' ('Is the world material?'), 'Aldadı' ('You deceived me'), 'Minnän nindi ez kalır?' ('What mark will I leave?') 'Bez nik yaşıbez?' ('Why are we alive?')) represent the human soul in different states. Accusing life itself of being imperfect, the persona is deeply anxious and outraged because the dreams of her youth have not been fulfilled.

Samitova's poetry concerns shattered hopes, dissipated illusions of love, frustration and a sense that existence is unjust [Zavgarova, 2002, p. 2]. The poetess reveals the inner world of a woman capable of deep feelings. The sense that

existence is a catastrophe, one which does not allow refuge to be sought or even allow a person to dream of transforming their life, makes her work a harbinger of the romantic strivings in Tatar literature.

According to A. Sibgatullina, the Tatar poetesses of the second half of the 19th century tried to draw public attention to the important issue of the need for women's education. 'While they do not step out of the limits permitted by that time, nor put forward any revolutionary slogans, they gradually, systematically set about solving the problem of the woman's role in the family, childcare and education. In such a way, enlightenment ideas were confirmed in society' [Sibgatullina 2001, p. 57].

In the late 19th century, prose came to the fore in literature. The novel and short novel genres took shape in this period. Writers' increased attention to different aspects of Tatar society is most in evidence in prose. These torch bearers began to describe in detail subjects as diverse as madrasahs, Tatar houses of the rich and poor, merchants and mullahs, stores and editorial offices, restaurants and steamboats, in an attempt to create the fullest possible picture of real life. Education and romance came to the forefront of characterization. Tatar prose writers concentrated more on 'ideal' heroes, and to direct demonstration of the desired and appropriate behaviours through the direct expression of the author's ideal.

In 1886, the first Tatar novel was published—a work by *Musa Akyegetzade* (1864–1923) 'Xisametdin menla'. Akyegetzade was born in the town of Chembar in Penza guberniya. His grandfather, Altynbaj Aqegotov, received a noble title for heroism during the Patriotic War of 1812. After finishing his studies at the Penza gymnasium, Musa applied for enrollment at Moscow University, but he was not accepted. He was a teacher in the Penza governorate and, in 1886, moved to the Crimea, where he started to work for the Terciman newspaper. From 1888 to 1891, he studied in Turkey at the higher school for civil servants. Then he taught, published the newspapers *Metin* (The Original) and *Öch kardäş* (Three Brothers), and worked in the city administrations in İzmir and Sivas. In

1914, he moved to Istanbul, and for the rest of his life worked on systematizing and cataloguing the library of the Turkologist N. Katanov, which had been taken out of Russia.

The novel 'Xisametdin Menla' reveals the life of the Tatar community of the time through the lens of changes. Its central characters, Xisametdin and Khanifa, fight for the freedom of a private life. In their desire to marry into the family of Ghali Dzhavatov, an influential merchant in the district, Khanifa's parents decide to give her in marriage to the rich Sibghatullah. Learning of this, Xisametdin says, '*...freedom is very precious in human life. We will be able to defend our personal freedom.*' [Aqegetzadä, 1986, p. 38] Khanifa stands with him and leaves her family home in protest. In the end, despite the difficulties, they finally get married.

The educated and active religious figure Xisametdin, the novel's protagonist, values above all in a person an energetic attitude. He believes that people should use their skills and knowledge for a noble purpose, to serve their nation. He dedicates his life and work to educating people, teaches children in his home village, and distributes popular books. In the figure of Xisametdin, Aqeget embodied the ideal of the educated person, the ideal of Modern history. In contrast, negative characters are present in the novel—the conservative mullah Bikbulat, the rich man of the village Ghali, and his son Sibghatullah.

The novel raises the problem of Tatar society's socio-economic backwardness and the theme of the nation's destiny. Aqeget writes that two sworn enemies of the nation—ignorance and a lack of trade knowledge—have brought it 'to its deathbed'. '*Surprisingly, we are able to show mercy to the individual, and yet we have no mercy for millions, for the whole nation... Is the grief and misery of a whole nation less significant than the grief and sadness of a single person?*' [Aqegetzadä, 1986, p. 52] He opposes the scholasticism prevailing in religious educational institutions, protects those maktab and madrassas where the necessary knowledge for life is studied, and advocates for the doors of educational institutions to be open to everyone who desires learning. Ac-

cording to Akyegetzade, teaching Russian in Russia is indispensable. Such characters as the young gymnasium student Abuzyar Davletgildiyev, the son of a bey, master coppersmith Gajsa Zurkolakov, and the poor orphan Muxtar represent different ways of serving the cause of enlightenment. But they all share a desire to serve the progress of Tatar society. The novel's central theme is encapsulated in Zurkolakov's words that it is not enough to talk about the benefits of the nation, people must work hard. The distribution of books, teaching under the new method, the opening of madrassas, assisting people in learning crafts—these are specific, practical steps taken by the novel's characters.

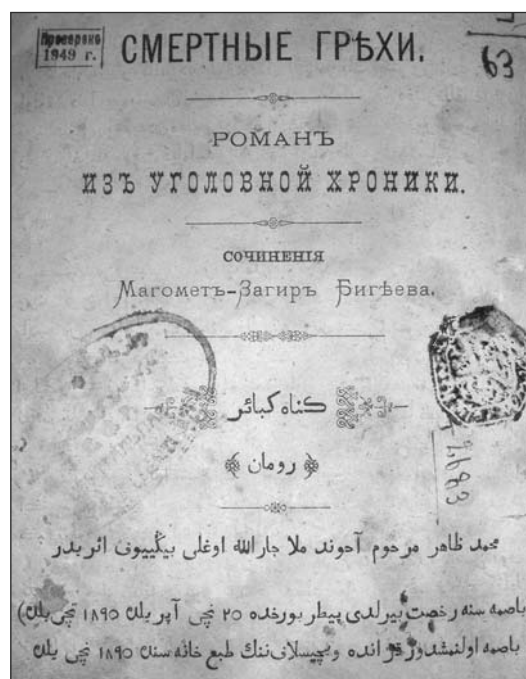

A year later, the novel 'Öluf, yaki Güzäl kız Xädiçä' ('Thousands, or the Beautiful Khadiča', 1887) by *Zagir Bigiev (1870–1902)* appeared. Bigiev was born in Rostov-on-Don into a family of akhoonds, and studied at the Russian school there, then in the Priozyornoye madrassa in Kazan (1886–1891). At the age of 16, he wrote his first novel (which put forward a social motif, the power of money), rightly considered the first adventure/detective work. It begins with the discovery of the corpse of a woman, Zuleikha. It turns out that a young, rich man from Kazan, Musa Salikhov, who has graduated from St. Petersburg University, was in love with the beautiful Zuleikha. However, they had gone their separate ways. Musa met Khadiča, the daughter of the wealthy Axmadi Xamitov, who was offering a dowry of 100,000 roubles for her. Khadiča and her dowry were sought by Gabdennasyr, the son of another wealthy man. After her father's death, Zuleikha had gone to Kazan to see Musa, and, having learnt about his intentions, committed suicide. Wishing to remove his rival, Gabdennasyr hides the girl's suicide note. Suspicion falling on Musa, he tries to clear himself. The secret fight of Gabdennasyr against Musa, the investigation by the detective Shubin—hired by Musa's brother Nigmatulla—and Shubin's trip to the Crimea to see Zuleikha's mother allow the complicated story its resolution. Musa is freed from prison. The criminal gets his due, leaving this life voluntarily.

Against a mystery background, Bigiev presents an interesting picture, critical of the lack of sensitivity and of the immorality of people who want to get rich at any cost. The contrast between the main characters shows his position. First are Musa and Gabdennasyr. Educated, with a certain status in society, the young men are opposites in terms of morality. The open, always guileless, friendly Musa and the plotting, deceitful Gabdennasyr embody Bigiev's idea that only the morally pure can fulfil their desires. Both Khadicha and Zuleikha are educated, beautiful young women, but the former is rich and the latter poor. Having defied her parents, Zuleikha commits suicide. Khadicha entrusts her fate to her father and is close to happiness. Although Bigiev makes the dowry the cause of the absurd struggle, the novel does not reveal Musa's true feelings. However, in his following works, he also evaluates people from a moral point of view.

In the novel 'Zur gönahlar' ('Great Sins', 1890), Bigiev withdraws from the detective genre, turning to the social problems of Tatar society. Recounting his characters' amorous adventures, Bigiev says that breaking rules and traditions leads to criminal acts, and that the environment in which the person lives is very important. Gabdelgafur Mansurov—a son of a village mullah who has received no education to speak of—falls under the influence of hard-drinking students. He becomes a killer. Magrui has grown up in a good family and married for love, but her life subjects her to a moral test. She takes up with a young gigolo, Yakub, but having realized her mistake, kills him.

On the one hand, the novel's positive characters, Dzhigangir and Magrui, and negative characters, Ibrahim and Yakub Galiev and Memet, express Bigiev's educational stances. On the other hand, he shows that some immoral sides of Tatar society result from backwardness in cultural development, a new feature of the national literature.

In 1891, Bigiev returned to Rostov-on-Don and became a mullah. He wrote two novels, 'Mörtät' ('Apostates', 1891) and 'Katıylä' ('The Killer', 1892). He handed them over to the publishing house, where they were lost. According

Cover of Z. Bigiev's book 'Ganahe Kabair' (Kazan, 1890).

to contemporaries who read the manuscript, these novels also presented the idea of preserving the traditional moral laws in Tatar society.

Fatikh Gilmanovich Karimi was born in the village of Minnibayevo in the Bugulma Uyezd, studied at the Kamaliya madrasa in Chistopol, and received his higher education in Istanbul at the higher school for civil servants. He mastered Arabic, Persian, Turkish, and French. After the death of his father in 1902, he ran the printing office of Karimov, Khusainov, & Co. From 1906 to 1917, he was a chief editor of the newspaper *Vakit*. He was elected to the All-Russian Congress of Muslims in 1905, 1906, 1914, and 1917, and was one of the leaders of the Tatar revival.

The main themes in Karimi's writings are criticism of old-fashioned schools and the struggle for reform of Tatar religious schools. One of his first works, the story 'Cihangir mäxdümneñ avıl mäktäbendä ukul' ('The Study of Dzhigangir the Mullah's Son in the Village School', 1900), is dedicated to the practices of the old-fashioned schools. He writes about the students' unacceptably low study level: '*Peasants put their children in schools for two or three*

years at most. One year passes in rote learning without any apparent benefit. The other two years are spent in vain on reading such useless books as "Kisekbaş", "Bädävam", "Kızıl alma", "Fazail aş-şöhur". In short, children do not learn anything about such necessary subjects as arithmetic, history, geography. As a result, they become ignorant fanatics, convinced that being a Muslim is shaving their moustaches and hair according to sharia ritual, wearing a tubeteika, and going to mosque in a good chapan. Spending their strength and energy on slander; they become the four-headed enemy of culture and progress'. [Istoriya tatarskoj, 2003, p. 132]

Akhmetsha, a fervent opponent of new practices—once a graduate student and now a madrassa teacher—has, after 25 years of study, only learnt the rules of ritual washing and the ways to 'shout louder than others' during scholastic debates. All winter, he goes on social calls and has no time to go to the madrassa. In spring, when he appears there, there are no more students. Akhmetsha is contrasted with Biktimer an old village man who is the bearer of folk wisdom. And so foolish deeds and acts of uneducated people are rejected, and old-fashioned madrassas are portrayed as useless to society. Karimi emphasizes: '...[T]his madrassa has been here for a long time... Hundreds of residents of this village have studied in it. But among them are very few who can read

and write [...], you rarely find fathers, uncles, and nephews able to write letters to sons at the front or to married daughters, and to read letters from them'. [Gaynullin, 1975, p. 243]

Unlike the first works, in which his educational views are transmitted to the reader negatively, the story 'Ber şäkert ilä ber student' ('A Shakird and a Student', 1899) is aimed at exposing the ignorance of Qadimist mullahs by recreating

Karimi's ideal. The action takes place on a ship. A Russian student of the East meets a Tatar teacher, who was educated in Bukhara, and his students. The teacher does not understand even a greeting in Arabic ('the language in which the Koran is written') and simple questions that the student asks in Arabic, Persian, and Turkish. In this way, Karimi advises his readers to follow the example of students of Russian institutions.

The conduit for Karimi's ideas, the student constantly emphasizes the role of knowledge in a conversation with one of the teacher's students, who has completed a full course at the madrassa: 'If other people need knowledge to exist, how can you live without knowledge? You're people as well. You also need to eat, to dress, and to live. Now is the age of knowledge. A person without knowledge is like a bird without wings'. [Gaynullin, 1975, p. 244]. His message resonates in the soul of a madrassa student, who being left alone, reflects: 'While other nations open schools, publish many useful books, newspapers, and magazines, seek enlightenment, our so-called spiritual scholars lead fruitless debates about whether Muslims need to study'. [.]. Karimi thus shows society's reaction to the actions and deeds of the educators.

According to Y. Nigmatullina, educational romanticism has most clearly manifested itself in the ideal female images 'millät anaları' (mother of the nation). They are well-bred and

educated Tatar women who shape their own destiny; faithful helpers of their husbands, together they bring knowledge and culture to the people. Ideal characters and perfect pictures of life created by Tatar educators heralded the poetization of a 'natural principle' in humanity, an exaggeration of the role of art, and the elevation of reason, which together would define the Tatar romanticism of the early twentieth century [Nigmatullina, 1970, p. 59] These most clearly manifested themselves in one of the first romantic works, Karimi's short novel 'Morza kızı Fatıyma' ('Fatima, a Daughter of Murza', 1901). Romantic love is shown as a sudden passionate and overwhelming feeling. Fatima's love for the gardener Mustafa makes her go against customs and the will of her parents: she leaves her home and goes abroad with her lover. Having caught up with the fugitives, the parents give consent to the marriage. The triumph of pure feelings, the glorification of the personality, and the pursuit of happiness form the main emotional content of romantic works.

Karimi travelled a lot and visited various countries. Based on what he saw, he created a series of traveller's reports (*säyaxät*namä). In the book 'Yaurupa säyaxätnamäse' ('Journey through Europe', 1902), Karimi wrote about his trip of 1899, comparing the life and culture of the Tatars and the Europeans and admiring the achievements of the past. He sees the reason for the Tatars' backwardness in their reluctance to reform the educational system and to introduce secular subjects into the curricula. Similar ideas are contained in the book 'Kırımğa säyaxät' ('Journey to the Crimea', 1904) based on impressions formed from a 1903 trip to Bakhchisaray to celebrate the twentieth anniversary of the newspaper *Terceman*.

Karimi promoted educational ideas not only in his writings, but also with concrete actions: he published newspapers and books, was engaged in journalistic and political activities, wrote textbooks for new-style schools ['*Moxtäsar cäğrafiya*' ('A Brief Geography Course', 1899), '*Mögallim vä möräbbilärgä rähnamä*' ('A Guide for Teachers and Tutors', 1902), '*Moxtäsar tarix*e gomumi' ('A Brief General History', 1911)], and contributed to the education of the nation.

In many educators' writings, educated and moral characters are contrasted to uneducated and immoral ones, the purpose of the opposition being the cultivation of an educated and harmoniously developed personality, a presentation of a perfect image of a character as a role model. Thus, in one of the first stories by Z. Khadi, 'Bäxetle kızı' ('Happy Girl', 1903), Gaisha, a smart Tatar girl rejects a forced marriage and decides to tie her fate to Gabbas. With his help, she becomes a teacher and finds happiness. Khadi's ideal female protagonist was brought up in a good family, she sees her future husband as her friend, and she fights for her happiness. The ideal male protagonist, Gabbas, is the embodiment of enlightenment ideas. Enlightenment writers believed that literature should foster a person in a spirit of civic virtue and instill hostility to vices, which led to an increased didactic, moralizing pathos.

However, the idealization of characters was one of the means to overcome this didacticism. Along with idealization, an increase in critical pathos was observed. If the ideal characters were presented as the people of the future, then the older generation—the opponents of any change—became targets of criticism.

Thus, two lines were clearly defined in the educational prose of the second half of the nineteenth century. One tended to represent the ideal directly, the other to criticize and expose the negative aspects of current reality. In the works of young writers, who appeared on the literary stage at the turn of the century, a social explanation of life was closely intertwined with a biting criticism of certain phenomena inherent in Tatar society.

A qualitatively new phenomenon was the development of Tatar drama, which 'at its birth, was based on folk playing traditions, on the one hand, and on dramaturgical experience of other literatures on the other' [Istoriya tatarskoj, 2003, p. 112] Drama was considered the most effective way to introduce the masses to educational ideas.

The founder of Tatar drama was *Gabdrakhman Muhammad-Aminovich Ilyasov* (*Gabdrakhman Ilyasi*) (1856–1895). He was a son of a merchant of the second guild. After a se-

Gabdrahman Ilyasi.

Fatikh Khalidi.

ries of unsuccessful business transactions, his father went into bankruptcy. After his father's sudden death, Ilyasi, who had to take care of his sister and elderly mother, had to sell the family estate and work as a clerk and book-keeper for hire by rich merchants for the rest of his life. After graduating from the Kasimiya madrasah, Ilyasi became close friends with Q. Nasiri, and together they started performing ethnographic research and observed the stars. They travelled to Tatar villages to collect folklore and written sources. At meetings of the Society for Archaeology, History, and Ethnography, Ilyasi presented his reports on the writings of Ş. Märcani, ancient Islamic manuscripts, and in 1885, he became a member of the society [Ahmetzyanov, 2005, p. 560]

Ilyasi was particularly attracted to the world of Russian culture, literature, and theatre: he dreamed of creating a national theatre. In 1887, his play 'Biçara kız' ('Miserable Girl') was published. The work was written in line with educational ideas: Ilyasi raised problems of individual freedom, women's equality, and education of the Tatar people. It tells of the daring act of the girl Magitab, who, in spite of circumstances, has not agreed to marry the ignorant and stupid drunkard Dzhantimer (Iron Soul), and has tied her fortune to the poor but well-bred and educated Dzhanbai (Rich Soul).

In that same year, Ilyasi published the didactic text 'Yaş kız vâ hatınnarga hâdiya' ('A Gift for Girls and Women'), dedicated to education of children in the family. He tried himself to create a home-grown theatre, staging performances in the native language for friends and like-minded people. Unfortunately, Ilyasi ruined his health early in life and died in Kazan in 1895. His only work

laid the foundation for the dramatic genre and had a significant impact on development of Tatar literature. In 1896, appeared an original creative response from another Kazan educator, Fatih Khalidi. His play 'Rädde bichara kız' ('Debunking of the Miserable Girl') contained a number of critical comments on Ilyasi's works. Both plays focus on negative aspects of life—the young Tatar woman who has no right to choose her husband, the willingness of fathers of respectable families to sell their daughters at a profit, polygamy, the ignorance of parents who are unable to bring up their children. Playwrights motivate them by moral-ethical factors.

Fatikh Khalidi (1850–1923) came from a family of well-known imams. However, contrary to the family tradition, he did not become a mullah and pursued a trade. For some time, he was employed by a large factory owner in Kazan, Gaisa Musin. Having gained some experience and saved up the money required, the former student opened his own store in the Tatar part of Kazan. But commerce was not his main occupation. Khalidi's first attempt at playwriting had a huge success with readers. At the beginning of the twentieth century, he wrote four more plays, the most famous of which was 'Murad Salimov' (1905), about the victory of reason and education over soulless riches, greed, and ignorance. The happy destiny of a young Muslim who studied in Paris and became a profes-

sor at the Sorbonne, and storybook changes in the characters—which suddenly made the poor man rich and the greedy man a generous philanthropist—were always perceived warmly both by readers and theatre-goers.

The works of one of the founders of Tatar professional theatre, playwright Galiyasgar Kamal, revealed the manners of some representatives of Tatar society. *Galiyasgar Galiakberovich Kamal (1879–1933)*, the playwright, publicist, and theatrical and public figure, was born in Kazan, studied in the madrassas Usmaniya and Khalidiya, and later in the madrassa Muham-madiya. At the same time, he received his primary education in a three-year Russian school. Contrary to his father's will, he chose to serve the cause of his people's education. In his first literary attempts, 'Bäxetsez eget' ('Miserable Boy', 1900), 'Öç bädäxet' ('Three Villains', 1900), and others, Kamal criticizes the patriarchal Tatar family structure. For example, 'ignorant' characters in 'Miserable Boy' represent the 'fathers' (Karim bey and his wife) and are to be despised and ridiculed, while the 'educated' characters (the Ufa bey Sabitov's family) are to be emulated. But, according to Y. Nigmatullina, in contrast to the work of his predecessors (Ilyasi and Khalidi), Kamal's play shows something new: a contrast of ignorance, as a social evil, with human nature, its natural state [Nigmatullina, 1970, p. 88]. In the play, the traditional themes of educational literature—education of the younger generation, the gap between 'fathers and sons', the destiny of a Tatar woman, the lives of 'people of the bottom'—are intertwined with a social and psychological evaluation of the life of Tatar society.

Thus, educational literature moved along a specific path of development. By creating new genre and style structures, it became the basis for the formation of a distinctive Tatar national culture in the twentieth century. In general, it was dominated by enthusiastic pathos, motivation of the characters' aspirations and actions, the motifs of correlation between moral perfection and enlightenment, the importance of the family's role in reforming society, and women's liberation from family and spiritual oppression.

Galiyasgar Kamal.

The poetry of this period laid the foundations of a new concept of the human in Tatar literature. From the criticism of certain human qualities of representatives of the Tatar clergy, Tatar poetry turned to irony and satire aimed at overcoming the 'intolerable conditions', in which a person is placed. Poetry developed a theme of the history of the Tatar people, aimed at awakening Muslims' creative potential. The status of the lyrical hero changed, and he began to act as a representative of the common people. Tatar literature showed an educational ideal different from the medieval 'perfect man'—an active man of business, aspiring to be useful to society.

The educational paradigm gave a push towards the transformation of the national literature's traditional symbols and images and of the compositional techniques peculiar to Sufi religious works. They came to be used in a completely different context. The situation arose when many works were read in both religious and secular terms.

Educational prose of the late 19th century on the one hand tended to represent the ideal directly, and on the other, to criticize and expose negative aspects of Tatar reality. Trials in educational literature were developed and enriched in the early 20th century.

CHAPTER 6

Evolution of the Tatar Literary Language

Airat Yusupov

The nineteenth century—a difficult period in the history of the Tatar literary language—was ‘a transitional stage between the Old Tatar Turki and the New Tatar national literary language’ [Faseev, 1982, p. 164]. The Old Tatar literary language was formed on the basis of the Bulgar-Kipchak dialects of the Volga and Ural regions, and functioned within the chronological framework of the twelfth to the Mid-nineteenth centuries [Mudrak, 2009, p. 191]. From the second half of the sixteenth century till the end of the nineteenth century, the literary language, ‘devoid of a constant unifying cultural centre which would stimulate its growth, developed at random, giving way to every breath of the wind’ [Usmanov, 1972, p. 82]. By the early nineteenth century, it included the main types of functional styles: scientific, epistolary, journalistic, and business [Nuriyeva, 2011, p. 328].

The cultural and historical situation of the nineteenth and the beginning of the twentieth centuries had a strong influence on the literary language. It is well-known that the nineteenth century was a uniquely crucial period in the history of the Tatar people. Medieval fragmentation was gradually washed away, social life intensified, and the Tatar people's national consciousness was awakening [Istoriya, 2003a, p. 3]. It was the century of reformation, enlightenment, the secularisation of public life, the creation of a new paradigm of national development on the cultural and ideological basis of Islam [Amirkhanov, 1998, p. 151] and the beginning of a spiritual revival. This revival was prepared by society's whole course of development, but there were some specific conditions that contributed to the awakening of Tatar society and its spiritual life [Khisamova, 1995, p. 39].

V. Khakov defines this period in the development of the Old Tatar literary language as the ‘initial stage of the Tatar national literary language’ [Khakov, 2003, p. 14]. By the early twentieth century, the literary language already had a highly developed form, and possessed almost all styles: literary, socio-political, religious-didactic, scientific-educational, business-official, and epistolary.

According to the sources, the evolution of the literary language as a whole and of its individual periods was characterised by several written versions. In this view, the literary language of the nineteenth to the beginning of the twentieth centuries was noted for its multifariousness: ‘the centuries-old traditional rules of the written classical Old Tatar language (Turki) come into contact with the commonly used colloquial forms of the Tatar people, the interaction of which becomes the basis for the structural-functional variability of the norm’ [Bashirova, 2000, p. 62]. For example, according to G. Säğdi, the language of nineteenth-century works, in particular those of Sh. Zaki, is ‘Turki’, which consists ‘of Kipchak + Bulgar + Uighur + Chagatai + Turkish + some Tatar components’ in its morphological and syntactical structure, as well as in prose and poetic form [Säğdi, 1926, pp. 36–37].

To understand correctly this period's complex historic-cultural and linguistic situation, the views of E. Tenishev on the variations of the Old Tatar literary language in the thirteenth and fourteenth centuries, and later periods, have important significance. He defines the following variations of the Old Tatar literary language:

— the Oghuz version of the Khwarezmian-Turkic language, which was brought to the Volga region by the flow of cultural influence;

'Qıssai Yosıf', by Kul Gali, 'Kisekbaş', 'Bedavam', and other works were written in this language;

— the literary language, preserving to a large extent the Khwarezmian-Turkic basis, bordering on the more ancient Karakhanid-Uighur language (Rabguzi's 'Kıssasü'l-Enbiyâ');

— the written literary language, continuing the Volga-Kipchak tradition (Qutba's 'Khosrow and Shirin');

— the literary language developed in later periods (the sixteenth and–seventeenth centuries), reflecting Chagatai traditions [Istoriya, 2003, p. 420].

It seems that the concept of the early variations of the Tatar literary language proposed by Tenishev correlates with the development of the Old Tatar language in the nineteenth century. That period was a 'preparatory' stage for the development of the language's structural and functional variations. The Tatar literary language of that period was represented by three variations:

— the Oghuzinized (Ottoman) version of the written literary language;

— the classical literary language, with the active use of Arabic-Persian grammatic elements and traditional common Turkic forms;

— the written-literary language, enriched by common national vernacular forms.

These very versions of the Tatar literary language remained up to the early twentieth century. The observations of I. Bashirova deserve close attention in this connection. In her opinion, at the end of the nineteenth and the beginning of the twentieth centuries, 'the term "language" meant the variations of the classical Old Tatar language, called: a) *terki ädäbi tel*—the Turkic literary language; b) *jädidi-gosmanlı*—the Jadid-Ottoman version; c) *gavami tel*—the written-language version, which was enriched by common national colloquial forms...' [Bashirova, 2000, p. 11].

The Oghuzinized (Ottoman) version of the Old Tatar language. It is well-known that the Volga Turki goes back in its roots directly to the literary language of the Golden Horde and Mamluk Egypt of the thirteenth and–fourteenth centuries [Khisamova, 1999, p. 29]. The tradi-

tional part of this language was inherited, and is mostly represented by the Uighur-Karakhanid and, to a lesser extent, the Oghuz traditions. Such mixing became a tradition, which both poets and copyists, 'writing at a different time and in different Turkic-speaking regions', quite consciously followed [Blagova, 1976, p. 28].

Oghuz elements were present at all stages of the development of the Old Tatar literary language. However, in different periods, these elements revealed themselves differently and they penetrated the Old Tatar literary language through different channels. In the the seventeenth and–eighteenth centuries, an intensive penetration by the Oghuz component begins as a result of Ottoman influence [Negmatull-ov, 1984, p. 156]. For F. Khisamova, the tangible manifestation of the Oghuz elements in this period was connected with the particular socio-historic conditions—the intensification of diplomatic relations with Turkey and Iran (Azerbaijan) [Khisamova, 1999, p. 35]. In the nineteenth century, especially in the latter half, there was a growth in Ottoman Turkish influence, as enlightenment ideas coming mostly from Turkey (through education of Tatar youth in Turkish institutions and circulation of Ottoman Turkish literature) started to spread among Tatars [Khakov, 1972, p. 58]. The invigoration of the Oghuz component of the Tatar literary language in this period was also somewhat influenced by the dissemination among Tatars of pan-Turkism, the socio-political and cultural movement based on the concept of the distinguished intellectual, educator, and reformer I. Gasprinsky, the editor of the Terciman newspaper, of a single common pan-Turkic literary language. This concept also had a certain impact on the language situation in the Volga region [Mirkhaev, 2007, p. 13]. By unity in language, I. Gasprinsky understood unity of the literary language, which should later lead to the unity (*ortak lisan*) of all the Turks, under his motto of 'Unity of Language, Thought, and Action'. And the language of Terciman, being the model of that period's publicistic style, became common for all Turko-Tatars of Russia. The result was that certain Oghuz elements, previously emerging just occasionally, in-

creased their presence, while the new Ottoman Turkish components started establishing themselves in the Old Tatar literary language, and a new version of the language began its creation. At that time, it had different names: Ottoman Turkish, Tatar Turkish, the Tärceman language [Mirkhaev, 2007, pp. 8–9].

This phenomenon is also explained by the continued influence of the Old Turkic and Old Tatar writing traditions. The old Uighur elements, however, as G. Blagova notes, by the nature of their use in the poetic variation of the literary written language, can be considered a kind of objective structural property of the style system, while the use of 'Oghuz-Turkmenian' grammatical elements here, on the contrary, does not fit into the framework of a single stylistic system [Blagova, 1976, p. 28].

The key figure of this version of the written language in the first quarter of the nineteenth century was G. Utyz Imyani (1754–1834) [Is-toriya, 2003a, p. 12]. For F. Khisamova, in the literary language represented in Utyz Imyani's rich poetic heritage, 'Karluk traditional features uniquely intertwine with the Oghuz ones' [Khisamova, 1999, p. 39]. Oghuz norms are encountered at the phonetic, lexical, grammatical, and even syntactical levels. Active use of Oghuz elements and language norms can also be seen in works by S. Marjani, K. Faezkhannov, A.-K. Maksudi, Z. Bigiev, M. Akyeget, F. Karimi, R. Fakhretdin, and others. These norms are vividly reflected in fiction and scientific and journalistic works by Fakhretdin, travelogues by Karimi, scientific works by G. Gafurov-Chygtay, et al. The same authors specifically dedicate some of their works to the Tatar reader and largely use common colloquial forms.

In the early twentieth century, however, the Ottoman Turkish influence on the Old Tatar language began to subside. 'Linguistic disputes' (tel bāxāse) lit up on pages of various publications, the gist of which came down to one question: what is to be taken as the basis of the literary Tatar language for its further development—the Old Tatar literary language, the language of the Tärceman newspaper, or the local (Kazan) dialect of the Tatar language? [Bashirova, 2000, pp. 11–19] Since many represen-

tatives of the Tatar intelligentsia in the early twentieth century were against the Terciman language, the issue was decided in favour of the Kazan dialect.

The classical literary language with active use of Arabic-Persian grammatical elements and traditional common Turkic forms. This period of the literary language's development was also characterised by the growth of borrowings from Arabic and Persian. In our opinion, this was driven by two causes. First, from the second half of the eighteenth century, the Old Tatar literary language began to feel the influence of the Chagatai literary tradition more clearly. Back to ancient times went the tradition to deliberately fill the Turkic written literary language, and particularly its poetic variation, with a great number of foreign, not only lexical units, but also grammatical elements, 'thereby cultivating a supra-dialect nature for the language, first of all the language of poetry' [Blagova, 1977, p. 99]. The classical period of the development of Chagatai literature was especially characterised by the abundance of Arabisms and Farsisms [Khisamova, 1999, pp. 35–36]. The poets of the Chagatai literary 'Golden Age' were bilingual, writing verse both in Turkic and Persian. That was regarded as 'the standard style of poetry' [Khakov, 1971, p. 56].

Secondly, most classics of the nineteenth century, particularly in the first half, composed their works under the influence of the Arabic-Persian and Central Asian classical Sufi literature. The emergence of Turkic poetry in the Volga region was from the beginning linked to Sufism. Up to the Mid-nineteenth century, it developed in the course of this school, which was generally characteristic of the whole Islamic world [Idiyatullina, 2001, p. 9]. Penetration in the eighteenth and nineteenth centuries of Sufi poetry and literature from Central Asia and Turkey, saturated with Arabic-Persian elements, supported the incorporation of Arabic words into the Tatar language. This literature made a strong impact on the development of the written literary language of that time [Siraziyev, 2002, p. 18].

Of all the trends of medieval Arabic Islamic philosophy, Sufism was the prevailing direction in the Islamic East [Abilov, 1984, p. 361].

Broad adoption by Tatar public opinion at the time of the Naqshbandiyya school has its background and explanations. In the latter half of the eighteenth century, a new wave of the forced Christianization of the Tatar people began. The stability of Islam's position in the life of the Tatar community in the colonial period was achieved largely due to its Sufi interpretation as 'a religion of the heart' [Idiyatullina, 2001, p. 12]. Works of Sufi poets were a powerful weapon in the hands of the people. They resounded as a concealed protest against the government's policy, also enhanced by the penetration of Arabic and Persian borrowings into the literature.

In the nineteenth century, however, according to A. Yuzeev, the interest in Sufism began to wane [Yuzeev, 2000, p. 29]. He writes: 'There were objective reasons for this. The new time put forward new demands for changes in the traditional way of life of Muslim society towards personal liberties and the acquisition of secular knowledge, while Sufism had gradually turned into a stronghold of reaction and spiritual dogmatism' [Yuzeev, 2002a, p. 114]. Sufism was undergoing an evolution more deeply in social terms. Having studied Utyz Imyani's works, R. Ganieva has come to the conclusion that 'the growth of the poet's Sufi sentiments resulted from the spiritual crisis that engulfed Tatar society at the end of the eighteenth – the first third of the nineteenth centuries. This drove Utyz Imyani to travel to Muslim countries of the East in search of new ways of purifying Islam from unacceptable distortions through the prism of a moderate Sufi tariqa...' [Ganieva, 2002, p. 52].

It is well-known that Farsi was the main language of classical Sufi poetry, being composed in Iran, Afghanistan, Central Asia, Azerbaijan, Turkey, and India. At the same time, there also existed works in Arabic, Turkish, and even Greek, and Sufi poems and treatises were written in literary Arabic [Ocherki, 2002, p. 245].

Sufism stimulated the development of the Tatar language, giving it an even greater flexibility and introducing new stylistic dimensions. The language of Sufi literature is distinguished by extraordinary figurativeness and expressiveness, diversity of lexical, morphological, and

syntactical tools used for the purpose of stylistic differentiation. Neither cutting off ties with the Tatar literary language of the preceding stage, nor ignoring common vernacular grammatical forms, the literary language widely uses morphological and syntactical, especially stylistic, norms and figures of Arabic and Persian as one of the modes of artistic reproduction of reality.

For example, to express the content of certain categories, alongside the Turko-Tatar grammatical tools, linguistic instruments typical for the Arabic and Persian literary languages are actively engaged, mostly represented by verbal nouns and participles used in the function of nouns and adjectives. There are also pronouns, numerals, adverbs, and auxiliary parts of speech. Arabic-Persian grammatical elements are used mainly for stylistic purposes, allowing avoidance of multiple repetitions of the same form.

Foreign elements are encountered primarily in the setting of nominative parts of speech, as well as in those verb moods which by their semantics and syntactical functions are close to nouns (participles and action nouns). Besides that, they are used not only in the meanings and functions, characteristic for Arabic and Persian, but also migrate to other parts of speech; that is, conversion (the use of verbal nouns and participles in the function of adverbs, the transfer of verbs to the category of auxiliary parts of speech).

Along with this, Arabic-Persian grammatical elements are widely used in the structure of religious expressions of Arabic or Persian origin and phraseological units typical for the language of Sufis, such as Sh. Zaki, K. Salikhov, A. Kargaly, etc. They obey the laws of the Tatar language, by whose scheme and rules, with the use of tools of Arabic and Persian, the meaning of certain categories (the meaning of multiplicity) is being conveyed. Arabic-Persian grammatical forms can also incorporate word formation tools of the Tatar language, agglutinative in its nature; that is, foreign elements conform to the Tatar language's laws and norms. This phenomenon appears vividly in the Tatar literary language of the early twentieth century. Beginning young writers, adher-

ing to the traditions of the Old Tatar language, freely used its main structural variations in their first works, common Turkic traditional written forms and Arabic-Persian borrowings [Bashirova, 2000, p. 62].

The written literary language, enriched by common vernacular forms. The latter half of the nineteenth century saw the beginning of the rapprochement between the Old Tatar literary and the colloquial languages, and for this reason, broad admission of national vernacular forms to the literary language became a characteristic feature of this period. The language of poetic compositions, along with traditional components, uses colloquial and folklore elements. According to Bashkir language expert I. Galyautdinov, the contradiction between traditionalism and innovation 'starts to reveal itself in the language of works by the poet of the first half of the nineteenth century Sh. Zaki. However, they represent not a mechanical mixture, but organically intertwine in the text' [Galyautdinov, 1989, p. 19].

K. Nasyri was one of the originators of the written literary language, which employed national vernacular forms. He was one of the first to drop the use of excessive Arabic-Persian elements from Old Tatar, and to attempt to create a common language in the spheres of science, technology, literature and arts. Writing his works in the language comprehensible for common people, K. Nasyri was developing a scientific-popular style and for the first time introduced in use hundreds of scientific terms of various fields of knowledge [Nasyrova, 2002, p. 18]. Besides that, he compiled bilingual dictionaries and published a vocabulary of the Tatar language 'Lähjäi tatari', which were good ways of developing and enriching the lexical

composition of the Tatar literary language. Thus, K. Nasyri prepared the empirical base and laid down the foundation for a new language variant, which served as a powerful impetus to further development of the Tatar language. This convergence between the written language and contemporary colloquial speech, and the transition from Old Tatar literary norms to national literary norms is quite evident in his artistic works. We also observe the active use of common vernacular elements and linguistic norms in the works of G. Kandaly; to a certain degree it is also characteristic of the works of Z. Bigiev, R. Fakhretdin, G. Ilyasi and F. Khalidi.

The beginning of the 20th century was an especially difficult period because centuries-old, Old Tatar, written traditional norms came into contact with commonly used colloquial forms in the modern Tatar language. This convergence between the two served as a basis for an emerging structurally functional variation of the norm. Thus it was exactly during this period that a standard literary language developed. Based upon traditions of the Volga region Turki, it was heavily influenced by common, national colloquial forms. For example, works by G. Tuqay, Derdmend, Sh. Kamal, F. Amirkhan and G. Ibragimov were all 'written in common national literary language, which was based upon a shared colloquial tradition' [Bashirova, 2000, p. 62].

In sum, we note that the classical, Old Tatar literary language of the 19th –early 20th centuries was a kind of lingua franca, having absorbed certain normative elements from the Arabic, Persian, Chagatai and Ottoman Turkish languages; the interaction between these elements served the basis for a structurally functional variation of the norm.

CHAPTER 7

The Evolution of Historical Knowledge

Farit Shakurov

Realities of the 19th century demanded an understanding and overcoming of medieval insularity by the Tartar ethnos, which could not be achieved within a traditionalist context that rejected the notion of change. Previous definitions of a historical consciousness, which were based upon a kind of national memory that was in essence the stuff of folklore, and upon 'revelations' of a feudal-clerical historiography that focused on the lost glory of the past were no longer acceptable for an awakening and rising nation. It was necessary to reconstruct an authentic past in order to define one's historical and cultural place among other peoples, to explain the present and ensure a worthy future.

In 1885 the first volume of scientific research devoted to the national history, 'Möstäfadel-äxbar fi äxvali Kazan vä Bolgar', ('Information on the History of Kazan and Bulgar'), by Sh. Marjani was issued by Kazan University printing works. It was dedicated to the history of the Tatar people before the fall of Kazan. In this work the reformer and educator reproduced a panorama of events in medieval Turko-Tatar history. He used information culled from numerous Arabic-Persian sources kept in libraries in Bukhara and Samarkand, including manuscripts and autographs that remained inaccessible to later researchers [Usmanov, 1969]. This included epigraphic and numismatic materials, Khans' yarliqs, and literary and folkloric records. Marjani believed that the only way to establish the authenticity historical events and facts was on the basis of an unbiased presentation of all the information, a comparison of the entire complex of available sources, and on their comprehensive analysis based on the context of a given historical epoch [Märçani, 1885, pp. 7–8]⁷. Thus,

philosophic doubt became part of the historical sciences. Objective and unbiased analysis of the past became Marjani's main methodological principle. Marjani believed that history demands truth. Thus, he disregarded H. Muslimi's works, and dedicated an entire chapter to debunking them in his 'Möstäfadel-äxbar fi äxvali Kazan vä Bolgar' entitled 'A Chapter on the Indisputable Mistakes, a Shameful Lie and Distortion of Events in 'Tavarih-i Bulgaria' [Märçani, 1885, pp. 208–226].

The first Volume of 'Möstäfadel-äxbar fi äxvali Kazan vä Bolgar' consists of Sections covering historical events before and after the arrival of the Tatars in the Volga region and the steppes of Eastern Europe. In this first Section, which covers primarily the history and culture of the Volga Bulgars, Marjani also presents information about other medieval peoples in this region, the Kipchaks, Khazars and Burtas. He reports on the Bashkirs and presents passages from Russian history. The second Section, which is organized according to the length of a given ruler's reign, describes the Chinggisid conquests, the period ruled by the Golden Horde, and the history of the Tatar Khanates. As he enlightens our knowledge of the Jochids dynasties, Marjani also touches upon the history of Kazakhstan and Central Asia, concluding his narration with events taking place in the 19th century. The content of the first Volume is not limited to a reconstruction of the history of the Middle Volga region and the military-political chronicle of the Middle Ages; actually, it contains very different information. Kazan orientalist, Professor N. Katanov noted that this work, 'based upon the

⁷ The attitude of Ş. Märçani to the sources was established by his theological background. The methods

of hadith studies required the transmission of authentic texts and the correct presentation of the sources [Kemper, 2008, p. 604].

richness of its ethnographic and historical content, deserves translation not only into Russian, but into European languages as well' [Katanov, 1898, p. 470].

The period after the fall of Kazan, to which the second Volume of *'Möstäfadel-äxbar fi äxvali Kazan vä Bolgar'* is dedicated [Märcani, 1900], is examined by Marjani through the history of mosques and madrasahs, and the accomplishments of their leaders, the imams. In doing so he touches upon the most important phenomenon in Tatar history after the loss of independence, when religious establishments became public institutions that united the people, and mullahs took on the burden of leading and protecting the people. If in writing the first Volume, Marjani mostly followed in the footsteps of his predecessors by relying on traditional sources, that is, the works of previous researchers, then the material for the second Volume was accumulated 'first hand' in bits and pieces from genealogies and epitaphs, private letters and memoirs, various manuscripts, interviews and discussions [Gosmanov, 1998, pp. 19–20; Ibrahimov, 1915, p. 17]. The study also includes material on the history of villages and mosques, and various ethnographic data in which we see reflected elements of the material culture, traditions and Tatar way of life. It also contains information about city leaders, heads of the Kazan Tatar City Halls, and describes the activity of the Orenburg Muslim Spiritual Assembly and its chairmen, the muftis.

In his depiction of the socio-legal position of the Tatar population, Marjani notes the arbitrariness of the authorities in the recruitment process. We know that various incidents of oppression against non-Russians was reported in the manuscript submitted for publication; it also contained a description of the Tatar revolt led by Ishbulat against the notorious missionary Luka Kanashevich, and included a biography of Imam Shamil. All of this was deleted by censor Smirnov [Gaziz, 1915, pp. 335–336; Yusupov, 2005, pp. 65, 120].

In *'Möstäfadel-äxbar fi äxvali Kazan vä Bolgar'* Marjani recounts for the first time sequentially the history of the Volga and Ural

regions, beginning with Volga Bulgaria, followed by the Golden Horde, the Tatar Khanates and ending with the 19th century, thus demonstrating a consistent and continuous unbroken line in its development. This is the conceptual approach he utilizes when considering the origins of the Tatar people. Comparing and analysing reports from his sources, this scholar comes to the conclusion that the medieval Turkic-speaking peoples of Eastern Europe, the Kipchaks, Khazars and Bulgars, represent one and the same ethnos [Märcani, 1885, pp. 42, 51–53]. After they were conquered by the Tatars, the Bulgars and neighbouring Muslim tribes began calling themselves Tatars [Märcani, 1885, p. 52]. The name of the ruler or the dominant people was adopted as a country's name and the collective name for its peoples: the Saqaliba country, Desht-i Qipchaq, the country of the Khazars, the country of the Bulgars, the country of the Tatars, Ulus Jochi, Yurt Batu, Barria al-Berke (the land of Berke), the country of Ozbeg and, correspondingly, the Kipchaks, Khazars, Bulgars, Tatars, Ulus Jochi people, the people of the Ozbeg country, etc. [Märcani, 1885, pp. 12, 17, 43, 52, 96, 98]. But it was the name 'Tatars' that became fixed [Märcani, 1885, p. 96; see also: Yusupov, 2005, pp. 228–251]⁸.

From the first pages of *'Möstäfadel-äxbar fi äxvali Kazan vä Bolgar'* Marjani addresses the reader with his famous question: 'Who are you, if not a Tatar?', and defends this name [Märcani, 1885, p. 6]. He rejects the typical association of ethno-cultural and religious identity characteristically made by Tatars; he considers it an association formed in response to national-religious oppression and manifested in the adoption of the term 'Muslim' as an endonym, which was no longer acceptable for a people trying to occupy its own place in history. The adoption of Bulgar identity was also incorrect, in his opinion, as it was too colored by untenable religious legends. As a scholar and

⁸ According to the American historian Yu. Shamiloglu, by proving and recreating the ethnic continuity of the Volga Bulgars—the Golden Horde—Kazan Tatars, Ş. Märcani has been deliberately crafting a new national identity [see Shamiloglu, 1991, pp. 22–27].

historian, he therefore chose the name 'Tatars' based upon historical reality, for under this name his people had been known for the several centuries. And as the ideologist-'founder of the nation', he believed it was the most widely known and integral ethnonym [Kemper, 2008, p. 618; Iskhakov, 1997, p. 73].

The most voluminous work by Marjani, 'Vasfiyyat al äslya täxiyät al äxläf', which was written in Arabic, consists of an 'Introduction' ('Mökaddimä'), published in 1883, and six hand-written volumes extant in a single copy. The manuscript is a bibliographical code, compiled in the format of an obituary, that is, it is similar to a traditional and popular genre of Arabic-Muslim historiography. It contains biographies of 6057 outstanding personalities from the Muslim world. For us, of special significance are the materials concerning Muslims of the Volga Region, although there are not many of them, only around 250 biographies [Garaeva, 1998, pp. 51–60]. The work not only contains valuable information about the history and prominent figures of the period, but also reveals ties between the Volga Region and the entire Muslim East, thus expanding the spatial and chronological framework of Bulgar-Tatar spiritual culture [Khalidov, 1998, p. 29]. Among Marjani's other historical works is his treatise entitled 'Görfät al-xävakın li arfati xävakın' ('Understanding the Karakhanids Through their Dwellings'), which was published in Kazan in 1864 and dedicated to a totally unexplored question, that is, the history of Central Asia during the Karakhanid epoch. Ahmet-Zaki Validi believed that this treatise by Marjani played as important a role in the study of the history of Central Asia as 'Möstäfadel-äxbar...' did in the study of the history of the peoples of the Volga region [Wälidi, 1914, p. 74].

There exists in manuscript form the first of a two-volume work about outstanding scholars in Egypt 'Ixtisar kitab än-nujum äz-zaxira fi äxval Misr vä äl-Qaxira' ('A Short Essay on the Bright Stars of Egypt and Cairo'), which was based upon a work of the same name by a 15th-century Egyptian historian, 1420–30s. Ibn Taghribirdi. Professors of Arabic at the

University of St. Petersburg, Sheikh el-Tantavy and Kh. Fäezxanov, provided supplemental information for it from the 19th-century work 'Al-Jabarti's Chronicle' [Fäezxanov, 2006, pp. 322, 327; Yusupov, 2005, p. 125]. Ibn Taghribirdi's materials were of interest in the study of the history of the Turkic peoples.

Marjani set forth his views on the methodology and philosophy of history in 'Mökaddimä' to 'Vasfiyyat al äslya...'. In this work, structured according to the traditional form of the similarly-named treatise by the Maghreb philosopher Ibn Khaldun (1332–1406), he sets forth the basic provisions of his philosophy of history. It was based, as we know, on two main principles: firstly, the principle of causality, according to which all events, historical included, are interrelated by causative connection, and secondly, the principle of authentic historical evidence, which is dependent on the honesty of the reporter and determined by the specifics of the epoch, that is, the assessment of an event should correspond to the spirit of the age [Yuzeev, 1999, p. 189]. In this manner, history is viewed as a system of knowledge constructed on the basis of a single theoretical method.

Marjani adopts Ibn Khaldun's principles of scientific classification and his notion that historical analysis belongs to the realm of science. He divides history into two types, the external and internal. External history describes the past: it provides us with instructive examples and reflects the condition of the world and its changes. Internal history discloses the essence and causes of events [Yusupov, 2005, p. 130]. Marjani also upholds Ibn Khaldun's views on the state as a social and political institution, creating and maintaining public harmony [Yusupov, 2005, p. 180]. As a scholar of Muslim tradition, Marjani not only assimilated and accepted the ideas of Ibn Khaldun, but also critically revised and creatively developed them. For example, Ibn Khaldun believed that the evolution of economic forms served as the basis of the historical process. According to scholar Marjani, social progress is, first and foremost, linked to the spiritual development of peoples, which is achieved through educa-

tion and knowledge. If Ibn Khaldun, in depicting particular historical events, could not go beyond the compilatory traditions of medieval historiography, then in his study methods of original sources, which M. Yusupov relates to positivist realism, Marjani was superior to some of his contemporaries and fellow scholars [Yusupov, 2005, pp. 151, 164].

Immeasurably broader and deeper was Marjani's view on the role of history in the development of society. He considered it a key field of knowledge, one that plays a role in the awakening of national awareness and the self-assertion of a people. He also considered it an effective weapon in the struggle for renewal and solving urgent socio-political problems.

Quite valuable, in our opinion, are the German researcher M. Kemper's comments on the degree of conceptual unity of Marjani's scientific-religious and historical works. Refuting notions of 'Bulgar' historiography on the sanctity of Bulgar that are tied to the Revelation through the legend about the adoption of Islam from the Prophet's companions, Marjani, according to M. Kemper, confirmed the uniqueness of early Islam as an imperative ideal for all times. History marches forward, and everything that has come after the 'Golden Age', cannot match it. The task for scholars is to understand change in the spirit of the Sunnah. For Marjani, its essence lay in overcoming the contradiction between Sharia and present-day scientific knowledge. In this respect, he suggested quite a religious understanding of history. On the other hand, having represented the Revelation as a 'suprahistorical', timeless ideal, and having divorced local history from the holy, Marjani turned it into something attainable, almost secular [Kemper, 2008, pp. 614–617].

Unlike Marjani, K. Nasyri was not a historian-researcher. He, first of all, K. Nasyri was a propagandist of historical knowledge and collected bits and pieces of the past. For example, he would place historical notes among various other information on the pages of desk calendars. His 'Legends of the city of Kazan', which were published in the calendar for 1881, represented a new stage in the development

of Tatar folkloristics. Here readers became acquainted with legends about the foundation of the city, the conquest of Kazan, Söyembikä Tower, Lake Kaban, information on historical topography, the history of slobodas, and about a lyric bait about the fall of Kazan. K. Nasyri also described the reigns of 'some of the most prominent Tatar Khans' (1873), and the history of Kazan mosques (1882). In a review published in the calendar for 1885, he entered into polemics with S. Marjani, defending H. Muslimi's Bulgar from what he believed to be groundless attacks.

K. Nasyri is also regarded as one of the first to popularise Russian history among the Tatars. He compiled chronologies of major dates and events in Russian history. These included: 'Russia's Beginnings' (1871); 'Memorable Events' in the calendars for 1872–1874; 'Memorable Events in Russian History Concerning the Accession of Russian Holdings' in the calendar for 1891. K. Nasyri translated N. Ustryalov's work and in 1890 published 'A Short History of Russia', the first book on Russian history in the Tatar language ('Zöbdäte min tävarixe är-Rusi'), although material from it had appeared previously in the 1872 calendar. In this work some of the most important events from Russia's past were presented in a concise traditional form, that is, focusing on the reigns of Russia's tsars from Rurik to Alexander II.

'A General History', on which the scholar had been working, remained unfinished [Gaziz, 1922, p. 96; Nogman, 1958, p. 18].

Manuscripts gathered by Nasyri in his native Sviyazhsk uyezd that contain historical and epigraphical information, as well as legends about the origins of certain villages, are of enormous scientific value [Kayum Nasyri, pp. 31–59]. They prove that the Bulgars established settlements in the region, which has been confirmed by present-day archaeological exploration [see: Fakhрутдинov, 1976, pp. 155–162].

Nasyri also prepared articles from a historical manuscript collection, compiled by merchant Muhammadzyan Aitov, for print (1823–1890). Although they remained unpublished,

Nasyri's manuscript entitled 'On Aksak-Karatun, Pugachev and Ishbulat-mullah' [Kayum Nasyri, pp. 19–30], was preserved. It allows us to become acquainted with this distinctive historian's work, whose knowledge was highly esteemed by Marjani. M. Aitov was the first in Tatar historiography to address the history of the Pugachev's movement. It was his father, in fact, who had begun gathering records about the recent past. A close friend of this family, the scholar and author of the first Tatar drama, G. Ilyasi, acquainted the members of SAHE (The Society of Archeology, History and Ethnography) with Aitov's materials on Pugachev's stay in Kazan in 1886; translations of them were later published by a local newspaper [Alishev, 1986, p. 101; Xäbibullin, 1977]. Another manuscript by M. Aitov remains to be studied, namely 'Tävarixe tatar' ('The History of the Tatars').

K. Nasyri was the first Tatar to undertake the ethnographic study of his people. In his work 'Popular Belief and Rituals of the Kazan Tatars' (1880), which was based on extensive folkloric material, he attempted to describe and classify mythological characters from legends and folktales, as well as popular omens, and examined pagan rites and incantations. A collection of earlier unpublished works by Nasyri was issued in 1926. It included his materials on Tatar ethnography, which contained detailed information about the dwellings, clothes, national cuisine and family traditions of the residents of the Tatar sloboda in Kazan [Kayum Nasyri, pp. 81–107]. This included descriptions of rituals, that later researchers would never have a chance of seeing or recording [Urazmanova, 1976, p. 165].

Shigabetdin Rakhmatullin (1853–after 1923), a translator of oriental literature and imam of a rural mosque, took over the job of compiling the annual desk calendars after Nasyri's death. Among the articles that appeared on the pages of the calendars he published between 1890 and 1901, one in particular entitled 'About Kazan' (1899, 1900) contained, besides other information, a chronology of the reigns of Kazan khans [Minnullina, 2006, pp. 84–85].

The writer, dramatist and calendar publisher F. Khalidi also contributed to the popularisation of historical knowledge. A work entitled 'The History of Bulgaria as Gathered from Trustworthy Sources' makes up the third part of the 1899 desk calendar. The publication is basically a layman's translation of the first chapters of Volume 1 of 'Möstäfadel-äxbar...' by Sh. Marjani. The same calendar also contains a chronicle of events from Kazan's history, as well as a history of the city's mosques.

In F. Khalidi's tear-off calendar for 1902, N. Katanov translated into Russian an essay on the history of Kazan, in which the establishment of the city, the confrontation with Moscow, the conquest of Kazan, and life in the Tatar city at the end of the 18th century–beginning of the 19th century are described [Katanov, 1904b, pp. 359–365].

In 1883 'Tävarixe Bolgariya' ('The Bulgarian Chronicles') by the Kazan imam Husain Amirkhan (1816–1893), the grandfather of the writer F. Amirkhan, were published in Kazan [Ämirkhan, 1883; Amirkhanov, 2010]. This work consists of an introduction, seven chapters and a conclusion. In the introduction to the book the author explains that he tried to organise reliable information from different sources, and compensate for the absence of books on the history of Bulgar. Following the example set by Abul-Gazi Bahadur-khan in his 'Şäcäräi törek' ('Origin of the Turks'), Amirkhan devotes the first chapters of his work to the origins of the Turkic peoples and their ancient history, to Chinggis Khan, the Chinggisids and Timur. Events in Bulgarian history are explained within the context of a criticism of Kisamutdin Muslimi's 'The Bulgarian Chronicles'. However, H. Amirkhan never demonstrated the kind of intolerance and self-righteousness in his appraisal of the book as Sh. Marjani had, and admitted that it some of the evidence presented by Muslimi might be accurate. Biographical information on 'Bulgarian sheikhs and ulamas'—Muslim leaders from the late 18–the first third of the 19th centuries—is unique and valuable. Legends form the basis of the last chapter of the book, which is devoted to Kazan. In it we

learn about the foundation of the city, its rulers, Kaban Lakes and the Black Sea, and the history of Tatar slobodas. There is also, among others, an extremely interesting source—a bait about Aksak-Timur written, according to the author, by the Kazan Khan Muhammad-Amin [Ämirkhan, 1883, p. 60]. Although these materials, as with the legends collected by K. Nasyri, contain errors and fiction, as do any works of folklore, they are, nevertheless, of historiographic value since they reflect the historical mindset of Tatar society.

While the truthfulness of some information from allegedly reliable sources that H. Amirkhan took on faith is doubtful, but his methodology is close, in many respects, to that used by K. Muslimi. Considered an intermediary work of Islamic historiography on the Volga and Ural regions, 'The Bulgarian Chronicles' by H. Amirkhan, nevertheless, demonstrated the long-standing need for the depiction of 'historical truth' [Frank, 2008, pp. 155, 166, 170–171]. In this regard, 'The Bulgarian Chronicles' are similar to a manuscript by the Sufi poet G. Chokry, 'Tävarixe Bolgariya, yaki täkribe Gariy' ('The Bulgarian Chronicles or an Approximate Explanation by Gari'), which he composed at the end of his life. In them he rejects Muslimi's history as a reliable source of information [Frank, 2008, 172–182].

In 1884 another historical work by H. Amirkhan was published entitled 'Şacäräi galiya fi bäyan äl-änsab' ('An Account of the Great Family Tree') also known in historiographic circles as 'Nöcümettavarix' ('Stars of History') [Ämirkhan, 1884]. This treatise was composed in accordance with the traditions of Islamic historiography. In it the author covers topics such as the history of the prophets and the deeds of their followers; the history of Islamic states and their rulers; the life and work of outstanding scholars.

Oriental studies in Russia played a role in the development of historical knowledge and the establishment of a national historiography for the Tartars.

In the first half of the 19th century Kazan University became the main center of orien-

tal studies in Russia. Even before Kh. Fraehn arrived in Kazan in 1807 and was appointed head of the Department of Oriental Languages, I. Khalfin had laid the basis for the teaching of oriental languages at the University. Through the publication of valuable Eastern texts, I. Khalfin received recognition and fame both in Russia and abroad. He laid, in essence, the foundation for a chronology of national culture. In 1818, he and Kh. Fraehn published the tarkhan yarliq of Temür Qutlugh. In 1819 I. Khalfin published the first Tatar textbook, a reader entitled 'Zhizn' Chinggis-xana i Aksak-Timura s prisovokupleniem raznyx otryvkov, do istorii kasayushchixsya...' ('The life of Chinggis Khan and Aksak-Timur, which includes various passages, up to the history of...') based on the texts of 'Däftäri Chingiz-namä' [Xälfın, 1819]. In 1825 the manuscript, 'The Genealogy of the Turks', which was written by Abdul-Gazi Bahadur-khan and prepared by I. Khalfin, was published by the Asian Printing House of Kazan.

In 1855, the Oriental department was transferred to St. Petersburg University. In 1857–1865, a disciple, close friend and like-minded fellow of Sh. Marjani, the inspiration of his historical research Kh. Faizkhanov (1828–1866) taught the Turkish and Tartar languages here. At his teacher's request he would send him the books he needed, make excerpts from the sources, and thus he helped him immensely in compiling works on history [Gaziz, 1915, b. 349; Şäräf, 1915, b. 114; Fakhretdin, 1993, b. 187–188; Fäezxanov, 2006, b. 327; Yusupov, 2005, pp. 79–80]. In his letters to his mentor Kh. Faizkhanov outlines and discusses his research tasks, and expresses his opinion on what has been written [Fäezxanov, 2006, b. 343–344, 350, 355, 366]. The key points, for example, of the Bulgarian and Tatar theory of ethnogenesis, were developed by them collaboratively [Fäezxanov, 2006, b. 371–373, 378–379]. Sh. Marjani was thankful for all his advice and remarks. Kh. Faizkhanov intended to have his teacher's works published in St. Petersburg [Fäezxanov, 2006, b. 350, 364, 366]. He became the link between the Orientalists of the capital and Sh. Marjani. In 'The Reserach

on the Tsars and Princes of Kasimov' (1863) V. Velyaminov-Zernov provides two letters of Sh. Marjani to Kh. Faizkhanov in which Sh. Marjani deciphers the texts of gravestone epitaphs made at the author's request.

Kh. Faizkhanov's contribution to the creation of the first scientific history of Tatars is also revealed by sources that have been re-acquired. The archaeographer R. Mardanov found Kh. Faizkhanov's manuscripts among the materials of Sh. Marjani's archive which had been given to the National Library of the Republic of Tatarstan in 1998 by the scientist's grandson Daniyal Amirkhanov. It turns out that our knowledge of the scientific legacy of Kh. Faizkhanov was incomplete. Moreover, a very important part of his activity as a historian and scientist had remained unknown. A notebook of 60 pages contains an incomplete draft for works on the history of the Kasimov and Kazan Khanates and descriptions of the epitaph texts from Bulgarian gravestones. We learn from the manuscript that he also composed the history of Volga Bulgaria [Märdanov, 2002; published: [Fäezxanov, 2006, b. 109–154, 228–272].

The comparison of the manuscripts with 'Möstäfadel-äxbar...' showed that Kh. Faizkhanov's materials had been included in Sh. Marjani's work in the form of passages or continuous text. Thus, his 'Kazan tarixı' ('The History of Kazan') and 'Kasimskij xanlığı' ('The Kasimov Khanate'), after several revisions, were fully included into the 'Möstäfadel-äxbar...' and made up over a half or nearly the whole text of the respective chapters of this book [Märdanov, 2006, b. 10–15]. Let us emphasise, the researchers are unanimous in this, that there was no chance that Sh. Marjani could have encroached upon the works of Kh. Faizkhanov, who had died before his time [Gosmanov, 2006, b. 33, Märdanov, 2006, b. 15–16]. They were bound by true and time tested friendship, this was a unique relationship between people who had chosen to serve a common goal. By collecting Kh. Faizkhanov's manuscripts upon his death and including them into his work Sh. Marjani had continued their collaboration.

Kh. Faizkhanov left his mark on the history of Russian Turkic studies. He systematised and finalised for publication extremely valuable sources on the international political history of Eastern Europe of the 16–18th centuries—diplomatic documents of the archive of the Ministry of Foreign Affairs in Turkic languages published under the editorship of V. Velyaminov-Zernov in 'The Materials on the History of the Crimean Khanate' (1864)⁹. In his work 'Three Bulgarian Gravestone Inscriptions' (1863) Kh. Faizkhanov proposed a method which made it possible to read correctly the epigraphic monuments of the Bulgarian period and laid the basis for Bulgarian and Tatar epigraphy [Gosmanov, 1990, b. 25–26].

The academic community of Kazan favoured the scientific activity of Sh. Marjani. He collaborated and was closely acquainted with the well known Kazan Turkologists I. Gotwald and V. Radlov. Marjani was a member of the Organising Committee of the 4 All-Russian Archaeological Congress (1877) for which he prepared the report 'Gılalät äzzaman fı tarıxe Bolgar vâ Kazan' ('The Curtain of Time Covering the History of Bulgar and Kazan') translated and recited by Radlov [Marjani, 1884, pp. 40–58]. The information from this work, both valuable and reliable, was used by I. Gotwald, S. Shpilevsky, N. Ashmarin.

At the initiative of the Congressional participants a Society of Archaeology, History and Ethnography (SAHE) was founded at Kazan university. 48 works by 24 authors on the history, culture and life of Tatars were published in the periodical collection of the Society—'Izvestiya OAIE' ('News of SAHE') [Khabibullin, 2006, p. 99].

Until October 1917 the active members of the Society were 15 Tatar scientists and intellectuals were: Sh. Marjani, K. Nasyri, S. Aitov, M. Zaitov, G. Ilyasi, G. Akhmarov, Kh. Atlasy and others [Xäbibullin, 1977]. While collaborating with SAHE they became familiar with Russian and European historical science,

⁹ The participation of the latter in the creation of this major collection was limited by the introductory article.

methods of scientific inquiry and research. On the other hand, the participation of Tatars in the activities of SAHE helped to introduce a wide range of written, epigraphic and folklore sources, including unknown ones (for example, the sources of research conducted by Sh. Marjani), or those unavailable for the majority of Russian scientists for scientific use.

From the 19th century the traditional genres of local historical literature underwent certain changes. They included genealogy-shadjara, histories of parishes and villages, biographies, autobiographies, etc. The national clan tradition took on a new character—one-name genealogy¹⁰ turned into a set of genealogies and, further were taken as a basis for establishment of folk regional history of villages (*avıl tarixları*) which received wide-scale development from the 80s of the 19th century [Shaykhiev, 1990, pp. 17, 29]. In one of the earliest examples of the regional natural history literature published by V. Radlov under the title 'What Ilyas-mullah heard from his father', was based on a separate genealogy integrated with local legends, as the history of Ust-Ishim was told [Ilyas mullah]. Works that revealed the history, ethnography, toponymy of the small motherland appeared [Shaykhiev, 1990, p. 29]. Among the most significant writings are 'The History of the Aul Tyuntyar' by M. Shamsutdinov, 'The History of Paranga' by A. Barangivi, 'The History of New Tinchali' by A. Gizzatullin and others. The first regional history work published in the Tatar language was 'The History of the Aul Sterlibashevo' by M. Tukayev which came out in Kazan in 1899.

The so-called vakaig-name, or year by year records of historical events, based on 'Chapters of the Novel on History' 'Däftäri Chingiz-namä' became wide spread. For example, the vakaig-name from the collection of the archaeographer S. Vakhidov which was compiled in the family of the Kazan merchants Zamanovs and represented the chronology of his-

torical events of Russia, Kazan and local life during from 1703 to 1855 [Dmitrieva, 1965, pp. 69–70].

Along with introduction of parish registers, local vakaig-names came up when the most important annual events started being entered into the register. Authors of regional history works often made references to this data after that. Some village histories were direct continuations of the vakaig-names [Shaykhiev, 1990, pp. 24–25]. Historian-amateurs referred to epigraphic monuments and folklore, used documentary sources kept by the residents, such as purchases, land tenure in a fortress.

National regional history literature developed under the influence of Tatar educators, Kazan oriental studies, in general, and along with establishment of the Tatar historical science it developed in strong interrelation with it. Even I. Khalfin, in his introduction to 'The Life of Chinggis Khan and Aksak-Timur..' advocated for the collection and preservation of written sources and historical monuments of the local area [Xälfin, 1819, b. 4, 7–8]. K. Nasyri's manuscripts preserved materials on the histories of the villages of Sviyazhsk uyezd [Nogman, 1958, b. 14; Kayum Nasyri, b. 31–59]. In 1878, under the hand of the supervisor of Tatar, Bashkir and Kyrgyz schools of the Kazan Educational District orientalist V. Radlov, and, obviously, on the instruction of the Society of Archaeology, Ethnography and History, a form was sent to mosque imams containing questions on the origin of the village, its name, on the presence of antiquities in the neighbourhood, legends and tales from history. As mentioned by many researchers, interest in writing regional histories was growing under the direct influence of Sh. Marjani's works, especially the second half of 'Möstäfadel-äxbar..' in which he included materials from histories of villages [Gosmanov, 1998, b. 20; Yusupov, 2005, pp. 125–126]. At the beginning of the early 20th century R. Fakhretdin popularised regional history research in the magazine 'Şura'. He provided information on the regional history works he was familiar with in one of the periodical's issues [Fäxretdin, 1915, b. 44–49]. Regional history traditions from the

¹⁰ Traditional Tatar shadjara was written in the form of a genealogy tree (later in the form of a table), where individual names were surrounded with short data on the dates of birth and death, several facts of biography worth mentioning from the point of view of the writer.

pre-revolutionary era continued in writings of the old Tatar intelligentsia and clergy up to the 60s of the 20th century.

The Tatar historical literature of the 19th century was diverse, but the vector of its development was evident and was aimed at teaching the actual history of the people. The two-volume work 'Möstäfadel-äxbar...' by Sh. Marjani became the first scientific research on the history of the Tatar people, that is research based on comprehensive analysis and scientific criticism of a wide range of sources. It determined the range of problems concerning further works, the main principles and peculiarities of bringing to light the past of the

Tatar people. It was a starting point for establishing the historiographic system—a collection of works united by common objectives and goals, consistent with the main approach towards interpretation of the national history. Thus, it is appropriate to speak about the beginnings of forming the historical science of Tatars, the establishment and development of which primarily refers to the period after the first Russian revolution. The followers and successors of the founder of this science—the outstanding Tatar thinker Sh. Marjani—were R. Fakhretdin, G. Akhmarov, Kh. Atlasy, Kh.-G. Gabyashi, A.-Z. Validi, G. Battal and others.

CHAPTER 8

Traditional Educational Establishments and Education with New Methods

Alta Makhmutova

The Revival and Development of the Education System of Muslim Tatars

The fact that Kazan Tatars lost their nationhood in 1552 and the policy of Christianisation carried out by the Russian state after that meant destruction of both the material and spiritual wealth, as well as leading groups of people. An especially heavy blow was inflicted on Muslim Tatars in the 1730s–1740s, when violence became the main and the only weapon of missionaries and the state policy in Christianisation of non-Russian peoples of the Volga region and Siberia. 'Over 150 years of colonial policy towards these peoples failed to integrate them totally into the economic and spiritual area of Russia.... The prospects for commercial exploitation of the natural resources of the Urals and Siberia, plans for further conquests of Kazakhstan and Central Asia, the Crimea and Caucasus strongly required ultimate spiritual colonisation of the conquered peoples of the Volga region. This task was especially pressing with regard to Muslim Tatars' [Islaev, 1999, p. 9].

Despite the persecution and the policy of Christianisation, a significant part of the Tatar population kept on adhering to their traditional religion—Islam. Such endurance was due to the fact that the nature of the Islamic doctrine was adjusted to the needs of common people and that mullahs were appointed by election [Khabutdinov, 2008, p. 21]. The reasons for Islam's strength was not only the fact that the majority of Tatars remained faithful Muslims in an Orthodox state but also the fact that the everyday life of the population was regulated by the Sharia laws, and the Islamic clergy which had to replace temporal power was very authoritative.

'Besides the Russian Orthodox Church viewed Islam as its natural competitor that was strong enough to fight for its influence among pagan peoples... According to missionaries, the destruction of mosques (obviously—*A.M.*) should have resulted in the destruction of the Islamic clergy, and consequently of Islam itself.... The decree from 19 November 1742 became the legal foundation for the total destruction of mosques' [Islaev, 1999, pp. 25–27]. As a result, within a short period of time, in Kazan and the uyezd 418 out of 536 mosques were destroyed, in the province of Siberia 98 out of 133 mosques were destroyed, in the province of Astrakhan 29 out of 40 mosques were destroyed [Istoriya, 1937, p. 152]. Thus, the New Baptismal office which was created in 1731 inflicted a major blow to the centres of spirituality and education of Tatars—the mosques. Along with the mosques educational institutions belonging to them also were eliminated. The succession and traditions in education that had been developed by Islamic schools of the Volga, the Urals, and Siberia were being lost.

In circumstances where rural Islamic communities were isolated and lacked unity it was abyzes who maintained the traditions of national Islam. As it is stated in the Tatar regional historical literature, the people fell into absolute ignorance [Bikkolov, s. 86].

The status of Muslims in Russia began to change from the middle of the 18th century. From 1756 the construction of mosques and their schools was permitted in villages with a Muslim population [Xronologicheskij, 2000, p. 315]. The Russian government, especially during the reign of Catherine II, began to realise that 'Tatar society functioned mostly on

the universalist links of Islam and remained a strong potential locus of separatism inside Russia. Therefore it was necessary to work out more efficient mechanisms that were designed to involve Tatar society into the Russian state system, rather than forced Christianisation' [Mukhametshin, 2005a, p. 28].

So, what was done?

In 1764 New Baptismal office ceased its activities. In 1773 the Synod issued an edict on tolerance towards all confessions and on the prohibition of interference of bishops with life and activities of people of other faiths. This meant that public religious persecutions ended. The status of Islam was also changing—the persecuted religion was turning into a tolerated religion.

As a result of implementation of the new system of governmental measures, Russian Muslims were included in the structure of the Russian state while at the same time autonomous Islamic structures were being created under governmental control. Kazan and Orenburg (Seitov Posad—Kargaly) began to turn into concentrated centres of active forces of Tatar society. The merchant class (bourgeoisie) and clergy had become stronger, that is the conditions for the formation and sustained development of new leading social groups were created. Religious and educational institutions which had been almost totally eliminated by that time received an opportunity to resume functioning. The change in the status of Islam in Russia in the late 18–early 19th centuries gave rise to the intensive construction of mosques and the establishment of respective schools, so-called madrasahs, in all territories populated by Tatars.

Madrasah (from the Arabic—a *place where people are taught*)—an educational institution which appeared in the Islamic world as early as during the period of the spread of Islam. For a long period of time, the main and often only subject taught in it was Islamic law. Gradually, other subjects of theological and ethic and legal nature were added to it. The whole complex science of Islam was included into the madrasah curriculum had been established in the Islamic world as early as in the 12–13th

centuries and remained almost unchanged to the end of the 19th century.

Since this educational system of the Tatars had been destroyed during many centuries of persecution, and there was no single centre that could have guided its revival, the initiators of this task had to act independently, using their own judgment. This meant that they borrowed teaching methods and tricks which they received from their teachers in Islamic countries. The personality of the mudarris (teacher, the founder of the madrasah) became crucial for the revival of the educational system. 'Due to the absence of printed works, the destruction of manuscript legacy in endless fires in the villages we do not have accurate information on teaching ways and methods during the times of our close and remote ancestors,—R. Fakhretdin noted.—We only know that after the Kazan state had disappeared our grandfathers who lived in villages began to restore education first using the experience of Dagestan scientists, and later they borrowed teaching methods from Bukhara [Fäxreddinev, 1993, b. 238].

The works of Sh. Marjani and R. Fakhretdin provide summaries on several mudarrises who brought to the Tatar environment, teaching methods and skills they had adopted in Dagestan, Bukhara and other places. Thus, Muhammad ibn Ali ad-Dagestani (?–1796) in the 18th century established his own madrasah in the village Kondurovka near Orenburg (it was founded in 1744 by the Astrakhan Nogais resettled according to the edict of the Empress Elizabeth Petrovna), he was the first to resume teaching the Arabic language to shakirds. This attracted students from the entire Volga and Urals region to the madrasah. His first disciples were the akhund Kargaly, the first mufti M. Khusainov (1758–1824); the mudarris of the Kargaly madrasah near Orenburg, the Sufi sheikh, poet Valid b. Muhhamad-Amin al-Kaibychi al-Kargali (1753–1802); a religious leader, pedagogue Abdurrahman ibn Muhammad-Sharif al-Kirman (1743–1826) and others.

They followed the example and methods of their teacher, occasionally went to Bukhara

to improve their skills, they established their own madrasahs where they taught new pupils, sending the best of them to Bukhara to complete their education. Thus, the Islamic education chain of Tatars which was almost broken started to be restored. Sh. Marjani and R. Fakhretdin pointed out that these and other mudarrises made a great contribution to the revival and establishment of classical Islamic education in the Volga and Ural regions, especially concerning transfer of their knowledge in law, Hadith studies, rhetoric, and the Arabic language [Märcani, 1989, b. 243–244; Fäxreddin, 2006, b. 19, 53–54, 75, and others].

The would-be mudarrises, who studied in Bukhara, adopted not only the religious examples and educational innovations, but also the formal aspects of the Bukharan way of life. 'Islamisation to a certain extent touched all activities of the Tatars. Sh. Marjani claims that the everyday Sharia norms were established in the Umma thanks to the efforts of individual graduates from Central Asian madrasahs' [Zagidullin, 2008, p. 165]. Particularly, Sh. Marjani associates a number of innovations in the everyday culture of urban Muslims with the personality of mullah Ibrahim bin Hudzhashi who gained knowledge in the training centres of the Caucasus and after returning to his country in 1783 he became the imam of the 1st mosque of Kazan in 1793 [Märcani, 1989, b. 266–269].

What is noteworthy is the unique influence of the Bukharan education system with its scholastic principles and dogma. 'The main advantage of the Central Asian cultural influence was the return of the Tatars to the scholastic Islamic tradition. The folk Islam of abyzes gave way to scholastic Islam. According to Erwin Panofsky scholastics can be defined as 'explanation postulate for the sake of explanation itself'. In 1908 R. Fakhretdin postulated that scholastics led to the stagnation and destruction of peoples who used it' [Khabutdinov, 2008, p. 35].

It is next to impossible to identify the date of foundation and duration of existence of many madrasahs that emerged in the second half of the 18–beginning of the 19th centuries,

as well as their total number. The reason for this was not only the absence of collecting of statistical data in the country but also the fact that madrasahs were founded by individuals (mullahs) or the parish society as schools at the mosques, were not registered anywhere and operated autonomously. As a rule, the madrasah was named after a mullah, not the place of its origin. The duration of the existence of a madrasah and the scope of its teaching directly depended on the mullah. If he was destined to live and work at one location for a long period of time, then his madrasah could make this place famous. If he had to roam (and this, for various reasons, happened very often at the turn of the century), and there were no followers of his mission at the former place, in this case the madrasah disappeared there as well (however, it emerged at a new location).

For example, Ibrahim bin Abdullah al-Nukratiy (?–1780), a disciple of the famous mudarris and Sufi of the first half of the 18th century Murtaza Gali bin Kutlugush as-Simeti who, in his turn, had received his education in Dagestan, taught (had a madrasah) in many villages. In the reference notes at the end of his books that were re-written by his disciples Sh. Marjani states that in 1753 his madrasah was located in the village of Khasanshaekh, in 1764—in the village of Tashkichu, in 1768—in the village of Kazaklar, in 1771—in the village of Shashy, in 1772—in the village of Urbar of Kazan uyezd. Ibrahim Hazrat is famous both for his profound knowledge in Islamic sciences and a great number of disciples (Sh. Marjani's grandfather Subhan Hazrat was also among them) [Märcani, 1989, b. 241]. The absence of other sources makes it impossible to determine whether any madrasahs remained in the villages abandoned by the mudarris.

The earliest information on Islamic schools in Russia was occasional and did not cover all these schools in total. Thus, 'The News on the Tatar Schools in Orenburg guberniya' (based on the data of the Ministry of National Education) was published in 1811 in issue 21 of 'Vestnik Evropy' (The Newsletter of Europe) reported the following about the schools of Seitov posad near Orenburg: 'Each mosque

(and there were 7 mosques made of stone and 2 made of wood.—*A.M.*) has a separate Tatar school, partly in the rooms downstairs, partly in separate buildings. The establishment of schools began 30 years from this point. The teachers are learned akhunds and mullahs, and partially private individuals; the students are, besides the locals, those coming from other parts of Russia, and even from Khiva, Bukharia and other Asian principalities. At schools they study the Tatar alphabet, the Arabic language in all its length, and Persian, as well as arithmetic, geometry, the basics of physics, philosophy according to Aristotle's works, sacred history of the Mohammedans, reading and expounding the Alkoran, and the sacred rituals of the Mohammedans'. It was also noted that the books used for instruction were all handwritten and mainly supplied from Bukhara, and that up to 150 people studied in each of the best schools.

A short description of five Kazan madrasahs is contained in the report of the senior teacher of the Main Kazan National School A. Pyatov which was submitted to the School Committee at the Kazan University on 15 May 1816. The report explains that 'all Kazan Tatar schools started in a similar way. Some rich Tatar being driven by his love of the sciences, but more often just to keep his word, gives away his house for school purposes, the parish mullah usually induced by zeal accepts voluntarily the position of a teacher, young Mohammedans express a desire to learn once they find out about it—thus a school is founded. Those are supported by charitable contributions or dependence of their pupils, some of whom live in their homes, others, the poorest ones, are accommodated in the school building itself where they often work as guards' [National Archives of the Republic of Tatarstan, f. 977, inv. Sovet, file 318, s. 9].

A. Pyatov also pointed out the absence in Kazan madrasahs of any rules, regulations indicative of a systematic learning model. 'All education in such schools is confined to learning to read and write in Turkish, Arabian and Persian languages, learning the Mohammedan law. However, in some schools the follow-

ing subjects are taught: a part of mathematics, geodesy, astrology, logics, philosophy, grammar, rhetoric, morals and Koran pronunciation rules,—he noted.—In general, mullahs-teachers stick to their old habits in teaching. But really, can one expect something else from them? They were brought up among their unlearned brothers, had no other close relations with Russians than trade, their Russian was poor and as a result they had no means to achieve the appropriate degree in education. Therefore they get by with the books published in their language long time ago. But since even these books are shared between them in manuscripts, very few of them have anything else except the Quran. However, the voluntarily established schools and frequent trips to Bukharia and other places prove that Mohammedans had a zeal for the sciences' [National Archives of the Republic of Tatarstan, f. 977, inv. Sovet, file 318, s. 9].

According to this document, the madrasahs were established at the initiative of the Tatar population itself, often by the representatives of the merchant class and clergy, and the schools were maintained at their expense. No permission to open a school was required, because according to the old Sharia canons teaching Sharia norms and rules were the mullah's responsibility. The scope of instruction depended on the scope of knowledge of the mullah-teacher. And they taught with the books at their disposal (as a rule, these were handwritten copies made during their studies). Re-writing or copying various books needed for further work was a part of the education and required great pains from a shakird.

This list does not include all schools of the Kazan guberniya existing during that period. We can assume that the number of Tatar schools was greater according to the report of the regular keeper of the Laishevo uyezd school: 'The uyezd I am in charge of has no educational institutions except Mohammedan schools at the mosques in almost every settlement where children of Mohammedans are taught by mullahs to read and write in the Tatar language' [National Archives of the Republic of Tatarstan, f. 160, inv. 1, file 33, s. 14].

The researcher on the life and customs of the Tatar population during the first half of the 19th century Karl Fuchs underscored: 'Tatars who cannot read and write are resented by their fellow countrymen, and as citizens are not respected. Therefore every father tries, as early as possible, to enroll his children in school where they could learn at to least read and write and learn the fundamentals of their religion' [Fuchs, 2005, pp. 212–213].

The scientist does not provide any statistical data on the number of schools, but his information shows how literacy was spread among the Kazan Tatars and proves that the system of the Tatar and Islamic education had been totally restored.

More complete information refers to the middle of the century. Data from the Orenburg Muslim Spiritual Assembly provided by the Religious Directorate to the Department of Religious Affairs of Foreign Faiths: as of 1 January 1856, it was in charge of 1,729,858 citizens of both sexes, 3,478 mosques, 934 madrasahs and maktab, 5,607 clergymen (260 mudarrises among them) [Russian State Historical Archive, f. 821, inv. 8, file 1093, s. 1–7].

Thus, the procedure for receiving education by Tatars which had been established by the Mid-19th century copied in many aspects the Bukhara system of education. The fact that the Kazan Tatars adopted, as an example, the Central Asian system of up-bringing and education, can evidently be explained by both domestic and international policy. If the Caucasian war closed the paths to receiving an education in the Caucasus even for those rare seekers of knowledge in foreign lands, then the strengthening at the end of the 18–the first half of the 19th centuries of trading, economic and diplomatic relations with the states of Central Asia in which Tatar Muslims played an important role, opened the way to Bukhara for young people who strove for knowledge.

The point of these studies was as follows. Every mullah who was appointed by the society at the same time accepted responsibility to teach the fundamentals of Islam to boys. He led classes either at his home or in a separate building at the mosque. By the way, Tatar

schools had not yet been divided into maktab (primary schools) and madrasahs (secondary and high schools). Such divisions were only established at the turn of the 20th century. Regardless of the education level, schools had a common name—madrasah, which means 'a place where people study', although the word 'maktab' (a place where people write) also was used [Makhmutova, 1982, p. 13].

The education may consist of several stages. First, boys (as a rule, from the ages of 5–8) became familiar with alphabet, learned to read, and sometimes to write and acquired elementary religious skills. The first step of education was learning the rudiments of the complicated Arab alphabet. (It was complicated because 29 letters of the alphabet had several letter forms thus making up to 118 letters in total, the number of vowels was not sufficient, special symbols were used to denote them; instruction was held in an unknown language, etc.).

After they learned how to combine letters (this could take two-three years, and even five or more depending on the interest and capabilities of the teacher and the pupil), pupils started reading religious didactic works, such as the 'Iman sharty' ('Conditions of Faith') and 'heftiyak' ('The seventh part of the Quran'). The instruction was individualised: 'Every pupil undergoes a training course separately from other pupils. He had his own lesson to learn which was different from that being learned by the pupil sitting next to him. The pupils learned their lessons out-loud as if they were trying to out shout the other. There is noise and hum in the school, so that it is hard to make out separate sounds' [Russian State Historical Archive, f. 821, inv. 150, file 420, s. 9 reverse]. Since such a method did not make it possible to teach all the pupils at the same time, the teacher-mullah appointed his assistants from among senior pupils called 'khalifa'.

A primary education was almost mandatory both for the mullah and for boys' parents regardless of their financial status. Further education depended on the willingness and capabilities of the boys and their parents, as well as of the mullah. Opening a madrasah did not require any special building or school equip-

ment, nothing that is necessary to establish a contemporary school. The boys, who managed to complete the primary education and demonstrated capabilities, continued their education at the same madrasah or transferred to a nearby madrasah, provided their parents could afford it.

The Kargaly madrasahs in the Orenburg region became a major centre for the comprehensive religious education of Tatars in the last third of the 18th–the first third of the 19th centuries. Sh. Marjani and R. Fakhretdin while giving a character reference to famous Tatars who lived at that period of time, there are around one hundred madrasahs, where those individuals received an education or were the founders of those schools. The Tatar madrasahs usually arose in trading settlements far from the governorate centres. For example, there is information about the existence of the following madrasahs in the 18th century: in the settlements Adayevo, Bereske, Bubi, Karile (Karelin), Kyshkar, Machkara, Or (Ura), Simetbash, Tashkichu, Tyunter and others, in Trans-Kazan, Ovechy Ovrage in the Nizhny Novgorod region, Taysuganovo and Sterlibash in the Trans-Kama Region and others.

Thus, at the end of the 18th century–the first half of the 19th century one of the famous madrasahs was the one in the village Machkara of the Kazan guberniya. Its 'Golden Age' was associated with the names of the mudarrises Muhammad-Rahim bin Yusuf al-Ashyti (died in 1818) and Abdulla bin Yakhya al-Chirtushi (died in 1858), as well as the 1st guild merchant Gabdulla Utyamyshev (died in 1832) who ensured the financial blossoming of his home village.

M.-R. al-Ashyti received his primary education at the madrasah of his father, imam and mudarris Yusuf bin Gabdulkarim. For three years he helped his father to train shakirds. Then he went to Dagestan in search of knowledge, where during 10 years he was taught by scientists who were well-known at that of time. Having returned to his homeland in the early 80s of the 18th century. M.-R. al-Ashyti was appointed imam and mudarris by the merchant Utyamyshevs, owners of the mosque and the

madrasah of the village Machkara. The fame of his teaching attracted a lot of young men who strove for knowledge from the entire Volga and Ural region to Machkara. Nearly all of them founded then their madrasahs and became well-known mudarrises. His disciples were the scientist-reformer G. Kursavi, imams and mudarrises of the Machkara madrasah Abdullah al-Chirtushi, the Kyshkar madrasah Yakub bin Yahya ad-Dubyazi, the Husna madrasah Sh. Marjani's grandfather Subhan al-Marjani, the founder of the mudarris dynasty of the Sterlibash madrasah Nigmatulla bin Biktimer Tukaev, the founder of the clan of imams and mudarrises Amirkhanovs, F. Amirkhan's great-grandfather Amirkhan at-Talkyshi and others [Märcani, 1989, b. 263–264; Fäxreddin, 2006, b. 83–84].

Abdullah bin Yahya al-Chirtushi, another mudarris of the Machkara madrasah, was from the Chistopol uyezd and had been taught by the mudarris M.-R. al-Ashyti before he went to study in Bukhara. Upon returning to Machkara he married his teacher's daughter at the end of 1812 and for the next six years he helped his teacher and father-in-law. In 1818 leadership of the madrasah was completely transferred to him. According to Sh. Marjani he had worked at Machkara for over 40 years, was the most famous mudarris of his time and had many disciples who became mudarrises. The well-known disciples among them were Mohammad Karim at-Takanashi, Gabdulvali an-Nurmawi, Yarulla as-Satyshi, Nigmatulla Bubi and others [Märcani, 1989, b. 319–321]. In the second and third quarters of the 19th century, graduates of the Machkara madrasah led the key parishes of Kazan at the Apanayev, Burnaev, Galeev, Sennaya, Rizovaya (Pink) mosques [Khabutdinov, 2009, p. 44].

In the Orenburg guberniya, at the end of the 18th and first half of the 19th centuries, the Sterlibash madrasah, founded in 1720 rose to fame [Tukaev, 1899, p. 5]. Its zenith is associated with the activities of the Tukaev dynasty of imams and mudarrises—Nigmatulla Hazrat (1772–1844), his sons Kharris (1810–1870) and Kharras (1814–1871), Khabibulla's grandson (1856–1897), Kharris' son. Nigmatulla bin

Biktimer Tukaev as-Sterlibashi (his grandfather Tukay bin Urmanay had migrated to the Bashkir lands from the Salavych Malmyzhsky uyezd) received a theological education in a madrasah of Kazan and Machkara and set out to Bukhara in search of profound knowledge. There he became a disciple and follower of the renowned Sufi Niyazkuli-ishan at-Turkmani. Upon receiving the title of sheikh Nigmatulla-ishan returned to his motherland and led a mosque and madrasah in Sterlibash. Sh. Marjani noted: 'His world was wide, he had many disciples. He became extremely renowned in his homeland. He advocated the views of his friend the mullah Abdinasir al-Kursavi. An interest in him was aroused in his mosque' [Märcani, 1989, b. 245–246]. According to R. Fakhretdin, during the period when mudarris Nigmatulla was the head of his madrasah, the Sterlibash madrasah 'reached the level of a higher educational institution' [Fäxreddin, 1906, p. 78].

Thus, the revival of the Tatar system of education and sciences led to unexpected results for the government: 'The intensive construction of mosques and establishment of maktab and madrasahs at the end of the 18–beginning of the 19th centuries were used by Tatars to create a system of national education independent of the official ideology' [Mukhametshin, 2005a, p. 29].

Traditional Educational Institutions of Tatars.

By the Mid–60s of district 110th century, around 1.5 thousand educational institutions

were under the supervision of the Orenburg Muslim Spiritual Assembly existed in Russia. All of them were typical Islamic schools (Table 47). The forms of their organisation were determined by the religious traditions established at that time, that is why they were similar to other educational institutions in the Islamic world. 'Even 25 years ago, when entering a maktab or a madrasah in Algeria, Constantinople or Prusa, I had the feeling as if I was transferred to a place in the Volga region: to a great degree, the general picture was that identical',—an official of the Ministry of National Education, N. Bobrovnikov noted in 1913. He was an expert on Islamic schools [Bobrovnikov, 1913, p. 228].

In reality, each mullah was a legally capable teacher. When he took the position, he immediately promised the village community assembly that he would not only perform religious rites, but also teach children to read and write Arabic and the basics of the religious doctrine. The classes were held either in a special room in the mosque or at the mullah's house. 'As a rule, parishioners strictly controlled mullahs' teaching and in case of negligence, evasion from the activity or dissemination of the bookish word, notified the Spiritual Assembly thereof and even decided to elect another spiritual leader for the community' [Farkhshatov, 1994, p. 55].

As private or public educational institutions attached to mosques, maktab and madrasahs had no officially approved programmes or charters. With few exceptions, these schools

Year	Mosques	Madrasahs	Clergy	Communities
1859	3559	1034		1800966
1860	4525	1075	6188	1838218
1862	3591	1404	6326	1854909
1863	3591	1404	6326	1854909
1864	3550	1569	6096	2074182
1865	3550	1569	6096	2074182
1868	4052	1396	6513	2104190

had no single specific training curriculum. Each mullah-teacher taught what he knew and as he had been taught himself. 'The time of a maktab course was not defined, and there was no division into classes; teaching periods were calculated from the time of mastering one book, such as the 'Iman Sharty' ('Conditions of Faith,' *A.M.*), to moving on to another book, such as the 'Kheftiyak' (the seventh part of the Quran.—*A.M.*)—this was equal to the transition from

one class to another' [Russian State Historical Archive, f. 733, inv. 173, file 102, s. 225]. The duration of the studies depended not only on the teacher, but also on the performance and capabilities of each student: 'If diligent, students could complete a course in a maktab and madrasah in 10 years, but usually it took a longer period' [Russian State Historical Archive, f. 821, inv. 150, file 420, s. 9, reverse].

The state, as well as city and rural authorities did not fund Islamic schools. However, establishment of a Tatar school was considered a holy deed; therefore, it was financially supported by various social groups. Merchants actively participated in the maintenance of a number of madrasahs. Such schools usually possessed several buildings, with residential and educational rooms separated from each other. For example, one of the most successful madrasah in the middle of the 19th century, the Sterlibash Madrasah in Ufa guberniya, had 25 buildings. In the latter half of 19th century several buildings were owned by such madrasahs as Usmania and Marjania in Kazan, Khusainiya in Orenburg, Bubi in Viatka guberniya, Abdulvagapov in Chistopol, etc. [Makhmutova, 1982, pp. 20–21]. However, the traditional method of maintaining the majority of maktab and madrasahs using only parishioners' contributions provided only a meagre existence.

Building of the former Kul Buye (Lakeside) madrasah at Apanayev Mosque in Kazan. Modern-day 28, Marjani Street. Photo, 2010

Most of the schools were located in buildings, which did not meet sanitary and hygiene requirements. The director of the public schools of Kazan guberniya noted in his application to the administrator of Kazan educational district on 19 December 1891, 'A significant number of maktab and madrasahs are located in the houses of local mullahs, and only relatively few of them—in special public houses or leased apartments. These rooms are very narrow; therefore, students wash and pray outdoors both in winter, and in summer, in the cold and wind, as a result, there are many ill students who remain to study among healthy children' [National Archives of the Republic of Tatarstan, f. 92, inv. 1, file 19380, s. 34,–35].

The overall picture was commented by the inspector of public schools for Astrakhan guberniya: 'Moreover, Islamic schools are deprived of any signs of a normal school environment: there are no tables, no uniforms, and no seats. All students spend their study time standing on their knees on the floor; thus they read holding books near their eyes, thus they write laying the copybook, but mostly some sheet of paper on one knee; only few of them have a small, low casket', and the director of public schools for Vyatka Guberniya: 'Maktab are usually placed in the kitchens of local mullahs and sometimes in cattle huts (as in Sarsaz village) under the most unfavorable

hygienic conditions' [National Archives of the Republic of Tatarstan, f. 92, inv. 1, file 19380, p. 22, 40, reverse].

However, the traditional form of people's support allowed to establish schools even in the poorest villages. In the conditions of the imperial Russia, this was the only possible form of existence for hundreds of Tatar educational institutions. As pointed by R. Fakhretdin, while in the latter half of the 19th century there were schools of primary education—maktab, practically in each parish, there was one madrasah for each 30–40, and sometimes 100 parishes. Shakirds were controlled and taught by well-known, educated mudarrises. Shakirds were from all over the country, and they lived in the same buildings of the madrasahs where they studied [Fakhretdin, 1993, b. 239].

Most rural schools were attended by a small number of students. Thus, based on the data about the number of students in 441 Islamic schools in Ufa and Orenburg guberniyas, it was found that 'in 1867–1868, the largest group (144 schools, or the 30.9% in Ufa guberniya, and the 33.5% in Orenburg guberniya) consisted of schools that had 11–20 students. Only 10 schools had more than 100 students. On average, one school in Ufa guberniya had 35.4, and in Orenburg guberniya—20.5 students' [Farkhshatov, 1994, p. 64]. This situation applied not only to rural, but also to urban madrasahs. For example, in 1869, there were only 387 students in seven Kazan madrasahs, and 100 boys studied only in one—Mustakimov—madrasah [Medrese, 2007, p. 23].

The number of students in schools depended on the level of education and popularity of mullahs, who headed them, as well as on the financial support of such madrasahs. Thus, as the number of schools and students was increasing, there were both schools with barely ten students and madrasahs having several hundreds of shakirds. For example, at the end of the 19th century, Kazan madrasahs—Apayev's (Priozerny), Bagautdinov's ('Marjania'), Galeev's ('Muhammadiya')—had 150–400 shakirds each [Russian State Historical Archive, f. 733, inv. 173, file 102, s. 234]. In

the 60's–80's, Sterlibash Madrasah in Ufa guberniya had 500–600 students, and Sterlitamak Madrasah—200–600 students [Farkhshatov, 1994, pp. 59, 60]. The age of students studying in Islamic schools also significantly varied: in maktab—from 5–6 to 16 years, and in madrasahs—from 10–11 to 30 years (sometimes even older) [Makhmutova, 1982, p. 16].

An academic year in Muslim educational institutions usually began in September or October, upon completion of the autumn harvesting time, and ended in April before the beginning of the spring field work. But there were madrasahs, where shakirds took lessons all year round. A school day was arranged as follows: 'Students go to school at 7–8 a.m., depending on the season, and study up to 2–3 p. m., with an hour-long break at about 12 o'clock. However, maktab often let the youngest students go home at 12 o'clock, while senior students necessarily continue their studies after the break up to 2–3 p. m. As to madrasahs, students attend them in the evening as well' [Russian State Historical Archive, f. 821, inv. 150, file 420, s. 5].

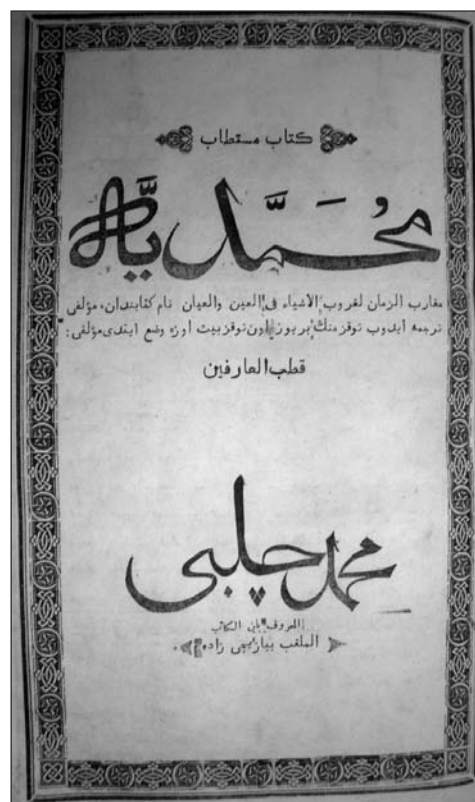

The Tatar education and upbringing was aimed at preparing a true Muslim living under the Sharia laws. 'The majority of the Tatar population is... still at a stage of their cultural development, when their religious mood penetrates and affects the entire life of the people, when questions of the faith prevail over all others,—M. Pinegin, the director of public schools in Kazan guberniya, noted at the beginning of the 20th century,—...notions of studying and learning religion are combined by the Tatars into one concept and are even denoted by the same word. Therefore, the majority of the Tatars have understood education as studying religion' [Russian State Historical Archive, f. 821, inv. 8, file 801, s. 45 reverse].

The activities of Muslim schools, irrespective of their location, had much in common, which was connected with their traditions. 'All Islamic schools taught a certain number of sciences in one way or another, at least some sections of these sciences' [Koblov, 1916, p. 15]. The education may consist of several stages. As the education system was recovering, es-

pecially when new-method schools appeared, there was an established division of the Islamic school into a lower one—maktab, and higher one—madrasah, although these names could be used in relation to the same educational institution.

Organisation of educational activities at a school was determined by its purpose. The ultimate goal of an Islamic school—was ‘to teach Muslim children to read and write, to acquaint them with the basics of Islam, to impart good moral in them and show them a way to achieve earthly and heavenly wellbeing and thus contribute to peace and tranquility in the state’ [Russian State Historical Archive, f. 821, inv. 133, file 466, s. 57]. According to this purpose, a maktab’s curriculum provided for studying to read and write in Arabic (which took a year or more), read and write in the Turkic language, basics of the faith and initial information on arithmetic. Having mastered a rather complicated mechanism of letter combination, boys began reading religious and didactic works in the Turkic language: ‘*Akhir Zaman Kitabi*’ (‘Book on the End of the World’) by S. Bakyrğani (died in 1186), ‘*Qısai Yosif*’ by Qol Ghali (end of the twelfth—beginning of the thirteenth century), ‘*Mohammédia*’ (‘Devoted to Prophet Muhammad’) by M. Chelebi (died in 1451), ‘*Risalei Gazize*’ (‘Tale about Gaziz’) by T. Yalchigulov (1768–1838), ‘*Bedavam*’ (‘Constantly Repeat’) and ‘*Kisekbash Kitabi*’ (‘Book about a Cut-Off Head’) by unknown authors, etc. [Tatar *ādābiyatı*, b.115–157, 273, 282, 443–452].

Studying of these books played an important role in the religious and moral education of the students: the students gradually got inspired with the ideas and doctrines of Islam in the form of dialogues, jokes, colourful and vivid scenes. At the same time, getting acquainted with the best examples of Islamic didactic literature, students received some information on history, geography, ethics, and aesthetics, which contributed to their mental development. For the majority of children studies in a maktab ended with reading several works of the Tatar and oriental literature. Reading and writing skills obtained in this way, with no ap-

Front page of M. Chelebi's 'Mahammadiya'.

plication in everyday life, were gradually lost after completion of studies, and although the vast majority of children actually received initial education, the adult population was gradually transferred to the category of illiterates.

We tend to connect the results of the first universal census of the population in 1897 on literacy of the Tatar population in the provinces of the Volga and Ural region with this very circumstance¹¹.

Only a few maktab located in larger villages and towns had a second department (usually a three-year one), where they taught the basics of the Arabic language, Islamic ethics

¹¹ According to the 1897 statistics, the general average rate of native language literacy among the Muslims was: in the Kazan Guberniya: 20% (22% among men, 18% among women), in the Simbirsk Guberniya: 10.8% (15% and 6.6%), in the Samara Guberniya: 24.5% (26% and 23%), in the Saratov Guberniya: 14.6% (18.8% and 10.5%), in the Ufa Guberniya: 19.3%, in the Orenburg Guberniya: 21% (25% and 17%, respectively) [Gibadullina, 2008, p. 107, Table 7].

and law. Such departments prepared students for madrasahs.

A madrasah was an educational institution of a higher stage and had a goal of 'preparing muezzins, imams, khatyps, fakihs, galims, mugallims, mudarrises, ghazis and muftis who would be familiar with both the requirements of the time and the science of faith and life, in order to have the ability to show a path to them for others' [Russian State Historical Archive, f. 821, inv. 133, file 466, s. 57 reverse side], that is, these were religious schools aimed at preparing theologians, experts in the Islamic law and Muslim spiritual leaders. Officials compared the best madrasahs with Russian theological seminaries and academies [Russian State Historical Archive, f. 821, inv. 8, file 785, s. 5 reverse; f. 733, inv. 170, file 263, s. 303 reverse; National Archives of the Republic of Tatarstan, f. 92, inv. 1, file 10464, s. 17].

As everywhere among Muslims, the complex of sciences studied in Tatar madrasahs was traditionally divided into two groups. The first one was comprised of '*shargiya*' sciences, that is, disciplines related to the study of Sharia, or in other words, '*nakliya*', that is, based on tradition. The second group consisted of mental sciences—'*gakliya*'. In their turn, they were divided into '*arabiya*', related to the study of the Arabic language and '*khikmiya*'—sciences of the so-called 'human wisdom', that is, philosophical sciences [Velidi, 1998, p. 35].

All these sciences were studied under a certain scheme, on the basis of a century-immutable complex of manuals, which, according to J. Validi, 'almost acquired the authority of the Quran'. Each such textbook 'consisted of a combination of several books, however, not independent, but parallel or concentric. This stemmed from a unique, so to say, medieval book compilation system. The fact is that an expert or scientist put up a book briefly stating the basics of his science; then the followers of this scientist, in their turn, wrote their commentaries to this book. The first of these works was called '*maten*' (summary) in Arabic, and the second one—'*sharh*', that means a comment. The comment by itself did not constitute

an independent book, but was closely associated with the *maten* [Velidi, 1998, p. 35].

Sometimes the '*sharh*' had a comment to it—'*sharhi-sharh*' or '*khashiya*'—interpretation of individual places of the first two works. 'Thus, a short *maten* consisting of just ten pages could be expanded with all the commentaries to it up to a multi-volume book' [Velidi, 1998, p. 35]. It was assumed that in a madrasah, shakirds should study, that is, practically memorise, the main works with several major comments, and independently master the rest of the interpretation¹².

The training programme at a madrasah began with studying the morphology, grammar and vocabulary of the Arabic language. The most authoritative textbooks, which were widespread in Tatar madrasahs, included '*Enmuzezh*'—a grammatical and lexicographical work by famous Mahmud Zamakhshari (1075–1144) and '*Kafiya*' by Ibn al-Hajib (died in 1249) about the verse structure. Students had to learn about ten interpretations. When shakirds reached the '*Kafiya*', the programme included books on the Islamic law (*fiqh*), prosody (*gilm aruz*) and disputes (*munazara*). Typically, this was '*Mukhtasar el-vikaya*' by Gubaydulla Sadr al-Sharia (died in 1344)—a short course on the Islamic law, which was a summarised version of a large legal code. There were comments '*Zhamig eromuz*', '*Sherhe Vikaya*', etc.

The next stage consisted in studying logic (*mantyk*). The major textbooks included '*Isaguzhi*' by Hassan al-Kati (died in 1358), with commentaries called '*Sherhe Isaguzhi*' by

¹² A further description of items and ways of studying in madrasa is based on: Akhmerov Sh. Kazanskoe musul'manstvo (The Kazan Islam) // Gorodskoj i sel'skij uchitel'. Kazan, 1897. Edition 2; Validov J. Ocherk istorii obrazovannosti i literatury volzhskikh tatar (do revolyuczii 1917 goda) (Essay on the history of education and literature of the Tatars of the Volga Region (Before the revolution of 1917)). Kazan, 1998; Koblov J. Konfessional'nye shkoly kazanskikh tatar (Confessional schools of Kazan Tatars). Kazan, 1916; Khanykov N. Opisanie Bukharskogo khanstva (Description of Bukhara Khanate). Saint Petersburg, 1887; Madrasahs of Kazan 19—early 20th centuries: Collection of documents and materials. Kazan, 2007 and others.

Jamalutdin al-Suyuti (died in 1505), and 'Shemsiya' with commentaries called 'Sherhe Shemsiya', and 'Kheshiyai Qutbi'. Then they proceeded to the interpretation of Islamic dogmas (*kalam*). The main textbooks were the 'Gakaid' by Nazhmeddin Abu Hafs Umar Nasafi (1068–1142), with commentaries by Sagduddin Taftazani (1322–1389) called 'Sherhe Gakaid en-Nasafi'. Numerous interpretations to them were studied by shakirds independently. Further study of logic was based on a work by Taftazani, called 'Tehzyyb' with a lot of commentaries, with 'Sherhe Tehzyyb' by Jalyaleddin Davvani (1426–1501) being the main one. They also studied fiqh on the basis of 'Sherhe el-Vikaya' consisting of two sections: 'Vikayat er-Rivayat' by Mahmud Taj al-Sharia and commentaries thereto by Ubeydullah ibn Masgud Sadr al-Sharia (died in 1346), which was called 'Shørhe Vikayat er-Rivayat'.

Students then proceeded to studying 'Khikmet el-Gayn' by Najmeddin Umar al-Katibi (died in 1276). 'Gakaid el-Gazdiya' by Gizeddin al-Iji (died in 1355) was the next textbook on Kalam, with commentaries by Jalyaleddin Davvani, called 'Mullah Zhelyal', which, in its turn, had an interpretation by Khanakahi and commentaries called 'Tatimma', 'Kheshiyai Kelam' and many others. These basic textbooks could be supplemented by a number of secondary books on subjects related to 'Arabiya'—rhetoric, the rules of word harmony, speech construction, etc. After getting acquainted with these books, followed the third large book on fiqh—'Hidaya' by a well-known lawyer Burhaneddin Ali Marginani (died in 1197), with commentaries and an interpretation thereto called 'Kifaya', 'Nihaya', 'Feth el-Kadir', etc. At the same time, they began to study the foundations of fiqh according to the book 'Tenkyyh el-ysul' by Sadr al-Sharia with his own interpretation called 'Teuzyyh el-ysul', a series of commentaries by Taftazani, etc.

At the last stage they began to study *hadihs*—the sayings of Prophet Muhammad and legends about his life. The main source was 'Mishkyat esh-Sherif', with an interpretation called 'Mirkat'. A special role was played

by the so-called science of division of inheritance—'*Gyylme Feraiz*', which is essentially one of fiqh sections taught as an independent subject. Simultaneously, they studied the rules of reading the Quran—'*Gyylme Kyraet*', arithmetic—'*Gyylme Hisab*'. The course taught in a madrasah was completed with studying the interpretation of the Quran according to the textbook 'Tefsir' by Baydavi Nasreddin Abdullah ibn Umar (died in 1286) with a lot of commentaries.

In total, the course could include more than a hundred of books written by outstanding experts in various fields of Islamic sciences, who lived and worked mainly in the 11–15th centuries. A full training course in a madrasah had no defined term: 'Students live and study in a madrasah as long as the teacher or they consider themselves as knowing the course of Islamic sciences, ten or more years' [Russian State Historical Archive, f. 821, inv. 150, file 420, s. 13].

Of course, a systematic study of these scholastic sciences required a lot of time, and shakirds usually finished their studies and took the position of a mullah at the age of 30–35 years. However, only few people could afford studying in a madrasah for such a long time. Studying the morphology and the syntax of the Arabic language, logic, kalam, jurisprudence and the fundamentals of Sharia was considered the most important. Therefore, many shakirds, having mastered these 5–6 courses, considered themselves well prepared for spiritual activities. This was also confirmed by Gabdulla Bubi in the 1870s–1880s, who studied in a madrasah of his father, '...many shakirds did not reach the middle of the training course or even did not go beyond the introduction' [Buby, s. 18]. A significant number of shakirds graduated from the madrasah having studied there for 5–6 years. Thus, in 1896, out of 200 students studying in the first madrasah of Sterlitimak Mosque, 63 (31.5%) studied during the first year, 32 (16%)—the second, 30 (15%)—the third, 23 (11.5%)—the fourth, 26 (13%)—the fifth, 16 (8%)—the sixth, 6 (3%)—seventh, and 4 (2%)—more than 7 years [Farkhshatov, 1994, p. 70]. Thus, 9 of 10 shakirds, who start-

ed studying in a madrasah, finished their studies in the first 5 years.

A traditionally used method of teaching in a madrasah was as follows: 'Taking a book in any branch of science created several centuries ago, and almost always in Arabic, a mudarris translates the Arabic text and provides all kinds of text comments taken from similar old books, standing in front of his audience sitting in front of him in a semicircle, on their knees. It is not allowed to express a personal view, nor develop issues in a way other than in the commentary' [Akhmerov, 1897, p. 77].

J. Velidi described the learning process in a madrasah in the following way: 'Every madrasah had several halfas, each of whom had his own students belonging only to him... Halfa gave lessons in the following way: he invited all students of the same level for a certain time, and at first asked them the previous lessons... After that, he began teaching a new lesson, which had to be attended by students of senior levels in order to repeat their previous lessons or, by virtue of their duty, to help their junior comrades in studying lessons' [Velidi, 1998, p. 38].

A mudarris gave lessons for senior shakirds. 'Students of all halfas attended his lectures; he did not question the students and rarely checked their knowledge. One of the students read a book, and in a few words (and sometimes even with each word), the mudarris interrupted him and began to sedately explain the meaning of what he had read and

sometimes got so inspired that could deliver a whole lecture regarding only one word... Students had the right to interrupt the lecture and oppose anything said by the mudarris; another student had to respond to this objection; but that who objected was not satisfied with his answer and objected again. Thus, an academic contest started, in which other shakirds intervened, with none of them listening to his opponent; all of them interrupted each other from various sides, which led to such a chaos... 'Calm down,—the mudarris's imperious voice was heard,—calm down, you crazy, you have really gone mad, haven't you'—he said, being satisfied with the fact that his shakirds are able to show themselves, when necessary' [Velidi, 1998, p. 39].

Thus, shakirds moved to 'the sphere of higher concepts', and the student 'felt able to resolve issues of knowledge and being, and was aware, although vaguely, of the meaning of such issues'. Disputes, even though they were scholastic, worked out in shakirds the ability to think logically and to convincingly express their thoughts, that is, they demanded the 'application of full mental abilities'. The meanness of reasoning in the scholastic philosophy 'could not but promote the development of critical analysis, and a wide range of various scientific and philosophical concepts made it possible to more or less freely operate in the field of abstract thought' [Velidi, 1998, p. 42]. Contest disputes called '*munazara*' were arranged between shakirds or dif-

Rules of Heritage	Siraziya	Faraiz
Counting	Kholasat al-khisab	

ferent halfas and even different madrasahs. While in the era of the education system revival, the majority of madrasahs were founded by the Tatars who had received education in Islamic countries abroad, in the middle of the latter half of the 19th century, graduates of actual Tatar madrasahs became founders and leaders of madrasahs more often. At the same time, the volume of the subjects taught was approximately the same. They were famous madrasahs named after their leader and mentor. If a mudarris proved to be a competent teacher, who knew how to engage his students in their studies, develop a persistent pursuit of knowledge in them, his fame spread rapidly, leading to an increase in the number of his students, who came to him from everywhere. This was the case in both rural and urban madrasahs. Naturally, the madrasahs, whose leaders-mudarrises seriously treated their obligation of teaching the youth, became famous.

Such leaders included Sh. Marjani, who studied in Bukhara and created his own madrasah in Kazan. 'Marjani taught very carefully, paying great attention to his lessons, and spent a lot of time in the madrasah',—Sh. Sharaf, his biographer, noted [Marjani, 2010, b.94].

Such leaders also included Gabdulgallyam Nigmatullin, who studied in local madrasahs and in 1857 recreated a madrasah in Izh-Bubi village of Sarapul Uyezd of Vyatka Guberniya 'While shakirds of many madrasahs were forced to content themselves with one lesson in two or three days or even in a week, our father did not deprive his shakirds of daily lessons,—his son Gabdullah Bubi noted.—For no reason he would miss his five-time prayers in a mosque, but never forced shakirds and even us (his sons) to visit a mosque. He taught lessons from half past nine to twelve in the morning, and from two to five in the afternoon, and in winter, when days were short, he went to his

madrasah after the evening prayer and taught lessons to shakirds up to nine or ten o'clock' [Buby, s. 18].

The comparison of subjects (books) studied in Kazan madrasah of Sh. Marjani and the rural madrasah of Gabdulgallyam Hazrat, who worked at the same time—in the 50–80s, demonstrates the similarity of subjects in these madrasahs (Table 48) [Makhmutova, 2003, p. 40].

Despite some differences in names, it can be argued that both madrasahs used the same books (for example, 'Sherhe Gabdulla' and 'Sherhe Mullah', 'Sullyam Kazi' and 'Sullyam el-Golum', etc.). Names of the textbooks show that these madrasahs used quite authoritative books of medieval authors that were widespread in Tatar madrasahs. Both hazrats adhered to a traditional training method, which undoubtedly was of a scholastic nature. Social consciousness of the Tatars, which was part of Muslim traditions, did not allow opposing the bases of education. Even Sh. Marjani, who understood the need to improve Tatar madrasahs, could not overcome the resistance of both shakirds and the society. Sh. Sharaf expressed a concern, 'For some reason, hazrat Marjani, having criticised the teaching methods in Bukhara and having shown them the ways of transformation, including writing special books about it, did not manage to streamline his own madrasah and his lessons' [Marjani, 2010, b.112–, 113]. However, he further explained, 'Hazrat Marjani expressed a concern that his thoughts about the need of change remained unnoticed, and that he had just a few helpers in the implementation of his ideas. He sometimes complained, "Trying to be like all madrasahs—Kyshkar, Buinsk, Kazan—[shakirds and halfas.—*A.M.*] destroyed my madrasah. They destroyed all the plans as to the lessons, which I had worked out in Bukhara. They waste their lives. They do not teach the necessary things. But nothing can be done; we live in such a time. I would teach none of these [scholastic sciences—*A.M.*]", thus, clearly explaining his dissatisfaction with the training procedure. However, irrespective of his dissatisfaction, he taught as he was forced by the time' [Märcani, 2010 b.115].

Progressive-minded mudarrises and their assistants—teachers (halfas and mugallims) started to more clearly understand the need of changes, and could not get reconciled with the reign of scholasticism. The richest and well-equipped Sterlibash madrasah in Ufa guberniya became particularly famous in this field. There was a garden, a water supply system, and a rich library. His mudarrises Haris and Harras and Biktimirovs (Tukaevs) and then the son of Haris, Habibullah Tukaev, had a profound theological education, spoke oriental languages, were interested in poetry and literature [Märcani, 1989, b.254, Tukaev, 1899, pp. 8–9]. They not only maintained a high standard of education at that time, but also introduced some changes into the process of studying. Thus, already in 1869, Hazrat Haris introduced a course of the Russian language into the educational curriculum. He believed that 'knowledge of the Russian language, which is a state language, is obligatory for Russian Muslims' [Fakhretdin, 1909, b.506].

Missionary N. Ilminsky noticed the great popularity of the Sterlibash Madrasah among Muslims and reported to K. Pobedonostsev, the Chief Procurator of the Holy Synod: 'Sterlibash Madrasah, like a strong underground root, provides support and strength to various Mohammedan movements' [Pis'ma, 1895, p. 142]. The then future academician V. Bartold, who visited this madrasah in the early 20th century, called it 'one of the living centres of Islamic science in Russia' [Farkhshatov, 1994, p. 59].

Tukaevs attracted talented, highly educated teachers to work in their madrasah. Such poets as Sh. Zaki and G. Chokry successfully worked there. They also invited a brother of Gabdulgallyam Nigmatullin, hazrat Gabdulla (1838–1884), who, after graduating from his brother's madrasah, improved his knowledge in Istanbul, Hijaz, Beirut, and Cairo for seven years, where the education reform had been already unfolded. Apparently, hazrat Gabdulla had a critical opinion regarding the traditional Tatar education system and tried to do his best to improve it.

G. Bubi reported as follows regarding the views of hazrat Gabdulla and the subjects taught by him in the madrasah, 'In Sterlibash, he even tried to teach geography, a subject that had never been taught by our Tatar damellas at that time, and the name of which had not been known to them. In addition, he did not teach the morphology and the syntax of the Arabic language in the Persian language, as it was taught in all madrasahs, but taught in Tartar, thus making a big step towards reforming the method of teaching the Arabic language. A book by uncle Gabdulla on the Arabic morphology and syntax written in the Tatar language is now lying in front of me. However, it is not like the books written in the present times. But what work can be perfectly correct at the very beginning? No educated person would agree to call teaching Arabic morphology and syntax a minor business that does not require a lot of courage, at a time when Tatar mullahs called geography prohibited, considered writing in Tartar as a great offense, and deemed learning Arabic grammar mandatory for all.... I remember uncle Gabdulla: he was a big man with a big beard, very soft and very patient. When he came to visit us, he always had a book or a pencil in his hands, always read books, or wrote' [Buby, s. 6–7]. Hazrat Gabdulla left seven written, but unpublished books, including several commentaries to books on theology, full rules of Arabic grammar and Arabic syntax in Tatar [Makhmutova, 2003, pp. 42–45].

In general, it can be said that there were famous madrasahs not only in Kazan, Orenburg and Ufa Governorates, but also in every region, where Tatar Muslims compactly lived. As a rule, they were opened on the initiative of education devotees, the most educated mullahs, who received a teacher's title of mudarris in the Orenburg Muslim Spiritual Assembly. Let us take a madrasah in Kasimov of Ryazan guberniya as an example. It was founded in 1808 on the initiative of Abdulvahkhut Davlikamov, an imam-khatib of the Khan's Mosque (?–1855), with financial support of rich parishioners, such as Shakulovs, Maksudovs, Davletkildeevs, etc. The madrasah was

successful and prosperous thanks to the financial support of Kasimov merchants and the activities of an imam and mudarris dynasty of Davlikamovs, who headed this institution for more than a century. The madrasah was particularly successful when it was headed by Fazlullah Davlikamov (?–1866), who became the second imam and mudarris in 1827.

In 1847, there were three departments in the madrasah: the first—Turkic one—was attended by 27 people, who studied the alphabet, the basics of the faith, the Quran and the Sharia; the second—Arabic one—was attended by 23 shakirds, who studied sciences associated with the Arabic language; the third one, called 'Persian', provided a course of the history of Islam, the history of prophets, interpretation of the Quran, geography and other subjects (6 students). A small number of students were apparently explained by the fact that the madrasah was located in the Davlikamov's house at first. Most of the shakirds were from Tatar villages of Moscow, Ryazan, Tambov, Penza and Simbirsk guberniyas. At the turn of the 19–20th centuries, Davlikamovs continued to remain faithful to orthodox traditions of the Kasimov theological school, and did not yield to the new trends [Salikhov, 2006, pp. 171–175].

By the end of the 19th century, there were already many mullahs, who realised the need for change. Some of them had a critical view as to the school scholasticism coming from Bukhara, which reflected the changes in their world outlook under the influence of social and economic changes in the post-reform Russia, a spread of rationalistic and enlightenment ideas of G. Kursavi, G. Utyz Imyani, Sh. Marjani, K. Nasyri, Kh. Faizkhanov and under the influence of changes, which began in the Islamic world. The 'sacred' Bukhara ceased to be a symbol of education for them. Senator M. Kovalevsky, who visited Kazan, Orenburg and Ufa guberniyas in 1881, noted, 'For the local Muslims... Bukhara has lost its charm, having been replaced by Constantinople, and especially Cairo' [Russian State Historical Archive, f. 821, inv. 6, file 785, s. 5, reverse].

Followers of Tatar enlighteners were characterised by their desire to expand the tradi-

Newspaper 'Tärjeman' ('Translator'). 1885.

tional curriculum of Islamic schools, erudition, love to classical eastern literature, history and philosophy. Their fame did not spread far beyond their region, but they were the predecessors of the future generation of reformers, who prepared a foundation for their appearance, but most importantly—created conditions for their development.

New-Method Education. In the post-reform period, when there was broad modernisation in Russia, conditions for progressive changes in all spheres of spiritual and material life began to form in the Tatar society. Although the actual content of the forthcoming transformation was mostly unclear, in the middle of the 19th century there was a desire to critically review the traditional, Islam-consecrated values that seemed unshakable to the previous generations and the majority of contemporaries. The ideas of Sh. Marjani, K. Nasyri, Kh. Faizkhanov, where a significant role was played by the idea of obligatory transformation of traditional Islamic educa-

tional institutions, found more and more supporters. They had already tried to partially start the restructuring of the education system, but the attempts to reorganise traditional madrasahs undertaken in the 60s–70s failed, because social forces interested in the changes were just being formed at that time.

The need for the cultural and spiritual renewal of the Tatar society, indigenous changes that objectively reflected the bourgeois development trends, started to be realised by its best representatives as an urgent task requiring a solution in the 70s–80s, when a large Tatar commercial and industrial capital started to form. Its brightest representatives financially and spiritually supported the idea of 'European-like' education. The most active participants in the implementation of the ideas of reorganising the Islamic school included brothers Khusainovs, merchants and manufacturers from Orenburg. They were followed by Galeevs, Aitovs, Apanayevs from Kazan, Yaushevs from Troitsk, Rameevs from Orsk, Akchurins from Simbirsk,

etc. Their charitable and educational activities aimed at such reorganisation played a positive role in awakening the national consciousness.

The main participants and ideologues of the movement for transforming confessional schools included progressive mullahs-mudarises, mugallim teachers, writers, and public figures. They were united by a desire for freedom of thought, progress and humanism, intolerance to medieval scholasticism and dogmatics, a belief in a culturological mission of the renewed Islam, education and the power of knowledge, the desire to overcome the backwardness of the Tatar people and equate them with the most advanced peoples of the world, conviction of the national narrow-mindedness and religious estrangement, promotion of broad cultural contacts with other peoples.

A major role in realisation of the urgent problems faced by the Tatar community was played by the activities of I. Gasprinsky. This outstanding Crimean and Tatar public figure and educator belonged to those intellectuals who were the first to recognise the need for extensive reforms in the public and political life of Muslims. 'We believe that the essence of the transformation should consist in the introduction of elementary, general subjects in the Tatar language in the madrasah curriculum (a limited course on geography, history, science, arithmetic and planimetry, basics of pedagogy and brief Russian jurisprudence),—he wrote in 1881,—...In eleven years, Russian Muslims would have developed clergy and educated ulems instead of the current, ignorant clergy; well-trained and developed teachers instead of the current blunt teachers (khojas)... Thus universal, humane ideas and knowledge... would quickly penetrate into the masses. Once awakened curiosity would provoke a conscious desire among the Tatars to receive education' [Gasprinsky, 2006, p. 82].

In 1883, I. Gasprinsky began to publish the *Terzheman* newspaper ('Translator') in the Russian and Tatar languages in Bakhchysaray (Crimea), which became a mouthpiece of enlightenment ideas in the entire Turkic world. The main objective of the newspaper was 'to awaken and renew the outlook of Russian Muslims' [Tärceman, 1890, 31 December].

The educator decided to start these transformations with a reform of the primary Islamic school. It was based on the 'ysule jadid' (the new method). 'The new method' of I. Gasprinsky first of all included a phonetic method of studying a language and introduction into the curriculum of primary Islamic schools of the foundations of general (secular) subjects, such as arithmetic, geography, history, etc., which had not been previously included in the curriculum. It was intended to supersede the 'ysule kadim' (the old method), based on a cumbersome alphabetic method and cramming of religious texts in Arabic, a kind of 'Latin' for Muslims.

A special role in spreading of the phonetic method was played by a primer composed and published by I. Gasprinsky in 1884 and called 'Khuzhai Syybyan' ('Teacher for Children'). This was a manual 'with samples of writing and instructions how to teach under the new method', which was constantly advertised in the newspaper. For example, the author of an article 'New maktab', propagandising the manual, emphasised, 'We do not doubt that children will acquire the skills of reading, writing and counting in Tatar, reading the Quran, and will know the basics of faith and theological rules in nine months' [Tärceman, 1890, 23 November].

'The active social activity of Ismail Gasprinsky, his undoubted achievements in publishing and educational business fall within an epoch, when Muslim and Turkic peoples of Russia, including us, the Tatars, having began to liberate from a social stagnation, a state of slow and closed thinking, quickly reached incomparable success in education, various areas of spiritual culture and, most importantly, in a rapid growth of the national liberation consciousness formed at that time', academician M. Usmanov noted, 'while a sound basis for these changes was created by the maturity of intellectual needs of these people, ideas and thoughts of Gasprinsky constituted a strong spiritual force uniting scattered attempts and directing them to the right path' [Gosmanov, 2001, p. 164].

So, the end of the 80s–90s was a time, when the seeds sown by I. Gasprinsky started to

Rasuliya Madrasah
in Troitsk.

of the 20th century.

sprout: new primary schools appeared in various territories of Russia, where Muslims lived. It happened everywhere in a similar way: a young mullah-mudarris, having decided to follow I. Gasprinsky's call, personally or through a student sent to Bakhchysaray, directly or indirectly, got acquainted with the teaching rules in his model primary school and created his own new-method school. In this case, not only the teaching method was changed. The purpose, the internal organisation, the content of education and training, the role and place of school in the social and cultural sphere were changed as well. This time can be called an initial stage of a bourgeois reform of archaic Islamic schools, their transformation into national educational institutions, a beginning of the formation of a secular education system.

A special energy and interest in the progress of the nation was shown by brothers Ahmed and Gabdelgani Khusainovs, who intrinsically headed the business of restructuring Islamic schools in the inner Russia. On the initiative and with the financial support of brothers Khusainovs, about 100 men and 20 women new-method primary schools were founded in the period from 1893 to 1902.

The name of G. Khusainov is associated with the appearance of a completely new phenomenon in the Tatar society—three-month teachers' courses. In 1899–1901, at the 9th cathedral Kargaly mosque built at Khusainovs' expense, all-Russian summer courses were organised, where teachers were trained for teaching at new-method schools. Here they

studied the Turkic (Tatar) grammar and syntax, the Quran and theology, mathematics, history, geography, basics of pedagogy and education. In 1899–60, in 1900–70, in 1901–80 mullims¹³ attended the courses; G. Khusainov undertook not only all the costs of the courses. He paid the travel expenses, food and accommodation of the students, was engaged in employment distributing them to various regions of the Russian Empire, monitored the effectiveness of their teaching activities, and paid salaries to them [Şäräf, 1913, b.19–21, 24, 72–73, 132–156, etc.]. This was the beginning of the preparation of the teaching staff to reform schools in central Russia.

The new-method primary school providing only a primary level of training set a task to the Tatar society to continue reforms in the education system. Acquaintance with Russian, European and Turkish education systems, as well as with the ideas of Jamal al-Din Afghani, Muhammad Abduh and other modernisers of Islam made the advanced representatives of the Tatar society understand the need to transform the school system under European standards, but using centuries-old traditions of the Tatar Islamic school. Thus, there appeared the idea of new-method madrasahs. In the 90s, such madrasahs as 'Khusainiya' in Orenburg, 'Muhammadiya' and 'Kasimiya' in Kazan, 'Rasuliya' in Troitsk, 'Usmaniya' in

¹³ They represented the Orenburg, Vyatka, Kazan, Nizhny Novgorod, Perm, Penza, Samara, Simbirsk, Saratov, Tobolsk, Ufa guberniyas, and Dagestan.

Ufa, Bubi in Viatka guberniya, etc. started to implement a reform. Making the first steps on a new path, they reviewed the primary education at first. The madrasah generally remained traditional, not differing from an old kadimist madrasah. It was not clear, what madrasahs would become in the nearest future, when the first generation of students studying in primary schools would graduate.

Therefore, first changes in madrasahs were external: there was a transition to the class-lesson system; they introduced a schedule of lessons, and exams at the end of a school year. The subjects studied still included the etymology and syntax of the Arabic language, logic, dogmatic, Islamic law and ethics. There were few general subjects, they were of auxiliary nature and had to serve to the better understanding and mastering of the doctrine. To reform the madrasah, there was neither ready curriculum, nor a list of subjects or textbooks. There were no subject teachers, who would be prepared to teach general subjects that were new for madrasahs or even to teach theological sciences under the new conditions. Leaders of the new-method madrasahs 'intuitively made their way in the jungle' of scholasticism and dogmatism that were established in traditional madrasahs. Let us briefly discuss three of the most successful madrasahs.

Brothers Ahmed and Gabdelgani Khusainovs were the first to create a new-type madrasah, they realised the need of the society in developing education, crafts and sciences, which were necessary for its development in the bourgeois conditions. Although the madrasah at the 6th Orenburg mosque constructed by the brothers had operated since 1889, the Khusainiya Madrasah was officially opened on 1 January 1891 in a specially purchased two-story stone building. In autumn of 1906, the new building of the madrasah was opened.

Shakirds of the Muhammadiya madrasah. Photo from the early 20th century.

In a three-storyed stone building with water heating and electricity, there were classrooms, a library, a hospital, a boarding school and a dining hall. It was adjoined by the mosque, an imam's house, a two-storyed house for teachers and servants [Vakyt, 1906, No. 25, 13 May].

The creators of the Khusainiya Madrasah faced organisational challenges at the very beginning: first, those were connected with a lack of personnel, who would create curricula and teach shakirds new subjects. There were no textbooks corresponding to the requirements of the time. All these began to appear only in the late 90s, when young people studying in Istanbul and Cairo returned, and Khusainovs tried to attract them to work in their madrasah. However, the curricula and the programmes created by them for the Khusainiya Madrasah were not stable, they were constantly changed, with some subjects replaced by others, and the ratio of academic hours changing. When the brothers died, leaders of the madrasah still continued to work on improving education programmes and curricula.

Writer G. İsaqiy, who taught the Russian language, the basics of the natural science and other subjects in this madrasah in 1902/03 academic year after his graduation from Kazan Tatar Teachers' School account, replied to this event in a newspaper called 'Tan Yoldyzy' ('Morning Star', Kazan) with his two articles. 'In terms of its schedule and availabil-

ity of rules, the Khusainiya Madrasah is the first among our Tatar madrasahs. Shakirds sit at their desks there, and teachers receive remuneration for their work. Judging by the programmes, a lot of subjects are taught there. However, over the 15 years of its existence, this madrasah has served people very little, has hardly helped people to treat their diseases. Although much more funds are spent on it as compared with other madrasahs, the results hardly surpass that of the old madrasahs',—he wrote [Tañ yoldızı, 1906, 10 August].

Frequent rotation of mugallim teachers and absence of qualified professionals to replace them led to the fact that 150 people worked there over 25 years of its existence, which could hardly contribute to the creation of a stably operating school.

Muhammadiy in Kazan is another well-known new-method madrasah, and it also passed many stages of its development.

In the middle of August of 1882, a 25-year-old Galimjan Galeev (Barudi) returned to Kazan after seven years of studies in Bukhara. In an article devoted to the 25th anniversary of the beginning of G. Barudi's activities, Yu. Akchura indicated that in the first years, the mudarris, who founded the madrasah, attempted to introduce changes in the traditional way of teaching, paying great attention to teaching theological sciences and sciences related to the Arabic language. 'But after that, realising that a reform was impossible without reforming the

maktab, he started to teach in accordance with the new method in 1309 on the day of Mawlide (Prophet Muhammad's birthday, falls 4 October 1890—*A.M.*' [Akchura, 1998, p. 58].

The Muhammadiya Madrasah existed for 35 years. The period of its activities can be divided into 5 stages:

Stage 1—1882–1889—the time of formation of a madrasah of a young mullah, when Galimjan Galeev (Barudi) gathered students and tried to introduce changes into the old, traditional teaching method. A building for the madrasah was constructed, and a solid material base for the educational institution was created.

Stage 2—1890–1904—the primary new-method school appeared and got stronger, but the madrasah itself still remained a traditional theological educational institution, which caused dissatisfaction among shakirds wishing to continue changes in the madrasah.

During this period, G. Barudi developed as a theologian and reformer, a mudarris and public figure, one of the leaders of the emerging Jadid movement. The desire to awaken the Tatar society, which was in a state of medieval stagnation and closedness demanded incredible strength, courage, firmness and undertakings in many spheres from his ideologists. Thus, the new teaching method required new textbooks. G. Barudi, as well as other leaders of Jadid schools started to create new textbooks. Already in 1890, he published 'Gyylme et-Teuhid' ('Doctrine of Monotheism'), in 1891—an ABC book 'Sevadhan' ('Diligent Student'), a textbook on arithmetic 'Nemunei Hisab' ('Examples of Counting'). This work was continued by G. Barudi thereafter. Only in the 1890s he wrote and published more than 10 textbooks. These textbooks were repeatedly reprinted in thousands of copies and were widely used in Jadid schools before the appearance of Soviet textbooks.

Naturally, not only the maktab (lower grades), but also the madrasah itself (middle and senior school) required changes. And G. Barudi, as well as the leaders of Khusainiya in Orenburg and Izh-Bubi in Vyatka Guberniya, had to search for their own methods, their own

ways for education reforming. In the late 19th century, he carefully began to put the educational programme of the madrasah in order, trying to free theology from scholasticism. In the same period, G. Barudi was also occupied with construction, as the madrasah had burnt down during the Great Fire in 1898.

In the early 20th century, the disapproval of G. Barudi's activities grew. The majority of the Tatar community disapproved of his novelties, while the shakirds who had tasted new knowledge began to demand including secular disciplines and the philosophy of the religion into the educational process.

The third stage—from 1904/05 to 1908—was characterised by great changes in the Muhammadiya Madrasah.

The Tatar national movement developed under the circumstances of the beginning revolution. It was partly formed by the shakird movement for madrasah reforming, and the initiators were the shakirds of Muhammadiya. Due to their demands, the educational system in the madrasah altered in a core way. New secular disciplines were included into the programme, the changes dealt with theological disciplines as well. To introduce new disciplines, skilled mugallim teachers, were needed. In 1905–1906 about 20 mugallims taught in the madrasah. The majority of them had been G. Barudi's shakirds. Such public persons as Yusuf Akchura (Political History), lawyer Saidgarai Alkin (Law), doctor Abubekr Terkulov (Hygiene), Fatikh Amirkhan (History of Political Parties, Geography) and others were also involved in the madrasah. So, new disciplines and teachers had appeared, but the timetables and programmes were still unstable. The disciplines and mugallims were constantly changed (the disciplines of the madrasah in that period will be discussed later, in comparison with the timetables of Bubi's madrasah). The fourth stage—1908–1912—was the time of G. Barudi's absence, when he had been sent out of Kazan, and his brother Gabdrakhman Galeev and mugallim Ahmetzyan Mustafin, in fact, only preserved his achievements in the new-method madrasah forming. On returning to Kazan in 1910, G. Barudi began to seek

the permission to resume his imam, mudarris and editor activities. It was only in January 1912 that he was allowed to resume teaching in the madrasah, and in December—in the journal. During the fifth stage—1913–1918—the Muhammadiya Madrasah flourished, and became the alma mater of Tatar intellectuals along with the Galiya Madrasah in Ufa and Khusainiya in Orenburg. In those years considerable changes took place in the madrasah. Since 1913–1914 the madrasah had worked on the basis of a new, constant programme. That programme implies that the madrasah encompassed a preparative year; primary and secondary schools, each taking six years; and three years of high school; so the full madrasah course lasted 16 years. And that programme let us call it a Tatar university [Mäxmutova, 2012, b.64–76].

However, the mentioned period is beyond the given Volume, so we will proceed to the third Jadid madrasah famous in the early 20th century, that is the madrasah in Izh-Bubi village of Vyatka Guberniya. The changes here from the very beginning differed from the changes in other madrasahs, if we talk about their extent and volume, despite the much pitier finance and personnel opportunities than in towns. We can say that the Bubi brothers who followed the path of reforming a little bit later, in 1895, not only had equaled to their predecessors very soon, but had also become pioneers in many education reforms.

Probably thanks to Gubaidulla Bubi, who had received a secular European education in Turkey, the brothers were more accurate than other Jadid mudarrisses to define how and where it would be better to proceed. The brothers' attempts were supported by their father, a respected in the area imam and mudarris, whose knowledge, infallibility and almost sanctity were indisputable for the population of the region. The Bubi brothers were much braver and much more decisive in achieving their goal, having taken as an ideal the Turkish gymnasium reformed in the French style—the one Gubaidulla had graduated from. Being full of enthusiasm and knowledge about the madrasah reorganisation in the European

(Turkish) way, the brothers began making their village a centre of secular male and, a bit later, female education [Makhmutova, 2003, pp. 66–95].

The primary school was opened in a specially built edifice, and each of the four classes had its own teacher. In the same year, an educational scheme was worked out for it, which was a completely new, earlier unknown phenomenon¹⁴. The major part of the time was devoted to disciplines of general education (62 hours out of 98 per week, that is the 63% of the timetable).

The reforms dealt with religion studies as well. In a traditional school, after learning the Arabic alphabet and all possible combinations of letters mechanically, they passed to an equally mechanic reading of the Quran in the unknown to students Arabic language; at the same time, students were not taught the rules of how to read the Sacred Book. Now, special hours had been defined for it. The reformer himself described the results of such a step as follows: 'For none of the old madrasahs, including ours, taught the reading of the Quran, shakirds preparing to become mullahs lacked even the knowledge needed to read salah in the right way. That was why none of the mullahs at first believed that eleven- and twelve-year-old boys would know how to read the Quran in the right way. Only afterwards, during the examination, were they astonished and could not but admit that 'the new method seems to have good points, too' [Buby, 1913, s. 26].

Having launched a primary Jadid school for boys in 1895–1896, the brothers began to create a female school and to reform senior classes (of the male madrasah): 'The Arabic department was also reformed little by little¹⁵.

¹⁴ It included phonics, reading, and writing in the Tatar (Turkics) language, four operations of arithmetic, basis of religion and the Quran, geography, the history of the Prophets and Islam. The duration of the teaching (4 years) was determined, as were the number of lessons per week (24 lessons in the 1st and 2nd classes and 25 in the 3rd and 4th), the subjects to be studied and the number of lessons in them.

¹⁵ It was called a madrasah because subjects related to the study of the Arabic language formed the basis for education, in some form or other, in the higher classes.

In the essence, it was impossible, even scaring, to make changes into Arabic departments at once,—G. Bubi explained.—For it would have been difficult to make shakirds learn the new order at once, as they were used to the old and had seen nothing except their old school. It would have been especially difficult to make their fathers accept the novelties, as they thought everything old to be sacred. If all the novelties had been introduced simultaneously, the mullahs' sons could have just left the place. So, two our halfas have abandoned the madrasah because of the new order in the primary school. That was why we had to act discreetly, in no hurry' [Buby, 1913, s. 23].

The madrasah reforming took seven years. By 1902–1903, Izh-Bubi village had become a cradle of male and female teachers, a centre of new-method schools and new intellectuals in general. In 1907, the Bubi brothers worked out a new programme for the male madrasah which definitely showed the secular development of the educational complex. The Bubi educational complex went on perfecting further. However, it was destroyed by the government in 1911, and the Bubi brothers were put on trial for the creation of a secular educational institution [Makhmutova, 2003, pp. 231–362].

Table 49 compares week timetables of the Bubi (1907) and Muhammadiya (1906) madrasahs. Both madrasahs initially implied six-year studies (the educational period was supposed to be later extended up to 8–10 years). To become shakirds of those madrasahs one had to first finish a four-year new method primary school or to pass the corresponding exams, so, at the given stage, both madrasahs implied ten-year studies [Makhmutova, 2003, p. 171].

Both madrasahs payed special attention to secular disciplines. But we can see differences in arranging the disciplines. In the Bubi Madrasah 25% of the timetable was devoted to natural sciences and maths (46 hours out of the total 179). And in the Muhammadiya Madrasah much less time was meant for such disciplines (18 out of 130), moreover, they were not very diverse. A great amount of hours devoted to the Russian language in Bubi (72

hours or more than a third of the total timetable) dealt not only with the aspiration for giving the shakirds a good knowledge of it, but also with the fact that those were hours of the Zemstvo Russian-Tatar school, specially financed by Sarapul Uyezd Zemstvo. In the same way, we can explain the lack of hours devoted to the Russian language in the Kazan madrasah, for shakirds studied it in a separate Russian-Tatar school.

There was a considerable difference in hours defined for theological subjects: 26 hours in Muhammadiya, and only 4 hours in the Bubi Madrasah. However, we can also include the Muslim Law and its Methodology (5 hours), Eloquence (1) and Dispute Arts (3) here. Although those disciplines could be called theological, they gave at the same time the knowledge needed not only for clerics, but for educated people in general. We can probably explain the few hours devoted to theology in the Bubi Madrasah by the fact that fundamental studies of the Quran, of its reading orthoepical rules (*tajweed*) and melodic (*maqam*) were provided by the primary school programme. Besides, the complete course of the Bubi Madrasah was to encompass eight years.

The comparison of the two madrasahs' programmes shows how differently the Bubi brothers and G. Barudi viewed the goals of the Tatar education system reforming. While the former intended to create an educational institution for national secular intellectuals, the latter viewed his madrasah as an educational institution that, first of all, trained theological scientists. So we believe this is how it should be explained why so many hours were devoted to religious disciplines and the Arabic language in the Kazan madrasah. Of course, the difference in the mudarrises' training also had its influence: The Bubi brothers enhanced traditional theological education in their father's madrasah with the European secular system, while G. Barudi had studied intricacies of Muslim sciences in Bukhara.

Female schools of a new type also appeared thanks to the new-methodists' activities. However, the few female new-method schools,

that had been opened almost simultaneously with the introduction of new reading and writing methods in male maktabas, gave elementary literacy at best, which was obviously not enough to prepare future 'mothers of the nation'. The majority of girls having studied the 'course' could only read certain religious and moral books, and they had learnt the necessary prayers by heart, which was revealed when public exams were established in such schools [Makhmutova, 2006, p. 127].

Matters stood similarly in female new-method schools of Magruiy Barudi, where reading had been taught by ear since 1891 in Kazan, and in Fatima Adamova's school in Orenburg, opened in 1897, in Galimatelbanat Biktimirova school in Yaubash village of Kasimov uyezd that appeared in the Mid-90s, in female schools of Simbirsk Governorate, opened thanks to the Akchurins' founding, and in others. In 1898, women (*abystai*) were even trained to teach by ear in Orenburg and Kargaly, which was financed by G. Khusainov. But, because of the low level of the women's education, 'the result was rather humble' [Şäräf, 1913, b.36, 111].

There was a need for an institution where girls aspiring for knowledge could get a real education. The Bubi brothers also got down to creating a female college to train *darelmugalimat* teachers in Izh-Bubi. A female four-year primary school was created at first. It was well-equipped having desks, boards, geographic maps, globes, along with other educational and demonstrative materials. Here, along with dogmas, Reading, Writing and Grammar of the Turkic (Tatar) language, Arithmetic, Geography were taught. The most part of the timetable (about 60%) was devoted to disciplines of general education. In 1901–1902 there appeared the 5th and the 6th years as well, during which Natural Science, World History, the Arabic and Persian languages, Hygiene, Calligraphy, Housekeeping, Needlework were taught. In that period, it was the only Tatar female school that could be called a college, according to the level of education as well as the extent of organisation [Makhmutova, 2006, pp. 60–61].

in Tare, Tobolsk
Guberniya.
Photo from the early
20th century.

Specially trained by the brothers young women of their family taught in the school. 'We, brothers, ourselves put this school in order, systematised the methods and ways of learning. And we gave two lessons in it every day,—Gabdulla Bubi wrote.—But our sister Mukhlis Bubi, my brother's wife Nasima and my wife Khusnifatima worked at the school with all their heart, all their skills; they sacrificed everything to make the female school prosperous. The three of them learnt from us in the evening, taught in the school all day, and trespassed unbelievable, earlier unseen obstacles. In the sake of Russian women following the path of knowledge and enlightenment, they doomed themselves to many woes and difficulties, hearing very rude accusations, and without any salary, only for the nation, they invested huge efforts...' [Buby, 1913, pp. 34–35].

In 1908, Sarapul Educational Council gave the Bubi brothers the right (license) to hold exams for female teachers (*mugallimas*) for the Tatar primary college and to give them certificates, which meant that the female madrasah created in Izh-Bubi had been officially recognised as an educational institution that trained female teachers for Tatar schools. Thus, the first *darelmugallimat*, a female teachers seminary, in Russia appeared [Buby, 1913, p. 34].

In the early 20th century, the amount of new-method female schools grew more rapidly than the amount of similar male schools. It was most probably the consequence of the fact that the Tatars had actually lacked a system of female education before, so new things

could be introduced a little bit faster as there was no need to spend time breaking or altering the old order. Representatives of the Educational Council also noted the appearance of female schools. Thus, inspector of public colleges A. Goryachkin, who had an eye on the Tatar press by the order of Kazan Educational District curator, highlighted in his report of 12 October 1909: 'The new methods are developing surprisingly fast among the female Muslim population as well!...The Muslims have managed to create such a solid organisation of female new-method *maktabs* that it would be extremely difficult to struggle with in the Russian interests' [National Archives of the Republic of Tatarstan, f. 92, inv. 2, file 10735, s. 53–54].

The emergence and establishment of the Tatar new-method education system took, thus, about 20 years [Russian State Historical Archive, f. 821, inv. 8, file 800, s. 322]. The process developed under the circumstances of the First Revolution. That era in the Tatar secular education development was, first of all, characterised by the appearance of new textbooks and timetables, new *mugallim* teachers, and by a steep growth in the amount of new-method schools, male and female. Everywhere among the Tatar settlements, schools appeared. They were created by graduates from new-method madrasahs, who believed enlightening people and teaching them at least elementary literacy to be their duty.

New method schools opened in that period were at different stages of the transition from

confessional to secular education. The majority of those schools were still completely confessional. They differed from the traditional schools only in teaching with a new, phonetic method, which made the educational process twice or thrice faster. Others also introduced a class system that was very often understood in a peculiar way—classes were defined according to the titles of books studied by the disciples. Those schools, still confessional, meant only the beginning of abandoning the completely confessional education. Becoming literate fast, conscious reading of texts written in the mother-tongue, not in the unknown Arabic language, taught disciples to love reading, contributed to their development, aroused their thoughts and minds. There were hundreds of schools of those two types.

At the next stage, schools began introducing the dawn of secular disciplines—reading and writing in Tatar and Russian, arithmetic, geography, history, and so on. Those disciplines were introduced into school programmes at the expense of religious subjects, step by step, in order not to raise drastic disapproval of the population used to view schools only as cradles of confessional education.

The mere theological education was changed in those schools—comprehension studies were suggested instead of scholasticism and dogmatism, there were made huge efforts to work out new perspectives on education and training. Such schools can be considered secondary semi-confessional institutions, and each region with a compact Tatar population had them. They include the Apanay Madrasah, Amirkhaniya, Marjania, the female Madrasah of Lyabiba Khusainova in Kazan, Rasuliya and Akhmadiya in Troitsk, Usmaniya in Ufa, the Madrasah of Munir Khadi in Chelyabinsk, four Kargaly madrasahs in Orenburg guberniya, the madrasah in Safadjay village in Nizhny Novgorod guberniya, and many others.

Finally, there were several schools that had become real cradles of enlightenment in those years. They included male and female madrasahs in Izh-Bubi village, Khusainiya Madrasah in Orenburg, Muhammadiya in Kazan, Galiya in Ufa, which offered high theological and secular education. Disciples from all parts of Russia came to those madrasahs. In fact, all Tatar intellectuals of the first half of the 20th century graduated from those madrasahs that were often called Tatar universities.

CHAPTER 9

School Education of Baptised Tatars and Nagaybaks

Radik Iskhakov

The reforms of Alexander I in the early 19th century led to certain positive changes in the sphere of public enlightenment, but hardly dealt with the educational system of Baptised Tatars. In 1800, newly-baptised schools in Kazan were closed [Complete Code of Laws of the Russian Empire–1, Vol. 26, No.19455], and they had been the only educational institutions created for the baptised non-Russian peoples of the region. It led to a long break in the tradition of special confessional 'strangers' education in the Volga-Urals region. According to the Charter of Educational Institutions of 1804, an Orthodox parish or two had to establish at least one of parochial school, teaching in which was the duty of the local Orthodox clergy, but such educational institutions by national parishes were not spread enough [Complete Code of Laws of the Russian Empire–1, Vol. 28, No.21501, pp. 118, 119]. It was hindered by the lack of consistent governmental steps, of a precise state founding system (the locals had to provide for a parish), of the citizens' intentions to develop an alien education in the unknown to them Russian language, which, moreover, imposed considerable financial duties on the country communities [Prokopiev, 1905, pp. 5–6; Kedrov, p. 78]. The same reasons, to a huge extent, led to the failure of another Alexander project, initiated by curator of Kazan Educational District M. Magnitsky in 1822. It was devoted to organising in the Volga Region and Siberia Lancaster movable schools of mutual education, the main aim of which, according to the author, was to spread literacy and Christian views among non-Russian peoples of East Russia [Primogenov, p. 81].

Only under Nicholas I did considerable changes in school enlightenment of Baptised Tatars take place. The first step in develop-

ing state primary education among the multinational rural population of the Volga-Urals region was the approval of 25 October 1828 'Charter of the Country Colleges in Appanage Estates' [Complete Code of Laws of the Russian Empire–2, Vol. 3, No.2377] that regulated the order of school opening in appanage settlements. Based on the appanage schools experience, a project on volost colleges for state settlers was approved on 24 December 1830, and encompassed, at first, Petersburg and Pskov guberniyas [Complete Code of Laws of the Russian Empire–2, Vol. 6, No.4219b]. According to the project, primary educational institutions for state peasants had to be established by volost administrations in order to train lower local rural administrators (clerks). Mostly parish Orthodox clerics—priests and, less frequently, deacons—were appointed teachers; they had a small salary for their work. Those schools had to be financed with public, Zemstvo, duties.

In the Middle Volga Region that type of primary educational institutions began to spread in the late 1830s and the early 1840s¹⁶, which was related to the establishment of the Ministry of State Property (1837) and the reform of the state country management that was implemented by its first minister P. Kisilyov. According to the decrees of 27 June [Complete Code of Laws of the Russian Empire–2, Vol. 17, Part 1, No.15794] and 25 November [Complete Code of Laws of the Russian Empire–2, Vol. 17, Part 2, No.16248] 1842, all the earlier created volost schools were changed into of

¹⁶ The first educational establishment of this type in a baptised Tatar (mixed Russian-Tatar) settlement was the school in the village of Yukachi in the Mamadysh Uyezd of the Kazan Guberniya, which was opened by a local priest in 1833 and later transferred to the local chamber of state properties.

parochial schools subdued to the Ministry of State Property. Instead of training clerks, those educational institutions had to spread religious and moral principles and literacy among the state peasants. One of the reasons to abolish volost schools was their extreme unpopularity among the locals. As priest S. Nurminsky who had finished one of such schools, noted, volost schools, over the whole period of their existence, had not managed to establish an educational system for the native peoples of the territory and had left ill memories among rural population; and their graduates, on becoming clerks, showed the worst qualities typical for the Russian bureaucracy [Nurminsky, 1864, p. 220]. Such situation was due to the low teaching level, scholastic methods and teaching in Russian which limited to a mechanic learning of texts from the Holy Bible, reading and writing. Changing those schools, the Ministry of State Property aspired for improving general education in rural primary schools, for making state peasants more interested in getting primary education. While implementing the project special attention was paid to the development of confessional education among the Baptised Tatars. Discussing in the governmental circles the problem of mass Orthodox 'denial' by the Newly-baptised Tatars in the early 1840s, Nicholas I expressed his opinion, according to which it was necessary to enhance the Baptised Tatars' school enlightenment as an important condition for their stable consolidation with Orthodoxy; and it led to launching a net of MSP colleges in the Baptised Tatars parishes [Russian State Historical Archive, f. 383, inv. 7, file 6190-a, s. 1, file 6190-b]¹⁷.

Thanks to the attention of the Governorate Chambers of State Property and the participation of the local Orthodox clerics, spacious edi-

fices with a capacity of 30–50 disciples were built for of parochial schools in the Baptised Tatar settlements. They were equipped with good school furniture, libraries with educational and church books [Ilminsky, 1856, pp. 10 and 11 reverse]. The main subjects were: God's Law, Arithmetic, Reading and Grammar taught in the Russian and Church Slavonic languages. The educational process in schools was controlled by the clergy (rural deans) and secular administration (staff supervisors and district officials).

There were attempts to abandon the compulsory acquisition of parochial schools, but the Old-baptised Tatars' reluctance and fear of sending their children to those educational institutions aroused from the previous negative experiences, related to the primary rural schools network, led to the necessity of literally taking future disciples away from their parents. At the same time, officials rather often used such actions to get richer, as parents had to pay volost seniors and clerks money and bring them gifts so that their children would not be taken away [Timofeev, 1887, pp. 10–11]. It was easy to understand why the Baptised Tatars were unwilling to send their children to those schools. The education was free, but parents had to pay for lodging and food for the disciples, which entangled extra, often unbearable costs for peasants' households. Besides, the Baptised Tatars had no trust in schools created without taking into account the needs of the locals, with 'russifying methods' of education and training. Upon entering school, disciples were separated from their families for a long time and plunged into a completely unknown atmosphere. They did not speak Russian, so had to read 'by ear' repeating after the teacher and being unaware of the substance. The majority of teachers were local priests, they were highly occupied with pastor duties and sometimes had no opportunity to teach properly, they had to visit schools 'from time to time' or to entrust children's learning to the lower clergy of a parish [Ilminsky, 1856, pp. 10–12]. Naturally, such teaching methods hardly led to considerable results. After a short stay in school, a lot of disciples from Baptised Tatar families were expelled because of their 'incapacity' (or ran away, or were taken away

¹⁷ By the Mid-1840s there were a total of 3,719 functioning parish schools in the Russian Empire, including 45 in the Kazan Guberniya, six of which were located in the settlements of the 'old-baptised' Tatars (Abdi, Yukachi, Uryas'-Uchi, Oshormo-Yum'i, Chura in the Mamadyshsky Uyezd, and Karabayany in the Laishev Uyezd). In addition, the children of baptised Tatars studied at schools located in the Russian parishes [Russian State Historical Archive, f. 797, inv. 15, file 5644, s. 18].

by their parents), not having mastered 'the Russian literacy'. Very few disciples completed the educational course. It is clear enough that those schools lacking the support of the local rural communities could not have developed properly. They gradually closed down in the second half of the 1850s and in the early 1860s due to the lack of founding and disciples [Ilminsky, 1856, pp. 11–12].

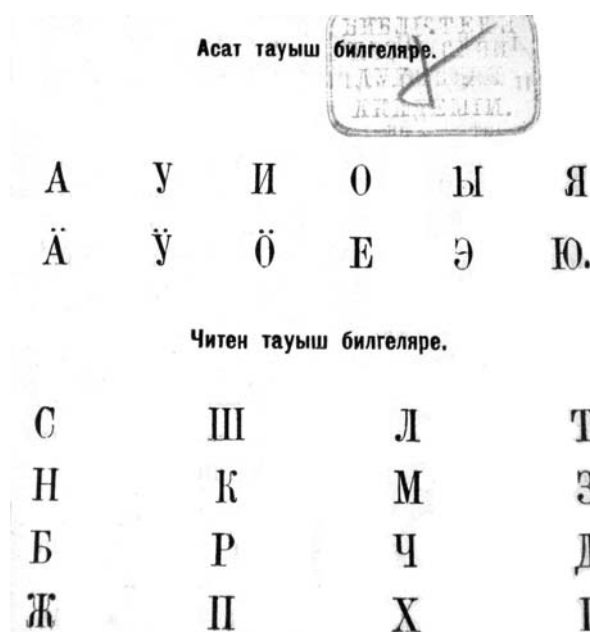

Despite the rather humble results of the schools and the general unsatisfactory level of education in them, which was noted in the majority of pre-Revolution studies [see Ilminsky, 1856; 1859; Nurminsky, 1864; Timofeev, 1887; Iznoskov, 1909; Rozhdestvensky, 1912], we cannot but mention their important role in the development of school education among the Old-baptised Tatars. To a large extent, thanks to those educational institutions, the first literate people appeared among the Baptised Tatars, and they rose their educational, and sometimes social, status afterwards. The former graduates from those schools became the first enlighteners and missionaries. Thanks to the development, though rather limited, of school education in Nicholas era, along with socio-economical changes in the Middle Volga countryside during the Great Reforms era, Old-baptised Tatars took interest in education and realised that raising the literacy of the young generation was necessary. Parochial schools created a basis for improving and expanding the primary educational system of the Baptised Tatars in the post-Reform period; their experience, mostly negative, was used by the enlighteners to work out new educational programmes and methods that became the foundation of the religious and educational system of N. Ilminskiy.

The post-Reform period was a new page in the history of the Baptised Tatars enlightenment. Shifts in the school policy of the state and in the Russian Orthodox Church's methods of Christian enlightenment in the early 1860s led to drastic changes in the system of primary and secondary education. A most important factor in the development of the Old-baptised Tatars' school education was the activity of Orthodox missionaries. According to the new

educational ideology worked out by N. Ilminsky (1822–1891), confessional schools were to become the main missionary institutions of the Orthodox Church in the Volga-Urals region; and the young generation educated religiously should have been a stronghold of the Church in the region, bringing Christian ideas to the senior generation. Realising that it was impossible to achieve drastic changes in the perception of Orthodoxy and raising the level of literacy among the Baptised Tatars in the unknown to them Russian language, the reforming missionaries suggested teaching children in primary confessional schools in their mother-tongue. In 1862, N. Ilminsky and V. Timofeev (1863–1893) composed the 'Primer for Baptised Tatars with Short Christian Prayers and Dogma Articles'¹⁸ that first used the Cyrillic alphabet for the sounds of the Tatar language. Henceforth, on the basis of the new alphabet, the authors translated the Orthodox Church books into the colloquial Tatar language, and they were the main learning materials in the Baptised Tatars' schools.

Working out the alphabet and composing first textbooks on its basis enabled N. Ilminsky to enhance his activities considerably and to open the first specialised educational institution for Baptised Tatars in 1863 in Kazan. A great part in its establishment belonged to V. Timofeev coming from an Old-baptised Tatar family of Nikiforovo (Chiyabashi) village in Mamadysh Uyezd. After leaving the MSP Teveleyevskaya Parochial School, he moved to Kazan to become a novice in the Convent of St. John [Voskresensky, 1904, p. 1]. In Kazan, he met N. Ilminsky, who suggested that they collaborated on the translation of religious books into the Tatar language. In 1863, thanks to his protection, V. Timofeev was taken on to KSA as an intern of the Tatar language. Having received funds for living and acceptable housing conditions, he proceeded to realising his

¹⁸ This first work of N. Ilminsky later became a basic training manual for Kryashen schools and the most popular book for the baptised Tatars. There were 16 editions of the book between 1864 and 1910, with a global circulation of 38 thousands copies [Xronologicheskij, 1910, pp. 17–18].

V. Timofeev. Photo from the second half of the 19th century

The alphabet made by N. Ilminsky for baptised Tatars.

missionary and pedagogic ideas—in the first autumn, he allowed three boys from his native village into his flat and began to teach them reading, writing and basic Christian dogmas [National Archives of the Republic of Tatarstan, f. 92, inv. 1, file 2340; Ilminsky, 1867, p. 293].

In order to develop the school further, N. Ilminsky applied in August 1864 to the MPE for the permission to open a private primary school in Kazan for Baptised Tatar children, headed by V. Timofeev. The proposal was upheld by KED curator P. Shestakov. In 1864—1865 the school began to function as an officially registered educational institution [Vitevsky, 1892, p. 13].

It was initially a small private boarding school where only three boys studied in the first year, living with their teacher and his family in a basement room of a house in Arsk Field, but it soon became a rather large educational institution. In the second year of its existence, 20 children studied here, and in 1866—40. A steep growth of the disciples number brought about the agenda of organising the educational process in the right way and providing material basis for the school. Thanks to N. Ilminsky's efforts, curator of KED P. Shestakov's and Kazan Archbishop Antonius's (Amfiteatrov) sup-

port, in 1867 the school got a separate edifice built in Arsk Field by Kazan merchant Arefyev, which was expanded in 1870 due to the MPE founding. In 1867—1868 the Kazan Central Christian Tatar School (KCCTS) was divided into two separate departments, a male and a female one [Gorokhov, 1941, p. 106].

Being the first educational institution sticking to the N. Ilminsky system, KCCTS became a laboratory where new pedagogic and missionary methods were tested and worked out by N. Ilminsky and V. Timofeev in the course of their first-hand teaching experience. Initially KCCTS had no precise educational plans and staff, which was grounded in its founders' position; according to it, the educational process itself should have indicated the way of teaching and the necessary subjects. Highlighting the empiric character of his system, N. Ilminsky believed it was important not to limit V. Timofeev's teaching activities with a strict framework of confirmed programmes, and tried to free the educational process from excess bureaucratic regulation as much as it was possible. As a result, despite state financial support, KCCTS, throughout its whole existence, had remained a private educational institution not subdued directly either to the

MPE or to the Educational Council of Synod. Its administration was rather independent in taking decisions on educational and upbringing matters, which allowed the school to react to religious and educational needs of the Baptised Tatars promptly. There was only a certain informal subordination of the school and its administration to the headmaster of Kazan Seminary for Non-Russian Teachers established in 1872. But even that linkage was first of all based on special confiding relations between the leaders, V. Timofeev and N. Ilminsky, and after both of them were gone—between their successors, T. Egorov and N. Bobrovnikov.

Deriving from the fact that the graduates would be mainly involved in Christian enlightenment among their compatriots in the future, the religious education prevailed. The main subjects in the school were God's Law, Orthodox Prayers, Holy History and Brief Catechism. Basic Orthodoxy was introduced from the first days of studies. Having learnt the Primer, disciples proceeded to reading the Book of Genesis, the Wisdom of Sirach, the Gospel According to Matthew translated into the Tatar language [Vitevsky, 1892, p. 14]. Since 1871, when a house church was built by KCCTS, disciples had been obliged to attend services, morning and evening prayers. Special attention was paid to church singing, which, according to N. Ilminsky's grounded position, had a great emotional impact on Baptised Tatars not ingrained in the Orthodoxy, attracted them to serve in the Church. In 1864–1865 V. Timofeev organised the first disciples' choir. Along with religious subjects, the Russian language, Basic Arithmetic (the course was limited to integer numbers), they also taught Drawing and Geography here. Primary education was carried out in the disciples' mother-tongue. After getting acquainted with Orthodox literature translated into Tatar, having learnt reading and writing in the mother-tongue, disciples began studying Russian. The school used a 'translating' method, according to which Russian grammar was studied on the basis of the Self-Practice Grammar Book for the Kazakhs, then the 'Holy History' composed by priest N. Popov and the Gospels in Russian were read. Reading was accompanied by oral

Cover of the 'ABC-Book for Baptised Tatars' (Kazan, 1878).

translation into the mother-tongue. The initial period of school education wasn't defined precisely and depended on disciples' successes and talents [Speshkov, 1904, pp. 10–10 reverse].

Placing children's upbringing above education, N. Ilminsky and V. Timofeev aspired for a family atmosphere in the school, gave up corporal and other types of punishment. In order to popularise the enlightenment ideas among Baptised Tatars, V. Timofeev went to Baptised Tatars' settlements with his disciples during summer vacations. Thanks to it, the school became widely known and popular. Now Baptised Tatars' children not only from Kazan guberniya, but also from Ufa, Samara and Vyatka guberniyas studied here. Along with the Tatars, the Tatar-speaking Udmurts, Mari, Chuvash and Mordvin people entered the school. By 1904, that is throughout the 40 years of its existence, the school had given education to 3394 boys and 1472 girls, 696 of them (14.3%) finished it certificated as public college teachers.

In 1878, KCCTS educational programme was expanded—it now corresponded to two-

Building of the Kazan Central Christian Tatar School. Picture, 1972.

year rural colleges of the MPE, which was related to the general unification trend in the educational system of the Empire. In order to give successful graduates privileges in military service, opportunities to become teachers in Zemstvo and the Ministry primary colleges, the school educational schemes had to correspond to the MPE programmes, and its graduates had to pass an obligatory attestation and final exams. According to the new programme, the number of subjects increased, the staff grew, the position of Law Teacher was introduced and taken by V. Timofeev. In 1883, a third year was introduced in the school, in 1901—a fourth one, which gave an educational level not lower than in a two-year parochial teachers' school. According to the new programme, Russian History, Natural Science, Physics and Drawing were introduced, studying the Russian and Church Slavonic languages became more profound [Otchet Kazanskoj Czentral'noj Kreshcheno-tatarskoj shkoly', 1904, pp. 1–2].

Since its foundation, KCCTS was meant to be an educational institution training teachers for Baptised Tatar primary missionary schools. In 1865–1866 its first graduates opened their own schools: a female one—in Nikiforovo village, mixed ones in Arnyash village (Mamadish Uyezd) and Apazovo settlement (Kazan

Uyezd). Those first schools were directly subdued to KCCTS and, according to P. Znamenskiy, were its 'small colonies' [Znamenskiy, 1892a, p. 196]. In order to raise the qualification of the graduates who, because of limited scientific and pedagogic training, insufficient duration of the course, not always managed to become teachers, KCCTS had been carrying out annual educational (pedagogic) courses since 1868. The courses paid special attention to getting teachers acquainted with new educational methods,

learning Russian and studying 'missionary sciences' [Otchet Bratstva svyatogo Guriya, 1884, p. 11]. Since the 1890s, teachers of primary non-Russian national schools had come here from the whole Volga-Urals region [Gorokhov, 1941, p. 110].

According to N. Ilminsky's ideas, KCCTS had gradually become not only an educational, but also cultural and religious centre; in addition to children's education and teachers training, here church and educational literature was translated into Tatar and centrally spread, Christian ideas were popularised among the majority of Old-Baptised Tatars [Budilovich, 1904, p. 5]. Thanks to its special status and coordinating role among the local primary schools, teachers training and control over their activities, KCCTS—when there were no other significant cultural and religious institutions among Baptised Tatars—performed communicative functions between separate, earlier hardly interlinked, groups of Old-baptised Tatars, contributed to their consolidation and the establishment of a single cultural and informational space. And its graduates, becoming teachers and Orthodox priests, were the main figures of the school enlightenment and missionary work among their compatriots. Almost all the Baptised Tatar intellectuals that appeared

in the second half of the 19th century and in the early 20th century were KCCTS graduates preserving close contacts with the school and its administration even after leaving it.

The development of the primary and secondary education system of Baptised Tatars in 1870–1905.

The official recognition of N. Ilminsky's system as the main method of school and Christian outreach activity among the baptised people of Eastern Russia, the use of new practices in the school and missionary routines, legally secured in the 'Regulation on Measures to Educate Foreigners Living in Russia', dated 26 March 1870 [Svod glavnejshix, 1882, pp. 42–45], contributed to the improvement of the school education system of the Baptised Tatars. In order to train qualified teaching staff for national schools operating under the new system, in 1872 a teachers (non-Russian) seminary was founded in Kazan (Kazan Seminary for Non-Russian Teachers), where N. Ilminsky was appointed as director [Akt, 1872, p. 1]. Along with Russians, it was open for representatives of indigenous peoples of Russia, who, after graduation from the Kazan Seminary for Non-Russian Teachers, were appointed as teachers at national colleges [National Archives of the Republic of Tatarstan, f. 93, inv. 1, file 4, s. 8–9]. In line with 'Regulations on the Kazan Seminary for Non-Russian Teachers', dated 1872, the following subjects were studied at the seminary: The Law of God (12 hours per week), the Russian and Church Slavonic language (19 hours), Natural History (5 hours), Arithmetic and Geometry (8 hours), Russian history and Geography (16 hours), the Basics of Pedagogy and Didactics (11 hours), Writing and Drawing (12 hours). Later combined lessons of singing, gymnastics and handicraft production were in-

Project for a wooden school building in the village of Ureevy-Chelny, Kazan guberniya, 1900.

cluded into the curriculum [National Archives of the Republic of Tatarstan, f. 93, inv. 1, file 4, s. 10]. While the Kazan Central Christian Tatar School became a centre for training Baptised Tatar teachers for missionary schools, the Kazan Seminary for Non-Russian Teachers turned into an alma mater for Zemstvo¹⁹, ministerial

¹⁹ The Kazan District School for Female Teachers (the Kazan Teachers' School for Women), opened by the Kazan Zemstvo [District Council] in 1871, played an important role in the preparation of teachers at local schools for baptised Tatars during the period under

(The Ministry of National Education) and parochial schools [National Archives of the Republic of Tatarstan, f. 968, inv. 1, file 83]. In total, from the moment it was founded until 1904, 104 Baptised Tatars graduated from the Kazan Seminary for Non-Russian Teachers²⁰ [32 godovshhina, 1904, p. 11].

Thanks to the implementation of new teaching techniques, creation of a system for training national teaching staff, a system of primary confessional education for the Baptised began to form since the middle 1860s. A major role herein was played by missionary associations—societies and brotherhoods, founded in the late 1860s to the early 1870s. The 'Brotherhood of Saint Gury at the Kazan Cathedral', which was founded on 4 October 1867 in Kazan and mainly focused on the promotion of missionary-clerical education among the local people, can be regarded as the most important missionary institution. By the end of 1867 the brotherhood had opened 23 schools, 7 of them were for Baptised Tatars, where more than 300 people studied [Iz- vlecheniya, 1869, p. 93]. The number of schools for Baptised Tatars kept growing steadily. By the end of the 19th century, there were 60 brotherhood schools in the Kazan Governorate with around 2 thousand Baptised Tatar students [see: Otchet Bratstva svyatogo Guriya, 1899].

Brotherhood schools were organised according to the organisational chart of the Kazan Central Christian Tatar School. Assignment and distribution of teachers to new educational institutions was controlled directly by N. Ilminsky, the teaching staff was selected entirely from graduates of the Kazan Central Christian Tatar School. The teachers of the school were

subject to parish clergy, who was responsible for observing the proper organisation of the school system. Brotherhood schools were two-year schools of reading and writing with a national component. Only in the late 1870s to the early 1880s a four-year education program was introduced in some of them. In accordance with the 'Draft Regulations for Primary National Schools of the Brotherhood of Saint Gury', developed by N. Ilminsky, the four-year education program of these schools included: 1) in the first academic year—initial teaching of children to church singing and saying Orthodox prayers, learning sounds and signs of sounds; exercises for correct spelling of letters on cards; exercises for counting to 10. During the first academic year, children had to learn the Russian names of elementary objects, to count to 20, read and sing Orthodox prayers in their mother-tongue; 2) in the second academic year they had to master correct reading, oral retelling of the read, arithmetic calculations within the first hundred, and calligraphy; 3) the third academic year was dedicated to the translation of Orthodox prayers from the mother-tongue to Russian, detailed study of Bible, retelling of the most important aspects of the Sacred History, learning prayers in Russian and the Church Slavonic language, arithmetic calculations, dictating certain sentences; 4) in the final academic year, students focused on consolidation of the Russian language skills, learning the Church Slavonic language, reading and translating the Gospel from Church Slavonic to Russian, retelling certain sentences in Russian [National Archives of the Republic of Tatarstan, f. 968, inv. 1, file 16, s. 36–38].

These educational institutions were marked by extreme simplicity of education process organisation and its missionary scope. Such schools were small, usually located in a simple village house, headed by a 'teacher-simpleton', a peasant like other locals, who didn't always have profound knowledge, but was sincerely loyal to Orthodoxy, eager to teach children and carry out Christian outreach activities among his compatriots. Giving instruction in the native language and the family atmosphere, created at the school, contributed to the organic

the consideration. From the middle of 1875, as a result of an increase in the number of local primary schools in the national settlements, N. Ilminsky's system was applied at the school, and the study of the Mari and Chuvash languages was introduced (such famous proponents of the Chuvash and Mari enlightenment as A. Rakeyev, I. Yakovlev, G. Komissarov, and F. Vasilyev worked here at different times), which attracted local non-Russian peoples, including the Kryashens. Before the Russian Revolution of 1905 a number of girls from amongst the 'old-baptised' Tatars attended this school and later worked for organisations of the local Zemstvo.

²⁰ These included several baptised Bashkirs.

embedding of these schools into the rural environment, the perception of them by local population as their cultural and religious institutions, and increasing their popularity. Low operating costs (on average 60–100 rubles per year) allowed to open them everywhere, making confessional education available for the significant part of the Baptised Tatar youth [Koblov, 1915, pp. 214–219 reverse].

Apart from the Kazan Governorate, by the end of 1870s the Brotherhood of Saint Gury expanded its activities to the adjacent Ufa guberniya. In 1868, it opened a missionary school for Old-baptised Tatars in the village of Melekesy, in 1870—in the village of Mazino, in 1871—in the village of Baydankino of Menzelinsk Uyezd of the Ufa guberniya [Spassky, 1900, p. 116]. In 1875, on the territory of the Ufa Governorate there were 12 brotherhood schools with 270 students [Otchet Bratstva svyatogo Guriya, 1876, p. 11]. Following the establishment of Zamstvo and missionary organisations in this region, these schools came under their charge, saving the missionary scope of the activity and close ties with Kazan missionary institutions. By the end of the 19th century there were 34 schools for Baptised Tatars and combined schools for Russian and Baptised people in the Menzelinsk and Belebey Uyezd of the Ufa guberniya.

The Brotherhood of Saint Gury had a significant influence also over other missionary organisations in the region. The closest ties were established between the Brotherhood and Vyatka Committee of the Orthodox Missionary Society, that began consistent practical implementation of the developments of Kazan educators. As a result of massive 'fall aways; of the Baptised Tatars of the Yelabuga and Mamadysh uyezds from Orthodoxy in 1870–1871, the council of the Vyatka Committee of the Orthodox Missionary Society asked the Brotherhood to help with the arrangement of Christian outreach activities. For this reason, the Kazan Central Christian Tatar School graduates Ivan Matveev and Aleksey Grigoryev were sent to Kazan, and they founded the first missionary schools for the Baptised Tatars in the Vyatka Krai [Otchet Vyatskogo komiteta, 1872, pp. 20–21]. For

training teachers, the Vyatka Committee started to send the most capable students of its missionary schools to the Kazan Central Christian Tatar School [Otchet Vyatskogo komiteta, 1878, p. 9]. By the end of 1870s, 4 schools for Baptised Tatars (103 students) were opened in the Vyatka Guberniya, by 1904 there were already 20 schools with 509 boys and 122 girls [Budilovich, 1904, p. 61 reverse].

On the example of the Kazan, Ufa and Vyatka guberniyas, missionary schools were opened also in other regions of Eastern Russia. Since the 1870s, such educational institutions had been opened in the Orenburg guberniya, Troitsk, Verkhneuralsk and Orsk uyezds, densely populated by a group of Old-Baptised Tatars, related to the Cossacks (Nagaybaks). In the Orenburg region the first school for Baptised Tatars, based on N. Ilminsky's system, was a missionary college, opened by a graduate of the Kazan Central Christian Tatar School Ignaty Timofeev (V. Timofeev's brother) in 1871 in the village of Fershampenuaz. By 1895 there were 7 schools for Baptised Tatars, where instruction was given in the Tatar and Russian languages [Sevastyanov, 1896, p. 20]. Following the establishment of a special deanery and the Preobrazhensky missionary camp (1901), the beginning of the 20th century was marked by a significant expansion of the Nagaybak school network. In 1904 there were 4 missionary, 16 village schools and 1 school of reading and writing with 596 male and 432 female Nagaybak students in the Orenburg guberniya [Budilovich, 1904, p. 105 reverse].

Although since the 1870s Zemstvo and ministerial colleges started opening in the Baptised Tatar parishes, it was the missionary school that became the main type of educational institutions among the Baptised Tatars. In total, by the end of the 19th century missionary schools (including parochial schools and schools of reading and writing) accounted for 76% of all schools for Baptised Tatars, Zamstvo schools accounted for only 13%, ministerial schools—11%. This was due to the special importance given by secular and spiritual administration to the missionary scope of the school system of the Baptised Tatars. In this re-

Ecclesiastical school in the village of Sluzhilaya Shentala

Photo from the early 20th century.

gard, up to the early 1890s the primary schools, being subject to Zamstvo organisations and the Ministry of National Education (for the most part being a one-year national college), even though formally weren't aimed at performing missionary functions, actually functioned in the same framework as the brotherhood schools (this term was enshrined in the approved in 1893 'School program for Baptised Foreigners of Eastern Russia' [Programma, 1893]).²¹ Also, they mainly focused on religious education, the teaching staff was recruited from pupils of N. Ilminsky and V. Timofeev, religious and missionary literature was used as the main teaching material, translated into Tatar by the Kazan Central Christian Tatar School and the 'Translation Commission of the Orthodox Missionary Society of the Brotherhood of St. Gury'. Schools of Baptised Tatars were a kind of Christian centre of 'school-church', where congregation 'must clearly learn and embrace Christian religion and its ritual practice' [Otch-

²¹ In parish schools and schools for basic literacy N. Ilminsky's curriculum was officially introduced on 12 January 1896 [Russian State Historical Archive, f. 796, inv. 177, file 879, s. 3].

et Bratstva svyatogo Guriya, 1873, p. 15]. By the example of the Kazan Central Christian Tatar School, students of these schools organised choirs all over the place, for locals on Sundays and on holidays they held church services in Tatar, along with prayer services, and pastoral counseling. Only in 1890s secular disciplines were first introduced in a number of schools, where they studied the basics of agriculture and agronomy, handicraft production and others. In 1893, the first special 'Non-Russian Agricultural School' was opened in the village of Shemorbashi (Shemortbashi) of the Laishev Uyezd of the Kazan guberniya [Inorodcheskaya, 1893, p. 50].

The education system established among the Baptised Tatars in the post-reform period and focused on religious education, had also some drawbacks due to the limited scope of school education and training. Clericalisation of the learning process and the lack of attention to the study of secular disciplines, characteristic of both primary and secondary education²², laid by the Orthodox missionaries, restricted the possibility of getting a secular profession and further study at the institutions of higher education for the Baptised Tatars²³. As a result, no layer of secular intellec-

tion emerged. The education system established among the Baptised Tatars in the post-reform period and focused on religious education, had also some drawbacks due to the limited scope of school education and training. As a result, no layer of secular intellec-

²² Besides studying at the Kazan Seminary for Non-Russian Teachers and the Kazan Central Christian Tatar School, from 1889 baptised Tatars were given the opportunity to attend missionary courses organised by the Kazan Theological Academy and theological seminaries from the Mid-1890s.

²³ One of the few baptised Tatar figures to succeed in pursuing a higher education was R. Dauley, who in 1903 graduated from the Missionary Anti-Muslim Department of the Kazan Theological Academy [Dauley, 1903, pp. 1–4].

tuals was formed among the Baptised Tatars up until the First Russian Revolution in 1905 (it was entirely represented by the Orthodox clergy and missionary teachers). However, it is necessary to emphasise the importance of missionary schools in the cultural development and school education of the Baptised Tatars. The wide expansion of schools, based on N. Ilminsky's system, allowed to make confessional education wide-scale and generally accessible for the younger generation of Baptised Tatars [Chicherina, 1904, pp. 1–2]. In order to understand the scope of the educational work performed by missionaries among the representatives of this confessional group of Tatars, it is enough to say that in the majority of large Old Baptised localities, in the Kazan guberniya in particular, by the end of the 19th century 50–60% of male population had attended these schools [see: Narodny'e uchilishha, 1888; Bobrovnikov, 1899, pp. 3–21]. There were examples of higher level literacy. For instance, in a relatively small village of Nikiforovo of the Mamadysh Uyezd (in 1897

the population was 779 thousand) 80% of male and 30% of female population had primary education, and 30 natives of this village at different times had studied at the Kazan Central Christian Tatar School, the Kazan Seminary for Non-Russian Teachers and attended the Missionary Courses in Kazan [Pamfilov, p. 30 reverse]. Overall, by the end of the 19th to the beginning of the 20th centuries, by the proportion of people who received elementary, primary education, the Baptised Tatars were a bit ahead of other indigenous people of the region, which was an unchallenged achievement of N. Ilminsky's system, used in the outreach and educational activities among the Baptised Tatars. Due to the new education system, the post-reform period for the Baptised Tatars was marked by significant changes in the cultural and religious life, a gradual transition from the patriarchal-clan to bourgeois society, which allowed them to successfully adapt to the new socio-economic and political realities of Russia at the beginning of the 20th century. A cultural and religious elite was formed.

CHAPTER 10

Institutes of Russian Language and Secular Education for Tatars and Bashkirs

§ 1. Pre-reform Period

Svetlana Basyrova

In the late 18th and first half of the 19th century the development process of Russian education system underwent significant changes, related to the initial stage of the formation of the system of state educational institutions. An integral part of this process was the local distribution of schools, including the outlying regions of the Empire, distinguished by their mixed ethno-confessional population. The school policy of the government was determined, first of all, by an acute need of the government establishments of competent specialists and staff. On the other hand, the state aimed at the integration of local communities of the country in a united sociocultural organism.

Military Department. On the territory of the Orenburg Krai, which was a border region of the Empire and was marked by its nature of military management, it was the military department that 'set the tone' for engaging Muslims into Russian educational institutions. It was associated with training of various specialists for the needs of the Bashkir Meshcheryak troops. For this purpose in 1825 was opened the *Orenburg Neplyuev Military College* named after the first governor of the krai²⁴.

In 1830 students were divided into two departments: European and Asian. The first department mainly focused on the study of Euro-

pean languages and military subjects, while the second one, on the study of oriental languages. The curriculum of the college, which in 1844 was converted into cadet corps, was repeatedly changed later on.

The Neplyuev Military College was an educational institution, where along with others there also studied Muslim children. As of 1842 it targeted: '1) children whose fathers serve or have served in the irregular troops of the special Orenburg corps; 2) children of Asians who are not in a strong allegiance; 3) children of all free people' [Complete Code of Laws of the Russian Empire–1, Vol. 39, No.29770]. Apart from children of mainly Russian Cossacks of the Orenburg and Ural Cossack troops, under the first category fell also the children of Bashkirs and Meshcheryaks, serving in the Bashkir Meshcheryak troops, under the second category, Kazakhs. Out of the first 16 graduates of the Neplyuev College, 7 were of Tatar-Bashkir decent, 2 were Kazakhs, and 7 were Russians [State Archive of the Orenburg Region, f. 6, inv. 4, file 10037, s. 149–150].

Children whose fathers served in the Bashkir Meshcheryak troops initially were accepted to the college on a common basis and studied as a rule in the Asian department. The lack of vacancies did not allow all comers to enroll in the college. Following the conversion of the college into cadet corps, out of 200 college places 30 were given to the children of officers of the Orenburg and Ural Cossack troops, the Bashkir Meshcheryak troops (they had to be trained at the expense of 'military funds'), and the children of Kazakh sultans, beys, seniors, the rest of the vacancies were intended for the children of military and civilian officials of the

²⁴ The academy became a successor to the school of 'Tatar students' established in Orenburg in 1744 under the direction of Governor I. Neplyuev. This school, which had existed under the auspices of the Orenburg Boundary Commission until the 1820s, prepared translators, dragomen, and clerical workers who were familiar with the Old Turkic ('Tatar') language, predominantly from amongst Russian soldiers and Cossacks.

governorate [Complete Code of Laws of the Russian Empire–2, Vol. 20, addition to the Vol. 19, No.17962a]—that is, these school became privileged.

In the Orenburg cadet corps studied mainly the children of nobility and officers as well as the sons of 'warrant'-officials. The vacancies were entirely occupied in 1848 [State Archive of the Orenburg Region, f. 6, inv. 10, file 5515, s. 270; Central Historical Archives of the Republic of Bashkortostan, f. I–2, inv. 1, file 5245, s. 11, 19]. 10–13-year-old boys were accepted to the corps. The Nepluyevsky Cadet Corps was popular among the Muslims of the region, especially among its social elite, because the graduates got proper professional training and after graduation had an opportunity to get a rank. What was also important is that Muslim students had an opportunity to study 'Mohammedan faith' and oriental languages. In total 70 Bashkirs and Meshcheryaks graduated from this educational institution in the period from 1831 to 1907 [Asfandiyarov, 2006, p. 378]. The social origin had a significant impact on the fate of cadets as it determined the rank with which a student graduated from the educational institution²⁵.

Thus, the Nepluyev Cadet Corps, which focused on training an officer personnel for the troops of the Orenburg region, engaged repre-

Photo from the early 20th century.

sentatives of the Muslim population into the Russian culture.

Representatives of the Bashkir troops studied at *the Orenburg Military College*, which was opened in 1859 and primarily intended for children of soldiers, officials, and clerks. This special educational institution focused on training junior officers for troops and staff of military departments; its course was close to 'the course of uyezdz colleges with some special subjects' [Complete Code of Laws of the Russian Empire–2, Vol. 32, Sect. 1, No.29770; Russian State Military Historical Archive, f. 324, inv. 1, file 511, s. 22, 24 reverse]. The college was established due to the liquidation of the military cantonists, that's why children whose fathers served in the Bashkir troops and who earlier studied at the Orenburg battalion were transferred to this college. There were 5 of them in August 1859, 32 by the end of the year, and 20 in February 1860. They were equalised with other pupils in uniform and food, even though they were kept on 'united duty' collected from Bashkirs and Meshcheryaks [Central Historical Archive of the Republic of Bashkortostan, f. I–2, inv. 1, file 10120, s. 95; Complete Code of Laws of the Russian Empire–2, Vol. 35, Sect. 1, No.35485]. The education of Muslims at the military college was aligned with the govern-

²⁵ Children of noblemen and owners of non-taxable estates left the school as officers. Children of 'brevet' officials became 'brevet' officers in the armies in which their fathers served. The owners of taxable estates could be given the rank of non-commissioned officer, whereas common Cossacks, Bashkirs, Teptyars, and Mishar Tatars received the rank of 'uryadnik' [rural police sergeant]. They could be appointed to the rank of an officer for a period of two to eight years.

ment policy, aiming at expanding the Russian culture among local peoples and training Russian speaking officials out of them. The college was not popular among Muslims because there, just like at the battalion of military cantonists, were no lessons on the Muslim faith.

The feldsher school of the Orenburg Military Hospital, opened in 1826, also made its contribution to the expansion of Russian culture among Muslims of the Orenburg Region. Initially there were 25 cantonists (children of soldiers) at the school and Bashkir and Meshcheryak boys selected at the cantons. In 1838 feldsher schools at the military hospitals were abolished. However, the military governor of Orenburg V. Perovsky, referring to the acute need of the region for health workers due to high incidence of diseases in the irregular troops, especially among Bashkirs and Meshcheryaks, managed to retain this educational institution. In 1841 the feldsher school of the Orenburg Military Hospital was opened exclusively for the irregular troops; its course and contingent were significantly expanded [Complete Code of Laws of the Russian Empire–2, Vol. 2, No.14792]. It was designed for 40 boys from the Bashkir Meshcheryak troops, 20 from the Orenburg, 6 from Ural, 2 from Kalmyk troops. 12–14-year-old boys were selected by local managers and accepted to the school without a preliminary Russian test. Christian and Muslim Faith, Russian and Latin Languages (reading, writing, grammar, translations), Arithmetics, Basics of Anatomy, Pharmacology, Formulation, Surgery, etc., were taught at the school. In the 1840–1860s there were three classes graduated from the feldsher school. It is known that 72 representatives of the Bashkir Meshcheryak troops graduated from the school by the end of the 1850s [Central Historical Archives of the Republic of Bashkortostan, f. I–2, inv. 1, file 10618, s. 68 reverse–69]. Graduates of the feldsher school received the rank of junior feldshers, corresponding to the rank of a sergeant.

The irregular troops of the Southern Ural needed health workers of even higher qualification. Doctors were in demand especially in the Bashkir Meshcheryak army because Muslims,

as a general rule, did not go to Russian doctors. For this reason the military governor of Orenburg P. Sukhtelen back in 1831 expressed an idea, which was supported by the authorities, about training Bashkirs on medicine at *the Kazan University* [State Archive of the Orenburg Region, f. 6, inv. 4, file 10037, s. 5–6]. Representatives of the Bashkir Meshcheryak army, who studied at the Neplyuev College, were selected to be sent to Kazan²⁶. Since 1836 in the Kazan Gymnasium and Kazan University 20 permanent vacancies were established for 'Mohammedans of the Orenburg Guberniya' [Complete Code of Laws of the Russian Empire–2, Vol. 11, Sect. 1, No.8771]. In line with the accepted rules, in August 1836 twenty 10–11-year-old boys, selected by the management from the Bashkir and Meshcheryak cantons, were sent to Kazan. In the gymnasium they had to go through a seven-year course, pass exams and only then, become students.

The lack of an advance preparation of children significantly reduced their learning efficiency. Out of 50 boys, who were selected in 1836, only 10 were accepted to the university by the end of 1849. Three of them graduated from the linguistic faculty, and only two graduated from the faculty of medicine, the rest were either still studying or expelled from the university due to illnesses. Apart from that, not all of the vacancies were occupied on time. For instance, in 1845 in Kazan instead of 20 boys studied 12 [Central Historical Archives of the Republic of Bashkortostan, f. I–2, inv. 1, file 6154, s. 36–38 reverse, 46, 49]. Not the best way out was found: in 1849 'in the Orenburg

²⁶ The first scholars of the Bashkir Meshcheryak army in Kazan were B. Subkhankulov (son of a subaltern officer), M. Muslyumov, Kh. Sharipov (sons of Mishar petty officers), and S. Kuklyashev. By 1832 the latter was already working as a dragoman for the Orenburg Boundary Commission. In March 1832 they came to Kazan and were provisionally placed in the First Kazan Gymnasium (upper secondary school) [State Archive of Orenburg Region, f. 6, inv. 4, file 10037, s. 61]. In 1833 they were joined by S. Nigametullin, who replaced M. Muslyumov, who lacked the necessary capacity to study. The boys studied various subjects at the school, including oriental languages, but they focused in particular on the study of Russian and Latin.

Krai the possibility of student transfer from the faculty of medicine to other faculties was banned' [Complete Code of Laws of the Russian Empire–2, Vol. 24, Sect. 2, No.23616], as a result, many Muslims, who studied at the gymnasium and did not have medical inclination, lost the opportunity to become experts of a different profile, to graduate from the university. This extremely unpopular measure was abolished only in 1860 [Complete Code of Laws of the Russian Empire–2, Vol. 35, Sect. 2, No.35946].

In order to improve the learning outcomes of Bashkir and Meshcheryak boys in Kazan, in 1849 it was decided to pre-train them at the Orenburg Battalion of Military Cantonists. However, this decision was not implemented in the period under review²⁷.

In total around 25 representatives of the Bashkir Meshcheryak army studied at the Kazan University in 1832–1861. After graduation, most of them became doctors in the army, but among the graduates there were also candidates of eastern philology, lawyers, etc. In 1860, 8 graduates from the Kazan University and 4 graduates from the Kazan Gymnasium served in the Bashkir cantons [State Archive of the Orenburg Region, f. 6, inv. 12, file 2173, s. 13 reverse–14]. The latter, of course, as the university, made a considerable contribution to the education of the Bashkir-Tatar population of the Southern Ural: its graduates, coming back to the homeland, became translators and held various positions in the canton offices.

In the pre-reform period the military department was also training other specialists for the needs of the population under its jurisdiction. For instance, in 1842 at the Drawing Department of the General Staff of the Separate Orenburg Corps along with others studied two Bashkir boys out of the Kazan Gymnasium students. In 1848 their number was increased to 10 because the Bashkir Meshcheryak army experienced an acute need of surveyors [Cen-

tral Historical Archives of the Republic of Bashkortostan, f. I–2, inv. 1, file 4969, s. 4, 83, 131]. In 1857 the vacancies in the army at the General Staff were eliminated, but a drawing school was founded in the Bashkir army itself designed for 10 students [Obrazovanie v Bashkirii, 1862, p. 52].

By the middle of the 19th century the government set a broad task to expand the Russian culture among the peoples of the Ural. In this regard, following the changes in the system of tax collection, in 1852 the government decided to allocate funds for the establishment of schools in the Bashkir cantons. The canton schools were designed to weaken the influence of Muslim schools, allegedly 'paralysing the moral strength of people,' to become a powerful tool for the destruction of the Mohammedan propaganda and fanaticism [Central Historical Archives of the Republic of Bashkortostan, f. I–2, inv. 1, file 10808, s. 5]. Another purpose of the establishment of these schools was the training of competent professionals with knowledge of the Russian language for the administrative apparatus. The first schools in the Bashkir cantons appeared in 1860. They were designed for a four-year course of study divided into two grades. In the first grade for two years students read Russian and old-Turkic books, manuscripts, learned to write, studied the numbers. Russian calligraphy, the first four arithmetic operations, the Mohammedan faith were taught in the second grade [Central Historical Archives of the Republic of Bashkortostan, f. I–2, inv. 1, file 7865, s. 23–30]. By 1862 in the army there were already 28 Russian-Bashkir schools with 498 students [Asfandiyarov, 2006, p. 379].

Thus, the military department in the pre-reform period was actively spreading the Russian literacy among the Muslims of the Southern Urals. On the eve of the abolition of serfdom, representatives of the Bashkir army (Bashkirs, Meshcheryaks) in the Orenburg Krai had 110 vacancies in the educational institutions of the military department, which were occupied almost all the time. Apart from that, cantons were marked by the start of the pro-

²⁷ Twenty boys started their studies in 1853 alone [Central Historical Archives of the Republic of Bashkortostan, f. I–2, inv. 1, file 6154, s. 139, 154].

cess of establishment of schools teaching the Russian language. This indicated that a part of Muslim population (mainly the social elite) tried to learn the Russian language in one way or another, which opened the way to European science, knowledge, career, etc. However, the desire to study in a Russian school directly depended on whether or not it taught Islam, whether or not the state infringed on the feelings of the Muslims.

The Ministry of National Education. In the pre-reform period a chain of educational institutions free of religious and national restrictions, though with the absolute domination of the Russian Orthodox population, was developed as part of the education department. Teachers of the Kazan University P. Kondyrev and I. Zapolsky, who audited public colleges in the Orenburg Krai in 1809, noted that there were many Tatars, Bashkirs, Udmurts, Maris in these schools [Bulich, 1887, part 1, p. 585].

Mainly Russians studied in the uyezd colleges of the Orenburg Guberniya, which were founded in the late 1810s to the early 1820s on the basis of public colleges and acted under the charter of educational institutions of 1810, because these schools were established in the uyezd cities. This situation persisted even after their reorganisation in 1835 [Mirsaitova, 2000, part 2, p. 79].

In the late 1850s authorities began to accept Bashkir and Tatar boys to the parochial schools to train clerks for governing bodies. These were temporary measures: the Bashkir army did not have enough funds to open specialised canton schools. In 1858 in the Ufa, Orenburg, Chelyabinsk, Sterlitamak, Troitsk, Menzelinsk, Birska, Bugulma parochial schools at the expense of the Bashkir army studied 90; in 1859, 100; in 1860, 60 boys; 250 students in total for three years. 196 out of them were Muslims; 54, pagans representing, respectively, around 20% and 5% of all students of these schools [Mirsaitova, 2000, part 1, pp. 64]. A part of graduates of the lowest type primary educational institutions continued to study at the uyezd colleges, regardless of their ethnicity.

Teachers, teaching Russian literacy to Bashkirs and Tatars at the colleges, tried to avoid

using 'The Russian Alphabet Book,' containing Orthodox prayers, but used more neutral Lancasterian charts instead. V. Zolotov's phonetic method of teaching literacy was used as well. Regular keeper and teacher of the Ufa Uyezd college I. Sosfenov had developed an Alphabet book for Bashkirs and Tatars called 'Initial acquaintance with Russian literacy' [Asfandiyarov, 2006, p. 380]. It was forbidden to force Muslims to listen to the basics of Christianity. Parents of the boys who studied at the Chelyabinsk, Orenburg, and Birska colleges took advantage of their right to call a mullah to teach Islam at their own expense [Central Historical Archives of the Republic of Bashkortostan, f. I-2, inv. 1, file 9776, s. 36].

8–13-year old boys, mainly children of officers and also orphans, were selected out of the Bashkir army to study at Russian primary schools. However, soon the children of ordinary Bashkirs, Meshcheryaks, Tyeptyars also started to study at these schools. On the eve of 1861, 102 Muslims and 12 pagans studied at the uyezd colleges, the parochial schools had 147 and 55 students, respectively (18.2% and 5% of all students of these schools), not including parochial schools of the Sterlitamak and Bugulma uyezds [Central Historical Archives of the Republic of Bashkortostan, f. I-110, inv. 1, file 874, s. 10–11].

However, the government policy was not always successful and consistent. For instance, the efforts of the governorate authorities to train Bashkir boys in crafts, away from the homeland in 1836–1842, can be considered as not quite successful. The boys were selected by the canton managers mainly from orphans or big poor families and sent to Moscow, Petersburg, Kazan, Izhevsk, and other industrial cities of the country for five-six-years. Out of 264 boys, who were sent, only 148 came back as graduates [Mirsaitova, 2000, part 2, p. 27].

Peasant and Mining Schools. In the 40s of the 19th century on the territory of the Southern Ural they began to create a network of primary schools for state and demesne peasants, who were represented in the region not only by Russians but also by Tatars, Chuvash people, et al. In 1860 in the Orenburg Guberniya

there were 38 schools (1,336 students) under the jurisdiction of the Moscow State Mining University and 16 colleges (282 students) of the demesnil department [Central Historical Archives of the Republic of Bashkortostan, f. I–110, inv. 1, file 860, s. 179; Russian State Historical Archive, f. 515, inv. 8, file 2310, s. 5, 15–20]. These educational institutions gave elementary knowledge to students: here they taught the Law of God, reading, writing, the first arithmetic operations; sometimes Calligraphy, Cursive, Accounting, etc., 'were added' because volost offices needed competent staff.

Rural schools in the Cis-Ural Region were marked by a 'mixed' ethnic composition of students [Orenburgskie gubernskie vedomosti, 1846, No.12]. The children of Muslims prevailed in the rural colleges opened in 1850–1851 in the villages of Zirgan and Buzdyak [Cheremshansky, 1859, p. 247]. There usually worked secular teachers, graduates from the uyezd colleges, non-Orthodox priests.

In the rural villages peasant boys were trained to become vaccinators and volost clerks at the expense of public tax. In 1844 the Moscow State Mining University was planning to open a special college for 20 people in each volost of the Kazan Guberniya, populated by Muslims and pagans, for training clerks and translators. They were aimed at teaching Russian literacy and four arithmetic operations, without lessons of religion. Eventually, only one clerk training school was opened in the uyezd city of Mamadysh in 1849 for Ta-

tars, Mari, and Chuvash people. For the maintenance of the school 900 rubles of silver was allocated annually from the economic capital. The language of study was Russian; cramming prevailed at the lessons [Materialy', 1936, pp. 455–456; Druzhinin, 1958, p. 254].

A contribution to the expansion of the Russian literacy among the Muslims of the Southern Ural was also made by *the schools of mining department*. By 1861 in the Orenburg Guberniya there were 10 primary factory schools (611 students). Those were two-grade schools that taught primary literacy, even though some of them, adapting to the factory needs, were also engaged in elementary professional training of students—the future workers and artisans. People, not associated with the mining department, including representatives of the Bashkir army, who were kept at the expense of the army, also got primary education at factory schools. It is known that more than 100 Bashkirs studied at the educational institutions of the Zlatoust District from 1858 to 1867 [Russian State Historical Archive, f. 44, inv. 3, file 252, ps. 15–17; Chernoukhov, 1998, p. 124].

Thus, the pre-reform development of the school system was marked by the multi-departmental character of state educational institutions represented by different types of schools. War Ministry was very successful in this field, which at the expense of funds collected from Bashkirs and Meshcheryaks sought to provide the local administration with middle-ranking executives and competent staff.

§ 2. Post-reform Period

Chulpan Samatova, Alfiya Yusupova

Russian Educational Institutions. Russian public schools aiming at religious and moral education of students, were unpopular among Muslims. In the latter half of the 19th century cities of the Cis-Ural Region were marked by the biggest number of Muslims at the secondary educational institutions. The biggest group of Tatar nobility was settled in the Ufa Guber-

niya. They sought to integrate into the Russian community and prepared their children for an officer's career. There were groups of Muslim children, mainly Tatars, who studied at the gymnasiums in Ufa, Troitsk, and Uralsk [Russian State Historical Archive, f. 821, inv. 8, file 817, s. 37]. There were 52 Muslims at the all-boys gymnasiums and pro-gymnasiums, in-

cluding 20 in the Kazan Educational District, 1 in the Kiev, 25 in the Vilensk, 2 in the Saint Petersburg, Moscow, and Odessa educational districts [Appendixes, 1869, pp. 154–155]. In subsequent years leadership in the number of students at the secondary educational institutions belonged to the Orenburg Educational District established in 1874: in 1878, 48 out of 127 gymnasium students studied here, 10 in the Warsaw, 8 in the Moscow, 6 in the Kazan Educational District, 5 in the Saint Petersburg, 2 in the East-Siberian, 32 in the Vilensk, 3 in the Kiev educational districts, and 10 in the Turkestan Krai.

In 1884 there was one Muslim in every all-boys and all-girls gymnasium in the Kazan Educational District [Russian State Historical Archive, f. 821, inv. 8, file 817, s. 35 reverse]. In 1890 there were 35 Muslim students at the Orenburg Gymnasium, mainly Kazakhs who stayed at the gymnasium dormitory by means of 30 scholarships for the indigenous population of the Ural, Turgai Regions, and Bukey Horde [Belavin, 1891, p. 98]. The early 20th century was marked by a steady increase in the number of Muslims entering gymnasiums. In 1902 in the Orenburg Educational District they accounted for up to 2% of gymnasium students, their number was more than two times bigger than the number of co-religionists in the Kazan Educational District (less than 0.5%).

Urbanisation processes, the development of capitalist relations, and establishment of Zemstvo facilitated the accelerated formation of a network of secondary and the lowest professional colleges, training staff for industrial, artisan, agricultural productions, commerce, and other branches of national economy. In the early 20th century groups of Muslims were present in real colleges of a number of cities. In 1902 they were enrolled in the real colleges of the Kazan (18 people), Orenburg (10 people), and Moscow educational districts (10 people).

The small number of Muslims in Russian universities was a characteristic feature of the post-reform period. For instance, in 1884 out of 5,747 students of Russian universities only 6 were Muslims (4 in the Kazan, 1 in Saint Petersburg, and 1 in Warsaw educational districts)

[Belavin, 1891, p. 358]. In 1873–1896 in the Kazan university with an average number of 595 students there were 5.6 Muslims on average, or the 0.9% of all students [Mikhaylova, 1979, Tables 22, 23, 24, pp. 338–340].

The early 20th century was marked by the increased aspiration of Tatars to study at higher educational institutions. However, by their number they were still a 'microscopic inclusion' in the confessional and ethnic structure of the Russian student community. 61 Muslims studied at the universities in 1899–1900 (0.4%). Technological, polytechnic, mining, agricultural institutions were also marked by a small number of Muslim students: there were just 17 Muslims in 1900–1901 (0.3%), 57 in 1907–1908 (0.4%) [Ivanov, 1999, Table 14, pp. 197, 198]. 92 Muslims studied at the Kazan University in 1899–1917: 19 Azerbaijanis, 10 Bashkirs, 21 Kazakhs, 41 Tatars, and one native of the Middle Asia; 28 successfully graduated [Mikhaylova, 1979, pp. 258, 333–335, 338–340, 347].

Thus, Russian secondary and high schools mainly attracted the children of Tatar gentry, commoners, and merchants, the most representative part of Muslims. Although there were no special restrictions (apart from the permission for Muslims to get a scholarship), in the 19th century they were low-rated among the Muslims.

Russian-Tatar Colleges and Russian Classes at Madrasahs. According to the 'Regulations on Measures for Education of Foreigners in Russia' 1870, the Russian language and arithmetics were the main subjects at Russian-Tatar colleges. The leading role in the training process belonged to the 'translational'²⁸ method. Initially, students learned spoken Russian. The next step was to learn the Russian grammar (reading, writing). At Russian classes at maktab and madrasahs teaching of the Russian language was primarily aimed at mastering the colloquial speech, which did not exclude the

²⁸ The 'translational' method was intended as an aid to learning the grammar of a foreign language and the comprehension of coherent text. The advantage of the 'translational' method was the systematic use of the students' native language.

* Without Russian-Kazakh schools and colleges operating in Ural and Orenburg Cossacks.

possibility of teaching the basics of grammar. It was possible to extend the arithmetics course (calculation, the first four operations with whole numbers) by learning the main operations with fractional numbers [Inorodcheskie i inovercheskie, 1903, pp. 14–16].

Initially, there was no education period: as a rule, at one-grade Russian-Tatar schools a three-year training course was practiced in three departments (junior, middle, elder). Shakhkirds attended Russian classes after lessons at

the confessional school. Only in 1907 a four-year education was established at one-grade Russian-Tatar (Bashkir) colleges, the hour-load for separate subjects was determined, and the establishment of two-grade colleges was approved, the curriculum of which was completed with courses of Russian history, science, drawing, geometry [Mir islama, 1913, Vol. 2, p. 28].

Audits of educational institutions in the Kazan Educational District in 1901 and 1903

showed that most of the students mastered Russian to a small extent [National Archives of the Republic of Tatarstan, f. 160, inv. 1, file 947, s. 9]. The number of graduates was small, too (15% of all accepted) [National Archives of the Republic of Tatarstan, f. 92, inv. 2, file 3798, s. 37 reverse]. Parents sent their children to schools out of practical interest: after acquiring spoken and written Russian skills, children left the school with no intention to get a graduation certificate. For this reason, in Russian-Tatar schools, especially at elder departments, there were either no pupils or just a few of them.

More intensive establishment of Russian-Tatar schools in the Kazan Educational District started at the turn of the century. It is known that in 1874 there were 21 schools of a new type, including 12 Russian-Tatar colleges, 9 Russian classes at madrasahs. In 1902 their number was doubled and made up 41 Russian-Tatar educational institutions. At the same time, the number of Russian-Tatar schools significantly increased (32). Mainly it was due to the fact that they were preferred by Tatars themselves. Most of the Russian classes were established at the madrasahs, only two were opened at the maktab of Bukey Horde [National Archives of the Republic of Tatarstan, f. 92, inv. 2, file 2246, s. 69 reverse].

However, it was impossible to completely overcome the negative attitude of Muslims to Russian-Tatar schools. For instance, attempts of inspectors and Zemstvo of the Saratov Guberniya to open new educational institutions were boycotted by rural communities [National Archives of the Republic of Tatarstan, f. 92, inv. 1, file 24602, s. 1–15]. The same situation was also observed in the Samara Guberniya (Table 50).

In the Orenburg Educational District the majority of schools were established at the turn of the century. However, by 1902 the number of Russian-Tatar (Bashkir) educational institutions was more than twice as much as those in the Kazan Educational District. With regard to the number of Muslims, the most successful Russian-Muslim schools were opened in the Perm Guberniya (23). There were 2 double-grade Russian-Muslim colleges and 25 single-

grade Russian-Tatar (Bashkir) schools in the Orenburg Guberniya. In the Ufa Guberniya their number in comparison with 1874 had increased 5 times and reached 34 (Table 51).

The distribution of all-girls Russian-Tatar schools left much to be desired. The first all-girls Russian-Tatar school in Kazan, opened in 1873, was soon closed because of the small number of students. New all-girls primary college here was opened just in 1901, in Tetyushi, in 1904 [National Archives of the Republic of Tatarstan, f. 92, inv. 2, file 3799, s. 18]. In the Cis-Ural Region one of the first all-girls departments with 10 students was opened in 1883 at the Temyasov Russian-Bashkir college (the Orsk Uyezd) [Central District Department of Education, 1883, Nos. 11–12, p. 491]. The all-girls Russian-Bashkir college in the village of Buzdyak (1893) was the first school supported by Zemstvo in the Ufa Guberniya [Azamatova, 2010, p. 87]. An all-girls Russian-Tatar school was opened in the village of Noviye Kargaly in the Ufa Guberniya in 1903, a Russian-Bashkir college for girls was opened in the city of Belebey in 1905 [Central District Department of Education, 1905, Nos. 11–12, p. 665].

In the reviewed period in rural areas particularly orphans and boys from poor families studied in free educational institutions, which taught Russian literacy [Russian State Historical Archive, f. 733, inv. 171, file 656, s. 109 reverse]. In general, one should note the small number of new type schools for Muslims. The Russian-Tatar educational institutions only in the late 19th century began to inspire credibility in a certain part of Tatar population and open upon its initiative. The financial support of Zemstvo facilitated their distribution. The quantitative buildup of Russian-Tatar schools was constrained by the lack of national teaching staff. Despite the small number, they had played a certain role in creating conditions for learning the Russian language particularly by children from needy families and getting of secular primary education by them.

Private Schools and Tutors. In order to prepare children for continuing their family business, Tatar merchants hired private teachers, who mainly were invited to their houses.

Under the conditions of the hostile attitude of Tatar community to Russian educational institutions, for the children of merchants this way of learning the Russian literacy was almost the only possible option.

Introduction of a Russian literacy test in 1891 for those who wanted to take a spiritual position and their failures on the commission tests at the college councils updated the need for qualitative preparation to exams. In a number of cities there appeared private teachers, specialising in preparing future mullahs for exams. The prevalence of this type of training was determined both by the educational traditions of Tatars and the inconvenience for applicants to undergo the course of Russian-Tatar colleges in order to obtain a title of a mullah because of age differences with other students.

The emergence of a local group of Russian language teachers, who obtained the required certificate following successfully passed exams without attending classes, also was a confirmation of the existence of a private education system on a fee basis aimed at meeting the needs of the local population in learning the state language and Russian literacy.

Kazan Tatar Teachers' School (KTTS). Due to the lack of trained Tatars, people without specific education, though knowing the Russian language, were assigned to Russian-Tatar primary schools in the beginning [Khanbikov, 1968, p. 51]. Later the Kazan Tatar Teachers School (opened in 1876) became a 'source of manpower' for Russian-Tatar educational institutions.

An annual admission of students was established at the Kazan Tatar Teachers School, it was based on the results of examinations, which could be attended by representative of any class, who were at least 15 years old. The entrance examinations included tests of the Russian language, arithmetics, reading in the Tatar language and Muslim faith, which was abolished in 1877 [Kazanskaya tatarskaya, 2005, pp. 22–23].

The school curriculum consisted of 84 lessons per week in all four grades. In the first grade students learned Russian, maths, faith,

and natural history. In the second grade these subjects were added by history, geography, in the third grade, pedagogics and didactics. Calligraphy and drawing were taught during the entire education period. Crafts (joinery, book-binding) and gymnastics were taught at the spare time without a split into grades. 9 lessons per week were allocated to the study of Muslim faith, it amounted to 11% of the total number of lessons per week at the school. At the faith lessons students also mastered the Arabic calligraphy and Arabic grammar. Apart from the basics of Islam, all school disciplines were taught in the Russian language.

The main part of students was constituted by 'state-permanent' students, who as a rule stayed at the boarding house. Since 1879 the Ministry of National Education reduced the number of state scholarship holders from 40 to 30, at the same time increasing the annual allowance for students from 90 to 120, later to 150 rubles [National Archives of the Republic of Tatarstan, f. 92, inv. 1, file 13584, s. 7].

Students who attended just the school lessons (at a small fee) fell under the category of 'non-resident' [National Archives of the Republic of Tatarstan, f. 92, inv. 1, file 12513, s. 12] and constituted a small part among students of the Kazan Tatar Teachers School.

Natives of the governorates of Kazan, Orenburg, and Moscow educational districts, Siberia, and Middle Asia studied at the Kazan Tatar Teachers School at different times. Allocation of allowance to natives of subordinated territories was a guarantee of the provision of Russian-Muslim educational institutions with teachers.

The majority of students of the Kazan Tatar Teachers School was constituted by children of nobility, officials, clergy, merchants, and burgess. The early 20th century was marked by an increase in the number of peasant children, which indicated the growing interest of the rural population in receiving education in the Russian language.

According to the main task of the Kazan Tatar Teachers School, the education process focused primarily on learning the Russian lan-

Cover of M. Imanaev's Russian language textbook for Tatar schools, madrasahs and makhtabs 'Russian Word' (Kazan, 1895).

guage (grammar, reading, speaking). Difficulties faced by students in learning Russian were determined both by the insufficient knowledge of the subject and the 'structure' of the Tatar language [National Archives of the Republic of Tatarstan, f. 92, inv. 1, file 12513, s. 25–25 reverse]. The insufficient knowledge of Russian of applicants to the Kazan Tatar Teachers School was determined by the use of textbooks in the 1–2nd grades, which, apart from Russian texts, contained translations into the Tatar language. Among them should be noted the 'Introduction to Natural History' by R. Arendt, 'Geography for Tatars' by E. Zeidlits, 'Introduction to the World History' by D. Ilovaysky [Khakimov, 1972, p. 6].

Literary evenings and performances, arranged with the involvement of students, were means of aesthetic education, development of the creative thinking of the Kazan Tatar Teachers School students. The desire of teachers to diversify, improve the educational process, broaden the horizons, and increase the erudi-

tion of students was determined by the organisation of various thematic tours and familiarisation with city theatrical performances.

The majority of teachers of the main disciplines had higher education and graduated from universities.

School graduates were not allowed to enroll in the higher education institutions of the country. Thus, government targeted them to work at the primary Russian-Tatar schools. 389 people graduated from the Kazan Tatar Teachers School during the period of its existence [Mikhaylova, 1979, p. 68]. By 1891 out of 79 graduates (12 were transferred from the Orenburg Tatar Teachers School) only 39 were appointed as teachers at primary Tatar schools at different times [National Archives of the Republic of Tatarstan, f. 92, inv. 1, file 19983, s. 1]. The graduates of the Kazan Tatar Teachers School worked as teachers even outside the Kazan Educational District.

The Kazan Tatar Teachers School attracted talented and ambitious Tatar youth from peasants, who did not have resources and opportunities to study at gymnasiums and higher schools. A whole galaxy of future representatives of the national creative intellectuals and public figures studied there, including G. İsxayı, S. Maksudi, A. Maksudi, H. Yamaşev, G. Kulakhmetov, etc. At the early 20th century those who did not study at makhtabs or madrasah studied at the Kazan Tatar Teachers School, which had its impact on their further adaptation among Tatars.

In 1880–1882, 10 teachers were invited annually to the courses at the Kazan Tatars Teachers School [National Archive of the Republic of Tatarstan, fund 92, list 1, file 15097, p. 1], 12 in 1883, 17 in 1901 (the Kazan Guberniya (10 people), the Vyatka Guberniya (7 people)) [National Archives of the Republic of Tatarstan, f. 142, inv. 1, file 32, s. 5–12].

Upgrading programs for teachers of Russian-Tatar schools, arranged at the Orenburg Tatar Teachers School (1878–1884 and 1887) [Bakirova, 2005, p. 51], did not comprise all teachers of the Russian language. They attended short courses for teachers of non-Russian colleges in the Orenburg Educational District

and agricultural courses in the city of Birk in the late 1880s to the first half of the 1890s: [Central District Department of Education, 1887, No. 1, pp. 1–2; Galanov, 1894, pp. 19–24, Galanov, b.g., pp. 15–19].

There was an acute need of teaching staff in the Cis-Ural Region. In 1898–1912 the Ufa Guberniya Zemstvo thirteen times applied to the Ministry of National Education with a request to open a Tatar Teachers School in Ufa but was rejected every time [Enikeev, 1977, p. 207].

Thus, the opening of Russian-Tatar schools and Russian classes for Muslims and the Kazan Tatar Teachers School by the government was a progressive step in the sociocultural development of the Tatar community. They facilitated the training of teachers, the development of new study guides, including dictionaries and self-study books, the formation of a layer of European-educated Tatar intellectuals, who made a major contribution to the development of the national culture.

Training Manuals. The creation of training manuals was an important issue for Russian-Tatar colleges and Russian classes. By the 'Rules' dated 26 March 1870 the government established subjects but did not develop education plans for them, even though there were ready projects [Shestakov, 1869, p. 31]. For this reason, teachers of Russian-Tatar schools and Russian classes had to adapt the programs of primary colleges for the Russian-speaking population. It is known that in the late 19th century the 'Approximate Programme of Subjects Taught at the Primary Public Colleges of the Ministry of National Education' dated 7 February 1897 was used as a kind of base [National Archives of the Republic of Tatarstan, f. 160, inv. 1, file 103, s. 24].

In the Kazan Educational District training manuals for the new type schools were developed mainly by V. Radlov. His books 'The First Book to Read' (1874), 'Russian Grammar Developed for the Tatars of Eastern Russia' (1873) favourably differed from those recommended by the Ministry of National Education by having Tatar translations of the texts. The chres-

tomathy of V. Radlov 'Belek' was written in the Tatar language. V. Radlov developed training manuals for Tatars based on active consultations with K. Nasyri. The book of M. Imanaev 'Russian Word' (1895) consisted of an Alphabet book, practical exercises and chrestomathy and at regular use could provide the required level of knowledge of everyday Russian. Gradually, the gap in the training manuals of Russian-Tatar schools was replenished by the teachers of the Kazan Tatar Teachers School. S. Akhmerov wrote a book on the Russian language for Tatar teachers schools (1895). A. Anastasiev published his work 'Public School, a Manual for Teachers of Public Schools. Reference Book' (1890). Art, calligraphy, and drawing teacher S. Tagirov developed the first Tatar Alphabet Book based on the phonetic method (1893) and charts on Russian Roman type calligraphy (1900). In the early 20th century their work was continued by graduates of the Kazan Tatar Teachers School G. Kulakhmetov, M. Kurban-galiev, et al. [Khakimov, 1972, pp. 8–12, 14–16].

It should be noted that the initiative to create and improve textbooks was raised mainly not by the educational authorities but the educational corporation of Russian-Tatar educational institutions and advanced Tatars interested in the education of the population.

Until 1890 books and alphabets were published mainly in Russian and for Russians. Changes in sociocultural life led to the publication of new textbooks for Tatars to learn Russian.

Tatar-Russian and Russian-Tatar Dictionaries and Self-Study Books. The creation of an extensive range of bilingual dictionaries and self-study books of the Tatar language is explained by the targets and tasks of both domestic and external 'eastern' policy of Russia. The Tatar language in the 19th century was the official language and the language of diplomacy in relations of Russia with the countries of the East. Diplomatic documents, sent on behalf of the Russian government to Turkey, Middle Asia, Iran, India, and Mongolia, at that time were written in the Tatar language [Khisamova, 1999, pp. 16–17]. The aforementioned diction-

Cover of Vagapov's textbook 'Self-Teaching Book for Russians in Tatar and for Tatars in Russian' (Kazan, 1889).

aries and self-study books were the 'conductors' of the east-oriented policy of Russia.

Teaching the Tatar language as a separate subject at such famous educational institutions as Saint Petersburg, Kazan, and Kharkov universities, at professional schools, theological academies, and gymnasiums led to the creation of 13 Russian-Tatar and Tatar-Russian dictionaries in the 19th century [Mikhaylova, 1972, p. 33].

The first lexicographical monuments, designed for learning the Russian language by Tatars and the Tatar language by Russians, were the Tatar-Russian and Russian-Tatar dictionaries by I. Giganov, published in 1801 and 1804 [Kononov, 1974, p. 146].

This activity was continued by other authors. In the 19th century were published dictionaries by A. Troyansky (1833; 1835), S. Kuklyashev (1859), L. Budagov (1869, 1871), N. Ostroumov (1876, 1892), K. Nasyri (1878,

1892), the Missionary community (1880, 1882, 1886, 1888, 1891), S. Gabdelgaziz (1893), A. Voskresensky (1894), M. Yunusov (1900) [Kononov, 1974, pp. 130, 141, 201, 224, 229, 246, 272, 293].

In the 19th century, apart from scientific works on the Tatar language, dictionaries, training materials, textbooks, there appeared around 30 self-study books for learning the Tatar language. The self-study books by G. Vagapov (1852–1899), M. Bekchurin (1859, 1869), S. Sainov (1880), M. Salikhov (1885, 1893), I. Kondratov (1893), S. Gabdelgaziz (1894) contained the most widely used words and typical grammatical structures of the Tatar language. It is interesting they were the first to define the principles of supplying the linguistic materials, which are used today to solve problems of foreign language teaching (thematic principle of vocabulary selection, situational dialogues, communicative-conscious principle, etc.). These bilingual dictionaries and self-study books, created by scientists, teachers, and missionaries, brought us the wealth of lexical materials of the period, reflecting the cultural and historical dialogues of the Russian and Tatar people.

The contribution of the Kazan School of Turkic studies should be noted especially. They not only studied the formal and literary language of Turkic peoples but also paid great attention to the colloquial forms of the languages of the people, who already had their script, which was reflected in the Tatar-Russian and Russian-Tatar dictionaries created by them. Authors had mastered the procedure of compiling a dictionary. Words in bilingual dictionaries are strictly alphabetised; in the most (Tatar-Russian) of them words are arranged according to the Arabic alphabet. They are represented in three columns: Arabic—Tatar—Russian. The Russian alphabet was strictly adhered to in Russian-Tatar dictionaries.

The Tatar-Russian and Russian-Tatar dictionaries and self-study books of the 19th century reflect the people's colloquial vocabulary (75%–80%), which is actively used in the modern Tatar language. Dictionaries also recorded the old Tatar vocabulary. In this regard, works

of A. Troyansky, L. Budagov, N. Ostroumov are of great interest.

Many dictionaries and self-study books of the 19th century are based on the written literary language, they have also preserved words related to dialect vocabulary. In this regard, dictionaries by I. Giganov, N. Ostroumov, K. Nasyri, S. Gabdelgaziz are distinguished. It can be explained by the fact that dictionary authors recorded words related to the vocabulary of the place where they were from. Perhaps they attributed these words to the standard literary language.

Missionary authors (A. Troyansky, N. Ostroumov, A. Voskresensky) used dialect vocabulary and thus avoided using Arabic-Persian borrowings, trying to introduce words from the vocabulary of Baptised Tatars into the literary language.

In I. Giganov's dictionaries most of the vocabulary is related to the eastern dialect, they reflect all characteristic linguistic properties of

the Siberian Tatar dialect along with the literary norm. This is explained by the place of residence and work of the author: the dictionaries were compiled in Siberia.

Arabic-Persian borrowings occupy a large part of the vocabulary of these works. They can be divided into the following thematic groups: religious words, scientific terms, sociopolitical terms, military and medical terms, and words related to daily life, flora and fauna, food, drinks, concepts of time, etc.

In order to explain the meaning of other capital lexical items, in some cases the authors of dictionaries use the method of encyclopedic explanation. This method is observed in all dictionaries of the reviewed period, giving them an encyclopedic character. Apparently, this was due to their tasks and targets since the dictionary was intended to reflect the educational intentions, the level of linguistic and cultural development of society, and the evolution of linguistics.

CHAPTER 11

Tatar Books in Russia

Guzel Gabdelganeyeva

Book publishing in the first half of the 19th century. The first book in Russia, printed in the Arabic script, was the Manifesto on Persian Campaign of Peter the Great, published in 1722 (Astrakhan, campaign printing house). The publications that followed (collection of declamations, odes, offering sheets, etc.) were sporadic. Some recovery of printing in the future was due to imperial and missionary needs resulting from annexation of new territories, inhabited by Turkic peoples, to Russia. The first textbooks in Arabic were printed: Turkish grammar by S. Khalfin (Saint Petersburg, 1776; Moscow, 1777 and his Tatar alphabet (Moscow, 1778). In 1787, on the personal order of Catherine of Russia was printed the Quran (Saint Petersburg, printing house of I. Shnor, 1,200 copies), the text was printed in new Arabic script, developed based on the pictures of a scholar-mullah Usman Ismagil. I. Shnor printed the Quran in the same script several times until the end of the century.

The first printing house in Kazan was opened in 1800 (it was called Asian, or gymnasium), and that was the starting point of the history of Tatar books created and distributed upon the initiative of the Tatars. The brief history of the printing house. In 1797 Paul I of Russia permitted G. Burashev, a Tatar, to open a 'free' printing house in Kazan. However, the Senate declined these decision. Following the repeated requests supported by Tatars from other governorates, G. Burashev got a permission to establish a printing house in Kazan (order of Senate dated 13 September 1800), however, not a 'free' printing house but at the First men's gymnasium, and to print there only 'the Quran, prayer books, and the like.'

In 1801 the printing house printed the first two books: 'Attagoci'²⁹ and 'Häftiyak' published by the founder and first tenant of the printing house G. Burashev.

When G. Burashev was suspended from the management of the printing house, it was rented by a merchant Y. Apanayev (1806–1809), who had published more than 8 books in 19 publications (the Quran, Stuari, Pirguli, etc.), repeating the repertoire of the previous publications of the printing house, apart from two new publications: 'Säifelmölek' (a story about the wanderings of Tsarevich Saiful Mulyuk in eastern countries) and 'Risälai Möxämädiye' ('Message of Muhammad').

According to incomplete data, 93 books were published at the printing house from 1801 to 1829 (including the 9 years, during which the printing house was inactive) [Karimullin, 1992, p. 122]. In this period, the Quran underwent 25 publications; 'Häftiyak,' 17, 'Älifba,' 16, 'Stuari,' 9, 'Pirguli,' 8, etc.

The first employees of the printing house and the first printing experts in Kazan—proofreader Kh. Mamyshev, typesetter G. Rakhmatullin, and the censor, editor, and translator of the works Ibragim Khalfin—made the first attempts to improve the scripts used for printing.

In 1829 the first printing house in Kazan and the first Tatar printing establishment in Russia was affiliated with the printing house of the Kazan University (opened in 1809) and up to 1860s was called as its 'Asian Branch Office.'

²⁹ The 'Attagoci' was a Tatar ABC book with prayers for reading, which was later published every year with a circulation of almost 150 thousand copies under the name 'Älifba iman şartları belän' ('Alphabet with Prayers'), 'Şartel'-iman,' or 'Iman şartı' ('Conditions of Faith').

The first book published in this printing house was 'The Alphabet and Grammar of the Tatar Language with Arabic Reading Rules, Taught at the Imperial Kazan Gymnasium' by I. Khalfin (1809, 170 p., 1,200 copies), a textbook of the Tatar language, which was used at the gymnasiums of Russia, quickly sold out like its second edition (1812). The second award-winning work of I. Khalfin 'The life of Genghis Khan and Aksak Timur, with addition of various stories, related to the history, all words for students are alphabetised' (1819, 1,200 copies; 1822) was also designed for students. For decades these publications were the only training manuals to learn the Tatar language in Russian educational institutions, they were used as examples for the subsequent works on the Tatar grammar by M. Ivanov, A. Kazembek, S. Kuklyashev, et al.

Prior to the affiliation with the Asian printing house, the printing house of the Kazan University published: the story of Abul-Gazi Khan about Mongols and Tatars 'Genealogy of Turks' in the Chagatai language (1825), ordered by the chancellor N. Rummyantsev, 'History of Tsars, Caliphs, and Sheriffs of the Mecca Empire' by Takhawetdin Mukhametdin in Arabic (1822), pieces of poetry in the Persian language by Azerbaijani poet Nizami, edited and commented by F. Erdman (1826, 1828), and other works on history, literature, the language of eastern people; translations addressed to Tatars: 'About Cowpox Vaccination' by head physician Fedor Volkov (1812), 'Teglim name' (A guide how to distinguish true death from imaginary) (1813). Upon the order of Tatar publishers the Quran, 'Söbatel-gacizin,' and other books were printed. According to the 'Catalogue of Books and Minor Works Published in the Printing House of the Kazan University... until 1819' 77 books were published, until 1829, according to Zagoskin, 177 [Zagoskin, 1906, p. 48].

Starting from the early 1830s the printing of works on oriental studies and oriental languages got intensified. The development of oriental studies at the university was reflected in the printing production, the publication of which became possible due to

equipping the printing house with new Arabic scripts. Among scientific works can be noted the Crimean-Tatar manuscript on the history of Crimean khans by Seid Muhammad Riza ('Asseb o-seiir, or Seven Planets') published under the editorship and commented by A. Kazembek (1832), 'Secret Islamic Jurisprudence' in Arabic with a Russian translation of the same author (1845), 'Story about the daughter of the Russian Tsar' ('Xikaäyat doxtär-i padsha rus') by Nizami in Persian under the editorship of F. Erdman (1844), a book about Ferdowsi by S. Nazaryants (1842, soon republished in Moscow), 'Babur-name' in the Chagatai language with Russian translation published by I. Ilminsky (1851), 'Library of Eastern Historians' by I. Berezin (1849–1854), 'Stories of Rubguzi' in the Uighur language (1859), etc.

Scientists at the university introduced many works of Arab, Persian, Turkish, Middle Asian authors on culture, philology, Muslim jurisprudence, as well as works of fiction and folklore into the scientific circulation.

Educational publications designed for the study of oriental languages are represented by 'The Grammar of the Turkish-Tatar language' by A. Kazembek (1839, gained worldwide fame, republished in 1846), the first in Russia 'Grammar of the Persian Language' prepared by I. Berezin (1853), 'Tatar Grammar' and 'Tatar Chrestomathy' by a Tatar language teacher at the Neplyuev cadet corps M. Ivanov (published in 1842 upon the order of the governor of Orenburg), 'Dictionary of the Tatar Language and Some Commonly Used Arabic and Persian Words' by A. Troyansky (2 volumes, 1833, 1835), etc.

Since the 1830s the university's printing house became a school for the preparation of staff, masters of the Tatar print. Its role in the history of Tatar books and books on oriental languages, which became the property of many Turkic people of Russia, is significant.

The emergence of private printing in Kazan was determined by the increased demand for Tatar books. The first private printing house was opened by an engraver Ludwig Shevits in 1840. The technically equipped

facility ensured high quality of work that attracted Tatar publishers, upon the orders of who 35 different books were published in the printing house until 1846.

In 1844 the first lithography in Kazan started to print books possessed by Shagi Yakhin. In the same year Rakhimzyan Sagitov, a famous publisher in the city, opened a printing house in the Novotatarsky settlement. However, private establishments developed under adverse conditions. According to the decree dated 1845, it was forbidden to print Islamic religious books in the private printing houses of Kazan. Referring to the decree, the governor of Kazan prohibited the owners of printing houses to publish every single Tatar book. L. Shevits had to stop printing, and in 1848 he sold the printing house.

Until 1848, 4 publications were done by S. Yakhin, and one publication was done by R. Sagitov. Following the abolition of the decree and resumption of work, at the lithography of S. Yakhin (since 1851) they mainly published shamails, calendars, and fulfilled other minor orders. In 1859 it was handed over to M. Yakhin. R. Sagitov had published 27 different books in total and in 1862 he gave up the upkeep of the printing house and returned to publishing.

The ban on the printing of Islamic religious books almost did not affect the university's printing house, which like before fulfilled the orders of Tatar publishers. Moreover, this printing house managed to return the seemingly lost monopoly of printing works in oriental languages. Despite high prices, Tatars had to use the services of this printing house and of the printing house of N. Kokovin (the former L. Shevits), despite its low quality of publication. Since the late 1840s private printing houses, which had resumed the work, began to interrupt such orders. For instance, in 1851–1852 in the university's printing house 20 different Tatar books were printed, while in the private printing houses they were 57 [Karimullin, 1992, pp. 148, 159].

According to incomplete data, in 1801–1850, 401 Tatar books were published in Kazan (93 out of them were published in the

'Practical Manual for the Study of Tatar'
(Kazan, 1855).

Asian printing house, 220 in the university's printing house, 45 in the printing house of L. Shevits, 12 in the printing house of N. Kokovin, 27 in the printing house of R. Sagitov, 4 in the lithography of S. Yakhin) [Karimullin, 1992, p. 165]. In the first half of the 19th century 1,877 different books, magazines, prints were published in the provincial printing house of Russia. Of these 1,281 were published in Kazan [Rubinstein, 1964, p. 292], including books in Russian, West European, Chuvash, Udmurt, Mari, and other languages. In 1851–1855 another 176 Tatar books were published in Kazan, which amounted to a total of 577 publications [Karimullin, 1992, p. 165]. Despite an overall downward trend in printing in Russia, in Kazan as before publishing was active, and every third book published in the province at this time (1,463 publications) [Rubinstein, 1964, p. 300] was

in the Tatar language. In terms of print runs it was second only to the Russian versions.

The early 1850s are marked by the emergence of secular works in the repertoire of Tatar publications: The 'Russian-Tatar alphabet' (1852) and 'Self-study Book for Russians in Tatar and for Tatars in Russian' (1851), G. Vagabov (re-issued in more than 20 editions before the revolution), 'Practical Guide to Learning the Tatar Language' by G. Makhmudov (1855), 'Näxu kitabı' ('Brief Tatar Grammar explained in Examples'), K. Nasyri (1860), study guides by S. Kuklyashev, M. Bekchurin, et al. Among the few fiction books by contemporary Tatar authors we note the first book by G. Chokry 'Täcvid' ('Rules of Orthoepic Reading of the Quran') (1860), 'Mäcmägil-ädäb' ('Collections of rules of conduct') by H. Salikhov (1856), etc.

Throughout the history of Tatar publications, a significant role was given to religious and moral works of a religious nature. According to the scholar and theologian P. Znamensky, in 1855—1864 in the university printing house only upon the orders of Tatar publishers were 1,084,320 copies of books printed; these included 147,600 copies of 'Häftiyak,' 90,000 copies of the Quran, and also similar books published in the private printing houses of Kazan [Znamensky, 1910, p. 28].

Tatar publishers were represented by a fairly wide range: merchants (the Apanayevs, Saidburganov, Yunusov, later R. Sagitov, M. Abdurashitov son of Akhmetov, U. Abdulsattarov, et al.), meshchans (M. Katenin, M. Maksutov, I. Medvedev, M. Davydov, I. Urazov, et al.), Tatars of the service class (Fayzullin, Y. Bogdanov, et al.), peasants, shakirds of madrasah, and even women (the first of them was Gubeyeva). One of the most active publishers of the first half of the 19th century was a translator for the Kazan city court by the name of Rakhmatulla Amirkhanov who published the first Tatar calendar, 'Görräle'k' (1841). At his order, in 1839–1843, 1845–1846 in the university printing house, 87,800 copies of books, mainly historical and religious, were published, including the Quran and the seventh part of the Quran, 30,200

copies [National Archives of the Republic of Tatarstan, f. 1, inv. 2, file 483, s. 35].

Publications for Turkic peoples of Russia printed beyond Kazan were not insignificant. Books in the Arabic script in the first half of the 19th century were infrequently published in Saint Petersburg and Moscow and were published in Orenburg, Astrakhan, and the Caucasus as needed by the central authorities, local administration, or missionaries. In 1802 in the printing house of the Saint Petersburg Academy of Sciences in response to an 'imperial order' publications were made of the 'Tatar Language Grammar,' 'Russian-Tatar Dictionary,' and 'Words, Indigenous, the Most Essential for Learning Tatar Language' by I. Giganov, 'Alphabet of the Tatar Language' by N. Antometov; in 1803, 'About Cowpox Vaccination' by F. Volkov (translated into Tatar by I. Khalfin); and in 1814, a 'Brief Tatar Grammar' by A. Troyansky. Such publications were rare, similar to the occasional orders of Tatar publishers: 'Kitab gıyl'me hä'l' by mullah A. Süleymanov (1839), 'Kitab däläyale axiryat' and 'Häftiyake şäri'f' by mullah Kamaletdin (1845), 'Sälyasäte auliya,' 'Cännätel-äsma,' 'Babur namä' (1856–1858), etc., that were printed using lithography rather than typesetting. From 1850 into the 1870s several religious books in the Tatar language were published by missionaries, and at the order of the General Staff Russian-Turkish and Russian-Persian dictionaries and phrase books were published using lithography [Karimullin, 1983, p. 96].

Rarely publications in Arabic were carried out in Moscow. Tatar publishers from Moscow preferred to employ the services of the printing houses in Kazan, the centre of book production in oriental languages.

Printing for the Muslim peoples of Caucasus or in languages of these people was preceded by the creation of a periodical press. Since 1818 the Russian military administration of Caucasus in Tiflis published the newspaper 'Tiflis News' in the Russian and Georgian languages, for the printing of which the printing house named 'Tatar' or 'Farsi' was established. However, this was the extent of printing in Arabic script in the Caucasus. In

all likelihood, this is explained by the fact that the Turkic peoples of the Caucasus were provided with books published in Kazan as well as in Iran and Turkey [Abramishvili, 1956, p. 69].

The publication of translations of Christian books into oriental languages was actively carried out by missionaries. These translations do not fall under the general statistics of Tatar publications in Russia or Kazan. However, as there were missionary translations addressed to Tatars and other Turkic peoples of the empire, it is appropriate to provide some information about them. The first such books were published by missionaries from Scotland who travelled to the Caucasus in 1802. They set up a printing house in Carras to print Christian books in Tatar, Persian, and Arabic, and after receiving the permission of the Kazan censor they published a catechesis in the Turkic-Tatar language (1806) followed by a large number of books in the Tatar and Crimean-Tatar languages as well as in the Nogai and Persian languages. Later some of the Scotland missionaries moved to Astrakhan, where they continued their translation and publishing activities. In 1816 they translated into Tatar language (the lower class dialect of Turkish language used between the Nogai and Kazan Tatars) the³⁰Bible. Translations into Tatar ('of Kyrgyz and Orenburg dialects') were intended for distribution among the peoples of the Volga and Ural Regions. The publication of Christian books in Turkic-Tatar, Persian, and Arabic in the Caucasus was carried out by missionaries of the Basel Evangelical Society, which settled there in 1821. However, in the 1830s the missionaries had to leave the Caucasus and later Astrakhan [Astafyev, 1889, p. 118].

The Kazan branch of the Russian Bible Society began to publish and distribute books of sacred scriptures in the indigenous languages of the people of Kazan Krai (opened in 1818). The books selected for translation included

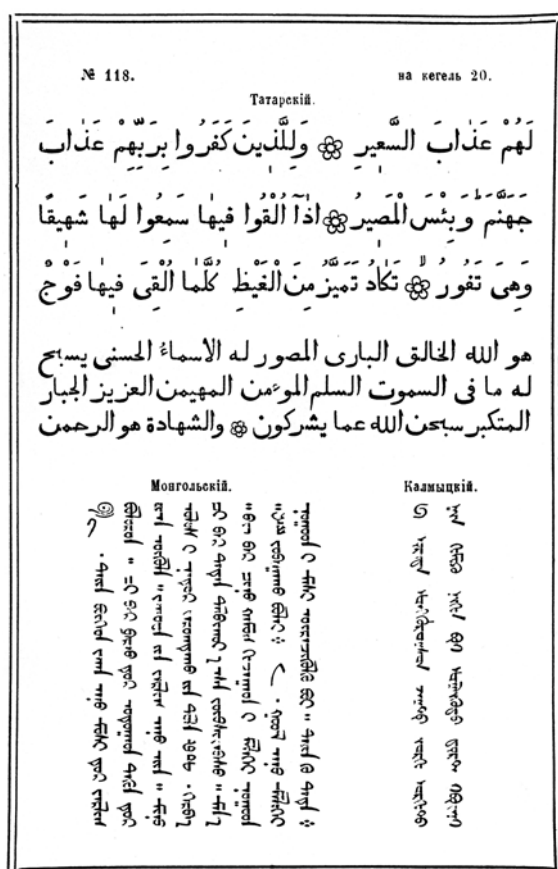

the Bible in the Kalmyk and Tatar languages (1819, 2,500 and 5,000 copies), the first edition of the Four Gospels in the Chuvash language (1821, 5,000 copies), which like the other books of the Bible were published in the university printing house.

The publishing activity of Tatars was traditionally combined with the book trade and was amounted to peddling as a rule. Apparently, in the Volga Region this began in the 17th century, when book printing in Arabic appeared in Europe and Eastern countries. The supply of books from Eastern countries continued with the emergence and development of book printing in Kazan. Publications came through Odessa and Astrakhan customs, were brought by Tatar pilgrims to fellow merchants, forbidden books were brought in the same shipments with religious-moral publications approved for circulation or with other goods. Different workarounds were used to provide the Tatar reader with books.

Tatar publishers actively used trade fairs. At the Makaryev, Irbitsk, Menselinsk fairs Muslim books were being sold already in the first quarter of the 19th century. In the 1830–1840s the most distributed book in this region was the Quran (just a small part of its circulation was the result of what was sold at Kazan bookstores and small fairs). The Quran was the most actively bought at the Nizhny Novgorod fair. As indicated by missionaries, thanks to Tatar booksellers at the Eastern markets, Kazan-Tatar publications were dispersed to 'all ends of Russia where Islam was a force—Siberia, Crimea, the Caucasus, Khiva, and Bukharia' [Znamensky, 1910, p. 28].

In the pre-reform period Tatar publications were used not only in the education of the Tatars but also in the religious development of the Turkic peoples of Russia, and they were widely distributed in the Caucasus, Middle Asia, and Siberia and found their way into Chinese Turkestan and Eastern India as well as Arab countries. Despite pressure resulting from dual forces of oppression—national and social—Tatar books continued to flourish: they were published, distributed, and used.

³⁰ The basis for the translation was an ancient manuscript purchased by the missionary G. Pinkerton from Karaite Jews.

Samples of letters, decorations, and typograph symbols of the publishing house and letter-foundry of Imperial Kazan University. 1884.

Tatar publishing in 1860–1905. The post-reform period was marked by the start of a new stage in the history of Tatar publishing, the centre of production and distribution of which as before was Kazan. The expansion of local printing facilities facilitated the active publishing of Tatar books. Equally important was the increased demand of Tatar society for books, print publications, which was taken into consideration by publishers.

In the latecenturyTatar books in Kazan were printed in Russian and Tatar printing houses. A revival of printing activity among Tatars in the early 1850s was short-lived. At that time it was difficult to acquire a license to open a printing establishment, especially for a Tatar. However, in 1859 the Kazan merchant M. Yakhin managed to open a lithographic

printing house,³¹ where he published prints, prayers, shamails, historical and religious works, later classical works of oriental literature, textbooks, and the first geographical map in the history of Tatar book printing (1861). In 1871 M. Yakhin establishment was closed, and the following year it was sold to I. Abdulin, who in 1883 passed it down to his son. It was still in operation in the early 20th century.

In the latter half of the19th century Tatar books were actively printed at the university press, which published almost half of all Tatar works in Kazan, as before. Their repertoire, being universal, characterises all Tatar book production of the given period. Year after year the press published 'Kıyssai Mansur,' 'Kıyssai Äbügalisina,' 'Kıyssai Zarkum,' 'Kıyssai Yosıf,' 'Kıyssai Kız Kerpeş,' 'Kıyssai Näürüz,' 'Kıyssai Pählevan,' and other numerous historic records of oral folk art of many of Russia's Turkic peoples. Works of Medieval Eastern literature were reissued regularly: 'The Book of Advice' by Attar, 'Flower Gardens' by Ghazālī, works of Nizami, Ferdowsi, Avicenna, O. Khayyam, A. Yassawi, Pirguly, and other Eastern philosophers who profoundly influenced the formation of the world view of the Tatar enlightenment. Some works of fiction were republished from Constantinople editions, such as: The 'Treasury of Wise Aphorisms' by Abu Ali Sina' (1864), 'Alti Bar-mak Kitabi' ('Book of Six Fingers') (1865), etc. Works on formal logic, Muslim jurisprudence and dogmatics, moral and edifying pieces, original and translated, often with commentaries by contemporaries, oracles, shamails, Quran and surahs from it, 'häftiyak,' prayers, etc., were issued regularly, as before.

The development of Tatar secular education and Tatar education reform served as a momentum for the printing of school books, first of all, on linguistics. The first attempts to make the Tatar literary language more conversational were made at the end of the18th century by S. Khalfin, a teacher of Tatar in the First Kazan gymnasium and the editor of 'Tatar

³¹ It was located on Sennaya Square, in the house of Yunusov.

Dictionary and Brief Tatar Grammar' (1785). From that point on, I. Khalfin, S. Kuklyashev, G. Vagabov, and other Tatar educators continued their work in this direction. From the beginning of the 50s they started printing reading materials to help Tatar and Russian language students. The amount of such books started to increase. Among the works of the 60–70s are 'The Grammar of Russian-Tatar Language' by G. Vagabov (1873), republications of his previous works, and works by S. Kuklyashev, M. Bekchurin, K. Nasyri, G. Makhmudov. In the 80s, and especially the 90s, the publication of philological books significantly increased, which can be explained by the general status of the development of the Tatar language and Tatar linguistics, literature, education, and culture as well as some other factors, including the development of a national identity by the Tatar people. The strengthening of opposition to the educational ideology of the new Tatar intellectuals and the fanaticism of the reactionary Muslim clergy that pervaded all spheres of social life was most evident in the sphere of education, where the question was raised about the introduction of reform in the maktab schools and the implementation of new teaching methods. The introduction of new textbooks written by new authors was one of the forms of protest against the old-fashioned 'cadimist' schools. The repertoire of these books included 'Beginner Studies or the Improved Alphabet Book' by S. Tagirova, Russian language teacher at madrasah in the Old-Tatar Sloboda (1892, 1896), 'Book of Reading and Writing' (1891), 'Beginner's Guide to Literacy' (1893) by the famous Kazan mudarris G. Barudi³², textbooks on the Tatar, Arabic, and Russian languages, including 'Primary Textbook on the Tatar and Arabic Languages' (1891) that used the syllable method and was republished dozens of times, 'Textbook on Arabic Grammar' (1893), and others. Anthologies and learner's dictionaries were published along with scientific and

scientific-reference books that were added shortly after: the first scientific grammar book of Tatar language 'Änmüzäc' (1895) and the first dictionary of Tatar language 'Lähjâi tatari' (1895–1896) by K. Nasyri, etc.

In the last quarter of the 19th century the university press started publishing geography and mathematics books, popular science books, calendars, publishing and booksellers catalogues (äsami kötep), new Tatar fiction pieces (by G. Ilyasi, M. Akyeget-zade, Kurmash, et al.), translations of well-known fiction works from the realm of Eastern literature 'Tutiynamä' ('Tales of a Parrot'), 'Kalilä vä Dimnä' ('Book of Kalil and Dimna') (1889–1892), 'Älfe läylä vä läylä' ('One Thousand and One Nights') (1897–1899),³³ etc. The vibrant translation business carried out by S. Tagirov, T. Yakhin, and other Tatar educators introduced Turkic readers to works by the leading Russian writers.

In the latter half of the 19th century the university press, according to partial data, published 1,415 Tatar books with a total print run of 10 million copies (the average print run of a single book was 8,000 copies) [Karimulin, 1983, p. 56]. Taking these numbers into consideration, 5,577 books were published by the university press during this period of time, including 1,700 publications by the university itself and 2,462 publications based on orders from Russian publishers [Gabdalganeeva, 2005, p. 24]. From the beginning of the 1900s the number of Tatar books suddenly being printed decreased, and with the establishment of new private printing houses publications of Tatar books virtually ceased altogether, while Russian books were still being actively printed.

The establishment of four private Russian printing houses in Kazan served as one of the factors for the subsequent development of Tatar publishing business. Tatar books were printed in large quantities at Kokovins-

³² They were published in the series 'Mäg'rife islamiya' ('The Knowledge of Islam'), as were other textbooks by the author.

³³ 'Tutiynamä' was translated from Turkish into Tatar by G. Faezkhonov, who also translated Kalilä vä Dimnä' from Arabic into Tatar; 'Älfe läylä vä läylä' was translated from Arabic into Tatar by F. Khalidi.

I. Kharitonov. Photo from the early 20th century.

Chirkovs' printing house (formerly L. Shevits). Up to the 1880s religious and quasi-religious literature prevailed. The publication of folkloric epic stories increased later ('Kiz Cibek,' 'Taminadar,' 'Ayman-Çulpan,' 'Malik Xasan,' etc.). These were widespread among Tatars, Kazakhs, Kyrgyzs, Uzbeks, Tajiks, Azerbaijanis, and other Muslim nations. Old-method and new-method alphabet books were published ('Mögallim Äüväl' by K. Maksudi, 'Älifba Kitabi,' 'Yaña isul älifba,' and others), arithmetic books, books on gardening and livestock-breeding, as well as works representing the new Tatar literature. Until the end of the 19th century this printing house published 1,025 editions of Tatar books [Karimullin, 1983, p. 77].

In 1882–1888 G. Vecheslav's printing house published 225 Tatar books with a combined print run of 1.5 million copies [Karimullin, 1983, p. 86]. After the printing house was taken over by B. Dombrovsky (1894), Tatar books continued to be printed, and until the end of the century 171 publications with a combined print run of 1.5 million copies were published [Karimullin, 1983, pp. 93]. Secular literature was dominant, as before. At the same time, Tatar folkloric works were printed

as well as works of Kazakh, Akyn literature and folklore, the Quran (10 issues were published up to 1900), Quranic and religious-ceremonial literature.

The development of Tatar books began in the 20th century and was closely connected to I. Kharitonov. A hereditary printer who managed G. Vecheslav's printing house, he opened his own printing house in 1896, and shortly after, a lithography shop, a bookbinding shop (1898), and a typesetting foundry (1900), where he started making letter punches for Tatar fonts. For over a century all Tatar and Turkic printings were done with these fonts created in the latter quarter of the 18th century by mullah scholar U. Ismagil for I. Shnor's printing house (Saint Petersburg). New fonts (called 'kharitonovsky') became widespread throughout Russia and were used in the Islamic East. The fonts were created with the help of the future Tatar playwright G. Kamal and artist-engraver and printmaker I. Yuzeev. The first Tatar book printed there was the booksellers' catalogue by G. Kamal ('Kitapçı Galiäskär bine Galiakbär Kamaletdinov kitapxanäseneñ äsami kötebe') (1902). Until 1905 the shop published 104 editions of Tatar books with a total print run of 645,136 copies.

From time to time, Tatar books (maps, sh-mails, wall calendars, and other lithographic products) were printed by I. Perov's printing house, and infrequently, by other Russian publishing houses and lithography shops: the Kazan Guberniya administration press, the publishing houses of A. Timofeev, I. Moldavsky, and L. Antonov. Book production in Eastern languages was also carried out by the publishing houses of R. Sagitov and lithography shops of S. Yakhin, M. Yakhin, and I. Abdullin. The last quarter of the 19th century was marked by the rapid growth of Tatar publications. At the end of the century there were up to 140–180 titles of Tatar books published in Kazan annually, with a combined print run of 1.5–2 million copies.

Religious literature was actively published as well. 'Häftiyak' was published with a print run of up to 100 thousand copies, the print run of prayers, oracles, shamails, etc., reached

10,000, 20,00 copies, and more. Religious literature continued to be published in large amounts: it was printed in all of the printing houses of Kazan that accepted orders from Tatar publishers. Such books were always popular in Russia's Islamic nations and thus were systemically reissued. However, secular works, whose print runs steadily grew, began to outstrip religious works. Thus, the print run of 'Self-Study Book for Russians in Tatar...' by G. Vagabov was 5,000 copies in 1874 and 10,000 copies in 1899. The print run of the alphabet book by S. Tagirov totalled 6,000 copies in 1896, while for the alphabet book by K. Maksudi it numbered 3,000, 6,000, and 10,000 copies in 1891, 1897, and 1898, respectively.

Works by Tatar authors or books for Tatars were also printed at the request of Russian publishers. Thus, the owner of the Kazan book firm A. Dubrovin published 'Self-Study Book of the Russian Language' by M. Salikhov (1885, 1897), and the owner of I. Khari-tonov's printing house published a great deal of secular books written by Tatar authors. At the request of the Orenburg governor, the Kazan university press published 'Beginner's Guide to Learning the Arabic, Persian, and Tatar Languages' by S. Bekchurin; at the request of the Vyatka Guberniya's zemstvo a guide to gardening and agriculture by the teacher M. Mansurov was published; the Kazan city дума ordered a translation of Gogol's comedy 'The Inspector General' into the Tatar language, etc.

Figures from the realm of Tatar publishing took into consideration new inquiries from the Tatars and all the Turkic-speaking peoples of Russia when they published books. The Karimov brothers (Mukhammadzyan, Sharifzyan, and Khasan) were among them. They started as booksellers (they engaged in trading up to 1883, then opened a bookstore on Sennaya Square), then they started to publish books themselves, and eventually opened a printing house ('Matbagai Kārimiya' 1900). In addition to the printing house, they opened a lithography shop and a type-foundry where they started creating new fonts ('karimovsky')

and decorative elements. In 1900–1905 their printing house published 508 books with a total print run of 7,032,470 copies [Karimullin, 1974, p. 31].

Kazan printing houses printed fictional and folkloric works by many Turkic peoples of Russia and books written in the languages of these peoples. Throughout the 19th century these books were predominantly printed by Kazan Tatars. From the end of the 70s, for example, works in Kazakh began to be systematically printed in Kazan. The first publisher of such works was the bookseller Sh. Khusainov. In 1866 the university press printed the first book in Kazakh at his request—'Kıyssai Tamindar,' which went through five reprints before 1917 (1882, 1895, 1896, 1906, 1913). Sh. Khusainov reprinted the Kazakh national epic poem 'Er Targin' in 1895 and 1898; his successors did the same in 1909 and 1913. It was first published in 1862 at the request of N. Ilminsky and was republished by him four times (1876, 1879, 1881, 1883). The total print run of all of the editions was 33,800 copies. Khusainov (and since 1905 his successors) published no less than 80% of all of the Kazakh books printed in Kazan before 1917 [Karimullin, 1985, p. 176]. The books in the Kazakh language were published by F. Amashev, F. Kateyev, K. Shamsutdinov, and other Kazan commercial publishers, who also handled their distribution. In the 19th century folkloric works in the Kazakh language were printed as well: 'Kıyssai Kozı-Korpeş' (1878, reissued six times before 1917), 'Kıyssai Tahir' (5 times), 'Kıyssai Zarkum' (twelve times), 'Kıyssai Säedbattal' (five times), 'Kıyssai Kız Cebek' (1894, reissued thirteen times), 'Kıyssa Alman Şolpan' (1896), and others [Karimullin, 1985, pp. 177, 178]. From the beginning of the 20th century Kazan publishers introduced works by modern Kazakh authors.

During the given period Tatar books were published in Saint Petersburg. In the 1880s, at the request of Tatar publishers, shamails and steamship schedules were printed³⁴ by the

³⁴ Book printing in the press of the Academy of Sciences recovered in the Mid-1850s, after the 'Oriental

printing house of the Academy of Sciences as well as that of Stein. As before, works from the scientists of the Academy of Sciences, manifests, decrees, and other official documents addressed to the Turkic peoples of Russia were printed in Kazan printing houses.

In 1894, with the support of Orientalist scholars, a new printing house was opened in Saint Petersburg by I. Boragansky, a skillful Eastern calligrapher and engraver, expert in Eastern and European languages, lecturer on Turkic language and Eastern calligraphy at the University of Saint Petersburg. By the end of the 19th century this printing house had published 60 editions of Tatar books and books on Oriental studies with a total print run of 270,000 copies [Karimullin, 1974, p. 177], including: works by scholars at the University of Saint Petersburg that had been previously printed in Kazan, shamails with aphorisms from the Quran, religious works of a didactic nature, translations of Persian and Arabic poetry, collections of proverbs, legends, etc. From the beginning of the 20th century this establishment started to function under the name of 'Lithography and Printing House of I. Boragansky and Co.' (partner akhun G. Bayazitov). When the 'Nur' newspaper started to be printed there, it was renamed the 'Nur' printing house. In 1901–1905 the printing house published 53 editions of Tatar books, mostly secular, with a total print run of 122,440 copies [Karimullin, 1974, p. 179].

Arabic fonts that were created by the Lazarev Institute of Oriental Languages at the beginning of the 1820s were not used in Moscow until the middle of the 1850s. Later they found use in the publication of 'Practical Guide to the Turkic-Tatar-Azerbaijan Dialect' (1857) and 'Turkic-Tatar and Russian Dictionary' (1864) by L. Lazarev, 'Comparative Chres-

tomathy of the Turkish Language: Osmanli and Azeri Dialects with Appendix, including Dialogues and Proverbs with Russian Translation for Practical Exercises' (1866), etc. In general, Arabic fonts were used very seldom, and many of the institute's works were printed by the Kazan university press.

Sometimes Tatar editions were printed in Moscow at the lithography shop of Abdullovsky and the printing house of O. Gerbek [Karimullin, 1983, p. 98]. Publishers in Moscow, Saint Petersburg, and other cities preferred to place their orders with Kazan printing houses.

In the latter half of the 19th century isolated cases whereby Tatar books were printed by Orenburg printing houses took place: at the Eastern branch of the military press (established in 1832) and at B. Breslin's private printing³⁵house. With the establishment of the printing house of G. Karimov (1900), Tatar books began to be printed on a regular basis. Over a year and a half (before the unexpected death of the owner) the printing house published 27 named publications with a total print run of 52,400 copies [Akhmer, 1909, p. 67]. Between 1901 and 1905 (the printing house was taken over by his son F. Karimi) 114 Tatar books were published with a print run of 275,000 copies, including: the works of F. Karimi, R. Fakhretdin, M. Fayzi, Z. Bashiri, M. Marjani, G. Ibragimov, G. Mangushev, G. Biktavi, N. Dumavi, Kh. Gali, and others [Karimullin, 1974, p. 141]. Some of the works were included in the series 'Nations of

Faculty' of Kazan University was moved to the capital. In addition, lithography was used, as earlier, for the printing of, for example, 'Kratkaya uchebnaya grammatika' ('A concise grammar textbook') by Kh. Faizkhanov (1862), Russian-Turkish and Russian-Persian dictionaries and phrase books commissioned by the General Headquarters, and from the 1850s rare books by orthodox missionaries.

³⁵ Among the publications were the first textbooks of the famous Kazakh educator, teacher, and writer Y. Altynsarin: 'Nachal'noe rukovodstvo k obucheniyu kirgizov russkomu yazyku' ('Introductory Guide for the Teaching of the Russian Language to the Kyrgyz People') and 'Kirgizskaya khrestomatiya' ('Kyrgyz Anthology') (1879), typed in the Russian script and designed for Kyrgyz children studying in Russian-Kyrgyz schools, 'Shartel'-iman' (1894), 'Khatynnar vazifasy' ('Duties of Women' translated from Turkish by F. Karimi) (1899), the calendar 'Zaman' by Sh. Shagidullin, 'Räxbare imlyä' ('Spelling Rules') by Kh. Fayzullin, around 20 publications in the Tatar, Bashkir, Kazakh languages, printed in a Russified script and commissioned by the trustee of the Orenburg Educational District in the late 19–early 20th centuries.

the World,' 'Tatar mäktäbe' ('Tatar School'), 'Besneñ mäktäp' ('Our school'), and others. At the end of the 19th century attempts to organise book printing in Arabic fonts were made in Ufa. From the beginning of the 1900s Tatar book societies started publishing and selling Tatar books: 'Xezmät' ('Work') in Troitsk, 'Cägadät' in Menzelinsk, etc. 'Xezmät,' for example, placed their orders with Kazan printing houses, then, with printing houses in Orenburg. They sold publications in Russian and Oriental languages, including books from Egypt, Istanbul, Beirut, India [Äsami kötep, 1904].

From the beginning of the 1880s book publishing was established in Crimea. The Crimean-Tatar educator I. Gasprinsky, being an author, editor, and publisher, devoted much attention to the printing trade. In 1881 he created a publishing establishment in Bakhchysaray and published an alphabet book that used the phonics method 'Xucaı sibyan' ('Teacher of the youngsters'). It became very popular. Later on I. Gasprinsky established the printing of the Quran, textbooks, fiction books, and organised the first trade union of publishers in Russia (1904).

Despite the rise in printing at the local level, publishers from different regions often turned to Kazan printing houses for help. As before, Kazan Tatar books were widespread among the Turkic speaking peoples of Russia, which is confirmed by the following data. In the latter half of the 19th century 3,242 Tatar books were published in Russia with a total print run of 26,864,000 copies. The average volume of each book was 6 printer's sheets, with a print run of 7,600 copies. 3,162 publications were published by 15 Russian and Tatar printing houses and lithography shops in Kazan. By 1900 the total amount of books printed in Kazan since the start of book printing (1801) was 3,563 Tatar books. In other cities (Saint Petersburg, Moscow, Orenburg, Ufa) this figure was 80 separate books (including 60 publications by I. Boragansky's printing house in Saint Petersburg) [Karimulin, 1983, pp. 155, 161].

The statistics on Tatar books does not include publications prepared by missionaries.

However, taking into consideration the demand for such publications, we will provide some data on them. The preparation of missionary books for Tatars and other Muslim nations of Russia in the latter half of the 19th century was connected with the Brotherhood of Saint Gury established in 1867 in Kazan. The new association regarded books as 'the main tool for spreading and consolidating Christian Orthodoxy among the non-Russians... The dissemination of Orthodox books in non-Russian languages, as was highlighted before, was also necessary because Mohammedanism, which attracted Christian Tatars and other non-Russian Christian people with its influence, relied on the body of its printed books' [Mashanov, 1892, p. 188]. Up to the end of the 19th century missionaries printed translations for Bashkirs, Kazakhs and Kyrgyzs, Azerbaijanis as well as books in Avar, Arabic, Persian, and other languages.

Missionaries actively printed religious books or a moral nature and liturgical books ('Horologion,' 'Psalms,' 'Gospel of Matthew,' stories of church history, church motets, etc.). From time to time they would print textbooks, reference books, popular issues of the 'Alphabet Book for Christian Tatars' (1862, 1865, etc.), 'The First Textbook of the Russian Language for Tatars' (1865, 1898), 'Self-Study Book of the Russian Language for Kyrgyzs' (1861, 1874) by N. Ilminsky, 'Tatar-Russian Dictionary' by an official from the ministry of education N. Ostroumov (1892), 'Russian-Tatar Dictionary' by the inspector from the Orenburg Board of Education A. Voskresensky (1894), 'The Tale of the Fisherman and the Fish' in Kyrgyz, poems by Ya. Yemelyanov that recorded the speech of Christian Tatars of the time, etc. Translations into the Tatar language were made in Kazan (in the Seminary for Non-Russian Teachers and the Christian Tatar School), into the Kazakh (Kyrgyz) and Bashkir languages, in Orenburg (under the tutelage of V. Katarinsky, the inspector of national schools for the Orenburg Region). Translations for Kyrgyzs and Kazakhs were made by the Altai missionaries as well (a Irkutsk and Nerchinsk schools). Translations

made before the end of the 19th century were later reissued. They were not popular among Tatars and other Turkic speaking nations, and this remained the case.

Up to the end of the 19th century most of the missionary books were published in the Kazan university printing house (346 publications in 17 languages) [Gabdelganeeva, 1994, pp. 166, 170]. From the beginning of the 1900s these works were published by the printing house of B. Dombrovsky (Central).

Further development in the book trade was related to the growth of book publishing and book printing. Traditionally, Tatar books were distributed by their publishers. Until 1865 they had no difficulty in selling their wares. With the introduction of 'Temporary Rules on Censorship,' the procedure for acquiring permits to sell books was more complicated. Nevertheless, book selling was quite active. The Usmanov and Yunusov shops on Sennaya Square were the trading centre of Kazan. In 1877, according to the data of the chancellery of the Kazan governor, books were sold in five Tatar stands, and at the beginning of the 1880s they were sold in fifteen. The Kazan censor A. Osipov noted that books in Oriental languages from Kazan were being distributed around Russia, thus interfering with the 'russification of the Muslim Tatars [National Archives of the Republic of Tatarstan, f. 1, inv. 3, file 9077, s. 1].

At this time book selling, which was active at all times, acquired new capitalistic principles and assumed a more organised form. As before, the new generation merchants, taking into account the status of the book market, published a great deal of religious (religious and moral) literature, which was still popular among a certain segment of Tatar society; at the same time, they also published and distributed secular books. The Karimov brothers and Sh. Khusainov were in this category of representatives of the Tatar publishing world. The Karimov brothers sold their own publications and also imported books in Kazan (on Sennaya Square), at Nizhny-Novgorod, Menzelinsk, Simbirsk, and other fairs. There were also many hawk-

ers who distributed books in Kazan, Vyatka, Perm, Orenburg, and other provinces. With enough resources at their disposal, in 1898 they got permission to open a 'Trading house in the form of a partnership under the firm of the Karimov brothers,' thus establishing Russia's first Tatar book partnership.

Sh. Khusainov was a bookseller and a publisher (for a long time he peddled books, in the end of 70s he came into possession of a book stand on Sennaya Square, and by the end of the century he had a book store and was the head of publishing and book-selling enterprise). Indeed, his business was honoured at the Kazan Scientific-Industrial Exhibition (1890). At his order, up to 500 copies of different books worth 6,000 roubles were published annually by the Kazan University printing house and were then distributed in the European region of Russia, as well as Asia and Africa for a total sum of 10,000 roubles [Spisok, 1890, s. 14]. After the death of Sh. Khusainov (1904) the firm worked under the sign 'Xösäenov varislari' ('Heirs of Khusainov'). As before, the owners engaged in publishing activities and book sales and ran stores not only in Kazan but in Ufa, Orenburg, and other places as well.

Besides books in Turkic and other Oriental languages, Kazan Tatars sold books in Russian. This applied not only to famous book firms (Karimov brothers, 'Idrisov, Galiev, and Co,' 'Xösäenov varislari,' etc.) but to smaller traders as well [Gabdelganeeva, 2006, p. 113].

Tatar book trading developed in densely inhabited regions thanks to the activity of Kazan publishers and booksellers. According to the data from 1900–1901, in addition to Kazan, Tatar book stores were located in Orenburg (M. Mukhametsharipov and Sh. Shagidullin), in the Seitov township of the Orenburg District (G. Davletyarov), in Troitsk (G. Akhmarov, G. Daminov, and Kazan publisher M.-S. Musin), in Orsk (N. Nigmatullin), and Perm (Ibatullin) [Vsya Rossiya, 1902, columns 1211, 1217, 1295]. Out-of-town branches of the Karimov brothers, Khusainovs, and others would be opened in these regions later.

The founders of the Tatar book partnerships ('Mägarif,' 'Sabax,' 'Millät,' etc.) that are related to the history of Tatar publishing of the beginning of the 20th century started their work as booksellers. The foundation of the future community of 'Millät' was laid in 1897, when I. Idrisov opened his stand in Kazan (on Sennaya Street, in the Galeev and Apakov block) and received a permit for the printing trade. Toward the turn of the 19–beginning of the 20th centuries the 'Sabach' community came into being, when the brothers M. and V. Akhmadullin, who worked at university printing house, engaged in book publishing and book selling. In 1902 they opened their book stand 'Kötepханäi ibtidai' ('Elementary School Library'). In 1901 G. Kamal opened

Kazan's first bookstore, which served as the launch for 'The Kamaletdinov and Co' partnership in 1904 and which later was reorganized as 'Mägarif.'

The development of Tatar book publishing at the beginning of the 20th century was related to these communities, which opened after 1905 and which later centralised all their production and distribution stages.

Tatar publishing of the latter half of the 19th century developed in new conditions. Changes in Russia's economic and sociopolitical life had an impact on the production, content, distribution, and purpose of new books. The books that were published changed in terms of quality and quantity in response to the demands of the new Tatar and Turkic readership.

CHAPTER 12

The Legacy of Manuscripts

§ 1. Tatar Manuscripts

Marsel Akhmetzyanov

Manuscripts are part of the cultural heritage of Islamic civilisation and are deeply rooted in tradition. Before the appearance of Tatar book printing, all educational literature in Islamic educational institutions as well religious books created by theologians were handwritten. This is why, in spite of the large circulation of the Quran and *Haftiyak*, the tradition of handwritten lists of the Quran and rewritings of the Holy Islamic Book were preserved in the Volga-Ural Region. It is also important to note that Tatar printed works did not fully meet the demands of Tatar society for books, which were extensive and diverse, and this served as one of the primary explanations for why the tradition of rewriting manuscripts lingered on [Akhmetzyanov, 2012, pp. 126–146].

Until the 1860s manuscripts of the Islamic Tatars played a key role in education and cultural progress. In Tatar madrasahs there were calligraphers who were skillful masters of the Arabic script working on demand. For example, one of the best known scribes was Muhammad-Gali Makhmudov (1824–1891), who was born in the village of Sulanger in Trans-Kazan. At the age of 19 he was invited to teach calligraphy to Oriental studies department of Kazan University [Tatar *ädäbiyatı*, 1985, part 31].

The poet and educator Gabdrakhim Utyz Imyani (1754–1834) was one of the best calligraphers of his time, as evidenced by his signature works. He rewrote books in *Nastaliq*, a decorative style of calligraphy. G. Utyz Imyani gathered around him and prepared a whole pleiad of disciples, professional calligraphers, among which his son Ahmadzhan (?–1849), sons-in-law Ahmadzhan ibn Shamsad-Din and Ahmadzhan ibn Fadlallakh, and others were

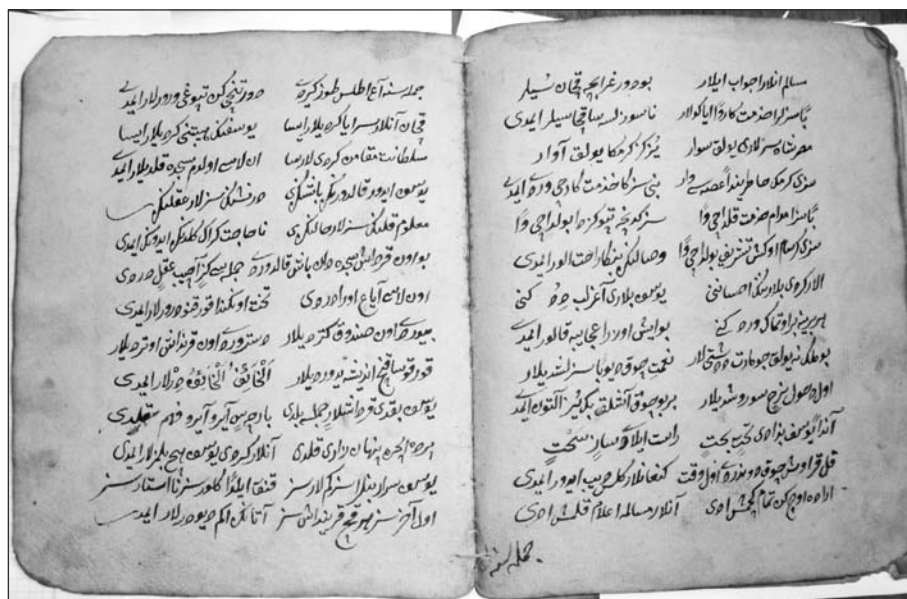

the most prominent. 'Oh, if only manuscripts written in the beautiful handwriting of Abdrahim hazrat and his disciples were collected in one place and be kept as is befitting,' as R. Fakhretdin dreamt at the time [Rizaetdin bine Fäxretdin, 1901, part 15–20].

The following dominated the handwritten legacy of the Tatar calligraphers: religious educational literature, prayer books, letters, poetry, records of the literature heritage of past ages [Akhmetzyanov, 1997; 2000; 2001; 2011; Ähmätcanov, 1998, 1999; 2000; 2011a; Fätxi, 1986, 2007; Gosmanov, 1994; 2004; Märdanov, 2008; 2009–2009a; 2010; Fäezxanov Xösäen, 2011].

A study of manuscripts by type revealed that in the 19th century most Tatar manuscripts were collections of different materials. Particularly, in addition to Tatar literature, folk and everyday inscriptions in manuscript collections, there are also Islamic prayers in Arabic.

Along with 19th century works, manuscripts preserved lists of works of writers from past centuries, *munajats* (poems) by unknown authors, *beits*, poems, stories, and ancient *dastans* in the prose of Medieval times. We shall focus on these in more detail.

The epistolary genre of folklore includes numerous handwritten texts of Tatar *beits*, dedicated to the 'Russian-Franco war of 1812,' 'Russian-Turkish war of 1853–54' as well as the 'Beit on the Leader of Dagestan nations of Shamil,' 'Beit on the Russo-Turkish war of 1878–79,' and 'Beit on the census of 1897' [Tatar Folk Arts, 1983, pp. 39–50]. Very popular was the *beit* 'On Seven Girls,' which was studied in the madrasah of Kargaly near Orenburg for seven years (until 1840) and which were accidentally disclosed [Tatar Folk Arts, 1983, pp. 155–156].

Kul Gali
'Kiyssai Yosyf'.
Manuscript text.
List, end of the
18th century.

Very popular among the people were beits about the poet Aqmulla and on various tragic accidents, particularly the 'Beit on Zulhabiri,' 'On the Flood in the Village of Nizhnyaya Ura in 1818,' etc. [Czentr, col. 39, items Nos.2895, 2838, 2826, 2811, 2797, 7076].

Such handwritten collections also contained the poetic obituaries 'Märsiya' and other genres ('Obituary of Ismagil Kyshkary,' 'Obituary of Muhammed Shakir son of Seyfulla,' 'Obituary of the Poet Fakhretudin Nurlati,' 'Obituary of imam Fattakh,' etc. [Czentr, col. 39, items Nos.2768, 2797, 2811, 2826, 2838, 2895, 2896, 3021, 3029].

F. Faseev, a well-known linguist and researcher of texts of the Tatar medieval literary monument 'Qıssai Yosıf,' gathered data on the existence of more than 160 lists, most of which were dated to the 19th century [Kol Gali, 1983, pp. 426–485]. Today more than 300 items from historical written lists of 'Qıssai Yosıf' are preserved in the archives of different academic centres [Ahmetzyanov, 2009, pp. 261–263].

It is important to note that some of these works were issued only in handwritten forms. Among this group of memorials especially noteworthy is the medieval dastan 'Kaharman kitabı' that was preserved only in the manuscript lists of the 18th to the 19th centuries [Czentr, col. 39, items Nos.5341, 6614, 7052,

etc.]. Some of these works were subsequently published. For example, the poetical monument of the 14th century 'Dastan Cömcömä' initially up to 1870 was known only in manuscript lists [Ahmetzyanov, 2009, p. 263].

In the collection of ancient manuscripts held by the Research Centre of the Written and Musical Heritage of Ibragimov Institute of Language, Literature, and History of the Academy of Sciences of the Republic of Tatarstan there are hundreds of Tatar literary monuments of the 19th century: 'Qıssai Yosıf' [Czentr, col. 39, No.3041 (1830), No.3042 (1830)], 'Yartı alma' by Kul Sulayman [Czentr, col. 39, Nos.2774, 2778, etc.], 'Qıssai Ibrahim' [Czentr, col. 39, Nos.2778, 2785, etc.], 'Kisek-bash kitabı' [Czentr, col. 39, Nos.2785, 2824, etc.], 'Tahir-Zöhrä' [Czentr, col. 39, Nos.2811, 7076, etc.], 'Buz eget,' No. 2774, etc.], 'Ana belän ugıl' ('Mother and son'), Nos. 2831, 2863, 3254, etc.], 'Tulek kitabı,' Nos. 7380, 7381], 'Möxämmädiya,' Nos. 425, 426, etc.], 'Qıssai Säed Battal gazıy,' No. 437, etc.], etc.

According to M. Usmanov, one of the most popular manuscript works of the 19th century is 'Tävarihi Bolgariya' by Muslimi, written not later than 1827 [Czentr, col. 39, items Nos.36, 565, 593, 2463, 3104, 3274, 3323, 4196, 4458, 5146, 5148, 7197, 7350; Dmitrieva, 2002, pp. 78–81; Usmanov, 1972, p. 134].

Works scribed by calligraphs and shakirds of madrasahs form a group of their own and were created even after the appearance of printed text. For example, the work of Tadzhetdin Yakchigulev 'Risälai Gazizä' (1796) was published in 1850 but was widely disseminated among Tatar readers in its handwritten form [Czentr, col. 39, items Nos.60, 317, 532, 748, 1846, 1953, 2084, 2268, 2465, 3089, 3129, 3432, 3520, 3512, 3534, 3878, 3906, 6404; Dmitrieva, 2002, Nos. 1896–1902].

Thus, books rewritten by Tatar calligraphs were a form of art, and their work was highly appreciated by the literate population. Such works were widespread among the shakirds of madrasahs, which to a significant extent were responding to the demands of Tatar schools for educational books. Until the 1860s the rewriting of manuscripts was active, and in the post-reform period it was still a regular practice, dropping off dramatically at the beginning of the 20th century.

§ 2. Handwritten texts in Arabic.

Rezeda Safiullina-Al Ansi

Most part of the Tatar manuscripts in Arabic consist of works on religious subjects: different notes, supra notes, compendiums, and other teaching aids for madrasahs³⁶. In later stages of Arabic literature generally a theological and philological complex prevailed along with standard scholastic works. Works on natural history, mathematics, and philosophy were no longer created in later stages and were rarely rewritten. Nevertheless, the repertoire of works by Tatar-Muslims in the 18–19th centuries is universal and embraces theological as well as the hard sciences and the humanities: astronomy and mathematics, natural history and medicine, philosophy and history, grammar and lexicography. Works of prominent thinkers of the East were widespread: al-Farabi, Ibn Sina, al-Ghazali, Ibn al-Arabi, Saadi, Khafiz, et al.

A certain part of this manuscript heritage comprises the non-published works of the

Tatar authors G. Utyz Imyani, G. Kursavi, Ş. Märçani, and many others.

Tatar authors were fluent in the language of Islamic scholarship and preferred to use it to express their views, as by that time Arabic corresponded more to the study of theoretical issues in terms of terminology and style and could offer ready terms and forms. Many Tatar researchers and theologists wrote in Arabic: G. Utyz Ilmyani, G. Kursavi, Ş. Märçani, R. Fakhretdinov, M. Chokry, D. I. Tuntari, and others. Religious and social disputes on local matters and religious issues, arguments of Dzhadidists and Kadimists on pedagogical issues were all posed in Arabic.

In the Islamic East the clerical establishment defended its ancient tradition of copying books by rewriting them as they regarded the printing of holy texts as apostasy. Handwriting flourished and developed in the Arab East, Iran, and Turkey up to the middle of the 19th century. Nevertheless, in the 19th century the Arabic manuscripts is displaced by the printed book and new literature and therefore becomes the subject of research first outside of the realm of Islam. Long before the appearance of printed book in Islamic countries, book printing in the Arabic script was established in Europe³⁷. With

³⁶ The contemporary collection of Arabic manuscripts of Kazan University, whose Oriental funds and collection of manuscripts are the largest not only among the Kazan collections but also analogous state collections in the Russian Federation, with over 13 thousand codices, around 6 thousand of which are works in the Arabic language [Garaeva]. By 1980 the State Archive of the National Archive of the Republic of Tatarstan contained 5 Arabic manuscripts; the archive of Ibragimov Institute of Language, Literature, and History, 15; the State Museum of the Tatar Autonomous Soviet Socialist Republic, 34; the Library of the Marjani Mosque, 156; and the private collection of Z. Maksudova, 229 [Khalidov, 1982, pp. 220–221].

³⁷ The Arabic alphabet was first used in 1486 in a lithographic publication in the city of Mainz in Germany, 36 years after book printing appeared in Europe, and Arabic letters were cast for the first time in 1514 in

the opening of the Asian printing house, Kazan becomes a centre of book printing and Russia's first publisher of Islamic books. Arabic editions amount to more than half of all printings of Tatar works in the first half of the 19th century.³⁸ According to our joint catalogue of Arabic books printed by the Tatars based on our data base (Microsoft Access)³⁹ about 4,000 books in Arabic have published from the beginning of book printing in Arabic up until 1917⁴⁰.

However, the quantity and selection of the printed works in Arabic did not meet the demands of the Tatar Muslim community. The tradition of rewriting religious texts continued to play an important role. Thus, lists of the Quran and tafsirs or works on Quranic exegesis held a high position among the handwritten religious books, among which there are both canonised works of medieval authors and Tatar tafsirs.

Incomplete lists of the Quran were widespread among the Tatar Muslims. So-called sennight (seven days) most often can be seen in manuscript collections and in black letter archives—that is, one-seventh of the Qura—'Haftiyak şäerif' ('Sacred Haftiyak'). This collection consists of the introductory chapter 'Fatiha' ('opening') of the Quran, followed by the first five verses of the second chapter 'Bakara' ('The

Cow') of the Quran, the 36th chapter, 'Yasin,' the 48th, and the rest in the right order. A 1/60th of the Quran 'Xizbel-äg'zam äl-möbäräk' had a wide distribution among Tatars ('Great Blessing part'), composed by Ali b. Sultan Muhammad al-Kari (1014/1605), as well as collections of chapters of the Quran's 'Suvar-min äl-Kor'än,' 'Ingham süräse,' 'Kähef süräse,' and others. But lists and publications of a surah 'Yasin' were the second most popular after Haftiyak. This surah was read at funerals and commemorations, Tatar shakirds wearing maktabas proceeded to its reading—Islamic primary schools in the first year of education, just after mastering the alphabet 'Iman sharty' ('The terms of faith'). And in the course of the second year of training, as J. Validi wrote, 'Islamic alphabet was replaced by the seventh part of the Qura—so-called 'Eftiek'—it is also a separate book. In his third and fourth years the student carried the entire Quran with them...' [Validi, 1992, p. 16].

Among Tatars, as regards books in Arabic, an important place was held by works on Russian philology, grammar, lexicography, rhetoric. These can be figuratively divided into two main groups: grammatical works by medieval authors and textbooks on the Arabic language created by Tatar authors in the late 19th century into the early 20th century.

Prayer books make up the bulk of the handwritten heritage—a rich layer of religious literature widely available to the Tatars. This is a collection of all kinds of dhikrs, wırdı, hizbs, and comments on them, prayers for the Prophet, as well as individual, group, ritual, celebratory works, which were dedicated to specific events, anticipated certain actions, etc. [Arabic manuscripts, 1986, pp. 167–180].

Tatars often rewrote published books, in particular small prayer books and other small religious texts. The collection of prayers 'Dälyail äl-häyrat' ('Evidence of good deeds'), 'Ävrade fätxiya' ('Victory vırdı') authored by Mir Sayyid Ali b. Shihab al-Hamadani (714/1314–786/1384) [Sobranie vostochny'x rukopisej, 1951, Vol. 3, p. 101], and also prayers 'Dogai cännät äl-äsma' ('Prayer paradise names') authored by Zainuddin Abu Hamid Muhammad al-Ghazali (1058–1111), and others were especially popular.

the Italian city of Fano [Materialy' simpoziuma, 1996, pp. 109–141].

³⁸ On the subject of Tatar book printing in general, it is fair to say that even by a rough estimation every third and sometimes even fourth book published in the province in the 19th century at certain periods of time was in the Tatar language [Safiullina, 2003, p. 55].

³⁹ Bibliographic sources (lists, directories, catalogues) and archive documents (journals, reports, records of the Kazan censors and the censorial committee, and also card catalogues of libraries) served as the basis for composing the central catalogue and database. For this period of research (2001) familiarisation with the publications de visu has enabled the number of publications preserved in main book depositories to be determined: The Lobachevsky Scientific Library of Kazan University contains over 1,000 Arabic publications; the Depository of the Department of Manuscripts and Textual Criticism of Ibragimov Institute of Language, Literature, and History, more than 300; and the Scientific Library of the KPTI KSC RAS, over 250 [Safiullina, 2003, p. 55].

⁴⁰ 1,463 books were published in all languages in all guberniyas of Russia between 1801 and 1855 [400 let russkogo knigopечатaniya, p. 291].

The lists of popular Islamic collections of prayers for the Prophet—'The Evidence of Good Deeds' ('Dälyail äġ-häyrat') composed by a Maghreb Sufi Abu Abdullah al-Jazuli (died in 1465)—are particularly beautiful manuscripts. The widespread idea among Sufi circles regarding the need to focus on the personality of the Prophet and the possibility of gaining miraculous powers by reading 'Dälyail äġ-häyrat' led to the tradition of adorning the manuscripts of this collection with calligraphy and decorative elements as well as the inclusion of unique images: these were executed in the colour scheme of the two holy cities (Mecca and Medina). There are several manuscripts among the Kazan list that stand out due to the fine work of their masters, including those which have a 'detailed' plan of the Sacred Mosque (Masġid al-Haram) in Mecca: the image of Kaaba, the location of the Well of Zamzam, Maġām Ibrahim, four gates of the Mosque and others. [Garaeva]

Shamails were also very popular among Muslim Tatars of the Middle Volga and the Urals Regions. 'Shamail,' translated from Persian, means a sacred image, it is a panel picture with a symbolic image and a calligraphic text commentary. They represent a small format of a manuscript with selected surahs or ayats of the Quran and prayers. In Turkey these manuscripts are called the sixth surah of the Quran 'Inġham sherif' [Titovets]. Handwritten astronomical calendars specifying lucky and unlucky days were quite widespread [Katalog].

Both the influence of the eastern Islamic tradition and local influences can be traced in the design of Tatar manuscripts. Handwritten lists made in the Volga Region are recognisable by their standard format and cover decor, a handwriting, ink made from local ingredients, the specifics of the text decoration, and their paper that was mainly produced in Russia. The topics of these manuscripts primarily reflect the standard range of theological writings, which were studied in madrassahs by shakirds. The methods of teaching in the madrassahs as well as the high cost of printed books determined the copying of works that were to be learned by shakirds [Garaeva].

Modesty and rigor are inherent in the external design of Arabic manuscripts. The adornments are more common at the beginning of the manuscripts. The pages of certain books are decorated with coloured frames (black and red ink). The frames with inscription in the first and at the start of the second surahs of the Quran have a more diverse decoration: architectural motifs (domes of the mosques), frames with red and black triangles, and geometric designs of a symbolic character are used for them. At the beginning of the works ornamented or simple writing of the traditional formula 'In the name of Allah, Most Gracious, Most Merciful' is placed (*bismil-l-lyakhi-r-rahmani-r-rahim*), in abbreviated form, 'basmala.'

Most of the books are written in a local variant of popular Arabic handwriting *naskh*, more precisely, at the confluence of its horizontal rigor with rapid implementation *taalik*, as a result there is cursive, the most common *Nastaliq*. The most common of the manuscripts is the use of the black and red homemade inks. Red ink is used to write key words and phrases as well as for overlining. The red ink is used for the names of surahs, juzs, and khizbs⁴¹ in the Quran⁴².

Scholars note that Tatar manuscripts in Arabic are created by more calligraphic handwriting. The evidence of this is the numerous lists of the Quran made by clear *naskh*.

The word-based translation was typical of tafsirs (the original text was written horizontally, and the translation was inserted under at an incline), but texts of different sizes with the word-based translation are common in other types of manuscripts as well. The design of the text (word-based translation) comes from Persian manuscripts and was continued in Turkish translations.

Today collections of manuscripts in Arabic are featured in endowments that any library is proud of. The library collections in Russia, CIS countries, Europe, and the Eastern countries include a significant number of manuscripts written by prominent scientific and cultural figures of Tatar origin.

⁴¹ Juz' is 1/30 part of the Quran.

⁴² Hizb is 1/60 part of the Quran.

§ 3. The Persian spiritual heritage in Tatar Culture

Alsu Arslanova, Salim Gilyazutdinov

For many centuries the Volga Tatars were strongly influenced by Iranian culture, in particular, Persian classical literature, which has enjoyed great popularity among this group.

A very extensive subject of Persian manuscripts held in various funds (The Department of Manuscripts and Rare Books of Lobachevsky Scientific Library of KFU; the Research Centre of the Written and Musical Heritage of Ibragimov Institute of Language, Literature, and History of the Academy of Sciences of the Republic of Tatarstan; State Tatar Folklore Centre of the RT Ministry of Culture; the Department of Manuscripts and Rare Books of the Bulgarian State Historical and Architectural Reserve Museum). The preferences of the Tatar reader can be gleaned from the composition of these funds. There are works on astrology, astronomy, mathematics, logic, medicine, theology (teachings and rituals of Islam, dogmatics, eschatology), religion and the Quran [tafsirs, the art of reading the Quran (tajwid), legends (hadiths), collections of prayers and their interpretations, the history of the prophets, religious ritual, Sufism], history, jurisprudence (fiqh), grammar and lexicography (dictionaries), linguistics, poetics and poetry, geography, politics, ethics, magic, etc.

The Lobachevsky Scientific Library of Kazan Federal University is one of the largest and richest libraries in Russia along with the book depositories of Moscow and Saint Petersburg. Besides printed books, these contain valuable handwritten holdings. Among them one of the first places, both in the number of monuments and their cultural and scientific value, belongs to the collection of manuscripts in Persian. Currently the Fund of Persian Manuscripts of the Lobachevsky Scientific Library has 736 separate holdings, the details of which are included in the list of inventory books. Among the Persian manuscripts there are manuscripts in Arabic, Turkish and vice versa; assembled manuscripts (sometimes there are madjmu'ats) containing several works in two or three languages. Persian manuscripts constitute approximately

5%–10% of the total East collection and cover a huge chronological period—from the 14th century to the beginning of the 20th century. The existence of prints of the owner in manuscripts indicated that there were private collections of Persian manuscripts of G. Galeev-Barudi, Ş. Märcani, Salah al-Din b. Ishaq al-Kazani, Ha-sangat Gabashi, and others.

Geographically, the manuscripts represent the following regions: The Volga Region, Central Asia, Afghanistan, Turkey, Iran, Iraq, etc., indicating the close cultural and economic ties between the Tatar people with these countries. The names of the scribes are not specified in many manuscripts. There are manuscripts with coloured miniatures, drawings, carefully crafted unvanami and illuminations, schemes, maps, and tables.

Indeed, not only did the Persian language serve as the language of poetry, it was also the language of science. Two works, for example, should be emphasised among writing on grammar—the anonymous 'Mukaddimah-yi bedan' and 'Sharh-Abdallah.' The first of them is a short treatise on Arabic grammar and primarily addresses names formed from verbal roots: verbal nouns (masdars), participles, etc. The second one consists of 22 chapters ('babs') of comments on Chapter 2 ('fasl'), Arabic grammar works 'Al-Mu'izzi,' which is attributed to 'Izz ad-Din Zanjani (circa 1257). Hence, its second name, 'Sharh-i Bist-o-do bab-i Mu'izzi.' Both books were textbooks of the Arabic language used in Tatar madrasahs; therefore, they were copied many times and repeatedly published in Kazan.

Dictionaries constitute a certain part of the collection of Persian manuscripts. This included the Persian-Turkish dictionary of the 16th century 'Lugat-i Ni'matallah' by Ni'matallah ibn Ahmad ibn Mubarak al-Rumi (the list of 1731). The author (who died in 1561—1562) was a judge in Aleppo and Baghdad and also lived in Constantinople. He belonged to the Sufi order Naqshbandi. The dictionary was composed not later than in 1540–1541 and includes a wide

range of Persian language vocabulary words used in Persian classical literature. Besides the dictionary of infinitives, there is a brief grammar outline of the Persian language and a dictionary of names.

The list of the 1825 Persian-Turkish dictionary 'Sikhah-i 'adjab' is of interest (composed in the 16th century) by Moulan Taqi ad-Din Muhammad ibn Pir Ali, who wrote under the pen name Barkawi (died in 1573). The dictionary has a general vocabulary of the Persian language as well as some Arabic words that are included in the Persian literary language. The collection of the University of Kazan has a list of 19th century explanatory dictionary 'Kashf al-lugat' (written not later than 1608) by 'Abd ar-Rahim b. Ahmad Suri, or 'Abd ar-Rahim ibn Sheikh Ahmad, also known as Sur-i Bikhari (born in the early 16th century in the Indian state Bihar), where Sufi terminology is explained along with the standard vocabulary of the Persian language. The objective was to facilitate an understanding of the vocabulary of the Sufi works. The author tried to take into account the experience of predecessors and the demands of contemporaries. One of the most famous works is the explanatory dictionary of rare and infrequent Persian words, 'Farhang-i Jahangiri'⁴³ (a list of the 19th century), which contains as illustrative material many fragments from the works of Persian poets—Ferdowsi, Shahid, Farrukhi, Anvari, Khaqani, Sanaa, Susanne, Amir Khusrow, and others. The peculiarity of the dictionary is that there are select interesting synonyms of individual compound words denoting one or another concept.

The Farsi-language collection of the University of Kazan has manuscripts containing valuable works on history. They mainly relate to the history of Central Asia, the Near and Middle East. This is a richly illuminated list of 1856 of writings by Fakhr ad-Dina Abu Suleiman Da'ud ibn Abu-l-Fazl Muhammad Banakati (died in 730/1329–1930) 'Rauzat uli-l-albab fi tawarikh

al-akabir va-l-ansab' (1317–1318)—usually called 'Tarikh-i Banakati,' telling the story of Adam to the (official) accession to the throne of Abu Sa'id in 717/1317. Most researchers believe that the work is primarily an excerpt of 'Jami at-Tawarikh' by Rashid al-Din, besides, perhaps, a part of the reign of Uldjait, to whom it was dedicated. In general, we can talk about the importance, the large factual and historiographical significance of the work of Banakati for the study of world history.

The List of 1876 'Tarikh-i A'sam al-Kufi' is an essay on the history of the Caliphate from the accession to the throne of Abu Bakr to the death of Musta'sin (866). This is the history of the first successors of Muhammad and Arab conquests in a Shiite interpretation. The author of the Arab original of the 10th century is Vadja Ahmad ibn A'sam al-Kufi (died around 926–927). Translator is Muhammad b. Ahmad Mustai-yu Herevi. The work was written in the 10th century. The translation dates to 1199–1200.

The Kazan University Scientific Library has a list of 19th century major works 'Tarikh-i 'Abdulla-Khan' by Hafiz-i Tanysh (written between 1584–1590), which presents in detail the political history of Central Asia, Kazakhstan, and neighbouring countries of the 16th century. The author of this rich work in terms of the variety of factual material was Hafiz-i Tanysh ibn Mir Muhammad al-Bukhari (died in 1588–1589), a talented historian and a poet of medieval Bukhara.

The Bukhara list of 1857 of the World History 'Mir'at al-'alam' ('The Mirror of the World') by Shaikh Muhammad Baka b. Ghulam Muhammad Saharanpuri (born in 1037/1627–1628; died in 1094/1683). World history before the days of the author, or rather of 1078/1668—that is, until the reign of the Great Mogul 'Alamgir (1069/1659–1119/1707), to which 'The Mirror' is dedicated. The scribe is unknown.

The lists of 1832 and 1839 of the work 'Tazkira-yi Mukim-Khani' of an historian of the 18th century Muhammad Yusuf Munsha bin Hajji Bak Balkhi, containing important information on the history of Central Asia, in particular that of the Shaybanidov and Dzhanidov dynasties (Ashtarkhanids). The author wrote

⁴³ The author was Navvab Jamal ad-Din Hossein Indju ibn Fakhr ad-Din Hasan or Jamal ad-Din Hossein Indju ibn Fakhr ad-Din Hasan Shirazi. It took 30 years to compile the dictionary, which was completed in 1017/1608–1609.

this essay at the request of the Balkh governor Muhammad Mukim-khan (1114–1119/1702–1707), which was named after him. The book is primarily devoted to the history of the last dynasty, especially that of its representatives who were linked with Balkh. The writing is a valuable resource for the study of political, social, and to some extent the cultural history of Central Asia, primarily the Balkh Region of the 16th century. Until and including the 19th century the essay was one of the most widespread historical works in Central Asia. The scribe for the list is Atalik bek b. Zu-l-Fakar ash-Shik Akabashi Kungrat.

The list of the 1824 work 'Tuhfa-yi isna 'ashariya' by Hafiz Ghulam Ali b. Shaikh Kutb al-Din Ahmad b. Shaykh Abu-l-Fayz-i Dikhla-vi (1159/1746–1239/1824) is dedicated to a presentation of Shia Islam beginning with the Sunni stance in respect of Shia history over 12 centuries of Hijra to the sources of origin, propagation methods and doctrine, with an emphasis on provisions that are contrary to Sunni Islam. This is an extensive polemical treatise against Shiites who recognise 12 imams and against a range of sects affiliated with them. The author is known as a writer, teacher, and reformer. The scribe for the list is Ahmad Valid Sheikh Najibullah Makhdum-zade.

In the field of astronomy a comment entitled 'Zidj' by Ulug-Bek—"The Astronomical tables of Ulug-Bek"—in the list of 1732 is of great value. The author is a ruler of Maveran-nahr and Iran, the grandson of Timur, the organiser of the Samarkand observatory. Al-Rumi, al-Kashi, and al-Kushchi took part in compiling the tables.

'Sharkh-i bist bab dar ma'rifat-i asturlab' by Nizam al-Din al-Bidzhin (the list of 1778). The author was one of the representatives of the astronomical school of Ulug-bek. The explanations to the essay of at-Tusi 'The Twenty Chapters on Teachings of the Astrolabe' are given in the treatise. The treatise was very popular, and a large number of its lists survived.

Among the handwritten books on Sufism and Sufi hagiographic literature we may note, for example, lists of works whose authorship and time of writing and rewriting are known.

The full list of 762/1360. Mirsad al-'ubbad min al-mabda' ila-l-ma'ad' ('The Way of the Slaves [of Allah] from this Life to the Future'). The full list of 897/1491. 'Tardjuma-yi a'varef al-ma'aref' ('The translation of "The Lights of Guidance and Key to Satisfaction"') by Mahmud b. 'Ali al-Kashani. The translation of a well-known work on Sufism, originally written in Arabic, which was done by Shihab ad-Din b. 'Umar Muhammad as-Suhrawardi (died in 632/1234). The full list of 901/1495. 'Fasl al-khattab fi-l-mukhazirat' ('The Clear Speech'). The author is Muhammad b. Muhammad b. Mahmud al-Bukhari (Muhammad Parsa) (died in 822/1419). The essay is a complete encyclopedia on Sufism, all matters of Islamic religious doctrine, religious rites, dogmatic and philosophical sects relating to the Sufi doctrine. The full list of 1006/1597 was rewritten in Kabul 'Nuzkhat al-arvakh' ('Delight for souls'). The author is Rukn ad-Din b. 'Alim al-Khusayni, known as Mir Fakhr as-Sadat Husayni. The full list of 1092/1681 'Shatkhayat' ('Ecstatic sayings') by Abu Yazid (Bayazid) Tayfur ibn 'Isa ibn Adam ibn Surushan al-Bistami (died in 875 or 878). The incomplete list of 1101/1689 'Tazkirat al-auliya' ('The Menology') by Farid ad-Din Muhammad ibn Ibrahim 'Attar, a famous Sufi poet. The full list of the turn of the 18–19th centuries. 'Nafakhat al-ons min hazarat al-Kods' ('The Fragrant Trends of Spiritual Closeness from the Heights of Holiness') by Abd ar-Rahman b. Ahmad al-Jami (born in 817/1414, died in 898/1492). The incomplete list of the 18th century. 'Masa'il-i Rakhat al-kulub' ('The Problems 'Rahkat al-kulub'). The full list of the 18th century. 'Mafatih al-a'dzhaz fi sharkh-i golshan-i raz' ('The Keys from the Miraculous in the Interpretation of 'The Pink Flower Garden of Secrets'). The full list of 1250/1834, rewritten in Baghdad, 'Kanz al-hidayat al-bidayat va-l-nikhat' ('The Treasure of Secrets for Revealing the Initial and Final Stages of the Mystical Way'). The author is Muhammad Bakir b. Sharaf ad-Din al-Lakhuri Hussaini. The full list of the 1244/1828, rewritten in Istanbul, 'Barakat-i Akhmadiyya va zubdat al-makamat' ('The Blessings of Ahmad and the Top of Steps on the Way to Perfection') by Ahmad 'Abdallah al-Faruki al-Naqshbandiyyah

as-Sirkhindi. The complete lists of the first (1227/1812) and the second (the first half of the 19th century) volumes 'Kimiya-yi sa'adat' ('The Alchemy of Happiness'), Abu Hamid Muhammad b. Muhammad b. Muhammad al-Ghazali (died in 505/1111). The full list of the end of the 18th century. 'Minkhadzh al-'arifin' ('The Path of Those Who Learned the Truth') by Sayyid 'Ali b. Shihab ad-Din Muhammad al-Hamadani, a known Sufi figure, religious leader, and preacher of Islam in Kashmir and Badakhshan (died in 786/1385).

One more of the two largest Kazan collections of Persian manuscripts belongs to the Research Centre of the Written and Musical Heritage of Ibragimov Institute of Language, Literature, and History of the Academy of Sciences of the Republic of Tatarstan. This collection is new (its establishment was launched in October 1939).

Of the precisely dated manuscripts of this collection, the most ancient dates to the 14th century ('Murshid fi-l-Khisab,' the date of correspondence is 795/1392–1393). It was rewritten in Central Asia. Of the manuscripts written in the Volga Region, the oldest dates to the 17th century ('Tardzhuma-yi Mukhtasar al-Vikaya,' the date of correspondence is 1692). The most recent dates to the 20th century ('Savanikh-i safar-i Hijaz' by Baha' ad-Din 'Amili Bahai, the date of correspondence is 10 January 1915). However, more than 90% of the manuscripts were rewritten in the 19th century.

The topic of Persian works in the fund is also quite extensive and includes biographies of Sufi sheikhs, treatises on grammar, lexicography (dictionaries), poetics, history, geography, astronomy, mathematics, medicine, music, ethics, physiognomy, and others.

The archive has a wide range of works written by such famous poets of Iran as Ferdowsi (323/934, died between 411/1020–442/1030), Khakim Sana'i (died around 543/1150–1151), Farīd ud-Dīn 'Aṭṭār (1120–1229); Jalāl ad-Dīn Muhammad Rūmī (1207–1273); Sa'di Shirazi (died in 1292); Sharaf ad-Dīn 'Alī Yazdī (was alive in 693/1295–1296), 'Abd ar-Rahman Jami (1414–1492); Baha 'al-Din' Amili Bahai (953–1030/1547–1641), Firishta, Muham-

mad Qasim Hindushah Astrabadi (was alive in 1033/1626), Sufi Allahiyar ibn Allah Kuli (died in 1133/1720–1721), Abu al-Qadir Bidil (1644–1720), Shaykh Mahmud, Baba Fagani (died in 925/1519), and others.

As regards poetic works, a small poem, 'Yiak Khikayak' ('One Story'), written by an anonymous author, should be noted, which describes an episode from the life of the Prophet. In terms of popularity the poem trails only 'Pand name' ('The Book of Spiritual Instruction') by 'Attar.

Prose is represented mainly by the world-famous essay 'Gulistan' ('Rose Garden') by Sa'di Shirazi (died in 691/1292) as well as its famous 'Bustan' ('Orchardings') and 'Pand name.'

The works of a Central Asian poet Sufi Allahyara, who wrote both in Turkish and Persian, were widespread among the Tatars. His poem 'Subhat al-adzhizin' ('Support for the Weak'), written in the Turkic language, was especially popular. The comment on the work by Tadj ad-Din Yalchygul 'Risala-yi Gaziz' had numerous editions in Kazan. His poems 'Murad al-'arifin' ('The Goal of Those Who Have Learned (God)') and 'Maslak al-muttakin' ('The Way of the God-Fearing'), written in the Persian language and repeatedly published in Kazan, were no less popular.

Among the manuscripts on religious topics, literature of the Quran stands out: comments (tafsirs) on the Quran; reading rules (tadjiwids), and the magical properties of the Quran. The most popular among Tatars was a tafsir on the Quran by Yaqub Charkhi (died in 1391). In addition, well-preserved lists of major work of Kamal al-Din Husayn ibn 'Ali Wa'iz Kashifi (died in 1504–1505) 'Mavakhib-i 'aliya' ('Great Talent'), also known as 'Tafsir-i Husaini,' in two volumes is of interest. Among the works devoted to the rules of reading, we can note two treatises of Hafiz Dust ibn yadgar Vaziri al-Khⁱⁿarazmi (lived not later than in the Mid-17th century): 'Madjma' al-garaib' ('The Collection of Curiosities') and 'Madjma' al-fava'id' ('The Collection of Benefits'). Persian translation of the Arab work 'Durr an-Nazim' ('The Beaded Pearls') by 'Abdallah ibn Asad al-Yafi (died in 1362) are devoted to the magic properties of the Quran.

Sufi literature is wide-ranging in terms of its thematics. In this respect worthy of note are 'Kimiya-yi Sa'adat' of Imam Ghazali (1059–1111), 'Maktubat' of Imam Rabbani and his son Khvadji Ma'suma, 'Zubdat al-khakayik' of 'Aziz Nasafi (died in 1262–1263), 'Tuhfat al-'Ushshak' of Khalili Mavlavi (died in 1551), 'Margub al-Kulub' attributed to Shams ad-Din Tabrizi (died in 1247–1248). The last three lists are of great interest as that they were rewritten by Gabderahim Utyz Imyani. Among other works we should note the munajats of authors such as 'Abdallah Ansari (1005–1088) and Ahmad Yesevi (died in 1166–1167), which were popular among the Tatar people.

The works on Fiqh are presented by quite widespread 'Chakhar fasl' and 'Mukhimmat-i muslimin.'

Among shakirds of madrassahs in the 18–19th centuries there was a popular comment by the Tatar scholar 'Ubaydallakh Bulgari (alive in 1726) 'Sharkh-i 'Avamil al-mi'a' to the essay on Arabic grammar 'Avammil al-mi-a' by 'Abd Abd al-Qahir al-Jurjani (died in 1078) written in Persian.

G. Utyz Imyani left a significant written legacy in the Persian language⁴⁴. Being in Bukhara, he compiled two explanatory dictionaries in the Persian language: 'Kashf al-lugat fi Hall mushkilat 'Jami' ar-rumuz' (The Disclosure of Words of the Time of Difficulties 'Jami' ar-rumuz' by Muhammad al-Qukhistani (died in 1554) and 'Lugat al-alfiya' ('The Dictionary of a Thousand Words'), an explanatory dictionary of rare words and 'Maktubat' terms of a collection of letters by Ahmed Faruqi Sirhindi Rabbani (1563–1624).

The poet wrote some of his poems in Persian: 'Mulla Baqir Kudga-yii?' ('Where are You, Mulla Bakir?'); reflections on Sufis 'Bait dar zamm sufiyan-i Zaman'; ode praising the author 'Ikhyā al-Ulum,' 'Manzuma dar Madkh-i 'Ikhyā al-Ulum.' His poems written in two languages are well-known. For example, the poem 'Tan-

zikh al-afkar,' consisting of 586 lines, has 400 lines written in Tatar, and 186, in Persian. The first 164 lines of the poem 'Al-karz mikraz-i makhabbat' are written in Tatar, the other 24 are in Persian.

Due to the poor preservation of manuscripts, the names of many scribes are unknown. Only 179 names are recorded of those who rewrote 186 manuscripts, including 436 descriptions. Mainly they were shakirds of Tatar madrasahs, the handwriting of which had a kind of 'Tatar' character. More than 130 manuscripts were rewritten in such handwriting. About 20 manuscripts were rewritten in the handwriting *naskh*. The rest—more than 400 manuscripts—are in the handwriting style *Nastaliq*.

The widespread opinion that the Tatar handwritten books were decorated very poorly is partly true as regards manuscripts in Persian. This is explained primarily by the fact that these manuscripts were not intended for the market but for private use. However, in the 19th century, when the rich layer of industrialists and especially merchants, who made huge fortunes in trade with Central Asia, appeared among the Tatar population, richly decorated manuscripts of Central Asian origin also appeared in conjunction with Tatar customers.

Tatar manuscripts in Persian were written mainly on Russian paper. There are also manuscripts on Eastern paper, but this does not mean that all these manuscripts have a Central Asian origin. The fact that they had no money to buy cardboard, factory bindings and were forced to do it themselves, demonstrates the poverty of scribes. One even encounters a plank binding, paper, cloth, rag, and cardboard bindings—both factory and homemade ones. There are also richly decorated bindings made by professional bookbinders in Central Asia: cardboard, leather with embossed medallions and patterns.

Undoubtedly, all of these indicate the rich repertoire and wide chronological range of Persian manuscripts in the funds of Kazan collections. Tatar intellectuals of the 19th to the beginning of the 20th centuries had an excellent opportunity to access the rich written culture in the Persian language and draw the essential knowledge from it.

⁴⁴ The Ibragimov Institute of Language, Literature, and History of the Academy of Sciences of the Republic of Tatarstan has preserved 19 lists of his work in different branches of science and literature.

CHAPTER 13

Formation of a Singular Tatar Ideology and National and Cultural Space

Aydar Khabutdinov

19th century was a transformative period for the social structure of Muslims in the Orenburg Muslim Spiritual Assembly. The bourgeois reforms of the 1860s–1870s in Russia led to the elimination of the special status of certain elements in this ethno-confessional community. The abolition of *laschmann* duty and the status of state peasants, the *kanton* system, and the dismantlement of the Bashkir army signified the transition of the Volga Ural Region Muslims to the scope of imperial legislation. The absolute majority of the Tatar population, especially rural, lived in areas of regional and city self-government. Practically all economic activities of the Tatars were concentrated in Russian domains or in economic sectors influenced by Russia. They retained a specific status only as representatives of the non-Christian faith. In Russia, industrial development provided them the option to work in enterprises that did not belong to Muslims. The appearance of liberal professions and state national schools helped in forming the intellectual class. The right of free movement and the development of the international financial system created opportunities to go on trips abroad [Khabutdinov, 2001, p. 90–103].

The reforms of Alexander of Russia set up the real possibility to develop secular institutions in Tatar society. At the same time, new bourgeois institutions scarcely affected the life of the Tatar majority in the years immediately following them.

The Tatar bourgeoisie was becoming increasingly independent from both the single all-Russian market, and cooperation with the Russian bourgeoisie. Owing to this, the very essence of merchants became fundamentally

altered. Pioneers, who were always at risk of being robbed in the steppe or repressed in despotic states, carried out trade using the barter system achieving an income respective to the risk, and turned into law-abiding citizens, first of all dependent on the officials. The loss of the singular monopolistic market led to the creation of poorly interconnected and independent economic centres. The absence of the national bank system led to a further dilution of capital and a consolidation of the role of the lower and middle bourgeoisie.

The structure of the Tatar society included an entirely insignificant number of members of the elite, such as officials, people of liberal professions, and upper classes of the bourgeoisie and clergy. However, the Tatars remained the only ethnos among the Muslim peoples of Russia and the non-Russian peoples of the Volga-Ural Regions that had a mobile urban middle class [Noack., 1993, tab.IIa].

The theory of forming a nation that did not have its own sovereignty on the foundation of non-dominant ethnic groups can be studied using the methods put forth by Czech historian Miroslav Hroch. He differentiates between two types of minor nations. The first are the 'nations without history' that did not have any sovereignty in the pre-capitalistic period, the second are the 'historic nations' or a 'group of nations that made up political communities in the Middle Ages and had its own sovereign feudal class, but lost its political independence or its main attributes before turning into modern nations'. We refer the Tatars to the latter group.

The basis of Islamic identity in the Russian period of history was the *mahallah*, which in the region turned mainly into a countryside

structure. The Orenburg Muslim Spiritual Assembly served as the connection between members of the umma of its own district. However, the mahallah was the centre of the union on the level of everyday structures.

According to M. Hroch's model, in the social movement of Tatars there can be logically distinguished three stages of the nation's formation (phases A, B, C).

The period of scientific interest in the language, history and national culture (phase A), when the leading role is played by a group of intellectuals, started in Tatar society in the 1820s (the Khalfins' and G. Utyz Imiany's work on the publication of monuments of history and literature, the activities of Sh. Marjani, Kh. Faizkhan, K. Nasyri, etc.).

The period of patriotic agitation (phase B), when a group of the activists is involved in spreading national awareness by agitation, was characterised by the following phenomena: the programme of the Kazan merchants in 1879 on reforming the Orenburg Muslim Spiritual Assembly and the equal rights of Muslims as well as of Russians, the petition of Tatars on establishing periodicals, the Tarjeman newspaper, and the reform of traditional schools.

The uprising of the mass national movement (phase C), when national awareness becomes a concern of the wider masses, and the national movement has a stable, organized structure that spreads over the entire territory (or the nation.—A. Kh.), was noted in the Tatar community during the first Russian Revolution of 1905–1907.

At its initial stage of development, the Islamic Tatar community of European Russia and Siberia was singled out by the Russian state in the form of the Orenburg Muslim Spiritual Assembly, close to a '*millet*': '*millet* is a form of church or religious government that make use of regular laws, especially regarding such factors of personal status as marriage, divorce and inheritance' [Ra'anani, 1991, p. 17].

The liberal political movement theorists of the Russian Muslims used the term 'nation' in the meaning accepted after the Great French Revolution. That is why, for example, I. Gasprinsky and S. Maksudi did not speak about

the Turkicnation, and instead used the terms 'narodnost' or 'nationality', and discussed Russian Muslims precisely as a political and legal community different from Christians. Yu. Akchura and A. Agaev, on the contrary, compared the process of forming the nation of Turkic Muslims of Russia with the processes of creating national states in Europe. A. Agaev considered that the most important processes that led to the formation of the nation of Muslims in Russia were cultural and linguistic unity, and the social stratification of society [Agaev, 1911].

The social movement of the Muslim peoples of Russia between the 19th–20th centuries was considered by its theorists as the movement to form a Russian Muslim nation. The Muslim Tatar elite, starting with Sh. Marjani, chose the European variant of nationalism as an example, or rather civic nationalism [Khabutdinov, 2001, pp. 26–27]. The social movement of the Muslims of Russia, especially the Tatars, in the 1890s–1910s was represented by two main trends: jadidism and cadimism, the members of which were cruelly opposed each other in the beginning of the 20th century.

The Russian Muslims, who were represented by the Tatar elite of the Volga-Ural Region, the Crimean Tatars and the Azeris began purposeful nation formation operations as part of the jadid movement. Owing to a multitude of reasons, Tatars played a uniting role on the all-Russian scale. I. Gasprinsky and his jadid colleagues managed to unite the efforts of three traditional elite groups and turn the national secular intellectuals into a new elite group. During the Russian Revolution from 1905–1907, under the prohibitive conditions on political activity, the main forms of the movement came out in the editions of the Tarjeman newspaper, the establishment of the modern languages of Russian Turkish Muslims—'Turki'—and its multi-genre literature, the establishment of the network of the jadid maktab and madrasahs, the sending of Muslims to secular educational institutions, and the operations of charity societies and boards of guardians. Bakhchysaray played the role of the all-Russian centre of the Russian Muslim movement as an experimental

ground for the formation of the jadid and the centre of the printing concern headed by Tarjeman. The medieval millet of the Orenburg Muslim Spiritual Assembly started the transformation towards the formation of a Russian Muslim nation [Khabutdinov, 2003, pp. 83–103].

By the beginning of the 20th century, two main social movements with opposite views on the development of Tatars were already clearly defined. In cadimism we see the typical conservative or preservation ideology aimed at retaining and reforming medieval institutions and the mutual relations between an individual and society. Cadimism was aimed at preserving the traditional medieval millet with the highest possible degree of autarchy from the Russian state and society, and jadidism—at creating the nation of the Muslims of Russia or separate nations (for example, Tatars) on the example of European nations while creating a constitutional legal state in Russia. Both cadimism and jadidism were the replies of Tatar society to the modernisation of the Russian state and society put into motion by Alexander of Russia. Cadimism was mainly caused by the inadequate attention given to the religious lifestyles of Muslims from the Russian government in the second half of the 19th century, and by limiting the monopoly of Muslim clergy in education.

In the beginning of the 1890s, the Jadidist national project was supported by the majority of the Tatar national elite. At the same time, issues about the nature of their identity and borders of their nation were blurry. There are three main types: traditional Muslim (on the bases of the Orenburg Muslim Spiritual Assembly millet), Tatar, and all-Russian Muslim (Turkist). Tatar society, when considered from the perspective of its law-abiding elite, was waiting for the beginning of the situation that would allow it to begin its social and political activities, which in fact only appeared during the revolution of 1905–1907.

During this period, there were two main models of national development among the Tatars, which can be defined as the western concept of the civic nation, and the eastern concept of the ethnic nation [Hroch, 1985]. The first

model presupposed the establishment of a religious autonomy with the Sharia trial and was adhered to by Batyrsha and the Tatar delegates in the Legislative Commission of 1767–1768. In 1788 the contours of the Tatar nation were defined by the millet of the Orenburg Muslim Spiritual Assembly. From a conceptual perspective, the model of the civic nation starts from the ideas of Sh. Marjani about religious autonomy and the equality of Muslims and Christians. This continued on in the doctrine of the liberals, especially in the idea of I. Gasprinsky on the nation of Russian Muslims.

The eastern concept of the ethnic nation has its source in the works of K. Nasyri, with his orientation towards the middle and lower classes, the development of colloquial language, and the ethnographic description of Tatar customs and traditions continued by, first of all, Tatar socialists and/or Tatarists. Its preconditions were the idea about the general ethnic origin of the Volga-Ural Region Muslims [Khabutdinov, 2001, pp. 144–190].

The ulemas, bourgeoisie and mirzas, in the 19th century, concentrated at an all-national level on the reform plans of the Orenburg Muslim Spiritual Assembly by turning it into an authentic autonomous structure based on electing the clergy, from imams to muftis, and on controlling the endowments, madrasahs, norms of Sharia family law [Khabutdinov, 2010a].

Sh. Marjani theologically opened I. Gasprinsky's path into the Islamic world with his idea to create a nation of the Muslims of Russia on the European example. Sh. Marjani strove to create a unified Tatar millet by including all the Muslims of the Orenburg Muslim Spiritual Assembly district, without paying mind to their class and ethnic affiliation and, if possible, Islamising the Kryashens, Chuvashes and Ugro-Finnish peoples of the region.

Jadidism became the basis for the all-national doctrine of the elite. It was predominantly a secular movement headed by intellectuals, but not by ulemas, which is why it is irresponsible to identify it in terms of the reformations in Europe. Sh. Marjani theologically grounded the possibility for modernist reforms in social de-

velopment. One of these reforms took place in the realm of education—'usul jadid'. Almost all reformation activities among the Muslims of Russia can be defined as several main groups: reforms of education, political reform in Russia and the formation of a constitutional state, and reforms of Islamic law.

The dominance of enlightenment at the initial stage of the social movement, the promotion of national ideas among all classes of society, and the cooperation with Russian authorities and self-governing bodies were the basis of I. Gasprinsky's views.

The basis of the doctrine of Muslim modernisers in Russia at the end of the 19th to the beginning of the 20th century is positivism, according to which the main aim of the social movement was the creation of a social consensus within the frame of the nation [Georgeon, 1980, p. 60]. The most known formula for this type of consensus can be summed up in the motto of Ismail Gasprinsky: 'Unity in language, thoughts and actions'.

In the end, by 1905 the aims of the educational stage of jadidism had for the most part been achieved. During this period, they set up new-method maktab and madrasahs with educational literature issued by new Muslim publishing houses. The unitary literary language of the Muslims of Russia had already been formed, and it already had its own multi-genre literature. The Muslim elite of Russia thus started to obtain a Russian-speaking education. In the largest urban centres, charity societies often functioned as the cultural and educational centres of communities. Thus, institutions of all-national secular education were fully functional, so the issue was already on expanding and increasing the level of education [Khabutdinov, 2001, p. 168]. Jadidism in the 1880s–1905 concentrated on the reform of traditional confessional education, and the introduction of the acoustic (usul savtiya), or new method (usul jadid) of education in opposition to Middle Age scholastic methods. The situation only radically changed during the Revolution of 1905–1907.

Appendices

I. Socio-Economic Development of the Tatars

§ 1. Socio-Economic Development of the Tatars in The Volga-Ural Region in the 19–early 20th Centuries, Viewed Statistically

Research on the socio-economic history of the 19th century largely relies on statistical documents, descriptions and surveys, censuses (population, households, and land plots), and descriptions and cartographic atlases of cities and settlements.

Fiscal taxpayer censuses (revisions) were regular in the pre-reform Russian Empire. Ten revisions were carried out from 1718 to 1859. Revisions were the responsibility of the Ministry of Finance. Revision data are the only large-scale source for studies on demographic processes and the socio-economic history of the latter half of the 18–first half of the 19th century. It is common for Russian historians to refer to such data. Tables 1–3 and 6 present data for 1795 and 1857.

Statistical surveys were scheduled, regular, and purposeful in the Russian Empire starting in the mid-19th century. This was the time when statistics became institutionalised. The Central Statistical Committee of the Ministry of Internal Affairs was established in 1863, followed by governorate statistical committees, which collected and prepared for publication an extensive array of national, governorate, and regional statistics until the fall of the Russian Empire.

Governmental statistical surveys in the latter half of the 19th century aimed at collecting, verifying, and publishing statistics for the country's various spheres of life. The Harvest Statistics of the Russian Empire is representative of changes in crop area sizes and crop yields in peasant households over two decades (1861–1870 and 1871–1880) (Table 4, 19 (13), 22(15)). The All-Russian Industrial Census of 1900 took into account the location of processing plants with an annual output of at least 1,000 rubles (Table 17(11)). The Land Ownership Statistics of 1905 recorded changes in the size and forms of land ownership in all uyezds, governorates, and regions of European Russia (Table 21(14)).

Apart from state statistical bodies, zemstvo statistical institutions (zemstvo, parallel, public statistics) operated in the 19th century. Zemstvo statistics offer a broader range of subjects, data collection methods, and coverage within uyezds and governorates. It relies not only on house-to-house census polls but on volunteers' responses. The development of zemstvo statistics largely depended on judgment and the zemstvo's financial resources.

As economic relations developed and became more complex, departmental statistics (see, for example, reports by the State Bank (Table 13, 14)) and accounting by business communities became widespread. For instance, the Committee of Congresses of Land Bank Representatives initiated the publication of the Long-Term Credit Statistics in Russia, which represented changes in land ownership and loan debt in it from 1892 to 1917 (Table 10, 15, 15a, 15b).

A number of scholarly traditions developed in Russian statistics in the 19th century. Russian statisticians were active participants in international statistical congresses.

The scholarly approach to statistical accounting in Russia included annual (regular) surveys carried out according to a specified method to produce uniform and comparable data. This requirement was frequently neglected. A variety of statistical surveys carried out over decades and widely published provides insight into the evolution of numerous economic, social, and cultural processes in Russia outside of large cities.

No. 15*Table 15***Long-term loan statistics for the Volga and Cis-Ural Regions in 1885–1915⁶**

Region	Cis-Ural	Middle Volga	South-Eastern	Total for the Russian Empire (50 governorates in European Russia)
Governorates (guberniyas)	Vyatka, Perm	Penza, Simbirsk, Saratov, Kazan	Samara, Ufa, Orenburg, Astrakhan	
1885				
Total land, thousands of dessiatinas	43,646	19,947	40,730	299,260

⁶ N. Proskuryakova presented a region-based classification using governorate data, namely the Long-Term Credit Statistics in Russia, published by the Committee of the Congresses of Land Bank Representatives in 1892–1917.

The tables contain summary data enabling us to trace the trends in the absolute size of privately owned land pledged with the country's credit institutions, the private to state real estate loan ratio, land valuation and loan amounts issued to land owners in the Cis-Ural, Middle Volga, and South-Eastern Regions of the Russian Empire over 20 years (1885–1905), over 30 years (1885–1915), and by decade.

N. Proskuryakova referred to the 'Collection of Land Loan Statistics in Russia' and the 'Agricultural Statistics of 1905'. The summarised statistics have a high confidence level, because the primary published documents used by N. Proskuryakova were uniform, complete, and regularly published arrays of data on the situation with land loans in various governorates of the empire.

Privately owned land, thousands of dessiatinas	9,464	6,134	7,239	90,118
Pledged land, thousands of dessiatinas	314	2,674	1,642	22,665

Table 17

Information on processing plants in the early 20th century by economic region (according to the 1900 factory census)⁷

Governorate (guberniya), region	Number of plants	Production cost, thousands of rubles	Headcount
Central Industrial Region	3,589	820,207	629,193
Central Black Earth Region	1,028	99,970	71,859
Southern Region	1,391	225,433	119,610
Baltic Region	957	143,961	77,681
Volga Region, including	1,106	153,351	75,987
<i>Saratov guberniya</i>	338	60,874	25,899
<i>Samara guberniya</i>	114	26,415	9,348
<i>Kazan guberniya</i>	174	34,064	14,866
<i>Orenburg guberniya</i>	161	14,387	4,829
<i>Simbirsk guberniya</i>	136	17,440	13,497
<i>Astrakhan guberniya</i>	184	10,171	7,558
Ural Region, including	526	50,214	33,099
<i>Perm guberniya</i>	240	28,904	15,904
<i>Vyatka guberniya</i>	183	14,543	13,636
<i>Ufa guberniya</i>	103	6,731	3,559
Western Region	2,086	76,739	57,204
Transcaucasian Region	280	25,295	13,552
North Caucasus Region	154	21,010	6,484

⁷ Table 17 is based on the records of the First All-Russian Industrial Census of 1900, which covered plants recorded by the factory inspection office and with an annual output of at least 1,000 rubles. Only non-excisable processing plants were inspected. The collective monograph [Promyshlennost' Rossii, 1991] processes the census data mathematically.

§ 2. Tatar Industry and Trade

The nature, level, and specific patterns of the development of Tatar entrepreneurship varied from region to region depending on the natural, climatic, historical, and socio-economic conditions. They were greatly influenced by the Tatar lifestyle, ethnic mindset, and the religious factor. The government's legislative policy was also of considerable importance.

Many Tatar entrepreneurs who became leaders in the commercial and production activities of Tatar burghers in the 19–early 20th centuries began by opening small businesses.

Accounting for just a small proportion of the Tatar population, merchants dominated its business. The social environment in which the Tatar merchant class formed in the first half of the 19th century consisted mainly of peasants and Tatar traders, replaced by burghers in the latter half of the century, although rural residents contributed to the process by entering the burgher class as a first step towards becoming guild merchants. The development of the merchant class was generally self-driven, ensured by annual guild fees. By the early 20th century, succession to family fortunes among Tatar merchants in areas with a dense Tatar population exceeded that of the Russian merchant class, with 6–7 generations compared to 3–4 generations.

The situation in mid-19th century Russia favored active involvement of commercial capital of various industrial activities. The same means of attracting Tatar bourgeois commercial capital to manufacturing were used as in the rest of Russia. They included ensuring superiority of trade intermediaries over individual goods producers, usually ruining the latter and turning them into hired homeworkers. Highly

developed industrial plants did not preclude either maintaining obsolete forms of organisation or the dominant pre- and early capitalistic forms of operation from being used at them.

The key processes in the socio-economic development of the Tatars, as well as the country in general, in the late 19–early 20th centuries, were the merging of commercial and industrial capital, concentration of production, capital centralisation, and the emergence of collective capital as trading houses—general partnerships and co-partnerships (limited liability companies), special partnerships, and joint stock companies.

Throughout the period being studied, Tatars remained essential to Eastern trade. Their influence spread to the Kazakh steppes, Turkestan, Central Asia, Western China, and Iran, actively maintaining exports of Russian industrial goods. Tatar entrepreneurs and merchants carried out most of their commercial operations in these regions, mainly in the form of exchange-based mediation for trade and procurement. Quite naturally, only a small number of Tatar entrepreneurs had access to foreign trade, while most small-, medium-, and even large-scale traders confined themselves to commercial operations within Russia. In the late 19th century, following the annexation of Kazakhstan and Turkestan and the establishment of a protectorate over Bukhara and Khiva, Russia expanded its commercial connections with these regions. However, the Tatar bourgeoisie gradually lost the Eastern market, which they had been struggling to get for the whole century. The Russian bourgeoisie was actively involved in commercial development in these territories.

Lyudmila Sverdlova

Table 27

Growth of the Tatar trade bourgeoisie in Kazan in 1800–1858

Years	Number of merchant families	Number of people	Stated capital in rubles
1800	31	126	553,549
1801	32	131	603,286
1802	35	140	675,972
1804	—	158	—
1805	—	170	909,460
1,807	—	159	—

In 1848, 688 out of 2,022 merchants in Kazan guberniya were Tatars. In 1858, all merchants of Kazan stated a total of 351 capitals amounting to 1,224,000 rubles, including 83 Tatar capitals. Tatar merchants were especially numerous in Seitov township near Orenburg, where 1,820 out of 2,674 Tatar residents were engaged in trade as early as 1792.

¹¹ *Tanneries in Kazan in the 19th century*. Tataria's leather industry continued to grow in the 19th century. The 1828 Addenda to the Kazan Newsletter provide a list of 84 tanneries located in Kazan and the governorate, including large factories with over 10 cauldrons. The total output of Kazan tanneries increased. The 1814 statistics estimated it at 916,934 rubles, which according to the 1825 statistics increased to 1,554,435 rubles. Top quality leather, such as soles, Russian leather, calf and goat skins, were primarily made, yielding 18,251,319,200 rubles, or 85% of the total output.

No. 30

Description of red calico and other factories owned by Tatar merchants in Kazan guberniya in 1852

Number of factories in Tsarevokokshaysk district: three red calico, two cotton, two glass; number of plants: one distillery, one tannery, one red calico dyeing and three potash plants. Founders:

Red calico weaving and decorating factories:

a) Arsk 2nd Guild merchant Mukhmini Khozeseitov: three cauldrons, two boilers, thirty-five machines, three furnaces, and one bin. Operation begins in October and lasts until June of the following year. The factory employs up to 54 free Tatar employees responsible for red calico weaving and dyeing. Salaries: weavers receive 12 to 13 kopecks per end woven; dyers 12 rubles monthly. The factory's output for the period is up to 10,000 ends amounting to 58,000 rubles.

b) Arsk 3rd Guild merchant Usman Khozeseitov: two cauldrons, two boilers, twenty-five machines, two furnaces, and one bin. Operation begins in October and lasts until June of the following year. The factory employs up to 37 free Tatar employees responsible for red calico weaving and dyeing. Salaries: weavers receive 12 to 13 kopecks per end woven; dyers up to 12 rubles monthly. The factory's output for the period is up to 9,000 ends amounting to 33,750 rubles.

a) Arsk 3rd Guild merchant Zyugra Khozeseitova: one cauldron, one boilers, ten machines, one furnace, and one bin. Operation begins in October and lasts until June of the following year. The factory employs up to 12 free Tatar employees responsible for red calico weaving and dyeing. Salaries: weavers receive 8 to 10 kopecks per end woven; dyers up to 12 rubles monthly. The factory's output for the period is up to 2,000 ends amounting to 7,000 rubles.

These factories use the following materials: white spun cotton, madder, fish oil, oak gall, Kizlyar grass, alum, and unpurified potash, bought in Astrakhan and at the Nizhny Novgorod Fair. Finished red calico is sold at the Nizhny Novgorod and Irbit Fairs, as well as to the cities Rostov, Menzelinsk, Simbirsk, and Bugulma. All these factories are located in Sluzhilaya Ura village, Kubyan Volost, on land granted by Tsar Mikhail to the Princes Khozeseitov in 7145 (1657), which has an area of 2,442 dessiatinas 1,532 sazhen.

Paper finishing factories:

a) the factory owned by Arsk 2nd Guild merchant Mukhmin Khozeseitov, Urazlino Volost, in houses of state peasants on the Shora River. It has one wheel, two bins, five furnaces, two tanks, two cauldrons, and two water machines. Operation lasts from May to April of the following year. It employs up to 16 free employees, peasants and Tatars from Vyatka guberniya, Urzhum uyezd and this uyezd. Salaries: a skilled workman receives 150 rubles a year, and workers receive 30 to 60 rubles and board. The factory is located on the premises of a flour mill run by the same merchant Khozeseitov, which occupies, together with the factory, four dessiatinas of local residents' land, for which they receive 400 rubles each under a contract signed and approved by the Treasury Chamber. The following materials are used to produce paper: cloth, alum, and glue bought in Kazan and Vyatka guberniyas and in the city of Kazan, costing up to 3,080 rubles. Up to 2,500 packages of paper, amounting to 7,500 rubles, are produced during the operating period. Being unfit for local consumption, they are sent abroad, namely to Bukharia and other Middle Asian countries.

b) the factory owned by Arsk 3rd Guild merchant Zyugra Khozeseitova, Urazlino Volost, in houses of state peasants from Atnya village, Kazan uyezd, Alat Volost on the Shora River. It has one wheel, one bin, three furnaces, one tank, and one water machine. Operation lasts from May to April of the follow-

¹² Italicised in the text of the document.

ing. It employs up to 8 free employees, peasants and Tatars from Tsarevokokshaysk and Kazan uyezds. Salaries: a skilled workman receives 85 rubles a year, and workers receive 30 to 40 rubles and board. The factory is located on the premises of a flour mill ran by the same merchant Khozeseitova, which occupies, together with the factory, three dessiatinas of local residents' land, for which they receive 150 rubles each under a contract. The following materials are used to produce paper: cloth, alum, and glue bought in Kazan and Vyatka guberniyas, costing up to 240 rubles. Up to 700 packages of wrapping paper, amounting to 840 rubles, are produced during the operating period. It is sent to Kazan for sale.

... The tannery in Kubyan Laschmann Volost, in Serving Tatars' houses, Vershyna Valoy Shashy village, founded by the 3rd grade license yasak Tatar tradesman from the same village Izmail Mukhamet-Rakhimov. The plant occupies one and a half dessiatinas without any payment to the residents; it has six tanks and one cauldron. Operation starts in October and lasts until the following May. It employs 8 Votyak free employees from Vyatka guberniya. Salaries: contractors received 30 kopecks per dressed skin and 10 kopecks per dyed skin, and workers received 12 rubles monthly. Materials with a total value of up to 700 rubles are purchased for tanning. Raw hide is purchased from residents of Tsarevokokshaysk and Urzhum districts, Vyatka guberniya, numbering up to 1,800. The leather is sold for up to 15,000 rubles in Orenburg.

The red calico dyeing plant owned by the Arsk 3rd Guild merchant Kurbangaley Burnaev, located in Kubyan Laschmann Volost, in Serving Tatars' houses in Borisovskiye Otary village. The plant occupies one and a half dessiatinas of land, for which each owner receives a payment of 50 rubles annually under a contract. The plant has 6 cauldrons, 4 boilers, 2 bins, and 6 furnaces. Operation lasts from October to the following June. It employs up to 55 free Tatars receiving a salary of 10 to 12 rubles monthly. The plant uses the following materials: madder, fish oil, oak gall, Kizlyar grass, alum, and unpurified potash, bought in Astrakhan and at the Nizhny Novgorod Fair. In addition, up to 12,000 ends of white calico for dyeing at a cost of up to 20,000 rubles are bought in Nizhny Novgorod. Dyed calico is sold at the Nizhny Novgorod Fair for up to 30,000 rubles.

No. 31

Report No. 1 by Priest of Chura village Gleb Lyapidovsky of 14 January 1872, to Archpriest of Krasnaya Gorka village, Mamadysh uyezd Yevgeny Antenorov, on sheepskin factories in his parish

I hereby report the following on your personal order following the annual inspection of the Trinity Church of Chura to present you with information on sheepskin factories located in Chura Parish, their number of Christian Tatar employee and general working conditions:

1) There are a total of seven sheepskin factories in Shemordan and Tirlova villages. Although unable to provide the exact number of workers at all these plants, I estimate the average number of workers at up to 200 at smaller factories and up to 400 or more at more developed ones, including 30 to 50 or more Christian Tatars from Chura, Nyrya and other parishes, depending on the total number of workers. They employ up to 170 or 200 Russian sheepskin and fur coat makers at all factories, and the rest of the workers are Tatars.

2) Living conditions of Christian workers vary. It is not uncommon for them to work in cooperatives in separate izbas. They are tailors. Some work with Tatars, namely astrakhan makers. Some also work with Russian sheepskin makers. Speaking of the price for which they work, it should be noted that nearly all Christians—Tatars are out of the question—take money from plant owners in advance in autumn to pay tributes and work for a very small price for the rest of the time, taking more for daily subsistence for themselves and their families. That is, some can barely repay their debts, while others remain indebted the next year. The average plant worker receives approximately 20 kopecks per winter

and summer day without board and 10 kopecks with board, except for contractors, whose work is more incomparably more profitable. Cooperative workers cook food for themselves. They enjoy complete freedom in staple products, while different workers receive food from owners, who do not limit Christians' food consumption this year. They buy whatever they need separately from Tatars, according to Christian requirements, even observing Christian fast days due to the Mamadysh Uyezd Police Officer, at whose request this was introduced. <...>

An extract from 'Materials for Research on Trades Practiced by the Population of Kazan Guberniya' by M. Rylov

The Forgotten Trade: The Present Situation and Pressing Needs of Boot Making in Kazan

There is hardly anyone who has not heard of the elegant Asian saffian shoes—'ichegs'—for which Kazan is rightfully famous. It is safe to say that everyone has experienced the delight of seeing them in Sennaya Square, in a Tatar inn, and in Galeev's shop windows in the Kazan Craft and Agricultural Exhibition, where they were truly a success. Made of colorful saffian decorated with rich gold, silver, and multicolor silk embroidery, such shoes can be truly luxurious and deserve to adorn the finest feet...

But how many citizens of Kazan have any idea of how the local industry works? Do they really know whose hands make the Asian shoes associated with Kazan and what labor and suffering it takes to produce these articles of Islamic taste and Oriental luxury?

We assume they are extremely few.

So let me introduce to the readers of 'Volzhsky Vestnik'¹³ to the trade known as 'icheg making'. It would be very informative to learn about it—if you wish—in terms of our handicraft industry.

According to private information, up to ten large companies produce and sell ichegs in Kazan. This trade is mainly localised in Sennaya Square, which has nine icheg shops. Only one, owned by Khvorov, is located in the market.

The trade in question is fully controlled by local Tatars, except for one Armenian (in Sennaya Square) and the above Russian Khvorov.

Ichegs are also sold beyond Kazan, at the Nizhny Novgorod, Menzelinsk, Irbit, and other fairs. They are also exported to the far Muslim-populated eastern periphery, namely Siberia, Transcaucasia, and Turkestan, then to Bukhara, Khiva, and so on.

As many as three million pairs of ichegs of various types are produced in Kazan. Their total value is at least 5 million rubles per year¹⁴.

In the meanwhile, only three exhibitors, large-scale Asian shoe traders, attended the Kazan Craft and Agricultural Exhibition, while the list of craft establishments in Kazan published by the Exhibition Committee does not mention the large industry branch of Asian footwear production.

However, this local trade is not fiction. It does exist, earn millions of rubles and employing approximately 2,000 women and up to 500 men.

Ichegs are made of goat and sheep skin. They can be black or colored, ornamented or plain. Colored cotton, silk, and gold are used for dimple patterns. Ichegs consist of the following three parts: 1) a hook, that is, the front pieces and the bootleg taken together; 2) the back piece and 3) the sole. The so-called two-klyush ichegs are made of an ornately shaped klyush (front piece), a bootleg, a back piece, and a sole. All other types of ichegs have a stitched-on front piece, like the so-called fancy and noble boots. The latter can be distinguished by a heel, which makes them similar to the European boot.

Regardless of their type, all ichegs have an ornately shaped back piece. Men's and black ichegs have backs of rear leather dressed in Persia and dyed light green; colored saffian ichegs have backs of saffian of different colors. The sole is always attached by Tatar men, while Russian women make the icheg itself. The sole is mostly made of coarsely dressed and red-dyed Asian Russian leather.

¹³ Social, Political and Literary Newspaper (Kazan, 1883–1904, 1905–1906), Editor-in-Chief: N. Zagoskin (1883–1891).

¹⁴ *Author's note:* We were unable to collect accurate data, because no official statistics are available, and merchants are rather reluctant to share the information.

Traders employ experienced skilled skin cutters, mostly local Tatars. Apart from their work, that is, cutting, skin cutters often work as salesclerks. They record all leather issued to contractors (of both sexes) and finished products received from them.

Even though ichegs are sewn by craftswomen, these craftswomen do not receive any sewing goods from traders directly, because merchants find it troublesome to pay a large number of sewers, while it has not occurred to the latter that they could form cooperatives. Thus, they lose up to half their salary, which they pay to artful contractors for mediation.

Four people are reported to act as such unwelcome mediators in Kazan and near it, namely the Tatar burgher Ishmetyev at the gunpowder plant, burghers Ivan Fyodorov and Yelena Zapadnova in Kizhitsy, and burgher Fyokla Ivanova in Sukonnaya Sloboda. Ishmetyev alone manages up to 800 craftswomen. To make their profit even higher, contractors pay the craftswomen not in money but in goods, also at horrible interest rates. They sell all goods, from chintz, tobacco, tea, and sugar to household utensils at revolting prices. Naturally, some of them understand what need means. However, some do not care for anything but their greedy stomachs.

As has already been mentioned, up to 2,000 craftswomen are engaged in icheg production. They all live in slobodas near Kazan, namely Sukonnaya, Nikolayevskaya, Admiralteyskaya, Yagodnaya, two Igumnova Slobodas, Kizhitsy, Kozya, Grivka, Porokhovoy Zavod, and in some suburban villages. The Kizhitsy contractors Fyodorov and Zapadnova manage up to 200 craftswomen. As has already been said, Ishmetyev hires up to 800 of them. In Sukonnaya Sloboda, contractor Fyokla Ivanova manages up to 100 craftswomen. The latter produce only costly goods with silk and gold embroidery, which is both tiresome and harmful to the eyes. This is why Fyokla Ivanova's profit is less than that of the other contractors.

The following types of Asian shoes are produced in Kazan:

Type name	Production cost per pair		Number of pairs made by one craftswoman per week	Per year
	shop prices	from contractors		
1. Black sheep skin whole-cut (Tashkent) ichegs	20 kopecks	10 kopecks	15 pairs	720 pairs
2. Same, but goat-skin	20 kopecks	12 kopecks	15 pairs	720 pairs
3. With a sewn front piece	14 kopecks	8 kopecks	15 pairs	720 pairs
4. Half-embroidered, cotton	1 ruble 20 kopecks	60 kopecks	1 pair	48 pairs
5. Half-embroidered, silk	2 rubles	1 ruble 20 kopecks	¾ pair	36 pairs
6. Fancy pattern ichegs	50 kopecks	30 kopecks	2 pairs	96 pairs
7. Two-klyush	12 kopecks	8 kopecks	15 pairs	720 pairs
8. Noblemen's boots	25 kopecks	15 kopecks	10 pairs	480 pairs
9. Half-ornamented, gold	5 rubles	5 rubles	¼ pair	12 pairs
	(material costs 2 rubles as estimated by the craftswomen)			
10. Silver and gold embroidered shoes	2 rubles	1 ruble 50 kopecks	1 pair	48 pairs
11. Silk embroidered shoes	1 ruble	50 kopecks	3 pairs	144 pairs
12. Fully ornamented ichegs: cotton	2 rubles 50 kopecks	2 rubles	¾ pair	36 pairs
13. Fully ornamented ichegs: silk	3 rubles	2 rubles 50 kopecks	½ pair	24 pairs
Average	1 ruble 40 kopecks	1 ruble 8 kopecks	6 1/3 pairs	3,792 pairs

This table shows how many pairs in total an experienced craftswoman makes weekly.

It should be taken into account that most of them have to work for over 15 hours a day, in cramped stuffy rooms in winter and usually outside in summer.

Their diet is very meager. We have seen many craftswomen literally live on rye bread without any addition, except for mushrooms or potatoes, never mind meat, which they only eat on 5–6 festival days. Only cow owners consume milk, although they mainly want to sell all of it in town. They live in extreme poverty. It is beyond doubt that the miserable craftswomen do not indulge in idle pastimes. However, their profit is meager because parasitic contractors devour most of it.

Let us study a family of four: the mother, one adult daughter, one 8-year-old son, and another daughter, aged 9. Their weekly expenses would be as follows:

Accommodation.....	25 kopecks
Firewood and lighting	40 kopecks
Food.....	1 ruble 20 kopecks
Tea and sugar.....	60 kopecks
Clothes and footwear.....	2 rubles

4 rubles 45 kopecks

A mother and her grown-up daughter could make 15 pairs each of the most common and profitable Tashkent ichegs every week, yielding 3 rubles. The little girl could make 5 pairs weekly, yielding 50 kopecks. This comes out to a weekly income of 3 rubles 50 kopecks, with expenses as high as 4 rubles 45 kopecks, which results in a weekly deficit of 95 kopecks. This could be compensated for by cutting back on clothes and footwear as well as—most importantly—food. If that still was not enough, pawning, often to contractors, was the only solution.

This is the troublesome situation of the miserable female workers of Kazan, who had no expertise in female labour, like the lacemaker Ms. Davydova. Statistics on indigenous female trade would be useful to show how heavily dependent Kazan women and girls were on their contractors, having to wait for a benefactor's hand to free them from the grip of exploitation. This was a broad and fruitful field for private charity that Kazan women were capable of pursuing.

The manner in which this might be brought about is quite obvious. Independent artels could be established for the residents of certain localities like Yagodnaya, Sukonnaya, Kozya, Kizhitsy Sloboda, Porokhovoy Zavod, and others. Each artel was responsible for electing its own head. The heads would be responsible for accepting cut leather from traders, issuing it to artel members, ensuring performance results, and settling accounts with owners. It might be necessary to persuade merchants to trust artels. To prove that craftswomen deserve this, we can mention the well-known fact that not a single crafts-woman has ever been reported to hide or speculate with any goods given to her by contractors, despite the fact that no receipts are issued and no records are kept to trace the issuance of goods. No disputes in the production of icheg have ever been referred to court.

The despondent situation of icheg makers in Kazan in need of a more rational model based on free labour and freedom from exploitation, which otherwise suppresses important local trade, in other circumstances might portend only the most promising. <...>

Tatar trade and industry in the 'Tärceman' ('Translator') newspaper

No. 33 Irbīt

On our way to Irbīt Fair we chanced to visit the settlement of Malchin, Tyumen uyezd, where the prominent merchant and benefactor Aja Nigmatulla Karmyshak oglu Seydyukov resided. After enjoying the respectful Aja's generous hospitality, which to us were reminiscent of ancient tradition, we arrived in Irbīt.

It is home to a large, two-storeyed mosque with a tall minaret. The mosque was built at the initiative of the Akhund of Petropavlovsk Abdul-Bari Yaushev. Two imams appointed by the Orenburg Spiritual Assembly were sent to perform divine services during the fair.

Being of great significance in general, the Irbīt Fair is crucial to Muslim merchants. The Quran and other books, both religious and secular, were brought here from Kazan along with Muslim household items like hats, skullcaps, footwear, leather goods, etc. It is host to the best book shop I know, ran by

Sh. Huseynov, as well as Magomejan Galiev and Magomed Sherif Musin's footwear shoP. It is common to find Kazan arts and crafts being sold here. Merchants from Semipalatinsk, Petropavlovsk, and other steppe cities bring raw materials, which they exchange for goods from Kazan and Moscow.

Astrakhan citizen

No. 34 **Tatar Buffets**

Some newspapers have been spreading the rumour that the Ministry of Communication is planning to prohibit Tatars from running railway buffets. This measure is allegedly caused by the fact that Tatars, who manage all the buffets at key railway stations, exploit passengers by offering poor food at high prices. At present, over 60 buffets at key stations are kept by Tatars, whom certain railway bosses seem to favour.

This is merely rumour that we believe to be inaccurate. The slander must instead result from complaints by individuals discouraged by Tatar buffet keepers and industrialists.

It is entirely possible that some Tatar buffet keepers provide low quality food. Yet, it cannot be said that all of them are exploiters. It would thus only be appropriate to remove the offenders, and not all industrialists. The procedure for obtaining permission to keep a railway buffet and the process of maintaining it, as well as the pricing models and other economic regulations, are so strict that hardly any corrupt practices are possible. The fact that Tatars own as many as 60 railway buffets proves them to be in good repute not with 'railway bosses', but all the authorities, as Tatars can be found on every railway line.

Being honest, modest, and sober, Tatars have earned this reputation, which is appealing not just to 'certain bosses', as rumour has it, but to all fair people.

If Tatar buffet and restaurant workers were truly bad, we would have read numerous complaints in newspapers. None have occurred so far, which means it is simply not a convincing argument that all Tatars are exploiters.

Source: Tärce-man-Translator. 1891. No. 9. 15 March.

No. 35 **Kazan**

To say that Kazan Muslims are not engaged in crafts would be inaccurate. Manual labour is common here, not to mention leather and soap making. Kazan craftsmen produce Asian footwear, caps, skullcaps, and gold and silk-embroidered articles. Hundreds of men and numerous women and girls make their living this way. Unfortunately, their labour is so poorly valued that they can hardly subsist on it.

All articles crafted by our Muslims fit in with the Asian taste and are bought by Muslims only, albeit in different cities and regions. Taking into account how high the quality is, our craftsmen could earn several times more if it occurred to them that they could make goods acceptable not only for Muslims, but for other peoples. This would increase their audience and prices greatly.

Ahmed Safa Sabitov

No. 36 **Kasimov**

The population of Kasimov is known for its high involvement in commerce. This city produces the most sharp-witted restaurant keepers, and being generally wealthy, they are generous benefactors eager to do good when so instructed.

Since I believe it to be my duty to speak of good things, I cannot help but present the following speculations. It would be quite useful to encourage handicrafts instead of confining ourselves to trade and buffet keeping. This would provide employment and subsistence earnings to a lot of people. A craft school for Muslims to ensure proper education in this sphere is also necessary. There is no doubt that the local well-off will support the initiative, provided that there is somebody to address it.

Miscellaneous news

The demand for exported Orenburg knitted downy articles has become very high. Such goods are mainly imported by France and Belgium. Lace shawls are the most popular among them.

No. 38
Saydashev's Brand

We have been trying to notice everything in the Russian Muslim community that can be considered suggestive of the activity of thought and energy. These include the entrepreneurial spirit of Kazan merchant Saydashev, whom Simferopol reports to have established a commercial business here in the south.

As the owner of a glass plant in the Kazan guberniya, Saydashev was awarded a certificate of recognition and a silver medal for his articles. This indicates the well-respected Muslim to be highly reasonable in how he conducts his business. One local company has been reported to have ordered as many as 100,000 bottles from him.

No. 39
Muslim-Owned Factories

The Muslims of the Simbirsk guberniya have been long engaged in wool making and fulling mill operation. As soon as cloth factories with advanced machines opened in Moscow, Muslims fully realised how important they were, and turned their mills into small factories. Developing their businesses with devotion, they supplied cloth for state purposes, thus competing with Moscow manufacturers. Goods from Simbirsk factories can be found everywhere. Local plants also act as contractors for the government in producing large batches of cloth for soldiers.

There are a total of ten Muslim-owned factories, of which two are located in Saratov Governorate. Their total turnover is as high as ten million rubles. The largest of them belong to the Akchurins, while the Deberdeevs and Alievs own the rest.

Most of the workers and managers at those factories are Muslims. The Guryevskaya Factory, ran by T. Akchurin, also has a small founding and metallurgical plant.

* * *

The famous Irgiz merchant Kyashif Shagadullin was awarded a medal for his breeding of pedigreed horses at the All-Russian Industrial Exhibition. Kyashif Efendi has been reported to have also been awarded a gold neck medal by his chefs.

It is truly pleasant to see Muslims involved in businesses of social importance, which the awards suggest they are.

Tatar Buffets

<...> The recent congress of physicians in Saint Petersburg raised the issue of the current situation with railway passenger nutrition. The congress was willing to go forward with increasing supervision for station buffets. 'Salgir'¹⁵ commented on this commendable initiative as follows:

'Non-Christians have been forcing Russians out of many industries in Russia. Where non-Christians are more proficient and experienced than their Russian colleagues, this is quite natural and should not

¹⁵ Social, Political, and Literary Newspaper (Simferopol, 1897–?). Published and edited by N. Mikhno.

cause any great discontent. However, non-Christians succeeding in an industry to which they are alien and for which they are unfit is abnormal, and the situation has to be rectified.

We discussed the newborn issue in various aspects and collected the necessary data. Out findings are as follows: 1) Tatars own just a small percentage of railway buffets and restaurants in the capitals, meaning that any ousting is unlikely, while 'cooperation' would instead be the correct term; 2) not all Tatars, but only those known as Kasimov Tatars, who have been perfecting their skills in the best homes of Moscow and Petersburg under the guidance of French chefs working for amateur connoisseurs, become buffet keepers; 3) as non-Christian as they are, Kasimov Tatars are by no means foreigners; 4) they all employ skillful, expensive chefs, as do their Russian colleagues, without cooking anything themselves; 5) they have never treated anyone to horse meat, about which Salgir expressed apprehension; 6) Kasimov and, partly, Tambov Tatars, being sober, honest, and responsible people, enjoy high credit and preference in the capitals and large cities.

This and the fact that Russia in all of its vastness has enough space and work for everyone, we believe that any measures except sanitary supervision are unnecessary.

'Salgir' should have begun his speech with a subject of greater importance.

No. 42

What I Saw at the Exhibition

I was in attendance at the All-Russian Industrial and Artistic Exhibition in Nizhny Novgorod from 13 to 20 August. <...>

I have no doubt that Muslims, as skillful and hard-working as they are in their ancient trades, will be able to successfully introduce machines. However, they have still yet to do so. I have no idea what others saw at the exhibition. I saw a total of over 6,000 exhibitors, of which only 97 pertained to Muslims, and of whom 45 were Kirghiz horse breeders¹⁶. That is, other Muslim exhibitors were as few as 52. With a ratio of 6,000 exhibitors to the Empire's total population of 120 million, that would be 500 per 10 million.

There are over ten million Muslims within the confines of Russia. That is, they were several times less represented than they should have been at the exhibition, or they had nothing to exhibit. Both reasons are worthy of pity.

So what did Muslims bring to this educational bazaar of labour, knowledge and competition?

Fourty-four Muslims (all Kirghiz) exhibited steppe horses; one (Allahyar Zulgadarov from Yelizavetpol guberniya) exhibited stud horses (Karabakh and race horses); two Akchurin-owned companies presented improved machine-produced cloth; two Kazan companies (owned by Murtaza Azimov and Utyamishev and Co.) presented machine-produced coarse calico and nankeen. Also, Aja Ahmejan Galeev's company (Kazan) exhibited saffian articles and footwear, beautiful but markedly Asian.

All the rest of the exhibitors were craftsmen presenting hand-made carpets, silk, cloth, wool, cotton, down, felt, tobacco pouches, Asian footwear, silver articles, saddles, whips, bridles, Asian knives, daggers, burkas and karakul fur.

Bukhara presented similar articles, while Khiva boasted wool, cotton, and other natural fabrics.

Among the craftswomen, Fatma Baybekova from Moscow presented artistic embroidery. She embroidered a photographically accurate image of a mosque with silk, for which she used a photograph as reference.

The satin tablecloth embroidered by Sherif Jemal Khimidullina from Petropavlovsk was also particularly beautiful.

Ivory articles by Ali Ibragim oglu from Yekaterinodar, horse hair reins and belly bands by Kurban Ali Nasyriv and Temir Sabitov from the Irbit uyezd, Perm guberniya, and fruits brought in by Ahmed Selimov from Simferopol are also worthy of a mention.

So that is pretty much the entirety of what was offered by the Muslim industry. The list could have also included gold embroidery and soap from Kazan, silk from Nukha, Shamakhi and Karabakh, but the soap would have affected the overall picture too much.

Muslims were not represented in the iron, cast iron, copper, cart, textile, dry goods, and machine sectors. Our Muslims clearly lived back in the wooden age, five centuries away from today's time of

¹⁶ Kazakhs.

'iron and machines'. Their ears appear deaf to the shrill whistling of machines, steam locomotives and boats. But they have to strain them, for life will get more challenging with time.

Now that I have seen the exhibition I realise that it is not the arts or knowledge on which the Muslim people rely, but on natural riches like wool, cotton, silk, dried fruit, leather, karakul, etc., and to some extent, hand-made articles that are not very common, such as carpets, Asian fabrics, felt, niello silver articles, etc.

But since the rest of peoples also have wool, cotton, hand-made goods, and so on, we Muslims find ourselves at a disadvantage. <...>

Manufacturing, iron, and machine production require both knowledge and skills. We do not possess them. But what prevents us from learning, though? <...>

The thousands of Muslims who saw the exhibition can bear witness for me. We have to learn, for we know nothing! We have to work at factories and plants to learn from the Russians in practice. We have to enroll in agricultural, mechanical, craft, technical, and other schools, for which we need to study Russian.

This will support the Muslim people, which is a holy cause. Hard-working and gifted as we are, Muslims do not know how to work. This exhibition shows that they do not.

Ismail.

From the study 'An Overview of Domestic Industries in the Kazan Guberniya' Tatar headgear and footwear production in Kazan

The above articles are hand-made by craftswomen, in most cases at home with their families, and not in dedicated workshops.

According to the famous Kazan trader M. Galeev, Asian footwear was termed as such because the first of these items were imported from Asia. The then-popular shoemaker Mustafa Fayzullin from Kazan went to Seitov township, Orenburg guberniya, in the 1790s, where he bought Bukharian men's ichegs with overshoes. When he came back to Kazan, he copied them into both men's and women's shoes. He had many followers. The original pair is on display in Galeev's shop in Kazan.

Essential Tatar women's headgear includes caps and hats, while men wear skullcaps. Ichegs with chaushas are the most popular footwear for both men and women.

Tatar women usually wear caps, which are traditionally shaped to resemble a bag, with a tilt to the right. They consist of two parts—the qirpu band and the öst top, and their size varies. At present, the types that are 3–4 vershok long and wide are popular in Kazan. Another style with a one-inch fringe is also common. It is much longer than a quarter arshin, but not longer than half an arshin.

Elder Tatar women wear örpyak shawls and beaver fur hats with an embroidered velvet top. This hat is different from the men's type because its top is always one vershok or more taller than the fringe, which is embroidered with silver or gold lace a little over 1/2 vershok wide. The men's skullcap and the women's cap also consist of two parts, namely a fringe and a top. The only difference between them is that the women's cap has fringe twice narrower than that of the man's skullcap. Skullcaps also have their top and fringe stitched in straight or oblique stripes with a spacing of half a centimeter, the space of which is filled with oakum, bast fiber, or cotton. Women's caps are usually made of unstitched, smooth fabrics.

Both the cap and the skullcap have a soft textile ball or a multi-colour tassel of silk or cotton of varying length attached to the middle of its top. This is both decorative and practical, as it makes the cap easier to put on and take off. Some skullcaps are made of red cloth and have a long black tassel. However, they are only imported from Turkey.

The so-called Bukharian skullcap is semioval and made of silk. It has a short upright tassel and a narrow striped fringe running lengthwise. The latter is not obliquely, but horizontally stitched, and only mullahs can wear it. The cap, hat, and skullcap can be made of velvet, velveteen, satin, silk, and other fabrics.

Ichegs (chitiks) are soft boots of sheep or goat leather with a soft horse leather sole. Premium-quality ichigs were made of goat skin. There is a difference between women's and men's ichigs. The former are made of multi-colour leather, embroidered with gold¹⁷, silver, colourful silk, and cotton threads, and

¹⁷ Author's note: 'Gold' refers to gilded silver thread, not genuine gold.

some women's ichigs also have heels. They can be embroidered up to the knee or half-embroidered. Men's ichigs always come in black, and they have no embroidery or adornments except for green, rough saury leather on the heel.

Keushes (kaloshev), which are worn with ichigs, also come in a variety of styles. Women's keushes are usually high-heeled and have a low back. Their instep can also often be embroidered with gold. There is a silk or cotton tassel attached to the middle of it.

Men's keushes have low heels and a high back. They are unembroidered. Apart from chaushev, Tatars also wear so-called bashmak. The difference between the keush and the bashmak is that the former has a broad wooden heel and no back. Its instep is also of dyed leather: green, black, light blue, and other colours.

The headgear and footwear described above, both men's and women's, are only produced in Kazan¹⁸ and brought to all the cities and localities where Tatars reside. There are dedicated shops in Kazan, and only women, both Russian and Tatar, embroider such articles¹⁹. Several thousand craftswomen in Kazan and all across the uyezd work day and night to supply hundreds of thousands of hats and shoes to shops. According to traders, about 50,000 pairs of each type are supplied annually to each shop. The number of headgear is the same or even higher. Footwear and headgear embroiderers in Kazan number over 2,000, and are scattered in the New and Old Tatar, Sukonnaya, Kizicheskaya Admiralteyskaya, and Igumnova slobodas. There are over ten thousand of them in Kazan uyezd.

Several people are engaged in the production of headgear. Some are responsible for stitching skullcap fringes and tops or embroidering them, while others print the stitched skullcap fringes or tops. Some also embroider cap tops or fringes, or decorate embroidered skullcap/cap tops and fringes, or put the headgear on the last²⁰. These specialisations determine the wages: some are paid for stitching tops and fringes, others for embroidering them, and the rest for printing or decorating and putting the headgear on the last. Payments are made for each 100 units. The materials suggest that a hundred yarmokas cost 5, 7, 10 kopeck or more to produce. That is, a craftsman stitching 30–50 skullcaps a day can earn 30–50 kopecks or 45–76 kopecks. Velvet can only be stitched by hand. Both velvet stitching and printing in general are much more expensive than other types of work. More experienced craftswomen, embroideresses in gold, can make between 1 ruble 50 kopecks to 2 rubles a day.

Caps, skullcaps, and cheplashka are embroidered with chenille, metallic thread, twisted thread, gold, silver, and pearls. Pearl-embroidered caps or skullcaps are rarely made for sale. Those who need them usually order them from special craftswomen. Approximately 30–40 zolotnik or even heavier pearl caps are very rare. The cost of silver, gold, and pearl embroidery depends on the weight. It is generally 25–30 kopeck per zolotnik. Ready-made caps and skullcaps embroidered with silver, gold, and pearls cost 2 rubles 70 kopecks and more.

Headgear, both men's and women's, was embroidered as follows. A piece of calico or simple chintz one vershok wide was first attached to the cap fringe to be embroidered. A thin towrope was then used to place it in a tambour frame one arshin long and 5–6 vershoks wide. The top was put into a special 4–5 vershok square tambour frame. Having put the fringe into the tambour frame, the craftswoman attached images of simple writing paper to the frame and outlined them by embroidering the cap. Patterns varied, but leaves, hanging trusses of berries, and the like were the most in-demand.

Where metallic thread was used, it was cut into small pieces 2–3 lines long with small scissors, which were inserted into the thread in the amount needed to fill the length and width of the picture using a thin needle. To increase the elevation level of the embroidery for a more impressive appearance, a thin layer of cotton was placed over the pictures. It was barely visible when the embroidery was complete. The top of the cap, hat or skullcap was embroidered in the same way.

It should be noted that depicting living creatures is prohibited under Mohammedan law.

Apart from embroidering, men's skullcaps have to be stitched with straight or oblique stripes using a machine or by hand. The stripes are then stuffed with oakum or bast fiber using a special iron styloid. Finally, the fringe and top are sewn together and put on a last when embroidered.

Embroidering ichigs is very simple. The essential tools are a round wooden last 5–6 vershok long with a diameter of 1 ½ vershoks, a round belt one-inch wide and as long as a human calf and the shoe-maker's awl. Multi-colour cotton and silk threads as well as common thin cobbler's twine are used for seam embroidery.

¹⁸ *Author's note:* Knitted caps are made of silk threads in Moscow.

¹⁹ *Author's note:* Only men do the cutting.

²⁰ *Author's note:* The cap is not put on a last.

To embroider ichigs, the craftswoman places the last on her knee and puts the ichigs on it. She wears said belt over the last to fix it in place so that she can use both her hands. The belt thus holds the last with the ichigs on it, enabling her to embroider them freely.

The embroidering process is as follows. The craftswoman uses the awl to pierce just one side of the ichigs. Then she wraps the thread 3–5 times around the awl end and pierces the other side. Finally, she removes the awl carefully and runs the thin twine through. Thus, the thread wrapped around the awl between two leather pieces (ichigs) remains the same on the twine.

A pair of women's ichigs costs 16 kopecks to 10 rubles and more to embroider. The craftswoman uses her own thread (twine), while the employer provides the rest. At present, ready-made women's ichigs are sold for 1 ruble to 20 rubles and more. Men's ichigs cost 1–10 rubles. Women's and men's²¹ keushes cost between 70 kopecks to 10 rubles.

Tatar commercial and industrial companies in Kazan 1877–1905

No.	Company name and type	Date of establishment	Founders	Activities	Capital, rubles
1.	'Mishkin Brothers' Factory and Trading House	1877	Kazan 2nd Guild Merchants Muhamet-Alim and Aynetdin Mishkins	Cloth production and sale	30,000
2.	'Nurma Manufactory of Ishmuratov and Co.' (special partnership)	1884	Arsk 2nd Guild Merchants Ahmet and Abdrakhman Ishmuratovs, Kazan 2nd Guild Merchant Muhamet-Garif and Sterlitamak 2nd Guild Merchant Muhamet-Zarif Utyamyshevs	Manufacture and trade of coarse calico, nankeen, and other goods	20,000 (in silver)
3.	'M.-Sh. Musin and Co.' (special partnership)	1885	Kazan merchants Muhamet-Sharaf, Muhamet-Shakir and Muhamet-Sitdik Musin	Asian footwear production and sale	20,000
4.	'A. and I. Rakhmatullin and Co.' (special partnership)	1888	Kazan 2nd Guild merchants Ahmetzyan and Izmail Rakhmatullin	Kerosene and mineral oil production and other trade operations	150,000
5.	'B. Subayev, I. Burnaev and M. Saydashev in Kazan Trade House' (general partnership)	1888	Kazan merchants Baky Subayev, Ibragim Burnaev, Muhametzyan Saydashev	Trade of fur and other articles	300,000 (in silver)
6.	'Kazan Manufactory of Utyamyshev and Co.' (special partnership)	1888	Kazan 1st Guild Merchant Muhamet Garif Utyamyshev, Arsk 2nd Guild Merchant Gumer Yakupov, and Tsarevokokshaysk 2nd Guild Merchant Muhamet-Yusup Usmanov	Production and sale of calico, cotton, and other textiles	22,000 (silver)
7.	'Burnaev and Shafigullin' Trade House (general partnership)	1889	Kazan 2nd Guild Merchant Muhamet-Sadyk Burnaev and Zagidulla Shafigullin	Fur peltry trade	Not available
8.	'Sons of Abdrakhman Ibragimov' Trade House (general partnership)	1891	Musa (Tashkent), Shakir, Zakir (Bukhara) and Murtaza Ibragimovs	Trade of various goods	40,000 (increased to 120,000)

²¹ *Author's note:* For more details on trade, see Krivaksina's pamphlet 'Women's Domestic Industries in Kazan'.

9.	'Kh. Tagirov, A. Nasyrov, and Co.' Trade House (special partnership)	1893	Kazan 2nd Guild Merchant Hasan Tagirov and Simbirsk 2nd Guild Merchant Ahmetzyan Nasyrov	Smallware, textile and other trade	20,000
10.	'N. Muzafarov, M. Apakayev, and Co. in the Kazan' Trade House (special partnership)	1894	Kazan merchant Nizamutdin Muzafarov and Yaransk merchant Muzafar Apakayev	Trading textiles and other articles	21,000
11.	'Ahmetzyan Saydashev and Sons and Baky Subayev' Joint-Stock Business Association	1895	Kazan 1st Guild Merchant Ahmetzyan Saydashev, merchants' sons Mustafa and Muhametzyan Saydashev and Baky Subayev	Trading sugar, tea, fur, and other goods; glass manufacturing	500,000
12.	'Galim Subayev's Widow and Co.' Trading House (special partnership)	1897	Widow of Kazan merchant Fatikha Subayeva and Kazan burgher Iskhak Khamzin	Fur article trade	15,000 (in silver)
13.	'Karimov Brothers and Co.' Trading House (special partnership)	1898	Kazan 2nd Guild Merchant Muhametzyan Karimov and burghers Sharifzyan and Hasan Karimov	Smallware and book trade	21,000
14.	'Partnership of I. Arslanov's Soap and Glycerin Plant' (general partnership)	1901	Kazan 1st Guild Merchant Suleyman Aitov and son of Kazan merchant Habibulla Gizatullin	Soap and glycerin production and trade	50,000
16.	'Brothers Sh. and A. Yusupov' Trading House (general partnership)	1904	Kazan burghers Sharafutdin and Ahmetsha Yusupovs	Trading grocery, bread, and other goods	6,000
17.	'Alekseyevskoye Glass Plant Industrial Partnership' (special partnership)	1904	Honorary Citizen by birth Muhamet-Zakir Apanayev, Kazan merchant Badrettdin Apanayev, and Kazan burgher Gabdulla Apanayev	Glass and glassware production and sale	6,000
18.	'M. Galeev and Sons' Trading House (general partnership)	1904	Honorary Citizen by birth Muhametzyan Galeev and Galimzyan, Gazizzhan, Salikhzhan, and Abdrakhman Galeevs	Manufacture and trade of Asian footwear and other goods	25,000
19.	'A. Gubayev and M. Dyaminev' (special partnership)	1904	Kazan uyezd peasants Ahmet-Safa Gubayev and Muhamet-Safa Dyaminev	Asian footwear production and sale	12,000
20.	'The Apanayevs and Kazakovs in Kazan' Special Commercial and Industrial Partnership	1905	Honorary Citizens by birth Iskhak and Zakir Apanayevs, Muhamet-Rahim and Abdul-Gamid Kazakovs	Trading various goods and establishing various industrial plants	18,000

§ 3. The Socio-Economic Development of the Tatar Peasantry

The decay of serfdom as an institution and emergence of market relations stratified the peasantry and increased the popularity of non-agricultural trade among peasants. Part of the agricultural population regularly became involved in industry as individual entrepreneurs.

State peasants made up the majority of the Tatar rural population. Chiefly relying on arable farming and animal breeding, their economy naturally included domestic industries, mainly leather, wood, and wool processing. This was a sign of the commodification of the peasant economy as the basis for the development of entrepreneurship in the Tatar country. As the peasant commodity economy developed, it brought about rural ethnic trade, which in their own right underlay a largely scattered system of manufacturing. Tatar entrepreneurs were founding an increasing number of plants in the country. The reason behind this trend was purely economic—cheap labour, nearby sources of raw materials, and no Russian competitors. The absence of any language barrier and the confessional homogeneity of entrepreneurs and employees should also be taken into account. The conservative rural community was content with the situation. Being unable to compete with goods of higher quality, the products of such plants were cheaper and always sought-after, in particular in the ethnic community.

Social borders became increasingly blurred across the state in the late 19th century. While among the Russian merchantry entrepreneurship had ceased to be class-specific, the title itself now becoming associated with business activities, the Tatar business community just entered this stage in the early 20th century. Merchants as a class had not lost their importance and authority. The succession of Tatar traditions and customs, values, mindset, and family capital proved more stable than those of the Russians.

Lyudmila Sverdlova

No. 45

An extract from the book by A. Fuchs²²

'Notes on the Chuvash and Cheremis of Kazan Guberniya'

From there we ascended a hill and arrived at the large village of Urazlino (Tatar: Kozaklyar), where serving Tatars, or laschmanns, live. It has 132 households and 483 males. There are many good houses in the village, but they are all in line with Tatar tastes. They always stand in the middle of the yard, which is surrounded by a tall fence with a tall gate. The village has three mosques with a junior akhund and two mullahs. Most of the locals trade at the Troitsk and Semipalatinsk Fortresses in Siberia, some in Moscow. Some even go to Saint Petersburg to exchange goods they buy at the Nizhny Novgorod Fair for Bukharian and Kirghiz articles. Many do not come home until winter, when they have to obtain their passports. Local fields are well-cultivated mostly under wheat and barley. However, there are no woods. A verst from here there is the Tatar village Ulla with 71 households and 222 people. It is noteworthy that the village has a tavern, which is not typical for Tatars. We soon entered the large Tatar village of Izleytary, which has 79 households and 229 people. <...>

The Cheremis and Tatar people share a vice that harms public convenience and their own wealth. People in the neighbouring localities employ poor Cheremis and Tatar workers every year. Such workers accept money in advance to pay tributes, and either neglect to fulfill their duties or leave their employees when they need them the most for field work, on the pretext of household activities, or rather, illness. Such deception undermines agricultural activities and prevents poor villagers from finding employment because they have no credit. <...>

**An extract from the study 'Statistics on Rural Land Communities in Kazan Guberniya'
by²³ Secretary of the Kazan Statistics Committee N. Vecheslav**

III. Mulma village, Kazan uyezd, Mulma volost, Mulma Rural Community²⁴.

1) Community composition²⁵.

The Mulma Rural Community consists of Mulma village and the settlement of Mulma, which lies adjacent. Both localities sit along the Serdinka River and are populated by Mohammedan Tatars. The settlement of Mulma was founded over 85 years ago, when Mullah Nigametulla Subkhankulov moved from said village. The peasants of this community are state owners and have community-owned land. The population of this community is: according to *ownership records*, 300 males; according to *family lists*, 347 males and 362 females. This includes 157 males of *working age* (17 to 55 years). A total of 134 families were recorded, including:

Large families (5 to 6 people)	7
Medium-sized families (3 to 4 people)	36
Small families (1 to 2 people)	91

The Mulma Community owns a total of 1,536 dessiatinas of land, including: *estate land* (in particular: homesteads proper, 7 dessiatinas; stackyards, 4 dessiatinas; vegetable gardens, 3 dessiatinas; hemp fields, 7 dessiatinas), 21 dessiatinas; *arable land*, 1,293 dessiatinas; woods, 90 dessiatinas; meadows, 51 dessiatinas; total usable land area, 1,455 dessiatinas.

2) Methods of community land use and allotment

Estate land is hereditary household property that cannot be re-allotted, except for hemp fields, which are re-allotted within each revision. Farm land is allotted as new homesteads.

Croplands are radically re-allotted from revision to revision. No lot-drawing or allocation procedure was ever established for arable land. Therefore, each peasant can use the bands allotted to him until the next revision. Croplands are divided into three fields, two of which are subdivided into 17 *parts* and one into 18. The parts do not have any specific names. Fields are divided based on differences in soil, location (mountainous, on hillsides, low-land), and distance from the locality (near fields, far fields)... Each part is divided into bands depending on the *number of people on census* lists. That is, each peasant receives land in different locations—17 bands in two fields and 18 in the third one. Band width varies from 1 to 3 sazhen, and land from 50 to 80 sazhen. Some of the *parts* are separated by roads, some by boundary belts enabling passage with a plough and even a cart. Deeper furrows separate the bands from one another.

Meadows are subject to annual re-allotment. They are divided into six parts depending on hay quality that do not have any specific names. Such re-allotment does not generate any new lots. Peasants draw lots annually to receive them. Each of the six parts is divided into bands depending on the population size. The narrowest of them are 1 sazhen wide, while band length varies from 40 to 60 sazhen.

Woods are divided into as many parts as there are people on the census list, and 1 or 2 cart per capita can be felled when necessary.

There are no *pasture lands*. During fallow periods, cattle graze in the hay and stubble fields. In the inter-fallow period, ravines and fallow fields are used. Each householder is entitled to allow his entire flock of cattle graze.

3) Organisation of community household activities.

Peasants in Mulma Community guard their horses alternately at night only. They hire a herdsman for 5 rubles a month for the rest of their livestock. He is obliged to also bring along assistant herd boys. The herdsman boarding procedure is as follows: each householder owning one cow must provide food for the herdsman for one day, those who own two, for two days, etc. The community owns no bulls. When necessary, they use a bull from other localities for an agreed remuneration. An alternating guard keeps watch over the community-owned woods. The Mulma Community does not lease its land out or take any on lease from other localities. The community does not have any community-owned rent property.

²³ He was the secretary of the Kazan Guberniya Statistical Committee in 1869–1877.

²⁴ Data regarding this community was collected in 1878 according to the programmes of the Free Economic and Russian Geographical Societies.

²⁵ Text italicised in the document.

4) Community field husbandry.

Dark brown clay prevails in the community, and they use the three-field system. No improvements were introduced to field husbandry. Grass sowing was never introduced to the general crop rotation. Only fields that lie up to one verst away from the locality are manured. The community uses the simplest farming tools. The prevailing crops are rye, oats and buckwheat, and also smaller amounts of wheat, barley and einkorn. A very small amount of flax and hemp is also sowed. Potatoes are the chief tuber cultivated.

5) The community's debts and duties (as of 1878).

The Mulma Community is to pay the following debts and duties:

Poll tribute.....	700 rubles	30 kopecks
Rent tribute.....	777 –	26 –
State land tax	86 –	11 –
Forest tax.....	47 –	5 –
Public duty	113 –	24 –
Zemstvo fees	213 –	84 –
Village food capital.....	74 –	50 –
Community duties	132 –	18 –

Total 2,144 rubles 48 kopecks

The duties are distributed in a way to yield 7 rubles 20 $\frac{3}{4}$ kopecks per *capita* on the census list, or 1 ruble 47 $\frac{1}{4}$ kopecks per dessiatina of useful land. Debt and duty assessment takes place every January when the tax registers are received. The tax distribution unit is each individual *person on the census* list. Community starshinas, starostas, and other elected officers enjoy benefits for physical duties in kind only. The duties of military servants who are currently serving in the army or have arrived home are distributed on an equal basis among all community members depending on the number of people on the census list in the year. Joint responsibility is the system adhered to, so any outstanding amounts are distributed among all community members on the census list. The community gives defaulters' land to the most responsible householders.

Physical duties are as follows: *cart* duty (90 carts supplied in 1877), *road* duty (120 workers sent for road repair in 1877), and *guard* duty (596 people supplied in 1877). The duties are fulfilled in turn and distributed among all community members on the census lists. Each conscript outfit costs 17 rubles, and allocation is done according to the census list. Joint responsibility applies to duty payment only.

6) Legal relations among community members.

No householder can deviate from the community's field husbandry system by sowing winter crops in a spring field or vice versa. No field work start date is established, and householders do not have to manure fields. It is optional²⁶. Similarly, householders are entitled to sell manure from their own yards, as well as livestock, to whoever they want. Householders can lease out their allotments, but not sell or pawn them. Retired soldiers or those on indefinite leave in the community, as well as soldiers' wives and widows, have the same land rights as other community members.

7) Additional information.

A) The Mulma Community.

It is so considered by the Mulma Community.

	Household count	Free-standing residential izba count	Total residential buildings
In the Mulma village	131	4	146
In the Mulma settlement	3	–	5
Total	134	4	151

An average crop yield²⁷ is enough for consumption, while a good yield ensures excess crops for sale, approximately up to 1,000 poods of rye and up to 500 poods of oats. In case of a poor crop yield, medium-income households are 4 months short of crops, and poor households 6 months short. The community has no commercial and industrial establishments or community-owned rent property. No local

²⁶ See above for field fertilising.

²⁷ Middle spring and winter crop yield has been established at sam-3, good yield at sam-4, and poor yield at sam-1.

trade exists or existed here before 1861. Seasonal work as day-labourers in Kazan, which ensures a net income of 3 to 3 ½ rubles per worker in addition to daily allowance, is common. The following number of people have been involved in seasonal work annually over the most recent three years (1866–1868):

With licences, monthly:..... 90 males

with passports, half-yearly 50–

Livestock decreased in the Mulma Community over the most recent three years (1866–1868), namely horses by 30 head, cattle by 70 head, and sheep and goats by 200 head. The reduction resulted not from murrains, which did not occur in the community in the period in question, but from selling livestock in the non-harvest years of 1876 and 1877. The community currently has 96 horses, 110 cows, 525 sheep and goats. The community has no reserve bread storehouse. Crop collection for this purpose was replaced with a contribution to the village food capital of 25 kopeck per capita in 1874. The community's capital amounts to 27 rubles 50 kopecks. The Mulma Community has the following arrears (1878):

Poll tribute.....540 rubles 1 kopeck

Public duty.....112 – 86 –

Rent tribute.....777 – 26 –

Forest tax.....47 – 5 –

Zemstvo duties213 – 84 –

Contribution to village food capital74 – 50 –

Total.....1,765 rubles 52 kopecks

These arrears resulted from the poor crop yield in 1876 and crop failure in 1877, and emerged in 1877. The Mulma Community has not sold property because of tax arrears since 1861.

B) By households in the Mulma Community.

(A description of one household from three groups: 1) Rich, 2) Middle-income and 3) Poor).

The households in the description were established before 1861 and have the following population.

Number of people, by age	1) Rich household		2) Middle-income household		3) Poor household	
	male	female	male	female	male	female
Under 12 y.o.	–	–	1	1	1	1
12 to 17 y.o.	1	2	1	–	–	–
17 to 55 y.o.	1	1	2	3	1	1
Over 55 y.o.	–	–	–	–	–	–
Total	2	3	4			
Including			4	2	2	
Workers	2	3	3	3	1	1
People unfit for work	–	–	1	1	1	1

Each household above owns the following number of per capita allotments: rich households, 4 allotments; middle-income households, 2; poor households, 1. The amount of duties and tributes per capita on the census list (7 rubles 20 ¾ kopecks) has been shown above²⁸. It should be noted that a rich household pays duties for 4 people on the census list, a middle-income for 2 people, and a poor household for 1 person. Each of the households owns the following amount of livestock:

	Horses	Horned stock	Sheep
Rich household	3	4	10
– middle-income	4	3	5
– poor	1	–	2

None of the above households owns any land bought or taken on lease from either co-villagers or neighbours. The families do neither seasonal work nor farm labour, nor do they employ workers. Tax arrears are as follows for the above households: rich—24 rubles 87 kopecks; middle-income—12 rubles 43 kopecks; poor—6 rubles 22 kopecks. The households did not sell their property to cover tax arrears.

²⁸ See above for the community's outstanding tributes and duties.

XXIV. Felting

Felting is most common in the northeastern corner of Kazan guberniya, namely in the Mamadysh and Kazan uyezds, although it is represented in the remaining uyezds, except for Tsarevokokshaysk, as well.

Felters produce such articles as warm footwear, hats, and felt.

Making felt goods of wool is a chiefly Tatar trade, though some felters are Russian and Votyak. Tatar-made footwear is especially careful in its construction. Votyak felters cannot compete with Tatars in this respect and have to reduce their prices.

Felting is a largely seasonal activity. Felters usually go to neighbouring villages or Vyatka and Ufa guberniyas, primarily the Birk, Belebey, Yelabuga, Menzelinsk, Bugulma, and other uyezds. Felters usually travel in pairs as one adult and one teenager. Felting season lasts from autumn to New Year and longer, sometimes until spring (March or April). However, it is not uncommon for felters to work in their places of residence. They make articles for sale or based on orders. They mostly receive orders from local buyers, but sometimes also from other residents. Prices can be set either per wool pound (10 to 25 kopecks) or per pair (approximately 60 kopecks). The former approach is mainly used when the felter provides the wool, while the latter applies when the customer supplies the material, which is mostly relevant for merchants and buyers. Articles meant for sale are partly sold to local residents, but mostly to town shops and local bazaars or fairs. The price of footwear depends on the wool quality and grade, size and aesthetic appeal. According to one correspondent (a priest), it varies from 50 kopecks for children's boots to 3 ½ rubles or even 3 ¾ rubles for the largest size.

In most cases it is the felter's family (the men) who do the actual felting. However, it is also relatively common to hire workers. Some large enterprises even employ a large number of workers (up to 60). They are located in Kukmor, Semyon-Golovin, and Pustosh along the Kurma River, Mamadysh uyezd. Some of the worker employed by large plant holders work in their own izbas, while others occupy their employers' workshops. Large, and sometimes also smaller resident traders practice felting year-round.

Felters buy wool at local markets or from local non-felters, mostly in cash. Wool prices differ depending on the grade. Teg wool costs up to 12 rubles per pood, common spring wool from 4 ½ to 6 rubles per pood, and autumn wool from 8 to 10 rubles. Red wool used for boot patterns costs 1 ruble 50 kopeks per pound. In addition to wool, felters also need flour and chalk, which were a large portion of production costs.

Correspondents and volost administrations provide different information on worker income. For instance, one correspondent (a priest) from the village of Ivanovka, Kulayevo volost, Kazan uyezd, presented the following cost and profit estimate. A worker can make two pairs of small and medium boots and two pairs of large ones a week, or up to 200 pairs amounting to approximately 525 rubles a year (felting is done year round). Deducting 250 rubles—the cost of 25 poods of wool, about 8 rubles for flour and chalk, about 25 rubles for workshop heating and tool repair, and about 50 rubles for wool loss (1/5 of its weight), the correspondent estimates the income of an independent worker at 192 rubles, daily needs included. According to the same correspondent, a hired worker received 5 rubles monthly with board. A correspondent from the village of Kukmor (teacher), where nearly all felters work for large plant owners, estimated a worker's income at 150 rubles per year (presumably without board).

Most correspondents estimated the income of a worker or even a pair at up to 50–60 rubles; some even report it to be as low as 20–30 rubles.

The correspondents did not complain about any decline in trade. On the contrary, some report it to have been progressing. Only the correspondent from the village of Kukmor reported the local owners of large workshops to face occasional difficulties while trying to sell articles. Meanwhile, they also need money to procure materials. The above priest from the village of Kulayevo finds the trade extremely lucrative. In his opinion, its development could be favourable for the population's wealth. As a potential measure to promote trade, the correspondent suggests that a school should be established under the aus-

pices of Chief Foreman Kirill Yevgrafov. The school could be established at the expense of Yevgrafov himself, who would earn about 10 to 20 rubles for teaching each teenager. <...>

Most tailors are non-Russians, primarily Tatars. For instance, in the eastern part of the governorate, namely in the Laishev, Mamadysh and partly Kazan uyezds, about 90% of the total tailor workforce (over 4,000 in the above three uyezds) are Tatars. However, there are also uyezds like Tsvil'sk where most tailors are Chuvash. Yet tailoring is still not common in the Tsvil'sk uyezd, or in the rest of the uyezds in the west of the governorate, as it is in its east and especially the northeast. There are volosts in the Mamadysh and Laishev uyezds where nearly the entire Tatar population works as tailors.

Tailoring is usually done during the autumn and winter season. When the weather starts to freeze and agricultural activities have been mostly wrapped up, tailors travel to nearby villages in pairs (mostly one adult male and a teenager) and stay wherever they find employment. Where tailors are few and jobs are abundant near their village, they do not tend to travel far away. On the contrary, the Laishev and Mamadysh uyezds do not have enough workplaces for the large numbers of tailors. Therefore, they must travel to the adjacent Vyatka, Perm, and especially Ufa guberniyas. Season length varies depending on the governorate. In some places tailors return home only a few weeks after leaving, while in others, like the Mamadysh uyezd, they stay in their places of employment from autumn to late spring, sometimes even until interfallow time. Some tailors from the Baltasi volost, Kazan uyezd, find jobs especially far away from home (in Tashkent, Troitsk, Petropavlovsk) and do not come home for 5 to 10 years. Sometimes they never return. Some tailors from the Novy Kishit volost, Kazan uyezd, travel to Orenburg in search of employment.

Tailors tend to use materials provided by their employers, working in the employer's izba with board included. The Proceedings of the Statistical Expedition state the following prices: 'an average fur coat costs 4–5 kopeck per sheep skin, a caftan 20 kopecks, a beshmet 30 kopecks.' Correspondents' estimates of the average annual income for tailors differed greatly. It is generally estimated as lower for western uyezds when compared to eastern uyezds, namely at 3 to 20 rubles in the west, which is not quite accurate.

As shown in the table, hat makers are largely concentrated in the Yadyger volost, Mamadysh uyezd. All the hat makers here are Tatars, and both men and women sew hats in their residential izbas. They make hats to sell at nearby markets, mainly those in Yanyl and Kukmor. The volost administration reports that annual income varies from 15 to 25 rubles for men and from 10 to 20 rubles for women. No more details are available.

No. 48 **Bread Shortage**

Residents of the Kazan uyezd have been reporting to 'Volzhsky Vestnik' ('Volga Newsletter') that villages near the non-central city of Arsk are so poor that people are literally dying of starvation. For instance, three Tatars from the Tatar village of Khayvan became bloated from starvation. Only timely charity saved them from death. The public puts most of the blame on the Kazan zemstvo, which failed to help the impoverished population in due time. In particular, reports mention the practice of providing sowing money to the neediest peasants. However, it was elected community representatives who ended up receiving the money in the Arsk volost Administration. This resulted in only the most influential individuals in congresses receiving the aid money, while the poorest peasants remained in a state of deprivation.

No. 49 **Letters from the Mamadysh uyezd**

I

They say that the Mamadysh uyezd used to be its own happy little square of the earth several years ago.

Even though it might not have had rivers of milk and honey, its new land was fertile, and vast areas of uncut woods ensured a peaceful life of abundance. The population had only a vague idea of starva-

tion. Those who visited the uyezd 10 or 15 years ago say that villages were numerous and would have dozens of haystacks piled up like a wall as a sign of their affluence. The Mamadysh uyezd was known as the region's granary and one of the richest uyezds of Kazan guberniya. Times change, however. Look at the Mamadysh uyezd now, and you will see quite a different picture.

The observer who was once impressed by abundant crops is now stunned that they see none. One can travel across dozens of villages without seeing a single haystack now. Only the sorry-looking remnants of stray hay in barn-yards remind us of their past wealth.

One who ventures to look even closer into the granary finds it empty. I have been traveling a lot this last month, and I do not pass a single village without asking the locals how many homes have some grain left. It turns out *that in the vast majority of villages, half or more families have no bread at all*³⁰. This is not enough, however. Recently I carried out a census in 20 villages within my district (a total of 1,776 households and 8,416 people of both sexes) with up to 425 households with 1,911 family members who have not a single grain, not to mention cows or horses. Sheep, goats, hens, geese, and ducks are also rare. That is, up to 20 families and about 100 people in each of the villages, who should be living much more contentedly. Moreover, many householders I did not not collect data on own either 1 horse or 1 cow. If we assume the rest of the villages in the uyezd have the same poverty rate, this yields an awfully large number of ruined peasants and proletarians who are surely a burden both to their zemstvo and to the state! And this group continues to expand because the next harvest is still so far away. Proletarians get no allowance. Those who chance to have a horse or a cow cannot but sell it. Householders who are reluctant to do so or have already sold all of their livestock for a trifling price are sell their prospective harvest or *borrow a pood from the kulak to return two*.

I expect to be asked: how has this proletariat still survived? Because it has to adjust to all kinds of conditions. Extreme poverty is no exception. The famine foods that I described earlier, like the beater of scrapped flour, potatoes eaten for weeks straight, and slipslop, is what they subsist on. Their appearance, their sallow, withered faces are indicative of extreme malnourishment and utter susceptibility to typhus and other diseases. It is no exaggeration to say again that they *have no idea what they are going to eat tomorrow*.

We have been using donations to buy bread for the needy. Although we can only give it to those whom we see to be famished when traveling across villages, for there is not enough for those who come to us; over a hundred people visit us daily asking for bread. They have to trudge for 30 to 40 versts, feeding on the illusion that they might get 20–30 pounds of flour. They come here on muddy roads, wet, shabby clothes hardly covering their bodies. Their need must be truly excruciating to make them walk this far without even a hope of getting something! How many thousands of famished people would come if we gave bread to every visitor who, by the way, never fails to produce a village head's license or a certificate by the local volost administrator. Our scare stores would not last a week.

Hundreds of visitors cry and ooh and aah every day, throwing themselves at our feet and subjecting themselves to humiliations which only a famished man can stand. Every now and then we hear the 'orphans' 'haven't eaten for days', 'children are dying of hunger'. When we recommend individuals beg for bread, they answer, 'Who's got enough to share?' Indeed, we have more beggars than givers. As the saying goes, the hand that gives is never empty. I think, however, that any riches would be depleted under such conditions... It is not only me but other physicians who have to face the begging crowd. *Famished people have been storming the zemstvo administration*. They go to the police district superintendents, volost administrations—wherever there is the slightest hope of getting some bread. Please mind that these famished men leave their famished wives and children at home. Those who cannot find bread at home have to seek employment or beg in Kazan, Samara, Orenburg. One has to be very lucky to find a job and a crust of bread there. Most of them return empty-handed to be replaced by others. People keep moving without ever finding what they are looking for...

I have seen many people hydremic from starvation recently. They might become even more numerous with time. *I cannot but share with you the sorry fact that several people, namely 4, recently died of starvation in the village of Nizhny Tokapysh, Petropavlovsk volost*.

The Authorised Representative of the Minister of Internal Affairs verified the reports by the chairman of our zemstvo administration.

³⁰ The body of the text contains italicised fragments.

'Why did you not feed them?' Baron Uexküll³¹ asked the mother of dead children. 'I did when I had bread. Then they stopped giving it, and I had nothing to feed them with. They grew bloated and died'.

Apart from its intended purpose, the fact indicates that there is no bread in the village where this event took place or in those adjacent. If the people had had bread, they would have stopped the children from starving to death. When the head of the governorate inspected some houses in the village, he found it necessary to immediately issue a pood or two of *donation* flour from the storehouse in Nyrtty to them.

This reminds us of the sad fact in the history of the Kazan zemstvo Administration when the governorate meeting did not take place for the sole reason of the nonattendance of several neglectful members. But at that session they were expected to address the burning issue of food shortage and crop sowing. This taken into account, a private telegram over the Northern Telegraph Agency denies famine, fever associated with famine and starvation deaths in three more exposed uyezds of Kazan guberniya, admitting only 'extreme need'. When a lot of people are eating God knows what, under-eating, or have nothing to eat at all, do we call that need? It is not need, but famine. Need is when people are eventually able to find food, though this comes at the expense of great efforts. When they cannot obtain any and have to eat less than their body needs, when they get sick and even die of malnutrition, we call that *famine*. Famine ratios might differ, but this *is not* merely *need*. Strangely, everybody—peasants, zemstvo members, administration—keep saying unanimously that this year is way harder than 1877 was. Yet for some reason 1877 was considered a famine year, while this is not. Why hide this fact? Why deceive ourselves and others? To fail to do what has to be done or wait for disasters beyond mitigation? Now that the supreme authorities are ready to pay attention to Kazan guberniya, we must not hide anything. We have to speak the truth. If we admit our illness, perhaps we can get better, for timely detection of disease is the only guarantee for a cure.

The telegram by the Northern Telegraph Agency denies, also erroneously, any hunger fever in Kazan guberniya. I spoke with the Authorized Representative of the Minister about hunger fever in the Mamadysh uyezd during his visit to Nyrtty on 22 March. I shared with him the scientific fact that hunger fever as a specific disease does not exist in the Mamadysh uyezd at all. However, what is colloquially termed hunger fever, the collocation that scientists sometimes use, does exist in the Mamadysh uyezd. I mentioned to him the village of Bolshoy Mashlyak, where I had been shortly before that, namely on 21 March. I found 25 people there down with acute camp fever in 18 houses, of which in 10 I found no trace of any livestock and *not a single grain*. Thus, I had to give a pood or two of flour to the families. I cannot but attribute this high incidence to malnutrition, and term this hunger fever, that is, typhoid fever caused by undernourishment. Even common people admit this year's diseases to be connected with crop failure, and say that it is a *rough* year.

* * *

The Chinese have a special phrase for a happy land where the people are content.

They say, 'a land where swords are rusted and ploughs are shiny, where granaries are full and prisons empty, where temple steps are polished by prayers and court entrances overgrown with grass, where butchers and bakers travel on horseback and physicians have to walk is a happy land'. Sadly enough, our governorate zemstvo members have been fighting a cruel verbal war both against the administration and against each other, thus sharpening their swords. Their ploughs are growing rusty and granaries empty. We cannot tell whether happy and content people attend our churches and mosques to pray to the giver of all good with any regularity, but we know that wood felling, burglary, and even famine murders (see: 'Voronezhsky Vestnik') have been keeping grass off of the court entrance. We have no bakers or butchers whatsoever in the country. And what about physicians?

Physicians receive documents like this one:

To His Excellency

Zemstvo Physician of District 2, Mamadysh uyezd

The Volost Administration begs to inform Your Excellency

that peasants in all villages of this volost without exception are suffering from a starvation-induced disease.

Assistant Volost Starshina Muhametrahimov on behalf of the Volost Starshina
Scribe Kroshtalev

³¹ State Councilor in Deed at the Ministry of Internal Affairs Baron N. Uexküll-Gyullenband. He was instructed by the Ministry of Internal Affairs to study the economic situation in Kazan guberniya. Extracts from his report on the economic standing of the governorate's peasantry, in particular, Tatar, dated 20 May 1884, to the Minister of Internal Affairs D. Tolstoy [see: *Materialy*], 1936, pp. 3–24].

So I think it's not about transport, is it?

No. 50

From the File on the Petition by the Yaushev Princes for Support in the Cultivation of Their Land, etc.

3 July 1884

To His Excellency the Kazan Governorate from residents of the Koshary village,
Bolshoy Menger Volost, Kazan Uyezd Princes Timirgaley and Muhametgaley, Galiaskar Yaushev,
and the agent and leaseholder of Prince Abdulganey Yaushev Vasily Domrachev

Petition

We possess full ownership of the land in the village of Koshary, which peasants from the above village re-allotted among themselves without authorisation to do so last autumn, depriving us Yaushev Princes of our land and allotting us the least useful plot. We initiated civil proceedings. The judges of the Kazan-Tsarevokokshays uyezd passed the following judgment: The ownership of land violated by the peasants of the Koshary village is to be restored, for which purpose Executive Order No. 1328 of last 12 June was issued to the Officer of Justice Chernobrovin at the congress, who restored it and transferred the land to us subject to the terms of 1883, that is, those that applied before the unauthorised re-allotment by the peasants of the Koshary village. On 16 June the peasants of the above village gathered for a village meeting, to which they summoned us and prohibited us to cultivate the land, threatening to take our life otherwise, which we reported in writing to the Bolshoy Menger Volost Administration on 17 June. On 18 June, the Volost Starshina arrived in said village, invited us and summoned a village meeting, and took no measures aside from persuading us to reach an agreement with the peasants, though he had to find out the initiators and also take preventive measures. The peasants ploughed our land and ploughed over all the borders on this pretext, which we reported to the Officer of Justice of District 2 of the Kazan uyezd on 23 June. On 29 June he arrived in the village of Koshary, but took no measures.

Therefore, Your Excellency, we beg you to instruct the persons responsible to take the following actions: 1) execute the judgment of the justice court in the appropriate manner, 2) prevent any unauthorised appropriation of our land by peasants and bring to justice those found guilty, and 3) provide police assistance for us to cultivate the land, as it is time to make hay and sow our winter crops. Otherwise, peasants will prevent us from cultivating it and even beat us to it. We hereto attach a copy of a copy of the register of the Officer of Justice Chernobrovin at the court of justice to confirm our ownership of the land. 2 July 1884.—Timirgaley Mratshina Yaushev attached his hand in the Tatar manner to this petition on his behalf and on behalf of Muhametgaley, Galiaskar, and Abdulganey Yaushev.

Timirgalu Moradşax uğlu ken yaz Yauşev qulım quydım.

The Authorised Representative of Prince Abdulganey Yaushev Vasily Domrachev attached his hand here.

Response to Petition No. 921 by Princes Yaushev by the Kazan guberniya Administration, dated 9 November 1884

The petition by Princes Timirgaley, Muhametgaley, Galiaskar, and Abdulganey Yaushev and Vasily Domrachev has been dismissed owing to the circumstances described in the present Report No. 2087 by the Kazan Police Officer of 26 October. The decision is to be communicated to the petitioners through the Kazan uyezd Police Department and the case is hereby closed. 31 October 1884.

II. Tatar Education and Schooling

§ 1. Muslim Tatars

Extended and enhanced trade, economic, and cultural interactions with Middle Asia, the practice of sending Tatar youth to Bukhara, Khiva, and Kabul for profound religious education and spiritual perfection under the guidance of famous sheikhs, as well as the broad activities of the Naqshbandiyya Tariqa brought about the rapid restoration of Islamic education for Tatars and Bashkirs [Muhametzyanova, 2008, P. 20]. The large madrasah of Seitov township, Orenburg guberniya became the 'parent' to many educational establishments in the Volga-Ural region in the late 18–early 19th century. Its alumni became madrasah principles.

Catherine II's policy of 'religious discipling', within the framework of which Islam was regarded as a 'tolerable' religion, also favoured the renaissance and further development of Islamic education. Following an examination by the OMSA, future imams and muezzins not only obtained a spiritual title but became teachers—mudarrhises, mugallims, or mugallim-sabians—meaning that they had the exclusive right of teaching in their mahallah parish.

In nearly every locality with a mosque people sent their children to maktab to study the principles of Islam. Back in 1799, traveler G. Georgi emphasised the connection between the mosque and the parish school. In particular, he mentioned every Tatar village to have 'a special prayer house and a school' [Islam, 2001, P. 141].

Along with a family upbringing, the primary school implanted segments of the Muslim Tatar ethnic and confessional identity into the young minds to turn them into 'faithful Muslims'. Maktab knowledge could be used in everyday rituals to ensure compliance with Islamic moral standards.

Speaking of the names of educational establishments, the famous expert in Turkic studies and inspector of Tatar, Bashkir and Kazakh schools in the KED V. Radlov mentioned that 'the Tatars of Eastern Russia attach different meanings to the names depending on the location. For instance, the term maktab is used very rarely in the Kazan guberniya, while all schools, even the smallest ones, are referred to as madrasahs' [Ob`yasnitel' naya zapiska, 1930, pp. 143–144].

In 1818 the first Mufti of Orenburg M. Khusainov submitted a project to the government for the improvement of ethnic secular secondary educational establishment. This clearly complied with the autocratic domestic policy secular schools had been opened under for the children of feudal lords in Transcaucasia to turn the local nobility into loyal Russian subjects. In the Volga-Ural region, the military and political problem was solved in other ways. Therefore, the imperial government ignored the Tatar initiative. Approval was also denied to the projects by Chistopol merchant Muhetdin Burganov (1820) and V. Radlov, under which the Tatar Teachers' Institute for Muslims was to be established in Kazan (1873).

In the early 1860s, K. Faizkhanov, a lecturer in Eastern languages at Saint Petersburg university, devised the project of a Kazan 'Big madrasah', where 60 to 70 students could study at a time. K. Faizkhanov actually developed a model of secular education for the Tatars, taking as a standard the Russian educational system. Tatar education, as envisaged by Faizkhanov, included 1) comprehensive ethno-religious primary schooling, 2) a secondary school of secular education with subjects parallel to those in the Russian gymnasium, 3) Russian college. As is well-known, the project was never put into practice [Usmanov, 1980, P. 133].

In the 1880s a new scheme of national Tatar education was devised. A Crimean Tatar enlightener named I. Gasprinsky proposed to transform the Muslim community of Russia in the European manner, preserving its national and religious traditions. Gasprinsky admonished the Tatars to send their children to mixed Russian and Tatar schools, but after they learn the basics of Islam and reading and writing to national schools, where they can form a national identity. The enlightener believed that Russian Muslims must know three languages: their native one, the state language and one international language [Tärceman, 1891, No. 7]. I. Gasprinsky became the initiator of primary school reform, and an important role in the spread of the auditory method was played by the primer «Ходжаи сыйбиян» ('Children's Teacher'), written and published by Gasprinsky in 1884. Due to the letter-subjunctive educational method, in a single year a shakird learned how to read and write in their native language, as well as the basics of religion and theology, arithmetic and the Quran.

The characteristic features of the new-method maktab was the use of native languages in the education process. The free studying hours were used to teach certain secular subjects (geography and

arithmetic). Short-legged school tables were used for shakirds to kneel in front of, and a backboard. At the end of the school year (in April) all the students took examinations. Sometimes their parents and anyone else interested were allowed to attend the examinations.

In his newsletter 'Terjeman' I. Gasprinsky focused on the advantages of the new auditory method (ysule jadid) and advertised the success of the first new-method schools. Gasprinsky thought that education was the main requirement for a national renaissance among Russian Tatars. Influenced by 'Terjeman', new schools and charitable institutions opened throughout Russia, and a literary revival was also gaining steam.

The emergence of new-method maktab was perceived critically by traditionalist mullahs. They believed that the system of religious education can tolerate no novelties and that they only 'harm Islam'. As the teachers in new-method schools were paid by benefactors who also paid for the teachers' accommodations, the new school teachers were therefore independent of mahallahs. The Traditionalist mullahs (the qadimists) feared lest they lose sadaka, which they received from the parents of students, and their incomes and influence on their flocks considerably diminished. Because of the small size of mahallahs (200 to 300 males), one settlement could usually provide for only one maktab, which made the confrontation even worse. By the end of the 19th century new-method schools were spread in city maktab, not so widely spread among schools in the country.

Tatar school reform came to the attention of the authorities only in the late 19–early 20th centuries. The police department of the Ministry of the Interior started to look closely into the modernisation underway among the Tatars of the Volga and Ural region after the chief of the Principal Inspection of the Press N. Shakhovskoy sent them a telegram on 22 November 1900. The polemics between the jadidists and the qadimists raging in Tatar books over perspective Tatar development, was considered by high-ranking officials as almost a threat to Russian statehood. Prince N. Shakhovskoy advised the police department to collect information concerning the authors of 'innovatory writings', their public standing and wealth, their liaisons in Muslim circles, and also find out where they studied. The chief of police S. Zvolensky in circular letter dated 31 December 1900 No. 13407 asked the governors to send him information of 'state concern', namely 1) find out which authors in Tatar literature 'innovatory writings' can be ascribed to; 2) collect detailed information on their public standing, liaisons in Muslim circles, and where they studied; 3) find out whether they communicate with the Young Turks; 4) find out where and by whom the new-method Muslim schools were being established, who teaches there and who supervises and controls such schools [National Archives of the Republic of Tatarstan, f. 1, inv. 6, file 99, s. 4].

Attached excerpts from the rapports of governors enable us to observe new tendencies in the development of the Tatar community in the late 19th century, and provide us with the names of local public leaders who carried out the school reforms. We can see the role of school reforms in the social and cultural revival of the Tatar people, comparing the processes of modernisation in different regions and assessing their commonalities and differences. In the years of the first Russian revolution from 1905–1907 and the decade that followed, this revival in the new social and political conditions assumed wholly unique traits and took off in new directions.

No. 1

News of the Tatar schools in Orenburg guberniya

The school authorities were informed of various Tatar schools which lay 18 versts from Orenburg in the Tatar settlement of Kargali, also known under the name Seitovo. This sloboda is home to up to 20,000 people of various ethnic groups. There are seven adorned mosques of stone and two of wood. Trades and the arts are rather widely spread. Each mosque has a separate Tatar school partly in the rooms downstairs, and partly in separated buildings. The schools were first founded 30 years ago. The teachers are learned akhuns and mullahs, and also partly private individuals; the students are, besides the local children, from other parts of Russia, and even from Khiva, Bukharia and other Asian principalities. They study the Tatar alphabet, the Arabic language in its entirety, along with Persian, as well as arithmetic, geometry, the basics of physics, philosophy according to Aristotle's works, the sacred history of the Mohameddians, reading and expounding on the Alkoran, and the sacred rituals of the Mohammedans. The books used for instruction are all handwritten, and many other, as the akhuns say, miscellanea from various authors, so that if they are printed, perhaps the scholars would find a lot for their studies. Moreover, that they are mostly received from Bukharia, where Asian schools are now

flourishing with up to 40,000 students. From among the other schools the best in the Argali settlement are, first off, the cathedral mosque lodged in a separate stone building with mullah Aburakhshan of Bagdad and the akhun teaching; second, the mosque of akhun Maulit Bashkov, Muftiev's son in law, in two wooden houses; third, in the same place near the mosque provided for by private mullah Mukhamet Amin. In each of these schools up to 150 students can be found during the winter, while in summer, due to their trade and work obligations, this number diminishes. The fourth is the school of the mosque of akhun Abdreshit Abdullin, with up to a hundred students in winter. In this same mosque is the Kirghiz school, in a separate house and subordinate to the Orenburg commission of the border. During my visit, this school was found to have one teacher receiving a wage of 120 rubles from the commission, and 10 students who get their alimant from the same commission and who study to read and write in Tatar and Arabic to become mullahs of the Kirghiz, wherever they wish. In all schools they study sitting on the floor or lying down, leaving their shoes outside.

No. 2

The Description of Tatar schools of the city of Kazan by the senior teacher of Kazan Principal Public School A. Pyatov, 15 May 1816.

1. In the New Tatar Sloboda (Novaya Tatarskaya sloboda)

a) At the Big Cathedral Stone Mosque there is a school built in 1796 by a Kazan third-guild merchant named akhun Ibragim Kudjyashev, who teaches at the same school. The lodgings of the school are two large upper rooms and a yard.

The said akhun acts as a school teacher from the very foundation of the school with up to 50 students. Although here the study is advanced and with the highest levels of certain subjects taught, the students do not complete a full course of study here.

b) At the stone, newly built mosque there is a school constructed in 1808 by the local Tatar commoners and second-guild merchant Bikbov Halfin. Last year in 1815 another upper room was constructed. Akhun Gabdusatar Sagitov, commoner subordinate to the Kazan Tatar city hall, has been teaching there since 1808. Those who dedicate themselves to his studies finish the entire course in no less than 15 years. The number of students here may be up to 80 people. The lodgings of this school are two chambers, a kitchen and a yard.

2. In the New Tatar Sloboda (Novaya Tatarskaya sloboda)

a) At the big Cathedral stone mosque there is a school built last year in 1808 by local Kazan merchant Mukhamed Abbasov. It features two chambers and a kitchen with a rather well-fenced yard and a water well. Since the founding of this school the office of a teacher here has been held by the licensed head of said mosque, mullah Abubakir Aramzanov, son of YusuP. This mullah is from the common people and supervised by the Kazan Tatar city hall. He earned universal trust through the diligence and zealous service he demonstrated in office, therefore he can teach 60 to 80 students at a time. His course of studies run no less than 15 years, and the students who successfully complete them, after being duly examined by the mufti, win the distinction of licensed mullahs.

b) At the newly built stone mosque there is a school constructed by the yasak-paying Tatar Yahveya Maksutov. The school has two chambers, one being upper room, and the other the kitchen. The teacher here is third-guild merchant Hamid Murtazin. This mullah has been teaching for 30 years, and contributed greatly to the founding of the school. Only initial instruction is provided here, consisting of the bases of the Mohameddan religion and the principles of other subjects. The number of students does not exceed 30.

c) At the stone mosque there is a school built in 1795 by the local Kazan merchant Nazir Azimov. It has a single upper chamber and a kitchen. The teacher is a yasak-paying Tatar, licensed mullah Amurkhan Ibraev, from the Tolkich village of the Chistopol' uyezd. The number of students does not exceed 40. Mohameddan rules of law are taught there, and some of the higher sciences.

No. 3 Tatar schools

To any outsider it doubtless seems strange to find the Kazan Tatars to be a people, in the general sense, more educated than even some European nations. A Tatar man who does not know how to read or write is despised by his fellow countrymen and is not respected by other Tatars. For that reason, all fathers try to enroll their children as soon as possible into a school where they can at least learn to read, write and understand the basics of their religion. In order to aid this process, every mosque should have a school overseen by an akhun; the mosque mullah functions here as a teacher who teaches said subjects daily. In two local Tatar slobodas there are 8 mosques, but only 4 schools, which, however, are packed with students. Their way of learning is somewhat different from ours: but there can be found certain similarities with our *boarding schools*¹ we well. The house for a school is purchased by some rich Tatar, then another Tatar for a single year or more pays all the expenses for heating and repairs to please God. Inside such a house, besides a small entrance hall, there is a large room where the floor is lifted up several steps, just like the stage in a theatre. On this podium the teacher, his assistant and the students are located so there is a step and a half of room left for their cushions, chests, utensils, books and writing sets. The teacher's assistant and students study and live in the same room, and participate in the housekeeping together; even if one of them is stricken with fever or another sickness, he has to lie on his cushion in that same room till he gets well. The teacher, in this case, functions as a doctor for him (the afflicted), treating him with simple remedies. The cushions of the teachers are separated from those of the students by curtains of colourful rags. Above the teacher's area shelves hang nailed to the wall where the useful books are stored. In this same spot one can see cobbler's tools as well, for the teacher both instructs and mends shoes, both his own and those of his students.

Children enter school when they have turned 7 or 8. The course lasts for at least 5 years, but those who dedicate themselves to learning, meaning they want to become priests or teachers, stay at school much longer.

The course of study starts with the *primer*, followed by the Gaftiak, containing excerpts from Alkoran, some abridged and some of them entire *suras* (so the *chapters* in the Quran are called). Then they read Tatar books printed here in Kazan, such as Pirguli, Sabatulgazisin, Fauzulnazat and Stuan, which expound on the Quran in verse or in prose, and finally the book by Muhammad-effendi, which instructs in the art of trade², and sometimes grammar (*nahu*) of the Arabic language.

Besides reading and the basics of the Mohammedan religion, this school also teaches Arabic, inasmuch as it is needed for a basic understanding of the Quran. Many also learn the Persian and Buharan languages to make communication with these peoples easier, and so they can read Turkish books where Arabic and Persian words are often used, as well as to know how to write in a *high style*, which means intermingling, without discretion, Tatar, Arabic, Persian and Turkish words. But they do not teach Tatar here according to the rules of grammar, neither do they teach how to write correctly, either: for the Tatar, they say, must learn his tongue from his mother, so it is useless to pay for that at school. It is significant that the local Tatars, living among the Russians and with whom they have mutual trade interests, are so uninterested in learning Russian. There is hardly a single person here who speaks it well, and even less who can write in it. When I asked why Russian is not studied in school, I was told that such a student, according to their opinion, would become a rascal, and would have no place among them.

The teacher (*stott* in Arabic, *halfa* in Tatar), who is also the mullah of a mosque, does not lodge at the school. Instead, he has assistants chosen from among the elder students who must live in the school in order to oversee it. He does not receive a fixed wage, but is content with the gifts his students present him. They mostly consist of flour, honey, tea and petty coin, albeit rarely, and sometimes he might receive a new robe. The children of local merchant Suyurov every Friday bring their teacher 8 loaves of bread. Here, as everywhere, the more strict and demanding a teacher is, the more gifts he receives, of course, from his students, but even given all that his income is never more than a *hundred* rubles annually. When I showed surprise at the meagre income of the teachers, the venerable akhun said: 'Ask your lord, the minister of education, that he take under his special tutelage our schools. We want our children to study the sciences, but we know not the means to bring this about; so we still send all those who want to become a *learned* priest to Bukhara, for they have no chance or means to receive the needed education here'.

¹ The body of the text contains italicized fragments.

² *Author's notes*: It can be said that trade constitutes practically the only occupation of these local Kazan Tatars. Those who possess at least a small amount of capital try to turn it into goods and conduct various trades. Some with large capital conduct trade with the Chinese, others with the Bukhara people, and the third, with the Persians.

Studies start in the morning, at dawn. During these hours the akhun instructs his students on religion. On Thursdays what was studied during the entire week is repeated, and those who fail to answer well are whipped or locked in the basement. The teachers supervise both the tidiness of their students and how they fulfill their duties: those who fail at either of these, as well as those who do not pray to God five times a day at school, are likewise punished. There is no time for rest allotted to the students. On Thursdays the studies stop in the afternoon and start again on Saturday morning.

For writing they use the feathers of an Indian rooster and Chinese ink mixed with water, and prefer coated paper. Some students during the course of their studies sometimes manage to read the *entirety* of the Quran four times over. They study sitting on their cushions with legs pulled up, reading aloud their lessons in a rueful, nasal tone. All this put together makes the spectacle rather remarkable. As the students stay at school without leaving for an entire week, they choose, usually by lot, the one who cooks for them; for there are no women allowed. They have a common cauldron where they boil their salma soup or dumplings. Everyone may eat his share when he wishes, but they usually eat first at 8 o'clock in the morning, and then dine at 6 at night.

The female sex among the Tatars of Kazan also receives an equal degree of education, and there are few among Tatar women who cannot read or write properly. They are taught by the wife of the mullah of the local mosque, for this woman has a great talent for teaching them these subjects. I saw myself letters brilliantly penned by these female students, as well as some Tatar songs they transcribed. Apart from that, almost all Tatar girls learn from their mothers or their relatives how to embroider; they are especially keen on embroidering Tatar boots and scull caps with gold, artfully devising the ornaments they arrange with such great taste.

No. 4

The project of Orenburg mufti Khusainov on establishing Tatar schools in Kazan and Orenburg. 1818.

According to the rank and position entrusted to me, I would like to present His Majesty the emperor a way to ameliorate the life of his subjects. I dare to offer for the consideration of Your Highness, the commander and guardian of national enlightenment, the following project on improving the working conditions of my coreligionists of different ranks.

During my administrative work on issues in the Mohammedan religion, I learned from reliable sources that private schools for youth were established on the territories of mosques in many villages of my coreligionists. The imam mudarrises and ecclesiastic officials of different ranks who I inspected lecture the youth on religious instructions. But as teachers they are only taught in the spectrum of spiritual education, which deals mostly with serving God and people in accordance with their rank. Because of that, the academic programme for young people is not only too long, it can also hardly be considered healthy due to differences in the views and beliefs of teachers. Pupils are deprived of their formative years while they study, as there are almost no schools, despite all the effort I made to take care of Orenburg guberniya, that would fit my requirements for both the level of scholarly and spiritual education; schools similar to 'Neplyuevskoe' do not exist here anymore. The lack of enlightenment among my coreligionists and neglect of the government made their desire for wholesome education weak. Various prejudices, combined with the frivolity and barbarism planted in children by their parents from early childhood, rarely transform into practical awareness. In this case, I eagerly encourage the social circle of my coreligionists to multiply, as His Majesty the Emperor intended, taking care of the well-being of his subjects. I deem it necessary to establish special schools similar to the existing Armenian schools—one in Kazan, under the direct supervision of the university, and the other in Orenburg, under the supervision of the local military governor. I also offer to establish a second special department for education to be supervised in all of my areas, with all the necessary classes. I, as a hard worker, accept the responsibility to provide young hearts with all that is necessary for them to serve our country and be useful to it. For this I see the following reasons:

1) The majority of such Mohammedans reside in Kazan and Orenburg guberniyas, and many of them work out all sorts of evasions (sic) and trades not only with the peoples who live near the border with Asian empires, but also inside the Russian Empire and in Astrakhan.

2) As European teaching education, blooming in its enlightenment, is studied in Kazan university, it would be reasonable for our non-Christians to study it as well, and educate their pupils in a similar way to make them more useful and pleasant citizens of our empire.

3) With the help of such academies we can establish new scholastic relationships with other neighbouring Asian countries on the border. If we can manage to attain perfect levels of education among the youth, European and Asian scientific societies will be able to merge with ours and, with vivid gratitude to how caring the Russian throne is to its people, deliver the most worthy subjects in line with the intentions of His Majesty the Emperor.

4) If pupils who studied in these schools succeed in the enlightenment sciences, they can get moved up to university study and, upon finishing their studies, they will become much-needed experienced translators for the supreme command, local public offices and missions. In places where my coreligionists live, they will be useful as teachers for children, as teachers are almost extinct in all of Russia due to a lack of education. With their help, the existing ignorance of some frivolous and uneducated Mohammedans will turn into sanity and conform to the accepted order of society in just a few years.

5) Established education for the youth, thanks to the intelligence of my coreligionists, will appeal to the children of noble Mohammedans: khans, princes and the nobility of other neighbouring Asian countries. This will elate the blaze of glory and honour of Russian Imperial enlightenment, earning the loyalty and diligence of young people from all Asian nations. Meanwhile, such sciences that people leave Russia to study and use them as a substitute, develop into the utmost narrow-mindedness and can no longer exist.

6) For universal use we can publish textbooks in all subjects in Tatar, Persian, Turkic and Arabic languages. I have plenty of such books in my library collected during the course of 16 years in Bukhara and India³.

7) In order for healthy education to influence young Mohammedans better and more precisely, I deem it useful to have tutors in European sciences and languages along with teachers of Persian, Arabic, Turkic and Tatar languages, thus connecting them with the half of young Russian pupils under the supervision of trained professors.

8) At first, the formation (sic) of schools can be done using the budget formerly intended for establishing the 'Neplyuevskoe' school for children from families of local Asian and irregular forces⁴ in Orenburg. We can also use the remaining mosque budget under the borderline commission of Orenburg. But if that is still not enough, I hope that my sensible coreligionists will not be able to help but donate generously when they learn about your approval and the benefits of the education project. All things considered, it will be possible to increase the necessary budget with money from the penalty income in accordance with the Mohammedan faith, and in various cases connected with spiritual issues of the Mohammedan religion in different areas presented by the sacred Al-Quaran to the power of the mufti.

My coreligionists would deem themselves happy if they would be honoured by Your Highness' representation to use the priceless fruits of enlightenment, just as the Russians that are subjects of our united empire, and be equal to them when enrolling in sacred schools.

On behalf of all of them, I dare to offer this project to Your Highness for consideration, and most humbly request for you to honour it with acceptance.

Extract from the record of educational institutions of Kazan administrative offices beyond the jurisdiction of the Ministry of National Education, 1844

15 November 1844⁵

Uyezd or city: The the city of Kazan:

<...> 2. Second part, the Old Tatar sloboda.

School name: Mohammedan.

Established: 1801

³ This reference to the library is made with a pencil on the side.

⁴ There is a mark in the margins made with a quill: 'All this sum is already intended for Neplyuev Military School which is part of the defence department'.

⁵ The date of the covering letter.

Subordinate to vedomstvo: did not report to anybody.

Financed by: the pupils.

Number of teachers: 1.

Number of pupils: 47.

Subjects taught: reading and writing in Arabic, Turkic, Persian, and Bukharian; explaining parts of the Al-Quaran and the first four arithmetic rules in Tatar.

3. Same part, same sloboda.

School name: Mohammedan.

Established in: 1836

Subordinate to vedomstvo: did not report to anybody.

Financed by: Kazan merchant Gaybadulla Yunusov.

Number of teachers: 1.

Number of pupils: 92.

Subjects taught: reading and writing in Arabic, Turkic, Persian, and Bukharian; explaining parts of the Al-Quaran and the first four arithmetic rules in Tatar.

4. Third part, same sloboda.

School name: Mohammedan.

Established in: 1832

Subordinate to vedomstvo: did not report to anybody.

Financed by: Kazan merchant Bashir Aitov.

Number of teachers: 1.

Number of pupils: 110.

Subjects taught: reading and writing in Arabic, Turkic, Persian, and Bukharian; explaining parts of the Al-Quaran and the first four arithmetic rules in Tatar.

5. Same part, same sloboda.

School name: Mohammedan.

Established in: 1826

Subordinate to vedomstvo: did not report to anybody.

Financed by: Kazan merchant Kurbangaley Risayev.

Number of teachers: 1.

Number of pupils: 80.

Subjects taught: reading and writing in Arabic, Turkic, Persian, and Bukharian; explaining parts of the Al-Quaran and the first four arithmetic rules in Tatar.

6. Same part, the New Tatar sloboda.

School name: Mohammedan.

Established in: 1817

Subordinate to vedomstvo: did not report to anybody.

Financed by: Kazan merchant Mukhamet Katayev.

Number of teachers: 1.

Number of pupils: 62.

Subjects taught: reading and writing in Arabic, Turkic, Persian, and Bukharian; explaining parts of the Al-Quaran and the first four arithmetic rules in Tatar.

7. Same part, same sloboda.

School name: Mohammedan.

Established in: 1837

Subordinate to vedomstvo: did not report to anybody.

Financed by: Kazan merchant Karbangaley Risayev.

Number of teachers: 1.

Number of pupils: 50.

Subjects taught: reading and writing in Arabic, Turkic, Persian, and Bukharian; explaining parts of the Al-Quaran and the first four arithmetic rules in Tatar.

8. Same part, same sloboda.

School name: Mohammedan.

Established in: 1837

Subordinate to vedomstvo: did not report to anybody.

Financed by: Kazan merchant Kurbangaley Sabayev.

Number of teachers: 1.

Number of pupils: 40.

Subjects taught: reading and writing in Arabic, Turkic, Persian, and Bukharian; explaining parts of the Al-Quaran and the first four arithmetic rules in Tatar.

Mohammedan spiritual schools [maktabeh and madrasah] in the Simbirsk and Sengiley uyezds of the Simbirsk guberniya

The northwestern, northern and northeastern parts of Simbirsk uyezd, being rather close to Buinsk uyezd of the Simbirsk guberniya and to Tetyushi uyezd of the Kazan guberniya, are inhabited by indigenous people of Turkic and Finnish tribes. There are up to 25 indigenous settlements here that outnumber Russian villages. The settlements are populated by Chuvashes, Tatars and Mordvins. There are 20,000 Tatars in Simbirsk uyezd who live in 12 settlements and comprise one tenth (10%) of the total population of the uyezd (up to 190,000 people of both genders). There are more than 17,000 Chuvashes living in 13 settlements, comprising an eleventh (9%) of the uyezd population. Mordvins are less numerous than other non-Russians, with people of this tribe inhabiting 9 settlements with up to 12,000 people, comprising one sixteenth (6%) of the total population. In Sengiley uyezd, Tatars form one big volost—Timoshkino volost that includes only two villages (Timoshkino and Kalda). There are more than 2,000 Tatars here, comprising one twenty-fifth of the total population. There is one Mordvin school per three villages, or per 3,912 citizens; 1 in 8 children are of school age. Sengiley counts one school per less than three villages, or per 2,649 people; and 1 in 5 children are of school age. <...>

The conditions are drastically different for *Tatars*⁶, as they exceed other non-Russian peoples not only in quantity, but also in education. They obey Russians politically, not morally. Tatars are considered European merely externally, according to where they live; while in their way of living, their religion and traditions, their aspirations and sympathies, they remain sons of the Asian steppes, faithful followers of Islam and adherents of Oriental enlightenment. When I was travelling around Simbirsk uyezd to inspect schools in Tatar villages; I felt like a traveler in a faraway foreign country; where there are no Orthodox churches in villages and one can only see the gloomy minarets of Tatar mosques; where the streets are narrow and abnormal; residential buildings, constructed in a particular way, are situated in clumps, with almost no plan or order; where people are only seen in special traditional clothing of a peculiar fashion; where there is not a sound spoken in Russian, and you can only hear the unfamiliar speech of a completely different tribe. Living in isolation, in dense settlements, Tatars of Simbirsk and, especially, Buinsk uyezds contact Russians very seldom, perhaps only concerning matters of trade. That is why the men who speak fluent Russian among them are very few, and that is why Tatars do not adopt Russian rituals. The ideas of Christianity are circulated even slower among our Tatars and with much more effort. Right now it seems that Russian missionaries have completely given up on trying to convert Tatars to Christianity. Left completely unattended and only externally connected to Russia, Tatars live here, preserving all their peculiar national features. They don't like Russians, and even detest them, they don't feel the slightest moral attraction to their motherland which is still new to them, and avoid getting closer to Russians at all cost, if not in language, but in beliefs and traditions. One can say with certainty that Tatars will keep their national originality in all the variety of its distinctive features for as long as possible, until some energetic measures are made to bring them closer to Russians. Moreover, Tatars will not only preserve their own faith, traditions and education, but they will keep circulating it, as they do now, among other neighbouring non-Russian peoples; especially among the Chuvash, who are the most prone to merge with the Tatars based on similarities in languages, beliefs and traditions. In this sense, Tatars will significantly harm the work of our missionaries among the Chuvash, and hamper the spread of Russian civic consciousness in general. It hardly needs mentioning that in a political sense Tatars are an unreliable nation, obedient to Russia only out of necessity.

⁶The body of the text contains italicized fragments.

A powerful weapon for provoking, developing and maintaining Tatar isolation and Muslim fanaticism are *Mohammedan spiritual schools*. They exist on the territories of almost every mosque, and Tatars have much more mosques than Russians have churches. Usually, almost all the boys of a parish study in these schools. The education of *girls* is usually conducted in the house of the mullah by his wife, who is a very respected figure among the female part of the Tatar population, similar to the best wives of priests in our villages. Tatar schools are of a strictly religious and confessional nature, even though some non-religious subjects are allowed in the educational process. These schools are aimed at introducing pupils to Islam as soon as possible and, of course, bringing them up fanatically loyal to it. Mohammedan elementary schools are divided into primary and higher schools. The first, analogues of our grammar schools, are called *makteb*, or *maktabeh* (from the Arabic verb *kitabā*—to read). The second ones are analogues of our primary schools,—*madrasa*, *ormedrese* (from the Tatar verb *darsa*—to teach). However, as a result of the absence of a strictly developed study programmes, village mullahs do not always distinguish between these types of schools and call them one name or the other on different occasions.

In Simbirsk uyezd there are 18 Mohammedan spiritual schools. One of them is situated in the city of Simbirsk; one in the village of Novye Maklaushi⁷ of *Novo-Nikulino volost*; one in the village of Novye Timersyani⁸ of *Nagatino volost*; four in Bolshaya Tsilna⁹ village and two in Staroye Shaymurzino village¹⁰ of *Bolshe-Tsilna volost*; one school in Tatarskaya Bedenga village¹¹, in the villages of Novo-Irkeevo¹² and Syundyukovo¹³, and two in Elkhovo-Ozernaya village¹⁴ of *Syundyukovo volost*; two in Bolshiye Tarkhani village¹⁵ and one school in both Nizhniye Tarkhani village¹⁶ and Utyamysheva village¹⁷ of *Bolshe-Tarkhanovskaya volost*. Sengiley uyezd has 9 Tatar spiritual schools, seven of which are situated in Staroye Timoshkino village¹⁸ and two in Kalda village¹⁹. I inspected the Tatar schools of Simbirsk uyezd in February and the schools of Sengiley in May. I recorded the results of the inspection for each school, but here I find it more convenient to talk about all the schools in general, as they are organized almost identically to each other. In Simbirsk uyezd there are almost two Tatar schools per settlement, one school per 596 male citizens, and almost all boys study at them. In Sengiley uyezd, every second settlement has more than four schools, one school per 358 citizens. Taking such a significant amount of schools in Tatar settlements into consideration, one cannot help but be impressed that almost all Tatars are literate, they all know the basics of their belief system well and are solidly, fanatically loyal to it.

Tatar spiritual schools are usually *placed* in special academic houses, forlornly placed near the mosques. In rare cases, in the absence of a special academic house, the community would rent an apartment in the house of one of the parishioners for this purpose. Academic houses are built, maintained and heated on the money of one of the rich parishioner-benefactors, or using the money of the parish. In front of the classroom there is usually a small unheated entry hall with no floors installed. Here pupils fire up samovars, obviously not being afraid of starting a fire; they dump all the rubbish from the classroom in this entry hall. In the classroom, which is usually small and cold, with single layer windows all year round, they put shelves made of wide planks up on the walls where pupils keep their outdoor garments, bedding items (felt mats and pillows), chests with books, samovars and food supplies. In almost all the schools I visited the air was very sultry and humid. Pupils conduct all the ablutions demanded by religion in school buildings. These must be effective for keeping the body clean, but in reality, it only does harm, as due to the utmost poverty and lack of space in the room, it creates dampness, gives off a specific heavy and unpleasant smell, increases untidiness, and in winter it acts as the reason for constant cold-related illness. Add the fact that pupils put dirty khirqahs on their

moist, not yet dried bodies, and you get skin diseases. There are no tables like our desks in schools, and during classes boys sit on their haunches, or on the bare floor. The mullah sits in front of them in the same position on a special place covered with a rug or a clean sack cloth, with a book in his hands, on top of a chest or a small bench. This is the image of Tatar schools. It would be fair to say that they do not meet any basic requirements, both pedagogical and sanitary, and act as breeding grounds for infectious disease not only among pupils, but also the people surrounding them. School buildings, bad on the inside, are not equipped with anything on the outside. There are no backyards there, no outhouses; when I visited these buildings in winter, frozen feces formed significant piles, and it was not easy to get through them to the schools. It should be added that many pupils stay in schools not only during daytime, but also at night, as they come here with all the necessary supplies, thus turning the school into cramped, dirty and stuffy night shelters.

Mullahs handle the educating and mentoring in schools. Every day they spend around four hours here—two hours before lunch and two after. Former or current senior pupils assist the mullahs in teaching children and keeping order in schools. It should be noted that children of rich Tatars sometimes stay in madrasahs until 20 or even 30 years of age. Exposed to the direct influence of the mullahs for long periods of time, these young people manage to finish the whole course of Islamism and, deeply embracing its ideas, become its most sincere preachers and propagators. In village schools, along with literacy, these grown up pupils pass a whole system of lore, traditions and beliefs onto their younger compatriots, which serves as an important accessory to the main guidelines of the Mohammedan faith expounded in *Al-Quaran*. Learning from mullahs all that they know, grown up and wealthy shakirids often enter higher Muslim academies, for example, in Kazan and Ufa. Here they attend a complete course on theological disciplines, literature and the philosophy of Plato and Aristotle, as the latter's ethnical discussions were known to the Arabs. Completing their education, shakirids travel to Arabia and Persia, or to Bukhara, sometimes to Egypt. Education and travelling open a road to the highest ranks and positions for the pupils—as imams, khatips, mudarrahs and mullahs. However, only few will finish the said journey of religious education, but these few become the staples of Islam afterwards, gaining reputation as scholars and apologists for Islam. Crowds listen to them as if they are prophets, representatives of the highest power available to people. I was lucky to have a talk with one such educated mullah, in the very village of Sary Shaymurzin, and I was greatly surprised by his theological expertise, his deepest faith in the absolute sacredness and superiority of Islam, and by the awe with which ordinary people listen to his speeches. It's a shame that the translator that helped me communicate with the mullah sometimes had trouble translating his speech, finding it too sublime for unprepared comprehension. However, not only scholars, but also ordinary mullahs are very respected by their pupils and parishioners in general, in a way that in our churches only few exceptional outworldly priests are. Respect for mullahs is connected to the fact that in their ordinary lives, with very rare exceptions, they are the most careful performers of the demands of their religion and its rituals. Mullahs are mentors to their parishioners who do not have the need to dishonour themselves in front of them by some down-to-earth deals and constant begging for payment: each Muslim has to bring a tenth of his income to the mullah by law. Moreover, mullahs receive significant lots of land, perform secret sacrifices during major holidays, receive an adequate salary for educating children and giving medical treatment, which is common. These conditions create an external, financial independence from the parishioners and ease the performance of some hard duties for them. To follow all the rules of exemplary life and behaviour, they have to come to the mosque five times every day, two times to school, and perform other duties in the parish—a long novitiate is necessary for that, which means preparation from an early age. I deliberately described mullahs in more detail to show what teachers in Tatar spiritual schools are like and what moral means they possess to succeed in what they do. These Tatar spiritual leaders greeted me with hostility, very coldly—I was an uninvited and unexpected guest to them, an infidel from the Russian officials who usually come, as Tatars believe, to disturb the peaceful course of patriarchal Muslim life, and sometimes to interfere with its confessional aspect. Upon arriving in a village, I stayed in a rented apartment, called the foreman, or an elder, or a mullah and, reporting the aim of my visit to them, I went to schools in their company. Mullahs expressed astonishment at why nobody has ever inspected their schools or interfered with their work in this field before: could it be that the government, they said, wants to establish Russian schools everywhere to make it easier to baptise Tatars? I reassured the ones those doubted by explaining that the government cares about ameliorating the external conditions of elementary schools, and no-one gave me the right to interfere with their religion. This statement calmed the mullahs down a bit, and they reluctantly went to schools with me. However, some of them refused to go, saying they are not feeling well or they don't have time. In this case I visited schools escorted by the foreman, or the elder, and

an interpreter. Inspecting schools alone, without an escort, would not be safe: I knew Tatars especially hate Russian officials and priests. In one village, Bolshiye Tarkhani, the volost foreman from among the Christian Chuvashes, an almost completely Russified man, tried to talk me out of visiting schools in every way possible, being afraid of vast revolts of Tatars, who, according to the foreman, had almost beaten up a district police officer the previous year. To tell the truth, I hesitated for some time in making the decision of whether to follow the foreman's advice or not, but talking with one of the mullahs calmed me down. The inspection of schools conducted in the presence of the foreman and mullahs occurred without any unpleasant adventures. Even though the Tatars knew about my visit, they did not gather in crowds in front of the schools and behaved peacefully...

Boys in Tatar schools learn to read and write in Arabic. They begin learning to read starts during the first year, and to write during the second or third year. Each boy studies a special part of the given course: one studies the alphabet (alef-bet); another prayers and aphorisms from the Quaran that are a part of the books which are studied in succession: Iman, Ya Sin and Khaftiyak; a third boy reads the Quaran. From the total amount of pupils I would usually find a fourth or a fifth who knew how to write. Senior pupils study Arabic grammar, and read and learn the Quaran by heart as mullahs explain it to them orally. Apart from that, they tell pupils the sacred historical tales (tarih) and novels [ikayat], as well as didactic fables [ak'yan]. These stories are carried over from schools to families like a holy legacy, and get passed on from generation to generation. Any system or order in education seems to be nonexistent among the Tatars, as each pupil learns their own lesson or listens to lectures and explanations of the mullah and digests them as far as their capability to understand and their age allow. Among cognitive functions, boys only use their memory to study. Coming to a school, I would listen to how separate pupils read. Usually they read their own texts aloud, all at once. I made them read prayers then: in this case usually two boys were separated from the general group of children, came to the middle of the room and, squatting, began to pronounce a prayer in a monotonous and highly dolesome singing manner. I was utterly discontent with myself as I do not speak Arabic. Not understanding the meaning of the prayers, I just listened to the external expression of how they sound and watched the effect the reading had on the boys. According to what Tatars generally say, the boys do not understand the Arabic language either. I also watched the mullah, the only person who understands every word of the prayers as I have already mentioned. In complete silence and evident indifference, boys hung their heads and listened to their comrades read, while the mullah constantly raised his head and eyes up, reverently repeating the sacred words after the children in whisper. Having heard the readings of the prayers, I would ask the mullahs whether the pupils knew any prayers for the emperor, and upon receiving a positive answer, I offered those who were able, to write something in Arabic. They scribbled several words or phrases in pencil on small scraps of paper; hardly any of them knew how to write, as I have already mentioned. Reading and writing in Russian is not taught in a single Tatar school. Mullahs told me directly that teaching Russian literacy was never part of their academic programme and never will be, as it has a purely ecclesiastical mission. Only one academy in Simbirsk uyezd had a pupil—a young man, who learned to read and write in Russian somewhere on the side. There is no distinct time period for education in Tatar schools: while some pupils stay in school for 2 or 3 years, others go there for 12 or 15 years, entering adulthood as schoolchildren. Classes begin in autumn, after field work is over, and last till spring. During this period of time, boys go to classes every day; on Fridays and on Thursdays after lunch there are no classes. There is no set amount of pupils in the class, either: every boy has to study, and every young man can attend school as well. According to the data I collected, 702 pupils study in 18 Tatar schools of the Simbirsk uyezd, and 205 pupils study in 9 schools of the Sengiley uyezd. There are 39 people per school in Simbirsk uyezd, in Sengiley uyezd there are 23 people. Pupils of Tatar schools are mostly dressed poorly. Being in a cramped school izba heated by the pupils themselves and forming a crowded group that barely fits inside such an izba, pupils of Tatar schools usually sit through classes wearing only undergarments, underpants and stockings. I have never seen a single pupil wearing clean garments, while some of them were practically wearing sack-cloth.

Such is the current condition of the Mohammedan theological schools of the Simbirsk and Sengiley Uyezds. From what has just been said above, it can be seen that these schools have plenty of deficiencies. They put a lot of obstacles in the way of developing both Russian civic consciousness and Christianity among the Tatars. If these schools are not meant to be retained in their present state, it would be useful, in my honest opinion, to take the following measures:

1. It should be made obligatory for Tatar societies to construct more spacious buildings for schools according to the largest possible number of students, to provide a special room for those who stay over-

night, to keep school buildings clean and tidy at all times, and to avoid the situations when the students are not under the supervision of adults.

2. To oblige mullahs, who receive their position after passing a recently established exam in the Russian language, to make sure that they do not preclude their students from studying how to read and write in Russian but find time to teach this subject to them instead.

3. It is necessary to work out a structured curriculum for Tatar schools with a distribution of learning material for a certain number of years; to specify the age for school admission and graduation. Such a curriculum could be developed by the Mohammedan Spiritual Assemblies, one of which is, for example, located in Ufa. After having been approved by the government, the curriculum may then become prescribed for all schools.

4. It is necessary to include teaching how to read and write in Russian as well as arithmetics in the curriculum. For these purposes one needs to create several good and not very expensive study guides specifically for Tatars. Teachers in Russian-Tatar governmental schools, who can be found, for instance, in Kazan and Ufa, could take it upon themselves to write such guides.²⁰

5. It would be better to assign the task of teaching the Russian language to particular *Tatar* teachers, who have completed their training at teaching schools and have actually become professional primary school teachers. Material support for the teachers should be entrusted to local communities, while part of the money should be paid from the public treasury. Special examinations should be established in the schools that provide Russian lessons so that the students can receive a deferment from military service.

6. Apart from the above mentioned classes, it would be useful to open model one-year schools with Tatar teachers at the government's expense in the most populous Tatar villages, at least one or two schools in an uyezd with a large Tatar population.

7. Finally, it would be fairly useful to have special *Russian* inspectors of Tatar schools in the Kazan school district, who have a good command of the Arabic and Tatar languages and have received a basic education that gave them enough skills for inspection service. If it is considered useful to have a special inspector for Chuvash schools, it can hardly be denied that such officials would be necessary in Tatar schools as well. Everybody knows that there are far more Tatars than Chuvash, and that the Tatars, who can read and write but are absolutely fanatical, need stronger external pressure, so that they become more trustworthy of Russian civic consciousness and Christianity. Inspections of Tatar schools by officers who know neither the Arabic nor the Tatar language can hardly be useful for the desired effect. These inspections may result perhaps in the improvement of the physical condition of Mohammedan schools. As for the problem of changing their internal structure in accordance with missionary and political aims, the practical solution of this problem could be a long-term strategy and manageable only for those who have special skills for that kind of activity; besides, the latter will have to devote a great deal of work and effort to this. Especially difficult will be the beginning of the task.

Source: A. Anastasiyev. Mohammedan spiritual schools [maktab and madrasah] in the Simbirsk and Sengiley Uyezd of the Simbirsk Guberniya // Off-print from an unofficial department of 'Bulletin of the Simbirsk Guberniya,' 1893, Nos. 65–69. pp. 3–20.

No. 7

Report on the condition of Russian-Tatar schools in the Vyatka Guberniya made by the inspector of Kazan Tatar Teachers' School Sh. Akhmerov, 15 September 1890 No. 326 to the trustee of the Kazan Educational District.

To His Excellency Mr. Trustee of the Kazan Educational District.

As a consequence of the order of Your Excellency No. 4387 issued on 7 September this year I have the honour to most respectfully inform you about the following.

From the aforementioned order it is clear that the inspection of one-year Tatar schools in the Vyatka Guberniya has uncovered the following problems: a) teachers of the Russian language in these schools themselves struggle with fluency in Russian; b) the teachers prefer to speak Tatar with their students; c) they teach mechanically, and the students do not understand what they read; d) the students fail to learn

²⁰ The author is wrong: The Tatar school for teachers in Ufa was transferred to Orenburg in 1877 and closed in 1890.

Russian e); textbooks sent by the Tatar school inspection do not offset the demands of Russian-Tatar schools—in a nutshell, the training unit of Tatar schools is rather unsatisfactory. And since the teachers of those schools have completed a course in the Kazan teaching school, the responsibility for the insufficiency of the educational process falls on the teaching school.

In the majority of cases students enter the Kazan Tatar teaching school almost without knowledge of the Russian language. Their basic writing and reading skills do not go beyond mechanically repeating dictated words and reading printed texts. The aim of the teaching school is to provide such people with a 4-year training course, so that they can work as Russian language teachers in Tatar schools. It means that they should do their best to become as proficient as possible in the language, which they, in their turn, will have to spread among the younger Tatar generation in urban and rural localities. Being keenly aware of the importance and great significance of the Russian language for future teachers of folk Tatar schools, all the teachers of the teaching school, including those who specialise not only in Russian but also in other subjects of the course as well as tutors, pay all their attention to this subject. As a result of the joint activity of all the school's teaching staff by the end of the course, which lasts for 4 years, the students obtain a rather good command of the Russian grammar, etymology, and syntax and enough speaking skills, although with some mistakes in their fluid speech and everyday language. As the experience of not only Kazan but other schools shows, it seems to be impossible for them to reach a higher level under present circumstances. Results in Russian language education achieved at the school have always been considered effective by local officials as well. However, young people, having completed their studies in the teaching school with a certain amount of knowledge still incomplete and requiring further development, practice, and supplement, become teachers in Tatar rural localities, which are often separated by many kilometers from Russian villages all around. As a result, real-world Russian conversation practice comes to an end since nobody speaks any other language except Tatar in the village. The textbooks that are available at the teaching school were read for the most part in a long time ago, and their novelty has worn off. Students cannot speak a word of Russian, and they are only curious about the new teacher who has arrived in their village uninvited, and whom their fathers look upon with suspicion. They become his students without realising how necessary it is to know the Russian language because the Russian-Tatar school is not a vital need for them. They can study at their favourite and respected madrasah or maktab, where everything is local and always familiar. A Muslim with their strong religious culture, their firmly organised everyday life, their customs, schools, is not aware that they need foreign education, and if they learn how to read and write in Russian, they only pursue it for practical purposes. This is a substantial difference between the Tatars and other foreigners, who have neither their own religious and moral culture nor their own educational establishments, so Russian school is the only place where they can receive a basic education. The teacher, whose activity does not meet any affection, and who is cut off from the locals, expends a great deal of energy in acquainting boys to school and teaching them to attend lessons. Severe requirements do not help at all: supposing the teacher begins to take rigorous measures, the boys will stop going to school. All village teachers complain that the students do not attend classes regularly: one week they are present, another week they are not. Their parents take little note of their children's studying Russian and in most cases do not take any measures to encourage them to do so.

As you can see, the teachers of Tatar-Russian schools find themselves in a truly deplorable, miserable situation. It does not seem to me impossible that they not only fail to advance and progress in their intellectual development but begin to regress in it instead as they gradually lose the habit of speaking Russian; with that they lose the possibility of acquiring new knowledge as well that of renewing and sustaining their former knowledge from sources of Russian education. In such conditions it seems to me that even a highly educated person with a good command of Russian will find themselves in a difficult position, and even a Russian will themselves learn Tatar faster than making their students learn it. If the student of the teaching school needed 4 years for the adoption of the Russian language so as to speak Russian more or less fluently and read books, all this while being taught by a brilliant staff of teachers with all their strong tension and efforts, I have no idea how long it will take them to teach Russian to a village Tatar boy, especially when that Tatar boy instantly returns to his family and does not hear a single word in Russian after 2–3 hour of studying half in Russian and half in Tatar as needed. Moreover, one should note that he goes to school only for 5 or 6 months a year, although irregularly, while missing a lot of lessons. The working conditions of the Russian-Tatar village school teacher can perhaps be compared with the working conditions of the Russian teacher who received their education in a foreign school and was sent to a Russian village to teach a foreign language to Russian boys.

Russian-Tatar schools in towns are in comparatively better conditions. Here the Tatars are more aware of the necessity to have Russian speaking, reading, and writing skills. There are a lot of children of tradespeople, children of such people as soldiers, caretakers, different servants of public offices and social institutions, etc., who have connections with the Russians, and the teachers themselves always have a chance to practice Russian and use Russian books. That is why, under favourable conditions, when Tatar society is not frightened by different rumours deliberately spread by fanatics and caused by the misinterpretation of executive orders, teaching at schools in towns is more effective even with a large amount of students. However, the teachers in towns still fail to make their students attend classes regularly. Even the slightest rumour, which agitates people's minds, results in almost complete student absence. This happened in 1882–1883, when word spread about bringing Tatar spiritual schools [madrasah and maktab] under the control of the Tatar school inspection and about the visit of the inspector to these schools. The type of situation repeated itself in 1888, following the supreme order issued on 16 July 1888 requiring the educational qualification of the Mohammedan clergy; such requirements, although not connected directly with Russian-Tatar schools, make the Tatars wary of anything that, in their opinion, can hold a spiritual influence over the youth and bring them closer to Russian life. Any school in a Tatar's view is a kind of maktab or madrasah—that is, an institution that pursues religious and moral aims.

Generally speaking, neither the teachers nor the students of Russian-Tatar schools should be demanded the same things as are usually demanded in Russian schools as national peculiarities together with the complexity of the Russian language and the attitude of society towards them reduce the level of requirements.

One more rather serious inconvenience in teaching Tatar children how to read and write in Russian, as has been rightly pointed out by the inspection of Vyatka schools, is caused by the lack of textbooks, which are compiled properly and with regard to the peculiarities of these schools. The existing textbooks, published by the former inspector of the Tatar, Bashkir, and Kirghiz schools of the Kazan educational district Radlov, could become helpful and suitable guides and course books only if they were used by experienced teachers and with constant management, control, and instructions to the teachers on how to use them. One cannot but admit the certain disadvantages of these textbooks, but those textbooks written for Russian schools are suitable for Russian-Tatar schools neither by their content nor for other reasons. That is why Radlov's textbooks are exclusive, and I have no idea what kind of other textbooks may be able to substitute them now, so I believe that there is a critical need to publish better textbooks and guides; but such books have not been compiled yet.

As for the measures to improve the educational process in one-year Russian-Tatar schools by increasing the duration of training in the teaching school—that is, the establishment of a 5 or 6-year long course, this measure can only be beneficial for the general development of the students of the teaching school and further improvement of their knowledge of the Russian language, but it seems to me that it won't help to escape those extremely unfavourable conditions for the promotion of Russian education and language among the Tatar Mohammedans, which are rooted in the way of life of the Tatar people, and neither the improvement of the teachers' knowledge nor the publishing of better textbooks will advance the process, leaving only remedial actions left to be taken instead. The underlying reason for the failure of Tatar-Russian schools is in the religious and everyday life of Mohammedanism, in the steadfast seclusion of their school's management structure, and in their alienation from Russian life and activities. It is necessary to raise awareness for the need of Russian education and consequently the knowledge of the Russian language as a means of obtaining Russian education. With the lack of sympathy and trust of the locals towards Russian-Tatar schools, the latter will hardly be able to improve their state and will be destined to a wretched existence on infertile soil. Russian-Tatar schools can hardly overcome the obstacles and difficulties on the road of their prosperity caused by the indifference of society, the hostility, and, at best, sneering attitude of the authoritative Mohammedan clergy and madrasahs and maktab. Any school can develop through only being aware of its power and feeling the sympathy and moral support of those for whom it exists. If the purpose of the existence of Russian-Tatar schools is in the promotion of Russian education, ideas, and knowledge among the Russian Muslims—that is, if the purpose is in the spiritual rapprochement and unity of the Muslims with the indigenous population—the coexistence of two different education systems will always be the greatest evil. On the one hand, the Ministry of Public Education will try to sow the seeds of European education on completely unprepared and unresponsive soil; and, on the other hand, the younger generation will be brought up in a spirit of deeply ingrained Islamism and ancient traditions of the maktab and madrasah, supervised and controlled by the local clergy only, which looks with suspicion upon the simultaneous existence

of their own school, revered by all as a breeding ground for spiritual training and the other school as strange in its spirit and aims. So, if one desires to influence the root causes that hinder the penetration of Russian educational elements into the Mohammedan environment, it is necessary to take in hand the upbringing of the younger Tatar generation, but this is certainly a rather challenging task, and it can be achieved not at once and not by strong measures but by gradually imposing government control over Muslim schools [maktab and madrasahs], which are under the sole supervision and control of mullahs, so the government knows neither the curricula nor the way and atmosphere of teaching there. Meanwhile, these schools are real and the most important sources of Tatar youth's education. The idea to establish control over all Mohammedan schools is not strange or new for the government, as it was in 1882 when the supreme order of 5 February was issued, under which all aforementioned Muslim educational establishments of different names had to be put under the control of the Ministry of Public Education. Such a task was imposed on the existing inspector of Tatar schools of the Kazan educational district, but the first attempt of bringing the supreme order into action turned to be unsuccessful. In my notes on Tatar education, presented to the Minister of Public Education at the beginning of the current year, at the request of His Grace, I had the honour to report on the reasons of this failure and to suggest the way how, in my sincere judgment, it would be possible to establish control over madrasahs and maktab, and to describe my work as the acting inspector of Tatar schools after Radlov's retirement from service, from 1885 to 1890.

Holding this interim appointment, I was deprived of the opportunity to make frequent trips for the observation of Tatar-Russian schools in the district, first, because it would distract me from my direct duties as an inspector of the teaching school and would require very long-term leaves of absence. Second, there are very few such schools, and I did not have enough motive for travelling to any district or governorate for observation of 1 or 2 schools. Third, since business trips needed to be made when required and at the discretion of the district curator, and my travel expenses appropriate to the position of a Tatar school inspector were not covered, but in the case of a business trip I was given money from the travel treasury. My business trips occurred when there was particular need for them. I was requested to travel on business twice during the period when I held the position of Tatar school inspector: once I travelled to the Vyatka and Kazan Guberniyas [Laishevo Uyezd] in December of 1883 to inspect the recently opened schools in the village of Kugarchin and two reopened one-year Tatar schools in the village of Akkuzino and Bitkovo of the Yelabuga Uyezd. The purpose of that trip, as I stated in my report, was not only revisionary but also a general one, as I set my mind on getting an idea of the attitude of the communities towards the schools in the region close to Kazan, the centre of Mohammedan fanaticism, and the region farther from it [Yelabuga Uyezd] in order to acquire an overview of the spiritual influence of Kazan on the nearest settlements. This task interested me then because I had to find out which district should be inspected first in case of an order from higher authorities to implement the inspection of Mohammedan schools. As for teaching and learning activities, I found all the schools I visited satisfactory and did not notice any particular problems, on the contrary, the schools in Bitkovo and Terski [the latter is financed from Yelabuga zemstvo funds] made a very favourable impression. The second business trip was to Astrakhan in 1887. Asking permission of the district curator, I reported to His Excellency about my intention to attempt inspecting local Mohammedan theological schools [maktab and madrasahs]—that is, to take a step toward bringing into action the supreme order of 5 February 1882 and, in addition to that, to revise existing schools foreign to the Tatars. This intention was approved by Mr. curator, who instructed me to exercise extreme caution so as not to cause any public unease in Tatar society and to begin inspecting only with the consent of the local governor. Astrakhan seemed to be a more convenient place for this purpose because it is quite an important centre of Islamic culture; however, the clergy and Mohammedan schools in Astrakhan are significantly isolated from Kazan's influence. As concerns the educational process, I found the situation in Russian-Tatar schools rather favourable. Moreover, my expectations about beginning to set up control over the Mohammedan schools in places furthest from Kazan were justified, which I had the honour of mentioning in my trip report.

Next the inspection of Vyatka schools finds that 'teachers of Tatar schools, who are graduates of the Kazan teacher training school, are not given the right instructions concerning the teaching techniques which are necessary to use in non-Russian schools while teaching Russian. This is seen from the way they give lessons in their schools.' In order to develop teaching skills, students of the teacher training school—beginning in year 4—take turns every day practising teaching techniques at the elementary school affiliated with the teacher training school. They do it under the direct supervision of a teacher at this elementary school and an inspector from the teacher training school. Teachers listen to them as they give a lesson, and the shortcomings of the pupils giving lessons are pointed out and discussed with

every pupil who has given a lesson. During lessons on pedagogy and didactics they are given both general teaching techniques and those most suitable for use in Tatar primary schools. Whether or not these techniques are correct, I can only say that there might be a lot of shortcomings as we had no ready-made models to follow when we developed them. Tatar-Russian teaching is a relatively new thing, which began only after the Inspectorate of Tatar schools was set up in the 1870s, when there was not a single school. These techniques had to be worked out depending on the circumstances and peculiarities of the newly-established schools. I myself studied them, too, working as a teacher for 6–7 years at the Tatar junior college and in a Russian class affiliated with a Kazan madrasah headed by the former inspector Radlov. I studied and have been studying them since 1878 as a teacher and since 1881 as an inspector of the teacher training school. During my visits to the schools the teachers, who had completed a course at the Kazan Tatar teacher training school, used these techniques, and, as far as I can see, they are using them now while teaching Russian classes at the madrasah and in Kazan Tatar schools.

In the light of the aforementioned, in conclusion, I have the honour to most respectfully present to your Excellency my humble views:

a) There is an urgent need to compile and publish the best books for Tatar schools since the books published by Mr Radlov as pilot models are not devoid of imperfections. Moreover, it is necessary to publish translations of the books, which the Tatar population could use to learn about the history and geography of Russia and other useful facts from various fields of knowledge. It could arouse Tatars' awareness of how beneficial access to Russian culture can be and could also give rise to closer relations with the Russian world and its world outlook. The exclusively religious education, which Tatar young men receive at madrasahs and maktabas, provides them no practical skills and deprives them of an well rounded development, leaving them totally ignorant of the world around them.

b) The poor state in which the Russian-Tatar schools currently find themselves is rooted in the cultural and social conditions in which they have to exist. It is also caused by the fact that Islam is estranged from the Russian world. It [Islam] is quite a tight-knit community, which satisfies its own spiritual needs. Therefore, so far it has not sought light and knowledge outside its limits. Mullahs and the madrasah as well as the religion of the Quran in general give them spiritual nourishment in abundance and meet the shallow needs of the ignorant Tatar's mind and heart. Under these circumstances the Russian school is still powerless to win popular support and arouse society's interest towards it. Nor can it pave the way to this community and make its presence secure and lasting in a community, which for centuries has been firmly enveloped by well-established religious and moral outlooks. A school teacher in a Tatar settlement is a worthless and isolated member, who is influenced by the environment rather than influencing it. The pupils attend school making strictly precise demands to teach them to read and write as they do not need anything else. If the teacher does not want to comply with their requirements, they do not come. The small number of pupils may displease the authorities, so to avoid dissatisfaction, the teacher gladly admits whoever comes, and they also care about those pupils who play truant and admit pupils at the beginning, in the middle, and at the end of the school year. Due to all this there are as many as 4–5 departments in the Russian-Tatar schools but not two–three, and some pupils are taught by the teacher individually. The future teacher of a Tatar-Russian school is admitted to the teacher training school when they have reached 15 years of age, having been brought up by a Tatar family, in a Tatar madrasah, and in the Tatar community. After staying here for 4 years, they, as teachers of Russian, come back to the same community. It is little wonder that old habits, their native tongue and native customs, their Tatar way of life soon take the upper hand and suppress the awakened powers and abilities within them. The knowledge and ideas instilled into them gradually become less coherent and partly become forgotten, and in several years' time the teacher loses half of the acquired knowledge. The inadequate state of education in the Russian-Tatar schools is not the fault of the teacher training school. This inadequacy is caused by the insurmountable living conditions, which make the Russian-Tatar schools stillborn institutions.

c) Extending the course to 5 or 6 years will improve the qualitative and quantitative knowledge of the pupils studying at the teacher training school both in Russian and other subjects, which will result in their better general development. But this fact won't bring tangible results while there are fundamental obstacles in the living conditions of the Tatar masses, and the aim of closer relations and the unification of the non-Russian Tatar elements with Russian people will remain almost as in its current state.

d) The education of Muslim youth should be in the hands of government bodies, and Muslim colleges should not be an abnormal phenomenon within the general stream of public education in Russia, which is where they are now. While not only purely Russian educational institutions but also schools of other nationalities enjoy the state's attention and wide patronage, Mahometan maktabas and madrasahs

are left to their own resources, thus de facto left without any supervision, and their life, direction, and spirit of teaching are being developed quite freely and, unfortunately, to the detriment of the government's aspirations aimed at educating non-Russians.

I provided the Russian-Tatar schools with the available textbooks, which had been compiled directly for Tatar schools, as well as with various manuals and textbooks in general. I sent books on those subjects that I supervise to schools on the basis of need, while those subjects that were supervised by local head teachers and the inspectors of public schools [colleges] received books by application.

f) While inspecting the schools, I found their state of education satisfactory, and the minor shortcomings were pointed out to the teachers directly and orally. I did not introduce changes into the techniques and methods of teaching, steadily following in this respect Radlov, the former inspector of Tatar schools, who was more experienced in teaching non-Russians than I. I did my best to maintain the things he had created and what I had been instructed to do before a new inspector was appointed by the ministry. This appointment did not take place, and I worked until the expected time arrived, and the Inspectorate of Tatar, Bashkir, and Kirghiz schools of the Kazan school district was abolished.

***Education and training of Tatars in the columns
of the newspaper 'Tarzheman' ['Translator']***

**No. 8
A Letter from Siberia**

Adji Nigmatulla bai Seidyukov, the famous merchant from Tyumen, who lives in the village of Malchin, and is known in many places of Western Siberia and Stepnoy Krai for his utmost charity, did his native village much good. I made up my mind to write about this so as to show this honourable man as an example to other people who are interested in the life and achievements of the Muslim community. Adji Nigmatulla bai had a substantial stone building built in the village of Malchin for a library and supplied it with a thousand books in Turkish, Arabic, and Persian, both printed and handwritten. Having deposited enough money in a bank to employ a keeper and a watchman for the library on the bank's interest, he took care of it for all the time. The library is open for any person willing to use it. Visitors will find cordial hospitality here.

Upon learning of the best methods that exist in primary education, Adji Nigmatulla bai decided without hesitation to donate a model maktab to his village. To this end, a competent teacher was invited, and a special stone building was built. In five months' time the new children, of which there were 55, learned to read and a few to write, which was an unheard-of success in our parts as contrasted with the old method and discipline used in our maktab. On seeing the unexpected success, many Muslims were moved to tears, feeling sorry for the time they had lost in ignorance. At present, nearly 100 children are planning to study and they come to school most willingly, while they had to be driven with a stick to the maktab where the old method was used. I will inform you of the teaching methods next time.

M. Kh.

<...> Reformed maktab already exist in the Yalta Uyezd, in Bakhchysaray, Feodosiya, Simferopol, Kasimov, Kazan, Iletsk, Orenburg, in the village of Chukry in the Ufa Guberniya; in the village of Malchin in the Tobolsk Guberniya, the city of Tara, in Semipalatinsk, and some other places. Everywhere there is news of excellent progress. In several months' time children begin to read and write in Tatar, read in Arabic, and by all means they will be more successful after one year than after three years, as it used to be.

A letter from Sergiopol, the Semirechensk Region, says that until recently there was not a madrasah in this town where Muslim children could learn religion. Imam Habibulla Mkhzum Kazyev, who has been recently invited, opened a good madrasah and was able to admit no fewer than 70 pupils.

Elementary education in this madrasah will be taught under a new method using the textbook 'Khovadzhe i-Subyan.'

Mudarris [the teacher] completed a course of Muslim sciences in the city of Troitsk, in the madrasah taught by damolla Akhmed Khadji gazreta²¹.

From the town of Karkaralinsk, Khalilulla Bikmetev reports to us that imam and mudarris Mr. Kes-haf-Eddin Shakhmerdan oglu, on using the new textbook 'Hovadzhe-i-Subyan' to teach beginners in his madrasah, achieved amazing results: after studying for 4 months, 8–10-year-old boys mastered reading and writing so well that they can write down everything they hear and can read and understand any book and manuscript. All this was proved by an examination given to the children.

We have received word from Moscow that at the examination held in the maktab run by mullah Safa Alimov, in the presence of honourable people and parents, 7–8-year-old children displayed unprecedented progress in reading and writing. After beginning their studies last October they were already able to write and read in Tatar and read and understand Arabic by this March, having studied for 6 months. The children's progress was certified by those present, among whom was the signature of the Orenburg merchant Adji Akhmed Khusainov. This maktab makes use of the textbook 'Hovadzhe-i-Subyan.'

No. 13

* * *

The problem of how to improve the teaching methods used in children's elementary madrasahs and in higher colleges [madrasahs], which was raised by the 'Translator' several years ago, seems to be more and more worrying to Muslims. Those children's maktabas which employ the new kind of teaching are known to have been opened in different places and are quite successful. Next is the turn of the madrasahs. In Bakhchysaray the madrasah 'Zindzherli' began to teach in the new fashion, and another one here will soon be reorganised. Other guberniyas also seem to be thinking about the reform, for recently Mr Khasyankayev, the kalfa at Agryz madrasah, which is in the Vyatka Guberniya, visited Bakhchysaray²² to study the new method so as to use it in his madrasah. Mr Khasyankayev is considering running the shakirds' hostel and classes more efficiently by introducing compulsory examinations and limiting the length of the course. This young mullah produced the best impression on us, being deeply convinced of the necessity to reform our system of education and extend the training programme. It was nice of him to remark that we keep learning but still know nothing.

²¹ Khazret is meant here.

²² Khalfa is implied.

No. 14**Ufa**

It has been some time since the local Muslim community spoke of the necessity to open a maktab, which employs the new method of teaching, but in spite of the large population and the presence of the Religious Mahometan Association, things did not get going. It was only a month and a half ago that the young mullah Mr Bagaeddin Maksudov opened a maktab in his own house and began to teach using the new method. On visiting his classes the other day, I was amazed at his achievements, and I have no doubts that by the summer the children will have learned reading and writing. I would like to draw attention to the Ufa murzas [gentry] to this maktab. If they support Khodji Maksudov's good initiative, it will be for a good cause, which will make the children's elementary education easier.

No. 15**Kazan**

In the Yunosov orphanage, which is in our city, children have been taught to read and write in their native Tatar tongue since it was established, but their progress did not meet expectations. Mr Magomed Hakhim Yunusov, the present headmaster of the orphanage, who has travelled a lot and is familiar with schools using the new type, decided to improve teaching in the orphanage. Owing to his efforts, reading and writing in the native tongue have been taught using the new method with the help of the textbook 'Khovadzhe-i-Sybyan,' and the children are making good progress. Mr Khasan-Gata-efendi, who is familiar with the new method and is educated enough to succeed, was entrusted with this task.

The experience of using the new method can have a significant impact on the city's Muslims, that is why all people of good sense must be grateful to M. Yunusov for his good initiative.

Ahmed, M.

No. 16

* * *

As is seen from the latest reports made by the district and guberniya statistical committees, the Muslim population of the Kazan Guberniya enjoy very few services of the district council, the administration, and city societies in the sphere of public education. To this end, it makes use of specialised Muslim schools, called madrasahs and maktabas, while in district, city, and government schools, where teaching is done in Russian, very few Muslim children study. The number of those studying in the above-mentioned Muslim schools is growing every year, so is the number of schools themselves. Especially noticeable is the growth of madrasahs and maktabas and those studying there in recent years. According to the Guberniya Statistical Committee, in 1889 the number of madrasahs in the guberniya did not exceed 563, and there were 18,354 boys and 9,536 girls studying there. In 1890 there were already 677 madrasahs, with 19,927 boys and 11,390 girls in them. Last year the number of madrasahs grew to 722, and the number of pupils was 20,965 boys and 12,154 girls. Owing to this growth in the number of schools, the Muslim community of the Kazan Guberniya seems to be better provided with schools than the Russian population. While for the Russian population on average there is one school per 1,345.8 people [data as of 1891], the Muslim population has one school per 885 people.

There are 15.6 Muslims for one pupil studying in a madras and one female pupil, while among the Russian population there are 18.5 men for every one male pupil, and 81.9 women for every one female pupil. The Muslim community of the Kazan Uyezd has the largest number of schools, where, according to the Guberniya Statistical Committee, there were 207 schools last year [whereas there were 106 Russian schools].

No. 17 About Our Life

The letters we have recently received are unanimous in saying that the new idea of reorganising maktab and improving their teaching has taken up a decisive struggle everywhere against the old idea of the sanctity of the old order, although it was obvious that it was useless. The movement for reform and renewal embraces larger and large areas, which means that there are mindful and intelligent Muslims everywhere wishing to do good for society. <...>

Things are not so successful in the Malmyzh Uyezd of the Kazan Guberniya. There is a large village called Tyunter where there is a maktab and a madrasah. One mullah is an ardent supporter of the new order, while the other is a fervent supporter of the old order and is in a rut. Naturally, this rouses a blind underground struggle, which endangers successful teaching. It is comforting at least that little by little public awareness is leaning more and more towards reform.

In the village of Ideyevo of the Tambov Guberniya, in connection to the new method, a worse situation has arisen, where the villagers are displeased with the children's progress as they are taught by a mullah using the old method <...>

No. 18 Kazan

In 1893, on advice proposed by the honourable mudarris Galimjan Barudi, 'a maktab for orphans' was opened at the madrasah. Many of the local merchants covered the expenses to maintain one orphan from those begging at the market and sent them to school to study. In this way the number of children beggars has considerably decreased, and the progress they have made and their good conduct gladden both the donors and all good people.

If those donating to the orphans and their patrons increase their benefactions a little, then those orphans could be taught some trade, which would give them a means of living after they have completed their training. Note that all the donors are regular readers of 'Translator.'

Jamaleddin Khuseynov.

Mudarris Galimdjani Efendi is a very respectable man. He maintains sokht on his own money, teaches free of charge, and is very concerned about improved teaching and the lives of the pupils; he also writes and publishes books.

No. 19 * * *

Perm. N. Timkin writes to us: In the newly taught maktab run by Mollah Memed Kerim effendi and established on the recommendation of akhun damolla Nurulla khazaret assisted by the honourary Muslims, examinations were given before Ramadan. Teaching using the new method began on the first of September last year. The large audience and clergymen from among the townspeople, neighbouring villages, and factories were very glad with the children's great achievements made within such a short period of time. There are 130 children studying. Having started with the alphabet, they can readily read, write, and skillfully answer the questions based on the subjects they have covered.

These exams completely consolidated the circulation of the new method and better school routine in the maktab that we have in our region.

No. 20 Girls' Education

There are quite a few bad things in the life of Muslim communities, which are maintained by tradition and dominance of 'custom,' which is contrary to common sense and sharia itself. It must be said that

one of this sad things is the complete disregard for the education and training of girls. While something in this respect is done for boys, girls become completely forgotten; some people even say that they do not have to learn [know] anything!

Muslims living in the Volga River basin think it is quite sufficient if a woman can read a little, much less write, but she must know the main rules of the Faith. It does not seem much, but sadly Crimean Muslims have made this miserable syllabus still shorter and only teach girls to read and know the rules of the Faith. In the Caucasus and Central Asia they went even further. As the Muslim alphabet in both the printed and written scripts is absolutely the same, then, fearing that a girl who can read will easily be able to learn to write by herself, girls are not given a book to hold in their hands due to this ungodly custom, and instead the rules of the Faith are just memorised by repeating them after the woman teacher!

Out of ignorance, Muslims are afraid that writing will be put to use by women for evil ends, for example, to communicate with strange people and so on. They think that it follows in accordance with the Sharia and do not suspect that this custom is contrary to the sharia and is a product of Chinese, not Muslim life. In China, according to custom, a woman is not only deprived of literacy, but her feet are also disfigured to prevent her from walking quickly or running.

Muslim law, however, stating that 'reading and writing are different parts of one and the same art' [science], strictly requires that both Muslim men and women be taught 'science.'

Alas, Muslims chose to obey a more barbaric law than sacred law.

A literate girl might write an amorous note...therefore down with literacy! Smart, isn't it? Following this logic, all horses and donkeys should be let free as they sometimes stumble and break the pots they are loaded with; likewise, qadis should not be taught laws as they sometimes can abuse them; oil lamps and candles must be destroyed for they sometimes cause fires...

A man of good sense cannot accept this logic; a true Muslim cannot reject the direct precept of sharia; therefore, it is time to stop being slaves to nasty custom.

However, we are happy to testify that there are quite a few Muslims who are aware of this ruinous, strange and anti-Muslim custom.

They realise that a bad tree cannot yield good fruit, that an educated mother can raise her children better, that the good rules learned from one's mother are never forgotten. Therefore, the more a mother—that is, a woman—knows, the better one's general education and life will be. The ignorant cannot be equal to the learned said the Prophet.

If the still-strong tradition creates obstacles on the way to reorganising women's maktab on a new basis, then, on the other hand, the awakening conscience meets women's training half-way. This is explained by the fact that like rare stars twinkling in a black and cloudy sky, there are so far only five maktab for girls where the new method is used, and the girls are taught to read, write, count, as well as Muslim law and some needlework. These are the maktab in the city of Tara [Siberia]; in the villages of Dzhav-Bash and Tatarbai, which are in the Kasimov Uyezd; one maktab in Bakhchysaray, and a maktab in the town of Nukh in Elizabeth Guberniya. All these maktab are taught by women using the phonic method and the syllabus of our textbook <...>.

No. 21 Rare Muslim Women

It is very gratifying to hear of literate and even more gratifying to hear of educated Muslim women. We will give two examples for our female readers and subscribers. From Ufa, we are told that Bibi Khanifa Niazova from Tara, daughter of the famous mullah Burundukov who teaches girls, is known for her in depth knowledge of Turkish and Arabic written languages and has a perfect command of sharia science.

Bibi Khanifa does honour to the Muslims of the city of Tara. <...>

No. 22
An attack against reforms

Recently Tatar society has been interested in improving the teaching in maktab and making it easier. To this end elementary reading books have been published, and in many places maktab and school routines have been more or less improved. The results have won still greater sympathy of the people. However, there are still quite a few blockheaded, inveterate advocates of stagnation who are ready to argue that two times two is five. They want to improve or adjust the teaching.

Not long ago one of these advocates published a 16-page book entitled 'The Alphabet.' It contains only 2–3 pages resembling the 'alphabet,' while the other pages are devoted to useless speeches and evidence of 'sinful' innovations in education. Having written and published 'The Alphabet,' from which not only children but also teachers will not understand anything, the mullah author, in order to impress the 'Innovators,' misuses the Quran and the Prophets' words and tries to show the sinfulness of the new teaching method.

This impudent treatment of the holy texts for the sake of stagnation compels us to give a brief answer to this half-mullah. We say 'half-mullah' because a real mullah would never write or publish silly things.

The half-mullah says that those using the new method are changing the ancient holy alphabet. This is a most outrageous lie. Take all the new alphabet books and see if they have even one new letter. You should be ashamed to lie to an entire people! What will they say about you? The half-mullah says that the new method is a product of the new times and betrayal of the sacred old times. The mullah does not know history, or he would not say such things. The desire to improve teaching and make it easier is very old. The first Muslim Kufa writings were without dots and signs. Soon after the Prophet dots and signs were introduced to make it easier for people. Then other improvements were made as both ulamas and the people thought made good sense.

The half-mullah says that he follows his ancestors. That is a lie. The ancestors cared about general education and did their best to make it easier, but what he wants to do is quite the opposite.

The half-mullah says that, according to holy precept, minor deeds done by the Sunnah are more beneficial than major deeds done according to a bad custom.

Of course, it is better to earn less by working honestly than to earn much, say, by stealing or by fraudulent bankruptcy; but what makes you think that to 'teach children for five years and make them learn nothing' is Sunnah? Why do you distort and confuse the hadiths by quoting those that are not applicable here?

Non-Arabic people cannot write in their native tongues without using the letters 'ch-zh-P.' These three letters were adopted back in the Abbasid Caliphate, but through your ignorance and lack of knowledge you revolt against them. You should be ashamed. You say the Prophet said to take the road that most Muslims take.

If it is so, if you understand what you are writing, why then are you opposed to improving maktab teaching? The majority of Muslims are taking this road. The new method and better training are in fact dominant among Muslims in Tunisia, Egypt, Turkey, India, and many other places, to say nothing of many regions of Russia. But you know nothing and read nothing, and you think that you make up 'the majority.'

We hope that the honourable Kazan ulamas will teach you some more, and the Orenburg Mufti will notice your inappropriate writings.

No. 24

**Notification No. 6 on innovative colleges sent by military governor of the Turgay Region
on 12 January 1901 to the police department**

Top Secret

To the Police Department

Following Memorandum No. 13419 of 31 December of the previous year, I have the honour to report to the department that in my region there are no authors of innovative books among the Tatar writers. Therefore, I leave items 1–3 of the above memorandum unanswered and find it necessary to dwell only on item 4.

In the Turgay Region religious education of Kirghiz young men is mainly in the hands of Tatars, who temporarily live in great numbers on the steppe among the nomads as their tutors, or they admit Kirghiz children to their Tatar schools that are found in the neighbouring towns and villages: in Orenburg (at the mosque run by Khusainov), in Kargal (at Ishan Hairula Zeinullin), in Iletskaia Zashchita, Orsk, Verkhneuralsk, Troitsk, and others. All these places have Tatar schools with innovative teaching methods. In the region itself the Kirghiz do not have schools that use the new methods, though it is difficult to deny that those Kazan Tatars, who supervise Muslim education among the nomads, do not use the new method of teaching Muslim grammar. Before 1984 the indigenous schools were supervised by the uyezd administration; after that year they were removed from its jurisdiction and assigned to the officials at the Ministry of Public Education, who actually do not supervise them and even have no idea of the number of these schools. This can be proven by a memorandum recently sent to me by the trustee of the school district (No. 5821 of 20 December of last year), in which he asks me to gather complete information about all Mahometan schools in the region, including the dates they were established, their locations, the teachers' names, etc. Therefore, the indigenous schools in the region remain without the necessary supervision, although in the immediate past the district education committee made attempts to put them under supervision. In 1893 this committee worked out a draft of 'Instructions on Measures Aimed at Establishing the Actual Subordination of the Indigenous Schools in the Turgay Region, Both Maktabs and Madrasas, to the Educational Authorities.' However, the instructions were never adopted.

Although I am unable to give the names of those Kirghiz who could be authors of the innovative writings or name schools in the regions where new methods of teaching are used, I can still say that the innovative works of Tatar writers are accessible in the steppe. In 1899 Aktyubinsk head of uyezd found out (by chance) packages of books addressed to Hazret Safa Nurfeisov (from Bakhchysaray) published by Gasprinsky; or another example: last year the house of Kirghiz Suleiman Suyundukov was searched, and among the books that belonged to him there were 8 books published in Istanbul, several books from Bakhchysaray, and a map (of Muslim countries) of the same edition. These examples are not the exception, according to eyewitnesses among the officials of the regional government, innovative writings have disseminated widely in the steppe; they are delivered to the well-to-do people from among the Kirghiz and Hazreti.

Having mentioned the hazreti, I must add that over the last 5–10 years in my region there has been an increase of both hazreti and ishanas, who surround their lives with mystery and can influence people, according to those who know the steppe well. It looks as if the ishanas and hazreti have in a sense divided the region into sections, built homes for themselves, acquired murids (their followers), and are people of importance to whom attention must be paid. There are hardly any people at my disposal through which I could receive exact and truthful information about these religious leaders' activity in the steppe. In uyezds that are 50–80 square versts in size, besides the head and his assistant there are volost stewards from among the Kirghiz, who in most cases are illiterate, look at life through the eyes

of common people, and willingly conceal any backwardness or religious ignorance. Nevertheless, I am gathering information about the hazreti and ishanas, and if their activities provide information, which will help to clarify the question asked by the department, then it will be added to this answer of mine.

In conclusion, I consider it my duty to say that in general the Kirghiz are not fanatics of the Mahometan faith, and their resettlement to Russian areas, sufficient expert supervision by peasant supervisors, and police supervision, the bodies whose establishment my predecessor and I have been especially requesting, will ensure that Turgay Region is on the right track of merging with the fatherland and is made free from manifestations of fanaticism in the faith professed by Kirghiz people.

No. 25

Notification No. 559 by Perm Governor to the police department of 27 February 1901 about innovative colleges

Top Secret

To the Police Department

Following Memorandum No. 13412 of 31 December 1900, I have the honour to inform the police department that there are no authors of innovative works among the Muslim community living in my province; there is also no connection between the supporters of the new movement and the Young Turks, nor are there new trends from Turkey or any other foreign Muslim centre among the local Muslim community. This community mainly consists of people engaged in all sorts of trade and unskilled laborers, who are hardly interested in Mahometan literature or show any intellectual interests. Only Shagimardan Sagdudtinov, mullah at Nadezhdinsk mosque, which is in the Verkhotursky Uyezd, and the ahunds Muslyumov from the village of Tersyuk and Yagudin from the village of Ichkishi, both of the Shadrinsk Uyezd, are subscribers to Tärceman (Translator) magazine edited by Morza Ismail Gasprinsky from Crimea. In addition, in the city of Yekaterinburg, on Studyonaya Street, in the house of the Agafurov brothers, Mahometan children are taught Tatar reading and writing and the foundations of Muslim religious doctrine under the guidance of Yekaterinburg mullah Abdul-Khakim Abdul-Latypov using the Gasprinsky textbook. The teaching aids and premises are provided by 'Brothers Agafurov Trading House.' Up to 60 boys attend lessons there. Besides this, at Nadezhdinsk Plant, which is in the Verkhotursky Uyezd, Muslim children learn Mahometan reading and writing under the guidance of the local mullah Shagimardan Sagdudtinov using books published in 1897–1899 by the same Gasprinsky. The mullahs did not seek any permission to teach their parishioners' children as they think that their title obliges them to teach. There are no other schools where new teaching methods are used, and Mahometan children learn to read and write and the Mahometan religious doctrine at the local mullahs' homes or at maktab connected to a mosque where old methods of teaching are used.

No. 26

Notification No. 48 of 7 March 1901 by the military governor of the Ural Region to the police department about innovative Muslim schools

Top Secret

To the Police Department

Following Memorandum No. 13420 of 31 December of last year, I have the honour to inform the department that 1) according to the information sent to me by the regional inspector of public schools and heads of uyezds, in my region there are no authors of innovative works among the Tatar men of letters; 2) no propaganda of new ideas in Tatar culture in the region is observed; 3) the few Tatars living in the town of Guryev, who know of the innovative ideas spread by Gasprinsky about the convenience of the method in teaching literacy and the use of general education for Muslims, are probably quite indifferent

to these ideas; 4) in aul (village) schools, madrasahs, and maktabas the Mahometan religious doctrine is taught by semi-literate public and private mullahs, who strictly adhere to the old doctrine, and 5) according to the inspector of public schools who supervised all the elementary schools in the region, including the madrasahs, only in the Ural second madrasah the teacher Nuriakhmet Gyadsyatullin and his assistant Akhmet-Safa Baiteryakov teach Muslim children using the new method. This madrasah is run by public mullah Tuffatullin, and besides the above two teachers there is a senior teacher called Miftakhuddinov, who uses the old teaching method. Gyadsyatullin first studied in Bugulma and then in Orenburg madrasah, while Baiteryakov, according to him, studied at the Ural madrasah. Gyadsyatullin is 40 years old, and Baiteryakov is 27. Besides, in the Temir Kirghiz Uyezd, in aul No. 6 of Elebensk volost (district), mullah Hagi Kultullin teaches his children reading and writing using a phonic method. Kultullin himself originally studied in Sterlitamak or Kargal (he himself does not know it well) and then in Khiva.

No. 27

Governor of Ryazan notification of 13 March 1901 No. 489 to the Police Department on new method Muslim schools

Top Secret

To the Police Department

Following Memorandum No. 13413 of 31 December of last year regarding the new social and intellectual movement revealing itself among the Muslim population of Russia and reflected in the spheres of religion, school, and literature, I have the honour to inform the Police Department that in the guberniya I am entrusted with the Muslim population is concentrated almost entirely in the town of Kasimov and its uyezd, hence signs of a progressive movement among the Tatar ethnic group could emerge only in this district.

By my privately gathered detailed information, there are no authors of any innovative literary works whatsoever from among permanent residents of the town of Kasimov and the Kasimov Uyezd, and similarly there are no persons who have a higher scientific education. It is being noticed in the Muslim community that the young generation strives to educate children with a new phonetic method using the textbook of Ismail Gasprinsky, who received the status of an honorary member of the Kasimov Islamic charity society. There are books of the latest edition in circulation among the local Tatar population that by their content are considered innovative views, such as works by Devlet-Kildeev, Bayazitov, and Murza Alim. The whole young generation should be regarded as supporters of the new movement among the Kasimov Tatar population, but it is difficult to ascertain whether there is any connection between the followers of the reformist views in Kasimov and the Young Turks. It has been established that the teacher of the Kasimov madrasah Muhammed Khasan Toshrov corresponds with Constantinople, to which he nearly on a monthly basis sends cash transfers of 15 and more rubles to the address: Nursalih Karimov, Constantinople. One of the teachers of the town maktabas Hasan Bulatov, who runs a private school, used to study in Constantinople, but it is still unclear whether he maintains relations with it at present. Through the postal telegraph office many Muslims receive the Tarceman (Translator) newspaper published by Gasprinsky. No other traces of communication of the Kasimov Muslim world with any foreign centres have been discovered, which can be partly explained by the fact that Kasimov is not an autonomous centre of Islam and depends on Kazan, from which books are often sent to teachers and pupils of Kasimov Muslim schools. So last December many books were sent to Kasimov to Fatahetdin Batarov and Abdulla Syundyukov, and to Hasan Bulatov this January.

Since undoubtedly the most powerful tool for influencing the young generation and bringing it up in a particular direction and principles is education of the youth, Muslim schools and the organisation of the teaching process in them deserve special attention under the present conditions. Meanwhile, these schools are not under the control of the Russian authorities and not visited by any Russians; and since classes are taught in the Tatar language, and teachers do not send in reports about the lessons and programmes taught in schools, it does not even seem possible to have them put under any real supervision. All information about Tatar schools, when required, has to be borrowed from these same Muslims. With

all this, knowing the external condition of Muslim schools and the intellectual level of their pupils and teachers, it must be concluded that the educational process in Kasimov Muslim schools is organised extremely unsatisfactorily.

The town of Kasimov and its uyezd have a madrasah, a secondary educational institution, and 17 primary schools, maktab, a list of which is attached hereto. The madrasah has a nine-year course of study. The goal of this institution is to prepare mullahs. The main subject taught in the madrasah is the Quran and Arabic, the secular lessons include geography, logic and history, but these subjects are of secondary significance. Maktab teach Islamic law, reading and writing in Tatar, and the four arithmetic operations. The Russian language is not studied either in madrasahs or in maktab, classes are taught in the Tatar language, and that is why many madrasah graduates can hardly speak Russian. In order to obtain the certificate of command of the Russian language, which is necessary to be appointed as a mullah, some of them study with Russian tutors.

The contingent of teachers in both the secondary and primary schools is quite poor. For the nine-year madrasah there is only one teacher, a certain Hasan Tagirov, who studied in the Kazan madrasah and is not regarded by his pupils as a well-educated person. He is even not acquainted with the phonetic method of teaching language.

In the majority of maktab the function of teachers is fulfilled by mullahs, often absolutely poorly educated people, who are, on top of that, distracted from school affairs by their congregational duties.

It is not surprising, therefore, that Muslims are not satisfied with their mullahs and demand proper teachers for maktab. By the information collected from the Muslims, the phonetic method of teaching reading and writing exists only in six maktab, while the other ones use the old letter-subjunctive method. Such an inadequate situation will continue in Muslim schools as long as Muslim education continues to be, as it is now, private and remains out of any control of the educational authorities. In view of the above and for my part I would consider it necessary to arrange for the appropriate supervision over Muslim schools and introduce compulsory Russian language classes. An understanding of the Russian language would be quite useful also in the sense that, having studied Russian in their primary schools, the Muslims would go more willingly to Russian secondary educational institutions, which is presently difficult because Muslim children almost have a complete lack of knowledge of the Russian language and cannot study the disciplines of a school course taught in this unknown language.

By the way, this explains the fact that in the secondary seven-year mechanical-technical college in Kasimov, despite measures taken to help Muslim children to access this educational institution, there are at present only six Muslims out of the total number of 205 pupils, while this academic year not a single Muslim has demonstrated the intention to enter the college.

Irrespective of the above, in order to make it easier to supervise all the new tendencies emerging in the areas of school, religion, and literature in the Muslim world as well as the state of public opinion of the Tatar population, it would seem quite appropriate if a special interpreter was assigned for local authorities, who lack knowledge of the Tatar language, and the local police is helped with a free access to the required reports and various confidential information from the Kasimov postal telegraph office about the correspondence maintained between the local Tatars and other centres of the Islamic world and about all the Kasimov Islamic books that are being mailed.

No. 29

Saratov Vice Governor Notification of 1 May 1901, No. 1853, to the Police Department on the new method Muslim schools

Top Secret

To the Police Department

Following Memorandum No. 13415 of 31 December of last year, I have the honour to inform the Police Department that among the Tatar population of the Saratov Guberniya, being a rather ignorant mass, there are no persons writing innovative works in the Tatar literature. There is only one peasant of the village of Tatarskiye Kanadei of the Kuznetsk Uyezd Muhamet-Yusup-Safin Kazakov, who writes an occasion article for the Bakhchysaray newspaper Tärceman (Translator). Last year he also compiled an alphabet book titled 'A Russian Teacher for Muslims' that was approved on 27 November of the same year for publication by the Saint Petersburg censorship committee.

This population holds firmly to its old traditions, and any new ideas of progress and culture are alien to it. The Tatar population is extremely unsympathetic even to the new method of teaching the Tatar language using the European phonetic system, and in some villages mullahs, who had just started teaching children using this method, had to return to the old one due to the persistent demands of fellow villagers.

Nevertheless, the new method of teaching the Tatar language taken from the Crimean magazine of Gasprinsky was introduced and became finally established in some of the Tatar schools of the Saratov Guberniya, namely in the above-mentioned settlements of the three uyezds—that is, in Kuznetsk, Petrovsk, and Khvalynsk.

The Kuznetsk Uyezd²⁶

1) In the village of Nizhnyaya Yelyuzan of Chaadayevskaya volost (the teacher is the son of the local mullah Sabir Sharifjanov Vyasanov); 2) in the village of Isikeyevaya of Planskaya volost (the teacher is the local mullah Abdul-Latif Kulafin); 3) in the village of Tatarskiye Kanadei of Yevlashevskaya volost (the teacher is peasant Muhamet Muhametjanov); 4) in the village of Bolshiye Truyevskiy Verzhiny of Yevlashevskaya volost (the teacher is the local mullah Gezhametdin Meftyahetdinov Mamyshev); 5) in the village of Kuncherovo of Kuncherovskaya volost (the teacher is Volsk Aksyan Yunusov Muhametov); 6) in the village of Demina of Kuncherovskaya volost (the teacher is the local mullah Salahetdin-Abdul Latifov Chukanov); 7) in the village of Mogilki of Kuncherovskaya volost there are three schools (the teachers are the local azanchi Jelaletdin Sharifov Negmetullin, local mullah Aynetdin Shayakhmetov Mansurov, and a burgher (meshhanin) of the Seitovsky posad of the Orenburg Guberniya Hayrulla Khabibullin Reimov); 8) by the village of Verkhozim of Kuncherovskaya volost, at the factory of the trade partnership of Ishmuhamet-Abdula Deberdeyev and brothers, there are two schools (the teachers are the acting mullah peasant of the Penza Guberniya Husyain Ismetullov Tugushev and unmarried woman from Bakhchysaray Idaye-Veli-Shi Murza Kaytazova); 9) in the village of Pendelka of Annenkovskaya volost there are three schools (the teachers are azanchi Abaydulla Fahretdinov, peasant of the Simbirsk Guberniya Shaydulla Gaytullov Rezyapov, and peasant of the Simbirsk Guberniya Hayrulla Ayzatullin Usmanov).

The Petrovsk Uyezd

1) In the village of Stary Vershaut of Kozlovskaya volost (the teachers are the local mullahs Muhamet-Zarif-Muhamet Mubinov Rahmankulov and Muhametdin-Muhamet Mubinov); 2) in the village of Karlygan of Savkinskaya volost (the teacher is peasant Muhametjan Sharifjanov Nugaybikov); 3) in the village of Sulyayevka of Pylkovskaya volost (the teacher is peasant Galyamutdin Khantemirov); 4) in the village of Novy Vershaut of Savkinskaya volost (the teachers are the local mullah Satredin-Muhamet Mubinov Kuramshin and his son Safa Satredinov).

The Khvalynsk Uyezd

1) In the village of Verkhnyaya Tereshka of Sredne-Tereshinskaya volost (the teacher is the local mullah Abdurahman Hosyanov); 2) in the village of Bakhteyevka of Staro-Lebezhayskaya volost (the teacher is the local mullah Ibni-Abbyas Umyarov Yagudin).

All these schools, except for the two schools at the factory of the Deberdeevs in the Kuznetsk Uyezd, were opened by rural communities, are managed by local mullahs, and are subject to supervision by educational authorities. The phonetic method of teaching was introduced by the mullahs, who considered it to be better, though the rest of the Tatar population, as indicated above, in many places are not in agreement. In the schools at Deberdeyevs' factory the new method of teaching was introduced by the factory owners themselves, who finance these schools and, in view of the advantages of the phonetic system of teaching, invited a male and a female teachers familiar with this system.

The Deberdeevs are relatives of Ismail Gasprinsky; besides, one of the Deberdeev brothers Abdul married a Turk eight years ago and settled down in Constantinople.

The Deberdeevs previously used to supply cloth to the Turkish army and often visited Turkey, at present they occasionally go to Constantinople to their brother Abdul and have visited Gasprinsky. The Deberdeevs, however, have in no way showed themselves to be supporters of any new progressive ideas.

No. 30

**Governor of Nizhny Novgorod Notification No. 980 of 5 May 1901
to the Police Department on the new method Muslim schools**

Top Secret

To the Police Department

Following Memorandum No. 13409 of 31 December of last year, I have the honour to inform the Police Department that in the governorate I am entrusted with the Muslim population resides on a per-

²⁶ Italics were done in the text of the document.

manent basis only in two uyezds, Vasilsursky and Sergachsky, and there is no one in their midst serving in Tatar literature as an author of innovative works, and equally no connection has been so far revealed between the supporters of such views among the Tatar population and the Young Turks.

In the Sergachsky Uyezd familiarisation with secular Tatar literature has been detected only in the village of Gribanovo. The teacher of the ministerial school Abu-Nagim-Shukurov has a textbook by Gasprinsky and the weekly newspaper *Tärceman* (Translator) published by the same Gasprinsky in Bakhchysaray that Shukurov gives to pupils at classes and for home reading. He uses the textbook for teaching the Tatar language to his own children and, when requested, to other boys from among the pupils of the ministerial school he is in charge of. Education in the latter is conducted using textbooks in Russian under the control of officials at the Ministry of Public Education. Abu-Nagim Shukurov studied at Orenburg Russian-Tatar Normal School²⁷, has been residing in Gribanovo already for a long time, and is married to the daughter of the local mullah, who is the religious teacher in the above-mentioned school. There are no schools with the new teaching methods in the Sergachsky Uyezd, and to teach children the Quran, local mullahs, who are hostile to any kind of novelties, have at their disposal lower ranking schools.

There are sixteen Muslim schools in the Vasilsursky Uyezd, and two of them teach classes using the new methods. Both schools are in the village of Andreyevka, and their teachers are mullahs Iskak Museyev, a graduate of Azimov Islamic School in Kazan, and Myasum Sharipzhanov.

In both Vasilsursky and Sergachsky uyezds the Tatar schools are not under the control of any party whatsoever.

No. 31

Governor of Kazan Notification No. 1876 of 13 May 1901, on the new method Muslim schools

Top Secret

To the Police Department

Following Memorandum No. 13407 of 31 December of last year, I have the honour to report to the Police Department the following information about the spread of the progressive trend in the field of educational tasks and methods among the Tatars of the governorate I am entrusted with.

The new trend (new method) already has a substantial number of followers, particularly among mullahs, Russian classes teachers at madrasahs, and wealthy merchants, who are waging an open and fervent struggle against the advocates of the old ways in the sphere of literature and school pedagogy. Naturally, at present it is difficult to predict the outcome of this struggle. The old adherents, having in their ranks the majority of mullahs and the peasant population in remote areas, are still very strong, but the rapid growth in the success of the new method is, nevertheless, beyond any doubt. In Kazan, which is the educational centre for the Tatars of the Volga-Kama Region, it is being distributed to distant villages by graduates of the Tatar normal school appointed as Russian classes teachers at madrasahs as well as by young mullahs, who have acquired knowledge of the new method in Kazan madrasahs and started to introduce it in makhtabs, which they open with the help of philanthropic merchants.

Almost all representatives of the new direction, active in the world of letters, are residents of Kazan; among them one can mention: 1) mullah Gaysa Yahyin, religious teacher at Kazan Tatar Normal School, who translated the fables by Krylov and Russian and German (brothers Grimm) folk fairy tales into Tatar. One of the original works by Yahyin, a book called 'Xalyasat' ul' misail,' contains key provisions on Islamic doctrine; another work of his published in 1898 aims to prove that studying the Russian language, which is a necessary subject for the Tatars, in no way contradicts the principles of Islam.

2) Shakirzyan Tagirov, teacher of the Russian class at madrasahs of Staro-Tatarskaya Sloboda in Kazan, published a quite popular textbook in 1892 for those starting to study Tatar and Arabic, the first edition of which was accompanied by a short methodological instruction. Tagirov, who initially studied at Kazan madrasahs, later in 1880 completed the course being among the students of the first graduation year of Kazan Tatar Normal School and has been a teacher since 1884.

²⁷ Orenburg Tatar Teachers' School is meant here.

3) Mullah Ahmed-Gady Maksudov, religious teacher of the first town primary Tatar school, is known as the author of the Arabic grammar book for the Tatars; besides, he translated a short textbook of the Russian language into the Kazan Tatar dialect, compiled by Kazas for schools of the Taurida Guberniya; finally, under the title of 'Primary textbook,' which has gone through two editions already, Maksudov grouped the rules of the phonetic method of reading Arabic and Tatar words, accompanied by daily prayers. Maksudov is a graduate of Tatar normal school.

4) State councillor Ibragim Teregulov, teacher of natural science in Kazan Tatar normal school, graduate of Kazan Veterinary Institute, is known as the author of popular booklets in Tatar on various issues of natural science and economy. Many copies of his published brochures 'Water,' 'Earth,' 'Air,' and 'Care of Horses' are ordered by the Ufa Guberniya Zemstvo council for further distribution among the Tatar population.

5) Mullah of the 5th mosque of the city of Kazan Galimzyan Galeev, son of a local merchant, is held in respect in the Kazan Muslim community due to his scholarship and wealth; having completed his education in local madrasahs, Galeev travelled to Bukhara and Constantinople to perfect his knowledge of the sciences.

After taking up the position of the mullah at the 5th mosque, Galeev enlarged the old madrasah, improved conditions for the residing shakirds, having arranged for a medical ward and common dining hall in the madrasah; apart from theological disciplines, there are also lessons in general educational subjects (history, geography, and mathematics), in lower level schools at the madrasah (maktab, one for boys and another one for girls) reading and writing are taught using the new method by the textbook prepared by Galeev himself. Shakirds graduating from the Galeev madrasah, who managed to acquire pedagogical skills by giving lessons to pupils of the mentioned maktab, take with Galeev's patronage teaching positions in uyezds of not only Kazan but also neighbouring governorates, later becoming mullahs. Galeev is able to render material support to his former students and sometimes to pay a stipend to teachers of rural Tatar schools out of his own pocket.

6) Among the ardent supporters of the new method one should also mention Ahmed Husainov, an Orenburg merchant, now residing in Kazan, possessing quite a substantial wealth.

Himself only able to read and write, Husainov, like many other wealthy Muslims, is wholeheartedly devoted to the cause of educating his co-religionists. In Orenburg he finances at his own expense a reorganised madrasah that adopted the subject education system and introduced the study of general educational disciplines. Many rural schools (maktab) in the Kazan Guberniya owe their existence to his support; he pays stipends to teachers, supplies schools with school books, etc. Besides, Husainov provides funds to publish teaching guides and books promoting the new method.

7) Known publishers of Tatar books of the new direction are also: merchant Valey Bakirov, a wealthy person; and brothers Muhamedzyan and Sharipzyan Karimov, owners of a Tatar printing house.

Among the schools using the new teaching method, apart from the above maktab at the mullah Galeev madrasah, worthy of mention are the following: In the Kazan Uyezd, in the village of Chuvail of Kovalinskaya volost, the teacher is a peasant of the Simbirsk Guberniya Shakirzyan Khamidullin, receives a stipend from merchant Ahmed Husainov; the maktab is managed by Gady Shamsutdinov. In the Tetyushsky Uyezd, in the village of Atabayev of Bolsheklyarinskaya volost, the teacher is the local mullah Shagi-Muhammed Usmanov, known for compiling a new method alphabet book and a guide for Muslims about the new system of children's education. These books are published with funding from the above merchant Ahmed Husainov and are provided to all willing to study or teach using the new method. Mullah Usmanov is a graduate of the Azimov madrasah in Kazan. In the village of Idryas-Tenikeeva of Ilyinsko-Shongutskaya volost the teacher is mullah Ahmetzyan Abdul-Gafarov, a graduate of the Azimov madrasah in Kazan. In the village of Bolshiye Klyari of the same volost the teacher is mullah Shagimuhammed Nurmuhametov, a graduate of the Azimov madrasah. In the village of Klyanchevevo of Bolshe-Klyarinskaya volost the teacher is mullah Shagabuddin Miftahutdinov, a graduate of the Buinsk madrasah of the Simbirsk Guberniya. In the village of Bolshoy Turme of Shemyakinskaya volost the teacher is mullah Zeitdin Sharafutdinov, a graduate of the Apanayev madrasah in Kazan.

There are three schools using the new teaching method in the Spassk Uyezd. A maktab in the village of Bolshiye Tigany was opened on 15 October 1899, the teacher is the son of the local mullah Harras Bogdanov, who first studied by the old method in Kazan madrasahs and then in the reformed madrasah of merchant Husainov in Orenburg. The stipend for the teacher as well as funds for teaching materials are provided by the above-mentioned Husainov. Two schools were opened in the village of Novyye Chelny in October 1900: one with funding from Chistopol merchant Zarif Badamshin, the other was financed by the local prosperous peasant Hayrulla Nasyrov. The teachers are peasant of the Chistopol

Uyezd Ahmet Zakey Mustafin in the first school and a merchant's son Negametulla Shafigullin in the second one, both of them being graduates of the Chistopol madrasah.

A maktab in the Mamadysh Uyezd in the village of Chabiya-Churichi of Abdinskaya volost was opened on 25 November 1895; the teacher is mullah Mubaraksha Fattahuddinov, a graduate of the Satyshevo madrasah of the same uyezd.

In the Tsivilsk Uyezd, in the village of Akzegitova of Novo-Kovalinskaya volost, a maktab was opened back in 1870, financed by merchant Zagidulla Sharifullin. In 1897 the new method of teaching was introduced in it. The teacher is a peasant of the Chistopol Uyezd Garifulla Hayrullin, who studied in Kazan madrasah.

In the Tsarevokokshaysk uyezd there are three schools where they teach using the new method. In the village of Kiklova the school was built with funds from Gaynulla Sabitov, a local peasant, and is maintained by him and other students' parents. The local mullah Nutfulla Sebegatullin is a teacher. In the village of Sluzhilaya Ura the school is supported financially by Mukhametzyan Tagirov, a local peasant living in Kazan. Reading and writing are taught by Samigulla Sebegatullin, a local mullah. In the village of Sary Uzyum there are no special school premises, but mullah Abdul Qasim Rakhmetullin teaches reading and writing using the phonetic method at his home.

As to other uyezds with a Tatar population (Chistopol, Sviazhs, Laishevo, and Cheboksary), mullahs still teach reading and writing using the former alphabetic method there, which is somewhat simplified in conformity with Gasprinsky's textbook. The mullahs themselves barely know the purely phonetic method.

If we turn to the question of the attitude of most of the Tatars to the new teaching method, it must be first of all noted that the old adherents, which are guided by mullahs who adhere to restraint and worship old traditions, are still very strong. They consider innovators to be dangerous for the faith, and all sorts of innovations, disastrous for the Tatar ethnic group. Adherents of the old ways struggle against innovators not only in practical ways but also in literature. In this respect, a brochure by Mukhuddinov published in 1899 in Kazan is very interesting. It asserts that the new method, by which the author means not only the phonetic method of teaching reading and writing but also all other innovations rooted in the life of local Muslims in the past few years, is contrary to the dictates of God and prophets. Bringing up an old Arab saying, the author recommends fighting against innovation with force.

The extent of strength of these views among the Tatar population is shown by the following example. In the villages of Kichkinyash and Urazlinoy of the Tsarevokokshaysk Uyezd innovative mullahs introduced the new teaching method in their schools. However, when it was necessary to expand the school building in the first village and to allocate a new place for it, the parishioners agreed to do this only if the old system of teaching was reinstated, although the new method had been used in teaching for seven years already. In the village of Urazlinoy peasants forced their mullah to return to the old order the very next year after the new method was introduced.

In the literary field innovators are more successful in the struggle between the two sides since their camp includes a lot of educated and cultured people. A book called 'Shakird and Student' published in 1899 in Kazan, which touted the benefits of European education in comparison with the narrow religious Islamic one, comparing Russian and Tatar students, caused a sensation in the local Muslim society and inflicted a serious blow upon the old group.

As to relations between representatives of the new teaching method and foreign educational centres, it should be noted that local Tatars usually travel abroad at the time of the hajj to Mecca with the goal of visiting holy places of worship; just a few go to Constantinople or Bukhara to improve their knowledge of the sciences. Some mullahs and merchants, such as the above-mentioned father and son Galeevs and mullah Apanayev, actively meet with foreign coreligionists coming to Kazan. However, there is no serious evidence that would show Kazan innovators have interacted with the Young Turks party.

It is necessary to mention that the movement connected with the new teaching method can be divided into two directions. Kazan Tatar Teachers' School at the Ministry of Public Education serves as a centre for the first of them. Its graduates leave it with a belief that their kinsmen need to know the Russian language and European culture, and with their influence in various fields they gradually destroy the fanatical Tatar aversion to everything Russian.

Quite the opposite spirit dominates in Galeev's madrasah mentioned above, which prepares mullahs. General subjects introduced in its curriculum and the general systematic nature of the classes hardly serve the purpose of familiarising Muslims with Russian culture. It has been asked repeatedly in previous years if students of madrasahs and maktab arranged by the Galeevs are avoiding Russian classes, and whether the Galeevs are trying to wrest their madrasah out from the control of the educational authorities.

Although there is no direct evidence proving mullah Galleyev is willfully evading the requirements of the Ministry of Public Education to introduce mandatory Russian classes for the shakirds, nevertheless, it can be said with certainty that we should not expect the Galeev family to do much to help assimilate the Tatars, judging by their beliefs.

No. 32

Notice No.²⁸ of the Governor of Tomsk dated 7 June 1901 to the Police Department on New Method Islamic schools

Top Secret

To the Police Department

Based on Order No. 13434 dated 31 December of this year, I have the honour to notify the police department that quite a large number of Tatars in the guberniya entrusted to me, as it turned out according to the data collected, do not strive for an education and continue to remain faithful to the old customs inherited from their ancestors.

Any innovation, be it based on science or on a change in the customs established by lifestyle, is treated by the Muslims with suspicion and even some hostility. Each settlement has its own school at which they are taught by a mullah or other competent person chosen by the community, and studies themselves do not go beyond reading the Quran. The textbooks they have were mostly published by Chernova's printing house in Kazan²⁹. As to Gasprinsky's publications in Bakhchysaray, they have recently appeared in the Mariinsk Uyezd, with Shuldat Kasmya Osin, the former mullah in the settlement, being a supporter and an ardent defender of them. In conversations with his coreligionists, the above person expresses the idea that mullahs distort the Quran due to a lack of education, that the current education system is defective, that ways should be found to raise the mental outlook of the population in general, and in particular, mullahs as educators, and that Gasprinsky's teaching method and abandoning established prejudices could serve to this purpose.

Based on this position, the above-mentioned Osin began to introduce Gasprinsky's teaching, but the people met the innovation with hostility, and the community replaced Osin and elected another person as teacher. Besides the desire to introduce a new textbook, Osin has done nothing wrong, and currently he does not have any influence on others. People living in the Tomsk Guberniya receive the following newspapers published in the Turkic language: in Tomsk Abubakirov, a trusted person of Bereznitsky the merchant, receives the *Lewet* newspaper (ottoman illustration) published in Constantinople in the Turkish language, and one copy of *Tärceman* (Translator) newspaper published in Tatar in Bakhchysaray is received in the village of Shemonand of the Zmeinogorsk Uyezd as well as in the village of Yansul of the Mariinsk Uyezd. Such a small number of periodicals received by a relatively large Tatar population of the governorate clearly demonstrates the degree of its development and its pursuit of education. There are no persons who write innovative Tatar literary works. As to the new intellectual and social movement that has emerged in the environment of the Muslim population of the empire, there is no such movement in the Tomsk Guberniya, and people continue to remain faithful to the precepts of their ancestors. If new trends appeared among the Mohammedan governorate's population, it would be immediately identified as the population strongly opposes it and would seek support from the local administration.

Currently there are three schools in the governorate entrusted to me at which non-Russian Mohammedans study, namely: 1. Tomsk-Kazan Rural School of the Ministry of Internal Affairs opened in 1875; Nadezhda Saymon-Simovich, who bears the title of primary school teacher, is a teacher there. The Russian language is taught using the phonetic method; besides Russian language, they teach arithmetic and divine law—the Mohammedan faith. The administrative arm is under the control of the inspector of public schools for the 1st district of the Tomsk Guberniya.

²⁸ The number is illegible.

²⁹ Printing house of M. Chirkova's descendants, who fulfilled orders of Tatar publishers.

2. Teplorechensk Rural School of the Ministry of Internal Affairs in Pochitansk volost of the Mariinsk Uyezd opened in 1878, with Litfulla Kurmashev, an imam of the 1st Teplorechensk cathedral mosque, being a guardian, teacher, and religious teacher there, who graduated from Orenburg Muslim Spiritual Assembly.

3. Private Mohammedan School in Tomsk opened in 1897 is maintained at the expense of Tomsk Mohammedan Society and controlled by the educational department. Mitkevich, who temporarily has the title of a primary school teacher and is a student of Tomsk State University with knowledge of the Tatar language, is a teacher there.

The divine law of the Mohammedan faith is taught by mullahs and imams in Tatar and Arabic, while Russian language and arithmetic are taught in Russian.

No. 33

Notice No. 159 of Ufa Governor dated 1 November 1901 to the Police Department on New-Method Islamic schools

Top Secret

To the Police Department

In response to Circular Order No. 13421 dated 31 December 1900, I have the honour to submit to the department the following information as a report to the Minister of Internal Affairs:

There are very few Muslim intellectuals in the Ufa Guberniya as there are few people with a higher or even secondary education among its population. I do not possess any information that would give me reason to establish a connection between this intelligentsia and such figures as Gasprinsky.

Gasprinsky's textbooks are not common in schools of the Ufa Guberniya. This has been observed by me personally as well as by the Directorate of Public Schools; the same has been repeatedly confirmed by Sultanov, the Orenburg mufti, in several casual conversations with me.

Many Mohammedans in the governorate subscribe to Gasprinsky's Tärce-man (Translator) newspaper as one of the few ethnic ones existing in Russia, but it is not completely understandable for the majority of the population as its Tatar language largely differs from the Bashkir dialect.

As for Islamic schools that exist in the governorate, these are all ordinary madrasahs and maktabas, and I believe that the fanaticism of old mullahs is even more dangerous for the majority of Ufa's Mohammedan population than new teaching ideas like that of Gasprinsky because they are still hard to understand for the majority of the population.

Given the insularity of the local Muslims, it is very difficult to provide a detailed report on the mood of individual elements of this environment; my previous conclusions are based on the following facts known to me:

1) The circumstances of the census rebellion of 1897 in the Menzelinsk and Belebey Uyezds, which demonstrated the utter ignorance of the Mohammedan masses and a complete absence of not only any new Tatar movements among them but also the ability to understand the true goals even of such measures as a national census.

2) The activities of representatives of the Mohammedan population from among peasants' and Zemstvo institutions, which almost entirely constitute the local Muslim intelligentsia. Such figures include: two Zemstvo leaders with a higher education and highly educated that can definitely be called trustworthy administrative figures of the governorate. Representatives of the Zemstvo from among Mohammedans mostly have a limited education and development, which can be proven by the texts of their statements in Zemstvo assemblies, indicating their narrow fanaticism, for example, the demand to exclude Christian girls³⁰ from the Russian-Tatar female school, rather than their fascination with any national liberal ideas.

³⁰ *Author of the note:* this requirement was imposed at the Belebey Uyezd Zemstvo assembly of 1900 by a Mohammedan councilor Syrtlanov.

3) The composition of the local Mohammedan clergy in the governorate, which entirely consists (except for mufti Sultanov, a person with a higher education³¹, a senior magistrate) of uneducated and even quite ignorant persons, with the oldest mullahs demonstrating persistent fanaticism. Moreover, most of them have their personal interests foremost in their minds. When a mullah teaching the Quran in a Russian-Tatar school in the Birk Uyezd started to receive a salary for his lessons like an Orthodox priest, local mullahs immediately expressed a desire to have Russian-Tatar schools.

All the foregoing leads me to the final conclusion that currently there is insufficient evidence that Gasprinsky's harmful ideas have spread among Mohammedans in the Ufa Guberniya. However, the manifested tendency of some Islamic clergy to resort to religious-fanatical agitation requires careful control, as it is even more dangerous in the dark and ignorant mass of the local Mohammedans, since such agitation can easily cause severe disorders for no good reason, as happened at the beginning of the national census of January 1897.

No. 34

Notice No. 369 of Simbirsk Governor dated 19 November 1901 to the Police Department on New-Method Islamic schools

Top Secret

To the Police Department

In response to Circular Order No. 13.416 dated 31 December of last year, I have the honour to notify the police department that the local Tatar population is engaged exclusively in agriculture, is at a very low level of mental development, and the majority of them are far from any progressive movement as well as from any issues of a political nature, jealously guarding centuries-old traditions against any innovation on the basis of their religious beliefs.

The teaching in Tatar schools in the governorate—'madrasahs' and 'maktabs'—is carried out using the old system, with few exceptions, which will be mentioned below, under the immediate control and management of mullahs, who strongly adhere to the old tradition.

As to the new method of teaching reading and writing in accordance with the textbooks of I. Gasprinsky and other related methods, it is unknown to the vast majority of local Tatars. Opinions of individuals who are familiar with these methods are as follows. Most of the mullahs and ordinary Tatar people under their influence treat these methods with hostility, seeing a departure from the true Islamic teaching in them. Moreover, the new alphabet books add nine new letters to the alphabet, which is a clear violation of Mohammedan tenets. According to a few other people from among the Tatars, although the new method based on Gasprinsky's textbooks is recognised as the most convenient from an educational point of view and makes it possible to quickly learn to read and write, applying it is met with some significant difficulties since the dialect of the Crimean Tatars, in which the textbooks are written, differs from the dialect of the Kazan Tatars. Furthermore, introducing the new method requires funds to equip schools and purchase books as well as makes it necessary to appoint special teachers because mullahs, who are constantly distracted from school classes due to the need to fulfill various spiritual obligations, are unable to teach systematically, which is the basis of the new method.

Citing these prevailing, so to say, views of the local Tatars on teaching with the new methods, I cannot but mention that these methods have started to penetrate into the local Tatar environment, although still to a small extent. In total there are six Tatar schools in the Simbirsk Guberniya where they teach using the new method (the list of them is attached). Of these two schools at cloth factories of Akchurin in the Karsun and Khusainov in the Simbirsk Uyezds are set up exclusively for children of the factory workers and are designed for a limited number of students. The other four, which are scattered in various areas of the governorate, have appeared relatively recently, in the period from

³¹ M. Sultanov had a secondary education.

1897 to 1901. The Tatars first met the opening of these schools with no enthusiasm, and only thanks to the persistent work of some people heading the schools, as well as success of the students, the number of students has gradually increased. But despite the apparent success, the sphere of influence of those schools is still limited to a small area consisting of one or two nearby villages. The rest of the Tatars, led by mullahs adhering to old traditions, remain resistant to all sorts of innovations, and judging by the prevailing hostility to the new method of teaching, it would take much time to introduce this method.

As to the way of thinking and direction of the persons heading the schools and promoting the new method of learning to read and write Tatar, it was found out by monitoring their activities and personal relations that these people, occupying the positions of mullahs, do not participate in any political movements and do not write any innovative works in the Tatar literature. Moreover, there is no reason to believe that they interact with the Young Turks or foreign Islamic centres. The main reason for the transition from the old method to the new one lies in the unquestionable superiority of the latter in terms of pedagogy, as the new method significantly facilitates teaching and makes it possible to extend the range of teaching. <...>

No. 35

**Petition of the Widow of a State Councilor Khadicha Shagiakhmetova Akhmerova;
the Wife of a Lieutenant Colonel Khadicha Abdulova Abdrakhmanova,
the Wife of a Colonel Mansurova; and Home Tutors Akhmerova and Abdrakhmanova
to the Head of Kazan Educational District to Permit Opening a Primary School
to Teach Russian Language, Reading, and Writing to Tatar Girls dated 7 November 1900**

The Russian language is currently disseminated among the Tatar population of Kazan Educational District through primary schools for Tatar boys opened at the initiative of the government by town and rural boards, and meanwhile there is not a single school to teach Tatar girls in the entire educational district.

Recognising how beneficial it is for Muslim girls to know the Russian language, we have come to the conclusion that it would be highly desirable to open primary schools to teach the Russian language to Tatar girls as well as handicrafts, which are so important in everyday life, in Kazan, since it is the centre of Volga Islam.

Having no funds to maintain such a school and not expecting to collect tuition fees at first, we, the undersigned, appeal to Your Excellency asking if you could recognise the possibility to initiate the procedure of opening a Russian school for Tatar girls in Kazan at the expense of the Ministry of Public Education.

No. 36**Progress among Vyatka Muslims**

An obvious desire for progress has been observed among Vyatka Muslims in recent years.

<...> Improved Islamic maktab and madrasahs, unprecedented spread of secular books designed for the general reader, the growing number of students in Russian-Tatar schools, where they exist, as well as a number of other facts of this kind—we believe that all this is an obvious indication that the traditional way of Muslim life is not satisfying all layers of the population. Moreover, it should be noted that recently it has been far from consisting of only shaved 'Abduls' and 'Bibiykas' wrapped in chapans, as it has been traditionally thought in Russian society. Not long ago rural Muslims considered a maktab to be an excessive burden for them. Muslims now recognise it is urgently needed, and some Muslim villages have even decided to have Zemstvo-established Russian-Tatar schools. The best evidence of this lies in the pleasant fact for Muslims that women's education is beginning to take a more favourable form. Five or six years ago in the Vyatka Guberniya there were no more or less decently equipped Islamic girls' schools that taught using the phonetic method general subjects as arithmetic, geography, and history besides the Mohammedan faith. Now there are such schools. For example, the girls' Izhbobinskoye maktab (the Sarapul Uyezd of the Vyatka Guberniya). Earlier they taught using the old 'alphabetic' method there, there were secular subjects, and the number of students never exceeded 20–25. Today, thanks to an educated teacher Ms Kamilya Nigmanizilina³³, the phonetic teaching method has been introduced there called 'usule-jadid.' Students now learn to read and write in a few months, which formerly took many years, when teaching was conducted according to the old alphabetic method. The main book for the students there is the recently-released Tatar language textbook called 'Mugallim Awwal' (first book for training) by Gady Maksyutov, and reading is taught in accordance with 'Kirayat-Turki' (Anthology) by Nigmanizilin. Besides the Mohammedan faith and Tatar reading and writing, there are brief courses on arithmetic, geography, ancient and modern history, and verses of Central Asian classics are learned

³³ This is probably a misprint, Kamilya Nigmatullina is meant.

by heart. Along with these they teach some works of Russian writers in translation, for example, fables by Krylov, 'Bakhchysaray Fountain' by Pushkin, and others.

The Izhbobinskoye reformed school has drawn particular attention of local Muslims in the current academic year and attracted up to 70 Muslim girls in the first week of studying (studies in Muslimmak-tabs usually start in September). In short the Izhbobinskoye girls' school succeeds, which is proved by a test introduced in January for interested Muslims. The exam has yielded excellent results. It is advisable for Ms Kamilya Nigmatullina to develop her work further and wider and not to stop to develop her well-launched business. Recognition of the fact that teaching will help at least ten or twenty Muslim girls to get on their feet, look around, and become decent, honest, and if not educated but at least competent and free people is the best reward for the good Muslim women for their sympathy in the difficult, critical time faced by Muslim women in their ignorant and slave period of life!

§ 2. Christened Tatars

The period from the 19th to the early 20th century was a time of global change in the social and cultural development paradigm for christened Tatars, which was characterised by the transition from the traditional (ethnic) culture to 'high' culture. This process was accompanied by a gradual destruction of the foundations of their agricultural patriarchal society, the emergence of a distinctive educational system, a class of urban and rural intelligentsia, the birth of a literary tradition based on the Cyrillic alphabet, significant changes in their religious ideas. The most important factor influencing the cultural transformation of the christened Tatar society was in the formation of their primary and secondary confessional (Orthodox) educational system. Founded by missionaries as a primary channel for promoting the Orthodox ideology in the 19–20th centuries, the primary school became the basis of cultural mobilisation for christened Tatars. The schooling of christened Tatars was inseparably linked with the personality of the missionary and a scientist-orientalist N. Ilminsky. The idea of introducing missionary schools for christened Tatars and opening a special central educational institution to train teachers for them was first expressed by him in his report on visiting the Tatar villages (1856) and addressed to Gregory (Postnikov), the Archbishop of Kazan. The formation and implementation of the new missionary-educational system was subsequently based upon this idea. An important step in the development of Ilminsky's system consisted in the creation of Kazan Central Schools for Christened Tatars in 1863, on the basis of which the theoretical and practical basis of a new educational ideology was created by trial and error. Ilminsky himself widely covered the development history of this educational institution in a number of his articles published in local and national periodicals and published as a separate collection of articles dedicated to Kazan Central Schools for Christened Tatars in 1887. They covered in detail the major milestones in the history of Kazan Central Schools for Christened Tatars as well as the key ideas underlying Ilminsky's systems to help to understand and analyse the innovations introduced by this missionary and educator. These publications caused much debate in governmental agencies and society. Over the course of extensive discussion, Ilminsky's system was recognised by the imperial authorities and became the foundation of the school and the missionary policy among christened non-Russian peoples of eastern Russia. This was reflected in the 'Regulation on Measures Related to the Education of Foreigners Living in Russia,' approved by his majesty on 26 March 1870. Since then the network of primary confessional schools for christened Tatars was extended. The main sources on the history of their development are clerical

materials prepared for higher authorities by officials of the Ministry of Public Education, Ministry of Internal Affairs, missionaries, and priests in which the functioning of these institutions, their cultural and religious influence on the local population are demonstrated. N. Ilminsky's correspondence with his students is another important documentary complex. After they graduated from Kazan Central School for Christened Tatars or Kazan Teachers' Seminary, these students became teachers and priests in villages, where christened Tatars lived. These sources are unique because of their personalised character that helps to look at the history of christened Tatars' school education through the eyes of direct participants of these events and to evaluate complex peripeteias of cultural and religious processes that took place among the representatives of this ethnic and religious community in the 19–early 20th centuries.

Extract from a Report of a Bachelor of Kazan Theological Academy N. Ilminsky on His Trip Across Tatar Villages (1856)

Orthodox schools for rural inhabitants should be the best and principal means to a Christian education of the people and to the unification of different-minded people into the like-mindedness of Orthodoxy. In Mamadysh there is a so-called central school; it gathers orphans speaking different languages and professing different religions from various districts of the Kazan Guberniya at the state's expense for up to 20 people. They are all placed in a common apartment, are dressed, and fed at the expense of the state. The educational period continues for six years. They study to read and write in Russian according to Russian grammar books, then they study 'The Basis of the Christian Doctrine,' and finally read the Bible. Moreover, they study arithmetic and writing. Even if a student was Muslim, they have to learn Christian prayers and catechism. They should without fail speak Russian. During the six years they are made entirely Russian, and there have been situations when Tatar and other non-christened boys wished to adopt Christianity at the end of their course. At the end of their course the boys are transferred at the disposal of the Kazan Chamber of the State Property and become clerks. This school is a clear proof of the decisive impact that can be had on foreigners by schools, where they are educated in accordance with certain concepts and rules from an early age. On my way I have met the following schools in the parishes, where many old-christened Tatars live: in Abdi⁵⁴, Yukachi⁵⁵, Uryas-Uchi⁵⁶, Yumya⁵⁷, Chura⁵⁸, and Karabayany⁵⁹ village in the Laishevo Uyezd, which I remember from my previous trips. In their number rural parochial schools can seem sufficient at the first glance, but they have the following inconveniences and deficiencies.

People have not become accustomed to a school education and do not yet understand its benefits. Not realising the benefits of education, most peasants reluctantly send their children to schools. Moreover, the residents of other villages have to lease a flat for their children in the village, where there is a school, and to pay a ruble per month, which is very burdensome for poor people. It should be added that during his studies a boy cannot help his father with household duties. The boys do not wish to study because of their inclination to laziness and games, which is natural for children. If one or two of the students from any village miss classes for several days, other boys abandon studies looking at them. Therefore students (at least many of them) attend their classes inconstantly: attend one week and miss another one. Threats or the strictness of teachers can only further alienate children from science. Therefore, teachers apply to village authorities to ask an elder or a clerk to induce the boys to attend the school, and parents, not to keep them at home or send their children again. Unfortunately, village leaders partially abuse this important business often using this fact to take bribes, [and] namely: they allow buying the boys off the studies for a small amount of money (in villages they treat smallpox vaccinators in the same way). And abundant correspondence between the teachers and the administrations often gives no results, so that the teachers finally cease to apply to village leaders with their problems. Consequently, this evil can be cured only by good intentions and vigilant solicitude of district leaders.

⁵⁴ Modern village of Abdi in the Tyulyachi District of the Republic of Tatarstan.

⁵⁵ Modern village of Yukachi in the Mamadysh District of the Republic of Tatarstan.

⁵⁶ Modern village of Uryas-Uchi in the Kukmor District of the Republic of Tatarstan.

⁵⁷ Modern village of Oshforma Umya in the Kukmor District of the Republic of Tatarstan.

⁵⁸ Modern village of Selo-Chura in the Kukmor District of the Republic of Tatarstan.

⁵⁹ Modern village of Karabayan in the Tyulyachi District of the Republic of Tatarstan.

By order of the Ministry of State Property, peasants should be voluntarily incited to send their children to study; they should not be oppressed or forced to do it. But it was demonstrated above how this humanity taken perhaps from German morals sticks to a Russian peasant. The same Ministry usually closes a school where few students study, and you can reopen it only with the help of a long correspondence and numerous applications. Thus, a school in the vilage of Abdyakh was closed, and a deacon now teaches children for free there. As I heard, a school in the village of Karabayanakh was closed, which happened due to the disagreement between the priest and the deacon as to who should teach—that is, who should receive the salary for teaching. This order of the Ministry of State Property seems to be unwise: it should support schools in every way possible. If a small number of students study reluctantly, then it should use compulsion or give them time for the peasants to get accustomed to schools; if students depend on another one or a cruel teacher, then it should replace the teachers for another one, a better one, and not deprive the region of any way to education.

Another inconvenience of schools consists of the teachers. I have noticed that mostly priests serve as teachers, and I must admit that not education but money leads the priest to these activities. However, taking into account the size of parishes and the number of parishioners, priests simply cannot spend much time with the class, and therefore the teaching process is slow. It would be better if priests were only observers and taught only the God's law, with other information taught by a different person. Since teachers come to schools, so to speak, not very often, all the teaching is limited to reading, writing, and arithmetic. It seems that other information of a moral and religious nature is not provided to the students at all. What is particularly strange is that they do not teach the boys to read and write in the language of the church. I believe that teaching to read religious books and sing religious songs, so that they could stand in a choir in the church, read, and sing, may be useful for peasants. Of course, they should gradually explain them a sense of religious Slavonic dogmas, especially those that are most frequently used in the church, for example, *ekteniyas*⁶⁰, and so on. It would familiarise them with the church and the Orthodoxy, induce to go to church, make the temple of God a direct school for the villagers, who lack other sources of education. I remember that in the mountains of Lebanon parishioners themselves fulfill the duties of junior deacons. At one location I admired as ten children came into the centre of the church, two in a row, and turn by turn, read all *kathismas*⁶¹ by heart. Meanwhile, our villagers demonstrate some reluctance to stand in a choir.

The printed circular books register maintained by each school demonstrates that the authorities try to provide rural schools with many books that only we can suggest to parishioners for reading, including a number of Slavic books: the Gospel, Psalms, the Book of Hours; a publication entitled 'Reading' is particularly useful since it includes passages from the Bible, the Old and New Testament arranged in a chronological historical order. If all these books were properly read by the students, village boys could get much information. But these books are currently read very rarely.

Finally, rural schools have another disadvantage consisting of the fact that they, having many observers—district authorities, deans, and other supervisors—have no permanent supervision, which would be directed only to them, and the condition of all schools is not reduced to one, and they could better understand the needs of these schools and find means to improve them. I think it would be useful to have a deliberate official, whose duty would be only to attend rural schools, to report detailed information about their condition to the diocesan authorities, and to fulfill orders of the diocesan authorities. Since education of the villagers should be predominantly religious, schools should be under direct supervision of the diocesan authorities.

Schools are located in decent houses arranged mostly by priests, who receive a small annual fee for this; they are equipped with decent desks. Boys study how to read and write very well: I saw some students who were reading quite fluently. Schools are attended by foreigners along with Russians: christened Tatars, Votyaks, etc., and they are talented if compared to Russians. As to the number of students, the greatest number of those studying in a school does not exceed 50; and the total number of students in all the aforementioned schools is not more than 150 people.

Thus, according to the number of students, the amount of information, and the time and persistence of studies, Russian rural schools are worse than Muslim schools; therefore, to equalise their influence if compared to the latter ones, rural schools should be given much more attention.

⁶⁰ In the Orthodox tradition *ekteniya* means the first of the main parts of a liturgy usually read by a deacon on an ambon in the church.

⁶¹ *Kathisma* means a part of the Psalter read during a liturgy.

I had an idea to take several older-christened boys, who proved to be talented and humble in rural schools, especially homeless orphans, and send them to a boarding school for a few years, educate, carefully train them, and subsequently use them as deacons or teachers to promote education among their fellow villagers. It would be like the former schools for newly-christened Tatars. But I do not know whether this idea is convenient for its implementation. Since in rural schools they teach only reading, they will probably forget this knowledge after graduation due to a lack of suitable books for them. Therefore, in order for the ability to read to serve as an educational tool, popular publications with a didactic content must be sold as cheaply as possible in villages.

No. 42

From an article by N. Ilminsky 'Primary School for Children of Christened Tatars in Kazan' (1867)

The germ of this school appeared in early September 1863, when Vasily Timofeev⁶² entered the Kazan Theological Academy as a trainee teacher of the Tatar language. At that time one older-christened Tatar man from the same village of Nikiforova, where Timofeev came from, brought his son to him to study. A month later this boy was followed from another one, then a third one, all of them being from the same village. They studied during the winter of 1863/4 in a leased flat in a basement behind the academy together with the teacher and his family. I cannot but mention I. Yastrebov⁶³, a student of the Academy's missionary branch. This energetic and handsome young man, with constant love and solicitude, supported Timofeev, who had just come to the academy from a humble village life, and the three of his students. Yastrebov tried to arrange better relationships between Timofeev and academy students, provided his emerging school with paper, cinder, various rags, bought geography by Corneille for Timofeev at his own expense, and was the first to interest him in this science. In general in his daily conversations with Timofeev he tried to convey various data. Once, when Timofeev's simple religious feelings were hurt by accidentally heard materialistic ideas, which were spread in our country at that time, Yastrebov used every effort to calm Timofeev and smooth the painful impression. Timofeev gratefully remembers Yastrebov's love, who now serves in Turkey with a Russian mission.

At the end of June 1864 Timofeev and his students went home. Their reading and singing Orthodox prayers in their native language were liked by all christened Tatars, and their example incited other Nikiforova boys, who became Timofeev's students. In addition, the later toured several villages of the Mamadysh Uyezd, inspiring christened Tatars with the idea in the need for educating their children. His suggestion was accepted by many people with confidence and sympathy. Having learned about this emerging sympathy to children's education among christened Tatars and bearing in mind the general ignorance of christened Tatars and a lack of knowledge about Christianity, in August 1864 I petitioned the authorities of the Kazan Educational District to permit me to open a private school for the initial training of christened Tatars' children in Kazan, with Timofeev being a teacher. The permission of the authorities is set out in order No. 1239 of 3 September 1864 sent to me by the Head of schools of the Kazan Guberniya, which contains the following provisions about the school: 'The boys should live in an equipped apartment, which will be leased at private expense for them, but clothing and food must be delivered by their parents, depending on their financial state. No tuition fee should be charged. The boys should be taught to read and write in Russian. The main subject is the law of God, prayers, the sacred history, and a brief catechism on the books written in the Tatar language but in Russian letters. Then, depending on the students' curiosity and performance, they must be taught the first arithmetic operations, drawing of geometric shapes, basics of geography, and similar basic information. Reading and teaching

⁶² Vasily Vasilyevich Timofeev (1836–1893), the founder of the Kazan Central School for Christened Tatars, is referred to here.

⁶³ Ivan Stepanovich Yastrebov (1839–1894) was a graduate of the Anti-Islamic Department of the Kazan Spiritual Academy, a famous Russian diplomat and publicist. From 1870 to 1886 he led the Russian General Consulate in Thessaloniki.

must be conducted primarily in Tatar, and then the students must gradually practice Russian. Timofeev should be the teacher at the proposed school at the request of the founders thereof, because christened Tatars, knowing him personally, have confidence in him and entrust their children to him. V. Timofeev and his family should live in the same apartment with his students to watch constantly their behaviour.' The school will be controlled by me and a bachelor of Theological Academy Mr Malov⁶⁴.

As christened Tatars live in uyezds and the christened Tatars of the Mamadysh Uyezd were the first to demonstrate an interest in the education of their children, to make it easier for them, we needed to give their children a fully equipped room, with the exception of clothes and food, which was, however, required in the form of raw products. We also presented the parents with the freedom to bring their children to school and to take them away from it when they wanted. On the issue of the students' entering the school, we acted without any interference of the authorities, bearing in mind the experience that any even the most delicate intervention of the authorities often awakens misunderstandings and fears in commoners. <...>

**The list of graduates of the Kazan Central School for Christened Tatars
for the 1902–1903 academic year with the indication of their place of service**

No.	Last name, first name, patronymic	What service they joined
1	Yegor Alekseev	Burdino 2–form school at the Ministry of National Education, the Ufa Guberniya, teacher's assistant
2	Vasily Alginov	Kurcheyevo zemskoye school of the Belebeyevsky Uyezd in the Ufa Guberniya, a teacher
3	Matvey Asanbayev	Novobalykino school at the Ministry of National Education of the Belebeyevsky Uyezd in the Ufa Guberniya, a teacher
4	Nikolay Asafov	Vladimir school of St. Gury Orthodox Brotherhood of the Mamadysh Uyezd, the Kazan Guberniya, a teacher.
5	Grigory Ilyin	due to the lack of open positions, was temporarily sent back to his parents
6	Pimen Kazakov	entered the Kazan Teachers' Seminary in order to continue his education
7	Alexander Komisarov	Bogryazhskaia missionary school of the Menzelinsk Uyezd, the Ufa Guberniya, a teacher
8	Yefrem Makarov	Tolkiyaz school of St. Gury Orthodox Brotherhood in the Laishevo Uyezd of the Kazan Guberniya, a teacher
9	Timofey Maksimov	due to the lack of open positions, was temporarily sent back to his parents
10	Vasily Nazarov	due to the lack of open positions, was temporarily sent back to his parents
11	Vasily Pavlov	was enrolled in the position of a teacher at the missionary school of the Vyatka Guberniya
12	Semen Pavlov	was enrolled in the position of a teacher at the missionary school of the Vyatka Guberniya
13	Ivan Pavlov	was enrolled in the position of a teacher at the missionary school of the Vyatka Guberniya

14	Ignaty Prokofyev	due to the lack of open positions, was temporarily sent back to his parents
15	Dmitry Ryabkov	due to the lack of open positions, was temporarily sent back to his parents
16	Vasily Semenov	due to the lack of open positions, was temporarily sent back to his parents
17	Ivan Sergeev	Biyersk school of St. Gury Orthodox Brotherhood in the Mamadysh Uyezd of the Kazan Guberniya, a teacher
18	Mikhail Sofin	Durgino school of St. Gury Orthodox Brotherhood of the Tsivilsk Uyezd of the Kazan Guberniya
19	Avraamy Tabakov	Khozesanovo school of St. Gury Brotherhood of the Tsivilsk Uyezd of the Kazan Guberniya, a teacher
20	Fedot Timofeev	missionary school of the Menzelinsk Uyezd of the Ufa Guberniya, a teacher
21	Konstantin Trofimov	missionary school of the Yelabuga Uyezd of the Vyatka Guberniya, a teacher
22	Maksim Usachev	Bolshe-Savrushevo school of St. Gury Orthodox Brotherhood in the Mamadysh Uyezd of the Kazan Guberniya, a teacher
23	Tikhon Yakovlev	Sumbashsk school of St. Gury Orthodox Brotherhood in the Mamadysh Uyezd of the Kazan Guberniya, a teacher
24	Aleksey Fedorov	Verkhne-Meretyakovo school of St. Gury Orthodox Brotherhood of the Laishevo Uyezd of the Kazan Guberniya, a teacher
25	Yemelyan Fedorov	Molkumerskaya school of St. Gury Brotherhood of the Laishevo Uyezd of the Kazan Guberniya, a teacher

No. 45

Extracts from the Regulations on measures at education of aliens inhabiting Russia, by Imperial consolidation of 26 March 1870

Relating to non-Russian Christians

1. The common factor for all non-Russian Christians in the system of their education should be the following: a) the basic tool of elementary education for every tribe should be their native dialects; b) teachers at non-Russian schools should be natives of these tribes but those who speak Russian well, or they may be Russians speaking the necessary dialects in an excellent way; and c) special attention must be paid to women's education, because the tribal dialect and tribal features are mostly preserved and maintained by mothers.

2. The peculiarities of the educational system for every group of non-Russians mainly lie in the significance which native dialect should be in the aliens' elementary school. In this respect, we should decree the following: a) for alien children who have barely absorbed the Russian environment and do not speak Russian new special schools must be established, at which the elementary education is conducted in their local language, and children's school books are written in the same dialect. School books include first readers, necessary prayers, short stories from the Sacred story of the Old and New Testament, and religious-moral books. In order to make the transition to the study of the Russian language easier, all these books should be printed in the local dialect with Russian letters along with the translation into Russian or without one, except for prayer books and liturgical books in general, which must contain a Russian translation. At the same time, children with the help of local dialects learn the Russian everyday speech via visual training and then, after they digest a significant vocabulary of Russian words and phrases, they start learning the Russian grammar (reading and writing at the same time), continuing to learn the Russian vernacular language. Besides, this visual training and learning of grammar should constantly supplement and help each other, thus contributing both to children's intellectual development through acquainting them with the surrounding world and a better adoption of the Russian language with the obligatory translation of Russian text into their alien dialects. As for calculation, initially children should learn it in their alien dialect and then in Russian. Upon the sufficient adoption of the Russian language by the children, they study the Law of God on a common basis; besides, the Sacred Story is repeated in Russian with necessary additions; the main prayers must be learned by heart in the Russian and the Church Slavic languages, the short catechesis is taught. The liturgical chant, as an important means of aliens' enlightenment, is introduced at all schools; moreover, the chant is sung both in the local alien dialect and the Church Slavic language. Then the organisation of the course's details and defining of its time frame as well as the following education of non-Russian children are at the dis-

cretion of the local school's administration. Moreover, at non-Russian schools with the aforementioned structure of education shifts for girls will be organised. B) In the localities inhabited by mixed native Russian and alien populations, general elementary schools for the two groups must be established. At these schools education must be carried out in the Russian language and the local alien dialect, which is, however, acceptable only for oral explanations. If it is not enough, in this case special departments established at the expense of the locality must be organised for non-Russian pupils, at which they must study until they completely absorb the Russian language to be able to study the same disciplines together with Russian children. Shifts for girls must also be established at such schools. C) Finally, for aliens who have integrated into the Russian environment elementary public schools are established on the common terms with Russian schools.

3. The nearest administration of schools of the two first categories is delegated to the priest—the school's catechist if he possesses knowledge of the local alien dialect and desires to take on the responsibility of administration; if the local priest does not speak the local dialect, then in this case the school administration is given to the teacher, while teaching of the Law of God may be confided to a lay person.

4. The supervision over alien schools is imposed upon inspectors of elementary public schools with the necessary additional instructions, which the administration generally has provided to all inspectors.

Table 10

The general record of missionary Christened Tatar schools of the Yelabuga Uyezd of the Vyatka Guberniya for 1884⁶⁵

The name of the school	Where and by whom the school was founded	Who works as a teacher, from when and where they received an education and whether they have the right for it and who the catechist is	Students' successes and what they studied in the first half of the academic year	Whether the school is educationally and materially satisfactory
1. Cherkasovo school	Opened on 8 November 1881 by the local priest, missionary Boris Gavrilov	Pavel Petrov a peasant from the village of Umyak. He was educated at the Kazan Christened-Tatar School and has the certificate of a village teacher. He has occupied this position since 8 November 1881. His salary is 100 rubles per annum, including residence allowance. The catechist is missionary Boris Gavrilov, gratis	Children are taught the Law of God, reading, writing, arithmetic, and chanting of more widely used prayers. Education is conducted in the Tatar and Russian languages. Moreover, there are evening classes for adults who study the same disciplines rather successfully. In 1884 three boys graduated from the school and received certificates. The chant is conducted under the direction of teacher P. Petrov	The school needs desks, tables, abaci, pictures, quills and ink tanks, school books, and all guides in general. For some reason the Yelabuga authority finally refused to provide the school with this equipment.

⁶⁵ The report is provided with abbreviations.

2. Bryushilino	In existence from 17 September 1873. It was opened by the local priest Konstantin Rodnikov	Since 2 September 1883 the position of a teacher has been occupied by Dmitry Petrov. He graduated from the Kazan Central Christened-Tatar School and comes from among the peasants of the village of Umyak. He has a certificate for teaching granted by the Laishevo Teachers Council. The catechist is Mikhail Leontyevich Kosmodamiansky, acting as the psalmist, gratis	Studies begin from 15 November; therefore, nothing exact can be said about students' achievements, because the school, at the order of the Vyatka committee of the Orthodox missionary community, was transferred to the village of Porym of the Grakhovo ward but subsequently was returned	The school is in need of all school guides and textbooks. Although the Yelabuga authority provides them with these items, but in an insignificant amount. Both books and desks were previously used by zemsky schools
3. Togayevsky	Opened by the Vyatka committee of the Orthodox missionary community on 1 October 1882	Mikhail Romanov Lobanov has been the teacher since 1 October 1883, a graduate of the Kazan Central Christened-Tatar School. He has certificate for teaching No. 134 from the Laishevo Teachers Council. His salary is 100 rubles with residence allowance.	The total number of students at the school is 9 people, but only 4 boys visit it continuously; therefore, no achievements have been seen.	The school needs all school guides and textbooks. Although the Yelabuga authority provides them with these items but in an insignificant amount. The textbooks are old and were out of use at zemsky schools
4. Setyakovsky	Transferred from the village of Munayka in 1879	A peasant from the village of Setyakova Vasily Terentyev, who studied at the Kazan Christened-Tatar School, has the certificate for teaching, occupies the position of a teacher since 1879, and since 1 October 1882 works at this school. His salary is 135 rubles, including residence allowance.	They read (reading) the Sacred Story of the Old and New Covenant with the emphasis on the Russian language with the translation into Tatar; arithmetics, four rules of calculation, calligraphy, they write to dictation; they know morning and evening prayers. They know how to sing several prayers	The school needs all school guides and textbooks. Although the Yelabuga authority provides them with these items but in an insignificant amount. The textbooks are old and were out of use at zemsky schools
5. Porymsky	In 1884, at the desire of local priest father Nikolay Yakimov, it was transferred from the village of Novo-Grishina	The teacher is one ⁶⁶ of the graduates of the Kazan Central Christian Tatar School, certificate No.105 of the Laishev Council, and receives 145 roubles, including residence allowance	7 boys out of 32 pupils study the Law of God, know all prayers, as well as four actions of arithmetic, while the rest study the abecedarium	The school is in need of all textbooks and guides. It was opened at the sole desire of priest Yakimov by the order of the society, which obliged to provide an apartment and heating. However, the society has granted neither an apartment nor heating, and the teacher should pay for them because priest Yakimov refused to pay for it

⁶⁶ Written unintelligibly.

6. Staro-Rish- kinsky school	Opened in 1871 by the missionary, ca- thedral protoiereus Stepan Kashmen- sky	Semen Dmitriev, teach- er from 11 October 1881. He graduated from the Kazan Central Christian Tatar School. He possesses the certificate for carrying out teaching activities No.156, dated 29 August 1880, from the Laishev Teachers' Council. His salary is 130 roubles per annum, including residence allowance	Pupils regularly attend the school. Senior ones read in Russian, Slavic, and Tatar, clearly and sensibly. They write to dictation, know all prayers in Russian and Tatar from the programme for elementary schools, and tell the 10 lessons from the Sacred Story of the Old and New Testaments. As well as all four acts of arithmetic and calculations. The middle section knows all the prayers according to the programme in Tatar and some in Russian and write in Tatar to dictation. They also solve small problems. Some junior students have studied the abecedarium; they write numbers to one hundred and cal- ligraphic letters, while those enrolled later have not yet studied the abecedarium	In the material sense, the school is in need of two desks and books in the Russian language, especially elementary ones—the New Testament and other books

No.47

The report by missionary, priest of the village of Shirinskoe Fillip Gavrilov⁶⁷ on the religious-moral condition of the christened Tatars of the Vyatka Eparchy for 1889.

<...> During the present trip, we visited 18 non-Russian schools and always attempted to adjust the time so that to be at the school during students' morning prayers, which are held before classes, which we managed to do at many schools. Children read the Slavic text of morning prayers in such a good way! And some prayers were read in their local language, from the adapted prayer book. They sang so clearly and touching, accompanying the reading of prayers with chant and also repeating it in their local language, that it deeply touched me. After the prayer, students took their seats and I, remaining at the school, listened to the teacher's classes and at the conclusion examined the students' knowledge of the Law of God. Asking question about different sites consecrated with events described in the New Testament, for example, Nazareth, Bethlehem, Jerusalem, Nain, Bithynia, about the Jordan River, the Sea of

⁶⁷ Filipp Gavrilov (?–1896) was a famous spiritual figure and missionary from among the christened Tatars. After graduating from the Kazan Central School for Christened Tatars, he was directed to Yelyshevo village as a teacher of a 'Brotherhood' missionary school. Consequently, on N. Ilminsky's insistence, he was conferred orders and directed to the Vyatka eparchy for missionary work. He was the founder and teacher of law in a range of christened-Tatar and Udmurt elementary schools in the Vyatka Region. From 1891 until his death, he was an eparchial non-Russian missionary of the Vyatka eparchy and a prior at the Cathedral in the city of Malmzyzh.

Galilee and the Lake of Gennesaret and about the mounts of Tabor and Olivet, etc., I was given answers convincing me that students at missionary schools know the life of Jesus Christ thoroughly and accurately. Students at these schools generally study Russian grammar. Their main disciplines are the Law of God, prayers, the Sacred Story and Short Catechism by the books translated into their native language, but in Russian letters, then, with the development of their curiosity and successes, they are taught first actions of arithmetic, technical drawing, geometric figures, basic notions of geography, and similar basic information. Initially, reading and teaching are conducted in the native language, and then pupils gradually train in Russian. Some school children made significant achievements in the Russian language and started reading the New Testament in it and can almost completely understand it. In one school, I asked a pupil to read a parable about a saint in the Russian translation of the New Testament, and in another school the parable of the wheat and chaff. After reading, I asked them what they had read and whether they could render the content in their language. And they retold it to me in Tatar in the right order and so accurately that they did not miss any feature of the Testament parable. In all the schools that I visited, I advised students to adhere to an independent manner of acquiring knowledge through reading books. Teachers themselves told that, as chance offers, they tried to acquaint students with different disciplines via oral stories and that their conversations mostly touched upon the Sacred history and church matters.

It is a great pity that at missionary schools, there are no books for teachers themselves to read; neither are there books for students. There are also no study guides. At those few schools where there are paintings, boys are told sacred events with their help. Being present at such conversations, I admired a live stream of the Tatars' and Cheremis' native speech, which God prepared and consecrated for a vessel honoured for reading the holy Testament truths.

Students are taught writing along with reading; they write calligraphy from a copy-book in a satisfactory manner. Moreover, they write to dictation after the teacher in the Russian language and rewrite fairy tales. In order that the hearts of non-Russian students better absorbed the truths of the Christian learning, I advised teachers to make senior students rewrite into separate notebooks the Slavic texts of Sunday and Holiday heirmoi, church canticles and hymns to the Mother of God, lending them for a while from their priest. Such an exercise for students of the Tatar and Cheremis origin in rewriting of church chants with their elevated thoughts and high studiousness about the householdry of our salvation will contribute not only to our students' development of hands via writing but also to learning the Church-Slavic language. But what is mostly important is that it will contribute to the spiritual and enlightening development of their intellect.

I observe poor furnishings at many missionary schools. Their small libraries are similarly miserable. And I unwillingly reflect upon these schools: whether they bring the anticipated benefit and whether they can provide means to bring benefits at least with the help of school books? They seem to have been opened in warm blood. Their founders only took into consideration an utter necessity to open schools for christened Tatars and even because of their detachment from the Orthodoxy. <...> And thus, in an attempt to rebut the influence of Mohammedanism upon the baptised Tatars, our missionary schools were opened thinking that, once we make a call, Tatar children from all sides would rush to our schools. In the meantime, it costs the teachers a great deal, and today there should be 10–15–20 christened Tatar students. While not a single baptised Tatar student is studying yet at zemsky schools which function at christened Tatar parishes of local settlements. If recently the number of students from baptised Tatar families has significantly increased and christened Tatar girls started entering these schools fairly often, we should assume that the christened Tatars gradually began to trust them. Again, when opening these anti-Mohammedan schools, not a single rouble seems to have been spent apart from those given to teachers as salaries. But as soon as the schools had been founded in villages and started functioning, we felt the need for school guides and other equipment necessary for a small household. Luckily, some zemsky authorities (Yelabuga, for instance) of the uyezd provided them with some shabby items which had been used at zemsky schools and returned back due to their decay and impropriety for further use at zemsky schools. 'Rodnoye Slovo' [The Native Word] by author Ushimsky is among these items; old desks were also lent from zemsky schools. By their own efforts, teachers have constructed a blackboard and bought some books from deliverers, as well as beads and some writing implements, and thus ran their schools step by step, overcoming different difficulties on their way, including abuse from those who are scandalised by the education of the christened Tatars and christened non-Russians in general. But these schools, to their honour, deserved trust not only from the baptised Tatars, but also gained sympathy and confidence from the side of the Orthodox community. Some of the most dignified representatives of the Russian Orthodox society encourage aliens in their enlightenment and have even arranged great facilities for two missionary schools in the villages

of Ilneti⁶⁸ and Sardabash⁶⁹; others, taking the responsibility of an administrator, provide some material help to some schools, at least providing teachers with paper, quills, ink and pencils, free of charge. The citizens of the city of Yelabuga Ushkov and Dmitrievsky donated desks and several exemplars of the New Testament in the Russian translation for two schools: the former, for the Setyakovskaya school; and the latter, for the Cherkosovskaya school. At last, the Mamlyzh zemstvo, prompted by the spirit of Christian love and awareness of the undoubted benefit of schools for aliens, decreed at their recent meeting to grant 100 roubles each to the five christian Tatar schools in the villages of Sardabash, Sabash, Bekteshev, Durge, and Nosle.

Missionary schools, whenever possible, aim at achieving that high and truly God pleasing goal in order to confirm christened aliens in Orthodoxy, especially the christened Tatars, who, due to their non-acquaintance with the gist and sense of the genuine faith, hesitate before Christianity. Therefore, those whose hearts are indifferent towards the future of Orthodoxy among the Tatars may satisfy their pious zeal contributing to the consolidation and development of missionary schools. And my cordial thought is as follows: simply-furnished houses at the church should be built in at least two–three villages of baptised Tatars. They should be cozy and have enough space for 20–30 boys including the teacher's family. At the church, the liturgy may at times be carried out by the parish priest during the chant of school students. Through it, the treasure of deep sincere praying locked in the Orthodox liturgy and this marvelous penitential and admirable feeling which can touch and delight a human heart will be revealed to them. They will see the poverty and nothingness of Mohammedan namazes, which seem best of all to them due to their religious ignorance.

Herewith I have the honour to submit for Your Majesty's discretion a special detailed record about 18 non–Russian schools I have visited.

I give my signature, missionary priest Filipp Gavrilov, to this report.
23rd day of December 1889, No.99.

No.48

The letter from zemsky teacher at the non–Russian school in the village of Yukachi, Mamadysh uyezd, Kazan guberniya, Ignaty Semenov to N. Ilminsky about the religious-moral influence of the school upon local christened Tatars dated 10 February 1891.

To His Eminence, headmaster of the Kazan Teachers' Seminary Nikolay Ivanovich Ilminsky.

I consider it to be my duty to notify you, Your Excellency, about my life during my seven-year service in the position of teacher. I was appointed as a teacher to the Kulushchino zemsky non–Russian school, where I faced great obstacles in school affairs from the side of inhabitants of this village; but I, being well aware of teaching responsibilities, led a hard-working life, which soon brought me the general love of the citizens. Upon fixing school affairs, I paid attention to the fact that inhabitants of one village were only called Christians by name, not for their essence. And my opinion was in time justified: although this village has almost 20 Russian yards, they are situated far from the church and, looking at these Russians, the christened Tatars were confused—no one among them thought of visiting the church on Sunday or any other holiday. In order to attract them to church, I started reading the horologium with my students in evenings and sing various chants with them in the Tatar language. Upon finishing the prayer, I would always discuss Saints' lives with children, while they retold their parents what they had listened to. These conversations seem to have influenced them a lot, so that some of them started visiting school for a prayer together with their children. But look what happened after! Villagers, suffering from their ignorance, started listening to my adult visitors discussing our priest and whether it is appropriate for a teacher to gather people [for] a prayer, and with this they almost ruined the matter I had started. But thank God, not all adult visitors paid attention to such reviews about me and continued to attend the school. After some time, the number of visitors increased so much that sometimes even only the elderly people were about 100. From this village, I was transferred for the good of the cause to the Churino zemsky non–Russian school, where I corrected school

⁶⁸ Present-day village of Ilnet in the Mendelevsk District of the Republic of Tatarstan.

⁶⁹ Present-day village of Sardabash in the Arsk District of the Republic of Tatarstan.

affairs with an even greater ardour. But my efforts were not spent in vain: 1) I was granted 25 roubles as a present for my school activities from the zemstvo; and 2) my name was printed in the zemstvo's report as 'The most famous person on the pages of school history'. At present, I serve at the Yukachino zemsky non-Russian school. My service at this school may be precisely described by priest father Vasily Timofeevich Timofeev who, upon making a revision in the finished year, expressed gratitude saying: 'It is only the second time I have seen a school in such a condition since its foundation.' Here I founded a great choir from children of the christened Tatars, for which I was granted 25 roubles from the zemstvo this year. On the 18th day of January, 1891, an inspector, member of the Mamadysh Uyezd Zemsky Authority, Pavel Matveevich Popov, visited the school entrusted to me. After listening to our choir, he was left gladdened and donated 1 rouble to the singers. I, with my hard-working life and excellent behaviour, deserved such love from the inhabitants, that they want me by decree to be the second priest in the village of Yukachi.

Notifying Your Excellency about my life and feeling weakness of my health at the position of a teacher because of hard labour, I most humbly dare to bother You, Your Excellency, can you not find the possibility to take me into consideration, because inside of myself I feel a spark in teaching in Tatar and consider myself to be a really useful person ready to lay down my soul for the christened Tatars.

Your disciple, teacher at the Yukachino zemsky non-Russian school Ignaty Semenov.

No.49

An extract from the report on the activity of St. Gury Orthodox Brotherhood for the 26th Brotherhood year from 4 October 1892 to 4 October 1893.

Being the product of a need for non-Russians' religious-moral life, the Brotherhood schools with their method of teaching in non-Russian dialects with their non-Russian teachers, school guides and religious-moral books written in the native language of aliens, with their headmasters who are either native aliens or in most cases well acquainted with this or that alien language depending on the local population, these schools are a powerful tool in the matter of development of the religious-moral education of aliens in the field of the Christian faith and liquidation of pagan and Mohammedan delusions. As for the christened Tatars, I can say without any exaggeration that the Brotherhood schools tore them out of the Mohammedan nets and continue to constantly improve them in the religious-moral sense. Reports of local parish priests unanimously testify to the salutary influence that the Brotherhood school has upon christened Tatars. Thus, priest father Arkhip Ilarionov of the village of Stary Tyaberdin of the Tsvilsk uyezd (who is now transferred to the village Ureevy Chelny of the Laishev uyezd) reported inter alia that before Lent he had received from the Kazan Central Christian Tatar School 10 exemplars of the book about the after-life and Lives of St. Pantaleon in the Tatar language; he gave them to students of the Staro-Tyabredino school. They read them to their relatives and passed to other students, who did the same. Former students of this school also started to ask father Ilarion to lend them these books, especially the one about the after-life. The rumour about a new book quickly spread among all baptised Tatars of this village, and everyone wanted to listen to its being read. Many old men and women started attending the school, visiting the assistant to the teacher Naum Petrov, who lived in the teachers' house, and asked him to read the book about the after-life. Petrov joyfully received them, read and explained this book. Therefore, almost every day, in the evening, the school was full of old-baptised Tatars and pagans; it was even attended by inhabitants of the neighbouring village of Angozino-Surinskaya⁷⁰. Petrov, with the priest's blessing, read them not only the book about the after-life, but also told them about lives of Saints, miracles and passions of Jesus Christ, about the Holy Mother of God and read to them the whole book Çin-den⁷¹. Soon after this, one pagan woman was christened on 8 April 1893. This Petrov, coming to the locality or the parish village, would always take the book about the after-life with him and,

⁷⁰ Present-day Yangozino (Surinskoe) village of the Kaibitsy District of the Republic of Tatarstan.

⁷¹ Çin-den in the Tatar language means 'the real, genuine faith.' Under this name, the Translation Committee of the Orthodox Missionary Society at St. Gury Orthodox Brotherhood issued the translation of the short Orthodox catechesis.

upon visiting different houses, he would always read it along with the Life of St. Pantaleon. The time of Lent has come and the church was full of fasting people in a number far exceeding the amount of fasting people in previous years. The priest of Serdy village⁷² of the Laishev uyezd, father Gleb Lyapidovsky, in his report to the Council of Gentility on the schools Kibecheskaya and Kolkomerskaya mentioned *inter alia* that, following the example of previous years, many people also fastened this year, especially in the Assumption fast and the fast of St. Peter and St. Paul. At the same time it was striking that all those who were fasting mostly came from the villages Kibechi⁷³ and Kolkomer⁷⁴, while only two people were from the village of Verkhnyaya Serda, even though it was previously christened and populous. At the same time, father Lyapidovsky added: 'I guess it will not be an exaggeration if I say that the phenomenon of this kind is explained by the presence of Brotherhood schools in Kibechi and Kolkomer.' The priest of the village of Utyashkino of the Chistopol uyezd, father Ioann Speransky, in his report about the Utyashkino and Nizhne-Nikitinskaya schools of the Brotherhood mentioned that children studied the Law of God with a special interest, which also has a positive feedback of their parents, who at home eagerly adopt many prayers and tales about sacred events and thus somehow develop within themselves a sense of religion. Although they cannot completely reject some pagan and Mohammedan superstitions, they are now vividly leaving them behind thanks to this school; they fulfill the duty of confession and Blessed Sacrament annually and certainly. Priest of Vladimirovo village⁷⁵ Semen Gavrilov tells about the baptised Tatars of his locality that before the school was opened, they used to be utterly non-religious and there was even a danger of their return into Mohammedanism, because some of them used to adhere to Mohammedan rituals and kept the Mohammedan fast. During the 24 years of its existence, the Brotherhood school made a salutary impact upon the citizens; they are now taught not only by school teachers, but students in their free time read edifying books to their family members in their native language. In former times, the Vladimir people had reluctantly visited the House of God, while at present up to a hundred praying people may be come across on Sunday during the liturgy. Member of the Brotherhood Council father Vasily Timofeev in his report about his trip around christened-Tatar settlements informs *inter alia* that priests of christened-Tatar parishes told him that in the just finished year, the baptised Tatars had fasted with a higher eagerness, confessed more sincerely and repented sins during Lent if we compare with previous years. Churchmen attribute this phenomenon to the strong impression made by the book 'About the After-Life According to the Orthodox Church' published for the first time in the Tatar language last winter. The priests and christened Tatars also told him many joyful facts about the Tatars' developing love towards religious reading. Thus, Ivan Ermolaeiev from the village of Verkhnie Mashlyaki⁷⁶ told with particular delight that his daughters ardently read books of creed and sing church prayers. On holidays, women and girls from many houses gather at his place to listen to his daughters singing and together with them sing other religious songs. The influence of the baptised Tatars educated at the Brotherhood schools is sometimes seen on the Mohammedans. 'Thus, I', father V. Timofeev writes, 'occasionally found out, going through one Mohammedan village, that there our former female student Fedora lives with her husband, a forester. I came to visit her. The spouses were glad to see me. Over a cup of tea, I asked Fedora whether she lived well here, among the Mohammedans, whether they laughed at her because she was a Christian believing in the Son of God and making the sign of the cross. "No", Fedora replied. "I have lived here for two years and got well acquainted with local women. They often visit me, listen to the reading of Christian books and they like them a lot; they are especially touched by Jesus's miracles and parables, and I even taught two Mohammedan fiancées to read our books, and they secretly read them. Tatar women praise our books a lot and say that Mohammedan books are hardly understandable to them, while ours are not only intelligible but also touching. But I", Fedora finished, "reading books with Mohammedan women and having conversations with them on the matters of the Christian faith, do not dispute their faith but just tell what I know myself; meanwhile, the Tatar girls listen peacefully and leave peacefully".' <...>

Apart from the teachers, the achievements of Brotherhood schools were positively influenced by many parish priests with their multiple-year and tireless work in the field of enlightenment of aliens. In

⁷² Present-day village of Kryash-Serda in the Pestrechinsk District of the Republic of Tatarstan.

⁷³ Present-day village of Kibechi in the Pestrechinsk District of the Republic of Tatarstan.

⁷⁴ Present-day village of Kolkomerka in the Pestrechinsk District of the Republic of Tatarstan.

⁷⁵ The village of Vladimirovo in Mamadysh uyezd of Kazan guberniya seems to be meant here, the modern day village of Vladimirovo in the Mamadysh District of the Republic of Tatarstan.

⁷⁶ Present-day village of Verkhny Mashlyak in the Rybnaya Sloboda District of the Republic of Tatarstan.

view of this, the Brotherhood Council ordered its members I. Iznoskov⁷⁷, M. Mashanov⁷⁸, and V. Timofeev to compile a list of priests who, since the first years of the Brotherhood's existence, had worked hard on the enlightenment of aliens. Upon its compilation, this list would be presented at the kind consideration of the eparchial administration.

The method the Brotherhood used in the matter of developing aliens' religious-moral [enlightenment] appeared to be so viable and fruitful that at the moment, the Brotherhood's activities in this field were recognised by all individuals familiar with non-Russian affairs and considered to be an example for other brotherhoods involved in the activities concerning aliens; many brotherhoods used the Charter of St. Gury Brotherhood as an example for themselves and many times addressed its Council with different bewildering questions on the matter of the religious-moral upbringing of various aliens inhabiting the Russian Empire. In the completed Brotherhood year, the Tomsk department of the Brotherhood of St. Dmitry of Rostov appealed to the Council of St. Gury Brotherhood asking, it to send them their Charter, because the former intended to change their own according to the Charter of St. Gury Brotherhood.

Acting mainly upon the young alien generation through schools and through children on their family members, the Brotherhood did not drop the idea of direct influence upon adults via interviews and translations of religious-moral books into non-Russian languages. The main partners in conversations with aliens about the truths of the Christian faith were the same teachers of Brotherhood schools. In the time free of studies, they read various religious and edifying books to aliens, had conversations at schools with them to which aliens willingly rushed in the evenings, especially on the eve of Sundays and holidays. Occurring at all Brotherhood schools, these conversations between teachers and non-Russians received widespread development in the localities where aliens were impacted by the Mohammedan propaganda or where they were deeply submerged into pagan superstitions. These interviews conducted by teachers served as a powerful force in the hands of the Brotherhood to make the Orthodox faith of hesitant baptised aliens firmer and in order to protect them from the harmful influence of Mohammedan propaganda. For this purpose and in order to constantly and uninterruptedly influence the adult alien population, some teachers from the Brotherhood schools remained at schools over the summertime holidays so that they had conversations with aliens. Thus, last summer, teacher Alexander Kirillov of the Yanylskaya school, was ordered to remain at school for which the Brotherhood Council paid him a certain salary. Village priests possessing a good knowledge of the language of their alien parishioners and priests from aliens also used interviews as a means of influence on their parishioners.

An extract from the note by the district head of the Kiev educational district Ya. Koblov 'Some thoughts on the establishment of education among the Eastern aliens inhabiting Russia' (1916)

At the time when N. Ilminsky stepped into the missionary-enlightenment field of work, there was almost no schools for aliens. But a great need for them was felt. Christened, but not sufficiently enlightened, non-Russians hesitated between Christianity and Islam, and many of them already turned their back on Orthodoxy. The Islamic propaganda strengthened and largely spread; there was a threat that nothing would be left from the acquisitions missionaries-illuminators had made throughout previous centuries. N. Ilminsky saw it clearly, as no one else could. And thus he expressed the most intense and energetic activity at founding churches and schools in settlements. At N. Ilminsky's initiative, a school for christened Tatars was founded in Kazan and then consequently a teachers' seminary. The St. Gury Orthodox Brotherhood, which set a goal to spread and support churches and schools in non-Russian areas, was also created.

After a short while and along with the vigorous activities of the Brotherhood, alien localities were covered by a net of small schools at which non-Russian children in their native language were taught grammar, the Law of God, and singing. These schools covered a significant amount of territory; they were spread throughout Kazan, Simbirsk, Samara, Vyatka, and other governorates; at present, there are around 120 of them, and that is only in the Kazan guberniya.

The main distinctive feature of St. Gury Orthodox Brotherhood was that all education was carried out in the native languages spoken by non-Russians. The native language⁸² of aliens was made the key pillar, the main tool of enlightenment. The school's basic task was Christianisation of aliens; therefore, such disciplines as the Law of God, study of prayers, and liturgical chanting were paid the most attention to and were the main focus of teachers and students. A sufficient amount of time was designated for learning the Russian language—up to 10 lessons a week—but still it occupied a secondary, unessential place. There was a moment when aliens had to be urgently educated and enlightened in order to prevent their sweeping return to Islam. And it could be done effectively only in their own native language rather than through the foreign Russian language. Ilminsky set a definite task: the Christianisation of baptised aliens. It is unclear whether the goal of Russification was also set forth by Ilminsky. We can assume what Ilminsky thought about this: first of all, we should enlighten alien tribes with the Christian faith; it is one of the most essential and closest stages of their rapprochement with the Russian nationality. The unification the Orthodox faith with the Russian nation means that aliens would never abandon it and would always feel attached to it. As for their adoption of the Russian language and final Russification, sooner or later it will come to them, once they feel the need of greater development. Regardless, they cannot manage without the Russian language and culture. They will seek it without violence and external incentives, being close to Russians in their spirit. And this idea was justified in the future. Now, christened aliens of the Volga Region often say that the Russian language is as necessary for them 'as bread and water.'

⁸² All emphases are made in the text of the document.

Using the educational structure we have described earlier, the Brotherhood entered into a large field of enlightenment activities. Judging by their exteriors, Brotherhood schools were always poor. A Brotherhood school was usually a simple village hut with a teacher: commoner, but honest man, whose salary was 60–100 roubles a year. Even at present, Brotherhood teachers receive salaries in the amount of 150 roubles if they were not included in the school net of M. P. as it was supposed to have been done in recent time. And despite this environment and utter poverty, the Brotherhood schools made a great contribution to the state, uniting a significant part of the Eastern aliens with the native Russian population. N. Ilminsky knew how to ignite people's hearts. And his students and sometimes ordinary peasants educated by him took up the teachers' craft with a special enthusiasm and inspiration, selflessly devoting themselves to teaching. This enthusiasm and inspiration were preserved in the teachers' environment even after Ilminsky's death. I, for example, during visits to the Brotherhood schools in a comparatively recent time, have often met such teachers, boundlessly dedicated to education, who come from peasants-commoners, who devoted themselves to their profession with a special zeal and ardour. Consequently, many ministry and zemsky schools were opened, which by their exterior and teachers' literacy were superior than Brotherhood schools, which sometimes gave rise to hold forth, especially at zemsky gatherings, on the superiority of the former over the latter. But I should note that I have not seen this internal inspiration at schools of other institutions and types as I saw in Brotherhood schools.

III. Orenburg Muftis and Their Activities in 'Asar' by Rizaeddin Fahreddin

The biographical and bibliographical code 'Asar' by R. Fahreddin consisting of four volumes contains 733 essays about the personalities inhabiting the territory of the Volga Region and the Cis-Urals in the 10–20th centuries who made significant contributions to the development of the spiritual culture of the Turkic Tatars. The code was created over a long period of time, and its first part was published in 1900, while the fourth and last volume was finished after 1911. In 1929, R. Fahreddin started to rewrite and supplement already published parts of the code, but this work remains unfinished. As all manuscript books intended for publication, the code 'Asar' was censored, as a result of which the text of the introduction to the first part was abridged. Deleted were those author's words which, in the opinion of censor V. Smirnov, could spur on inter-ethnic hostility or awaken the national awareness of the native Turko-Tatar population of the Volga-Ural Region. Therefore, everything which contradicted the state policy-making towards non-Russian peoples was expunged from the book; one of the introduction's sections was almost completely deleted, which treated about the absence of sources on the history of the Turko-Tatars and the necessity to revive the national history.

From 1900–1908, 15 parts of the code were published in Kazan and Orenburg, which constituted the first two volumes; the 3rd and 4th were not published during the author's lifetime.

According to R. Fahreddin, he decided to compile this code so that his people knew their famous brethren, who brought much benefit to the nation. Most of them were representatives of the Islamic clergy (muftis, qadis, khazrats, imams, and ishans) and intelligentsia (mudarrises, mugallims, writers, poets, and scientists), as well as entrepreneurs. Apart from biographical information, the code 'Asar' contains many other data. From biographical essays, we can trace what and whose books were the most popular among people, which of them were used as school guides. Besides this, poetic works are also found in biographical essays which R. Fahreddin uses to better reveal the personalities. Private letters included into biographies also gain an important value. According to the author, they have a great public significance for future generations because they, as a mirror, reflect the social and moral condition of society; they provide material about customs and morals.

The code 'Asar' was created in the genre of biographical essays—popular both among Muslims and Turkic peoples—which the author probably chose to attract more readers because this type of literature allows to lift the veil of a famous person's private life. R. Fahreddin developed this genre to the level of bio-bibliography, unveiling in his essays, as long as the sources allowed it, the private and creative life of one person or another. However, the author preserved only the chronological principle of biography composition, traditional in the medieval Arabic-Islamic biographical genre: according to the date of death, considering that thus continuity of knowledge between the generations is observed in the best way. Moreover, the traditional composition of the biography itself was preserved where the following facts were expounded: the dates of death and birth, parents, education (where, in what madrasah), activities, children, the list of rewritten or written works, memories of contemporaries. The sequence of these events was almost unchanged, but some points could be absent due to a lack of information.

Developing this genre and improving it to the level of a historical narrative, the author attempted at covering the lives of certain people in his essays, thinking that every single biography was a page of history. Choosing objectiveness as his basic principle, R. Fakhreddin did not seek to hide negative facts and phenomena of the life of the personality being described because he saw a moral aspect in them. In his opinion, hiding mistakes of the past and negative features of a man will bring more harm than their revelation. The author used a wide range of documentary and narrative sources to fully cover life activities of the personalities being described. He collected sources to write biographies throughout the whole process of creating this collection. Originally, the basis for creation of the essays became documents of the Orenburg Muslim Spiritual Assembly, which preserved various materials concerning Muslims of the Volga-Ural Region. In the future, being the editor of the newspaper 'Wakıt' and magazine 'Şura' in Orenburg, he published appeals to readers on their pages asking to send him information about famous people. Thus, the circle of sources of the code 'Asar' was supplemented by memories, manuscripts, letters, which the author used to different extents. R. Fakhreddin also used historical works (by Sh. Marjani) and Tatar printed media, where the necrologies of famous people were published. Thus, from the documentary sources in the collection, only officially produced documentation was used (journals of the Orenburg Muslim Spiritual Assembly, reports, and petitions), fiscal and administrative account materials (census records, metrics, official lists), specific sources such as epitaphs and colophons as well

as photographs may also be included here because the data they contain bear a documentary character. The range of narrative sources include epistolary sources (letters-memories, personal correspondence), shajara, historical narratives. The basic source of writing the bio-bibliography constituted narrative sources; however, they being the most subjective, the author carefully analysed them by comparing them with documentary sources. Documentary sources were examined as well. When the author did not have the possibility to verify data, he quoted the source of information, and it was usually related to memories which were not recorded. Among personalities to whom R. Fakhreddin paid special attention in 'Asar' were the Orenburg muftis. During his period as an assessor at the Orenburg Muslim Spiritual Assembly, apart from his main work, he was actively involved in the compilation of inventories of office documents in the archive of the religious administration. He purposefully searched for and detected the materials about his chiefs and introduced new historical sources into the scientific circulation about muftis Mukhamedzhan Khusainov, Gadessalyam Gabdrakhimov, Gabdulvakhit Suleymanov and Salimgarey Tevkelev. Only the life of 'current' Orenburg mufti Mukhamedyar Sultanov was barely covered by the author.

He wrote about the important role the heads of the Islamic clergy and Orenburg muftis played in the development of Islamic religious institutions among the Tatars, Bashkirs, and Kazakhs while the Orenburg Muslim Spiritual Assembly started to execute the function of a consolidating centre for the Islamic nations in the European part of Russia and Siberia. Chiefs of the Spiritual assembly occupied high public positions among co-religionists. They had a high status also in the Russian hierarchal system, cooperated with senior officials, and some of them were even introduced to the Russian Emperor. Muftis maintained relations with outstanding representatives of the clergy and entrepreneurs. Being tsarist officials and at the same time official leaders of Muslims, the Orenburg muftis contributed to the best of their abilities to the development of the Islamic religion and culture of Islamic peoples. In this respect, the correspondence between the muftis and officials as well as co-religionists characterises the heads of the Orenburg Muslim Spiritual Assembly as individuals, covers state-Islamic relations in the Empire, as well as peculiarities of application of the Sharia rules between the clergy, imams, and parishioners in the new light. Sources of the personal origin treated about the needs of the local population and even allow to feel the atmosphere of the historical epoch.

Liliya Baibulatova

Mukhammedzhan bine al-Khusain bine Gabdrakhman.

The first mufti of the Muslim Spiritual Board of Russia, died in Ufa on 17 June 1824 (2 Zulhijja 1239 according to Hijrah), aged 68 and according to his will was buried 60 km east of Ufa, in the cemetery of Adzitarovo village¹.

He received his elementary education in the Seitova Sloboda and Orenburg, was also taught by Muhammed bine Gali ad-Dagestani. Later, he undertook a trip to Bukhara and Kabul, where he gained additional knowledge. According to witnesses, over there he met Gataulla bine Khadi, qadi Tursunbaki bine Gabderrakhim, and others, talked to sheikh Faekzhan bine Khozyrkhan in Kabul. Over the course of this trip, he learned a little bit of the Persian language.

Honourable Marjani said the following about him: 'Upon his return to the Motherland, he by all means tried to provide education to adults and children of the Russian State, showed the path to pacification for the Kazakhs, Bashkirs, and other peoples who did not want to be subjugated to Russia. After the formation of the Spiritual Board, he was appointed as its head and Muslims' mufti. He disposed of a significant trust in such a degree that his words were taken into account when opening a mosque or appointing some person to a certain position. This trust came at a steep price: he used qadis as personal servants, demanded every single order to be fulfilled, appointed the necessary people as qadis. Towards the end of his life, he lost his influence among qadis; because of the opposition and disputes between them, decisions of the Spiritual Board started being directed to the public prosecutor for review. Through the selling of positions to mullahs, he collected a great fortune. My father, Bagautdin, and Fatkhulla Akhund, Baymurad bine al-Mulkari, and others confirm his knowledges; however, what he wrote was poor and contained multiple mistakes. Moreover, his use of Persian expressions confirms the insignificance and helplessness of his knowledge. His education was way poorer than Fatkhulla Akhund's level and possibly did not even reach the level of mufti Gabdessalyam.'

¹ Adzitarovo—present-day village in the Karmaskalinsky District of the Republic of Bashkortostan. The village of Adzitarovo was founded by the Teptyars in 1735.

Judging by the official lists of 1815, at that time he was 57, which means the date of his birth falls on the end of the 1785 (1171 AH). His son Mirzaakhmed was then 19 years-old, and he was in the service in St. Petersburg, working at an institution for alien confessional affairs. Mirzashakhbik was 10 and Mirzadjan was 6.

Other official documents note that Mufti Mukhammedzhan came from the merchant class; materials of the 5th revision show that he was listed as working in the village of Kharamabad (Sultanay²) near Ufa. At first, he was listed at the foreign collegiate, and then he served as an officer in Orenburg. On 9 July 1785, the Borderline committee chose him as the Akhund for the Kirghiz population; later, on 22 September 1789, he was appointed as the head of the Spiritual Board and the Mufti of Muslims. Before this appointment, he conducted a great work at subduing the Kirghiz to the Russian State, released Russian captives in the Caucasus, and achieved the Kabardin people's promise to join the Russian Empire. He managed to elevate Russia's authority among the Astrakhan Turkmen. He was granted presents from the Russian State for his actions. Empress Catherine and Emperor Pavel Petrovich awarded him a diamond-encrusted medal, while a house and clothes, as well as monetary awards, were granted to him from the Orenburg Treasury.

Unfortunately, we are not familiar with the mufti's earlier biography. At that time, when those returning from Bukhara and Kabul became mudarrises and sheikhs, the mufti, upon his arrival from there, became an officer. One of scientists studying the history of philosophy, said that Mukhammedzhan Khusainov was not involved in the improvement of his religious knowledges in Bukhara and Kabul but was directed there by the Russian State for solving political problems. Allah alone knows the truth. Upon becoming mufti, he variegated his everyday life: clothes, horses, fur coats—everything was expensive and luxurious. He rode along the streets in a four-horsed cart with dignity. However, despite the fact that he was in the heyday of his fame, toward the end of his life, the mufti's reputation among people deeply fell. They say that the mufti died because his influence decreased, wealth ceased to gladden him, and he had less happiness. After his death, his heirs received much gold, countless livestock, houses near Ufa bought from Bashkirs for a mere song. Only Adzitarovo village contained 2,284 desyatinas of land, which he had bought for a trifling sum from the Bashkirs of Miras village.

One of the mufti's wives, Gaysha, predeceased him. According to legend, she was a Turkish woman captured during the Russo-Turkish war. At first, she was the wife of Ismagil Apanaev from Kazan, gave birth to two of his children, Iskhak and Khabibjamal. After Apanaev's death, she became the mufti's wife and died aged 79 in Kazan, where she was buried in the cemetery between two slobodas.

The Motherland of his other wife, Karima, was the city of Anapa, located on the coast of the Black Sea. After the mufti's death she was sent off to her daughter Fatima, and until her death lived in the care of Dzhikhangir Khan.

The third wife, Sufiya, was a Circassian. She was born in 1759 (1172 AH). The mufti's sons were born by her. After the mufti's death, she lived at his estate in Adzitarovo village in full health until the age of 110. She died on 2 March 1866 and was buried in a heath, one km north of the Islamic cemetery where the mufti's grave is located.

The son Mirzaakhmed spent his life without burdening himself with work and wasting his fortune. He lived with a Russian girl known as Anfiska. They say he lived in the house he had inherited from the mufti and sometimes went to Ufa on business trips. He had four daughters and different stories were told in Ufa about the children of one of them. The mufti's inheritance which passed to Mirzaakhmed was consequently inherited by his four daughters, who did not become Muslims. Moreover, Mirzaakhmed's mother Sufiya before her death officially willed to his daughters 500 desyatinas of land.

However, as a result of multiple litigations with the population, the lands of the Kudey Bashkirs³ passed not to the mufti's heirs but were returned to the Bashkirs. However, since all businesses of the

² Today it is a village in the Askinsky District of the Republic of Bashkortostan.

³ Kudei (Kezei)—a tribe of the Old Turkic origin, a part of the Aile group of Bashkirs.

According to legends, the Kudeis take root in the Caucasus, Central Asia, and Western Bashkiria. In the Sayano-Altaysky Region, a part of the Kudeis detached from the Old Kudei community and passed from the Altai to the Northern Caucasus. They moved in the general stream of the Badj-Gardo-Burjan tribes from the southern steppes into the Volga-Kama Region. In the Cis-Ural Region, they settled on the Ik and Menzelya Rivers and mixed with Usergan, Tangaur, and Burzyan tribes. In the 13th century, the Kudeis moved to the left bank of the Belaya River where they were strongly influenced by the Kipchaks. At the end of the 14th century, the Kudeis inhabited both banks along the midstream of the Belaya River. With the start of the Nogai expansion at the turn of the 14th and 15th centuries, a part of the Kudei people settled in forest areas of the lower stream of the Ufa River where they mixed with the Mintsy people; another part headed up the Sim River, and later, to the Yuryuzan and the Lemeza

Bashkirs in this world lay in the sale of land, it is most likely that mufti Mukhammedzhan's lands returned to them will be sold to Germans or Latvians, if they have not done it yet, at the cost of matches of radish.

Mirzaakhmed's grave is located close to his mother's grave, and there is neither a stone nor a fence over their burials. They say that due to the constant struggle with ordinary people, the local population of Adzitarovo village refused to bury them in their cemetery; therefore, the graves of Mirzaakhmed and his mother Sufiya are situated on the margins.

The son Amirdzhan was an officer serving in Orenburg. He died approximately in the 1850s–1860s. After his death, he left a wife and son Khusni. His widow was remarried to Gaysa mirza from the Bikmeevs clan. It is possible that a part of mufti Mukhammedzhan's books passed to Gaysa mirza through this woman.

The mufti's daughter, Fatima, was the wife of Dzhikhangir Khan, the ruler of the Bukey Horde. She gave birth to his sons Ibragim, Ahmed, Gubaydulla and daughters Zuleykha and Khadicha.

Fatima was namely the reason behind the nice attitude and kind memory of the mufti. She was different from her relatives because of her special piousness, wit, and decency, as well as clear-sightedness in matters which was why the Khan sympathized with her and loved her. Thanks to her efforts, the culture was spread throughout the whole Bukey Horde. She managed to instill good rituals and traditions in Kazakh families and rejected those which did not comply with Islam; she paid a special attention to cleanliness.

After Fatima became the Khan's wife, friendly good-neighbourly relations were established between the Bukey Horde on the one hand and the Ufa Region on the other. Wealthy Kazakhs at their own expense sent their sons and children from poor needy families to study at the madrasahs of Sterlitamak and Sterlibash. At present, all authoritative scientists and famous mudarrises of the Bukey Horde are graduates of these two madrasahs. The construction of mosques, appointment of imams, and their provision with official documents, education of mahallah children, naming of children with ancient names—all these matters which made Dzhikhangir Khan popular became possible only thanks to the well-considered activity of his wife.

Did the mufti die because of torture under arrest? Did he engage in self-education in his spare time? We do not know.

When I wrote the clean copy of these lines, I specially visited the village of Adzitarovo. I went there with the intention to see the mufti's library, see books and manuscripts he had brought from Bukhara and Kabul, read the letters sent to him by scientists and prominent people and thus collect various data. However, when I arrived, I did not see anything but a dilapidated crypt. At the headstone, a beautiful inscription was incised. The first line is a sacred Ayah, after which the 9 lines follow:

- 1: He is the Eternal Creator
- 2: the Forgiven Deceased
- 3: the sheikh of Islam and the mufti of Muslims
- 4: Mukhamedzhan
- 5: bint Khusain
- 6: al-Bulgari passed away in
- 7: 1239
- 8: mizan To his Soul
- 9: Fatiha

In my opinion, the month of mizan in the 8th line is mistakenly written here, because the mufti died not in the month of mizan (September), but in July, and it is recorded in official documents. This mistake probably occurred because this very inscription was made on the stone in the month of mizan.

The mufti's crypt is constructed out of brick and has not been renewed for a long time, and soon may completely collapse.

Upon studying the mufti's life, it is clear that his intellect and acumen outran his knowledges and education. His courage and eloquence eclipsed his lack of knowledge to the extent that the Bashkirs recognised him as the greatest scientist. One day one of his relatives wanted to declare his relationship with him in front of a crowd, but the mufti replied, 'You are lying, can a mufti have relatives?' With these words, the mufti wanted to show that he can have neither friends nor relatives in the field concerning

Rivers. These Kudeis appeared to be included into the Aile group of Bashkirs. Contacts between the Western and Eastern Kudeis gradually weakened [see: Kuzeev, 1974].

his immediate activities. We must say that he had a reason to say so. However, the fact that he placed himself above others means he was doomed to unhappiness...

They say that the mufti had a great inclination to the Russian language, but no evidence of that has been preserved.

The house in Ufa, on the corner of Telegrafnaya and Pushkin streets where he lived, was in his property. This house was wooden, which was burned in the course of fire, and a stone building was constructed on its site. It is possible that the Spiritual Board was located in one of his houses.

It was uneasy to find judgments the he gave. Here, eight letters are provided which were written by his hand, preserved with all of the original mistakes....⁴

The seventh letter:

'To Rafik Valid, head of Buinsk district...

In June, I met Gabdelmadzhid, son of Safar, from your volost. The imams of this volost, by the order of Chief of police of Buinsk uyezd, examined the case whether the nikah [Sharia marriage] conducted by the aforementioned mullah Valid, son of Bikkul, between above-mentioned Gabdelmadzhid, son of Safar, and Bibikhabiba, daughter of Sagid, was legitimate. The Chief of police recognised Bibikhabiba as the legal wife of Gabdelmadzhid in the presence of aforementioned imams and head. Because everything was carried out in accordance with the Sharia, I gave a fatwa, No.84, in which Bibikhabiba is recognized as the legal wife of Gabdelmadzhid. According to this fatwa, the head and imam Valid, son of Bikkul, are to interrogate mullah Nigmattula, son of Bashir, to find out according to which Sharia laws he carried out the nikah between Bibikhabiba, who is already the wife of another man, and Saifetdin, son of Bikbov. Upon reception of the answers, you have to send me a report.

Secondly, if there is no consent to marry Khabiba to Gabdelmadzhid, then, upon reporting it to the Chief of Police, with the help of Chief of police, she must be returned to her husband. If he refuses to the Chief of police, the latter will have to report it to Simbirsk governor Andrey Fedorovich Umansov, who, prohibiting everything illegal, will return the wife to Gabdelmadzhid, son of Safar, which you will have to tell me in a report. The Chief, upon asking to obtain court judgments from the former Chief Ibragim and two mullahs and showing to Mister Head of police the fatwa I gave, should make a decision. Mufti. 1820, 7 July. No.87.'

Another seven letters of the mufti were included in 'Mustafadel-akhbar' (part 2, pp. 83–84, 290–295). Since all these letters are same-type, having the same style and even mistakes, I believe they have been rewritten from the same draft.

Conclusion:

Why, although he spoke his native Turkic language, did the mufti write these orders and fatwas in the Persian language? There seems to be some secret which we do not know yet. There is nothing bad in using Persian or Arabic to write scientific works and fiction intended for the whole nation. However, the mufti's works are neither all-Islamic nor scientific works. In this case, the preference for the Persian language over the only heritage of our fathers, grandfathers and mothers—our native language—is an unforgivable sin.

In the time when the Iraqi regions were conquered, the Islamic state officially used the Persian language so that the local population did not forget it. For the same reason, the Coptic language was used in Egypt and Greek in Syria. After some time, this tradition faded, and the Arabic language started being used.

I wonder, whether the Tibetan Lama writes orders for his co-religionists in the Arabic or Latin language? In my opinion, he would write them in a language understandable to the people in question. So why did the mufti write important instructions intended for the Bashkirs of Timerbay and Savaley in the Persian language? If he was worried about the destiny of these people, they should have been written in their language, but if he was anxious about his position, then he must have used Russian, which is accepted to be the state language.

The tribesmen who consider our language to be poor, that there are not enough words for a conversation hide their laziness in order not to write anything and not to read that which is written. They might be right, but there are people who enrich the language—they speak and write in it. I have never heard that a language could develop remaining in one and the same condition, as rusty iron....

For the sake of Allah, may the sunlight and mothers' heritage—the native language—never be needless to any nation.

⁴The original contained eight letters, six of which are written in Persian and one in a mixture of the Tatar, Arab and Persian languages. One of the letters, written in Tatar, is presented here.

Letters addressed to the mufti.*The first letter.*

By the order of Great Emperor Alexander Pavlovich, the Spiritual Board in June 1810 sent me, Rakhmankul's son, as an imam to the Makaryev Fair to read namaz for Islamic merchants and conduct other spiritual rites. At the time when I was fulfilling the obligations imposed upon me, the appointed imam of Ura village, the Tsarevokokshaysk uyezd of Kazan guberniya⁵ Khabibulla, son of Khusain, put obstacles in my path. To justify his actions, he provided a decree issued by the Kazan civil governor. Secondly, my activities are also limited by the mullah of the third mosque of the Staraya [Old] Sloboda of Kazan city, Sagid Akhund, despite the fact that he had not been given any order. He took his muezzin Khalid with himself, without providing an opportunity to me to place my own muezzin. Imam Murtaza also arrived here from the wooden mosque of Staraya Sloboda. Apart from these people, no one else bothered me. Moreover, all the money raised from shops at the mosque were kept by the merchant Bashir, son of Gaid, from the Staraya Sloboda. No money were provided to us. Since the mosque was located far, we ourselves built a mosque from planks, did a namaz, read a prayer for the Emperor's good health. Abushakhma, Rakhmankula's son, the imam, mudarris, and muhtasib of Kulay village, the Malobakhtinskaya volost of the Chistopol uyezd. 18 September 1810....

The third letter.

In response to your letter No.9: Khabibulla, son of mullah Khusain from Ura village, is worthy of performing spiritual rites among Muslims because on 4 September 1802 the Emperor gave this man a decree to perform religious rites for Muslims.

Secondly, in June 1810, Islamic merchants, filing a petition, asked for my permission to appoint Khusain, the mullah's son, as an imam. Therefore, I wrote an order to the governor of Nizhny Novgorod about appointing Khusain's son as an imam for Muslims who arrived at the Makaryev Fair, which I inform you about. No.1765. 1811, 29 March. The signature is unclear. No other notes are noticed.

The third letter⁶.

On 24 May 1811, the Ministry of Internal Affairs and Justice reviewed your petition regarding Khabibulla, son of Khusain, from Ura village of Tsarevokokshaysk uyezd. On 30 January 1803, the Spiritual Board released him from his position because he had undertaken a trip to Petersburg without the permission of the relevant authorities. As it is seen from the judicial case, Khabibulla, son of Khusain, adheres to a bad madhhab; he declared himself a sheikh, who proclaimed himself a saint and miracle worker in Saratov guberniya; having opened his own secretariat, he set there an expensive chair and collects money. However, the investigation carried out by the zemsky court did not confirm anything. Therefore, the case of Khusain's son was passed on to the Criminal Chamber of Saratov. The Saratov civil governor said the following about this case: Shagban, son of Mussa, invited his teacher Khabibulla, son of Khusain, on a visit. In February 1802, Khusain's son stayed in the house of Shagban, son of Mussa, in Truir village and did not leave this village. Some inhabitants from neighbouring localities by their own wish met Khusain's son and completed namaz together. Each of them voluntarily gave a Sadaqah to Khusain's son—as much as one could—but there was neither property collection nor an expensive chair; neither did he proclaim himself a saint or a miracle worker. In the opinion of Muslims, mullah Khabibulla is an educated, responsible, and careful person. The Kazan civil governor also adds the following: 'Most Muslims trust Khabibulla, the son of Khusain, consider him to be honest and note that he has the temper of a saint.' You suggest that Khabibulla, son of Khusain, is spoiled but do not provide evidence. You attached a book to the petition sent to the Minister of Justice. You say that on pages 58–59, where the genealogy of the Prophet is given, Khabibulla suggests that he and a Dzhaqfar are caliphs. Upon translating these pages, we have not noticed what you declared. The Minister of Justice responded with the following words: 'It ill beseems you to write such frivolous things.' Therefore, in order to maintain respect to Your position, you should not offer us cases which are not true. Prince Alexander Golitsyn. Saint Petersburg. No.127. 16 March 1812.

The fourth letter.

We have nothing against the fact that Khabibulla, son of Khusain, expresses obedience to the Spiritual board since he is an Islamic scientist. This desire of your will not be disregarded. According to your petition, the Emperor in 1804 issued a decree about his exile from Petersburg. However, according to the information received from the Ministry of Internal Affairs and Justice, the aforementioned son

⁵ Present-day village in the Baltasinsky District of the Republic of Tatarstan.

⁶ The document's text is as such.

of Khusain has been declared not guilty. The Kazan governor, for his part, also justifies him. Based on this, I cannot give an order to release him from office. Prince Golitsyn. Saint Petersburg. No.516. 5 September 1812.

The fifth letter.

Regarding your letter dated 12 October 1812 about Khusain's son, I appealed to the Kazan governor. The Kazan governor, after an accurate review, recognises this person to be honest and of good temper. The paper's copy is attached to this letter. Therefore, in my opinion, You should stop the struggle against this person. Prince Alexander Golitsyn. St. Petersburg. No. 381. 21 August 1813.

The conclusion.

Apart from the first letter, the other letters reproduced only the content. Letters written by the mufti himself are too long and, according to the tradition of the last century, are hieroglyphical and, that is why we decided not to translate them. It is already clear from what is written here that the mufti did not respect Khabibulla ishan. It seems to us that the mufti did not like the latter due to the possibility of his appointment as a mufti. He wrote about it to Prince Golitsyn, who at that time occupied the position of the Procurator of the Synod.

During the mufti's time in Ufa, there were no places for the burial of Muslims and a mosque to complete namaz. Thanks to his efforts, some works were published in Kazan and just because of this we must remember him with gratitude. In one of the works by Muhammad bine Barkili (Muhammad efendi Barkavi), 171 pages in volume, published through the mediation of Gabdelgaziz, Tuktamyshev's son, in 1802, the following is printed: 'Courtesy of mufti Mukhammedzhan.' It cost much effort to develop the Spiritual Board and make it recognised as an official institution. It is generally known that such matters demand unprecedented efforts. May Allah forgive him!

Source: R. Fäxretidin. Asar. Dürtençe cöze. Orenburg, 1903. B. 181–200.

Gabdessalyam bine Gabderrakhim bine Gabderrakhman bine Muhammad.

The second mufti of the Orenburg Muslim Spiritual Assembly in Russia died on 30 January 1840 (7 Zulhijja 1255 AH) and was buried on 2 February (10 Zulhijja). At that time, according to Christian chronology, he was aged 67, and according to the Hijrah, he was 70 years old.

Similar to the large bazaars in Ufa, a great number of people gathered on the day of his funeral. The service was carried out by famous mudarris and akhund of Balyklykulevo village Khusnetdin bine Shamsetdin bine Dzhagfar al-Izhdani. However, the time of the mufti's death was recorded neither in parish registers of the Islamic mahallah of Orenburg nor in parish registers of Balyklykuevo village. The fact that Khusnetdin bine Shamsetdin conducted the funeral service was related to the absence of Ufa's official imam, or it was connected to the will of mufti himself. It could have been the will of top-rated murzas of Ufa city.

In the collection published in 1891, on the occasion of the centennial of the Spiritual Board, on page 42, the year of the mufti's death is mistakenly marked as 1839. The data at our disposal proves the words written on sidelines of some old books. Apart from this, the fact that this date is incorrect is also proved by journals of the Spiritual Board. Thus, for example, in the journal, dated 10 January 1840 (on Wednesday), mufti Gabdessalyam bine Gabderrakhim, members imam Tadzheiddin bine Maksud, Gabdeldzhabbar bine Rakhmankul, Mukhammedsadyk bine Galiakbar put their signatures. For 11 January, Thursday, only signatures of members were found in the journal; there was added at the bottom: 'Due to illness, the Orenburg mufti was not present.' The entries 15–17, 22–25, 29 mention the mufti's illness; for the date of 30 January (Tuesday) the following is written at the bottom, in the 13th entry: 'Today, unable to recover from illness, the mufti passed away, which will be announced to the Orenburg Governorate Administration and the Minister of Internal Affairs.'

Grave.

The mufti's grave is located at the very edge of the cemetery, on the side where the night sun declines. The remnants of the stone fence have been preserved. The gravestone made of an easily crumbling stone was soon destroyed. At present, the mufti's grave is inside of the stone fence with a wooden grating painted green. His spouse Marfuga, daughter of Gabderrakhman, rests next to him. Both of them had a stone at the head of the grave, but because of low quality the stones quickly cracked and fell into disrepair. It looks as if there has never been an inscription on them. When I went to the cemetery in summer, I would always visit this grave and read a prayer. Unfortunately, up to the present day, there is no stone with the name and date of death on the grave, but no one seems to look worried about it. Therefore, in several years, the mufti's grave may be lost forever....

Legacy.

By the time of the mufti's death, his property was estimated at 4,849 thousand roubles and 34 kopecks. His age heirs confirmed it, together with the debt of 1,100 roubles. According to the decree of the Orenburg Governorate Administration, the partition of his property was laid upon the member of the Spiritual Board Gabdeldzhabbar, son of Rakhmankul, and Akhund Gabdelgalim, son of Tagir, from the village of Kirghiz Miyaki of Belebeevsk uyezd⁷. The son of mufti Akhmadi was in Bukhara at that time; therefore, instead of him, translator Salikh mirza bine Khasan mirza Mamliiev was appointed as the deputy. However, the book of property recordings did not show the general number and names of the mufti's books and who exactly inherited which book.

Origin and date of birth.

The mufti was born in 1774 (1188 AH) in the Motherland of his father and grandfather—Abdrakhmanovo village of Bugulma uyezd⁸. This village is located on the left bank of the Zay River, on the postal track between the stations of Almetyevsk and Karabash⁹. The mufti comes from the Teptyars, while the name of the village comes from his grandfather's name.

Period of maturity.

Having studied at some places in Bugulma uyezd, he left to go in Kazan to study under Ibragim efendi Khudzhash. Ibragim efendi was born in the village of Sharlama¹⁰, not far from the village of Abdrakhmanovo; therefore, it is possible that relative or friendly relations could have been between them. Having lived in Kazan for some time, he for some reason departed to the Seitov Sloboda (Kargala) and was taught there by Gabderrakhman bine Mukhammedsharif al-Kirmanii.

Due to the fact that ambassadors of Bukhara, Khiva, Tashkent, as well as the First Cathedral Mosque built in Orenburg by the Russian state for Asian Muslims, needed an imam, this person [Dabdessalyam] was appointed as the imam-khatib and, consequently, the akhund. They said that Muslims of Orenburg, having gone to Seitov Sloboda, appealed to Gabderrakhman bin Mukhammedsharif al-Kirmanii asking to give them one of the Shakirds for a temporary performance of Islamic rites, reading the tarawih prayer during Ramadan, and teaching children. Gabderrakhman khazrat pointed at him [Dabdessalyam]. Upon the arrival in Orenburg, he carefully performed his responsibilities, moreover, expressed skills of public speaking and was benevolent, which helped him win love of Muslims, especially wealthy people. Later, Orenburg Muslims elected him as the imam in the Cathedral mosque.

Official biography.

According to the service book, in 1826 mufti Dabdessalyam bine Gabderrakhim was 53 years old. His sons Gabderrauf, 20 y.o., Akhmadi, 11 y.o., and Giniyatulla, 1 y.o., lived with him.

On 17 October 1799, he was appointed as the imam of the stone mosque, and on 14 August 1805 as an akhund and mudarris. On 16 August 1806, he was granted an annual salary in the amount of 150 roubles for his service to the Russian state. In 1814 he was awarded with a gold medal; moreover, 80 roubles were added to the previous sum, and the amount of his annual salary climbed to 230 roubles. In 1817 he was released from all capitation taxes, and in September, 70 more roubles were added to the former sum, which then constituted 300 roubles per annum. At the petition of Orenburg general-governor Essen¹¹, in 1820 he was awarded a sum of 100 roubles. As a member of the society for examination of the activity of the Kirghiz Horde, he visited on 14 October 1823 Shirgazi Khan bine Aichuvak bine Nurgali Khan bine Abulkhaer Khan. For the faithful performance of his duties under the Khan, on 28 April 1824, the Russian state awarded him with a gold watch worth 500 roubles.

On 30 September 1825, by the decree of Emperor Alexander I, he was appointed mufti of the Spiritual Board. On 7 May 1826, he was granted 4 thousand roubles from the treasury as a gift for building a house.

⁷ The village of Kirghiz-Miyaki was the centre of the cognominal rural locality from 1866 and the centre of the present day Miyakino District of the Republic of Bashkortostan.

⁸ Present-day village in the Almetyevsk District of the Republic of Tatarstan on the Stepnoi Zai River, 18 km southeast of Almetyevsk city.

⁹ Now the city of regional subordination in Chelyabinsk Region is located in Southern Ural, 90 km from Chelyabinsk.

¹⁰ Present-day village in the Almetyevsk District of the Republic of Tatarstan.

¹¹ Peter Kirillovich Essen (1772–1844, St. Petersburg), count (1833), a state and military person, the General of the Infantry (1819). He was Orenburg's military governor between 1817 and the 1830s.

After this, there were other medals; monetary rewards and events followed, but we have not seen it until the most recent service book.

Wives.

The first wife, Marfuga, was the daughter of a famous scientist Gabderrakhman bine Tuymukhammed from the village of Taysugan¹², located on the bank of the Zay River two kilometres from the village of Abdrakhmanovo. This wife died in Ufa before the mufti. After the mufti's death, his second wife Farkhibany, Rakhmatulla's daughter, was still alive.

Children.

After his death, the mufti left the following children: Gabderrauf, Akhmadi, Giniyatulla, Bibibad-ersafa, Bibimakhidzhikhan, Bibisarvidzhikhan, Bibifakhriddzhikhan. There is also daughter An-varkhan, married to caravan-bashi [head of a merchant caravan] from Bukhara, Hajji Nazarbay bine Ishmukhammed, who had possibly predeceased the mufti.

Bibisarvidzhikhan was married to the Bashkir canton Shaykh ul-Islām bine Muhammedrakhim Sul-tanov from the village of Masteevo, Menzelinsk uyezd¹³. She bore the children Nafisa, Shaykhezzaman, Amirtimur, and Mariam. Nafisa was married to a translator at the Spiritual Board in Ufa named Ra-khmatulla, the son of Mirzasalikh Mamliev, and died aged 34 on 4 March 1866 (Shawwal 1281 AH). Her grave is approximately 25 arshins north of mufti Gabdessalyam's grave. The date of death, age, and names of children are written on the stone, but it is broken; therefore, soon this grave will be lost. Except for Nasifa, all the other children are alive.

Bibifakhriddzhikhan married the famous Kazan merchant Iskhak bine Mustafa bine Murtaza bine David bine Yusuf bine Muhammad bine Apak. Their children are Shaykhegattar, Bakhtegarey, Makhid-zhikhan, and Khusnidzhikhan. Bakhtegarey died in Kazan in 1880 (1297 AH).

Gabderrauf, the imam of the First stone mosque of Orenburg, known as 'Efendi khazrat,' was later given the title of an akhund. He taught religion to Shakird Muslims of the Cadet corps with the salary of 500 roubles per annum. By the decision of the Council of Ministers dated 17 June 1830 and the Emperor's decree, he, together with his brother Giniyatulla, was granted a tarkhanshiP. After he was released from the position of imam and akhund in 1843, thanks to the protection of senior officials, he was granted a permanent position as a mugallim; later, after giving up teaching at his own request, he retired and went on a pension. He died on 15 February 1881 (15 Rabi' al-awwal 1259 AH) aged 76. He was buried in Orenburg cemetery. No data about his teaching and upbringing methods that he used to educate shakirds has been preserved. Without visiting Bukhara and Kabul, he learned the Persian language himself and freely spoke it. His wife came from Astrakhan, was the daughter of Dzhabir Akhund, qadi of Dzhihangir Khan. They had one son, Khabibulla. He was imam at the same mosque, where he served for several years before his death. They said he had 'good knowledge, and thanks to him, the name of the mufti would be mentioned in prayers, but his life turned out to be short'. There are the following lines written by his hand in the examination book of the Spiritual Board: 'On 11 November 1861 I, living in Orenburg, tarkhan Mirkhabibulla, the son of the senior akhund Gabderrauf Gabdessa-lyamov, arrived in Ufa to the mufti khazrat, the highest official, to occupy the position of the imam of this city's cathedral mosque. Over 200 people inhabit our city. I have no wife. The lessons I learned are 'Mukhtasar', 'Sharkhe vikaya', 'Faraiz'. My mentor is damella Gabdulla al-Machkaravi.'

In December 1834, the Orenburg Governorate Administration appointed Akhmadi as imam and senior akhund of the First stone mosque of Ufa. As a result of lengthy and various events, in July 1843, when mufti Gabdelvakhid Suleymanov was in office, the Spiritual Board released him from his position. May Allah forgive him—they say his behaviour was unapologetic. He was taught in Kazan by Gabden-nasir akhund ibne Rakhmankuly and Iskhak bine Sagit, in Machkara¹⁴, at the madrasah of Gabdulla bin Yakhya al-Chirtushi, after which he was appointed as imam at this mosque. After that, he went off to Bukhara, to the madrasah of Kugeltash¹⁵. He returned in the year of the mufti's death and assumed office. He had a son Makhdi from his marriage with Bibigabida, Sharafetdin al-Esterli's daughter. He divorced her on 21 March 1843. Makhdi, upon marrying Zukhra, the widowed daughter of Astrakhan Akhund Dzhabbar, and lived in Sterlitamak until his death in 1878 (1295 AH).

¹² Now it is a village in the Almetyevsk District of the Republic of Tatarstan.

¹³ Now it is a village in the Aktanysh District of the Republic of Tatarstan.

¹⁴ Present-day village of Maskara in the Kukmor District of the Republic of Tatarstan.

¹⁵ Kugeltash, Kukeltash (Kukeldash) is one of the biggest madrasahs in Bukhara which possessed substantial waqf properties. It was built in the 16th century by Kulbobo Kukeldash, one of the influential dignitaries of Abdulla Khan (1557–1598).

They say that apart from Makhdi, Akhmadi had another son, Khaydar. After Akhmadi was released from office, he left Ufa and departed to his uncle, to the village of Masteevo, where he died.

Marfuga, Gabderrakhman's daughter, was the mother of Gabderrauf, Akhmadi, Sarvidzhikhan, and Fakhriddzhikhan. There is no data about other children.

Relatives.

Gabdelmuemin, Makhbubdzhamal, Makhbubdzhikhan. Gabdelmuemin permanently lived in Sterlibashevo village. One of the sons, Gabderrakib, was the imam of Barudy's parish in Kazan; another son, Gabdelkhakim, was the imam in the village of Abdrakhmanovo. Each of them had many children and descendants.

Makhbubdzhamal married the famous canton chief of the Orenburg uyezd, Gabdulla bine Davletshah bin Gadelshah. Descendants remained.

Makhbubdzhikhan was married to someone named Khamza in Orenburg. People say they have children and grandchildren.

Other data.

Thanks to the efforts and obstinateness of mufti Gabdessalyam, the Kazan merchant Muemin bine Tagir bine Nazir bine Tukamysh bine Khodzhasaid built the First stone mosque in Ufa. Before it was constructed, there had been no data about the presence of a mosque in the city. At the entrance to it, the following words are written on the stone over the second door: 'This mosque was constructed by mirza Muemin bay bine Tagir al-Kazani thanks to efforts of mufti Gabdessalyam.... The mosque was opened on 7 March 1830 (12 Ramadan 1246).'

After becoming mufti, he went to attend a wedding as a matchmaker in Ursai village of Bugulma uyezd¹⁶ on the bank of the Ik River. According to legend, the Shakirds were sent to meet the mufti when he entered the village and, standing behind the mufti's sledge, they read verses of praise. Later, the mufti was visited by scientists and famous people, who arrived from across the whole district.

Upon entering the house, the mufti fulfilled the request of the both sides—reading the khutbah of nikah. For some reason, he read this khutbah not by heart but looking in a notebook. Then he wrote the following in the metric notebook: 'The daughter of Bashkir head of the 12th canton, Ursay village of Bugulma uyezd, Shakhingarey, son of Kurmakey Nugaybekov, maiden Gaziza Maftukha, became the wife of a Major, prince Asfandiyar, son of Mustafa Maksudov. 1835, 11 February (on this spot, they put their signatures in Turkic, and 2–3 murzas also signed it as witnesses). The makhar amounting to 11 thousand roubles was paid in full at the wedding; Shakhingarey, son of Kurmakey, accepted it by his own hands to pass it to the daughter. Keeping in mind the Emperor's decree, according to which intending Islamic spouses were to give away 30 kopecks for constructing a mosque, Shakhingarey Nugaybekov, as it befits his status, paid 30 roubles with a banknote. I, mufti Gabdessalyam, son of Gabderrakhim, having held the nikah at the request of the both sides, wrote a note about it into the notebook and sealed it.' The seal was official, fixed with wax.

Nugaybekov and Maksudov mentioned here were famous families in their time. Asfandiyar mirza was the brother of Zuleykhavika, the mother of Salimgarey mirza bine Shakhingarey Taftilev. He lived in the village of Kilem in Belebeevsk uyezd¹⁷. After mirza Asfandiyar died, his wife Maftukha, Shakhingarey's daughter, was a widow for 30 years, after which she married canton head Gardi Syrtlanov, after whose death she again was left a widow and died in 1893 (1310 AH). She is buried in the village of Kilem. People were asking me to write her name and years of life in order to cut them on the headstone. As I believe, she did not leave offspring after herself. Our famous murzas, possessing a great fortune, which is almost equal to the one of Rothschild, could not even write and publish a booklet about their ancestors.

And so from that time, there was no official imam in Ufa, the mufti himself performed Friday and holiday prayers, as well as other parish rites; sometimes he imposed this work upon members of the Assembly.

Visiting Ufa for the first time on 17 February 1891, I met Valiulla, the son of Gadelshah Teregulov, who was personally acquainted with mufti Gabdessalyam. To answer my question 'Could you tell me anything from the life of mufti Gabdessalyam?' he told me the following: 'His Friday gospel is still in front of my eyes. He was of large stature, with a large open face and a solid beard. His voice was beautiful and impressive, people listened to it with pleasure. Sometimes, when he preached, tears flowed

¹⁶ Present-day village of Ursaevo in the Aznakaev District of the Republic of Tatarstan.

¹⁷ Present-day village in the Buzdyaksky District of the Republic of Bashkortostan.

down his long white beard. Parishioners neither could help crying.' This Valiulla is buried in the cemetery of Ufa....

The Honourable Marjani said the following about this person: 'After the death of mufti Mukhammedzhan, at the request of people, the Kazan governor considered Akhund Gabdessattar bine Sagit worthy of this position and offered his candidacy for the government's review. However, Gabdes-salyam Khazrat, being more educated and supporting their [the governmental] side, was appointed as mufti, also by the request of the Orenburg governor. Ibragim bin Khudzhash from Kazan, who wanted to revenge on Sagit bine Akhmed, also supported Gabdes-salyam. Mufti Gabdes-salyam was a ceremonious, but open person.'

Home.

The mufti's house was located east of the First stone mosque, between Voskresenskaya and Belskaya streets. After him, it was sold to Taftilev and divided into two sections. In the quibla-oriented section, Salimgarey (mufti) built a house for himself. The house's northern part and old constructions were granted to an orphanage. Old houses on the corners of this orphanage had been built by mufti Gabdes-salyam. He himself used to live in the house near the mosque, and another house was lent to the Spiritual Board. The land located west of the Mosque was given to one of his workers named Maryam. At present, there is a beautiful garden over there. Maryam used to be a famous woman in Ufa: canton officials and public officers visiting Ufa, shakirds arriving to pass exams, akhunds and khazrats appointed to the service at the Spiritual Board, Bashkirs selling land—they all stopped at her house. She died long ago.

Letters. This section contains the mufti's letters that were preserved in his library. These letters represent nothing important but may contribute to revelation of morality and traditions of scientists and the nation during that time, the determination of the level of their knowledge and enlightenment, skills, and thinking. A portion of the letters has been rewritten verbatim, while some of them are rewritten with changes. Those who would like to know the level of the mufti's education will be interested in the letter rewritten completely. They are divided into two sections: the first one provides official and semi-official letters, and the second includes private correspondence.

The first section¹⁸.

The second letter. Co-religionists and blood brothers! We, the lowermost slave of God, at Allah's will and the Emperor's decree from 30 September 1825, were appointed to the position of mufti. Living and working in the city of Ufa, we lack the opportunity to perform the compulsory five-time-a-day namaz together with all people. The absence of the mosque in the city where the mufti of all scientists and educated people resides calls forth surprise and humiliation. We see the necessity for the constant arrival to our city of scientists, permanent living of merchants and burghers, murzas and military men here. We want to leave a good memory after ourselves by constructing a stone cathedral mosque in this city and by our efforts, and houses near it necessary for the imam, muezzins who come to pass exams, as well as scientists. Each of you, being sincere to Allah, in conformity with your opportunities and consciousness, can make a donation to build the mosque and other buildings, which will be recorded by your own hand in the handbook attached to this [appeal]. Thanks to it, they will receive a holy blessing, and the gates of paradise will be opened to them. 1827, 24 September.

The fourth letter. In the name of Allah, merciful and generous. Admonition. Brothers in religion and Muslims! Know and understand. I, mufti Gabdes-salyam, son of deceased mullah Gabderrakhim, rewriting different rivayats and phrases from respected books, send the fatwa together with it, order all akhunds, muhtasibs, and scientists: they, each in their mahallah, on Friday and holidays have to deliver sermons to every member of the parish about not taking actions that contradict Sharia, that they are subject to Allah, and that they do not contradict the will of Allah, do not commit sin, and do not say evil words, and stay away from deceit and slander. Generous and great Allah says in the holy book: 'I brought people into this world only so they worship me.' As we see from these words, it is necessary to follow Allah's orders and constantly worship Him, beware of sinful deeds and going against his will. In one of ayahs it was written: 'Children of Adam! Do you think you were born to lead a useless life? No, you were born for worship and obedience.' How can you, leaving worship and obedience, commit sins? Do you think you will not be able to rise under our patronage? You will definitely rise. Based upon your deeds, on Judgment Day, each of your desires will be subjected to a penalty; however, today your activities will not be judged. It means that if you did a good deed, your punishment will be easy and you will be rewarded and enter the gates of paradise, where you will taste enjoyment. If your activities are sinful,

¹⁸ This section included 11 mufti's letters written between 1826 and 1837 in the Tatar, Arab, Persian and Turkish languages. Translations of letters written in Tatar will be given here.

the punishment for you will be hellish sufferings. If you follow the traditions of our Prophet and adhere to Sharia, you will be close to Him on Judgment Day. Thus, Mohammad said: 'Those become my confidants who follow my traditions and act according to the Sharia.' You know that Mohammad did make efforts to develop worship and obedience, and you can also do it: eat and drink what is prescribed by Sharia and considered permissible, reject what is prohibited, not to hold godless and impious carousals, not to slander, not to fornicate; in general, reject everything sinful and contradicting Sharia. By repenting already committed sins, calling upon each other to adhere to holiness and not allowing yourselves to act in contradiction to Sharia, as well as listening to scientists' instructions, fence yourselves off from hellish sufferings! In doing holy deeds, you will be equal to saints and sweetened by Allah's mercy on Judgment Day. As it is written in the Sacred book, paradise will be opened to those who committed worthy deeds, were obedient to Allah, rejected harmful and sinful matters, while the non-pious will be exposed to hellfire because of their deeds. Performing the five-time namaz together with people, on holidays and Fridays, read prayers for good health of our Emperor, his family, and heirs and make every effort to carry out his decrees, pay taxes and tributes, and you will be rewarded in the afterlife.

Mufti Gabdessalyam, son of damella Gabderrakhim. Written in Ufa city on the 10th day of Muharram 1833.

The fifth letter. Brothers in religion! Following Allah's will, you have to avoid disobedience and sinful acts. Moreover, you must obey the will and orders of generous Emperor Nicholas Pavlovich, listen to him, and express docility; to maintain your living, your bodies and souls must work hard.

According to the decree issued by the Spiritual Board, akhunds and imams must spread and explain this admonition among parishioners of their mahallahs and prevent them from committing wrongful deeds. Only being obedient to Allah and expressing patience, may you be rewarded. Those who cause injury to themselves hiding from military service, deserve the punishment of God. Self-mutilation is a great sin. The sixth part of the book 'Khamidi' is where the gravest sins are described in detail; it is said that the most serious sins include suicide and self-mutilation. There is a sacred Hadith delivering a warning to people who disagree with Allah's punishments, express dissatisfaction at benefits given by us, and do not want to stand hardships. The 34th part of 'Khadimi' says: 'The first which Allah wrote on the board of destinies: "Indeed, I am Allah, and there is no other God but me. If someone does not agree with my orders, is dissatisfied with benefits, is impatient to burdens, so he denies Allah".'

Therefore, those who believe in the pure essence of the faith need to express caution. It is necessary to obey decrees of the padishah and khakims and not to show resistance to the orders of the firmans. The Quran says, 'Those who adopted the faith, obey Allah and His Prophet.' Prophet Mohammad said, 'The obligatory rule for men is obedience to orders and docility, despite grief or joy.'

(Checked by the assessor Gabelnnasir mullah, the son of Almkhammed).

The sixth letter. At the highest mercy of the great Emperor, in order to make sure Muslims are attended to by their co-religionist doctors, it has been decided to send representatives of the Islamic community to study at Kazan university so that they receive a medical education. Upon graduating, they have to apply their knowledge in the Islamic environment and constantly take care of the health of their society. Following this desire expressed by the Emperor, military governor Count Sukhtelen¹⁹ appealed in 1831 to the mufti with the following suggestion: 'The great Emperor announced his generous wish to Muslims. Could you please also order it with the legal fatwa according to Sharia?' After the mufti's fatwa, after the announcement of this monarchic mercy throughout the territory of the Orenburg guberniya, youngsters of some governorate's uyezds, with the permission of their parents, decided to obtain education at Kazan Imperial University. However, ordinary people and scientists of the Upper Urals, Troitsk, and Chelyabinsk, being afraid of forced Christianisation, rejected this offer, about which they reported to akhunds of their districts. In their turn, akhunds directed them to the Spiritual Board, together with their own reports. Chelyabinsk scientists, who are notable for their special recalcitrance, have sent their petition to the Emperor. Will it be appropriate if some scientists disobeying the Emperor's desire and the mufti's fatwa will be issued with a warning, some instigators will be imposed a penalty, and some will be released from office? In any case, medicine is a sacred science allowed by Sharia. In some books it is considered to be allowed; other books call it necessary. The answer is the following: it will be appropriate to warn some scientists, impose penalties on others, and release some from their positions.

Orenburg mufti, mullah Gabdessalyam, the son of mullah Gabderrakhim.

¹⁹ Pavel Petrovich Sukhtelen (23 August 1788–20 March 1833)—the Russian general and Orenburg governor. Baron (since 1812), count (since 1822), adjunct-general (since 1828), lieutenant general (since 1826)..

The seventh letter. Notifying akhunds of the following, I order: on 30 April of last year, Orenburg civil governor Zhukovsky in his concern No.1292 decreed the following: 'I have issued an order prescribing every zemsky police chief to maintain awareness of the condition the people entrusted to him find themselves in, protect them from plight; thus, various seeds for sowing must be prepared. The Chief of police must control people so that they did not fall into idleness, that is, sowing on time and were involved in other matters. Mister Chief of police of Belebeevsk has also reported to me: "In order to fulfill your decree, we have notified the whole population. In some villages, mullahs of Islamic parishes, rejecting them, said [to the population]: "If you have food for today, do not worry about tomorrow." That is why they do not sow on time and spend their days in idleness and sloth. Because of this sloth, hardships fall on them; they are poorer than the Chuvash, Mari, and Cheremis inhabiting the district." The words of these mullahs influenced me greatly; therefore, I decided to appeal to you, dear sir. Could you please explain these mullahs that crafts and trade are the matters which do not contradict Allah, while passivity, on the contrary, does. Mullahs have to incite ordinary people to work so that they cease to be poor. Evil thoughts must be disrooted from their heads, including the one that one does not have to worry about tomorrow if there is food for today. Could you please also send me a copy of your admonition about it if you write one.'

Basing ourselves on the attitude expressed by Sir civil governor and considering this case necessary for myself, I order all akhunds, muhtasibs and imams not to disturb the consciousness of ordinary people with the aforementioned words and appeal to them so that they strive to crafts and other activities. After performing each of the five namazes, you have to do an appropriate work for yourselves, because the provision of your lives with labour is an obligatory religious order.

Moreover, every ulama is obliged to explain to people the harm of idleness and the necessity to do something after performing namaz, so that they constantly sowed and harvested, are beware of evil intentions and actions, so that they fulfill all necessary work for a certain day and did not leave it for tomorrow. Those who delay matters for tomorrow will be in trouble.

Orenburg mufti, the son of Gabderrakhim. Ufa. May 1834.

The ninth letter. The answer to the petition of Bashkir kantone yesaul Bikmatov. Due to the fact that at present most people spend their time at sinful Majlises, drink alcoholic beverages from which appears the danger of disobedience and unlawful activities, those who would like to get married should for a while delay this matter. If during the time of the Prophet, women were allowed to attend mosque to perform namaz, Gumer has prohibited it. This is recorded in books.

The tenth letter. The following mullahs shall be sent to every prison in uyezd cities of Orenburg guberniya where Muslims are kept for the edification and exhortation of prisoners :

1) imam, senior muhtasib and mudarris of the mosque 'Shakhane,' mullah Gabderrauf, the son of mufti Gabdessalyam—to Orenburg;

2) to Ufa—akhund Gabdelgallyam, the son of Yusuf from the village of Urazbakty;

3) to Belebey city—imam and mudarris Gabdelkhalik, the son of Kitap from the village of Tukay;

4) to Bugulma city—imam and muhtasib Gabderrakib, the son of Gabdelmuemin from the village of Abdrakhmanovo;

5) to Buguruslan—imam Kutlugakhmed, the son of Murad from the village of Gali;

6) to Buzuluk—imam Imankul, the son of Khudayvirde from the village of Dzhaek;

7) to Menzelinsk—akhund Mukhammedlatif, the son of Yakhudi from the village of Buech;

8) to Birska—akhund Akhmedshakh, the son of Atyitar from the village of Adzhak;

9) to Chelyabinsk—akhund Mukhammedvali, the son of Yarmukhammed from the village of Urkey;

10) to Troitsk—imam, muhtasib Mukhammedzarif, the son of Abduldzhilil;

11) to Verkhneuralsk—imam Gabdelgaffar, the son of Saedkul from the village of Kuzgun Akhmer²⁰;

12) to Sterlitamak—akhund Sharafetdin, the son of Zainetdin;

13) to Uralsk—assistant of akhund Gabdelkhalik, the son of Khalil.

The second section.

In the pack of personal letters of mufti Gabdessalyam, I have 146 letters he wrote to muhtasib Ibragim efendi, son of Khudhash, son of Nurmukhammed. Being reluctant to increase the volume of the book, we held back from republishing all of the letters. Moreover, readers who are used to writing letters in the form of a telegram or a newspaper article will not be pleased to read the long sentences and

²⁰ Kuzgun Akhmerovo—a village in the Tamian-Katansky canton, present day Beloretsk District of the Republic of Bashkortostan.

greetings of the Kazan beys. We have chosen the most useful information from every letter and present it here, in brief, indicating the date of writing.

1) I received the letter you sent and was very happy to learn that within two days after your return you will be able to obtain the decision on my case. 15 April 1826.

2) The Orenburg military governor, in consequence of appealing to the emperor through the spiritual minister, awarded us with the sum of four thousand rubles to buy a house. The Treasury Chamber received the decree issued by the finance minister. The spiritual minister informed the military governor about it who brought it to the attention of the Treasury Chamber, the Governorate Administration and me. We were glad to learn from your letter, dated 22 April, that this decree had been received, which was also transmitted to the public offices and scientists. The Governorate Administration informed the board about it. 29 April 1826.

3) In the last mail, we received a letter from the Spiritual Minister Shishkov in which he writes: 'From my report, the emperor learned that you compiled a work on a public prayer in his honour, which gladdened him a lot, as a consequence of which he presents you with a mink coat. This coat was sent to the Orenburg military governor to be passed to you'. 14 April 1827.

4) Upon arriving in Orenburg at the order of the military governor, I was happy to receive my clothes. By the will of Allah, I hope to wear them in good health; may prosperity and the joys of this life and the after-life be sent down to all of us. A caravan of 300 camels arrived from Urgench, on 13 June it entered Menovny; the goods were unloaded in the caravanserai. The Kazakhs started arriving in good amounts. The messengers sent to Bukhara started returning. They informed us that a caravan is getting ready to depart from Bukhara. After the death of Bukhara's Khan Amir Khaidar, his son Amir Khusain became the khan, who died after ruling for 80 days. After him, his brother Amir Gumer became the khan. At that time, his brother Bakhadir Khan, after gathering an army, conquered Samarkand and other cities; having approached Bukhara, he besieged the city for 50 days and Khan Gumer had to leave the city. At dawn, on the 27th day of Ramadan, Bakhadir Khan entered the city, killing Gumer Khan's counselors; he gave honours to other scientists and noble people. 15 June 1827. Orenburg.

5) Gabdelsattar-akhund, you were also sent the decree and notebooks with seals from the Board. All donations directed to building the stone cathedral mosque in Ufa must be written down in this notebook. We hope for your zeal in this matter. First of all, you have to donate one thousand or five hundred rubles yourself, about which you should make a true recording. After seeing it, others will also strive to do the same. We also ask you to inform us in what way public prayers for finishing the construction of the mosque and in the name of our emperor have been carried out. When you meet the Ural muhtasib, Saifetdin muezzin, please retell him our wishes. 4 August 1827.

6) We are upset about the fact that there are no donations for the mosque. It is surprising that among such a great number of people there are no sympathetic people—as it is said, a lake is made up of drops. If one person donated at least 10 or 5 rubles, a significant sum would be collected. The fact that we have sent a notebook to the Makaryev Fair was known by noblemen, therefore we were confused when they asked us about it. However, after our return to Kazan, you wrote about the good news of Yusuf from Koval; moreover, after talking to Gubaidulla-bey, you promised to provide help. I met Gubaidulla-bey and Ahmed Zamanov at the Makaryev Fair, our brother-in-law has written that they agreed to provide us with help. Therefore at the moment we are in expectation. We hope for their help if Allah allows it. If Allah helps, one person will be able to deal with this matter. The instruction may be written in a notebook, but it is not obligatory. If there is a necessity of instruction, rewrite it into the notebook and put your signatures. Qadi Gabdeldzhabbat was directed to the gunpowder factory. 6 October 1827.

7) You wrote about the appointment of <...>²¹ to the position with a salary of 300 rubles. May Allah bless him. He left saying that he would never do illegal actions and we would never hear about him drinking alcohol. Keeping it in mind, occupying such a position, he must deploy all his efforts to maintain his good name. He does not have to give his wife much freedom, but keep her in an iron fist, otherwise he will be disgraced. Gaet was read on Thursday. 5 April 1828.

8) Muemin-bey promised to build a mosque in Ufa. This was told to us by Astrakhan akhund Gaed Mukhammed, son of Ishmukhammed. 2 December 1828.

9) As Muemin-bey promised, we received 2 thousand rubles to prepare the necessary materials. His matchmaker, Ahmed Zamanov from Kazan, considering this plan successful, offered to build the mosque according to this sketch. I have seen a copy of the plan here, Zuleikha-bike has it. 24 January 1829.

²¹ The document's text is as such.

10) At present we are purchasing bricks, we have agreed to bring in sand at the price of 4 paper rubles for a sazhen. Last summer we bought it for 8 paper rubles and in winter it became cheaper. Sir Pushkin wrote that after his return from Saint Petersburg he read in Russian with my son. Please inform me when he will return, I will write a letter of gratitude to him. 31 January 1829.

11) I was given permission from the military governor. If I am in good health, I will depart in 2–3 days. I hope for a successful outcome of the trip. On the request of Muemin-bey, we have approved the plan of the mosque. The vice-governor put his signature on it, we hope for confirmation from the military governor. According to this plan, we have to finish masonry by the beginning of October and spend no more than 2,250 rubles. 16 May 1829.

12) We departed on Friday, 24 May, visited Kargal and other places, and on 28 May, after the evening namaz, we arrived in Orenburg. The Bukhara people, Khivin, Tashkent people and Muslims inhabiting Orenburg went to meet us and greeted us with dignity. We were happy to see our close people, friends, and acquaintances. I would like to visit the military governor. If Allah wishes, the expected plans and desires will come true. 29 May 1829.

13) At the desire of Gubaidulla-bey, the muezzin from the mahalla, Sabit, the son of Khalid, was appointed as the muezzin to the Makaryev mosque and according to written petitions of many people, Gabdessattar akhund and Orsk's Mukhammedgalim, the son of Khabibulla-ishan, were appointed as imams. The governor of Nizhny Novgorod will be informed about the way you perform your muhtasib duties. 18 June 1829.

14) On 5 August, a boy was born; he was named Mirgataula. Sir Pushkin arrived in Ufa to visit us. He has advised us several times to teach the boy the Russian language. I responded that we will agree only if it does not create obstacles for his other lessons. He is a really pleasant man. Please send him regards from us upon his return and say that we were left content after his visit. 29 August 1829.

15) Rice grains sent from Bugulma by Zuleikha-bike's man were handed to the father-in-law and he sent it to us. Masonry at the mosque is long finished. Now, the roof is covered with wood and a wooden minaret is being set. Recently, the military governor visited the construction site. 3 October 1829.

16) The election of the Board members will be held on 13 January. Then we shall write about you. Akhmadidzhan asked the book 'Namuzadzh'. If you see it, buy it. Could it be that a copy of the book exists among the belongings of the deceased khazrat? It would be great if you could look. We have the book 'Ifitakh', if you need it, we will send it to you. Please inform us when you will start to rewrite 'Sharkhe mullah'; there are also 'Gyisam', 'Gabelgafur', 'Abul-bakae'. 'Sharkhe mullah' and 'Gabelgafur' are compiled in a good way, I rewrote them myself when I visited efendi khazrat²². 28 November 1829.

17) On the 8th, the ballot vote was carried out in which the virtuous and educated man Fakhretdin from Bakhtiyar village was elected. The other candidates were Sabit and Saidash from Shali village²³. Only Saidash passed the exam for muezzin of Bolshaya Yelga²⁴ village. If it is this Saidash, how have you elected him for the position of the qadi? May it be another Saidash from Saidash village? Please, write us about it in more details. 12 January 1830.

18) Having departed from Ufa on 27 February, we arrived in Orenburg on Saturday. We visited our closest relatives. However, hadji Mukhammednasir-bey left to Saint Petersburg on the emperor's orders, for an unknown reason. He was glad that we arrived. He will leave on Thursday or Friday. After we say goodbye to him, we have to depart to Kargala. I have written to the governor that another person should be chosen instead of Saidash, please inform me on the further decision. If he orders to hold new elections, choose an elderly and virtuous scholar! 5 March 1830. Orenburg.

19) On the second day from this date, qadi Sabit took his office. May Allah send justice to his work. We have done much that is merciful, but the one who disagrees with this currently fulfills the duties of the imam at the gunpowder factory. Locals will not accept him, will not be able to perform the five-time namaz, will not gather the people for namaz and people will not be able to understand what he will read. It will be difficult for him to take his sparkling boots off and he will mostly perform namaz with his shoes on. Do not put in a good word for him in front of the general! 1 May 1830.

21) From the letter sent by Ahmed-makhdom, I was informed about the death of his father. Mukhamedvafa wrote a letter asking to appoint him as the imam at the Makaryev Fair. It is indecent to send a new person there. At first, he should serve for a couple of years at his parish and deserve the

²² *Author's notes:* Staying at Ibrahim efendi's madrasah is meant here.

²³ Present-day village in the Pestrechinsky District of the Republic of Tatarstan..

²⁴ The Rybnaya Sloboda District of the Republic of Tatarstan.

people's trust. For this year I am planning to appoint Fatkhulla-akhund there, he asked for it in previous years. I have information that Bashir-bey from Chekany wants to see Chistopol's damella Iskhak at his mahalla, is it true? Do you have good relations with Fatkhulla-akhund? 18 June 1831....

23) The Orenburg military governor, the honourable count Sukhtelen, is reporting to interim minister Sir Bludov²⁵ about my instructions to co-religionists about the necessity of providing access to doctors during outbreaks of cholera, about actions taken in favour of the emperor. Based on his report, the emperor awarded me with a golden medal with a diamond on the blue St. Andrew's ribbon about which Sir Bludov has informed me in his letter. The news about such a high award gladdened all my family members and friends and we all expressed our gratitude. Thank Allah! May Allah prolong the days of your life, increase your fortune and establish your name and status! I was glad to know that Akhmadi-bey Zamanov, Gubaidulla-bey Yunusov, Yusuf-bey and Kurbangali-bey had been awarded medals. 18 October 1831.

24) I have written a letter of gratitude to Sir Bludov on the matter of my receiving a gold medal adorned with a diamond, which contained the following words: 'If you asked for the emperor's permission, I would immediately, upon my arrival to the highest person and bending my knee, thank him for such a present'. In response to this, Mister Bludov wrote that he had made known my desire and received the following from the emperor: 'Our sovereign Emperor, honouring your loyalist expression of gratitude with his merciful attention, highly ordered me to inform you that you will be invited to Saint Petersburg at the first opportunity', which made me happy. I dare to hope that I will be able to see our emperor which would gladden my confidants. We needed a sleigh and harness for three horses, it would be good if you found out the price for them. Qadi Sabit departed to Troitsk and Chelyabinsk to observe the local mullahs and akhunds. He sent one letter in which he writes that their positions are not assigned to them. I have not received other letters. I hope he will come back in good health. 24 December 1831.

25) Because of a large amount of work, I did not get a chance to attend the wedding in Orenburg. Moreover, Uraza is approaching, and we thought that if we were to go then we would not be let go soon. With this mail, we received the letter from damella Iskhak and his son. The son is departing from Chistopol on the 4th and the damella on the 7th. 14 January 1832.

26) I received a letter from Orenburg. They are writing that our brother-in-law Mukhammedrakhim is very offended, which has made us upset. We agreed to pay 1,000 rubles of Makhar during the nikah between the daughter of Bibisarvidzhan and Mister Shaikhulislam, the son of Mukhammedrakhim Sultanov. We are planning to hold the nikah at the beginning of March. I translated the instruction issued by the governorate committee about pox in the Tatar language in 1830, which I am now sending to you. The Russian copy is held in the committee. 28 January 1832....

28) An honourable affiancer writes to us: 'We have to return from the wedding on 15 March, because the responsibility of preparing a military regiment has been imposed upon us. The reception will be held on 15 March'. Therefore, the nikah will be celebrated the next Friday. Depart immediately after the receipt of this letter. 3 March 1832....

31) They say the emperor is coming to Kazan. If it is true, they must be currently preparing for it. Please provide me with more details. Mirginayatulla is waiting for 'Khaftiyak', he has already started understanding the lessons. 19 May 1833.

32) Mullah Gabdelvakhid²⁶ writes from Saint Petersburg that recommendations for medals have been directed to the governor. You should show your certificates of merit and take the certificate of working at the gunpowder factory from the general. The ruler should see and look through them in front of the governor. Mullah Sagretdin passed the exam and I will send 'Shakhre mullah', 'Gasametdin', and 'Abul'bakae' to my son together with it. Dear son, correct the mistakes in interpretation written in the margins of the books, try to answer set questions and understand the texts you are reading. If you find other copies of 'Shakhre mullah' and 'Gasametdin', rewrite the interpretations we do not have. At the moment you lack nothing, while we were half-educated in our time. Thank Allah, we have reached such a high position. 4 June 1832....

²⁵ Dmitry Nikolaevich Bludov (5/16.04.1785–19.02/2.03. 1864) a litterateur, diplomat, state person. After the events of 14 December 1825, he was appointed as a document controller at the Investigation Committee for Decembrists. Since November 1826 he was Assistant to the Minister of Public Enlightenment. Since 1832–Minister of Internal Affairs. In 1842 he was elevated to countship. Since 1855 he was the president of the Academy of Sciences, since 1862–the head of the National Committee and Cabinet of Ministers.

²⁶ Author's notes: Future mufti.

34) It is most likely that the first two parts of the book on medicine are merged into one volume, therefore the part we have begins with page 278 and it is written in it that it is the ending of the second book. It would be good to find [the other two parts]. There is one healer in the sloboda and mullah Yusuf wanted to ask him [about these books]. The order to occupy the position of the mullah in Makaryev will be given to Chistopol's mullah Gabdelgafur and Mukhammedvafa-makhdom from the sloboda. You said that you possess some kind of published book on history. Could you please send it to me for reading? The honourable count has sent us one on history in the Turkic language published in Kazan. It is the work of Abul-Gazi Mukhammed Bakhadirkhan, the son of Garab Mukhammedkhan—'Shadzhara Turk'²⁷. 14 July 1832.

35) Our brother-in-law Muhammad Nazir-bey visited us. We have received a letter from damella Gabdelgafur, which he wrote on 15 August. He wrote he was in good health, however, Mukhammedvafa is somewhat offended. The muezzin has not arrived yet, what could have happened to him? (Is it the muezzin of the mufti himself, whose name is Gabdennasir, son of Gabdeldzhali?) Tell our brother-in-law Mukhammedrakhimdzhani to visit us upon his arrival. 25 August 1832.

36) Despite difficulties with Astrakhan's Allavirde, we, taking your request into consideration, have patched things up. After examinations, Sabur has been appointed as the imam-mudarris and senior muhtasib. The population of the mahalla, standing against him, filed a petition to the public prosecutor, while we have written to the guberniya administration that he will be given an office if most parishioners and the mosque's builder will vote for him. Someone in Kazan has the book on medicine 'Manafiy an-nas,' which I want to give to Nurmukhammed-makhdom. 8 September 1832.

37) Please, constantly watch my son and deliver him sermons. He should not leave the madrasah without your permission, he will lack no literature, he has to read more and I hope he will not grow into an ignorant person as the son of the deceased mufti. We rely on you. 6 October 1832....

39) We have received a paper from the minister of spiritual affairs which contains the names of people awarded medals by our generous emperor based on our recommendations: 1) in Kazan, senior muhtasib Nurmukhammed Khudzhashev, the son of Ibragim, with a golden medal with the inscription 'For bringing use'; 2) akhunds Gabdelgani Amirkhanov and Ishmukhamed Zaidov, with silver medals 'For diligence'. These medals were sent to the military governors of Kazan and Orenburg. I am happy for them more than for myself. Until present, none of our predecessors have been involved in it. Thank Allah, the minister and emperor treated our idea with respect. May Allah send respect to what we do. May the generosity of our emperor descend on you. In order to thank the emperor for such benefactions, apply all efforts to accomplish your work. This work is very prestigious both for you and us. Thank Allah. You wrote that you passed the elections of qadis. I have received a letter from qadi Gabdennasir. We are surprised that he is leaving an honourable post with a high salary to arrive here. He became a tarkhan in a short time and he needs to continue his work in this position. We do not know what to do with our son Akhmadidzhan. Should we maybe send him to Machkara²⁸ to the madrasah of damella Gabdulla? Damella Gabdulla came here to pass an exam. He told he would serve eagerly—with his soul and body—giving all his efforts for his education so that he would not have time for idleness. What do you think about this? If you consider it appropriate, and his ustaz [teacher] will not object, we would send him to Machkara. 19 January 1833.

40) I thought you were going to come, that would have been really good. The honourable count, having sent us the medals, ordered to award akhunds with them. Therefore we called upon them, they will come after the sacred gaet. We are also waiting for you to come. 9 February 1833.

41) If anyone is selling 'Wānqūlī'²⁹ for 20 rubles, buy it. We have one 'Wānqūlī' in two volumes taken in debt. The first volume contains 666 pages and the second one 706 pages. It was published in 1141 in Rajab / February 1729. Purchase the ending for any price. Maybe someone is selling a book on foreign

²⁷ Abu al-Ghazi Bahadur Khan (1604–1664)—a direct descendant of Chinggis Khan, he owned Khiva and Urgench and at the same time was an influential poet, litterateur and historian of that epoch. His work 'Shajare-i Türk' ('Genealogy of the Turks') is a result of the examination of multiple Eastern sources (part of them did not reach our time). It was created with the aim of describing the Turks' common history since the time of their legendary ancestors until the period of the author's rule (mid–17th century). In 1726 its French translation was published in Leiden and in 1780 'Shajare-i Türk' appeared in the German translation; then, the French translation served as the original for the Russian translation completed by V. Trediakovsky and published in 1770, as well as for the English translation printed in 1780.

²⁸ 'Van Kuli'—an Arabic-Turkish dictionary, published in two volumes in Istanbul.

²⁹ 'Van Kuli'—an Arabic-Turkish dictionary, published in two volumes in Istanbul.

history, 'Tafsir kabir', 'Tafsir Abbilais', 'Kamus', or 'Sikah', ask around and message me. How much does a closed sleigh on springs with glass doors cost, which may be ridden in winter? We need one which would hold four people, two opposite the other two, and so that it could be pulled by two or four horses. If it costs around 300 rubles then it would be great if you brought it. I want it to be sound and beautiful, today the wives of wealthy and famous people only ride in them. The new akhund Khalid, a mullah from Chelny, used to say that the book 'Fetavi khandiya' left after Salikh-khazrat is currently held by the patron. It would be good if it was entrusted to you and you brought it. 23 February 1833.

42) You must have heard that on 21 March, the honourable count Sukhtelen passed away. On the 20th he was putting signatures on cases, in the evening, at nearly 9 o'clock, he was listening to the reports of the commandant and city-provost and soon after their departure he died. He was a just person, but he was given short time. Our brother-in-law Mukhammednazir returned in good health. He asked to write to you that he desired to maintain good relations with Gubaidulla-bey, Yakub-bey and others. Will qadi Gabdennasir come? If he does, you have to try and send a decent and good scholar. You know very well the condition of the newly arrived. Send the letter addressed to my son to Machkara. 30 March 1833.

43) We have received a letter from our son Akhmadidzhan. He speaks highly of the diligence of the damella and the scientific discussions between the shakirds. 13 April 1833.

44) Shafi and Dzhalyaletdin appealed with a petition to the public prosecutor about their appointment as senior muhtasibs, because they both gained the biggest amount of bowls [votes]. In his turn, the prosecutor sent an inquiry to Kazan to find out who exactly received the biggest amount of bowls. As a response, the governorate administration wrote that Gabdennasir came the first, then Dzhalyaletdin and then Shafi. The prosecutor, examining the decree of the governorate authority, confirmed Gabdennasir as the senior muhtasib. We have made a note about it in the journal in which everyone, including the prosecutor, put their signatures. Therefore, filing a petition in such a situation is unworthy. Moreover, Shafi has been noticed in dirty affairs. 29 June 1833.

45) We were happy to receive the message of mullah Ilyas. I heard that there are commentaries written with sufi Allayar's hand in the margins of the book 'Ikhyat', left after the deceased hadji Bibkau Khalfin. Is this book for sale? Please inform us about its price. May the Quran and Tafsir and other books in good condition be found? I would buy works I do not have. 9 November 1833.

46) I ask you to buy a cart for me to which three horses could be yoked, and send it together with those which will arrive in Ufa to the fair. With this mail, I have sent the decision to the minister about which of the two mullahs should be appointed to Tiflis. Both are worthy of praise. One of them served as an assessor at the Board for three years, at present, he is an assessor at the gunpowder factory in Kazan; the second studied in Dagestan and, upon passing exams at the Board, took office. Please inform me about the return of the pilgrims and ambassadors sent to Saint Petersburg. 4 January 1834.

47) I have received the letter sent through mullah Nugman. I was upset about the death of damella hadji Gabid³⁰ and mullah Mukhamedzhan. The minister reported that the construction of the stone mosque in Troitsk is delegated to mirza Muemin-bey, the son of Tagir. 7 February 1834.

48) It is the second time they are reporting about... the qadi. Those who elect such people for the position of the qadi must be cursed. 22 February 1834.

49) We are sorry about your grief, but we have to be patient. If it is destined, everything will be found. You must know what zakat³¹ is, such property will neither be stolen nor will it drown. Mullah Tadzhettin was confirmed in Tiflis. He may reach great influence if he works well. We shall greet him on our side. Local murzas and Your acquaintances do not agree with the fact that you are leaving [your post]. They think you would achieve greater influence if you served for two more years after which, upon retiring from the tsar's affairs, you could be granted the tarkhanshiP. Expressing your offence, you want to raise your value, however, later you will write petitions so that you are provided with a wagon train to inspect uyezds. How can an ill man appear in uyezds? Uyezd mullahs complain that you illegally offend them. Wealthy people also report that you must not show your superiority so vividly. All these words reach us, You should beware. 17 May 1834.

50) It is known for certain that the emperor is going to arrive in Kazan. Whether or not we want to meet him, there is no such opportunity at the present. We did not manage to arrange it with the Orenburg military governor beforehand. At first, he was not at home, then the news came that he arrived in Ufa where I thought I would see him. He, without visiting Ufa, departed to Kazan on 8 September. Upon the

³⁰ Author's notes: Gabid, son of Gabelgaziz al-Kenari.

³¹ Zakat—an income tax in the amount of 1/40 of the whole income.

emperor's arrival in Kazan, I order you and all imams to perform the Friday liturgy at mosques. Making a copy of the sheet attached to the letter, give it to the imams. After the liturgy, send a report to the military governor that it was carried out at the order of the Orenburg mufti. I also wrote to the military governor, general-lieutenant Perovsky³², that according to my order, senior muhtasib Nurmukhammed Khudzhashev must carry out liturgies at all the mosques of Kazan. If you find time, tell this in a personal meeting [with the military governor]. 13 September 1834.

51) It became known that the emperor returned to Saint Petersburg without visiting Kazan. I hope that Allah will send us a meeting with him. I was happy to know that the military governor passed copies of the letter sent by mullah Khasan-bey Apanayev to the spiritual minister. Thank Allah, our letters were not lost in vain. The deceased mullah Khalid of the Tetyushi uyezd said that he had a good book 'Bezaziya', please try to find out who will inherit it after the partition of property; it would be great if you bought it and sent it to us. 11 October 1834.

52) I was glad to learn that you bought us the book of Gubaidulla bey 'Ikhyā' for 200 rubles. It would be good if he wrote the following in it: 'As a gift to the great mufti of Islamic people Gabdessalyam, the son of Gabderrakhim'. You said that the aide-de-camp sent by the emperor was watching us praying. We should have prayed for our emperor that time. Upon the tsar's arrival, it will be necessary to say that reading of such a public prayer was ordered by the great mufti. Mullah Kamaletdin writes: my grandfather has the book 'Sahih al-Bukhari'. If you accept him, you will not have to pay. 25 October 1834.

53) I recently started to write the fifth notebook of 'Mokhit Borkhani' and am busy with it in every free minute. If I manage to finish it, hopefully, it will be useful to me, my children, and Allah. I wrote to Akhmedshah-bey that it would be great to find an educated man who would write down the sixth part. Upon arrival in Kazan, please ask him whether he has received my letter. In order to bind them together, they have to be of the same size. Therefore, I also sent the size of the publication together with this letter. It is necessary to write on the Holland paper of a large size. Thank Allah, everything is calm at our place. This year, the Itil overran its banks. There has not been such a flood since the time we had arrived in Ufa. Miryakub wrote to me asking to appoint muezzin Sabit to Makaryev. In order to honour his request, we will do it. 8 May 1835.

55) ³³We were happy to learn that the emperor granted you the tarkhanship. 12 June 1835.

56) If you made a copy of the tarkhan certificate, we would be able to read it and be happy for you. This year, imam-muhtasib, mullah Gabdegallyam from Agryz village and Shamsetdin Khafiz from Slo-boda were appointed as imams in Makaryev. We have heard that damella Gabdulla from Machkara gave the sixth part of 'Mokhit Borkhani' to some imam from Saba village so that he would rewrite it. We will pay when the work is finished. 3 July 1835.

57) One elderly mullah used to say that Ibragim-bey possessed the book 'Tatarkhania'³⁴, written by some Dagestan [scholar], corresponding to the size of one and a half of 'Dzhamig ar-rumuz'. It would be good if you sent us this book. We would really like to see it because we have come across the words: 'It is in Tatarkhania' in some works. If there are good books, we would purchase them. Senior muhtasib and mudarris, damella Yusuf efendi from Isak village³⁵ wrote to us that he had two volumes of the book 'Maktubat' written by imam Rabbani for which he was offered 40 rubles, the first volume of 'Tafsir Kashshaf' and the last volume 'Tafir Madarek'. I ask you to negotiate and acquire these books and, paying for them, send them to me with a reliable traveler. We have agreed about the daughter of the akhund, damella Sharafetdin-ishan, for our son Akhmadidzhan. I hope they will live in peace and accord. 10 July 1835.

59)... We have written to the Governorate Administration about the vote for the new qadis. We would like to see [among them] decent and religious scholars. It would be good if they included Gubaidulla-bey, head of Akhsan-bey, and Yusuf-bey from Koval. 9 October 1835.

60)... He was sent by mullah Dzhalyaletdin, he should be asked. We are planning to read the sacred gaet at dawn on Thursday. Mirginayatulla reads it well, he joined his ustaz [alderman, teacher] everyday to read Tarawih. We hope for Allah's help, may he not leave us in poverty. 8 January 1836.

61) Mullah Fatkhulla, son of Safar, from Urazla village of the Tsarevokokshaishk uyezd, based on the judgment issued by the mullahs of the Kazan and Tsarevokokshaysk uyezds, has been examined to be

³² Vasily Alekseevich Perovsky (1795–1857)—Orenburg's military governor between 1833–1842, the general-governor of Orenburg and Samara between 1851 and 1857.

³³ The original does not contain the 54th letter, it might be a mistake.

³⁴ The collection of fatwas 'Al-Fatawa at-Tarhaniah' by Hanafi imam Alim ibn Al Hanafi (died in 800)..

³⁵ The village of Isakovo in the Buinsk District of the Republic of Tatarstan.

appointed to the position of mullah. However, the imams of the Tetyushi uyezd filed a judgment so that he was appointed the senior akhund of the Kazan guberniya. But we have recorded in the journal that he was appointed as the uyezd akhund of the Kazan uyezd living in Urazla village. Today he said goodbye to us before departing; because he has not achieved what he desired, he was somewhat upset. Since we do not have a letter from the Kazan beys, we decided not to appoint him in the city. 22 January 1836.

62) We were upset to be informed that damella Iskhak had died. You wrote about the illness of hadjji hafiz Rabbani. If he is still alive, please send him our prayers, death will touch each of us.

They say that the newspapers are writing about the preparation of new personnel for our and the Crimean Spiritual Boards. The mufti will be left with the same salary, qadis will receive 750 rubles; the allowance of the secretary, translator, and other officers will be increased. 4 March 1836....

64) I have been waiting for a message from you about the arrival of the great emperor, however, I have not received any so far. Fatkhulla-akhund, the son of Khusain, has written to us about his meeting with the military governor and the arrival of the great emperor in August. Inform us about how much the books 'Maktubat', 'Gali al-Kari' and 'Okyanus' cost which are left after Bikbau-hadjji. 10 June 1836....

66) The visit of the great emperor is going to be short. I am planning to arrive in Kazan in order to meet him. I hope to see him in a good hour and count for his kind attention. Has the imam of the mosque been designated? I have thought of the chief mudarris and the senior muhtasib of Astrakhan, mullah Gubaidulla, son of Sabkul. His knowledge is perfect, he is of a good temper, he has a decent look and beautiful handwriting. He studied in Bukhara for several years. The Astrakhan Nogays, because of their ignorance, and especially the support of Nogai qadi Gabdulla, cannot fully appreciate him [Gubaidulla, the son of Sabkul]. Asking for my advice, he writes in one letter: 'May I only remain in the position of the muhtasib and mudarris this winter? It is better to release me from the position of the imam and thus protect me from the ignorant Nogays and grant relief from keeping the mahalla'. I have not responded to him yet. It seems to me, if the Kazan beys see benefits, this person will be interested himself. Anyways, everything is in their own hands. I will send the letter from mullah Gubaidulla together with this letter. 1 July 1836.

68) For the sake of Gubaidulla-bey, Sabit muezzin was appointed to the Makaryev mosque as the imam; for the sake of Khasan-bey, at secret namazes, Shamsetdin-khafiz was appointed to the position of the imam. The decrees for them were mailed to you. If there are any news about the arrival of the great emperor, please inform me. Have you said a good word to the beys about the chief mudarris and senior muhtasib of Astrakhan, Gubaidulla, the son of Sabkul?...

69)... Having received your letter, we found out that our brother-in-law Mukhammednazir-bey hajji departed to Moscow, we wish him good luck and to return with honours. Please inform whether you have sent to publish the prayer with blessings on the arrival of the great emperor in Kazan. 23 September 1836.

70) If what I have sent has not been printed yet, it would be good to correct several words. The first thing: instead of 'You will never see wickedness and infringement from me' there should be 'You will never see wickedness and compulsion from me', and the second: instead of 'Everyone can worship and pray in their religion' there should be written 'Everyone can joyfully and calmly worship and pray in their religion'. It will be better. One bey named Miklu intends to give some money to build a mosque in the village of our grandfather Gabderrakhman. It would be good if he gave at least one thousand rubles; as you know, the mosque should be constructed according to the existing plan, please, inform him about it if you can. 1 October 1836....

72) On 23 November I received a letter from the Minister of Internal and Spiritual Affairs, honourable Sir Bludov, in which he writes the following: 'By the merit of the great Emperor and by his generosity, 1,000 paper rubles as a table provision and 250 rubles for life maintenance have been added to your salary'. For these great benefactions of the tsar, we gave thanks to Allah and performed a prayer for the good health of our great emperor and minister and all their relatives. May their lives be long; we also hope that we and our children will live long, in happiness and health. I have sent a copy of this letter to you, upon the receipt of which you should read a prayer together with your friends and acquaintances. Let dear Gubaidulla bey, Yusuf bey, Kurbangali bey, Murtaza bey, Khasan bey, dear chief Iskhak bey, dear Shakhimirza, Arslangali mirza, damella Sagit efendi, mullah Shakhi efendi, mullah Ahmed efendi, Mukhammedvafa makhdum and all imams perform a prayer after the Friday namaz to prolong the life of the great emperor and our lives. 25 November 1836.

73) In the previous mail, we received a paper from the district general informing about the withdrawal of the order given to Fatkhulla, son of Abuzyar, due to our investigation according to the law and the Sharia. The above-mentioned son of Abuzyar filed the following petition: 'I was given an order from the

public office to bury warrant officer Gusman, who died on the 9th. On the basis of the paper from the office dated the 11th, I buried him on the third day. However, when we were awaiting the arrival of the great emperor in the chambers of Musa bey in the presence of Fatkhulla akhund and others, Sir Arslan-gali, mirza Muratov said that officer Gusman had passed away the previous night. On Friday, during the Friday namaz, they came to the mosque in order to perform a funeral prayer, however, I prohibited them from reading it. Qadi Amin and our confidant told me not to go and read the funeral prayer. Moreover, he said that I had not paid attention to the question of why we hastened the funeral service. I started contemplating whether mullah Abuzyar had changed something in the paper. Therefore, you need to ask the widow on what day and at what time her husband died, moreover, to find out in the Kazan public prikaz [office] about the date of death and the date at which they stopped paying him a salary. You have to fulfill it as soon as possible. 1 December 1836'.

74) Many years have passed since I received the judicial decision along with your letter. The above-mentioned akhund has already passed away. Taking into account that he wrote a letter to the great emperor, we cannot set this decision in motion and put our signatures on it without a proper investigation. From this point of view, Fatkhulla akhund lies beyond similar cases. This person is capable of making judgement after the investigation, drawing limits based on petitions which he had written himself. Inshallah, with his death, we will be able to bring back the decision written by Khamza akhund. You write that Gubaidulla-bey does not provide the book 'Rawzat aş-şafā' so that we could rewrite it. I remember that the work of our university acquaintance Iskander mirza 'At-tuhfat al-hakirat fi gilmi al-adab giynd al-garb' includes the 1st, 2nd, 3rd and the 6th volumes of this book. Inshallah, he will give us the 2nd and 6th volumes to be rewritten. If they need the 4th volume, we will rewrite it and send them a copy. We ask you to notify us upon receiving this letter. I invited the chief mudarris and senior muhtasib of Astrakhan, mullah Gubaidulla, to visit me, inshallah, he will arrive at the end of January. It is possible that he will soon be in Kazan, talk to him. 1838, 17 February....

76) I have received a letter written by my dearest son Akhmadidzhan akhund upon his arrival in Bukhara. He accommodated himself in madrasah Kugeltash and is writing that he is given lessons by qadi Kelyan at the madrasah of Mukhammed Sharif; his other tutors are Nigmatulla ishan and Sharafetdin ishan. We are very content, thank Allah. We are happy that when you met the general of the gunpowder factory, you passed him regards from me. We have given the instruction to the Board to appoint our relative there. With this mail, I was also sent a paper in which officials of the gunpowder factory asked the general to appoint his son Sagdetdin instead of Shamsetdin Bashirov. However, as we know, Sagdetdin is a young man, we are acquainted neither with his temper nor with his deeds, we do not have confidence that he will carefully fulfill the functions at this government position. If his father, an elderly man, will do something against the law, it will not be possible to appoint this young man in his stead. Please send him regards from me at the meeting with the general and say that I have ordered to appoint Shamsetdin Bashirov, my close relative, to this position, who will soon arrive to the gunpowder factory. 12 June 1838.

77) I received a letter from my dear son Akhmadidzhan. Our brother-in-law, Gabdelkader, arrived in Orenburg with his younger brother and son. They said that an ambassador with a large caravan and an elephant is arriving. The carpet coving the elephant was bought for 80 gold coins. They say that there is a throne set over it, adorned with turquoise, rubies, pomegranates, emeralds and other gems and gold. I was written that the ambassador is arriving from Khiva. We hope that each house is in good health and calmness. Baymurad mullah is complaining that you are disgracing him in front of dignified people. It is desirable for scholars to be in peace with one another. June 1838....

The letters written to the mufti.

The first letter. The late Mufti, in the course of his trip towards Astrakhan, passed by the Kuznetsk uyezd and visited the late rich landowner Gabderrashid in the Kanay village³⁶. At his request but against the will of the imams, he appointed his son-in-law from Bolshoy Truyov to the position of Akhund³⁷. However, because of his lack of learning and piety, he could not give fatwas. Many times on Fridays, when engaging in debates with imams from his and neighbouring villages on the questions of Sharia, he gave wrong fatwas to the common people, being tied to the chariot of his ignorance. To the people who came to say goodbye to the deceased in the house of a man named Bikkul, he gave a fatwa that the son of the Prophet Muhammad was a prophet as well. The mullahs present

³⁶ Present-day village of Tatarsky Kanai in the Penza Oblast.

³⁷ Today it is a village in the Kuznetsky District of the Penza Oblast.

read the Ayah which says that the Quran was revealed to him [Muhammad], but he did not accept it and did not repent. Also in his village, in the house of the foreman Ayub, he gave a fatwa that alcohol is permitted (halal). After the mullahs told him not to talk about such things, he called them all the names under the sun, especially mullah Abu Talib from Bolshie Chirekli village³⁸. At the same time, he does not have any one book of fatwas, he makes decisions without basing them on the book. You can hear about this if you ask those who come to you from our region. Divorcing lawful wives from their husbands, he married them to others, without complying with customs. And he has done many such things. If your khazrats decide to investigate, we will tell everything, insha Allah. In the past year of 1815, we wrote to the late Mufti of these unworthy cases, but there is still no answer for some reason. As you are mentioned in the notebooks of our master, you were given the responsibility for the events that took place in Paldanga³⁹ village in 1826; therefore, having shown courage, he did not report the real number to the mullahs. However, after that, those cases that were given to your khazrats were not his business, this Akhund cannot even read the writing on the paper. Our request is as follows: after reading our petition, in order to protect him and others from trouble, we ask you to interview the imams from Muslim villages in the course of the investigation with the head of our Zemsky court and the respected titular counselor serving in the Assembly, the acting noble assessor of Gabdessalyam Mirza Enikeev.

- 1) Imam of Bolshoy Truyov village mullah Shafi, son of Gaed.
- 2) Imam of Maliy Truyov village mullah Salikh, son of Gabbas.
- 3) Imam and mudarris of Bolshy Chirkli village Abu Talib, son of Gabderrashid.
- 4) Muezzin of Maly Truyov village Sabit, son of Kulsharif.

1827, April.

The second letter. The petition. By the will of Allah and the personal consent of the daughter of a Moscow subject Bukharan Davletbay, the widow of Bibisaliha, I concluded a [marriage] contract with her in the evening of the 28th day of the month of Ramadan in a society of Muslims and in accordance with the requirements of the sharia. The rite was performed by Mullah Mirgalyam Nakyshband. The reason for this [as follows]: I sent my stepson Gabdelyakhid to my wife Bibisalikha with news about the holding of the ceremony, to which the damella, the mullah from Tatarskoe, was invited. My wife said to her stepson: I have not told anyone from Tatarskoe; I do not do anything that my son may not like; it is shameful to not invite anybody but the damella. Damella Mirgalyam Nakyshband is a pious man; let him perform the nikah; give [money] to the imam for nikah. Having heard such an answer from her, damella Mirgalyam Nakyshband performed the nikah. The witnesses were the Bukharan Allakhnazir bay, the Karavanbashi Rakhim bay, the Hajji Gatiyatulla Kabli, Khakim bay, the Astrahanian Peremgali and him stepson Gabdelyakhid, and junior brother Tursun bay; from the members of the family, her mother, grandmother, and two sisters were aware of the nikah. After the nikah, the imam from Tatarskoe was invited; they told him about the nikah and paid 20 rubles for it. Five months after the nikah my wife said: 'I do not love you; give me back my word.' I did not agree. I felt that she would raise a scandal, saying that the nikah was not performed by an imam. Mufti khazrat is a legitimate holy judge, I handed him a petition; If according to our holy law the nikah is recognized as illegal and the decision on the Sharia is sent, having heard my request and showing clemency, could you send a decree to Moscow so that my wife, showing humility, would not resist the firman. You will have great mercy for this. Bukharan Mullah Niyaz Gavas, son of Mohammed. 1834, 20 June (Moscow).

The fourth letter. (Translation from Russian). From the canton yesaul Bikmatov, from Kurmanov village of Shadrinsk uyezd of the Perm guberniya⁴⁰, to Mufti Gabdessalyam, son of Gabderrakhim. 1837, 31 December, No.2815. Recently Muslims have introduced the custom during the nikah ceremony in order to not see each other. It leads them to deception and it spoils their everyday life. By my order, assistant akhund Muhammedshakh Baltagulov picked up 12 texts from books on Sharia, which show that such a Muslim tradition is contrary to the sunnahs of the prophet. These texts signed by Baltagulov were sent to you, khazrat, for consideration. We ask you to distribute them among the Muslims through the appropriate bodies so that they stop this harmful tradition and see each other at the time of nikah. Canton Bikmatov⁴¹.

³⁸ Present-day village of Bolshoy Chirkley in the Nikolaevsky District of the Ulyanovsk Oblast.

³⁹ Today it is a village in the Penza Oblast..

⁴⁰ Present-day village of Novoe Kurmanovo in the Kunashsky District of the Chelyabinsk Oblast.

⁴¹ Ten texts in the Arab language are presented further.

The library.

Despite the mufti Gabdessalyam's hobby of collecting books, only ten of his books survived in the Spiritual Assembly....

All the inscriptions made by the mufti on the books only apply to their purchase and bequest. Inside the books, none of the interpretations contain his notes; there are not even corrections of misspelled words. That is why I think of the following: 'As he was passionate about collecting the books, so he was not interested in their study'. By the tradition of the old madrasahs, he would have put marks in some of the places.

The mufti has fine handwriting; he writes correctly and only makes mistakes in Arabic words. I wrote a biography of the mufti to the extent in which I had information.

Gabdelvakhid bine Suleyman Sagluk bine Gabdelkhalik.

The third mufti of the Orenburg Spiritual Assembly died on 4 August 1862 (1279, 19th safara in Hijrah) at the age of 76 years. He was buried at the Ufa cemetery. His grave is located on the right side of the entrance to the cemetery, near the tomb of the Kazan merchant Ibrahim bin Iskhak (the man died in 1880 at the age of 57). The grave is not fenced. At the head, a stone is put, on which is written: 'Orenburg mufti, tarkhan Gabdelvakhid Suleymanov at the age of 76 years moved to the eternal home....'. The date of death likely remains underground. Because of his illness, on 2 August 1862, he wrote a paper to the Assembly, which appointed the senior assessor Tadzhetdin bin Maksud to the position of mufti.

He was born in the family of the Akhund Suleyman, in Arbishcha village of Nizhny Novgorod guberniya⁴². We do not know where he was educated and who were his teachers. At a certain age, he went to St. Petersburg, where he was involved in trading. Through the efforts of the Nizhny Novgorod Mishar Tatars living in St. Petersburg, he was appointed as their imam. He had little knowledge of the Russian language and got acquainted with some well-known people. After the death of Mufti Gabdessalyam bin Gabderrakhim and his appointment as mufti of the Spiritual Assembly, he came to Ufa. At that time when he lived in St. Petersburg, he was in trouble after making a nikah in 1830 between a Moscow merchant's son, Ibrahim bin Makay, and the daughter of Iskander Mirza, the son of Yanpay, Tutiey, without the consent of her father, as a result, he was under investigation. He was released thanks to a letter written in his name by Mufti Mukhammedzhan about Nizhny Novgorod's son Tamimdar (this letter was included in the biography of the Mufti Mukhamedzhan, pp. 193–194).

It is said that after his arrival in Ufa, he often went to Ibrahim Yumran village⁴³, to the house of canton Ishmukhammed bin Umid bay. Together with the imam of the village Ishanazar, the son of Ishkeldi, and muezzin Gilman, the son of Tavis, they engaged in falconry.

The house located at the corner of Voskresenskaya and Spasskaya streets, opposite the stone mosque and the building of the Assembly, was in his possession. It was a high stone house. Currently, the house is divided into two parts; the western part is owned by the daughter-in-law of Mufti Makhfuzabike binte Asfandir, the eastern part belongs to the daughter-in-law of the present Mufti Maryambike binte Timurpulad Akchurina.

The official biography. 'Mufti Gabdelvakhid bine Suleyman came from Gabdessalyam village of Sterlitamak uyez⁴⁴ (probably, he was assigned here later); from 2 March 1822 he was the Civil Imam of Petersburg; on 10 November 1832, for his services in this capacity, together with his son Sharafutdin, under the decree of the emperor, he received Tarkhan status. On 26 January 1835, he was appointed the mugallim for Muslim students in a military school. By the decree of the emperor dated 19 June 1840, he was appointed the mufti of the Orenburg Spiritual Directorate. On 26 September 1849, the government rewarded him with a sum of money amounting to 1,500 rubles. In 1856, he was appointed as a director of a prison; on 4 August 1862, he died.'

The honourable Marjani spoke of him as follows: 'In spite of a lack of knowledge, he was fond of reading books; he read Russian and Turkish newspapers, engaged in rewriting of Turkic writings into his native language; reading books on medicine, he learned a lot about treatment using medicinal

plants; he knew their Arabic, Persian, Russian, and Turkish names. After his appointment as mufti, he was accepted into the highest circles of Russia, he had a great desire to fulfill his religious duties, but the weakness of his advisers and other reasons did not provide this opportunity. He was a very simple man, who even went hunting with the lowest ranked penman of the Assembly. In his time, many began to publish the Quran with their own amendments, which led to the presence of numerous errors and the lowering of the Quran's authority. As a result of this and according to the evidence and advice of the sheikhs of Sterlitamak, the mufti addressed the internal affairs minister⁴⁵. Also in his time, Gabdulla bine Yakhyia al-Chirtushi and Fatkhulla bine Safargali al-Kazaklari were dismissed from their positions. He did not perform Hajj, in spite of his desire'.

His letters.

2) A report to the distinguished mufti of the religious Mohammedan administration from khatib damella Gabdelvakhid, son of Suleyman Akhund, imam by decree in the city of St. Petersburg. On 26 January, Petersburg residents Colonel Sakhibabike and the mother of General Maksuda Gulsheker, daughter of Hassan, died. Having completed preparations for their burial, murzas, merchants, and foreigners living here began to gather for the funeral. Then a military mullah named Badamshakh declared that he should perform the rites as requested by Gulsheker's late husband, although he possessed neither a copy of the will nor any other evidence proving he was asked to do so. His companion, mullah Dzhamilkhan, assured him that it is he who should read the funeral prayer as imam. As a result, Badamshakh, son of Kharamshakh, was appointed imam at the funeral. But he performed the funeral prayer not according to tradition, but as a gaet prayer. That is, when he said the takbir⁴⁶, he raised his hands as one usually does during the gaet. It was said that the aforementioned Badamshakh passed the test in the presence of the Crimean mufti and was subsequently appointed imam to perform the five-time namaz, but he had committed acts contrary to sharia. Colonel Sakhib told us about one of them. His companion, knowing about these things, did not initiate anything. We ask you to investigate these cases under sharia law. Damella Gabdelvakhid, son of Suleyman Akhund. 30 January 1829. Petersburg.

3) In answer to High Minister Count Stroganov's questions of 29 November 1836, number 2744, and of 7 September 1839, number 2022, concerning the qadi's responsibilities, his relationship to the Spiritual Directorate and his whereabouts, I have the honour to inform him that the answer to these questions is taken from the book of fatwa, which is under the highest consideration for translation into the Russian. However, the position of the supreme qadi belongs only to the mufti. The qadi is not limited by anything; the position of the khakim, that is, the Akhund, is fully controlled by the mufti.

On this occasion, I think as follows: some positions are suited to scholars, others are not. When the previous two muftis were here, Akhunds and qadis received a decree written neither in Turkish nor Persian. Thus, not being able to read the decree, they were unaware of their responsibilities as they began their work in the courts. Some, because they carried out extraneous investigations, ended up delaying their cases. As a result, a lot of paperwork piled up in the Assembly. From my point of view, we need to adopt the following measures: a) Qadis and rural judges—their rulings must be written in Arabic and in Russian in the fifth paragraph. The supreme qadi, that is, mufti, shall determine the deadline for their appointments and provide them with a fatwa (decree) explaining their rank, even though provincial authorities issue them a decree in Russian. b) Since 1829, imams in the mosques have been in charge of the naming of newborns, reading the khutbah nikah, overseeing divorces, burial of the dead, and inscriptions in the parish register. An imam may consider a spouse's claims in the local mahallah and help each side reach an amicable agreement. If the parties do not reconcile, the imam records their claims and sends this document to the rural qadi, that is, the Akhund. c) The county qadi is independent; judges, that is, Akhunds, are eager to solve things peacefully; in accordance with the laws of sharia, they consider the claims of both parties who come to them with petitions from the imams of local mahallahs. If this does not happen, then they, according to sharia and the law, having interviewed witnesses on both sides and taken their signatures, and having received from Islamic scholars a fatwa concerning the investigation, address the Religious Mohammedan Assembly. If the spouses, on the basis of mutual grievances, decide to separate, a divorce decree (talakname) is drawn up and signed by witnesses from both parties, which is then sent to the imam of the local mahallah and recorded in the official register. d) Marriage of orphans having no guardians, or little or no inheritance are the responsibility, according to the Law and sharia, of the county qadis or khakims, that is, Akhunds. e) Without the permission of the Mohammedan Spiritual Assembly qadis and Akhunds cannot travel to a county or to villages for

⁴⁵ These events are described in a detailed way in the book 'Quran Wa Tabaqat'.

⁴⁶ To pronounce takbir is to pronounce 'Allahu Akbar!'

review of disputes when they arise. Considering themselves educated men, they must be humane and of good character, God-fearing and righteous so that the common people honour and respect them. They avoid those scholars who deserve censure and removal from their posts. They try to obey secret orders (Muslim scholars must keep any secret!). e) If a woman states that she was beaten severely, the county quadis and Akhunds should immediately send her to the civilian authorities. According to sharia, a husband must not beat his wife severely, break her arms or legs, or pull out her hair. If a husband commits these actions, he is subject to legal punishment. In this case, judgment does not depend on the scholar.

This memorandum was sent by Orenburg mufti Gabdelvakhid Suleymanov to his highness Count Stroganov. 6 December 1840.

4) (Translation from the Russian). To the Honourable Minister of the Interior.⁴⁷ According to the Emperor's decree of 22 September 1788, Orenburg General Igelström was to open the Mohammedan Spiritual Assembly in Ufa. A mufti was appointed its chairman, along with two or three other mullahs from among the Kazan Tatars, who are sincere in their dealings with the Emperor and are respected by the people. But these mullahs, who are appointed jurymen, will they be chosen by the people or the government? This is not specified in the Emperor's decree.

Based on the Emperor's decree, mullahs in Kazan guberniya select jurors, who are then confirmed by the Provincial Office. Owing to this Decree, I find myself in this position. Based upon my experience, however, I believe that these appointments are contrary to sharia. Without checking on the suitability of these candidates, we appoint jurors who are complete strangers and lack any comprehension of sharia and the Law. They do not know how to examine cases or carry out their decisions. Once, for example, they started replacing our secretaries on a regular basis. This resulted in a complete mix-up of cases in the Jurors' Office⁴⁸. We learned, however, that Gabdeshshukur, son of Gabderrakhim, from Bikuly village, Chistopol uyezd, and Amin, son of Damin, from Mamadysh Tukeldi village in Sviyazhsk uyezd were familiar with records management. As to those who were previously appointed and have already retired, and those who are now at the office, I see no sense in their presence. From this perspective, I believe that this appointment process should be stopped, and that jurors should be chosen by the government. If anyone unversed [in a case] should be assigned, there must be someone who has the right to appeal to the government and dismiss him⁴⁹. Or perhaps jurors appointed on a permanent basis would better understand the essence of a case and make an effort to execute their duties fairly. But now, being appointed only temporarily, they fail to pay adequate attention to their cases.

In describing this situation, I kindly request that you abolish the procedure in which judges are appointed by mullahs, and accept my proposal that the government appoint good and honest people, that this should become the norm for future appointments. I believe that the aforementioned Akhunds—son of Gabderrakhim, and son of Damin—are deserving of these positions, as I have examined their character and deeds. They are quite suited for this job. I can find someone for the third juror position as well.

Orenburg mufti tarkhan Gabdelvakhid, son of Suleyman. 19 July 1841, No.36.

5) (Translation from the Russian). To the Department. Regarding the correspondence of 19 July 1841, No.36 to Minister of Internal Affairs Count Stroganov, in which he was asked to change the manner in which jurors to the Mohammedan Spiritual Assembly are appointed so that they may be elected by the government. The Minister's decision on the matter remains unknown. Since the deadline for jurors currently serving is approaching, I wrote to the military governor of Kazan asking him to select judges from among learned scholars and acting mudarrises. Now Mukhammedvafa, son of Fazlulla, Gabdennasir, son of Almukhammed, and Gabdelmannan, son of Adel, have been appointed to these positions by the provincial board. I had hoped that they would be somewhat knowledgeable of sharia and the law, and that they would be good assistants. But my hopes were in vain. The first of them, as a result of paralysis, had his arm removed and thus signs documents with his left hand. When speaking with him, he is barely able to explain his requests. The second of them is quite old and, therefore, writes very slowly and with difficulty. The third one has bad eyesight and is almost blind. None of them is familiar with records management, thus we do not expect their work to be of any benefit.

In this regard, I am wondering whether I could be permitted to appoint Fakhredin, son of Fathulla, instead of his son Fazlullakh. I know that this person is well versed in records management since he has been teaching my children for the last two years. The Assembly has already submitted his candidature

⁴⁷ Iosif Andreyevich Igelström (1737–1817) was a baron, general-governor of Simbirsk and Ufa between 1784 and 1792, and Orenburg's military governor between 1796 and 1798.

⁴⁸ *Author's notes*: By this he meant to say that assessors allegedly depended on secretaries.

⁴⁹ *Author's notes*: He meant to say that this person should be mufti.

to the Department since, according to No.572 of 27 February of this year, he was appointed imam of the mahallah. Waiting for a response to this request, the Orenburg mufti tarkhan Gabdelvakhid, son of Suleyman. 7 April 1842, No.7.

6) The Akhund of Buray village Birsks uezd, Khushiyar, son of Akhund Gabdulla, conveyed a message from an officer in Kalmak village, Galiulla, son of Abulkhasan, in which it is said that in Kalmak village, Mishar Tatar Nasretidin, son of Zeynish, under the guise of teaching the common people tariqa, declared himself sheikh and called upon them to follow false teachings. Murids and women gather together at promenades, where they drink a lot. Nasretidin, son of Zeynish, also attends such gatherings. In 1836 the late mufti received a note from Zeynish's son and his followers imams, in which it was said that they would avoid such things. Also, based on the late mufti's report, General Silkovsky placed Zeynish's son under observation of the fourth canton, but this mullah continues his activities. It is said that the mullahs who follow him do not perform the five-time Namaz, do not come to Friday prayer, play the violin and the organ, indulge in gluttony and drunkenness. In connection with this, we request that the Orenburg military governor appoint someone from his contingent who could investigate the case against Zeynish's son and would transfer his followers-mullahs to the Assembly. Mufti ibn Suleyman. 9 July 1842. (This letter was abridged in the text; two-thirds of it are not included here).

7) (Project submitted to the Department)

1. A) Imams, muezzins, Akhunds and mukhtasibs should be exempted from military conscription. B) The mullahs, by law, must pass exams in the Assembly and be confirmed as mullahs by the Governorate. Imams from other governorates and uyezds should be granted residency without passports. C) Sons of mullahs who have studied religious sciences may replace the parish imam if they are qualified, even if they have not reached the age of 23. They should be considered for such a position when there is a vacancy. If they are not qualified and older than 23, then they should be required to fulfill their military duties as the Christian clergy that are not qualified for religious service are required to do. D) The local mahallah is responsible for the imam's state taxes and financial affairs. E) During the selection process, the parish population should take responsibility for all of the mullah's governmental and public affairs, including their children younger than 23 years old who study the religious sciences. F) If the mullah has no son, or he is not worthy of the title of mullah, then the population of the local mahallah has the right to choose a mullah from among the common people.

Sent on 12 July 1841.

2. The Treasury must provide funding for scholars and their children, as well as for officials and the military. Those such as scholars and military are, therefore, legally responsible for their positions in the mahallah and may not be absent from their posts. If they engage in other activities, they will infringe upon their main occupation, and the interests of the population of the mahallah will suffer. The second point in this presentation, with respect to tributes paid by imams, was written in order to protect the interests of the common people. We would not dare to request that taxes should be forgiven since they are set by the Emperor. But if the activities of Mohammedan scholars were under the control of higher officials, perhaps the Emperor would grant them a courtesy: they could be exempted from taxes as are Russian priests. Thus, they would be on an equal footing with all citizens—something that would greatly please Muslim scholars. According to sharia, scholars are not subject to tributes. That is, if a scholar does not pay tribute, and the Emperor does not pay him a salary, then the scholar is considered indigent and worthy of receiving gosher-sadaqah, fitr, and other obligatory alms for the poor. Gosher, fitr, and other sadaqah must, in actuality, be given to the poor and those similarly in need.

Secondly, higher authorities may release imams in the local mahallah from taxes and other public expenditures. If anyone hired by the local mahallah refuses to take upon himself public expenditures, then such a person would not be suitable for the post. It could cause disorder.

Sent on 15 September 1842.

8) The reason for writing this is as follows: 'I command the imam of Sufman village Yelabuga uyezd, mullah Akhmadi, son of Iskhak: the mosque in your village was built according to a resolution by the Assembly in 1823. I allow you to perform the five-time namaz in this mosque, Friday and holiday celebrations, after which you must perform a litany for the health of our great Emperor and the distinguished royal family'. Written by an Orenburg mufti, tarkhan Gabdelvakhid bin Suleyman. 12 February 1844, No.9.

9) Memorandum to the Mohammedan Spiritual Assembly. A report for consideration by the Ufa provincial committee on the monitoring of smallpox: 1. Imams in the local mahallah have been warned by the Assembly that they are not to leave the city, thus foisting their duties upon incumbents. 2. Parish imams have no duties. There are bureaucrats who carry out the Emperor's orders. 3. Imams in the ma-

hallah are not required by law to travel from village to village and from uyezd to uyezd by cart. Imams do not own horses. Every month they have to go to the district committee, which is 50 to 150 km away to register newborns and the deceased. Thus, the mullah's job is very difficult. In connection with the above-mentioned, I suggest the following: if it is not contrary to the great Emperor's edict, then once every six months parish imams, having composed a list of newborns and the deceased, could seal it in an envelope labeled 'Record of births and deaths to be delivered to the county committee on smallpox'. They could give it to an uyezd lieutenant, who could pass it to a local police officer, who could give it to the appropriate organisation. Or the Office of the Governorate can suggest another legitimate, easy way to handle it.

Mufti, tarkhan Suleymanov. 9 January 1845.

10) The mufti of Orenburg's fatwa. Based on the words of the Bashkirs' leader, Zhukovsky, I order that: Bashkir men and women in the 6th and 9th cantons must, before marrying, obtain a medical certificate stating that they have no contagious diseases. This is necessary to ensure that after the ceremony a husband cannot divorce his wife due to a lack of desire. Thus, knowledge of one's health is necessary before the wedding. In this regard, imams who have married the young couple without a health certificate will be removed from office.

Written by the Muslim mufti Gabdelvakhid ibn Suleyman al-Orenburg. 7 February 1846. (Since there was no original of this fatwa, we convey here only its intent).

11) The fatwa. Orenburg superior and cavalier, Mr. Esterkhavemsky told me on 17 May 1846 in No.9788 that during a period of high cattle mortality Muslims apparently do nothing to save their herds or prevent disease. Based on this information, I wrote a manual, with which you must intelligently and unquestionably comply. Firstly, the Prophet said, 'If you are bound by economic relations, then in this world and in the next you will be asked about the death of people and animals belonging to you'. Secondly, the Prophet said, 'If you hear that there has been an outbreak of plague in a certain city, do not enter into it. If this happens in your city, flee from it'. Thirdly, there are obvious, as well as hidden, causes for the plague, the first of which is fornication. If a people begin to sin, fatal diseases will begin to immediately appear. An epidemic occurs because, according to Sharia, people who are involved in fornication are not whipped. Fourthly, in all books concerning fatwas, it is stated that the buying and selling of the skins of dead animals is forbidden. Fifthly, doctors believe epidemics are caused by contaminated waste from deceased and unburied animal carcasses winding up in the rivers, which spoils the water in them. But the real reason, in their opinion, is that cholera and plague among humans and animals are due, in a great number of cases, to sinful behavior. You know that, according to Islam, in cases of high mortality among the cattle, Muhammad's descendants had to separate the sick from the herd and make every effort to avoid infecting others. If the epidemic originates in other towns and villages, you must not let your cattle graze there or bring cattle from these villages to other pastures. If a large number of cattle have died in your own village, you cannot bring anything except hay and straw into it. If there is another epidemic, the entire Muslim population should recall all of their sins and ask forgiveness for them, say a namaz and, while repeating the name of Allah, beg Him to save the animals. If someone behaves stubbornly and veers from the true path by selling the skins of sick animals, then he will bring harm to his fellow believers and those around him. The skins of dead animals must be buried far away from the village so that noxious fumes do not affect the healthy animals. You must also clean all filth from the house, courtyard, and streets. The benefits of these actions will return to you. You must comply with all orders from officials concerning sick animals; if you should choose not to, it will only bring about your own death. You, dear Akhunds and imams, should explain this to the entire population of your parishes.

12) An official fatwa. A high-ranking military governor in Orenburg told me the following: 'The Bashkirs, Mishar Tatars, Teptyars, and other Muslim groups are not heating their houses, are freezing in the cold, and eating raw food; they are not paying attention to the doctor's advice or treatments and do not go to the medical clinics, even though they are numerous. They do not pay attention to their health, and as a result many of them die of cholera'. The fatwa to co-religionists is as follows: 'in this dangerous time of epidemics and diseases, the Islamic population must constantly repent and pray for mercy, and take measures to guard their health. Listen to the doctor's advice and orders concerning nutrition and treatment. You, dear imams, having gathered your congregations into the mosques, must relate to them the contents of this fatwa, and explain to them that the plague is heaven's punishment for committing all manner of sins. Together, repent and ask for forgiveness, say the name of Allah, beading, and beg, and Allah by his grace and majesty will stop the plague. After that—the final treatment'. Written by the Muslim mufti of al-Orenburg Ibn Suleyman. 1847.

13) Dear Sir, Kazan Head Ibragim Yunusov. In 1847 I requested that, when choosing qadis, preference should be given to good scholars and mudarrises. On 17 January 1848, I received from you the ballot registry for qadis. Those who received 29, 28, and 24 white balls are not suitable, because there are more worthier scholars and mudarrises on the ballot. They are: 1) mudarris Khusnetdin, son of Gumer from Kazan sloboda; 2) Fakhretdin, son of Galimshakh from Urbagar village, Spassk uyezd; 3) Gimadetdin, son of Usman from the village of Maras, Chistopol uyezd⁵⁰; 4) Imam-khatib and mudarris Tukhfatulla, son of Abuyazid from the village of Tashly Elga, Mamadysh uyezd⁵¹. The fact that these four mudarrises were not selected is, in all probability, your fault, Mr. Yunusov. I also wrote to the governor that those qadis who had been elected previously were not re-elected, and that mudarrises were instead. Inform the Office of the Governorate about this. The mullah who received 28 white balls is guilty before the Assembly, as was reported to the Office of the Governorate on 18 January 1848.

14) Imam, son of Yakhi, is removed from office because on 14 May 1849 he conducted a marriage ceremony between Gaysha, daughter of an honorary citizen, a merchant of the first guild, Akhmed-shakh, son of Gabdulla, from Machkara village, Malmyzh uyezd, Vyatka guberniya, who was born 1 September 1833 and was at that time 15 years, 8 months and 16 days old, and a Kazan merchant, Mukhammedgali, son of Kurbangali, which is noted in the register book. 21 June 1849⁵²....

16) An exhortation to Muslims under the authority of the Orenburg mufti, who live on the eastern outskirts of the Russian Empire. The old and the young, commoners and nobles, the entire male and female population residing in the territory of our great state under the tutelage of our great Russian padishah, regardless of their origins or faith, all are protected by the law and live as one people. Russian padishahs regard their subjects as their children, and are equally merciful to all; the authorities treat the common people as their younger brothers.

We, Muslims, descendants of the Prophet, who did not find a padishah for ourselves among co-religionists, we are Russian citizens; we live just like our fathers and grandfathers did. No one forbids us to live under sharia law. What, according to our religion, do we need in this life and the afterlife to be happy? If you need riches, then in the Russian state it is possible to attain them, and the Russian people present no challenges to that; we can engage in trade; nothing is taken away from us by force, and no one punishes the innocent. Russia and its borders are protected by troops, so we are defended from military attacks. However, in the Islamic world our fellow believers are constantly in danger. If in peacetime we are faced with hunger, cholera, or other disasters, the padishah will give us seeds for sowing and medications for the sick. In this way we, like our Russian counterparts, are successful in our chosen fields of endeavour, are rewarded for our service, and even attain higher office. Seeing their good deeds rain down upon us and our ancestors, we must live under the rule of the padishah and sincerely thank Allah for making us happy. And we must wholeheartedly wish that the Russian state should flourish, and ask the Generous and Merciful for a long life for Alexander Nikolaevich, that we might surpass ourselves with each coming generation.

However, the enemies could not bear to watch the prosperity of Russia. During the time of the great sultan Nikolai Pavlovich, known for his arrogance, the French and British courts, showing their hostility to the Russian state, were looking for ways to harm it. To do this, they used the differences that had arisen in recent years between our late Emperor and padishah of Istanbul. Sowing the seeds of discord between Russia and the Turkish state, wanting to weaken Russia, they moved the Turkish state closer to themselves and became spiritual masters of the Muslims living there. It was in that same way that England took control of India, Punjab⁵³ and Afghanistan. At the present time, the same intentions of England and France were fully extended to the territory of the Turkish state. By deceit, in the guise of aid to the Turkish sultan, they sent their troops to Istanbul, and the soldiers also filled the city of Adrianople, Varna, and other Turkish areas. Furthermore, restraining the Muslim ruler from voluntary abdication, they appointed him as their authorised representative. Showing disrespect to the Islamic religion, turning castles and mosques into hospitals, mocking their manners and customs, they treated them like cattle. They demanded their food and sent them off to do dirty work. The Turks realised that they had been tricked and began to reproach themselves for this same assistance. It was that assistance which brought them into conflict with Russia, which resulted in bloodshed, and contributed to their

⁵⁰ Present-day village of Kulbaevo-Marasa in the Nurlat District of the Republic of Tatarstan.

⁵¹ Now it is a village in the Kukmor District of the Republic of Tatarstan.

⁵² *Author's notes: This letter is very long and here we limited ourselves to just this.*

⁵³ Punjab—the most northwestern province of British India, founded in 1849 from the areas belonging to the Sikh Kingdom.

deaths. But the Turks would not be able to get rid of them without Russia's help, and they very much wanted to ask for its help.

The British and the French, eager to extend their rule into the territory of the Turkish state, infiltrated our territory and by introducing their troops into the Crimea, undertook the siege of Sevastopol. For five months they besieged the city, but gradually they melted like wax as a result of hunger and cold. However, despite this, in spring they were planning to attack our country from different sides. They scared us that they would supposedly destroy some southern and western governorates. To counter these two powerful nations and prevent them from entering his home [state], the late Emperor Nikolai Pavlovich, known for his beneficence, told his faithful sons to arm a militia under someone's leadership so that it would guard the state, and after the war they returned to their villages and engaged in their handicrafts. This militia also included Muslims.

Muslim brothers! This is an opportunity to show our loyalty to the state in which we were born and raised; by your deeds you can show sincerity to padishah for all the great mercy shown to us and our grandfathers. Everyone who is capable of fighting must ask to join the militia; to protect your home and property from enemies you have to go together with the Russians, and not sparing your soul, you have to fight against our enemies and return home with honour! Just as 40 years ago for the destruction of Bonaparte on his invasion of Russia your fathers have helped the Russians and returned home with their heads held high. While at that time the danger was much higher than it is now, in spite of that Russia was victorious, and countless enemy soldiers were destroyed, and their bones are buried in our land. Without entering war, Russia became twice as strong as before (the meaning is not clear —R. F.). Now we hope that with the help of the almighty and just, the righteous cause shall triumph! Allah spoke of the devious and cunning: 'The day will come when you will be punished for pride and for the evil deeds you have committed'.

If any of you are unable to join the ranks of the militia, you shall, by the grace of almighty Allah and the padishah, to the extent of your skills, prepare soldiers, maintain them, and to help by donating your property, and to spare no resources for those who shed blood for the sake of your tranquility.

The Almighty said, 'Faithful and pious people are those who are true to their word and live humbly through difficult times'. Keeping this ever in mind, we, as loyal subjects, should keep our word to the great Tsar Alexander Nikolayevich. Finding ourselves a long way from the border, and being content with doing acts of divine worship for security, we read the following prayer: 'May Almighty Allah send down victory to our Emperor Alexandr Nikolaevich and establish accord between the emperors and the peoples.' Muslim Mufti, tarkhan Gabdelvakhid bin Suleyman al-Orenburgi. 1855, April.

(This letter was published, and in comparison with the rest, it was written almost without any mistakes, and the sentences are eloquently composed. However, there were a lot of synonyms, and so we deleted those which ran on for a whole line.—R. F.).

17) (Translated from Russian). To the Orenburg and Samara Governor-General. From the file on the construction of the building for the Mohammedan Spiritual Assembly in the city of Ufa, it is clear: a one-storey building for the Muslim Assembly, a wing on the right-hand side for the archives, and a wing on the left-hand side as a residence for the mullahs and qadis. An annexe behind the building for employees. The design makes no provision for an apartment for the mufti. Expenses for the construction of these buildings to the design are expected to be 45,000 roubles. When I was in Orenburg, you told me that for some reason the minister had not approved this design. Upon returning to Ufa, I talked to people who know the prices for similar work, and they told me that the construction of an apartment for the Mufti in the form of a second floor to the Assembly would be inexpensive. Therefore, we ask Your Excellency, if possible, to order someone to change the design in connection with the foregoing. 12 April 1855, No.1077.

18) To the Orenburg building commission. With the approval of the government in Ufa, construction of buildings for the Mohammedan Spiritual Assembly has begun, but it seems to me, there are drawbacks here. There are no places for horses and carts; in the wing for the qadis there is no basement, bath, or garden, although they are necessary. Therefore, estimates must be drawn up for them. Mufti Suleymanov. 22 May 1861, No.1471.

Conclusion: Permission to build the Assembly building was given, apparently, because the Muslims were essential in the defence of Sevastopol. The estimate was 41,994 roubles 25 kopecks, but at auction on 1 September 1860 it [construction of the buildings] was given to a Michael Abdeyev from Orenburg for 45,000 roubles. After completion of the construction by Abdeyev, the Assembly informed the building commission in Orenburg about it on 22 September 1864. In spite of active participation in the construction of the buildings of Mufti Gabdelvakhid bin Suleyman, he could not see the end of

construction because of his death. The first of the muftis to enter the new building was Mufti Salimgirey bin Shakhingirey al-Taukili. Some of the qadis could not live in the wing because the building was not suited to their needs, and so they were forced to live in another place. Observing these, the subsequent qadis also began to live in other places....

The letters written to the mufti.

The first letter: We know that our school (Mikhailovskaya School) is under the supervision of the director and the doctor. On 12 June, they took the examination with the children we taught. The doctor, wanting to go to Makaryev Fair, decided to write you a letter. We decided to go to Makaryev Fair after receiving only his permission. At the fair, we wanted to stay until the end of August. If we do not have time to go back, the doctor promised to appoint Mullah Khusnetdin in our stead. So getting permission elsewhere was not necessary. Mullah Gabdelgafur Ibn Mahmud al-Bulgari Mamishev. 1843, 4 July. Kazan. (This person is recorded under number 328. In addition, he was appointed by the Assembly to discharge the duties of imam at Makaryev Fair).

The second letter: Relying on the blessing of mufti khazrat, we pray for all your family. We were very pleased to receive your letter dated 11 November. We understand that you have written about the election of the qadis. The provincial government notified the uyezds so that from each uyezd two mullahs would arrive who are mudarrises, i.e. maintain a madrasah and teach shakirds. We have seen the mullahs who arrived, and not all of them meet this requirement. After consulting with the Mirza Alkin, the provincial government ordered those mullahs to return. The government again wrote to the uyezds so that from each uyezd village four mullahs would come. Among the newly-arrived mullahs there were good, religious, and pious mudarrises. We held a ballot, and the scholars were asked to vote for the very best. We decided to hold an oral vote. We did the best we could, and we hope for a good result. The ballot papers were sent out in the form of a register. The period of our service ended in this year; the ballot was held, and Your Marriage-broker Iskhaq, son of Mustafa, Apakov, was elected to the post of the head. Mukhammedvafa Makhdoom died, may the mercy of Allah abound. He was buried on 9 January after Friday prayers. Looking forward to your prayers, Ibrahim, son of Gubaydulla, Yunusov. 1848, 12 January, Monday. Kazan.

The notebook with a record of the mullahs for election to the posts of qadis for three years, from 1848, held on 29 December 1847.

The third letter: To the Mufti of Muslims Gabdelvakhid Suleymanov. On the basis of the 1848 decree, I went to Irbit Fair to perform religious affairs, and the Muslims there gave their verdict on the construction of a stone mosque. In the past 1849, when I went to Irbit Fair, the governor gave me a laced notebook to record money for building the mosque. But since the book was issued to me in the last days of the fair, I said that we would fill it up in the next year, 1850, with which the governor agreed. Akhund Gabdelkhalik, son of Mullah Akhtyam. 1850, 24 January.

The fourth letter: To Ufa, to Mufti Khazrat Gabdelvakhid bin Suleyman. From him who discharges the post of imam in the large stone mosque of head Mullah Sagid, son of Khamid, in Kazan sloboda, with the deepest obeisance. When I was appointed to the post of imam, a former Mullah Shigabutdin, son of Mullah Bagautdin, gave me a notebook for the year [18]54. In this notebook, the dates of birth, death, and nikahs were recorded under the names of astronomical constellations, for example, Aries, Taurus... But they do not correspond to the solar months, starting from January, which are accepted in the Muscovite state for the calculation of time. Take, for example, the constellation of Aries; it begins on 11 March and ends on 9 April, and it has 31 days. 10 March falls on the last days of the constellation of Pisces, while the beginning of March corresponds to day 21 of the constellation of Pisces. February begins on day 23 of the constellation of Aquarius, and ends on the 20th day of the constellation Pisces. Thus, if the Mullah Shigabutdin, son of Bagautdin, counts January and the constellation of Aquarius as one month, then 24 January refers to the constellation of Capricorn. Then why is nothing written for day 24? No births, no deaths, no nikahs—it cannot be that nothing happened on that day.

The fourth nikah was recorded on day 31 of the constellation of Aquarius. He wrote thus, counting the constellation of Aquarius and January as one month, while the first is made up of 30 days. In this nikah, the husband is Gabbas, son of Gabdessalyama. However, the witnesses are recorded as the sons of the bridegroom, Gabderrashid and Gabdulla.

In the second nikah there is only age; the word 'groom' is omitted. It is written that the sum of makhar in the amount of 200 roubles was delayed and the groom gave a room in his own home. It is not clear if the room is part of makhar or whether it is an additional gift. At all events, it is unclear why it is written down in the notebook. <...>

In the fourth nikah, the witnesses for Gabbas, son of Gabdessalyam, are given as two of his own sons, Gabdulla and Gabderrashid. The evidence of two of his sons could not constitute confirmation of Gabbas's oath. The purpose of this record in the notebook became clear after the conflict.

In the seventh nikah, the bride's father Shakhiakhmed is recorded without the father's name.

In the notebook with the entries of the deceased a mistake was made in writing the name of the disease; the name of the father of Ismagil Valid Sagdi was not recorded; the exact age of a child who did not live to its first birthday was not recorded; the name of Valid Sagdi's father is missing; the age of one woman is not understandable, for another the cause of death is not recorded; the number of one woman is put in the male column; therefore, the number of deaths is not clear. These mistakes made by Shigabutdin, son of Bagautdin, in the notebook of entries of the nikah and deceased were copied out and sent for consideration of the khazrats by the chief mudarris, Mullah Sagid, son of Mullah Khamid. 3 September 1854 and 11 December 1854...

The sixth letter: To Mufti and Sheikh of Islam. As you know, on 20 August 1860 there appeared a cad, a sorcerer, liar and impostor posing as a sheikh. He calls himself Khusain, son of Mullah Bay from Khokand. He sends the faithful astray. He announced that dancing and music are allowed. Banging two pieces of iron together, he gave orders that the words 'There is no God but Allah' should be uttered loudly, and despite the fact that I, son of Imam Abuzyar, was against it, the mahallah people agreed with this requirement. Because of this, discord was sown between me and the people of mahallah. He says that he has the consent of the Muslim Assembly. He banished me from the place of prayer, and appointed a commoner from mahallah, Khabibullah, son of Zabir, to be the imam. To this day, the son of Zabir is the imam, and he has been doing unrighteous deeds. I was not allowed to fivefold or Friday prayers. Mufti of Islam! I, miserable son of Abuzyar, grieving for defiance of the sacred law, wrote you a report in September of 1860; it is unknown whether it reached its destination. Currently, the impostor is in Saratov. He wrote a lot of letters with the request to appoint him Ishan, but later he began to abandon them, saying that he had not sent such letters to anyone. He says he does not know how to read or write, and was not engaged in Ishan business. Mufti Khazrat! We have no money to write a petition; we do not get salary for it. In our mahallah there are seven houses; by false promises, he bent them to his side, and forced them to write statements to our Provincial Government. It would be good to have the matter reviewed according to law, and this was reported to the Akhund of Kuznetsk uyezd, Shaikhutdin, son of Salikh. I would like to bring together the pious mullahs of Kuznetsk uyezd Gubaydull, son of Ayub, from the village of Gali, Hajji Khabibullah, son of Damkay, and Miftakhetdin, son of Salikh, from the village of Mirzalar, Khusnetdin, son of Biktemir, from the village of Duma. Khusnetdin, son of Abuzyar, Imam of Volsky city. 26 February 1861

Wives.

The wife of Khabib, daughter of Rakhmankul, travelled from Saint Petersburg with him, and she was buried by his side with their son, Akhund Sharafetdin. Her epitaph says, 'The wife of Islamic Mufti Gabdelvakhid Suleyman Khabib, daughter of Rakhmankul. Rabigul-akhir 1815'. After her, on 20 May of the same year, he married a daughter of a Sterlitamak merchant Bakhtiyar Gabdelkarim, son of Ismagil ar-Ramevi Ummugulsum. This wife is buried by his side, and the writing on her gravestone says, 'Ummugulsum, daughter of Bakhtiyar, wife of mufti Gabdelvakhid, son of Suleyman, [died] at the age of 46, in the month of zul'-kagda 1297 / 3 September 1880'.

Children.

We know of his children named Sharafetdin, Makhbubkamal, and Rauzatelzhanan. Makhbubkamal was born on 15 August 1828, was married to Ibragim, son of Iskhak Apakov from Kazan, and had one daughter Maryam. Rauzatelzhanan was married to the prince Mukhammedkhasan, son of Gabdelgaffar Akchurin⁵⁴. Their children currently live in Ufa. The mufti's bloodline was preserved in the children of his two daughters; his sons had no children.

⁵⁴ *Author's notes:* According to the certificate provided by the Orenburg Deputy Assembly on 8 January 1834, Akchurin's genealogy is as follows: the son of prince Adash Akchurin (the family's founder), Akchura's son Bulash, his son Yeniki, his son Bikbulad, his son Kilmash, his son Khasan, his son Uрмаi, his son Umrai.

Bulash, Akchura's son, also had sons—Tengrevirde, Irbak and Tenibek. Tenibek's son was Buchan; Tengrevirde's sons were Ilshikai, Nurai, and Mavlyud.

Sharafetdin was born on 10 July 1823/1238, and died on 21 February 1888 / 23 jumadiel-akhir 1305 at the age of 67. He was buried in Ufa. His gravestone bears the inscription 'Performed the Hajj during his travels to Hejaz. His teachers are unknown.'

His official biography: Sharafetdin, son of Gabdelvakhid ibn Suleyman, was born on 10 July 1823. In July 1844, he was promoted to be an imam-khatib and mudarris. Pursuant to the Edict of the Assembly dated 9 October 1844, he was appointed a member of the smallpox Committee in Ufa uyezd. On 23 April 1849, he was appointed a member of the prison commission in Ufa. That same year in response to the mufti's petition, he was authorised to take divine service for Muslims in Ufa prison. On 21 August 1857, Orenburg guberniya authorities appointed him as the Akhund. In 1861, the Governor of Ufa made him a member of the audit chamber. In the same year, he and the mufti went to the Bashkirs in Usa vilage to instruct them in matters of compulsory military service. In 1876, he was appointed to take divine service for sick Muslims in Ufa zemsky hospital.

One of his letters: To the Orenburg Muslim Assembly.

Orenburg Muslim Assembly ordered the preparation of logs and selection of people who would be needed for surveying Ufa's cemetery in the upcoming year 1858. However, the Assembly did not specify where to get the money to pay for the logs or to pay to the employees. If the cemetery were not to be fenced, the Russians would trample rough-shod over it. The stone walls around the graves of mufti Gabdessalyam and some murzas have already become useless. As we cannot find money, we ask the Assembly to announce fundraising among the Muslims of Ufa, especially wealthy ones, to gather subscriptions to restore the walls around these graves

Senior Akhund, tarkhan Sharafetdin Suleymanov. Ufa.

26 December 1857.

His father, Akhund Suleyman, was Akhund and imam in the village of Arbashcha. Here is one of his letters in shortened form. To the government of the Orenburg Assembly. Akhund of the Bolshoy Arbashcha village of Kuznetsk uyezd, Suleyman, son of Sagluk, wrote: 'Over many years, there has been a conflict between the imams in our neighbourhood about the beginning and ending of Holy Ramadan. Thus, for example, as they cannot see the Moon, they start and finish [the uraza (fasting)] two days earlier. They do not appeal to the Holy hadiths to solve the problem of visibility of the Moon. Their leader is the imam of the village of Kuysuy, Yunus, son of Gabdelzhalil. The rest accept him as the son of an ishan, and so they obey his words. However, mullah Yunus does not listen to me. Every year uraza starts one day earlier than in Kazan (if it were binding to follow Kazan according to the Sharia, then, undoubtedly, Yunus would be guilty of his actions). Before they followed his father Gabdelzhalil; now they follow mullah Yunus. Our village is 5 km from the village of Kuysuy. Muslims of our village started to go for Friday namaz and gaet to mullah Yunus. Last year, paying no attention to the Moon, mullah Yunus read the gaet one day earlier than in Kazan and than our mufti did.

Akhund Suleyman, son of Sagluk. 10 December 1829.

Source: Fäxretudin R. Asar. Cild 2. Cöze 13. Orenburg, 1907. pp. 348–389.

Salimgarey bin Shakhingirey bin Yusuf bin Kutlugmukhammed bin Mamesh at-Tevkeli.

The fourth mufti of the Spiritual Assembly died at the age of 80, on 2 January 1885 (27 rabigul-aval 1302 according to the Hijrah) and was buried on 4 January. The memorial prayer was recited by the Kazan imam Muhammad bin Gumar al-Salakhi, a member of the Spiritual Board at that time. With the authorisation of the Ministry of Internal Affairs, the mufti was buried on the west side of the first mosque in Ufa. His grave is enclosed by an iron fence, inside which a white marble stone is placed at the head. The epitaph is beautifully drawn, but written with mistakes.

Official biography.

Mufti Salimgarey, descended from Ufa nobility, entered military service. In 1828–1829, during the Russo-Turkish War, he served under the command of the Count Balin and the general, Baron Budbirkh. For the courage he displayed during military actions, he was awarded the Order of Saint Anna, 3rd and

Bikbulad, son of Yeniki, also had sons—Timergali, Barbik, and Muhammed.

The sons of Kilmash, Bikbulad's son, were Siunbai, Ishgaki and Safar.

The sons of Uрмаi, Khasan's son, were Kaderem and Kadershah. Kaderem's son was Ibrai, the latter's son was Yakub, and Yakub's son was Kutluket.

Umrai's son was Kali, his son was Gabdelgaffar, and the latter's son was Mukhammedkhusain. This is the last link which was rewritten from the certificate.

4th class, and, moreover, he was granted a silver medal. For successful negotiations with the Governor of Malakia, Kaimkam Pasha, he was included in the ambassador's mission to the city of Adrianople⁵⁵. In 1831 he was sent to the Pulak Region to suppress unrest, and as a result of his successful actions, a decoration was conferred on him. Having obtained the rank of shtab-rotmistr [captain of cavalry], he left military service and in February 1848 was elected a marshal of the uyezdnobility in the city of Bugulma. There he served until 14 December 1850. By the Emperor's Edict of 28 February 1865, Salimgarey Tevkelev was appointed as a mufti of the Muslim Spiritual Board in Ufa. On 29 July 1866, he was appointed director of the prison commission. On 30 April 1869, he was awarded the Order of Saint Anna, 2nd class; on 16 April 1872, Emperor Alexander bestowed on him a signet ring, ornamented with jewels and the inscription 'Alexander'. He participated in suppressing unrest among the Perm Bashkirs, who were protesting against compulsory military service, for which Emperor Alexander officially expressed his gratitude and presented him with a gold cigar case. On 1 January 1877, he was awarded the 1st class Order of Saint Stanislaus; on 7 March 1880 the 1st class Order of Saint Anna; and on 6 May 1884 the 2nd class Order of Saint Vladimir. In 1880 he participated in the celebrations for the 25th anniversary of Emperor Alexander Nikolaevich's rule; in 1883 he attended the coronation of the Emperor Alexander Alexandrovich, and in honour of this celebration he was awarded a gold medal. He died on 2 January 1885, at the age of 77 and was buried in the apple tree garden beside the first cathedral mosque in Ufa.

Unofficial biography.

Mufti Salimgarey was born on 30 December 1805 in the village of Kilim, Belebey uyezd (so he could not have been 77 when he died). After the completion of his military service, in 1854 he performed the Hajj during his journey to Hejaz. In Istanbul, with the Russian Ambassadors, he was received by the Sultan Gabdelmazhid. During this same journey he also visited Syria.

His first wife was a daughter of Mirza Asfandiyar Davletkildeev, Gainelkhayat. She died at the age of 29 in the village of Kilem. After that, he married one of her relatives, Fatima, a daughter of Mirza Suleyman Davletkildeev. With this wife he lived for 25 years, and after his death, Fatima lived for a further 26 years, and died on 19 June 1912, at the age of 85. She was buried next to her husband. She left her house, worth 80,000, as a waqf for the mosque.

The mufti had no children with either of his wives.

The general situation.

During the reign of Mufti Salimgarey, the Spiritual Assembly only took care of official business and did not undertake any measures against the unrest among the Muslims. The Muslims were unhappy with the negative attitude of the authorities towards them and were well aware of the restrictive measures against their religion. Thus, as soon as the Muslims learned of any disturbing news, they sent word to the mufti.

In 1878, the religious problem affected the entire Islamic population. The mahallahs sent their representatives to Ufa. 83 of their petitions were kept in the archive of the Assembly. However, the members of the Assembly did not officially consider them or make any decisions on them but sent them straight to the archive. It is difficult to appreciate such actions by members of the Assembly elected by the Kazan Muslims.

During the period of the mufti's activities, the madrasahs were transferred to the Ministry of Education. However, the translation of this decree into the Tatar language was not distributed among the Tatars, so they did not undertake any actions.

The venerable Marjani spoke of the mufti: 'Despite the fact that he knows nothing of Fiqh and Sharia law, he has managed to attain this position. Although his predecessors were not scientists in the true sense of the word, this mufti made the mistake of opening the doors to uneducated people. Although he was acting with the sincerest of intentions, owing to his lack of knowledge and courage, he was forced to listen to the opinions of others and was unable to stand his ground. Hence, he accomplished very little for his nation and often changed his own decisions. There were high expectations of this man, who was open-minded and had a good understanding of state decrees, but these expectations went unfulfilled'... (Mustafadel-akhbar. Vol. 2, pp. 311–312).

The fact that he was not capable of performing useful deeds and unable to guard the nation and religion we learned from well-informed people in Ufa. They said, 'There is growing discontent with the members of the Assembly elected in the Kazan wilayah. Each time familiar but narrow-minded people

⁵⁵ Adrianople (Edirne) was the main city of the Turkish Adrianople vilayet. It was the residence of the sultans between 1360 and 1453.

are elected, who know nothing of their work, cannot tell their right from their left, and the mufti is left in a helpless situation'.

Before he was appointed Mufti, Mirza Salimgarey had travelled to Saint Petersburg, where he had met Khusain Faizkhanov and discussed with him the opening of a school of higher scientific and religious education for the Tatars. (Personally, I think Salimgarey needed these meetings to become a mufti, but he hid his true goal from Khusain Effendi).

In 1864 Khusain Effendi wrote the following to Marjani from Saint Petersburg: 1) Tevkelev has put a great deal of effort into and talked with a lot of people about the proposed madrasah. 2) The madrasah, on which Tevkelev and I have agreed, will be opened in Kazan and fully funded. Useless books will be excluded from the school curriculum; emphasis will be placed on religious and secular studies. The madrasah will be fully regulated. The Russian language, geography, and geometry will be taught in Russian. 3) It was originally intended that the madrasah would teach the same subjects as the gymnasium, and that the school itself would be on an equal footing with the gymnasium. However, considering that there is no one amongst us who can teach these subjects, we have discarded that thought. The teaching of Russian to a good standard will be sufficient for us. 4) Tevkelev was going to speak with the Minister of Education on this matter.

After Mirza Salimgarey was appointed mufti, Khusain Faizkhanov visited him as a guest in the village of Kilem. Afterwards, in 1865, he wrote a letter to Marjani, which stated: 'The Mufti stands by his opinion about the opening of the madrasah and wants to bring all his ideas to fruition'.

On the one hand, the Mufti agreed with this idea because the mullahs of Kazan were causing harm to Khusain Faizkhanov, but, on the other hand, after the death of Khusain Effendi, the Mufti forgot all about it and his words became louder than his actions. Originally, this idea was supposed to be realised in a Teachers' school open for Muslims in Ufa, which is confirmed in the archived documents.

Official letters.

28 May 1880, No.1282 to the Minister of Internal Affairs. As the letter is too long to be written out in full, only extracts are given here:

1) Only imams of the Kazan wilayah can be elected as members of the Assembly; other Muslims did not have this opportunity. However, the Assembly consider affairs that concern the whole Muslim population. Thus, electing Assembly members from the Kazan wilayah only is wrong. For this reason, one of three members will be elected in Kazan every three years, and the other two will be elected in other governorates.

Elections to the Spiritual Board are currently held in December. This causes a certain amount of discomfort for those finishing their duties to return and for the newly elected members to arrive. The elections should be rescheduled for May, by which time the water route is open, which is convenient for both the departing and the arriving members of the Assembly.

Electing three members at once is not profitable for our Board. It takes a lot of time for new members to get settled in. Therefore, we only need to replace one every year. Thus, the arrival of only one new member will not hinder the Assembly.

2) (Instruction written in the Russian language. At the beginning of the letter, there is a Russian translation of the 'Fatiha' surah. The date is not specified despite the fact that the instruction was distributed among the imams).

Distinguished Mullahs and Akhunds of the Orenburg Assembly!

I am compelled to write to you in view of the mistakes that some of you are making. It has come to my attention that some of you are hostile towards the Christians. Thus, I consider it necessary to acquaint you with the Christians of Russia.

The Christians are people who have allowed us to build mosques and who promote the development of our agriculture, trading, and crafts. They are the loyal sons of their Emperor and homeland, who do not expect our gratitude for their good deeds. How can we thank our Emperor? Our gratitude should be expressed in our compliance with his laws and the fulfilment of his decrees.

If we do not know the language of our state, how are we to learn about the laws of our Emperor? How are you going to speak with officials? Not knowing the Russian language will be disastrous for you. With no understanding of what officials want, you will have to content yourselves with the words of translators. Without the opportunity to ask the necessary things of officials, you will lose a lot. If you have a question concerning your religious needs, you will ask for help from someone who speaks Russian. You never know; they may write something harmful.

Some people think that by learning Russian they will have to be baptised. You must not believe these words. Sahih al-Bukhari wrote that the Prophet spoke of the benefit of learning the Hebrew language.

Knowing Russian is useful for you. Your happiness depends on it. He who does not want to speak the Russian language does not respect our Emperor. There is also an academic benefit. However, some of you do not understand that knowledge of the Russian language is the main science of religion.

How would you ask for bread from the Russians if you do not know Russian? How would you answer in court cases? How would you learn about land and water taxes? All decrees and laws concerning your life are written in the Russian language.

Our great Emperor has ordained teaching in Russian in the new schools and madrasahs, which will be open for his loyal subjects. For the implementation of this decree it is you, Akhunds and Mullahs, who must be the first to provide assistance.

Thus, I have listed the reasons why you must know the Russian language. So I order you: urge people to learn Russian.

Read Surah 191 from the 3rd Ayah of the Quran and prove that you can carry out these instructions. And may Allah help you in matters of religion!

(This paper was printed out; I found it among the archive documents which had been prepared for destruction. Most probably, this instruction was distributed⁵⁶, but it should have been spread in the Turkic language, not in Russian. It would have been a good idea to write it in the form of books 'Fazailsh-shuxur' and 'Badavam'. But for that the author of 'Fazailsh-shuxur' would be needed, and there was no such person in the Assembly. The Russian version was most probably composed by his illiterate secretary. If it had been given to a lawyer, it would have been much better.)

Some of the letters written to the Mufti.

1) From the Ministry of Internal Affairs, 23 June 1884, No.329.

From the letter dated 28 May 1880 we learned about your suggestions concerning the procedure for electing new members to the Orenburg Assembly. Some of the governors we questioned were opposed to calling a meeting for the election of members. At any rate, your suggestion is against the law. Therefore, once you have compiled a new project, send it for my consideration. (Excellent answer after four years!—R. F.)

2) (Rewritten in an abridged version): 'To the Mufti Tefkelev. From Yarmukhammed, son of Gabdesattar from the village of Muslim in the Chistopol uyezd⁵⁷'.

(After listing the names and titles of the ishans and caliphs of the village of Kizlyau—R. F.) he writes: 'I was well in with them, so I heard their words and saw their deeds, which conflicted with the Sharia. Apparently, they are opposed to the Hajj. I am 67 now, and I have seen a lot of sheikhs who did not act against the laws of the Sharia. But these have no honesty. They only become ishans to get wealthy, which only brings harm to the common people. Not a single one of them has an ijaza. Women consort with strange men under the pretext of visiting an ishan. Some of the women are taken by refugees on the road and are kept for up to ten days. Being honourable and distinguished women, they spread a lot of gossip at the same time. The murids and khalfas drink alcohol, rustle horses and steal, then go to their ishan and receive absolution of their sins. It is impossible to enumerate all the sinful deeds of the murids. The whole village knows that one khalfa, known to everyone, fornicated in his apiary. Holding his family prisoner, he goes around with another man's wife. He eats the products stolen by the son of this fallen woman. In another village, one khalfa takes young women alone to an empty house allegedly to explain something to them. In another village, a khalfa gets his accomplices drunk with a few buckets of vodka to get some job done. He was found guilty of appropriating another man's property but found some witnesses who were made to give false testimonies.

...Therefore, they need to be stopped before it is too late. Because of them the religion of Islam may disappear. Cursed be those ishans who do not know basic Islamic rules. I am almost blind; my pen does not obey me; I am old; nevertheless, as I write these lines, I fear the wrath of Allah. May Allah preserve us from the evil designs of the murids!

13 March 1878.

Some letters written by the Mufti Salimgarey and letters addressed to him were published in the first part of 'State Instructions concerning Muslims' (Islamnar xakında xökümät tädbirläre⁵⁸). Included in

⁵⁶ This refers to the admonition of mufti S. Tevkelev which was compiled no later than February 1873. It was printed and spread among the Islamic clergy of the Orenburg Muslim Spiritual Assembly. See the Russian text of the original. Materials on the history of the latter half of the 19th century. Part 1. Moscow—Leningrad, 1936. PP. 301–302.

⁵⁷ The village of Muslyumkino in the Chistopol District of the Republic of Tatarstan.

⁵⁸ See: Fäxreddin Rizaeddin. Dini vä ictimagi mä'sälälär: saylanma xezmätlär. Kazan, 2011. B. 153–203..

the work 'Yadkar' by Mukhammedsalim Umetbayev⁵⁹ were letters by Tevkelev addressed to the muftis of the Crimea and the Caucasus. This is a good source of reference for those wishing to become better acquainted with the written tradition of the Russian muftis, which existed half a century ago.

**Muhammadyar bine Mukhammedsharif bine Bayazid bine Gabdelzhalil bine Sultan
bine Mamat bine Chuban bine Tutar bine Kuzay bine Akyul bine Yulbirde bine Tangrebirde
bine Tavkil bine Shakhuli bine Tuksybay.**

The fifth Mufti of the Orenburg Spiritual Assembly in Ufa died on 12 June 1915 (12 Shagban 1333 according to the Hijrah), at the age of 80. He was buried on the west side of the First Cathedral Mosque, north of the graves of the Mufti Salimgarey Tevkelev and his wife.

Mufti Muhammadyar came from a Bashkir estate; his distant ancestors originated in the village of Kudzhaka in the Menzelinsk uyezd⁶⁰. The Mufti's last name comes from his grandfather Sultan bin Mamat. His Shajare is included in the collection of works 'Maglumat'⁶¹ under numbers 24–33.

Gabdelzhalil bine Sultan served in the position of canton chief for the Bashkirs and died in September 1824 (1239 AH). His wife and the mother of the Mufti Muhammadyar, Sagadatdana, daughter of Gabderrashid Mutin from the village of Takta Alachyk⁶², died in Ufa in 1891 (1308 AH) and was buried in a Muslim cemetery.

Mufti Muhammadyar mentioned in his autobiography, written in the 1905, that he was 68 years old at that time, thus his year of birth is 1837 (1253 AH).

After finishing the Kazan Gymnasium he entered university, but having spent only a year there, he joined the civil service ('Shura', Vol. 8, P. 449). On 2 January 1886, he was appointed Mufti in the Orenburg Spiritual Assembly by imperial edict, with an annual salary of 5,000 roubles (the annual salary of the previous mufti was 2,000 roubles).

Wives: after the death of his first wife, Muhammadyar Sultanov married a daughter of Sheikhulislam, son of Muhammedrakhim Sultanov, Maryam (granddaughter of the Mufti Gabdessalyam), who died after the Mufti.

IV. 'Mirat' ('Mirror') by Gabderashit Ibragimov About Problems of the Tatar-Islamic Society at the Turn of the 19–20th Centuries.

Gabderashit Ibragimov (1857–1940) was one of the first persons to identify in public the problems of reforming the Tatar society in the early 20th century, and urged the people to seek out together the path of non-scholasticism, of transforming the Tatars into a competitive nation. For the transmission of his ideas he successfully used his publicist work 'Mirat' ('Mirror'). G. Ibragimov was born into the family of a member of the Islamic clergy; he received his primary education in the rural madrasah and continued at schools in other regions of Russia and also in Medina. In 1885 he was appointed as a mullah and mullim in his home town of Tara in the Tobolsk guberniya¹. In 1892–1894, he was an assessor with the Orenburg Islamic Spiritual Assembly, then travelled to Turkey, where he published his publicist composition 'Çulmap yıldızı' ('Morning Star'), concerning the legal status of Muslims in the Russian Empire and the paramount questions of their development, which required an immediate solution. In 1897–1900, he travelled across the countries of the East and Europe.

During his travels in the Volga-Ural region, Western Siberia and the Kazakh Steppes, investigating the complaints of his co-religionists to the OMSA, G. Ibragimov developed a clear understanding of the needs and wishes of Muslims from different regions, of their common problems and obstacles, which were hindering the gradual development of the Tatar nation. His travels to the European and Oriental countries helped him to define the level of development of the Russian and Tatar-Islamic societies on a global scale, to form a thorough understanding of the under-development of the Islamic countries and to evaluate the potential of the Tatar mahallahs in the Russian environment. As a result, G. Ibragimov abandoned the critical evaluation of the legal status of the Muslims in Russia and focused instead on the internal problems of the Tatar-Islamic society, which he considered to be the main reasons for the deterrence to progress.

On his return from his travels abroad, G. Ibragimov published a series of publicistic brochures entitled 'Mir'at' ('Mirror') in the printing house of I. Boragansky in Saint Petersburg and in Kazan (1900–1909). These enjoyed huge popularity amongst the Tatars.

The first 18 editions of 'Mir'at' were published in 1900–1903, and further 4 editions in 1907–1909. The name of the small-format brochures (16 x 22 cm), containing up to 36 pages, told the reader that they, as their name suggested, would reflect events currently taking place in the Russian Islamic society. Judging by the content of the brochures, the author was mainly concerned about the problems of the Russian Muslims in education and the necessity to implement reforms quickly in this area. G. Ibragimov advocated not to invent new methods and ways of teaching but to use those that had been successfully implemented in Russian schools. He explained the backwardness of the Russian Muslims by their reluctance to develop themselves, their failure to use the opportunities provided by Russian legislation. From an educational perspective, he wrote about the necessity of disseminating essential knowledge among men and women and teaching them different crafts, and about the emancipation of women from domestic and spiritual oppression.

The second issue that troubled G. Ibragimov was finding a solution to the social problems of the Tatars in an urban, foreign-culture environment. The urbanisation required new, effective ways of organising the social and cultural life of the Tatar communities, it created conditions for their members to participate in civil life, for transforming public charitable organisations with the status of legal entity into a real centre for the social and cultural life of the co-religionists. The turn of the 19–20th centuries was the time of the emergence of the first Islamic charities. Seeing in them a great potential as public, secular ethno-confessional centres, he sought to prevent those that had newly appeared from repeating the mistakes that had been made and urged the existing societies to restructure their activity.

In his opinion, the existing societies failed to fulfill adequately the mission entrusted to them of socially protecting the co-religionists in need. He saw the reason for this phenomenon in the passivity and indifference of the members of the society, most of whom were selected solely on account of their publicity or wealth. G. Ibragimov revealed the expenses involved in the societies' activities, reproached their management for the lack of targeted and consistent fund raising, for their biased approach to the just distribution of the collected funds, and accused members of the management and board of being dependent on the opinion of one wealthy member of the society. G. Ibragimov saw the solution to this problem in the rigorous implementation of the provisions of the Statute—the normative document of the

¹ Present-day Tara—the administrative centre of the Tarsk District of the Omsk Oblast.

charitable organisation, defining the duties of all its members. He also considered it necessary to elect honest and active Muslims as board members of these societies.

It is important to note that, in the absence of Tatar newspapers and magazines, the 'Mir'at' carried out, to some extent, the functions of a national periodic publication. G. Ibragimov published his readers' reviews of his articles in his brochures, promoting public dialogue and the discussion of pressing problems of the Muslims, thereby shaping public opinion.

Liliya Baibulatova

Mir'at, or Mirror

<...> Our essay will reveal some events of recent years to the Russian Muslims and, in giving useful advice, will show the right way.

Among the Russian Muslims, writing books was the privilege of the scholars², in recent years only the mullahs have held teaching positions and have started to be critical of people who write.

25–30 years ago khazret³ damella Shigabuddin Marjani wrote some works on history and religion, but a lot of excellent writings still remain unfinished. Kayyum Nasiri is also famous for several short stories, calendars and translations. However, these do not amount to much. It would appear that nothing, apart from the Quran, has been published in the Arabic print, and that only Kazan University has an Arabic printing press.

We should also be grateful that we are living in better times in comparison with the previous period, the number of printing houses is growing constantly, and new, useful books and compositions are published by mullahs every year.

If we examine closely the Tatars' past deeds and compare them with the present time, it will be clear that they possess astuteness and perception in all spheres. There are no obstacles to progressive development, the decrees of the Russian government are loyal enough; moreover, the government is eager to help in any respect.

Books in Arabic print have started to be published and distributed in Kazan and other areas. A lot of books have been published in the University and the Chirkovaya printing houses; the 'Tardjeman' printing house has recently been opened in Bakhchysaray, in the Crimea by the Muslim administration; in Saint Petersburg, thanks to Ilyas Mirza Boragatsky's⁴ efforts, an Islamic printing house⁵ has been opened for publishing Muslim books in Arabic print. In the latter two volumes of 'Mishkat al-Masabih' were published twice over a short period, the first time lithographically, the second time by letterpress printing, 5,000 copies in total. A lot of our mullahs have found various ways of publishing poems, short stories and many other books on science, morality, history, and works written by the Tatars have even appeared in foreign newspapers.

Everyone knows that for the assiduous, bold and strong there are no obstacles on their path through life; he who tries succeeds. The assiduous will level mountains to the ground, the strong will rend steel hawsers; thanks to mutual help and cooperation one can improve matters in the state. We cannot deny everything; initially, anything can seem disgusting to a person and be rejected, but later on by degrees they will be able to accept it.

Even those who used to say that scholars should not write books, as everything necessary had already been written about, now have taken up quills and begun writing and publishing various compositions, some of them in Tatar, some in Turkic, others—in a mixture of the two languages. Everything that was written has been accepted by society and sold in thousands of copies; there have been no obstacles either on the part of the government or on the part of anyone else.

In spite of that, however, desirable progress is not visible, for in the past there were many scholars who were prominent and celebrated personalities; even every vilayet and village used to have its own scholarly circle, but now they do not. In the era of progress, having great opportunities, we have no scholars. To speak of there being no scholars is to take a very grave step, for every vilayet has a well-appointed madrasah. So how can we talk about a lack of scholars? All the same, I aver that there are no scholars, and I will advance reasons with which not everyone will be in agreement.

² In this case, the word 'scientists' means Islamic clergymen—mullahs and imams—who constituted the most educated strata of the Tatar society.

³ Hazret—an honourable title which is added to the name—also used to denote an educated religious figure.

⁴ Ilyaz mirza Boragatsky (1852 to the end of the 1920s)—a publisher, typographer, pedagogue.

⁵ I. Boragatsky's typography was opened in 1894 in Saint Petersburg. It issued scientific, public-political and religious literature in the Kazakh, Crimean-Tatar, Arabic and Persian languages..

It is necessary to show at least some evidence of the lack of scholars. To state their presence or absence we should first of all pay attention to the morals, life and the atmosphere around simple people.

20–30 years ago, mutual help and support, exaltation of scholars and respect for elders, compassion for the young and many other fine traits were widespread among the Tatars, and in particular women-folk were distinguished by their purity and decency. The Tatars treated other nations or peoples well. Drinking of alcohol was rare, and never in public, and smoking was considered evil. A five-fold Namaz was observed in mosques in front of a large number of people. Reconciliation between two people was considered as a duty of scholars. They also judged, disseminated knowledge, and had the last word in disputes. Any member of mahallah feared the imam and obeyed his every word.

We can thus say that in former times there used to be genuine scholars, whose words were respected and followed by mahallah.

If we pay attention to the current situation, it is completely unclear if there are scholars or not. On observing simple people carefully we can see hostility among them. In each town, village and even mahallah there are two rich men or two aqsqaqs, or one rich man and one mullah, who, being enemies, seek for support among their friends and relatives, look for drawbacks in each other, thereby splitting a mahallah into two or three parts, and for days on end they lay traps for each other. Hostility and trials are spread not only in the mahallah, but even between brothers and cousins, relatives, between a mother and her son. There is no better way to destroy a people or a nation than by fomenting hostility. Hostility is the gravest tribulation, and is the cause of blood and tears. It makes towns, villages, and great powers to perish, and nations to disappear. To prevent hostility and to ameliorate the current situation we need scholars, but can there be found in all Russia even a single scholar?

With us there remains not a trace of friendship, each is only concerned about themselves, for friendship is viewed only for the advantages it might bring. Such notions as mercy, help, and compassion do not exist. How many hungry and sick children of the poor wander in the streets and, in the end, perish, how many orphan girls ask for alms near the gates or in front of a mosque, and then, when barely adult, begin flirting with those same children near that same mosque! Later, after they fall under the eye of a policeman, they take a downward path...

There are no orphanages to provide for these unfortunates, and no adults to teach and raise them. In recent years, thanks to the efforts of certain officials and prominent persons, charities have been set up in some towns, but they are not supported either; moreover, people put obstacles in the way of charity.

According to a respected citizen of Astrakhan, during a performance in Kasimov in favour of a charity, local khazrets issued a fatwa against visiting the theatre. The next day, when the revenues from the performance were directed to the theatre's needs, all the khazrets with their wives set out for the performance. What can society do in the face of such a state of affairs? Orphanages have been built in some towns, but there is no money to maintain them. An orphanage was opened three years ago, but none of the orphans has been given a piece of bread since. At present there are 5–6 charity societies in Russia currently; they have names and members, but no funds. The lack of funds, like an Indian plague, has spread everywhere.

It is amazing—surely there are some rich people among the Tatars! Or is the money used for something else? The Tatars seem to have money, there are said to be millionaires as well. These people cannot find a lawful way of giving alms, which is obligatory under sharia. But non-obligatory alms are taken up by a khazret, who appears quite fortuitously, and in return the rich are rewarded (sawāb) for it.

We can say that our beys expect rewards only in one respect, that is, in sacrificing small sums they hope for a great reward, having no thoughts about the future. Believing that the ass thinks about tomorrow, and living according to but one rule they gradually turn themselves into asses. If people thought about the future, then a town or mahallah would not worry about their population: they would raise shakirds capable of becoming imams who would teach the children of the poor in high schools and academies. Everyone knows what should be done for the future, but the Tatars have none of it. When in some town an imam passes on, the beys, soliciting a good imam from a poor village with money, appoint him as a replacement. That imam moves away, and the poor and miserable villagers remain without an imam, as they do not have either money or a decent candidate to elect a new one. What can these poor people do, how will they raise their children, in whom will they confide their woes...

Beys will always manage to find a mullah: when the next one dies they will take a mullah from another poor village again. Kazan beys have already taken all the village mullahs. It can be said that not one decent mullah remains around Kazan. Even if several of them remained, one would be needed for the khazret of Gallyam appointment, another—for the position in Samarkand. This also constitutes evidence of the lack of scholars.

Another important reason for the lack of scholars is the blessing of an old mullah and ostabika⁶. It is also a common misfortune. Clerics' children, on becoming makhdums⁷, are seduced with public money and get literally no education (especially if they possess at least some beauty). By the age of 20, a makh-dum's status is completely clear, and the old khazret himself starts to divine the makhdum's intentions.

One day a khazret invites beys, aqsaqals and the most garrulous villagers to his house and complains about his old age: 'Oh, I am old! I'm in bad health! Glory to Allah, the makhdums have grown up, so how can we not be aging? Badreddin Agai, I want to ask you: do you think it is time to make a determination for a makhdum? If he remains in the forthcoming selection, then I will be able to leave my post'.

The old men exclaim unanimously: 'Very well! We need that! That's the right way!'

Straightaway they start drawing up the determination, the pretender passed the exam, the makhdum is exempted from the conscription and becomes the imam...

If the khazret dies without settling the matter, then it is completed by the ostabika. There is no doubt that the makhdum will become the imam. However, as soon as the makhdum becomes the imam, the madrasah is closed, its shakirds leave, and the ostabika's blessing ends it all...

Sometimes poor men can also become mullahs. Children of the poor roam the streets (some of them have run away from their stepmothers, others—from extreme poverty or having no mentor), and finding nowhere to spend the night enter a madrasah. Changing from one madrasah to another, and beginning to distinguish between black and white, they become khalfas⁸ of beys' children. In some time, having learnt a few expressions and a couple of words from introductions [to books], they begin writing letters ornamented like 'Sharkha Mullah' and 'Tauzikh'. As a result, they draw the beys' attention, and the latter make them mullahs.

However, by that time, having spent half of his life in poverty and destitution, this man is already 40. He spends two years to become an imam; he travels to Cheboksary or Yekaterinburg to sit the examination, and that takes another year; after that he gets the decree. But he himself is poor, he has no wife, he has not this, he has not that—and in that way he spends a further 5 or 6 years, by which time he turns 50. <...>

We must now put all our efforts into the sphere of enlightenment, helping each other, and as soon as possible we must study sciences and acquire the skills of a trade. Nowadays everyone can learn in the way which is most accessible for them; it is too early to raise the question of creating our own programmes and methods, as it is almost impossible to put this necessity across to the people. Firstly, we have no people who are capable of creating such programmes and methods, and even if one such person were found it could not be done single-handedly. In the state schools there are people who are known in the world of pedagogy, there are text-books published with the support of some society, and there are certain accepted rules. However, the situation with this problem remains unsatisfactory, which is permanently being covered in the pages of our newspapers and journals. So it is too early for us to study methods, as we do not know which of them are useful; we have no methods that have been generally approved and tested. We were told that the most effective one was a new method, and after setting off for Istanbul we brought back new methods for whose analysis we needed to fetch a mudarris from the fish market.

Now everyone must put in more effort to explain and teach something with those methods and rules that they themselves possess. There is no use in disputes, since the goal of reading is knowledge, the goal of teaching is learning. But whatever the methods are, there is one goal. So there is obvious futility in disputation and also in writing diverse compositions on that subject. It is unwise to pose the question whether this or that teaching method is lawful according to Islam. The best response to that would be silence. <...>

The Birth of a Human

<...> There are sensible people who do not use their wit, thus making no good either to themselves or to others. But if someone uses their wit every day, ruminating on the beneficial and evil aspects of a matter, then their wit develops every day and every year to the extent that they are able to predict events 100 years in advance. They will be able to tell what nations and states should expect in future, and their words will come true. They will manage to rule the state being able to predict future demands and ad-

⁶ Ostabika—a prioress teaching secular and spiritual disciplines.

⁷ Makhdum—sons of clergymen..

⁸ Halfa—teacher.

verse circumstances. Those who do not use their wit and know nothing cannot even say what they have in their homes, and so they cannot be masters there.

What I mean to say is that we, that is the Tatars, have wit, Allah has made us sensible along with other nations, we have no drawbacks. However, from failure to use our wit, we have already spent 100 years in the same state, without endeavouring to take a step forward; we know nothing about the current situation, to say nothing of the future; we do not distinguish bad from good; we live like our parents and grandparents did; we eat, drink, and barely distinguish ourselves from animals—all this is the consequence of thoughtlessness, or more precisely, of ignorance. For when someone has knowledge he constantly reads books and thinks. Whereas in former times one could observe such a situation, and there were people who had mastered a trade, now they have become extinct because of laziness, and even their names are forgotten. There were also people without a trade, but, with some effort, they managed to become the owners of the world. Constant thinking develops wit, enlarges perception—in the end all this is of use for both the person concerned and also for the nation. The spreading of knowledge is also a science, enhancing respect is also a science. All knowledge vanishes without science. <...>

Wherever we look, we will not find a Muslim heading anything worthwhile. There are a lot of ministerial institutions in the capital, Saint Petersburg; Tatars not only do not manage anything worthy, they are not even deputies to the managers. There are about 10,000 Tatars in Saint Petersburg now. We can distinguish a group of Astrakhan Tatars among them who engage in one trade. The rest are beggars, street cleaners and similar workers. Several times a year they are visited by *ishans*,⁹ to whom, in their ignorance, they pay out their hard-earned money for a *sadaqah*,¹⁰ and in exchange receive a *fatiha*.¹¹ They are also visited by mullahs who collect money to build a mosque, and in exchange these unfortunates receive a *sawāb*.¹² They are steeped in ignorance; it would be better to spend the money given to the *ishans* and a mosque on building a *maktab* or a *madrasah*, where they could teach their children the Tatar and Russian languages. Now, having learnt from experience, we know that a mere blessing is not enough, we must put in effort and in all things follow the example of our Prophet. He restricted himself to one *fatiha*, dug trenches in the ruins with his own hands, and tried to find the cause of what had happened. Great scholars and Allah's disciples never collected the petty *sadaqah*, and foreign scholars do not involve themselves in such an unworthy matter; the law does not allow begging for the reason of being an *ishan* or a scholar. If someone is actually poor, they must tie a bag round their neck to make the alms-giver know that he is giving alms to a beggar; and we give alms to *ishans*. Under such circumstances the imams of a *mahallah* are in an exclusive position as they receive a legal salary in their parish. So, if we raise our children in the right way, they will not be seduced by *ishans*' deceit and will be able to distinguish for themselves where lies the good, and where the bad, and will start thinking about future. <...>

Until recently the education of girls was thought improper. Only unusual people gave their daughters to an *ostabika*, who taught them how to read in Tatar, a few prayers and a short *surah* from the Quran—everything that the *ostabika* herself knew. But girls never received a complete education, and did not learn crafts. The *khazrets* had always insisted: 'Do not teach girls to write, do not let them climb the roof of the house'. Evidently, teaching girls in Russian was regarded as a sin.

But now, Allah be praised, we hear that schools for girls have appeared. Women with an excellent education and broad views are known. Women have published books.

Recently, girls who have received a Russian education have appeared. Many of us have heard of the girl from a village of Belebey uyezd who studied in Saint Petersburg and learnt Russian, French and English. Then she returned to her village and began to look after orphan girls and girls from poor families. A lot of people helped her, in accordance with their powers and abilities. Recently, a man coming from those places has said that the girl is feeding and educating about 50 girls, paying for it herself. <...>

The problem of female education has become widely discussed among the Tatars, and some *beys* have even had the courage to give an education to their wives, who have begun reading the Quran and learning the Arabic and Persian languages.

⁹ *Ishan*—a Sufi tutor; an honourable name for religious authorities, experts of religious disciplines, and people famous for their virtue.

¹⁰ *Sadaqah*—alms.

¹¹ *Al-Fatiha*—the name of the Quran's first *surah*. Also means 'blessing'.

¹² *Sawāb*—a reward for a good deed.

Our women possess many skills; Tatar girls work in telegraph stations and cash desks, they are in charities and trade associations, zemstvo administration, and perform in the theatre. We hear about a Tatar girl who has performed at the Vienna Opera. <...>

Piety

Muslims are currently associated with laziness, unemployment and poverty. <...> Some write that it is Islam that call Muslims to idleness and poverty. However, we have come to such a state because we have put aside those books which form the essence of Islam, and have begun living on the basis of books that are poorly related to our religion, such as 'Akhyr Zaman'¹³, 'Badavam'¹⁴ and others of that kind. We would not have come to such a state if we had guided ourselves exclusively by the Quran and Hadiths of the Prophet. Our sharia is based on wonderful traditions and humanity, and it guards us from useless deeds. The deeds allowed by Islam are equal to wisdom and bear witness to the benefits. Every deed that is forbidden by our religion is evil. <...>

In this connection, the problem of banks is an exceptional matter, as, on the one hand, they are evil, and on the other, very useful. In general, transactions with interest become haram¹⁵ only when they are made between two people. <...>

A part of a bank should be public, and there is no doubt that the state would see to its development. According to the law and rules, it is proper to give money at interest to a simple and honest person.

Source: G. Ibrahimov. *Mir'at sani yakhud ikenche közge*. Saint Petersburg, 1900. P. 32–34.

Every place will have its word, every square—its public figure

We have already talked a lot about the necessity of educating children, and we repeat it once more. State schools are always open for us, and so we should use them, and not spend our life idly.

There have been many false rumours among the Tatars recently; having believed that the Russian government desires to teach children Russian so as to russify them in future. So the Tatar population started to act thoughtlessly and unnecessarily. People from several villages decided to move to Turkey; some of them, having lost all their property and moved to Turkey, returned to Russia in the end. How many serious diseases they have risked—it is all the consequence of ignorance. In Russia, religious freedom is stated by the law. In solving the religious problem, the government have opened the Spiritual Assembly for us, have appointed the mufti and qadis, have established special laws and procedure. If we had received education at the appropriate time we would not listen to false rumours now and would not have deceived ourselves.

To correct this matter we have to give our children to the state schools. In that there is no harm to religion, as these schools are based on a programme, regulations and rules. There is nothing taught above the programme, Muslim children also learn in accordance with the programme, and during the holidays they can learn at home in Tatar and Arabic, it is not forbidden. The government will say nothing against that, they will not attract to their religion, so you should not believe such unconfirmed words. <...>

We, Muslims who live in Russia, must not forget all the good done for us by Russian tsars; we should be grateful for everything that they have done for our religion. The greatness of Russia rests in the fact that, after conquering part of Siberia, it sent scientists there, who introduced the Russian government so favourably that the local Muslims, known as the Bukharans and the Sarts,¹⁶ joined Russia willingly. We must always remember those good deeds and be grateful. <...>

Oh, Muslims! What else do you need? The kindness of Emperor Nicholas II of Russia knows no limits. A special committee is currently studying and discussing measures in order to take Muslims to Hijāz and back. Thus, the government themselves are taking useful measures for the sake of our religion.

¹³ 'Axir zaman kitabi'—a monument of the religious-didactic literature. The authorship is attributed to S. Bakyr-gani. The Doomsday, Qiyāmah, and otherworldly life are described in the book.

¹⁴ 'Badavam'—a monument of the Tatar religious-didactic literature. The author is unknown. Devoted to a criticism of pagan customs and rituals and propaganda of Islam's basic concepts..

¹⁵ Haram—forbidden.

¹⁶ The Sarts—the general name of certain population groups inhabiting Central Asia in the 18 and 19th centuries. Before the Revolution of 1917, the name 'Sart' was used mostly by the Kazakhs and a semi-nomadic part of the Uzbeks in regards to the sedentary Uzbeks and sometimes to plain Tadjiks.

We hope that in the near future our people educated in schools will be able to translate scientific literature and belles-lettres from Russian into Tatar, will teach our religious brothers to think, will be useful to the nation and the government.

One cannot waste one's precious time. Despite the fact that we remain behind Europe, in comparison with <...> Muslims from other countries our condition is much better. We have scholars, manufacturers, gold-miners, merchants, and we have madrasahs.

But our khazrets and heads of the houses, having put a sack over their head, undertake many actions to spoil the relations between Muslims, from which they have almost made them extinct. That is why the government, in order to resolve the situation, have issued a decree on obligatory knowledge of the Russian language for those who are elected imams in a mahallah. If imams are people speaking Russian, they will not allow such ignorant actions and will cause general changes. Still, we must not reproach the old khazrets too much, they are travelers; we must get their blessing and let them go; we must not offend them, we will always need their blessing. There is hope that if their fatiha marches with the wit of our youth then our situation will rapidly improve.

Source: G. Ibrahimov. *Mir'at salis yakhud echenche közge*. Saint Petersburg, 1900. P. 2–4, 8–11.

* * *

The aim of 'Mir'at' is to show the way and give necessary advice for the future of Muslim brothers. Each nation makes efforts to provide for its future, seeks paths, and even now thinks of its children's and grandchildren's futures.

As we can see, our compatriots—the Russians—are currently developing industry and using natural resources very actively; the number of scholars and specialists among them is growing; their schools are improving year by year; their trade spreads from the West to the East. It is the Russians who are most of all engaged in useful crafts in the towns, and each of them puts great efforts into their occupation. The Tatars completely lack industry, some of them are involved in trade, but in comparison with other nations living in the same territory their trade is restricted and poor. Jewish, Armenian, Polish, Finnish, Russian and Ukrainian manufacturers and millionaires carry on trade between the East and West, work day and night to increase their fortunes, yet we content ourselves with little.

There are all the necessary tradesmen in Russian villages: blacksmiths, tailors, shoemakers, carpenters, bricklayers. But in Tatar villages there are no such tradesmen, despite the fact that they are big and rich. Blacksmiths and tailors come when needed from Russian villages, and the Tatars care only about their food and, perhaps, a little about their money. There are even villages where all the local Tatars are given food and drink by the only Russian trader, and the Tatars themselves do not have even one grocery shop. Or a Jewish trader opens a shop in an Islamic village and launches an active trade, and the local women buy threads from him at three times the normal price.

No matter how much we try, Muslims cannot be changed as they lack even the knowledge needed at the initial stage of social reform. It is impossible to change for the better a people that does not possess knowledge or unity. They are still arguing about the teaching method in madrasahs; mullahs, having captured their decrees, do not even remember the faithful, no one worries about children's education; moreover, they can scold someone who brings a khalfa to teach children and can say 'you have nothing to do in my madrasah, I myself have a khalfa who has been lying in vain for 30 years already'. Thus, the khazret does not either enter the madrasah himself or let somebody else in (so he is like a dog in the manger: he himself does not eat, yet does not allow others to do so).

I would like to write that the majority of khazrets are like that, but they are not in the majority, but they are common. There are very few precious people who really teach, and so we can say there aren't any at all. Our imams do not like teaching, that is why they give no education to their children. There are those among known and respected khazret-ishans who, giving their children to khalfas, say that they will not pay for the education as it contradicts sharia, and give orders to teach their children for sadaqah¹⁷, demanding to give them knowledge in all the sciences for a ruble per year. What can a miserable khalfa do in that situation, manifesting humanity? He sets about teaching, and later the khazrets will blame the khalfa for their children's poor education. At the same time, those khazrets pay 25 rubles a month to teach their daughters Russian. beys kiss such khazrets' hands, and no one except the miserable khalfas pays attention to children in madrasahs. 'Mir'at' can only feel sorry about the situation, we can do nothing else.

¹⁷ Sadaqah—alms.

Education and Enlightenment

The name of a scholar is eternal. Even when the scholar himself passes on or leaves no descendants, his name will live on. Education means respect and honour in this and the next world. If we take all the hadiths¹⁸ and ayahs¹⁹ devoted to knowledge, we could write a whole book. But, unfortunately, if we look at Muslims' current state, we will see that it (education.—*L. B.*) has nothing to do with them. The only goal that the Tatars seek when getting an education is the wish to become an imam. They believe that only having become an imam can you receive respect and fame in life as well as after death. How grievously mistaken they are!

The Russians have progressed so much with the help of education: they level mountains to the ground, unite towns, communicate by telegraph and telephone having linked two distant points with a thin cable, and they have lit up their towns brightly. They do unbelievable things and never stop. We share towns and the land with this people, but do not even try to reach their level, only blame them. We do not see our mistakes, our drawbacks, and do not realise our decline.

Our scholars must constantly and each Friday summon the people to education and enlightenment, at every Majlis must they find the necessary words that will help to make people interested in getting knowledge. We must summon them to get an education in state schools, high schools and at the universities. Knowledge is vital and is, no doubt, a treasure that can save people's honour, decency, nationality and religion.

An educated person will never be in need, and will not be humiliated or insulted.

Humanity consists in education and enlightenment. Muslims! Brothers! Teach your children; if you do not nurture your children, you will be responsible to Allah and to the people.

Source: G. Ibrahimov. *Mir'at yaki közge. Unykenche jöz'e*. Saint Petersburg, 1902. P. 9–11.

Charities

Russian Muslims have established a few charities recently, but no one knows what benefit accrues from them... <...>

A Charter is a precious thing. According to the rules, the beginning of the year is meant for accounts, but in our charities the accounts are written in March. The rules should fix a certain sum for annual purposes. No one among us remembers about the estimate: in accounting for elections, they state as costs what they have spent on those who applauded and screamed 'bravo' to them during the election; they point out that they have had these or those costs and revenues in the recent two or three years, but it remains unknown where the money came from and what it was spent on, for if they made it all public, many people would probably be offended. Why they should be offended is unclear.

Actually, it is this offence which has led the Tatars to this condition. In our opinion, people holding such positions in the similar organisations should not pay attention to others' susceptibility and should not be offended themselves by rightful words addressed to them; on the contrary, they should be thankful for their drawbacks being highlighted; only in this event will the nation begin developing. Generals and officers²⁰ should serve as an example to us, it is out of the question to cover up for each other in such matters. Officials and famous people should always be the example we emulate. Such people should not consider only themselves clever; there are people at the meetings who hang on to their every word and their evil actions, which can lead to being expelled from membership.

In the account books of the first year only half of the necessary number of members is fixed; in the second year, there aren't any at all; and, thus, it becomes harder and harder to find new members year by year. In our opinion, it should be written down in the account books who exactly the help was given to; otherwise, it is not worth asking for help. There is no reason to be offended. There can be no offence in public matters, the matters should be run in accordance with the accepted rules.

What is the aim of charities? It must be understood, and we must act in compliance with that aim. My wish is to direct charities so that we do not feel ashamed of them. That is what I call on the members of the charities to do.

¹⁸ Hadith—a tale about Prophet Muhammad's words and deeds which relates different religious and legal sides of the Islamic community's life..

¹⁹ Ayah—a verse of the Quranic text which has an independent semantic value.

²⁰ Ibragimov writes it in reference to the St. Petersburg Islamic Charitable Society.

Source: G. Ibrahimov. *Mir'at yaki közge. Unechenche jöz'e*. Saint Petersburg, 1903. P. 13–16.

Once again about charities

We have already written about charities, having highlighted in the 13th issue of 'Mir'at' some of their drawbacks. After that, some members of those organisations have taken offence as they did not understand the essence of our words, so we believe it necessary to raise the question again. Furthermore, in 1902–1903 all the members of Saint Petersburg Charity who are decent and ideal people will not spend a kopeck of the organisation in vain, and will make no mistakes in spending. However, wisdom is not in spending the money—that is not the problem. The main thing is to collect money, and here the members of the organisation can be of little help, so that 'Mir'at' objective consists in disclosing this problem. The members of Saint Petersburg Charity need to resolve the following matters: where to find money for the organisation; how to increase the organisation's funds, and how to make Muslims and people in general happy; how to make the status of the organisation known to the Russians, French, English, Bashkirs, Tatars and everyone else who arrives in Saint Petersburg; what useful things 10–15 rubles could be spent on; or if money should be earned with a calendar published for the needs of the organisation; or if it is worth publishing announcements or advertisements. But none of these things worries the members of the organisation. 'Mir'at' will always draw attention to these deficiencies. The members of the charity hold meetings once a month only to allocate money, but not to collect it. They are not able to ask a rich man, who has come to the town, for money, even if that man publicly announces a donation, they cannot ask him for the money, but wait till the rich man personally suggests coming and taking the money. But no one invites them, so the money meant for the organisation does not reach it. Of course, some could ask why the sponsor does not bring the money himself, and 'Mir'at' will respond: if that man is a Tatar and has decided to make such a large donation, he expects to be treated with respect. Such people prefer to give money so that everyone knows about it, that is why they stretch their hand as high as possible to make the coins ring. No matter how arrogant the sponsor is, we should not blame him; the one who takes the money should be submissive and humble, giving thanks for every ruble he gets; it can be learnt from the khazrets, who have great experience in this matter. Everyone must learn from his mistakes. Everyone who has given somebody 10–15 kopecks talks about it whenever he can; a person donating a few thousand rubles also endeavours to let people know about it, and we cannot blame him.

I will not tire of repeating: the members of charities should act within the framework of their charter, should find ways to increase the organisation's funds, should pay a secretary 10 rubles a month to keep control of matters, and give him money for petty cash, then the secretary would be more attentive and careful, he will write prompt letters of thanks to sponsors. At all events, there must be no empty words, things must be done. You cannot blame the mirror, it reflects all your defects, and that is what its function is. <...>

A charity should indicate those places where its financial support has been given: this student or shakird was given that money; this money was given to bury the poor; this sum was given to orphans; all the donations should be written down with names. If the address of the needy is known someone else could help them; it must also be published in newspapers.

Source: G. Ibrahimov. *Mir'at yaki közge. Unjidenche jöz'e*. Saint Petersburg, 1903. P. 7–9.

Zakat and charitable organisations

In past times beys gathered the poor to declare the amount of their zakat; the latter, after hearing that beys were giving zakat, came from miles around a week before the proposed event and quartered in the homes of the same poor. For 10 arshines of coarse calico or 5 arshines of calico, they come from 30 miles away and wait for a week. Because of a bey who had promised to give two thousand rubles of zakat, so many hundreds of people stopped working. At the same time as the poor, after receiving a piece of bey's zakat, go straight to the pub where they leave the zakat they received for nothing, our scholars say not one word. In our nation there are people whose fortune amounts to two, three or even five million, for which the required amount of zakat is 1000, or 100 thousand rubles. Handing out such huge sums of money to the needy, at the same time, it is impossible to give to one person more than the due amount of zakat. Therefore, a man who is giving zakat is faced with many problems. In this situation, the members of the charitable organisations, elected by general consensus of the Muslim community and approved by the government, should provide assistance to those people who give zakat and sadaqah. The people who collect zakat can be paid wages out of this money. In this case, a charitable organisation acts like an

Islamic Bank. If Muslim scholars agree with this opinion and write their solution to this problem, we will publish it with great pleasure.

However, there is one detail: an obvious aim should be the basis of any action. The goal of the majority of Muslims is the preservation of Islam, so charities should change their activities, subordinating themselves to this purpose, and seek the funds which are required for the needs of Muslims. To do this, the rules of the charities should state that only pious and righteous people can become their members; elected members also need to issue a manual where all their duties will be written, only in this case our zakats, spent in accordance with the Sharia, will become useful to God.

Lately, there has been a lack of manners among our women, particularly the Kazan Tatar women. They look quite healthy, their speech is literate, however, they are only interested in clothes, they don't care about reality, they are not aware of events that are taking place outside of the home, they do not think about the future, and furthermore, they do not perform their duties—the upbringing of children. We have to educate our women so that they can fit into today's life and our world and to teach them all the necessary things for this world and the other one. We need to precisely define their responsibilities. All of this is written in our Holy book. First of all, we need to know it. By nature, women are imperfect, so if you equalize them with men, a new people would be created. If all are equal, then women should serve as porters, drivers, cab drivers, and soldiers, but women can't do this. There are several activities that are not obligatory for women, as they are not able to do them. In this case, equality between men and women is out of the question. It is no doubt that women are less capable. Even in Europe men design women's clothing, although this activity should only be for women. In Europe, all the cooks are men; you will not see any woman-cook there, despite the fact that this work is purely for females. Generally, there are much fewer women than men in high schools, classes of geometry, mathematics, and other exact sciences, as evident by tests in schools. Only in France, women enjoy the same freedom and rights as men. Among women there are doctors, lawyers; they are found in all the professions except for magistrates or district judges. If they are equal, what could they achieve? There are no women among the deputies, there are still many situations where they cannot become the equals of men. To talk about equality, firstly, we need to balance the two. Women have their special duties, which men may not carry out, for example, how can men breastfeed babies? Therefore, without having considering this issue thoroughly, it is impossible to talk about equality. According to Sharia, women have more rights than men. First, men should feed women; secondly, the upbringing of children is the duty of fathers, not of mothers; a man must provide a woman with housing, if a wife tells her husband that she cannot live in the same house with his parents, the husband should provide her with a separate house; Sharia law does not force women to breast-feed babies. Therefore, in order to make a final decision regarding women, everything must be considered. Of course, men and women can never be equal, but it would be wrong to obscure the legal rights of women. Women living in the villages work more than salaried employees, they take care of the cattle, milk cows, stoke the stove, cook meals, mow the hay, and pull a cart like a donkey; these unfortunate women, their husbands beat them with whips, throw dishes at them, demean them—these poor women are starting to regret that they were born. However, no one remembers that women have rights, too. Even the manifestos of Russian parties say nothing about the rights of women, and we put up with when a man hurts a woman. The Social Democrats don't notice it, although women are the guardians of the farm. Somehow, supporters of equality are more worried about urban women, the wives of the beys, who are sitting within four walls, striving to open the doors of their home.

I want to repeat once again: the members of the charities should accept zakat, and the society should distribute this money for the needs of Muslims, and then there will be no doubt about the legitimacy of these expenses.

The state provides official assistance to charitable organisations in raising money for the needs of Muslims, imams read Friday Namaz's glorifying state aid. Due to government decrees and assistance, the decisions of qadis become more official. Thus, on the basis of these rules, the members of charitable organisations are confirmed as officials. Support for charity organisations will wholly bring us good.

The source: G. Ibrahimov. *Mir'at yaki közge*. Eguerme berenche cöz'e. Saint Petersburg, 1908. P. 7–11

The woman question

For Russian Muslims, 'the woman question' firstly refers to the problem of hijab.²¹ Tatar scholars, beys, and many others know only two answers to this problem—needing to cover up or not needing to

²¹ Hijab—a chador, mantle, or coverlet an Islamic woman puts on when going out.

cover up. After proclaiming the equality of women and men, we did not think of anything other than mutual walks in the garden and visits to the theatre.

In fact, this problem is very important. It is impossible to make the wrong decision. Like any other problem that concerns our people, this problem is also strongly underestimated.

First of all, we must find out the needs of our women. What is their current situation? What are their duties? What rights do they have? For each of these issues, we need to talk in detail.

What do our unfortunate companions need now? We don't know. What do they need for the afterlife? We don't know. We don't even know what position they are currently in.

No one asks: 'Oh, women! Why do you need diamonds, pearls, and multiple rings, why do you turn into mannequins'. If poor women had any sense, would they be happy with these trifles? If women possessed intelligence, would they sell all their rings and earrings, spending the earned money to fill their heads with thoughts and knowledge? Due to their lack of knowledge and education, they do not know about their rights; being covered with gold and silver, they do not think about that, nor about the afterlife. If today, a woman's husband dies, then tomorrow she will be hungry; if she becomes a rich widow, she will not be able to manage the money. To spend it, she marries again, often the second husband is a drunkard, and in a few years they squander all the fortune.

For a woman to support herself, she needs to learn some craft. If she's the wife of a rich husband, she must learn to keep registries at least for small expenses in the shop of her husband. If a woman is poor, she should, according to her position, learn some craft, at least cooking. Anyway, after divorce or if she has become a widow, a woman should not cry, she must possess the craft that can ensure her life.

Letters from readers

The letter from Orenburg

To dear Gabdrashit effendi khazret

Gabdrashit efendi! I have known you for many years, but with the release of 'Mirrors' I began to understand you better. I have wanted to write you a letter, but I didn't have an opportunity. However, now I am in such a state that I can forget about all of my affairs, as I can not help but write to you. I am a merchant, I live in Siberia; at the moment I am in Moscow to buy some goods, and on the way, I had to stop for one day in Chelyabinsk. Making use of this stop, I decided to meet with khazrets which were extremely unhappy after having recognised themselves in your 'Mirror'. After Chelyabinsk, I went to Troitsk, where I had the same situation: many were so traumatised by the first 'Mirror' that they could not even look at the second one. However, there were people who praised 'Mirror'; among them, there were learned scholars, but these scholars were not of those mullahs who prefer the sweet crunchy bottom of the cake...

On the day of Eid al-Adha I was in Orenburg, where the most interesting events were taking place. For prayers, I went to the mosque in the lower mahallah. There were many people, but from their gestures, it was evident that they were not familiar with Islam. Everyone knows that the mullahs should instruct such an uneducated people to study crafts and become actively involved in trade in order to increase their income and teach their child by example. However, we don't have such imams yet, thank God. In this regard, I was hoping that in Orenburg there would be at least one such person, but unfortunately, my hopes were dashed. After the festive Namaz, the local khazret pronounced an exhortation that criticised jadidists and forbade the reading of new books. I'm tired of hearing people say that you should not teach children according to the new method and that you should not teach girls; however, the last instruction of the khazret was the last straw. The mullah denies jadidists at a time when many men don't know their mother tongue and are unlearned in the Islamic faith. What could be worse than that?

I stayed in Orenburg for a few days to see my friends. Due to the holiday, I had to visit several Muslims. No matter how many times they called their Majlis scholars, I didn't notice anything like that; conversations were mainly about your 'Mirror'.

The Orenburg mullahs became scared when they recognised themselves in the 'Mirror'; of course, they did not deny the similarities, but, having no desire to look unattractive in the eyes of readers, they decided to look for flaws in the 'Mirror' itself.

You probably know that Tatar mullahs like calling someone a disbeliever (kafir) most of all. For example, someone who has not trimmed his mustache is a kafir, someone who teaches writing is a kafir, someone who has a collar serif is a kafir. They are always ready to say the word 'kafir'.

Recently I visited one Majlis, where there were a lot of mullahs, men, and rich people. The Majlis began as always with a discussion about the 'Mir'yat', though this conversation was a continuation of the previous Majlis. Someone in a turban started to say that there are controversies [in 'Mir'yat'.—*L. B.*] and there is a danger that it is blasphemy. Someone else, in confirmation of these words, added that it mocked the Sharia by forbidding driving girls to the attic, and thus there is no doubt about its godlessness. Another mullah said that the author of the 'Mirror' called Tatars dirty and smelly, and this also indicated his blasphemy. Another mullah cited the fact that it taught girls the Russian language as evidence of godlessness. While the mullahs tried to prove its godlessness, one of those present said to them: 'Khazrets! Shame on you for spending your time in having such conversations. You sit in the corner and while eating a pie accuse a man of blasphemy. Do you really think that if you call a person a kafir, it is indeed so? Who gave you the right to accuse a man of profanity? Do you hope that due to your accusations the author of 'Mir'yat' will stop writing? You followers of the prophet and the guardians of Islam, if there is something contrary to the Shariah and knowledge in 'Mir'yat', then take a pen and write about it, point to the error. What is the point of you, like turkeys, arguing in this Parliament? If you scare turkeys, they fluff their tails and begin to clang, and you are no different: you cannot hear each other, and even your ears do not hear what your mouths utter. Your words are dirty, their existence is filled with conjecture and speculation. Well, we live in Russia, if this happened in Bukhara, you would have already issued a fatwa about the hanging of the author of 'Mir'yat', and some illiterate man, considering it a noble cause, would have gotten out the rope. You used to talk about the new method and called its supporters atheists; after a while, you began to use the method in training. If you had a conscience you would feel shame when appearing among the people and would not call those who serve their nation and religion infidels'.

I was very surprised to hear these words. I was glad that there was a man who managed to speak out in front of the mullahs, who could not answer his charges. After the Majlis, I inquired about the man; he turned out to be an employee of the Majlis.

Sir, do not worry, there are a lot of people who accept your work well, go on with it.

Effendi, I compare these learned mullahs with worms (microbes) that are slowly devouring everything around. The 'Mir'yat' is like a powder for them which is sprinkled on worms, after which they start writhing in pre-mortem agony. Maybe if you sprinkle even more 'Mir'yt', the scholarly class will be cleansed from such worms.

Effendi, I say it again, there are many people who highly exalt your name, so don't stop your work. Siberian merchant Sharifulla. 3 April 1900.

The source: G. Ibrahimov. *Mir'at at-tasig' yakhud tuguyzynch y közge*. Saint Petersburg, 1902. P. 4–8.

The letter form Petropavlovsk

Dear author of 'Mir't'

In our region, and perhaps throughout Russia, the following problem exists: when we address questions to our mullahs, their answer is based on their own benefit. For example, we want to know how much money mullahs should take for nikah—the funeral prayer—or for the record of a newborn, according to the Sharia. This evokes many arguments. Most of all, rural imams oppress the poor: if a poor man marries the daughter of a poor man, all of the expenses, including mahr²², equate 10 rubles. If someone's mother dies, the imam asks for a large sum of money for the funeral prayer. It would be great if the 'Mir'at' would give a clarification on this issue.

Kh. B.

'Mir't'

This problem has interested us for a long time, and it is pertinent for us to say a few words about it here. In Russia, scholars do not have special duties; when the parish chooses an imam, it promises to take care of all of his expenses, but after the appointment of the imam, the parish does not provide any money. According to the verdict, an imam's salary is the responsibility of the community, therefore, the imams should not take money for the recording of newborns, or for saying a requiem or nikah. Once in Siberia, an imam requested 25 rubles for issuing a certificate of divorce. Our imams, without knowing the legal ways of receiving their wages, take money from others. All of this is a result of a lack of necessary activity. Scholars equated the amount of fitr²³ to 8 kopecks and collect it from the poor, who have nothing to eat,

²² Mahr—property the husband apportions to his wife when they get married.

²³ Fitr—alms Muslims give out on the last day of Ramadan..

and from the rich men, who have fortunes of several thousand. This is also a result of a lack of necessary activity. The true meaning of alms given after the uraza is to show our dependence on food, which we eat all day like animals, while according to the will of Allah, we should remember those who lack food. Fitr should show our gratitude to Allah for the wealth we have and help those who are in need, to protect them from hunger. Undoubtedly, the size of the alms of rich people must correspond to their status, our imams should understand that and convey it to the people, therefore, where they took 8 kopecks from 10 men, they can collect 5 or 10 rubles. <...> However, the salaries of the mullahs should originate from the community, according to the verdict, the parish must provide for imams.

Nikah in Astrakhan

In the September issue of the newspaper 'Tardzheman', we had a chance to read many interesting things about nikah in Astrakhan. Thereby we think that this letter, which we received, will arouse great interest:

'The Tatars–Muslims who live in Russia—have no possibility to spend their money. Of course, these words will surprise many, but if I am able to present the proof, everyone will agree with me.

Every nation has a school, hospital, orphanages, and homes for the poor that support them. For this, someone allocates money or mentions a sum in their will, in the future, they can be sure about the strict and proper spending of this money. But we have nothing like that: there are no places where rich people can invest, if they divide money between their children, they will not donate money to charities. So they have to spend money for the nikah and other useless activities. Here the expenses spent for the marriage of their daughter or son equate to the construction of one orphanage; gifts from matchmakers, chests of clothing, food, and drink: all of these cost a fortune. The marriages of Tatar children is a source of revenue for Moscow manufacturers. At these events, everyone is trying to outdo the others; there have been instances in which the wedding of a daughter became a cause of bankruptcy. For the wedding, 15–20 troikas of white horses are prepared, a clock is ordered specially for the coachman. According to Saint Petersburg fashion, it is put on his back, after an incident in which a delayed clock led to the postponement of a wedding for three days. Alcohol consumption becomes a sign of nikah. What is the amount of mahr for the bride? During the marriage, two matchmakers agree that all that will be left after the wedding expenses—the food and drinks—will be the mahr, which the mullah records in a notebook. A poor bride doesn't get anything from this mahr. Besides this, Muslims from Astrakhan have plenty of opportunities to squander their money. Our mullahs also don't agree with this state of affairs, but they cannot oppose the rich. The rich also don't like this situation, but they are forced to continue out of a fear of judgment. This is unstoppable, moreover, there are not many places where one could invest money. Despite the fact that we have madrasahs and maktabas, we think the owner of a madrasah should finance it. Even if somebody wants to give some money, there is no special box for money in the madrasah; if he gives this money to a mullah, the latter will guzzle it. Mosques also don't know where they should invest their money. We need explanations on this matter.

The zakats of our beys are spent meaninglessly. During the sacred month of Ramadan, many people who want to receive some pieces of zakat come to the city. For 10 arshins of fabric, they spend the whole week in the city, bothering the citizens, and as a result, having received a piece of cloth, they sell it for 80 kopecks, which they drink away immediately. What is the point? It would be much better to spend the money on the needy, but our khazrets consider this way of spending money to be wrong, or that there will be much more benefit if the money is transferred to charities. Other nations spend millions on the needy, however, due to a lack of places where one can donate money, our nation is content to allocate some money for tahlil²⁴, for reading the Quran, and for the atonement of the sins of the deceased (Fidyah).

Sir! We will wait for your judgment on this question and your answer on the pages of the 'Mir'at'.
